Podcasts on government and economics

January 30, 2009 | by Wintery Knight | Link | Original Link

Please help yourself to the blog roll and the podcasts in the rightmost column.

Here are some excellent podcasts on the relationship between government and Christianity:

- This one from Dennis Prager with Sally C. Pipes is about health care and government.
- This one from Dennis Prager with Glenn Sacks is about the deterioration of the nuclear family.
- This one from Apologetics.com with Kevin Alan Lewis on economics, law and government.
- This one from Hugh Hewitt with J. P. Moreland on government.

I also would highly recommend reading the articles from the current issue of Salvo magazine.

Domestic violence and censorship

January 30, 2009 | by Wintery Knight | Link | Original Link

Here is a fascinating article from the Canadian journalist Barbara Kay in their national newspaper, the National Post.

The article describes how the Justice minister of a Canadian province was stripped of his Cabinet position for daring to suggest that men could be victims of domestic violence (DV) and not only women. He did this in an internal e-mail – this was not even said in public.

Some special interest groups and their government allies have a vested interest in making sure that the public thinks that all DV is committed against women. There is a lot of taxpayer money at stake. If it were discovered that male victims of DV existed, that taxpayer money might have to be shared. Canada might then need a Minister for the Status of Men, an Office on Violence Against Men, a Violence Against Men Act, a National Council to Reduce Violence against Men and their Children, etc. I think that we should condemn DV against women *and men*, equally.

Here are the numbers from official government surveys in the UK and Canada:

UK numbers:

> In the event, the CASI method found relatively high levels of male victimisation, to the extent that men appear to be at equal risk to women of domestic assault (4.2% of both sexes reported an assault in the last year).

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

Here is a related research paper by Dr. Linda Kelly, a professor of Law at Indiana University School of Law.

Birth control funding to stimulate the economy?

January 30, 2009 | by Wintery Knight | Link | Original Link

Dr. Jennifer Roback Morse is an ideal exponent of the view that conservative libertarian capitalists *do* have an interest in promoting intact families as the best environment for raising children. She argues that certain social issues can impose huge costs on the taxpayer, and also increases the size and scope of government. Government should at least do no harm in discouraging traditional marriages and even stay-at-home mothers.

In this article, she examines Nancy Pelosi's recent comments regarding the inclusion of contraceptives in the the Democrat's so-called stimulus package. This bill is no stimulus. It is a giveaway to the secular left's special interest groups, on the backs of the productive private sector. Dr. Morse argues that supporting marriage instead of contraceptives would reduce taxpayer costs.

Here is an excerpt from Dr. Morse's excellent article:

> If Nancy Pelosi wants to reduce the costs to taxpayers, she should be promoting marriage. Out-of-wedlock childbearing is one of the surest roads to poverty and, thereby, to taxpayer expenditure. A recent study by the Institute for American Values conservatively estimated the taxpayer costs of non-marital childbearing to be $112 billion per year, or roughly the GDP of New Zealand. Responsible, sustainable childbearing takes place within marriage. And, incidentally, if Speaker Pelosi really wants to reduce abortions (which she hinted at, but did not say) she should also be promoting marriage. Some 80 per cent of abortions, year in and year out, are performed on unmarried women.

Here is a related research paper by Christine C. Kim of the Heritage Foundation on teen sexuality and the effects of family structure and stability in curbing it.

William Lane Craig to debate Hitchens, Carrier

January 30, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Audio and video from a panel discussion with Hitchens, Craig, etc. is linked here.

UPDATE: My play-by-play transcript of the debate is here.

William Lane Craig is arguably the most effective active defender of evangelical Christianity. He is currently finishing off a 5-day debating/ speaking tour in Ontario, Canada, but he also has an upcoming 4-day debating/ speaking tour in Quebec, Canada in February.

A listing of many of Bill Craig's debates is here, along with links to transcripts, audio and video. Here is audio from a debate between William Lane Craig and Walter Sinnott-Armstrong which I think is one of his better debates. It was later incorporated into book debate between the two scholars, which was published by Oxford University Press, 2004.

Craig is scheduled to debate Richard Carrier and Christoper Hitchens this year. The debate with Hitchens will be held on April 4, 2009 at Biola University. Radio show host Hugh Hewitt is the moderator. The debate with Carrier is scheduled for March 19, 2009 at Northwest Missouri State University.

Richard Carrier is a strong proponent of atheism, and did well in his debate (audio, video) with Mike Licona on the resurrection of Jesus. Licona has since been awarded his PhD from the University of Pretoria in South Africa with high grades, and would presumably do better in a re-match. Craig and Carrier debated before on Lee Strobel's "Faith Under Fire" TV show.

Hitchens may be more of an easy win for Craig, as he struggled with the scientific and philosophical issues in his previous debate with Dinesh D'Souza, (video here). Hitchens also debated at Stanford University against Jay Wesley Richards.

UPDATE 1: Welcome, visitors from RichardDawkins.net and SherDog.net! While you're here, why not check out my snarky series on the the war between science and atheism, in which I analyze recent scientific discoveries and how atheists responded to them! Part one, part two. WARNING! These two posts are deliberately mocking the new atheism by being as mean as they are on purpose!

UPDATE 2: Panel discussion in Dallas, TX with William Lane Craig, Lee Strobel, Christopher Hitchens on atheism is also scheduled, details here. Date: Saturday, March 21, 2009 from 1:00 – 3:00 PM.

UPDATE 3: You can get a LIVE FEED of the upcoming Craig/Hitchens debate for yourself or group viewing for $98. Details here!

UPDATE 4: Welcome visitors from Ace of Spades HQ! Ace wins Conservative Blog of the Year *every year*. Thanks for the link, Ace! New visitors, please take a look around. My blog is half conservative/libertarian politics and half analysis of arguments and evidence for and against the Christian faith. The goal of the blog is to bring together fiscal

conservatives with socially conservative Christians, by improving understanding between the two factions.

Here are some posts that explain Christianity for non-Christians: the hiddenness of God, the problem of evil, religious pluralism, and the problem of the unevangelized. I also have posts on why men are leaving the church, how to make a pro-life case *without appealing to religion*, explaining the resurrection *without assuming the Bible is inerrant or even reliable*, etc. Please make yourself at home, and leave your challenges in the comments. Challengers *always* get the last word here, after my 1 rebuttal.

UPDATE: I analyze Hitchens' case against God here, from his debate against Frank Turek.

The war between science and atheism, part one

January 31, 2009 | by Wintery Knight | Link | Original Link

Note: Part two of the series on the fine-tuning argument is here.

I was recently reading over at Colliding Universes, and I noticed that Denyse O'Leary was commenting on this post by Christian apologist Frank Turek at TownHall.com. Turek recounts his experiences in his debate (audio, video), with atheist Christoper Hitchens on September 9, 2008 at Virgina Commonwealth University. In particular, Turek describes his use of cosmological argument, and the scientific confirmation of that argument provided by recent discoveries in astronomy and physics.

And suddenly it struck me: *atheism is dead*. The big bang has *killed it*. And it is safe to say that in this day and age, if you meet an atheist, then that person is either ignorant, stupid or insane (or wicked, but I'd rather not consider that). And I think that is worth talking about the discoveries that led up to this theory, since this theory is the most accepted theory of the origin of the universe in astrophysics today. All Christians should be able to discuss these discoveries and explain how God created the entire physical universe from nothing – *and we can know this*. The creation of the universe in the Big Bang is as confirmed as the theory that the Earth goes around the Sun.

First, here is the syllogism for the argument for a supernatural cause that brings the entire physical universe into being:

1. Whatever begins to exist requires a cause.
2. The universe began to exist.
3. Therefore, the universe requires a cause.

Second, let's review the 6 fairly recent discoveries that confirm premise 2 with scientific observations. These discoveries reversed the atheism-friendly theory of an eternal universe, and led to the theory of the creation of the entire physical universe out of nothing.

1. Einstein's theory of general relativity
2. the red-shifting of light from distant galaxies
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Why do atheists deny these findings? Probably for emotional comfort – they desire autonomy and so they invent a worldview that allows them to feel good about jettisoning moral constraints and accountability . But for those of us who do constrain our worldviews using scientific discoveries, I recommend the book "God and the Astronomers" by

agnostic scientist Robert Jastrow. His book is the best introduction that I have seen on the 6 discoveries that led to the Big Bang theory.

Here is the best quote from the book, (p. 116 of the second edition), where Jastrow, the former director of NASA's Goddard Space Institute, explains how atheistic scientists were forced, *against their wills*, to accept the big bang theory.

> For the scientist who has lived by his faith in the power of reason, the story ends like a bad dream. He has scaled the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries.

The acceptance of the big bang is just another example of how the progress of science whittles away at the gaps in our knowledge. These gaps are leveraged by atheists in order to cling to the delusion that the material world is all there is. But we *now* know that the physical universe had a non-physical, *supernatural*, cause that brought it into existence, just like the Bible says in Genesis 1:1.

Turek unpacks how the creation of the physical universe is best explained by a supernatural creative act.

> Why couldn't natural forces have produced the universe? Because there was no nature and there were no natural forces ontologically prior to the Big Bang—nature itself was created at the Big Bang. That means the cause of the universe must be something beyond nature—something we would call supernatural. It also means that the supernatural cause of the universe must at least be:
>
> - spaceless because it created space
> - timeless because it created time
> - immaterial because it created matter
> - powerful because it created out of nothing
> - intelligent because the creation event and the universe was precisely designed
> - personal because it made a choice to convert a state of nothing into something (impersonal forces don't make choices).

Now, I would never take the faith of atheists away from them, because it gives them comfort, and hope that no one will ever hold them accountable. It is also important for them to have some *privatized, subjective* way of looking down on other people, so that they can feel better about themselves, despite their flight from science and reason. I really admire the way that by sheer force of will, they are able to believe things without a shred of objective evidence. But, when we discuss these matters in the public square, I think we should insist that we limit our discussion to the available public, testable evidence.

A research paper written by William Lane Craig, and published in a peer-reviewed journal

of astrophysics is available here. This paper contains thorough refutations of all naturalistic rivals to the big bang theory.

UPDATE 1: Welcome, visitors from The Anchoress. Thanks for the link, Anchoress! 300+ hits and counting… WOW!!!

UPDATE 2: Welcome, visitors from Triablogue. Thanks for the link, gentlemen!

UPDATE 3: Welcome, visitors from Post-Darwinist! Thanks for the link, Denyse. First-time visitors, please take a look around the blog. There are many varied topics here, and most of my posts are not nearly as snarky as this satirical one!

UPDATE 4: Part two in the series on atheism's war against science has been posted here.

Obama’s anti-free-trade policy angers the world

February 1, 2009 | by Wintery Knight | Link | Original Link

Well, I thought that Obama was too smart to enact protectionist policies, but it looks like he does indeed mean to try to plunge the USA into a new depression, just like Hoover did when he signed the Smoot-Hawley Tariff Act in 1930. What protectionism says to consumers is this: working families must pay more for inferior products manufactured by government’s favored special interest groups, (e.g. – unions). The standard of living of consumers of those protected products will be reduced, because consumers are overpaying for something that they could get cheaper elsewhere.

What this means that those of us who prefer to use our dollars for purchases that are important to our worldviews (e.g. – Christianity), is that we will have *less purchasing power* to spend on charity, private schools, apologetics resources, or anything else we want to buy to express our values. Money is the fuel that people use to live out their worldviews in the public square. The more money is wasted by government, the less money we have for our *individual* priorities. And the way that a secular government spends money is never as good as the way an informed Christian individual will spend it.

Reactions to Obama’s “Buy American” plan worldwide have been swift and alarming:

- In Canada, the Globe and Mail’s headline is “Buy American, spark a global trade war“
- In the UK, the Telegraph warns that “Protectionism could destroy us all” and the Times declares “Spat with China raises fears of trade war“
- In Australia, the Canberra Times reports that there are “Fears ‘Buy American’ bid could ignite ignite trade war“

Over at Pat Toomey’s Club for Growth, Andrew Roth notes that India is angered at the prospect of having their exports taxed. The headline from Reuters India is “Policymakers sound alarm over protectionism“. We can expect to pay more for goods imported from other countries, because they will retaliate against our tariffs. More consumer purchasing power is lost!

Over at William J. O’Neill’s Investors Business Daily, an editorial describes how firms such as GE and Caterpillar faces *job losses* because they are denied access to cheap foreign steel. By the way, if you haven’t clicked on the IBD podcasts over there on the rightmost column, what are you waiting for? Those are the best podcasts on the Internet!

Over at the Cato Institute blog, Daniel Ikenson notes that the American Steel industry has been enjoying record profits, and that the steel tarrifs supported by Obama’s plan cause other companies to *lose exports* to foreign nations, because businesses here are forced to pay too much for steel that they could get cheaper abroad.

It was Adam Smith who first explained so long ago:

> It is a maxim of every prudent master of a family, never to attempt to make at

> home what it will cost him more to make than to buy. The tailor does not attempt to make his own shoes, but buys them of the shoemaker. The shoemaker does not attempt to make his own clothes but employs a tailor.… What is prudence in the conduct of every private family can scarce be folly in that of a great kingdom. If a foreign country can supply us with a commodity cheaper than we ourselves can make it, better buy it of them with some part of the produce of our own industry employed in a way in which we have some advantage. (Adam Smith, The Wealth of Nations, Book IV, Chapter II)

A more complete explanation of the effects of imposing tariffs on imports can be found in Robert P. Murphy's new introductory book to free market capitalism, The Politically Incorrect Guide to Capitalism. A review of this book is here. Another good book analyzing free market capitalism applied to a number of different areas including crime and abortion, is Freedomnomics by John R. Lott. A review of this book, by the eminent economist Walter Williams, is here.

Atheism, Christianity and the problem of evil and suffering

February 2, 2009 | by Wintery Knight | Link | Original Link

In Christian theology, a classical definition of evil is found in the work of Augustine of Hippo. He states that the evil is not a thing itself, and therefore is not brought into being by God. Instead, evil is the privation of right order. Or, to put it more simply, evil is the state of affairs when things are the way they ought not to be. So, if a mugger mugs you and steals your money, that was evil, because humans ought not to do that. And if a tsunami leaves thousands of people homeless, that's evil, because the world ought not to be like that. (Let's bracket why God might allow natural evil, such as the latter example, for another post).

The point is that when you talk about evil and suffering, it pre-supposes that the world is not the way it ought to be. But that means that the world ought to be some way. If the world "ought to be" any way other than it is, then that pre-supposes a designer, who had a purpose for the world, i.e. – a way the world ought to be.

But that's not my point today. My point today is that atheists cannot use the apparently gratuitous evil in the world as a disproof that there is a God *until* they define what they mean by evil.

It seems to me that there are 2 choices for what evil could be on atheism. What is NOT open to atheists is the solution above, namely, that evil is a departure from the way things ought to be. Because the universe is an accident on atheism – it is purposeless – there is no way *the universe* ought to be. *We* are accidents on atheism. There is no way *we* ought to be.

So evil must mean one of two things on atheism:

1. Evil means something that the atheist finds personally distasteful. It is a subjective preference that each person decides for themselves. Just as some people don't like broccoli – some people don't like murder or tsunamis. It's up to each person. But that cannot be used as an argument against God, because who says that God's moral purposes ought to be connected to the personal moral preferences of atheists? It won't work.
2. Evil is what society says is counter to the social conventions of a particular time and place. If we decide that murder is against our society's conventions today, then for that time and place, murder is "evil". But then, not signaling when you turn right at a stop sign is also "evil". It's all just made-up conventions. And again, it is difficult to see why God should be bound by a society's conception of good and evil, they are just conventions of accidental people, on an accidental planet, in an accidental universe. (Again, we will bracket the problem of deciding what a society is for this discussion).

So, now I am going to ask you atheists. When you say that there is gratuitous evil in the world, (i.e. – a state of affairs that is apparently pointless, apparently without morally sufficient justification for God to permit it), what do you mean by evil? Does not the invocation of a standard of right and wrong that applies to God himself imply an objective morality? (a moral standard that is independent of personal or cultural preferences) And if there is an objective moral standard like this, where does it come from, on your atheistic worldview?

It seems to me that pressing the problem of evil is inconsistent on atheism. There is no moral standard to hold God accountable to in an accidental universe. You have to *pre-suppose* an objective moral standard, and a designer of the universe who makes that standard and makes it applicable, before you can proceed to hold God accountable to that standard. But then, you have already assumed God in order to argue against him.

Here is a short paper that contains a summary of *everything I know* about the problem of evil, (deductive/ logical, as well as inductive/ probabilistic). If you can only read one short paper on the problem of evil/ suffering, this is what you need to read. Do not pass this paper up – it is *pure wisdom* and will make you effective on this issue in the public square better than anything else out there.

Also, to see these arguments in action, check out the debate here, with William Lane Craig and Kai Nielsen. If you want a book, here is one between William Lane Craig and Walter Sinnott-Armstrong, published by Oxford University Press, 2004, (audio of one of their debates here). One of my favorite scholars on this topic is Doug Geivett. If you can listen to the audio from his lecture on evil, that is *pure wisdom*. It's up on the Academy of Christian Apologetics, (audio). I love the use of "noseeums" in his examples.

UPDATE:

I was over on triablogue.com, and they were commenting on a post over at Victor Reppert's blog C.S. Lewis' Dangerous Idea, on the topic of morality on atheism. Also, there this debate between Douglas Wilson and Christopher Hitchens is fantastic for understanding why morality is irrational on an atheistic worldview.

How divorce laws discourage marriage

February 3, 2009 | by Wintery Knight | Link | Original Link

A friend notified me of this new article by the Canadian journalist Barbara Kay about a recent decision by a judge in Ontario, Canada. The article states that a Toronto judge has awarded custody of the 3 children from a dissolved marriage to the father, as a result of the mental trauma suffered by the children while they were in custody of the mother. The article notes that this is a "stunning and unusual family law decision".

According the Government of Canada's own numbers, sole-custody is awarded to the mother in nearly 80% of divorce cases:

> In the majority of cases (79.3 percent), the mother had sole custody; the father had sole custody in 8.7 percent of cases. Shared custody (a child spends at least 40 percent of the time with each parent) and split custody (one or more children have primary residence with the mother and one or more children have primary residence with the father) were relatively infrequent at 6.2 percent and 5 percent, respectively.

In this particular case, Kay notes that the mother (K.D.) had pressured the children to distance themselves from their father (A.L.). She writes:

> According to the judgment against K. D., she is denied all contact with the girls, even by telephone or text messages She has been ordered not to come closer to them than 300 metres. A. L. has been given the right to confiscate their computers and cellphones. This is necessary, Justice McWatt said, because the mother had so poisoned her children's feelings toward their father that they had lost their capacity for independent judgment in relating to him.

Now, for good men, the thought of losing access to our own children after a divorce is a terrible thing to contemplate. Two-thirds of divorces are initiated by women, often against the wishes of the men, under no-fault, (i.e. – unilateral), divorce laws. Additionally, there is the question of money. Alimony and child support payments can be high, and men can often be required to pay even if they lose their jobs!

In another related story, a Quebec judge overturned a father's grounding of his daughter because the judge felt the grounding was too harsh! Men are not going to feel comfortable about getting married when the courts interfere with families in order to implement their politically correct agenda. Men want to be fathers, but it seems as if the courts are sending men a message: don't marry, don't have children.

Stephen Baskerville, a professor at Patrick Henry College, has written a cover story for Touchstone Magazine in which he explains the danger that faces men and women who choose to marry. This article summarizes Baskerville's new book, and is highly recommended understand how and why the government discourages marriage.

Here is an excerpt from the article:

> Though obfuscated with legal jargon (losing “custody”), what this means is that a legally unimpeachable parent can suddenly be arrested for seeing his own children without government authorization. Following from this, he can be arrested for failure or inability to conform to a variety of additional judicial directives that apply to no one but him. He can be arrested for domestic violence or child abuse, even if no evidence is presented that he has committed any. He can be arrested for not paying child support, even if the amount exceeds his means (and which may amount to most of his salary). He can even be arrested for not paying an attorney or a psychotherapist he has not hired.

This can happen to women as well, according to Baskerville, in certain cases. Christians typically believe in marriage, and research indicates that a stable marriage is the best environment in which to bring up children. Therefore, Christians should be concerned by the government’s attempt to weaken the bonds of marriage by providing spouses with financial incentives to file for divorce, seize custody of the children, drain their ex-spouse of money, and prevent the ex-spouse from having a healthy relationship with the children.

Stephen Baskerville was interviewed on the Chicago-based radio show Extension 720 with host Milt Rosenberg. This interview is alarming, but required listening for men and women contemplating marriage, and for those who want to see marriage encouraged, and not discouraged, by the government and the courts. Here is another interview with Dr. Baskerville, but this one is from the Dennis Prager show.

Marriage is without a doubt good for children, for spouses, and for society. Shouldn’t we be thinking of ways to encourage people to marry, and to stay married, instead of having the government provide incentives to divorce or not marry at all?

UPDATE: Australian study shows that kids are safer when they live with their fathers.

The pro-life position on abortion explained in plain English

February 4, 2009 | by Wintery Knight | Link | Original Link

Now, you may think that the view that the unborn deserve protection during pregnancy is something that you either take on faith or not. But I want to explain how you can make a case for the right to life of the unborn, just by using reason and evidence.

To defend the pro-life position, I think you need to sustain 3 arguments:

1. The unborn is a living being with human DNA, and is therefore human.
2. There is no morally-relevant difference between an unborn baby, and one already born.
3. None of the justifications given for terminating an unborn baby are morally adequate.

Now, the pro-abortion debater may object to point 1, perhaps by claiming that the unborn baby is either not living, or not human, or not distinct from the mother.

Defending point 1: Well, it is pretty obvious that the unborn child is not inanimate matter. It is definitely living and growing through all 9 months of pregnancy. (Click here for a video that shows what a baby looks like through all 9 months of pregnancy). Since it has human DNA, that makes it a human. And its DNA is different from either its mother or father, so it clearly not just a tissue growth of the father or the mother. More on this point at Christian Cadre, here.

Secondly, the pro-abortion debater may try to identify a characteristic of the unborn that is not yet present or developed while it is still in the womb, and then argue that because the unborn does not have that characteristic, it does not deserve the protection of the law.

Defending point 2: You need to show that the unborn are not different from the already-born in any meaningful way. The main differences between them are: *size, level of development, environment* and *degree of dependence*. Once these characteristics are identified, you can explain that none of these differences provide moral justification for terminating a life. For example, babies inside and outside the womb have the same value, because location does not change a human's intrinsic value. More at Stand to Reason, here.

Additionally, the pro-abortion debater may try to identify a characteristic of the already-born that is not yet present or developed in the unborn, and then argue that because the unborn does not have that characteristic, that it does not deserve protection, (e.g. – sentience). Most of the these objections that you may encounter are refuted in this essay by Francis Beckwith. Usually these objections fall apart because they assume the thing they are trying to prove, namely, that the unborn deserves less protection than the

already born.

Finally, the pro-abortion debater may conceded your points 1 and 2, and admit that the unborn is fully human. But they may then try to provide a moral justification for terminating the life of the unborn, regardless.

Defending point 3: I fully grant that it is sometimes justifiable to terminate an innocent human life, if there is a moral justification. One of the best known justifications is Judith Jarvis Thomson's "violinist" argument. This argument is summarized by Paul Manata, one of the experts over at Triablogue:

> Briefly, this argument goes like this: Say a world-famous violinist developed a fatal kidney ailment and the Society of Music Lovers found that only you had the right blood-type to help. So, they therefore have you kidnapped and then attach you to the violinist's circulatory system so that your kidneys can be used to extract the poison from his. To unplug yourself from the violinist would be to kill him; therefore, pro-lifers would say a person has to stay attached against her will to the violinist for 9 months. Thompson says that it would be morally virtuous to stay plugged-in. But she asks, "Do you have to?" She appeals to our intuitions and answers, "No."

Manata then goes on to defeat Thomson's proposal here, with a short, memorable illustration, which I highly recommend that you check out. More info on how to respond to similar arguments is here.

For those looking for advanced resources, Francis Beckwith, a professor at Baylor University, published the book Defending Life, with Cambridge University Press, 2007.

UPDATE: I found a neat video over at Tough Questions Answered of a 12-year old girl making the case for protecting the unborn. This is better than I can do!

Mike Licona to debate Bart Ehrman in April at SES

February 4, 2009 | by Wintery Knight | Link | Original Link

I sent an e-mail to Mike Licona last night to see if he had any upcoming debates. Mike debates in favor of the view that we can know historically, on the evidence, that God raised Jesus from the dead. Mike replied back to let me know that he will be debating Bart Ehrman, a professor at UNC Chapel Hill, *again* at Southern Evangelical Seminary in NC, on April 2, 2009. The topic of their debate will be "Can Historians Prove Jesus Rose From The Dead?"

In Mike's first debate with Ehrman, (audio, video), Licona used the minimal facts approach pioneered by Gary Habermas, which is similar to Bill Craig's approach. Mike's minimal facts approach does not require that the Bible be inspired, inerrant, or *generally reliable*. Mike uses only a fraction of the New Testament, the minimal facts, which are facts that are accepted nearly unanimously by scholars across the ideological spectrum, including atheists. He leans especially hard on 1 Corinthians 15:3-7, which contains the basics of the resurrection narrative and is dated to 1-5 years after the cross.

The minimal facts are accepted because they pass a variety of tests that the other passages do not pass. To be considered a minimal fact, the passage must be cited in one early source, such as Paul's letters or Mark, and it must be in other independent sources. It also helps if the passage is attested to by enemies, or is dissimilar from Jesus' Jewish milieu, or if it embarrasses the people who are recording and preserving the text. So, a fact like the guard at the tomb, which is only recorded in one source, (Matthew), is not a minimal fact.

Licona's 4 facts last time were: 1) Jesus was crucified, 2) Jesus' followers experienced visions of Jesus after his death, 3) Jesus' enemy, Paul, had an experience that transformed into a powerful advocate for Christianity, and 4) Jesus' brother, James, also had a post-mortem experience of Jesus, and changed from being skeptical of Jesus during his lifetime to being a leader in the early church. Both Paul and James were eventually martyred for their new faith in Jesus. This approach to the resurrection is a lot more acceptable to skeptics. There is no blind faith – just pure historical analysis.

Interestingly, Licona does not argue for the empty tomb, as Craig does. In the recent debate between J.D. Crossan and N.T. Wright, I was surprised to hear that Crossan was willing to grant the empty tomb, for the sake of argument, to Wright. Crossan is a radical liberal, so if he grants the empty tomb, then you and I can use it. I think that the fact that the earliest witnesses to the empty tomb were women, whose testimony was not regarded as reliable at that time, enhances the reliability of the empty tomb narrative.

Ehrman argues that the New Testament is not a reliable source for history, because there are manuscripts that differ from other manuscripts. He concludes that the resurrection cannot be proved historically. He also makes a point about how miracles are the "least probable" explanation, (which William Lane Craig demolishes in their debate, see transcript here). These manuscript differences are called variants, and there are quite a

high number of them, because there are quite a high number of manuscripts. The number of variants sounds alarming, until you realize that *no New Testament doctrine is affected by the large number of invariants.*

In Ehrman's debate with Peter Williams on the UK-based Unbelievable radio show, and in Ehrman's debate with Dan Wallace, Ehrman lists the 4 worst problems caused by the invariants:

1. the woman caught in adultery (John 7:53-8:11) is a late addition not present in the earliest manuscripts
2. the long ending of Mark (Mark 16:9-20) is a late addition not present in the earliest manuscripts
3. Jesus was angry and not compassionate when he healed the leper (Mark 1:41)
4. that Jesus died apart from God, and not by the grace of God (Hebrews 2:9)

Now I have to tell you, these disputes are *irrelevant* to standard Christian doctrine. Also, I personally *prefer* the woman at the well story being left out, and I *prefer* angry Jesus in 3). Why? Because I am *snarky*. The only variant that bugs me is the ending in Mark, because I liked the long ending. But none of these "worst cases" affects anything that Mike Licona might say on behalf of the resurrection, which is what the debate is supposed to be about, right?

For further study of Licona and Ehrman, I would recommend the book "The Case for the Resurrection of Jesus", by Gary Habermas and Mike Licona on the resurrection, which is the best introductory book you can get on how to argue the minimal facts case. If you like Lee Strobel's interviewing style, then you can't go wrong with this book, "The Case for the Real Jesus". If you prefer books featuring debates between opposing scholars, check out William Lane Craig against Gerd Ludemann here, (audio of their re-match is here), William Lane Craig against John Dominic Crossan here, (audio of the debate is here), or N. T. Wright against John Dominic Crossan here, (audio of the debate *only* is here).

If you can get the audio for the N.T. Wright and J.D. Crossan debate, that's quite useful because of the strong respondents, (Doug Geivett, Craig Evans and Charles Quarles). The audio from the Ben Wallace vs. Bart Ehrman debate is also worth getting. These are both available to buy here.

Democrats vote to discriminate against students of faith

February 6, 2009 | by Wintery Knight | Link | Original Link

Did you know that Obama's massive stimulus bill contains a provision that "prohibits renovation money for schools that allow religious groups to meet on campus"? Jay Sekulow of the ACLJ describes the provision here. According to this Fox News story, Senator James "Jim" Demint (R. – SC), proposed an amendment to the pork-filled bill to remove the anti-religious provision. However, Demint reported that the amendment failed in the Senate 43-54, with almost all Republicans voting for religious liberty, and almost all the Democrats voting against it. The provision had previously passed in the Democrat-controlled House, with every Republican voting against it.

I think this defeat is a helpful reminder to people of faith about the role of government-run schools, and teacher's unions, in imposing secular-leftist values on the next generation. I recently finished reading Jonah Goldberg's book "Liberal Fascism", in which the author explains what the word *fascist* really means. Fascism is the political philosophy that seeks to undermine individual goals and values, including religious and entrepreneurial values, and to substitute the values of the society, as expressed by the party in power.

A common thread in fascist regimes is the effort to separate children from parents at a young age, so that adult teachers can impose the state's values on the children when they are least able to resist them. That is why, accoring to the Guardian, the National Socialist party abolished homeschooling in fascist Germany in 1938. (A review of Goldberg's book by Canadian author Denyse O'Leary is here). My favorite quote from Goldberg's book is about the role of government-run schools in a fascist state:

> Hence a phalanx of progressive reformers saw the home as the front line in the war to transform men into compliant social organs. Often the answer was to get the children out of the home as soon as possible. An archipelago of agencies, commissions, and bureaus sprang up overnight to take the place of the anti-organic, contra-evolutionary influences of the family. The home could no longer be seen as an island, separate and sovereign from the rest of society. John Dewey helped create kindergartens in American for precisely this purpose — to help shape the apples before they fell from the tree — while at the other end of the educational process stood reformers like Wilson, who summarized the progressive attitude perfectly when, as president of Princeton, he told an audience, "Our problem is not merely to help the students to adjust themselves to world life … [but] to make them as unlike their fathers as possible."

The United States is also heading in this direction. In California, Human Events reported that homeschooling was effectively banned by an activist court. Dinesh D'Souza frankly explains why the left is so intent on keeping control of the schools here. He notes that

secular people do not form families and do not have children, because it is too much of a constraint on their autonomy. Instead, D'Souza writes, secularists simply seize control of the children of religious parents, and pass their values on to the children in the mandatory government-run schools.

This plan has become so successful, that even young evangelicals are abandoning their faith at the ballot box. Phyllis Schlafly recently noted that 32% of young evangelicals voted for Obama in 2008, compared to 16% of them who voted for Kerry in 2004. Some of this slide to the left is due to parents focusing too much on entertainment and material gain. But a large portion of the blame should be pinned on the government-run schools and universities. USA Today notes that 70% of *Protestant Christians* abandon their faith by age 23.

Once you understand that the secular left has an interest in separating children from their parents, you begin to see why they support policies that transfer more familial responsibilities to the state. Higher taxes ensure that mothers *must* work, so that the child's vulnerable pre-school years may be spent with government-certified instructors in day care. The emphasis on sex-education in the government-run schools leads young people into behaviors that later undermine marital stability. And, as Stephen Baskerville argues, the state encourages divorces to make business for itself.

I've argued here that Democrats favor secularizing government-run schools in order to undermine the faith of children. This is something that people of faith, who want to pass on their worldview and values to their children, need to think about. If you voted for Obama for nationalized health care, taxing of the rich, stopping global warming, etc., then *now* may be a good time to think *again*. Do a little studying about what conservatives believe – you may find out that conservatism is more consistent with the goals of faith-based voters than you had first thought.

By the way, as Ezra Levant reports, it happens in Canada, too. Often.

UPDATE: Wow, Ezra Levant is really mad at the University of Calgary for censoring pro-life students! National Post story is here.

Stephen Baskerville on Dennis Prager show today

February 6, 2009 | by Wintery Knight | Link | Original Link

I just received an e-mail from Stephen Baskerville, who is an expert on the effects on marriage and family caused by our divorce laws and divorce courts. He is scheduled to be on the Dennis Prager show today at 2:00 PM Eastern, 11:00 AM PST. (It was pushed back from 1:30 PM to 2:00 PM)
Here are some places where you can listen online:

- WHK 1420
- KRLA 870
- 1280 The Patriot

Or you can try a radio guide here:

- Radio Time – Dennis Prager
- Streaming Radio Guide – Dennis Prager

For more information about Stephen Baskerville, check out his cover story on marriage and divorce for Touchstone Magazine, here.

UPDATE:
Today's show (02/06/09) is available here.
Baskerville's previous appearance (12/19/2007) on the show is here.

BONUS:
An appearance on Milt Rosenberg's Extension 720 is here.

William Lane Craig debates on the Michael Coren show

February 6, 2009 | by Wintery Knight | Link | Original Link

If you're looking for William Lane Craig's appearance on the Michael Coren show, I found them posted over in his Reasonable Faith forum.

Here are the links:

- Part 1
- Part 2
- Part 3
- Part 4
- Part 5

The show is posted in 5 parts. By the way, Bill Craig has published his latest newsletter with details of his January speaking tour in Ontario, Canada, eh? Don't forget – Bill will be touring la belle Province (Quebec, Canada) *this month*.

Government-run health care is bad for patients and liberty

February 8, 2009 | by Wintery Knight | Link | Original Link

Proponents of government-run health care, (i.e. – socialists), want to redistribute wealth from producers to victims. *Producers* create wealth and *victims* engage in risky and/or immoral activities that are likely to require medical treatment. (I am concentrating on medical treatment for culpable activities here). Wealth redistribution reduces economic growth because producers stop producing while victims incur *more* costs, since they do not pay much for their treatment. Eventually, reduced economic growth leads to poor health care, as seen in socialist countries like North Korea, Cuba, Venezuela, Zimbabwe, etc.

Socialists do not trust people to make their own health care decisions, and to deal with the consequences, (i.e. – liberty). In a socialized system, a producer might have his wealth redistributed to victims for services he would never need himself, because of his lifestyle decisions. He might even have his wealth redistributed to victims for services that he objects to on moral grounds, like abortions or sex-changes. He may pay into a mandatory government program for his entire life, without ever making a claim. If at the end of his life, he finally makes a claim, he may be told that he must *get in line* behind the government's favored victims – victims who may not have even paid into the system. To see how this actually happens in Canada, watch these *excellent* 5-minute films from On the Fence Films: Two Women, A Short Course in Brain Surgery, The Lemon, and Dead Meat. Also see this Fraser Institute article.

Imagine how socialism would work if applied to a different business, like auto insurance. *Everyone* would have to carry *mandatory* auto insurance, whether they owned a vehicle or not. People would pay into the system *based on earned income, not based on personal choices, desired coverages or risks.* Different vehicles, driving infractions, vehicle usage, and other risk factors like age would be *irrelevant to the price charged*. Socialized auto insurance would just be a huge transfer of wealth from non-drivers and safe drivers to risky drivers. The socialist system of redistributing wealth to equalize health care outcomes, *destroys* productivity and personal responsibility. For further details, see this Heritage Foundation lecture transcript.

Socialized medicine involves price-fixing. The government is the single-payer, and set the prices that doctors can charge for services. Since doctors cannot make a fair profit practicing medicine, compared to other fields, we get fewer doctors. But since health care is "free" to victims, we get more risky and/or immoral behavior, and increased demand for medical care. Fewer doctors, and more victims results in a shortage of medical care, and waiting lists. Medical costs also increase because doctors often practice "defensive medicine" to avoid exposure to lawsuits from lawyers, worsening the shortage, (Investors Business Daily editorial, podcast). Another factor that increases medical costs is mandatory licensing, which forces hospitals to pay more for labor and supplies, (Cato

Institute podcast). For further details, see this Cato Institute research paper.

Even if the socialist claims that he wants to set up a parallel system to compete alongside the private medical insurers, the government can easily engage in predatory pricing in order to drive out private businesses from the market. The government is far more able to price medical services lower than private alternatives, and run deficits, until their private rivals go out of business. The government does not have stock that private companies could short in order to prevent this predatory pricing. Monopolies are *never* good for the consumer, because consumers can't shop around for the best deal. In a government system, you are forced to pay for services you don't need. The government is already woefully mismanaging Medicare, and Medicaid, (Investors Business Daily editorial, podcast), do we really really want to give them the whole system to manage?

People need to be responsible for their lifestyle choices, and their medical bills. The free market approach preserves liberty, and economic growth. Medical providers have an incentive to lower costs and improve quality. Consumers keep their liberty by taking responsibility for managing their own risks and costs, (see Investors Business Daily editorial, podcast).

It is important to note that upholding traditional morality and traditional relationships, like marriage, helps to reduce medical costs. Government should therefore avoid assaulting religious beliefs, and moral values. An additional problem with socialized medicine is that Christian medical practitioners often have their religious liberty infringed by the government, (see examples here, and here).

These Cato Institute podcasts describe Obama's medical policy proposal, (first, second). For more on Obama's plan, see this Heritage Foundation research paper. For more about socialized health care in other countries, see this Cato Institute research paper. A recent debate on this topic, hosted by the left-wing National Public Radio is here. If you prefer books, there is David Gratzer's book, Sally C. Pipes' book, Arnold Kling's book, and Michael F. Cannon and Michael D. Tanner's book.

A Christian and a postmodernist discuss religious pluralism

February 9, 2009 | by Wintery Knight | Link | Original Link

I listened to this week's episode of the the radio show "Unbelievable", which is broadcast in the UK by Premier Christian radio. Justin Brierly, the host, moderated a dialog between author Joan Konner and Christian philosopher Peter S. Williams. Konner is the dean of the Columbia School of Journalism, and is the author of "The Atheist's Bible". I enjoyed listening to Konner speak, and I admire her for coming on the show. I learned from this podcast that I need to work harder at being more tactful, and gentle with postmodernists. Brierly and Williams do a great job, and I hope that when you listen to the podcast, that you will learn something about how to handle similar challengers.

I thought that I would make a list of some of the points that postmodernists make, because I guarantee that you will have heard some these things before. Many people in our society are guided primarily by emotions, and intuition. For them, there is a tremendous insecurity about what they believe, and the differing beliefs of others makes them uncomfortable. They are upset by absolute claims of fact or morality, because they consider these claims to be exclusive, and judgmental. What upsets them the most is that other people seem to be certain about what they believe, and that these people vote for public policies on the basis of these beliefs. What we'll see is that postmodernists do exactly what they condemn, namely, they exclude, they judge, and they support public policies that they agree with. These are general points, not specific to Konner.

First, postmodernists have view of faith that is a caricature of authentic Christian faith. Postmodernists think that faith is opposed to reason, and evidence. They believe this because they require that all religions are "equally valid". It is not that postmodernists have evaluated the truth claims of different religions. It is they have decided in advance that thinking you're right is mean, and makes people feel bad, and causes wars. Therefore, no faith can be right – all faith is irrational and unsupported. The fact that their own view is absolutist, and exclusive, goes unnoticed.

Second, postmodernists reject reason, science, and any other reality-based support for claims, because supported claims constrain their own subjective will. Postmodernists think that believer's appeals to reason, and evidence, are coercive. This is because they desire complete autonomy to imagine the world based on their own emotions, and intuition. This is especially true for morality. Postmodernists believe that no one has a right to judge the moral practices of others. But, if you disagree with them on their non-judgmentalism, then you are morally wrong. Again, this is self-contradictory, but it goes unnoticed.

Third, postmodernists reinterpret the truth claims made by all religions as myths, (a la Joseph Campbell). That means that every factual claim made by every religion, past, present, future is factually false. No rational analysis or investigation is necessary. For

example, if a religion claimed that universe began to exist, that would be a myth, according to postmodernists. Scientific confirmation from the big bang is irrelevant. No religion can enjoy support from reason or evidence, a priori. Emotional concerns about how exclusive truth claims make people in other religions feel bad is the deciding factor. Again, the claim that no one can make truth claims is self-refuting, because they believe that their claim is true. They don't notice the contradiction.

Fourth, for postmodernists, the purpose of religion cannot be to hold true beliefs about the external world. The purpose of religions must be to make people behave well, because then they are all equivalent, and no religion is excluded. It is irrelevant to a postmodern that Christians claim that their religion hinges on a historical event, (the resurrection), which either happened or didn't. Postmodernists simply presume to tell religious people what their religion really says, and what it really means. Also, postmodernists believe that since all people can invent moral rules and goals for their lives out of thin air, that there is no need for God to ground them. What this means is that according to postmodernists, Stalin's morality is as valid as William Wilberforce's morality. Both have the exact same validity, namely, that they are "true" for the subject.

The postmodernism and moral relativism I discussed above also informs progressive thought, which is why progressives seem to always take the side of evil against the side of good. An amazing lecture given by Jewish comedian Evan Sayet at the Heritage Foundation is probably the best treatment of that point that you will ever see.

For further reading, check out this paper on Christian exclusivism, and this paper on the fate of the unevangelized. Both of them are by William Lane Craig. And remember, it is OK to think you are right, and to disagree with others. But God does not coerce, and neither should you. Share your beliefs, and your reasons, if someone asks you to share with them. The important thing is to appeal to reason and evidence, and to be civil and charitable. Disagree with the person's ideas, but treat the person with respect.

How the left censors free speech in Canada

February 9, 2009 | by Wintery Knight | Link | Original Link

Denyse O'Leary, a Canadian journalist, gives a helpful round-up of the latest news in the war against free speech in Canada. Did you know that it's dangerous to disagree with certain special interest groups in Canada? If you say something that they find offensive, it can land you in front of a kangaroo court. It's sort of like the secular equivalent of the Spanish Inquisition, because you are almost certain to be found guilty. You can be forced to apologize or pay fines, or pay off your accuser. If you don't know what's happening with the Canadian Human Rights Commissions, Denyse's post is a good place to start.

UPDATE: WOW, Denyse has the full transcript of Mark Steyn's speech during his Human Rights Commission trial. She even transcribes Steyn's answers to the questions afterwards. You do not want to miss this post!

UPDATE 2: Things are even worse that I thought. It turns out that you can't even disagree with pro-abortion activists at taxpayer-funded campuses in Canada any more. If a campus organization books a speaker, the other side can just show up and shut it down by screaming and shouting like banshees every time the speaker tries to get a word in. Here is a video of what happened on the campus. Here is an article from the The Chronicle Herald describing the incident. A radio interview with the pro-life speaker on Calgary's CHQR 770 radio station is here.

UPDATE 3: The Calgary Herald takes a stand against the Human Rights Commissions here. The Chronicle Herald defends the free speech of pro-lifers here. And this article from the Calgary Herald is the **best one of all**, it includes a link to the video of the pro-life speaker, Jose Ruba, being shouted down while he tries in vain to politely reason with the enraged protesters.

UPDATE 4: A Toronto Sun article on Mark Steyn's vicious denunciation of the Human Rights Commissions and their war against freedom of speech.

UPDATE 5: National Post is reporting that the University of Calgary is going to ban the pro-life club.

The war between science and atheism, part two

February 10, 2009 | by Wintery Knight | Link | Original Link

In part one, you'll remember that I argued that the progress of science in confirming the big bang disproved atheism, and I on went to speculate about why there are still atheists today, given this tremendous scientific discovery. This time, I want to discuss the fine-tuning of the initial constants and conditions of the big bang and see how atheists responded to these recent scientific discoveries.

In nature, the values of physical constants, (e.g. – the force of gravity), are set at the instant when the universe is created. Initially, atheists assumed that the constants could be any value, and life would still exist. But the progress of science has shown that if these constants were altered even slightly, then the resulting universe would not permit life. For example, physicist Brandon Carter has shown that if the force of gravity were stronger or weaker by 1 part in 10 to the 40th power, life-sustaining stars could not exist. While each possible value of the force of gravity is equally unlikely, the *vast majority* of these possibilities *prohibit complex life of any kind*. That means that any one value picked at random is as likely as any of the others, but it is overwhelmingly likely that the one picked will not permit life.

And how do atheists respond to the evidence of a universe that is finely-tuned for life? Well, there are two responses I've seen. The first is to speculate that there are actually an infinite number of other universes that are not fine-tuned, (i.e. – the gambler's fallacy). All these other universes don't support life. But, lucky us, we just happen to be in the one universe that popped into being out of nothing, and is fine-tuned to an incredible degree for life. What's that you say? "Wintery! How can we be sure that these other universes even exist?" Why, you just have to have faith, because there *is no way of directly observing these other universes.* So, to be an intellectually-fulfilled atheist, you have to believe in billions and billions of demons unobservable universes.

> Short of invoking a benevolent creator, many physicists see only one possible explanation: Our universe may be but one of perhaps infinitely many universes in an inconceivably vast multiverse. Most of those universes are barren, but some, like ours, have conditions suitable for life.
>
> The idea is controversial. Critics say it doesn't even qualify as a scientific theory because the existence of other universes cannot be proved or disproved. Advocates argue that, like it or not, the multiverse may well be the only viable nonreligious explanation for what is often called the "fine-tuning problem"—the baffling observation that the laws of the universe seem custom-tailored to favor the emergence of life.

The second response by atheists is that the human observers that exist today, 14 billion years after the universe was created out of nothing, actually caused the fine-tuning. Now you say to me, "Wintery! How can fairies humans fine-tune constants that were set

before humans even existed!" Well, it's true that causality in science has never been known to go backwards in time. But hey, atheists already believe that the entire physical universe popped into being out of nothing. What's one more anti-science delusion to someone already *against* the *law of conservation of mass and matter*? I mean, if you're already against the progress of science, why not double down?

> …maybe we should approach cosmic fine-tuning not as a problem but as a clue. Perhaps it is evidence that we somehow endow the universe with certain features by the mere act of observation… observers are creating the universe and its entire history right now. If we in some sense create the universe, it is not surprising that the universe is well suited to us.

So what makes people become atheists? It isn't arguments or evidence, because the progress of science repudiates atheism-of-the-gaps. Atheism is really just a long-running tempter tantrum. Atheism is caused when a child's selfish autonomy runs into moral obligations, or when a child feels alienated because they are raised in a minority religion. The extreme reactions to these typical childhood experiences is triggered by the atheism-module of the brain. Scientists now believe that the atheism-module causes atheists to want to start wars, such as the wars of atheistic communism, which killed over 100 million people, and still enslaves millions in North Korea, Cuba, Zimbabwe, etc.

A podcast with scientist Scott Chambers, an active researcher on the fine-tuning is here. Here are two posts (first, second) discussing Newsweek's evasions of the fine-tuning, (related podcast here). Five podcasts with *atheist* scholar Bradley Monton on cosmic fine-tuning are here. Physicist Robin Collins argues here that even if you take the blind leap-of-faith into multiverse-land, *you still need a fine-tuning intelligence*. Further discussions of the *unobservable multiverse delusion* are here and here. Further discussions of the *non-existent observer delusion* are here and here. For a serious, non-snarky, non-satirical look at the psychology of atheism, by a former atheist Professor of Psychology at New York University, look here, (related podcast).

UPDATE 1: Welcome, visitors from The Anchoress. Please take a look around while you are here. And thanks for the link, Anchoress!

UPDATE 2: Welcome, visitors from Colliding Universes. Thanks for the link, Denyse! Denyse's other excellent blogs are Post-Darwinist and Mindful Hack.

Ezra Levant defends free speech on the Michael Coren show

February 11, 2009 | by Wintery Knight | Link | Original Link

In Canada, the right not to be offended trumps freedom of speech and freedom of religious expression. If you offend someone, nothing can save you from the Human Rights Commissions. All that is needed is for a victim to feel offended. The complainant doesn't have to pay anything to lay charges, but the defendant is on the hook for all of his own legal fees. The conviction rate is virtually 100%. Even if you could somehow win, you would still lose time and money while you defend yourself. Penalties can include fines, public apologies, bans on future speech, and even jail time! These are left-wing inquisitions created by left-wing governments who believe in controlling citizens through the force of government.

Ezra Levant and Mark Steyn are the two most prominent defenders of free speech in Canada.

Here is Ezra Levant's most recent appearance on the Michael Coren show. (There is no clip 3) In this show, Levant gets to debate against two left-wing activists, and there are *fireworks going off*. Do not miss this debate!

Clip 1a
Clip 1b
Clip 2
Clip 4

On the Michael Coren show in 2008, Ezra Levant explains the Human Rights Commissions. No debate in this one.

Clip 1
Clip 2
Clip 3
Clip 4
Clip 5
Clip 6

And, as a special bonus, here is Mark Steyn's appearance on the Michael Coren show.

Clip 1
Clip 2
Clip 3
Clip 4
Clip 5
Clip 6

Here is a summary of Ezra's struggle against the Human Rights Commissions. He has spent more than $100,000 defending himself from charges that he offended people. Here

is a summary of what happened to Mark Steyn. He authored the extremely popular book “America Alone”. Steyn was just hauled in front of the Human Rights Commission in Ontario to answer for offending people with his writings.

To see how this affects Christians in particular, consider the case of Stephen Boissoin. You will not believe the sentence that he gets after 5 years of being tried. These anti-free speech laws are not applied equally, they are almost always applied against groups that are hated by the left. When left-wingers get into power, they are not shy about using the full force of government to go after people who did not vote for them. Your human rights are irrelevant to them.

UPDATE: Welcome visitors from the Anchoress! Thanks so much for the link! New readers may want to take a look around since I cover a lot of different topics here, from free speech to economics to science to public policy!

New RNC chairman Michael Steele debates the porkulus on Fox News

February 11, 2009 | by Wintery Knight | Link | Original Link

We have a new chairman of the Republican National Committee, former lieutenant-governor of Maryland, Michael Steele.

Steele's first action on taking command of the Republican party was to *clean house.* In this clip, he goes toe to toe with DNC chairman Tim Kaine on the porkulus package. Boy, is it great to have someone who understands fiscal conservatism and can actually talk about it.

Economist Tom Sowell explains in this piece why Steele is a great choice for conservatives and libertarians.

> Steele not only knows how to talk, he seems to understand the need to talk. In his appearances on television over the years, he has been assertive rather than apologetic. When attacked, he has counter-attacked, not whined defensively, like too many other Republicans. And when criticizing the current administration, Steele won't have to pull his punches when going after Barack Obama, for fear of being called a racist.

For details on what is actually in the porkulus bill, check out Tom Coburn's list.

Here are my favorites:

- $39 billion slush fund for "state fiscal stabilization" bailout
- $5.5 billion for making federal buildings "green" (including $448 million for DHS HQ)
- $1.3 billion for NASA (including $450 million for "science" at NASA)
- $1.5 billion for carbon capture projects under sec. 703 of P.L. 110-140 (though section only authorizes $1 billion for five years)
- $850 million for Amtrak

Do Democrats even care about history? Stimulus packages did not work for FDR in the 1930s, or for Japan in the 1990s. Not only that, but Michelle Malkin is reporting that the porkulus bill contains a mechanism to *nationalize health care.* I already blogged in detail about how well nationalized health care works in the UK and Canada.

UPDATE: Here is an article that an atheist Obama supporter sent me that shows why the porkulus is such a bad idea. Needless to say, he is shocked – *shocked* – that Obama is doing exactly what he said he would do during the campaign. Porkulus!

UPDATE 2: Economist Walter Williams argues that not only will porkulus drive us into a depression, but that it is also unconstitutional. Here is economist Tom Sowell's take on porkulus, "Using long, drawn-out processes to put money into circulation to meet an emergency is like mailing a letter to the fire department to tell them that your house is on fire." Paul over at triablogue laments that we have not reached the day where we give

equal credence to the conclusions of eminent black economists, like Williams and Sowell, in Washington.

John Lott debates gun control on Canadian radio show

February 12, 2009 | by Wintery Knight | Link | Original Link

John Lott is probably the best known academic researcher on gun laws and the effects of gun ownership on crime rates. He discussed the topic on a Canadian radio station CKNW, and did a great job of covering many of the important points in the debate. The commercial-free show is available here. If you are a Canadian, or if you have never heard the other side of the gun control debate, then you need to spend 18 minutes listening to the case against gun control. The case against gun control is something you may *never* hear about in the mainstream media.

Here is a summary of some of the points he touches on during the dialog.

- Lott begins by noting that guns can be used in tragic ways, but that they can *also* be used to prevent crimes. The only way to decide whether gun ownership should be allowed is to compare the ratio between the tragic incidents against defensive gun usage incidents.
- Lott also briefly discusses the media bias in reporting on firearms. The media selects stories that result in actual violence, so that the vast number of defensive gun uses go unreported. These defensive gun uses seldom involve injuries, or even firing a shot. Instead, a crime is prevented by merely displaying or brandishing the weapon, which scares off the assailant.
- Lott notes that gun control laws are only obeyed by law abiding citizens, never by criminals. Thus, the only purpose gun control serves is to increase crime rates by disarming the potential victims of criminal activity. He also argues that gun bans actually increase violent crime and murder rates in countries where bans have been implemented.
- Lott compares crime rates in the USA and Canada using official United Nations surveys. Lott notes that most of the crime in the USA is due to gang violence, and as such is isolated to small areas within a few counties.
- Lott addresses Canada’s gun registries and gun laws specifically. He explains why gun registries are virtually useless for lowering crime rates. Lott also discusses concealed carry laws in the USA, and their effect on crime rates.
- Lott also notes that concealed-carry permit holders commit fewer crimes than off-duty police officers. In other words, private gun ownership doesn’t cause crime, and gun owners are extremely law-abiding.

But there is hope for Canada. This press release, (dated February 9, 2009), states that:

> Saskatchewan M.P. Garry Breitkreuz has introduced a Private Members' Bill to scrap the decade-old Canadian long-gun registry (see link below to Bill C-301).
>
> The long-gun registry was originally budgeted to cost Canadians $2 million, but the price tag spiraled out of control to an estimated $2 billion a decade later. Breitkreuz says it's time to pull the plug on this useless money pit, because the registry has not saved one single life since it was introduced.

Finally, this video clip is a hilarious knock on gun control laws.

Happy Academic Freedom Day

February 13, 2009 | by Wintery Knight | Link | Original Link

You can counter the Darwin Day celebrations with these articles on intelligent design and academic freedom. I got these in my e-mail from the Discovery Institute Center for Science and Culture.

- Professors Show Need for Academic Freedom Bill by The Oklahoma Daily Editorial Board, *The Oklahoma Daily*
- Happy Atheist Day by Dr. Michael Egnor, *Evolution News & Views*
- Happy Darwin Day? by Dr. Jonathan Wells, *The Washington Times*
- Darwin, Intelligent Design, and Freedom of Discovery on Evolutionists' Holy Day by Casey Luskin, *US News & World Report*
- Happy Birthday, Charles Darwin by Dr. Benjamin Wiker, *InsideCatholic.com*
- Darwin's Birth Day by Dr. Geoffrey Simmons, Discovery Institute
- Darwin would teach 'weaknesses,' too by Kelly Coghlan, *Dallas Morning News*
- There is no politically correct science by Dr. John West, *Forbes.com*
- A Neurosurgeon, Not A Darwinist by Dr. Michael Egnor, *Forbes.com*
- The problem of evidence by Dr. Jonathan Wells, *Forbes.com*

Tom Sowell explains how to counter leftist indoctrination in the schools

February 13, 2009 | by Wintery Knight | Link | Original Link

Thomas Sowell is my favorite economist. His latest column explains to parents what they can do to counter the left-wing indoctrination that their children receive in the government-run schools.

Now you might be tempted to think that Sowell is going to tell you parents that you just need to make your children read books that undermine what the secular left teaches them in school. But Sowell doesn't think that will always work:

> Yet trying to undo the propaganda that passes for education at too many schools and colleges, one issue at a time, may not always be the best strategy. There are too many issues on which the politically correct party line is considered to be the only way to look at things.

Instead, Sowell recommends a different strategy: he recommends that you engage in a dialog with your child, (preferably in public, I would add, in front of other people), in which you ask your child one simple question about their view:

> Another approach might be to respond to the dogmatic certainty of some young person, perhaps your own offspring, by asking: "Have you ever read a single book on the other side of that issue?"
>
> Chances are, after years of being "educated," even at some of the highest-priced schools and colleges, they have not.
>
> When the inevitable answer to your question is "No," you can simply point out how illogical it is to be so certain about anything when you have heard only one side of the story– no matter how often you have heard that one side repeated.
>
> Would it make sense for a jury to reach a verdict after having heard only the prosecution's case, or only the defense attorney's case, but not both?

Read the whole article. I run into this problem with non-Christians, Democrats and even anti-intellectual Christians every day. The only solution to their dogmatism is to ask about what they have read on the other side. They answer is *inevitably* "nothing". We Christians should be able to argue for opposing views better than any opponent. And that is why many of my posts focus on interchanges between opposing views. You can never really be convinced of something until you see one side of an argument fail miserably in a rough-and-tumble debate.

USA Today reports that men are fleeing the churches today in droves. Maybe if Christians started emphasizing debate, instead of just praise songs, emotions and prayer, then we might be able to get more men to be interested in Christianity. Men and women are different – if you want men to come back to the church, maybe you should be

emphasizing things we men actually like: confrontation, aggression and *competition.* I could share many stories of how female-dominated churches and campus groups actively fight efforts to approach Christianity in this way.

And this goes double for raising Christian kids. If we take the feminine approach exclusively, and shelter our children from opposing views instead of teaching about them, you can guarantee that your child will fall away from the faith as soon as he leaves home. As USA Today reported, 70% of Protestant Christian children already do exactly that. There is nothing more fatal to the project of building up a child's Christian faith than ordering them around on the authority of *blind faith.* It just doesn't work.

Democrats are weak on military policy and counter-terrorism

February 14, 2009 | by Wintery Knight | Link | Original Link

I was browsing over at The Anchoress and I came across this post which describes how Democrat Senator Dianne Feinstein has inadvertently leaked that the USA launches Predator missions from Pakistan. This may cause the government to lessen their cooperation with American military efforts in the region because a significant amount of the population of Pakistan will not react well to this news.

This sort of error is not the exception but the rule with Democrats. Democrats have a reputation for not taking defense and counter-terrorism seriously. According to this post over at the American Thinker, the 9/11 tragedy was mostly due to a failure in intelligence caused by a "wall" between different intelligence-gathering organizations.

> Gorelick, an appointee of Bill Clinton, is the one who constructed the wall of separation that kept the CIA and the FBI from comparing notes and therefore invading the privacy of nice young men like, say, Muhammed Atta and Zacarius Moussaoui. While countless problems were uncovered in our intelligence operations in the wake of 9-11, no single factor comes close to in importance to Jamie Gorelick's wall.
>
> In fact, it was Gorelick's wall, perhaps more than any other single factor, that induces some people to blame Clinton himself for 9-11 since he appointed her and she acted consistent with his philosophy of "crime fighting." She put the wall into place as Deputy Attorney General in 1995.

George W. Bush's bold action abroad gave us 7 years free from terrorist attacks on American assets. If there is one thing that deters future attacks, it is military invasions of countries that support and/or harbor terrorists. They understand military force. For Bush, one terrorist attack was enough to get us to respond with force.

As a result of the Bush doctrine of invading states suspected of developing and/or proliferating WMDs, Libya discontinued its weapons program and invited inspectors to come in and cart away all of its research equipment. That was the Bush doctrine – which Libya believed only because they saw that we were willing to back up our demands with force. We can have peace if our enemies believe that we have the will to go to war, and that our enemies fear that they will lose that contest.

Contrast George W. Bush's immediate response to terrorism with Democrat Bill Clinton. According to Byron York, we had *four* terrorist attacks during Clinton's presidency.

> So Clinton talked tough. But he did not *act* tough. Indeed, a review of his years in office shows that each time the president was confronted with a major terrorist attack — the February 26, 1993, bombing of the World Trade Center, the Khobar Towers attack, the August 7, 1998, bombing of U.S. embassies in Kenya and

> Tanzania, and the October 12, 2000, attack on the USS *Cole* — Clinton was preoccupied with his own political fortunes to an extent that precluded his giving serious and sustained attention to fighting terrorism.

How did Clinton respond to these four attacks? According to this interview with Richard Miniter, President Clinton was much less aggressive than Bush was, during his two terms. Bush's administration did not fear public opinion, but Clinton's administration did. Miniter lists *sixteen* of the Clinton administration's failures to treat terrorism as a serious threat. Below, I cite my favorites. *Read the whole list!*

> **Lopez:** In sum, how many times did Bill Clinton lose bin Laden?
>
> **Miniter:** Here's a rundown. The Clinton administration:
>
> …
>
> 4. Did not militarily react to the al Qaeda bombing in Riyadh, Saudi Arabia.
>
> …
>
> 7. Objected to Northern Alliance efforts to assassinate bin Laden in Afghanistan.
>
> 8. Decided against using special forces to take down bin Laden in Afghanistan.
>
> …
>
> 11. Clumsily tipped off Pakistani officials sympathetic to bin Laden before a planned missile strike against bin Laden on August 20, 1998. Bin Laden left the camp with only minutes to spare.
>
> 12-14. Three times, Clinton hesitated or deferred in ordering missile strikes against bin Laden in 1999 and 2000.
>
> 15. When they finally launched and armed the Predator spy drone plane, which captured amazing live video images of bin Laden, the Clinton administration no longer had military assets in place to strike the archterrorist.
> 16. Did not order a retaliatory strike on bin Laden for the murderous attack on the USS *Cole*.

When you look at the facts, we begin to understand *why* Democrats perform so poorly on national security issues. Remember John Kerry's global test? Kerry thought that our national security should be partly based on world opinion. (Ironically, Kerry voted against the first war in Iraq, when the whole world supported us in the liberation of Kuwait).

Republicans, on the other hand, believe in peace through strength.

> In foreign policy, Reagan sought to achieve "peace through strength." During his two terms he increased defense spending 35 percent, but sought to improve relations with the Soviet Union. In dramatic meetings with Soviet leader Mikhail Gorbachev, he negotiated a treaty that would eliminate intermediate-range nuclear missiles. Reagan declared war against international terrorism, sending American bombers against Libya after evidence came out that Libya was involved in an attack on American soldiers in a West Berlin nightclub.

The differences between the two parties could not be more clear. Weakness provokes war. Wars start when our enemies believe that they can strike us with impunity. Military strength, and the will to use it, deter aggression.

Porkulus bill reverses welfare reform and nationalizes health care

February 15, 2009 | by Wintery Knight | Link | Original Link

This post is just a quick summary of what the spendulus bill actually does. The Heritage Foundation notes that the bill reverses welfare reform, threatens religious liberty and effectively federalizes health care.

> Against the recommendations of the Congressional Budget Office, he will sign this bill. Despite returning the nation to a sea of dependency by completely reversing President Clinton's welfare reform in 1996, he will sign this bill. Despite the threat to religious freedom cleverly disguised in the small print, he will sign this bill. Standing steps from the federal agencies he plans on doubling in size through cherry-picked liberal programs, he will sign this bill. Using an economic emergency to shield the liberal goal of federalizing your health care, he will sign this bill. And despite the overwhelming majority of Americans in poll after poll saying 'no' to this bill, he will say 'yes'.

The National Review has more on the reversal of the welfare reform, which was passed by Newt Gingrich and signed by Clinton. Porkulus actually makes the welfare problem *worse* than before 1996.

> Under the provisions in the stimulus bill, states will once again be paid a bounty for expanding their welfare rolls. As reported by Robert Rector of the Heritage Foundation, the federal government will now pay states 80 percent of the cost for each new family they sign up for welfare. That means that states will get $4 for every $1 they spend. This will leave the main welfare program, Temporary Assistance to Needy Families (TANF), with a funding mechanism similar to the one that supports Medicaid. As Brian Blase argues here, Medicaid's funding ratio, which gives states $1 to $3 for every dollar they spend, has caused state Medicaid spending to skyrocket. If Medicaid's dollar-for-dollar model has proved ruinous, Obama's new $4-to-$1 ratio for welfare will prove, in all likelihood, four times so.

The Cato Institute's blog explains how porkulus will balloon the budget deficit, and also how it is full of pork. According to the Tax Foundation's Joseph Henchman, only about 24% of the bill is "tax cuts", and not the good kind. Arnold Kling, speaking at a Heritage Foundation/Club for Growth event, argues that the right thing to do would have been to cut payroll taxes. Cutting payroll taxes *would* stimulate the economy. The Competitive Enterprise Institute notes that Cato assembled 200 economists who opposed the Generational Theft Act. CEI also notes that our current national debt is 11 trillion and that we owe 451 billion in interest per year, *before* porkulus even passes.

CNS News reports that the Generational Theft Act was passed without a single Republican

or Democrat in the House or Senate reading it.

> Sen. Frank Lautenberg (D-N.J.) predicted on Thursday that none of his Senate colleagues would "have the chance" to read the entire final version of the $790-billion stimulus bill before the bill comes up for a final vote in Congress.
>
> "No, I don't think anyone will have the chance to [read the entire bill]," Lautenberg told CNSNews.com.

Or, if you like video, you can see John Boehner's disgust with the hiddenness of spendulus here. So much for "transparency". The Democrats also broke their promise to allow the public to see the final version of the bill for 48 hours, before it was voted on. I highly recommend watching this 1 minute clip. At least the Republicans in the House did not provide cover to Obama. He will own the mess he created. Too bad the Democrats aren't owning Clinton's Community Reinvestment Act, which caused a lot of this sub-prime lending mess in the first place.

For details on what pork is actually in the porkulus bill, check out Tom Coburn's list. (This may not reflect the last minute copy from Friday).

Why doesn’t God provide more evidence that he exists?

February 17, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Apologetics 315! Thanks for the link Brian!

Over at economist Robert P. Murphy’s blog, a recent post makes the point that Jesus had a reason for teaching in vague parables instead of giving detailed lectures like a university professor.

> Jesus used parables to get across a watered-down version of His true message, because the masses were not prepared–as His apostles were–to literally discard their old lives and follow Him 24/7. So they couldn’t possibly understand what His mission really was.

This made me think about the problem of divine hiddenness. You may hear that argument when talking to atheists, as in William Lane Craig’s debate with Theodore Drange, (audio, video). Basically the atheist’s argument is that 1) God wants people to know about him, 2) reasonable people don’t know about him, so then 3) he isn’t there to be found.

Basically, the atheist is saying that he’s looked for God real hard and that if God were there, he should have found him by now. After all, God can do anything he wants that’s logically possible, and he wants us to know that he exists. To defeat the argument we need to find a possible explanation of why God would want to remain hidden when our eternal destination depends on our knowledge of his existence.

Well, Dr. Michael Murray, a brilliant professor of philosophy at Franklin & Marshall College, has found a reason for God to remain hidden. He argues that if God reveals himself too much to people, he takes away our freedom to make morally-significant decisions, including responding to his self-revelation to us. Murray argues that God stays somewhat hidden, so that he gives people space to either 1) respond to God, or 2) avoid God so we can keep our autonomy from him.

Doing the right thing just to avoid punishment is NOT what God wants. If it is too obvious that God exists and that he really will judge us, then people will respond to him and do moral things out of self-preservation. But God wants us to respond to him out of interest *in him*, just like we might get to know someone we admire. God has to dial down the immediacy of the threat of judgment, and the probability that the threat is actual. That leaves it up to us to respond to God’s veiled revelation of himself to us, in nature and in Scripture.

(Note: I think that we don’t seek God on our own, and that he must take the initiative to reach out to us. We are free to resist his revelation, at which point God stops himself short of coercing our will. We are therefore responsible for our own fate).

The atheist’s argument is a logical/deductive argument. It aims to show that there is a

contradiction between God's will for us and his hiding from us. The argument requires that God has *no* possible reason for remaining hidden. When Murray offers a possible reason, the argument is defeated. In order for the atheist's argument to go through, he must be able to *prove* that God does not have *any* reason for being hidden. The atheist has to be able to prove that God could provide *more* evidence of his existence without interfering with the free will of his creatures.

Michael Murray's home page is here.

His first paper on divine hiddenness is here:
"Coercion and the Hiddenness of God", American Philosophical Quarterly, Vol 30, 1993.

Murray has defended the argument in works published by prestigious academic presses such as Cambridge University Press, (ISBN: 0521006104, 2001) and Routledge (ISBN: 0415380383, 2007). The book chapter from the Cambridge book is here. The book chapter from the Routledge book is here.

Michael Murray's papers are really fun to read, because he uses hilarious examples. (But I disagree with his view that God's work of introducing biological information in living creatures has to be front-loaded).

This exposition of the problem of divine hiddenness also touches on the topic of religious pluralism. One of the reasons why Christians are so soft on making exclusive theological claims is that we don't talk much about evidence with non-Christians. Try it! It turns out that most people (even Christians) are pretty lazy about investigating what God is really like.

In fact, you can confront people with facts that disprove their religion and they may not care, especially if they are very distracted by day-to-day issues. For example, try telling atheists about the findings of science from the big bang and fine-tuning of the universe. See how quickly they deny that science has any bearing on religion? People don't want to respond to evidence, and God gives them space to avoid the evidence.

People choose to separate themselves from God for many reasons. Maybe they are professors in academia and didn't want to be thought of as weird by their colleagues. Maybe they didn't want to be burdened with traditional morality when tempted by some sin, especially sexual sin. Maybe their fundamentalist parents ordered them around too much without providing any reasons. Maybe the brittle fundamentalist beliefs of their childhood were exploded by evidence for micro-evolution or New Testament manuscript variants. Maybe they wanted something really bad, that God did not give them. How could a good God allow them to suffer like that?

The point is that there a lot of people who don't want to know God, and God chooses not to violate their freedom by forcing himself on them. God wants a relationship – he wants you to respond to him. (See Matthew 7:7-8)

If any Calvinists are reading this, I'm really sorry that I am wrong, but it was pre-destined that I would be wrong. That's a little humor for you. Ouch! Stop hitting me!

Here's more terrific stuff from Dr. Murray:

“Who’s Afraid of Religion?“, Inaugural Lecture delivered March 30, 2006. Franklin and Marshall College.

“Seek and You Will Find“, in God and the Philosophers. Thomas Morris, editor. Oxford: Oxford University Press. 1994.

UPDATE 1: Welcome visitors from the Anchoress! Thanks so much for the link! New readers may want to take a look around since I cover a lot of different topics here, from free speech to economics to science to public policies!

UPDATE 2: Welcome, visitors from Robert P. Murphy’s blog Free Advice. Please take a look around – the purpose of my blog is to help Christians to integrate their faith with other areas of knowledge, especially *economics*! For those of you who don’t know, Dr. Murphy is the author of the greatest book on economics ever written (and I’ve read The Road to Serfdom!). This is a book for *everyone* – and it’s the *first* book laymen should read on economics.

UPDATE 3: Welcome, visitors from Colliding Universes. Thanks for the link, Denyse! Denyse’s other excellent blogs are Post-Darwinist and Mindful Hack.

William Lane Craig Ontario debate videos (York, Toronto, Waterloo)

February 17, 2009 | by Wintery Knight | Link | Original Link

Video and audio from William Lane Craig's January 2009 speaking/debate tour in Ontario, Canada are here.

1. DOES GOD EXIST?

VIDEO: William Lane Craig vs Ronald De Sousa at York University (DivX Video File)

I watched this one and this was a *lively* debate, with cross-examination. I recommend this one, De Sousa is fully engaged in the debate. They've debated before. He really bears his burden of proof and doesn't give an inch. He makes a lot of emotional denunciations, like "Christians are mean" and "the Bible is mean". He proposed the unobservable multiverse to explain the fine-tuning. Is this what atheism has come to? Belief in fairies in order to weasel out of the progress of science?

He argues that the laws of physics, (*math formulas* that describe physical regularities), *caused* the entire physical universe to come into being. He argues that morality is what most people do in particular times and places, and Craig nails that. I found it silly to argue that morality is what people decide, yet God is expected to conform to this changing standard or he's evil. I blogged about that problem here. De Sousa's problem of evil argument is pretty vague. This is a solid engagement!

2. DOES GOD EXIST?

AUDIO: William Lane Craig vs James Robert Brown at the University of Toronto
Part 1 (welcome) Part 2 (Intro) Part 3 (Debate 1) Part 4 (Debate 2) Part 5 (Q&A)

They've known each other for a while and debated before. I just listened to the first two speeches and it sounds lame. Brown is a good speaker, but he talks about arguments that Craig never raises, like Aristotle's prime mover and Behe's irreducible complexity. He also started out with the genetic fallacy about how beliefs originate. His speech is really disorganized, flipping between snark and argument. He also proposed the unobservable multiverse to explain the fine-tuning. Sigh.

He believes in objectively morality, but he believes that there is no purpose in life, (no reason to *follow* the moral rules beyond personal satisfaction). He tried to argue the problem of evil, but it was not rigorous. Too much snark about Greek gods and flat earths. Atheists seem to think that the high number of false religions somehow disproves the claim of Christianity to be correct. There are lots of wrong answers to math questions – how does this undermine the correct answer? Because it hurts the other people's feelings? WHO CARES!

3. DOES GOD MATTER?

VIDEO: William Lane Craig vs Christopher Dicarlo at University of Waterloo (Video)
(Or, watch it in 14 Youtube clips, starting here).

This is a pretty lame debate. Dicarlo is completely out of his element and has probably never debated a Christian scholar in his life. I don't recommend this debate. I found him to be as uninformed as he was insulting.

I also posted video of Bill Craig's appearance on the Michael Coren TV show, here. Bill's latest newsletter talks a bit about his upcoming Quebec tour in February 2009:

> Next week I'll be back in Canada, this time in the even colder climes of Quebec. I have a debate on Jesus' resurrection scheduled with the Muslim apologist Shabir Ally at McGill University on February 11, sandwiched between lectures I'll give in French at L'Université Laval and L'Université de Montréal on February 10 and 12 on "Dieu Existe-t-il?" As always we appreciate your prayers!

By the way, I mailed my annual donation for Bill's ministry today. If you like what Bill does, be sure and stop by his Reasonable Faith web site and leave him a contribution. You want to participate in the work of this fine defender of Christianity. If you can't spare the money, then please *pray* for Bill.

12-year-old pro-life girl stuns pro-choice establishment with speech

February 17, 2009 | by Wintery Knight | Link | Original Link

This amazing 12-year-old girl delivers a defense of the pro-life position using reason and evidence. Be sure that you check out this video of her speech and read the full story here. She's definitely bound for greatness!

Excerpt from the article:

> "She was also told that if she went ahead with that topic, she would not be allowed to continue on in the speech competition," Lia's mother wrote in the email to the Moral Outcry blog. "Initially, I tried helping her find other topics to speak on, but, in the end, she was adamant. She just felt she wanted to continue with the topic of abortion. So she forfeited her chance to compete in order to speak on something she was passionate about."
>
> …
>
> At the schoolwide competition, the mom said one pro-choice teacher on the judge's panel "didn't even want to hear" the speech, and stepped down from the panel before Lia began. After the speech, which Lia's family said was well-received by both students and teachers, the judges initially told Lia she had indeed been disqualified. But controversy among the judges eventually led to a reversal, and Lia's family learned the next day that the panel agreed the girl deserved to win the competition.

Some men and women that I've met seemed to abandon apologetics and polemics in order to to get along with everyone. They also believe that God wants them to be non-confrontational with people. So they never disagree with others about anything. Well, let this young lady be a lesson to us all about the need to stand up to our opponents. I don't think we should give up disagreements with others on important things, just so we can feel happy and be popular!

Lia has *courage*, something that I admire very much. Contrast courageous Lia with Barbara Kay's piece on abortion, which Stephanie Gray demolished here. As someone who normally loves Barbara Kay's pro-male, pro-marriage articles, I was really disappointed with her this time.

Lia had to fight hard to get the chance to even speak in the government-run public schools. Another example of how the pro-choice establishment responds to pro-life debaters is here. Jennifer Roback Morse notes that students can't even defend traditional marriage in public schools, either. My own short defense of the case for the pro-life position is posted here.

Bobby Jindal pushes education reform in Lousiana

February 18, 2009 | by Wintery Knight | Link | Original Link

Governor Jindal speaks about budget reform

Last year, my favorite Governor, Bobby Jindal, passed several laws to address discipline problems in the schools. One bill's goal was to re-establish discipline in classrooms by empowering teachers. Another bill sought to protect teachers from frivolous lawsuits. A third toughens penalties for students who are absent or tardy. That was a great start, especially since it was miles away from the typical teacher union plan to spend more money without any guarantee of better student achievement.

But he goes even further here, in a post dated 2/17/2009. First, he expands the laws governing discipline in the classroom even further.

> We will give teachers more authority to remove students from the classroom for unruly behavior, require that parents be notified when their child is removed, and administrators will have to give their teachers feedback and management skills to help them work with misbehaving students.
>
> Additional plans to increase discipline include requiring that suspended students make up missed work, permitting courts to help our schools hold parents accountable for attending mandatory intervention programs with their kids, and to allow schools to work with the courts to enforce truancy penalties. These steps will ensure that not only teachers and administrators will be taking a more active role in discipline – parents will be held accountable as well.

He also proposes to strengthen charter schools.

> …we will require that our public elementary and secondary education boards use a high-quality third party review process for approving charter school applications. By ensuring that all applications are measured by the same high-quality standards, we can make certain that only the best applications are approved.

The regulation of charter schools is OK because as I understand it, charter schools are public schools. And lastly, he proposes something that the teacher unions and children will hate, but that parents and taxpayers will love: *teacher and student evaluation criteria*.

> …we will work to implement a comprehensive value-added assessment model, which will aid our schools in better determining teacher effectiveness and student improvement. Our state has completed nationally recognized research, which was recently praised by the National Council on Teacher Quality, dealing with the use of value-added data well-positions in teacher preparation programs to improve our current system. This model takes student achievement into account, which better informs our parents, teachers, and kids on the progress our students are making.

The article also mentions a dropout prevention program that is coming out soon. The press release goes on to discuss budget reforms and coastal infrastructure. He proposes web sites to make budget expenditures transparent to the taxpayers, as well as subjecting all spending to accountability standards.

Bobby Jindal, along with Mark Sanford in South Carolina, are my two favorite governors. Being a person of color myself, it is a real joy for me to see an Indian-American man *universally* regarded as the savior of the Republican party. In the Republican primaries of 2008, I favored Fred Thompson, because he had good ideas. But Jindal is a policy *genius*. And at 38 years old, he has youth, charisma and passion. What we need in the Republican party are compelling ideas, and people who are willing to debate with our opponents in order to convince them.

To find out more about Bobby Jindal, check out these links:

Michele Bachmann explains why we need to cut corporate tax rates

February 18, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

Michele Bachmann is by far my favorite House Representative. In a post dated 2/17/2009, she draws attention to the little-known fact that the combined corporate tax rate of the United States is the *fourth highest* in the world. This is important because the higher to corporate tax rate, the more likely it is that a corporation will move overseas and lay off all of its American workers. Also, a lower corporate tax rate attracts the best and brightest from abroad to move here to start their businesses, powered by American workers.

> This might come as a surprise to you, but the United States is near the top of the list of industrialized countries with the highest corporate tax rates.
>
> You may be asking yourself "so what," or "who cares," but it's important to recognize that lower corporate tax rates result in attracting more investment capital. A reduction of the federal corporate tax rate would increase firms' productivity and investment incentives, and ultimately stimulate our nation's long-term competitiveness by enhancing economic freedom. The end result would be a boon to your family budget.

The problem gets even worse when you realize that many eastern European nations are slashing their corporate tax rates and even imposing flat taxes, leading to astonishing economic growth. This growth attracts foreign investments away from the USA, because investors can get a better return wherever there are lower corporate tax rates.

Bachmann post cites a study from KPMG showing just how bad the USA is compared to other nations.

> "U.S. corporate income tax rate is higher than all other global regions—14 percentage points higher than the global average and nearly 17 percentage

> points higher than the average among European Union nations. Of the 106 countries surveyed, only the United Arab Emirates, Kuwait, and Japan impose a higher corporate tax rate than the combined rate of 40 percent. The United Arab Emirates and Kuwait each have a staggering tax rate of 55 percent; Japan's rate is 40.69 percent."

She also cites alarming figures from Heritage Foundation.

> "Even Europe's old welfare states have joined the aggressive tax cut parade: Sweden has cut its corporate tax rate to 28 percent from 60 percent; Norway's rate has dropped over 50 percent to 28 percent; and Denmark's corporate tax rate is now 25 percent."

Is it any wonder that American firms are laying off workers and shipping jobs overseas? Cutting corporate tax rates creates jobs, increases economic growth and, eventually, increases consumer spending. If you don't believe me, believe the 69-page research paper published by the Congressional Budget Office. The Tax Foundation summarizes their findings here.

> A new study from three prominent economists finds that employees suffer most when their corporate employers must pay high corporate taxes. That contradicts the theory that has prevailed for decades — that corporate taxes mainly hurt investors — but it supports a recent CBO study by Randolph that found workers bearing 70 percent of the burden of corporate income taxes.
>
> …
>
> They find that the workers' share of the corporate tax burden ranges from 45 to 75 percent.

The Tax Foundation has a complete study of corporate tax rates across the world. We are not winning. We are losing. *Badly.*

On a positive note, I find it charming and delightful when women speak passionately about how fiscal conservatism supports marriage, family and charity. Bachmann and her husband Markus run their own business. She's worked as a tax lawyer and an elected legislator, but she still found time for a period of home-schooling. And not only did she raise her own 5 children, but also *23 foster children.*

In her speech at the Republican National Convention in 2008, (video, transcript), Bachmann makes the connection between fiscal conservatism, small government, a strong family and private charity.

> As Republicans, we recognize that service is an innately personal characteristic. It is best achieved by individuals and community groups, faith-based organizations and charities. And, service thrives best in an environment of freedom. Government fosters service best when government binds it least.
>
> …

> As Republicans, we recognize that when you keep more of your hard-earned dollars, you are free to spend it as you choose on the charities that touch your heart and make a difference in your community.

Bachmann believes in marriage, family and charity. My favorite quote from her is from her profile in World Magazine.

> Bachmann says for her one thread ties all the day's obligations together: "radical abandonment to God's call."

For more on big-government socialism and its conflict with marriage, family and charity, see this video lecture, by the eminent economist Jennifer Roback Morse.

William Lane Craig, Lee Strobel and Christopher Hitchens panel discussion

February 18, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Audio and video from a panel discussion with Hitchens, Craig, etc. is linked here.

UPDATE: My play-by-play transcript of the debate is here.

This just in… William Lane Craig, Lee Strobel, Doug Wilson, Jim Denison and Christopher Hitchens will be participating in a panel discussion at the Dallas Convention Center. The event is being organized by Christianity Today and is being held on **Saturday, March 21, 2009 from 1:00 – 3:00 PM.**

The event is on the web here.

> The New Atheists usually make two charges against Christianity: (1) that it is untrue and (2) that it is harmful. A panel of apologetics experts respond to an atheist critic with evidence from Scripture, science, and history about why the faith is both reasonable and good for the world.
>
> **Moderator**: Stan Guthrie, *Christianity Today*
> **Panelists**:
>
> - Lee Strobel, *The Case for the Real Jesus, The Case for a Creator* (Zondervan)
> - William Lane Craig, *Reasonable Faith* (Crossway)
> - Douglas Wilson, *Is Christianity Good for the World?* (Canon Press)
> - Christopher Hitchens, *Is Christianity Good for the World?* (Canon Press) and *God Is Not Great* (Twelve Books)
> - Jim Denison, *Wrestling with God* (Tyndale)

More information about the 2009 Christian Book Expo is here.

Video from Hitchens' last debate with Dinesh D'Souza, is here.

There is one thing you really have to admire about Christopher Hitchens, in addition to his sound views on the war on terror. And that is that he has *never* run from a debate with anybody. It seems like it took forever to get Richard Dawkins to face-off against John Lennox, but Hitchens has *no fear.* He's debated some pretty good Christian scholars, like Frank Turek (video) and Douglas Wilson (transcript).

You have to admire the man, and I hope that he does a good job of presenting his views and that our side, and the audience, is courteous and appreciative. This man has courage.

Incidentally, the Dawkins-Lennox debate is here, if you haven't seen it. It's a hoot, but it's not my preferred debate format. I don't know of any other debates with the other new atheists… if anyone has any links, post it in the comments.

UPDATE: I analyze Hitchens' case against God here, from his debate against Frank Turek.

Ezra Levant: “the best news on the freedom of speech front in a year!”

February 19, 2009 | by Wintery Knight | Link | Original Link

Ezra Levant, champion of free speech

Alberta is the most conservative province in Canada, and the most free. It is therefore shocking that they have one of the worst Human Rights Commissions in the country, just behind British Columbia and Ontario. But it looks like there may finally be hope for free speech in Alberta, at least, as Ezra reports here.

Ezra begins by recounting his own brush with the Alberta Human Rights commission.

> Fifteen government bureaucrats and lawyers investigated me for 900 days, leaving me with $100,000 in legal bills — and the taxpayers of Alberta out five times that — before the charges were dropped.

He notes how the phony right to not be offended now trumps real civil rights, like freedom of speech, freedom of the press and freedom of religion. But there is hope. Lindsay Blackett, the provincial Cabinet minister in charge of the Alberta HRC, was interviewed by Rick Bell in the Calgary Sun. And he is not happy about their little kangaroo court.

Here is my favorite quote from the interview:

> “People shouldn’t feel they can’t come to Canada, like a university professor who talks about a subject matter and then there are reprisals,” says the cabinet minister.
>
> “They should have the ability to say what they say and somebody should have their ability to have the counter argument. That is what a free and open society does. Let’s get away from trying to mediate everybody’s feelings.”

And this one:

> Lindsay talks about being turned down by a girl at a school dance with all his pals watching.
>
> “You feel about two inches tall. I guess maybe I should have taken her to the Human Rights Commission because I had hurt feelings. Where does it end?”

Levant concludes that the interview is “the best news on the freedom of speech front in a

year”. We can only hope that Blackett acts on his convictions. *Fire. Them. All.*

UPDATE: If you want to see Ezra Levant in action against leftist opponents of free speech, click here.

Canadian-raised comedian explains what's wrong with socialized medicine

February 19, 2009 | by Wintery Knight | Link | Original Link

I don't know what it is about Canadians, but they sure have talented comedians. I loved my recent post on health care, in which I cite research and podcasts from practically every think tank out there. So many wonderful facts, figures and evidences! But I know that some of my readers want to learn about health care by laughing and having "fun". Ick!

But, guess what? I've found the perfect video clip for you. By a guy who grew up with in the most progressive city in Canada – Montreal. If this doesn't cure you of supporting socialized medicine, nothing will! If you want more of his videos, his web site is here. He has videos on global warming, abortion, terrorism, the auto bailout and other interesting topics.

By the way, have you guys heard of this guy Zo? He is awesome! This particular video clip has over 800,000 views. He covers health care, economics, energy and foreign policy. Can this guy talk! He needs to have his own radio show. Zo has a ton of videos. His web site is here.

Split decision on Texas evolution standards favors academic freedom

February 20, 2009 | by Wintery Knight | Link | Original Link

Over at the Discovery Institute's Evolution News blog, they recently reported that the Texas State Board of Education reached a split decision on the state standards for teaching evolution.

Evolution News says this in their post:

> Kudos to the *New York Times* for filing a story on the actions of the Texas State Board of Education that actually describes what happened last week. Unlike much of the rest of the newsmedia, the *Times* doesn't tell only half of what happened or play up the hysterics. The story's even-handed title is telling: "Split Outcome in Texas Battle on Teaching of Evolution."

The NYT article they mentioned explains the compromise reached by the Texas State Board of Education.

First, the bad news:

> …the board voted to drop a 20-year-old mandate that science teachers explore with their students the "strengths and weaknesses" of all theories.

But the board also passed some good amendments, among them this one:

> …one that would compel science teachers to instruct students about aspects of the fossil record that do not neatly fit with the idea of species' gradually changing over time, like the relatively sudden appearance of some species and the fact that others seem to remain unchanged for millions of years.

Let me explain *why* this is a big win for ID. One of my previous employers was a major academic publishing company. By major, I mean my alma mater's campus library featured academic publication databases that I helped to code. In this company, it was well known that California and Texas were the two most important states, because their textbook standards set the guidelines for the other states.

The NYT article explains:

> Whatever the 15-member board decides then will have consequences far beyond Texas, since the state is one of the largest buyers of textbooks in the nation. The new standards will be in place for the next decade, starting in 2010, and will influence the writing of the next generation of biology texts, which the state will order this summer.

John G. West of the Discovery Institute evaluates the board's decision as positive:

> "They did something truly remarkable today," John G. West of the Discovery

> Institute, a group that questions Darwinism, said in a statement. "They voted to require students to analyze and evaluate some of the most important and controversial aspects of modern evolutionary theory."

I actually have podcasts for you of the *testimonies* of pro-ID scholars given to the Texas Board. If you want to learn how scientists argue for academic freedom on issues of origins, you should listen to these three 15-minute podcasts.

1. My favorite ID scholar Stepen C. Meyer testified on the Cambrian explosion and the fossil record, (podcast, article). Meyer holds a Ph.D in the Philosophy of Science from Cambridge University. I once saw him explain biological information using colorful lock-blocks, *live*. (He stole them from his children). I often draw it up for my co-workers on a white board, just like he does!
2. Microbiologist Ralph Seelke testified about how his lab research that shows clear limits on how far bacteria can evolve, (podcast, article). Seelke holds a Ph.D in Microbiology from the University of Minnesota and the Mayo Graduate School of Medicine. He is a Professor in the Department of Biology and Earth Sciences at the University of Wisconsin-Superior.
3. Biochemist Charles Garner testified on the chirality problem in chemical evolution, (podcast, article). He also discussed the importance of not glossing over the weaknesses of scientific theories. Garner holds a Ph.D. in Organic Chemistry from University of Colorado, Boulder. Garner is now a Associate Professor in the Department of Chemistry & Biochemistry at Baylor University.

For those looking for a definition of what intelligent design is, look here. I highly recommend the work of Canadian journalist Denyse O'Leary, who is probably the foremost expert on *why* there is an ID controversy. Her main blog on ID is called Post-Darwinist.

As a supporter of academic freedom, I sent a donation to the Discovery Institute's Center for Science and Culture yesterday. The CSC is currently offering a free book with donations received before February 28th, 2009. For my annual donation, I chose Stephen C. Meyer's forthcoming book "Signature in the Cell: DNA and the Evidence for Intelligent Design".

On another note, I am also excited about Jay Richards' forthcoming book, "Money, Greed, and God: Why Capitalism Is the Solution and Not the Problem". Jay did a great lecture on basic economics for Christians and another great lecture on what Christians should think about global warming. Maybe his employer, the Acton Institute, will give me a free book if I send them a donation?

UPDATE: Casey Luskin just posted audio of Stephen C. Meyer responding to questions after is presentation at the hearing.

Do free speech and transparency actually make people happier?

February 20, 2009 | by Wintery Knight | Link | Original Link

I was browsing over at the Anchoress, and I found this fascinating article on free speech, political correctness and self-censorship.This is a *huge* issue for Christians, especially given what is happening in countries like Canada with these politically correct, multi-cultural censorship tribunals. In the post, the Anchoress urges us to be *less worried about offending people*.

> In our politically correct age, where everyone is afraid of giving offense, being misconstrued-and -then-sued, or simply fearful of falling out-of-step with the trendoids, we almost never hear or read anything that is uncontrolled.
>
> But "free speech" cannot be controlled or it is not "free" at all. And we in America have for too long engaged in self-censorship in favor of "niceness."
>
> Sometimes, you have to lose control and let the words fly, and if you cannot do that, you are not free.

People in my office know that my favorite way to end a conversation is by apologizing. I probably apologize about 15 times a day. Why do I have to do that? The people I work now with are the most tolerant people I have ever worked with. But I never know if a member of some left-wing special interest victim group is listening, and they may sue me if they don't like what I say.

And what is the effect of this PC victim mentality? Fewer friendships between people who disagree. Shouldn't these "victims" get used to the idea that some people disagree with them? People disagree with me *all the time*. My Christian beliefs were mocked by the media and secular teachers all the way from kindergarden to grad school. I didn't complain! I wasn't offended by people who disagreed with me.

The Anchoress also cites a study from Science Daily that argues that self-censorship makes people very unhappy. The study notes:

> They figured that well-intentioned people are careful – sometimes hyper-careful – not to say the wrong thing about race in a mixed-race group. Furthermore, they thought that such effortful self-control might actually cause both unease and guarded behavior, which could in turn be misconstrued as racial prejudice.
>
> …
>
> …independent black observers found that the powerless volunteers were much more direct and authentic in conversation. And perhaps most striking, blacks saw the less inhibited whites as less prejudiced against blacks. In other words, relinquishing power over oneself appears to thwart over-thinking and "liberate" people for more authentic relationships.

As a person of color myself, I would just state that the joy of having authentic relationships with different people is real. I *love* intimacy. I *love* being myself. I *love* opening myself up to people. I *love* disagreements. If I cannot say what I really think about issues that matter, how am I supposed to be able to form authentic friendships with people with whom I disagree? Enforced segregation by worldview is *very bad.*

The Anchoress goes on in her post to list how free speech has been curtailed in a number of instances, even in the media, where there is supposed to be freedom of the press.

> If we lose our freedom to speak out – to opine loudly, to mock, to question, even to *demand – then we have lost everything.*
>
> And the truth is, we have already – thanks to political correctness and self-censorship – fallen into the mindset that our speech should be controlled, measured and unfree.

Her post made me recall a podcast that Dennis Prager did a while back on the issue of transparency. For those who don't know, Prager has a regular "Happiness Hour" every week on his show. Prager makes the point that being transparent with your neighbors, and not censoring yourself, leads to happiness. There is also a partial transcript here. Here's an excerpt:

> You have to let out your secrets. Keeping yourself bottled is a recipe for misery, anger and pathology. I must have hit paydirt here, because all the lines lit up before I even gave the number.
>
> …
>
> Keeping stuff inside of you, and usually, we do it because we're embarrassed by it. But you know, everybody has things that they are embarrassed by. The more that you keep hidden, the less chance of happiness you have. Why would one want to go through life hiding? It's like wearing a veil over your psyche, and over your soul, or even a burka, completely covered. I've never followed it, because…I've never been hurt by opening up. I mean, it hasn't always received the response that I wanted. It's inevitable that it won't.

The Anchoress ends by mentioning the movie "The Lives of Others". I just watched it myself yesterday evening, because I saw that it was number ONE on National Review's list of top conservative movies. And now I am going to make it clear to you. WATCH THIS MOVIE. This is the most amazing movie I have seen in a long time. I give it my highest recommendation!

UPDATE: Welcome visitors from the Anchoress! Thanks so much for the link! New readers may want to take a look around since I cover a lot of different topics here, from free speech to economics to science to public policy!

Jim Demint presses Democrats to vote on free speech

February 22, 2009 | by Wintery Knight | Link | Original Link

Senator Jim Demint

James "Jim" Demint is my favorite senator, (although he's nearly tied with James Inhofe). Demint introduced the Broadcaster Freedom Act to protect free political speech in January, and he's trying to force the Democrats to vote on the so called "Fairness Doctrine" so that their views on free speech over the radio can be made clear. If the Fairness Doctrine passed, free political speech on the radio would be effectively abolished. This is dangerous because talk radio is predominantly conservative just as the news media is predominantly leftist.

This NewsMax.com article notes that Senator Debbie Stabenow, House Speaker Nancy Pelosi and Senator Tom Harkin all support reintroducing the Fairness Doctrine. Their article explains what would likely follow from passing the bill.

> Since talk radio is overwhelmingly dominated by conservative hosts, and progressive talk radio draws few listeners, the "equal time" provision would likely force many radio stations to pull popular conservative hosts from the air rather than air low-rated liberal hosts.

If they do go ahead and ban political speech on the radio, I wonder what they will call the bill?

Remember that his Freedom of Choice Act abolishes the right of medical personnel to choose not to performing abortions.

The Family Research Council says:

> If FOCA is passed, it would automatically overturn:
>
> - Forty-six states' conscience protection laws for individual health care providers
> - Twenty-seven states' conscience protection laws for institutions

And remember his Employee Free Choice Act abolishes the right of workers to choose not to join a union.

The Heritage Foundation says:

> Abolishing elections deprives workers of a fundamental democratic right. Elections guarantee that all workers can express their views on whether they want to belong to a union. Under card check, however, workers who have not been contacted by union organizers have no say in whether their workplace organizes. If organizers collect cards from a majority of workers, all workers must join the union without a vote.

Maybe the bill to ban free speech on the radio will be called called the Happiness, Ice Cream, Apple Pie, Sunshine and Nothing To See Here Act?

Democrats caused the recession and Republicans tried to stop it

February 22, 2009 | by Wintery Knight | Link | Original Link

Who caused this economic downturn and what should we do about it?

Almost no one realizes that this entire subprime lending mess was created by the Community Reinvestment Act, which was passed by President Carter, a Democrat, in 1977. Later on in the 1990s, Bill Clinton, another Democrat, passed laws to enforce the original bill. The purpose of the CRA is to force banks to make risky loans to people who can't afford to repay those loans.

The extremely left-wing Los Angeles Times explains in 1999 that the CRA was passed to force banks to make risky loans.

> Under Clinton, bank regulators have breathed the first real life into enforcement of the Community Reinvestment Act, a 20-year-old statute meant to combat "redlining" by requiring banks to serve their low-income communities. The administration also has sent a clear message by stiffening enforcement of the fair housing and fair lending laws.
>
> …
>
> In 1992, Congress mandated that Fannie and Freddie increase their purchases of mortgages for low-income and medium-income borrowers. Operating under that requirement, Fannie Mae, in particular, has been aggressive and creative in stimulating minority gains… Fannie Mae has agreed to buy more loans with very low down payments–or with mortgage payments that represent an unusually high percentage of a buyer's income. That's made banks willing to lend to lower-income families they once might have rejected.

The extremely left-wing New York Times noted in 1999 that the GSEs gave out the risky loans under duress from Democrat Bill Clinton.

> Fannie Mae, the nation's biggest underwriter of home mortgages, has been under increasing pressure from the Clinton Administration to expand mortgage loans among low and moderate income people and felt pressure from stock holders to maintain its phenomenal growth in profits.
>
> In addition, banks, thrift institutions and mortgage companies have been pressing Fannie Mae to help them make more loans to so-called subprime borrowers. These borrowers whose incomes, credit ratings and savings are not good enough to qualify for conventional loans, can only get loans from finance companies that charge much higher interest rates — anywhere from three to four percentage points higher than conventional loans.

According to the New York Times in 2003, George W. Bush tried to stop the Democrats

from ruining the economy with these forced loans. He was blocked by Democrats like Barney Frank.

> The Bush administration today recommended the most significant regulatory overhaul in the housing finance industry since the savings and loan crisis a decade ago.
>
> …
>
> ”These two entities — Fannie Mae and Freddie Mac — are not facing any kind of financial crisis,” said Representative Barney Frank of Massachusetts, the ranking Democrat on the Financial Services Committee. ”The more people exaggerate these problems, the more pressure there is on these companies, the less we will see in terms of affordable housing.”

Here are some video clips to prove that the Democrats opposed regulating the GSEs. They are responsible for this mess, along with the irresponsible people who signed up for these loans that they could not repay.

Timeline of the events in the crisis: Bush was the first to recommend regulating the GSEs in April, 2001. In 2003, Bush tried to create a new federal agency to regulate the GSEs. He was blocked from doing so by the Democrats in the Senate. In 2005, Alan Greenspan warned that failing to regulate the GSEs could be a catastrophe. Again, Democrats blocked the effort to regulate Fannie Mae and Freddie Mac. The video shows Democrat Chuck Schumer protesting that regulation is not needed. In 2006, McCain and other Republicans introduced a bill to regulate the GSEs. Again, the Democrats voted against it and nothing happened.

Republicans and Democrats in their own words on the GSE accounting practices: Here we have Republican Rep. Richard Baker, Democrat, Democrat Rep. Maxine Waters, Democrat Rep. Gregory Meeks, Republican Rep. Ed Royce, Democrat Rep. Lacy Clay, Republican Rep. Christopher Shays, Democrat Rep. Arthur Davis, Democrat Rep. Barney Frank, Republican Rep. Don Manzullo. Shays notes that the GSEs make many contributions to Democrats who are blocking their regulation.

Fannie Mae CEO addresses Democrats: Fannie Mae CEO calling Obama and the Dems the “Family” and “Conscience” of Fannie Mae. The Democrats obstructed the regulation of the GSEs while taking political contributions from them, especially Obama. Franklin Raines, Jamie Gorelick and Jim Johnson were all executives at the GSEs and are all Democrats. Other Democrats like Penny Pritzker ran other mortgage banks into the ground, and now work for Obama.

According to Human Events, Obama himself sued banks on behalf of ACORN, to force the banks to make these risky loans.

> Obama sued Citibank under the Community Reinvestment Act in a typical ACORN-style lawsuit to force the bank to make these risky loans. ACORN filed many of this type of lawsuit alleging racism in all of them.

According to opensecrets.org, Obama was also the second-highest recipient of political contributions from the GSEs. The American Spectator notes that he included 5.2 *billion* dollars of taxpayer money for ACORN in the porkulus bill.

UPDATE 1: The Achoress just posted even more of the history of this mess here. She has a link to Nice Deb's post which contains about 2 dozen warnings issued by the Bush administration about the looming crisis, including 17 warnings in 2008 *alone*.

UPDATE 2: Here's an even better timeline than mine, by Roger Kimball.

Two ways to conduct a Tea Party revolution against socialism

February 22, 2009 | by Wintery Knight | Link | Original Link

GatewayPundit is reporting that the economic news is getting even worse.

> Along with **raising taxes** on businesses, **raising taxes** on the "rich," and **allowing** the Bush tax cuts to expire…
> President Obama will also announce the implementation of an expensive cap and trade energy policy this week to battle pretend global warming.

He cites Human Events' report that we will lose between between $444 billion and $1.308 trillion of GDP output, and unemployment would increase 2.7% (= 4 million jobs lost), mostly in the manufacturing sector.

Well, we're doomed. Or are we? I've found a couple of clever ideas for dealing Obama's plans to plunge the United States into socialism.

The first idea is from Biola University professor Doug Geivett, who is a first-class evangelical Christian scholar. I met Doug at a philosophy conference on Providence and Open Theism at Wheaton College, IL in 2000. I remember asking him whether investments were a form of gambling. He explained that investing was not gambling, because investments fund the creation of new products and services that grow the economy.

Doug starts by noting Rick Santelli's rant against Obama's socialist policies which involve wealth redistribution from those who produce to those who consume. (Note: there is now a new rant up, with supply-sider Larry Kudlow).

In his post, Geivett enumerates the points made by Santelli:

> First, fiscally responsible Americans don't want to pay the bill for borrowers who can't keep up with their mortgages.
>
> Second, fiscally responsible Americans shouldn't have to pay the bill for borrowers who can't make their payments.
>
> Third, this plan doesn't rob the rich to give to the poor. It takes from every tax-paying American and turns it over as free cash to people who can afford to rent but can't afford to buy.
>
> Fourth, there are ways to get the federal government to pay attention, ways the government is totally unprepared for.

Santelli suggests that responsible, productive Americans may want to consider a revolution – a kind of Chicago Tea Party. Right now, the banks are being more careful about who they give credit to. This is not a problem for responsible people with good credit history. The government is giving out bailouts to banks in order to ease credit for

irresponsible consumers – the same ones that got us into this mess in the first place.

Geivett describes what he thinks this Chicago Tea Party might look like:

> For example, what do you think would happen if 30% of all Americans with an income of $50,000 or more organized to do the following two things:
>
> 1. Convert all of their assets held in the stock market and at banks and credit unions into cold, hard cash (or gold bars holed up in their bank's safe deposit boxes)?
> 2. Refused to pay income tax for 18 months (or indefinitely)?

This would remove the money that banks use for consumer loans. If no one can get credit, then no one can default, and there is no need for bailouts to these delinquents. By refusing to pay income taxes for a period of time, the government would have no funds available for bailing out their favorite special interest groups. People might finally have to stop spending and start working and saving again.

Geivett goes on to describe how this plan should incorporate reduced consumer spending, which I agree with. Somehow, America has gone terribly wrong. We use to be a nation of workers and savers. But the progress of left-wing socialism, with all the redistributing of wealth from producers to free-riders, has caused us to drift into an irresponsible, immature, hedonistic culture.

Geivett's plan made me think of a post I read before on "Going Galt". What if all the people who produced wealth *just stopped producing?*

> Do you ever wonder after dealing with all that is going on with the economy and the upcoming election if it's getting to be time to "go John Galt"? For those of you who have never read Ayn Rand's *Atlas Shrugged*, the basic theme is that John Galt and his allies take actions that include withdrawing their talents, "stopping the motor of the world," and leading the "strikers" (those who refuse to be exploited) against the "looters" (the exploiters, backed by the government).
>
> …
>
> Obama talks about taking from those who are productive and redistributing to those who are not — or who are not as successful. If success and productivity is to be punished, why bother? Perhaps it is time for those of us who make the money and pay the taxes to take it easy, live on less, and let the looters of the world find their own way.

The National Taxpayers Union explains who pays the taxes that Democrats are redistributing to their freeloading constituents. The top 50% pays 97% of all income taxes collected! The lazy half the country is freeloading off of the productive half.

The second idea that I found for responding to Obama's socialist bailouts is to *move to Canada*. Captain Capitalism had this post in which he compares the two economies and concludes that Canada has a better future than the United States. Canada has a smaller

deficit, a smaller debt, and is not facing a meltdown from entitlement programs like Medicare and Social Security, like we are.

Investor's Business Daily reports that:

> By 2041, Social Security will be essentially broke, having exhausted its trust fund, those dollars amassed through decades of surplus payroll tax revenues that Congress will have already squandered on general budget expenditures. Medicare's future is just as bleak. It is already spending more than it is receiving in payroll taxes.

The prime minister of Canada right now is economist Stephen Harper, a strong fiscal conservative in the mold of F.A. Hayek.

UPDATE 1: Michelle Malkin has even more ideas on what to do here.

William Dembski to speak at SES in May 2009

February 22, 2009 | by Wintery Knight | Link | Original Link

Just noticed this up at the SES home page:

> **Dr. William Dembski is coming to SES**
>
> May 11-16, 2009
>
> Intelligent Design
>
> Dr. Dembski is an internationally recognized authority on Intelligent Design and Design Theory. He will be teaching a Summer Module on that very topic.
>
> ***The public is welcome to sign up for this module.****
>
> *To register for this course, click here*
>
> *For new students please contact Duke or Nora Hale: 704-847-5600, Ext. 216.*

For an introduction to intelligent design, look here.

John Lennox vs Michael Shermer and Christopher Hitchens

February 22, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Audio and video from a panel discussion with Hitchens, Craig, etc. is linked here.

I found this debate between Michael Shermer and John Lennox, with video and audio, here. Shermer is, as usual, completely unable to bear his side of the burden of proof. He does not present a single argument other than the problem of evil, and that isn't presented with any rigor. Lennox presses several scientific arguments from the progress of science, including the big bang. He also argues that atheism makes life and moral behavior meaningless. Shermer does not understand this simple maxim: before you can show *why* a belief is wrong, you need to show *that* a belief is wrong.

In other news, Lennox will be facing-off against Christopher Hitchens in Birmingham, AL in March 2009.

> The Samford University Socratic Club is sponsoring a debate between leading atheist and acclaimed journalist **Christopher Hitchens** and Christian apologist and Oxford Professor **John Lennox** in what promises to be a thought-provoking evening.
>
> **"Is God Great?"** will take place at **6:00 pm** on **March 3, 2009** at **Samford University's Wright Center** in Birmingham, AL. Doors will open to the public at 5:15, and the event will last until 8:00 with a booksigning to follow. Books will be on sale in the lobby. Both men debated each other before for the first time this past fall at the **Edinburgh International Festival** over the question of whether or not Atheism could save Europe. Click here for the DVD of that event.
>
> Tickets can be purchased through Samford University
> $20 each / $10 for Samford Students
>
> For questions or other inquiries, call **205.807.4477**
> **For more information, see the** Socratic Club website**.**

Is prescriptive morality rationally grounded on atheism?

February 23, 2009 | by Wintery Knight | Link | Original Link

In this post I am going to review a series of 7 posts over at Tough Questions Answered on the topic of whether evolution explains morality. The series critically analyzes two variants of godless morality, based on evolution: 1) optimistic humanism and 2) immanent purpose. Let's start with part 1.

On optimistic humanism, moral values are not objective – that is, they do not exist for all times and places, independent of what humans believe. Instead, they are just arbitrary customs that emerge differently in different cultures, depending on the time and place. So, by good, optimistic humanists mean "what is in fashion here and now" and by bad, they mean "what is not in fashion here and now".

On atheism, moral impulses are just the carry-overs from the need to cooperate in order to survive. Now, suppose we ask the question "Why should I following these arbitrary customs that limit my pleasure, if I can escape punishment?" TQA writes:

> Why should a person be moral? According to optimistic humanism, it is because leading a moral life will give you personal satisfaction. Proponents of this view offer several ways of defining personal satisfaction. Atheistic philosopher Kai Nielsen says that "there can be purposes in life even if there is no purpose to life." He speaks of each individual developing a life plan that may include career goals and social goals. Meaning can be found in "things like love, friendship, caring, knowledge, self-respect, pleasure in life."

Nielsen says that ethics is make-em-up-as-you-go, on atheism. You choose what you like, based on pleasure. That is why today people have given up on the hard virtues, like chastity, sobriety, marital fidelity, charity, self-sacrifice and devotion to children's well-being. Instead, morality has been reduced to recycling, environmentalism, yoga, vegetarianism, animal rights, socialist tax policies, and anti-war protests.

As prominent atheist Michael Ruse says:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. **Considered as a rationally justifiable set of claims about an objective something, ethics is illusory**. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory. (Michael Ruse, "Evolutionary Theory and Christian Ethics," in *The Darwinian Paradigm* (London: Routledge, 1989), pp. 262-269).

Next, part 2 notes that optimistic humanists are not able to judge the evolved morality of other times and places. *Their* morality was right for them, just like *our* morality is right for us – it is all arbitrary on atheism. Widow-burning in India isn't really *wrong* on atheism, it's just *different* from what we believe in our time and place. In their time and place, it's right for them.

Atheist Michael Ruse says this about widow-burning:

> "Obviously, such a practice is totally alien to Western customs and morality. In fact, we think that widow sacrifice is totally immoral. **Clearly there is nothing particularly objective about this morality**, nor is it something one would expect to find the inevitable product of natural selection." (Michael Ruse, "Evolutionary Theory and Christian Ethics," in *The Darwinian Paradigm* (London: Routledge, 1989), pp. 262-269).

In part 3, TQA writes that moral choices and moral responsibility are *impossible* on atheism. On atheism, you are a computer made out of meat, and all of your outputs are fully determined by your genetic programming and sensory input.

TQA notes that:

> Morality seems to require humans to possess a robust form of free will that allows them to make moral choices. We often praise good moral acts and condemn bad moral acts as if the people we are judging have some control over their actions. **If there is no free will, then moral choices are completely determined by the laws of chemistry and physics**, and it makes no sense to praise or criticize anyone because they are acting according to deterministic physical laws.

I would add this quote from Richard Dawkins:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, **no design, no purpose, no evil and no good**, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Source)

In part 4, TQA writes that atheists cannot judge other people, or even God, because their atheistic morality is totally subjective and arbitrary. TQA cites the January-February 2005 edition of Humanist magazine, in which former American ambassador Carl Coon writes:

> [Ethical] principles constitute a structure of interlocking behavioral guidelines that have been growing organically since our ancestors first became human, if not earlier. These standards and principles didn't descend to us from on high as some revealed truth from an intelligent being greater than ourselves. We worked them out through a long and arduous evolutionary process marked by many

> **wrong turns** and much social discord. Indeed, the structure is still **imperfect** and we continue trying to make **improvements**.

Then TQA exposes how all of this language is logically self-contradictory:

> …notice the words he employs to describe morality: *wrong turns*, *discord*, *imperfect*, and *improvements*. All of these words indicate that morality, over time, has been moving in a direction from worse to better, from bad to good, from imperfect to perfect. But how is it possible for the ambassador to judge the morality of the distant past if all morals are relative? How can he say that morality has taken "wrong turns"? How do we know ethics are improving over time if no two time periods can be compared?

TQA goes on to define the immanent purpose view, (our survival is objectively good), in part 5. They critique it in part 6 and part 7. Here are some of their responses to this view:

- no explanation of the origin of the value of human survival
- evolution doesn't justify compassion on the weak and unfit
- no reason why individuals should conform their behavior to past observed behavior

Below are five good debates in which atheists try to answer the question: "on atheism, why is it rational for me to to do the right thing, especially when I feel less pleasure, and when I will not be punished if I do the wrong thing?". There is no reason to be moral on atheism. And that is why atheism killed 100 million people in the 20th century *alone*. Atheists who do act morally are acting *inconsistently* and *irrationally*.

Douglas Wilson vs. Christopher Hitchens

William Lane Craig vs. Kai Nielsen

William Lane Craig vs Richard Taylor

William Lane Craig vs. Paul Kurtz (audio, video1, video2, video3, video4, video5, video6, video7)

William Lane Craig vs. Louise Antony (audio1, audio2, video1, video2)

Democrats to expand porkulus with 410 billion omnibus bill?

February 24, 2009 | by Wintery Knight | Link | Original Link

The Democrats aren't done redistributing wealth to their constituencies yet. They want an increase in discretionary spending that Republicans say will cost *another* 410 billion dollars on top of the auto-bailout and the spendulus!

Wall Street Journal reports on the story here:

> Congress returns next week to take up another spending bill, this one with a price tag of $410 billion. Unlike the emergency recovery plan rushed through Capitol Hill in a matter of weeks, this covers the regular functions of government, from education to agriculture.
>
> The "omnibus" bill would increase discretionary spending — funds for programs that aren't benefits like Social Security and Medicare — by 8.7% over 2008. "This would be the largest increase in discretionary spending since at least 1978 — with the exception of a 10% boost in 2002, shortly after the Sept. 11 attacks — according to figures from the White House Office of Management and Budget.

And it's worse… the omnibus bill will contain loads of earmarks and pork:

> President Barack Obama and congressional Democratic leaders boasted that the stimulus bill had no "earmarks," or special projects inserted by lawmakers for their home areas. In contrast, the new spending bill will have billions of dollars in such projects.

> …
> Taxpayers for Common Sense, a nonpartisan fiscal watchdog group, has listed several thousand earmarks in bills that have passed a subcommittee or full committee and are being combined into the final version. Among them, for example, are $425,000 for Aultman Health Foundation in Canton, Ohio, to buy technology and equipment; $540,000 for Children's Memorial Hospital in Chicago to improve its facilities and buy equipment; and $300,000 for the Discovery Center in Boise, Idaho, to mount exhibitions and conduct outreach.

Wow, Michelle Malkin's headline is "9,000 earmarks in the $410 billion omnibus spending bill: Gang tattoo removal, Maine lobster, La Raza & more!". She even has specifics from Hill staffer Tom Jones on the earmarks!

- $200,000 for "Tattoo Removal Violence Prevention Outreach Program," pg. 283;
- Maine lobster earmark in the omnibus, pg. 173;
- $5.8 million earmark for the "Ted Kennedy Institute for the Senate…for the planning and design of a building & an endowment," pg. 232;

- and National Council of La Raza, $473,000 earmark from Sens. Bingaman and Menendez, pg. 212.

Human Events reports (H/T GatewayPundit) that John Boehner and Mike Pence are both requesting that the bill be put out there in the open so everyone can see what's in it. But they are getting snubbed, apparently:

> House minority leader John Boehner (R-Ohio) called upon the Speaker Thursday to release the voluminous spending bill online without delay. "If Democratic leaders plan to schedule a vote on the half-trillion dollar omnibus spending bill next week, they should post the legislation online immediately so the American people have adequate time to read the measure and understand what is in it," Boehner said. "My colleagues in the Republican leadership and I made this request two weeks ago, and to date, our request has gone unanswered…"
>
> Rep. Mike Pence (R-Ind.), the House Republican Conference chairman, joined Boehner in asking again – apparently in vain — for an open process from the secretive Democrat leadership this time around. "More than two weeks ago, House Republicans called on Speaker Pelosi to post online the text of the upcoming half-trillion dollar 'omnibus' spending bill, bringing it out of the shadows and before the American people," Pence said. "So far, that call has gone unanswered…"

Read the comments, the commenters have found *even more* earmarks!

Also, Nice Deb notes the irony of Obama painting himself as a fiscal conservative. She links to CBS News, and they say:

> Mr. Obama has promised to slash the federal deficit in half by the end of his first term, reports CBS News senior White House correspondent Bill Plante.To do that, the president will reduce Iraq War spending, end tax breaks for the wealthiest Americans, and streamline government.

Contrast Obama's wasting of taxpayer dollars with Bobby Jindal, *turning down* porkulus funds. The Anchoress linked to this video over at Hot Air of Jindal excoriating Obama for trying to pass off government spending as a means of stimulating the economy. Just listen to the way that Jindal structures his speech like a debater, and includes facts to support his assertions. WE NEED A COMMUNICATOR. Jindal is all substance and Obama is all style.

UPDATE: Here I explain how taking every penny earned by people making $75,000 or more will not pay for all the spending. Here I explain how Porkulus-2 would abolish the Washington, D.C. voucher program which allows school choice.

James Inhofe says that the Fairness Doctrine will affect Christian radio

February 24, 2009 | by Wintery Knight | Link | Original Link

On his official blog, Senator James Inhofe links to an article from the Culture and Media Institute. The article states that the Fairness Doctrine could affect Christian radio as well as conservative radio.

> But, the return would also harm religious speech according to a senior Republican senator, James Inhofe, Okla., and the senior vice president of the National Religious Broadcasters (NRB), Craig Parshall. Both are warning religious broadcasting is facing a threat.
>
> According to Parshall, there are about 2400 full power radio stations with a Christian format in the United States. About 40 percent of people who regularly listen do so specifically so they can listen to "teaching, preaching and talk" formats, he said. Christian radio and television have a total reach of 75 million he claimed.

Inhofe is quoted in the article as follows:

> Those warning shots from the left have raised the possibility of the Fairness Doctrine's reinstitution, one that Sen. James Inhofe, R-Okla., says Christian radio isn't immune to. According to the senior senator from Oklahoma, if the federal government had to enforce a "Fairness Doctrine," in whatever form it may take in the legislative process, it could open the door to lawsuits by advocacy groups, like the American Civil Liberties Union (ACLU).
>
> "Religious messages are, often times, inherently political," Inhofe said to the Culture & Media Institute. "Even when they are not, they could be considered controversial, and under the Fairness Doctrine as it once existed, controversial issues of public importance must be presented in an equitable and balanced manner. I am concerned that the ACLU and other liberal organizations will use this logic to file lawsuits against anyone who presents a message that they deem to be controversial. Though I believe these lawsuits would ultimately fail on First Amendment grounds, the chilling effect that the mere threat of a lawsuit will have on religious broadcasters could be substantial."

Another concerned Republican is Cathy McMorris Rodgers. She is cited as follows:

> "Over the last 20 years, conservative talk radio has done such an incredible job as far as getting out the message," McMorris Rodgers said. "And although, 'Fairness Doctrine' may sound good, it's just a clever title to say, 'We're going to shutdown conservative talk radio, and we're going to potentially really hammer Christian radio, Christian television, and it's very important to not allow this to

> move forward."

Congressman Mike Pence also weights in:

> "The American people cherish freedom, that's why President Reagan repealed the so-called 'Fairness Doctrine' back in 1987," Pence said. "This Depression-era government regulation would actually regulate the content of America's airwaves and represents an existential threat to talk radio—and in particular—Christian talk radio."

The article ends by discussing a legal case in which a Christian radio station was actually shut down by the FCC, because of the Fairness Doctrine. This happened in 1969, but the Fairness Doctrine was repealed in 1987.
Jim Demint's Broadcaster Freedom Act of 2009 is co-sponsored by some of my favorite conservatives, like Tom Coburn and James Inhofe.

First report from William Lane Craig's Quebec speaking tour

February 24, 2009 | by Wintery Knight | Link | Original Link

William Lane Craig completed his tour in Quebec, Canada on 2/13/09. One of the Quebecois students named Martin wrote to Dr. Craig, challenging him on many aspects of his presentation. Quebec is widely regarded as the most secular and progressive of the Canadian provinces, so I was delighted to hear from this student, but I don't think Dr. Craig spent enough time replying to him, so I will help.

First, if you need a refresher on Craig's standard 20 minute opening speech, look here (opening speech from the Craig-Pigliucci debate, audio from the Craig-Stenger debate, video from the Craig-Dacey debate). Bill usually argues for God from the origin of the universe, the fine-tuning of the universe for permitting life of any kind, objective moral values, the resurrection of Jesus as a historically-testable miracle claim, and the immediate personal experience of God.

The student Martin starts off by complaining that atheism is an adequate foundation for rational moral behavior. He writes:

> …you know as well as I do that any thinking person, atheist or no, understands why rape isn't acceptable in modern society. Being an atheist isn't being a hedonist, and I feel that it's pathetic I need to remind you of this.

Notice that Martin links the moral rules to the time and place in which he lives. Rape isn't really wrong for all times and places, it's wrong for us in this society in this time.

First of all, on atheism morality is an illusion. In an accidental universe, the only morality that exists is when societies *make them up*. In that sense, morality is similar to the fashion of clothing – it is purely convention. It varies by time and place. It is completely arbitrary. Let me explain some of the problems with briefly here, but a longer treatment is here.

On atheism, there is no non-physical soul, and no free will. There are therefore no moral choices nor is there moral responsibility. On atheism moral behavior is ultimately *futile*, as humans are all going to die individually and collectively in the heat death of the universe: it does not matter if you are moral or not, on atheism. On atheism, there is no standard by which to judge individual moral progress, or the evil in other cultures, such as widow-burning or slavery.

When an atheist speaks about morality, is isn't talking about the way humans everywhere ought to be, he is talking about social conventions. When an atheist acts morally, he is simply imitating the fashions of the people around him – either to please himself by feeling moral, or to please other people. If they can escape the social consequences, it would be irrational for them to do the right them if it gives them no pleasure.

By the way, it's not just me who says this. Richard Taylor, an atheist who once debated

against William Lane Craig, says this:

> The idea of political or legal obligation is clear enough… Similarly, the idea of an obligation higher than this, referred to as *moral* obligation, is clear enough, provided reference to some lawgiver higher…than those of the state is understood. In other words, our moral obligations can…be understood as those that are imposed by God…. But what if this higher-than-human lawgiver is no longer taken into account? Does the concept of moral obligation…still make sense? …**The concept of moral obligation [is] unintelligible apart from the idea of God. The words remain but their meaning is gone.** (Richard Taylor, *Ethics, Faith, and Reason* (Englewood Cliffs, N. J.: Prentice-Hall, 1985), p. 83-84)

Next, Martin argues that the anthropic principle is an adequate refutation of the fine-tuning of the physical constants of the universe for life. The anthropic principle is the idea that the presence of intelligent life *causes* the constants to be fine-tuned 14 billion years ago. He writes:

> Impressing a room full of vaguely interested people with figures about the extremely rare conditions that allow life to exist is all well and good – handwaving away the entire anthropic principle with a single bad analogy is not.

Regarding Martin's claim about fine-tuning being explained by the anthropic principle, let me say this. First, the fine-tuning is real. If you change the constants of physics in the big bang, the universe will not support life of *any kind.* Consider another Martin, Martin Rees, an atheist and the British Astronomer Royal. In his book "Just Six Numbers: The Deep Forces That Shape The Universe", he discusses 6 finely-tuned numbers.

Rees writes **here**:

> These six numbers constitute a 'recipe' for a universe. Moreover, the outcome is sensitive to their values: if any one of them were to be 'untuned', there would be no stars and no life. Is this tuning just a brute fact, a coincidence? Or is it the providence of a benign Creator?

It is impossible for humans, who just appeared relatively recently, to have any causal impact on the selection of these physical constants *14 billion years ago*. I discuss two known responses to the fine-tuning problem, (unobservable multiverse and non-existent observer), here.

Bobby Jindal responds to Obama's SOTU speech

February 25, 2009 | by Wintery Knight | Link | Original Link

Bobby Jindal gave the response to Barack Obama's State of the Union speech last night. I am a huge Bobby Jindal supporter, so I was alarmed by Ace's negative reaction here.

> Awful. He walked out like an earnest dork and has a weird inflection, trying to sound upbeat and sunny when it's clearly not his natural metier. It sounds false, and he looks false.
>
> I don't care how much of a star Jindal is, America doesn't elect somewhat-off dorks as president.

But GatewayPundit liked the speech.

> **Governor Bobby Jindal** was fantastic tonight. He delivered **the Republican rebuttal** to the Democrat's irresponsible spending plan.
>
> Democrats place their hope in government.
> We place our hope in you the American people.
>
> **"We Believe Americans Can Do Anything."**
> This was a terrific speech.
> Jindal has a tremendous amount of charisma.

GatewayPundit also posted the transcript at that same link.

You can watch Bobby's response here at HotAir.com, (12 minutes). My favorite part is when he says "who among us would ask our children for a loan?".

> **Who among us would ask our children for a loan, so we could spend money we do not have, on things we do not need?** That is precisely what the Democrats in Congress just did. It's irresponsible. And it's no way to strengthen our economy, create jobs or build a prosperous future for our children.

Basically he hammered the point that Democrats are for taking your money and solving someone's else's problems with it. They do not trust you to solve problems yourself. He was able to illustrate Republican priorities by talking about his reforms in Louisiana.

> In Louisiana, we took a different approach. Since I became governor, we cut more than 250 earmarks from our state budget. And to create jobs for our citizens, we cut taxes six times — including the largest income tax cut in the history of our state.
>
> …

> In my home state, there used to be saying: At any given time, half of Louisiana is under water — and the other half is under indictment.

> No one says that anymore. Last year, we passed some of the strongest ethics laws in the nation — and today, Louisiana has turned her back on the corruption of the past. We need to bring transparency to Washington, DC — so we can rid our Capitol of corruption and ensure we never see the passage of another trillion dollar spending bill that Congress has not even read and the American people haven't even seen.

I really would appreciate it if you guys can watch this and let me know what you think of his speech! (Leave a comment) I think that the speech seemed a little plain, but remember, *everybody* is watching this response, not just people like us with a big interest in policies. Hey – I'm a Fred Thompson guy – what do I care about a person's charisma? I only care about policies. Policies that increase liberty, prosperity and security.

One more opinion. Michelle Malkin said the delivery was fine. And I say the content was great!

Tom Price, chairman of the conservative Republican Study Commitee responds to Obama here, (5 minutes). He is really being clear about the differences between fiscal conservatism and socialism.

Jim Demint's 2 minute take on Obama's SOTU address is here.

UPDATE: Jindal does much better in this interview with Meredith Viera on NBC Today.

Vladimir Putin tells America that socialism doesn't work

February 25, 2009 | by Wintery Knight | Link | Original Link

Found this transcript of Putin's remarks in the Wall Street Journal. The story was linked over on John Lott's blog.

Putin opposes protectionism:

> We must not revert to isolationism and unrestrained economic egotism. The leaders of the world's largest economies agreed during the November 2008 G20 summit not to create barriers hindering global trade and capital flows. Russia shares these principles.

Putin opposes state intervention in the economy:

> Excessive intervention in economic activity and blind faith in the state's omnipotence is another possible mistake.
>
> True, the state's increased role in times of crisis is a natural reaction to market setbacks. Instead of streamlining market mechanisms, some are tempted to expand state economic intervention to the greatest possible extent.

Putin opposes big government:

> The concentration of surplus assets in the hands of the state is a negative aspect of anti-crisis measures in virtually every nation.
>
> In the 20th century, the Soviet Union made the state's role absolute. In the long run, this made the Soviet economy totally uncompetitive. This lesson cost us dearly.

Putin opposes wealth redistribution and welfare:

> Nor should we turn a blind eye to the fact that the spirit of free enterprise, including the principle of personal responsibility of businesspeople, investors and shareholders for their decisions, is being eroded in the last few months. There is no reason to believe that we can achieve better results by shifting responsibility onto the state.

Putin opposes bailouts and deficit spending:

> And one more point: anti-crisis measures should not escalate into financial populism and a refusal to implement responsible macroeconomic policies. The unjustified swelling of the budgetary deficit and the accumulation of public debts are just as destructive as adventurous stock-jobbing.

Putin goes on to give recommendations on how to solve the problem.

I can’t believe that America and the USSR have switched places. What is the world coming to? Obama has *unilaterally* plunged us into bankruptcy and angered the entire world with his naive protectionism. How could we have been so ignorant as to have elected someone with *no knowledge of economics whatsoever*? During an economic crisis!

Porkulus-2 bill would destroy school choice in Washington D.C.

February 26, 2009 | by Wintery Knight | Link | Original Link

I already blogged about the new 410 billion dollar omnibus bill here, but on John Boehner's blog, I found out more about it. It's not just that it contains 9000 earmarks, as Michelle Malkin noted. On John Boehner's blog, he argues that the bill also contains a hidden provision that would destroy the voucher program in Washington, D.C..

This post states:

> Congressional Democrats are scheming to deny low-income parents and students in the nation's capital a popular school choice program by inserting a provision mandating Congress renew the program before more money is spent on it. While this may sound innocuous enough, it would serve as a death blow to the groundbreaking D.C. school choice program – a goal Congressional Democrats have sought since taking control of Congress in 2007.

The post also links to a video produced by the Heritage Foundation that shows some of the affected students pleasing with Obama to let them attend private schools using vouchers, instead of attending defective public schools.

You may have heard that Washington, D.C. spends the most amount of money per pupil, but gets the least return on their investment. Andrew Coulson of the libertarian Cato Institute calculates the cost per student per year as $24,600. That is not a typo. The Washington Times notes that the voucher system cost only $7500 per year, and produced far better results than the government-run, union-staffed public schools.

> The Opportunity Scholarship Program that Congress established allows more than 1,900 low-income D.C. children to receive vouchers so they can attend the private school of their parents' choosing. The scholarships are good for up to $7,500. So, the best bet is obvious: a $7,500 voucher that caters to children – not a one-size-fits-all $24,600 per-pupil plan. The former has measurable academic success and incredible parental demand; the latter consistently places children at the bottom rungs of the academic ladder. **In fact, D.C. ranked the lowest in math and reading, according to results of the National Assessment of Educational Progress tests released in September**.

The Boston Globe summarizes the numbers on reading and math here:

> According to the authoritative National Assessment of Education Progress, only one in seven fourth-graders is ranked at grade-level ("proficient") or better in reading and math. Among eighth-graders, only one in eight is proficient in reading; only one in 12 can handle eighth-grade math.

John Boehner is quote in his blog post as follows:

> The D.C. school choice program has provided hope for thousands of low-income children in the District of Columbia since it was established, and has been demonstrating results when it comes to parental satisfaction and increased parental involvement. Eliminating this program would represent an irresponsible and shameful act on the part of the Democratic leadership in Congress, and the children of the District of Columbia deserve better.

If the Barack Obama is willing to take away school-choice from the poorest students in the nation in order to satisfy the teachers unions that got him elected, then what hope do the rest of us have of keeping our liberty?

Does the origin of the first living organism require an intelligent designer?

February 26, 2009 | by Wintery Knight | Link | Original Link

I found a good debate on this question here on the Unbelievable radio show, which is broadcast in the UK. The argument is specifically about the first replicating organism.

The first replicating organism would have to have had a number of characteristics of living things, such as the ability to store its own genetic information and replicate that information. The first living organism cannot be built up by mutation and selection, because mutation and selection require that replication *already be in place*. So, where did the information in the first replicator come from?

If you imagine that the simplest organism is a functional computer program, you have to ask yourself – how much code is needed to provide that minimal functionality for a living system? Whatever that amount of code is, it would have to come together all at once, because having only a part of the program in place means that the program doesn't compile and it doesn't run!

Here is the link to the debate audio. The debate starts at 15 and half minutes into the show, and is 1 hour long. And here is the blurb introducing the topic and speakers:

> Unbelievable? – 21 February 2009
> **Could the DNA that makes up the building blocks of life of every living thing on the earth be the clue to a cosmic designer?**
>
> That's the view of Christian guest Perry Marshall. An electrical engineer by background, he is now a leading authority on information systems and the internet. He says that anybody who comes at the topic of how life originated from an engineering background will see that DNA is a code that needs a designer to create the information it transmits.
>
> Peter Hearty is an atheist biologist. He says that science does not work when you dispense with the search for a naturalistic explanation for the origin of DNA.
> [Note from Wintery Knight: Peter Hearty has a Ph.D in computer science!]

This is a fun and easy-to-understand debate, especially for those of us coming from a computer science or engineering background. I think it's fun to argue with my friends about what kind of professional God would be if he had to get a job. Naturally, I always argue that God is a computer scientist, because he designed the genetic code of the first replicator. If you have a different answer, leave a comment!

For more on science and faith, see my (snarky, mean, satirical) articles on the origin of the universe and the fine-tuning of the physical constants of the universe in order to permit the minimal requirements for complex living systems of any kind.

Canadian prime minister Stephen Harper interviewed by Larry Kudlow

February 26, 2009 | by Wintery Knight | Link | Original Link

Canadian Prime Minister Stephen Harper

Larry Kudlow sat down with Canadian prime minister Stephen Harper and had a conversation about Canada's economic situation and policies. (Video here)

Kudlow first asks Harper about the banking situation in Canada. Harper says that the banks are run much more tightly in Canada. Harper explains that there are no bailouts planned for Canadian banks because Canadian banks are *private institutions.*

> **KUDLOW:** Let me begin with an interesting subject here, banking. Everybody's talking about banking. The Canadian banks appear to be in much better shape than the American banks. They have fewer toxic assets. Their losses aren't nearly as bad. No one's talking about bankruptcy up there. I want to learn from our northern cousins. What can you tell us? Why are Canadian banks looking better than our banks?
>
> **HARPER:** Well first of all I can tell you, it is true. We have, I think, the only banks in the western world where we're not looking at bailouts or anything like that.
>
> **KUDLOW:** No TARP money sir, if I'm not mistaken? No TARP money?
>
> **HARPER:** We haven't got any TARP money. We've gone in and done some market transactions with our banks to improve liquidity. But I think the reasons are really complex, Larry. You know, first of all, our banks are private. We don't have a Fannie Mae or Freddie Mac equivalent mucking around in the system.
>
> **KUDLOW:** Is that a lesson right there Prime Minister?
>
> **HARPER:** Well, I think my observation is those are institutions with a difficult private/public mix. And sometimes private/ public mixes have benefits and sometimes they have the worst of both worlds. We don't have anything like that. We do have though, a strong system of regulation, and activist regulators, who go and meet with the sector. But they're macro, prudential kind of regulations. They don't try and micromanage banks' decisions. We try and establish good oversight and transparency.
>
> **KUDLOW:** Do you have leverage and borrowing ratios that might have been

> enforced? Because that's clearly one of the breakdowns here in the states?
>
> **HARPER:** Well, we do have leverage ratios. What's ironic is that our own banks had not actually achieved those ratios. They were actually working under them. Part of what we…
>
> **KUDLOW:** They were under leveraged?
>
> **HARPER:** They were under leveraged.
>
> **KUDLOW:** Wait, wait. Canadian banks were under leveraged?
>
> **HARPER:** Under what they could have been.
>
> **KUDLOW:** I didn't know there was such a thing on this entire planet earth.
>
> **HARPER:** Well I think part of what we have done is through the system of regulation we've had, we've encouraged a fairly cautious culture in the banks. For example, our banks, when they sign mortgages, largely hold those mortgages rather than trading them. So they have a lot more interest in the underlying quality of those mortgages. And we avoided the sub-prime kind of problem.

Kudlow goes on to quiz Harper on individual income tax rates, corporate income tax rates, tax cuts, Canadian energy production, carbon emissions, protectionism/free trade and auto-union bailouts. If you want to know what it is like to have an F.A. Hayek-admiring economist running your country, (BA and MA in Economics from the University of Calgary), read the whole thing!

UPDATE: More interviews with Stephen Harper with CNN, Wall Street Journal and Fox Business are here!

Obama introduces cap and trade scheme in budget

February 27, 2009 | by Wintery Knight | Link | Original Link

I was browsing over at Nice Deb and found this story about the budget that really upset me. I am really beginning to fear for the future of the American economy. I don't think we can handle all of these bad decisions in such a short period. We may be looking at a new Depression.

Nice Deb cites this article from Human Events as follows:

> The Department of Energy estimates that S. 2191, the Warner-Lieberman cap-and-trade proposal, will increase the cost of coal for power generation by between 161% and 413%. DOE estimates GDP losses (see chart) over the 21-year period they forecast, at between $444 billion and $1.308 trillion, with particular damage to the manufacturing sector…
>
> **Winegarden estimates that this bill could increase unemployment by 2.7% or about 4 million jobs.** In fact, companies are already preparing to avoid increased level and volatility of American energy prices by setting up factories and partnerships in countries which won't be subject to cap-and-trade restrictions…

In addition, we can expect 1 trillion dollars in new taxes. Here are the individual tax hikes from an ABC News article that Nice Deb links to in her post:

> On people making more than $250,000:
>
> $338 billion – Bush tax cuts expire
> $179 billlion – eliminate itemized deduction
> $118 billion – capital gains tax hike

Here are some of the tax hikes on businesses from the same post. I picked the ones that are specifically going to affect energy production.

> $5.3 billion – excise tax on Gulf of Mexico oil and gas
> $3.4 billion – repeal expensing of tangible drilling costs
> $62 million – repeal deduction for tertiary injectants
> $49 million – repeal passive loss exception for working interests in oil and natural gas properties
> $13 billion – repeal manufacturing tax deduction for oil and natural gas companies
> $1 billion – increase to 7 years geological and geophysical amortization period for independent producers

Oil and gas? Isn't that what people use to heat their homes and power their vehicles?

UPDATE: The Anchoress says that the price hikes on individuals making $250,000 or more

also apply to *small businesses*, as well as individuals! Bye-bye jobs!

Richard Dawkins cites German professor as authority on historical Jesus

February 27, 2009 | by Wintery Knight | Link | Original Link

Well, if this doesn't show the sad state of affairs in the world of militant activist atheism, I don't know what does.

In Chapter 3 of "The God Delusion", Dawkins cites a professor of German, G. A. Wells, as an authority on the historical claim that Jesus did not exist.

> "It is even possible to mount a serious, though not widely supported, historical case that Jesus never lived at all, as has been done by, among others Professor G. A. Wells of the University of London in a number of books, including Did Jesus Exist? Although Jesus probably existed." – Richard Dawkins, The God Delusion, p.122

Now, there is *not one single person in the universe* who has a Ph.D in history would take this view in peer-reviewed published work. Not one. Yet Dawkins cites a professor of German to make his case. If this were handed in as part of university assignment, Dawkins would get a big red "F" for *FAIL* from me.

Rev. Philip Brown comments on Wells' credibility on historical matters here:

> What Dawkins fails to mention is that Professor G. A. Wells from the university of London is NOT a professor of History, Religion, Theology, Philosophy, Literature, or even Anthropology; all subjects that we would be expect him to be an expert in? No! G. A. Wells is the Emeritus Professor of German at Birkbeck, University of London. While Wells does hold a degree in Philosophy his field is in language. Why does Dawkins mention that Wells is a professor and indeed one at the university of London, but fail to mention that Wells is a professor in a field that has noting to do with expertise in assessing validity of historical figures?

Unbelievable. Here is a list of the virtually indisputable facts about Jesus, from *respected, skeptical, non-Christian scholars* like Norman Perrin and E. P. Sanders. That is how serious people do scholarship. But maybe militant activist atheism is not about scholarship at all.

Here is N.T. Wright's list from the same page. N.T. Wright taught on the historical Jesus at Oxford, Cambridge, McGill (Canada) and Duke. That is what we call historical scholarship.

– Born in 4 B.C.E.
– Grew up in Nazareth in Galilee
– Spoke Aramaic, Hebrew, and probably Greek.
– Was initially associated with John the Baptist, but emerged as a public figure in his own right around 28 C.E.
– Summoned people to repent.
– Used parables to announce the reign of Israel's god.

– Conducted itinerant ministry throughout villages of Galilee.
– Effected remarkable cures, including exorcisms, as enactments of his message.
– Shared in table fellowship with a socioculturally diverse group.
– Called a close group of disciples and gave twelve of them a special status.
– Performed a dramatic action in the temple.
– Incurred the wrath of some elements in Judaism, especially among the high priestly establishment.
– Was handed over by this powerful Jewish element to the Romans to be crucified as an insurrectionist.
– Was reported by his followers to have been raised from the dead.

Resources to respond to the proposal that Jesus never existed are here.

Hong Kong debates evolution curriculum

February 27, 2009 | by Wintery Knight | Link | Original Link

According to the Nature News, Hong Kong is debating whether to support academic freedom in their schools on controversial areas of science.

> Hong Kong is in the middle of reforming its school system, and the Education Bureau has issued a series of guidelines for all levels of education to go into effect in September 2009.
>
> …
>
> The guidelines were prepared by the Curriculum Development Council and the Hong Kong Examinations and Assessment Authority.

The change affects the teaching of biology at the secondary level. A section of the proposed curriculum guidelines on 'Genetics and Evolution' states the following:

> In addition to Darwin's theory, students are encouraged to explore other explanations for evolution and the origins of life, to help illustrate the dynamic nature of scientific knowledge.

Opponents of "teaching the controversy" are ducking debates with the other side:

> There has been heated debate in the Hong Kong media since. On 13 February, the radio series Backchat broadcast a programme on 'Creationism versus Evolution'. Kwok, dean of the science faculty at the university, backed out of the programme when he found it had been changed to a debate format at the last minute, noting that he is not a specialist in evolution and thus cannot counter detailed arguments regarding evolution versus creation.

Professors who want to teach the evidence for and against naturalistic theories are having to dodge academic censors:

> Chris Beling, a solid-state physicist and associate professor in the University of Hong Kong department of physics, debated with two other panellists and took the opportunity to mildly criticize the science faculty for refusing his request to continue a course on the origin of the Universe that included a section on intelligent-design thinking. Instead, he has met in private with students to discuss intelligent design.

Keep in mind that Nature News is biased in favor of naturalism and therefore *must* defend the position that scientific inquiry can never implicate an intelligence.

In other words, their opinion has been set by their philosophical assumption of naturalism, and experiments and observations *cannot* overturn their *a priori* commitment to naturalism.

(H/T: Telic Thoughts)

LAT: Conscience rule on abortions may be overturned

February 28, 2009 | by Wintery Knight | Link | Original Link

Los Angeles Times story is here.

> Reporting from Washington — Taking another step into the abortion debate, the Obama administration today will move to rescind a controversial rule that allows healthcare workers to deny abortion counseling or other family planning services if doing so would violate their moral beliefs, according to administration officials.

And a bit more:

> Last month without official ceremony, Obama overturned a controversial ban on U.S. funding for international aid groups that provide abortion services.
>
> The move by the Department of Health and Human Services to throw out the conscience rule is being made equally quietly as most of Washington focuses on the president's blockbuster budget plan.

UPDATE: The Achoress adds:

> If we are going to be a nation that supports the "freedom to choose," then it seems to me that has to go both ways. Professional health workers should be "free to choose" whether or not they will participate in what they find to be morally objectionable.
>
> **Freedom that is only one-sided** i.e., "she is free to have a late term, partial-birth abortion and you are *not free* to refuse her request" or "she is free to demand this contraception and you are *not* free to refuse to fill that prescription," is not really freedom.
>
> It is enslavement. Dress it up any way you want. If the government is forcing you to do what your conscience tells you not to, under threats to your freedom, your purse or your livelihood, then you are not free.

Higher taxes for the rich will not pay for Obama's spending plans

February 28, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

On her official Townhall.com blog, Michele Bachmann asks whether Obama will ever be able to find money to pay for all the spending he has announced.

> To pay for the trillions in spending that President Obama and his Congressional Democrat allies have passed and are about to pass in the months ahead, our President has assured us that taxes on Americans making less than $250,000 will not be raised by "one single dime." His plan is to increase the tax rates on Americans making more than $250k a year to offset the spending. But is this even statistically feasible was the question the Wall Street Journal set out to answer?

She links to this story in the Wall Street Journal. The WSJ piece notes that Obama's current plans to raise taxes won't pay for the spending:

> Note that federal income taxes are already "progressive" with a 35% top marginal rate, and that Mr. Obama is (so far) proposing to raise it only to 39.6%, plus another two percentage points in hidden deduction phase-outs. He'd also raise capital gains and dividend rates, but those both yield far less revenue than the income tax. These combined increases won't come close to raising the hundreds of billions of dollars in revenue that Mr. Obama is going to need.

But there just isn't enough money to pay for the spending even if we take 100% of the earnings of those who make only $75,000 and up.

> A tax policy that confiscated 100% of the taxable income of everyone in America earning over $500,000 in 2006 would only have given Congress an extra $1.3

> trillion in revenue. That's less than half the 2006 federal budget of $2.7 trillion and looks tiny compared to the more than $4 trillion Congress will spend in fiscal 2010. Even taking every taxable "dime" of everyone earning more than $75,000 in 2006 would have barely yielded enough to cover that $4 trillion.

And as usual Democrats are ignorant of the fact that when you raise taxes on wealthiest producers, *they stop producing*, so the tax revenues actually go *down.* Not only that, but all of this tax and spend socialism destroys economic growth – so that tax revenues are reduced *even further*.

> Fast forward to this year (and 2010) when the Wall Street meltdown and recession are going to mean far few taxpayers earning more than $500,000. Profits are plunging, businesses are cutting or eliminating dividends, hedge funds are rolling up, and, most of all, capital nationwide is on strike. Raising taxes now will thus yield far less revenue than it would have in 2006.

And the cap-and-trade scheme he announced earlier is going to hurt the economy even more by raising prices on energy production.

> The bottom line is that Mr. Obama is selling the country on a 2% illusion. Unwinding the U.S. commitment in Iraq and allowing the Bush tax cuts to expire can't possibly pay for his agenda. Taxes on the not-so-rich will need to rise as well.
>
> On that point, by the way, it's unclear why Mr. Obama thinks his climate-change scheme won't hit all Americans with higher taxes. Selling the right to emit greenhouse gases amounts to a steep new tax on most types of energy and, therefore, on all Americans who use energy. There's a reason that Charlie Rangel's Ways and Means panel, which writes tax law, is holding hearings this week on cap-and-trade regulation.

Canadian Human Rights Commissions are bad for business

February 28, 2009 | by Wintery Knight | Link | Original Link

Denyse O'Leary has a re-cap of the sorry state of free speech in Canada, here.

It is worth noting how these Human Rights Commissions don't just affect individual liberty – they affect commerce, as well! Businesses can be sued just as easily as individuals. All it takes is a victim from a special interest group to feel "offended".

Closet Conservative linked to this St. Catharines Standard story:

> The owner of a downtown St. Catharines fitness club faces a mediation hearing today for allegedly denying a pre-operation transsexual access to the women's only areas of his gym.
>
> The transsexual — now a woman, but a man at the time of the incident two years ago — is taking the case to the Human Rights Tribunal of Ontario, John Fulton said Tuesday.

Mark Steyn has more stories of business owners and professionals facing "Human Rights" suits from offended clients. Excerpt:

> What's the "proper conduct" for Mr Fulton? Decline to let the pre-op use the ladies' changing room and get a "human rights" complaint? Or let the Big Swinging Dick have the run of the shower and get a whole bunch of other suits from his outraged female members?
>
> What's the "proper conduct" for Dr Stubbs? Decline to perform a labiaplasty on the post-op transsexual because he's no idea what he's getting into (so to speak)? Or perform it and risk a malpractice suit for botching an operation?
>
> What's the "proper conduct" for Gator Ted? Tell the medical marijuana guy to stop smoking pot in his doorway and be hauled before the commissars? Or let the guy go ahead and get sued by the trucker sitting next to him at the bar when he fails his drug test?
>
> There is no "proper conduct", only the whims and caprices of nuisance plaintiffs backed by the Ontario government's social engineers. Bar owners and fitness clubs run up five- and six-figure legal bills. The nuisance plaintiffs get the tab picked up by taxpayers, and thus have no incentive to settle.

Canada may have a fiscal conservative running the economy today, but Stephen Harper still doesn't have the majority government he needs to abolish these kangaroo courts once and for all.

So it may not be time for Americans to flee Obama's socialist paradise for Canada, yet. Will Canada win back the right to free speech? Maybe. Time will tell.

Does Darwinian evolution matter for the progress of biology?

February 28, 2009 | by Wintery Knight | Link | Original Link

Over on Tough Questions Answered, they have analyzed an article by Phil Skell, emeritus professor of chemistry at Penn State. Skell's article appeared in Forbes magazine. Skell argues that evolution has no bearing on the progress of science in biology.

TQA writes:

> Skell writes that Darwinists "overstate both the evidence for Darwin's theory of historical biology and the benefits of Darwin's theory to the actual practice of experimental science."
>
> Experimental science, in biology, has "dramatically increased our understanding of the intricate workings within living organisms that account for their survival, showing how they continue to function despite the myriad assaults on them from their environments."
>
> These advances, however, have little or nothing to do with explanations of Darwinian origins. They "are not due to studies of an organism's ancestors that are recovered from fossil deposits." The study of fossils "cannot reveal the details that made these amazing living organisms function."

Another (even better) Forbes article by neurosurgeon Michael Egnor is here. He explains why practicing scientists don't need to be Darwinians, because Darwinism is irrelevant to the practice of science.

Excerpt:

> The fossil record shows sharp discontinuity between species, not the gradual transitions that Darwinism inherently predicts. Darwin's theory offers no coherent, evidence-based explanation for the evolution of even a single molecular pathway from primordial components. The origin of the genetic code belies random causation. All codes with which we have experience arise from intelligent agency. Intricate biomolecules such as enzymes are so functionally complex that it's difficult to see how they could arise by random mutations.

Egnor then asks why Darwinism is so important to some activists. And he describes how strongly they cling to their belief in Darwinism, often in very facistic and insulting ways:

> I came to learn why evolutionary biologists are so fiercely devoted to Darwinism. I was vilified on the Internet. Calls came to my office demanding that I be fired.
>
> And much of the venom was ideological. The vast majority of evolutionary biologists are atheists. I'm Catholic, and my religious faith was mocked by my fellow scientists. Many Darwinists openly express their hatred for Christianity–atheist biologist P.Z. Myers desecrated a Eucharistic host on his Web

> site.
>
> In 1989, Oxford evolutionary biologist Richard Dawkins wrote in the *New York Times* book review section that people who don't accept evolution are "ignorant, stupid, insane … or wicked." He has described the religious upbringing of children as "child abuse."
>
> In his book, *Darwin's Dangerous Idea*, atheist philosopher and Darwinist Daniel Dennett has written that "[s]afety demands that religions be put in cages too–when absolutely necessary." The fight against the design inference in biology is motivated by fundamentalist atheism. Darwinists detest intelligent design theory because it is compatible with belief in God.

Rush Limbaugh speaks at 2009 CPAC conference

February 28, 2009 | by Wintery Knight | Link | Original Link

Links to entire speech is here.

GatewayPundit says the speech was carried live on CNN and Fox News. I'm watching CNN right now and the CNN anchorwoman is calling Rush "divisive" for asking Democrats to stick to their oath to defend the Constitution. (That's the clip they played, she called that divisive)

Full report from William Lane Craig's Quebec debating tour

March 1, 2009 | by Wintery Knight | Link | Original Link

I received William Lane Craig's report from his Ontario and Quebec speaking tours in my e-mail inbox. The report is not yet posted on his web site, so I reproduce the portion related to his debate at McGill against Shabir Ally below. (I wanted to post everything, but it was too much)

Here's what Bill says about debating Shabir at McGill University in Montreal:

> The next evening was my debate at the English-speaking McGill University with the Muslim apologist Shabir Ally on "Did Jesus Rise from the Dead?" I began by presenting a case for Jesus' resurrection, and Shabir then followed. Shabir is a very slick customer, a skilled debater and smooth speaker. Whereas my debating style tends to be pretty formal, ticking off one point after another, Shabir began his opening speech by telling a joke, which got the audience laughing, and even presenting to me a small souvenir gift from Montréal. I thought to myself, "Boy, I'm already ten points behind just on audience rapport!" But my experience is that these first impressions fade pretty quickly as the debate unfolds.
>
> So I figured I should just carry out my plan to attack his view hard, while continuing to be gracious personally. Shabir defends a very strange view of what happened to Jesus. He holds that Jesus was crucified (despite the Qur'an's denial of that fact) but that he was only apparently dead when he was taken down from the cross and laid in the tomb. Before he could die in the tomb, God assumed him into heaven and thereafter gave visions of Jesus to the disciples. In that way, Shabir is able to affirm the historicity of Jesus' crucifixion, burial, empty tomb, post-mortem appearances, and the disciples' belief in his resurrection, but all without Jesus' being raised from the dead!
>
> Unfortunately, to my surprise, Shabir didn't even mention his theory in his opening speech but just presented a wishy-washy, feel-good talk about Islam and Christianity. "Now what should I do?" I thought. "If I attack his view when he hasn't even presented it, I'm really going to come across as mean-spirited. But if I wait till the rebuttals, there won't be enough time to present my critique." As I said, I decided to go after his view anyway, explaining to the audience that this is his position in his published work.
>
> As a preliminary observation, I pointed out that no true Muslim could embrace his view, since the Qur'an could not be more straightforward or unambiguous: "They did not kill him; they did not crucify him" (4:157). I even quoted the Arabic "*wa maa qataluhu, wa maa salabuhu*." I charged that Shabir, in denying the Qur'an, had already deserted Islam for a mishmash of Christianity and Islam, which I dubbed "Chrislam." I said that if you're going to embrace Chrislam, why not go

> all the way and become a Christian?
>
> I then argued that Shabir *should* do this because his view faces insuperable historical and theological objections. Historically, it has inadequate explanatory scope (since mere visions of Jesus would not explain the disciples' belief in Jesus' resurrection), weak explanatory power (since the early Church distinguished visions of Christ from resurrection appearances of Christ), and little plausibility (since it is highly improbable that Jesus was taken down alive).
>
> The theological objections are even more problematic: (1) The theory provides too little, too late. For in virtue of his crucifixion, Jesus has already suffered shame, humiliation, and defeat in the minds of his enemies. (2) By misleading the disciples into thinking that Jesus was risen from the dead, Allah himself is to blame for foisting the religion of Christianity on the world, resulting in hundreds of millions rejecting Islam and going to hell! Shabir had little to say in response to these objections, except to reiterate that there's no way of knowing that Jesus was really dead.
>
> So in the end the palm of victory went clearly to the Christian side. But sad to say, there were very few Muslims in the audience. I hear through the grapevine that Muslims are increasingly disaffected with Shabir because of his compromises on orthodox Islam. In fact the Muslim Student Association at McGill, which had promised to help promote the debate, called at 4:00 p.m. the very afternoon of the debate to say that they weren't coming and had decided to schedule a meeting of their own that night! So it appears that the Muslim community is losing confidence in Shabir.

His newsletter contains more about his speaking in Quebec at the University of Montreal and the University of Laval. The newsletter also discusses his debate with Shelly Kagan of Yale University, held at Columbia University. And he concludes with his upcoming speaking engagements. Please pray for Bill and consider supporting him by donating to Reasonable Faith.

Round-up of US media interviews with Stephen Harper

March 1, 2009 | by Wintery Knight | Link | Original Link

Canadian Prime Minister Stephen Harper

I spotted this round-up of media interviews with Stephen Harper on the Canadian blog Blue Like You. I've already blogged about the CNBC interview with optimistic Larry Kudlow here. That interview focused on economic policy.

In the Fox Business interview with Alexis Glick, (video here), she explains how Canada was able to avoid the subprime lending crisis.

> Immediately after I talked to the vice chairman of the Swedish central bank, I interviewed — in a "First on Fox Business" — Canadian Prime Minister Stephen Harper about a lot of things: Everything from his meeting with President Obama last week, to NAFTA to the "Buy American" clause in the stimulus to carbon emissions and the Canadian Sands to the banking system. Why has Canada's banking system withstood the financial crisis while other countries banking systems like the U.S. are in such dire straits? **In 2008, the World Economic Forum ranked Canada's banking system the healthiest in the world. The U.S. was ranked 40th. Canada's system has much stronger federal regulations and lower mandatory leverage ratios. Canada's firms never engaged in subprime mortgage lending.** For over a decade, Canada has posted budget surpluses; only in the last quarter did they enter into a recession. What is working? What lessons could we learn from them? Take a look. Prime Minister Harper is very impressive.

Canada does not believe in forcing banks to make loans based on ACORN's vision of social justice. I explained how Democrats like Carter and Clinton forced banks to make these loans and how Republicans tried in vain to stop them, here.

The Wall Street Journal interview was more focused on foreign policy. You may have heard of Harper's recent free trade deal with Peru. But did you know that Canada also signed a free trade deal with Colombia?

> But the mention of Canadian and American political opposition to free-trade agreements with Colombia has sparked a change in the PM's unflappable

> manner. For a fleeting moment, what sounds a lot like frustration emerges. "I'm not going to say it's a perfect government, but we have a government in Colombia that is democratically elected, that has increased democratic norms, that has taken on the insurgency, that is moving that country forward economically and politically. And it is in a hemisphere where we have an increasing number of real serious enemies and opponents."

Meanwhile, the economically-illiterate, protectionist ACORN lawyer rejected a free trade deal with Colombia.

And did know that Canada has been taking a leading role in foreign policy?

> Since establishing a minority government in January 2006, this prime minister and his Conservative Party have restored Canada's international prestige by increasing military funding and tenaciously supporting Canada's dangerous NATO mission in the Afghan province of Kandahar. No NATO ally has put more on the line against the Taliban, and Mr. Harper seems to sense not just the opportunity but the need for Canada to capitalize on it. There is a vacuum in conservative leadership in North America and on the world stage, and Mr. Harper is stepping into it. His objective would appear to be the restoration of liberal-democratic resolve against tyranny.

You want Reaganesque? I'll give you Reaganesque:

> An unreliable NATO has implications for Canada not least because Russia is once again becoming a menace. The Kremlin's claim to the Arctic seabed can be discounted, he argues, because it is being pursued through the United Nations Law of the Sea Treaty. But other provocations are worrisome. "They are testing our airspace more frequently than they have been doing in a long, long time," he says. "It's the aggression in the Arctic, aggression more generally, an aggression that is increasingly troublesome just to be troublesome."

Check this out: 2 CF-18 fighters intercepted a Russian bomber that was snooping near Canadian airspace just last week. Look, if Obambi wants to focus on increasing welfare and nationalizing health care, then maybe Canadians will have to pick up the slacker's slack.

I rarely say this, but I am going to say it for this WSJ interview: READ. THE. WHOLE. THING.

UPDATE: Welcome, Canadian visitors from Blue Like You! Thanks for the link Joanne! I've just blogrolled you! I am hoping Stephen Harper gets his majority soon, so he can get rid of those pesky HRCs that keep going after Ezra Levant.

UPDATE 2: I noticed in the comments on Blue Like You that they referenced this interview from CNN with Wolf Blitzer. Here is the video and a news article from the National Post. Ooops. I think the commenter Allison meant a more recent CNN interview with Fareed Zakaria which is here.

UPDATE 3: Welcome visitors from Post-Darwinist! Thanks for linking to me, Denyse!

Report on Plantinga-Dennett debate

March 3, 2009 | by Wintery Knight | Link | Original Link

Free Mark Steyn linked to *eight* of my posts today, so I went over there to see what else he found. Canadian writer Deborah Gyapong linked to a debate play-by-play between Alvin Plantinga and Daniel Dennett.

First off, the audio of the debate is here.

Here is an excerpt from the play-by-play, which has drawn over 100 comments so far:

> The debate was between Alvin Plantinga and Daniel Dennett. Plantinga is one of the founders of the Society of Christian Philosophers and one of the fathers of the current desecularization of philosophy. He is widely regarded – even by his critics – as one of the finest epistemologists of the last fifty years and one of the finest philosophers of religion since the Medieval period. Daniel Dennett is one of the New Atheists and is a well-known proponent of atheistic Darwinism and critic of religion. He is widely regarded – even by his critics – as one of the most important early philosophers of mind that opened the field to cognitive science and evolutionary biology. He has contributed enormously to the serious study of the mind and its relationship to the brain. Both philosophers are over sixty and perhaps at the height of their philosophical powers. They have also faced off before but, as far as I know, not in person.

It looks like Plantinga presented on his argument that rationality is incompatible with naturalism and evolution. I actually heard him present this paper *live*, and the phrase "the probability of R on N and E" is seared into my memory. Here is another excerpt:

> Plantinga was the presenter. The session asked the question of whether science and religion were compatible. Plantinga argues that they are and that in fact the scientific theory taken to be most incompatible with religion – evolutionary theory – is not only compatible with Christian theism (the religious view Plantinga defends) but is incompatible with Christian theism's most serious opponent in the scientific world – naturalism. Naturalism is the view that physics and the sciences can give a complete description of reality. Plantinga defines it as the view that there is no God or anything like God.

Here's the conclusion of the play-by-play:

> On another note, I walked around and listened to various conversations (not eavesdropping really, just listening for loud reactions to the session). The Christian philosophers were particularly interesting. They were not upset, surprised or even moved. They were wholly unphased. They were so unphased that they weren't even discussing the session. I was floored at Dennett's behavior but they reacted as if Dennett's hateful, childish behavior was to be expected. I thought they would be upset, but from what I can tell they simply

> expected Dennett to compare theistic belief to holocaust denial and to advocate murdering the Almighty. I guess I was wrong to expect more from him.
>
> In my estimation, Plantinga won hands down because Dennett savagely mocked Plantinga rather than taking him seriously. Plantinga focused on the argument, and Dennett engaged in ridicule. It is safe to say that Dennett only made himself look bad along with those few nasty naturalists that were snickering at Plantinga. The Christians engaged in no analogous behavior. More engagements like this will only expand the ranks of Christian philosophers and increase the pace of academic philosophy's desecularization.

If you guys are into debates, I highly recommend William Lane Craig debates here. Plantinga doesn't debate much, but there is this book-debate he did recently, that I haven't checked out yet. Dennett debated twice before that I know of, first, against that wimpy microbiologist Alister McGrath as part of the Greer-Heard series here, and against Dinesh D'Souza here.

Democrat stock-picker Jim Cramer angry with Obama's socialism

March 3, 2009 | by Wintery Knight | Link | Original Link

See this awesome post over at Nice Deb. She's got the videos up showing democrat Jim Cramer complaining about the economic free-fall caused by Obama's policies.

There are a lot of people in this country who do not know anything about economics, but they've been buying stocks based on *hype* generated by Obama-supporting Wall Street types.These gamblers (not investors) have not read Hayek or Sowell or Friedman. But they hope that Obama's socialist policies will make the stock market go *up*.

According to Business Week, Cramer is a life-long Democrat. According to this article, he contributes to Democrats. I think it is interesting to note that it's probably Democrats who are taking the most damage from the market right now, because they believe in Obammunism – they think that the market will rise as we go socialist.

Check out this video of Cramer being bullish on the Dow when it was around 14000 in the teeth of *abysmal* fundamentals, and then later denying that he was bullish.

And now Cramer is surprised that the party he supported is wrecking the economy. I hope he loses piles of money, and I hope everyone who voted for Obama loses everything. *EVERYTHING*.

Remember, Democrats caused this mess by forcing banks to make loans in order to achieve social justice for the benefit of other irresponsible Democrats who signed legal contracts with banks to purchase more house than they could afford. Many of these banks were being *run* by Democrats who got million-dollar bonuses while fudging the accounting and paying off Democrat lawmakers to block efforts by Bush to regulate them. Now the Democrat bankers are *working for Obama*.

The Democrats are voting in wasteful spending bill after wasteful spending bill, *and none of this spending will help the economy one iota.* And it's not just socialist tax policy, it's protectionist trade policy, too. And no matter how much Obama raises taxes on the productive class, we cannot afford to pay for this spending.

Democrats in general seem to believe that their socialism will make the economy grow faster. The falling stock market must be a real wake-up call to their ignorant faith in an ideology of feelings and intentions.

The fact that Obama's policies are likely to cause inflation and/or stagflation means that the rest of us responsible people who have to pay for this crap will have the additional comfort of knowing that every dollar we saved after our hard work will be devalued when he has to print money to pay for his wasteful spending.

Major breakthrough in adult stem-cell research

March 4, 2009 | by Wintery Knight | Link | Original Link

There are two kinds of stem-cell research. The first kind is called embryonic stem-cell research (ESCR). This kind is opposed by pro-lifers because it kills unborn persons by extracting their stem cells for use in medical research. The second kind is called adult stem-cell research (ASCR). This kind is supported by pro-lifers.

You may be surprised to know that ESCR doesn't work as nearly as well as ASCR. Despite all the advocacy from left-wing Hollywood actors, ESCR has not helped a single patient. But ASCR in being used for 73 different kinds of therapies. According to the Family Research Council:

> …adult stem cell research had an impressive track record as of 2006-over 1100 FDA approved clinical trials in the United States for 72 different illnesses and disabilities. 2007 has seen further advances in adult stem cell research and therapy. Currently, peer-reviewed studies have documented 73 different conditions in humans where patient health has been improved through adult stem cell therapy, and over 1400 FDA approved trials are ongoing.
>
> Adult stem cells are found throughout the human body from birth onward, in placentas, and in umbilical cord blood. Unlike embryonic stem cell research, no embryos are destroyed in retrieving them.
>
> …There have been *no* successful treatment trials in human beings using *embryonic* stem cells.

But there were still a couple of problems with ASCR as Telic Thoughts explains here:

> In 2007 scientists found a way to induce pluripotency in adult somatic cells. There were just two problems. First, it was a slow process. Second, the cells were modified via a virus delivery system which increased the risk of cancerous mutation in the future.

Cancerous mutation? That sounds bad. But wait:

> Yesterday the second problem was solved as it was announced that scientists had found a way to induce pluripotency similar to that of embryonic stem cells without the use of viral delivery systems.

And their post closes with this:

> Last week the Obama administration promised to move soon to repeal the funding ban on embryonic stem cell research. It will be interesting to see if this monumental scientific breakthrough will alter Obama's course of action.

That won't happen. For more information about *why* pro-lifers oppose ESCR and support ASCR, here is a series of 3 Townhall.com articles written by Greg Koukl, (first, second,

third). Greg is the founder of Stand to Reason, an apologetics ministry with a heavy emphasis on bioethics.

UPDATE: Video of Michele Bachmann opposing ESCR funding.

Bobby Jindal defends Rush Limbaugh against hostile Larry King

March 4, 2009 | by Wintery Knight | Link | Original Link

Hot Air has the video of Jindal kicking butt on Larry King Live. It's more fun to watch when the left is angry and crazy.

Here's Hot Air's blurb about the video:

> Bobby Jindal faced off against an unusually hostile Larry King last night over the Steele-Limbaugh contretemps. King kept trying to stuff words into Jindal's mouth, and Jindal politely but firmly kept spitting them back at King. King insists that Republicans want the country to fail when it's clear that not even Rush says that.

CNN has the full transcript! Here's the best part:

> KING: Governor, do you think people are thinking about capitalism now or are they thinking about problems?
>
> JINDAL: Look, clearly, the American people are worried about paying their mortgages, keeping their jobs and paying their health care bills. I think Rush is a great leader for conservatives. I think he articulates what a lot of people are concerned about. And I think it is absolutely true that you can help people keep their jobs, help people afford their health care, help people afford their homes without abandoning the same conservative principles. For example, Republicans offered ideas like aggressive tax credits to make homes more affordable so people can refinance, can stay in their homes. You'd see more demand for homes. They've offered ideas about — instead of nationalizing banks, why not modify the mark to market rules? …
>
> KING: Do you want him to fail?
>
> JINDAL: I want the — I don't want those policies to be adopted. I want my country to succeed, but I don't want policies to be adopted that I think –
>
> KING: But what if the… policies actually work? What if they work?
>
> JINDAL: This is where we have a fundamental disagreement. I don't think it's going work to borrow half a — to spend in excess of our revenues. If you believed everything that the president — if you believed all of his projections, if you believe the economy starts growing again, you believe that we're not going be spending all that money fighting overseas…if you believe that all of these temporary programs are truly temporary, he's still projecting deficits of half a trillion dollars per year, under the best case scenario. Larry, that's just not sustainable. We cannot continue to do this as a country. China cannot become — continue to be our largest foreign holders of debt. This addiction to debt is what's caused so many of our problems. The government is not going to be the answer

> to every problem. I want my country to succeed. But what I worry about is that simply spending money on new programs — look at every new bailout. You know, you talked today, you know, about the auto bailouts. Then you had the fourth, I think it's the fourth — it's hard to keep track — the AIG bailout today. It seems like every time you turn around, there's another trillion dollar trillion plan. … I've yet to hear a coherent exit plan.
>
> KING: So you hope — you hope it doesn't hurt?
>
> JINDAL: No. I hope that failed policies don't get adopted. I want my country to succeed. I want the economy to grow. I want — certainly I want the economy to grow again so people can afford their homes. But I don't want the Congress to adopt policies that would make the problem worse, not better. … I think it's our — I think it's our obligation as Americans when we don't agree with a policy to speak up against it and to certainly offer different solutions.

Obama blames Bush for Obama's 1.75 trillion dollar deficit

March 4, 2009 | by Wintery Knight | Link | Original Link

Full story over at Gateway Pundit.

Excerpt:

> [Bush's policies] dropped the deficit **4 of 8 years**, held an **average unemployment at 5.2%**, saw the **strongest productivity growth** in 4 decades and witnessed **robust GDP growth**.
>
> Bush was able to do this despite the recession he inherited, 9-11, Hurricane Katrina, and wars in Iraq and Afghanistan.
>
> As you can see from this chart, after the Bush tax cuts were implemented the budget deficit was reduced 3 of the last 4 years.
>
> The deficit was reduced in 2005, 2006 and 2007 even with war and implementation of the successful Bush surge of troops in Iraq.
> It wasn't until the mortgage crisis struck the economy, a crisis Bush warned the democratic Congress about **17 times** in 2008 alone, that the deficit climbed to $459 billion.

Have you seen this chart? (Source: CBO chart via **RedState**)

Gateway Pundit also mentions that Bush warned about crisis 17 times in 2008 and was blocked from regulating the GSEs by the Democrats. I proved here that the Democrats are to blame for this mess. In the post, I cited 1999 and 2003 articles from the left-wing New York Times and Los Angeles Times. There are also videos of Republicans trying to stop the crisis and Democrats blocking them.

Obama raises taxes on oil and gas to stop global warming

March 5, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome, visitors from the Cato Institute! Thanks for your link from here. New visitors, interested in economics make want to check out my posts on card check, the deficit, Stephen Harper, tax hikes for the rich, cap and trade, porkulus 1, porkulus 2, conscience rights, school choice and the subprime crisis.

This Reuters article explains how Obama is going to attack energy producing oil and natural gas companies in order to save the planet from global warming. Here is the exact quotation from Reuters:

> U.S. oil and natural gas producing companies should not receive federal subsidies in the form of tax breaks because their businesses contribute to global warming, U.S. Treasury Secretary Timothy Geithner told Congress on Wednesday.

In the same article, Senator John Cornyn explains the consequences of this policy:

> Senator John Cornyn of Texas criticized the tax increases, saying they would hurt independent energy companies that provide a large share of U.S. oil and gas supplies.
>
> "My view is that higher taxes on small and independent producers here in America will make us **more dependent on imported oil and gas** while we transition to cleaner energy alternatives, a goal we all share," said Cornyn. "And it will also **hurt job retention and job creation in the energy sector**, which provides an awful lot of jobs in this country."

Let me also note that *consumers* are going to pay the price for raising taxes, because energy producing companies are just going to raise their prices to pay for the tax increase. And if Obama either fixes prices or nationalizes the energy industries, (like he's nationalized health care), then you can expect energy supply shortages.

When you raise taxes on the producers of a commodity, you get less of that commodity. When supply decreases and demand stays the same, you get a shortage. The price of that scarce commodity rises. If you respond to the rising prices by fixing the prices lower, you get line-ups outside of gas stations. This is what we saw in 1973 with price controls on gas.

Jerry Taylor of the Cato Institute explains *why* price controls on oil and gas didn't work in 1973:

> Let's begin with a review of what happened the last time Congress tried to protect consumers from "Big Oil." When Richard Nixon enacted his strict retail price-control regime in 1971, service stations ran out of gas and motorists were forced to wait in staggeringly long lines to get what fuel remained. Burned by the

> fiasco, Congress adopted the Emergency Petroleum Allocation Act of 1973 (EPAA), which essentially removed price controls from the pump and instead applied them upstream into the wholesale domestic oil market.
>
> Indeed the gasoline lines and physical shortages disappeared, but the cap on profits from domestic oil production discouraged investment in new domestic supply, increased reliance on imported oil, and increased the upward pressure on world crude prices. The Energy Policy and Conservation Act of 1975 (EPCA) tightened the wholesale oil price controls established in the EPAA and exacerbated the economic dislocations associated with it.

Read the whole article. As Santayana urged, we need to *learn from history* and from the mistakes of other socialist countries, so that we do not repeat their mistakes.

Now on to the secular religion of global warming. Gateway Pundit completely destroys the idea that the earth is even warming:

> Arctic **sea ice growth** finished the year in 2008 at the same level as 1979.
> The **oceans have been cooling** since 2003.
> Sea ice is **growing at the fastest pace** on record.
> Greenland's **glaciers are stabilizing**.
> There are **growing fears** of a coming freeze worse than the ice age.
> **Alaskan Sea Glaciers are advancing** for the first time in 250 years.
> ***And,*** for the second straight year the Earth is, in fact, **cooling… not warming**.

I stole this graphic from his post as well:

US Climate Map October 2007-November 2008

Warning! Now is a good time to stop reading, as I am about to become mean and snarky.

<snarky>So what we have here is a faith-based initiative introduced by Obama in order to appease his favored secular special interests groups, who substitute recycling for the rigorous demands of traditional, reality-based religion and morality. Do we really need a

religious nut in the White House catering to this crowd of anti-science fanatics? Should these dogmatic eco-fascist fundamentalists be influencing the policy of the most powerful nation on earth with their anti-reality delusions? Should we really be acting on the religious doctrines of non-scientists like Al Gore and his Big-Environmentalism-backed propaganda films, which are even now shown to our children in *public schools* as fact, fact, fact? What happened to the separation of church and state?</snarky>

For my Christian readers, Jay Richards of the Acton Institute did a great lecture on basic economics for Christians and another great lecture on what Christians should think about global warming.

Obama's plan to eliminate the right of workers not to join unions

March 5, 2009 | by Wintery Knight | Link | Original Link

According to John Boehner's blog, Obama wants to pass a piece of legislation called the "Employee Free Choice Act". EFCA would deny employees the choice to *not* surrender a significant portion of their wages to left-wing unions, for use in left-wing political activism, (e.g. – redefining traditional marriage in California).

The post by Kevin on Boehner's blog explains:

> Yesterday, President Obama promised union bosses that "We will pass the Employee Free Choice Act," referring to the mis-named official title of the bill popularly known as "card check." Unions came within a few votes of passing "card check" last Congress – and after giving $450 million to the Democratic Party this past election cycle, union bosses are cashing in on their investment by demanding the swift passage of the anti-worker "card check" bill.

Kevin also links to this *must-see* 6-minute video, produced by the pro-business Chamber of Commerce:

EFCA would cost American jobs because some companies would simply *shut down* work sites that use expensive unionized labor, rather than pay the additional costs for the same amount of production. They would just ship their plants and jobs *overseas*. A short policy paper from American Enterprise Institute is cited by Kevin makes the point:

> Card check should be seen for what it is: an attempt to rebuild the private-sector union movement by making it dramatically easier for unions to organize American workers. Adding card check to the already heavy burden of U.S. labor and employment law that companies face today will cost the U.S. economy additional jobs.

Allison Kasic of the Independent Women's Forum released this short research paper on EFCA last week. I think it is ironic that the party that loudly advocates for "making every vote count" and the right to "privacy" would pass a law that hurts voting rights and privacy rights. Allison explains:

> Since Congress enacted the National Labor Relations Act (NLRA) in 1935, most workplaces have organized through secret ballot elections monitored by the National Labor Relations Board. Once organizers have collected signatures from at least 30 percent of workers expressing the desire to unionize, the union submits the information to the company and requests recognition. Companies can choose to recognize the union based solely on this card check, but more regularly request an election.
>
> **The privacy of the secret ballot system protects workers from strong-**

> **arm tactics by either the unions or the company in question before and after a vote. All of that would change under the EFCA. Elections would no longer be necessary. Instead, a union would be recognized once a majority of workers publicly signed a card supporting unionization. In fact, once a majority of cards have been signed, holding an election would be illegal.**

The Heritage Foundation has a slew of papers on EFCA here, including this recent short research paper by James Sherk, which has a lot more detail on EFCA.

Fred Thompson broadcasting in Bill O’Reilly’s old spot

March 5, 2009 | by Wintery Knight | Link | Original Link

Thompson was my pick in the 2008 primaries, since Jindal and Sanford weren’t running.

Story here.

> Former Tennessee senator and presidential candidate **Fred Thompson** will launch his nationwide radio talk show on March 2, opening with 125 stations, according to the Westwood One syndicate.
>
> The show will air from noon-2 p.m. Monday through Friday opposite Rush Limbaugh, though some stations may delay the broadcast to later in the day. The only Tennessee station signed up thus far is WWTN 99.7 FM in Nashville.
>
> Thompson gave up his role as the district attorney on television’s *Law & Order* in order to run for president.

This is a great move for Teh Fred, provided that the Broadcast Freedom Act passes. Kate at SDA notes that you can listen here. You can probably find more streaming stations here once he gets started in earnest.

William Lane Craig's March 2009 speaking engagements

March 5, 2009 | by Wintery Knight | Link | Original Link

For some reason, Bill's March newsletter has not been posted on the RF web site yet. As one of his financial supporters, I get an early version of the newsletter e-mailed to me. So, I think I will share some of that early newsletter with you all.

> During March two events stand out as especially challenging: on March 16 at Westminster College in Missouri I have a dialogue on the kalam cosmological argument with Dr. Wes Morriston, a philosopher who has published several articles critical of the kalam argument. Then two days later I have a debate at Northwestern Missouri State with the self-described "internet infidel" Dr. Richard Carrier on the resurrection of Jesus.
>
> …I'll also be doing some teaching for Impact 360, a high school ministry, and will be speaking several times at the Christian Book Exposition in Dallas. I round out the month with a Veritas Forum at Florida State.

I already blogged about the panel discussion he is doing with Lee Strobel and Christopher Hitchens at the Christian Book Expo here. And here is a bit more on his recent speaking engagement at Columbia University in March:

> On the first evening I debated professor Shelly Kagan of Yale University on the question "Is God Necessary for Morality?" Actually, this was not a debate but a dialogue. After we each gave our opening statements, we had a very substantive discussion. Kagan has Christian colleagues at Yale, like Robert Adams and John Hare, who defend moral values and duties based in God, and I was struck by the respect with which he treated the view.
>
> He surprised me by not arguing for his own view of ethics, which is a radical consequentialism. He holds that if torturing a little girl to death would somehow result in greater overall good as a consequence, then that is what we should do! Instead he defended a social contract view of morality, according to which our moral duties are whatever rules perfectly rational people would agree to as a way of governing society. I responded that this makes morality a human convention, rather than objective.
>
> Kagan also affirmed in our dialogue that he is a physicalist and determinist. I charged that determinism strips our actions of any moral significance. We also disagreed over the importance of moral accountability. I claimed that the absence of moral accountability on atheism makes morality collide with self-interest and robs our choices of significance, but Kagan maintained that we don't need a sort of cosmic significance in order for our moral choices to be significant. All in all, we had an affable and substantive exchange which fairly presented the

> alternatives.
>
> One feature of our dialogue that pleased and surprised me was how clearly the Gospel emerged in the course of our conversation. Talking about moral values and accountability led naturally to the subject of our failure to fulfill our moral duties and how to deal with that. I was able to explain our need of God's forgiveness, moral cleansing, and rehabilitation.
>
> Kagan then asked me how Jesus fits into the picture. That gave me the chance to expound on Christ's atoning death and the fulfillment of God's justice in Christ's bearing the penalty for our sin. I was gratified that the Gospel could be shared so clearly and naturally with the students present.

I hope I will be able to purchase all 3 of these debates (Morriston, Carrier and Kagan) from the Biola Web Store later, as I love to lend these out to my non-Christian friends. I would encourage you to support the ministry of the most able public defender of Christianity operating today. Bill is the St. Paul of our day.

If you have not seen any of his debates, go here right now and listen to his debate with Walter Sinnott-Armstrong of Dartmouth College, on the problem of evil and suffering. The book version of that debate, (and another debate), was later published by Oxford University Press and you can purchase it here. This is a great book to put on your desk at work to show people that God is not a matter of blind faith.

In case you missed the previous updates, check out the details from Bill's Ontario speaking tour, his appearance on the Michael Coren TV show, and his Quebec speaking tour, as well.

Can atheists on the Richard Dawkins forum justify morality on atheism?

March 6, 2009 | by Wintery Knight | Link | Original Link

Check out this thread where I am debating atheists on whether moral rules, moral choices, moral accountability, human dignity, human rights, and ultimate significance of moral actions are rationally grounded on the atheist worldview.Warning, the thread contains swearing!

Here is the original starting post for the thread:

> I noticed that a tension between two positions taken by certain atheists. First, they say that morality is an illusion fobbed on us by our genes. Second, they say that the God of the Bible is immoral, or that the Christian church is immoral.
>
> I have a question about this, and maybe you can help me to understand the apparent contradiction. If moral behavior evolved over time, then it seems to me that it varies by time and place. This means that the standards we have today in the place where we live now are not really better or worse than at any other time and any other place. The evolved moral standards are just arbitrary conventions.
>
> If this is true, then in what sense can atheists consistently press the problem of evil, the immoral behavior of God, and the immorality of Christian church in history?
>
> Here is what I have come up with so far:
> 1. The atheist is expressing his personal preferences (I wouldn't do it that way)
> 2. The atheist is using the arbitrary standard of his time and place to judge God and the church (we in this time and place wouldn't do it that way)

Here is one of their comments, which I thought was about as good as an atheist can do on atheism:

> The morality we all appeal to when we make moral judgments is at least 90% the result of the social conditioning we have all received. Where that conditioning contains a strong religious component (most places throughout history), religious values will have a high place. In the modern West, the religious component is weaker, and we now condemn slavery, crusades, inquisitions, and wars between Catholics and Protestants, all of which were once firmly believed to be sanctified by God. (There is a whole thread on this subject just now under "Faith and Religion" above. So far only the person who started the thread and I have posted on it.)
>
> The other 10% consists of personal views arrived at by reflective people on the kind of world they'd like to live in. That portion of it is personal preference. It differs from a personal preference for chocolate over broccoli in only two ways: (1) Its object involves the behavior of other people and their interactions rather

> than that of the individual alone; (2) when two people have different preferences, they cannot both have their way, and so they are in conflict.

If you want to learn about these issues at a deeper level, there is also a good paper by Bill Craig on the problem of rationally-grounding prescriptive morality here. My previous posts on this blog on this topic are here and here. The first post is about whether atheists can use a made-up standard to judge God for his perceived moral failures, the second one is on whether meaningful morality is rational on atheism.

How do leading atheists understand morality on atheism?

March 6, 2009 | by Wintery Knight | Link | Original Link

Here are descriptions of morality, as understood by atheists:

> The idea of political or legal obligation is clear enough… Similarly, the idea of an obligation higher than this, referred to as moral obligation, is clear enough, provided reference to some lawgiver higher…than those of the state is understood. In other words, our moral obligations can…be understood as those that are imposed by God…. But what if this higher-than-human lawgiver is no longer taken into account? Does the concept of moral obligation…still make sense? …The concept of moral obligation [is] unintelligible apart from the idea of God. The words remain but their meaning is gone. (Richard Taylor, Ethics, Faith, and Reason (Englewood Cliffs, N. J.: Prentice-Hall, 1985), p. 83-84)

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory. (Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins) http://www.simonyi.ox.ac.uk/dawkins/WorldOfDawkins-archive/Dawkins/Work/Articles/1995-05-10nomercy.shtml

The late atheist philosopher J. L. Mackie said that moral properties are "queer" given naturalism "if there are objective values, they make the existence of a god more probable than it would have been without them. Thus we have a defensible argument from morality to the existence of a god." Agnostic Paul Draper observes, "A moral world is very probable on theism."

If you want to learn about these issues at a deeper level, there is also a good paper by Bill Craig on the problem of rationally-grounding prescriptive morality here. My previous

posts on this blog on this topic are here and here. The first one is about whether atheists can use a made-up standard to judge God for his perceived moral failures, the second one is on whether meaningful morality is rational on atheism.

How every Christian can learn to explain the resurrection of Jesus to others

March 6, 2009 | by Wintery Knight | Link | Original Link

Basically, as a Christian, I think we, myself included, all ought to be able to show that there is a case for the resurrection on historical grounds. Even if Christians know that the resurrection is true by the inner testimony of the Holy Spirit, you cannot use that when persuading and defending it to other people. So you have to make a case using the available evidence and the normal rules of historical investigation. You can't assume the Bible is inerrant with your co-workers and you can't focus on Christian-ese or peripheral issues, either. So how can you do it?

Part A: Historical methods

The way I normally start is with the standard rules used by all scholars who analyze ancient biographies. Basically, there is a list of criteria that scholars across the spectrum use for deciding which parts of ancient literary sources are more likely to be true. It's amazing when you see debates on this because both sides basically agree on the methodology.

And, if you apply the methodology carefully, then both sides actually agree on what facts in the biographies are authentic. I am talking about agreement on authentic facts by atheists and fundamentalists alike!

Here are some of the rules used for analyzing ancient biographies:

1) multiple attestation – if the fact about X is asserted by two or more sources, then the fact is likely authentic.

2) dissimilarity – if a teaching of X is different from popular teachings and concepts of that time and place, it is likely authentic.

3) embarassment – if a fact is embarassing to X or X's community or the writers of the biography of X, then it is likely authentic.

4) enemy attestation – if a fact about X is corroborated by enemies of X, or X's community, then that fact is likely to be authentic.

5) early attestation – if a fact about X is in an early source, then that fact is likely to be authentic.

And there are others.

So, if you want to talk about the resurrection at work without being laughed at or fired, you can use these criteria to identify historical facts.

Part B: Minimal facts

Using the historical methods above, you won't be able to recover MOST of what the New Testament writings say about Jesus. For example, the guard at the tomb is only in Matthew, so you cannot use that as a minimal fact. And John is a pretty late gospel, so

most of that can't be used. So what parts can be used?

Well, here is William Lane Craig's list of facts:

1) the empty tomb
2) the appearances experienced by various people, including Paul
3) early belief in the resurrection emerged in Jerusalem

And, here is Gary Habermas' list of facts:

1) death by crucifixion
2) early belief in resurrection
3) appearances experienced by disciples
4) Paul's appearance and change of heart
5) James's (Jesus' brother) change of heart
6) the empty tomb

Probably the most celebrated defender of the resurrection writing today is N. T. Wright. He makes a bit of a different case where he asks what sort of historical occurrence would be adequate to explain the changes in theology and practice that occurred when 1st century Jews in Jerusalem became Christians. His argument is that the changes ("mutations") require a historical resurrection. Here is Wright's list:

1) the empty tomb
2) the appearances to various people
and 7 mutations (changes) in the way that early Christians changed
their views of the meaning and centrality of the Jewish doctrines of
the Messiah, resurrection, eschatology, etc.

You'll be surprised to know that few of these facts are disputed by atheistic historians like Gerd Ludemann, Marcus Borg and John Dominic Crossan. The only one that's sometimes disputed is the empty tomb, but some guys will give it to you. I just read N.T. Wright's debate against John Dominic Crossan, who is on the far-left fringe. He gave up the appearances AND said he was "OK" with the empty tomb.

So, once you apply the historical criteria, and you hammer out your list of facts, what comes next?

Part C: Inference to the best explanation

Once you have the list of facts, you need to explain why the hypothesis that God raised Jesus from the dead is the best explanation for the facts. This is done by showing that the hypothesis is consistent with all of the available data.

The atheist is likely to jump in at this point with an alternative explanation of the facts. Their explanations will not involve any miracles – instead, they try to account for the facts by proposing a naturalistic hypothesis. Here is a list of a few together with my defense against them.

1) Jesus wasn't really dead
– crucifixion is lethal and you can't fake being dead
– this doesn't explain the early belief in the resurrection, since

a half-dead Jesus would not inspire a belief in the resurrection

2) Jesus' disciples moved the body and lied about it
– it doesn't explain the appearance to Paul, etc.
– it doesn't explain why the early church was willing to be persecuted

3) The Jews moved the body and lied about it
– they had no interest in helping a rival sect
– it doesn't explain the appearance to Paul, etc.

4) The Romans moved the body and lied about it
– they had no interest in helping a trouble-making sect
– it doesn't explain the appearance to Paul, etc.

5) Somebody else moved the body
– it doesn't explain the appearance to Paul, etc.
– there is no evidence to support the claim

6) The early church hallucinated the appearances
– group hallucinations are impossible
– it doesn't explain the empty tomb
– it doesn't explain the theological mutations about "resurrection", since seeing a ghost does not imply a bodily resurrection

Etc.

Keep in mind that when judging explanations, the simplest explanation is usually the best. If a skeptic has to join together multiple hypotheses, then this weakens the appeal of their explanation, because it's "ad-hoc".

I wrote another post on the resurrection here, with some links to debates. Here is a list of the virtually indisputable facts about Jesus, from *respected, skeptical, non-Christian scholars* like Norman Perrin and E. P. Sanders. More debates are here.

UPDATE: Welcome, visitors from Robert P. Murphy's blog Free Advice. Please take a look around – the purpose of my blog is to help Christians to integrate their faith with other areas of knowledge, especially *economics*! For those of you who don't know, Dr. Murphy is the author of the greatest book on economics ever written (and I've read The Road to Serfdom!). This is a book for *everyone* – and it's the *first* book laymen should read on economics.

How do atheist scholars justify morality on atheism in debates?

March 6, 2009 | by Wintery Knight | Link | Original Link

I want to tell you that the easiest topic to debate with non-Christians is the foundations of morality. Here's a primer:

1. If atheism is true, matter is all there is. Your actions are biologically determined. So there is no free will. As Dawkins says, there is only DNA and you dance to its music. Period. If there is no free will, there are no moral choices and no moral responsibility. Moral actions are not rationally justifiable on atheism.
2. If atheism is true, humans are accidents with no intrinsic value. Any value that is assigned to humans is arbitrary, and arbitrary standards do not constrain the will of rational people when it is not in their best interest and/or they will not be caught (e.g. – Stalin).
3. If atheism is true, there is no ultimate accountability for moral evil. Being good or evil is irrelevant to where you end up, and where humanity ends up. (The heat death of the universe). Being good when it requires self-sacrifice is irrational, on atheism.
4. There are only 2 reasons to be moral on atheism. If you get pleasure out of following these made-up rules or if you avoid punishment. That is not what theists mean by virtue. Acting in the way you were designed to act in order to achieve what Aristotle called eudaimonia.
5. Etc.

Try absorbing some of these actual public debates with real scholars and see for yourself:

1. From Christianity Today, a written debate: Douglas Wilson vs. Christopher Hitchens
2. From the University of Western Ontario, a transcript of a public debate: William Lane Craig vs. Kai Nielsen
3. From Schenectady College, a transcript of a public debate:William Lane Craig vs Richard Taylor
4. From Franklin & Marshall College, William Lane Craig vs. Paul Kurtz (audio, video1, video2, video3, video4, video5, video6, video7)
5. From the University of Massachusetts at Amherst, William Lane Craig vs. Louise Antony (audio1, audio2, video1, video2)

These debate links are courtesy of ChristianJR4. Where's your blog, JR4? Come on, man! Get with it! If you other readers agree with me that he should start his own blog, then e-mail me or comment about it, and I will see that he is appropriately castigated for his slacking.

If you want to learn about these issues at a deeper level, there is also a good paper by Bill Craig on the problem of rationally-grounding prescriptive morality here. My previous

posts on this blog on this topic are here and here. The first one is about whether atheists can use a made-up standard to judge God for his perceived moral failures, the second one is on whether meaningful morality is rational on atheism.

UPDATE: Welcome visitors from Truthbomb Apologetics! Thanks for posting about my blog, Chad! New visitors from Truthbomb may be interested in my posts in the apologetics category.

John Boehner calls for Congress to freeze spending at current levels

March 7, 2009 | by Wintery Knight | Link | Original Link

House Republican Leader John Boehner

House Republican Leader John Boehner calls for an immediate spending freeze at current levels. The freeze would cancel the 900 earmarks in the 410 billion dollar porkulus-2 omnibus bill. The video of his speech is below, and you need to watch it right now. Please.

Excerpt from John Boehner's speech on the floor of the House of Representatives:

> I know there are a lot of members that have a lot of other issues that they'd like to include in this, but the fact is that American families are hurting, small businesses are hurting around the country, our economy is hurting. And I think we could help our economy, we could send a strong signal to the American people by extending this spending freeze through September 30.
>
> "Let's show the American taxpayers that we get it. Let's show investors in our American economy that we get it. Because clearly the bill that's been under consideration both here in the House and now in the Senate has a $30 billion increase over last year's spending, and includes nearly 9,000 earmarks. And the way to put all of this to a stop is to just have a spending freeze. **Let's show the American people we understand the pain they are under and show them that we are willing to tighten our belt**.

Boehner was not content to give mere talk. He tried to force a vote on the freeze in order to get the Democrats to go on record on the 1.75 trillion dollar deficit they've introduced. The story is here, and includes this quote from the Associated Press:

> "The top Republican in the House is seizing on the latest spike in unemployment to call for a freeze on government spending and to urge President Barack Obama to veto a $410 billion spending bill."
>
> "Rep. John Boehner, R-Ohio, said the jump in unemployment to 8.1 percent and

> the loss of 651,000 jobs in February is a sign of a worsening recession that demands better solutions from both parties."
>
> "Boehner criticized the spending bill as chocked full of wasteful, pork-barrel projects. The Senate postponed a vote on the bill until Monday amid the criticism."
>
> "Boehner said he hoped Obama would veto the bill. He urged the president to work with House Republicans to impose a spending freeze until the end of this fiscal year."

Who gets it? The House Republicans get it.

UPDATE: Michelle Malkin is reporting (via Connie Hair of Human Events) that the motion failed 160-218, with every Republican present voting for it.

Al Gore refuses questions from reporters, refuses to debate skeptics

March 7, 2009 | by Wintery Knight | Link | Original Link

Now, if you guys have been on the blog, you know that a majority of stories here are going to be presented as issues to resolve between two oppsing forces, especially when it comes to spiritual issues. And that is because I believe that no one can convinced, by anyone, on any issue, until they hear *both sides*. But that is not the case with Al Gore.

Gateway Pundit links to this story from KNX:

> Former Vice President Al Gore repeated his message that climate change is a planetary emergency at the WSJ's Eco:nomics conference in California. …But don't expect Mr. Gore to debate the merits of how best to tackle climate change anytime soon.
>
> …he was challenged by Mr. Lomborg, the Danish skeptical environmentalist who thinks the world would be better off spending more money on health and education issues than curbing carbon emissions.
>
> "I don't mean to corner you, or maybe I do mean to corner you, but would you be willing to have a debate with me on that point?" asked the polo-shirt wearing Dane.

So Al Gore refused to debate Bjorn Lomborg. Must-see video is here:

Larry Elder links to this Boston Globe article that re-caps Al Gore's impressive scientific credentials:

> Gore's undergraduate transcript from Harvard is riddled with C's, including a C-minus in introductory economics, a D in one science course, and a C-plus in another… Moreover, Gore's graduate school record – consistently glossed over by the press – is nothing short of shameful. In 1971, Gore enrolled in Vanderbilt Divinity School where, according to Bill Turque, author of "Inventing Al Gore," he received F's in five of the eight classes he took over the course of three semesters. Not surprisingly, Gore did not receive a degree from the divinity school. Nor did Gore graduate from Vanderbilt Law School, where he enrolled for a brief time and received his fair share of C's.

Heck, all we have on our skeptical side are people like Richard S. Lindzen:

> **Richard S. Lindzen** is the Alfred P. Sloan Professor of Meteorology in the Department of Earth, Atmospheric and Planetary Sciences at the Massachusetts Institute of Technology. Professor Lindzen received his Ph.D. from Harvard University, and he is a contributor to numerous scholarly volumes and the author of more than 200 articles in scientific journals. He is a member of the national Academy of Sciences and the Science and Economic Advisory Council of the

> Annapolis Center for Science-Based Public Policy.

And just look at the poor quality of his arguments. Al Gore could wipe the floor with Lindzen. Yeah. He really could.

UPDATE: Commenter ECM posted this link to a post on Watts Up With That? blog. Al Gore certainly seems to win a lot of awards, this one is for raising awareness about global warming. From the story: “Scripps Institution of Oceanography is awarding its first-even Roger Revelle Prize to former Vice President Al Gore… UCSD said Gore was selected for his efforts to raise awareness of global warming.”

TCF Bank returns TARP money, rejects government interference in business

March 7, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

On Michele Bachmann's blog, she has posted twice about banks that are returning TARP bailout money, rather than accept government control of their business. Michele voted against the TARP bill, which redistributed 700 billion dollars from the honest/productive sector of the economy to the irresponsible/fraudulent sector.

Here is an except from her first post:

> The Minneapolis Star Tribune reported yesterday that TFC Financial Corp. has joined Northern Trust and Iberiabank Corp. as financial institutions who are staying clear of the government's Troubled Asset Relief Program.
>
> The way TCF Chief Executive Bill Cooper views it:
>
> "I don't want to be part of the new regulatory regime that's growing up around TARP. Congress is now talking about putting their oar in the water on just about everything we do. That puts us at a competitive disadvantage."

A more recent post links to a Fox News story on TCF bank. According to the TCF Bank CEO, TCF never made any subprime loans, and therefore they do not need a bailout. Although they were going to take the money, they decided to return it, because they refused to yield their autonomy to the federal government.

Watch the 5-minute clip: (need I mention that Megyn Kelly does the interview?)

Now, for those of you who have read F.A. Hayek's "The Road to Serfdom", you know that all our liberties, including our precious freedom of religious expression, hangs on the separation between government and the means of production. If the government controls the means by which you earn your living, then the government controls *you*.

A summary of the Road to Serfdom is here.

Amendments to block coerced abortions and U.N. global taxes fail

March 7, 2009 | by Wintery Knight | Link | Original Link

Senator James Inhofe

I found these stories on James Inhofe's blog. First, an amendment to the 410 billion dollar omnibus (son of porkulus) that would have prohibited US-taxpayer funds being used by the UN for coerced abortions has been voted down by the Democrats.

Inhofe's first statement reads:

> The amendment would have required that amounts appropriated for the United Nations Population Fund are not used by organizations that support coercive abortion or involuntary sterilization. I am strongly opposed to the use of taxpayer dollars for these purposes and for these organizations. Taxpayers should not be forced to subsidize abortion in the United States or abroad.

Second, another omnibus amendment to prevent US-taxpayer funds being used by the UN to implement global tax schemes has also failed.

Inhofe's second statement reads:

> My amendment to the FY'09 omnibus appropriations bill would have reinstated this important U.S. policy and ensured that officials at the U.N. and other international bureaucracies who receive generous funding from U.S. taxpayers do not pursue or implement policies of international taxes on U.S. taxpayers.

Well, I guess the Democrats think that the UN needs that money more than ordinary US taxpayers, anyway.

Obama’s cap-and-trade plan is a carbon tax that hurts consumers

March 7, 2009 | by Wintery Knight | Link | Original Link

House Republican Leader John Boehner

John Boehner’s blog, notes that his concerns about Obama’s cap and trade bill are now being echoed in the mainstream media.

Investor’s Business Daily explains:

> Tax-challenged Treasury Secretary Timothy Geithner and White House Budget Director Peter Orszag went to Capitol Hill on Tuesday to defend a federal budget that assumes $650 billion in revenue from a cap-and-trade carbon emissions scheme…
>
> “The president’s budget increases taxes on every American, and does so during a recession,” pointed out Rep. Dave Camp, R-Mich., ranking member on Ways and Means. “And that means higher prices for Americans for food, for gas, for electricity, and in a state like Michigan for home heating — pretty much everything they buy.”
>
> This carbon tax will be paid by energy companies, manufacturers and public utilities and will be passed on to consumers. Camp’s Michigan gets 60% of its electricity from coal. But Obama’s plan has always been to make fossil fuels so expensive that boondoggles like wind and solar suddenly look competitive.

The article concludes:

> Obama’s cap-and-trade budget is a recipe for permanent recession. An analysis by the George C. Marshall Institute estimates GDP losses of as much as 3% in 2015 and as much as 10% in 2050 as a result of this measure.

The Detroit News reports that:

> President Barack Obama’s proposed cap-and-trade system on greenhouse gas

> emissions is a giant economic dagger aimed at the nation's heartland — particularly Michigan. It is a multibillion-dollar tax hike on everything that Michigan does, including making things, driving cars and burning coal.

Let me be clear. Obama intends to raise taxes on energy producers. These energy producers will pass these tax hikes onto consumers. If the prices rise too high, Obama may fix prices lower which would cause a shortage. A shortage would potentially cause gas lines and power rationing. If things get worse, it could lead to the nationalizing of the energy producing companies.

UPDATE: On John Lott's blog, he links to this Reuters story in which Hillary Clinton tells the European Parliament: "Never waste a good crisis … Don't waste it when it can have a very positive impact on climate change and energy security". This quotation echoes Rahm Emanuel: "Never Allow a Crisis to Go to Waste". This might explain why Democrats are so bold about having government take control of the free market.

Can God make a rock so big he can’t lift it?

March 8, 2009 | by Wintery Knight | Link | Original Link

Over at Tough Questions Answered, I notice they are putting out a lot of quality work. But they also have some answers for beginners. I am going to be posting two of their beginner answers today, just to make sure we can all answer them. Here is the first question they answered: “Why can’t God make a rock so big he can’t lift it”

> This is a common question that is asked by those who misunderstand the nature of God’s omnipotence. Another humorous way of asking this question is: Can God make a sandwich so big he can’t eat it? (I owe that jewel to my friend Greg).

You’ll have to go over there for the answer, I’m not telling!

UPDATE: My answer is actually a little different than their answer. My answer would be that a rock that can’t be lifted is self-contradictory. All objects that have mass can be lifted, by definition. So what the questioner is really asking is something like this: “Can God make a married bachelor?” or “Can God make a round square?”. God’s power does not allow him to perform self-contradictory things. That is not a limit on his power – self-contradictory things are nonsense, and *no one* can do nonsense.

Did God create evil?

March 8, 2009 | by Wintery Knight | Link | Original Link

Over at Tough Questions Answered, I found an answer to a question I get all the time:

> Now here is a question that many people struggle with. Here is how the argument generally goes:
>
> 1. God is the Author of everything.
> 2. Evil is something.
> 3. Therefore, God is the Author of evil.
>
> This is a valid syllogism, meaning that if premises 1 and 2 are correct, then the conclusion follows.
>
> Looking at premise 1, is God the author of everything? Well, if he isn't, then we don't have a sovereign creator, but that's what the Bible teaches. We can't reject this premise.
>
> Looking at premise 2, if we deny that evil exists, then we deny a basic truth about reality. There clearly is evil in the world and we all know it. To deny the existence of evil would be to deny a fundamental aspect of life.
>
> Are we stuck? Not exactly.

Well, go on over there and see what the answer is, I'm not going to tell you.

Captain Capitalism explains why friends don't let friends marry

March 9, 2009 | by Wintery Knight | Link | Original Link

Apologetics?! NEENER NEENER NEENER!

This is pretty funny, especially because it's totally true.

Excerpt:

> The end came on a Saturday evening. It wasn't late. It wasn't too early and I called him up. I said, "Hey, John, let's go down to the Dubliner and get a beer."
>
> The Dubliner being an Irish joint literally 3 blocks from his house.
>
> Over the phone he said, "I don't know, it's Saturday night and I'm pretty busy."
>
> "Busy!?" I said, "What do you mean busy?! Come on, it's 3 blocks from your house, it'll take all of 30 minutes to have a beer. Let's go."
>
> "Hang on, let me ask my fiancé (he liked to call her his fiancé)"
>
> So in the background I hear his lower toned male voice mumbling, asking his beloved if he could go out and get a beer, "*Murmur murmur murmur murmur?*"
>
> And in return I heard her Beaker-esque (from the Muppets) high pitch voice respond;
>
> "Neener neener neener neneer neen?"
>
> Then I heard my friend say,
>
> "The Captain."
>
> And then in vehement response the girl saying;
>
> "THE CAPTAIN! NEENER NEENER NEENER NEENER NEENER NEEEEEEE!!!!"
>
> Soon he came back on the phone and said, "I'm sorry, we're hanging a pot rack tonight."
>
> I sat there thinking to myself, "Wooooooow. This guy is completely 100%

> castrated."
>
> I said, "Pot rack? A pot rack? Can you postpone the great hanging of the pot rack?"
>
> "No, we've been meaning to hang this for a while, and you know how long these projects take."

Read the whole thing, and remember 1 Corinthians 7. For Christian men, it's not beer that we would be giving up – it's Christian apologetics. Most Christian women I know think that apologetics is *divisive* and *exclusive.*

The doctrine of the Trinity is an asset, not a liability

March 9, 2009 | by Wintery Knight | Link | Original Link

Over at Tough Questions Answered, I noticed that they posted this graphic of the Trinity:

The Christian doctrine of the Trinity

This image is pretty good at conveying who is who and what is what. But you may be asking yourself: how the heck did those Christians come up with that doctrine? Did God come down and tell them that? Well, anything I say is probably going to be wrong or heretical, so let me just pass you over to Greg Koukl of Stand to Reason and you can get an accurate answer to that question.

Here is an excerpt that explains what he is trying to do in his answer:

> The particular question that came up was that my view, or the Christian view, of the Trinity is inconsistent with the Scripture. That was the objection. That's why John 20 was raised as a verse and a number of other verses were raised as contradicting the orthodox notion of the Trinity. In fact, it was questioned as whether such a thing could be an orthodox notion because Jesus Himself didn't teach it.
>
> Now it's clear that Jesus did not teach the Trinity as I would teach the Trinity because it's synthetic in that it's taking a number of different things and synthesizing them into a doctrine. But the synthesis is legitimate if each of those things is actually taught in the Scripture.

Remember, he is answering this question from a Christian perspective, so he is allowed to use the Bible, since Christians believe that it is at least a generally reliable record of Jesus' public ministry. This is the best short answer I've seen so far, from a first-class apologetics guru.

One criticism. Before I cite Bible verses in a debate, I always explain the rules that determine whether a verse is admissable. (I explained the rules as they apply to the

resurrection here). But Greg just cites the Bible as if it were inerrant. That would work on me, but it might not work on my atheist co-workers. A better way is to use only the verses that are early, multiply attested, and pass the other standard historical criteria.

Answering Richard Dawkins' question: "Who made God?"

March 9, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Apologetics 315! Thanks for the link Brian!

Atheists are very uncomfortable with the progress of science in the areas of cosmic origins and cosmological constants. On my friend's Rick Heller's blog, he responded to my article on the 6 scientific discoveries that led to the theory that the universe, including all matter, time and space, was created out of nothing.

Here is an excerpt from Rick's response:

> The traditional rebuttal to the First Cause argument is, who created God? That makes a nice point, but I don't find it entirely convincing, because it contains a complacent acceptance of an uncaused universe.
>
> I think we humans find ourselves unable to resolve the logical paradox–things don't come into existence without a cause, yet there is no explanation for the first cause. Neither the atheist nor theist views quite hang together.

Richard Dawkins asks a similar question in his book "The God Delusion". My friend Canbuhay got there first and posted the correct answer. Here is what he said:

> The First Cause argument is not simply about how the universe must have a cause because everything else we know about, does. Included in the argument is that whatever must have caused the universe must be unique. Why? Because if everything began at the Big Bang, including time, then whatever caused the Big Bang would have to be outside of time. It could literally have no beginning because there was no such thing as "before" or "beginning" when there was no time.
>
> The atheistic response that there had to be something that caused the causer of the Big Bang cannot adequately account for the time factor.
>
> Whereas, the theistic one can: the causer of the Big Bang is a Deity who lives outside of time.

I got there next and I posted this comment:

> There is no physical universe, and no time, causally prior to the Big Bang. That means that whatever causes the universe to exist is not in time, it is outside of time. It is eternal and exists necessarily. It does not "come into being" because that is a time-bound notion. It exists timelessly, and brings the entire universe into being.
>
> Now, you may well ask, "Wintery! What immaterial thing can bring an entire physical universe into being?". Well the only two non-physical realities that we

> are aquainted with are abstract objects, such as numbers, or *minds*. And that is what caused the universe. A big M I N D. Dawkins' objection of "who made God?" is thus defeated. The universe is contingent, the cause of the universe is not.

Yes, I stole "big M I N D" quote from J.P. Moreland. If you haven't read his book "Love Your God With All Your Mind", then you should. My friend Andrew affectionately calls JP's book LYGWYM ("lig-wim"). JP seems to be going soft lately, just like Ravi Zacharias, who hasn't written anything useful since "Can Man Live Without God?". Look how tough JP used to be.

If you don't like my answer to "Who made God?", check out Perry Marshall's answer. He recently debated on the origin of life. I like his ideas, because he is a software engineer, and not a squishyhead. Yes, I stole "squishyhead" from Henry F. Schaefer. Have you ever read his paper on the big bang and who made God? The video is here: part1, part2.

Michele Bachmann opposes Obama's plan to fund ESCR

March 10, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

UPDATE: For all the people that are searching for Michele Bachmann, this blog is FILLED with stories on Michele Bachmann!!! Here is a good summary of some of her best material. Here's her latest video.

More recent posts

Here are my recent posts on Michele Bachmann:

- Michele Bachmann's famous impassioned speech against "gangster government"
- Michele Bachmann defends free trade at the Heritage Foundation
- MUST-SEE: Michele Bachmann explains why the US dollar is in serious trouble
- Congresswoman Michele Bachmann is Mrs November in new calendar
- Hot Air and Michelle Malkin post new video of Michele Bachmann's town hall
- New Michele Bachmann video on the future of Obamacare
- MUST-READ: Michele Bachmann open to running for President in 2012!

Michele Bachmann on ESCR

Michele Bachmann is my favorite member of the House, and I've blogged about her before, here, here and here. Today, she shows that she is aware of the recent breakthroughs in stem cell research in her speech on the floor of the House. Do not miss this great video of the most conservative and articulate legislator in the House.

More videos of Michele Bachmann are here.

(H/T: The Maritime Sentry)

UPDATE: One of my other congressional favorites Mary Fallin had these comments on the ESCR intitiative:

> "**Every human being, no matter how small or how early in his or her**

> **development, has a right to life.** By allowing federal dollars to fund the destruction of human embryos, the Obama Administration is not only denying this essential truth, it is ordering taxpayers to foot the bill for research that many, including myself, find morally repugnant.
>
> "**I enthusiastically support adult and cord blood stem cell research, methods which show great promise and do not involve the destruction of human life.** It is a tragedy the new administration has further weakened protections of the unborn and ignored the science behind morally acceptable alternatives to embryonic stem cell research."

Notice how she echoes the SLED-test argument, and she understands the difference between ESCR and ASCR. That's what I like to see!

UPDATE 2: Michele Bachmann has an even better speech on the dangers of tinkering in the free market here! This one is a must see!

Connecticut Democrats introduce bill to re-organize Catholic church hierarchy

March 10, 2009 | by Wintery Knight | Link | Original Link

Yes, it's fascism – the deliberate intrusion of the state to impose their worldview and values onto people with different, individual worldviews and values. You see, the state's religious and moral views are more important than those of individuals. Any organization that teaches different values needs to be taken over by the state – it's the progressive way.

Gateway Pundit cites this post from The Corner:

> The [Democrat]-controlled Judiciary Committee has introduced **Raised Bill 1098**, a bill aimed specifically at the Catholic Church, which **would remove the authority of the bishop and pastor over individual parishes and put a board of laymen in their place.**

Hot Air notes that the government cannot legislate against religious organizations with *voluntary membership*. It is illegal:

> According to the First Amendment and the Establishment Clause, the government has no business dictating to religious organizations how they should structure themselves.

Hot Air goes on to explain what the effects of the bill would be:

> In other words, bishops would no longer have power over the actions of the parishes. That's the Connecticut legislature's vision of Roman Catholicism, but in America, government doesn't get to structure religious organizations to suit itself. That, in fact, is a form of fascism that we routinely decry in other countries. The State Department objects to China's insistence on picking Catholic bishops itself to suit their political oppression of religion, and Lawlor's motion would find a welcome in Beijing as another means to the same end: state control of Catholicism.

So many people toss around the word fascism without understanding what it means. Having the state control churches is fascism.

RedState.com notes that Connecticut's own Constitution forbids single out any one sect or denomination in legislation.

> Before we go any further, let me quote from Article Seventh of the Connecticut state constitution: *"It being the right of all men to worship the Supreme Being, the Great Creator and Preserver of the Universe, and to render that worship in a mode consistent with the dictates of their consciences, no person shall by law be compelled to join or support, nor be classed or associated with, any*

> *congregation, church or religious association.* ***No preference shall be given by law to any religious society or denomination in the state****.* ***Each shall have and enjoy the same and equal powers, rights and privileges,*** *and may support and maintain the ministers or teachers of its society or denomination, and may build and repair houses for public worship."*

LifeSiteNews has an article explaining that this bill is an attempt to pay Catholics back for supporting traditional marriage as the best environment for children. The Maritime Sentry agrees. The left-wing northeastern states have been very hostile to Catholicism lately, even going so far as to effectively ban Catholic adoption agencies for failure to comply with politically correct dogma.

A majority of the Catholic voters voted for Democrats in 2008. They voted 54% to 45% in favor of Barack Obama. What I would like my Catholic readers to explain to me is – *Why? How?*

UPDATE: I just saw this post over at Deborah Gyapong: Catholic hospitals must perform abortions or be shut down.

UPDATE 2: Nice Deb has ways to take action here.

UPDATE 3: Welcome visitors from the Anchoress! Thanks for the link. More religious liberty here (conscience rule for abortion dissenters) and here (fairness doctrine would affect religious radio broadcasts) and here (stimulus bill discriminates against religious schools). Bonus: free speech in Canada.

Debt and the return of real men?

March 10, 2009 | by Wintery Knight | Link | Original Link

Captain Capitalism posted this rant which is an excellent, although very snarky, read. He starts with the fictitious case of Cindi, a suburban princess whose every need was provided for by her hard-working Daddy. But Daddy had to take on enormous amounts of debt in order to buy Cindi everything her heart desired.

> Much like debt misled suburbanite Cindi to think free Audi's, nightly dinners at Applebee's, free food clothing and shelter, and avoiding any real career that requires math was "standard," the amount of debt the government and economy as a whole has taken on has brainwashed nearly 3 generations of Americans to be similarly overly optimistic as to just how easy their lives should be. Debt has allowed pretty much every American to live above their means of support. Debt has allowed pretty much every American to live a life that does not produce the wealth necessary to support it. If you can't afford a car, take it out of your home equity line. You don't like math or science? That's alright, piss away some of your dad's money majoring in political science. Don't have a down payment for a house? Don't worry about it, we'll loan you 100% of the money anyway. But the problem is not just the obvious unsustainability of this behavior, but even worse is how it corrupts and destroys society's ability to live in the real world.

And where has this avoidance of math and science, normalization of debt and instant gratification led us?

> You think the divorce rate in this country isn't due to people being spoiled rotten brats and thinking marriage is some kind of trial balloon?
>
> You think the childish and [very bad] behavior of people having "kids" and then dumping them off at daycare to have somebody else raise them because the kid was too much of a burden for them to handle, but they still wanted them anyway would have flown during the frugal 40's?
>
> Would teenage pregnancy even exist if the government wouldn't perpetually bail these losers out because the government can perpetually "rollover" its debts and borrow more to finance a litany of social programs?
>
> Would you have such a volume of frivolous lawsuits and parasitic lawyers in this country driving up the cost of doing business and destroying the standards of living?
>
> Would you have seemingly endless legions of "environmentalists"… who have no real talents or skills, but find themselves pointless, effortless, made-up crusades to give their meaningless lives meaning at the expense of our freedoms and $3 per gallon gas?

He goes on to argue that the worsening economy will be a boon to real men. The decline

of government revenues will reduce the availability of social programs to “solve” social problems that result from poor decision making. (And by poor I mean lacking wisdom, lacking respect for the moral law).

> When Jimmy gets Cindi pregnant at 15 and the government is out of money, there will be two real men (the father of Jimmy and the father of Cindi) with shotguns and baseball bats ensuring Jimmy gets a job, goes to school and marries Cindi, not for Cindi’s sake, but for the child’s sake.
>
> When somebody breaks into the house and the cops are too understaffed dealing with the crime wave that happened once the state released all those prisoners to “save money,” he’ll be the one shooting the burglar to protect himself and his family.
>
> When a woman wants to get married and have children, the real man will wait until he’s financially stable, the country has a future, and make sure he is able to provide the kid a decent upbringing ALL THE WHILE MAKING SURE HE DOESN”T GET DIVORCED.

I am worried that the rising tax rates and inflation will cause men to withdraw *irreversibly* from any enterprising behavior. Big government may help people to feel more secure about making poor decisions. But responsible men fear higher taxes and punitive divorce courts… they are less likely to work hard and to marry.

Real men are just not in demand so long as marxist-feminist welfare state is there to provide everything that real men used to be sought after for. And the big appeal of the state is that it doesn’t ask for anything in return from its dependents. But why should real men work to pay for social programs to fix the problems of other people?

One of my best friends, Andrew, got married to a fabulous Christian woman who spent time as a missionary in Russia. Men are in a terrible state in Russia – there are few real men. Her experience in Eastern Europe really helped her to understand how important the right man is for the responsibilities of marriage and parenting.

She chose to marry someone who would not only care for and provide for her, but who also understood Christian beliefs and would be able to pass them on to her children in an informed and persuasive way. But today, there is no vision for men as husbands or fathers, nor any vision of marriage as a worldview-incubator for children.

Michele Bachmann and Marsha Blackburn defend free market capitalism

March 10, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

UPDATE: For all the people that are searching for Michele Bachmann, this blog is FILLED with stories on Michele Bachmann!!! Here is a good summary of some of her best material. Here's her latest video.

More recent posts

Here are my recent posts on Michele Bachmann:

- Michele Bachmann's famous impassioned speech against "gangster government"
- Michele Bachmann defends free trade at the Heritage Foundation
- MUST-SEE: Michele Bachmann explains why the US dollar is in serious trouble
- Congresswoman Michele Bachmann is Mrs November in new calendar
- Hot Air and Michelle Malkin post new video of Michele Bachmann's town hall
- New Michele Bachmann video on the future of Obamacare
- MUST-READ: Michele Bachmann open to running for President in 2012!

Videos of Michele and Marsha defending capitalism

Here's Michele Bachmann, on the floor of Congress, explaining economics and defending free market capitalism. She touches on many important topics: intentions versus incentives, learning from past economic failures, American exceptionalism, economic growth, private ownership of property, the rule of law, private contracts, tax law, the law of unintended consequences and the "forgotten man".

Well, if we're going down as a nation, it won't be because no one understood what was happening. Michele knows – because she is a *trained tax lawyer* and she understands economics and business – she and her husband Markus *own a small business*. They have

5 children and 23 foster children, so they know enough not to saddle the next generation of Americans with debt. *Life experience matters.*

And then there is another "M.B." in the house, Marsha Blackburn.

Representative Marsha Blackburn

Marsha Blackburn also voted against porkulus 1 and porkulus 2, and the cramdown bill:

> Congressman Marsha Blackburn (TN-7) today voted against passage of H.R. 1106, a housing bill that will allow bankruptcy judges to "cramdown" the principle on a mortgage, change the interest rate, or extend the life of the loan. The consequence of this legislation for new homebuyers and homeowners who have lived within their means is dire. As banks attempt to absorb the cost of crammed down mortgages, they will be forced to raise fees, increase down payment requirements, and increase interest rates for potential home buyers.
>
> **"This is yet another bailout for bad actors. It rewards those that gamed the system or knowingly lived beyond their means at the expense of responsible taxpayers. I would have been more comfortable with a bill that helped those who legitimately fell on hard times and excluded unscrupulous borrowers and lenders."** Blackburn said.
>
> **"Some of my colleagues claim that this program is cost-free. It isn't. Struggling banks, who are at the core of our economic problems, will be forced to rebuild their bottom line somehow in order to remain solvent. That cost will be paid for by the first time home buyer who will now have a much harder time getting a mortgage as banks insure themselves against risky loans. It will be paid for by responsible home owners who will watch their bank fees increase as bankruptcy judges cram down home values in their neighborhood."**
>
> Congressman Blackburn supported proposed Republican changes to the bill that would have prohibited taxpayer assistance to any borrower that misrepresented

> or lied about their income on a mortgage or to any lender that failed to follow proper underwriting standards.

Mary Fallin and Sue Myrick, two of my other favorite representatives, also voted against all 3 of these socialist bills. Not only are these 4 representatives fiscal conservatives, but they are also pro-life.

You might remember that Sue was the one who wanted to revoke Jimmy Carter's passport when he met with Hamas.

UPDATE: More Michele Bachmann here and here. She is also Mrs November in a new 2010 calendar. A full list of all of my many posts on Michele Bachmann is here.

Obama’s first 50 days: worst president ever

March 11, 2009 | by Wintery Knight | Link | Original Link

Oh, there’s no doubt that he’s the *worst president ever*. Gateway Pundit has the re-cap, in point form.

Excerpt:

> ** He’s lost at least 3 administration nominees due to tax fraud.
>
> ** He’s promoted a tax cheat to run the IRS and Treasury.
>
> ** The Dow has dropped faster under Obama than any other new president in 90 years.
>
> ** Obama’s budget **more than doubles the national debt** held by the public, and adds more to the debt than all previous presidents — from George Washington to George W. Bush — combined.
>
> ** Obama managed to **spend more than** the wars in Iraq and Afghanistan combined.
>
> ** Obama will **quadruple the deficit** this year.
>
> ** Cap & trade was introduced that will cost America **4 million jobs** and cost Americans at least **$700 per family per year**.

That’s just about some of the spending and the socialism. Click here to see more about his energy policy, foreign policy, social policy, trade policy. *We’re doomed*. *We’ve elected an unqualified socialist who does not understand anything about how the world works, on any level.*

Also, Gateway Pundit reports here that Obama wants to sign a trade deal with communist Cuba after rejecting a trade deal with our capitalist, pro-American ally Colombia recently. Meanwhile, Canada has a free trade deal signed with Colombia already.

How redistribution of wealth kills the entrepreneurial spirit

March 11, 2009 | by Wintery Knight | Link | Original Link

There is a perception, especially on the left, but also on the "big government" right, that the federal government should be responsible for redressing every inequality that occurs in society. This is true whether the person brings misfortune on themselves or whether it is accidental. The problem with this wealth redistribution is revealed when you think about the incentives this introduces to the producers and the victims.

1. Government does not transfer wisdom, skill or responsibility from producers to victims
2. Government transfers *money* from producers to victims
3. Being productive involves risk and hard work on the part of producers
4. Receiving money involves ingratitude and rationalization on the part of victims
5. If the government confiscates a large enough portion of the earnings of the producers, they *stop producing*
6. Every dollar taken from producers is a dollar less they have for engaging in their productive plans, (e.g. – running a business or raising a family in a responsible way)
7. The more money is that transferred to victims, the more the frequency of bad behavior *increases* – because being a victim is *easier*
8. If you subsidize being a victim, you get more of it
9. If you tax production, you get less of it

"Going Galt" is named after the character John Galt in Ayn Rand's novel Atlas Shrugs. Galt is an industrialist who withdraws from the economy when faced by punitive tax rates and burdensome regulations. Going Galt refers to slowing down or ceasing production, because the risks and effort involved in producing are not worth the portion of the earnings that producers keep after taxes are redistributed to the victims.

The idea was first brought up afresh by Dr. Helen Reynolds in October 2008 on her blog Ask Dr. Helen. A more recent discussion of the phenomenon is here at the Washington Independent web site.

Excerpt:

> "Just this weekend," said Rep. John Campbell (R-Calif.) on Wednesday in an interview with TWI, "I had a guy come up to me in my district and tell me that he was losing his interest in the business he'd run for years because the president wanted to punish him for his success. I think people are reading 'Atlas Shrugged' again because they're trying to understand what happens to people of accomplishment, and people of talent and energy, when a government turns against them. That's what appears to be happening right now."
>
> The plot of Rand's novel is simple, despite its length — 1,088 pages in the

> current paperback edition. The United States is governed by bureaucrats, "looters" and "moochers," who penalize and demonize creative people. The country is in decline because creative people are disappearing — they have followed the innovative John Galt to a mountain enclave, "Galt's Gulch," where they watch society crumble. Creativity has gone on strike (the working title of the novel was "The Strike"), and the engine of capitalism cannot run without it.
>
> For Campbell, this is a powerful and relevant story. The congressman calls "Atlas Shrugged" an "instruction manual," and inscribes the copies that he gives to interns. Rep. Paul Ryan (R-Wis.), the ranking member of the House Budget Committee, also gives copies of the novel as gifts and refers to it to make the case against President Obama's policies. "It's an audacious scheme," said Ryan in his speech to the Conservative Political Action Conference last week. "Set off a series of regulatory blunders and congressional meddling, blame the free market for the financial crisis that follows — then use this excuse to impose a more intrusive state. Sounds like something right out of an Ayn Rand novel."

Michelle Malkin is posting a lot of messages on her blog from people who are suggesting other ways to Go Galt.

Excerpt from one of the producer's letters:

> *It is now fashionable and politically expedient to extend blame for the current financial crisis on greedy businesses and predatory lenders. The reality is that individuals and poorly managed businesses were responsible for the bulk of the problems. Government also played a role – and it was both parties – that encouraged and supported unsound business practices. Now the Government "must" step in to "save" these poor people from losing their homes, and "save" these "too big to fail" financial institutions. What about those of us, and those businesses, that chose to act responsibly? Who chose to live within their means? Who chose sound financial decisions over high risk behavior?*
>
> *Enough is Enough. Let them all fail. It is not too late. I don't care about the homeowner that borrowed more than they could afford and now find themselves potentially without a home and bankrupt. I don't care about the businesses that overlooked sound financial decisions in the name of short term profits. We all make choices in life and it is time to let those that made the bad choices live with their decisions and finally reward those that chose to act responsibly. It has come down to this – either we let those that made the bad decisions fail, or we end up sacrificing our nation, our national identity and our very way of life.*

China cuts sales tax on cars and auto sales shoot up 25 percent

March 12, 2009 | by Wintery Knight | Link | Original Link

Here are the details of China's sales tax cuts on new vehicle sales from Time Magazine:

> On Jan. 20, **the Beijing government slashed the sales tax on cars with engines of up to 1.6 liters from 10% to 5%.** The measure, designed to get Chinese to buy smaller, more fuel-efficient vehicles, has had an immediate impact. **January sales of small cars jumped 19% compared with the previous month**, according to the China Association of Automobile Manufacturers. Also boosting buyer interest: Lower road taxes and fuel prices, which are set by the government.

> …The surge in small-car sales helped China pass a milestone. **For the first time ever, more cars were sold in China (735,000 vehicles) in a month than were sold in the U.S. (657,000)**. In January at least, China was the world's largest car market. "The tax reduction was an obvious help to our sales," says a sales manager surnamed Feng at the biggest Hyundai dealer in Beijing. "**Since the new policy started, sales of our three models with 1.6 liter engines or below have gone up by 30% compared to the same period last year.**"

> …**China's stimulus plans "could have an enormous difference in whether or not people want to buy cars,"** says Ben Simpfendorfer, chief China economist for the Royal Bank of Scotland. "What's unusual about this cycle is that China faces the same problems as everywhere else in the world. The big question is how to spur consumer spending. Strong auto sales will help China, just like they'll help America or Europe."

And it works the same way for jobs! If you want to create jobs, what should you do? Should you waste 1.5 trillion dollars of money stolen from the private sector in order to expand government, pay off special interests, fund pork projects and thousands wasteful earmarks? Of course not! What you need to do is what China did. They made cars go on sale. We need to make *employees* go on sale. How?

The answer is to do what the Arnold Kling of the Cato Institute says and temporarily cut the employer portion of payroll taxes. This means that employers get all of the productive capacity of new employees hired within the United States, but the cost of hiring new employees is *reduced.* All the productivity at a much cheaper cost. Total cost of this stimulus plan: 230 billion dollars!

This plan is actually from Harvard economics professor Greg Mankiw, who describes it more fully here, but couples it with off-setting gas tax hikes.

> I would institute an immediate and permanent reduction in the payroll tax,

> financed by a gradual, permanent, and substantial increase in the gasoline tax. I would make the two tax changes equal in present value, so while the package results in a short-run budget deficit, there is no long-term budget impact. Call it the create-jobs, save-the-environment, reduce-traffic-congestion, budget-neutral tax shift.

But who cares what Harvard economists think? The tax-cheat says that you can fix the economy by raising taxes on companies that actually hire people:

> The Treasury chief today also defended the carbon emissions cap-and-trade proposals in the plan, saying the policy would raise hundreds of billions of dollars and help the country achieve energy independence. "It is critically important for our country that we begin the process now of changing the incentives Americans face for how they use energy," he said. "It's important to reduce our dependence on foreign oil, it is critical for climate change."

Who cares if consumers have to pay more for oil and gas in a recession? We need to think of the *trees* and *whales!* Won't someone please think of the *sea-kittens?*

Don Surber summarizes the problem:

> That's a good bailout because it allows people to spend their own money to buy cars instead of forcing them to pay for not buying cars.
>
> …50 years ago, President Eisenhower dreamed of the day when China would abandon communism in favor of capitalism.
>
> That dream is coming true.
>
> **Little did he know that we would be doing the reverse.**

And here is Monica Crowley's take:

> China cut taxes, and auto sales spiked.
>
> China cut taxes, and a part of its economy started to boom.
>
> Cutting taxes equals economic growth.
>
> The Chinese Commies get it.
>
> …Still waiting for the American Democrats to get it.

Tax cuts = Jobs. Jobs = economic recovery. Why is it that we are disregarding capitalist recommendations from former communist countries like Russia and China? Why is it that we insist on angering the world with our socialist policies? Why is that we are going out of our way to impose new taxes on products that consumers rely on? We can't afford this much spending no matter how much we tax the rich.

Greg Koukl expains the right way to handle an angry, aggressive atheist

March 12, 2009 | by Wintery Knight | Link | Original Link

Greg Koukl is one of the scholars who got me started in apologetics. I can still remember, (and I know my old friends Andrew, Kerry, and Jose can, too!), over 10 years ago, when we used to sit around in my basement listening to Greg Koukl's radio show over the internet. At the time, streaming audio was quite new. Well, he taught us all how to be ambassadors for Christ. (See 2 Cor 5:9-21)

I got his recent "Solid Ground" newsletter (free registration required), for January/February 2009, and the topic was on dealing with angry, aggressive atheists. This is a topic of real value for me. Not only do I have to face these belligerent atheists in my office (Yes, Gerry, I mean you!), but I also face them online at the Richard Dawkins forum, and face to face in my own family and friends!

Let's start with the question "what is a steamroller?":

> The defining characteristic of a "steamroller" is that he constantly interrupts, rolling over you with the force of his personality. Steamrollers are not usually interested in answers. They are interested in winning through intimidation.

Greg breaks down the techniques for handling steamrollers in 3 steps.

Step 1: Stop Him.

> Your first move when you find yourself in a conversation with a steamroller is a genial request for courtesy. Momentarily put the discussion on "pause." Ask to continue making your point uninterrupted.

One of the ways you can do that is using body language. You can raise your hand in the stop motion to emphasize your verbal attempt to pause the conversation so that you can finish responding. Ask for a specific amount of time to make your point, and make sure that you him to agree that you will get that time to respond! But the most important thing is to *not lose your temper.*

> Be careful not to let annoyance or hostility creep into your voice. That would be a mistake, especially with this kind of person. Don't let a steamroller get under your skin. Being defensive and belligerent always looks weak. Instead, stay focused on the issues, not on the attitude. Talk calmly and try to look confident.
>
> …don't take unfair advantage of the time you buy with this little negotiation. Make your point, then ask, "Does that make sense to you?" This invites him back into the conversation. Give him the courtesy of offering you a reply without interruption.

I hear J.P. Moreland saying "Does that make sense to you?" all the time in his lectures,

and now I've started doing it too! And so should you! But what if "stopping him" doesn't work? Then we go on to step 2.

Step 2: Shame Him.

Suppose the steamroller interrupts you again during your negotiation response time. You want to gently draw attention to the fact that he is being rude and intimidating in the conversation. Again, the goal is not to show the slightest discomfort, but always to act with confidence.

Phase two of the Steamroller tactic is to shame him for his bad manners while maintaining your integrity. Stay on topic and don't follow any "rabbit trails" he may voice.

That point about not taking on any new questions until you finish answering the first one is vital. You see this all the time on the Richard Dawkins forum. Every time you make a point about the progress of science, they start complaining about how cruel God is. (Note that atheists can't even judge God without assuming an absolute moral standard, which only a designer of the universe can ground!)

Below is example of how to do step 2:

> "Can I ask you a quick question? Do you really want a response from me? At first I thought you did, but when you continue to interrupt I get the impression all you want is an audience. If so, just let me know and I'll listen. But if you want an answer, you'll have to give me time to respond. Tell me what you want. I need to know before I can continue." Wait for an answer.

Part of becoming a good ambassador is knowing how to guage your opponent, and how much force you should use. Practice, practice! But suppose even step 2 doesn't work. What should we do now?

Step 3: Leave Him.

The most difficult thing to do is to break off a defense, especially when there are people around listening in or even participating. Usually you do this when the person is moving the wrong way on the aggression scale. Greg cites a number of Bible verses to show that the Bible does support this kind of strategic withdrawal from an engagement that is going the wrong way.

Conclusion

The article concludes with some very useful points. First, you don't have to win every debate. Just make your point and then let the Holy Spirit handle it from there. It is a mistake to think that you can change people's minds just by talking to them at more and more. Mind changing usually happens much later, as the person weights both sides of the issues. So don't rush, and remember, God values free will.

Second, always give an aggressive challenger the last word. This is the policy on my blog, where I get *one* rebuttal to a commenter, and then they get the last word. So far, I haven't had to violate this in 5 weeks of blogging.

And let me just reiterate – do not lose your cool. A lot of arguing relates to your attitude

under fire, especially for beginners who judge debates not on the evidence, but on appearances. You need to spend time studying in advance in order to get this confidence, *and I do mean studying both sides in debates.* Under fire, the confidence you've gained through study, especially the study of debates, is more effective than your words.

Richard Dawkins thinks that aliens may have caused the origin of life

March 12, 2009 | by Wintery Knight | Link | Original Link

I have blogged before about the problems atheist have in accounting for the origin of the simplest living, self-replicating organism. The problem is that a significant amount of biological information is required to provide minimum biological functionality. More importantly, that sequence of biological information, which is *identical to software code* must come together all at once. It cannot be built up step by step.

Now watch this 2 minute clip from the recent movie "Expelled". This is worth the price of the whole movie! The arch-atheist is interviewed by Ben Stein about the problem of the origin of the first replicating organism, which cannot have arisen by Darwinian means, such as mutation and selection.

Wow, that was painful. I almost felt bad for Dawkins. Here he is explaining the origin of life based on unobservable aliens that he just knows, deep down in his knower, evolved by Darwinian means. How does he know that these unobservable aliens evolved? He couldn't have observed them evolving, and he can't even observe them now. I guess he is willing to make that leap of faith.

But commenter ECM sent me something even funnier. Dawkins is now refusing to use the word "design" in his public lectures. Maybe, if everyone stops using that nasty, nasty word, then the whole idea that nature is the product of a Creator and Designer will *just go away*! Yes! If we rule out design *a priori*, then William Dembski and Jonathan Wells and the rest will just go home and leave the public schools to the Darwinists!

Here's the link. Funny stuff.

To see Dawkins debate John Lennox on "The God Delusion", click here. Answering Dawkins' schoolyard objection "Who Made God?". A debate on the origin of life. Atheist views on morality. Actual debates that discuss morality on atheism.

France, Germany and Italy warn G20 nations against Obammunism

March 13, 2009 | by Wintery Knight | Link | Original Link

I was browsing over at the Anchoress and I found some very interesting links in her link-filled post here. She runs a blog that features a mix of Catholic-oriented reflections and a conservative perspective on the news of the day.

Here's the part of her post that caught my attention:

> **Not good:** First Putin told him not to, now France and Germany. Boy, didn't the left HATE when Bush was this stubborn and set on his own way? And he didn't listen to other countries? I seem to remember the left really, really hating that. About Bush. They hated these things too. When Bush did them.

Here is the warning from France and Germany from the Financial Times, via American Thinker:

> Disagreements between the European Union and the US over how to combat the global recession widened on Tuesday as EU governments made clear they had little appetite for piling up more debt to fight the collapse in output and jobs.
>
> Finance ministers from the 27-nation bloc insisted in Brussels that it was doing enough to support world demand and did not need at present to adopt another fiscal stimulus plan, as Washington is urging.
>
> The US-European differences are casting a shadow over next month's summit in London of leaders from the G20 group of advanced and emerging economies, an event to be attended by Barack Obama on his first visit to Europe as US president.

It's true that France, Germany and Italy have *all* elected *conservative* leaders recently, (along with Japan, Canada, the Czech Republic and Mexico). I thought that these European socialist countries were to the left of the USA. Are we now to the left of *France, Germany and Italy?*

You might remember that I posted recently about former-communist Russia warning Obama about the dangers of socialism. Former-communist China also warned Obama to stimulate the economy with tax cuts, not spending. Instead, Obama raised taxes and spent trillions.

Canada, Japan and Mexico also elected conservatives governments. Why can't we be more like them? Why do we have to embrace Obama's unilateral, cowboy-communism? Why must Obama anger the world with unpopular economic policies that fail the "global test"? Why does Obama make the world hate us?

Why Obama's big government socialism leads to secularism

March 13, 2009 | by Wintery Knight | Link | Original Link

I have been browsing on a few forums, including forums that discuss Christian apologetics. Imagine my surprise when I encountered pro-Obama, pro-socialism statements by people who are supposed to be informed about these issues.

Well, I found an article over at Mercator Net, (an Australian web site), which might be useful for Christians who are sympathetic with Obama's pacifism, redistribution of wealth and creeping fascism. I want to argue that his policies are inconsistent with Christianity.

First of all, the article notes that Obama did gain a significant number of votes from religious Christians.

> In 2008, according to CNN exit polls, Obama won forty-three percent of the presidential vote among voters who attend religious services once a week or more, up from Senator John Kerry's thirty-nine percent in 2004. Obama did especially well with Black and Latino believers. But he also made real inroads among traditional white Catholics, according to a recent article by John Green in *First Things*.

The article describes Obama's spending, (which I discussed here), and then comments on the significance of that spending for religious institutions, like churches and charities.

> To fund his bold efforts to revive the American economy and expand the welfare state, Obama is proposing to spend a staggering $3.6 trillion in the 2010 fiscal year. Obama's revolutionary agenda would push federal, state, and local spending to approximately 40 percent of Gross Domestic Product, up from about 33 percent in 2000. It would also put the size of government in the United States within reach of Europe, where government spending currently makes up 46 percent of GDP.
>
> Why is this significant for the vitality of religion in America? A recent study of 33 countries around the world by Anthony Gill and Erik Lundsgaarde, political scientists at the University of Washington, indicates that there is an inverse relationship between state welfare spending and religiosity. Specifically, they found that countries with larger welfare states had markedly lower levels of religious attendance, had higher rates of citizens indicating no religious affiliation whatsoever, and their people took less comfort in religion in general. In their words, "Countries with higher levels of per capita welfare have a proclivity for less religious participation and tend to have higher percentages of non-religious individuals."

The article goes on to explain the chain of casusation from big government to

secularization. Read the whole thing.

But this should be no surprise when you recall Nobel prize winning economist F. A. Hayek's thesis in his landmark book "The Road to Serfdom". His thesis is that the natural endpoint to all systems of government that control the means of production is fascism.

Fascism is a left-wing ideology, in which the state substitutes its own values, meanings and purposes for the values, meanings and purposes of individuals. There is no such thing as fascism on the right, because people on the right are free market capitalists who prefer small government and individual liberty.

To see how fascism destroys individual liberty and freedom of conscience, consider:

- Obama's plan to force hospital workers to perform abortions against their conscience
- Obama's forcing of taxpayers to pay for abortions here and abroad against their conscience
- Obama's forcing of taxpayers to pay for embryonic stem cell research against their conscience
- Obama's forcing of students to attend government run schools instead of private schools of their choice
- Obama's discrimination against religious schools in his spendulus bill
- Obama's plan to force some workers to join unions against their will and fun left-wing union political activism against their will
- Obama's forcing individuals to let Washington run their health-care

I could go on. And on. And on and on and on. But the point is that electing a socialist put us on the road to fascism. As IBD notes, socialists want to force-feed (podcast audio) their worldview onto an unwilling populace by any means – from government-run schools to news media.

I think that Christians need to do a much better job of understanding how our religious liberty hangs on small government and the free market. And remember: this crisis that Obama is "fixing": it's the Democrats who caused it, while Republicans tried to stop it.

William Lane Craig vs Christopher Hitchens debate LIVE FEED

March 13, 2009 | by Wintery Knight | Link | Original Link

UPDATE: My play-by-play transcript of the April 4, 2009 debate at Biola is here.

Got this in e-mail from Biola University, regarding the upcoming William Lane Craig vs Christoper Hitchens debate.

> YOU MUST ACT FAST—to set up a viewing site for your church, Bible study, family, or neighborhood! Debate takes place on Saturday, April 4.
>
> The "Does God Exist" Debate is almost completely sold out at Biola University . Nearly 4,000 people will be seeing it live. But the demand is tremendous from all over the world to view this debate as it happens between one of the finest Christian philosophers alive today, Dr. William Lane Craig, and Christopher Hitchens, who is one of the most outspoken atheists in a century.
>
> **Live Broadcast:**
>
> - **Saturday, April 4**
> **7:30 pm Pacific Daylight Time (10:30 pm Eastern)**
>
> **Re-broadcasts:**
>
> - **Sunday, April 5**
> **4:00 pm Pacific Daylight Time (7:00 pm Eastern)**
> - **Wednesday, April 8**
> **5:00 pm Pacific Daylight Time (8:00 pm Eastern)**
>
> **Deadline for sign up:**
> **Monday, March 30, 11:59 pm PDT.**
>
> HOW DO I SIGN UP?
> 1) Just log on to the registration web site:
> http://www.apologeticsevents.com/debate
> 2) Agree to the terms, pay the viewing fee, and receive a code to log into the broadcast
> 3) Use your equipment to put it on a nice monitor, screen, or projector, invite everyone at your church, and enjoy!

Look here for more information, FAQ, and pricing information ($98):
http://www.apologeticsevents.com/debate

If anyone's church is hosting a feed, please post a comment below.

UPDATE: I analyze Hitchens' case against God here, from his debate against Frank Turek.

UPDATE: Audio and video from a panel discussion with Hitchens, Craig, etc. is linked

here.

UPDATE: Information about live-blogging of the debate is here.

Why does talking about religion make people uncomfortable?

March 14, 2009 | by Wintery Knight | Link | Original Link

In a recent post, I argued against Christians who hide their faith in public. I said that although hiding your faith may make you happier and more popular, it is more loving to confront others as an informed Christian ambassador. Your goal should be to help your friends to be reconciled with God through Christ, by telling them the truth and answering their questions, if they are willing.

In this post, I want to survey a research paper by evangelical Christian philosopher Michael J. Murray. In a previous post, I surveyed his answer to the question "Why does God hide his existence from us?" in this post, the question is "Why are we afraid to discuss our faith in public?"

Murray begins with a distinction, as philosophers love to do:

> …we would be perfectly happy to have a discussion of claims like…"Mahayana Buddhism emerged in the first century BCE with the appearance of the Mahayana sutras." … It is OK to speak of religion… as a historical phenomenon or a socio-cultural influence. It is something altogether different to discuss religious commitments that one owns. That is the sort of religion that troubles us.

People who aren't religious feel discomfort about hearing about the religious beliefs of others, because those beliefs influence public policy, but (they think) those beliefs are based non-rational factors, such as place of birth, parental beliefs, peer groups, emotions, prejudices, superstitions, etc. They are uncomfortable living in a government that was voted in by people whose views are based on irrational religious beliefs.

He has some illustrations of this "theo-phobia" here:

> …think about the last time you heard a devoutly religious person argue, on explicitly religious grounds, that gay marriage should be banned, or that intelligent design should be taught in the public school biology curriculum, or that abortion is murder and thus should be outlawed.

And I agree with that. I feel uncomfortable when people argue for positions from faith-based premises. But do discussions of religious beliefs necessarily have to be about faith-based personal preferences? Or is there another way to discuss religion that doesn't make non-religious people squirm with discomfort?

In the remainder of the paper, Murray explores five reasons why theo-phobia exists in academic settings:

1. Religion supports oppression, violence, and tyranny and is thus best ignored, excluded or perhaps even actively opposed.

2. Religion is a personal or subjective matter and as a result can't be subjected to canonical standards of rational scrutiny. It thus has no place in the academy.
3. Religion can't have a role in scholarly inquiry since it at best plays a balkanizing role in the scholarly world.
4. If religion is allowed to have a role in the academy it will quickly intrude into domains where it does not belong.
5. Reason #5 is kept secret until the end of the paper.

Regarding point 1, Murray argues that religious excesses can be controlled by falsifying the religion using reason and evidence, because *religions make testable claims.* So, if academics are afraid of the excesses of a dangerous religion, they should *falsify it by arguing that its claims are false.* There is no reason to be afraid of expressions of religious belief when you are free to argue against the testable truth claims of that religion.

I repeat: different religions make different claims about the external world. Either the universe had a beginning (Christianity) or it didn't (Mormonism). Either Jesus died on the cross (Christianity) or he didn't (Islam). If academics are worried about the effects of some religion, they *can* argue against it! If a religious person is *not* willing to defend the testable truth claims, then they are discredited anyway by refusing to engage.

For the remaining 4 points, especially the last one, *I recommend you read the whole article*. Give it to your friends, religious and non-religious, who believe that faith is fundamentally different from other academic disciplines. Some truth claims of different religions *can be tested*. And Christians especially should help others to feel comfortable talking to them by sticking to *testable truth claims and publicly accessible evidence.*

I'll give you a hint about reason #5, from atheist philosopher Thomas Nagel of New York University. Nagel is quoted as follows:

> "In speaking of the fear of religion, I don't mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn't just that I don't believe in God and, naturally, hope that I'm right in my belief. It's that I hope there is no God! I don't want there to be a God; I don't want the universe to be like that."
> ("The Last Word" by Thomas Nagel, Oxford University Press: 1997)

So we learn from Murray that religions stand or fall based on logical consistency and

empirical validation against the external world, *just like any other academic discipline*. So long as you stick to discussing the public, testable claims of religions, there is no reason to be uncomfortable about discussing religions. Don't discuss the parts of a religion that can't be tested, only discuss the parts that can be tested.

(Note: Nagel isn't all bad, he defends intelligent design as science in a research paper summarized here). To see how religion is debated in academia, (public debates held on university campuses, that leverage arguments from published research across academic fields), look here.

Scott Klusendorf makes the case for protecting the unborn

March 14, 2009 | by Wintery Knight | Link | Original Link

Linked here at Apologetics 315. His 35-minute presentation (no Q&A) is entitled “Making Abortion Unthinkable: The Art of Pro-Life Persuasion”. There is a presentation of the law of biogenesis and the SLED test (Size, Level of development, Environment, Degree of dependency).

A little biographical information on Scott.

For your office show-and-tell, you can buy Frank Beckwith’s 2007 book “Defending Life: A Moral and Legal Case Against Abortion Choice”. Since the book is published by Cambridge University Press, it’s useful to show people who think that there is no respectable case for the pro-life position.

My previous post on the case for the pro-life position in plain english is here. It contains a link to a 4-part series by Beckwith on answering arguments for the pro-abortion position.

Democrats in Congress spending 1 billion per hour

March 15, 2009 | by Wintery Knight | Link | Original Link

Politico is reporting that the Democrats are spending like drunken sailors.

> "In just 50 days, Congress has voted to spend about $1.2 trillion between the Stimulus and the Omnibus," McConnell says. "To put that in perspective, that's about $24 billion a day, or about $1 billion an hour—most of it borrowed. There's simply no question: government spending has spun out of control."
>
> The math: 50 days times 24 hours equals 1,200 hours. 1,200 times 1 billion equals 1.2 trillion (a thousand billions is a trillion).

H/T: Sen. Jim Demint

Different perspectives on the days of Genesis

March 15, 2009 | by Wintery Knight | Link | Original Link

Over at Tough Questions Answered, they survey different views on the days of creation described in Genesis. Basically, there are two views: the young-earth creationist view, the old-earth creationist view. (Theistic evolution is nothing but atheism).

As my bio describes, I favor the old-earth view. I believe in micro-evolution (adaption to environment within different body plans), but I don't believe that macro-evolution has been demonstrated in the fossil record or in the lab or in mathematical models of likely mutations and development parthways.

Christians are delighted to that the Bible is in agreement with what scientists have discovered about the origin of the universe, and it's careful design to support the minimal requirements for complex life of any conceivable kind (given our physical laws and chemical diversity). But there is still one apparent disagreement between the Bible and science.

The apparent disagreement is that the book of Genesis describes the creation (*asah, bara)* of the earth as taking place in a series of days (*yom*). But there seems to be a tension between 6 24-hour days and a 4 billion year old earth. Are we stuck with a contradiction between science and Scripture here?

Here's what TQA says:

> The word *yom* can mean several things in Hebrew. It can refer to a 24-hour period or it can refer to longer periods of time. Which is the correct interpretation in Genesis 1?

In fact, Genesis 2:4 uses the word *yom* to describe the entire week of creation. And, St. Augustine, writing in the 5th century, interpreted the *yoms* of Genesis to be long periods of time, not 24-hour days. (And he also predicted the beginning of time at the creation).

For a solid scientific treatment that explains the possible meanings of *yom* and tries to reconcile it with what science tells us about the age of the earth, take a look at this paper by Dr. Walter Bradley of Baylor University.

Here is an excerpt that explains what the paper is about:

> In this paper we would like to focus on the interpretation of the Hebrew words "yom" and "bara/asah" as they are used in the early chapters of Genesis to describe the time frame and mechanism of creation. A careful examination of both biblical and scientific data will be summarized. A critique of the current models based on this data will be made leading to our summary of how at present we think one may best harmonize all of the available information.

I think there are solid young-earth creationists out there, like Paul Nelson and Marcus Ross, but I agree with Bradley and Augustine on this question.

One last thing – the dividing line between Christian and non-Christian views on this issue depends on how you answer this question: “Does nature, including the realm of biology, show signs of having being created and designed by an intelligent agent – signs that are *independent* of the religious beliefs of observers”.

Both young earth and old earth creationists answer “yes”. Yes, the universe shows signs of being programmed by an Engineer. Atheists and “theistic evolutionists” answer no, there universe was not programmed by an Engineer. Intelligent design people also answer “yes”, but their theory is strictly mathematics (probability theory). What Genesis says is not relevant to intelligent design.

What about those who never heard of Jesus?

March 16, 2009 | by Wintery Knight | Link | Original Link

One of the most difficult questions for Christians to answer, especially when posed by adherents of other religions, is the question of what happens to those who have never heard of Jesus? In this post, I will explain how progress in the field of philosophy of religion has given us a possible (and Biblical) solution to this thorny question.

First, Christianity teaches that humans are in a natural state of rebellion against God. We don't want to know about him, and we don't want him to have any say in what we are doing. We just want to appropriate all the gifts he's given us, do whatever we want with them, and then have eternal bliss after we die. We want to do whatever we want and then be forgiven, later.

Along comes Jesus, who, through his sinless life and his death on the cross, heals that rift of rebellion between an all-good God and rebellious man. Now we have a real understanding of the fact that God is real, that he has power over death, and that he has very specific ideas on what we should be doing. If we accept Jesus' atoning sacrifice and follow his teachings, we can avoid the penalty of our rebellion.

The only problem is that in order to appropriate that free gift of reconciliation, people need to actually *know* about Jesus. And there are some people in the world who have not even *heard* of him. Is it fair that these other people will be sent to eternal separation from God, just because they happened to be born in the wrong place at the wrong time?

Enter William Lane Craig to save the day. His solution is that God orders the world in such a way that anyone who would freely choose to acknowledge Jesus and appropriate his teachings in their decision-making *will* be given eternal life. God knows in advance who would respond, and chooses their time and place of birth, and he supplies them with the amount of evidence they need.

And this agrees with what the Bible teaches. The apostle Paul says this in his apologetic on Mars Hill in Acts 17:22-31:

> 22 So Paul stood in the midst of the Areopagus and said, "Men of Athens, I observe that you are very religious in all respects.
> 23 "For while I was passing through and examining the objects of your worship, I also found an altar with this inscription, ' N D ' Therefore what you worship in ignorance, this I proclaim to you.
> 24 "The God who made the world and all things in it, since He is Lord of heaven and earth, does not dwell in temples made with hands;
> 25 nor is He served by human hands, as though He needed anything, since He Himself gives to all people life and breath and all things;
> 26 and He made from one man every nation of mankind to live on all the face of the earth, **having determined their appointed times and the boundaries of their habitation,**

> **27 that they would seek God, if perhaps they might grope for Him and find Him, though He is not far from each one of us;**
> 28 for in Him we live and move and exist, as even some of your own poets have said, 'For we also are His children.'
> 29 "Being then the children of God, we ought not to think that the Divine Nature is like gold or silver or stone, an image formed by the art and thought of man.
> 30 "Therefore having overlooked the times of ignorance, God is now declaring to men that all people everywhere should repent,
> 31 because He has fixed a day in which He will judge the world in righteousness through a Man whom He has appointed, having furnished proof to all men by raising Him from the dead."

In this research paper, Craig explains in detail how God foreknows how people will choose in every set of circumstances, and how God uses that knowledge to get everyone where they need to be *without violating their free will.* God wants the best for everybody, and has ordered to whole universe in order to give each of us our best opportunity for eternal life.

Here is a summary of the what is in his paper:

> The conviction of the New Testament writers was that there is no salvation apart from Jesus. This orthodox doctrine is widely rejected today because God's condemnation of persons in other world religions seems incompatible with various attributes of God.
>
> Analysis reveals the real problem to involve certain counterfactuals of freedom, *e.g.*, why did not God create a world in which all people would freely believe in Christ and be saved? Such questions presuppose that God possesses middle knowledge. But it can be shown that no inconsistency exists between God's having middle knowledge and certain persons' being damned; on the contrary, it can be positively shown that these two notions are compatible.

Go read this paper and equip yourself to answer this common question!

And now I want to close by making a general point. There are two kinds of people in the world. The first kind encounters problems, like the hiddenness of God, or the problem of evil, the problem of Cookie monster objections (thanks, Truthbomb!), or religious pluralism, and they respond by *leveraging* that problem in order to justify rejecting God and going their own way.

Even uninformed Christians read books like "The Da Vinci Code", and avoid the arguments and evidence that would defeat the objections raised by that book. Why? They want to be lazy, or to fit in, or to pursue pleasure apart from God. This is because if we don't know that God is real *for certain* then we won't feel *rationally compelled to be good.* And that's why many Christians go out of their way *not to find out the truth* about these thorny problems.

And doubts also relieve us of the burden of evangelizing. Uninformed Christians know

that their doubts give them freedom to keep silent about God, so they can get along with non-Christians. They think that keeping the truth about God to themselves, and not being ready and available to answer questions, is *loving.* But it's really just *selfishness.* It doesn't help non-Christians to keep the truth from them.

So why do some Christians hide the truth from others? It's because they really *do not believe that God will exclude people based on their beliefs about Him*, even though Jesus says so in many places*.* Deep down, *we believe that God's purpose for humans is to be happy.* When Christians don't try to find answers to difficult questions like religious pluralism, they end up softening the Bible's exclusive claims *based on their emotions*.

This is not what ambassadors are supposed to do – we are not free to make up our own doctrines and then lie to people in order to be happy and popular.

The second group is willing to spend time and effort to assess whether science, history, philosophy, etc. support Christianity. This kind of person is willing to go where the evidence leads. They don't jump on doubts and use them to justify disobedience. They are willing to be public (i.e. – "divisive") about their faith and put God first, above worldly goals, like popularity.

The whole point of life is for God to draw people to himself in a *two-way* relationship. He reveals himself a little, and we respond and pursue him. How about you? Do you want to know for certain whether God is real? Are you willing to give up everything to follow him? Or would you rather he just keep out of your busy life and your subjective purposes in the world?

UPDATE: A related post over at Tough Questions Answered on whether Jesus is required to be rightly related to God and to get eternal life.

Michele Bachmann opposes Obama's pro-abortion bill

March 16, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

UPDATE: Welcome visitors from dcjunkies! Here are some other posts (usually with videos) on Michele: opposing nationalization of banks, explaining free market capitalism, opposing embryonic stem cell research, evaluating Obama's spending plans, arguing that corporate tax rates are too high.

Michele Bachmann is the most capable and conservative House Representative. In the video below, she explains what Obama's mis-named "Freedom of Choice Act" would actually do.

I just don't think it's right for people to choose to perform activities that result in pregnancy, and take innocent human lives in order to escape the consequences. In fact, it scares me that so many men and women would be willing to hurt other people in order to avoid the responsibility for their own choices.

Life is filled with choices that involve risk. The reason we have speed limits is because we recognize that driving too fast poses a danger to others. And pre-marital sex is no different than speeding. It's fun, but it's dangerous. How about this: let's all try to avoid behavior that is likely to result in hurting innocent people. Is that too hard?

(H/T The Maritime Sentry)

Apologetics 315 lists the 16 best apologetics podcasts

March 16, 2009 | by Wintery Knight | Link | Original Link

The list of podcasts is here.

Here are the ones I listen to:

> 1. Reasonable Faith – William Lane Craig
> 3. Unbelievable?
> 6. Defenders Podcast – William Lane Craig
> 11. Intelligent Design the Future

But there are a bunch of new ones I had never heard of in his list. Check it out!

And let me just plug a podcast that is not related to Christian apologetics: the Investors Business Daily podcast (RSS link). This is by far the best podcast available on issues ranging from economics, to foreign policy to social policy. I highly recommend this podcast.

Assessing Obama's 5-point plan for education reform

March 16, 2009 | by Wintery Knight | Link | Original Link

Found this article on Mercator Net, an Australian site that is really getting my attention with the quality and scope of their articles. This is more than just politics, it's policy analysis. Here's Kevin Ryan's article on Obama's education plan.

The plan is composed of 5 points:

> He promises his administration will promote five reforms in particular: major funding for early childhood education; increased funding for and emphasis on standards and assessment; new funding to recruit, educate and reward teachers; a substantial increase in the number of the country's charter schools and new funding for programs to expanding life-long learning with a special emphasis on all American's having another year of education.

Obama is obviously equating more spending with better student performance, an approach that I like to analogize as throwing gasoline on a fire to put it out. The rest of the article deals with the policy implications of the 5 points. The article contains a couple of examples.

Here's one of the examples:

> Historically, it is a very modern idea that money will buy a quality education. Our current experience with funding education hardly supports such a view. Arguably the worst school system in America, the Washington DC schools spends the most dollars per pupil, US$16,650. On the other hand, Utah schools, which relative to the rest of the nation, are outstanding schools spend a third, $5,700, of what is spent in the nation's capital.

Here's an excerpt from the analysis of the 5 points:

> Every one of the President's five-point plan means more jobs and influence for the teachers' union. More early childhood means more teachers and administrators, even though the effects pre-kindergarten and day care are increasingly in doubt. (Finland, whose students recently earned the highest scores in international achievement tests, doesn't send its children to school *until they are seven years old)* The Obama Plan ought perhaps be called the NEA's Full Employment Plan.
>
> Having every America spend an additional year in a classroom sounds wonderful. It will mean a staggering increase tax dollars to fund such an increase. On the other hand, the opportunity costs for an individual student staying away from meaningful salaried work will also be huge.

The article concludes its analysis of the plan with this observation about Obama's personal life:

> As a Chicago politician and now as president, he has exercised school choice for the education of his two daughters, while, de facto, denying it to those parents without his income. The fact of the President's stonewalling parents' efforts to get real educational choice, plus the picture of his daughters being driven out the their tony private school, passing the orange school busses delivering Washington's children to those failing public schools, is the unstated message of his speech.

The article does not mention that Obama himself went to expensive private schools. As Michelle Malkin says, be skeptical that his education will help anyone but teacher's unions.

I will be tracking the education and health care plans that Obama has proposed closely, to find out who really will benefit from his big government approach.

Everything I know about the problems of evil and suffering in a 4 page essay

March 17, 2009 | by Wintery Knight | Link | Original Link

I just wanted to draw your attention to this 4 page essay by Joe Manzari, which is the best darn summary of the state of the art on the problems of evil and suffering I have seen. The problem of evil is an objection to the existence of God based on the presence of evil or suffering in the world. The arguments basically infer that if God is all-good and all-powerful, then there should not *be* any evil or suffering.

There are two kinds of problem of evil.

The Logical/Deductive Problem of Evil:

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An exampel of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omniscient being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God

> can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

Inductive/Probabilistic Problem of Evil

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is the second one:

(1) If God exists, gratuitous evil does not exist.
(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order to for the character of humans through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil we observer more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.

Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.

2. Mankind is in a state of rebellion against God and God's purposes.
   Given that we humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about him as possible. We should not be surprised that people would also reject his moral demands on them, which results in some of the evil we see.
3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

The Argument for God from Evil

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That’s right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again. More on this argument for God’s existence *from evil* here.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I’ve been through… but then, that’s why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

For more on the problem of evil, listen to this lecture by Douglas Geivett, professor of philosophy at Biola University. Then you *must listen* to this debate here between William Lane Craig and Walter Sinnott-Armstrong. Another debate transcript is here, with William Lane Craig and Kai Nielsen. Here’s a book debate between William Lane Craig and Walter Sinnott-Armstrong, published by Oxford University Press, 2004.

Evan Sayet explains why progressives believe what they believe

March 17, 2009 | by Wintery Knight | Link | Original Link

One of the tragedies of being an active blogger is that you don't get to visit all the blogs you used to visit before you started blogging. Well, since Ace linked to my notice about the upcoming debate of the century between Christopher Hitchens and William Lane Craig, I figured: now is the time. So I went over there and scrolled around, catching up on who is drinking Valu-Rite vodka, and who is polishing LauraW's hump.

And I noticed that the brilliant Jewish comedian Evan Sayet, a 9/11 Democrat, has given *another* speech at my favorite think tank, the Heritage Foundation. If you missed Evan's first *brilliant* speech, (brilliant because you learn TONS of stuff that you've never heard before!), don't miss it now. But do not even think about watching this speech if you are a thin-skinned special-interest leftist. You can't handle it.

Here is the link to his FIRST speech for the Heritage Foundation if you missed it:

Here is the audio (MP3) and video of the second speech.

Topics of the second video include:

- What progressives believe: postmodern skepticism, moral equivalence, creative anti-realism
- How progressives side with evil instead of good so that everyone will be equal
- How progressives believe that failure is never an individual's responsibility, but always the fault of some group of oppressors
- How progressives believe that success can only achieved by oppressing others
- Why progressives believe in redistribution of wealth and zero-sum game economics
- *and more*

I really like listening to this guy, and so will you! *Listen to both of his speeches*. You are never going to hear direct truth, as from a fire hydrant, like you will by listening to Evan Sayet. **Pay attention to what he says at the end of the second speech**. Our hope lies in our *individual* willingness to speak out intelligently *to our neighbors* about *what we believe* and *why we believe it*.

Obama’s federal budget: thinking beyond stage one

March 18, 2009 | by Wintery Knight | Link | Original Link

House Republican Leader John Boehner

Everyone who reads Thomas Sowell knows that the most important question to ask when talking about any economic proposal is “And Then What Happens?” That was the point of his one-two punch of introductory books on economics, “Basic Economics: A Citizen’s Guide to the Economy” and “Applied Economics: Thinking Beyond Stage One”. Don’t examine the intentions of the proposal. *Examine the incentives it creates.*

But this idea goes back even earlier to Henry Hazlitt, who wrote about it in “Economics in One Lesson”. (The link goes to a statement of the “one lesson”)

> …the whole of economics can be reduced to a single lesson, and that lesson can be reduced to a single sentence:
>
> The art of economics consists in looking not merely at the immediate but at the longer effects of any act or policy; it consists in tracing the consequences of that policy not merely for one group but for all groups.

Well, what are the long-term effects of Obama’s federal budget, for all groups?

Congressman John Boehner has a breakdown of some of the budget numbers on his blog.

> The President’s budget calls for $1.4 trillion in new taxes that will affect every American. There’s a $646 billion “cap and trade” energy tax; a $636 billion tax on income and small businesses; new taxes on investors by raising capital gains and dividend rates; a resurrection of the death tax; and a reduction in charitable deductions which will result in $4 billion less in donations each year to charities across America.

But it’s worse than that. A while back, I wrote about how Obama wanted to discriminate against religious schools by denying them renovation funds. In the budget, he continues his anti-religious trend by de-funding private charities. This is the part that Christians who voted for Obama need to pay attention to, because this matters to us.

Boehner notes:

> The proposed reduction in charitable deductions is especially troubling, since it would hurt charities at a time when American families are struggling and in need of assistance.

But remember, when government expands, the state becomes more secular. The capabilities and influence of private religious groups decreases as the state de-funds them and takes over their duties. Instead of people depending on their neighbors' charity, they now depend on the state. Instead of letting workers decide where to give charity, workers are forced to fund secular government programs.

Boehner cites this Wall Street Journal piece:

> According to the Center on Philanthropy at Indiana University, total itemized contributions from the highest income households would have dropped 4.8% — or $3.87 billion — in 2006 if the Obama policy had been in place. That year, Americans gave $186.6 billion to charity, more than 40% from those in the highest tax bracket. A back of the envelope calculation by the Tax Policy Center, a left-of-center think tank, estimates the Obama plan will reduce annual giving by 2%, or some $9 billion.

Before Obama's budget, you might have given charity to a Crisis Pregnancy Center. Now that money could be spent by the government on coerced abortions abroad. Before Obama's budget, you might have given charity to support William Lane Craig's web site Reasonable Faith. Now that money could be spent destroying human embryos. *Elections matter.*

Representative Mike Pence

Congressman Mike Pence goes over the budget numbers on his blog.

> The following is a summary of the Administration's plans to increase taxes by $1.4 trillion over the next ten years.

> **Taxing Small Businesses**: In 2010, the President's budget will increase taxes on all taxpayers that earn more than $250,000. The majority of the burden for this $637 billion tax increase will be borne by small businesses that pay taxes as individuals. Small businesses create 60 to 80 percent of all new jobs in America. These new taxes will stifle job creation and economic growth in the midst of a recession.
>
> **Taxing Energy Consumers**: The budget also proposes to raise taxes by $646 billion on consumers of oil, coal, and natural gas through a complicated "cap and tax" program that will increase the cost of energy for every American. These carbon-based fuels provide about 85% of all energy output in the U.S. This new tax will increase the cost of energy by up to $3,128 per household annually, taking more money out of the pockets of hard working families struggling to pay their bills each month.
>
> **Taxing Investors Part I**: Under the President's budget, taxes on capital gains and dividends would increase from 15 to 20 percent, increasing taxes on investors by $338 billion over ten years. These taxes would directly affect investors and shareholders, including many 401k holders and pension funds, most impacted by the declining stock market and would further discourage investments during a time when new investments are essential to jumpstarting our economy.
>
> **Taxing Charitable Giving**: The budget also caps the value of itemized deductions at 28% for those with an income over $250,000 (married) and $200,000 (single), which will reduce charitable giving by $9 billion a year. The current economic crisis has severely damaged charitable organization's ability to provide for people who are most affected by the recession, and the budget would leave these charities with at least a $9 billion deficit.
>
> **Taxing Death**: The budget reinstates the death tax scheduled to be fully repealed in 2010. According to the Joint Committee on Taxation, the death tax has "broad economic effects" and one study has found that the death tax is responsible for lowering overall employment by 1.5 million jobs.
>
> **Taxing Investors Part II**: The budget would more than double taxes on carried interest, increasing taxes up from the capital gains rate (15%) to the income tax rate (35%). Carried interest is interest gained on profits from investments and is generally used to pay investment fund managers based on the fund's performance for investors. This tax hike is yet another attack on profit, private equities, and investments in the middle of a recession.

High taxes and big spending is not good for business, and therefore not good for job growth. I predict double-digit unemployment (around 12%) by year's end as a result of this socialist budget.

Already, Gateway Pundit is reporting that Caterpillar has laid off 2,454 employees, with more layoffs on the way. Hot Air has video on the layoffs here: Obama saying that his

bailout will reduce layoffs, and the CEO saying that the bailout will not prevent layoffs. Ooops.

Mark Sanford and Bobby Jindal refuse bailout funds

March 18, 2009 | by Wintery Knight | Link | Original Link

Governor Mark Sanford

I noticed some posts at the Maritime Sentry about Governor Mark Sanford. If Bobby Jindal can't save us in 2012, then Mark Sanford is my second choice. Everybody knows that Jindal is turning down bailout funds. Here is Bobby Jindal on the Hugh Hewitt show explaining why he is refusing the bailout funds, on how he intends to deal with the economic downturn in his state budget. *Dynamite!*

But Maritime Sentry has the story on Mark Sanford's refusal to take bailout funds. Here, they link to this Forbes article, entitled "Why Mark Sanford Matters: Small-government conservatives have found their champion."

Here is an excerpt from the article:

> Sanford's opposition to President Obama's American Recovery and Reinvestment Act, and in particular his insistence on using up to a fourth of his state's stimulus funds to pay down debt or refusing it outright, has fast made him a folk hero to conservatives.

I am a little concerned by his opposition to the Iraq war, because I feel that it was a successful action against terrorism with strategic gains that *far* outweighed the costs. I approve of his small government stand, though. The National Taxpayer's Union also approves:

> The 362,000-member National Taxpayers Union (NTU) has applauded South Carolina Gov. Mark Sanford (R) and Texas Gov. Rick Perry (R) for their decisions this week to refuse part of the federal stimulus package earmarked for their respective states. Sanford will accept $700 million only if the President allows him to use it to pay down debts rather than create new spending obligations. Perry has refused outright $555 million for expansion of state unemployment

> benefits.

Maritime Sentry also links to this 5-minute video, in which Sanford explains why he is turning down the bailout money. He doesn't want Obama to be able to impose taxes on his state later, if he takes the bailout money today.

The Democrats doesn't like federalism much. The DNC is even running ads in South Carolina against Sanford for refusing to take the money, and the attached strings. I found a statement about these DNC ads over at his blog. Jindal is also taking heat from unions and other economically-illiterate left-wing groups in his state.

UPDATE 1: Here is the transcript of Bobby Jindal's interview on the Hugh Hewitt show. (H/T Binky @ Free Canuckistan!)

UPDATE 2: Here is the first part of an interview with Mark Sanford conducted by the Acton Institute, which specializes in free market capitalism and its relationship to religious liberty. (H/T Binky @ Free Canuckistan!)

New podcasts on academic freedom and intelligent design

March 18, 2009 | by Wintery Knight | Link | Original Link

I found a couple of new podcasts on intelligent design on Post-Darwinist!

Here is the skinny:

> **Academic Freedom Update: Where Are We in 2009?**
>
> On this episode of ID the Future, CSC's Casey Luskin gives listeners an update on what's going on with academic freedom legislation around America. Academic freedom bills submitted in five states already this year, including Oklahoma, Iowa, New Mexico, Missouri and Alabama. Listen in to today's podcast as Luskin explains how Darwinist opposition to the bills is showing why academic freedom legislation is necessary to protect teachers from a climate of intimidation.
>
> **Why Specified Complexity Cannot Be Purchased Without Intelligence**
>
> On this episode of ID the Future, CSC's Robert Crowther highlights one of the foundational books of the theory of intelligent design. "No Free Lunch", the sequel to mathematician and CSC senior fellow William Dembski's Cambridge University Press book "The Design Inference", explores key questions about the origin of specified complexity. No Free Lunch demonstrates that design theory shows great promise of providing insight in the field of evolutionary computation.

Do you know what intelligent design is? The definitive statement of the what intelligent design is was *first* published in 1998 by Cambridge University Press. The name of that book is "The Design Inference: Eliminating Chance Through Small Probabilities".

Here's a little bio of the author, William Dembski. And here are some of his earned degrees:

- Ph.D. philosophy University of Illinois at Chicago 1996
- M.A. philosophy University of Illinois at Chicago 1993
- Ph.D. mathematics University of Chicago 1988
- M.S. statistics University of Illinois at Chicago 1983

If you put together the IQs of all the journalists who have ever written against intelligent design, the total number is actually lower than the IQ of William Dembski's pinky finger nail clipping. An introduction to intelligent design is here. A chapter explaining intelligent design from a book published by Michigan State University Press is here.

Or, you can just read this sentence: intelligent design is what happens when you select letters and form sequences that have function. Like writing blog posts or software code. That's intelligent design, and that's *all* it is. Surprise! I do it all day at work. I'm doing it right now while I write this post. And it's in your DNA, too. Sequences of amino acids and

proteins arranged to have biological function.

My Dad, who reads everything I tell him to read because he's such a great Dad, just finished Dembski's new book "Understanding Intelligent Design: Everything You Need to Know in Plain Language". He assures me it is extremely easy to understand, even for you helpless squishyheads who dropped math in grade 10.

Here is a good debate on whether the biological information in the simplest organism requires an intelligent designer.

Walter Williams evaluates Sweden's single-payer health care system

March 19, 2009 | by Wintery Knight | Link | Original Link

Walter Williams is my second favorite active economist, just behind Thomas Sowell. (I also like John Lott, Robert P. Murphy and Jennifer Roback Morse – see my blogroll for links) In a recent article, Williams takes a look at how well Sweden's single-payer, socialized health-care system is working out for its customers. The productive Swedish taxpayer forks over a lot of money to the government. What do they get in return?

First, what is socialized medicine? (which we are moving toward, since porkulus passed)

1. Producers pay huge amounts of taxes to the government .
2. Low-achievers pay nothing, since they have no income.
3. When you want treatment, you have to get in line behind everyone else – especially behind special interest groups, such as people wanting sex-changes.
4. The taxation is compulsory, the treatment of patients is at the government's discretion.

Williams begins his article by evaluating the UK's National Health Service:

> A recent study by David Green and Laura Casper, "Delay, Denial and Dilution," written for the London-based Institute of Economic Affairs, concludes that the NHS health care services are just about the worst in the developed world. The head of the World Health Organization calculated that Britain has as many as 25,000 unnecessary cancer deaths a year because of under-provision of care. Twelve percent of specialists surveyed admitted refusing kidney dialysis to patients suffering from kidney failure because of limits on cash. Waiting lists for medical treatment have become so long that there are now "waiting lists" for the waiting list.

And then there's Canada single-payer socialized system:

> …after a Canadian has been referred to a specialist, the waiting list for gynecological surgery is four to 12 weeks, cataract removal 12 to 18 weeks, tonsillectomy three to 36 weeks and neurosurgery five to 30 weeks. Toronto-area hospitals, concerned about lawsuits, ask patients to sign a legal release accepting that while delays in treatment may jeopardize their health, they nevertheless hold the hospital blameless. Canadians have an option Britainers don't: close proximity of American hospitals. In fact, the Canadian government spends over $1 billion each year for Canadians to receive medical treatment in our country.

The article cites Sven R. Larson, who recently completed the book "Lesson from Sweden's

Universal Health System: Tales from the Health-care Crypt," published in the Journal of American Physicians and Surgeons (Spring 2008). The first thing about socialized health care is that you don't pay for treatment like you shop at Wal-Mart. The government takes your money and makes sure that everyone is treated equally, regardless of each individual's earned income and lifestyle choices.

> Mr. D., a Gothenburg multiple sclerosis patient, was prescribed a new drug. His doctor's request was denied because the drug was 33 percent more expensive than the older medicine. Mr. D. offered to pay for the medicine himself but was prevented from doing so. The bureaucrats said it would set a bad precedent and lead to unequal access to medicine.

When health care is free for consumers, demand increases. Doctors and drug companies stop producing since the government won't let them make a profit. Since the government is the single-payer, then the only way to stop the shortage is to ration medical services, often based on leftist victim ideology. Socialists don't trust you to make your own decisions about how you earn income or how you spend it.

Here's a bit more from the article:

> Malmo, with its 280,000 residents, is Sweden's third-largest city. To see a physician, a patient must go to one of two local clinics before they can see a specialist. The clinics have security guards to keep patients from getting unruly as they wait hours to see a doctor. The guards also prevent new patients from entering the clinic when the waiting room is considered full. Uppsala, a city with 200,000 people, has only one specialist in mammography. Sweden's National Cancer Foundation reports that in a few years most Swedish women will not have access to mammography.

Wow, that smacks of fascism! *But that is where socialism inevitably leads*. In Canada, you can't even buy your own drugs and treatment, even if the government puts you on a waiting list (dying list?), or if it won't pay for treatment at all. Private purchases of health care or medical drugs are illegal in Canada. (except for Quebec, oddly enough, because of a recent court decision).

The problem with a system in which low-risk producers pay for the services, but don't use them while high-risk victims use the services, but don't pay for them, is that there is no incentive for people to be healthy. As people act more and more recklessly, the government steps in and starts controlling their lives in order to reduce costs. *Fascism.*

Socialized medicine redistributes wealth in order to equalize the outcomes of good lifestyle choices and poor lifestyle choices. The more that lifestyles are equalized, the less personal responsibility there is among the citizens. Eventually, the government takes control of people's lives to reduce costs. This article shows how it's happening in Canada, as they try to ban trans fats:

> A mammoth government program is a poor excuse for further encroachment on

> people's lives–maybe fewer government entitlements would encourage smarter and healthier habits. If the ban is the sword of the nanny-state crusader, surely the health-care system represents his shield.

Freedom means deciding how much security to want, based on your own free choices and the risks you assume.

A useful podcast on health care and government, featuring Sally C. Pipes on the Dennis Prager show is here. For a good explanation of supply, demand and shortages, see this Von Mises Institute article.

UPDATE: Saw this UK Telegraph story on a single NHS hospital (H/T Stop the ACLU):

> NHS managers were yesterday accused of putting targets and cost-cutting ahead of patients as a report into at Mid-Staffordshire Hospitals trust found up to 1,200 people may have died needlessly due to "appalling standards of care" at a single hospital.
>
> …Last night patient groups voiced concern that managers who should have spotted failings at the trust but did not raise the alarm have been **promoted to key jobs** in the NHS and health care regulation.
>
> …The investigation into care between 2005 and 2008 found overstretched and poorly trained nurses who turned off equipment because they did not know how to work it, newly qualified doctors left to care for patients recovering from surgery at night, patients left for hours in soiled bedclothes and reception staff expected to judge the seriousness of the condition of patients arriving at Accident and Emergency.
>
> Doctors were diverted from seriously ill patients to treat ones with minor problems to make the trust look better because it was in danger of breaching the Government's four-hour waiting time target.

Douglas Groothuis on the Six Enemies of Apologetic Engagement

March 19, 2009 | by Wintery Knight | Link | Original Link

I found a link to this article by Doug Groothuis on the importance of Christian apologetics over at Truthbomb Apologetics. He doesn't necessarily endorse my snarkiness in this post, though.

Doug's article is call-to-arms for Christians who do not view the defense of the faith as an integral part of their Christian life. In this post on why men are fleeing the feminized church I argued that apologetics is a necessary part of a healthy two-way relationship with God and that it also engages the men to express their masculinity in a Christian way.

Groothuis starts by recommending 3 books on the lack intellectual rigor in the evangelical church, and he then goes on to lay out 6 "enemies" to the task of apologetics.

First, the 3 books:

> Mark Noll's *"The Scandal of the Evangelical Mind"* (Eerdmans, 1994) explores the historical roots of evangelical anti-intellectualism. Os Guinness' *"Fit Bodies, Fat Minds"* (Baker Books, 1994), discusses some of the historical problems and also outlines what a Christian mind should look like. J.P. Moreland's *"Love Your God with all of Your Mind"* (Navpress, 1997) explains why Christians don't think, develops a biblical theology of the mind, and offers helpful apologetic arguments and strategies to empower the church intellectually.

I've read all of them and LYGWYM is by far the best. J.P. Moreland is a *warrior*. Videos and audio of his university campus lectures are here.

Enemy #1: We don't really love God or our neighbors

If we really cared about God like we say we do, then we would care enough to defend his reputation in public. If we really loved our neighbor and believed that they need to follow Jesus in order to be reconciled with God, we would tell them that. But we don't really care enough about God when his reputation is slammed in public. We don't care that our neighbor has false beliefs, such as a belief in the eternal universe.

Groothuis writes:

> Too many Christians don't seem to care that Christianity is routinely ridiculed as outdated, irrational, and narrow-minded in our culture. They may complain that this "offends" them (just as everyone else is complaining that one thing or another "offends" them), but they do little to counteract the charges by offering a defense of the Christian world view in a variety of settings. Yet Scripture *commands* all Christians to have a reason for the hope that is within them and to present this with gentleness and respect to unbelievers (1 Peter 3:15).
>
> Our attitude should be that of the Apostle Paul who was "greatly distressed"

> when he beheld the idolatry of sophisticated Athens. This zeal for the truth of God led him into a fruitful apologetic encounter with the thinkers gathered to debate new ideas (see Acts 17). It should for us as well. Just as God "so loved the world" that he sent Jesus to set us right with God (John 3:16), Jesus' disciples should so love the world that they endeavor to reach the lost by presenting the Gospel and answering objections to the Christian faith (John 17:18).

Enemy #2: We distort Christian teachings in order to avoid disputes with other religions

As a result of the feminization of the church, we have altered our theology in order to "get along" with other religions that conflict with ours. Instead of wrestling with the competing truth claims of other religions, we just change the nature of our religion from objective knowledge to personal preference. If the Bible claims that Jesus rose from the dead, we reinterpret that historically testable claim as a preference claim. If the Bible says that the universe began to exist, we reinterpret that scientifically testable claim as a preference claim.

And it goes double for moral judgments and soteriological claims. The easiest way to make peace with people in these other religions is by dropping everything that offends our neighbors in other religions, like moral judgments and exclusive salvation. We simply decided that if Christianity claimed X and some other religion claimed not-X, that *both* could somehow be right. But this irrationality divorced Christianity from reason and made it into a personal preference instead of objective knowledge. It's now just another option in the self-help buffet.

Groothuis says:

> For some Christians, faith means belief in the absence of evidence and argument. Worse yet, for some faith means belief *in spite of* evidence to the contrary. The more irrational our beliefs, the better–the more "spiritual" they are… When Christians opt for irrationalism, they become just another "religious option," and are classified along with Heaven's Gate, the Flat Earth Society, and other intellectually impaired groups.

Enemy #3: We refuse to learn the evidences that support Christianity

We spend almost no time reading the kinds of non-fiction books that would inform us so that we are prepared to defend our beliefs. Instead, we put our best effort, our money and our thinking into school, work and other secular pursuits. We give Christianity a piece of our lives, and only allow it to serve us. We never serve it. We read fiction, watch TV and movies, pursue romantic relationships and play video games. But we have no time for preparing a defense based on actual facts and arguments.

Groothuis says:

> Many Christians are not aware of the tremendous intellectual resources available to defend "the faith that was once for all entrusted to the saints" (Jude 3). This is

> largely because many major churches and parachurch organizations virtually ignore apologetics… Few evangelical sermons ever address the evidence for the existence of God, the resurrection of Jesus, the justice of hell, the supremacy of Christ, or the logical problems with nonChristian worldviews. Christian bestsellers, with rare exceptions, indulge in groundless apocalyptic speculations, exalt Christian celebrities (whose characters often do not fit their notoriety), and revel in how-to methods.

Enemy #4: We refuse to defend God if it means being unpopular

Somehow, we have gotten the idea that the purpose of Christianity is for us to be happy. Being popular and accepted by non-Christians makes us happy. Therefore, we want to be popular. To be popular, we avoid being divisive with non-Christians. Moral judgments are divisive. Exclusive salvation is divisive. Christianity teaches moral rules and exclusive salvation. Therefore, we don't talk about Christianity in order to avoid being divisive so that we can be popular and have the happy feelings that God wants us to have. But this is *nowhere* in the Bible.

Groothuis says:

> In our pluralistic culture, a "live and let live" attitude is the norm, and a capitulation to social pressure haunts evangelicalism and drains its convictions. Too many evangelicals are more concerned about being "nice" and "tolerant" than being biblical or faithful to the exclusive Gospel found in their Bibles. Not enough evangelicals are willing to present and defend their faith in challenging situations, whether at school, at work, or in other public settings. The temptation is to privatize faith, to insulate and isolate it from public life entirely. Yes, we are Christians (in our hearts), but we have difficulty engaging anyone with what we believe and why we believe it. This is nothing less than cowardice and a betrayal of what we say we believe.

He goes on to exegete Colossians 4:2-6, Matthew 5:11-12, 1 Peter 4:14, Romans 1:16 and Matthew 28:18-20. The Bible just doesn't support this anti-apologetics stance that seems to be so popular in the feminized church.

I'm out of space: …I'd like to say something about the other 2 enemies, but I am out of space. But that will just encourage you to click on the link and read the rest of the article, right?

700 scientists dissent from global warming and 700 scientists dissent from Darwinism

March 19, 2009 | by Wintery Knight | Link | Original Link

The fact-free, less-morally-demanding religion of anthropogenic global warming is running into evidential problems. When I wrote about global warming before, I noted that the real goal of the AGW-crowd is to seize control of the free market and implement socialism. Well, we're getting socialism from the erudite Teleprompter-Reader, but that doesn't mean we'll lose the debate.

Scientific Dissent from Global Warming:

MYTH: The latest scientific studies predict more warming (H/T Independent Women's Forum)

> "…You go from a cooling regime to a warming regime or a warming regime to a cooling regime. …we were able to explain all the fluctuations in the global temperature trend in the past century," Tsonis said. "The research team has found the warming trend of the past 30 years has stopped and in fact global temperatures have leveled off since 2001."
>
> "…if we don't understand what is natural, I don't think we can say much about what the humans are doing. …we were very excited when we realized a lot of changes in the past century from warmer to cooler and then back to warmer were all natural," Tsonis said.
>
> Tsonis said he thinks the current trend of steady or even cooling earth temps may last a couple of decades or until the next climate shift occurs.

MYTH: All the scientists agree that the recent warming period was man-made (H/T Club for Growth)

> Fifty nine additional scientists from around the world have been added to the U.S. Senate Minority Report of dissenting scientists, pushing the total to over 700 skeptical international scientists… This updated report… includes yet another former UN IPCC scientist…
>
> The over 700 dissenting scientists are now more than13 times the number of UN scientists(52) who authored the media-hyped IPCC 2007Summary for Policymakers. The 59 additional scientists hail from all over the world, including Japan, Italy, UK, Czech Republic, the U.S. and many are affiliated with prestigious institutions including, NASA, U.S. Navy, U.S. Defense Department, Energy Department, U.S. Air Force, the Philosophical Society of Washington (the oldest scientific society in Washington), Princeton University, Tulane University, American University, Oregon State University, U.S. Naval Academy and EPA.

MYTH: Green jobs will boost the economy (H/T Independent Women's Forum)

> [Myth #2 of 7]: These green jobs studies mistake any position receiving a paycheck for a position creating value. Simply hiring people to write and enforce regulations, fill-out forms, and process paperwork is not a recipe for creating wealth. Much of the promised boost in green employment turns out to be in non-productive – and expensive – positions that raise costs for consumers. These higher paying jobs that fail to create a more eco-friendly society dramatically skew the results in both number of green jobs created and salary levels of those jobs.
>
> [Myth #4 of 7]: Green jobs estimates promise greatly expanded (and pleasant and well-paid) employment. This promise is false. The green jobs model is built on promoting inefficient use of labor. The studies favor technologies that employ large numbers of people rather than those technologies that use labor efficiently. In a competitive market, the factors of production, including labor, are paid for their productivity. By focusing on low productivity jobs, the green jobs literature dooms employees to low wages in a shrinking economy. The studies also generally ignore the millions of jobs that will be destroyed by the restrictions imposed by governments on disfavored products and technologies.

Andrew Chamberlain of the Tax Foundation calculates that the cost of the myth of global warming alarmism, which resulted in Obama's cap-and-trade legislation, would be 144.8 Billion dollars, with an average annual household burden would be $1,218, which would be approximately 2% of the average household income.

John Lott has a post where he links to a UK Telegraph article on media bias that covered two scientific conferences, one pro-AGW and one against AGW, in two completely different ways. The headline is "Nobody listens to the real climate change experts ". Indeed.

Scientific Dissent from Darwinism:

MYTH: There are no reputable scientists who dispute Darwinian evolution

There are over 700 reputable scientists who dissent from Darwinism!(it was 700 as of February 8, 2007, the list has grown even bigger today)

> Discovery Institute's Center for Science and Culture today [February 8, 2007] announced that over 700 scientists from around the world have now signed a statement expressing their skepticism about the contemporary theory of Darwinian evolution. The statement, located online at www.dissentfromdarwin.org, reads: "We are skeptical of claims for the ability of random mutation and natural selection to account for the complexity of life. Careful examination of the evidence for Darwinian theory should be encouraged."
>
> …"We know intuitively that Darwinism can accomplish some things, but not others," added Egnor. "The question is what is that boundary? Does the information content in living things exceed that boundary? Darwinists have never

> faced those questions. They've never asked scientifically if random mutation and natural selection can generate the information content in living things."
>
> …The list of signatories includes member scientists from National Academies of Science in Russia, Czech Republic, Hungary, India (Hindustan), Nigeria, Poland, and the United States. Many of the signers are professors or researchers at major universities and international research institutions such as Cambridge University, Moscow State University, Chitose Institute of Science & Technology in Japan, Ben-Gurion University in Israel, MIT, The Smithsonian and Princeton.[image]

Really, these two myths are two sides of the same coin. Global warming and Darwinism are examples of politics masquerading as science. We've seen this before in the myths of global cooling in the 1970s, the steady-state model of the universe and nuclear winter.

Bobby Jindal cuts spending in Lousiana and imposes accountability

March 19, 2009 | by Wintery Knight | Link | Original Link

Bobby and Supriya Jindal: no teleprompter needed

UPDATE: Welcome visitors from the Anchoress! Thanks for the link! New visitors, please take a look around. My blog is 50% news and policy analysis, 50% defending Christianity in practical ways.

Found this recent blog post over at Governor Bobby Jindal's blog. (H/T The Maritime Sentry).

Previously, I had blogged about his refusal to take bailout funds, his defense of Rush Limbaugh on CNN, and his plans for education reform in Louisiana.

In the new post, he talks about cutting spending and imposing more reporting and accountability on the government departments:

> Our budget will decrease by 9.8 percent compared to last year's budget, including a 12.7 percent decrease in state funds… We have asked agencies and departments across state government to provide meaningful performance data, so that we can target underperforming and out-of-date programs while protecting high performing programs from severe reductions.

He outlines specific measures to deal with the economic downturn:

School funding based on performance

> First, are calling on the Board of Regents to implement a new funding formula that will reform higher education spending. While the current formula too often rewards enrollment alone and results in duplication, a new formula should reward performance, and, for example, encourage schools to target specific programs that will provide degrees in high demand professions – aligning funding with our state's economic needs.

Eliminate unnecessary government departments

> Next, we will create a Commission on Streamlining Government, whose mission will be to examine agencies and departments throughout state government to ensure that their roles and missions are still relevant today.

Improve efficiency of civil service

> Third, we will work to reduce the size of state government by implementing civil service reforms that encourage state workers to do their jobs well – not just to reach tenure.

Facilitate future spending cuts

> Dedicated funds will have to be just as transparent as discretionary funds, and will sunset every four years beginning in 2010. We will change the current laws so that discretionary funds can be cut up to 10 percent, whereas currently they can only be cut 5 percent, and to remove the two year limit on cutting these funds.

Improve transparency and accountability in education spending

> Finally, we will reform the current MFP funding process for our state's K-12 schools. As the MFP funds are given to school district as a block grant, there is not enough accountability for how the funds are spent. We will require that beginning in FY11 districts must fully account for how these dollars are spent, and the Department of Education will develop an easy to use website allowing taxpayers to see how their hard-earned dollars are being spent.

The post goes on to discuss other initiatives, such as increasing economic growth. And that is when you read this startling statement:

> The retention and expansion of jobs has been a top priority of this administration, and we will continue working to expand our economy in the coming months and years. In December, we were the only state in the nation to add jobs, and in January, we were the only state in the nation whose unemployment rate when down and not up.

Sigh. Shouldn't we have elected Bobby Jindal instead of Mr. Teleprompter-Reader?

Megyn Kelly takes on ACORN spokesman Scott Levenson

March 20, 2009 | by Wintery Knight | Link | Original Link

I try to focus more on policy and leave the news to other blogs. But this encounter between Megyn Kelly and ACORN spokesman Scott Levenson on ACORN's participation in the census is too good to pass up. (H/T Nice Deb)

Megyn Kelly is so awesome! Check out that last look she gives the camera at the end! Wow.

According to Gateway Pundit:

> One of Barack Obama's first big "community organizer" jobs **involved ACORN** in 1992. Obama also **trained ACORN** employees. He **represented ACORN** in court. Obama worked with and protested with ACORN. His campaign **donated $800,000** to ACORN this year for voter registration efforts.
> And, ACORN even **canvassed for Obama** this year.
>
> **ACORN** is the **largest radical Leftist group** in America today.

Michelle Malkin has related videos of other ACORN activities.

Our whole economic crisis was caused by the democrats forcing the mortgage lenders to make these risky loans to people who could not afford them. And if the lenders didn't comply with the Community Reinvestment Act, ACORN was right there to sue them into submission.

Does the Bible teach that faith is opposed to logic and evidence?

March 20, 2009 | by Wintery Knight | Link | Original Link

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

What is faith according to the Bible?

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.
   God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.

   And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?
   Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.

   But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of

this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.
Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

What is faith according to Bible-based theologians?

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia** – This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus** – This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia** – This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

How do beliefs form, according to Christian philosophers?

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

The article goes on to make some very informative comments on the relationship between apologetics and belief.

William Lane Craig vs Richard Carrier debate audio

March 20, 2009 | by Wintery Knight | Link | Original Link

Full audio of the debate at Northwest Missouri State University is here at Apologetics 315, (where else?).

Here's a little blurb about the debate:

> Two well-known American philosophers, Dr. Richard Carrier and Dr. William Lane Craig, will debate the question "Did Jesus Rise from the Dead?" at 7 p.m. Wednesday, March 18, at Northwest's Ron Houston Center for the Performing Arts (formerly the Performing Arts Center).
>
> The debate is being hosted by the Philosophy Club, a student organization that serves as the local chapter of Phi Sigma Tau, a national honor society whose mission is to promote academic excellence in philosophical study.
>
> Admission to the debate is free, and the event is open to the public.
>
> Carrier is a historian and author best known for his Internet writings on "The Secular Web," which he edited for several years. A noted advocate of metaphysical naturalism, he has published articles on elements of naturalist and atheist philosophy and frequently writes and speaks in defense of naturalism as a world view. Carrier was featured in the documentary film, "The God Who Wasn't There," in which he questions the historicity of Jesus.
>
> Craig, who maintains the "Reasonable Faith" Web site, is a theologian, New Testament historian and Christian apologist. He writes and lectures widely on issues related to the philosophy of religion, the historical Jesus, the coherence of the Christian world view and natural theology. The author of more than 30 books, Craig has served as a research professor of philosophy at the Talbot School of Theology in La Mirada, Calif., since 1994.
>
> The debate will be moderated by Dr. Janice Brandon-Falcone, professor of history at Northwest, and should last about two hours. Each scholar will make a 20-minute opening statement to be followed 12-minute rebuttals, eight-minute counter-rebuttals and five-minute closing statements. Afterward, both speakers will take questions from the audience.

UPDATE: Richard Carrier's reflections on the debate are here. I have to tell you, I was telling my one of non-Christian co-workers about this debate and I was really worried about what Carrier was going to do to Craig. My friends and I watched Carrier in the Carrier-Licona debate, and Carrier either won or tied. But this time, as Carrier admits, Craig got the better of him – due to sound preparation. As a sponsor of Bill Craig, and also of his web site, Reasonable Faith, let me just say: We dodged a bullet here. The audience was of typical size for Craig debate, at about 1000 people.

Does Obama want to snuggle with theocratic Iranian mullahs?

March 21, 2009 | by Wintery Knight | Link | Original Link

The problem with progressives is that they never met an evil that they didn't want to appease. Consider the fact that in Iran, you can be imprisoned for *blogging*. And do you know what happens in Iranian prisons? If you answered "you die", give yourself a gold star! First, consider this story from Celestial Junk (H/T Free Canuckistan!) which links to this Beitbart article.

Excerpt:

> A young Iranian blogger jailed in Tehran's notorious Evin prison for insulting supreme leader Ayatollah Ali Khamenei has died, his lawyer told AFP on Thursday.
>
> …The blogger, aged around 25, was sentenced in February to 30 months in jail for insulting Khamenei and Ayatollah Ruhollah Khomeini, founder of the Islamic Republic.
>
> Sayafi was first arrested in April last year and released on bail after 41 days before being detained again this year.
>
> Iran has launched a crackdown on bloggers and Internet users deemed to be hostile to the authorities and their Islamic values.

The Jerusalem Post notes that Freedom House is promising to launch an investigation.

> "Omidreza Mirsayafi's death illustrates the dangerously inhospitable environment in which bloggers operate in Iran," said Jennifer Windsor, Freedom House executive director. "Mirsayafi should never have been subjected in the first place to the cruel conditions found in Iran's most notorious prison. **At a time when President Obama is attempting to engage Iran, it is essential that the United States see Iran's regime beginning to demonstrate a greater respect for human rights.**"

But here's President Teleprompter reaching out to Iran:

Excerpt: (Stop the ACLU has the transcript)

> My administration is now committed to diplomacy that addresses the full range of issues before us, and to pursuing constructive ties among the United States, Iran and the international community. This process will not be advanced by threats. We seek instead engagement that is honest and grounded in mutual respect.

Remember how progressives think: good is evil and evil is good. Everyone is morally equivalent. Just imagine, (they say), if everyone were the same then there would be no more wars! If we just appease the good Iran and unilaterally disarm the evil USA, then the

world will be at peace.

George W. Bush knew the difference between good and evil, and was not afraid to act to defend liberty abroad. And 2 wars only cost us about 500 billion dollars. Meanwhile, Obama is going to spend several *trillion* dollars over the next few years driving us into a socialist depression. Bush spends a little money and liberty increases. Obama spends tons of money and liberty decreases.

Then again, maybe Obama isn't as much of a naive dove as I think he is. His unilateral trade war with the entire world is going great! Look, John Lott is reporting progress in the trade war against Mexico. Yeehaw! Cowboy communism!

UPDATE: In my RSS reader, I spied this IBD podcast and here's the transcript of it.

When all else failed, Republicans will try conservative ideas

March 21, 2009 | by Wintery Knight | Link | Original Link

Jennifer Rubin over at Pajamas Media writes that the GOP has had enough with the Democrats' big-spending socialist agenda, and they are ready to try something completely different: *small government conservatism*. Instead of just being the party of "NO", the GOP intends to market a series of common sense conservative policies directly to Americans.

Rubin writes:

> Minority Leader John Boehner has a new video out listing a number of Republican themes and promising a Republican alternative budget from reformer Rep. Paul Ryan. The themes are simple: lower taxes, restrain the growth of government, a market-based health care plan, domestic energy development, and ending bailout mania. Boehner's video does not have many details, but its core message is clear: Republicans are tired of being the punching bag for an administration that wishes to paint itself as the only source of ideas capable of solving the country's problems.

But I didn't like John Boehner's video as much as this one from Rep. Paul Ryan:

He can make the case in the House of Representatives:

And look, he can take on the leftist news media, too:

Fun! Rubin continues with some links to wonderful policy ideas:

> Truth be told, for months, Republicans inside and outside of government have been throwing out ideas on how to revive the economy. Americans for Tax Reform has ten ideas to help small business. Newt Gingrich has twelve ideas to promote job growth and recovery. And budget draftsman Paul Ryan has had "A Road Map for America's Future" for some time. But the mainstream media is uninterested in reading through all of this, much of the conservative blogosphere is too invested in carping about the shortcomings of elected leaders and in fighting among themselves, and the president, of course, has made a habit of disparaging his opposition's lack of creative ideas.
>
> …**the task here is to capture the public's dissatisfaction with the Democrats' bailout and pork-laden approach to governance and remind voters that Republicans in fact do *have* ideas — ones that favor lower taxes and less spending**.

As soon as I read this, I rushed over to the Cato Institute to see their take on Ryan's plan, and I found an article by Michael D. Tanner.

He likes Ryan's plan:

> Health Care: Ryan would reform our employment-based insurance system by replacing the current tax exclusion for employer-provided insurance with a refundable tax credit of $2,500 for individuals, and $5,000 for families. This would encourage employers to take the money they currently spend providing health insurance and give it directly to workers, who could then use it to purchase competitive, personally owned insurance plans. That would be insurance that met their needs, not those of their bosses, and people wouldn't lose it if they lost their jobs.
>
> Ryan would also allow workers to shop for insurance across state lines. That would mean residents of states like New Jersey and New York, where regulation has made insurance too expensive for many people, could buy their insurance in states where it cost less. And increased competition would help bring insurance costs down for all of us.

Since I am a clean-living, never-married single guy, this would basically add a bunch of money to my take home pay. More money for donations to Reasonable Faith and the Discovery Institute! So far so good!

Tanner continues:

> Social Security: Like Medicare, Social Security is hurtling toward insolvency. Rep. Ryan would preserve the program unchanged for current recipients and workers older than age 55, but he would allow younger workers to invest part of their Social Security taxes privately through personal accounts. Unlike the present system, workers would own the funds in their accounts, and when they died, they could pass any remaining funds on to their heirs.
>
> Taxes: Rep. Ryan would radically simplify today's hopelessly complex, cumbersome and bureaucratic tax code. He would give filers a choice: They could pay their taxes under existing law, or they could choose a new simplified code, with just two tax rates (10 percent on the first $100,000 for joint filers; $50,000 for individuals, and 25 percent above that).

Human Events has some more details on the tax policy:

> The tax reform aspect of the bill is appealing, offering a simplified tax system that has only two rates and eliminates the alternative minimum tax (AMT) and the death tax. The bill also abolishes taxes on interest, capital gains and dividends among other aggressive tactics that will make a noticeable, long term change.

And this interesting quotation from Ryan:

> "Our fate is not inevitable…we can change it," he said. "I want to be the Paul Revere of fiscal policy in this country."

Now, that two-tier tax plan was one of the reasons why I preferred for Fred Thompson in

the primaries… but the rest of my party wanted style, instead of substance. You blithering toadies! Who cares how warm his belly is? He opposes taxes *and* abortion, you hamster-brains! Oh, well. There's always 2012, where we can try to run Mark Sanford, Bobby Jindal or maybe even Michele Bachmann!

For more on Ryan's plan, here is an article in the Wall Street Journaltat he wrote. (H/T Western Standard Shotgun Blog)

How to talk to your co-workers about your faith

March 21, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Apologetics 315! Thanks for the link Brian!

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the linky, Binky!

UPDATE: Welcome visitors from The Happy Catholic! Thanks for the link, Julie!

Today, I'll talk a little bit about how to go about raising your colors in the workplace. Before we start, here are some catch-up posts on why apologetics matters:

- Does the Bible teach that faith is opposed to logic and evidence?
- Douglas Groothuis on the Six Enemies of Apologetic Engagement
- Why men stay away from the feminized church
- Why does talking about religion make people uncomfortable?

How to be yourself at work, without making other people angry

First of all, concentrate on working hard for the first 3 months after you start a job. Your ability to to raise your colors in the workplace is conditional on your ability to do your job well. For example, I decided to cut my career short a while back in order to go back to school and achieve some more goals, before returning to work:

- get a Masters degree in computer science (3.9 GPA)
- get computer science articles published in peer-reviewed journals
- present research at professional conferences
- apply for and be awarded patents

Secondly, *never* fight about work-related conflicts. Your job is not the means by which you will make your mark on the world. You make your mark *solely* by being an ambassador for Christ. Never sour a work relationship by arguing. State your reasons, and document your dissent. Christianity isn't about you. Or climbing a corporate ladder.

Let me be clear: With respect to your Christian commitment, your pride, popularity and reputation are *expendable*.

Thirdly, take every opportunity to make yourself the servant of your co-workers, especially those who may not be as senior or technical as you. In every job I have had so far, I've tried to help clean things up, wash dirty coffee mugs and dishes, and keep a supply cough drops, and other healthy snacks, etc. Also, don't get promoted to manager.

Fourth, after a few months, start to build your bookshelf at work. To start with, only stock debate books from academic presses, especially Oxford University Press and Cambridge University Press. These kinds of books connect evidence to the claims of Christianity. It is *much easier* to discuss public, testable evidence with your co-workers than whether they are going to Hell or not .

Here are some examples of debate books I stock:

- Theism, Atheism, and Big Bang Cosmology, Oxford University Press, 1995.
- Debating Design: From Darwin to DNA, Cambridge University Press, 2004
- God?: A Debate between a Christian and an Atheist, Oxford University Press, 2003.
- Darwinism, Design, and Public Education, Michigan State University Press, 2004.

Leave these books out on your desk as you read them, with a bookmark to show you are reading them. If asked to explain them, take no position but explain *both sides.* Speak quietly and don't interrupt. Stop talking after 2 minutes. Offer to continue the conversations off-site. Learn what your co-workers believe as they talk to you about your perfectly acceptable debate books.

As you read, note arguments and evidence used for and against your beliefs. When you eventually do get to the point where you are explaining your beliefs to people, you'll need to link them up with evidence and defeat objections. Keep the discussion on public evidence, show you are operating at a research level, and you should be able to avoid blow-ups.

Fifth, expand your book collection with books from any academic press. Your goal is to show that these topics require study and can be debated rationally using evidence. Even if you only read popular level books to start, it is important to project to your co-workers how you approach faith just like any other discipline – by studying it.

- Defending Life: A Moral and Legal Case Against Abortion Choice, Cambridge University Press, 2007.
- Philosophy of Religion: A Reader and Guide, Rutgers University Press, 2002.
- The Design Inference: Eliminating Chance through Small Probabilities, Cambridge University Press, 1998.
- Hume's Abject Failure: The Argument Against Miracles, Oxford University Press, 2000.
- The Evidential Argument from Evil, Indiana University Press, 1993.
- Warranted Christian Belief, Oxford University Press, 2003.

If you get no flak from anyone, you can add more books on other issues, like the history, foreign policy, health care, education, philosophy of religion, astrobiology, global warming, economics and family/parenting. These books allow you to link your beliefs to other areas, so that turning the conversation to Christianity becomes easier.

The academic books are useful to convey that you have a serious approach to faith. But you probably will face much more ordinary objections. So, you should be reading *mostly* popular books to address them. That's where books by people like Lee Strobel and Paul Copan are useful. After those two, you can move on to edited collections like "Passionate Conviction" or "Signs of Intelligence".

An important rule is *never* to discuss the person's personal life or morality. And never discuss Christian-ese hymns, prayer, church, feelings, emotions, intuitions, religious experiences, or your own life. Untestable faith claims scare people. Stick to the public, testable evidence. Debate whether DNA is designed, not whether they should stop

shacking up.

Only talk to people who don't offend easily and who don't subscribe to politically correct ideologies. I avoid talking about spiritual things with people from groups that vote overwhelmingly democrat, such as single or divorced women. Eventually, the victim-mentality people will learn to behave in order to talk with you. Avoid breaking cover to anyone in your chain of command.

Sixth, you need to get comfortable with opposing views. In order to do that, you need to get used to being quiet and tolerant, and listening for extended periods of time, while ideas you oppose are forcefully presented. The goal is to be able to recognize your opponent's arguments and argue *for* them better than they can themselves.

Start with these university debate transcripts: (print them out, leave them on your desk)

- William Lane Craig vs Bart Ehrman (Resurrection)
- William Lane Craig vs Edwin Curley (God)
- William Lane Craig vs Kai Nielsen (Meaning)
- William Lane Craig vs Richard Taylor (Morality)
- William Lane Craig vs Ray Bradley (Hell)

Your goal is to speak about Christianity the same way Craig does. Move on to audio and video debates in this list, only *after* you master *reading* debates. Debate your friends and family first for practice. I will write a separate post on what to buy to augment your resource collection with actual debates and lectures that you can lend out.

Another important point: your goal is not to win during the discussion. Try not to beat up your opponent. Instead, explore the issue from both sides using public, testable evidence. Let the person decide for themselves what they think, after the discussion is over. Here's a great book on tactics that will help you.

An example of authentic Christianity in the public square

One last thing. You may be encouraged by listening to some lectures by Dr. Walter L. Bradley (C.V. here). Bradley is the best active proponent of public, authentic Christianity. He is the Distinguished Professor of Engineering at Baylor. He has a huge pile of grants and research papers, and directed a research lab when he was at Texas A&M.

Here are a couple of different versions of the same lecture on integrating faith and vocation:

- Giants in the Land (80 min, low volume, Q&A)
- Coping in Academia (35 min, no Q&A, clear sound)

And here are a few other Bradley lectures I really like:

- Is There Objective Truth in Religion? (59 min,clear sound, Q&A)
- Walter Bradley's Journey to Faith (30 min, no Q&A, clear sound)
- Is there Scientific Evidence for an Intelligent Designer? (91 min, clear sound)

More Bradley lectures are here.

Obama’s minions go door-to-door to get us to sign loyalty pledges

Talk about The Road to Serfdom.

CBO: Budget adds 4.8 trillion to national debt, China worried

March 22, 2009 | by Wintery Knight | Link | Original Link

Hot Air has this:

> In a new report that provides the first independent analysis of President Obama's budget request, the nonpartisan Congressional Budget Office predicted that the administration's agenda would generate deficits **averaging nearly $1 trillion a year over the next decade — $2.3 trillion more than the president predicted when he unveiled his spending plan just one month ago.**

Tax hikes are mentioned here at the Competitive Enterprise Institute's Open Market blog:

> Obama's budget would explode the national debt while increasing taxes. That's the conclusion of the Congressional Budget Office, controlled by lawmakers who support Obama. "The President's proposals would add $4.8 trillion to the national debt," increasing "the cumulative deficit from 2010 to 2019 to $9.3 trillion." **The budget also adds $1.9 trillion in tax increases.**
>
> And the stimulus bill Obama claimed was needed to avert "disaster" and "irreversible decline"? It will shrink the economy over the long run, since its "increase in government debt is expected to displace or 'crowd out' . . . private capital."
>
> ...The CBO's conclusion confirms its earlier findings that the stimulus package will cut wages and the size of the economy in the long run, despite costing $800 billion. The stimulus package also gutted welfare reform.

The Heritage Foundation blog The Foundry has more. Here are just a few of their bullet points:

> • He raises taxes not just on upper-income taxpayers as he promised, but on all Americans through his misnamed "climate revenues", and as his budget indicates, this is just a starter program.
>
> • The President calls for enormous increases in government spending on health care and climate change, but on a great many other programs.
>
> • The CBO saw through perhaps the greatest chicanery ever in federal budgeting when President Obama first assumed the full costs of the operations in Iraq and Afghanistan in perpetuity, and then claimed he is cutting spending when he asserts a change in policy and those spending amounts disappear.

The more he spends, the more it looks like he's going to have to print money to get out of this, or raise taxes on producers and destroy the economy completely. And all that makes China very, very worried. Here is an article from the leftist New York Times, headlined

“China’s Leader Says He Is ‘Worried’ Over U.S. Treasuries”.

Excerpt:

> The Chinese premier Wen Jiabao expressed concern on Friday about the safety of China’s $1 trillion investment in American government debt, the world’s largest such holding, and urged the Obama administration to provide assurances that its investment would keep its value in the face of a global financial crisis.
>
> …Mr. Wen said he was “worried” about China’s holdings of Treasury bonds and other debt, and that China was watching United States economic developments closely.

If Obama prints more money, this would raise inflation and devalue the US currency, including the Treasury Bonds held by China.

> But economists have cited several possible threats, led by the prospect that the dollar’s value will depreciate over time, lowering the value of China’s holdings.
>
> “In the short run, the dollar is appreciating” because global investors see the American currency as a safe haven at a time of crisis, Bai Chong-En, who heads the economics department at Tsinghua University in Beijing, said in a telephone interview. “But we don’t know what’s going to happen in the long run. If the American stimulus package is financed mainly by borrowing, then that may affect the future value of Treasury securities.”
>
> Some specialists also say that high inflation could erode the dollar’s value. Finally, some believe that China’s investment in American debt is now so vast that, should it need foreign exchange in some emergency, it would be unable to sell its Treasury securities without flooding the market and driving down their price.
>
> “The only possibility, really, is that China will have to hold these bonds until maturity,” said Shen Minggao, the chief economist at Caijing, a Beijing-based business magazine. “If you start to sell those bonds, the market may collapse.

And Heritage Foundation is reporting that they are even talking about switching out of the US dollar as their reserve currency.

Sigh. I found an article by Victor Davis Hanson (H/T Stop the ACLU) where he explores why Obama is destroying the economy. He has three possible solutions, and he analyzes each of them.

1. Clueless
2. Not so clueless
3. A mean streak

Personally, I vote for 1). And that goes for anyone voted for him. And I’ve read David Freddoso’s book, so that’s where I am coming from. But you can read the VDH article and make up your own mind.

Why fiscal conservatives should care about marriage

March 22, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the linky, Binky!

The percentage of out-of-wedlock births is now 40% of all births. Does this have an effect on the size of government? FOX News has a story on the breakdown of the nuclear family. (H/T Institute for Marriage and Public Policy)

Excerpt:

> …births to unwed mothers reached an all-time high of about 40 percent, continuing a trend that started years ago. More than three-quarters of these women were 20 or older.
>
> For a variety of reasons, it's become more acceptable for women to have babies without a husband, said Duke University's S. Philip Morgan, a leading fertility researcher.
>
> …And more women – especially those in their 30s and 40s – are choosing to have children despite their single status.

For some reason, and I know what that reason is, society has decided that men are unnecessary to the task of raising children. A man's job is just to supply sperm and money. And that money is taxed away from men by the government and redistributed, via expensive social programs, to unwed mothers. And this is how the state takes over the traditional role of men as protector and provider.

The House Ways and Means Committee knows about the effect of raising children without fathers.

> US House Testimony on Child support and Fatherhood proposals (Hearing 107-38). June 28, 2001, online House version; http://waysandmeans.house.gov/legacy.asp?file=legacy/humres/107cong/6-28-01/record/chillegalfound.htm) — Father absence, a byproduct of divorce, illegitimacy, and the erosion of the traditional family, is responsible for; filling our prisons, causing psychological problems, suicide, psychosis, gang activity, rape, physical and sexual child abuse, violence against women, general violence, alcohol and drug abuse, poverty, lower academic achievement, school drop-outs, relationship instability, gender identity confusion, runaways, homelessness, cigarette smoking, and any number of corrosive social disorders.

So then why does the government continue to subsidize out-of-wedlock birth? When you subsidize something, you get more of it. When you tax something, you get less of it. Is this so hard for social progressives to understand? Too much compassion, without standards, costs society in the long run, (see Jewish scholar Dennis Prager's piece here).

More statistics on the cost of fatherlessness here at Fathers for Life..

Analyzing Christopher Hitchens' case against God

March 23, 2009 | by Wintery Knight | Link | Original Link

UPDATE: My play-by-play transcript of the April 4, 2009 debate at Biola is here.

UPDATE: Welcome visitors from the Anchoress! Thanks for the link! New visitors, please take a look around. My blog is 50% news and policy analysis, 50% defending Christianity in practical ways.

UPDATE: Welcome visitors from Apologetics 315! Thanks for the link Brian!

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the linky, Binky!

UPDATE: Welcome visitors from Truthbomb Apologetics! Thanks for the link, DJ Spidey!

In preparation for the upcoming debate between William Lane Craig and Christopher Hitchens, I thought that I would go over his opening statement from a previous debate to see what we can expect from him. I used his opening speech from his debate with Frank Turek. The audio from that debate is here, at Brian Auten's Apologetics 315 site.

Now the important thing to remember about a generic debate on whether GOD EXISTS is that there should be no mention of any particular God, such as the Christian God, and no mention of the history of any particular religion. All arguments that assume specific theological or moral doctrines or specific religious history are *irrelevant* to a debate on generic theism.

The question to be debated is: does a God who created and designed the universe, who has all the traditional properties of God, such as omniscience, omnipotence, omni-benevolence, etc. exist? That is the question being debated in a "Does God Exist?" debate.

Frank Turek's case for theism:

Frank Turek made 4 *relevant* arguments for theism, each of which *alone* would support his conclusion, that God exists:

- the origin of time, space, matter and energy out of nothing
- the fine-tuning of the physical constants to support the minimum requirements for life of any kind
- the origin of the biological information in the first self-replicating organism
- objective, prescriptive moral rules need to be grounded by the designer of the universe

And he also listed 4 features of the universe that are more consistent with theism than atheism (= materialism).

- non-material minds that allow rationality that would be impossible on materialism/determinism
- the mathematical structure of the universe and its intelligibility to the scientific method

- free will, which is required for moral responsibility and moral choices, requires a non-material mind/soul
- our first person experience of consciousness is best explained by a non-material mind/soul

Hitchens' case against theism

To counter, Hitchens has to argue against God using arguments in one of two forms:

1. The concept of God is logically self-contradictory
2. An *objective* feature of the world is inconsistent with the attributes of God

The claim that God does not exist is a claim to know something about God, namely, that he does not exist. This claim requires the speaker to bear a burden of proof. In a debate on "Does God Exist?", Hitchens must *deny* that God exists. Let me be clear: Hitchens must defeat the arguments for the claim that God exists, and then defend the claim that God does not exist, and support that claim using arguments and evidence.

Hitchens makes 2 basic claims:

- There are no good reasons to believe that theism is true
- There are good reasons to believe atheism is true

So far so good. But what are his good reasons for atheism?

1. I personally don't like Christianity, therefore God doesn't exist
   – Premise: I personally don't like Catholicism getting rid of limbo
   – Premise: I personally don't like Hell
   – Premise: I personally don't like some episodes in church history
   – Conclusion: God doesn't exist
2. The plurality of religions means that no religious claims can be correct, therefore God doesn't exist
   – Premise: There are lots of religions
   – Premise: The religions all disagree in their truth claims about the external world
   – Conclusion: No religion's claims can be correct, therefore God doesn't exist
3. I believe in one less God than you, therefore God doesn't exist
   – Premise: You disbelieve in every God I do, except one
   – Conclusion: God doesn't exist
4. Religious people are stupid and evil, therefore God doesn't exist
   – Premise: Religious people are ignorant
   – Premise: Religious people are fearful
   – Premise: Religious people are servile
   – Premise: Religious people are masochistic
   – Conclusion: God doesn't exist
5. Evolution explains how life progressed from single cell to today's bio-diversity, therefore God doesn't exist

– Premise: Modern theists like Turek believe in Paley's argument, and argued it in this debate
– Premise: Paley's argument was refuted by evolution
– Conclusion: God doesn't exist

6. God wouldn't have made the universe this way, therefore God doesn't exist
   – Premise: If God exists, then he would have made the universe my way
   – Premise: The heat death of the universe wasn't done my way
   – Premise: The extinction of species wasn't done my way
   – Premise: The size of the universe wasn't done my way
   – Premise: The amount of open space wasn't done my way
   – Premise: The large number of stars wasn't done my way
   – Premise: The age of the universe wasn't done my way
   – Conclusion: God doesn't exist
7. Religion makes people do things that I don't like, therefore God doesn't exist
   – Premise: Some religions do suicide bombing
   – Premise: Some religions do child abuse
   – Premise: Some religions do genital mutilation
   – Conclusion: God doesn't exist
8. If you speak a sentence, I can repeat the same words as you said, therefore God doesn't exist
   – Premise: Anything that you say is good, I can say is good too
   – Premise: Anything that you say is bad, I can say is bad too
   – Conclusion: God doesn't exist
9. Atheists are morally superior to religious people, therefore God doesn't exist
   – Premise: I act in a way that is consistent with my personal, arbitrary moral preferences
   – Premise: You don't act in a way that is consistent with my personal, arbitrary moral preferences
   – Conclusion: God doesn't exist
10. If I believe in God, I would have to submit to an authority
    – Premise: If I believe in God, then I can't do whatever I want
    – Premise: But I want to do whatever I want
    – Conclusion: God doesn't exist
11. I don't like certain Christian doctrines, therefore arguments for God from science fail and therefore God doesn't exist
    – Premise: I don't like the atonement
    – Premise: I don't like the virgin birth
    – Premise: I don't like the incarnation
    – Premise: I don't like original sin
    – Premise: I don't like the resurrection
    – Conclusion: Arguments that are built on recent discoveries from the progress of science like the big bang, fine-tuning, origin of life, etc. are incorrect, and therefore God doesn't exist

General comments about Hitchens' case:

- The form of *all* of these arguments is *logically invalid*. The conclusions do not follow from the premises using the laws of logic, such as modus ponens and modus tollens.

Specific comments about each argument:

- Argument 1 tries to disprove God by arguing from Hitchens' personal preferences about specific Christian doctrines. Christian doctrines are irrelevant to a debate about generic theism. And there is no reason why God should be bound by the personal, subjective preferences of one man. In fact, the concept of God entails that his unchanging nature is the standard of good and evil. So, this argument doesn't disprove God, it's just a statement of personal, subjective preference.
- Argument 2: Just because there are different truth claims made by different groups, doesn't mean no one is correct. Mormons believe that matter existed eternally, and Jews believe it was created out of nothing. The big bang theory shows that the Mormons are wrong and the Jews are right.
- Argument 3: First of all, the debate is a about a generic Creator and Designer, not any particular religious conception of God. So the argument is irrelevant. Moreover, Christians reject Zeus, for example, because Zeus is supposed to exist in time and space, and therefore could not be the cause of the beginning of time and space.
- Argument 4: This is just the ad hominem fallacy. Hitchens is attacking the character of the theist, but that doesn't show theism is false.
- Argument 5: This argument can be granted for the sake of argument, even though it's debatable. The point is that it is irrelevant, since it doesn't refute any of Turek's actual scientific arguments like the big bang, the fine-tuning of the physical constants, the origin of information in the simplest living cell.
- Argument 6: Again, there is no reason to think that God should be bound by Hitchens' personal opinion of how God should operate.
- Argument 7: This is the ad hominem fallacy again. The good behavior of religious believers is not a premise in any of Turek's FOUR arguments for theism. Therefore, Hitchens' point is irrelevant to the debate.
- Argument 8: The fact that the atheist can parrot moral claims is not the issue. Being able to speak English words is not what grounds objective, prescriptive morality. The issue is the ontology of moral rules, the requirement of free will in order to have moral responsibility and moral choices, ultimate significance of moral actions, and the rationality of self-sacrificial moral actions.
- Argument 9: This is just the ad hominem fallacy again.
- Argument 10: This is not argument so much as it reveals that the real reason Hitchens is an atheist is emotional. One might even say infantile.
- Argument 11: Again, these specific Christian doctrines are irrelevant to a debate about generic theism. And Hitchen's subjective, personal preferences about Christian doctrine certainly do not undermine the objective scientific support for the

premises in Turek's 3 scientific arguments.

So, in short, Hitchens lost the debate. A talking parakeet who could only say the 3 premises of the *Kalam* argument over and over, in a squeaky high-pitched voice, would have defeated him. Atheists and agnostics can do a lot better. That is, if the purpose of the debate is to win and not to just hurl insults at people on the other side.

Worst. Debater. Ever.

Here are some posts on defending Christianity: the big bang, the fine-tuning, the origin of life, the irrationality of morality on atheism, debates on morality, the irrationality of moral judgements against God on atheism, the hiddenness of God, the problem of evil, religious pluralism, the problem of the unevangelized and how to defend the resurrection without assuming that the Bible is generally reliable.

UPDATE: On Hot Air, I noticed that legions of British atheists are signing up to be de-baptized. Probably fans of Hitchens and his "I woudn't have done it that way" case against God. As well, Hot Air is covering a story that scientologists and atheists are uniting. Because, you know, they are both science-based.

Full video and slides from the Heartland Institute GW conference

March 23, 2009 | by Wintery Knight | Link | Original Link

I first heard about this global warming conference on John Lott's blog here. But at least I'll be able to go through the slides and video of the presenters, because it's all online here.

I was excited to see the Czech Republic President (and current European Union President) Vaclav Klaus in there as a keynote. And I see some other names I recognize, like Richard Lindzen of MIT who also gave a keynote address. I see Tom McClintock gave a keynote. He's a solid conservative who ran against Arnold in the California gubernatorial race, after Gray Davis was dumped.

The only other people I recognize are Sen. John Sununu, Fred Singer and Roy Spencer. And Iain Murray, whose book I still have to buy.

Here's something by Iain Murray in the Competitive Enterprise Institute's Open Market blog that's relevant. The UN wants to impose a tax on wealthy nations to raise 750 billion dollars to stop ManBearPig global warming.

> Achim Steiner, head of the UN Environment Program, has said that the global financial crisis provides an opportunity for a global green new deal.

Murray quotes Steiner in this Reuters article, on how he proposes to get the money:

> "If, for argument's sake, you were to put a five-year levy in OECD countries of $5 a barrel, you would generate $100 billion per annum. It translates into roughly 3 cents per liter," he said.
>
> "It would be almost, if not totally, unnoticed by the consumer"…

Remember a little while back, Sen. James Inhofe tried to stop UN global taxes? I don't know if this counts as one, but it sounds like one to me!

Judd Gregg says Obama's budget will bankrupt the country

March 24, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the linky, Binky!

Found this post over at Gateway Pundit. You'll remember that Judd Gregg is one of those fiscally conservative New Hampshire senators, an expert on business, finance and economics. Despite being a Republican, he was nominated by Obama for the Cabinet position of Commerce Secretary. He backed out of it, though. And now we can guess why.

Last month, he warned that the budget would bankrupt the USA:

A new video from CNN is here. Here's an excerpt from the transcript:

> "The practical implications of this is bankruptcy for the United States," Gregg said of the Obama's administration's recently released budget blueprint. "There's no other way around it. If we maintain the proposals that are in this budget over the ten-year period that this budget covers, this country will go bankrupt. People will not buy our debt, our dollar will become devalued. It is a very severe situation."
>
> "Your listeners have to understand how staggering the numbers are. We're talking about a deficit in the trillion-dollar range for as far as the eye can see. We're talking about deficits which are 4% to 5% of GDP – which is not sustainable under any form of government. We're talking about a public debt – this is a debt that people own of the federal government – that will be around 80% of GDP. Historically, it's been around 40% of GDP in the out years. The practical implication of this is bankruptcy for the United States. There's no other way around it."

I know people who denounced Bush, McCain and Palin. They voted for this ACORN lawyer. As if Obama was God's gift to small government conservatism. They wouldn't read a single economics book. I remember showing them numbers from Citizens Against Government Waste and American Taxpayers Union, which they rejected.

Here's one more interesting piece from the always wonderful IBD (editorial, podcast). I include the details of the Bush and Reagan budgets, for comparison with Obama's budget.

Excerpt:

> According to the CBO, the Obama administration lowballed its deficit forecast by $482 billion over the next four years and $2.3 trillion over the next 10. In other words, the CBO says that 10-year deficits will be 33% higher than the president claims, should his plans get enacted.
>
> This makes Obama's budget one of the worst accounting jobs ever put forward in

> modern times by a new administration.
>
> When the CBO reviewed George W. Bush's first budget, for example, the difference between what Bush said his budget would cost and what the CBO said it would cost was minimal.
>
> …Reagan's first budget, which was widely panned for allegedly employing rosy scenarios to cook the numbers, differed from the CBO by just 1.2% in projected revenues and 5% in spending over the first four years.
>
> So why the huge gap between Obama and the CBO?
>
> Obama's team employed one of the oldest budget tricks in the books — exaggerating economic growth — to hide the true cost of his tax and spending plans. Budget forecasts are hugely sensitive to predictions about GDP growth, inflation, unemployment and interest rates. Even slight differences can have a huge impact on projected outlays and revenues.
>
> And in his budget, Obama is positively Pollyannaish about the economy, predicting 3.2% real GDP growth next year, compared to the CBO's 2.9% and the Blue Chip consensus forecast of 1.9%. While the CBO and Blue Chip think unemployment will be 9% in 2010, Obama claims it will be only 7.9%. And so on.

Here's an image I stole from IBD:

IBD: Publically-held debt

Read the whole editorial! And don't foget to subscribe to IBD's podcast feed. It's FREE!

Michelle Malkin has more details on Obama's "public-private partnership" plan for economic recovery.

Excerpt:

Quick overview of N.T. Wright's case for the resurrection

March 24, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the linky, Binky!

I thought I would just go over a paper from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best).Wright has taught at Cambridge, Oxford, Duke, McGill, etc.. He's published 40 books.

CV excerpt, all degrees are from Oxford University:

- 2000 **D.D.**
- 1981 **D.Phil.**
- 1975 **M.A.**
- 1973 **B.A.**(1st class Honours), Theology; Denyer and Johnson Prize (shared) for top first class of year; College Prize
- 1971 **B.A.**(1st class Honours), Literae Humaniores; College Prize

Wright seems to get a lot of respect from skeptics like John Dominic Crossan (their debate is here: book, audio – note: buy the audio, don't buy the book). I have never heard Crossan concede the empty tomb and the appearances before, but he did against Wright. In his debate (audio, book) against William Lane Craig, he denied *all 4* of Craig's minimal facts.

We have seen elsewhere how to argue for the resurrection using the minimal facts approach. The minimal facts are the handful of facts about Jesus that survive the standard historical criteria used in the evaluation of historical biographies. But Wright has a *different* approach.

Let's take a look at a lecture (that link has PDF transcript, audio and movies) that Wright gave on the resurrection.

N.T. Wright's historical case for the bodily resurrection of Jesus

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable* apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).
5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there

were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissable under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was not a belief in a flying spaceship that was going to come and pick them up if they drank the kool-aid. This was a belief they held *based on personal experience*s. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

Additional resources

For more debates on the resurrection, see here for William Lane Craig, here for Mike Licona, and here for Gary Habermas. I am a big fan of all these guys, but Craig hasn't lost any resurrection debates, while Licona *tied* against Richard Carrier and Habermas *lost* against Arif Ahmed. In particular, I recommend these 3 debates:

- William Lane Craig (Biola) vs Roy Hoover (Whitman College)
- Mike Licona (Independent) vs Bart Ehrman (UNC Chapel Hill)
- Gary Habermas (Liberty) vs Joel Marcus (Duke) – Part1, Part2, Part3

UPDATE: Also, I have a more recent post on the earliest source of historical facts about the resurrection.

Massachusetts state-run health care costs hit 820 million

March 24, 2009 | by Wintery Knight | Link | Original Link

Spotted this article in the leftist New York Times, (H/T Independent Women's Forum). Looks like the communists in MA are finding out too late that there is a problem with having the state make health insurance compulsory and having prescription drugs and mental health coverage included for every policy holder, regardless of risk.

The article states:

> Alan Sager, a professor of health policy at Boston University, has calculated that health spending per person in Massachusetts increased faster than the national average in seven of the last eight years. Furthermore, he said, the gap has grown exponentially, with Massachusetts now spending about a third more per person, up from 23 percent in 1980.

John R. Graham of the State Policy Network, (H/T Pacific Research Institute) explains how they got into this mess:

> Surely, even the *New York Times* can figure out that spending $820 million on the Bay State's Commonwealth Care "universal" health-care plan, in order to save $250 million in uncompensated hospital care, is not a good trade-off.
>
> Not according to today's article on the latest state to compel its residents to buy health insurance, which reports those savings as the only positive outcome of this out-of-control program. Three years ago, Gov. Romney collaborated with the Democratic-majority legislature to achieve "universal" health care by government diktat: squeezing every resident into either compulsory private health insurance or expanded government programs, using both tax-hikes and subsidies.
>
> Today, we learn that, alongside the absurd cost/benefit ratio, the state can no longer bear the costs, which are spiralling out of control faster than other states' costs are. **This reminds us of a fundamental lesson of government power: When the government orders you to buy something, the government will have to step in to decide what that something looks like.**

It's the same old story of how fixing the price of a product or service below market value results in increased demand and decreased supply. And we all know what happens when the costs of government-run health care escalates – increased government control of the lives of patients and decreased quality of health care service.

For the life of me, I don't know why anyone voted for that RINO Mitt Romney in the primaries. In my opinion, he was terrible on social issues across the board, and this

RomneyCare mess doesn’t exactly inspire confidence on fiscal policy, either.

Republicans call for Obama to fire tax-cheat Geithner

March 25, 2009 | by Wintery Knight | Link | Original Link

I found these stories on the blogs of conservative Republicans. They are not going to let Obama weasel out of the consequences of his incompetent Cabinet picks.

Representative Marsha Blackburn

Marsha Blackburn

Representative Marsha Blackburn posted about Geithner on her blog.

Excerpt:

> Yesterday Congressman Marsha Blackburn (TN-7) appeared on The Fred Thompson Show and called on Secretary of the Treasury Tim Geithner to resign.
>
> **"I think that he has caused more problems than he has solved,"** Blackburn said on the nationally syndicated radio show. **"I think he needs to go and it doesn't matter if the President wants to remove him or he wants to submit his resignation but Secretary Geithner needs to go."**

Audio of Blackburn on the Fred Thompson radio show is here: short clip, long clip).

Senator Jim Demint

Jim Demint

Jim Demint calls for the firing of Geithner in this post on his blog:

Excerpt:

> During an interview with FOX Business, Sen. Jim DeMint (R-S.C.) discusses Americans' outrage with AIG bonuses and government bailouts. DeMint calls upon President Obama to fire Treasury Secretary Timothy Geithner, saying that Americans have lost confidence in him because he clearly "has lost his ability to operate" and deal with America's current economic crisis.

Video:

John Shadegg

In addition, Representative John Shadegg had a post on his blog.

Excerpt:

> "How could Geithner have been so intimately involved in the AIG bailout, head of the New York Federal Reserve when the Reserve was informed of the bonuses, head of the Treasury when the department asked for the provision that helped secure these bonuses, and supposedly one of the greatest experts on Wall Street today – and not have known about them?
>
> "Sadly, it appears that **Secretary Geithner is either dishonest or incompetent.**
>
> "Perhaps the Senate should have paid more attention to Geithner's tax errors after all."

We need to embarass Obama for nominating this incompetent tax cheat.

Is there scientific evidence for an intelligent designer?

March 25, 2009 | by Wintery Knight | Link | Original Link

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor, and a great example of the integration of Christian faith and a stellar academic career. He is not a "secret-service" Christian. Rejecting the notion of safe, private Christianity, he instead projects his Christian faith outward, where his students *and colleagues* can be aware of his beliefs.

Below I analyze a lecture I chose from the hundreds of public lectures he has given all over the world on the integration of Christian faith with other public, testable areas of knowledge. In this lecture, entitled "Is There Scientific Evidence for an Intelligent Designer?", Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

Evidence #1: The design of the universe

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other

selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – “carbon-based life), but the bonds are not so tight that they can’t be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet

must sufficient mass in order to retain an atmosphere, etc.

The best current atheist response to this is to speculate that there may be an infinite number of unobservable and untestable universes. (I.e. – the Flying Spaghetti Monster did it)

Evidence #2: The origin of the universe

1. The progress of science has shown that the entire physical universe came into being out of nothing (= "the big bang"). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.
- And there were other discoveries as well, mentioned in the lecture.

The best atheistic response to this is to speculate that there is an unobservable and untestable hyper-universe outside our own. (I.e. – the Flying Spaghetti Monster did it)

Evidence #3: The origin of life

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current atheistic response to this is to speculate that unobservable and untestable aliens seeded the earth with life. (I.e. – the Flying Spaghetti Monster did it)

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

Conclusion

In all three areas, scientists expected that the data would be consistent with atheism. First, scientists expected that life could exist even if the physical constants and ratios were altered. The progress of science said *NO*. Second, scientists expected that the universe would be eternal. The progress of science said *NO.* Third, scientists expected that the origin of life would be simple. The progress of science said *NO.*

The Democrats are considering carbon tariffs on imported goods

March 25, 2009 | by Wintery Knight | Link | Original Link

Robert P. Murphy's linked to this post he wrote at the Institute for Energy Research. Murphy is concerned that Obama is going down the same path as that interventionist Herbert Hoover did. Hoover passed the Smoot-Hawley Tariff Act, which led the United States into the Great Depression. Murphy thinks that carbon tariffs could be on the way!

Here is an an excerpt from Murphy's post:

> …the Obama administration—under the guise of fighting climate change—is testing the waters with new restrictions on imports. Specifically, lawmakers on the House Energy and Commerce Committee are considering imposing "carbon tariffs" to prevent foreign nations from gaining a competitive advantage vis-à-vis U.S. producers who are burdened with a forthcoming cap-and-trade regime. The idea is that the U.S. government would slap a huge "compensatory" tax on imports that were produced in foreign nations that do not impose carbon legislation on their manufacturers.

Murphy explains why free trade increases the prosperity of all nations, by promoting efficient production:

> Even without retaliation, a unilateral tariff increase makes Americans poorer. The gains to the workers in the "protected" domestic industry are more than offset by the loss to consumers who have to pay higher prices. A tariff is *a tax on American consumers*; the government says to its own citizens, "If you want to buy a product from a foreign producer, you have to make a side payment to the U.S. Treasury." You don't make a country richer by jacking up taxes on its own consumers.
>
> International trade allows countries to specialize in their "comparative advantage," or their areas of relative expertise. It would be catastrophic if everyone had to grow his own food, sew his own clothes, and drill his own cavities. We all benefit tremendously from the ability to specialize in occupations at which we are better than our peers, and then trade with each other.
>
> The same principle applies to entire countries, which are simply aggregates of the individuals living in them. Because of differences in resource endowments, industrial infrastructure, weather, and the skills of the workforce, it is much more efficient for certain regions of the world to concentrate on a few key items and export them to other regions. When the government raises tax barriers, it interferes with this process and makes everyone poorer on average.

Not only do tariffs hurt consumers, but they also destroy businesses that export products.

First, those businesses will have to pay *more* for raw materials. Second, the goods they export to other countries will face import tariffs. This will cost more American jobs than are "saved" by imposing tariffs. And the government gets the money from tariffs, not the productive private sector.

Murphy explains how global warming is really just a euphemism for economically-ignorant socialism:

> Even if the threat from man-made climate change is as serious as some scientists claim, this fact would not overturn the centuries of work done by economic scientists. We know from both theory and history that raising trade barriers in the middle of a severe worldwide recession is a terrible policy. We also know from theory and history that government central planning *does not work*. When the technocrats reorder the economy, deciding which firms will survive and which prices are too high or too low, the results are disastrous. It doesn't matter whether the justification is "fighting the Depression" (as in the 1930s) or "fighting climate change" (as in today's discussions). Either way, central planning will wreck the economy, and it won't even achieve its ostensible goals.

I recommend you go there and read the whole article. Think of the future of your children, and of your neighbor's children.

Related story over at Stop the ACLU: "EPA may soon deem CO2 a threat to human health". I blogged before about cap and trade, tax hikes on oil, the world's anger at tariffs, and the myth of global warming.

Michele Bachmann opposes nationalization of industries

March 25, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

We're well on our way down the road to serfdom, but thankfully we still have Michele Bachmann fighting against socialism on our behalf.

Excerpt from her blog post:

> It's vital that we ask questions of this Administration as it continues to insert itself into the private sector. Most recently, it's reported that the Obama Administration is considering asking Congress to give the Treasury Secretary the authority to take over non-bank financial companies, such as large insurers, investment firms and hedge funds.
>
> Giving the Secretary this authority would be an unprecedented transfer of power to the federal government. The current model for regulating the financial markets relies on independent agencies that are independent from the political process.

Give 'em hell, Michele!

UK Prime Minister Gordon Brown excoriated over massive debt

March 26, 2009 | by Wintery Knight | Link | Original Link

Spotted this awesome video over at The Anchoress. This is a MUST-SEE video. If only someone had the courage to take on President Teleprompter and the economic-illiterates who voted for him, like this British MP takes on Gordon Brown.

The Anchoress has a bunch of great links there, as well.

Excerpt from her post:

> Here in the United States, land of the First Amendment and free speech, it is right now unthinkable that anyone would stand up in a political chamber and speak so forthrightly.
>
> I mean…can you imagine someone in our Congress or Senate actually standing up with a chart like this, and daring to talk to Obama about his "inherited" debt?

Michele Bachmann could do it. Also, here's the chart that she mentions from Ace of Spades: (watch out for vulgar language!)

Obama's projected deficits

Gateway Pundit has more here:

> President Obama expects the deficit level to be **12% of GDP** this year.
>
> America is actually in worse shape than Great Britain.
> According to **Heritage**, Obama has already helped **quadruple the deficit** with his stimulus package.

Hot Air has links to the MP's youtube page and blog. Apparently this is *normal* for him, although Hot Air says he isn't a solid conservative.

> Here's his YouTube page, chock full of more in this vein, and here's his blog, in which he marvels at the ability of the 'Net to turn a backbench parliamentarian into an international fiscal conservative hero overnight. Exit question: We're all agreed that Hannan gets to deliver the GOP's response to next year's State of the Union, yes?

Some people who voted for Obama told me during the election that Obama would be *much more* fiscally responsible than Bush and Reagan, because Republicans are all big spenders. They couldn't stand the 550 billion we spent securing our liberty in two wars against radical terrorism. Obama is going to run the national debt up to over 20 trillion by 2019. Which amount is greater?

I asked 2 of my Obama-voting friends today how much the 2 wars cost, and neither of them knew. They did not even believe me when I showed them the *actual numbers*. What do they do in the evenings? Why, they watch Family Guy, Rachel Maddow and sports. One of these people actually told me that Rachel Maddow was a *centrist*. The other one is the more ignorant of the two.

Lastly, two of my fundamentalist Christian friends told me that Obama was more pro-life than McCain. Yes, they really said that! If you have a story about someone who voted for Obama who ought to have known better, please put it in the comments!

Are there objective truths about God?

March 26, 2009 | by Wintery Knight | Link | Original Link

In a lecture entitled “Are there Objective Truths About God?”, philosopher William Lane Craig address the postmodern skepticism of logic that seems to be so fashionable these days, especially on campus and in the “emergent church” movement.

Here’s the link to the lecture audio and the lecture outline.

What is a self-refuting statement?

The main concept in the lecture is the logical concept of self-refutation. A self-refuting sentence is a sentence that, if true, makes itself false or meaningless. For example, if someone said to you: “there are no meaningful sentences longer than 5 words”. Or if they said, “it’s wrong to make moral judgments”. Those statements are self-refuting.

What is truth?

Craig assumes the common-sense correspondence theory of truth. This theory holds that “truth” is a property of a proposition such that if the proposition is true, then it corresponds to the external world. For example, if I claim that there is a crocodile in your closet and we find a crocodile in your closet, then my statement was true. No crocodile in your closet means my statement was false.

Are there objective truths about God?

There are 3 objections discussed in the William Lane Craig lecture. Each objection seeks to make religion subjective, (true for each person, like food preferences), in order to minimize the incumbency and prescriptive force of Christian theology and Christian moral teachings.

Objection #1:The Challenge of Verificationism

The first challenge is that religious claims cannot be verified using the 5 senses, and therefore religious statements are objectively meaningless.

Consider the statement “Only propositions that can be verified with the 5 senses are meaningful”. That statement cannot be verified with the 5 senses. If the statement is true, it makes itself meaningless. It’s self-refuting.

Objection #2: The Challenge of Mystical Anti-Realism

The second challenge is that religious claims, and claims about God, are neither true nor false.

Consider the statement “No statements about God can be true or false”. That statement itself is a statement about God. If the statement is true, then it is neither true nor false. It’s self-refuting.

Objection #3: The Challenge of Radical Pluralism

The third challenge is that each person invents an entire reality of their own, and that there is no mind-independent objective world shared by individuals.

Consider the statement "There is no objective reality shared by all individuals". That statement is a statement that applies to all individuals. If the statement is true, then it only applies to the *speaker's subjective reality,* not to everyone else. It's self-refuting.

Conclusion

Craig ends the lecture by arguing that it is OK to think that other people's views are false. It does not follow that just because Christians think other people's views are wrong that they am going to mistreat other people. In fact, in Christianity it is objectively true that it is good to love your enemies. It is objectively true that all human beings have value, because human beings are made by God.

In Christianity, I am absolutely obligated to treat people with whom I disagree with respect and gentleness (1 Pet 3:15-16). The more convinced I am about *that* belief, the better my opponents will be treated. A *stronger* belief in Christianity means *more* tolerance for those who disagree.

My personal experiences with "Christian" postmodernism

Growing up, I was often confronted with the idea that God was beyond logic and beyond reason. Imagine my surprise as a conservative young Christian to find out that church and campus club leadership had embraced postmodernism, and were very skeptical of controversial doctrines like Hell, exclusive salvation, inerrancy and authorial intent.

As I grew older, I began to uncover why the postmoderns in leadership believed that God is not bound by the laws of logic. It was because of their desire for popularity. They did not want to have to confront people with exclusive and judgmental Christian claims. They did not want to have defend these ideas as true, using evidence – because that would involve *work.*

Postmodern Christians would say to atheists, "Christianity is true *for me*, and atheism is true *for you*", in order to be accepted. And they would feel, emotionally and intuitionally, that non-judmentalism and non-exclusivism was *right.* Postmodernism was their way to avoid wasting time on theology and apologetics, (although technically, it did involve lying to people about God's character).

Postmodern Christians were also very hostile towards apologetics, because "knowing for certain" took away their ability to doubt. They could keep God at arms-length when he was morally demanding, while keeping him within arm's reach for emotional support. God existed for postmoderns when they needed comfort, and he didn't exist when they wanted autonomy.

For further study

A debate between a Christian and a postmodern. You can see for yourself how gentle Peter Williams is during this dialog with someone with whom he disagrees. His objective is to persuade – to win her over. Also, what about those who have never heard of Jesus? What about the problems of evil and suffering?

Also, for extra credit, Super-commenter ECM sent me this post from David Thompson a few days back, in which Thompson interviewed Dr. Stephen Hicks on postmodernism in

academia. The post also describes the link between postmodernism and socialism. This is a great post!

Jim Demint stands up to fascism on the Senate floor

March 26, 2009 | by Wintery Knight | Link | Original Link

Senator Jim Demint

Here is a video from Hot Air of our hero Jim Demint, the best senator in the Senate.

Here's the best part:

> These are not Government decisions. We need to focus on what we were set up to do and do it much better than we are doing, instead of every week coming in here, bringing our good intentions and our compassion and every problem we see across the country we say something needs to be done. Then we say: The Government needs to do it.
>
> That is the fatal flaw of the Congress today, is we forget that sacred oath of office that says: We will protect and defend the Constitution which says this Federal Government has a very limited function. And those functions that are not prescribed in the Constitution are left to individuals and to the States. At least we have someone fighting back against the democrats.

The whole transcript is here.

I also noticed this other video related to one of my old posts in which Demint opposed discrimination against religious schools in one of Obama's massive spending bills.

And remember Obama's defunding of charities, including churches and other religious organizations. As I argued before, when government increases, secularism increases right along with it. Big government is anti-Christianity and anti-religious-liberty.

Heartland Institute’s podcasts on school choice and education

March 26, 2009 | by Wintery Knight | Link | Original Link

I waited anxiously for this Heartland Institute series of 10 5-minute podcasts on education to finish, and now it’s finally done!

Here are the links:

- In episode 0, the introduction, we respond to the question, Why Do We Need School Reform?
- In episode 1, surveys reveal that parents who choose independent schools do so on the basis of academics, not athletics or convenience.
- In episode 2, we discuss how allowing tax dollars to follow the child will give parents more control over their child’s education.
- In episode 3, competition encourages creativity and lessens mediocrity.
- In episode 4, choice makes parents accountable and frees leaders from excessive regulation.
- In episode 5, school choice enables teachers to recover lost freedoms.
- In episode 6, funding should be adequate to enable parents to chose high-quality schools, but parents should be allowed to add their own dollars.
- In episode 7, voucher programs help teachers by paving the way for better teachers to receive higher pay.
- In episode 8, private schools should be allowed to retain their self-government. This autonomy is in the best interest of the public.
- In episode 9, school choice promotes and protects the institutions and organizations that create and protect democracy.
- In episode 10, school choice creates a genuine free market for education, free from rules.

The booklet that the series is based on is here as a PDF.

Greg Koukl explains how to be a consistent moral relativist

March 27, 2009 | by Wintery Knight | Link | Original Link

The absolute easiest way to get into a good conversation with someone is to ask them what makes something right or wrong on their view. You have to be careful not to get into a fight about a particular moral issue, though, so you have to choose a clear-case example, not something controversial.

Just ask the person you want to engage two questions:

1. Is it it wrong to treat people badly just because of their skin color?
2. What makes it wrong?

Now, as I see it, there are only 3 possible answers to this question.

1. I personally prefer not to do that – it is wrong *for me.*
2. Our culture has evolved a set of customs that apply for us in this time and place, and that set of customs says that members of the society ought not to do that. It is wrong *for us, here and now.*
3. Humans are designed to act in a certain way, and part of that design is that we ought not to do that. Acting in line with our design allows us to flourish, (Aristotle's *eudaimonia*).

Response #1, is called "moral relativism". Response #2 is called "cultural relativism", and I will say a few words about that later. Response #3 is my view. I believe in a hierarchy of moral absolutes.

In this post, I wanted to go over a paper by Greg Koukl from Stand to Reason, in which he critiques moral relativism. His paper is called "Seven Things You Can't Do as a Moral Relativist". First, let's see the list of sevent things.

1. You can't make moral judgments about other people's moral choices
2. You can't complain about God allowing evil and suffering
3. You can't blame people or praise people for their moral choices
4. You can't claim that any situation is unfair or unjust
5. You can't improve your morality
6. You can't have meaningful discussions about morality
7. You can't promote the obligation to be tolerant

You'll have to read the paper to see how he argues for these, but I wanted to say a brief word about number 1. I already blogged about 2 here.

1. Relativists can't accuse others of wrong-doing

In moral relativism, what you ought to do is totally up to you. Morality is just like a lunch

buffet – you pick what you like based on your personal preferences.

I remember one particular discussion I had with a non-Christian co-worker. Both she and her live-in boyfriend were moral relativists. They were fighting because she was angry about his not having (or wanting) a job, and he was angry because when he asked her for space, she immediately ran out and cheated on him.

What's interesting is that both of these people chose the other in order to escape being judged themselves. I think this happens a lot in relationships today. Instead of choosing someone who has character and who takes the role of spouse and parent seriously, people choose someone ammoral, who doesn't threaten their autonomy.

Only later do they realize that marriage and parenting requires moral knowledge! I think that they each hope that they will later be able to change the other person into someone they are not. Which is probably why a lot of marriages break up. I just don't see how it's possible to get married without the ability to appeal to objective moral standards when disputes arise.

One of my best friends is married to a woman who I think is a really great wife and mother. A number of times I have disagreed with her about various topics, like firearms or masculinity. She goes away and reads a bunch of things and then comes back with a more thoughtful view. I think this is very important in a marriage. She's changed my mind a few times as well.

(She spends her free night answering apologetics questions for seekers at her church)

A quick point about cultural relativism

Regarding cultural relativism, there a number of problems with it, some of which are described here. What constitutes a society? Who defines the moral consensus? What about the reformer's dilemma? Why should I care what the herd thinks? Why should I sacrifice my own autonomy when the herd won't catch me? Etc.

Also, I want to point out the 7-part series on morality and atheism that Tough Questions Answered put together a while back. I blogged about it here. Here's another post with some debate about the rationality of moral rules and moral behavior on atheism. And then there was that debate with the postmodern moral relativist against Peter Williams.

Traditional marriage supporters sue California over harassment and intimidation

March 27, 2009 | by Wintery Knight | Link | Original Link

Supporters of traditional marriage are being harassed and intimidated by opponents of the pro-marriage Proposition 8 initiative that passed recently in California. Anti-traditional-marriage activists used public lists of donors to put up web sites with maps showing the names and addresses of people who donated to support traditional marriage.

Here is an excerpt of the Washington Times article: (H/T John Lott)

> After giving $10,000 to California's Proposition 8 campaign last year, Charles LiMandri began receiving some unexpected correspondence.
>
> "I got about two dozen e-mails and hate phone calls," said Mr. LiMandri, who lives in San Diego….Those e-mails are now among hundreds of exhibits in a landmark case challenging California's campaign-finance reporting rules, which require the release of the names, addresses and employers of those who contribute $100 or more to ballot-measure committees.
>
> The lawsuit argues that those who contribute to traditional-marriage initiatives should be exempt from having their names disclosed, citing the widespread harassment and intimidation of donors to the Proposition 8 campaign.
>
> …Intimidation tactics range from letters and e-mails to death threats, proponents say. A Sacramento theater director was fired after opponents of the initiative publicized his Proposition 8 campaign contributions.
>
> "Anybody who's in California knows that it's very widespread," said Brian Brown, executive director of the National Organization for Marriage, one of the biggest contributors to Proposition 8 and a joint plaintiff in the lawsuit. "Every donor has a story. I talked to a $100 donor the other day who had a note in his mailbox that said, 'I know where you live and you're going to pay.'

I don't think it's right for *anyone* to force their views on others by using threats and intimidation. Maybe we need a Human Rights Commission to protect the rights of supporters of traditional marriage.

The Republican alternative budget

March 27, 2009 | by Wintery Knight | Link | Original Link

Tired of trillion dollar deficits as far as the eye can see? Worried that Obama is going to bankrupt the country? Angry about the planned reduction of charitable giving by 9 billion dollars? Or tax hikes on energy companies that will raise consumer energy prices? Are you doubtful that any amount of tax hikes on the productive sector can pay for all this spending?

Well, I spotted this post outlining the Republican alternative to Obama's budget over at Investors Business Daily. (H/T Club for Growth)

This is definitely worth reading! The first part reiterates how tax cuts have stimulated the economy and job creation in the past under Ronald Reagan and George W. Bush. The article then list all the details of the GOP budget proposal which would get us similar results.

Instead of socialized medicine, the GOP would lower prices by increasing consumer choice and competition among medical plan suppliers. And they would also introduce a simplified tax system that would reward hard work and productivity:

> …[The GOP budget] would establish "a simple and fair tax code with a marginal tax rate for income up to $100,000 of 10%, and 25% for any income thereafter, with a generous standard deduction and personal exemption."
>
> Prefer the current system? The GOP plan lets you stay in it. The capital gains tax would be cut and the Alternative Minimum Tax would be fixed to prevent huge surprise tax hikes each year.
>
> …businesses with fewer than 500 employees would get a deduction of 20% of their income, so "these engines of growth will continue to fuel our economic recovery and companies can compete with their foreign counterparts, while keeping jobs here at home."
>
> On energy policy, the plan would open the Outer Continental Shelf to oil and gas drilling and use part of the federal share of revenues for alternative fuel programs. The Arctic Coastal Plain would be opened for exploration and development. Obstacles to new nuclear power plants would be removed.

Read the whole wonderful thing! And don't forget: they have a podcast of this article read by the professionals at OutloudOpinion.com. Subscribe here!

Victory for academic freedom in Texas School Board hearings

March 28, 2009 | by Wintery Knight | Link | Original Link

"Teach the Controversy" is now the law in Texas. This is a huge win, because the science standards in Texas will influence the science standards of other states, since Texas dominates the science textbook market.

Here's a brief excerpt about the decision from Evolution News:

> Today, the Texas Board of Education chose science over dogma and adopted science standards improving on the old "strengths and weaknesses" language by requiring students to "critique" and examine "all sides of scientific evidence." In addition, the Board—for the first time— specifically required high school students to "analyze and evaluate" the evidence for major evolutionary concepts such as common ancestry, natural selection, and mutations.
>
> The new science standards mark a significant victory for scientists and educators in favor of teaching the scientific evidence for and against evolution.
>
> …The science standards approved today by the Texas State Board of Education include language requiring students to "analyze, evaluate and critique scientific explanations…including examining all sides of scientific evidence… so as to encourage critical thinking by the student." Equally important, the high school biology standards now require students to "analyze and evaluate" the scientific evidence for key parts of evolutionary theory, including common ancestry, natural selection, and mutations.

More here at the Evolution News blog:

- More details on the significant changes that will result from the decision
- Details on the arguments made by the politicians on the pro-metaphysical-naturalism side
- Details on the arguments made by the Ph.D biologists on the pro-critical-thinking side

UPDATE: Discovery Institute Fellow John West has a piece in the Washington Post.

Projected increases in electricity prices under Obama's cap-and-trade policy

March 28, 2009 | by Wintery Knight | Link | Original Link

Over at Michele Bachmann's blog, I noticed that she has posted about the expected increase in electricity prices (per person) under Obama's proposed cap-and-trade legislation. The numbers are provided by Ways and Means Ranking Member Dave Camp.

Here are a couple of the bigger increases:

- Alabama $1,528.26
- Indiana $1,627.46
- Kentucky $1,798.23
- Montana $1,717.63
- North Dakota $4,350.56
- West Virginia $3,972.29
- Wyoming $7,249.54

Looks like the effect is to transfer wealth from pro-business red states to anti-business blue states. Redistribution of wealth. Equalization of outcomes. Welfare. After all, a lot of these blue states have been spending like drunken sailors, and will need to grab some money from their red-state neighbors, if they are to continue acting irresponsibly.

Here is an interesting quotation in Michele's post, provided by the Director of the Congressional Budget Office, Dr. Douglas Elmendorf on the proposed cap-and-trade legislation:

> At a Ways and Means hearing today, Congressman Camp questioned Congressional Budget Office Director Dr. Douglas Elmendorf about the impact of this policy on consumers in other ways as well. As Dr. Elmendorf said, "at any point in which we are putting a price on carbon emissions, that would be passed through to the cost that consumers face on energy products but also all other products that are made using fossil fuels….I don't know if there are any goods that use no energy in their production. It seems to me unlikely."

I blogged here about the proposed tax hikes on oil companies, and here on the proposed cap-and-trade system and here on the proposed carbon tariffs Obama wants to impose on imported goods. And we've also seen that global warming is just a myth – useful crisis that leftists sell to the public in order to justify government control of the free market.

Assessing the current state of the debate on abortion

March 29, 2009 | by Wintery Knight | Link | Original Link

Here is a GREAT discussion between Greg Koukl of Stand to Reason and Scott Klusendorf of the Life Training Institute. The discussion starts at time 55:50 of the podcast. Klusendorf and especially Koukl are *on fire* in this podcast! Do not miss this podcast.

Topics include:

- How do left-leaning Christians justify their pro-abortion voting?
- What kills more people: unintended civilian casualties in war or deliberate killing of unborn babies? Are these two kinds of death morally equivalent?
- Have Obama's policies on abortion reduced or increased abortions?
- Did the rate of abortion decline under Clinton and increase under Bush?
- What policies really do reduce the number of abortions, and who supports those policies?
- Should Christian medical personnel be forced to perform abortions against their consciences?
- What are the root causes of abortion, and should we be addressing them by government-enforced wealth redistribution (social programs), instead of by legislation?
- What is the difference between embryonic stem cell research (ESCR) and adult stem cell research (ASCR)?

As well, Klusendorf alludes to some research by Michael J. New at the Heritage Foundation about the policies that reduce abortions. You can read about it here in National Review. The supporting research is here.

I have blogged about some of these topics before, such as: stem cell research, a simple case for defending the unborn, right of conscience for health care workers, and about Representative Michele Bachmann's opposition to FOCA and ESCR.

Scott Klusendorf makes the pro-life case on audio, here.

UPDATE: Doug Groothuis has a short, non-sectarian argument against abortion here.

Health care policies in the UK and in Ireland

March 29, 2009 | by Wintery Knight | Link | Original Link

Over on Health Care BS, they reported the results of an Healthcare Commission investigation of Mid Staffordshire NHS Foundation Trust in the UK. This foundation runs the which runs Stafford and Cannock Chase hospitals.

Excerpt:

> If you have a friend or loved one in an NHS hospital, make sure to send them flowers. They may have to drink the water out of the vase to avoid dying of thirst.
>
> …The Prime Minister apologized and claimed that this was an isolated situation. Oh, really? Tell that to the NHS patients who *starve to death* in your hospitals. Tell that to the patients who die of cancer because the NHS *won't pay* for their treatment.
>
> Tell that BS to the patient on whom NHS surgeons insisted on operating despite the *dead rat* in the OR. Tell that to the emergency patients *stacked* in ambulances in the ER parking lot. If they could hear, you could tell that the patients waiting for *hearing aids*.

Scary stuff! And this is what Obama wants for us, because then everyone will be *equal*, regardless of their ability to pay. Should individuals be left free to choose how much health care they need based on their own lifestyle choices? Obama says no.

On the other hand, the Stockholm Network reports that Ireland raised their co-payments for ER treatment, in order to encourage people to use managed care instead. (H/T State Policy Blog). They reduced their ER demand by 5%.

> The 2009 Irish budget, presented by finance minister Brian Lenihan, revealed that charges for A&E services would rise from €66 to €100, if the patient has not been referred by their GP, or if they do not hold a medical card.
>
> The revised tariff came into force on 1st January and …saw 4.5% less people attend A&E in January 2009 than in January 2008…

There is a myth on the ignorant left (and in Canada) that Americans are dying in the streets because of private medical care, that emphasizes personal responsibility. Actually, ER medical care is free in the USA, and maybe we should start charging something for it like Ireland is doing.

I posted before on the nationalized health care, the exploding health care costs in Massachusetts, and on health care problems in Sweden. Also, here is a funny video from a Canadian-raised comedian on single-payer health care.

UPDATE: John Lott has a post on how 9 people accounted for 2,678 ER visits over 6 years in Texas, costing taxpayers 3 million dollars.

Global warming is a made-up crisis to justify socialism

March 30, 2009 | by Wintery Knight | Link | Original Link

I just want to get this out there so that we can be clear. There is no climate crisis. The whole thing was invented, just like "nuclear winter", in order to justify government taking control of the economy so they can equalize economic inequalities.

Fox News reports that the United Nations is proposing global redistribution of wealth from productive, free nations to unproductive, repressive ones. The rationalization for this redistribution of wealth is going to be global warming alarmism.

Excerpt: (H/T John Lott)

> A United Nations document on "climate change" that will be distributed to a major environmental conclave next week envisions a huge reordering of the world economy, likely involving trillions of dollars in wealth transfer, millions of job losses and gains, new taxes, industrial relocations, new tariffs and subsidies, and complicated payments for greenhouse gas abatement schemes and carbon taxes — all under the supervision of the world body.

And Wesley J. Smith sheds more light on the topic here, where he analyzes a column by a radical environmentalist who argues that we need to prevent economic growth, on the grounds that it is harming the planet.

Excerpt:

> This willingness to sacrifice human welfare is reaching a fever pitch among those who believe that global warming is a crisis of unimagined proportions–a belief that can border on quasi-religion or pure ideology. An article by David Owen–pushing the importance of economic decline to saving the planet–in the *New Yorker* illustrates the point.

Here's one of the quotes from David Owen:

> The environmental benefits of economic decline, though real, are fragile, because they are vulnerable to intervention by governments, which, understandably, want to put people back to work and get them buying non-necessities again–through programs intended to revive ordinary consumer spending (which has a big carbon footprint), and through public-investment projects to build new roads and airports (ditto).

I would recommend checking out the post to read what environmentalists really think about human welfare when compared to the myth of global warming. It's important to understand what people on the left, who are advising Obama, are planning to do.

To get the real costs of what it would take to "fix" global warming, check out this post at

the Heritage Foundation's blog "The Foundry". In this post, they explain the science, what global warming alarmists are trying to do, and how much it will cost to do it – and they done the research to prove it.

Excerpt:

> Perhaps the most alarming part is the price tag associated with attempting to reduce such a small part of the atmosphere and something we really cannot control. Our analysis shows the cumulative GDP losses for 2010 to 2029 approach $7 trillion. Single-year losses exceed $600 billion in 2029, more than $5,000 per house¬hold. Job losses are expected to exceed 800,000 in some years, and exceed at least 500,000 from 2015 through 2026. It is important to note that these are net job losses, after any jobs created by compliance with the regulations–so-called green jobs–are taken into account. In total, the "climate revenue" (read: energy tax) could approach two trillion over eight years. Keep in mind, this is all for negligible environmental benefits.

UPDATE: Heritage Foundation weighs in with more on the UN's plan for global wealth redistribution.

> The U.N. conference in Bonn, Germany commenced yesterday to hash out details for an international approach to reducing greenhouse gas emissions. The goal is to have a plan ready for the global warming summit in Copenhagen at the end of the year that would supplant the failed Kyoto Protocol.

And the Competitive Enterprise Institute has a link to a piece in the WSJ about the impact to the manufacturing sector and to US trading partners.

Thomas Sowell explains why too much compassion is a bad thing

March 30, 2009 | by Wintery Knight | Link | Original Link

Here is something you can forward to all of your progressive friends! It clearly explains what's wrong with too much moral permissiveness and compassion. When you subsidize certain decisions, you get more of those decisions, when you tax certain decisions, you get less of them.

Excerpt:

> Since the average American never took out a mortgage loan as big as seven hundred grand– for the very good reason that he could not afford it– why should he be forced as a taxpayer to subsidize someone else who apparently couldn't afford it either, but who got in over his head anyway?
>
> Why should taxpayers who live in apartments, perhaps because they did not feel that they could afford to buy a house, be forced to subsidize other people who could not afford to buy a house, but who went ahead and bought one anyway?

And what about saving for a rainy day?

> Who hasn't been out of work at some time or other, or had an illness or accident that created unexpected expenses? The old and trite notion of "saving for a rainy day" is old and trite precisely because this has been a common experience for a very long time.
>
> What is new is the current notion of indulging people who refused to save for a rainy day or to live within their means. In politics, it is called "compassion"– which comes in both the standard liberal version and "compassionate conservatism."

The article concludes with this:

> Even in an era of much-ballyhooed "change," the government cannot eliminate sadness. What it can do is transfer that sadness from those who made risky and unwise decisions to the taxpayers who had nothing to do with their decisions.
>
> Worse, the subsidizing of bad decisions destroys one of the most effective sources of better decisions– namely, paying the consequences of bad decisions.

I would just encourage you to try to communicate with your neighbors who may not have thought clearly about "the forgotten man", the taxpayer who works hard, plays by the rules and then is stuck with the bill for the *compassion* of well-meaning socialists.

In one of my more popular posts, I explained how the compassion of socialist democrats got us into this financial crisis by forcing banks to make loans to people who couldn't afford them.

Arizona Supreme Court rules voucher program unconstitutional

March 30, 2009 | by Wintery Knight | Link | Original Link

Arizona's Supreme court has *banned* their state's voucher program. 500 students were enrolled and will be allowed to complete the year in their currently schools. (H/T Independent Women's Forum and Jay P. Greene).

Excerpt from the linked Arizona Republic article:

> The Arizona Supreme Court on Wednesday declared the state's school-voucher programs unconstitutional because they violate a ban against appropriating public money for private or religious schools.
>
> The unanimous decision shuts the door on vouchers in Arizona unless voters agree to a statewide ballot measure to change the state Constitution.

So parents shouldn't have a choice where their children go for an education. The important thing, according to the socialists, is that the teachers in the failing schools have a guaranteed job and a guaranteed audience. Public schools are not there to serve children – it's *adult day care.* All guaranteed unionized jobs are *adult day care.*

This article from the Alliance for School Choice argues that vouchers provide a better education for students for far less money. If we desire excellent education at reduced cost to taxpayers, then vouchers deliver. If the goal is allowing adult teachers to insulate themselves from the market demands, so they can continue on in perpetual adolescence at the expense of children and parents, then vouchers should be outlawed.

Excerpt:

> Conducted by researchers at the University of Arkansas as part of the independent School Choice Demonstration Project (SCDP), the report found that students in the program generally posted achievement gains that were somewhat higher than that of students in the Milwaukee Public Schools (MPS). When compared to children in MPS, students enrolled in the Milwaukee Parental Choice Program experienced statistically significant gains in 7th and 8th grade math.
>
> At the same time, the report concluded that the MPCP continues to save Wisconsin taxpayers tens of millions of dollars a year. For FY 2009 alone, the state saved $37 million as a result of the voucher program. While the report is focused on state sources of funding, when federal sources of funding are included, it costs $13,468 to educate an MPS child, versus a maximum of $6,607 to educate an MPCP student.
>
> In a significant finding that undercuts the main arguments of school choice detractors, the study demonstrated conclusively that the presence of the

> Milwaukee Parental Choice Program (MPCP) helped local public schools improve. In the words of the authors: “It appears that Milwaukee Public Schools are more attentive to the academic needs of students when those students have more opportunities to leave those schools.”

The article goes on to note that voucher programs lead to increased parental awareness and involvement in their children’s education.

On a related note, the Pacific Research Institute had this post on the success of charter schools, which are not insulated from competition either, and therefore need to care about student academic performance, instead of left-wing indoctrination.

Excerpt:

> The Academic Performance Indicator for OCA is 902, easily surpassing the statewide goal of 800 (out of 1,000). Within five years the charter rose from an API of 736 to 902. “The API is a good indicator after you pass 800 because the students have to work very hard to maintain it,” says Jorge Lopez, principal and executive director of OCA. Most impressive, this charter school succeeded despite receiving thousands of dollars less per student compared with average California public school funding.
>
> The Oakland Charter Academy, for example, earned the 902 API score while receiving $7,211 per student, nearly $4,366 below the state average of $11,547. Yet, the return on investment is higher than the average public school. Consider the Orange Unified School District. It received $9,544 per student and earned a 777 API with a less-challenging student population.
>
> Ninety-five percent of the students at OCA are from low-income families. The OUSD serves 38 percent low-income children. OCA students achieved 75 percent proficiency in reading on the California Standards Test. Fifty-six percent of OUSD students scored proficient in reading.

The article goes on to compare the much worse performance of public schools in the area who spend a lot more money and have *far fewer* low-income students. The difference is competition. The difference is free market capitalism.

Beware of government-run health care

March 31, 2009 | by Wintery Knight | Link | Original Link

The Anchoress has an inspiring pro-life story posted here. I recommend you take a look. It is very important for people to take her point, that on the Christian view, God has a purpose for allowing us the opportunity to to love those who need love. The purpose of life is not to shove away the demands of others so that you can maximize your own happiness.

The first part of her post is a story about a mother who chooses to deliver a baby whom, she was told, would die shortly after birth. She goes on to have the baby, who is doing (mostly) fine. I recommend you check out the story. But there is another point that needs to be made about this story. Ask yourself – *why was this woman allowed to choose to have her baby?*

The answer is – because the government did not control her health-care decisions, as would be the case in a single-payer system. And in a single-payer system, your health care depends on radical secular-leftist social engineers. The same ones who fund *useless* embryonic stem cell research, because it is a sop to the pro-abortion lobby.

The Anchoress continues:

> **People who clamor for government-run health care** should consider that once the taxpayers have given that power over the government, they – like AIG and all of the "evil banks" currently being talked down – will place themselves and their loved ones into the power of the government and their accounting sheets. The grandmother you think of as gold, may be so much tin, if she costs the government too much to keep alive. The husband you call your diamond becomes only coal to the bureaucrat.
>
> And abortion…if you discover that the child in your womb is "defective" and decide you want to love it, anyway, that you want to allow your daughter a few precious minutes of life and love, give your son the chance to grow *in the life he will have*, you will be told you are unrealistic and selfish to burden the state and your fellow taxpayers with your absurd love.

One of the purposes of my blog is for Christians to realize the connection between public policies and their ability to execute their own Christian lives without interference from the secular state. The point that Anchoress makes above is something that we should all think through carefully. How many "social justice" policies do Christians vote for that will come back to bite us?

I blogged about Obama's plan to outlaw the right of conscience of medical personnel, the abolition of voucher programs here and here, defunding of churches, discrimination against religions schools, and the secularization that results from socialism here. The left favors forced euthanasia and coerced abortions. And the left is willing to reduce costs by

reducing the quality of care.

Is one true religion even possible?

March 31, 2009 | by Wintery Knight | Link | Original Link

Dr. Walter L. Bradley

This is a follow-up to my previous post on Walter Bradley's lecture about the scientific evidence for an Creator and Designer of the universe. Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor, and a great example of the integration of Christian faith and a stellar academic career.

Is there truth in religion?

Another one of Bradley's lectures is on the question "Is There Objective Truth in Religion?". In the lecture, he describes a book by Mortimer Adler, called "Truth in Religion". In the book, Adler makes a distinction between two kinds of "truth".

1. Trans-cultural truth – also known as objective truth. This is Adler's term for the correspondence theory of truth. A claim is true if and only if it is made true by corresponding to the state of affairs in the mind-independent external world. It is irrelevant who makes the claim. The claim is either true or false for everyone, e.g. – "the ice cream is on the table". Either it is, or it isn't, for *everyone.*
2. Cultural truth – also known as subjective truth. This is Adler's term for claims that are arbitrarily true for individual and groups of subjects. For example, your personal preference for a certain flavor of ice cream, or the cultural preference for a certain style of dress or cooking. The claim is true for the person or group, e.g. – "I/we prefer chocolate ice cream and wearing tuxedos".

The question that Bradley addresses in the lecture is: *are religious claims trans-cultural truth or cultural truth?*

Why do people want to believe that religious truth claims are subjective?

People want to believe that religious truth claims are subjective because religious claims differ, and people lack the courage to tell some group of people that their beliefs about the world are *wrong*. By reducing religion to personal preference, no one is wrong, because everyone who believes in any religion, or no religion, is just expressing their own personal preferences.

But, if religious truth claims are trans-cultural claims, e.g. – the universe began to exist, then some religions are going to be wrong, because religions *disagree* about reality. It's possible that no religion is right, or that one religion is right, but it is not possible that

they are all right because there is only one reality shared by all people. Religions make contradictory claims about reality – so they can't all be true.

Suppose religious claims are trans-cultural? How would you test those claims?

I credit E.J. Carnell with a test for truth that I still use today. It is the same test used by Adler and Bradley.

1. Logical consistency (the claim cannot violate the law of non-contradiction)
2. Empirical verification (the claim is verified against the external world)

Adler says that other trans-cultural truth claims, such as those from math and science, must all pass the test for logical consistency, as a minimum. And so with religion, if it is like math and science. Once a proposition passed the test of the law of non-contradiction, then you can proceed to step 2 and see if it is empirically verified.

Adler surveys all the major religions in his book, and concludes that only 3 of them – Judaism, Islam and Christianity – pass the test of the law of non-contradiction. He ends the book by recommending to seekers that they proceed to evaluate the historical claims of these 3 religions, in order to see which *if any* passes the empirical tests.

Conclusion

Bradley concludes with the claim of the resurrection of Jesus could be investigated using historical methods, in order to decide which of these 3 religions might be true, if any. He also mentions the stories of a few people who performed the investigation and changed their initial opinion of the resurrection in the face of the historical evidence.

Related posts

I blogged previously about whether the Bible teaches that faith is opposed to reason and evidence and William Lance Craig's refutation of postmodern sketicism of religion. I also blogged about scientific and historical evidence that could also be used to test religious claims. My post on N.T. Wright's view of the resurrection may also prove useful.

Also, a good debate between a Christian and a postmodern relativist on truth in religion is here.

Fedex threatens to cancel jet order if card check bill passes

March 31, 2009 | by Wintery Knight | Link | Original Link

Spotted this Wall Street Journal article over on Ask Dr. Helen.

Excerpt:

> FedEx Corp. is threatening to cancel the purchase of billions of dollars worth of new Boeing Co. cargo planes if Congress passes a law that would make it easier for unions to organize at the package-delivery company.
>
> A company spokesman said Tuesday that FedEx may cancel plans to buy as many as 30 new Boeing planes should Congress pass a bill that would remove truck drivers, couriers and other employees at FedEx's Express unit from the jurisdiction of the federal Railway Labor Act of 1926, the law which today also governs labor organizing at U.S. airlines.

I blogged about Obama's card check bill and its effects here.

Mark Sanford interviewed by the Acton Institute

March 31, 2009 | by Wintery Knight | Link | Original Link

Governor Mark Sanford

Acton Institute blog posted this interview with Governor Mark Sanford of South Carolina. Sanford is my runner-up for the 2012 Republican nomination. The Acton Institute is the think tank that best expresses my deepest concern – the concern for freedom of religious expression. And they believe that certain public policies, such as fiscal conservatism, protect that freedom.

The interview with Sanford is enlightening and encouraging, because it talks about ideas and ideals, in detail. I was particularly interested to see if he would make the connection between free market capitalism and liberty. Here is a relevant excerpt:

> I would say that we got to go back to the basics. And the vision would be for a prosperous, competitive America in what has become a very, very competitive global world. It needs to be based on an advance and adherence to free market capitalistic principles, and on maximizing the sphere of individual freedom.

And that includes religious freedom. And I was also interested to see how Sanford connected his faith to the public policies that he advocates. The interviewer asks him: "When it's convenient, many politicians say they can't bring their own religious views to bear on important issues because they represent all the people. What's your view?"

Here is his reply to the question, in full:

> **I don't agree with that. What people are sick of is that no one will make a stand.** The bottom line in politics is, I think, at the end of the day to be effective in standing for both the convictions that drove you into office and the principles that you outlined in running. And that is not restrained to simply the world of Caesar, it applies to what you think is right and wrong and every thing in between.

> Now we all get nervous about the people who simply wear it on their arm sleeve to sort of prove that they've got that merit badge. But I think the Bible says, "Let your light so shine be fore men that they may see your good works and give glory to your Father that's in heaven." Hopefully, by the way in which you act. The way in which you make decisions. They're going to see that something's there.
>
> **I would also say the Bible says in Revelation, "Be hot. Be cold. But don't be lukewarm" [Rev. 3:15]. And there's too many political candidates who walk around completely in the middle—completely in neutral. With regard not only to faith, but with regard to policy. And that's what people are sick of. Everything's gotten so watered down. So I have people come to me frequently saying, "Look, I voted for you. In fact, I completely disagree with you on these different stands over here. But at least I know where you stand."**
>
> And so I would say it's a mistake to confine one's belief to only matters of government. If you have a religious view, it's incumbent upon you and it's real to have that. The Bible talks about the fruit of the spirit: love, joy, peace, patience, kindness, goodness, gentleness, faithfulness, self-control. There ought to be certain things that are clearly observable by your actions.
>
> I remember when I first gave a Christmas address, a candle lighting event on the state house capitol. And people were freaking because they said, "You can't say Jesus." **I said, "Look, I'm not trying to offend anybody. But if that's my personal faith, I can say what I want to say. I'm going to say what I want to say."** I'm not going to be rubbing anybody's face in it. **But I say you can't dance around that which you really believe. And so I'd say we need people who are more bold in taking stands on all kinds of different things.**

Now, you know what to do: read the whole thing!

John Campbell takes a shot at Obama's budget

April 1, 2009 | by Wintery Knight | Link | Original Link

This is Representative John Campbell letting the Democrats have it with both barrels.

I found the video linked on his blog, where he has some advice for how to explain to your neighbors what this budget will really cost taxpayers.

Excerpt:

> If you want to see what a 30% tax increase looks like, take your paycheck and multiply the total taxes deducted by 1.3. Then, subtract that from your gross income and that will be close to your new net income. So, if you made $3,000 gross and $2,000 net, you will now only net $1,700. Oh, and that won't include the cuts your employer has to make in order to pay for their tax increases. By the way, this budget includes all kinds of things that are minor in the grand scheme of things, but big to certain people. For instance, it would repeal the use of the 'Last In, First Out' (LIFO) inventory accounting method. This will dramatically raise taxes on all retail businesses who carry inventory.

Gateway Pundit has a list of the top 10 facts about the budget here. On economist Robert P. Murphy's blog, I found a link to this story in Bloomberg.

Excerpt:

> The U.S. government and the Federal Reserve have spent, lent or committed $12.8 trillion, an amount that approaches the value of everything produced in the country last year, to stem the longest recession since the 1930s.
>
> New pledges from the Fed, the Treasury Department and the Federal Deposit Insurance Corp. include $1 trillion for the Public-Private Investment Program, designed to help investors buy distressed loans and other assets from U.S. banks. The money works out to $42,105 for every man, woman and child in the U.S. and 14 times the $899.8 billion of currency in circulation. The nation's gross domestic product was $14.2 trillion in 2008.

Representative John Shadegg has a list of the taxing/spending records that Obama's budget is breaking in a post on Red County. And remember, the Democrats caused this mess and the Republicans tried to stop them. More details from John Boehner and Mike Pence about what's in Obama's budget here. The Republican alternative budget is here.

The story of the Wintery Knight blog so far…

April 1, 2009 | by Wintery Knight | Link | Original Link

Those of you who have been reading the blog know that the blog is split between Christian apologetics and policy analysis. Here's a little list of the topics that I have touched on related to Christian apologetics, with topics yet to appear later in *italics*.

Positive apologetics

Scientific arguments for theism:

- the creation of the universe out of nothing (Warning: SNARKY)
- the fine-tuning of physical constants and ratios to support the minimal requirements for life (Warning: SNARKY)
- *the origin of biological information in the simplest living organism*
- *galactic, stellar and planetary fine-tuning to support the minimal requirements for life*
- *the sudden origin of all animal phyla in the Cambrian explosion*
- *the natural limits of biological change*

Philosophical arguments for theism:

- *the moral argument*
- the argument from evil
- *the origin of non-physical mind, rationality and free will*

Historical arguments for Christianity

- the minimal facts argument (Habermas/Craig/Licona)
- the best explanation of the changes in the concept of resurrection (Wright)

Negative apologetics

Scientific objections:

- what about the progress of science and God-of-the-gaps?
- doesn't the Bible require the creation of the earth in six 24-hour days?
- didn't aliens seed the earth with the first life?

Philosophical objections

- the problems of evil and suffering
- the problem of religious pluralism and religious truth claims
- the problem of postmodern skepticism (i.e. – the problem of wanting to be lazy and popular)
- the problem of rational morality and purpose on atheism

- the problem of moral relativism
- the fate of the unevangelized (what about those who never heard of Jesus)
- the hiddenness of God (why isn't there more evidence for God's existence?)
- isn't the doctrine of the Trinity self-contradictory?
- can God make a rock so big he can't lift it?
- did God create evil?
- who made God?
- isn't faith is opposed to reason and evidence?

Emotional objections

- memo to Christopher Hitchens: a sneer is not an argument

Moral issues

- a case for the pro-life position in plain English
- adult stem cell research is superior to embryonic stem cell research

Mentoring

- the importance of being able to argue both sides of a question
- why does talking about religion make people uncomfortable?
- how to talk to your co-workers about your faith

Apologetics advocacy

- does the Bible teach that faith is opposed to logic and evidence?
- the six enemies of apologetic engagement
- why men flee the feminized church

What conditions are needed to create a habitable planet?

April 2, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome, visitors from Post-Darwinist! Thanks for the link Denyse! New visitors may be interested in this post, which is a jumping off point for all of posts on science and faith issues.

Everyone who isn't Christopher Hitchens or Richard Dawkins already knows about the standard fine-tuning argument. But have you ever considered what it takes to make a planet that is capable of supporting the minimal requirements of living systems? The area of science that specializes in answering this question is called *astrobiology*. Let's take a look!

I will be working from a lecture (with Q&A) delivered in October 2007 at California State University – Fresno, by two of my favorite scholars, Jay Wesley Richards and Guillermo Gonzalez.

The Copernican Principle

Richards introduces the idea of the Copernican Principle. This principle states that the progress of science will show that there is nothing special (designed) about man's place in the universe.

The minimal requirements for life

I've written about this before here, but basically life requires a minimum amount of encoded biological information to allow it to replicate itself. The only element in the periodic table that allows you to encode information is carbon. Carbon is the hub of large molecules which form the paper and text of biological information. No carbon = no life.

Secondly, you need some environment in which to form molecules around the carbon, such as amino acids and proteins. That environment is liquid water. And you need the liquid water to be at the surface the planet where you want life to exist.

The requirements of a habitable planet

Here are just a few of the requirements mentioned in the lecture.

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die

- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits

Note that these requirements are connected. If you mess with one, some of the others will be thrown out of tune. For more habitability requirements, see this article by Gonzalez and Richards.

What are the probabilities that we will get these conditions?

Richards explains that the question of whether this is designed is like winning the lottery. Your chance of winning depends on two things:

1. the odds of getting all the conditions correct
2. the number of tries that you get

If the odds of winning are 1 in a million, you could still win by buying a million tickets with all the different numbers. In the universe, there are only about 10^22 possible solar systems. So if the odds of getting a habitable planet are 1 in 10^9, you'll get tons of life. But what if the odds are 1 in 10^40? Then you're not likely to win.

But this is not the argument that these two are making, because even though there are a lot of factors needed for a habitable planet, we still can't say for certain how likely it is that each of these conditions will obtain. Therefore, we can't make the argument except by estimating the odds of getting each condition.

Although you could use very generous estimates, it would still be guessing, and you can win a debate by guessing. So are we stuck?

How to make a design argument using habitability

Gonzalez explains why you can still make an argument for design by arguing that the coorelation between habitability and measurabiliy is intentional. (By measurability, he really means the ease of making scientific discoveries). And you do this by correlating the conditions for sustaining life with the conditions for allowing scientific discoveries.

Gonzalez gives two examples:

1. Solar eclipses require that the sun and moon have certain sizes and certain distances from the sun. The surface of the Earth is the optimal location in our solar system for observing solar eclipses. We were able to make many valuable discoveries due to this fine-tuning, not the least of which was confirming the theory of general relativity, which was cruicial to the science of cosmology.
2. The location of our solar system is fine-tuned within two spiral arms of a spiral galaxy. We escape from radiation and other dangers, but to also allow use to capture heavy elements that are needed to make a suitable Sun and humans bodies, too. But the same conditions that allow life also allow us to make scientific

> discoveries, such as star formation theory and cosmic microwave background radiation measurements, which was needed in order to confirm the creation of the universe out of nothing (the big bang).

Spooky. And what until they list off a half-dozen more examples in their book “The Privileged Planet”. It’s downright terrifying!

Conclusion

Richards sums up the argument with an illustration. He asks why scientists construct observatories high up on mountains. The answer is in order to avoid “light pollution” from nearby cities, which ruin the ability of scientists to observe the stars and make discoveries. And this is what we see with our planet and solar system. No one builds a planet that can be used to make scientific discoveries in a place that doesn’t support life. It turns out that the very places in the universe that are good for making observations are also the best places for supporting life.

Further study

I would recommend checking out the documentary DVD, if you find the book too scary. There is also a university lecture DVD with both authors, filmed at Biola University. If you want to see the DVD online for FREE, then click here (narrated by John-Rhys Davies). Awesome! Go science!

Video and audio from Christopher Hitchens panel debate

April 2, 2009 | by Wintery Knight | Link | Original Link

UPDATE: My play-by-play transcript of the Biola debate is here.

Over on Apologetics 315, I've found links to video and and audio from the recent debate panel from the Christian Book Expo in Dallas, TX. This is a useful preview for the upcoming debate on April 4, 2009 between Christopher Hitchens and William Lane Craig.

Below is a summary of the initial 4-minute speeches of all of the participants, in order of speaking:

Lee Strobel

1. There are good arguments for the existence of God:

- creation out of nothing (the big bang)
- cosmic fine-tuning
- biological information (DNA, etc.)
- consciousness (intentionality)
- free will
- historicity of the resurrection

2. Christianity makes a positive difference on people's lives.

Christopher Hitchens

1. Christianity is not needed for personal morality or social cohesion.

2. Christian stories are not unique, they are paralleled in other religious. Therefore, they are not historical, but invented.

3. Christian leaders say and do things that are harmful, but also inconsistent with their stated beliefs.

William Lane Craig

1. There are good arguments for the existence of God:

- the contingency argument
- creation out of nothing
- cosmic fine-tuning
- the argument from objective moral values
- the argument from objective moral duties
- the ontological argument
- historicity of the resurrection
- religious experience (in the absence of any defeaters)

James Denison

1. It is not effective to argue against religion in general by citing the specific bad behaviors of certain religious people in a variety of religions.

Doug Wilson

1. Rational thought is not compatible with atheism, because atheism is committed to materialism. If human behavior are totally determined by chemical reactions, then it is not possible for humans to reason about the world.

Further study

To read more about these arguments, please see my index of arguments used in debates. To see an analysis of Hitchens' case that he used in his recent debate with Frank Turek, click here.

Angela Merkel opposes spending, China stimulates solar energy production

April 2, 2009 | by Wintery Knight | Link | Original Link

Story here, from the always-on-target Investors Business Daily. If you prefer a podcast, then here is your podcast.

Angela Merkel is the Chancellor of Germany. She also has a Ph.D in Physics.

First a little background:

> British Prime Minister Gordon Brown's idea for a "global stimulus plan" has met with resolute opposition from Germany's leader, Angela Merkel. Good to see that common sense isn't dead, at least in Europe.
>
> Brown, who'll be hosting the leaders of the G-20 nations later this week as they seek a way out of the global financial crisis, has pushed what he calls a "global New Deal" of up to $2 trillion in added spending.
>
> But he's had trouble selling his idea to others — to put it mildly. Czech Prime Minister and EU President Mirek Topolanek called it "a way to hell." Even Bank of England Governor Mervyn King trashed the idea.

And then Merkel jumps on the pile:

> Now comes Merkel, who, as head of the world's third-largest economy, has probably killed Brown's big idea.
>
> **"I will not let anyone tell me that we must spend more money," she said over the weekend. "We must look at the causes of this crisis. It happened because we were living beyond our means. . . . We cannot repeat this mistake."**

We need to listen to Merkel, because she knows what she is talking about. She has a perspective we don't because of Germany's tragic history in the 20th century.

> After World War I, Germany tried to spend its way out of a recession brought on in large part by the onerous war reparations.
>
> As Weimar Germany printed money, inflation soared (in 1918, $1 bought 4.2 German marks but by 1923, $1 fetched 4.2 trillion marks) and unemployment surged.

If you want a real stimulus, try being like the communist Chinese. I blogged about their sales tax cuts on automobiles before, and about how worried they are about our deficit spending, (along with everyone else in the G20). But look what I found over on Ace of Spades HQ.

They cite an article from semiconductor.net, and here is an excerpt:

> …The Chinese government alerted all silicon, ingot, wafer, cell, and panel manufactures that it intends to announced a very **aggressive Solar subsidy that is equivalent to $3 USD per installed watt**, in cash, as an incentive to aid the Chinese population to install solar. Currently in China non UL, non CE, and non TUV **panels can be purchased for under $2 per watt**…
>
> …With the combination of lower panel prices, renewed Federal and State incentives, utility rebates, the finance freeze thawing out, and oil prices moving up, Solar is once again looking awfully attractive. **When you take into consideration the increased value of your home upon a solar installation and the tremendous credits and rebates available, you can literally install solar for 20 cents on the dollar**….

Why did we elect a socialist ACORN lawyer from the party that got us into to this mess in the first place?

Christianity and the birth of modern science

April 3, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome, visitors from Free Canuckistan! Did you know that Binks is a web elf? It's true!

Super-commenter ECM sent me this post from Pamela Geller's blog, Atlas Shrugs. I thought that this was something wonderful because this is not an area of expertise for me, although it is something that I do get questions about, because atheists believe that Christianity is anti-science, and I need to know how to respond. The post discusses an essay by the blogger Fjordman.

And here's how it starts:

> Neither Roman, Egyptian, Chinese nor Indian civilization created the Scientific Revolution; they all stagnated after making initial gains in knowledge. This is because the natural human tendency is to want immediate results. If the research does not yield reasonably quick benefits, interest wanes. Yet you needed a critical mass of accumulated knowledge before the Scientific Revolution could be ignited. The Bible commands mankind to subdue the Earth, but in order to do so, men need to understand how the world works. In addition to this, the Bible portrays God as a Creator who made the universe work according to rational laws. Since God's laws are immutable, it remains for us to discover them. **Many of the scholars who created modern science, including Galileo and Newton, believed that they were honoring God by studying his Creation. They saw science as a religious duty.**

Now, I've blogged on the *vital importance* of scientific progress to the Christian worldview. Let me be clear. We are in a period of economic abundance which exacerbates arrogance, hedonism and disdain for theology and morality. We absolutely must avail ourselves of every sign of creative and/or intelligent activity in the natural world. *And that means science must progress.*

The essay then cites an Oxford University Press textbook by James Evans as follows:

> "…Kepler went on to become the most outstanding mathematical astronomer of his generation. His greatest gifts were inexhaustible patience, great calculating ability, and a relentless drive to understand. But his motives for astronomical research always involved a quest for higher knowledge. **Everywhere, he sought for connections between apparently disparate realms of thought. He wanted to know God's plan for the cosmos**…."

Fjordman then continues:

> While leading scholars during the Scientific Revolution such as Galileo, Kepler and Newton were indeed inspired by the mathematics of the ancient Greeks,

> their Christian world view made the connection between mathematics and the natural world even more powerful and explicit. Isaac Newton spent a great deal of time looking for hidden codes in the Bible, and undoubtedly believed that he was studying both of God's Books: **The Bible and the Book of Nature**. Nothing similar happened in East Asia, or indeed in any other civilization.

But wouldn't any old monotheism do in order to ground natural laws? Agnostic sociologist Rodney Stark says no:

> …Rodney Stark agrees that Islam does not have "a conception of God appropriate to underwrite the rise of science…Allah is not presented as a lawful creator but is conceived of as an extremely active God who intrudes in the world as he deems it appropriate. This prompted the formation of a major theological bloc within Islam that condemns all efforts to formulate natural laws as blasphemy in that they deny Allah's freedom to act."

Fjordman continues:

> In contrast [with Islam], for Jews and Christians, God has created the universe according to a certain logic, which can be described. Kepler firmly believed the Solar System was created according to God's plan, which he attempted to unlock. Sir Isaac Newton was passionately interested in religion and wrote extensively about it.

And it ends with this:

> Does mathematics have an independent existence in nature or does the human mind invent it? The answer potentially has huge philosophical implications. The people who created modern science lived predominantly in Europe, an overwhelmingly Christian continent with an important Jewish minority. They apparently had an advantage when they assumed the universe to be designed by a rational Creator. I admit this is a challenging dilemma for those of us who are not religious: Why can nature apparently be described mathematically and rationally if it has not been designed by a rational Creator? As a non-religious man, this is the only religious argument that I find difficult to answer.

It's an interesting essay. It made me think of this article by Walter Bradley in which he talks about the relationship between mathematics and nature as a pointer to an intelligent designer. For those interested in the relationship between Christianity and science, please take a look at the index of Christianity-related posts.

Democrats vote to force health care providers to perform abortions

April 3, 2009 | by Wintery Knight | Link | Original Link

Sen. Tom Coburn

UPDATE: Welcome, visitors from Free Canuckistan! Did you know that Binks is a web elf? It's true!

UPDATE: Welcome visitors from 4Simpsons blog! Thanks for the link, Neil!

Story here, at Gateway Pundit. One of my favorite senators, Tom Coburn, proposed the amendment to protect the conscience rights of health care providers.

Here's the purpose of the amendment:

> To protect the freedom of conscience for patients and the right of health care providers to serve patients without violating their moral and religious convictions.

And here's the roll call.

> Senate Democrats voted down the **Coburn Amendment #828** tonight.
>
> The vote was **41 to 56** against the amendment.
> Senators **Snowe**, **Collins** and **Specter** voted with democrats on the amendment.

The description of the amendment is up at Coburn's blog.

Excerpt:

> This amendment ensures that the funds made available through the budget's health care reserve fund will not be used to violate the conscience of health care providers or to allow government bureaucrats to make health care choices for patients, including which doctors they may see.

But the Democrats are not the only ones who disagree with the right to conscience.

Commenter ECM sent me this story from the Anchoress on abortion. Rev. Ragsdale, the new Dean of Episcopal Divinity School in Cambridge, Massachusetts has a peculiar belief about the place of abortion in Christianity. The Anchoress cites a sermon on her blog in which she states her views plainly.

Here is Rev. Ragsdale on abortion:

> …when a woman becomes pregnant within a loving, supportive, respectful relationship; has every option open to her; decides she does not wish to bear a child; and has access to a safe, affordable abortion – there is not a tragedy in sight — only blessing. The ability to enjoy God's good gift of sexuality without compromising one's education, life's work, or ability to put to use God's gifts and call is simply blessing.
>
> These are the two things I want you, please, to remember – abortion is a blessing and our work is not done. Let me hear you say it: abortion is a blessing and our work is not done. Abortion is a blessing and our work is not done. Abortion is a blessing and our work is not done.
>
> I want to thank all of you who protect this blessing – who do this work every day: the health care providers, doctors, nurses, technicians, receptionists, who put your lives on the line to care for others (you are heroes — in my eyes, you are saints); the escorts and the activists; the lobbyists and the clinic defenders; all of you. You're engaged in holy work.

And in a different place, Rev. Ragsdale writes about medical personnel who refuse to perform abortions due to conscience:

> Let me say a bit more about that, because the religious community has long been an advocate of taking principled stands of conscience – even when such stands require civil disobedience. We've supported conscientious objectors, the Underground Railroad, freedom riders, sanctuary seekers, and anti-apartheid protestors. We support people who put their freedom and safety at risk for principles they believe in.
>
> But let's be clear, there's a world of difference between those who engage in such civil disobedience, and pay the price, and doctors and pharmacists who insist that the rest of the world reorder itself to protect their consciences – that others pay the price for their principles.
>
> This isn't particularly complicated. If your conscience forbids you to carry arms, don't join the military or become a police officer. If you have qualms about animal experimentation, think hard before choosing to go into medical research. And, if you're not prepared to provide the full range of reproductive health care (or prescriptions) to any woman who needs it then don't go into obstetrics and gynecology, or internal or emergency medicine, or pharmacology. Choose another field! *We'll respect your consciences when you begin to take responsibility for them."*

Laura at Pursuing Holiness explains how to get the sermon here since it was quickly deleted by Rev. Ragsdale:

> … Ms. Ragsdale deleted the sermon, but on the intarweb things have a zombie-like way of coming back to get you. Cached copy is here. And for posterity, here's a PDF of the cached page with Our Work Is Not Done.

Laura goes on to make these admirable comments:

> ***Yes*. I am so sick of this postmodern "what's true for you" mindset that prevents people from calling out evil in the name of tolerance. Aside from "Katie Rags" blessed sacrament of abortion, though, obviously the American church continues to weaken. We're so seeker-sensitive, tolerant and multi-culti we scarcely bother to defend it.** Success is too often defined by butts in the seats – an easy metric to quantify – not true discipleship, which is less metric and more "I know it when I see it."

I agree with you, Laura! And I'd go further. My readers already know what I think about the feminized church, its anti-intellectualism, and its refusal to engage. I also wrote about how to talk about your faith with others, even in the workplace. Please check out my index of posts on Christianity for more on how to defend your Christian beliefs in the public square.

Green policies will cost hundreds of thousands of jobs per year

April 3, 2009 | by Wintery Knight | Link | Original Link

Gateway Pundit has the story here.

He cites Heritage Foundation research for these figures:

> Perhaps the most alarming part is the price tag associated with attempting to reduce such a small part of the atmosphere and something we really cannot control. Our analysis shows **the cumulative GDP losses for 2010 to 2029 approach $7 trillion.** Single-year losses exceed $600 billion in 2029, more than $5,000 per house¬hold. **Job losses are expected to exceed 800,000 in some years**, and exceed at least 500,000 from 2015 through 2026. It is important to note that these are net job losses, after any jobs created by compliance with the regulations–so-called green jobs–are taken into account. In total, the "climate revenue" (read: energy tax) could approach two trillion over eight years. Keep in mind, **this is all for negligible environmental benefits**.

The Heritage Foundation piece also makes clear how much of an impact this will have on the planet's temperature:

> Out of the entire atmospheric makeup, only one to two percent is made up of greenhouse gases with the majority being nitrogen (about 78 percent) and oxygen (about 21 percent). Of that two percent, "planet-killing" carbon dioxide comprises only 3.62 percent while water vapor encompasses 95 percent. And of the amount of carbon dioxide in the atmosphere, humans cause only 3.4 percent of annual CO2 emissions.

They have a nice graph that shows these numbers.

Ace of Spades also has nice graphs of solar activity and how well it coorelates to planetary temperature. You know, exactly in the way that CO2 *doesn't.* (And Ace has a graph for that, too).

Further reading

I blogged about the United Nations' plan to stop global warming with *global wealth redistribution* here. More on how much your energy prices will rise, the democrats plan to impose carbon-tariffs on imports, scientific dissent from catastrophic anthropogenic global warming, Al Gore's refusal to debate and Obama's plan to raise taxes on oil production.

Gary Habermas explains the earliest source of resurrection facts

April 3, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome, visitors from Free Canuckistan! Did you know that Binks is a web elf? It's true!

UPDATE: Western Experience has video of Gary Habermas in action here.

UPDATE: Welcome, visitors from Stand to Reason! Thanks for the link, Melinda!

Do you just skim right over 1 Corinthians 15:3-7 when you read your Bible? Did you know that this passage is the best passage in the entire Bible when it comes to defending the resurrection? Let's take a look at a lecture where historian Gary Habermas explains the importance of 1 Corinthians 15:3-7 for defending the bodily resurrection of Jesus as a historical event.

Recall that there are certain criteria for deciding what passages of the New Testament writings are historically reliable. Here is a great article from Gary Habermas that explains all of the criteria. Below, I'll list some of the criteria from that article.

Early attestation

Early sources include: 1) 7 of the 13 Pauline books that are unanimously accepted as being authored by Paul, 2) the "Q" passages which are shared by Matthew and Luke, but that are not in Mark, and 3) certain short creedal passages from the book of Acts. The 7 reliable Pauline epistles are Romans, 1 Corinthians, 2 Corinthians, Philipians, 1 Thessalonians, Galatians and Philemon.

Habermas writes:

> With regard to the historical Jesus, any material between 30 and 50 AD would be exemplary, a time period highly preferred by scholars like those in the Jesus Seminar.
>
> Reports from such an early date would actually predate the written Gospels. A famous example is the list of Jesus' resurrection appearances supplied by Paul in 1 Corinthians 15:3-8. Most critical scholars think that Paul's reception of at least the material on which this early creedal statement is based is dated to the 30s AD. Other examples are supplied by the brief creedal statements that many scholars find embedded within the Book of Acts, which Gerald O'Collins dates to the 30s AD. From the so-called "Q" material in the first and third Gospels, another instance is the statement of high Christology found in Matthew 11:27/Luke 10:22. Further, Paul's earliest epistles date from the 50s AD.

Eyewitness testimony

Habermas writes:

> Whenever these early sources are also derived from eyewitnesses who actually

> participated in some of the events, this provides one of the strongest evidences possible. Historian David Hackett Fischer dubs this "the rule of immediacy" and terms it "the best relevant evidence." When scholars have ancient sources that are both very early and based on eyewitness testimony, they have a combination that is very difficult to dismiss.
>
> In our previous example, one reason critical scholars take Paul's testimony so seriously is that his writings provide both a very early date as well as eyewitness testimony to what Paul believed was a resurrection appearance of Jesus. This is even conceded by atheist scholar Michael Martin. Other crucial instances would concern any eyewitness testimony that can be located in the Gospel accounts.

Multiple attestation

Habermas writes:

> Independent attestation of a report by more than one source is another chief indication that that a particular claim may be factual. Ancient historian Paul Maier asserts that: "Many facts from antiquity rest on just one ancient source, while two or three sources in agreement generally render the fact unimpeachable." The Jesus Seminar emphasizes items "attested in two or more independent sources."
>
> Several important examples might be provided. Of the five sources often recognized in the Gospel accounts, Jesus' miracles are reported in all five, with some specific occurrences reported in more than one. Jesus' crucial "Son of Man" sayings are also attested in all five Gospel sources. And the empty tomb is reported in at least three, if not four, of these Gospel sources. This helps to understand why these items are taken so seriously by contemporary critical scholars.

Timeline of New Testament sources

You can only use the data that pass these criteria when you are constructing historical hypotheses in a debate setting. But the passage of 1 Corinthians 15:3-7 is special, because it has the markings on an ancient creed. As Habermas explains, Paul received this creed within *five years of the crucifixion.* Paul verified this creed *twice* with eyewitnesses, Peter, John and James, in Galatians 1:11-24 and Galatians 2:1-10.

So, let's set the date of Jesus' death as being 30 AD. Then ask the question: what sources are closest to the event? We need to have multiple early sources in order to be able to surface minimal facts that can be used when debating skeptics and atheists. Here's the timeline, using the absolute latest possible dates for the sources:

- 30 A.D.: Jesus is crucified. (+0)
- 31 A.D.: The early creed originates around this time
- 35 A.D.: Paul receives the early creed from Peter, John and James in Jerusalem
- 55 A.D.: 1 Corinthians (+25)

- 70 A.D. Mark (+40)
- 80 A.D. Matthew (+50)
- 85 A.D. Luke (+55)
- 95 A.D. John (+65)

My preferred dates on the gospels are at least 5 years ealier than the skeptical dates. So, your earliest source for minimal facts about the resurrection is 1 Corinthians 15:3-7. I explained before how to leverage the facts in 1 Cor 15, and other minimal facts, into a case for the resurrection.

Personal application

You really need to be able to talk to your friends and co-workers about the resurrection. That is our obligation as Christians. When you talk to non-Christians, you cannot use the entire Bible *on faith*. Your opponent is not going to allow you to use the entire text as a source because they don't assume that it is inerrant. You need to argue from minimal facts that pass the standard historical criteria.

So, you need to learn how to explain how scholars extract the minimal facts from the Biblical sources. You need to list the criteria, explain why they are generally accepted, and then apply them. You need to know the dates and authors of the New Testament writings. You need to know which passages are considered to be minimal facts. And then you can make you case on those facts.

I think the most promising strategy is to argue from a supernatural creator and designer, using some recent scientific discoveries, and then go on from there to historical concerns once the existence of a deistic God has been firmly established.

Further study

First, listen to the 30-minute lecture delivered at California Polytechnic State University in 2008 by Gary Habermas, on 1 Corinthians 15:3-7. Then, check out N.T. Wright's case for the resurrection. Then listen to this lecture delivered at California State University in 2005 by William Lane Craig, on arguing from the minimal facts.

And finally, you can check out some debates on the resurrection. I recommend the debate between William Lane Craig and Roy Hoover. But it is important to read the N.T. Wright's case for the resurrection *first!* There is a cross-examination section in the debate, so if you're into that, as I am, then get your fix here.

Featured site: The Western Experience

April 3, 2009 | by Wintery Knight | Link | Original Link

I had plans of writing lots of wonderful posts on foreign policy when I started this blog. But when I tried to do so, I found out that watching all the episodes of Danger Man and Secret Agent, together with my wargaming experience, was no preparation at all for being able to blog on current events!

And that is why I am glad to tell you about a relatively new blog called The Western Experience, that started up around the same time I did. The blog features *great posts* on foreign policy, and it's off to a fast start in terms of readership!

Here are some of The Western Experience's recent posts:

- NATO doesn't exist to coddle offended Muslims.
- America is not arming Mexico's war.
- Iran to the world: 'You can win by defiance'
- Saudi Arabia could be headed towards unstable times.
- North Korean missile launch eminent. Will there be consequences?
- Qaddafi settling in comfortably as new leader of Africa

Blogging about foreign policy is *hard*. So I really appreciate Jason's work on these issues.

Live-blogging the William Lane Craig vs Christopher Hitchens debate

April 4, 2009 | by Wintery Knight | Link | Original Link

UPDATE: My play-by-play transcript of the debate is here.

I got the following e-mail from Reasonable Faith regarding the debate tomorrow between William Lane Craig and Christopher Hitchens:

> Follow the debate on our special blog update live from the debate floor!
>
> **The Live Blog will be held at:** DoesGodExistDebate.blogspot.com
>
> The debate begins at 7:30 pm (Pacific) on Saturday, April 4, 2009. If you can't make it in person, join us online!
>
> More debate info can be found at DoesGodExistDebate.com.

I'm really not sure what they have planned for this live-blogging. If you really want to get ready for the debate, check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek. You can also watch or listen to a *preview debate* that was held in Dallas recently between Craig, Hitchens and some other people.

For a complete list of arguments that are used in these debates, check out my list of posts on defending Christianity here. It includes information on scientific, philosophical and historical arguments, pro and con.

Tough Questions Answered has first report of Licona/Ehrman debate!

April 4, 2009 | by Wintery Knight | Link | Original Link

Here is their commentary on the recent Licona vs. Ehrman debate at SES. And they didn't even tell me about it, I had to find it myself. Those meanies!

Excerpt from their awesome post-debate report:

> Here is my summary of the arguments that each of them presented.
>
> Licona opened the debate with a historical argument that goes like this. First, he argued, virtually all historians (close to 100%) agree on three key facts about Jesus:
>
> 1. He died by crucifixion.
> 2. His disciples believed they saw Jesus appear several times after he died.
> 3. The apostle Paul believed he saw Jesus appear after he died.
>
> Then, Licona explained that the historian's job was to figure out the best explanation of these three facts. There are four criteria that the professional historian should use to judge possible explanations of the facts:
>
> 1. explanatory scope
> 2. explanatory power
> 3. plausibility
> 4. less ad hoc

I read their post, and it sounds like Bart Ehrman made his standard discredited case based on 1) manuscript variants and 2) David Hume's argument against miracles. He doesn't even care that he lost his debate against Craig with these exact same arguments.

As I reported before:

> In Ehrman's debate with Peter Williams on the UK-based Unbelievable radio show, and in Ehrman's debate with Dan Wallace, Ehrman lists the 4 worst problems caused by the invariants:
>
> 1. the woman caught in adultery (John 7:53-8:11) is a late addition not present in the earliest manuscripts
> 2. the long ending of Mark (Mark 16:9-20) is a late addition not present in the earliest manuscripts
> 3. Jesus was angry and not compassionate when he healed the leper (Mark 1:41)
> 4. that Jesus died apart from God, and not by the grace of God (Hebrews 2:9)

> Now I have to tell you, these disputes are *irrelevant* to standard Christian doctrine. Also, I personally *prefer* the woman at the well story being left out, and I *prefer* angry Jesus in 3). Why? Because I am *snarky*. The only variant that bugs me is the ending in Mark, because I liked the long ending. But none of these "worst cases" affects anything that Mike Licona might say on behalf of the resurrection, which is what the debate is supposed to be about, right?

That post also had some links to other debates on the resurrection. Furthermore, in previous debates, Ehrman's argument against miracles is really just David Hume's argument against miracles, which even non-Christian scholars, like John Earman, have defeated at the highest level here:

- Hume's Abject Failure: The Argument Against Miracles, Oxford University Press, 2000.

Here is an another interesting part of part one of TQA's report (part two is forthcoming, they say!):

> Interestingly, Ehrman did fully accept Licona's three facts about Jesus as historically true. He just didn't accept the explanation of Jesus rising from the dead to explain those facts. His favorite explanation seemed to be hallucinations, so the two debaters spent a lot time discussing hallucinations.

UPDATE: Part 2 of their evaluation has been posted!

Mark Sanford stands tall against left-wing media bias

April 4, 2009 | by Wintery Knight | Link | Original Link

27-minute Video below. (H/T The Maritime Sentry)

The interviewer appears to be working from Democrat talking points, and Sanford has to correct obvious deceptions several times during the speech. The questioners are all predictably representing Democrat special interest groups, such as teacher unions. Why do these left-wing activists ask for money when private and charter schools can educate students *better* for *half the price* of failing public schools?

Remember, the DNC had plenty of money to run ads against Sanford to pressure him into compliance, too.

Other posts on Mark Sanford:

- Sanford interview with the Acton Institute
- Sanford refuses to take bailout funds

Sanford's opponents seem to be concerned about education and health care, but I don't see why we should be having government solve these problems by throwing money at them, instead of my introducing competition using vouchers and de-regulation. Customers do better when service providers, like schools and health care providers compete.

Reviews of Christopher Hitchens' book

April 4, 2009 | by Wintery Knight | Link | Original Link

I saw this book review about Christopher Hitchens' book "God is Not Great", written by Melinda Penner of Stand to Reason.

The post is here. Here is an excerpt:

> Let me say something that isn't very pleasing to think about Religion isn't false just because it's cruel. Even if every one of Hitchens' accusations were accurate, they don't disprove the truth of religion. God might be a cruel being who does delight in manipulating man. In that case, Hitchens' claim that "religion poisons everything" might be true, but his real claim is that God doesn't exist. And that just doesn't follow from every evil example of religion.

What standard of morality is Hitchens using to judge God and Christians as evil? If it is his personal preference, then who cares what he thinks. If it is the current fashion of the culture he is in in this time and place, who cares? That "standard" will change as time and place changes. It's convention. But, if it is an objective moral standard that exists independently of what individuals and cultures think, then God exists to make that design for the way the world ought to be.

Next excerpt:

> Hitchens says religion is evil, and he does mean evil and sin. He freely uses moral language to pin the blame right where he believes it belongs, but he never explained how he, as a materialist, can use moral language and mean them as moral terms that all mankind are beholden to….
>
> As I mentioned, Hitchens professes materialism, believes it's proved. He freely makes moral accusations against religion and religious people. He freely admits contempt, and, given what he believes, that would be the proper response. He accuses religion of sins and evil. These are real, objective categories for him, not his personal sentiment. He never explains how, as a materialist who believes in a world of only what science can explain and prove in the physical world, he can lay claim to morality. He ignores the grounding problem, the explanatory power of a view of reality to account for the features in it. Morality, the way Hitchens is using it, has no material explanation. How does he account for the prescriptive, universal nature of morality, not merely descriptive? His humanism won't get him there because that can only offer a descriptive, contingent account – whatever is is morality. On this major flaw alone, it's justified to ignore anything Hitchens claims because his view of reality can't lay claim to morality.

Melinda wants to know how Hitchens' can help himself to the notion of rationality on a materialistic worldview. After all, if materialism is true, humans are pure matter. Everything humans do is causally determine by their genetic programming and sensory

inputs. But that behavior is targeted towards *survival and reproduction* not *reasoning about the external world.*

She writes:

> There's more to the grounding problem, too. Is rationality material? He can't even ground the rationality he sees as the crown of human progress. If man is purely material, then he's a machine programmed by nature, c-fibers firing, acting according to the laws hard-wired by his biology. He lauds the "chainless mind," free from religion. Yet in his view of reality, man is chained by determinism with no escape. There is no rationality because there is no option to behave, think, believe any way other than we do. There's no point in even trying to persuade religious people to believe and behave different since we're also just acting the way we're programmed to. Indeed, even scientific inquiry that Hitchens offers as the hope of mankind is nonsense since only one conclusion is predetermined by our programming.

And it goes on from there. I'm looking forward to the (not yet planned) debate between Melinda Penner and Christopher Hitchens! Because I think she could kick his butt with half her brain tied behind her back.

If you want to get ready for the debate today between William Lane Craig and Christopher Hitchens, check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek. You can also watch or listen to a *preview debate* that was held in Dallas recently between Craig, Hitchens and some other people. Biola University is live-blogging the debate as well.

UPDATE: I was just chatting with Brian Auten of Apologetics 315, and he recommended this review of Hitchens' book by Douglas Groothuis. This is a 28-minute audio clip.

Summary of the William Lane Craig vs Christopher Hitchens debate: Does God Exist?

April 5, 2009 | by Wintery Knight | Link | Original Link

UPDATE: The video of the debate has been posted:

TOPIC: DOES GOD EXIST?

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

WC opening speech:

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws

– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think
– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

CH opening speech:

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus

– god wouldn’t have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that’s a bad design
– the universe is so vast, why would god need so much space, that’s a bad design
– there is too much destruction in the universe, like exploding stars – that’s a bad design
– the heat death of the universe is a bad design
– too many of the other planets don’t support life, that’s a bad design
– the sun is going to become a red giant and incinerate us, that’s a bad design

3. hitchens’ burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can’t prove there is no god
– but they can prove there is no good argument for god

4. craig’s scientific arguments don’t go far enough, they only prove deism, not theism
– the scientific arguments don’t prove prayer works
– the scientific arguments don’t prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn’t be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig’s evidence was extraordinary

7. science can change, so craig can’t use the progress of science
– it’s too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god’s existence should trump contradicting evidence
– but then he isn’t forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don’t believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

WC first rebuttal:

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you’ve got is agnosticism
– because CH did not claim to know there is no God

– and he gave no arguments that there is no God

CH’s evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH’s argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn’t need to be efficient

CH’s argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH’s argument that Craig’s scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work
– all that deism denies is miraculous intervention

CH’s argument that Craig has a burden of proof
– theism doesn’t need to be proven with certainty
– must only prove best explanation of the evidence

CH’s citation of Craig’s book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH’s rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH’s rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH’s argument about heat death of the universe
– duration of design is irrelevant to whether something was designed

– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

CH first rebuttal:

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old
– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do

– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

WC cross-examination of CH:

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

CH cross-examination of WC:

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

WC second rebuttal

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument <signal loss>
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing

– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection <signal loss>
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

CH second rebuttal:

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

WC concluding speech

no arguments for atheism presented

What CH has said during the debate:
– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it's just a genetic predisposition to act in a certain way – that's not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

CH concluding speech

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

Further study

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek. You can also watch or listen to a *preview debate* that was held in Dallas recently between Craig, Hitchens, Lee Strobel and some other people. Biola also officially live-blogged the debate here.

Philosopher Doug Geivett's review is here. He attended the debate.

For more on the arguments used in the debate, see my index of arguments here.

Final comments on the William Lane Craig vs Christopher Hitchens debate

April 5, 2009 | by Wintery Knight | Link | Original Link

Information about how to get the audio and video of the debate will be posted here, later.

My written summary of the debate is here. It's really a play-by-play of every statement made.

Doug Geivett's review of the debate

Doug Geivett's *excellent* summary of the debate is here. This is a comprehensive summary!

The Pugnacious Irishman

The Pugnacious Irishman has a super summary of the debate. (He attended it) In addition, he has some very welcome comments about the general task of apologetics.

Excerpt:

> As **I've said before** (third part of a three part series. To get the whole of my presentation, you need to read the first two parts as well.), this is a gigantic red herring, and confuses epistemology with metaphysics/ontology. Craig was asking, "how can an atheist ground his moral beliefs?" not "how can an atheist behave morally without believing in God?" Those are two totally different questions. In the absence of a good God that grounds morality, well, the atheist might *think* he's behaving morally, but he's just attaching words without meaning to his actions..actually, the same goes for the theist! Without God, all anyone ever does is act in ways we call morality, but our words are meaningless. The moral sense that we have (that Hitchens claims develops via evolution) is merely an illusion that aids our survival…that's what you get if you follow the atheistic premises where they lead.

And towards the end of the post:

> The highlight of the debate for me was when Craig made an evangelistic appeal to both Hitchens and the non believers in the audience. Of course, Hitchens wasn't just gonna bow the knee right there, but this underscores a proper view of apologetics: it is an evangelistic, missionary enterprise.
>
> I frequently hear Christians dismiss apologetical ventures because "its all just arguing about words. You can't win anyone to Christ with an argument. Only the Holy Spirit can do that. It's all head and no heart and is totally irrelevant to my life."
>
> First, I think anyone watching tonight could see Craig's character and fervent love for the Lord. I've seen the same for many Christian philosophers and apologists on the intellectual front lines. They are winsome and attractive

> ambassadors, as Koukl says. This puts that last objection (it's all head and no heart) in it's place.
>
> Secondly, *nothing* in isolation can win someone to Christ without the Spirit, not even love or acts of service. But people are won over to Christ with arguments all the time when they are used by the Holy Spirit. With the Holy Spirit's help, they are quite potent.
>
> Third, it's not just arguing about words. It is rooted in care for the lost. **Paul** did it. **Jesus** did it. **The early church fathers** did it. Craig showed it tonight.
>
> Of course, if someone doesn't care for the lost, he won't care about any of this either…but that's another discussion.

I would like to see TPI post something about that "other discussion"!

Further study

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek. You can also watch or listen to a *preview debate* that was held in Dallas recently between Craig, Hitchens, Lee Strobel and some other people. Biola also officially live-blogged the debate here.

Some book reviews of Hitchens' book by Melinda Penner and Doug Groothuis are here.

For more on the arguments used in the debate, see my index of arguments here.

UPDATE: Looks like this has been picked up by Breitbart here.

BY THE WAY: If you enjoyed Bill Craig's performance in his debate, why not stop by his Reasonable Faith web site and leave him a donation? He won that debate through months and months of preparation. So, when you fund his research, you really are helping him to go out there and do his job well. Won't you consider helping Bill in his work?

Editorials by Stephen Baskerville, John Lott, Thomas Sowell and Walter Williams

April 6, 2009 | by Wintery Knight | Link | Original Link

I thought I would throw out a variety of recent editorials from some of my favorite economists and public policy experts. Economist Robert P. Murphy isn't featured today, because I wrote an *entire post* about his excellent article on energy policy recently.

Does the government discourage marriage and family?

Patrick Henry College economist Stephen Baskerville wrote an article about the government's role decline of marriage and the family.

He writes:

> …80 percent of divorces are unilateral. Under "no-fault," divorce becomes a power grab by one spouse, assisted by judicial officials who profit from the ensuing litigation: judges, lawyers, psychotherapists, and social workers. Involuntary divorce involves government agents forcibly removing innocent people from their homes, seizing their property, and separating them from their children. It requires long-term supervision over private life by state functionaries, including police and jails.
>
> …Invariably the first action in a divorce is to separate the children from one parent, usually the father. Even if he is innocent of any legal wrongdoing and does not agree to the divorce, the state seizes his children with no burden of proof to justify why. The burden of proof–and financial burden–falls on him to demonstrate why they should be returned.
>
> A legally unimpeachable parent can thus be arrested for seeing his own children without government authorization. He can be arrested through additional judicial directives that apply to no one but him. He can be arrested for domestic violence or child abuse, even without evidence that he has committed any. He can be arrested for not paying child support, regardless of the amount demanded. He can even be arrested for not paying an attorney or psychotherapist. There is no formal charge, no jury, no trial, and no record.

If these statements surprise you, I recommend you read the whole article to find out how this is done. You will never see anything like this reported in the mainstream media. They have an agenda that forbids telling the truth about this issue.

Do gun-free zones discourage multiple victim public shootings?

University of Maryland economist John R. Lott writes about gun-free zones and their effect on MVPS incidents in this Fox News article.

He writes:

> Time after time multiple- victim public shootings occur in "gun free zones" —

> public places where citizens are not legally able to carry guns. The horrible attack today in Binghamton, New York is no different. Every multiple-victim public shooting that I have studied, where more than three people have been killed, has taken place where guns are banned.
>
> You would think that it would be an important part of the news stories for a simple reason: Gun-free zones are a magnet for these attacks. Extensive discussions of these attacks can be found here and here. We want to keep people safe, but the problem is that it is the law-abiding good citizens, not the criminals, who obey these laws. We end up disarming the potential victims and not the criminals. Rather than making places safe for victims, we unintentionally make them safe for the criminal.

Lott is the author of "More Guns, Less Crime", a study, published by University of Chicago Press, that shows how concealed-carry laws drastically reduce crime in every state in which these laws were enacted. Surprising? Take a second look.

Is moral equivalence good foreign policy?

Hoover Institute (Stanford University) economist Thomas Sowell writes about the danger of electing a president with no executive experience at any level. Especially one who believes, as Evan Sayet says, that evil is good, and good is evil.

Sowell writes about Obama's affection for Iran and Russia:

> What did his televised overture to the Iranians accomplish, except to reassure them that he was not going to do a damn thing to stop them from getting a nuclear bomb? It is a mistake that can go ringing down the corridors of history.

> …This year, President Obama's attempt to make a backdoor deal with the Russians, behind the backs of the NATO countries, was not only rejected but made public by the Russians– a sign of contempt and a warning to our allies not to put too much trust in the United States.

And his hostility for Israel and Britain:

> However much Barack Obama has proclaimed his support for Israel, his first phone call as President of the United States was to Palestinian President Mahmoud Abbas, to whom he has given hundreds of millions of dollars, which can buy a lot of rockets to fire into Israel.
>
> Our oldest and staunchest ally, Britain, has been downgraded by President Obama's visibly less impressive reception of British Prime Minister Gordon Brown, compared to the way that previous Presidents over the past two generations have received British Prime Ministers.

You can find a lot more about the kind of foreign policy threats we face at The Western Experience. The world is not a safe place, Bush just made it look that way by keeping our enemies in check, in exactly the way Obama won't.

Is wealth redistribution morally justified?

Finally, let's see what George Mason University economist Walter Williams has to say about the morality of wealth redistribution.

Excerpt:

> The reason is that now that the U.S. Congress has established the principle that one American has a right to live at the expense of another American, it no longer pays to be moral. People who choose to be moral and refuse congressional handouts will find themselves losers. They'll be paying higher and higher taxes to support increasing numbers of those paying lower and lower taxes. As it stands now, close to 50 percent of income earners have no federal income tax liability and as such, what do they care about rising income taxes? In other words, once legalized theft begins, it becomes too costly to remain moral and self-sufficient.

I recommend clicking on whichever of these stories strikes you as the most wrong or unfamiliar, and see if reading the whole thing changes your mind at all. I think it's a fun experience to become more aware and tolerant of different views by learning about them. You can still disagree, but you'll have more understanding.

Recent legislative activity by Trent Franks and Jim Demint

April 6, 2009 | by Wintery Knight | Link | Original Link

I was listening to Mike Pence guest host "The Washington Watch Weekly" radio show recently, which is normally hosted by the Family Research Council's Tony Perkins. And he introduced me to a real pro-life Congressman named Trent Franks. He had Franks on the show and he really seemed to like him. So, I checked up on Franks and added him to my blogroll.

And then I noticed this news story on OneNewsNow.

Excerpt:

> Congressman Trent Franks of Arizona has introduced the "Prenatal Nondiscrimination Act." If passed, the bill would ban race- or gender-selection abortions.
>
> Attorney Steven Aden of the Alliance Defense Fund tells OneNewsNow his organization helped write the bill that is being referred to as "PreNDA."
>
> "Sex-selection and racially-motivated abortion is an immense problem in America and internationally," the attorney explains, "and Congressman Franks' bill would prohibit the performance of such abortions, the funding of them, or promoting them."

That's good news.

And remember how the Heritage Foundation was worried that the porkulus-1 spending bill would nationalize health care? Well, check out this proposed amendment by Senator Jim Demint.

Excerpt:

> Senator DeMint is offering an amendment to the budget resolution that would prevent any legislation from being passed with less than 60 votes that would eliminate the ability of Americans to have freedom in their health care choices. If passed, the amendment would reinforce President Obama's campaign promise to protect the ability of Americans to keep their health care plan and choice of doctor, regardless of changes made to the health care system.

So, we're seeing some advocacy on two fronts: social issues and fiscal issues.

Are all religions basically the same?

April 6, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from The Western Experience! Thanks for the link, Jason!

I'm sure that all my readers will have noticed that there a huge number of different religions in the world. This is called *religious pluralism.* Religions all make claims about the way the universe is, and the way that we ought to act in order to solve the problems that we all face as human beings.

The law of non-contradiction

To start with, we all need to be familiar with the law of non-contradiction. This is the stuff that software engineers all learned in undergraduate computer science courses. Computer science is a lot like analytical philosophy because both study symbolic logic. Analytical philosophy is as rigorous as mathematics.

The law says that for any proposition P, P cannot be true and not true at the same time, and in the same context. For example, let P be the statement "it is raining outside my window right now". It is impossible that the reality of the world be that it is raining outside my window right now, and not raining outside my window right now.

The external world is shared by all of us, and it is objective (it is not affected by what we think about it). When we make propositional claims, it is the external, mind-independent world that makes claims true or false. And by "world" I mean all of reality, past, present and future.

Similarities between religions

On a superficial level, religions are similar because they all try to answer the same kinds of questions:

- what is the nature of the ultimate reality in the universe?
- what is the fundamental problem faced by human beings?
- what should human beings do to solve this problem?

These questions are shared by all religions, but on a more fundamental level, religions are all completely different because they give *mutually exclusive* answers to these questions. Therefore, according to the law of non-contradiction, they cannot all be true at the same time and in the same context.

Differences between religions

In this post, blogger Neil explains how the Christian Bible claims that Jesus died on a cross, but the Koran claims he did not die on a cross. How do we understand these two contradictory claims? Are they propositional truth claims about the external world, or something else? There are two answers.

Postmodernism: Treating religious claims as subjective nonsense

We could say that all religious claims are just nonsense, and are not intended to apply to

the external world, but are just personal preference claims about each believer – they are neither true nor false. The problem is that the postmodernist is then being condescending to the religious adherent by redefining their own words.

Rationality: Treating religions claims as genuine claims about reality

We could instead avoid insulting believers by being condescending about their claims. We could say that all religious claims are exactly what the believers claim they are: real claims about the external world. We could then resolve the conflicts using the same tools we use in our everyday lives: the laws of logic and empirical evidence.

How do postmodernists reinterpret religious claims as non-propositional?

Here are a few ways that postmodernists reinterpret the conflicting claims of different religions:

1. relativism: you reinterpret truth claims of the different religions so that they are claims of personal preference, which express the deluded myths that each individual religious person finds "fetching"
2. pragmatism: you reinterpret truth claims of the different religions so that they are claims of personal selfishness, so that each religious believer chooses the delusion that is personally satisfying to them
3. syncretism: you re-interpret truth claims of the different religions so that claims that are absolutely central, such as "was Jesus God?" are reinterpreted as being peripheral issues, and then the religions can all agree on the core of religious belief, such as advocacy of socialism, global warming and abortion

Why would postmodernists want to treat religious claims as nonsense?

In addition to the desperate desire to keep God from having authority over our moral decision-making (i.e. – sin, rebellion, etc.), there are 3 reasons why people try to treat religious claims as non-propositional nonsense.

1. Ignorance: people do not know the conflicting truth claims that different religions make
2. Laziness: people do not want to have to spend time evaluating the competing truth claims
3. Cowardice: people do not want to investigate and debate truth claims: it makes them unpopular

Postmodernists have decided that the purpose of life is to be hedonistic, and not to worry about the world really is. They think that trying to find out the truth about our origins, our purpose, and our ultimate fate is hard work, and talking about it makes them unpopular. So they don't want to do it.

But that is not what they say when you ask them. Instead, they say that disagreements about religion has caused a lot of wars, and so it's better if we just reduce the question of truth in religion to personal preference. That way, everyone can choose the delusion that

makes them happy, (although religions are all *actually* false).

But postmodernists are arrogant to redefine the claims of all religions as nonsense. And it is self-refuting because they are substituting their own view of religion as objectively true, which is just what they deny everyone else. And if disagreeing about religion causes wars, then why are they disagreeing with us about religion?

So then how do we deal with the plurality of religions?

The answer is to treat religion the *exact same way* as any other area of knowledge. We can tolerate people's right to disagree, disagree while still being polite, and resolving disputes using logic, and evidence supplied from disciplines such as analytical philosophy, scientific investigation, and historical analysis.

People who want to involve emotion and intuition in the process of testing the conflicting religious claims can just butt out of the conversation. The search for truth should proceed *irrespective* of what you think about the truth claims of religion. Yes, the doctrine of Hell offends people, but *that doesn't make it false*.

Further study

Portions of this article were borrowed from this lecture by philosopher Douglas Groothuis, in which he explains the how to think carefully, using the laws of logic, about religious claims and the fact of religious pluralism. Note that Doug is *a lot* less snarky than I am in the lecture.

Also, I noticed that Unbelievable has posted a debate between Muslim Shabir Ally and Christian Tony Costa on whether Jesus dried on a cross and whether he rose from the dead.

Here are some related posts on the question of postmodernism and testing religious claims. All of them are far, far, far less snarky than my post today.

- Walter Bradley: is there objective truth in religion? (for beginners)
- William Lane Craig: are there objective truths about God?
- A Christian and a postmodern discuss religious pluralism (many logical contradictions exposed!)

Related objections answered:

- Does the Bible teach that faith is opposed to logic and evidence?
- Six enemies of apologetics engagement
- Why men flee the feminized church
- How to talk to your co-workers about your faith
- Why doesn't God give us more evidence that he exists?
- What about the problems of evil and suffering?
- What about those who have never heard of Jesus?

Obama cuts military spending, blinks at North Korean aggression

April 7, 2009 | by Wintery Knight | Link | Original Link

You knew that the socialist ACORN lawyer was going to cut military spending at some point. Well, he's done it.

Sweetness and Light reports on the cuts in military spending here. (H/T Gateway Pundit)

Excerpt from an AP article:

> Production of the F-22 fighter jet, which cost $140 million apiece, would be halted at 187.
>
> ...The Army's $160 billion Future Combat Systems modernization program would lose its armored vehicles. Plans to build a shield to defend against missile attacks by rogue states would also be scaled back...

See, the thing you need to understand is that wars start when aggressors believe they can win the war. When you build up your own military, aggressors start to understand that victory may not be so easy. That's how you prevent wars from even starting. This is called **peace through strength**.

So, by cutting defense spending, Obama is basically emboldening aggressors. Not just aggression against us, but aggression against our allies. If our enemies do not believe that we have the will or the firepower to defend our interests, and those of our allies, abroad, then they will act against our interests. The North Korean missile launch is just the beginning.

Closing Velocity had some more details on the missile defense cuts. (H/T Hot Air)

> 1. Total cuts in missile defense: $1.4 billion or roughly 15%.
> 2. Cancel second Airborne Laser (ABL) aircraft, keep the one remaining ABL prototype as a testbed and revert to pure R&D.
> 3. No increases in Ground-based Interceptor (GBI) deployment in Alaska. Remaining silos will stay unfilled. European GBIs will be decided on later during the Quadrennial Defense Review (QDR).
> 4. Termination of the Multiple Kill Vehicle (MKV) program.

Hot Air linked to this Politico article, featuring comments by Newt Gingrich.

Excerpt:

> "Dick Cheney is clearly right in saying that between the court decisions about terrorists and the administration actions, the United States is running greater risks of getting attacked than we were under President Bush," said the former speaker of the House and Georgia congressman.
>
> On the North Korean missile launch, he said "the embarrassing repudiation of the

> United States appeal to the United Nations Security Council Sunday afternoon is a vivid demonstration of weakness. This is beginning to resemble the Carter administration's weakness in foreign policy."
>
> He said Obama's speech on nuclear disarmament in Prague on Sunday "is a dangerous fantasy that runs an enormous risk. It is part of the Obama administration's substitution of words for thoughts and fantasies for achievements."
>
> "Now we no longer have a 'global war on terror,'" Gingrich said. "We have 'overseas contingency operations' Now we will no longer have 'terrorist attacks.' We will have 'man-made disasters.' None of our enemies seem to have learned this new language."
>
> "There was amazing symbolism in North Korea deciding to launch a missile the very day President Obama was speaking to Europeans about his fantasy of nuclear disarmament. The West has talked with North Korea for over 15 years and they just keep building nuclear weapons and missiles. We have been talking with the Iranians for a decade and they continue to build nuclear capability and missiles.
>
> "Pakistan has a lot of nuclear weapons. Russia, India and China have nuclear weapons. Hamas in Gaza fires missiles into Israel virtually every day. In this reality, our president proposes we have a big meeting in Washington to discuss nuclear disarmament."

And he contrasts Obama's plan with Ronald Reagan's policy.

> "Reagan felt that keeping a defensive shield alive was more important than a paper deal. The Obama administration is rapidly undermining our missile defense system while describing a fantasy world of trust and cooperation."

Here is a related quotation from Ronald Reagan's debate against the 2nd worst president ever, Jimmy Carter.

> And I'm only here to tell you that I believe with all my heart that our first priority must be world peace, and that use of force is always and only a last resort, when everything else has failed, and then only with regard to our national security. Now, I believe, also, that this meeting this mission, this responsibility for preserving the peace, which I believe is a responsibility peculiar to our country, and that we cannot shirk our responsibility as a leader of the free world because we're the only ones that can do it. **Therefore, the burden of maintaining the peace falls on us. And to maintain that peace requires strength. America has never gotten in a war because we were too strong.**

Ronald Reagan's focus on strength projected abroad ended the cold war without firing a shot. And military spending is vital for achieving peace. But Obama is choosing a different path… the path of Jimmy Carter. And we all know where that ended.

UPDATE: More on the NK missile launch, including Gingrich video on Fox News Sunday at Nice Deb.

UPDATE: A new post on the effectiveness of waterboarding and Obama's intent to prosecute the authors of counter-terrorism policies, possible including George W. Bush himself.

Evaluating atheistic reponses to scientific arguments for theism

April 7, 2009 | by Wintery Knight | Link | Original Link

I thought that I would take a serious look at a couple of recent comments from the atheists who have been traipsing through looking for debate summaries. Normally I don't allow these kinds of comments through to dirty up the blog, but these ones were clean. So, I thought I would post them for all to see how atheism compares to Christianity.

First, let's take a look at commenter Jason R.

First post by Jason R

First of all, commenter ECM, who is a deist, writes that the scientific arguments "make the painfully obvious case for deism".

Jason R. writes in response:

> "painfully obvious case for deism"
>
> As soon as that case exists then I'm sure Hitch will debate against it. So far the case doesn't exist. Every argument for deism has been debunked, the supporters of which just need to perform a bit of due diligence and research it.

Here is my reply to his first post

> Can you give a list of the arguments for a deistic God that have been debunked?

Here is his reply to my question

> Every single one that I am aware of.
> http://www.google.com is good starting point.

What we learn about atheism from this exchange

It is a bad idea for atheists to insinuate that they have disproved the case for theism without citing logically valid arguments with premises that are supported by specific evidence. Because people like me are going to ask you: "what is your reason or evidence to support that assertion?" And you need to be ready to answer that before you make your assertions.

If you cannot even list the arguments for theism, then you don't know that they have been refuted. If your refutation of my scientific arguments is "Google it", then maybe you should reconsider your assertions. You're not helping your team when you cannot list arguments on the other side. Let me be clear: I can argue your case better than you can, and that should concern you.

Commenter ECM adds:

> Traditionally, in a debate, one will attempt to at least refute the points laid out rather than falling back on "Google it" and then offering the standard boilerplate

> materialist reply that ‘it was all one big accident’ but not before, of course, taking a gratuitous whack at theists a la Hitchens.
>
> …Furthermore, if you do not wish to do so (and when your response is ‘Google it’ you clearly do not or cannot), then why waste everyone’s time with the same hollow argument that at least Wintery and I have heard a thousand times?

Second, let’s take a look at commenter Arthur S.

Hist first post

Arthur S. writes:

> Everyone of the scientific arguments from the Christian posts site (see list below) has been refuted time and time again as you well know (seek and ye shall find vs. ignorance is bliss) but christians persist in claiming them as being valid. The same is true of the philosophical arguments which are really more about word play than useful proofs of anything.

Now ask yourself a question. What has he really said here? Well, nothing. He makes an assertion that my arguments have been refuted time and time again. What we have here is just an assertion *without any evidence*, followed by an insult, followed by an unabashed confession of ignorance regarding the construction of philosophical arguments.

His “refutations” of my scientific arguments

> 1) Creation of the universe out of nothing. (Refuted over and over. In addition the “how, who, what, when, where, why was god created?” are questions that can never be satisfactorily answered. How can a christian be satisfied with the shallow answers provided by the bible?)
> 2) Fine-tuning of physical constants and ratios to support the minimal requirements for life (see response to 4 below).
> 3) Origin of biological information in the simplest living organism (please read up on evolution before using this tired argument again).
> 4) Galactic, stellar and planetary fine-tuning to support the minimal requirements for life (Conditions for life exist throughout the universe. Christians fall into these kinds of traps all the time. Once contradictory evidence is demonstrated, they fight it for a few decades and then have to modify their belief system to accommodate the new findings. Kind of like how christians defended slavery in the U.S. in the 1900’s based on the bible until they developed some morals that were in opposition to the bible which contradicts the claim that our morals come from the bible).
> 5) Sudden origin of all animal phyla in the Cambrian explosion (”Sudden” if you consider 50 to 100 million years sudden and have an incredulous attitude).
> 6) Natural limits of biological change (again study up on evolution before making these kinds of nonsense arguments)

A critical evaluation of his responses

Let's take a look at his replies point-by-point.

1. No evidence is cited.
2. No evidence is cited. There is a long-winded personal attack against Christians, which is irrelevant to the science.
3. He says that evolution can explain the origin of the simplest living system. But evolution requires that replication already be in place, it cannot be used as an explanation of the first replicator. So citing evolution here is no defense to the explain the origin of the first replicating organism.
4. No evidence is cited, but there is a long-winded insult.
5. No source was provided for his "50-100 million years" number. The correct number according to the University of California at Berkeley is 5 million years. So that could just be an outright lie. And more insults, of course.
6. No evidence is cited, but we do get yet another insult.

So, there is popular atheism. No evidence, one probable lie, and tons of insults. I am not saying all atheists are like this, but many of them are like this. And I am talking about people with good degrees, good careers and good jobs. They really have never bothered to look into these issues. The creed of atheism is these ignorant, hateful diatribes.

And that's why they love people like Christopher Hitchens, and why many atheist web sites think he is a great debater. Because he is good at *hating* and *insulting* people he disagrees with. And that makes him the *best atheist*. On the other hand, Christians love people like William Lane Craig, because arguments, evidences and truth matter more to us.

Our bestselling books are Lee Strobel books, in which scholars with one or more PhDs are interviewed about their academic research publications. Their bestseller is "God is not great", in which an uneducated journalist goes on a hate-spree, without making a single formal argument against the existence of God. These are two different sets of values.

And that is why when we have debates between William Lane Craig and Christopher Hitchens, all the militant atheists like Common Sense Atheism and Debunking Christianity have to award the victory to Craig.

My advice for atheists

My recommendation is that you proof-read everything you write and remove all the personal attacks and insults. Then, for every assertion, you need to reference some data from a book published by an academic press, or a peer-reviewed research publication. That way, you will be able to sustain your arguments when you try to debate Christians.

I know it feels good for you to hate and insult those with whom you disagree. And since morality and rationality unjustificable on atheism, since atheism cannot ground objective morality and free will, I am not surprised at your tone. But we were all created in God's

image. At least try to treat your neighbors with respect and tolerance.

You can read see a list of arguments for and against Christianity in my post here.

What is the doctrine of peace through strength?

April 7, 2009 | by Wintery Knight | Link | Original Link

Ronald Reagan
Image stolen from Douglas Groothuis.

"Si vis pacem, para bellum"
– Publius Flavius Vegetius Renatus

It means, "Let him who desires peace prepare for war."

The idea of peace through strength was paraphrased in George Washington's first state of the union address, as well as by Presidents Lincoln and Reagan. Margaret Thatcher (United Kingdom) and Stephen Harper (Canada) also believe in peace through strength.

Most wars start when a dictator or monarch (e.g. – Hitler) believes he can win a conflict against a weak neighbor quickly and easily. Perhaps to test out his plan, he takes some small aggressive steps to make sure that no one is going to stop his aggression (e.g. – rebuilding the Luftwaffe, occupying the Rhineland, annexing the Sudetenland, annexing Austria, invading Poland). Once he is able to confirm over and over that no democracies are going to stop his conquests by force, he attacks.

The way to stop most wars is to make dictators believe that you have the means and the will to stop their aggression. Clinton allowed about a half dozen attacks in the 90s without any reprisal, (e.g. – World Trade Center, USS Cole, etc.) We did not respond to these terrorist attacks on our national interests. As a result, Bin Laden would joke about how the USA was a "paper tiger" that did not have the stomach for war. He thought that a few American losses would make us pack up and go home.

Contrast Clinton's view with Ronald Reagan. Reagan's biography at the White House web site says this:

> "In foreign policy, Reagan sought to achieve "**peace through strength**". During his two terms he increased defense spending 35 percent, but sought to improve relations with the Soviet Union. In dramatic meetings with Soviet leader Mikhail Gorbachev, he negotiated a treaty that would eliminate intermediate-range

> nuclear missiles. Reagan declared war against international terrorism, sending American bombers against Libya after evidence came out that Libya was involved in an attack on American soldiers in a West Berlin nightclub."

When the USA was attacked by terrorists, Bush, following Reagan's example, made sure that the aggressors would understand that the first steps of aggression would draw a violent, decisive response. As a result of the Bush doctrine, Libya has discontinued its WMD program and invited inspectors to come in and cart away all of its research equipment. Libya did this *only* because it believed that the USA was willing to back up diplomacy with force. We can have peace if we cause aggressors to believe that war will cost too much.

Now, violence is not the only way to make war cost too much. We could probably avoid war with Iran or Venezuela or Russia by drilling for our own oil and building our own nuclear plants. No one *prefers* a war. It's better to de-fund potential aggressors by supplying our economy with oil that we produce ourselves. This is one good reason to increase domestic energy production. (Another good reason is to lower the price of oil, etc – because of supply and demand: increased supply leads to lower prices)

Reagan won the cold war without firing a shot. But sometimes, especially after 8 years of Clinton's weak foreign policy, some violence is needed to communicate to our enemies that we mean business. Our willingness to engage in a military response to the 9/11 attacks was enough to provide us with 7 years free of attacks on American soil. The terrorists knew that next time they attacked us, then maybe Syria would become a democracy. So there were no more attacks on American soil while Bush governed.

Deterrence works. The goal is to AVOID war by making tyrants understand that the cost of their aggression will be too much for them to bear. This is the doctrine of peace through strength.

"An appeaser is one who feeds a crocodile – hoping it will eat him last."
— Winston Churchill

An analysis of the Democrats socialist health care policies

April 8, 2009 | by Wintery Knight | Link | Original Link

I would summarize the ideals of Democrats (socialists) as follows:

1. There are unequal life outcomes in society
2. Those who have little wealth are the victims of those who produce wealth
3. We (democrats) must transfer wealth until everyone's life outcomes are equal, regardless of their life choices
4. We (democrats) must use government coercion to achieve this equality
5. Since we (democrats) are so morally superior, we are not obligated to transfer our own wealth to anyone

Consider health care. Some risky lifestyle choices are more likely to require more health care services. The socialist's goal is to make sure that no one is deterred from making these risky choices. Those who do not engage in these risks must be forced to pay for the health care of those who do choose to take on these risks. That way, everyone is equal in the end.

The way this is done is to make sure that people who *don't* engage in risky behaviors cannot pay *less* for their health care than those who *do* engage in risky behaviors. Let me explain.

Suppose a safe person S knows that he only needs coverage for catastrophic care, since his lifestyle choices eliminate the need for elective treatments like abortions, birth control, STD medications, sex changes and drug addiction treatments. He can be covered for a very low premium.

Consider another irresponsible, risky person R who is engaged in all kinds of risky behavior. He can be covered for all of the medical services for a very high premium. His own choices expose him to risks that will require more medical services.

Democrats (socialists), solve this problem by forcing S to pay for mandatory health care with a very high premium that covers services he will never use. That way, he is really paying for his own health care, *and R's health care, too*.

Take a look at this article I found on Health Care BS. In the article, they cite Michael Tanner of the Cato Institute, who analyzes the health care policies that may be included in the Democrats' health care reform bill.

This is the one I want to draw your attention to, because this is what single-payer countries like Canada have that causes them so many problems:

> **An Individual Mandate**. Every American will be required to buy an insurance policy that meets certain government requirements. Even individuals who are currently insured — and happy with their insurance — will have to switch to

> insurance that meets the government's definition of acceptable insurance, even if that insurance is more expensive or contains benefits that they do not want or need.

And here is another one that will force employers to *lay off American workers* because employers have to pay more for the same productivity.

> **An Employer Mandate.** At a time of rising unemployment, the government will raise the cost of hiring workers by requiring all employers to provide health insurance to their workers or pay a fee (tax) to subsidize government coverage.

Yes, that's right. Socialism attacks businesses. Attacking businesses causes unemployment.

And there's more:

> **A Government-Run Plan**, competing with private insurance. Because such a plan is subsidized by taxpayers, it will have an unfair advantage, allowing it to squeeze out private insurance. In addition, because government insurance plans traditionally under-reimburse providers, such costs are shifted to private insurance plans, driving up their premiums and making them even less competitive. The actuarial firm Lewin Associates estimates that, depending on how premiums, benefits, reimbursement rates, and subsidies were structured, as many as 118.5 million would shift from private to public coverage. That would mean a nearly 60 percent reduction in the number of Americans with private insurance. It is unlikely that any significant private insurance market could continue to exist under such circumstances, putting us on the road to a single-payer system.

When government controls your health care, you pay them at gunpoint and when you want care you get in line behind people who *paid nothing into the system.* That is socialized medicine, the dream of all Democratic socialists.

And there's also redistribution of wealth:

> **Massive New Subsidies.** This includes not just subsidies to help low-income people buy insurance, but expansions of government programs such as Medicaid and Medicare.

And remember what I said about the government needing to reducing costs when demand skyrockets for "free" care?

> **Government Playing Doctor**. Democrats agree that one goal of their reform plan is to push for "less use of aggressive treatments that raise costs but do not result in better outcomes." While no mechanism has yet been spelled out, it seems likely that the plan will use government-sponsored comparative effectiveness research to impose cost-effectiveness guidelines on medical care, initially in government programs, but eventually extending such restrictions to

> private insurance.

This is all caused by the good intentions of people who have no knowledge of economics, *whatsoever.* And it is important to note that it is this kind of naive, incompetent meddling in the free-market that leads to poverty and the loss of all of our liberties.

Free speech activist Ezra Levant interviewed about his new book

April 8, 2009 | by Wintery Knight | Link | Original Link

Canadian free speech activist Ezra Levant has a new book out. I am in the process of reading it right now, because I was lucky enough to get a copy as a gift, *autographed!* Ezra had to shell out six figures to defend himself from charges that he offended members of a special interest victim group. His new book tells his story, and the stories of many of the other victims of fascism in Canada.

Here is a video he posted this week of his interview with the libertarian Fraser Institute:

Here is his famous opening speech from his first hearing with the Alberta HRC:

Make no mistake. The left has no respect for individual rights. None. Today they confiscate your money to redistribute it to their favored special interest victim groups, while blaming you for working hard. Tomorrow, they arrest and imprison you for saying things that offend their favored special interest victim groups. Leftism *is* collectivism. Collectivism *is* fascism.

For more information about the book, the best thing I have seen is Denyse O'Leary's twelve part series of posts. Part 12 is linked here and contains all of the other 11 parts and an introduction. Here are some excerpts:

Here is a quotation of "Shakedown" from part 2:

> The main reason that today's human rights commissions feel so un-Canadian is that their operations violate the most basic principles of natural justice. As soon as a human rights complaint is filed, the deck is stacked against the accused. For most of Canada's HRCs, taxpayers foot the bill so that government-paid bureaucrats can investigate complaints and government-paid lawyers can prosecute them. The targets of those complaints, on the other hand, don't get any government help. Many are too poor to hire lawyers and private investigators. So they must fend for themselves against an army of public paper-pushers.
>
> (A study of the cases in which the Canadian Human Rights Commission investigated allegations of hate speech, for example, foujnd that 91 per cent of the government's targets were too poor to afford lawyers and appeared either on their own or with representation by a non-lawyer volunteer.) In other words, it's a turkey shot for the government, with poor, intimidated targets fighting against the unlimited resources of the state. (p. 19)

Check out this quote from Shakedown from part 4:

> It's hard to believe, but government bureaucrats, paid with tax dollars, who are supposed to be promoting human rights and interracial relations, are spending

> their time becoming members of neo-Nazi websites and writing bigoted comments on the Internet. Their goal is to goad Canadian citizens into replying with their own hateful comments – which the human rights investigators can then prosecute as human rights abuses.
>
> That would be like a police officer setting out lines of cocaine at party, snorting a few himself, then inviting other people to do the same – and then arresting them when they take him up on his offer.

Here is a bit more from part 5:

> The March 25 hearing was a disaster for the CHRC. Its staff had to admit, under oath, that they routinely went online under false identities to provoke reactions from neo-Nazis. The CHRC admitted that it had no controls over who had access to these CHRC neo-Nazi website membership accounts. Despite dozens of objections made by CHRC lawyers – apparently to run out the clock on the one-day hearing – the CHRC's dirty laundry was aired in the national media.
>
> The dirtiest fact of all: the CHRC had logged on to a neo-Nazi website by illegally hacking into a private citizen's wireless Internet account at her home. It was a means to cover the CHRC's tracks, so that the identity of the originating, government computers would be hidden. That staggering revelation came from Alain Monfette, a Bell Canada security officer, who had been subpoenaed by Lemire to find out who had gone on online as "Jadewarr," one of the CHRC's neo-Nazi codenames. Monfette disclosed to a stunned courtroom that jadewarr's posts had been made thorugh the Internet account of Nelly Hechme …

Complainants don't have to pay anything, while defendants are drained of tens of thousands of dollars in legal fees. In fact, the defendants taxes go to *pay for their own prosecution*.

Here's an excerpt from part 6:

> If you're mad about something in your life, no matter how trivial – no matter if it's your own fault – there really is no reason *not* to file a complaint with your unfriendly neighbourhood human rights commission. It doesn't cost you a thing to start a complaint. Not even the price of a postage stamp – you can just fax your complaint in. If you win, you can get tax-free cash, and often some sort of government order that will try to assuage your feelings – like an order to make those darned pizza boys change the CD at work and stop hiding your stool. And even if you lose and the HRC vindicates your opponent, there's the cruel satisfaction of knowing that you've punished your adversaries by putting them through years of legal hassles.

And one last word from Denyse herself in part 9:

> …when I read Solzhenitsyn's Gulag Archipelago years ago, one thing that struck me was his testimony that, in general, the Soviet regime punished political

> dissidents much more viciously than it punished street criminals.
>
> That makes sense in a certain kind of regime. Street criminals, after all, threaten only the citizen. Political dissidents threaten the bureaucrat – a much more serious crime.

And one more thing. Although Ezra is Jewish, he is a tireless defender of the free speech rights of Christians. I mean, he goes out of his way to defend our rights – more than highly-placed Christians have done. He is a real hero.

Buy. This. Book.

Further study

Ezra Levant defends free speech in these video clips from the Michael Coren TV show. And remember, fascist HRCs are bad for business, too.

How to defend the kalam cosmological argument just like William Lane Craig

April 8, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from The Way the Ball Bounces! Thanks for the link!

UPDATE: Welcome visitors from Colliding Universes! Thanks for the link Denyse!

This post is the first in a two part series. In case you missed it, here is Craig's *second* argument about fine-tuning.

I've been watching Bill Craig debates for a long time now, ever since I did my first degree in computer science a dozen years ago. Today I thought we could all learn how to argue Craig's first argument for God, which he used in his debate with Christopher Hitchens.

Let's go over Craig's *kalam* argument in brief.

The *kalam* cosmological argument

The argument goes like this:

1. Whatever begins to exist requires a cause
2. The universe began to exist
3. Therefore, the universe requires a cause (M.P. 1,2)

The most important thing for you to realize is that *nothing* can be sustained in a debate unless it can be phrased as a valid argument according the rules of inference. All of Craig's arguments can be broken down into logical propositions that use the standard laws of logical reasoning in order to force their conclusions *deductively*, so long as the premises are true.

Understanding the logical form of the *kalam* argument

The form of the *kalam* argument is valid because it allows for a *modus ponens* inference. (Here's a primer on logical reasoning)

- if p is true, then q is true
- p is true
- therefore, q is true

That means that so long as premise 1 and 2 are true, the conclusion follows necessarily. This is the same form of argument (deductive) used by Sherlock Holmes in his cases.

Proving the premises

Can the atheist deny that either or both of these premises are true?

1. "Whatever begins to exist requires a cause"
   If the atheist denies this premise, then they are denying a fundamental law of natural science, namely, that matter can neither be created or destroyed. That is

natural law.
2. “The universe began to exist”
   The universe came into being. If the atheist denies this they are denying the state of the art in modern cosmology.

First, quantum mechanics is not going to save the atheist here. In QM, virtual particles come into being *in a vacuum.* The vacuum is sparked *by a scientist.* The particles exist for a period of time *inversely proportional to their mass.* But in the case of the big bang, there is no vacuum – there’s nothing. There is no scientist – there’s nothing. And the universe is far too massive to last 14 billion years as a virtual particle.

Secondly, atheists will say that the big bang is speculative physics that could change at any moment. But the trend is in favor of an absolute beginning out of nothing. We have had a string of solid, recent scientific discoveries that point in a definite direction, as follows:

- Einstein’s theory of general relativity, and the scientific confirmation of its accuracy
- the cosmic microwave background radiation
- red-shifting of light from galaxies moving away from us
- radioactive element abundance predictions
- helium/hydrogen abundance predictions
- star formation and stellar lifecycle theories
- the second law of thermodynamics applied to nuclear fusion inside stars

So, insofar as atheists question these discoveries and the origin of the entire physical universe out of nothing, they are opposing the progress of science.

What came into being at the moment of creation?

You need to understand that the big bang theory states that space, time and matter were all created at the moment of creation.

1. There was no space causally prior to the universe beginning to exist
2. There was no time causally prior to the universe beginning to exist
3. There was no matter causally prior to the universe beginning to exist

All of these things *began to exist* at the first moment.

What can we infer about the cause?

So, space, time, and matter began to exist. What could have caused them to begin to exist?

1. Whatever causes the universe to appear is not inside of space, because there *was no space* causally prior to the creation event. The cause must therefore be non-physical, because physical things exist in space.
2. Whatever causes the universe to appear is not bound by time (temporal). It *never began to exist.* There was no passage of time causally prior to the big bang, so the

cause of the universe did not *come into being.* The cause existed *eternally*.
3. And the cause is not material. All the matter in the universe came into being at the first moment. Whatever caused the universe to begin to exist cannot have been matter, because there was no matter causally prior to the big bang.

So what could the cause be? Craig notes that we are only familiar with *two kinds* of non-material realities:

1. Abstract objects, like numbers, sets and mathematical relations
2. Minds, like your own mind

Now, abstract objects don't cause of any effects in nature. But we are very familiar with the causal capabilities of our own minds – just raise your own arm and see! So, by process of elimination, we are left with a mind as the cause of the universe. As Sherlock Holmes says, "*When you have eliminated the impossible, whatever remains, however improbable, must be the truth.*"

This cause created the entire physical universe. The cause of this event is therefore *supernatural, b*ecause it brings nature into being and is not inside of nature itself. The cause of the universe violates the law of conservation of matter is therefore performing a miracle.

Responding to alternative naturalistic cosmologies

In this published research paper from the journal *Astrophysics and Space Science*, William Lane Craig responds to the several naturalistic attempts to evade the implications of the *kalam* argument. I will list each one by name and explain the main problem with each. I highly recommend you read the paper and become conversant with the arguments and evidences.

1. The steady-state model: disproved by recent empirical observations of radio galaxy distributions, as well as red-shifting of light from distant galaxies moving away from us at increasing speeds
2. The oscillating model: disproved in 1998 by more empirical measurements of mass density which showed that the universe would expand forever, and never collapse (was named Discovery of the Year)
3. The vacuum fluctuation model: the theory allows for universes to spawn at every point in space and coalesce into one extremely old universe, which contradictions observations of our much younger universe
4. The chaotic inflationary model: does not avoid the need for an absolute beginning in the finite past
5. The quantum gravity model: makes use of imaginary time which cannot be mapped into a physical reality, it's purely theoretical

Why the *kalam* cosmological argument matters

We need to make a decision *today* about how we are going to live. The evidence available

today supports the creation of the entire physical universe from nothing, caused by a supernatural mind with immense power. The progress of science has strengthened this theory against determined opposition from rival naturalistic theories.

Those are the facts, and we must all choose what to do with them.

Further study

A good on this topic is the debate between William Lane Craig and atheist physicist Victor Stenger, (audio here). Also, a lecture titled “Beyond the Big Bang”, was delivered at the University of Colorado at Boulder, in front of Victor Stenger and other physicists (audio here). There is a period of Q&A in which Bill must face challengers. These are both available on DVD. More Bill Craig debates are here.

How to defend the fine-tuning argument just like William Lane Craig

April 9, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Colliding Universes! Thanks for the link Denyse!

This post is the second in a two part series. In case you missed it, here is Craig's *first* argument on the kalam argument.

First of all, if you're not clear on the fine-tuning argument, click here and read Walter Bradley's exposition of it. Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor University. He was also a professor and department head at Texas A&M before going to Baylor. He had his Ph.D at age 24 from the University of Texas and was a tenured professor at 27.

The first argument presented by Bradley in that post is the same argument that Craig used against Hitchens in their debate. (It's Craig's second argument in the set of five). Bradley's version of the argument has been presented *live*, *in-person* by Bradley at dozens of universities here and abroad, in front of students *and faculty*. The lecture I linked to in that post is an MP3.

The fine-tuning argument

The argument goes like this:

1. The fine-tuning of the universe to support life is either due to law, chance or design
2. It is not due to law or chance
3. Therefore, the fine-tuning is due to design

What does it meaning to be fine-tuned for life?

Here are the facts on the fine-tuning:

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- The constants are *selected* by whoever creates the universe. They are not determined by physical laws. And the extreme probabilities involved required put the fine-tuning beyond the reach of chance.
- Although each individual selection of constants and ratios is as unlikely as any other

selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants

Here are a couple of examples of the fine-tuning. Craig only gave one example in the debate and didn't explain how changes to the constant would affect the minimal requirements for life. But Bradley *does* explain it, and he is a professional research scientist, so he is speaking about things he worked in his polymer research lab. (He was the director)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – "carbon-based life), but the bonds are not so tight that they can't be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

Either way, you've got no life of *any conceivable kind.*

Is the fine-tuning real?

Yes, it's real and it is conceded by the top-rank of atheist physicists. Let me give you a citation from the best one of all, Martin Rees. Martin Rees is an atheist and a qualified astronomer. He wrote a book called "Just Six Numbers: The Deep Forces That Shape The

Universe", (Basic Books: 2001). In it, he discusses 6 numbers that need to be fine-tuned in order to have a life-permitting universe.

Rees writes here:

> These six numbers constitute a 'recipe' for a universe. Moreover, the outcome is sensitive to their values: if any one of them were to be 'untuned', there would be no stars and no life. Is this tuning just a brute fact, a coincidence? Or is it the providence of a benign Creator?

There are some atheists who deny the fine-tuning, but these atheists are in firm opposition to the progress of science. The more science has progressed, the more constants, ratios and quantities we have discovered that need to be fine-tuned. Science is going in a theistic direction. Next, let's see how atheists try to account for the fine-tuning, on atheism.

Atheistic responses to the fine-tuning argument

There are two common responses among atheists to this argument.

The first is to speculate that there are actually an infinite number of other universes that are not fine-tuned, (i.e. – the gambler's fallacy). All these other universes don't support life. We just happen to be in the one universe is fine-tuned for life. The problem is that there *is no way of directly observing these other universes and no independent evidence that they exist.*

Here is an excerpt from an article in Discover magazine, (which is hostile to theism and Christianity).

> Short of invoking a benevolent creator, many physicists see only one possible explanation: Our universe may be but one of perhaps infinitely many universes in an inconceivably vast multiverse. Most of those universes are barren, but some, like ours, have conditions suitable for life.
>
> The idea is controversial. Critics say it doesn't even qualify as a scientific theory because the existence of other universes cannot be proved or disproved. Advocates argue that, like it or not, the multiverse may well be the only viable nonreligious explanation for what is often called the "fine-tuning problem"—the baffling observation that the laws of the universe seem custom-tailored to favor the emergence of life.

The second response by atheists is that the human observers that exist today, 14 billion years after the universe was created out of nothing, actually caused the fine-tuning. This solution would mean that although humans did not exist at the time the of the big bang, they are going to be able to reach back in time at some point in the future and manually fine-tune the universe.

Here is an excerpt from and article in the New Scientist, (which is hostile to theism and Christianity).

> …maybe we should approach cosmic fine-tuning not as a problem but as a clue. Perhaps it is evidence that we somehow endow the universe with certain features by the mere act of observation… observers are creating the universe and its entire history right now. If we in some sense create the universe, it is not surprising that the universe is well suited to us.

So, there are two choices for atheists. Either an infinite number of unobservable universes that are not fine-tuned, or humans go back in time at some future point and fine-tune the beginning of the universe, billions of years in the past.

Why the fine-tuning argument matters

We need to make a decision *today* about how we are going to live. The evidence available *today* supports the fine-tuning of the universe by a supernatural mind with immense power. The progress of science has strengthened this theory against determined opposition from rival naturalistic theories.

Those are the facts, and we must all choose what to do with them.

Further study

Here is a paper by Walter L. Bradley that contains many more examples of the fine-tuning, and explanations for *what happens* when you change the constants, quantities and rations even slightly.

Why taxing the rich to grow government fails

April 9, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from 4Simpsons! Thanks for the link!

I spotted this article from Chris Edwards of the Cato Institute. (H/T Club for Growth)

In the article Edwards explains why taxing the rich is bad for economic growth. The article is a response to a leftist polemic in *The Economist.*

The first thing to note is that tax increases decrease the growth of the efficient, market-oriented private sector:

> President Obama wants to go in the other direction, raising the top two income tax rates, which would reduce production and increase avoidance by highly skilled people. Such economic damage from higher taxes is called deadweight loss. In the 2006 paper, Mr Feldstein argued that deadweight losses from a federal income tax rate increase would be $1.76 for every dollar of tax increase. That means that every new $1 billion spending programme in President Obama's budget will destroy about $1.76 billion of activities in the private sector.

Yes, this is why we are losing jobs today, because Obama is transferring wealth from private companies, who answer to customers and shareholders, to public bureaucracies, who are insulated from market competition.

He continues by explaining that the rich already pay most of the taxes:

> …43% of American households do not pay any federal income tax, according to data from the Joint Committee on Taxation. That large group is doing little to support the huge burden of the welfare state, so it is laughable that they might be angry at the wealthy who do bear the burden. The CBO data show that the top one-fifth of households pay 69% of the entire costs of the federal government. Frankly, the rest of Americans are free-riders on the top quintile's enormous financial support of government.

And he explains why the public sector is less efficient than the private sector:

> There are fundamental reasons why big governments do not work very well. As taxes rise, resources are shifted from more efficient private activities to less efficient government activities. The private sector is not more efficient than government because it does not make mistakes, but because it has mechanisms to purge mistakes and move resources to higher-valued uses. Government policymakers do the opposite: they retain failed programmes year after year, and resources get stuck in low-value uses.
>
> Even if politicians did focus on moving resources to higher-value uses, they would be unable to because government activities do not generate the price and profit signals needed to allocate capital and labour efficiently. A final problem is

> that government programmes are often horribly managed.

For an example of why governments don't manage money efficiently, consider this USA Today story. (H/T Representative Mike Pence)

Excerpt:

> The federal government will soon send more than $300 million in stimulus funds to 61 housing agencies that have been repeatedly faulted by auditors for mishandling government aid, a USA TODAY review has found.
>
> The money is part of a $4 billion effort to create jobs by fixing public housing projects that have fallen into disrepair. Recipients include housing authorities in 26 states that auditors have cited for problems ranging from poor bookkeeping to money that was spent improperly, according to the review of summaries the agencies must file with the federal Office of Management and Budget (OMB).

Where did that money come from? It comes from the private sector. It comes from *you.*

Millions Will Lose Health Care from their Employer Under the Democrats' Plan

April 9, 2009 | by Wintery Knight | Link | Original Link

House Republican Leader John Boehner

I spotted this scary post over at John Boehner's blog. The post, written by Kevin Lewis, links to this AP article that highlights a new study from the Lewin Group. I blogged before about the Democrats' plan to equalize life outcomes and redistribute wealth by nationalizing health care. Now we get more details of how they'll do it.

Here is a summary of the Democrats' plan:

> President Barack Obama and many Democrats want to create a government insurance plan to compete with private plans that now cover about 170 million Americans. The issue is major sticking point for Republicans and the insurance industry.

And the predicted results of that plan:

> The Lewin study found that if such a plan were open to all employers and individuals, and if it paid doctors and hospitals the same as Medicare, the government plan would quickly grow to 131 million members, while enrollment in private insurance plans would plummet.
>
> "The private insurance industry might just fizzle out altogether," said John Sheils, a Lewin vice president and leading author of the study.
>
> By paying Medicare rates the government plan would be able to set premiums well below what private plans charge. Monthly premiums for family coverage would be $761 in the government plan, compared with an average of $970 in private plans, the study estimated. Employers and individuals would flock to the public plan to cut costs.

Lewis cites two of the study's key findings:

> "If as the President proposed, eligibility is limited to only small employers, individuals and the self-employed … The number of people with private coverage would fall by 32.0 million people."
>
> "If the public plan is opened to all employers as proposed by former Senators Clinton and Edwards, at Medicare payment levels … The number of people with private health insurance would decline by 119.1 million people. This would be a two-thirds reduction in the number of people with private coverage (currently 170 million people)."

More here at the Heritage Foundation.

Colombia hosts international banking conference and signs free trade deals

April 10, 2009 | by Wintery Knight | Link | Original Link

This story has two parts. First of all, take a look at this IBD article that explains how the USA was able to transition Colombia's economy away from drug-trafficking with a plan called "Plan Colombia". The Democrats deserve all the credit for this plan, because it was initiated by Clinton and supported by Joe Biden. It has been a huge foreign policy victory for the USA.

Let's take a look:

> …Colombia is no longer the narco-trafficking hellhole it once was, but a bright Latin American success story.
>
> Plan Colombia not only went after traffickers, but also root causes of conflict, professionalizing the military and offering the population alternatives to trafficking.

IBD is hoping that the lessons we learned in Colombia can be applied in other places like Mexico and and Afghanistan, where similar drug-related problems abound. But wait! All is not well. For Obama has decided to undermine Plan Colombia by reneging on the last step of the plan. Obama is refusing to sign a free trade deal with Colombia!

> But we don't see how the reality of victory can truly be achieved so long as Congressional Democrats undermine the final step in Plan Colombia's victory plan, which is free trade with the U.S.
>
> It's the last step in the process of offering an alternative development path, over drugs and terror. Protectionist Democrats in Congress, in hock to Big Labor cash, still refuse to allow even a vote.

That's right. After all this work on Plan Colombia, we are about to throw away all the fruits of our labor by refusing to allowing American companies to sell to Colombia, and allowing American taxpayers to buy cheaper, higher quality Colombian goods. Free trade is good for us, good for them, and good for world peace. But I guess it's not good for Obama's special interest groups.

And this has implications for Afghanistan, a country desperately trying to break away from an economy based on drug-trafficking:

> Worse, it has potential to undercut victory in Afghanistan. Afghanis can see how hard Colombians worked with Americans to make Plan Colombia succeed. They can see how the program addressed not only military tasks, but social ones, which end in free and legal trade with the vast U.S. market.
>
> …For Colombia, the promise was the free trade that Democrats are now reneging on. Democrats are snatching defeat from the jaws of a victory they could claim

> as their own and extend to Afghanistan. All they have to do is keep their promises.

But Colombia isn't about to take this garbage from the President-Teleprompter. They're going to fight back! Check out this IBD article that explains what Colombia is trying to do to avoid rolling back all the progress they've made against the drug traffickers. They've hosted an international conference of bankers to try to diversify their economy.

Excerpt:

> Colombia asserted itself on the international stage last week, with the 50th annual governors' meeting of the Inter-American Development Bank in Medellin. Some 6,000 bankers and businesspeople came.
>
> …Corporate titans from Brazil, Spain, Japan, China and Germany were present along with the bankers, having invested $8.5 billion in Colombia in 2008.

But wait! One country barely even showed up! Which one? It's the country that angers the world by opposing free trade. The country that was warned about its ignorant and destructive economic policies by former communist basket-cases like China and Russia. Who is it?

Let's see:

> A few U.S. executives were present too, but the Americans seemed overshadowed by the others.
>
> It isn't surprising, because Colombia is rapidly moving to diversify its trading partners, signing deals with China, Japan, Korea, the European Union, Canada and Central America, following Chile's model of signing free-trade deals with all comers.
>
> The U.S., with its Colombia free-trade agreement still on ice in Congress, was the only country that looked isolated and out of tune with the world without its pact.

But the IBD article does end on a hopeful note: there are signs that the free trade deal may be back on the table. We can only hope.

Further study

This previous post I wrote links to an article by economist Robert P. Murphy, published by the Institute for Energy Research. The article warns about the dangers of carbon tariffs and the benefits of free trade. I highly recommend it to those who do not understand whyy free trade matters for our economic growth and prosperity. And that includes *jobs.*

Scoop! Upcoming debate between William Lane Craig and Francisco Ayala

April 11, 2009 | by Wintery Knight | Link | Original Link

Using my mysterious *Wintery* powers, I have managed to discover a secret story about Bill Craig's next debate! He is going to be debating the evolutionary biologist Francisco Ayala in the fall of 2009, at Indiana University.

Here's the skinny:

> ...the faculty ministry of Campus Crusade for Christ, is organizing a debate in early November on the topic of "The Viability of Intelligent Design." It will be an evaluation, so to speak, regarding the criticisms against ID brought forth by the scientific community. This is a cutting edge discussion. The participants are evolutionary biologist, Dr. F.J. Ayala and Christian philosopher, Dr. William Lane Craig.

I know that this is a Google cache, so you may not believe me, but ChristianJR4 has it up here as well. The date has not been set, but the debate itself is confirmed.

My co-workers and I were extremely surprised and excited to see the topic, because Bill has never debated on this topic before. I am not even certain what he thinks about this topic!

My thinking is that this is going to be a debate about philosophy of science. But wouldn't it be *amazing* if Bill came out swinging on William Dembski's explanatory filter, the origin of biological information, the cambrian explosion, the fine-tuning and other evidential concerns? Wow!

Here's a bit more about his opponent, Francisco Ayala:

> His research focusses on population and evolutionary genetics, including the origin of species, genetic diversity of populations, the origin of malaria, the population structure of parasitic protozoa, and the molecular clock of evolution. He also writes about the interface between religion and science, and on philosophical issues concerning epistemology, ethics, and the philosophy of biology.

He's written 650 papers and 12 books. I think this is going to be a *tough debate* for Bill!

Cap and trade will raise electricity prices and increase unemployment

April 11, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

Michele Bachmann has a post on her blog about a new study by a Spanish economist regarding the cost of green job initiatives.

Excerpt:

> A study directed by Dr. Gabriel Calzada, an economics professor at Juan Carlos University in Madrid, concluded that every "green job" created in Spain resulted in 2.2 other jobs being destroyed.
>
> The study emphasized that only 10% of the "green jobs" created could be considered permanent – such as maintenance of renewable power systems. The remaining jobs consisted of temporary jobs in construction, fabrication and installation jobs; along with administrative positions, marketing, and engineering projects.

Spain has been providing subsidies to create green jobs, and this is viewed by some as a model for future US energy policy.

Bachmann continues:

> "If U.S. subsidies to renewable producers achieve the same result — and President Obama has held Spain up as a model for how to subsidize renewables — the U.S. could lose 6.6 million to 11 million jobs while it creates three million largely temporary 'green jobs.'"
>
> Furthermore, Dr. Calzada stated that "the loss of jobs could be greater if you account for the amount of lost industry that moves out of the country due to

> higher energy prices."

Thomas J. Pyle of the Institute for Energy Research adds:

> "As this study makes clear, Spain has spent billions in taxpayer resources to subsidize renewable energy programs in an effort to jumpstart its ailing economy – and what they've gotten in return are fewer jobs, skyrocketing debt and some of the highest and most regressive energy prices in the developed world. Now, as U.S. policy-makers prepare to embark Americans upon a similar course, this report offers our first realistic glimpse into what we should expect in return for that unprecedented sacrifice of public resources and personal autonomy."

The IER has a list of the key findings from the study in that post.

Ed Morrissey at Hot Air adds:

> Why did the jobs disappear? **In part because of the higher capital confiscation of the government, and in part because the green policies pushed industry out of Spain.** Actually, the study didn't count jobs lost through "industrial relocation", which in this case amounts to capital flight. The largest stainless-steel producer in Spain directly linked its decision to move operations to South America to the higher energy costs imposed by the government.
>
> **In the US, we could see a massive flight, and not just in manufacturing. High-tech industries that rely on cheap energy could be forced to find less expensive environments.** Bloomberg's economist notes that Microsoft and Google have already relocated their servers once to get cheaper energy. The Internet is flexible enough to allow employers to go almost anywhere in the world to host their servers, and in this economy, there will be plenty of competition for them.

In a related post, Gateway Pundit notes that the cap and trade policies of the Democrats will also cause consumer electricity prices to soar.

Excerpt:

> Democrats know that their cap and trade energy policies will devastate the economy.
>
> …Cap and trade policies would likely cost American families $700 to $1,400 dollars per family per year according to the video above. The Department of Energy **estimated** GDP losses would be between **$444 billion and $1.308 trillion** over the 21-year period. Cap and trade also could cost the US **4 million jobs**. In Missouri and the Midwest where energy is "cheap" it would cause electricity rates to double.
>
> ***And,*** it would likely do nothing to help with the make-believe **global warming junk science**.

And GP also links to this video showing what we can expect from the Democrats on this issue:

Further study

I posted a list a while back of the expected increases in electricity prices, broken down by state, here. More about the impact on consumers from John Boehner is here.

More about the rise in unemployment we can expect from green jobs initiatives is here. Info about Obama's tax hikes on energy producers is here. Information about possible carbon tariffs is here.

Information about the recent Cato statement of 700 scientists who dissent from man-made global warming is here.

Understanding the reason for Easter

April 12, 2009 | by Wintery Knight | Link | Original Link

In order to help everyone to celebrate Easter on a firm foundation of facts, I thought I would re-post links the best 3 of my posts so far on the topic of the resurrection of Jesus.

- The structure of arguments based on sets of minimal facts
- The earliest evidence for the resurrection in 1 Corinthians 15:3-7
- N.T. Wright's case for the resurrection

Happy Easter!

Easter fundraising appeal from Reasonable Faith

April 12, 2009 | by Wintery Knight | Link | Original Link

Happy Easter!

Bill Craig has sent out a fund-raising appeal that I thought I would mention. I am a regular supporter of Bill's efforts, and I doubt that there is *any* ministry that better deserves your financial contributions.

Here is an excerpt:

> We want to show that Christianity has its basis in real events and not merely a philosophy or a myth. That's why your support helps us to provide an intelligent defense of the Gospel for those seeking to know more about our risen Lord. Here's just a sample of what your gifts help to accomplish:
>
> - Present the Gospel through our Web site to people from over 156 countries
> - Provide audio classes to the thousands who download our Defenders and Reasonable Faith podcasts
> - Reaching out to students around the world with lectures and debates
>
> Would you please take a moment to help Reasonable Faith continue to reach out to believers and unbelievers alike with the life-changing message of the resurrection? Simply visit our secure Web site form to give now. Thank you so much for partnering with us!

Just a few weeks back my friend Todd (an ex-coworker from Detroit) and I attended a speaking event in Michigan. Bill was so excited to meet us and autograph our new copies of the 3rd edition of his new book, Reasonable Faith. It's surprising that someone who is so busy can be so authentic in person.

I urge you, if you like apologetics, to consider sending a donation to support Bill! Although Bill makes debating look easy, it isn't. It takes months of preparation to study your opponent's writings. We need to be willing to support him during that preparation time. Please give generously!

Female legislator killed in Afghanistan, pro-jihad woman kidnapped in Pakistan

April 13, 2009 | by Wintery Knight | Link | Original Link

These two stories create an interesting contrast to say the least. First of all, a female legislator is killed by terrorists in Afghanistan.

Excerpt:

> A female provincial government official in Afghanistan who worked hard for women's rights was gunned down on Sunday during a weekend of violence that has rocked the south of the country.
>
> Sitara Achakzai died when gunmen ambushed her outside her home in Kandahar city before driving away, according to Matiullah Khan Qateh, Kandahar province's chief of police.
>
> Four men on motorcycles drove up to the house and shot Achakzai as she exited her car, Qateh said.
>
> Qari Yousef Ahmedi, a Taliban spokesperson, claimed responsibility for the killing.
>
> Achakzai spent the years of Taliban rule in Afghanistan living outside the country. She lived in Germany for at least 20 years and was a dual Afghan-German citizen.
>
> She returned to Afghanistan to work for women's rights, according to Shahida Bibi of the Kandahar Women's Association.
>
> Achakzai was a member of Kandahar's provincial council and was a vocal proponent of women working outside the home, Bibi said.

And here is an interesting contrast. According to this Fox News article (H/T Small Dead Animals), a Canadian female journalist who advocated in favor of terrorism has now been kidnapped and is being held for ransom by the terrorists that she'd been supporting.

Excerpt:

> Soon after Al Qaeda terrorists killed 3,000 people in the U.S., Giesebrecht converted to Islam, adopted a new name — Khadija Abdul Qahaar — and spent the next two years studying the Koran in Egypt.
>
> She created a pro-Jihadi Web site, Jihad Unspun, and she developed a network of contacts, contributors and translators, some of whom introduced her to the Taliban in Pakistan.

But then her new allies turned on her:

> And then last November, the Taliban, the group she had befriended, kidnapped her while she was chasing a story in the Bannu region of northern Pakistan. In a

> video released after her capture, Qahaar says she’s being held by the Taliban…
>
> In the most recent video, released to the Miranshah Press Club on March 18, Qahaar says her captors demand ransom payment of 2 million Rupees — about $25,000 — by the end of March. On earlier tapes, she said her captors were demanding $375,000.
>
> “I’m pleading with you, save my life. Spare me,” she says. “We have a very short time now, I’ll probably be beheaded.”

The article concludes with this:

> “I need somebody to help me,” Qaahar pleaded on the most recent video. “My government — the Canadian government, the Pakistan government — I want to go home.”

It’s certainly ironic.

Scoop! Craig/Hitchens debate DVD will be produced by Illustra Media

April 13, 2009 | by Wintery Knight | Link | Original Link

Again, my *Wintery* powers have enabled me to discover a story hidden from the eyes of mortal men. Behold! The DVD of the recent debate between William Lane Craig and Christopher Hitchens will be produced by Illustra Media.

Illustra Media is the same company that produced professional DVDs, such as “Unlocking the Mystery of Life”, “The Privileged Planet” and the “The Case for a Creator”. All of these DVDs are available from Amazon.com!

My secret source informs me that Illustra has film from the press conference, the pre and post debate interviews, as well as the whole debate itself! They are going to turn the event into a professionally-made film that will be widely disseminated!

You can pre-order the Biola University version of the DVD here!

The llustra Media version will take months to create, because of all the extensive editing and production that will be involved in making it.

At last some honesty on global warming alarmism

April 14, 2009 | by Wintery Knight | Link | Original Link

You may have read something about the NYT article a while back that discussed the brilliant scientist Freeman Dyson and his opposition to global warming.

Excerpt from the NYT article:

> Dyson may be an Obama-loving, Bush-loathing liberal who has spent his life opposing American wars and fighting for the protection of natural resources, but he brooks no ideology and has a withering aversion to scientific consensus.
>
> …IT WAS FOUR YEARS AGO that Dyson began publicly stating his doubts about climate change. Speaking at the Frederick S. Pardee Center for the Study of the Longer-Range Future at Boston University, Dyson announced that "all the fuss about global warming is grossly exaggerated." Since then he has only heated up his misgivings, declaring in a 2007 interview with Salon.com that "the fact that the climate is getting warmer doesn't scare me at all" and writing in an essay for The New York Review of Books, the left-leaning publication that is to gravitas what the Beagle was to Darwin, that climate change has become an "obsession" — the primary article of faith for "a worldwide secular religion" known as environmentalism.
>
> Among those he considers true believers, Dyson has been particularly dismissive of Al Gore, whom Dyson calls climate change's "chief propagandist," and James Hansen, the head of the NASA Goddard Institute for Space Studies in New York and an adviser to Gore's film, "An Inconvenient Truth." Dyson accuses them of relying too heavily on computer-generated climate models that foresee a Grand Guignol of imminent world devastation as icecaps melt, oceans rise and storms and plagues sweep the earth, and he blames the pair's "lousy science" for "distracting public attention" from "more serious and more immediate dangers to the planet."

Well, the NYT got a fascinating letter to the editor in response to their profile of Dyson. The letter came from a graduate student at Harvard named Monika Kopacz.

The letter is excerpted in First Things (H/T The Weekly Standard):

> **It is no secret that a lot of climate-change research is subject to opinion, that climate models sometimes disagree even on the signs of the future changes (e.g. drier vs. wetter future climate). The problem is, only sensational exaggeration makes the kind of story that will get politicians' — and readers' — attention. So, yes, climate scientists might exaggerate, but in today's world, this is the only way to assure any political action and thus more federal financing to reduce the scientific uncertainty.**

Remember, in 1975, the leftist magazine Newsweek propped up the global cooling as the crisis-du-jour.

Excerpt from an article from the Business and Media Institute:

> **It took 31 years, but Newsweek magazine admitted it was incorrect about climate change. In a nearly 1,000-word correction, Senior Editor Jerry Adler finally agreed that a 1975 piece on global cooling "was so spectacularly wrong about the near-term future."**
>
> **Even then, Adler wasn't quite willing to blame Newsweek for the incredible failure. "In fact, the story wasn't 'wrong' in the journalistic sense of 'inaccurate,'" he claimed. "Some scientists indeed thought the Earth might be cooling in the 1970s, and some laymen – even one as sophisticated and well-educated as Isaac Asimov – saw potentially dire implications for climate and food production," Adler added.**

Journalists, lacking marketable skills, support socialism. They believe that their word-smithing skills are more worthy than the practical skills of engineers and entrepreneurs. Socialism is their way of regaining the accolades they lost once they left the safe confines of the public school classroom.

Any myth that will allow the government to seize control of the free-market must be supported, regardless of the evidence. And the same thing applies to Darwinism. Only in this case, the target is not the free market, but the church. And the goal is not redistribution of wealth, but autonomy from moral judgments and moral constraints.

For more on scientific opposition politics masquerading as science, see here.

Licona vs Ehrman debate DVD is now available to order!

April 14, 2009 | by Wintery Knight | Link | Original Link

From the Apologetics Book Store web site. (H/T Mike Licona)

Details:

> UPDATED: APRIL 11, 2009
>
> DVDs of my recent debate with Bart Ehrman are now available for purchase for $10 at http://theapologeticsbookstore.com/licona-ehrman-debate.aspx.

A review of the debate is linked here.

I like these two new guys, Mike Licona and Tony Costa, a lot. I think we are in good shape on the resurrection debate front, going forward. If we could only find a few good philosophical debaters. Anyone know of any?

Early, independent sources for the empty tomb

April 14, 2009 | by Wintery Knight | Link | Original Link

Bill Craig's "Question of the Week" feature at Reasonable Faith recently addressed the problem of the number and dating of the earliest independent sources for the burial and empty tomb stories. I found that my own views were somewhat mistaken, so I thought we would all benefit from a closer look.

Let's take a look at the independent sources for the empty tomb story.

1) The portion of Mark that recounts the burial is an early source

Mark is the earliest gospel, but even he relies on an earlier source for a portion of his gospel.

> The burial account is part of Mark's source material for the story of Jesus' Passion. This is a very early source which is probably based on eyewitness testimony and dates to within several years of Jesus' crucifixion.
>
> …The empty tomb story is syntactically tied to the burial story; indeed, they are just one story.

Bill talks about the dating and significance of this early source:

> …Whereas most of Mark's Gospel consists of short anecdotal stories strung like pearls on a string, when we get to the final week of Jesus' life we encounter a continuous narrative of events from the Jewish plot during the Feast of Unleavened Bread through Jesus' burial and empty tomb.
>
> …According to James D. G. Dunn, "The most obvious explanation of this feature is that the framework was early on fixed within the tradition process and remained so throughout the transition to written Gospels. This suggests in turn a tradition rooted in the memory of the participants and put into that framework by them" (J. D. G. Dunn, *Jesus Remembered*, 2003, pp. 765-6.)
>
> The dominant view among NT scholars is therefore that the Passion narratives are early and based on eyewitness testimony (Mark Allen Powell, *JAAR* 68 [2000]: 171). Indeed, according to Richard Bauckham, many scholars date Mark's Passion narrative no later than the 40s (recall that Jesus died in A.D. 30) (Richard Bauckham, *Jesus and the Eyewitnesses*, 2006, p. 243)….

Wow, this independent source is almost as good as 1 Corinthians 15:3-7! What else is a good source?

2) Matthew has an independent source for the empty tomb story

Craig writes:

> As for the other Gospels, that Matthew has an independent tradition of the empty tomb is evident not only from the non-Matthean vocabulary (*e.g.*, the words

> translated “on the next day,” “the preparation day,” “deceiver,” “guard [of soldiers],” “to make secure,” “to seal”; the expression “on the third day” is also non-Matthean, for he everywhere else uses “after three days;” the expression “chief priests and Pharisees” never appears in Mark or Luke and is also unusual for Matthew), but also from Matt. 28.15: “this story has been spread among Jews till this day,” indicative of a tradition history of disputes with Jewish non-Christians.

This one was new to me.

3) A source used by Luke and John for the empty tomb story

The inspection of the empty tomb by Peter implies the empty tomb. Craig writes:

> Luke and John have the non-Markan story of Peter and another disciple inspecting the tomb, which, given John’s independence of Luke, indicates a separate tradition behind the story. Moreover, we have already seen that John’s independence of Mark shows that he has a separate source for the empty tomb.

This one was also new to me.

4) The early sermons in Acts support the empty tomb

Acts was written by Luke. Craig writes:

> The early sermons in Acts are likely not created by Luke out of whole cloth but represent early apostolic preaching. We find the empty tomb implied in the contrast between David’s tomb and Jesus’: “David died and was buried and his tomb is with us to this day.” But “this Jesus God has raised up” (2:29-32; cf. 13.36-7).

This one I had heard about before, from Gary Habermas.

5) The creed recited by Paul in 1 Corinthians 15:3-7 is an early source

This passage does not explicitly mention the empty tomb, but it does imply the empty tomb. We moderns are not free to re-invent the meaning of the word resurrection. Ancient Jewish theologians who believed in the resurrection had a definite definition of the word: the word means that the body is gone from the tomb.

Craig writes:

> …the old tradition handed on by Paul to the Corinthian church, which is among the earliest traditions identifiable in the NT, refers to Jesus’ burial in the second line of the tradition. That this is the same event as the burial described in the Gospels becomes evident by comparing Paul’s tradition with the Passion narratives on the one hand and the sermons in the Acts of the Apostles on the other. The four-line tradition handed on by Paul is a summary of the central events of Jesus’ crucifixion, burial by Joseph of Arimathea, the discovery of his empty tomb, and his appearances to the disciples.

This creed has been dated to within 5 years of the crucifixion, as I mentioned before.

Further study

A scholarly-level article where Craig makes the case for the empty tomb is found here. Atheist commenters: be sure and read this article *before* commenting.

I'll be posting a follow-up later this week on the empty tomb, but I wanted to write about the sources separately.

It’s official: Obama’s socialism will lead to fascism

April 15, 2009 | by Wintery Knight | Link | Original Link

Homeland Security's worst enemy! (H/T Nice Deb)
Looks like Obama suspended the war on terror abroad… only to start it up again… at home!

What is fascism and how is it caused?

Fascism is the political system that results when the state imposes its values on its citizens and represses individual values. The traditional view of free-market capitalist conservatives is that socialist efforts to “fix” financial inequalities by redistributing wealth in a planned economy inevitably ends in fascism. This is despite the fact that fascism is *never* the desired or intended result of well-meaning socialists.

This thesis is presented in a famous book called “The Road to Serfdom“, written by Nobel prize winning economist F.A. Hayek. This is the book that guided champions of free-market capitalism and individual liberty such as Ronald Reagan, Margaret Thatcher, and today, Stephen Harper.

What the Department of Homeland Security wrote

Let’s take a look at the latest report from Barack Obama’s Department of Homeland Security.

Michelle Malkin has the complete story here. (H/T The Western Experience)

> Yesterday, Roger Hedgecock and the Liberty Papers posted an unclassified DHS Office of Intelligence and Analysis report titled:

> **Rightwing Extremism: Current Economic and Political Climate Fueling Resurgence in Radicalization and Recruitment.**
>
> The "report" (PDF file here) was one of the most embarrassingly shoddy pieces of propaganda I'd ever read out of DHS. I couldn't believe it was real.
>
> …I spent the day chasing down DHS spokespeople…[and] the press office got back to me and verified that the document is indeed for real.

Below, Michelle has the actual quotes from the DHS report.

Here are some questions for you:
Are you for federalism? Are you for limited government? Are you for immigration law enforcement? Are you pro-life?

If you answered "yes", then the Obama regime thinks that you are a potential terrorist:

> Rightwing extremism in the United States can be broadly divided into those groups, movements, and adherents that are primarily hate-oriented (based on hatred of particular religious, racial or ethnic groups), and those that are mainly antigovernment, rejecting federal authority in favor of state or local authority, or rejecting government authority entirely. It may include groups and individuals that are dedicated to a single issue, such as opposition to abortion or immigration.

Here are some more questions for you:
Are you a free-market capitalist? Are you in favor of personal responsibility? Are you for legal firearm ownership?

If you answered "yes", then the Obama regime thinks that you are a potential terrorist:

> Rightwing extremists are harnessing this historical election as a recruitment tool. Many rightwing extremists are antagonistic toward the new presidential administration and its perceived stance on a range of issues, including immigration and citizenship, the expansion of social programs to minorities, and restrictions on firearms ownership and use. Rightwing extremists are increasingly galvanized by these concerns and leverage them as drivers for recruitment. From the 2008 election timeframe to the present, rightwing extremists have capitalized on related racial and political prejudices in expanded propaganda campaigns, thereby reaching out to a wider audience of potential sympathizers.

And there's more in the report:

> Over the past five years, various rightwing extremists, including militias and white supremacists, have adopted the immigration issue as a call to action, rallying point, and recruiting tool. Debates over appropriate immigration levels and enforcement policy generally fall within the realm of protected political speech under the First Amendment, but in some cases, anti-immigration or strident pro-enforcement fervor has been directed against specific groups and

> has the potential to turn violent.

And more:

> DHS/I&A assesses that rightwing extremists will attempt to recruit and radicalize returning veterans in order to exploit their skills and knowledge derived from military training and combat. These skills and knowledge have the potential to boost the capabilities of extremists—including lone wolves or small terrorist cells—to carry out violence. The willingness of a small percentage of military personnel to join extremist groups during the 1990s because they were disgruntled, disillusioned, or suffering from the psychological effects of war is being replicated today.

And more:

> DHS/I&A will be working with its state and local partners over the next several months to ascertain with greater regional specificity the rise in rightwing extremist activity in the United States, with a particular emphasis on the political, economic, and social factors that drive rightwing extremist radicalization.

The Anchoress, unlike me, is more calm and circumspect. But, with her characteristic perceptiveness, she adds this warning:

> **Dissent – normal, healthy political dissent – which was "patriotic" just six months ago**, and expressed without encumbrance throughout our history (until now) seems to be under attack….
>
> As some of us have noted, **everything that was *projected* on to the Bush administration is finding real expression in the Obama administration.** I'm still waiting for the part where those who predicted that "Bush will declare martial law and never allow another election" pooh-pooh the right who say it of Obama. You know it will happen.
>
> So, you see…we're in a bad place, in these United States.

So let's be clear. In my opinion, the United States is now on the road to fascism. Every single person who voted for Obama put us on that road to fascism. The United States of the Founding Fathers has been obliterated by the government-run schools, the leftist media, and our own invincible hedonism. Our liberty, and the liberty of nations struggling against socialism, (i.e. – fascism), worldwide, is now in jeopardy.

To end on a positive note, Open Market has something hopeful to say about possible remedies:

> Government agencies that investigate people for their "politically incorrect" views can be held liable for violating the First Amendment, as happened in White v. Lee (2000), where a federal appeals court held that federal fair-housing officials could be sued individually for punitive damages for investigating citizens who spoke out against a group home for the disabled (in that case, mentally-ill

> substance-abusers).

Let's hope that Bush appointed enough strict constructionist judges, he was pretty good at doing that.

Further study

Nice Deb is making light of the story here by comparing Democrats like Obama's friend Bill Ayers, (a non-terrorist who just tried to blow some innocent people up), with authentic terrorists like little Republican girls who still believe in the Constitution.

Here are books on liberty that people today don't read, but they should. They *really* should. Because God knows, those secularist socialists in the government, and the people who voted them in, sure haven't. Atheistic communism lead to the deaths of 100 million people in the 20th century alone. Is that what we have to look forward to in this country? Ideas have consequences.

An abridged version of The Road to Serfdom is here.

UPDATE: Michelle Malkin's syndicated column is here.

Secretary of Education rescinds previously awarded D.C. vouchers

April 15, 2009 | by Wintery Knight | Link | Original Link

Fox News reports on it here: (H/T The Cato Institute)

The Heritage Foundation has *a lot* more.

Let's start with a personal experience from one of the 200 low-income households affected.

> Put yourself in the shoes of LaTasha Bennett. A single mother living in Washington, D.C., Ms. Bennett is able to send her child to a private school thanks to the D.C. Opportunity Scholarship program. Hoping to enroll her daughter in the same private school, Ms. Bennett applied for and recently received a voucher from the Washington Scholarship Fund.
>
> But last week, Ms. Bennett and hundreds of other D.C. parents received a form letter from the U.S. Department of Education informing them that their children wouldn't be receiving a scholarship.

And more:

> Secretary Duncan's decision to take scholarship money away from low-income families came just days after the Department of Education released a study showing that students participating in the Opportunity Scholarship program had statistically significant better reading scores than students who applied to the program but were not offered a scholarship. The students that were in the program the longest showed notable improvement reading at levels approximately 1.5 to 2 full school years ahead of the sample group.
>
> The data is in. School choice works. And it significantly lower costs. Opportunity Scholarships offered through the program are worth $7,500. Since the participating private schools cannot charge scholarship students more than the amount of their scholarships, that amount is still less than half of the $15,315 that D.C. taxpayers spent per pupil in the 2004–05 school year.

And what about the educations of Barack Obama and Arne Duncan?

> Growing up in Hawaii, President Obama attended a private school. Growing up first in Chicago, and now in Washington, Obama's two daughters attended and still attend a private school. Growing up in Chicago, Secretary Duncan attended a private school. And when he moved to D.C. Secretary Duncan chose to live in Arlington, where good schools for his children are assumed.

But maybe they were just pretty typical progressives, living in an emotional fantasy-land, with no access to facts?

The Wall Street Journal reports: (H/T The Heritage Foundation)

> Voucher recipients were tested last spring. The scores were analyzed in the late summer and early fall, and in November preliminary results were presented to a team of advisers who work with the Education Department to produce the annual evaluation. Since Education officials are intimately involved in this process, they had to know what was in this evaluation even as Democrats passed (and Mr. Obama signed) language that ends the program after next year.
> …
> Mr. Duncan's office spurned our repeated calls and emails asking what and when he and his aides knew about these results. We do know the Administration prohibited anyone involved with the evaluation from discussing it publicly. You'd think we were talking about nuclear secrets, not about a taxpayer-funded pilot program.

And the Denver Post's David Harsanyi reports: (H/T The Heritage Foundation)

> When I had the chance to ask Duncan — at a meeting of the Denver Post editorial board on Tuesday — whether he was alerted to this study before Congress eradicated the D.C. program, he offered an unequivocal "no." He then called the WSJ editorial "fundamentally dishonest" and maintained that no one had even tried to contact him, despite the newspaper's contention that it did, repeatedly.
>
> When I called the Wall Street Journal, I discovered a different — that is, meticulously sourced and exceedingly convincing — story, including documented e-mail conversations between the author and higher-ups in Duncan's office. The voucher study — which showed progress compounding yearly — had been around since November and its existence is mandated by law. So at best, Duncan was willfully ignorant.

And why are we surprised? Teacher's unions funded Obama's election campaign, not children and parents. The purpose of schools, according to socialists, is to indoctrinate the youth with socialism, moral relativism, secularism, and the religion of global warming. The purpose of schools is not to provide them with an *education*, so that they can *get a job* and avoid dependence on the government!

The Heartland Institute's series of podcasts on vouchers and school choice.

Should it be legal to publicly support traditional marriage?

April 15, 2009 | by Wintery Knight | Link | Original Link

The Washington Post reports: (H/T The Heritage Foundation)

> Faith organizations and individuals who view homosexuality as sinful and refuse to provide services to gay people are losing a growing number of legal battles that they say are costing them their religious freedom.
>
> The lawsuits have resulted from states and communities that have banned discrimination based on sexual orientation. Those laws have created a clash between the right to be free from discrimination and the right to freedom of religion, religious groups said, with faith losing. They point to what they say are ominous recent examples:
>
> – A Christian photographer was forced by the New Mexico Civil Rights Commission to pay $6,637 in attorney's costs after she refused to photograph a gay couple's commitment ceremony.
>
> – A psychologist in Georgia was fired after she declined for religious reasons to counsel a lesbian about her relationship.
>
> – Christian fertility doctors in California who refused to artificially inseminate a lesbian patient were barred by the state Supreme Court from invoking their religious beliefs in refusing treatment.
>
> – A Christian student group was not recognized at a University of California law school because it denies membership to anyone practicing sex outside of traditional marriage.

The Heritage Foundation adds a couple more examples:

> The post left out a Los Angeles City College student whose professor called him a "fascist bastard" and refused to let him finish his speech against same-sex marriage and Methodist ministry in New Jersey forced to end performing wedding ceremonies because they did not allow a same-sex union to be performed on their campground.

How does government endorsement same-sex marriage hurt those who believe in traditional marriage?

According to Heritage fellow Thomas Messner, it hurts us in 3 ways:

Excerpt:

> Specifically, in a society that redefines marriage to include same–sex unions, those who continue to believe marriage is a relationship between a man and a woman can expect to face three types of burdens. First, institutions that support

> the traditional understanding of marriage may be denied access to several types of government benefits, and individuals who work in the public sector may face censorship, disciplinary action, and even loss of employment. Second, those who support the traditional understanding of marriage will be subject to even greater civil liability under nondiscrimination laws that prohibit private discrimination based on sexual orientation, marital status, and gender. Third, the existence of nondiscrimination laws, combined with state administrative policies, can invite private forms of discrimination against religious individuals who believe that marriage involves a man and a woman and foster a climate of contempt for the public expression of their views.

Don't believe that it could happen here? Take a look at what is happening in the UK schools according to this Telegraph article, or what is happening in Canadian schools.

Obama aims to destroy math, physics and computer science

April 15, 2009 | by Wintery Knight | Link | Original Link

Story by Christina Hoff Sommers in the Washington Post, or here on AEI. (H/T The American Enterprise Institute)

I bet you thought that Obama was pro-science, didn't you? Nope. Not only is he directing funds towards unproven ESCR and away from useful ASCR, but he also means to destroy university education in the fields of math and science. Leftist politics is more important than science for Obama.

Here's what he plans to do:

> In an October letter to women's advocacy groups, he declared that Title IX, the law that requires universities to give equal funding to men's and women's athletics, had made "an enormous impact on women's opportunities and participation in sports." If pursued with "necessary attention and enforcement," the same law could make "similar, striking advances" for women in science and engineering.
>
> That campaign pledge is hardening into policy, which ought to give people pause. In February, the Congressional Diversity and Innovation Caucus met with academic deans and women's groups to plan for the new Title IX deployment. Nearly everyone present agreed that closing the gender gap in the laboratory is an urgent "national imperative." What they failed to consider, however, is how enforced parity might affect American science.

To start with, consider the effects of Title IX:

> Consider the situation at Washington's Howard University. In 2007, the Women's Sports Foundation, a powerful Title IX advocacy group, gave Howard an "F" grade because of its 24-percentage-point "proportionality gap": Howard's student body was 67 percent female, but women constituted only 43 percent of its athletic program. In 2002, Howard cut men's wrestling and baseball and added women's bowling, but that did little to narrow the gap. Unless it sends almost half of its remaining male athletes to the locker room, Howard will remain blacklisted and legally vulnerable. Former Howard wrestling coach Wade Hughes sums up the problem this way: "The impact of Title IX's proportionality standard has been disastrous because . . . far more males than females are seeking to take part in athletics."

Allison Kasic over at the Independent Women's Forum writes about recent cuts at Kutztown University.

She writes:

> The latest victims of gender equity appear to be men's soccer and swimming at Kutztown University in Pennsylvania. The school announced at the end of March that it would be cutting both sports effective at the end of this season.
>
> …The "gender equity" law guides school's program decisions through its rigid proportionality requirements (aka gender quotas). For background on Title IX's demands, read this as a starting point. **And, lo and behold, after students, parents, and coaches started asking questions about Title IX, the school admitted that many factors, including Title IX were taken into consideration.**

IWF writes about Title IX quite a bit, and they have some of their pieces linked here.

UPDATE: Alison K. at the IWF sent me a couple of links on Title IX.

- A thorough overview of Title IX's impact on athletics is available here.
- If you are looking for something shorter, this is basically the Cliff Notes version.

CNN media bias exposed by slanted tea party coverage

April 16, 2009 | by Wintery Knight | Link | Original Link

Here is a video clip to get us started from CNN. (H/T Hot Air and Heritage Foundation)

This is not at all unusual for CNN. Notice how those on the left cannot even bear to hear the words of those they disagree with. That is telling, and it foreshadows the oncoming fascism that I predicted earlier based on the leaked Department of Homeland Security report that portrays Republicans as potential terrorists because they are not secular socialists.

Michelle Malkin, (who I think is *very* pretty and funny and smart), was interviewed on Fox News at the Sacramento Tea Party. She explains *exactly* why these protests are happening: fiscal irresponsibility, including high taxes, huge spending, massive deficits, corruption, fraud and government waste. And these protests are as much against big spending Republicans, as Democrats.

And Glenn Beck is even more explicit. (H/T The Heritage Foundation). This is not about Democrats or Republicans. It is about economic policy. Period.

There were 225,481 attendees, according to PJTV. Over 800 protests occurred, across all 50 states! But Gateway Pundit reports that Obama is unaware of the protests. Yes, he's unaware of many things, I'm sure. In fact, that's his specialty. (UPDATE: The Campaign Spot says 337,682 on Thursday April 16th)

In her related post entitled The word of the week is "crazy", The Anchoress has a funny caption over the graph showing the budget deficit projections under Obama's plan. Her caption is: *If you do not like this chart and think something should be done about it, you are "crazy"*. Yes, according to socialists, everyone who objects to socialism is crazy!

If you do not like this chart and think something should be done about it, you are "crazy"

(H/T The Anchoress)
And here is a bit more of her post: (go read the whole thing!)

> **From the LA Times:** Anti-Obama Taxpayer Tea Parties steeped in insanity
>
> Here is a crazy lady?
>
> That headline is interesting, not only are the Tea Party folk "insane" but they are also *"anti-Obama."* Recall, back in the day, if you were any sort of opponent to Clinton policies or if you donated to a candidate other than a Clinton, you were "anti-Clinton" or, as I liked to say, an "anti-Clintite". Of course for the last 8 years, protesters were just reasonable people with reasonable, moderate and patriotic concerns. They were not "anti-Bush" and they were not "crazy" or "insane." Those protesters, originating from the left, were *smart*, and deserving of respect and respectful media coverage. Hell, when the DHS wrote about "leftwing extremism", they felt no need to even mention them as part of a vague "suspect 'em all" strategy. Imagine that.
>
> But now if you are protesting, you're just a crazy "anti-Obamite."

Gateway Pundit has pictures of the St. Louis rally, which drew 10,000 protesters! And more pictures are linked here.

Remember, these grass-roots protests of the tax-and-spend policies of the Democrats, which have been adopted in response to a crisis caused by the Democrats (videos showing Democrats are linked there). If you still believe that Democrats are fiscally conservative, check out this video of Obama giving a serious economic policy speech during the election campaign.

Also, did you know that Obama made 2.7 million dollars in income last year? At least it's less than the 4.2 million he made in 2007. Somehow, I don't think he'll donate it all to charity like Dick Cheney did.

Pictures and stuff

More Tea Party at the Heritage Foundation, including pictures and videos!

- The Tea Party Protests are grass-roots protests that arose spontaneously
- Comments on Tea Party protests by famous CNBC ranter Rick Santenelli
- Lafayette Square Tea Party pictures, more pictures here and even more pictures here
- Olympia, WA pictures
- Rush Limbaugh
- Fox News coverage of the Sacramento protest

I have to link to the pictures, as everyone I talk to seems to be interested in what the signs say. Laura at Pursuing Holiness, whom I just blogrolled, has a post up with a video of the New Orleans Tea Party protest.

The eyewitness testimony of Jesus' women followers supports the empty tomb

April 16, 2009 | by Wintery Knight | Link | Original Link

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection. The entire paper was also presented orally to the students and faculty at California State University, Fresno in 2005, and a full recording is available here. The paper covers all of Craig's preferred set of minimal facts, which he uses in debates.

The word resurrection means bodily resurrection

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

More on this from N.T. Wright, here.

There are multiple early, eyewitness sources for the empty tomb

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think

> otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s.

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

Lack of legendary embellishments

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

The eyewitness testimony of the women

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

The earliest response from the Jewish high priests assumes the empty tomb

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

Critical responses to the empty tomb

Richard Carrier tried to argue that the testimony of women was accepted, in his debate with Craig, but Craig showed that this was only possible in *two cases:* 1) if they were testifying about their status as widows, or 2) if no male witnesses were available, e.g. – they had all been killed. Audio of the debate is here. Carrier's admission of defeat is here, on his blog. Craig's post-debate response to Carrier is here and here.

Further study

To see a debate betwen Craig and the well-known skeptic Bart Ehrman, click here for the 12 part playlist. The first two parts are embedded below, containing Craig's entire 20 minute opening speech. The full transcript of the debate is here, so you can follow along.

To hear a related lecture by Craig on the topic of “Who did Jesus think he was?”, click here. The video is here. This lecture was delivered in February, 2009 at Columbia University, probably the most secular leftist university in the United States. Yes, the same university that invited Ahmadinejad to speak.

How government regulations can cost us our jobs

April 16, 2009 | by Wintery Knight | Link | Original Link

Good post on the effects of government regulation, over at the Competitive Enterprise Institute's Open Market blog.

Excerpt:

> A story in the *Star Tribune* in Minneapolis St. Paul shows how adverse effects of such needlessly onerous standard can spill over into other areas. In this case, a meat plant had to shut its doors, putting 200 people out of work because their water exceeded EPA's standard by 8 parts per billion. EPA can't show that the Clinton era its standard won't save a soul, but we do know that economic hard times hurt many.

Here's an excerpt from the Strib piece:

> More than 200 workers in a small town 90 minutes west of Minneapolis have lost their jobs after a beef slaughtering plant was forced to shut down because its water contained excessive levels of arsenic, a condition the plant owner said he couldn't afford to fix in time to avoid federal penalties.
>
> "I'm done," said William Gilger, owner of North Star Beef Inc. in Buffalo Lake, Minn.

The Heritage Foundation has a good post on how the EPA intends to expand their control of the economy in order to save us from global cooling warming.

> In essence, the endangerment finding says that global warming and climate change pose a serious threat to public health and safety and thus almost anything that emits carbon dioxide and other greenhouse gases could be regulated under the Clean Air Act.
>
> The endangerment finding is the first step in a long regulatory process that could lead to EPA requiring different regulations and units of emissions requirements for each gadget that emits carbon dioxide. The first target would be automobiles, but the EPA's Advanced Notice of Proposed Rulemaking (ANPR) suggested regulations of almost everything that moves, including new regulations smaller items such lawnmowers and forklifts. The ANPR also suggests putting speed limiters on large trucks on the table as a means of reducing carbon dioxide and even suggested sharkskin boats oozing bubbles to reduce emissions from the shipping industry.
>
> …Beyond things that move, the agency could go after things that stand still. More than a million energy using businesses, buildings, and farms could also be hit with crushing administrative burdens and costly controls. And even if EPA decides not to go that far, they will almost certainly be sued into doing so.

And they have a forecast of the potential costs of this regulation:

> However, the economic damage would be similar to any carbon capping bill passed by Congress and perhaps even worse. Dr. David Kreutzer and Dr. Karen Campbell of The Heritage Foundation's Center for Data Analysis found the economic costs of EPA regulations to be:
>
> • Cumulative gross domestic product (GDP) losses are nearly $7 trillion by 2029 (in inflation adjusted 2008 dollars)
> • Single-year GDP losses exceed $600 billion (in inflation-adjusted 2008 dollars).
> • Annual job losses exceed 800,000 for several years.
> • Some industries will see job losses that exceed 50 percent.

If you tax or regulate something, you get less of it. If you cut taxes and remove regulations, you get more of it. The best protection a worker has is not onerous taxes and regulations on their employer. The best protection a worker has is a choice among a huge number of employers. If you want a choice of employers, try creating conditions that employers actually want.

Republicans care about creating conditions that allow businesses to create jobs. We want this because we believe that people should not dependent on the government for their livelihood. Your ability to choose your employer is part of your liberty. Democrats care about inventing a faked crisis using junk science in order to justify government-coerced redistribution of wealth.

Upcoming panel debate featuring Tony Costa and Michael Coren

April 16, 2009 | by Wintery Knight | Link | Original Link

For my Canadian readers, if you are in Toronto, you might want to consider attending this upcoming debate on morality in an atheistic worldview. Is it possible? Is it rational? The official topic is "Evolution of ethics: Science vs Faith". It is being organized by non-Christians, which explains the title, and the apparent 3-2 advantage the non-theists will enjoy.

Excerpt from the Humanist Canada web site:

> Are ethics divinely-inspired or man-made? Are there absolute morals? Although scientists and philosophers have debated the nature of ethics for hundreds of years, developments in genetic research have unleashed a firestorm of issues concerning human control of creation and its impact on our future. Given that society ideals change over time, how can we determine what is morally right or wrong?
>
> Join Humanist Canada for a lively and thought-provoking debate on the nature of ethics. Five prominent speakers, from both the Christian and Humanist communities, will discuss and debate some of the hottest topics today including abortion, gender, homosexuality, and biotechnology. Our panel of speakers includes: **Christopher diCarlo** (celebrated professor of Philosophy of Science and Bioethics; founder of "We Are All African" Campaign); **Michael Coren** (outspoken Christian writer; radio and TV host); **George Dvorsky** (popular transhumanist; animal rights activist); **Tony Costa** (recognized public speaker for Campus for Christ); and **Jean Saindon** (award-winning professor of Natural Science and Technology).

Time and place: Saturday April 18 @ 6:30 pm, Innis Town Hall, 2 Sussex Ave, Toronto

Tickets: **$15 Humanist Canada members; $25 general admission; $10 students (with school ID).** Appetizers, desserts and drinks included. Purchase tickets by April 15 for best seats. Click **HERE** for the printable registration form or click on ticket choices below.

DiCarlo debated Bill Craig before and really, really disappointed me.

If you know of an upcoming debate or discussion event related to the topics on this blog, be sure and send me an e-mail. If you know of any additional materials related to this topic, please leave a comment.

Other debates on atheism and morality

Here are some prior debates on the rationality of morality on atheism.

1. From Christianity Today, a written debate: Douglas Wilson vs. Christopher Hitchens
2. From the University of Western Ontario, a transcript of a public debate: William Lane Craig vs. Kai Nielsen
3. From Schenectady College, a transcript of a public debate:William Lane Craig vs Richard Taylor
4. From Franklin & Marshall College, William Lane Craig vs. Paul Kurtz (audio, video1, video2, video3, video4, video5, video6, video7)
5. From the University of Massachusetts at Amherst, William Lane Craig vs. Louise Antony (audio1, audio2, video1, video2)

Further study

A good paper by Bill Craig on the problem of rationally-grounding prescriptive morality here. My previous posts on this blog on this topic are here and here. The first one is about whether atheists can use a made-up standard to judge God for his perceived moral failures, the second one is on whether meaningful morality is rational on atheism.

Michelle Malkin takes on Nancy Pelosi's dismissal of tea party protests

April 17, 2009 | by Wintery Knight | Link | Original Link

The Weekly Standard, citing Roll Call, reports on Democrat Nancy Pelosi's explanation for the 800+ Tax Day protests.

Excerpt from the Roll Call article: (H/T Gateway Pundit)

> But in an interview on Fox TV in San Francisco, Speaker Nancy Pelosi (D-Calif.) chalked up the GOP grass-roots effort as "AstroTurf."
>
> "This initiative is funded by the high end; we call it AstroTurf, it's not really a grass-roots movement. It's AstroTurf by some of the wealthiest people in America to keep the focus on tax cuts for the rich instead of for the great middle class," Pelosi said.
>
> Other House Democratic leaders took a different tack: One senior aide has been circulating a document to the media that debunks the effort as one driven by corporate lobbyists and attended by neo-Nazis…
>
> **In addition, the tea parties are "not really all about average citizens," the document continues, saying neo-Nazis, militias, secessionists and racists are attending them. The tea parties are also not peaceful, since reporters in Cincinnati had to seek "police protection" during one of the events, it states.**

The Weekly Standard responds to Pelosi:

> The suggestions that these tea parties are driven by DC-based groups is laughable; Liz Mair takes a critical look and concludes the charge is baseless. Besides the points that Mair makes, it's worth noting that while there have been dozens of tea parties, few have featured conservative candidates or representatives of DC think tanks and lobbying groups.
>
> As far as the charge that these rallies are composed of Nazis and terrorists, that's hard to reconcile with the pictures of participants. There are too many young children and grandparents. Further, even a strong Obama supporter like Susan Roesgen didn't turn up any violent types at the Chicago Tea Party, despite her best attempt to provoke a strong reaction.

And then they ask about the groups and sponsors of left-wing rallies:

> If this is a conversation they want to have, however, perhaps Ms. Pelosi can explain the role of Marxists and North Korean sympathizers in the U.S. anti-war movement, or discuss how George Soros bought such influence in the Democratic party. It's not a debate that would help Democrats, since it's

> relatively easy to show the role of fringe extremists in the Democratic grassroots.

That’s all well and good, but commentary is better when Michelle Malkin is the commenter:

And Michelle has a lot more photos and videos from the various protests, too.

Debate summary: Is God necessary for morality? William Lane Craig vs Shelly Kagan

April 17, 2009 | by Wintery Knight | Link | Original Link

Debate summary

This is a summary of a debate on the rational justification for moral values, moral duties and moral accountability on atheism. The question of free will and determinism also comes up. Note that this is not a debate to see who wins. The commie wusses at the Veritas Forum made Craig promise not to press for a victory, as he reports here:

> I did respond briefly to Prof. Kagan's view… but I didn't press the point because our hosts with the Veritas Forum had made it very clear to me that they were not interested in having a knock-down debate but a friendly dialogue that would foster a warm and inviting atmosphere for non-believing students at Columbia. The goal was simply to get the issues out on the table in a congenial, welcoming environment, which I think we did.

The debate was held in February, 2009 at Columbia University between Yale philosopher Shelly Kagan and William Lane Craig.

Video and audio are here:

- Downloadable audio and video of the debate in MP3 and Quicktime, respectively.
- Streaming video of the entire debate.

Shelly Kagan – opening speech

Framing the debate:

- The question is not whether people need God in order to act morally, because atheists are able act morally and immorally just as well as theists
- The questions is whether we need to God in order to be the ground for morality. Do right and wrong really exist if there is not God?
- He will defend objective morality on atheism

One possible explanation for morality without God is:

- right is what helps others and doesn't hurt them
- wrong is what hurts people and doesn't help them

And the standard rules of moral behavior emerge from these 2 principles.

What are the objections to this help/hurt theory

1) Are these really wrong, or is this standard just a matter of opinion?

No, these moral standards are not a matter of opinion, they are facts.

2) What makes these rules apply to everyone and prescribe behaviors

Possible answers:
– moral rules are just brute facts
– contractarianism: (social contract) the moral rules should be chosen by reflecting on a hypothetical discussion between ideal reasoners
– something else

3) Morality involves commandments, so who is the commander?

Possible answers:
– moral commandments don't require a commander
– for example, logical rules like the law of non-contradiction don't need a lawgiver, and moral rules could be just like that
– or, perhaps the commander is society itself, which fits with the contractarian theory

William Lane Craig – opening speech

Framing the debate:

- not debating whether belief in God is necessary to act morally
- the question is whether god is a necessary ground for morality to be meaningful

Is God necessary for morality? It depends on what morality means:
– is morality just an arbitrary pattern of social behavior?
– if so, then God isn't needed to ground humans to act according to a pattern of social behavior

But if morality is objective, (true whether anyone believes it or not):
– then god is necessary to ground objective morality
– because objective moral standards exists independently of human standards of personal preference or cultural fashion

Non-objective morality is illusion/convention
– pattern has no objective moral significance, it's just an arbitrary fashion that varies by time and place

God is necessary for morality in 3 ways
1) God grounds objective moral values, i.e. – what counts as good and what counts as evil
2) God grounds objective moral duties, i.e. – what we ought to do and ought not to do
3) God grounds moral accountability, i.e. – our ultimate fate depends on how we act morally

1) Moral values
– whether some action is good or evil, independent of whether anyone thinks it is or not
– individual and social opinions do not decide these standards of good and evil
– god is necessary to ground moral standards that exist independent of human opinions
– the moral values are set by god's unchanging nature

Human value:
– why think that humans have value, such that they should be treated a particular way

– on atheism, humans are just animals
– evolution means that moral values are the product of the struggle for survival
– the “herd” moral standard is arbitrary, it is not really a true standard
– on atheism, moral values do not exist independently, they are merely descriptions of behaviors that are the product of biological and cultural evolution
– in other animal species, many things that we think of as wrong are practiced, like stealing and rape
– so why think that our practices are objectively true, instead of just customs and fashions of our species?

Free will:
– moral choices require a non-physical mind distinct from the physical brain in order to make free moral choices
– on (biological) determinism, no choices are morally significant – just actions of puppets on strings
– no moral responsibility for a puppet’s determined actions

2) Moral duties
– whether some action is right or wrong
– whether humans are morally obligated to perform certain actions, independent of whether we think that we do or not
– the commands flow from god’s unchanging moral nature
– they become duties for us, his creatures

on atheism
– on atheism, humans are animals, and animals don’t have real moral obligations
– where would moral duties come from on atheism, to whom is the duty owed?
– on atheism, it is just a subjective impression ingrained into us by social and biological pressures
– on atheism, there is no standard of what we ought to do
– on atheism, breaking the social contract is the same as belching loudly at the dinner table, it’s just being unfashionable – not doing what the rest of the heard has decided is customary

3) moral accountability
– on theism, the moral choices we make affect where we end up in the afterlife
– god balances the scales of justice in the end

on atheism:
– it is irrelevant how you act, you end up in the same place (dead) regardless of how you live

why be moral on atheism?
– why shouldn’t a person pursue self interest instead of following the moral conventions of the social contract
– it’s not always the case that doing the right thing is also doing the thing that gives you selfish pleasure

– a very powerful person would not need to be moral, since they can escape the social sanctions that result from their breaking the social contract
– why would a very powerful do the right thing when it is against their self-interest, on atheism, since the social contract is just arbitrary fashion?

acts of self-sacrifice are irrational on atheism
– the result is that no one will be moral when it is hard to do the right thing
– because in the long run, it doesn't matter what you do, on atheism
– compassion and self-sacrifice are not pleasurable, and are therefore pointless on atheism

Conclusion:

questions atheists must answer:
what is the basis of objective moral values?
what is the basis of human value on atheism?
why ought we to do the right thing and avoid doing the wrong thing?
what is the basis for moral accountability

10 minutes of cross X, Craig questioning

1)
WC what makes harming other people wrong, on a naturalistic (atheistic) worldview? Other animals do it, so why is it wrong for humans?

SK because humans have the rational capacity to understand the morality of their actions

WC but why is it wrong for humans to inflict harm on other humans?

SK humans can do neat things that animals can't do like calculus and poetry, so therefore murder is wrong

2) WC Are you a determinist?

SK Yes

WC Then how do you justify moral choices on naturalism?

SK I'm a compatibilist

WC but on your view, behavior is caused by brain chemicals, so then how can you make free choices?

SK I don't want to talk about it right now

10 minutes of cross X, Shelly questioning

1)
SK just because I deny ultimate meaning, it doesn't mean that I can't be moral

WC on naturalism, everything, including stars and humans, is destined to destruction in the heat death of the universe, so why would moral choices matter in the end, since the moral choices don't affect your ultimate fate (death)?

SK just because my moral actions lack ultimate significance, things can be still be significant to the people living now, because I can feel good about doing moral things

when it is against my self-interest

WC the end of your life doesn't change regardless of what we choose, on naturalism/atheism, so why be moral on atheism? on atheism, prudence and morality are in conflict, but on theism prudence and morality coincide

SK but then on theism, being moral is just self-interest – and besides, I can still choose morality over prudence, because it makes me feel good, (i.e. – atheists can adopt the moral point of view against their self-interest, based on feelings of happiness)

WC but it demoralizes moral behavior to realize that it makes no difference in the end whether you do right or wrong

SK but it demoralizes morality on theism that it reduces to self-interest, you are doing right in order to be get an eternal reward

2)
SK how can we justify punishing people on atheism? the hypothetical social contract imagined during a discussion between perfectly rational people prescribes morality for all of us

WC what if the person doesn't want to sign the contract

SK everyone ought to bound by it because the perfectly rational people made it, even very powerful people ought to follow the social contract

Moderator-directed discussion

1)
MD On atheism, is free will impossible

WC yes, because all behavior on naturalism/materialism/atheism is the result of chemical reactions, not free decisions of personal agents

2)
MD if the Nazis won, and ran the world, would the Nazis still be bad

SK yes, because the social contract is a thought experiment with perfectly rational people behind a veil of ignorance so it's still binding on Nazis even if they win world war 2 and run everything

3)
MD religious history is filled with atrocities

WC yes, and this helps to prove that morality really is objective, not just based on social convention

MD but why do humans do such immoral things

WC humans are sinful, and it shows that they need god

4)
MD why do we violate the social contract

SK humans are sinful

MD how would you prevent or control these moral failures

SK moral education, moral community, the power of the state as enforcer of morality

SK (to WC) isn't there a tension between doing good and being saved by grace on christianity?

WC on christianity, the bad people who are contrite go to heaven, the self-righteous think they are good enough without god, they are they ones who go to hell

SK but doing good is significant to me, even if it's not ultimately significant, because it makes me feel good right now

5)
MD should we be nice to animals

WC christians have an advantage here because humans have environmental and animal stewardship duties – not based on animal rights, but based on obligations that god has placed on humans to be good stewards

SK are you a vegetarian

WC no, but we should be humane to animals – in any case why should a naturalist treat animals well?

SK because it's wrong to harm animals, it's wrong to make them feel pain

6)
MD what about cross-cultural differences, how is that affected by theism and atheism

WC the question of ontology is separate from the question of epistemology

MD so are some cultures wrong?

WC yes, nazis, etc.

SK we are largely in agreement, some societies are not evolved enough to be able to know what is right and wrong by educated rationality

William Lane Craig – closing statement

theism does have good answers to the questions of moral values, moral duties and moral accountability
– the values are rooted in god's nature
– the duties are owed to God
– it matters if we're good or not because our ultimate destination is affected by our moral actions

on atheism
– the social contract is just an arbitrary social convention
– determinism does not allow for free moral decisions
– with no one to prescribe duties, there is no reason to perform duties
– on atheism, moral duties are like rules of etiquette
– it makes no difference in the long run how you behave

Shelly Kagan – closing statement

objective morality can exist without god

atheists can prefer to do the right thing against self-interest because it gives them happy feelings of significance, even if there is no ultimate significance
– atheism cannot provide ultimate significance for moral actions, and that is ok so long as their is emotional (subjective) significance

Craig's post debate comments

Craig's comments on the debate from his March newsletter.

Other debates on atheism and morality

Here are some prior debates on the rationality of morality on atheism.

1. From Christianity Today, a written debate: Douglas Wilson vs. Christopher Hitchens
2. From the University of Western Ontario, a transcript of a public debate: William Lane Craig vs. Kai Nielsen
3. From Schenectady College, a transcript of a public debate: William Lane Craig vs Richard Taylor
4. From Franklin & Marshall College, William Lane Craig vs. Paul Kurtz (audio, video1, video2, video3, video4, video5, video6, video7)
5. From the University of Massachusetts at Amherst, William Lane Craig vs. Louise Antony (audio1, audio2, video1, video2)

Further study

A good paper by Bill Craig on the problem of rationally-grounding prescriptive morality here. My previous posts on this blog on this topic are here and here. The first one is about whether atheists can use a made-up standard to judge God for his perceived moral failures, the second one is on whether meaningful morality is rational on atheism.

William Lane Craig's comments on the Columbia University debate with Shelly Kagan

April 17, 2009 | by Wintery Knight | Link | Original Link

Thought I would cut and paste these comments from Reasonable Faith regarding the debate I summarized in my last post so that you would be able to see how much Craig appreciated Kagan's debating skill. I thought this was a great debate!

This is just a big quote from Craig's March 2009 newsletter:

> After a week at home, I was off again to New York to speak at a Veritas Forum at Columbia University. Columbia is on the western edge of Harlem, just north of Central Park. Its campus is a lovely oasis in the midst of big city ugliness. Like the other Ivy League universities, it was originally founded as a Christian institution. On the face of the old library the inscription states that Columbia exists "for the advancement of the public good and the glory of Almighty God." In the campus chapel above the altar are inscribed Paul's words, now ironically so appropriate, "Whom therefore you ignorantly worship, him declare I unto you" (Acts 17. 23)!
>
> On the first evening I debated professor Shelly Kagan of Yale University on the question "Is God Necessary for Morality?" Actually, this was not a debate but a dialogue. After we each gave our opening statements, we had a very substantive discussion. Kagan has Christian colleagues at Yale, like Robert Adams and John Hare, who defend moral values and duties based in God, and I was struck by the respect with which he treated the view. He surprised me by not arguing for his own view of ethics, which is a radical consequentialism. He holds that if torturing a little girl to death would somehow result in greater overall good as a consequence, then that is what we should do! Instead he defended a social contract view of morality, according to which our moral duties are whatever rules perfectly rational people would agree to as a way of governing society. I responded that this makes morality a human convention, rather than objective. Kagan also affirmed in our dialogue that he is a physicalist and determinist. I charged that determinism strips our actions of any moral significance. We also disagreed over the importance of moral accountability. I claimed that the absence of moral accountability on atheism makes morality collide with self-interest and robs our choices of significance, but Kagan maintained that we don't need a sort of cosmic significance in order for our moral choices to be significant. All in all, we had an affable and substantive exchange which fairly presented the alternatives.
>
> One feature of our dialogue that pleased and surprised me was how clearly the Gospel emerged in the course of our conversation. Talking about moral values and accountability led naturally to the subject of our failure to fulfill our moral duties and how to deal with that. I was able to explain our need of God's

> forgiveness, moral cleansing, and rehabilitation. Kagan then asked me how Jesus fits into the picture. That gave me the chance to expound on Christ's atoning death and the fulfillment of God's justice in Christ's bearing the penalty for our sin. I was gratified that the Gospel could be shared so clearly and naturally with the students present.
>
> The next day I sat for an interview with an independent filmmaker who is doing a short film on the theological significance of the beginning of the universe in contemporary cosmology. Later that evening I spoke in a small campus theater on "Who Was Jesus?" Judging by the student questions, this audience was largely Christian. It is very touching to hear so many Christians after the debate and my lecture share expressions of encouragement and thanks for the way the Lord has used our ministry in their lives.

Craig's other lecture at Columbia

To hear the other lecture by Craig on the topic of "Who did Jesus think he was?", click here. The video is here. This lecture was also delivered in February, 2009 at Columbia University, probably the most secular leftist university in the United States. Yes, the same university that invited Achmadinejad to speak.

Friday night funny: Media not sure how to cover Obama's crime spree

April 18, 2009 | by Wintery Knight | Link | Original Link

From the Onion, a perfect article to culminate the week's events.

Excerpt:

> WASHINGTON—More than a week after President Barack Obama's cold-blooded killing of a local couple, members of the American news media admitted Tuesday that they were still trying to find the best angle for covering the gruesome crime.
>
> "I know there's a story in there somewhere," said *Newsweek* editor Jon Meacham, referring to Obama's home invasion and execution-style slaying of Jeff and Sue Finowicz on Apr. 8. "Right now though, it's probably best to just sit back and wait for more information to come in. After all, the only thing we know for sure is that our president senselessly murdered two unsuspecting Americans without emotion or hesitation."

This is a must-read, folks! Ow, my cheeks are hurting.

UPDATE: One my Canadian friends and I were talking about upcoming debates just now and he was wondering why I can post so much. It made me think of my only other humor post, on why women and Christian apologetics don't mix. If you have dreams of heroic combat with non-Christians, anywhere, at anytime, then you had better forget about courtship, romance, love and marriage.

On the other hand, I do have a fantastic article coming out about the one exception to this rule that I know of. The article is done, and it is scheduled to come out on Sunday at 5 AM EST. Do not miss this article!

Video clip from Craig vs Hitchens debate at Biola, on God and meaning in life

April 18, 2009 | by Wintery Knight | Link | Original Link

This is from the recent debate held at Biola University between Dr. William Lane Craig, and Christopher Hitchens.

By the way, don't forget to check out my play-by-play of the debate here, and other reviews of the debate here. I also wrote a play-by-play of the recent debate at Columbia University in February 2009 between Craig and Yale philosopher Shelly Kagan. The topic there was "Is God Necessary for Morality?"

BONUS:

If you missed Dr. Craig debating on the Michael Coren show in Canada, check out these video clips posted by ChristianJR4, located below the fold. You have to click the link to display the rest of the post to see them.

IBD: Canada fills Obama's leadership void

April 18, 2009 | by Wintery Knight | Link | Original Link

Canadian Prime Minister Stephen Harper

Investors Business Daily had a good post up about how other countries with more conservative leadership are picking up the slack left by Obama's naive socialism. Canada is led by economist Stephen Harper, who studied the economic theories of F.A. Hayek and other proponents of free-market capitalism. Harper understands what economic policies promote liberty.

Here is an excerpt from the article: (a podcast version is here)

> Thus far, the Obama administration seems more interested in continuing its global apology tour, Latin edition, during this weekend's Fifth Summit of the Americas than he is in leading. His accusations against America are stronger than his promotion of the institutions and treaties that bring authentic democracy and prosperity to our hemisphere.

Obama's aversion to policies like free trade, which supports liberty and prosperity, is well known:

> Today, Obama is paying only lip service to that trade goal while two finished free-trade treaties with friendly American allies Panama and Colombia sit in his desk drawer, unvoted-on in Congress.
>
> He speaks of the U.S. being "distracted by other priorities" but in reality he's only "distracted" by listening to Big Labor, which has tried to shut Colombia and Panama out of free trade.
>
> In the same way, he's distracted by the Farm Lobby's campaign cash and won't think of ending the senseless tariffs on Brazil's ethanol — another major free-trade, and energy policy, issue.

> He has yet to expend political capital to muscle Congress to put those tariffs and treaties to a vote. If he did, he would show leadership. It's not going unnoticed by democratic leaders of our hemisphere, who, from Brazil to Chile to Mexico to Peru, are urging him to take action. This is the one issue he should be showing strong leadership on. But he isn't.

Yes, the world is truly against us because of Obama's economic ignorance. But there are some liberty-opposing communist dictators that love Obama – because he supports their dictatorships and the repression of common people who don't even have enough to eat or the opportunity to earn a decent living. IBD continues:

> The region's protectionists can be counted on one hand, and they just happen to be the same countries trying to ruin their own democracies — among them Venezuela, whose de facto dictator, Hugo Chavez, declared at the last summit in 2005 he would "bury" free trade of the Americas. With Obama failing to lead, he's effectively handing Chavez the leadership, as well as a victory.
>
> He's also giving Cuba a victory, unilaterally loosening rules for remittances to the island, providing the bankrupt Castro dictatorship with an economic lifeline as well as a fresh pool of visitors to spy on, blackmail and potentially recruit.

Hot Air links to the photos of Obama accepting gifts and shaking hands with dictator Chavez. Hot Air writes:

> Via Tapper, the long-awaited meeting between the "destructive force" and the "ignoramus" hath come to pass. There are already a few photos of the encounter at Yahoo News but you have to go to Facebook for the best one. Check out that thousand-watt grin. Funding FARC, imprisoning dissidents, staging wargames with Russia, and of course consolidating dictatorial power — none of it's enough to ruin a photo op for The One. I hope this at least convinces El Presidente not to throw that Cuba-themed tantrum at the summit that he's been planning. We deserve something in return for the free propaganda Barry just handed him.

The world opposes Obama's unliteral war against free trade. Even Russia is disgusted with Obama's economic naivete. And so is China. But what about Stephen Harper and Canada? IBD's article continues:

> Canada, by contrast, is taking the lead. Prime Minister Stephen Harper said his top priority at the Summit is to champion free trade, in line with the will of the region's real democracies.
>
> "Our focus for the Summit of the Americas will be about free trade and avoiding other countries moving back to protectionist measures," Harper's spokesman said. "Canada's position is that we must not allow the impact of the (financial) crisis to reverse our hard-fought progress towards freer trade and investment."

> …What a shame that it's now left to Canada to do the heavy lifting on the actions

> that will genuinely advance peace and prosperity in our global neighborhood.

According to this just-released news story from CTV, Harper is pledging 4 billion dollars to spur trade with Latin America.

Excerpt:

> Prime Minister Stephen Harper is pushing for greater regional co-operation and better hemispheric trade relations at the Summit of the Americas, pledging $4 billion in loan guarantees for Latin American countries.
>
> …Harper said on Saturday that loans to the Inter-American Development Bank will help nations in the region get access to credit and build their economies.
>
> "Canada is taking the lead when it comes to ensuring that countries continue to trade during a time of economic contraction," said Harper in a statement. "This has not been done before and is a very significant contribution."

Meanwhile, Obama is making Iran and North Korea feel comfortable about their pursuit of nuclear weapons. What a difference there is between Harper and Obama!

Harper's recognition of Easter and the importance of religious liberty

Religious liberty is the liberty that I value most. Isn't it amazing that at a time when Obama is taking steps to greatly reduce the freedom to express Christian convictions in public, that up north the prime minister of Canada is talking about the resurrection of Jesus and the importance of religious liberty as a Canadian tradition?

In case you missed it, here are some videos of Harper on CNN and Fox News, as well one from CNBC with Larry Kudlow. I previously wrote about how Colombia is trying to diversify their economy in the wake of Obama's snubbing them on the proposed free trade deal.

Is it OK for Christians to marry non-Christians?

April 19, 2009 | by Wintery Knight | Link | Original Link

I want to draw your attention to a talk given by William Lane Craig. Bill is the ablest defender of the Christian faith operating today. You may remember Bill from such famous debates as "Does God Exist?" with Austin Dacey, "Did Jesus Rise from the Dead?" with Bart Ehrman, or "Is Goodness Without God Good Enough?" with Paul Kurtz.

The 32-minute talk is in MP3 format and is available on his web site Reasonable Faith, here. This was Bill's chapel address to Biola University students, and he is introduced by his son, John, a Biola grad. As you listen to the talk, and reflect on the quotations that I will reproduce below from his writings, the question "is it OK to marry a non-Christian?" will be answered.

In the talk, it becomes clear that Bill's wife Jan plays an *enormous* role in his success. Indeed, you will see that if it were not for her, he never would have gotten *either* of his doctorates, or even his second Masters degree. Just imagine: Bill Craig with one M.Div pastoring a seeker-sensitive church, instead having 2 MAs and 2 Ph.Ds and stomping Christopher Hitchens with both feet! What a loss!

Here is a quotation that occurs about 11 minutes into the talk, as Bill describes the completion of his Bachelor's degree at Wheaton:

> And it was at Wheaton that my vision began to focus on presenting the gospel in the context of giving an intellectual defense of the faith, to appeal not only to the heart but also to the head, as well. And so I determined that I would go on to seminary for further training.
>
> But, my senior year, in chapel, we heard a speaker who challenged us, before going on to further education, to take a couple of years out, and to wring out the sponge, so to speak, that had been soaking up all that knowledge, and to work with university students while we were still about the same age.
>
> And so I joined the staff of Campus Crusade for Christ for 2 years, and was assigned to Northern Illinois University. And that was where I met my wife Jan. She was a graduate of the University of North Dakota where she had come to faith in Christ. And she had a similar vision for her life of evangelism and discipleship.
>
> And as we worked at NIU together, she with gals and I with the guys, leading students to Christ and discipling them to walk with the Lord, we fell in love. And we decided that we would be more effective if we joined forces and became a team.

It is at this point in the talk where Bill begins to explain just how Jan molded him into the lean, mean debating machine that travels the world striking terror into the hearts of atheists today.

Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

In an article on his web site, he talks about how Jan encouraged him to do his first PhD:

> As graduation from Trinity neared, Jan and I were sitting one evening at the supper table in our little campus apartment, talking about what to do after graduation. Neither of us had any clear leading or inclination of what we should do next.
>
> So Jan said to me, "Well, if money were no object, what would you really like to do next?"
>
> I replied, "If money were no object, what I'd really like to do is go to England and do a doctorate under John Hick."
>
> "Who's he?" she asked.
>
> "Oh, he's this famous British philosopher who's written extensively on arguments for the existence of God," I explained. "If I could study with him, I could develop a cosmological argument for God's existence."
>
> But it hardly seemed a realistic idea.
>
> The next evening at supper Jan handed me a slip of paper with John Hick's address on it. "I went to the library today and found out that he's at the University of Birmingham in England," she said. "Why don't you write him a letter and ask him if you can do a doctoral thesis under him on the cosmological argument?"
>
> What a woman! So I did, and to our amazement and delight Professor Hick wrote back saying he'd be very pleased to supervise my doctoral work on that subject. So it was an open door!

And in the same article, he explains how Jan encouraged him to get his second Ph.D:

> As Jan and I neared the completion of my doctoral studies in Birmingham, our future path was again unclear to us. I had sent out a number of applications for teaching positions in philosophy at American universities but had received no bites. We didn't know what to do.
>
> I remember it like yesterday. We were sitting at the supper table in our little house outside Birmingham, and Jan suddenly said to me, "Well, if money were no object, what would you really *like* to do next?"
>
> I laughed because I remembered how the Lord had used her question to guide us in the past. I had no trouble answering the question. "If money were no object, what I'd really like to do is go to Germany and study under Wolfhart Pannenberg."
>
> "Who's he?"
>
> "Oh, he's this famous German theologian who's defended the resurrection of Christ historically," I explained. "If I could study with him, I could develop a historical apologetic for the resurrection of Jesus."
>
> Our conversation drifted to other subjects, but Jan later told me that my remark had just lit a fire under her. The next day while I was at the university, she slipped away to the library and began to research grants-in-aid for study at German universities. Most of the leads proved to be defunct or otherwise inapplicable to our situation. But there were two grants she found that were possibilities. You can imagine how surprised I was when she sprung them on me!

Both of these Ph.D experiences are also described in the talk. And the talk concludes as follows:

> I am so thankful to be married to a woman who is tremendously resourceful, tremendously talented and energetic, who could have pursued an independent career in any number of areas, but instead, she has chose to wed her aspirations to mine, and to make it her goal to make me the most effective person I can be, for Christ. And she has been like my right arm in ministry over these many years. And it is a tremendous privilege to be a team with a person like that.
>
> And you young men, I would encourage you, if you marry, to find a gal who shares your vision, not some independent vision, but who is interested in aligning herself with you, and pursuing together a common vision and goal that will draw you [together], so that you will avoid the growing separateness that so often creeps into marriages.

And now you know the rest of Bill's story. *The person you marry will have an enormous influence on the impact you will have for Christ and his Kingdom.* It is up to you to decide whether that influence is going to be positive or negative, by deciding if you will marry, and if you do marry, by deciding whom you will marry.

Conclusion

The level of influence of a significant other in a non-platonic relationship greatly impacts your ability to achieve the vocational task that the Lord has set for you. My recommendation is to avoid engaging in *any* romantic relationship in which self-sacrificial service to the Lord is not the main focus. And remember, physical contact greatly reduces your ability to make objective evaluations.

Today, Christians treat the Christian life as a hobby that we engage in *for our benefit.* And this includes romantic relationships. One way of screening prospective mates is by assessing how well prepared they are to defend the Lord's reputation, when it is called into question. An authentic Christian should care enough to have prepared to defend God's existence and character in public.

UPDATE: New William Lane Craig lecture specifically on the topic of Christian marriage:

Round-up of stories on adult stem cell research and abortion

April 19, 2009 | by Wintery Knight | Link | Original Link

As you know, Obama is making scientific progress and patient care take a back-seat to feminist ideology. He appeases his pro-abortion special interest groups by wasting money on unproven embryonic stem cell research, while neglecting proven therapies based on adult stem cell research. Who cares about patient liberty and curing diseases?

Let's take a look and see what adult stem cells can do.

UPI reports that adult stem cells can revert to an embryonic state.

> U.S. scientists say they have, for the first time, returned adult mouse cells to their embryonic pluripotent state, meaning they can become any cell type.
>
> The University of California-San Francisco researchers said they used tiny molecules called microRNAs to reprogram the cells.
>
> The achievement suggests scientists will soon be able to replace retroviruses and even genes currently used in laboratory experiments to induce pluripotency in adult cells. The researchers said that would make potential stem cell-based therapies safer by eliminating risks posed to humans by these DNA-based methods, including alteration of the genome and risk of cancer.

Adult stem cells provide solutions for stroke victims.

> The good news continues to flow about the first stroke patient successfully treated in Houston using the patient's own adult stem cells. The patient, Roland Henrich, was originally admitted to the emergency room at Memorial Hermann-Texas Medical Center on March 25, 2009 with signs of stroke–he could not speak and had significant weakness on his right side. Because it was beyond the few hours window for use of the clot-dissolving drug TPA, the adult stem cell trial was his only option. The next day some of his bone marrow was removed, the adult stem cells separated, and returned intravenously to the patient. In less than a week doctors noted that he was recovering remarkably well and had not shown any signs of paralysis. Within 11 days of the treatment Mr. Henrich was walking, climbing stairs unassisted, and said his first word after the stroke, captured on a local news video and surprising his own doctor and leader of the clinical trial, Dr. Sean Savitz. His wife says now he has spoken several single words and phrases and has fed the cows by himself.

Adult stem cells provide solutions for infertile women.

> Chinese scientists have published a study in *Nature Cell Biology* that suggests even older females retain adult stem cells that can stimulate fertility, including the production of more eggs. The evidence is in contrast to the usual dogma that

> women have a finite number of immature eggs, some of which mature and are ovulated, and that the number of eggs becomes depleted with age. Tilly *et al.* recently reviewed the evidence for and against production of new eggs after birth. Tilly's group was one of those recently to challenge the dogma with evidence that new egg production could occur in mammals.
>
> What the Chinese group showed is that ovaries contain stem cells that can produce more eggs, similar to the stem cells in testes that produce sperm.

Adult stem cells provide solutions for healing bones.

> Patients confined to wheelchairs have been able to walk or live independently again because their broken bones finally healed, thanks to a drug that stimulates their adult stem cells. Preliminary results presented at the Orthopaedic Research Society meeting found 93% of those with an unhealed bone fracture had significant healing and pain control after treatment for only 8 to 12 weeks. Half of the 145 patients studied had non-healing fractures for 6 months or longer. The drug, teriparatide (Forteo), was approved by the FDA in 2002 for treatment of osteoporosis. A team led by Dr. J. Edward Puzas at the University of Rochester Medical Center discovered that this drug can also boost the body's bone adult stem cell production to the point that adults' bones appear to heal at a rate typically seen for young kids.

Adult stem cells provide solutions for diabetes.

> Another success for adult stem cells, again treating Type I (juvenile) diabetes patients. As reported in a study published today in the *Journal of the American Medical Association*, 20 of 23 patients became insulin-independent after treatment with their own bone marrow adult stem cells. This report is a follow-up to the previous report by Voltarelli & Burt in 2007, and includes new patients as well as a longer period to follow the patients. Some of the patients have gone for four years insulin-free. The authors note in the paper that this adult stem cell treatment "remains the only treatment capable of reversing type 1 diabetes in humans."

Adult stem cells provide solutions for treating ligaments and tendons

> Recent news from London that adult stem cells will be used to repair damaged tendons and ligaments in patients. This isn't really a new technique, but the interesting thing is that the technique is now used routinely in horses and other animals. Finally, the realization has hit that this adult stem cell treatment might work for people, too. More than 1,500 race horses have been treated using the same process, and follow-up data suggest a 50 percent reduction in re-injury over a three year period, compared with conventional treatment.

We don't need to kill innocent unborn humans in order to make medical progress. We don't need an excess of 32 million males due to anti-female sex-selection abortions. And

we don’t need to subsidize Planned Parenthood with 350 million dollars when they already have net assets of 1 billion dollars.

And lastly, some good news. In contrast to the Democrats anti-life stance, Republicans in the Oklahoma legislature voted to ban embryonic stem cell research. Now that’s progress.

Are polar ice caps really melting due to global warming?

April 20, 2009 | by Wintery Knight | Link | Original Link

- Global warming is not caused by humans

Are global warming alarmists wrong?

Consider this article from The Australian: (H/T Watts Up With That)

> **ICE is expanding in much of Antarctica, contrary to the widespread public belief that global warming is melting the continental ice cap.**
>
> The results of ice-core drilling and sea ice monitoring indicate there is no large-scale melting of ice over most of Antarctica, although experts are concerned at ice losses on the continent's western coast.
>
> Antarctica has 90 per cent of the Earth's ice and 80 per cent of its fresh water. Extensive melting of Antarctic ice sheets would be required to raise sea levels substantially, and ice is melting in parts of west Antarctica. The destabilisation of

> the Wilkins ice shelf generated international headlines this month.
>
> However, the picture is very different in east Antarctica, which includes the territory claimed by Australia.
>
> **East Antarctica is four times the size of west Antarctica and parts of it are cooling. The Scientific Committee on Antarctic Research report prepared for last week's meeting of Antarctic Treaty nations in Washington noted the South Pole had shown "significant cooling in recent decades".**

And here's the graph that goes with the findings:

Source: Cryosphere Today

Why are global warming alarmists wrong?

Now we know that they're wrong. Why are they wrong? Well, maybe I should start by showing that the media is cherry-picking data in order to delude the public. This post by Anthony Watts which explains how the media deliberately recycles the images and stories about imminent climate catastrophes. This time, it's about a vast antarctic shelf that's about to collapse.

Only one problem. It was just about to collapse *last year*, but the media is re-using the the same scary stock photo and story again *this year* and telling us again that it's just about to collapse.

Excerpt:

> Those masters of disaster are at it again, and it appears our friendly scientists at that National Snow and Ice Data Center (NSIDC) help this story along each year.
>
> …It seems that not only is the photography recycled, so is the storyline. It seems

> to happen every year, about this time. Note the photos show shear failure and cracks, not melted ice. Shear failure is mostly mechanical-stress related, though ice does tend to be more brittle at colder temperatures.
>
> National Geographic reported this story headline last year, March 25th 2008.
>
> …From the Nat Geo story:
>
> > "[It's] an event we don't get to see very often," Ted Scambos, lead scientist at the U.S. National Snow and Ice Data Center in Boulder, Colorado, said in a press statement.
>
> > Now, how is it that an ice shelf breaks up in the spring of 2008 and again in the spring of 2009 and it's "not very often"? Hmmm.

Watts goes on in his post to take a look at how much the ice shelf has really changed over the years (it hasn't) and whether the air temperatures have gotten warmer (theyhaven't) such that the air would be causing cracks. So all we really have is a scary re-used photo and a lot of propaganda.

What are the economic effects of policies based on global warming alarmism

Well, to start with, we're going to lose a lot of jobs, due to increase taxation and regulation of "the rich" and "greedy corporations". And, the EPA is going to raise consumer energy prices and put American money in the pockets of terrorists, by curtailing domestic energy production. And, we're going to waste tons and tons of taxpayer money subsidizing corporations to be "green".

The good news: public opinion is shifting away from global warming alarmism

A recent Rasmussen Reports poll shows that there is hope. (H/T The Chilling Effect)

Global Warming is Primarily Caused By…

Date	Human activity	Planetary Trends	Other Reason
Apr 09	34%	48%	7%
Mar 09	41%	43%	7%
Feb 09	38%	45%	7%
Jan 09	44%	41%	7%
Dec 08	43%	43%	6%
Apr 08	47%	34%	8%

So at least we're slowly winning the battle for truth. Unfortunately, Obama has got until 2010 until he can be challenged in the mid-term elections.

r.

Conservatives in British Columbia defend free speech

April 20, 2009 | by Wintery Knight | Link | Original Link

Political Map of Canada

Canadian columnist Mark Steyn has some welcome news on the sorry state of free speech north of the border. (H/T Free Canuckistan) Specifically, the good news is from the western province of British Columbia, (contains Vancouver), home to one of the 3 worst Human Rights Commissions operating in Canada.

Steyn writes:

> BC is a bit like Quebec in that it has a two-party system in which neither choice is conservative: in *la belle province*, it's a choice between the separatists and the Quebec Liberals; on the left coast, it's a choice between the socialists and the BC Liberals. So the right-of-centre vote in BC goes, *faute de mieux*, to Gordon Campbell's party.

So, there really is no way that the provincial conservatives can win at the provincial level, and conservative voters ending up voting for the Liberals, just to keep the socialists out of power.

But suddenly, the provincial conservatives decided that the status quo was not good enough for British Columbians:

> Or at any rate that's the way it was until the upstart BC Tories decided to challenge Premier Campbell from the right in next month's provincial election. Robert Jago spoke to their leader, Wilf Hanni, about the "Human Rights" Tribunal and got the following response:
>
> A BC Conservative Government will reform the BC Human Rights Tribunal:
>
> * So that any complainant will be responsible for the legal fees associated with his or her human rights complaint.

> * To make complainants responsible for paying the defendant's legal fees should the complainant lose their Human Rights Tribunal case.
> * To disallow individuals and organizations from making Human Rights Tribunal complaints when Human Rights Tribunals in other Canadian jurisdictions are already investigating the same issue.
> * To disallow cases dealing with freedom of speech under Section 2 of the Charter.
> * To allow appeals, to a court of law, for any decision made by the Tribunal.
> * So that the Tribunal cannot render penalties outside the boundaries of Canadian Laws.
>
> We realize that it is neither fair nor equitable that complainants currently receive free legal representation no matter how frivolous the complaint, while defendants must pay their own legal fees.

Stay tuned, because tomorrow at 11 AM I will be posting about how conservatives in another province are defending free speech against left-wing fascism.

How teacher’s unions make war on charter schools

April 20, 2009 | by Wintery Knight | Link | Original Link

Story here in the Wall Street Journal. (H/T The Heritage Foundation and Independent Women’s Forum)

Let’s see what Jay P. Greene has to say about charter schools:

> In New York, for example, the unions have backed a new budget that effectively cuts $51.5 million from charter-school funding, even as district-school spending can continue to increase thanks to local taxes and stimulus money that the charters lack. New York charters already receive less money per pupil than their district school counterparts; now they will receive even less.

When I was a young man, I dreamed of becoming a prosecuting attorney or English teacher. (Software engineering was my third choice). But the political activism of left-wing teacher unions, and their opposition to merit-pay, stopped me from becoming a teacher. I always think of unions as a form of adult day-care, insulated from real world competition and consumer needs.

> Unions are also seeking to strangle charter schools with red tape. New York already has the “card check” unionization procedure for teachers that replaces secret ballots with public arm-twisting. And the teachers unions appear to have collected enough cards to unionize the teachers at two highly successful charter schools in New York City. If unions force charters to enter into collective bargaining, one can only imagine how those schools will be able to maintain the flexible work rules that allow them to succeed.
>
> …Eva Moskowitz, former chair of the New York City Council education committee and now a charter school operator, has characterized this new push against charters as a “backlash” led by “a union-political-educational complex that is trying to halt progress and put the interests of adults above the interests of children.”
>
> …When charter schools unionize, they become identical to traditional public schools in performance. Unions may say they support charter schools, but they only support charters after they have stripped them of everything that makes charters different from district schools.

And why does school-choice matter?

> In New York City, Stanford economist Caroline Hoxby found that students accepted by lottery to charter schools were significantly outpacing the academic progress of their peers who lost the lottery and were forced to return to district schools.
>
> Florida State economist Tim Sass and colleagues found that middle-school

> students at charters in Florida and Chicago who continued into charter high schools were significantly more likely to graduate and go on to college than their peers who returned to district high schools because charter high schools were not available.
>
> The most telling study is by Harvard economist Tom Kane about charter schools in Boston. It found that students accepted by lottery at independently operated charter schools significantly outperformed students who lost the lottery and returned to district schools. But students accepted by lottery at charters run by the school district with unionized teachers experienced no benefit.

I highly recommend you read the whole article, as Greene is a respected authority on education policy. In case you missed my recent article on Obama's cancelling of vouchers, check it out here.

Why is critical evaluation of Darwinism not permitted in the public square?

April 21, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome Post-Darwinist readers! Thanks for the link Denyse!

UPDATE: Welcome visitors from 4Simpsons! Thanks for the link!

No one doubts what can be proved in the lab or in the fossil record about the ability of organisms to adapt to their environment. Finch beak sizes can change, bacteria can become resistant, etc. Perhaps even some limited "speciation" between ancestors due to geographic isolation. But that isn't what Darwinism-skeptics object to. We object to naturalistic accounts of the origin of life and to macro-evolution.

But Darwinism, like global warming, is one of those beliefs that is long on faith and short on evidence. And the way you can tell that you're being sold a pig in a poke is by taking a look at how welcoming Darwinists are to debate. Do they organize public debates and publish books with their opponents? Or do they simply have them fired and black-listed from the academy? Let's talk a look at the data.

The case of NPR media bias

Here is an interesting article from Evolution News by ID proponent Casey Luskin. Casey was interviewed by the government-run, taxpayer-funded National Public Radio, regarding the recent decision favoring critical thinking in science by the Texas Board of Education.

Casey writes:

> Last week I did an interview with an NPR reporter, Bob Garfield, for his NPR show "On the Media" about the recent Texas decision…

> The interview started with benign questions about the recent decision of the Texas State Board of Education to welcome scientific critique of evolution into the curriculum. This quickly descended into various "how dare you" type questions, about whether this was all a plot by the "Religious Right" to insert religion into public schools, and why I rejected all the fossil and cosmological evidence that shows the universe isn't 10,000 years old. "Huh?," I replied. I quickly informed Mr. Garfield that not only do we oppose advocating religion in science classrooms, but that I'm not a young earth creationist, and that the debate in Texas has never been about young earth creationism. The new Texas Science Standards only require scientific critical analysis of evolution, and in no way shape or form invited biblical creationism or religion into the classroom.
>
> Mr. Garfield was also reminded that many of the 13 members of the Texas State Board of Education who voted for the new science standards *both professed to accept evolution and stridently opposed the teaching of creationism*, and thus it would seem highly unlikely that the new Texas standards were a "Trojan horse"

> for teaching religion. Nonetheless, the final story favorably quoted members of the evolution lobby saying this is all a ruse for creationism.

How familiar is the left-wing elite media with the 700+ scientists who dissent from Darwinism? Not so much:

> But during our interview, having lost his argument that the new Texas Science Standards were a conspiracy to bring religion into the curriculum, Garfield shifted our conversation to the science. Again, he asked various "How dare you?" type questions, making assertions like *virtually "100%" of scientists accept evolution*, or that *evolution comprised the unchallengeable "consensus,"* or that *there is no fossil evidence that challenges evolution*. I reminded him that a critical mass of well-credentialed scientists in fact don't support neo-Darwinian evolution, and that a number of Ph.D. biologists testified in Texas about scientific weaknesses in evolution. He then accused me of cherry-picking data because, outside of the Texas hearings, he asserted that essentially the "universe" of scientists support evolution. Not true, I told him. I replied that while surely majority of scientists do support evolution, there are credible scientists who dissent from it–hundreds of Ph.D.s in fact–and that there are plenty of discussions of doubts about core claims of neo-Darwinism in the scientific literature. I also discussed some of the reasons for these doubts-ranging from the inability of empirical evidence of natural selection to be extrapolated to bolster the grand claims of neo-Darwinism to the lack of confirming fossil evidence.

And the result of this cloistered, close-minded, intolerant, bigoted, echo-chamber caricature of evolution critics?

> Mr. Garfield's reply to my discussion of the science was that we were getting outside of his field, and he cut all of my discussions of the scientific weaknesses in neo-Darwinism from the final story. There's no shame in him not knowing much about science, but it's troubling that despite his self-professed ignorance on the science, he acted like he knew for a fact that skeptics of Darwinian evolution had no scientific basis should be treated like crazy religious fanatics.

But isn't the left-wing elite media right to think that opposition to evolution is entirely from Bible-thumping, snake-handling, shotgun-toting, pick-up-truck driving rednecks?

> As a last ditch attempt to discredit Darwin-doubters, Garfield compared teaching critique of evolution to teaching Holocaust denial. I replied that not only is there a world of difference between the two (hundreds of serious Ph.D. scientists doubt neo-Darwinism, and one cannot find such credibility supporting something as pernicious as Holocaust denial!), but I also told him that given that I (as well as many other Darwin-skeptics) am Jewish and had close friends impacted by the Holocaust, his comparison was not just fallacious, but out-of-line. I mentioned that even more scientists would come out of the closet to express their doubts

> about evolution were it not for the intolerance in the scientific community towards dissent from Darwinism. His reply was to twist my position into allegedly arguing that scientists don't really believe in evolution, they're just forced to pledge allegiance to it due to pressure.
>
> **I replied that this was not at all what I was saying, because of course a great many scientists harbor purely bona fide scientific support for evolution. My point was that were it not for the climate of intolerance, we'd see far more doubters and skeptics breaking their silence. However, in the final story, Garfield apparently sliced and diced my response so that it sounded like I affirmed his assertion that any "consensus" over evolution is the result of intimidation, when that is not at all how I responded to his question and false characterization of my views.**

The article goes to explain how NPR cited a well-known critic Ken Miller of intelligent as an authority on intelligent design, despite the fact that he elementary errors on obvious details about the ID research program. I recommend reading the entire article, as it explains a lot about leftism and their propensity for group-think, censorship and fascism.

When he isn't misleading his readers about historical facts, even Richard Dawkins allows that the first living system may have been intelligently designed by aliens. But those aliens must have evolved. How does Dawkins know that? Even without looking at the evidence, they must evolved, because of Dawkins' anti-science faith in materialism. *Evidence is irrelevant once you pre-suppose materialism, on faith.*

So how did the Darwinists win then?

The same way that they've been winning on global warming alarmism. By avoiding a fair, open debate on the merits!

First, by intimidation, censorship and ridicule of anyone who opposes them. To say that their treatment of skeptics is like McCarthyism would be a tremendous insult to McCarthy. These are fact-averse fideistic fascists, plain and simple. If they had the evidence, they wouldn't be firing peope left, right and center in the academy – they would be welcoming public debates.

Consider the case of Caroline Crocker. Here is video clip 1 of 6:

Second, by deliberate deception. Jonathan Wells' book "Icons of Evolution", showed multiple serious inaccuracies in the way that Darwinism is presented in textbooks. To take just one, the images of Haeckel's embryos used in textbooks are fraudulent and have known to be so for decades! And this fraud is debunked in the highest research journals, like Science and Nature.

Consider this one example from *Science*: (*Science* 5 September 1997: Vol. 277. no. 5331, p. 1435)

> [Abstract:] Using modern techniques, a British researcher has photographed embryos like those pictured in the famous, century-old drawings by Ernst

> Haeckel–proving that Haeckel's images were falsified. Haeckel once admitted to his peers that he doctored the drawings, but that confession was forgotten.

Third, by judicial activism. Since Darwinists cannot win a debate on the evidence, in the public square, the next best thing is to win by judicial fiat. Judges typically have no relevant qualifications, either in science or in philosophy of science. They can also be intimidated by peer-pressure to conform to the opinions of the elite, regardless of the evidence.

Conclusion

The reason why critical evaluation of Darwinism is not permitted in the public square by Darwinists is because *they would lose the debate.* I will be posting a few of the debates that have occurred between faith-based Darwinists and their fact-based critics later in the week, and you will be able to see how well their case for naturalistic evolution holds up.

Further study

Here are posts on cosmological argument and the fine-tuning argument.

UPDATE: How well do Darwinists do in debates: Michael Shermer vs Steven Meyer.

Conservatives in Ontario defend free speech

April 21, 2009 | by Wintery Knight | Link | Original Link

Political Map of Canada

BC isn't the only province where conservatives are fighting back against progressive threats to fundamental rights. Ontario, (contains Toronto and Ottawa), has one of the other really bad provincial Human Rights Commissions, and provincial representatives Lisa MacLeod and Randy Hillier on the case in that benighted province.

Here's an assessment of MacLeod and Hillier from free-speech superhero Ezra Levant: (H/T The Western Standard)

> Hillier, along with fellow PC MPP Lisa Macleod, have been leading the charge to reform Ontario's HRCs. They were the ones who pressed for public hearings at which Tribunal appointees would be grilled — which led to some scary revelations about the censorious instincts of that panel. And he also was part of the team (led by Macleod) who brought Mark Steyn to Queen's Park to testify about the kangaroo court nature of the OHRC.

Levant is referring to her questioning of Mark Steyn regarding the Ontario Human Rights Tribunal. The full transcript is here, courtesy of Pamela Geller at Atlas Shrugs. This is about as strong a defense of free speech as you'll ever see, folks. And it's a warning to the consequences of electing progressives who do not trust you to exercise your own free will, lest you hurt someone's feelings.

Here is a little of Mark Steyn's opening speech from the hearing:

> **Mr. Mark Steyn:** The present Ontario human rights regime is incompatible with a free society. It is useless on real human rights issues that we face today and, in the course of such pseudo human rights, as the human right to smoke marijuana on someone else's property or the human right to a transsexual labioplasty, in the course of those pseudo-rights it tramples on real human rights including

> property rights, free speech, the right to due process and the presumption of innocence. Far from reducing racism or sexism, the Ontario human rights regime explicitly institutionalizes racism and sexism through its inability to view any dispute except through the narrow prism of identity politics. It's at odds not just with eight centuries of this province's legal inheritance, but with the United Nations Universal Declaration of Human Rights. Canada likes that one so much, it sticks it on the back of the $50 bill, even though Ontario's human rights regime is in sustained, systemic breach of article 6, article 7, articles 8 to 10, 11, 12, 18, 19, 21 and 27 of the UN declaration. The good news is that Ontario's not in violation of as many articles as Sudan or North Korea.
>
> All are equal before the law and are entitled, without any discrimination, to equal protection of the law. That's article 7. It's not true in Ontario. Last year, the Ontario Human Rights Commission effectively gave Maclean's and myself a driveby verdict. They couldn't be bothered taking us to trial but they decided to pronounce us guilty anyway. That neglects the most basic principle of justice: Audi alteram partem, hear the other side. Chief commissar Barbara Hall didn't bother hearing the other side; she simply declared us guilty. That is the very defining act of a police state: an apparatchik announcing that a citizen is guilty of dissent from state orthodoxy.
>
> But here's the point: Maclean's and I have no fear of Barbara Hall, the commission or the tribunal. You're welcome to try and do your worst to us. We have deep pockets, we pushed back and we filled the newspapers with stories about all these wacky cases that Barbara Hall and others are so obsessed about. Like all tinpot bullies, the commission couldn't take the heat and backed down. But if you're just a fellow who happens to own a restaurant in Burlington, the Ontario human rights regime will destroy your savings, your business, your life for no good reason. The verdict's irrelevant; the process is the punishment.

He is saying this about a tribunal run by fascist progressive inquisitors hell-bent on ramming their values down the throats of individuals. And here is an excerpt from MacLeod's questioning of Steyn:

> **Ms. Lisa MacLeod:** Welcome to our committee Mr. Steyn. During the summer, this committee convened to interview and review the 22 vice-chairs and the 22 members of the Ontario Human Rights Tribunal and throughout that process your case, Maclean's vs. the Ontario Human Rights Commission, as well as what happened in British Columbia to you as well as what happened federally to you was front and centre on our minds. Consistently throughout that process I asked questions of the deputants, those seeking to be appointed to the Ontario Human Rights Tribunal, if they believed free press trumped discrimination or vice versa. One of the deputants actually responded. Today, earlier, I asked the same question to the chair of the Ontario Human Rights Tribunal. He responded and said that neither trumps either. I would like your view on that, because it follows

> sort of a logical set of questions that I have which are next with respect to freedom of expression and freedom of speech.
>
> **Mr. Mark Steyn:** With respect to the witness this morning, that has become a standard equivocation at the Ontario Human Rights Tribunal. Whenever tribunal judges take away individual human rights they do so under the guise of what they call balancing competing rights. So for example, going back to the Scott Brockie case, they claim to be balancing his right to freedom of religion with the right of the gay people seeking printed materials to be free from discrimination. In practice they almost never balance those rights. They always defer to collective rights, group rights in favour of individual rights. I'm an absolutist on this. I agree with the view that the ultimate minority is the individual and classically, historically, common law has been entirely antipathetic to group rights, because who can speak for a group? Who can speak for a group? The notion of group rights should be an abomination to a settled democracy as old as this province.

As an aside, Lisa MacLeod is also fighting polygamy in Ontario. (H/T Blue Like You)

I hope that the Canadian conservatives at every level of government turn this into an election issue, in order to draw libertarians away from the other parties. These Human Rights Commissions are the darlings of secular left-wing politically correct fascists, and they can't stand the idea of their totalitarian censorship seeing the light of day.

This article is a follow-up to yesterday's article about free speech efforts in British Columbia.

Jobless rate climbs in 46 states

April 21, 2009 | by Wintery Knight | Link | Original Link

Wall Street Journal has the story here.

Excerpt:

> The state-by-state employment figures showed only a few states avoiding the deterioration seen nationwide. Unemployment rose in 46 states during the month, and 12 states plus the District of Columbia posted unemployment rates in March that were significantly higher than the 8.5% nationwide figure the government released earlier this month.
>
> The chief economist for California's finance department, Howard Roth, said the state's unemployment rate hasn't been this high since reaching 11.7% in January 1941. The highest level on record in California is 14.7% in October 1940, he said.
>
> …Most economists expect job losses across all U.S. nonfarm employers to continue in April at or near the rapid pace seen in March, when 663,000 jobs disappeared.

Here's WSJ's map of the numbers. Click the map for more details.

March year-over-year unemployment
So much for socialism hope and change.

Waterboarding saved American lives, so Obama opposes it

April 22, 2009 | by Wintery Knight | Link | Original Link

According to Gateway Pundit, waterboarding does work after all:

> According to a former intelligence agent, waterboarding of terrorist Abu Zubaydah got him to talk in less than 35 seconds. The technique, which critics say is torture, probably **disrupted "dozens" of planned al-Qaida attacks and saved hundreds and thousands of lives.** The CIA also confirmed that waterboarding 9-11 mastermind Khalid Sheik Mohammed led to information that prevented a similar attack on Los Angeles.
>
> …The CIA confirmed that waterboarding of 9/11 mastermind Led to Info that aborted 9/11-style attack on Los Angeles.

The details on the prevention of that Los Angeles attack are provided by CNS News. (H/T Hot Air)

> The Central Intelligence Agency told CNSNews.com today that it stands by the assertion made in a May 30, 2005 Justice Department memo that the use of "enhanced techniques" of interrogation on al Qaeda leader Khalid Sheik Mohammed (KSM) — including the use of waterboarding — caused KSM to reveal information that allowed the U.S. government to thwart a planned attack on Los Angeles.
>
> Before he was waterboarded, when KSM was asked about planned attacks on the United States, he ominously told his CIA interrogators, "Soon, you will know."
>
> According to the previously classified May 30, 2005 Justice Department memo that was released by President Barack Obama last week, the thwarted attack — which KSM called the "Second Wave"– planned " 'to use East Asian operatives to crash a hijacked airliner into' a building in Los Angeles."

Hot Air fills in some more of the details:

> …the [CIA] remains tenacious in insisting that waterboarding Khalid Sheikh Mohammed, Ramzi Binalshibh, and Abu Zubaydah saved American lives. CNS News reports that the CIA stands by its 2005 memo describing how those interrogations stopped another 9/11-scale attack:
>
> KSM initially resisted all other interrogation procedures, right up to the waterboard. He insisted that Americans did not have the necessary resolve to get information out of him, and that we would only know about the next plot when it killed hundreds, if not thousands again. Only after the waterboard did KSM cough up the information on the "second wave" attacks, and the CIA and other national-security agencies stopped it.

But nevermind the good results of counter-terrorism programs and policies. Obama needs to appease the special interest groups who elected him! How will he do that?

The left-wing BBC reports that Obama may prosecute the authors of the counter-terrorism policies: (H/T Gateway Pundit)

> US President Barack Obama has left open the possibility of prosecuting officials who wrote CIA memos allowing harsh interrogation methods.
>
> It would be up to the attorney general whether to prosecute, Mr Obama said.
>
> The memos detailed the range of techniques the CIA could use for questioning terror suspects.
>
> Mr Obama had said he would not use anti-torture laws to prosecute CIA personnel who relied in good faith on legal opinions issued after 9/11.
>
> The BBC's James Coomarasamy in Washington says the president's comments marked a change of tone amid growing pressure from the Democratic Party not to rule out potential prosecutions.

Well, prosecuting counter-terrorism experts is one thing, but that may not be enough to appease Michael Moore and the rest of the high school dropouts in Hollywood.

Gateway Pundit reports that Obama won't rule out prosecuting George W. Bush either, because protected America too much:

Video here:

Gateway Pundit reported a few days ago that Dick Cheney, a serious statesman, has asked the Obama regime to declassify the details of the attacks that were stopped by waterboarding, but so far Obama has declined to do so. I guess he doesn't want the American people to know the realities of national security decision-making in the 21st century.

Should we really have elected an ACORN lawyer who is tougher on counter-terrorists than on actual terrorists? Remember these things when the 2010 elections come around.

UPDATE: More about Obama's defense spending cuts, including cuts of missile defense programs, is here. This post also talks about his appeasement of aggressors such as North Korea and Iran as they go nuclear.

UPDATE: A total of THREE terrorists were waterboarded during the time the policy was in place.

Is the concept of moral obligation intelligible on atheistic materialism?

April 22, 2009 | by Wintery Knight | Link | Original Link

Commenter ECM sent me this post from Uncommon Descent about the is-ought fallacy, and the difficulties that atheists have grounding morality on worldview in which only material things exist. The post is written by Barry Arrington. He is summarizes an argument based on some of the comments from an earlier post.

Barry introduces two assumptions:

> (1) That atheistic naturalism is true.
>
> (2) One can't infer an "ought" from an "is." Richard Dawkins and many other atheists should grant both of these assumptions.
>
> Given our second assumption, there is nothing in the natural world from which we can infer an "ought." And given our first assumption, there is nothing that exists over and above the natural world; the natural world is all that there is. It follows logically that, for any action you care to pick, there's nothing in the natural world from which we can infer that one ought to refrain from performing that action.

This makes sense to me. If only matter exists, and the whole universe is an accident, then where would an atheist get this idea that the current arrangement of matter ought to be any other way? Matter just is. This concept of "ought to be" is totally alien to an atheistic worldview where everything is matter, because moral obligations are non-material.

The article goes on: (I added the number 3)

> Add a further uncontroversial assumption: (3) an action is permissible if and only if it's not the case that one ought to refrain from performing that action. This is just the standard inferential scheme for formal deontic logic.

Basically, he is saying that an action is permissible so long as there is no moral obligation against that action. Can you see what's coming? (I added the number 4)

> We've conformed to standard principles and inference rules of logic and we've started out with assumptions that atheists have conceded. And yet we reach the absurd conclusion: (4) therefore, for any action you care to pick, it's permissible to perform that action.

And let's be clear about why this is bad for atheists:

> If you'd like, you can take this as the meat behind the slogan "if atheism is true, all things are permitted." For example if atheism is true, every action Hitler performed was permissible. Many atheists don't like this consequence of their worldview. But they cannot escape it and insist that they are being logical at the

> same time.

Let me just add one more point. How are we supposed to be morally obligated to perform any action if we are pure matter? Meat machines don't have free will. We would just be strings of dominoes falling forward, with no choice whether to fall or not. And even if we could somehow choose, our choices have no ultimate moral significance.

So, what does morality mean to atheists, then?

A while back, I listed some quotes about morality on atheism, taken from atheists who have actually thought through the consequences of atheism for rational moral behavior.

Here is a quotation from Richard Dawkins:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.

Of course, atheists can sense the objective moral standard that God has built into every person. But their materialist worldview undercuts the meaningfulness of moral values, moral duties and moral accountability. And people just don't act morally once morality has become irrational for them. Acting morally is *hard*.

What ends up happening to atheists is that they only do the right thing for pleasure, or to avoid social punishments. Once the pre-supposition of materialism has destroyed the rationality of morality, it becomes impossible for atheists to answer the question "Why be moral?". Any atheist who continues to act morally is living inconsistently with their own worldview – and that is not sustainable in the long run.

Atheistic assumptions wear down the awareness of the moral law that atheists started out with, so that they begin to advocate for obviously immoral things, like the suppression of freedom of inquiry. Eventually, the guilt becomes so strong that they exchange authentic moral values like chastity and sobriety for cheap narcissistic fads like recycling and yoga.

The case of William Wilberforce

Consider this article from the Wall Street Journal about the abolitionist William Wilberforce.

> In fact, William Wilberforce was driven by a version of Christianity that today would be derided as "fundamentalist."
>
> …William Wilberforce himself, as a student at Cambridge University in the 1770s and as a young member of Parliament soon after, had no more than a nominal sense of faith. Then, in 1785, he began reading evangelical treatises and underwent what he called "the Great Change," almost dropping out of politics to study for the ministry until friends persuaded him that he could do more good

where he was.

And he did a great deal of good…[h]is relentless campaign eventually led Parliament to ban the slave trade, in 1807, and to pass a law shortly after his death in 1833, making the entire institution of slavery illegal. **But it is impossible to understand Wilberforce's long antislavery campaign without seeing it as part of a larger Christian impulse. The man who prodded Parliament so famously also wrote theological tracts, sponsored missionary and charitable works, and fought for what he called the "reformation of manners," a campaign against vice.**

Even during the 18th century, evangelicals were derided as over-emotional "enthusiasts" by their Enlightenment-influenced contemporaries. By the time of Wilberforce's "great change," liberal 18th-century theologians had sought to make Christianity more "reasonable," de-emphasizing sin, salvation and Christ's divinity in favor of ethics, morality and a rather distant, deistic God. Relatedly, large numbers of ordinary English people, especially among the working classes, had begun drifting away from the tepid Christianity that seemed to prevail. Evangelicalism sought to counter such trends and to reinvigorate Christian belief.

…Perhaps the leading evangelical force of the day was the Methodism of John Wesley: It focused on preaching, the close study of the Bible, communal hymn-singing and a personal relationship with Jesus Christ. Central to the Methodist project was the notion that good works and charity were essential components of the Christian life. Methodism spawned a vast network of churches and ramified into the evangelical branches of Anglicanism. Nearly all the social-reform movements of the 19th and early 20th centuries–from temperance and soup kitchens to slum settlement houses and prison reform–owe something to Methodism and its related evangelical strains. The campaign against slavery was the most momentous of such reforms and, over time, the most successful.It is thus fitting that John Wesley happened to write his last letter–sent in February 1791, days before his death–to William Wilberforce. Wesley urged Wilberforce to devote himself unstintingly to his antislavery campaign, a "glorious enterprise" that opposed "that execrable villainy which is the scandal of religion, of England, and of human nature." Wesley also urged him to "go on, in the name of God and in the power of his might, till even American slavery (the vilest that ever saw the sun) shall vanish away before it."

Wesley had begun preaching against slavery 20 years before and in 1774 published an abolitionist tract, "Thoughts on Slavery." Wilberforce came into contact with the burgeoning antislavery movement in 1787, when he met Thomas Clarkson, an evangelical Anglican who had devoted his life to the abolitionist cause. Two years later, Wilberforce gave his first speech against the slave trade in Parliament.

…This idea of slaving as sin is key. As sociologist Rodney Stark noted in "For the

> Glory of God" (2003), the abolition of slavery in the West during the 19th century was a uniquely Christian endeavor. When chattel slavery, long absent from Europe, reappeared in imperial form in the 16th and 17th centuries–mostly in response to the need for cheap labor in the New World–the first calls to end the practice came from pious Christians, notably the Quakers. Evangelicals, not least Methodists, quickly joined the cause, and a movement was born.

William Wilberforce believed that slaves were made in the image of God – that they were embodied souls who could be resurrected to eternal life. Wilberforce believed that the purpose of human life is to freely seek God, and to be reconciled with God through Christ. He wanted all men and women to have the opportunity to investigate and respond to God's self-revelation to them.

Further study

You can read more about Wilberforce's beliefs here and his public activities here. And you can still see modern-day abolitionists, like Scott Klusendorf, acting out their Christian faith. Only today they're called pro-lifers.

A good paper by Bill Craig on the problem of rationally grounding prescriptive morality is here.

Alfonzo Rachel on progressives and sex

April 22, 2009 | by Wintery Knight | Link | Original Link

Zo re-caps the week in politics, and comments on Sarah Palin, progressive hypocrisy, abortion and abstinence.

I just noticed that he posted this video from a tea party as well.

PJTV did well to pick this guy up. More here.

More states look to raise taxes to address budget shortfalls

April 22, 2009 | by Wintery Knight | Link | Original Link

In America, one of the political parties is dominated by people who were born into rich families and have never run any business – not even a lemonade stand. Try contrasting people like Howard Dean or Al Gore with Representatives John Campbell or Michele Bachmann. And there are consequences to being sheltered from the realities of commerce and economics your entire life.

The Wall Street Journal reports: (H/T The Tax Foundation)

> A free fall in tax revenue is driving more state lawmakers to turn to broad-based tax increases in a bid to close widening budget gaps.
>
> At least 10 states are considering some kind of major increase in sales or income taxes: Arizona, Connecticut, Delaware, Illinois, Massachusetts, Minnesota, New Jersey, Oregon, Washington and Wisconsin. California and New York lawmakers already have agreed on multibillion-dollar tax increases that went into effect earlier this year.
>
> Fiscal experts say more states are likely to try to raise tax revenue in coming months, especially once they tally the latest shortfalls from April 15 income-tax filings, often the biggest single source of funds for the 43 states that levy them.

And WSJ provides this useful map of who is likely to be affected:

State budget shortfalls

I'm thinking it was a bad idea for 50% of the country to not pay income taxes, then to spend on social services like drunken sailors.

How well do Darwinists do in debates with skeptics?

April 23, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome Post-Darwinist readers! Thanks for the link Denyse!

I thought that I would introduce a couple of my favorite critics of Darwinian fundamentalism, Stephen C. Meyer and Jonathan Wells. Here they are debating with Michael Shermer. I like Michael Shermer for two reasons – fiscal conservatism and engagement with his opponents. I've seen him MC sessions at Christian conferences. So let's give him a chance to make his case.

Biographies of our debaters

Michael Shermer

Dr. Michael Shermer is the Founding Publisher of *Skeptic* magazine (www.skeptic.com), the Executive Director of the Skeptics Society, a monthly columnist for *Scientific American*, the host of the Skeptics Distinguished Science Lecture Series at Caltech, and Adjunct Professor of Economics at Claremont Graduate University. Dr. Shermer received his B.A. in psychology from Pepperdine University, M.A. in experimental psychology from California State University, Fullerton, and his Ph.D. in the history of science from Claremont Graduate University (1991).

Stephen C. Meyer

Stephen C. Meyer is director and Senior Fellow of the Center for Science and Culture at the Discovery Institute, in Seattle. Meyer earned his Ph.D. in the History and Philosophy of Science from Cambridge University for a dissertation on the history of origin of life biology and the methodology of the historical sciences. Previously he worked as a geophysicist with the Atlantic Richfield Company after earning his undergraduate degrees in Physics and Geology.

Jonathan Wells

Jonathan Wells has received two Ph.D.s, one in Molecular and Cell Biology from the University of California at Berkeley, and one in Religious Studies from Yale University. He has worked as a postdoctoral research biologist at the University of California at Berkeley and the supervisor of a medical laboratory in Fairfield, California, and he has taught biology at California State University in Hayward.

Massimo Pigliucci

Massimo Pigliucci, Ph.D., is a professor in the Department of Ecology and Evolution at State University of New York at Stony Brook, where he conducts research on the ecology of plant populations and the evolution of adaptations…. He received his doctorate in genetics at the University of Ferrara in Italy, his Ph.D. in botany from the University of Connecticut, as well as a Ph.D. in philosophy of science at the University of Tennessee.

Let's get ready to rumble!

Let's start with a short 15-minute debate between Michael Shermer and Stephen Meyer,

moderated by Lee Strobel.

Meyer starts with these points:

- the origin of the universe implies a Creator who exists outside of time, space and matter, because he created time, space and matter
- the physical constants and ratios of physics must be fine-tuned in order to support the minimal requirements for life
- the cell is filled with molecular machines that are identical to machines built by humans, such as rotary engines
- the cell contains biological information in the DNA, and the origin of this information cannot be explained by evolution

Shermer makes these points:

- we should never infer intelligent causes, we should keep searching for a materialistic explanation and say we don't know until we find an explanation that allows me to continue to be an intellectually-fulfilled atheist
- who made the designer?
- maybe the big bang will be overturned and then we can go back to the eternal universe that I want to be true in spite of the evidence
- we can speculate (without any experimental evidence) about alternative theories of how the universe got here, unlike the standard big bang theory which is backed by multiple lines of scientific evidence

Then a dialog ensues:

Shermer: The design of life is sub-optimal – if God did it, it should be perfect, with no trade-offs between non-functional requirements, just like Wintery Knights' software architecture designs and Java code are perfect

Meyer: There is no such thing as a perfect design. Software architects, like Wintery Knight, who have studied software design, will tell you that non-functional requirements must be traded-off against one another. (Source: Software Engineering Institute at Carnegie Mellon University)

Shermer: Let me commit the ad hominem fallacy by attacking the motives of intelligent design proponents instead of dealing with their arguments and evidence.

Meyer: Two can play at that game, since evolutionists are atheists and secular humanists. But who cares? let's stick to the arguments and evidence, ok?

Strobel: Meyer, are evolution and Christianity compatible?

Meyer: No, because evolution requires that the natural processes that create the diversity of life be random and unpredictable.

Shermer: Well, maybe the natural forces could be caused by the designer but in a totally undirected and undetectable way, so you Christians could have blind faith and we could run the public square.

Meyer: But Darwinism says and that no design is detectable in those processes, so they processes cannot be *actually directed* on Darwinism.

Shermer: But the designer could use natural selection and mutation.

Meyer: If so, then why did Darwin explicitly reject God having a role in these processes?

Shermer: I don't believe in God because there isn't enough evidence and it would require too many changes in my life. I like having autonomy from God and his moral demands. Also, we must always prefer material explanations, we can never infer that an intelligence played a role. I will only allow you to have two explanations of natural phenomena: 1) God didn't do it, or 2) we don't know.

Meyer: I like that you allow "we don't know" as an explanation if we don't know, because that is a rejection of dogmatic explanations that don't fit the available evidence. But the arguments for design are based on what we do know, not what we don't know – science gave us these arguments – and the progress of science has only *strengthened* them.

Conclusion

Well, I think it's pretty clear who won, and who had the evidence! I like Michael Shermer, though, and I hope that he comes around to our point of view in time. At least he's willing to debate, and he has a pretty moderate view compared to other Darwinian fundamentalists.

Other debates on Darwinism vs intelligent design

Michael Shermer debates Jonathan Wells at the pro-Darwinism Cato Institute (in 7 parts), MP3 audio is here.

Massimo Pigliucci debates Jonathan Wells for the pro-Darwinism PBS, downloadable video and audio.

John Lennox debates against Michael Shermer about the existence of God.

Further study

Here are posts on cosmological argument and the fine-tuning argument. I'll respond to hopeful, but unwarranted, speculations about quantum mechanics and chaotic inflationary models, which I will be blogging about later. I'll blog about molecular machines in a future post.

An essay on the origin of biological information by Meyer is here and a debate between two software engineers on it is here. I'll also mention Meyer's forthcoming book Signature in the Cell. Don't forget about the upcoming debate between William Lane Craig and Francisco Ayala!

By the way, William Lane Craig has also debated Massimo Pigliucci on the topic "Does God Exist?".

UPDATE: Did you see my post on why Darwinists don't allow debates like this to happen in school classrooms?

Steven Crowder’s Obama Song

For those of you who need a re-cap of Obama’s first 100 days in office.

More Crowder here.

How childhood experiences shape our view of religion

April 23, 2009 | by Wintery Knight | Link | Original Link

I have a very good friend named Rick Heller who blogs at several places, including Transparent Eye. Rick is not a Christian, but he is fairly familiar with the relevant evidence pro and con, except on the resurrection of Jesus. I was browsing on Transparent Eye the other day and I found this post about a childhood experience that turned Rick away from religion.

Excerpt:

> Even when I was religious, I always found the glorification of God to be a lesser form of spirituality. As an Orthodox Jew, I disliked the text of the Yishtabach prayer (though I liked the tune)
>
> May your Name be praised, our King, the God, the great and holy King, in heaven and on Earth. Because, our God and God of our forefathers, you deserve song and praise, lauding and hymns, power and dominion, triumph, greatness and strength, praise and splendor, holiness and kingship, blessing and thanksgivings now and forever.
>
> It seemed to me that the Rabbis thought that God had a self-esteem problem, and His ego needed massaging. Even as a religious person, I thought these prayers were inferior to the Psalms, which often expressed delight and gratitude rather than the obsequious praise of the courtier.
>
> In life, I can think of two reasons why you might flatter someone. First, the person might be insecure, and out of compassion you might say a little white lie that makes them feel better. Second, the person might have power over you, and you tell a lie in order to elevate them in the hopes of reciprocity, that they will elevate you, or at least not punish you.
>
> This sucking up to God seems to me like the flattery of the poweful. The extravagent praise of the Yishtabach prayer strikes me as something done to propitiate a powerful and potentially dangerous Being that could destroy you.
>
> Does God need our glorification? A mature person does not need constant praise (though a heartfelt thank-you every once in a while is appreciated).

Let's take a look at his concern and see if we can find a solution.

The problem of forcing religion on children

Now, I have a different view of worship than many Christians. I think it's better to worship God in the public square, not just in church. I believe in worshiping with theological truths *and* with publicly available knowledge, such as describing the scientific discoveries that led to our knowledge of God's role in creating the universe. And I believe in talking about

God's worth to non-Christians, not just Christians.

Surprising as it may be to many Christians, as someone who was not raised in a Christian home, I really struggle with the church. Unlike Rick, I enjoy ascribing worth to God. I think that voluntary worship is best, because you make your own case based on what you know about God from your own study. But I also think a prayer like Rick's may be appropriate, *but only after you convince yourself it is true.*

I want to go on to make a general point about the way religion is presented to young people.

A lot of people who have religion crammed down their throats at a young age end up either rebelling or just going through the motions until they leave home. What I noticed about Rick's post is that sounds like he was being made to do things that he didn't want to do. Can you imagine what would have happened if he told the church elders or his parents that he was uncomfortable mouthing these parrot-praises?

This is the problem. Church elders and parents are long on ordering people around, and short on answering questions. They don't try to convince you of anything, they just demand visible behaviors. Rick might be willing to say that prayer, but first he deserves to be convinced. It is not enough to just pressure him into mouthing the words. He needs to persuade himself that the words are true, by studying the facts!

The problem is that parents and the church won't lift a finger to present religious truth claims the same way as truth is presented in the classroom, the lab or the workplace. Children know when they are being told fairy tales. We need to give them public knowledge! Show them some debates! We need to put in the same effort into persuading people about religion as we do about *any other area of knowledge*.

I once exchanged e-mails with a fundamentalist Christian who explained to me how her approach to atheist's questions was to quote the Bible to them. I asked her whether it might not be better to appeal to scientific or historical evidence, instead, since atheists don't believe the Bible. Naturally she cited a Bible verse to me, in order to justify her not having to answer anyone's questions.

> A wicked and adulterous generation looks for a miraculous sign, but none will be given it except the sign of Jonah." Jesus then left them and went away. (Matthew 16:4)

Now the thing is, this woman had no idea what this verse was saying. She was just trying to justify being lazy. But every serious Christian knows that Jesus is predicting his own resurrection in that verse! That is what the sign of Jonah is: 3 days in the tomb and then out of it. So Jesus is saying, you guys are going to get a historical event, and it's going to be done right in front of you as a sign to prove my claims.

This is exactly how the early church presented the resurrection (e.g. Peter in Acts 2:14-41). Non-Christians were supposed to form their opinion of whether Jesus was the long-awaited Messiah, or not, based on a historical event. The whole Bible is chock-full of examples of faith founded on fact! But you would never, ever know that by watching

parents and churches present religion to children.

I hereby apologize to sincere atheists, agnostics and deists for these experiences. But guess what? Authentic Christians like William Wilberforce agree with me on this.

What would William Wilberforce think?

Well, take a look for yourself, from his own writings:

> Look at the facts. Do cultural Christians view Christian faith as important enough to make it a priority when teaching their children what they believe and why they believe it? Or do they place greater emphasis on their children getting a good education than on learning about the things of God? Would they be embarrassed if their children did not possess the former while basically being indifferent about the latter? If their children have any understanding of Christian faith at all, they probably have acquired it on their own. If the children view themselves as Christians, it is probably not because they have studied the facts and come to a point of intellectual conviction but because their family is Christian, so they believe they must be Christians also.
>
> **The problem with this way of thinking is that authentic faith cannot be inherited. When Christianity is viewed in this way, intelligent and energetic young men and women will undoubtedly reach a point where they question the truth of Christianity and, when challenged, will abandon this "inherited" faith that they cannot defend. They might begin to associate with peers who are unbelievers. In this company, they will find themselves unable to intelligently respond to objections to Christianity with which they are confronted. Had they really known what they believe and why they believe it, these kinds of encounters would not shake their faith one bit.**
>
> I fear for the future of authentic faith in our country. We live in a time when the common man in our country is thoroughly influenced by the current climate in which the cultural and educational elite propagates an anti-Christian message. We should take a look at what has happened in France and learn a lesson from it. In that country, Christianity has been successfully attacked and marginalized by these same groups because those who professed belief were unable to defend the faith from attack, even though its attackers' arguments were deeply flawed. We should be alarmed that instruction in authentic faith has been neglected, if not altogether eliminated, in our schools and universities.
>
> **Is it any wonder then that the spiritual condition of our country is of little concern to those who don't even educate their own children about true Christianity? Their conduct reflects their absence of concern, not only for the state of Christianity in our own country, but also for the need to communicate the message of Christ to those in other parts of the world who have not heard this truth.**

This is the guy who stopped slavery in the UK, folks. My advice: let’s do whatever Wilber says.

In a forthcoming post, I’ll look at another childhood experience that causes problems for people. It turns out that bad views of economics can be traced to childhood experiences, just like bad views of religion.

How childhood experiences shape our view of economics

April 24, 2009 | by Wintery Knight | Link | Original Link

Last time, we looked at how childhood experiences influence our views of religion. This time, I want to go over an article from the Cato Institute from the famous Harvard philosopher Robert Nozick. This article will give you insights into why leftist academics are against capitalism, and what specifically causes them to have that belief.

Here's a blurb about Nozick:

> *Robert Nozick is Arthur Kingsley Porter Professor of Philosophy at Harvard University and the author of* Anarchy, State, and Utopia *and other books. This article is excerpted from his essay "Why Do Intellectuals Oppose Capitalism?" which originally appeared in* The Future of Private Enterprise*, ed. Craig Aronoff et al. (Georgia State University Business Press, 1986) and is reprinted in Robert Nozick,* Socratic Puzzles *(Harvard University Press, 1997).*

Nozick's thesis is that the school environment encourages "wordsmith intellectuals" to be hostile to free market capitalism and prefer centralized systems.

First, let's see what a wordsmith intellectual is:

> By intellectuals, I do not mean all people of intelligence or of a certain level of education, but those who, in their vocation, deal with ideas as expressed in words, shaping the word flow others receive. These wordsmiths include poets, novelists, literary critics, newspaper and magazine journalists, and many professors. It does not include those who primarily produce and transmit quantitatively or mathematically formulated information (the numbersmiths) or those working in visual media, painters, sculptors, cameramen. Unlike the wordsmiths, people in these occupations do not disproportionately oppose capitalism. The wordsmiths are concentrated in certain occupational sites: academia, the media, government bureaucracy.

Nozick's argument is that wordsmiths oppose capitalism because the free market doesn't provide them with the rewards and adulation from authority figures that they received in their school years.

He writes:

> Schools became the major institution outside of the family to shape the attitudes of young people, and almost all those who later became intellectuals went through schools. There they were successful. They were judged against others and deemed superior. They were praised and rewarded, the teacher's favorites. How could they fail to see themselves as superior? Daily, they experienced differences in facility with ideas, in quick-wittedness. The schools told them, and

> showed them, they were better.
>
> The schools, too, exhibited and thereby taught the principle of reward in accordance with (intellectual) merit. To the intellectually meritorious went the praise, the teacher's smiles, and the highest grades. In the currency the schools had to offer, the smartest constituted the upper class. Though not part of the official curricula, in the schools the intellectuals learned the lessons of their own greater value in comparison with the others, and of how this greater value entitled them to greater rewards.

But what happens when these pampered wordsmith intellectuals hit the job market?

> The wider market society, however, taught a different lesson. There the greatest rewards did not go to the verbally brightest. There the intellectual skills were not *most* highly valued. Schooled in the lesson that they were most valuable, the most deserving of reward, the most entitled to reward, how could the intellectuals, by and large, fail to resent the capitalist society which deprived them of the just deserts to which their superiority "entitled" them? Is it surprising that what the schooled intellectuals felt for capitalist society was a deep and sullen animus that, although clothed with various publicly appropriate reasons, continued even when those particular reasons were shown to be inadequate?

So, what economic system do wordsmith intellectuals advocate for instead of capitalism?

> The intellectual wants the whole society to be a school writ large, to be like the environment where he did so well and was so well appreciated. By incorporating standards of reward that are different from the wider society, the schools guarantee that some will experience downward mobility later. Those at the top of the school's hierarchy will feel entitled to a top position, not only in that micro-society but in the wider one, a society whose system they will resent when it fails to treat them according to their self-prescribed wants and entitlements.

Intellectuals can't make money degreez in Marxist Studies, Peace Studies, or <Insert_Victim_Group_Here> Studies. And yet, they feel entitled because of their classroom experiences. So, the answer is to confiscate the wealth of the productive entrepreneurs and redistribute them to the intellectuals.

But there are further unrelated points I must add to this article.

What makes people less religious the more educated they become?

OK, if you watch the debate between Peter Atkins and Bill Craig, or Lewis Wolpert and Bill Craig, etc. then it's pretty clear that these "intellectuals" have not rejected God for intellectual reasons. On the contrary, they rejected God based on the reasoning of a 12 year old and never bothered to look for answers since they were 12.

The real reason that more educated people reject God is due to pride. Specifically, they do not want to be identified as believing the same spiritual things as the masses. Their great education makes them feel pressure to please their colleagues by embracing views

that are different from the benighted masses.

So, it comes down to peer-pressure. They simply don’t want to be different from their colleagues. They want to be able to look down at the benighted masses.

What makes researchers support socialist dogma and pseudoscience?

Researchers are funded by government grants. Grants proposals have to get the attention of government bureaucrats. Bureaucrats are always looking for a crisis that they can sell to the public in order to increase the size of government and regulate the free market.

Therefore, researchers tend to embrace whatever the latest Chicken Little crisis is, be it global cooling, global warming, or unsafe consumer products, etc. Grant proposals that open up opportunities for government to control the free market will get the most funding.

What makes government-run schools and media support socialism?

Again, government-run schools and media receive funds based on the size of government. NPR, PBS and the whole public school system can never be objective about anything. They must always side with government and against individual liberty. They also oppose competition from private alternatives like Fox News and vouchers.

How the left abandoned argument for coercion and intimidation

April 24, 2009 | by Wintery Knight | Link | Original Link

Steven Crowder is funny and I hope that his video about bullying from the left this will encourage everyone who disagrees about these issues to be more civil about it instead of calling people names and intimidating one another.

I think it's wrong to intimidate people who disagree with you, e.g. – by making them lose a beauty contest. Dragging people into court and making them lose their jobs, pay fines or publicly apologize, etc., just because they don't agree with your view, is WRONG.

Let's have everybody concentrate on winning arguments about issues, not on coercion, insults and intimidation.

UPDATE: I posted a while back on whether it should be illegal to publicly defend traditional marriage.

Friday night funny: Obama's plan to undo waterboarding damage

April 24, 2009 | by Wintery Knight | Link | Original Link

I have a double feature for this week's Friday Night Funny.

First, Scott Ott writes about Obama's new interrogation policy for terrorists. (H/T Scrappleface)

Excerpt:

> Although aggressive interrogation techniques on three terrorists produced intel that likely prevented major attacks on American cities, most experts agree that there's no way to know whether less vigorous methods might have produced the same results.
>
> "In hindsight," the president said, "it might have been better to gain the trust of men like Khalid Sheik Mohammed by speaking gently with them, and offering small gifts like Pop-Tarts, or Nair."

Next, Frank J. Fleming writes about Obama's plan to fix the national security mess, (7 years free of terrorist attacks), of the Bush administration.

Excerpt:

> "We were shocked when we learned the full extent of the inappropriate techniques approved by the CIA under the previous administration," White House press secretary Robert L. Gibbs told reporters. "That's one of the reasons we made the memos public. We want everyone to know what was done, supposedly in our name, and that this administration does not condone such actions."
>
> The president plans to go even further, Gibbs said.
>
> "It would be unconscionable for this administration to look the other way, just because those tactics achieved results. It was wrong to use them, and we should not benefit from their use," Gibbs stated. "The president had directed that, since those tactics obtained information that prevented a major attack on Los Angeles, it is only right that we carry out the attack on ourselves."

Did you miss last week's Friday Night Funny: Media not sure how to cover Obama's crime spree.

Happy Friday!

Guest post: Some thoughts on marriage, part 1

April 25, 2009 | by Wintery Knight | Link | Original Link

The following post is a guest post from my friend Andrew, who has the best marriage of anyone I know. The post below is pat one of a two part series. Part two will be out later today.

Some Thoughts on Marriage (Part 1 of 2)

I (Andrew) have been married for 7 years now and thought I would share a couple of things that I've learned over this time that I really hadn't given much thought about before.

Real commitment means no back door!

No one walks down the aisle thinking maybe this marriage will work out okay. Everyone thinks that their marriage will last forever. But with about one third of married couples getting divorced, you need real commitment and a 'no back door' policy to make your marriage go the distance.

My wife and I took premarital counseling before we were married. This is something I would highly recommend as it helped us to identify potential stumbling blocks before we actually ran into them. Pre-marital counseling is not about someone telling you what you should do. Rather, it helps you identify and work through things that commonly come between couples and things that might be areas of conflict specifically for you – e.g., finances, expectations, roles, in-laws, etc.

One of the things that my Christian pastor made very sure that my wife and I understood before he would marry us is that marriage is meant to be for life, and if you want it to be for life you have to make sure there is no 'back door'. You need to both go into marriage with the understanding that this is a permanent arrangement and that there is no way out, no back door.

In my vow I made it clear to my wife that I was 'in' for better or for worse. It's the 'for worse' part that you really need to be committed for. Every marriage will eventually experience some difficult times, and it's during those really challenging times that your marriage will be put to the test, not during the easy times.

Marriage is not about you! But it can help you grow!

Most of us automatically take care of ourselves first, me included. However, I soon came to realize that marriage is in fact about elevating your spouse and putting them first. It's not giving 50% and getting 50%. It's about giving 100% and expecting nothing in return. It's about building your spouse up to be all they can be.

One of the painful benefits of marriage is that it will make you a better person. I say 'painful' because in marriage everything is magnified. If you have a disagreement with a friend you can just put some distance between each other and things will probably work

themselves out. In marriage you can't put distance between you and your spouse because they are always there. You have to deal with things. This is what makes you a better person, because you find out things about yourself that you didn't realize before and you have an opportunity either to work on these things or to harden your heart.

For example, I always thought of myself as an incredibly patient person, but over time I have found that this is in fact something that I need to work on. In his book "Sacred Marriage", author Gary Thomas suggests that the purpose of marriage is to make us holy, not (only) happy.

UPDATE: I spotted this related post on the importance of marriage on Hot Air.

Guest post: Some thoughts on marriage, part 2

April 25, 2009 | by Wintery Knight | Link | Original Link

This is part two of a two-part series of guest posts written by my friend Andrew. My friend Andrew has thought a lot of the issue of marriage and he and his wife have really done an amazing job. I thought we could all benefit by absorbing his tips and experiences.

Some Thoughts on Marriage (Part 2 of 2)

Continuing on from my Part 1 post, here are a couple more things that I have learned about marriage that I don't think I really understood before (at least not to the same extent) I was married:

Men and women are different…and that's okay!

In general, men are logical and physical, and women are emotional and relational. Taken to the extreme, men can be cold and uncaring, and women can be led purely by their emotions and inappropriately compromising. By coming together in marriage men and women can really work together and learn from each other. In marriage, expect each other to be different, and expect to learn a lot from your spouse.

If I'm very frustrated, my normal reaction as a male is to kick something. Something like a steel door or a brick wall. If my wife is frustrated or overwhelmed, her normal reaction as a female is to cry. As a man, I only cry when something is really wrong…like my both my arms and legs were accidentally amputated. As a woman, my wife would only consider hitting something if the situation was really desperate. God made men and women special, equal, complementary…and very different.

Now that my wife and I have children, I have discovered just how much the difference between the sexes is innate, and not learned. Last week my wife took some food over to a friend of hers who had undergone an operation and was out of commission. She brought our two young sons with her, who played with her friend's three young daughters. My wife later told me what she had overheard: Girl to her sisters and to my son: "Let's play princesses. We can dress up in our princess dresses. You [to my son] can pretend to be a prince!". My son's reply: "I don't want to be a prince, I want to be a tiger-shark!"

Two different people = different expectations.

Though it is obvious enough, it helps to realize and acknowledge that in marriage the husband and wife are two different people. Two different sexes. Two different backgrounds and upbringings. Therefore you should expect to have different ideas of what the different aspects of your marriage will be like. One spouse might expect to have three children because they came from a three child family, the other doesn't want children. One spouse expects to celebrate Christmas Day with their family, the other expects to alternate. And so on.

This brings us back to two things that I have come to realize: One should enter into

marriage with an open mind and realize that there are many ways to do things, and often it doesn't really matter as long as husband and wife can agree on which way works for them. The other thing is premarital counseling – it will help you both to identify your expectations as well as areas that might lead to conflict in your marriage. By the way, it's never too late to go for premarital counseling, even if you've been married for several years. And on that note, a word of caution: if you are having difficulties in your marriage please don't harden your heart – seek help before it's too late. Contrary to popular understanding, divorce makes things more difficult, not easier. Many church pastors are professionally trained to provide marriage counseling.

UPDATE: I spotted this related post on the importance of marriage on Hot Air.

An experimental particle physicist answers speculations about creation and fine-tuning

April 25, 2009 | by Wintery Knight | Link | Original Link

I was corresponding with Dr. Michael G. Strauss recently regarding some comments that my previous articles on the kalam, fine-tuning and habitability arguments had drawn. Dr. Strauss is a tenured professor but he also does research on particle physics.

I wanted to draw your attention to a lecture given by Dr. Strauss to the students at Stanford University. In the lecture, he gives 3 arguments from the progress of science that support the conclusion that the universe was created and designed by an intelligent agent of immense power.

I highly recommend this lecture, entitled "Scientific Evidence for the Existence of God".

Dr. Strauss is not a Christian philosopher or debater – he is a practicing physicist with a stack of publications, who is excited by scientific discoveries that confirm the existence of God.

Here is an outline of the lecture:

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

What Dr. Strauss thinks about science

As you listen to the lecture, pay close attention to the fact that it is the progress of science that has disproved atheism and given support to theism. Atheism is based on *old science*. And people who continue to cling to atheism against the new evidence must resort to speculations that are either not testable at all, or not confirmed by experimental testing.

Let's take a look at two of the speculations that sound scientific, but aren't confirmed by any research. The first is quantum mechanics (i.e. – vacuum fluctuation model). It argues that the universe is an event without a cause, because there is an unobservable hyper-universe that spawned our universe. The second is a response to the fine-tuning. It argues that there are an infinite number of unobservable universes that are not fine-tuned, and we just happen to be in the fine-tuned one.

Notice that both responses are theoretical speculations that take refuge in unobservable entities in order to escape the good experimental science that proves that there is a Creator and Designer. It's atheism-of-the-gaps!

Vacuum fluctuation:
– offered as a response to the big bang
– what can QM do: explain how particles appear in a vacuum when the vacuum is sparked
– speculation is that this same process may explain the origin of the universe
– in order to test it, our universe would have to be contained within a larger universe, with similar laws of physics
– but there is *no evidence that this unobservable hyper-universe exists*

Chaotic inflationary model:
– offered as a response to the fine-tuning
– speculates that inflation may cause other universes to come into being, with different constants
– no experimental verification has been offered
– no evidence of any of these other universes

So, what we have here is a clear cut case of logical arguments and evidence for theism, vs atheist faith and wish-fulfillment. All the data we have today is for theism, but all the untestable speculating is on the part of the atheists, who have faith and hope that the progress of science will overturn what we know and replace it with the what atheists hope for. (And I haven't even talked about the origin of life and molecular machines, etc.!)

In fact I e-mailed Dr. Strauss about these two speculations, and this was his response:

> Wintery Knight,
>
> Quantum mechanics works within the laws of physics. So if you postulate that this universe was created from QM then you must also postulate that a previous universe with similar laws existed previously.
>
> There are a number of theories that would allow multiple universes, though none have any experimental verification. Have you read Jeff's "Who's Afraid of a Multiverse?" It is very good.

> -Mike

I think that we need to be careful when we explore these issues of faith and science. This is not a game. We need make decisions about what is true today, not hold out hope that some discovery will be made later that validates what we want to believe.

Further study

Dr. Strauss gave a similar lecture more recently at the University of California (Santa Cruz) and in the Q&A, he actually faced questions regarding quantum mechanics and the chaotic inflationary model. You can hear him express his mistrust of theories that haven't been proven as he urges the audience to go with the evidence, not with the self-serving speculations. Dr. Strauss takes part in a panel discussion on science and religion here.

Also on this topic is the debate between William Lane Craig and atheist physicist Victor Stenger, (audio here). Also, a lecture titled "Beyond the Big Bang", was delivered at the University of Colorado at Boulder, in front of Victor Stenger and other physicists (audio here). There is a period of Q&A in which Bill must face challengers. These are both available on DVD. More Bill Craig debates are here.

In this published research paper from the journal *Astrophysics and Space Science*, William Lane Craig responds to the several naturalistic attempts to evade the implications of the *kalam* argument. Vacuum fluctuation, chatoric inflationary, steady state and quantum gravity models are all addressed.

Why does President Pantywaist hate America so badly?

April 26, 2009 | by Wintery Knight | Link | Original Link

That is the actual title of an article by Gerald Warner of the UK Telegraph. (H/T Stop the ACLU)

We are the laughingstock of the entire world now.

This entire passage from the Telegraph piece needs to be excerpted, so that people understand that the United States has elected a President who is far less competent than Jimmy Carter. The Worst President Ever.

> If al-Qaeda, the Taliban and the rest of the Looney Tunes brigade want to kick America to death, they had better move in quickly and grab a piece of the action before Barack Obama finishes the job himself. Never in the history of the United States has a president worked so actively against the interests of his own people – not even Jimmy Carter.
>
> Obama's problem is that he does not know who the enemy is. To him, the enemy does not squat in caves in Waziristan, clutching automatic weapons and reciting the more militant verses from the Koran: instead, it sits around at tea parties in Kentucky quoting from the US Constitution. Obama is not at war with terrorists, but with his Republican fellow citizens. He has never abandoned the campaign trail.
>
> That is why he opened Pandora's Box by publishing the Justice Department's legal opinions on waterboarding and other hardline interrogation techniques. He cynically subordinated the national interest to his partisan desire to embarrass the Republicans. Then he had to rush to Langley, Virginia to try to reassure a demoralised CIA that had just discovered the President of the United States was an even more formidable foe than al-Qaeda.
>
> "Don't be discouraged by what's happened the last few weeks," he told intelligence officers. Is he kidding? Thanks to him, al-Qaeda knows the private interrogation techniques available to the US intelligence agencies and can train its operatives to withstand them – or would do so, if they had not already been outlawed.
>
> So, next time a senior al-Qaeda hood is captured, all the CIA can do is ask him nicely if he would care to reveal when a major population centre is due to be hit by a terror spectacular, or which American city is about to be irradiated by a dirty bomb. Your view of this situation will be dictated by one simple criterion: whether or not you watched the people jumping from the twin towers…
>
> President Pantywaist's recent world tour, cosying up to all the bad guys, excited the ambitions of America's enemies. Here, they realised, is a sucker they can

> really take to the cleaners. **His only enemies are fellow Americans. Which prompts the question: why does President Pantywaist hate America so badly?**

Michelle Malkin has more on the Democrats national security and foreign policy blunders:

> Data point – Hillary cackles at serious questions about the effectiveness of enhanced interrogation.
>
> Data point – House Speaker Nancy Pelosi ups pressure for 'truth' panel on torture
>
> Data point – Soros acolyte Rosa Brooks, al Qaeda apologist and military-basher, now ensconced at the Pentagon.
>
> Data point – Radical Yale Law School Dean Harold Koh's Senate confirmation hearing for a key State Department legal adviser slot set for next Tuesday.
>
> Data point – Department of Haplessness and Stupidity Secretary Janet Napolitano — fresh from pooh-poohing terrorism and illegal border-crossings, botching 9/11 history and issuing hit jobs on limited government conservatives and veterans — is now pushing for repeal of Real ID Act

And she ends with this:

> We have lost our war footing. Welcome back to the Sesame Street school of national security. Feel safer? Me neither.

You Democrats who voted for Obama didn't want to know anything about this man during the election campaign. You trust the left-wing media to tell you everything you needed to know. Well, now you know what we, the people who *can* read, were trying to tell you.

UPDATE: Stop the ACLU linked to another post by Gerald Warner entitled Barack Obama: President Pantywaist – new surrender monkey on the block. Why is it that the entire world can see this guy is an unqualified joke, except us?

Michele Bachmann calls for Napolitano to resign

April 26, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

This video is awesome. (H/T The Maritime Sentry)

But the leaked DHS report is not the only problem that conservatives are facing from the fascist left. The tolerant left, champions of diversity and tolerance, doesn't like the idea of hearing things that might hurt their feelings. Every word you say has the potential to incite violence against them!

So, they've proposed this new Hate Crimes bill so that they don't have to listen to people they disagree with anymore.

Excerpt from a post on Atheism Analyzed: (H/T Apologetics 315)

> Committee members allowed that, yes, the law could result in the imprisonment of religious leaders. Conceivably then, a threat might be perceived in the preaching from a Bible (the weapon), perceived as inciting "radicals" to do bodily harm to non-believers or gays or whoever. Thus the ***perception allegedly received*** by the alleged victim holds total sway over the actual occurrence, which in actuality might have been completely benign.
>
> If the validity of the actual occurrence is not the basis for justice, then there is no justice under this proposed law; it is an invitation for persecution by allegation of personal offendedness, a legalization of internal outrage as the definition of a crime regardless of whether the outrage is legitimate.
>
> Protection from outrage is not possible; so persecution of the hated must substitute. Justice misapplied can become persecution, and it undoubtedly will if H.R. 1913 becomes law.

We elected Obama, and now the whole country will look like the university campuses, where leftist fascism is the rule, and conservatives need bodyguards and police escorts in

order to be able to speak.

BONUS:

Michele Bachmann talks with Neil Cavuto about cap and trade, and the recession: (H/T The Maritime Sentry)

Sensible science, sensible energy policy and sensible pollution reduction. Why won't the socialists just listen to her? Just do whatever she says to do and we'll get out of this mess that the Democrats put us into.

Marsha Blackburn busts Al Gore on cap and trade corruption

April 26, 2009 | by Wintery Knight | Link | Original Link

Representative Marsha Blackburn

Surprise! Al Gore stands to gain from the cap and trade legislation that he's backing! No wonder Democrats oppose domestic oil production.

Gateway Pundit has the story:

> Rep. Marsha Blackburn (R-Tenn.) challenged Al Gore's motives for supporting climate change legislation including his links to a firm that will make millions from cap and trade:
>
> ***Funny…*** During that same hearing Gore compared global warming skeptics to fraudster Bernie Madoff.

Video clip:

More from The Hill:

> Blackburn noted Gore's role as partner in Kleiner, Perkins, Caufield & Byers, a venture capital firm that invests in technology to address global warming.
>
> Blackburn asked Gore if he stood to benefit financially from cap-and-trade legislation, which would force companies to reduce carbon emissions. Companies would likely turn to the kinds of technologies Kleiner Perkins helps develop.
>
> "This bill is going to fundamentally change the way America works." Given the magnitude of those changes, I think it's really important that no suspicion or shadow fall on the foremost advocates of climate change legislation. So I wanted to give you the opportunity to kind of clear the air about your motives and maybe set the record straight."

Transcript:

> BLACKBURN: I've got an article from October 8th, the New York Times Magazine about a firm called Kleiner Perkins. A capital firm called Kleiner Perkins. Are you aware of that company?
>
> GORE: (LAUGHS) Well yes, I'm a partner at Kleiner Perkins.
>
> BLACKBURN: So you're a partner at Kleiner Perkins. OK. Now they have invested about a billion dollars in 40 companies that are going to benefit from cap and trade legislation. So is the legislation that we're discussing here today, is that something you are going to personally benefit from?
>
> GORE: I believe that the transition to a green economy is good for our economy and good for all of us. And I have invested in it. But every penny that I have made, I have put right into a non-profit, the Alliance for Climate Protection, to spread awareness about why we have to take on this challenge. And Congresswoman, if you're, if you believe the reason I have been working on this issue for 30 years is because of greed, you don't know me.
>
> BLACKBURN: I'm not making accusations. I'm asking questions that have been asked of me. And individuals, constituents that were seeking a point of clarity–
>
> GORE: I understand exactly what you're doing, Congresswoman. Everybody here does.
>
> BLACKBURN: Well, are, you know, are you willing to divest yourself of any profit? Does all of it go to a not-for-profit that is an educational not-for-profit.
>
> GORE: Every penny that I have made has gone to it. Every penny from the movie, from the book, from any investments in renewable energy. I've been willing to put my money where my mouth is. Do you think there's something wrong with being active in business in this country?

The Heritage Foundation has more on Al Gore's testimony here.

I blogged about the increases we can expect in energy prices here.

Read my lips. Cap and trade is a tax on energy consumption: (H/T Gateway Pundit, The Heritage Foundation)

Remember Al Gore's house?

> So much that last August Tipper and **Al Gore** used twice as much electricity in their two-building property as an average U.S. household uses in an entire year, the Tennessee Center for Policy Research, a think tank, reported Tuesday.
>
> Public power and gas bills turned up by the group show that the man behind the Oscar-winning global warming wakeup documentary, "An Inconvenient Truth," uses much more overall carbon-based fuel than the average American, spending thousands of dollars a month on electricity and gas.

An inconvenient truth.

Princeton physics professor testifies to Senate about global warming

April 26, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from two or three . net!

This transcript was sent to me by my friend Richard. It is an 11 page PDF containing the full testimony of William Happer, the Cyrus Fogg Bracket Professor of Physics at Princeton University. This testimony was given on February 25, 2009 to the U.S. Senate Environment and Public Works Committee, chaired by Democrat Barbara Boxer.

> I do work in the related field of atomic, molecular and optical physics. I have spent my professional life studying the interactions of visible and infrared radiation with gases – one of the main physical phenomena behind the greenhouse effect. I have published over 200 papers in peer reviewed scientific journals. I am a member of a number of professional organizations, including the American Physical Society and the National Academy of Sciences. I have done extensive consulting work for the US Government and Industry. I also served as the Director of Energy Research at the Department of Energy (DOE) from 1990 to 1993, where I supervised all of DOE's work on climate change.

Here, he explains the limited role that CO2 plays in global warming, and also why an increase in CO2 will not have a continued effect on the warming, because the limit of what CO2 can do has already been reached.

> Without greenhouse warming, the earth would be much too cold to sustain its current abundance of life. However, at least 90% of greenhouse warming is due to water vapor and clouds. Carbon dioxide is a bit player. There is little argument in the scientific community that a direct effect of doubling the CO2 concentration will be a small increase of the earth's temperature — on the order of one degree. Additional increments of CO2 will cause relatively less direct warming because we already have so much CO2 in the atmosphere that it has blocked most of the infrared radiation that it can.

So CO2 really won't lead to increased warming directly, unless it somehow causes the warming from water vapor and clouds to increase. But, the evidence clearly shows that this is not the case. In fact, increasing the CO2 level decreases the warming effects of water vapor and clouds.

> Since most of the greenhouse effect for the earth is due to water vapor and clouds, added CO2 must substantially increase water's contribution to lead to the frightening scenarios that are bandied about. The buzz word here is that there is "positive feedback." With each passing year, experimental observations further undermine the claim of a large positive feedback from water. In fact,

> observations suggest that the feedback is close to zero and may even be negative. That is, water vapor and clouds may actually diminish the already small global warming expected from CO2, not amplify it.

But doesn't the corelation between rising CO2 levels and increased warming imply causation?

> No, the current warming period began about 1800 at the end of the little ice age, long before there was an appreciable increase of CO2. There have been similar and even larger warmings several times in the 10,000 years since the end of the last ice age. These earlier warmings clearly had nothing to do with the combustion of fossil fuels. The current warming also seems to be due mostly to natural causes, not to increasing levels of carbon dioxide. Over the past ten years there has been no global warming, and in fact a slight cooling. This is not at all what was predicted by the IPCC models.

But what about the hockey stick graph, that, like the images of Haeckel's embryos, has been used to terrify a generation of children taught in the government-run schools about the dangers of capitalism and economic growth? Surely scientists wouldn't lie to manufacture a crisis that would lead to bigger government, bigger tax revenues, and more research grants?

> When I was a schoolboy, my textbooks on earth science showed a prominent "medieval warm period" at the time the Vikings settled Greenland, followed by a vicious "little ice age" that drove them out. So I was very surprised when I first saw the celebrated "hockey stick curve," in the Third Assessment Report of the IPCC. I could hardly believe my eyes. Both the little ice age and the Medieval Warm Period were gone, and the newly revised temperature of the world since the year 1000 had suddenly become absolutely flat until the last hundred years when it shot up like the blade on a hockey stick. This was far from an obscure detail, and the hockey stick was trumpeted around the world as evidence that the end was near. We now know that the hockey stick has nothing to do with reality but was the result of incorrect handling of proxy temperature records and incorrect statistical analysis. There really was a little ice age and there really was a medieval warm period that was as warm or warmer than today…. The IPCC has made no serious attempt to model the natural variations of the earth's temperature in the past. Whatever caused these large past variations, it was not due to people burning coal and oil.

But what about Al Gore, a brilliant 2-time university drop-out with a C average and an unparalleled talent for smoking pot? Surely he understands atmospheric science better than lousy professors of physics from Princeton?

> By looking at ice cores from the Greenland and Antarctic ice sheets, one can estimate past temperatures and atmospheric concentrations of CO2. Al Gore

> likes to display graphs of temperature and CO2 concentrations over the past million years or so, showing that when CO2 rises, the temperature also rises. Doesn't this prove that the temperature is driven by CO2? Absolutely not! If you look carefully at these records, you find that first the temperature goes up, and then the CO2 concentration of the atmosphere goes up. There is a delay between a temperature increase and a CO2 increase of about 800 years. This casts serious doubt on CO2 as a climate driver because of the fundamental concept of causality. A cause must precede its effect….In the case of the ice cores, the cause of increased CO2 is almost certainly the warming of the oceans. The oceans release dissolved CO2 when they warm up, just like a glass of beer rapidly goes flat in a warm room.

But my teacher says that CO2 is a poison that will destroy us all! We need big government (and increased teacher pay) to save us all from fiery doom!

> We are all aware that "the green revolution" has increased crop yields around the world…. no small part of the yield improvement has come from increased atmospheric levels of CO2…. If we really were to decrease our current level of CO2 of around 400 ppm to the 270 ppm that prevailed a few hundred years ago, we would lose some of the benefits of the green revolution. Crop yields will continue to increase as CO2 levels go up, since we are far from the optimum levels for plant growth. Commercial greenhouse operators are advised to add enough CO2 to maintain about 1000 ppm around their plants. Indeed, economic studies like those of Dr. Robert Mendelsohn at Yale University project that moderate warming is an overall benefit to mankind because of higher agricultural yields and many other reasons.

But doesn't consensus determine truth?

> We are told that only a few flat-earthers still have any doubt about the calamitous effects of continued CO2 emissions…. First, what is correct in science is not determined by consensus but by experiment and observations…. Secondly, I do not think there is a consensus about an impending climate crisis.

But if that is true, then why is no one speaking out against this politicized science?

> Many distinguished scientific journals now have editors who further the agenda of climate-change alarmism. Research papers with scientific findings contrary to the dogma of climate calamity are rejected by reviewers, many of whom fear that their research funding will be cut if any doubt is cast on the coming climate catastrophe…. Certainly, it is a bit unnerving to read statements of Dr. James Hansen in the Congressional Record that climate skeptics are guilty of "high crimes against humanity and nature."
>
> Even elementary school teachers and writers of children's books are enlisted to terrify our children and to promote the idea of impending climate doom….

> children should not be force-fed propaganda, masquerading as science. Many of you may know that in 2007 a British Court ruled that if Al Gore's book, "An Inconvenient Truth," was used in public schools, the children had to be told of eleven particularly troubling inaccuracies.

Read the whole thing! And don't forget to read more about dissent from global warming, melting polar ice caps, Obama's planned tax hikes on oil and gas, deceptive alarmism to procure research funding, the cost of green jobs programs and the use of made-up crises in order to impose socialism.

Hate crimes bill H.R. 1913 destroys civil liberties and Constitutional protections

April 27, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from Free Canuckistan! Thanks for the linky Mr. WebElf!

UPDATE: Welcome visitors from 4Simpsons!!! Thanks for the link, Neil. 4Simpsons is a daily read for me, and it should be for you, too!

Hans Bader of the Open Market blog of the Competitive Enterprise Institute has done a massive analysis of the Democrat's hate crimes bill.

First, the news:

> On April 23, the House Judiciary Committee voted 15-to-12 to approve a dramatic expansion of the federal hate-crimes law. The bill, H.R. 1913, would add gender, sexual orientation, and transgender characteristics to a law originally designed to protect racial minorities. It also greatly expands the law's reach over local offenses typically handled by state prosecutors, by eliminating many jurisdictional limits.

The hate crimes bill violates federalism:

> The bill would allow people who have been found innocent of a hate crime in state court to be reprosecuted in federal court.... Supporters of the hate crimes bill also see it as a way to prosecute people even in cases where the evidence is so weak that state prosecutors have decided not to prosecute. Attorney General Eric Holder has pushed for the hate crimes bill as a way to prosecute people whom state prosecutors refuse to prosecute because of a lack of evidence. To justify broadening federal hate-crimes law, he cited three examples where state prosecutors refused to prosecute, citing a lack of evidence. In each, a federal jury acquitted the accused, finding them not guilty.

But that's not all, it also violates the principle of *double jeopardy*:

> Civil libertarians like Wendy Kaminer have criticized the federal hate-crimes bill for taking advantage of a loophole in constitutional double-jeopardy protections. Law professor Gail Heriot, a member of the U.S. Civil Rights Commission, has also criticized the bill for circumventing protections against double-jeopardy.
>
> I wrote earlier about how the federal hate-crimes bill backed by Obama and Congressional leaders would violate constitutional federalism safeguards, such as the Supreme Court's decision in United States v. Morrison (2000), and how it would allow people found innocent in state court to be retried in federal court.

One more point that caught my attention:

> The ACLU long opposed the loophole in Constitutional double-jeopardy

> protections that the bill is designed to exploit. But it switched its longstanding position in order to back the federal hate crimes bill, apparently believing that civil-liberties must be sacrificed in order to fight hate.

Yes, when push comes to shove, leftists oppose all liberties, and end up supporting fascism.

UPDATE: Ed Morrissey has more on the hate crimes bill here.

UPDATE: Don't forget about the bill that criminalizes blogging here.

I highly recommend this article!

Carbon caps already killing California jobs

April 27, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome, visitors from Pursuing Holiness! Thanks for linking to me, Laura!

The Foundry, the blog of the Heritage Foundation, has an amazing story on the cost of regulations against energy producers. This is a preview of what we can expect from Obama's crazy cap and trade plan!

Here's the first story about a cement manufacturer in California:

And a second video, featuring a debate about this:

And here's the bottom line:

> Heritage's research on U.S. manufacturing vulnerability shows roughly 4 million jobs nationwide will disappear or relocate to other countries. This massive climate bill is a minefield for American families, who will pay extremely higher prices for energy and goods, and for American businesses who will suffer under the heavy hand of government.

If you haven't already bookmarked The Foundry, I would highly recommend it.

Barack Obama after 100 days: Worst President Ever!

April 27, 2009 | by Wintery Knight | Link | Original Link

Hans Bader has the details at the Open Market blog, the blog of the Competitive Enterprise Institute.

What about Obama's campaign promise for a net spending cut?

> The Congressional Budget Office says that Obama's proposed budgets will explode the national debt through massive spending increases, increasing the already large deficits left behind by the Bush Administration from $4.4 trillion to $9.3 trillion. His record-setting budgets flagrantly violate his promise to propose a "net spending cut."

His promise not to raise taxes on those making less than 250K?

> Obama broke his campaign promise not to raise taxes on anyone making less than $250,000 a year by signing a regressive SCHIP excise tax increase, and by proposing a cap-and-trade energy tax that could charge up to $2 trillion, a massive cost that Obama himself has said will be passed "on to consumers," as well as homeowners and motorists.

His promise to improve transparency?

> Over and over again, Obama has broken his campaign promise to give the public five days of notice before signing bills into law, including his very first law, the trial-lawyer backed Lilly Ledbetter Fair Pay Act.
>
> …Obama broke seven campaign promises dealing with transparency and clean government in signing the $800 billion stimulus package, much of whose contents were secret until shortly before Congress voted on it, and whose 1400 pages went unread by most Congressmen who voted on it.

And there's more in the post! He doesn't even mention the federal cigarette tax hike!

I posted some nice charts showing the messes we are in as far as spending, debt and jobs.

RELATED: The Heritage Foundation has more details on the spending catastrophes of the first 100 days. And he hasn't even gotten started on card check, health care and cap and trade, yet!

UPDATE: A friend e-mails me regarding this essay by John Hawkins, (of Right Wing News), documenting the 20 most notable features of Obama's first 100 days.

My favorite:

> 7) In the best example yet of Obama's over-reliance on a teleprompter and the mainstream media's fervent devotion to him, during an appearance with the Irish prime minister, there was a mix-up — and "**President Obama thanked**

> **President Obama for inviting everyone over**." The same mainstream media which relentlessly mocked George Bush for his slip-ups wouldn't even release the footage.

Read the whole thing! Early humor before this week's Friday funny.

Worst. President. Ever.

Jim Demint scores against Democrats on health care

April 28, 2009 | by Wintery Knight | Link | Original Link

Senator Jim Demint

Great news! Senator Jim Demint tried to pass a bill guaranteeing more liberty in health care, and he succeeded. The Heritage Foundation's blog The Foundry has the story.

His bill read, in part:

> The Senator from South Carolina, Mr. DeMint, moves that the managers on the part of the Senate … be instructed to insist that the conference report on the concurrent resolution … **shall not decrease the number of Americans enrolled in private health insurance, while increasing the number of Americans enrolled in government-managed, rationed health care.**

Remember, Obama's goal is to control our lives, by controlling the free market:

> This language is important because many aspects of Obama's health care budget seek to expand the numbers of Americans enrolled in government-managed health care, which necessarily then "crowds out" private health care forcing more Americans into government managed care.
>
> Those voting against DeMint's motion (and therefore for the unlimited expansion of government rationed care) include:
>
> Bingaman (D-NM)
> Brown (D-OH)
> Burris (D-IL)
> Cardin (D-MD)
> Durbin (D-IL)
> Harkin (D-IA)
> Kerry (D-MA)

> Levin (D-MI)
> Merkley (D-OR)
> Mikulski (D-MD)
> Sanders (I-VT)
> Stabenow (D-MI)
> Udall (D-NM)
> Warner (D-VA)

I also spotted this story over at the Pacific Research Institute. This should be a wake up call to all those who believe that nationalizing health care would give them more freedom.

Excerpt:

> In 2005, the Supreme Court of Canada found that elements of the province of Quebec's monopoly over health care violated citizens' human rights, because of the government's failure to deliver care. Since then, other Canadians have launched similar lawsuits in other provinces.
>
> **In British Columbia, the monopolistic provincial health plan is suing Dr. Brian Day, an orthopedic surgeon, for allegedly receiving direct payment from patients for performing surgeries in his clinic. Mindful of the 2005 Supreme Court decision, the province has adopted a novel legal tactic: claiming that health care is *not* a right! If that is the case, then the government's monopoly obviously cannot violate citizens' rights!**

We need to learn from countries like Canada, who have already tried socialized medicine. Or we could look at Sweden. Either way, we shouldn't be adopting failed health delivery systems.

Missouri legislators consider Fair Tax policy

April 28, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from The Maritime Sentry!

I discovered this story at the Tax Foundation blog.

Excerpt:

> Missouri lawmakers are considering a drastic change to their tax system. A bill recently passed by the state's House of Representatives would allow residents to vote on a Constitutional amendment that would eliminate corporate and individual income taxes in the state and replace them with a broad based sales tax. The plan is essentially a state version of the national FairTax proposal popular with some grassroots groups that would replace the federal income tax with a national sales tax. If the Senate passes the bill Missouri residents would be voting on the amendment in November of 2010.
>
> Missouri currently has a sales tax, a corporate income tax, and a personal income tax. The sales tax rate is 4.225%, and the top corporate and personal tax rates are 6.25% and 6%, respectively. The plan put forth would replace all those taxes with a single sales tax levied at a rate of 5.11%. Accompanying the sales tax rate hike would be a substantially broadened sales tax base that would include all purchases. Currently most services are tax exempt and certain goods, most notably groceries, are taxed at a reduced rate of 1.225%. These exemptions would not exist under the new tax structure.
>
> The overhaul of the tax system is meant to be revenue neutral. In other words, the revenue from the sales tax increase and broadening of the tax base is meant to exactly offset the elimination of income taxes. In 2008 Missouri's sales tax brought in $3.2 billion while the state's corporate and individual income taxes brought in $5.5 billion. In order to achieve revenue neutrality, at a rate of 5.11% the base would have to increase by 124%, or a little more than double. This may sound like a huge increase, but it is very possible.

This would be a useful test case to see if a national fair tax is feasible. I am all for consumption taxes. Leave a comment if you prefer the fair tax to the flat tax. I'm leaning towards the flat tax, and I love the way that it's been implemented in those Baltic states, like Estonia. Estonia is such a courageous country!

Obama’s spending spree in one simple chart

Is waterboarding really torture? Does it enhance our national security?

April 29, 2009 | by Wintery Knight | Link | Original Link

The Wall Street Journal has an editorial by Representative Pete Hoekstra, regarding Barack Obama's decision to inform our enemies about the details of the interrogation techniques we would be using against them to protect America:

> Director of National Intelligence Dennis Blair got it right last week when he noted how easy it is to condemn the enhanced interrogation program "on a bright sunny day in April 2009." Reactions to this former CIA program, which was used against senior al Qaeda suspects in 2002 and 2003, are demonstrating how little President Barack Obama and some Democratic members of Congress understand the dire threats to our nation.
>
> George Tenet, who served as CIA director under Presidents George W. Bush and Bill Clinton, believes the enhanced interrogations program saved lives. He told CBS's "60 Minutes" in April 2007: "I know this program alone is worth more than the FBI, the Central Intelligence Agency and the National Security Agency put together have been able to tell us."
>
> Last week, Mr. Blair made a similar statement in an internal memo to his staff when he wrote that "[h]igh value information came from interrogations in which those methods were used and provided a deeper understanding of the al Qa'ida organization that was attacking this country."
>
> **Yet last week Mr. Obama overruled the advice of his CIA director, Leon Panetta, and four prior CIA directors by releasing the details of the enhanced interrogation program. Former CIA director Michael Hayden has stated clearly that declassifying the memos will make it more difficult for the CIA to defend the nation.**
>
> It was not necessary to release details of the enhanced interrogation techniques, because members of Congress from both parties have been fully aware of them since the program began in 2002. We believed it was something that had to be done in the aftermath of the 9/11 terrorist attacks to keep our nation safe. **After many long and contentious debates, Congress repeatedly approved and funded this program on a bipartisan basis in both Republican and Democratic Congresses.**

I previously wrote about how Obama had opened the door to prosecutions of those who, from the bottom to the top, defended the United States from terrorist threats. Even if no one is convicted, this witch-hunt undermines our vigilance, and will create incentives that will make our counter-terrorism personnel hesitate in the performance of their duty to defend us.

But now I want to ask a different question. Is waterboarding really torture? Take a look at this MSNBC video linked at Hot Air, featuring a debate between an ignorant, unqualified, left-wing journalist and Liz Cheney.

And here is some of the transcript from Hotline:

> O'DONNELL: Well Liz, we'll get to that argument in a minute, about do the means justify the ends. Whether torture justifies…
>
> L. CHENEY: Well, it wasn't torture, Norah, so that's not the right way to lay out the argument.
>
> O'DONNELL: OK.
>
> **L. CHENEY: Everything done in this program, as has been laid out and described before, are tactics that our own people go through in SEER training and that our own people have gone through for many years. So it's really – does a fundamental disservice to those professionals who are conducting this very effective program and to those people who approved the program in order to keep this nation safe and prevent attacks through the program to call it torture.**
>
> O'DONNELL: Liz, the CIA, on its own after 2005, stopped waterboarding on its own. The U.S. prosecuted people for waterboarding after World War II.
> So to suggest there's a consensus out there that waterboarding is not torture is not in fact accurate.
>
> **L. CHENEY: No, I think it is accurate. There were three people who were waterboarded. And two of those people are people who gave us incredibly important and useful information, information that saved American lives after they were waterboarded. Both Khalid Sheikh Mohammed and Abu Zubaydah.**
>
> And I would just refer your viewers to the really important op-ed piece that Mike Hayden and Attorney General Mukasey wrote laying out why this program worked, why it was effective and what damage has now been done to our national security by releasing the tactics of this program

The impression I get is that the left-wingers in the Democrat party and the mainstream media is more concerned about the rights of terrorists than protecting American lives. They have a right to hold and express those opinions – it's a free country. But should we really reward them by voting for them or watching their silly biased television broadcasts?

RELATED: Hot Air notes that a new Rasmussen poll finds that 58% think Obama endangered national security.

Is Al Gore getting rich from faith-based global warming alarmism?

April 29, 2009 | by Wintery Knight | Link | Original Link

Representative Marsha Blackburn

You may remember I blogged before about how Marsha Blackburn asked Al Gore about whether he was profiting from his global warming alarmism? That was a very interesting video clip. And Green Hell Blog has posted many interesting things about Gore's answer to Blackburn in that video clip.

Excerpt: (H/T Gateway Pundit)

> When Tennessee Rep. Marsha Blackburn confronted Al Gore with his profiteering from global warming legislation at today's House Energy and Environment Subcommittee hearing on the Waxman-Markey climate bill, Al Gore said that every penny he ever made from his business activities went into non-profit efforts.
>
> That is a flat-out lie, according to this March 6, 2008 Bloomberg report that indicates that Al Gore invested $35 million of his own money in various for-profit endeavors.
>
> Former U.S. Vice President Al Gore left the White House seven years ago with less than $2 million in assets, including a Virginia home and the family farm in Tennessee. Now he's making enough to put $35 million in hedge funds and other private partnerships.
>
> Gore invested the money with Capricorn Investment Group LLC, a Palo Alto, California, firm that selects the private funds for clients and invests in makers of environmentally friendly products, according to a Feb. 1 securities filing. Capricorn was founded by billionaire Jeffrey Skoll, former president of EBay Inc. and an executive producer of Gore's Oscar-winning documentary film on global

> warming.Kudos to Rep. Blackburn for asking one of the "10 Questions for Al Gore" and exposing Gore as the fundamentally dishonest operator that he is.

Pro Patria analyzed of Al Gore's rising net worth here.

Excerpt: (H/T Gateway Pundit)

> **So what has Al Gore gained from his Big Green escapades?**
>
> According to public disclosure information, **Gore was worth somewhere between $1 million and $2 million in 2000. Not quite eight years later, Gore is estimated to be worth somewhere in the neighborhood of $100 million.** While I ordinarily would applaud such financial gains from such a short period of time, I can't help but to question just how it happened. When you look out at what Al Gore has done, it's evident that he figured out on a way to capitalize on the creation of Big Green while becoming the official doomsday prophet that has helped to build Big Green into the monetary powerhouse that it has become.
>
> In any other industry this would be considered a severe conflict of interest. In essence, Al Gore has helped to create a fictitious catastrophe, then told everybody what the solutions have to be, and then put himself in a position to capitalize on the hype. It's not only seriously dishonest, but many people and industries are going to suffer in the wake of this hype while Gore and Big Green bring in millions (and in some cases, billions) of dollars in green money.

Follow the money! Somehow I doubt that he is giving away the vast majority of it, like Dick Cheney did.

Are same-sex marriage advocates tolerant of traditional-marriage advocates?

April 29, 2009 | by Wintery Knight | Link | Original Link

Hot Air reports that the the organizers of the recent Miss America pageant tried to get Miss California to renounce her beliefs about marriage and apologize to same-sex marriage activists like Perez Hilton. The organizers didn't want her to be herself. They wanted to change her beliefs to be like theirs. The organizers didn't want a rainbow of diverse opinions, they wanted uniform, lock-step, monochrome compliance!

The Western Experience linked to a video debate from CNN between Jewish scholar Dennis Prager and Perez Hilton.

Sometimes, same-sex activists like Perez Hilton move beyond disagreement to name-calling, and to harassment, and to threats of violence, and to vandalism, and to actual violence, as even the New York Times acknowledges. It seems to me that this *coercion* intrudes on the freedom of other people to express disagreement with same-sex marriage activists over same-sex marriage.

I wanted to draw your attention to a 10-point analysis of the whole Perez Hilton episode by Christian philosopher Douglas Geivett, so that we could really see who is being intolerant of who.

Here are my favorites:

> 3. Carrie Prejean was not "inclusive" enough in her answer, say her critics. But if she had answered that she approved of gay marriage, she would have *excluded* many Americans who also disapprove, including all those from her own state who passed Proposition 8 with their vote in November.
>
> 4. Gay rights advocates are bound to take offense even if Carrie Prejean meant no offense. Gay rights advocates are duty-bound by their cause to take offense. It is a strategic requirement in their effort to persuade others of gay rights. "Being offended" is an acquired taste. It comes natural when you've trained for it.
>
> 5. A beauty pageant is a popularity contest. Because of her answer, Carrie Prejean is unpopular with certain people. Which people? Gay rights activists. Who are gay rights activists? This is an important question. Some gays are not gay rights activists. Many gay rights activists are not gay. Gay rights activists are engaged in a strategy to marginalize anyone who believes that there is no "right" to gay marriage. You may believe that marriage is between one man and one woman. But do you have a right to believe this? Do you have a right to say so? Doesn't matter. Gay rights activists will do anything in their power to ensure that if you believe it you will be made a pariah.
>
> 7. Former Miss USA, now director of the Miss California USA pageant, Shanna Moekler has also made it publicly known that she's disappointed in Carrie

> Prejean. As state pageant director who sought sponsors for Prejean's participation in the pageant, Moekler was embarrassed and indignant, and said that Prejean had betrayed her sponsors. Apparently, Prejean should have betrayed herself and her own values, instead. This is very revealing about Moekler's own moral compass. We should like to know who the sponsors are and which ones are so offended. In view of serious economic reversals in this country, it's become imperative that Americans know more about the moral compass of corporate leaders. So tell us, Ms. Moekler, which sponsors are embittered by Prejean's integrity?

Isn't the activist left worried about inciting hatred, violence, depression and increased suicide rates against those who are different from them? Shouldn't we celebrate diversity (of opinion) and not coerce those who disagree?

I recently wrote about legal sanctions being faced by those who stand up to the agenda of same-sex marriage activists.

How educrats sacrifice academic excellence for self-esteem

April 29, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome Post-Darwinist readers! Thanks for the link Denyse! For more on the failures of educrats to focus on teaching young people instead of building up their self-esteem, please see Denyse's post on the subject.

UPDATE: Welcome visitors from Blazing Cat Fur! One of my favorite Canadian blogs! Please take a look around, as I cover a number of issues of importance to Canadians, including health care, education, free trade, tax policy and of course FREE SPEECH! The Wintery Knight is a HUGE fan of PM Stephen Harper, MP Maurice Vellacott, MP Jason Kenney, Ezra Levant, Mark Steyn and MPP Lisa MacLeod.

My friend Richard sent me this:

Apparently, it has come to the point where students may not be given a zero grade for handing in assignments late, or a zero for not showing up the remake test/assignment. Below is a link to a petition a HS teacher in Ottawa has set up to reassess this policy. Please sign it. The last thing we need is to raise a generation of kids that have no concept of deadlines and consequences. That would be the end of our workforce.

The petition is here.

Excerpt from the petition content:

> According to the Ontario Ministry of Education policies, if a student misses a test (whether they skip class or are sick) or if they cheat then the evaluation is not valid and they must not be given a zero. The student must have an opportunity to be re-evaluated on the material. Assignments can have a due date but if the student does not hand it in on the due date a zero cannot be assigned. The student must be allowed to hand in the assignment late without being penalized.
>
> In the past teachers would go out of their way to make sure they evaluated students, but when given an opportunity to be re-evaluated, the student had to turn up. Now you can offer the student a chance to be re-evaluated, and if they don't turn up they still cannot get a zero. Assignments can be handed in at any time during the year. If the whole class is doing the same assignment, the teacher can receive the finished assignments any time between the due date and the end of the year. If the teacher marks the assignments as he/she gets them and returns them as they are marked, then anyone who has not handed in an assignment can, if they are so inclined, copy an assignment that has been marked and turn it in as their own work. The only way around this is not returning the assignments until all of the students have submitted their work, but this

> delays essential feedback to the students. Teachers have to be able to indicate to students that a zero may given on missed evaluations and give penalty marks for work not done on time.

We cannot succeed in a global economy when those in charge of educating our children fail to teach them the kinds of skills they will need to take on the demanding jobs of the future. This is just another area of life where things have gotten so politically correct that we have forgotten the purpose of school: to gain knowledge! I urge you to consider signing the petition.

UPDATE: I found this story featuring Caroline Orchard in the Ottawa Citizen. And a panel discussion transcript. MP3 audio of an interview with Caroline Orchard from 580 CFRA, the news talk radio station in Ottawa.

A brief introduction to the blind faith religion of Marxism

April 29, 2009 | by Wintery Knight | Link | Original Link

The American Thinker has this post up explaining the blind faith of Marxism. (H/T Douglas Groothuis)

Marx thought that value was proportional to the labor spent in creating a product:

> Marx claimed that all products contain value that is directly proportional to the amount of labor embodied within them. He was wrong. All the rest of Marxism is based entirely on this mistaken and falsifiable premise.

That's clearly wrong. The price of products varies depending on supply and demand!

Marx thought that the free market would create monopolies:

> Marxists claim that the operations of markets have a natural tendency to spawn monopolies. They call this "monopoly capitalism." In reality, markets have a natural tendency to break up and undermine monopolies. Almost all monopolies under capitalism are those set up by governments stifling and interfering in the operations of markets.

That's clearly wrong. Government regulation is needed to insulate monopolies from competition. And in capitalism, capitalists agree that government should take an active role in destroying monopolies and fostering competition, in order to give consumers *choices.* When consumers can choose, producers have to add value and reduce prices. Socialism, on the other hand, allows consumers one choice: the state-run firm.

Marx had no idea what incentives and laws were needed in order to foster conditions in which entrepreneurs would want to create wealth:

> Marxists and socialists in general care a lot about the distribution of material wealth. But they have no idea how to bring about the creation of the material wealth that they wish to redistribute. They just assume it all gets produced all by itself. That is why people in communist regimes starve.

Wrong again!

Marx believed that capitalism was bad for workers.

> Marxists claim that workers are oppressed in capitalist societies. Workers in communist societies always try to sneak out into capitalist societies. No one in South Korea is trying to sneak into North Korea. The Berlin Wall was not built to keep West Germans from sneaking into East Germany's collective farms. Cubans in Florida do not steal boats to seek asylum in Cuban collective farms.

Why is it bad to encourage people to take risks, start their own companies and hire

workers? Isn't it better for for workers to have a *choice* of employer, so that they can leave if their working conditions or remuneration are unacceptable? How do people leave their employer in Marxism? Oh yeah – by firing squad or by jumping the wall.

But what about companies? Aren't they all owned by greedy, colluding capitalists?

> Marxists claim that capitalists do not work and that workers do not own capital. That is why they comprise "social classes." But nearly all capitalists work, often in work days with very long hours. Meanwhile, a huge portion of capital is held by workers themselves through their pension funds and other institutional investment intermediaries.
>
> …Marxists claim that businesses are owned by a small closed clique of capitalists. Actually, most businesses are "public," meaning they are owned by shareholders and anyone at all can be a shareholder in them.

But isn't capitalism opposed to democracy?

> Marxists claim that capitalism cannot be democratic. But every single democratic society on earth is predominantly capitalist. Not a single communist regime was ever democratic. Communists take power via military coups and military conquest, not via elections.

But isn't violence used against people in order to preserve capitalism?

> Marxists claim that capitalists use violence to protect their perquisites and privileges. In truth, Marxists in power use violence to protect their perquisites and privileges. They use violence to suppress opposition wherever they manage to seize power, including violence against opposition groups of workers. It is conservatively estimated that 100 million people were killed by Marxism and by Marxists in the twentieth century.

But aren't workers less well off in capitalist economies?

> Marxists think that only *things* matter in economics, meaning tangible products, and so services do not. They believe that big products are more important than small products, big industries being more important than small industries. They also believe that consumer goods are superfluous and should not be produced much. All those ideas are why the quality of life and the standard of living are so miserable under communist regimes. In wealthy countries, small- and medium-size enterprises are the main engines for producing wealth.

But aren't people poorer and less free in capitalist economies?

> Marxists claim that under Marxism everyone receives according to his needs and contributes according to his capabilities. In reality, under Marxism everyone receives according to whatever the entrenched party apparatchiks decide their needs are, usually sub-sustenance levels of consumption, and the same people

> decide what are your abilities, generally assumed to be your ability to work endlessly at whatever you are told to do without getting paid much. To put this differently, in the absence of positive incentives, no one is capable of doing anything and everyone's needs are infinite.

But isn't a centrally-planned economy with fixed prices better than a free market capitalist economy?

> Marxists think that "experts" can tell what needs to be produced. They cannot. That is why Marxist experts produce starvation. In some cases Marxist starvation has produced cannibalism. There is not a single Marxist scholar or expert on earth who could produce a pencil by himself.

But letting people earn money based on what they do leads to lower productivity, right?

> Marxists believe that economic incentives do not matter. That is why they think there is no need to pay people more for working hard or exerting effort. It is enough to appeal to their "class interests." That is why people starve under communism.

But in a Marxist economy, everyone is equal, right?

> Marxists pretend to be in favor of the working class collectively owning all property. In reality Marxists always steal the property of members of the working class and turn it over to well-paid party apparatchiks.

But in capitalist economies, when two parties freely agree to exchange items of value for money, one of them is oppressing the other, right?

> Marxists believe that in every voluntary transaction, one side wins and the other loses, and so it is impossible for two sides to profit from it. That is why they think you should be told what to buy and how much you should pay for it.

But capitalists go all around the world imposing their free market ideology through military force, right?

> Marxists claim that capitalist countries engage in imperialism. But since World War II the largest empires of imperialist conquest were those headed by Marxist regimes.
>
> Marxists believe that there are no real conflicts of interest between the workers living in different countries and speaking different languages or coming from different cultures. That is without a doubt the very stupidest idea of all coming from Marxism. In any case, that is why Marxism is generally spread only via military conquest.

This article is one to e-mail to all your friends who voted for the Marxist Obama. Obama's Marxism was well known to everyone who took the time to read his books, and to read about his past actions and policies. Now we are going to be governed by someone who

knows less about economics than Al Gore knows about climate science.

Maybe one day Obama will release his grades, so we can finally find out which of them is smarter.

Arlen Specter's challenger Pat Toomey panned by RINOs in the NRSC

April 30, 2009 | by Wintery Knight | Link | Original Link

I was just browsing over at the Maritime Sentry, and there was this interesting post about Arlen Specter's primary challenger, Pat Toomey. Specter has been a de facto Democrat for a long time now, but for some reason the NRSC has continuously endorsed him in the primary. So what happens now? They can't endorse Specter, he's a Democrat. But they won't endorse Pat Toomey.

Here is what happened with the Maritime Sentry phoned the NRSC about this:

> I was shocked when I read at Hot Air today that the NRSC may not support Pat Toomey and may instead back another RINO candidate. I immediately called them and in very polite terms said I was disappointed and that I hoped they would change their mind and support Toomey; otherwise I would not support them in any way.
>
> The guy who answered was extremely rude and hung up on me. I called back and got through to a woman this time. I asked to speak to a supervisor and she refused. She asked what my problem was. I went through the whole ordeal with her and again repeated my request to speak to a supervisor. She told me no, that she would handle it, and that my concerns were unjustified because the NRSC was supporting Toomey.
>
> I read the quotes from Senators Hatch and Cornyn in the Hot Air article that stated otherwise. She then put me on hold, came back on, and said they have not decided who they will support, but that they needed to go with someone who could actually win.
>
> I said something to the effect of 'fine, if you go with a RINO I will not support the NRSC in any way…..'. She addressed me like a parent does a little child and promptly let me go. That is the legist of the call. I was raised to say sir and mam so I assure you I was polite.

Here's a little more about it from post from NRO's The Corner: (H/T Hot Air)

> "I don't think there is anybody in the world who believes he can get elected senator there," said Sen. Orrin Hatch, the vice chairman of the National Republican Senatorial Committee.
>
> Asked if the NRSC would back Toomey, Hatch said, "I don't think so" and that the party should look for "someone who can win there."…
>
> Hatch later equivocated and said, "I'm not saying he can't win – nobody gave me a chance when I ran."…
>
> On Wednesday, Cornyn said he didn't know if Toomey would be the "only

> candidate” or the “strongest candidate” in the GOP primary.
>
> “It’s too early to endorse,” Cornyn said.

Pat Toomey’s site is here. We can’t win the country back unless we stop being Democrat-lite and start articulating conservative principles and policies. And I do include socially conservative principles and policies as well as fiscally conservative ones.

UPDATE: Here’s an MP3 podcast featuring Pat Toomey on the Hugh Hewitt show.

Round-up of stories about intelligent design, from the Discovery Institute

April 30, 2009 | by Wintery Knight | Link | Original Link

The Discovery Institute is the headquarters for ID research and advocacy in the United States. They send out a newsletter by e-mail and I though this week's hit on all cylinders. Below are some of their stories from the newsletter. Thanks to commenter ECM for an earlier tip on the Junk DNA story.

When "Junk DNA" Isn't Junk: Farewell to a Darwinist Standard Response

Richard Sternberg, research scientist at the Biologic Institute supported by the Center for Science and Culture, is now blogging at Evolution News & Views, weighing in on the latest research showing that so-called "Junk DNA," which Darwinists have discounted as "rubbish," are actually "anything but that."

Sternberg writes:

> In the Darwinist repertoire, a standard response to evidence of design in the genome is to point to the existence of "junk DNA." What is it doing there, if purposeful design really is detectable in the history of life's development? Of course this assumes that the "junk" really is junk. That assumption has been cast increasingly into doubt. New research just out in the journal Nature Genetics finds evidence that genetic elements previously thought of as rubbish are anything but that. The research describes tiny strands of RNA, previously thought to be junk, that now turn out to play a role in gene expression. Another finding by Dr. Geoff Faulkner shows that "retrotransposons," a further variety of "junk" as the dogma previously taught, play a similar role.

Also at ENV, Dr. Sternberg takes a look at the old Darwinian tripe that biological systems couldn't possibly have been designed because they exhibit "shoddy engineering":

> We often hear from Darwinians that the biological world is replete with examples of shoddy engineering, or, as they prefer to put it, bad design. One such case of really poor construction is the inverted retina of the vertebrate eye. As we all know, the retina of our eyes is configured all wrong because the cells that gather photons, the rod photoreceptors, are behind two other tissue layers. Light first strikes the ganglion cells and then passes by or through the bipolar cells before reaching the rod photoreceptors. Surely, a child could have arranged the system better — so they tell us.
>
> The problem with this story of supposed unintelligent design is that it is long on anthropomorphisms and short on evidence. Consider nocturnal mammals. Night vision for, say, a mouse is no small feat. Light intensities during night can be a million times less than those of the day, so the rod cells must be optimized —

> yes, optimized — to capture even the few stray photons that strike them. Given the backwards organization of the mouse's retina, how is this scavenging of light accomplished? Part of the solution is that the ganglion and bipolar cell layers are thinner in mammals that are nocturnal. But other optimizations must also occur. Enter the cell nucleus and "junk" DNA.

Jerry Coyne Recycles: Why Darwinism Is False

Jonathan Wells is reviewing Jerry Coyne's Why Evolution Is True over at ENV, and already the list of problems with Coyne's book is mounting:

> On Earth Day 2009, we are reminded of the ecological importance of recycling. As a professor in the Department of Ecology and Evolution at The University of Chicago, Jerry A. Coyne must be keen on recycling: He even recycles worn-out arguments for Darwinism.
>
> If "evolution" meant simply that existing species can undergo minor changes over time, or that many species alive today did not exist in the past, then evolution would undeniably be true. But "evolution" for Coyne means Darwinism — the theory that all living things are descendants of a common ancestor, modified by unguided natural processes such as DNA mutations and natural selection.
>
> Coyne discusses the fossil record, embryos, vestigial structures, the geographic distribution of species, artificial and natural selection, and the origin of species. In the process, (1) he ignores the Cambrian explosion — which Darwin considered a "serious" problem — and he rearranges the fossil record to fit Darwin's theory; (2) he defends Ernst Haeckel — who faked some drawings of vertebrate embryos to provide support for Darwinism — and he dredges up the doctrine that ontogeny recapitulates phylogeny; (3) he claims that much human DNA is useless junk — despite abundant recent evidence that this is not true — and he relies on theological arguments that have no legitimate place in natural science; (4) he invokes "the well-known process called convergent evolution" to explain many cases of the geographic distribution of species — even though the "well-known process" is merely speculation — and he again falls back on theology to justify a supposedly scientific theory; and (5) he describes examples of natural and artificial selection — none of which show anything more than minor changes within existing species — and he misrepresents experimental evidence to make it sound as though the origin of species by natural selection has been directly observed.

Part 1
Part 2
Part 3
Part 4

Other stuff

The newsletter also discussed historian A.N. Wilson's return to faith from atheism, which is really interesting because he seems to be well-rounded in his reasons for rejecting atheism. And the newsletter mentions that Jay Richards' forthcoming book, "Money, Greed, and God: Why Capitalism Is the Solution and Not the Problem" is out May 6th! Jay gave a great lecture on basic economics for Christians and another great lecture on what Christians should think about global warming.

Ontario Premier Dalton McGuinty faces protests over socialized medicine failures

April 30, 2009 | by Wintery Knight | Link | Original Link

How well does socialized medicine work? Just ask Dalton McGuinty, the Premier (governor) of the wealthy province of Ontario. According to Yahoo News, he's facing protests over his proposed cuts in medical service. It's government-run health care at its finest, complete with Canada's own version of tea parties!

(I know some of you Canadians are proud your nationalized health care, but please allow me to critique it and don't be too upset with me).

Excerpt:

> TORONTO – With a massive protest over hospital cuts planned today, Premier Dalton McGuinty says he's not trying to dismantle local health care services.
>
> Thousands of demonstrators are expected to descend on the front lawn of the Ontario legislature to denounce changes at six Niagara hospitals that they say are also happening in other communities.
>
> Critics say a regional health-care agency in the Niagara-Hamilton area is planning to close ERs in smaller communities and move services elsewhere.
>
> …The Ontario Health Coalition says about 50 busloads from communities across Ontario will take part in the protest, starting at 11:30 a.m.
>
> They are expected to be joined at the legislature by seniors and patients to demand that McGuinty to save hospital services.
>
> Buses were expected to arrive from such communities as Belleville, Trenton, Windsor, Leamington, Wallaceburg, Sarnia, Strathroy, Cambridge, Hamilton, St. Catharines, Welland, Port Colborne and Fort Erie.

Niagara-Hamilton is the region south and southwest of Toronto, which votes overwhelmingly Liberal and NDP (Socialist). It's a union area where steel and auto manufacturing is the major industry. This is the area just northwest of Buffalo, New York.

The Conservative Party leadership race in Ontario

Right now, Ontario has kicked out their ineffective and moderate provincial leader John Tory, and they are in the process of choosing a new leader. One of our free speech heroes, Randy Hillier is in the running. The other two candidates are too far to the left, i.e. – "red tories". Joanne from Blue Like You is also leaning towards Hudak.

Conservative MP Jason Kenney has already endorsemed Hudak:

> TORONTO – Immigration Minister Jason Kenney is backing Tim Hudak in the Ontario Progressive Conservative leadership race – a move that could make things awkward at the federal cabinet table.

> …Having the backing of an influential federal minister is a major coup for Hudak, 41, the perceived front-runner in the race to succeed John Tory.
>
> …"He's the bright, young, energetic, common-sense conservative that will appeal to Ontarians," he said.

Here is an excerpt from another article about the candidates:

> The Niagara-area member, who is married to Harris's former chief of staff Deb Hutton, also has about half of the 24-member caucus in his corner.
>
> Norm Miller – son of former premier Frank Miller – Julia Munro, Garfield Dunlop and Lisa MacLeod have all endorsed Hudak.
>
> …Hillier, a self-described libertarian who wants to scrap the Ontario Human Rights Commission, will likely make a splash in the race, but observers say he has virtually no support among caucus members.
>
> …Hillier has cast himself as the leader who will steer the party and the province back to true conservatism, including smaller government, fewer regulations and a more participatory democracy.

MPP Lisa Macleod and MPP Randy Hillier are free-speech champions in Ontario. Free speech is also an issue in British Columbia.

Prayer is good, but reason and evidence are better

May 1, 2009 | by Wintery Knight | Link | Original Link

I spotted a post over at the Anchoress about the issue of prayer and abortion. She is discussing with a friend whether to pray in front of an abortion clinic, which takes a lot of courage. But I don't think that's the only way to make a difference on abortion. I want to remind my readers that you can pray *and* debate. I think both are necessary. And debate is just as Biblical as prayer.

The Anchoress writes about the importance of prayer:

> If you stand outside an abortion mill and peacefully pray for everyone inside, the abortionists and their aides, the troubled women choosing to enter, the babies – you are truly moving outside of your own concerns, your own ego, and growing in knowledge of generosity and detachment. Will you save a few lives? Perhaps, if God wills it.
>
> But perhaps the point of your calling is two-fold; to affect the lives of others in a positive way, yes, but also to affect your own life, if you are open and trusting enough to allow yourself to be instructed and changed, as I know you will be.
>
> I am convinced that the abortion issue itself is meant to be the long, protracted, painful, divisive and enduring struggle it is, because it is a challenge to the entire age.
>
> The Torah says, "who saves a life saves the world entire." Our common-wisdom will sometimes say – over new laws, or new restrictions or new requirements – "well, but if it saves a single life, it's worth it." We *do know* the value of human life, we know it instinctively and intrinsically, because our own DNA shouts out "I am good; I am important and I want to live" with every breath we take, every heartbeat pumped and every new blood cell created. But some of us work against that knowledge, for a variety of reasons. Some of it is self-loathing. Some of it is faux enlightenment. Some of it is simple, stubborn, adolescent contrariness, writ large.

I agree with all of this, but I want to also emphasize the importance of debating with our opponents.

I tend towards more confrontational means, and so I wanted to link together some of my best posts on defending the pro-life position, and then make some comments. When it comes to abortion, I'm inclined to keep faith, emotions and personal experiences right out of the discussion and stick with the strict philosophical reasoning and pure science.

First, let me share with you the links:

- Audio: Scott Klusendorf's 35-minute case for the pro-life position
- Audio: A 55-minute discussion featuring two great pro-life debaters, Greg Koukl and Scott Klusendorf

- My own religion-free case for the pro-life position in plain English
- A comparison of embryonic and adult stem cell research
- Video: Cute 12-year old girl makes the pro-life case in a short speech

And now the comment. I think we need to get serious about the way we talk about social issues like abortion, marriage and divorce. Some Christians are hiding from these discussions and resorting to prayer alone because they believe that these are issues that are too emotional to debate. But emotions and personal experiences are irrelevant to questions of truth and morality.

The reason why society as a whole is sliding leftwards on social issues is because we wrongly believe that there is a fundamental split between facts and values. We believe in objective truth over here, as in chemistry and physics. And we believe in religious and moral truth over there, as in the existence of God and the sanctity of life. We need to halt the slide by treating the latter like the former.

And here's how: *learn to defend your views by reading books.*

For example, is the abortion issue a concern to you? Then read Francis J. Beckwith's 2007 book "Defending Life: A Moral and Legal Case Against Abortion Choice", published by Cambridge University Press, and put it up on your shelf at work.

Is the marriage/divorce issue a concern to you? Then read Stephen Baskerville's 2007 book "Taken into Custody: The War Against Fatherhood, Marriage, and the Family", published by Cumberland House, and put it up on your shelf at work.

And so on… bioethics is just like any other area of publicly testable knowledge. The more you know, the more confident you become, and the easier it is to speak about these things in a non-threatening, academic tone. People actually debate these topics in formal, timed debates at universities, in front of students, for example.

We succeed in persuading our neighbors about social issues as we succeed in persuading our neighbors about *anything.* Bring more data to the table than your opponent and you will do well. Even if you don't get an admission, talking about moral issues seriously creates respect for traditional social conservative views in the culture, by showing that we have reasons, and not just blind-faith.

UPDATE: This post over at Nice Deb is a must-read. Obama is telling Catholic Cardinals that he's not pro-abortion.

What is Obama working on instead of making Americans safer?

May 1, 2009 | by Wintery Knight | Link | Original Link

Below is the video of the new Republican ad that highlights all the recent bungling by Obama on national security and foreign policy. (H/T Gateway Pundit)

The Patriot Room has more on this effective ad.

Check out this post on Obama's opposition to waterboarding. And this one of Obama's military spending cuts. A general article listing the administration's failures on national security and foreign policy. And an essay I wrote on the conservative doctrine of peace through strength. And don't forget last week's Friday night funny on Obama's plan to undo the effects of Bush's successful national security policies.

Robert Spencer over at Jihad Watch has this post up about how Obama overruled the CIA and FBI in order to release Gitmo detainees into the United States.

> Excerpt:They told him these guys were dangerous jihadists, and Obama *doesn't seem to care*. They're coming to your neighborhood whether you or the FBI or DHS like it or not. Relax. What could go wrong?

Spencer asks: "How about putting them up in the White House?"

So, what are Democrats focused on instead of national security?

First, Democrats are busy restricting free speech to protect the hurt feelings of their special interest groups. Here is a speech by Representative Trent Franks about the recent thought crime hate crime bill that the Democrats just passed in the House.

Excerpt:

> In fact, Madam Speaker, the essence of America is that all people should be treated with the same respect and should be protected completely equally under the law. To break up people into different categories and say that one group is more worthy of protection than another and then to grant special protection to some groups and not to others, fundamentally diminishes the protection of all of the other remaining groups.
>
> …The First Amendment of our Constitution was crafted because our Founding Fathers recognized that the freedom of thought and belief is the cornerstone of every other freedom. It is the foundation of liberty itself, because, without it, every other freedom, including the freedom of speech, becomes meaningless.
>
> …Not only does this legislation require law enforcement to investigate an individual's motivations–those are the thoughts and beliefs that seemingly motivate him or her to commit a crime–but it would expand the scope of the prosecution to include individuals or members of organizations or religious groups whose ideas or words may have influenced a person's thoughts or

> motivations when he committed a crime.
>
> …Madam Speaker, this would have a devastating and chilling effect on free speech in America. Who could blame pastors, educators or any other cultural leaders if they chose to cease expressing their beliefs for fear of being thrown in prison and charged with a Federal crime? This is not rhetorical speculation. It has already happened in the case of the Philadelphia 11 and in other cases. In the Philadelphia 11 case, 11 individuals were jailed, and they faced $90,000 in fines and 47 years in prison for simply speaking the gospel openly and publicly.

Democrats have to be divisive, and pit one group against another. That is how they get elected – by promising all of their victims government-run salvation from their "enemies". They thrive on anger, divisiveness, victimization, blame-fixing and resentment.

Second, the Democrats are working hard to raise the unemployment rate by attacking small businesses.

> Today's *Washington Post* has a front page story: "Small Businesses Brace for Tax Battle," that catalogues the burden small businesses will face under the President's massive $4 trillion budget which raises taxes by more than $1.4 trillion.
>
> Gail Johnson, the subject of the *Post's* story, is a former pediatric nurse who's spent "20 years building a chain of preschools and after-school programs that accommodate sick children so working parents can keep their jobs," but since, "like most small-business owners, Johnson reports her profit on her personal tax return," she'll see her taxes go up under the President's plan – big time.

The WaPo's article says this:

> In a typical year, Johnson's federal tax bill would be about $120,000. But starting in 2011, the higher marginal rates would add about $13,000 a year, Hurst said. Capping the value of itemized deductions at 28 percent would add another $10,000, for a total increase of $23,000.
>
> And Johnson's tax bill stands to grow dramatically if Obama were to revive a plan to apply Social Security tax to income over $250,000 instead of capping it at the current $106,800. Because Johnson is an employee and an employer, she would have to pay both portions of the tax, Hurst said, tacking another $30,000 onto her bill.
>
> Johnson said such an increase would force her to consider scaling back operations.

Why do Democrats complain so much about outsourcing and "the rich"? They are the ones who cause businesses to shut down, downsize, relocate overseas or outsource. They push anti-business policies, like tax hikes, card check, global warming regulations, tariffs, etc. If you want more jobs, then make business ownership profitable. Is that so hard to understand?

Thomas Sowell and Walter Williams are my two favorite living economists

May 1, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the link, Binks!

Let's see some of their recent posts.

Is Obama's weak foreign policy going to get us killed?

My biggest concern about Jimmy Carter II is for the nations that rely on us to protect their liberties. Our armed forces project strength abroad that safeguards the liberties of our allies against our enemies. Thomas Sowell just nails this point in his post about the dangers of weak foreign policy, a point most of us don't even think about.

> As if it is not enough to turn cutthroats loose to cut throats again, we are now contemplating legal action against Americans who wrung information about international terrorist operations out of captured terrorists.
>
> Does nobody think ahead to what this will mean– for many years to come– if people trying protect this country from terrorists have to worry about being put behind bars themselves? Do we need to have American intelligence agencies tip-toeing through the tulips when they deal with terrorists?
>
> …Repercussions extend far beyond issues of the day. It is bad enough that we have a glib and sophomoric narcissist in the White House. What is worse is that whole nations that rely on the United States for their security see how easily our president welshes on his commitments. So do other nations, including those with murderous intentions toward us, our children and grandchildren.

Who caused the subprime mortgage crisis?

Thomas Sowell writes about who caused the subprime mortgage crisis. And he has a new book out about it, too!

> Beginning in the 1990s, getting a higher proportion of the American population to become homeowners became the political holy grail of government housing policies. Increasing home ownership among minorities and other people of low or moderate incomes was also part of this political crusade.
>
> Because banks are regulated by various agencies of the federal government, it was easy to pressure them to lend to people that they would not otherwise lend to– namely, people with lower incomes, poorer credit ratings and little or no money for a conventional down payment of 20 percent of the price of a house.
>
> Such people were referred to politically as "the underserved population"– as if politicians know who should and who shouldn't get mortgages better than people who have spent their careers making mortgage-lending decisions.

My own comprehensive post on this topic is Democrats caused the recession and Republicans tried to stop it.

What happens when the secular left undermines morality?

I've blogged about how atheism cannot ground the rationality of moral values, moral duties and moral accountability. The presumption of materialism is inconsistent with rationality, consciousness and free will which are necessary pre-conditions for non-ephemeral morality. So what happens to civil society when atheists push religion out of the public square? Walter Williams explains.

> To see men sitting whilst a woman or elderly person was standing on a crowded bus or trolley car used to be unthinkable. It was common decency for a man to give up his seat. Today, in some cities there are ordinances requiring public conveyances to set aside seats posted "Senior Citizen Seating." Laws have replaced common decency. Years ago, a young lady who allowed a guy to have his hand in her rear pocket as they strolled down the street would have been seen as a slut. Children addressing adults by first names was unacceptable.
>
> You might be tempted to charge, "Williams, you're a prude!" I'd ask you whether high rates of illegitimacy make a positive contribution to a civilized society. If not, how would you propose that illegitimacy be controlled? In years past, it was controlled through social sanctions like disgrace and shunning. Is foul language to or in the presence of teachers conducive to an atmosphere of discipline and respect necessary for effective education? If not, how would you propose it be controlled? Years ago, simply sassing a teacher would have meant a trip to the vice principal's office for an attitude adjustment administered with a paddle. Years ago, the lowest of lowdown men would not say the kind of things often said to or in front of women today. Gentlemanly behavior protected women from coarse behavior. Today, we expect sexual harassment laws to restrain coarse behavior.

I personally feel alienated by how impolite, unchaste, unromantic and unchivalrous my generation has become.

Friday night funny: Obama to ban fully-automatic assault vehicles

May 1, 2009 | by Wintery Knight | Link | Original Link

Scott Ott at Scrappleface.com has the scoop on Obama's plan to spur new vehicle sales. No, it's isn't lowering the sales tax on new vehicle sales, like communist China did. Obama likes taxes, and sometimes I think he is to the left of communists.

Oh no, Obama has an even better idea!

Excerpt:

> Since the Obama administration's talk of banning so-called 'assault weapons' has resulted in a huge spike in semi-automatic weapon sales nationwide, the White House has recently begun a covert 'whisper campaign' suggesting the president might also ban U.S.-manufactured cars and trucks with fully-automatic transmissions, now dubbed 'assault vehicles'.
>
> President Obama reportedly hopes such chatter will give a much-needed boost to U.S. auto sales.

Happy Friday!

Mark Steyn and Ezra Levant on Milt Rosenberg's Extension 720 radio show!

May 2, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the link, Binks!

Here is the commercial-free MP3 recording. We Americans need to understand what leftist ideologues do to free speech rights in other countries. It's going to look a lot like what's been done by the left in Canada, Europe and in leftist-dominated university campuses the world over. You *must* listen to this podcast! You will not find a better resource about the leftist threat to our liberties!

Already, we are seeing the Democrats take action to pass "Hate Crime" laws that punish free speech that might offend their favored constituencies! As Trent Franks notes, religious Christians are the likely targets of such laws. Our civil liberties are being threatened, and we need to start learning by studying the defenders of free speech, such as Mark Steyn and Ezra Levant.

What I like best about Ezra Levant

Ezra Levant is Jewish, but he is the best friend that Christians ever had in Canada. One of the victims of the virulently anti-Christian Human Rights Commissions was a penniless pastor by the name of Stephen Boissoin. Boissoin wrote an essay in which he expressed his opinions on gay activism. The case is described by Levant in the audio linked above.

But the main thing is that I have been watching with awe at how this good Jewish man Ezra Levant, who has his own 6-figure legal bill to worry about, has tirelessly supported this Christian pastor's right to free speech. He not only re-published Boissoin's letter on his own blog several times, but he has also organized fundraisers to raise funds for Boissoin's appeal.

> Calgary, Thursday, April 30
>
> This one (and the next two) are very special events. They're dinners to help a victim of Alberta's human rights commission — Rev. Stephen Boissoin. As readers will recall, because he expressed his religious views on gay marriage, Rev. Boissoin was punished with a six-year government prosecution, and then an outrageous order — punitive fines, a lifetime ban on expressing his views in public or in private, and an abominable order to publicly renounce his religious views. Seriously — you can read the details here. Tickets are $100, with proceeds going to pay for Rev. Boissoin's appeal. For more info, and to register, click here.
>
> Red Deer, Friday, May 1
>
> Second fundraising dinner for Rev. Stephen Boissoin's legal defence, 6 p.m. Details here.
>
> Edmonton, Saturday, May 2
>
> Third and final fundraising dinner for Rev. Stephen Boissoin's legal defence, 6

> p.m. Details here.

Ezra Levant is without a doubt the most heroic person in Canada! That is another reason to listen to the podcast. Levant and Steyn are two good men of courage and directness. This is the podcast equivalent of “Gladiator” and “300”. These are courageous, forceful men who have been given a difficult task. They are direct and passionate. PLEASE LISTEN TO THE PODCAST!!!

How socialism undermines family, community and the dignity of labor

May 2, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Free Canuckistan! Thanks for the link, Binks!

I saw this amazing post over on the Pugnacious Irishman, and I would highly recommend you take a look at it. Rich comments on an essay by Charles Murray on whether the United States should start implementing European-style social policies.

Here is Rich's summary of the Murray article:

> In the annual Irving Kristol Lecture given at the American Enterprise Institute Dinner, he argues that while such Europe-style policies might produce an economic benefit or two, they are ill conceived because they suck the meaning out of life. They do this by enfeebling the institutions necessary for robust meaning in life: family, community, vocation, and faith. Lastly, he argues that in the next few decades, science will provide ample evidence that such policies are ill conceived.

But how does European democratic socialism destroy human flourishing?

Murray writes:

> To become a source of deep satisfaction, a human activity has to meet some stringent requirements. It has to have been important (we don't get deep satisfaction from trivial things). You have to have put a lot of effort into it (hence the cliché "nothing worth having comes easily"). And you have to have been responsible for the consequences.
>
> There aren't many activities in life that can satisfy those three requirements.... Let me put it formally: If we ask what are the institutions through which human beings achieve deep satisfactions in life, the answer is that there are just four: family, community, vocation, and faith.
>
> ...It is not necessary for any individual to make use of all four institutions, nor do I array them in a hierarchy. I merely assert that these four are all there are. The stuff of life–the elemental events surrounding birth, death, raising children, fulfilling one's personal potential, dealing with adversity, intimate relationships–coping with life as it exists around us in all its richness–occurs within those four institutions.
>
> Seen in this light, the goal of social policy is to ensure that those institutions are robust and vital. And that's what's wrong with the European model. It doesn't do that. It enfeebles every single one of them.

And then comes Murray's central thesis. Big government socialism, by taking responsibility away from individuals in the areas of importance and meaning, actually

causes more problems than it solves. Murray calls this government involvement in these areas “taking the trouble out” of life.

Murray continues:

> The problem is this: Every time the government takes some of the trouble out of performing the functions of family, community, vocation, and faith, it also strips those institutions of some of their vitality–it drains some of the life from them.
>
> It’s inevitable. Families are not vital because the day-to-day tasks of raising children and being a good spouse are so much fun, but because the family has responsibility for doing important things that won’t get done unless the family does them. Communities are not vital because it’s so much fun to respond to our neighbors’ needs, but because the community has the responsibility for doing important things that won’t get done unless the community does them. Once that imperative has been met–family and community really do have the action–then an elaborate web of social norms, expectations, rewards, and punishments evolves over time that supports families and communities in performing their functions.
>
> When the government says it will take some of the trouble out of doing the things that families and communities evolved to do, it inevitably takes some of the action away from families and communities, and the web frays, and eventually disintegrates.
>
> …We have seen growing legions of children raised in unimaginably awful circumstances, not because of material poverty but because of dysfunctional families, and the collapse of functioning neighborhoods into Hobbesian all-against-all free-fire zones.

This next point is something I first read about in George Gilder’s book “Men and Marriage”. When the government steps in and takes away the responsibilities of a man, especially husband and father responsibilities, it destroys the male will to be a responsible contributor to society. If the welfare state awards money to women to raise children without the father, what honor is there in being a good man?

> Earlier, I said that the sources of deep satisfactions are the same for janitors as for CEOs, and I also said that people needed to do important things with their lives. When the government takes the trouble out of being a spouse and parent, it doesn’t affect the sources of deep satisfaction for the CEO. Rather, it makes life difficult for the janitor. A man who is holding down a menial job and thereby supporting a wife and children is doing something authentically important with his life. He should take deep satisfaction from that, and be praised by his community for doing so. Think of all the phrases we used to have for it: “He is a man who pulls his own weight.” “He’s a good provider.”
>
> If that same man lives under a system that says that the children of the woman he sleeps with will be taken care of whether or not he contributes, then that

> status goes away. I am not describing some theoretical outcome.
>
> I am describing American neighborhoods where, once, working at a menial job to provide for his family made a man proud and gave him status in his community, and where now it doesn't. I could give a half dozen other examples. Taking the trouble out of the stuff of life strips people–already has stripped people–of major ways in which human beings look back on their lives and say, "I made a difference."

Murray's article and Rich's commentary continue, but for me this was the important point. When government distributes wealth, it gets involved in the decision-making of the most important areas of life: marriage, education, parenting, taxes, etc. Speaking as a man, when you take away choice and responsibility from me, you cannot expect me to engage in work or family or community in the same way I would if I were in charge.

By the way, I explained why European socialism leads to the decline of religion in a previous post.

Barack Obama outlaws capitalism: threatens Chrysler's non-TARP creditors

May 2, 2009 | by Wintery Knight | Link | Original Link

UPDATE: More details about this story and related stories of government intervention and wealth redistribution are here.

UPDATE: Welcome visitors from 4Simpsons! Thanks for the link!

This bombshell comes to me from my favorite commenter ECM.

Newsbusters is reporting that the White House is making threats to Chrysler's creditors. Obama is living that these creditors allowed Chrysler to go bankrupt, because he would prefer to throw your money at his auto union worker constituents. What does it mean when the President of the United States threatens and coerces private investors?

- Private property is abolished
- The free market is abolished
- The rule of law is abolished
- The Constitution has been abolished
- Private contracts are abolished
- Capitalism is abolished

It means that socialism has come to the United States, just as the rest of the world is abandoning a failed system.We are now the equivalent of Zimbabwe and North Korea! Our run of liberty and prosperity is now OVER.

The source of the story is a radio interview conducted between 760 WJR's radio host Frank Beckmann and Tom Lauria, the attorney representing Chrysler's non-TARP creditors. I am reproducing the full transcript, because you need to read the whole thing, especially what I've bolded.

Beckmann: So what's the matter with your vulture clients who are so greedy and selfish. Why won't they go along with this?

Lauria: Well, they bought a contract that says that they get paid before anyone else does by Chrysler. And they have been told by the government who is in complete control of Chrysler, oddly enough, that despite their contractual right, they do not get paid before everyone else.

So they are standing on their rights, standing on the law, trying to defend in effect what is the Constitution of the United States, to make sure that they get what they're entitled to for their investors.

Beckmann: Tom, let me make the argument against you in another way. We've heard the President say this, "I wouldn't want to stand on their side." Ron Gettelfinger says "Everyone else has made concessions. These people won't; they're greedy." Why not

take a concession that is being asked of everybody else and is being accepted by everybody else, including other hedge funds that had bought some of these bonds in Chrysler?

Lauria: Well that's a great question, because let me tell you it's no fun standing on this side of the fence opposing the President of the United States. In fact, let me just say, people have asked me who I represent, and that's a moving target.

I can tell you for sure that I represent one less investor today than I represented yesterday. One of my clients was directly threatened by the White House, and in essence compelled to withdraw its opposition to the deal under threat that the full force of the White House press corps would destroy its reputation if it continued to fight. That's how hard it is to stand on this side of the fence.

Beckmann: Was that Perella Weinberg?

Lauria: That was Perella Weinberg.

Beckmann: All right.

Lauria: Now let me just tell you, to be clear, that we do not oppose the rehabilitation of Chrysler. We think it is vitally important that a company like Chrysler be protected to the extent that it can be within the framework of the law. I want to also say that we do not oppose the government backstopping or supporting the pensioneers and retirees and workers of Chrysler.

I actually think that in a troubled economic time like we're in, that is an appropriate role for the government to perform. What we do oppose, however, is the abuse of the bankruptcy law to coerce first-lien lenders subsidize the rehabilitation of Chrysler or the backstop of the obligations to the pensioneers and retirees beyond what they will do voluntarily.

And just to be clear, these clients of mine have agreed to compromise 50% of their first-lien position to help support the rehabilitation of Chrysler — Contrary to what the President said yesterday in his new conference that "these people will not give to support the effort," they have agreed to compromise 50% of what they're owed to support the rehabilitation of Chrysler, despite the fact that they're under no obligation whatsoever to do so.

That is what we stand for, and that is what we're going to go to court to fight for.

Beckmann: OK, so they have offered to take 50 cents on the dollar. What are they being offered in return, and how does that compare to what other stakeholders, say the UAW, are going to be receiving?

Lauria: Here's the troubling circumstance here. My clients bought a position in the Chrysler capital structure that entitles them to be paid "first dollars out." That is, they're to be paid 100 cents of what they're owed before any junior creditors get a penny.

The government has offerend them 29 cents on the dollar, in the context of a restructuring of Chrysler that will send over $10 billion of value to junior claims. And when I say $10 (billion), that's a floor. As we're continuing to review the papers that Chrysler has filed in the bankruptcy court, that number may actually be more like $20 billion. So in other words, my clients, who are contractually entitled to 100 cents on the dollar, are being asked to take 29 cents on the dollar, while junior creditors are being offered somewhere between $10-$20 billion of value in the Chrysler rehabilitation.

Now I ask your listeners, what would they do if they were in our position?

Beckmann: Now Tom Lauria, let me cite a New York Times piece, I believe this was yesterday's New York Times. No, it's today's as a matter of fact. And it says about the creditors who are standing firm: "Many of them bought Chrysler debt for about 30 cents on the dollar." So what they're saying is, "Look, they got a discount to begin with. They're getting a good deal here. If they bought it for 30 and they're being offered 29, that's a great deal, better percentagewise than anybody else got."

Lauria: Well, what people need to understand, first of all, that that is only speculation. There are people who bought this debt at par in my group, there are people who bought this at 70 cents, there are people who bought it at other prices. But what people really need to understand is that the people who bought this debt are pensioneers, teachers' credit unions, personal retiree accounts, retirement plans, college endowments. That's who my clients act as fiduciaries for. And they make all kinds of investments. And as you can imagine in this economy, there are numerous of those investments that have gone bad.

This was an investment that people made based on their assessment of the assets of Chrysler, and the view that this was a very secure, very safe investment. And they bought a contract that said they would get a very low rate of return in exchange for that high level of security. So the argument about what they paid for their investment really is irrelevant.

The fact of the matter is they bought a contract that said "you're first in line, and in exchange for that you're going to get a very low rate of return." And I think everybody in this country should be concerned about the fact that the President of the United States, the executive office, is using its power to try to abrogate that contractual right. If the President will attack that contractual right, what right will it not attack?

Beckmann: You made a comment to me before we went on the air about the significance of this case as it relates to the Constitution. I'd like you to explain that to my audience.

Lauria: Well, look, there are kind of two aspects to that. The first is the right to property and the right to contract are kind of sacronsanct in this country. I think everybody understands that when you make a deal it's supposed to be honored, and if it's not honored you're supposed to be able to get protection in court. And what is happening here, through the force of the United States government, and that's what's disturbing about this — I mean, private parties

have contract disputes all the time — but for the United States Government to step in, the Executive Office of the United States Government, who under the Constitution is charged with enforcing the laws to step in and try to in effect break the laws, I think we should all be concerned about that. That is a constitutional issue.

OK, number one. Number two, realize that our Constitution is premised on the notion that there is a balance between the three branches of government: the executive, the legislature, and the judiciary.

And what's going to be happening, in fact I'm going to have to go here, because I'm heading down to the bankruptcy court to start taking on this battle, which is of epic proportions. But what is going on here is you've got the executive branch coming into the judicial branch. And I think it is really important for the Constitution of the United States that people understand that the judicial branch can stand independent and interpret and apply the laws as it's required to do under the Constitution in the face of intense pressure from the Executive branch to do otherwise.

Beckmann: Tom Lauria, really appreciate it. Final question, will Oppenheimer Funds and Stairway Capital, your other two clients in this, are they committed to standing firm? I've got to believe they're facing the same pressure Perella Weinberg did before it changed its mind and said "Okay, we'll go along now."

Lauria: Well they are today, but the Executive Office hasn't called them yet and made threats to them. So, maybe by tomorrow I won't have any clients, and maybe this fight will be over.

Click the link below to see more commentary from National Review, Wall Street Journal and Hot Air.

The editors of the National Review comment on the story.

Excerpt:

> The administration tried desperately to keep Chrysler out of bankruptcy court; in the process, it demonstrated exactly why that institution is so valuable. Obama's auto task force attempted to browbeat Chrysler's creditors into taking a terrible deal in order to spare the United Auto Workers union as much pain as possible. The large banks, which owe their continued existence to the $700 billion Troubled Asset Relief Program (TARP), caved and agreed to take a massive haircut on their secured Chrysler debt. But a group of smaller firms, calling themselves "The Committee of Chrysler Non-TARP lenders," refused to play ball.
>
> In a statement released yesterday, the firms pointed out that they would be shirking their fiduciary duty to their investors if they did not hold out for the best possible deal. For them, the best deal is bankruptcy. In bankruptcy court, secured debtholders take priority over other creditors. The administration's plan called for

> secured lenders to get in line behind the UAW.
>
> For resisting this expropriation and following the law, the non-TARP lenders were publicly denounced as vicious Benedict Arnolds by a sitting American president. "I stand with Chrysler's employees and their families and communities," Obama said — not "those who held out when everybody else is making sacrifices." He stands, he said, "with the millions of Americans who own and want to buy Chrysler cars." If millions of Americans wanted to buy Chrysler cars, the company wouldn't need the president of the United States to be its pitchman.

Hot Air has more here about whether the media will call Obama to account:

> Glenn Reynolds wonders how the White House press corps will feel about being used as an arm of the administration to beat its opposition into submission. My guess? Enchanted, with just a couple of exceptions. He also wonders whether they will show the slightest inclination to ask about these allegations. So far, it looks like the Sounds of Silence on the WHPC dial rather than We're Not Gonna Take It.
>
> Bear in mind that this is one attorney operating in his client's interest, and attorneys do like to make media waves by fighting cases on the evening news and the front page before they fight them in court. However, the WHPC should be asking whether they're getting played by the Obama administration — and consider the strong possibility that they've allowed themselves to be put in that position.

Commenter ECM adds a link to a WSJ piece:

> Here's a link to the WSJ piece where the rapacious, evil, capitalists stake out their position on the matter (which was quoted from in the NRO piece):
>
> http://blogs.wsj.com/deals/2009/04/30/statement-from-non-tarp-lenders-of-chrysler/

Heritage Foundation has more analysis here.

Excerpt:

> Specifically, the creditors refused to settle the debt owed to them by Chrysler for 29 cents on the dollar. **The offer was far below what the UAW would get under Obama's plan**, and the creditors thought they could do better, electing to bring the matter up before a bankruptcy judge.
>
> …True, the holdouts represent only a small minority of Chrysler's creditors. But among those who did agree to the terms, the four biggest – Citi, JPMorgan Chase, Morgan Stanley and Goldman Sachs – are banks which themselves took massive bailout money from the feds, and whose future is largely in the Administration's hands. Not only does the government own a substantial amount of their stock, but government "stress tests" of their stability are due to come out next week.

READ THE WHOLE THING AND SEND IT TO EVERYONE YOU KNOW!!!

Audio debate: Did Jesus die on a cross?

May 3, 2009 | by Wintery Knight | Link | Original Link

I've decided to feature 4 debate podcasts in 4 sequential posts. Each debate will be on an off the wall topic or feature a clearly insane person. They are all from the Unbelievable? radio show, which is broadcast in the UK. I don't know what it is about these Brits, but they seem to really go in for the Monty Python in their debates.

The first debate features a strong Christian Tony Costa going up against the likable Muslim scholar Shabir Ally. I wish I had a Muslim friend like Shabir, because he is a smart guy and super polite. But the reason why this is a weird debate is because Shabir has to defend the idea that Jesus was never crucified, because that's in the Koran.

But no historian believes that! So Shabir is really in tough. If you want to see the best debater that Islam can offer, then listen to Shabir, he is the best. I have even sponsored debates on university campuses that featured Shabir.

Note that debates on the Unbelievable radio show start at about 15 minutes into the podcast.

> **Unbelievable? "Did Jesus rise from the dead? Did he die on the cross?"4 Apr 2009**
>
> As Easter approaches we hear from one of the best respected Muslim scholars in the world – Shabir Ally. He explains why he does not believe Jesus rose from the dead, namely because he never actually died upon the cross – he merely 'swooned'. Christian Apologist Tony Costa presents his case for the resurrection of Christ and critiques Ally's belief that Jesus did not die.
> For Shabir Ally visit www.islaminfo.com
> For Tony Costa visit www.freewebs.com/tonycosta/

Tony and Shabir are both from Canada!

Audio debate: Did Jesus rise from the dead?

May 3, 2009 | by Wintery Knight | Link | Original Link

Sometimes, they do debate serious questions on Unbelievable? radio show. But they feature clearly insane people like Steven Carr. Note that debates on the Unbelievable radio show start at about 15 minutes into the podcast. The Christian debater and callers are woefully uninformed in this debate, so I would recommend listening to something with William Lane Craig instead.

> **Unbelievable? 11 Apr 2009 – "Did Jesus Rise from the dead?" An atheist perspective**
>
> Steven Carr has a prolific presence on the internet as an atheist blogger and debater. He contends that the early Christians did not believe in Jesus' resurrection and that the Biblical views of resurrection are contradictory.
> Canon Michael Cole is a veteran defender of Christian faith and responds to Steven's criticisms of the resurrection.
> For Steven Carr see http://stevencarrwork.blogspot.com/
> For Canon Michael Cole see http://www.nationwidechristiantrust.com

---

I'm trying to give my audience something different here. I prefer formal academic debates, but maybe I need to post things like this for some of the more crazy atheists who leave me weird comments. I don't know. Maybe my Christian readers will enjoy hearing an unqualified loon rant and rave like a lunatic at the full moon. Your call.

UPDATE: I am, of course, kidding about Steve Carr and I think he did a good job in his debate, whereas his opponent and the callers were not nearly as prepared. I wanted to see how fast he would descend on my blog, and if you read the comments, you'll see that I wasn't mean to him at all. But I wanted to engage him in a discussion and I thought this was the best way to get his attention. I apologize for my sneaky tricks, but they worked!

My response to Carr would be two-fold:

1) That word you keep using. Resurrection. I do not think it means what you think it means.

2) How do you square the empty tomb with your idea of a non-physical resurrection? We have multiple early sources for the empty tomb, and piles of evidence for it from those early sources, not the least of which is the testimony of the women followers of Jesus.

Audio debate: Should Christians be coerced to act like non-Christians by the state?

May 3, 2009 | by Wintery Knight | Link | Original Link

Our next debate in the series of 4 wacky British debates is on whether Christians should be allowed to express their faith in public. In particular, should Christians be allowed to express their faith in the workplace? In the UK, it sounds like it is virtually illegal, just like it was in Stalinist Russia or North Korea today.

The way it works in the UK is like this: if you are a nurse, and you offer to pray for a patient, you're suspended. Period. The offendedness of thin-skinned atheists cancels out the liberties of Christians. Listening to the atheist Terry Sanderson is like listening to Stalin. American Christians will be shocked to find how atheism leads naturally to fascism. *Listen to him for yourself!*

Note that debates on the Unbelievable radio show start at about 15 minutes into the podcast.

Unbelievable? 18 Apr 2009 – Are Christians being marginalised?

Premier is inviting Christians to sign the "I am a Christian" declaration at www.iamachristian.org.uk and stand up for their Christian faith. It's in response to the fact that over 100,000 have downloaded the National Secular Society's "Debaptism" certificate, renouncing childhood baptismal vows.There have been a number of stories that suggest Christians are being restricted form being open about their Christian faith in the public arena, and now the National Secular Society is urging that hospital chaplains should not be funded by the NHS.Premier's CEO Peter Kerridge explains why he believes the campaign will encourage Christian to be bold in their faith. Terry Sanderson of the National Secular Society explains why they want to take Christian influence out of the public sphere, while Andrea Williams of Christian Concern for Our Nation explains why she believes the rights of Christians are being challenged.
Sign the declaration at www.iamachristian.org.uk
For Terry Sanderson see www.secularism.org.uk
For Andrea Williams see www.ccfon.org

Atheism naturally leads to heavy-handed censorship of other views.

Human rights and liberties have no place in an atheistic, materialistic universe – it's just survival of the fittest. And that's what led atheist regimes to murder 100 million people in the 20th century. Violence, hatred and coercion are natural on atheism. That's consistent atheism. There are no objective moral values, moral duties and morally significant actions in an atheistic universe. It's all accidental.

Yes, I am exaggerating for effect, many atheists are not like that, especially the libertarians and fiscal conservatives, who do believe (inconsistently) in morality and

freedom of religion. But those are rare! In a materialist universe, there is no such thing as objective human rights and human dignity, so even the fundamental right of free speech and freedom of religious expression can be removed.

UPDATE: I just want to define fascism so people understand what I am saying. Fascism is the system of government in which the values and purposes of the state are imposed on the people through state coercion. When something that someone else says makes you feel bad, and you threaten them with state coercion, you are using the state to force that person to give up their fundamental rights, such as the right to free speech, and act in a state-approved manner. That's fascism.

Atheists need to learn how to listen to those who disagree with them and *tolerate other points of view.*

UPDATE: Be sure and check my comparison of a famous, authentic, consistent Christian with a famous, authentic, consistent non-Christian.

Audio debate: Did Jesus even exist?

May 3, 2009 | by Wintery Knight | Link | Original Link

This debate features James Patrick Holding one of the experts on the question of whether there is sufficient evidence outside the New Testament writings to answer the question of whether Jesus ever existed. Note that debate on the Unbelievable radio show start at about 15 minutes into the podcast.

The wacky thing about this debate is the topic of course. No PhD historian has ever taken the position that Jesus never existed in a research publication or book.

This is the last debate in my series of 4 wacky UK debates. I hope you enjoyed them!

Note that debates on the Unbelievable radio show start at about 15 minutes into the podcast.

Unbelievable? 2 May 2009 "Did Jesus exist?"

While non-Christians may doubt the miracles and resurrection of Jesus, few doubt his actual existence.However, Ken Humphreys believes the evidence for Jesus' very existence is scant and that Christian belief in him is the result of "late and fake" accounts. JP Holding is a vociferous defender of Christian history and doctrine and believes Ken's scepticism is unfounded and biased.They examine the evidence both in and beyond the Gospels for Jesus' existence.
For JP Holding see www.tektonics.org
For Ken Humphreys see www.jesusneverexisted.com

If you want to see more debates on weird subjects, featuring fringe atheists, let me know.

How do Democrats plan to improve health care?

May 4, 2009 | by Wintery Knight | Link | Original Link

I think it's important to be clear about what their goal is for their seizing control of reforming health care.

The Heritage Foundation says this:

> Earlier this month in Chicago, Rep. Jan Schakowsky (D-IL) told a rally of government-run health care supporters: "I know many of you here today are single payer advocates and so am I … and those of us who are pushing for a public health insurance don't disagree with this goal. This is not a principled fight. This is a fight about strategy for getting there and I believe we will."

And let's be clear about how they mean to do it:

> Recent SCHIP expansion and additional Medicaid funding in the stimulus package made a substantial down payment on major expansion of government run health programs. Established research shows that a public health plan will "crowd out" private insurance, forcing millions of Americans off their current plans, and away from their family doctors. A public health plan, coupled with Comparative Effectiveness Research, would engineer artificially lower prices for medical services through the imposition of Medicare-style price controls. Such Medicare-style payment levels would undercut the market share of existing private health plans, and, combined with a mandate on employers, stack the incentives against workers in private employer-based health insurance by encouraging their employers to dump them into a new government-run health plan. Watch the video of Rep. Schakowksy's statements on The Foundry. She clearly admits that the purpose of the government run option is to kill private insurance so everyone eventually is forced into government-run health care.

And the result is also known:

> Moving all Americans into a government-run health care system will not only bankrupt our country, but will lead to less innovation in the health care sector and lower quality care for all Americans.

This is what people who vote for Democrats will get. It's not what they expected, but it's what they'll get.

What will cap and trade mean for American consumers?

May 4, 2009 | by Wintery Knight | Link | Original Link

The Heritage Foundation posted this summary of the top ten points regarding cap and trade.

> ***Cap and Trade Top Ten List***
> 1. Cap and Trade Is a Massive Energy Tax
> 2. It Will Not Make A Substantive Impact on the Environment
> 3. It Will Kill Jobs
> 4. It Will Cause Electricity Bills and Gas Prices to Sharply Increase
> 5. It Will Outsource Manufacturing Jobs and Hurt Free Trade
> 6. It Will Make You Choose Between Energy, Groceries, Clothing or Haircuts.
> 7. It Will Be Highly Susceptible to Fraud and Corruption
> 8. It Will Hurt Senior Citizens, the Poor, and the Unemployed the Worst
> 9. It Will Cost American Families Over $3,000 a Year
> 10. President Obama Admitted "Electricity Rates Would Necessarily Skyrocket" under a cap-and-trade program. (January 2008)

I can help with number 4: the energy price increases for consumers are right here, courtesy of Michele Bachmann.

Their post goes on to list and analyze the effects of various legislation proposed by Democrats in terms of number of jobs lost and amount of money confiscated from the private sector for the government to spend. It's amazing how many times Democrats tried to destroy the economy while Bush was President. And now they will finally be able to do it!

The article also mentions how many jobs will be lost by the proposed green jobs programs, as well as how many jobs will be outsourced to China and India, who will enjoy a manufacturing boom since they are not capping their emissions at all.

That's right, let's be clear on that:

> The Ultimate Outsourcing: India and China have repeatedly said they would not match U.S. environmental goals in order to protect their economies. Cap and Trade will merely move manufacturing jobs to China and India.

There are people I know who voted for Obama who are worried about their jobs. They complain to me about outsourcing. They do not understanding that Obama causes outsourcing by taxing "the rich" and regulating "greedy corporations". What a tragedy! Defeated by your own ignorance!

The 10 part series on cap and trade

The Heritage Foundation has also started a nice series of 10 posts about what cap and

trade will do to the economy. In this series, they are going into a lot more detail than in the summary posted I talked about above.

Part 1 is called Cap-and-Tax is a Jobs Destroyer.

They explain cap and trade:

> It works like this: Policymakers set a cap on the amount of carbon dioxide and other greenhouse gases that can be omitted into the atmosphere. Each power plant, factory, refinery, and other regulated entity will be allocated allowances (rights to emit) six greenhouse gases. However, only a certain percentage of the allowances will be allocated to these entities. The remaining percentage will be auctioned off or distributed to other emitting entities. Most emitters will need to purchase at least some allowances at auction. Emitters who reduce their emissions below their annual allotment can sell their excess allowances to those who do not–the trade part of cap-and-trade. Over time, the cap would be ratcheted down, requiring greater cuts in emissions.

So this is basically a tax on energy production. Yes, Democrats think that we produce too much energy, employing too many Americans, and that we sell it for too little money. According to Democrats, we need less production, fewer jobs and higher consumer prices for electricity. And other companies who use energy will have to pay more for it as well.

Take a look at this graph showing projected job losses under the Liberman-Warner cap and trade bill:

Jobs lost from Lieberman-Warner bill
Click the image for a bigger version.

Now let's take a look at Part 2, which is called Cap and Trade will force you to make budget cuts.

Again, Heritage explains how cap and trade transfers money out of the private sector, where money is used to produce goods, into the public sector, where money is wasted by bureacrats on bicycle paths and gold monuments to Obama.

> …if President Obama were to sign a cap and trade bill into law, he would have to call for familial budget cuts much greater than one dollar. (For a brief explanation of how cap and trade works, go here.) As recently acknowledged by a top White

> House official, a global warming tax could generate as much as $1.9 trillion in tax revenue over eight years, which amounts to a nearly $2,000 tax every year for every American household.* Add this up over the period of a few years and we're talking about trillions of dollars in lost income for the entire U.S. economy.

And here's the chart:

How much will cap and trade cost you?

I hope the people with low income who were hoping to become rich under Obama won't be too shocked to find that the poor do better under *capitalism* not *socialism*. I mean, I hope they don't drop their television remote controls and doughnuts.

Save us Michele Bachmann!

Actually, she did save us on that mortgage cramdown bill that I blogged about while back. So my pleading is not in vain.

UPDATE: Good news! Michelle Malkin says the cap and trade tax is in trouble! It turns out that the Democrats in manufacturing-intensive states are aware of what the tax will mean to their unemployment rate.

> Yesterday, I noted Henry Waxman's debate-evading maneuvers to try and facilitate passage of the massive eco-tax/"climate change" bill.
>
> The NRCC sent out a helpful fact sheet outlining why the radical green plan is really in trouble. You can thank opposition from Democrats in manufacturing and energy-producing states.

Michelle has all the citations from the Democrat politicians who are never going to vote for this mess. So, good news!

UPDATE: My post on the fraud involved in the "polar ice caps are melting" myth.

Michele Bachmann evaluates Obama's first 100 days

May 4, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

I *do* recommend that you watch at least the CNBC video clip below, as she *is* wearing my favorite color (white).

And here she is again on Fox News with Liz Claiborne.

She makes even swine flu seem *terribly* interesting.

Thanks for the Maritime Sentry for the butterflies videos.

Bill H.R. 1966 would make blogging a crime, punishable by up to two years in prison

May 4, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from Small Dead Animals! Thanks for the link, Kate! Canadian readers, this post that I wrote is an index to most of my recent posts on your free speech troubles with the Human Rights Commissions. I hope and pray that you guys can get your civil liberties restored, and be the True North Strong and Free, again!

UPDATE: If you are looking for the story on the hate crime bill that adds pedophiles to the list of "protected" groups, see here.

Wow, check out this story from OpenMarket blog.

Excerpt:

> Under a recently-introduced bill, H.R. 1966, bloggers would face up to two years in prison if they "harass" public figures by criticizing them in a "severe, repeated, and hostile" manner, and thereby cause them "substantial emotional distress."

I guess fascism is coming along faster than I thought.

> U.C.L.A. Law Professor Eugene Volokh, the author of a First Amendment treatise, has concluded that the bill is unconstitutional. I agree, as I explain here. As a federal appeals court noted in *DeJohn v. Temple University* (2008), "there is no harassment exception to the First Amendment's free speech clause." Speech that causes emotional distress can be protected,as the Supreme Court made clear in barring a lawsuit by Jerry Falwell over an offensive parody.

Wow, it's like the left is doing everything they accused Bush of doing, which he never did. The fascist policies they imagined were all projections onto Bush of what they intended to do themselves! Now I get it. It wasn't conservatives who were in favor of government control of private lives, it was the progressive left.

> The bill is a telling example of how the American Left has turned against free speech and civil liberties. The bill's sponsor, Linda Sanchez (D-CA), and nearly all of her 14 co-sponsors are liberals. All of them backed the federal hate-crimes bill passed by the House yesterday, which is designed to allow people who have been found innocent in state court to be reprosecuted in federal court. (That bill has been criticized by four members of the U.S. Civil Rights Commission, including law professor Gail Heriot, and by civil libertarian Wendy Kaminer. Advocates of the federal hate-crimes bill once cited the defendants in the Duke Lacrosse case, who were innocent, as an example of people who should be prosecuted in federal court).

And don't forget about the hate crimes bill: I wrote previously about the two ways in

which that bill is unconstitutional.

Why do conservative Catholics support Obama so strongly?

May 5, 2009 | by Wintery Knight | Link | Original Link

Let's see what the story is, from Hot Air:

> I know I've said this before on the site, and I know many devout Catholics' experiences are different, but having grown up in the Church, there's nothing here that surprises me. Most Catholics I know treat the Church's commands as essentially hortatory, to be politely ignored when need be — as in the case of torture — which is why I can't quite fathom the outrage over a pro-choicer as adamant as The One speaking at Notre Dame. His job approval this month among Catholics is *70 percent*, and 65 percent among those who attend church weekly. They're fighting a losing battle here.

Allahpundit then goes on to quote the findings here:

> Even Catholics who consider themselves "conservative" politically are more likely to approve than disapprove of Obama's job performance [49/40]…
>
> In fact, 53% of Catholics voted for Obama for president in November, almost identical to the 52.9% of the popular vote Obama won in the 2008 election. Catholics' 67% approval of Obama in his first 100 days is slightly higher than his overall 63% average approval rating for the same period. Thus, relative to the population, Catholics have become a bit more supportive of Obama as president than they were in the election.

This news makes the Wintery Knight sad… so sad, that he is tempted to cry tiny icicle tears.

I am an evangelical Protestant Christian who believes in the inerrancy of the Bible (in the autographs). I think that one of the reasons why evangelical Protestants are more politically conservative than Catholics (and some mainline Protestants) is because there is more emphasis on free market capitalism in evangelical Protestantism.

Evangelical Protestants are also more conservative on the exclusivity of salvation than Catholics are. We believe that salvation is based on knowing God, not on doing good works. I think some Catholic voters are being swayed by Obama's emphasis on helping the poor, even by government redistribution of wealth. This is also true for mainline Protestants, who seem to be increasingly concerned with social justice instead of economic liberty, and they are also soft on exclusive salvation.

UPDATE: Commenter ECM says that I should not make too much of this poll, because it is done by Gallup and their polls lately have been way off.

UPDATE: And now I'm going to rebut my own post: Pastor Joel Hunter says Obama Displaying "Wisdom and Balance" During First 100 Days. (H/T The Pugnacious Irishman)

Excerpt:

> As someone who is completely pro-life (concerned about the vulnerable outside the womb as well as inside the womb), I am encouraged by the vision (and budget) President Obama has cast for empowering those marginalized with the resources they need to become responsible citizens.
>
> …By supporting sex education and contraception, we reduce the number of unexpected pregnancies and thus reduce the likelihood of abortion. Also, by supporting expectant mothers who are feeling pressure to have an abortion because of financial concerns, education interruptions, or the baby having development problems, we again decrease the likelihood and therefore the incidence of abortion.
>
> …Even the overturning of the Mexico City Policy had a pro-life side to it, in that sex education, contraception and family planning almost certainly will decrease the number of abortions performed."

It's the social justice that does them in, and I should write something about how social justice suddenly became the main job of the church instead of spreading the Gospel and answering speculations against it. What do you expect when people abandon truth? If religion is about meeting people's needs, then everybody goes to Heaven and we should all focus on making people feel good about their sins in the here and now.

EVERYBODY: Say it with me: when you subsidize something, you get more of it. When you tax something, you get less of it. Subsidizing pre-marital sex gives you more pre-marital sex, and more accidental pregnancies, and more abortions. Reduce government subsidies and support for risky sex, and you lower the number of abortions.

UPDATE: Maritime Sentry has a much more reliable Rasmussen Reports poll shows that Catholics are more serious about their faith than the flawed Galup poll indicated.

Why Democrat policies discourage men from marrying, part 1

May 5, 2009 | by Wintery Knight | Link | Original Link

This article is the first of a three-part series on how Democrat policies discourage marriage and child-rearing. Part 2 is here and Part 3 is here.

How women's voting grew government and destroyed the need for fathers

Let's start with a research paper written by economists John Lott, then at Yale University, and Lawrence Kenny, then at University of Florida. The peer-reviewed paper was published by in the University of Chicago's Journal of Political Economy. The abstract summarizes the argument I am about to make in their abstract to the paper.

> This paper examines the growth of government during this century as a result of giving women the right to vote. Using cross-sectional time-series data for 1870–1940, we examine state government expenditures and revenue as well as voting by U.S. House and Senate state delegations and the passage of a wide range of different state laws. **Suffrage coincided with immediate increases in state government expenditures and revenue and more liberal voting patterns for federal representatives, and these effects continued growing over time as more women took advantage of the franchise.** Contrary to many recent suggestions, the gender gap is not something that has arisen since the 1970s, and it helps explain why American government started growing when it did.

Now let's look at this article by John Lott from Fox News, available here.

> For decades, polls have shown that women as a group vote differently than men. Without the women's vote, Republicans would have swept every presidential race but one between 1968 and 2004.
>
> The gender gap exists on various issues. The major one is the issue of smaller government and lower taxes, which is a much higher priority for men than for women. This is seen in divergent attitudes held by men and women on many separate issues.
>
> Women were much more opposed to the 1996 federal welfare reforms, which mandated time limits for receiving welfare and imposed some work requirements on welfare recipients. Women are also more supportive of Medicare, Social Security and educational expenditures.
>
> Studies show that women are generally more risk-averse than men. This could be why they are more supportive of government programs to ensure against certain risks in life.
>
> Women's average incomes are also slightly lower and less likely to vary over

> time, which gives single women an incentive to prefer more progressive income taxes. Once women get married, however, they bear a greater share of taxes through their husbands' relatively higher incomes — so their support for high taxes understandably declines.
>
> Marriage also provides an economic explanation for why men and women prefer different policies.
>
> Because women generally shoulder most of the child-rearing responsibilities, married men are more likely to acquire marketable skills that help them earn money outside the household. If a man gets divorced, he still retains these skills. But if a woman gets divorced, she is unable to recoup her investment in running the household.
>
> Hence, single women who believe they may marry in the future, as well as married women who most fear divorce, look to the government as a form of protection against this risk from a possible divorce: a more progressive tax system and other government transfers of wealth from rich to poor. The more certain a woman is that she doesn't risk divorce, the more likely she is to oppose government transfers.

And I have to quote his interesting conclusion:

> During the early 1970s, just as women's share of the voting population was leveling off, something else was changing: The American family began to break down, with rising divorce rates and increasing numbers of out-of-wedlock births.
>
> Over the course of women's lives, their political views on average vary more than those of men. Young single women start out being much more liberal than their male counterparts and are about 50 percent more likely to vote Democratic. As previously noted, these women also support a higher, more progressive income tax as well as more educational and welfare spending.
>
> But for married women this gap is only one-third as large. And married women with children become more conservative still. Women with children who are divorced, however, are suddenly about 75 percent more likely to vote for Democrats than single men. So as divorce rates have increased, due in large part to changing divorce laws, voters have become more liberal.

The article also explains what statistics were used to arrive at these conclusions.

Based on this research, I argue that as government grows, it takes over all of the traditional responsibilities of the mothers *and* fathers, because socialists don't trust parents to raise their own children. Government provides and controls day care, policing, counseling, schooling, finances, etc. As the sphere of government increases, there is less money for families to spend, and less influence for parents.

And as men see that there is nothing for them to do, they begin to withdraw from responsible behaviors like marriage and child-rearing. Men need to be needed, valued

and respected for doing tasks that only they can do. Men rise to challenges *if* they are in control. Men don't like to share authority with anyone, especially a meddling feminist-marxist state! More government means fewer manly men.

Let's take a quick peek ahead to tomorrow's topic to see why the welfare state is hostile to marriage and family.Stanley Kurtz, writing in the Weekly Standard, talks about feminism, contraception, abortion and the welfare state.

> In Sweden, as elsewhere, the sixties brought contraception, abortion, and growing individualism. Sex was separated from procreation, reducing the need for "shotgun weddings." These changes, along with the movement of women into the workforce, enabled and encouraged people to marry at later ages. With married couples putting off parenthood, early divorce had fewer consequences for children. That weakened the taboo against divorce. Since young couples were putting off children, the next step was to dispense with marriage and cohabit until children were desired. Americans have lived through this transformation. The Swedes have simply drawn the final conclusion: If we've come so far without marriage, why marry at all? Our love is what matters, not a piece of paper. Why should children change that?
>
> Two things prompted the Swedes to take this extra step–the welfare state and cultural attitudes. No Western economy has a higher percentage of public employees, public expenditures–or higher tax rates–than Sweden. The massive Swedish welfare state has largely displaced the family as provider. By guaranteeing jobs and income to every citizen (even children), the welfare state renders each individual independent. It's easier to divorce your spouse when the state will support you instead.
>
> The taxes necessary to support the welfare state have had an enormous impact on the family. With taxes so high, women must work. This reduces the time available for child rearing, thus encouraging the expansion of a day-care system that takes a large part in raising nearly all Swedish children over age one. Here is at least a partial realization of Simone de Beauvoir's dream of an enforced androgyny that pushes women from the home by turning children over to the state.
>
> …There are also cultural-ideological causes of Swedish family decline. Even more than in the United States, radical feminist and socialist ideas pervade the universities and the media. Many Scandinavian social scientists see marriage as a barrier to full equality between the sexes, and would not be sorry to see marriage replaced by unmarried cohabitation. A related cultural-ideological agent of marital decline is secularism. Sweden is probably the most secular country in the world. Secular social scientists (most of them quite radical) have largely replaced clerics as arbiters of public morality. Swedes themselves link the decline of marriage to secularism. And many studies confirm that, throughout the West, religiosity is associated with institutionally strong marriage, while heightened

> secularism is correlated with a weakening of marriage. Scholars have long suggested that the relatively thin Christianization of the Nordic countries explains a lot about why the decline of marriage in Scandinavia is a decade ahead of the rest of the West.

Democrats are anti-family, and pro-big-government. The reason why there is a huge weakening of marriage and skyrocketing rates of out-of-wedlock births is because Democrats have replaced the need to marry competent, responsible men with an anonymous welfare check from the state, thus depriving children of fathers. Women don't need men to rise to the occasion when they know that a welfare check, social programs and a divorce settlement is there to back them up.

This series will be continued tomorrow with another scholar and another data point.

HUGE natural gas discovery in Louisiana! And Texas, Arkansas and Pennsylvania!

May 5, 2009 | by Wintery Knight | Link | Original Link

Bobby and Supriya Jindal

GREAT NEWS! Oh, I know that I usually say some depressing things on this blog… but I'm going to make up for all that right now by bringing out the Bobby and Supriya Jindal picture to illustrate this exciting story.

Here's the story from the Wall Street Journal, courtesy of commenter ECM. The title is "U.S. Gas Fields Go From Bust to Boom".

Excerpt:

> A massive natural-gas discovery here in northern Louisiana heralds a big shift in the nation's energy landscape. After an era of declining production, the U.S. is now swimming in natural gas.
>
> Even conservative estimates suggest the Louisiana discovery — known as the Haynesville Shale, for the dense rock formation that contains the gas — could hold some 200 trillion cubic feet of natural gas. That's the equivalent of 33 billion barrels of oil, or 18 years' worth of current U.S. oil production. Some industry executives think the field could be several times that size.
>
> "There's no dry hole here," says Joan Dunlap, vice president of Petrohawk Energy Corp., standing beside a drilling rig near a former Shreveport amusement park.
>
> Huge new fields also have been found in Texas, Arkansas and Pennsylvania. One industry-backed study estimates the U.S. has more than 2,200 trillion cubic feet of gas waiting to be pumped, enough to satisfy nearly 100 years of current U.S. natural-gas demand.
>
> The discoveries have spurred energy experts and policy makers to start looking to natural gas in their pursuit of a wide range of goals: easing the impact of energy-price spikes, reducing dependence on foreign oil, lowering "greenhouse

> gas” emissions and speeding the transition to renewable fuels.
>
> …The natural-gas discoveries come as oil has become harder to find and more expensive to produce. The U.S. is increasingly reliant on supplies imported from the Middle East and other politically unstable regions. In contrast, 98% of the natural gas consumed in the U.S. is produced in North America.
>
> Coal remains plentiful in the U.S., but is likely to face new restrictions. To produce the same amount of energy, burning gas emits about half as much carbon dioxide as burning coal.

Scary happenings around the world that the Democrats ignore

May 5, 2009 | by Wintery Knight | Link | Original Link

I was trying to work my way through the latest voluminous post from my buddy Binks over at Free Canuckistan, and I thought that I would share some links with you from stories around the world. Warning, these are pretty depressing.

Brazil: Brazilian President Will Seek to "Criminalize Words and Acts Offensive to Homosexuality".

> In a written address delivered to the Third Congress of the Brazilian Association of Gays, Lesbians, Bisexuals, Transvestites, and Transsexuals (ABGLT), Lula denounced groups, most of them Christian, who have objected to plans to outlaw such speech, calling them "hypocrites."
>
> "Some backward as well as hypocritical sectors … have criticized our government for supporting initiatives that criminalize words or acts that are offensive to homosexuality," he wrote. "That has no importance. I will continue, with the support of the entire government, to maintain that attitude."
>
> As LifeSiteNews has reported in the past, Lula has for several years sought to pass a "homophobia law" that would make it a crime to criticize homosexual behavior.

India: India is in peril. Obama is making it worse.

> The real threat is of an Islamist takeover of Pakistan. Yet Obama's strategy on Afghanistan and Pakistan (or 'Af-Pak' in Washingtonese) inspires little confidence. Throwing more money at Pakistan and keeping up the pretence that the badly splintered and weakened al-Qa'eda poses the main terrorist threat risks failure.
>
> …As Bush's national security adviser Stephen Hadley pointed out just before leaving office in January, 'You can't really solve Afghanistan without solving Pakistan.'
>
> …Yet to mend a broken policy on Pakistan, Obama is doing more of what helped to create the failure — dispensing rewards upfront.It's no wonder that even as the Taleban's sway in Pakistan spreads, the US defense secretary Robert Gates declared in Krakow that the United States 'would be very open' to an agreement in Afghanistan similar to the one Pakistan made with the Taleban which ceded control of the Swat Valley to the Taleban. All this is music to the ears of the Pakistani military and its offspring — the Taleban.

Venezuela: In Venezuela, political opposition has a price.

> In 2002-2004, almost 5 million Venezuelans signed one or more in a series of three petitions calling for an election to remove President Hugo Chavez from

> office. After Chavez survived the recall vote of August 2004, the names of those who had signed the final petition were compiled into a database using software called *Maisanta*.
>
> Now economic analysis has found evidence that petition signers paid a price in lost employment and wages. This tends to corroborate long-held suspicions that the Chavez government used the *Maisanta* database as an enemies list. The analysis also quantifies the loss to Venezuela's economy due to the regime's apparent indulgence of political vendettas.

Middle East: Woman's Inhumanity to Woman, Jihadic Style.

> …there were three carefully organized explosions on one day in Iraq, which killed a total of 80 civilians. One explosion was carried out by a woman in a black abaya, holding a 5 year-old child's hand, (probably not her own). She killed herself and 28 other Muslims in a crowded market in a Baghdad slum. The civilians, many of whom were other women, were waiting on line for free flour, cooking oil, tea, macaroni, and other staples that the police were handing out. Of course, police officers died as well.
>
> I have written a number of articles about Muslim mothers who have participated, both directly and indirectly, in the honor killing of their daughters; and about female Muslim suicide-homicide bombers who have specifically targeted other women and children.
>
> For example, in 2008, in Iraq, one of four female homicide bombers entered a tent that provided shelter to weary female religious pilgrims. She sat down, read the Koran with them, and left a bag behind that, moments later, blew them all up. Please note that she targeted *weary, religious* Muslim women.
>
> Thus, I was dismayed but not surprised when a Sunni, Al-Qaeda plot emerged, one in which male terrorists raped eighty Muslim girls and women, then turned them over to Samira Jassim who patiently, persistently, "maternally," persuaded the rape victims, (many of whom had been targeted because they were depressed or mentally ill), to "cleanse" their shame by blowing themselves and other Muslims up. Twenty eight women did so.

Middle East: Nine Muslim countries among top 13 "egregious" violators of religious freedom. (Quote below is from CNN)

> A U.S. government panel listed 13 countries Friday as "egregious" violators of religious freedom.
>
> The U.S. Commission on International Religious Freedom's annual report named Myanmar, North Korea, Eritrea, Iran, Iraq, Nigeria, Pakistan, China, Saudi Arabia, Sudan, Turkmenistan, Uzbekistan, and Vietnam.

Cuba: What Bob Gates Should Do With the Gitmo Uighurs.

> So, Defense Secretary Gates now confirms for the first time that, yes, the Obama administration intends to release "some" Uighurs into the US–said Uighurs being the 17 Chinese Muslims at GItmo whom Andy McCarthy describes as being "steeped in jihadist ideology, trained in explosives and assassination tactics, and anxious enough to get that way that they high-tailed it from China to Afghanistan to become more lethal terrorists."

Egypt: Coptic Priests and Women Assaulted.

> The Egyptian State Security forces attacked and demolished on 26/04/09 at 7.30 am the services building belonging to the Coptic Orthodox Diocese of Masrah Matrouh, assaulting the Coptic priests and Coptic women and men. More than 1000 Copts have surrounded the remains of the demolished building, ready for martyrdom, said a church member.

Scotland: Scottish Schoolchildren to Attend Government Funded "Islamophobia Workshops". (from UK Press)

> The Scottish Government is to back efforts to challenge Islamophobia in schools across the country.
>
> More than £81,000 will be spent on holding more than 150 workshops in secondary schools over the next two years.
>
> The move was announced by the Education Secretary Fiona Hyslop and welcomed by the charity Show Racism The Red Card, which will put on the 90-minute workshops.

And here's one from Laura over at Pursuing Holiness…

Europe: Hey, Europe – don't like U.S. control of the internet? Then build your own.

> ICANN is a non-profit organization that coordinates things like the system that allows you to type hotair.com instead of 67.192.179.13 into your browser's address bar. It has that authority thanks to a Joint Project Agreement with the Department of Commerce. It also manages domain name disputes like the People for the Ethical Treatment of Animals vs. People Eating Tasty Animals fight over peta.org. (The carnivores lost.) That JPA is going to expire on September 30th, and the United Nations and the European Union are continuing their ongoing fight to gain control.
>
> I'm not a big fan of ICANN for a number of reasons. But turning control of basic internet functions that we've come to take for granted over to the nanny-state Europeans is even worse. People who "issue binding regulations governing all aspects of public life on all member states, right down to the sizes of apples and oranges in street markets" are not fit guardians of the internet.
>
> They micromanage business and their impulse is to criminalize and control dissenting opinion…

Commenter ECM sent me this article from the UK Times featuring a video of actual torture.

> The 45-minute tape shows a man that the Government of Abu Dhabi has acknowledged is Sheikh Issa bin Zayed al-Nahyan — one of 22 royal brothers of the UAE President and Abu Dhabi Crown Prince — mercilessly and repeatedly beating a man with a cattle prod and a nailed board, burning his genitals and driving his Mercedes over him several times. He is assisted by a uniformed policeman.

This act, by a member of the United Arab Emirates Royal Family, is *actually* torture. When the USA waterboards a terrorist, it's *not* torture, and we potentially save thousands of lives from future terrorist attacks. Check out this article from the Weekly Standard regarding the Democrats' politicization of national security and foreign policy.

Excerpt:

> **…In a letter to his intelligence community colleagues last Thursday, Director of National Intelligence Dennis Blair described those briefings. "From 2002 through 2006 when the use of these techniques ended, the leadership of the CIA repeatedly reported their activities both to Executive Branch policymakers and to members of Congress, and received permission to continue to use the techniques."**
>
> **That passage from Blair's letter – along with another confirming that the interrogations produced "high-value information" that provided a "deeper understanding of the al Qaeda organization attacking this country" – was dropped when language from the letter was released publicly. A spokesman for Blair attributed to the omission to normal editing procedures.**
>
> In an interview this morning, senior Bush administration official accused the DNI of "politicizing intelligence" by attempting to hide his judgment that the program had produced valuable results. This official also accused the Obama administration of double standards, citing its professed belief in transparency and its unwillingness – at least so far – to declassify memos that demonstrate the value of the interrogation techniques Obama has banned.

I have an idea. Let's kick these bums out in 2010!

Conservative Marco Rubio announces for Florida Senate seat

May 6, 2009 | by Wintery Knight | Link | Original Link

I spotted this over on the Maritime Sentry, a conservative policy-oriented blog.

Excerpt:

> This gives the voters of Florida a chance to elect a true Conservative. Marco Rubio already has a record of standing on principle and being an articulate spokesman for Conservative ideals. Here is his official announcement video.

The video:

Cuban-Americans are SO CONSERVATIVE! They know the dangers of progressive policies.

I also noticed that the fiscal conservatives at the Club for Growth are pretty excited as well!

Excerpt:

> Rubio, a young Cuban-American, highlighted his conservative record in a recent interview with the Club for Growth – including efforts to overhaul Florida's tax system, reduce property taxes, and decrease the size of government.
>
> "His fiscally responsible, pro- growth approach in the State Capitol stands in stark contrast with other elements of the state government, led by Charlie Crist" said Club for Growth President Chris Chocola.

Also from the Washington Independent's David Weigel, good news for Pat Toomey in Pennsylvania: (H/T Club For Growth)

> The campaign of Pennsylvania GOP Senate candidate Pat Toomey announced that is has raised "raised over half a million dollars from over four thousand contributors" since the candidate entered the race on April 15. A hard number would be more interesting, but the campaign is backing up what a campaign worker told me (anonymously, for some reason) on the day of the the Specter switch: that the Website was deluged with donations.

Looking good for 2010!

UPDATE: I found even MORE good news over on the Anchoress' blog. She has a post filled with interesting links, including a link to a recent Pew Research poll. The poll shows that the public is becoming more supporting of the pro-life view and the pro-legal-gun-ownership view.

> For the first time in a Pew Research survey, nearly as many people believe it is more important to protect the right of Americans to own guns (45%) than to control gun ownership (49%). As recently as a year ago, 58% said it was more

> important to control gun ownership while 37% said it was more important to protect the right to own guns.
>
> …Currently, 46% say abortion should be legal in most cases (28%) or all cases (18%); 44% believe that abortion should be illegal in most (28%) or all cases (16%).

So, some things are going well!

Why do people favor legal private ownership and concealed carry of handguns?

May 6, 2009 | by Wintery Knight | Link | Original Link

The entire practical case for concealed carry is based on a comparison between the number of crimes that can be prevented by brandishing a weapon versus the number of incidents where firearms are misused. Basically, supporters of the 2nd amendment (the right to bear arms) argue that the number of successful defensive handgun uses is high, and the number of accidents is low.

Take a look at this defensive handgun usage story from WSB TV: (H/T John Lott, Michelle Malkin)

> COLLEGE PARK, Ga. — A group of college students said they are lucky to be alive and they're thanking the quick-thinking of one of their own.
>
> Police said a fellow student shot and killed one of two masked me who burst into an apartment.
>
> Channel 2 Action News reporter Tom Jones met with one of the students to talk about the incident.
>
> "Apparently, his intent was to rape and murder us all," said student Charles Bailey.
>
> Bailey said he thought it was the end of his life and the lives of the 10 people inside his apartment for a birthday party after two masked men with guns burst in through a patio door.
>
> "They just came in and separated the men from the women and said, 'Give me your wallets and cell phones,'" said George Williams of the College Park Police Department.
>
> Bailey said the gunmen started counting bullets. "The other guy asked how many (bullets) he had. He said he had enough," said Bailey.
>
> That's when one student grabbed a gun out of a backpack and shot at the invader who was watching the men. The gunman ran out of the apartment.
>
> The student then ran to the room where the second gunman, identified by police as 23-year-old Calvin Lavant, was holding the women.
>
> "Apparently the guy was getting ready to rape his girlfriend. So he told the girls to get down and he started shooting. The guy jumped out of the window," said Bailey. . . . . .

If you are a supporter of gun control, how does a story like this fit into your worldview?

What if the number of defensive handgun uses was 1 million per year, but the number of accidental incidents was less than a 100? Is that worth looking into, or is this an issue where facts must yield to emotions and intuitions?

RELATED: I found a story recently in Reason magazine in which the writer explains how the banning of handguns in the UK in 1997 *DOUBLED* the violent crime rate in the next 4 years. The whole point of the case for permitting the concealed carry of legally owned handguns is that it *dramatically* reduces violent crime.

Excerpt:

> The illusion that the English government had protected its citizens by disarming them seemed credible because few realized the country had an astonishingly low level of armed crime even before guns were restricted. A government study for the years 1890-92, for example, found only three handgun homicides, an average of one a year, in a population of 30 million. In 1904 there were only four armed robberies in London, then the largest city in the world. A hundred years and many gun laws later, the BBC reported that England's firearms restrictions "seem to have had little impact in the criminal underworld." Guns are virtually outlawed, and, as the old slogan predicted, only outlaws have guns. Worse, they are increasingly ready to use them.
>
> Nearly five centuries of growing civility ended in 1954. Violent crime has been climbing ever since. Last December, London's *Evening Standard* reported that armed crime, with banned handguns the weapon of choice, was "rocketing." In the two years following the 1997 handgun ban, the use of handguns in crime rose by 40 percent, and the upward trend has continued. From April to November 2001, the number of people robbed at gunpoint in London rose 53 percent.
>
> Gun crime is just part of an increasingly lawless environment. From 1991 to 1995, crimes against the person in England's inner cities increased 91 percent. And in the four years from 1997 to 2001, the rate of violent crime more than doubled. Your chances of being mugged in London are now six times greater than in New York. England's rates of assault, robbery, and burglary are far higher than America's, and 53 percent of English burglaries occur while occupants are at home, compared with 13 percent in the U.S., where burglars admit to fearing armed homeowners more than the police. In a United Nations study of crime in 18 developed nations published in July, England and Wales led the Western world's crime league, with nearly 55 crimes per 100 people.
>
> This sea change in English crime followed a sea change in government policies. Gun regulations have been part of a more general disarmament based on the proposition that people don't need to protect themselves because society will protect them. It also will protect their neighbors: Police advise those who witness a crime to "walk on by" and let the professionals handle it.

So, given this data regarding legal gun ownership and violent crime rates, what should

our policy be?

The Family Research Center evaluates Barack Obama's first 100 days

May 6, 2009 | by Wintery Knight | Link | Original Link

Has Obama been a good President for Christians? Should Christians have voted for him? How well has he done at fulfilling his campaign promises to pro-life and pro-marriage social conservatives?

Watch this 7-minute video and see for yourself how prudent it was for Christians to put their faith in Obama's promises. (H/T Gateway Pundit)

The Cloak Room lists the decisions of interest to Christians and social conservatives from the first 100 days of Obama's regime.

I think we should judge presidential candidates on their record, not on their speeches or their appearance. How did Obama vote before his campaign started? Did the Christians who voted for Obama take the time to find out?

This video follows the story of the Democrats' Hate Crime bill, which allows the government to imprison bloggers and Christians, (much like Iran's theocratic government). My original post on Obama's attempts to intimidate Chrysler's creditors, thereby undermining the Constitution and the rule of law, is here. And it has now been corroborated over at Hot Air, here.

Regarding the intimidation of Chrysler's creditors, Hot Air has a follow-up story from the Business Insider:

> Creditors to Chrysler describe negotiations with the company and the Obama administration as "a farce," saying the administration was bent on forcing their hands using hardball tactics and threats.
>
> Conversations with administration officials left them expecting that they would be politically targeted, two participants in the negotiations said. …
>
> The sources, who represent creditors to Chrysler, say were taken aback by the hardball tactics that the Obama administration employed to cajole them into acquiescing to plans to restructure Chrysler. One person said described the administration as the most shocking "end justifies the means" group they have ever encountered. Another characterized Obama was "the most dangerous smooth talker on the planet- and I knew Kissinger." Both were voters for Obama in the last election.
>
> **One participant in negotiations said that the administration's tactic was to present what one described as a "madman theory of the presidency" in which the President is someone to be feared because he was willing to do anything to get his way. The person said this threat was taken very seriously by his firm.**

Hot Air comments:

> Well, that's certainly reassuring. The man at the helm during one of the biggest economic crises in decades is a madman who will act in an unpredictable and irrational manner if he doesn't get his way. It sounds like they paint Obama as either a lunatic or a petulant child.

The "madman theory" of the Presidency? Is that what uninformed Christians who voted for Obama expected?

UPDATE: Ace has more here and here. (H/T Commenter ECM) And Hot Air (Ed Morrissey) has more here.

Why Democrat policies discourage men from marrying, part 2

May 6, 2009 | by Wintery Knight | Link | Original Link

This article is the second of a three-part series on how Democrat policies discourage marriage and child-rearing. Part 1 is here and Part 3 is here.

How same-sex marriage separates marriage from procreation and child-rearing

This time we'll look at an article from the Weekly Standard by Stanley Kurtz. He looks at the death of marriage in Scandinavia and concludes that the policy of same-sex marriage encourages people to separate the concept of marriage from the need to provide a stable environment in which to raise children. This results in fewer people getting married.

Let's take a look at his conclusion, first.

> A majority of children in Sweden and Norway are born out of wedlock. Sixty percent of first-born children in Denmark have unmarried parents. Not coincidentally, these countries have had something close to full gay marriage for a decade or more. Same-sex marriage has locked in and reinforced an existing Scandinavian trend toward the separation of marriage and parenthood.
>
> …More precisely, it has *further* undermined the institution. The separation of marriage from parenthood was increasing; gay marriage has widened the separation. Out-of-wedlock birthrates were rising; gay marriage has added to the factors pushing those rates higher. Instead of encouraging a society-wide return to marriage, Scandinavian gay marriage has driven home the message that marriage itself is outdated, and that virtually any family form, including out-of-wedlock parenthood, is acceptable.

Basically, same-sex marriage, and especially no-fault divorce, undermines the purpose of marriage. Marriage is for children. But when you ask same-sex marriage proponents why it should be legal, they say: because getting married is what people do when they love each other. So, the purpose of marriage for them is the happiness for adults, not bringing up children.

But if Democrats make marriage policy in order to make adults happy, then when adults aren't happy, they can break those marriages up. The vision of providing an environment for children who are biologically linked to the parents has been lost. Children will not get a stable environment if people do not put happiness second, and commitment to a serious relationship first!

Kurtz continues:

> The family dissolution rate is different from the divorce rate. Because so many Scandinavians now rear children outside of marriage, divorce rates are unreliable measures of family weakness. Instead, we need to know the rate at which

> parents (married or not) split up. Precise statistics on family dissolution are unfortunately rare. Yet the studies that have been done show that throughout Scandinavia (and the West) cohabiting couples with children break up at two to three times the rate of married parents. So rising rates of cohabitation and out-of-wedlock birth stand as proxy for rising rates of family dissolution.
>
> By that measure, Scandinavian family dissolution has only been worsening. Between 1990 and 2000, Norway's out-of-wedlock birthrate rose from 39 to 50 percent, while Sweden's rose from 47 to 55 percent. In Denmark out-of-wedlock births stayed level during the nineties (beginning at 46 percent and ending at 45 percent). But the leveling off seems to be a function of a slight increase in fertility among older couples, who marry only after multiple births (if they don't break up first). That shift masks the 25 percent increase during the nineties in cohabitation and unmarried parenthood among Danish couples (many of them young). About 60 percent of first born children in Denmark now have unmarried parents. **The rise of fragile families based on cohabitation and out-of-wedlock childbearing means that during the nineties, the total rate of family dissolution in Scandinavia significantly increased.**
>
> …And now that married parenthood has become a minority phenomenon, it has lost the critical mass required to have socially normative force. As Danish sociologists Wehner, Kambskard, and Abrahamson describe it, in the wake of the changes of the nineties, "Marriage is no longer a precondition for settling a family–neither legally nor normatively. . . . What defines and makes the foundation of the Danish family can be said to have moved from marriage to parenthood."

What is the effect of this weakening of marriage on the children?

> In 2000, Danish sociologist Mai Heide Ottosen published a study, "Samboskab, Aegteskab og Foraeldrebrud" ("Cohabitation, Marriage and Parental Breakup"), which confirmed the increased risk of family dissolution to children of unmarried parents, and gently chided Scandinavian social scientists for ignoring the "quiet revolution" of out-of-wedlock parenting.
>
> Despite the reluctance of Scandinavian social scientists to study the consequences of family dissolution for children, we do have an excellent study that followed the life experiences of *all* children born in Stockholm in 1953. (Not coincidentally, the research was conducted by a British scholar, Duncan W.G. Timms.) That study found that regardless of income or social status, parental breakup had negative effects on children's mental health. Boys living with single, separated, or divorced mothers had particularly high rates of impairment in adolescence. An important 2003 study by Gunilla Ringbäck Weitoft, et al. found that children of single parents in Sweden have more than double the rates of mortality, severe morbidity, and injury of children in two parent households. This held true after controlling for a wide range of demographic and socioeconomic

> circumstances.

Now the question is, is same-sex marriage really viewed as a weapon against traditional marriage by left-wing radicals?

Well, it certainly is in Europe:

> Kari Moxnes, a feminist sociologist specializing in divorce, is one of the most prominent of Norway's newly emerging group of public social scientists. As a scholar who sees both marriage and at-home motherhood as inherently oppressive to women, Moxnes is a proponent of nonmarital cohabitation and parenthood. In 1993, as the Norwegian legislature was debating gay marriage, Moxnes published an article, "Det tomme ekteskap" ("Empty Marriage"), in the influential liberal paper Dagbladet. She argued that Norwegian gay marriage was a sign of marriage's growing emptiness, not its strength. Although Moxnes spoke in favor of gay marriage, she treated its creation as a (welcome) death knell for marriage itself. Moxnes identified homosexuals–with their experience in forging relationships unencumbered by children–as social pioneers in the separation of marriage from parenthood. In recognizing homosexual relationships, Moxnes said, society was ratifying the division of marriage from parenthood that had spurred the rise of out-of-wedlock births to begin with.
>
> A frequent public presence, Moxnes enjoyed her big moment in 1999, when she was embroiled in a dispute with Valgerd Svarstad Haugland, minister of children and family affairs in Norway's Christian Democrat government. Moxnes had criticized Christian marriage classes for teaching children the importance of wedding vows. This brought a sharp public rebuke from Haugland. Responding to Haugland's criticisms, Moxnes invoked homosexual families as proof that "relationships" were now more important than institutional marriage.
>
> …Months before Moxnes clashed with Haugland, social historian Kari Melby had a very public quarrel with a leader of the Christian Democratic party over the conduct of Norway's energy minister, Marit Arnstad. Arnstad had gotten pregnant in office and had declined to name the father. Melby defended Arnstad, and publicly challenged the claim that children do best with both a mother and a father. In making her case, Melby praised gay parenting, along with voluntary single motherhood, as equally worthy alternatives to the traditional family. So instead of noting that an expectant mother might want to follow the example of marriage that even gays were now setting, Melby invoked homosexual families as proof that a child can do as well with one parent as two.

At the center of the Democrat defense of same-sex marriage and single motherhood is the idea that children do not deserve the stability of a two parent family, with parents who are strongly linked to the children genetically. Democrats believe that children are playthings for adults, like pets, and therefore the happiness of adults is of primary concern.

But traditional marriage isn't about adults having their needs met. Traditional marriage is *explicitly* for the the purpose of creating a next generation of people. And people who marry for this purpose, especially people who go through pre-marital counseling, *know* that children are little monsters, and they *expect* to be sacrificing their happiness for the children.

Men engage in risky, demanding, self-sacrifical behaviors, like joining the army or marrying, because of the social respect they get for doing something hard that *not everyone can do.* Making a firm commitment is a hard thing to do, and raising children is a hard thing to do. That's why we invented marriage and we attach so much social respect to this institution.

But if we divorce marriage from commitment, stability and sacrifice for the sake of the children, then men will not get involved in this higher calling. If "marriage" is just two or more people living together and children are an accident, then why should men bother sacrificing their childish irresponsibility and selfishness when this sacrifice means nothing special to society?

Kurtz concludes:

> If America is to avoid being forced into a similar choice, we'll have to resist the separation of marriage from parenthood.
>
> …AMERICANS take it for granted that, despite its recent troubles, marriage will always exist. This is a mistake. Marriage is disappearing in Scandinavia, and the forces undermining it there are active throughout the West. Perhaps the most disturbing sign for the future is the collapse of the Scandinavian tendency to marry after the second child. At the start of the nineties, 60 percent of unmarried Norwegian parents who lived together had only one child. By 2001, 56 percent of unmarried, cohabiting parents in Norway had two or more children. This suggests that someday, Scandinavian parents might simply stop getting married altogether, no matter how many children they have.

This series will be continued tomorrow with another scholar and another data point.

UPDATE: Another good essay on traditional marriage is here, courtesy of Hot Air.

Barack Obama wants to control whether you can pay for your own medical care

May 6, 2009 | by Wintery Knight | Link | Original Link

Yes, privatized health care is such a bad, bad thing. Health care is so much better in Cuba, North Korea and Vietnam.

Really? Here is a post that begs to differ by Betsy McCaughey on National Review. (H/T Commenter ECM)

Here is a dose of reality, for those who voted for the Democrats:

> President Obama pledges to provide health insurance for 46 million uninsured people and, at the same time, restrain the nation's total health spending. Covering the uninsured is a worthy goal, but it will not save money: Once they are covered, they will use 70 percent more health services overall than before, according to the Congressional Budget Office.
>
> So where will the promised savings come from? **The truth is that Americans who already have insurance will get less care.**

Well, I know this will come as shock to Democrats who based their vote for Obama on Michael Moore movies depicting health care in Cuba, but government-run heath care means skyrocketing costs and waiting lists for treatment.

> Health spending is higher in the U.S. than in Europe not because the American medical profession is less efficient, but because Americans have higher incomes: "The more people have, the more of it they tend to spend on health care," wrote David Blumenthal, a Harvard Medical School professor. Blumenthal was recently chosen by Pres. Barack Obama to be national coordinator of health information technology, a key position. In his academic writings, Blumenthal has long advocated government limits on how much health care you can get.
>
> **Patients will be dissatisfied, he admits. "Government controls on health care spending are associated with longer waits for elective procedures and reduced availability of new and expensive treatments and devices," he conceded in the *New England Journal of Medicine* (*NEJM*) in 2001.**

You need to understand that people who voted Democrat did so from a position of total ignorance about how the world actually works. They think money grows on trees. They think that "greed" is the only reason why the world isn't a utopia of equalized of outcomes, regardless of individual choices. Unfortunately, government-run health care is a done deal in the USA.

> Legislators slipped the framework for top-down government controls into the stimulus package passed in February. One provision called for computer technology that will "guide" doctors' decisions about what care is "cost-

> effective." **Beginning in 2014, Medicare and other federal programs will impose financial penalties on doctors and hospitals who are not "meaningful users" of this system.** Private insurers historically have followed Medicare's lead.

That's right. Your doctor will be coerced by the federal government to prevent you from spending your own money on your own health care. Instead, the government has decided that your money would be better spent on more valuable things like sex changes, because those are for a Democract special interest group, and you're not in that group. You're just a taxpayer, not a victim. No health care for you!

> How much leeway will your doctor have to order tests and treatments? It's hard to say, because the government can make the standard of compliance "more stringent" over time. Blumenthal says his job is not about "just putting machinery in offices." **In fact, it's about control. In a *New England Journal of Medicine* article published April 9, just after his appointment to the Obama administration was announced, Blumenthal explained that if electronic technology is to save money, doctors will have to take advantage of "clinical decision support," a term of art for computers telling doctors what to do. He predicted that "many physicians and hospitals may rebel, petitioning Congress to change the law or just resigning themselves to . . . penalties."**

Yes, I know this is hard for your People-magazine-reading Democrats to believe, but socialism leads to a loss of liberty. Yes! Isn't that crazy? If you voted for Obama, you voted for fascism! You voted for the values of the state, as expressed by the ruling elite, to be imposed on the individuals who actually provide the state with capital for their schemes. Surprise!

> **Government controls on health expenditures will reduce the availability of medical technology, such as MRIs, and cause waits for treatment.** Blumenthal says it's "debatable" whether the timely care Americans currently receive is worth the added price. Ask a cancer patient about waiting, and you'll get a different answer. **Delays lower your chance of survival.** For example, women in the U.S are more likely to have regular mammograms than are women elsewhere, according to data from the Commonwealth Fund. Their breast cancer is detected sooner. They are also treated faster and have higher survival rates than women in any other developed country, according to the CONCORD study published in 2008 in *Lancet Oncology*. These statistics include all American women, not just those with insurance.
>
> Treating cancer is costly. Nancy-Ann De Parle, newly appointed director of the White House Office of Health Reform, said on March 23, "we have to get to a system of keeping people well, rather than treating the sickness." That would

> make sense if all disease were preventable. But many cancers and other diseases are linked to genetics or unknown causes. **De Parle's pronouncement echoes the chilling explanation offered by Sir Michael Rawlins, head of Britain's National Institute of Clinical Effectiveness (NICE), for his nation's low cancer survival rates. The British National Health Service, he is quoted as saying in the *NEJM* last November, has to be fair to all patients, "not just the patients with macular degeneration or breast cancer or renal cancer. If we spend a lot of money on a few patients, we have less money to spend on everyone else."**

Isn't that great? You pay into the system based on the amount of money you earn, and then left-wing activists with degrees in Marxist Studies decide when, or even IF, you will be treated. That is what we have in this country now. And we got it by our incredible ignorance about the way the world works.

And do you know what else gets reduced or eliminated in government-run health care?

> Also, built into the U.S. health-care tab is research for cures. Five hospitals in the U.S. do more clinical trials than any entire country in Europe, including the U.K., the McKinsey Global Institute reported in December. If someone in your family has an incurable disease, you start each day hoping for a breakthrough. Yet in his writings, Blumenthal identifies innovation as a culprit driving up health spending.
>
> The health provisions in the stimulus legislation were rushed through without discussion. "Speed is essential," Blumenthal wrote in the *NEJM* last November. "Bill Clinton waited for nine months to introduce his Health Security Act in 1993, which allowed his opposition to mobilize and defeat him." This time, he added, a "savvy health advisor" will warn the president, "Hurry up, we're almost out of time for health reform."

Now ask yourself. What is the point of producing wealth in a country where your money is confiscated to pay for other people who live risky lives and never pay anything into the system. Is work worth it? Is prudent living worth it? Only the suckers produce wealth and live clean, in Obama's socialist utopia. Ignorance of economics is going to mean death for many Americans. And Democrats don't care. They want everyone to be "equal", regardless of individual choices.

UPDATE: John Lott posts that Obama thinks that US taxpayers should give up 63 billion dollars to pay for health care *abroad*.

Excerpt from MSNBC:

> The Obama administration wants the United States to spend $63 billion over the next six years to fight global diseases and provide more aid for prenatal and postnatal care, children's health and fighting tropical diseases.
>
> "We cannot fix every problem," Obama said in a written statement Tuesday. "But we have a responsibility to protect the health of our people, while saving lives,

> reducing suffering, and supporting the health and dignity of people everywhere. America can make a significant difference in meeting these challenges and that is why my administration is committed to act.”

That is more than 10% the total cost of the Afghanistan and Iraq wars in one fell swoop! At least we got good strategic value for the money spent on the wars! What can we expect from this? Obama’s enormous ego to become even more inflated while he spends other people’s money?

How Darwinian fundamentalists burn their critics at the stake

May 7, 2009 | by Wintery Knight | Link | Original Link

It's the story of Galileo and the Catholic Church. Only this time, the Darwinians refuse to look through the microscope, and the penalty isn't house arrest. Read Jerry Bergman's story in the Toledo Blade. (H/T Access Research Network)

Who is Jerry Bergman?

> Jerry Bergman is a mild-mannered, soft-spoken, and balding college professor, author, and member of Mensa – a group of people whose IQs are in the top 2 percent of the population.

And what happened to him?

> "In 1979, I was let go by Bowling Green State University openly due to my increasing disillusion with Darwinism," he said in a lecture Monday night at WLMB-TV, Channel 40, Toledo's Christian television station.

What has he been up to since?

> For the last 30 years, Mr. Bergman, 62, has interviewed hundreds of people in academia and documented cases in which he contends that careers were derailed because of doubts about evolution.
>
> The results of his interviews and research are compiled in his latest book, Slaughter of the Dissidents: The Shocking Truth about Killing the Careers of Darwin Doubters, published last fall by Leafcutter Press.

Well, these cases must deal with young-earth creationists, right?

> The students, professors, and scientists suffered not because they were advocating the teaching of biblical Creationism or Intelligent Design, he said, but for questioning or debating aspects of Charles Darwin's famous theory.

Well, this guy is a fringe scholar with fewer degrees and published papers than Richard Dawkins, right?

> Mr. Bergman has nine academic degrees, including a doctorate in education from Wayne State University, and currently teaches at Northwest State Community College in Archbold, Ohio, and the University of Toledo's Health Science campus. In 35 years as an educator, Mr. Bergman has taught college-level courses in biology, microbiology, chemistry, biochemistry, genetics, pathology, anthropology, geology, and statistics, among other subjects, and has published more than 800 academic papers.

But surely this is an isolated case?

> Publicity over the lawsuit, however, led other academics to contact him with similar stories, he said. He has since compiled a list of 3,000 cases alleging discrimination due to religious beliefs, and personally has interviewed more than 300 people in such situations.
>
> "It's unlikely today that an out-of-the-closet Darwin doubter will survive in academia," he said. And there's much at stake because a PhD requires a huge investment in time and money, averaging nine years of school and $300,000 and $500,000 in costs, he said.
>
> Rather than risk losing everything over one's personal beliefs, Mr. Bergman said he advises people to "stay in the closet until things change" and to seek change through legislation.

Is it possible that Darwinists could be so blinded by faith in materialism, that they would protect their monopoly in the the public square by censorship of their opponents?

BONUS:

Here is a video of Casey Luskin, whom I blogged about before, on Fox News, explaining how well leftists in academia respond to scientific evidence contrary to their own assumptions of naturalism and materialism. And click here for some examples of how well Darwinians do in debates with the top atheist scholars, like Michael Shermer.

By the way, if you haven't seen the movie "Expelled" yet, what are you waiting for? You get to see Richard Dawkins attribute life to unobservable aliens.

This is a must-see movie that explains how freedom of inquiry is being violated by Darwinian fascists in the academy. You can tell how warranted an idea is by how willing supporters are to defend them in public. If the true believers start to resort to judicial activism, threats and intimidation, it's a blind-faith religion!

Further study

Atheist responses to scientific arguments for theism are fun to understand. Atheists attribute the beginning of the universe to untestable theories and the fine-tuning to an unobservable multiverse. (And don't forget their lame responses to galactic, stellar and planetary habitability arguments)

UPDATE: This post seems to be quite popular! Commenter ECM sent me this additional post from Denyse O'Leary's Post-Darwinist blog. She has a citation from a scholar that, if expressed publicly in an academic setting, would be sure to doom the career of whoever uttered it. Click the link, read the quote.

Why Democrat policies discourage men from marrying, part 3

May 7, 2009 | by Wintery Knight | Link | Original Link

This article is the third of a three-part series on how Democrat policies discourage marriage and child-rearing. Part 1 is here and Part 2 is here.

How no-fault divorce discourages men from marrying

This time we'll look at my favorite argument against marriage. Today's article is from Dr. Stephen Baskerville, author of the amazing book "Taken Into Custody: The War Against Fathers, Marriage, and the Family". I own two copies, one for me and one to lend out.

Let's get a look at the problem posed to marriage by the Democrat policy of no-fault divorce:

> …80 percent of divorces are unilateral. Under "no-fault," divorce becomes a power grab by one spouse, assisted by judicial officials who profit from the ensuing litigation: judges, lawyers, psychotherapists, and social workers. Involuntary divorce involves government agents forcibly removing innocent people from their homes, seizing their property, and separating them from their children. It requires long-term supervision over private life by state functionaries, including police and jails.
>
> …Invariably the first action in a divorce is to separate the children from one parent, usually the father. Even if he is innocent of any legal wrongdoing and does not agree to the divorce, the state seizes his children with no burden of proof to justify why. The burden of proof–and financial burden–falls on him to demonstrate why they should be returned.
>
> A legally unimpeachable parent can thus be arrested for seeing his own children without government authorization. He can be arrested through additional judicial directives that apply to no one but him. He can be arrested for domestic violence or child abuse, even without evidence that he has committed any. He can be arrested for not paying child support, regardless of the amount demanded. He can even be arrested for not paying an attorney or psychotherapist. There is no formal charge, no jury, no trial, and no record.

When I was a student in graduate school, I used to hate going out the door and leaving my pet parrot behind with my brother. I did not believe then, and do not now, that *anyone in the world* is capable of taking care of my bird except me. I felt awful leaving the house, and I would call home between classes just to check on him. That is how parents feel.

I could go on and on about the way that I have bonded with that little creature. And this is basically why marriage is a virtual impossibility to me, given the divorce laws enacted by Democrats and their special interest groups, (trial lawyers, feminists, academic elites,

etc.). I do not think I could survive being separated from my children for years by lawyers and courts.

> To justify this, the divorce machinery has generated hysteria against parents so inflammatory that few dare question it: child abuse, wife-beating, and nonpayment of “child support”–all propagated by feminists, bar associations, and social work bureaucracies, with federal funding. The accused parent loses his children and is abandoned by friends, family members, parishioners, and co-workers–all terrified to be associated with an accused “pedophile,” “batterer,” or “deadbeat dad.”
>
> Each of these figures is largely a hoax. There is no evidence of large numbers of fathers abandoning their families, beating their wives, and molesting their children. Divorce courts separate parents from their children, with false accusations as a rationalization.
>
> Child abuse and domestic violence have no precise definition. They are not adjudicated as assault, and accused parents do not enjoy the constitutional protections of criminal defendants. Allegations are “confirmed” not by juries but by judges or social workers. Domestic “violence” need not be violent or even physical. Official definitions include “extreme jealousy” and “constant criticizing.”
>
> Child abuse is itself the creation of welfare bureaucracies. An intact family is the safest place for women and children, since child abuse overwhelmingly occurs in single-parent homes from which the father has been removed. Britain’s Family Education Trust reports that children are up to 33 times more likely to be abused in a single-parent home than in an intact family. Domestic violence too is far more likely with the breakup of a marriage than among married couples.
>
> Yet trumped-up accusations are rampant in divorce courts, usually to eliminate fathers. Elaine Epstein of the Massachusetts Women’s Bar Association writes that “allegations of abuse are now used for tactical advantage” in custody cases, a trend documented in the Illinois Bar Journal, Yale Law Review, Rutgers Law Review, and others.
>
> The principal impediment to child abuse is thus the father. “The presence of the father placed the child at lesser risk for child sexual abuse,” concludes a study in Adolescent and Family Health. By eliminating fathers, officials pose as the solution to the problem they themselves create. Appalling as it sounds, we have created a massive army of officials with a vested interest in child abuse.

And it’s not just the separation, the legal fees, the false allegations and the criminal record. It’s the fact that I would be driven into poverty by the courts.

> The “deadbeat dad” is another creation of divorce machinery. He is far less likely to have voluntarily abandoned offspring he callously sired than to be an involuntarily divorced father who has been, as one attorney writes, “forced to finance the filching of his own children.”

> Originally justified to recover welfare costs, child support has become an entitlement for all mothers, regardless of their behavior, and a subsidy on middle-class divorce. It allows the mother–simply by divorcing–to confiscate her husband's income. It is tax-free to the recipient, and nonpayment means incarceration without trial. The Journal of Socio-Economics notes that child support serves as an "economic incentive for middle-class women to seek divorce." Economist Robert Willis calculates that one-fifth to one-third of child support payments are used for children; the rest is profit for the custodial parent.
>
> State governments also generate revenue from child support, giving them a financial incentive to make it onerous and to encourage divorce. Federal taxpayers subsidize this family destruction scheme with about $3 billion annually. Officials have admitted that the arrearages are far beyond the parents' ability to pay.
>
> Government's divorce apparatus has become a machine for destroying families, seizing children, and incarcerating parents without trial. It is the most repressive government machinery ever created in the United States.

So, the creation of no-fault divorce, an intrusion by the state on private contracts, makes marriage impossible for rational men. The stakes are just too high to be taking chances.

You can hear Dr. Baskerville on the radio with Dennis Prager and Milt Rosenberg in podcasts linked here.A more complete version of the article can be found here in Touchstone Magazine. I highly recommend the more complete version. If you are a single man, or you have male children, you really need to read it. Dr. Baskerville wrote recently about marriage and the Christian church here.

This series on Democrat's opposition to marriage and family is now complete. If you absolutely, positively have to have more on marriage, then you can read one of my most popular posts about an ideal marriage I know about, or some guest posts from my *very* happily married friend Andrew on marriage, here and here.

Democrats introduce bill to punish infanticide as a felony, not murder

May 7, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Sorry, the headline from before should read that infanticide up to one year will be reduced to a felony, not legalized outright! My mistake!

A post at Gateway Pundit, sent to me by the greatest commenter in the blogosphere, ECM.

Gateway Pundit has a link to the bill, but Cassy Fiano has a lot more.

Here's a bit about the bill:

> It defines infanticide as:
>
> A person commits an offense if the person wilfully by an act or omission causes the death of a child to whom the person gave birth within the 12-month period preceding the child's death
> The bill says that infanticide should not be prosecuted as murder, though, as long as:
>
> … at the time of the act or omission, the person's judgment was impaired as a result of the effects of giving birth or the effects of lactation following the birth.
> Infanticide would become a felony, punishable by no more than two years in prison, with a minimum of 180 days, and/or a fine of no more than $10,000.

We need to start getting serious about defending the pro-life view using facts and arguments. Here's some stuff to get you started. Disagreeing with people is fun once you take time to learn your stuff in detail.

- Audio: Scott Klusendorf's 35-minute case for the pro-life position
- Audio: A 55-minute discussion featuring two great pro-life debaters, Greg Koukl and Scott Klusendorf
- My own religion-free case for the pro-life position in plain English
- A comparison of embryonic and adult stem cell research
- Video: Cute 12-year old girl makes the pro-life case in a short speech

Here is a new video featuring pro-life supermodel Kathy Ireland talking to Mike Huckabee, who strikes as very ignorant. (No surprise, given his terribly uninformed positions on illegal immigration and fiscal policy!)

The Wintery Knight strongly approves of pro-life supermodels!

Barack Obama's claim to save or create 150000 jobs falsified by FactCheck.org

May 7, 2009 | by Wintery Knight | Link | Original Link

Obama claim that his socialist policies that attack "greedy corporations" and "the rich" are actually increasing employment rates. Now, that seems to be impossible for rational people to believe, and FactCheck.org confirms that intuition. It is not possible for socialist policies such as card check, higher taxes, increased spending, more regulation, etc. to create more jobs than are lost from the changes.

Obama's claim was:

> At President Obama's April 29 news conference, he claimed that the American Recovery and Reinvestment Act has "already saved or created over 150,000 jobs."

That's what he learned to believe at Harvard in his marxist rap sessions with the radical students and professors.

But how does the world really work?

> According to the Bureau of Labor Statistics, the economy lost more than 1.3 million jobs in the two months after he took office, and it has probably lost at least another half-million in April. The day after Obama spoke, the Department of Labor announced that another 631,000 workers (seasonally adjusted) had filed new claims for unemployment insurance the previous week.
>
> So what 150,000 jobs was Obama talking about?
>
> It turns out the president's claim is really an estimate of what his economic advisers think the stimulus bill is doing, and not based on any evidence of its actual effects.

But how does the White House respond to the falsification of their propaganda by reality?

> We asked the White House for substantiation of Obama's claim, and a spokesman responded that the figure comes from a recent estimate by the Council of Economic Advisers. "Because the baseline for employment is obviously still strongly downward," the spokesman told us, "the estimate does not mean that employment has risen by 150,000. Rather, it means that employment is 150,000 higher than it otherwise would have been." He said the figure is an estimate of people hired to work directly on ARRA-funded projects, plus "jobs created by the tax cuts, aid to the states, and other parts of the ARRA."
>
> So when the president said his stimulus bill "already saved or created" those jobs, he was just giving an estimate produced by his own economic advisers at the White House. Furthermore, the jobs figure is based on projections done at the time ARRA was passed. Recipients of ARRA spending aren't required to report

> until later what they're doing with the money and how well it's working, so there's very little hard data on where the money is being spent, let alone how many jobs may have resulted from the legislation. The CEA incorporated some actual spending reports into its estimate, but that information is not complete.

This is the result of voting by people who know more about the lives of celebrities than they know about economics. Imagine how surprised these Democrat voters are to find out that the 1 hour spent voting was not enough time to have thought anything through. Some of them thought that Obama was better on pro-life issues and government spending than McCain for example.

Remember, Democrats caused this recession and Republicans tried to stop it.

Canadian prime minister Stephen Harper visits the troops in Afghanistan

May 8, 2009 | by Wintery Knight | Link | Original Link

Harper: Not a primping peacock bitterly clinging to his teleprompter

Joanne over at Blue Like You has the story. (Photo credit:THE CANADIAN PRESS/Sean Kilpatrick)

Here are some of the best bits from the official government press release:

> Prime Minister Stephen Harper today travelled to Afghanistan, where he visited with Canadian Forces and civilian personnel stationed in Kandahar.
>
> "From the very first day of the Afghan mission the men and women of the Canadian Forces and civilian officials, have served courageously and selflessly to help the people of Afghanistan build a better future," said the Prime Minister. "Over the course of this mission our men and women in Afghanistan have made incredible sacrifices to defend our values and our interests. It is an honour for me to meet with them, to thank them, and to let them know that their country supports them. They make us very proud."

Look, the Canadian general even put him to work as a field artillery spotter. (Photo credit:THE CANADIAN PRESS/Sean Kilpatrick)

Harper (not effeminate) calls in his third fire mission on Taliban forces: "Right 1 degree. Fire for effect!"

While Barack Obama drags 25 teleprompters with him when he travels overseas, Harper didn't bring *any* teleprompters with him, and he travels into a warzone.

Here is the description of Canada's mission in Afghanistan from the Canadian forces web site:

> Canada's efforts in Afghanistan are guided by the Afghanistan Compact, which includes a five-year framework for coordinating the work of the Afghan government and its international partners, outlining specific outcomes related to security, governance and development with benchmarks and delivery schedules.
>
> For example, a new Afghan constitution has restored the rule of law and respect for the human rights of all Afghan citizens, including women and children. The Afghan people now vote, women and girls have rights, and children are going to school.
>
> The biggest threat to rebuilding is continued violence and threats from the Taliban and al-Qaeda. In fact, terrorism is a clear and present threat to global peace and security, and terrorists used Afghanistan as a base of operations during the seven-year Taliban regime. In the interest of collective security, Canada and its international partners share a duty to help ensure that terrorism cannot take root again in Afghanistan.

And Canada is busy spending money on things like this:

> The Prime Minister announced that the Government of Canada is deepening its partnership with UNICEF and the Afghan Ministry of Education to invest in improved learning centres, construct new schools for 18,000 children in Kandahar, and provide funding for a 10-month literacy course for 2,500 women in the region.
>
> "Investing in education is vital to improving human rights and, in particular, the rights of women in Afghanistan," said the Prime Minister. "My message to the people of Afghanistan, and to our international partners is clear. Canada will do

> its part."
>
> The Prime Minister also visited Kandahar's Dahla Dam project on the Arghandab River. Eighty percent of Kandahar's population lives along the Dahla irrigation system. The Government of Canada is investing up to $50 million over three years to repair the dam and improve its surrounding irrigation system while helping train local farmers in new water management and crop production techniques.
>
> "Canada's Afghan mission is more than just a security operation. It is also about making a real difference in the quality of life for thousands of Afghan families," said the Prime Minister. "I am delighted to have had the opportunity to see, first hand, the kind of meaningful contribution Canadians are making to Afghanistan's future."

Hmmmn. Obama is spending a lot of money, too. I wonder what the trillions of dollars he spent on his special interest groups is accomplishing? Well, Warner Todd Huston at Stop the ACLU managed to track down some of it.

> If we need no other example of why government can't "stimulate" an economy, we have but to look at the use to which the city of Akron, Ohio wants to put some of its "stimulus" money. Akron, it seems, wants to spend some of that money for suicide prevention. Oh, not a general suicide prevention program that might at least employ people. No, Akron wants to build a fence on a bridge that seems to emit a siren call for jumpers to prevent them from killing themselves.
>
> Akron's All-American Bridge, a "Y" shaped structure that serves as a main artery into the city, has been a platform for suicide jumpers for so long now that area residents have nicknamed it the suicide bridge. Consequently, city officials have proposed using more than **one million dollars** of the city's "stimulus" money to erect a fence that will help prevent people from being able to use the span as a means to an end.

There's other stuff we could do with that money you know. Like making the rest of the world freer and reducing threats from terrorists to the homeland.

Democrats vote to protect pedophiles in H.R. 1913 hate crime bill

May 8, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from But as For Me! Thanks for the link!

UPDATE: If you are looking for the story about bloggers facing jail terms for "harassing" public figures, see here.

The indomitable Pamela Geller at Atlas Shrugs has the full story on the hate crime here. (H/T Stop the ACLU)

She links to this video of Democrats voting for protection for pedophiles, and against protections for military veterans.

And then writes this summary about the left (Democrats), and their *inevitable* drive towards fascism:

> Hate crime — hate is in the eye of the beholder, eh? And if you are a Democrat – you protect child rapists, but G-d forbid you protect the military.
>
> Hate crime legislation will be used as a tool against the right. Period. A crime is a crime. WTF is the "hate" bias? Will those screaming for the death to Jews at those demonstrations in January be prosecuted under these laws?
>
> Who are these people? Good is evil and evil is good. Good luck with that super majority, America.

Yes, remember the speeches by Evan Sayet at the Heritage Foundation. Good is evil, and evil is good. That is the essence of the left.

I'm going to steal some comments from RedState that Pamela cites.

Over at Red State:

This is really kind of mind numbing and demonstrates what is wrong with Congress.

During a House Judiciary Committee meeting, Congressman Steve King (R-IA) offered up an amendment to the hate crimes bill to exclude pedophiles from being a protected category under the hate crimes legislation.

Every single Democrat voted it down.

In the same meeting, Congressman Tom Rooney (R-FL) offered an amendment to include veterans as a class protected under the hate crimes bill. Not only did the Democrats vote it down, but Cogresswoman Debbie Waasserman Schultz attacked the Republicans for even thinking veterans might need protection under hate crimes legislation. After all, who but Democrats in Congress hate veterans?

Pamela cites Congress Louis Gohmert to explain what does this hate crime bill does.

> If a mother hears that their child has been raped and she slaps the assailant with her purse, she is now gone after as a hate criminal because this is a protected

> class. There are other protected classes in here. I mean simple exhibitionism. I have female friends who have told me over the years that some guy flashed them, and their immediate reaction was to hit them with their purse. Well now, he's committed a misdemeanor, she has committed a federal hate crime because the exhibitionism is protected under sexual orientation.

The Democrat bill says that Americans can't make moral judgments on others, because that makes those poor victims feel bad. If moral people make moral judgments against these victims, it's a federal crime. Democrats are the party of moral relativism and moral equivalence. And Christians voted for Democrats in record numbers because we were too lazy to inform ourselves about them before the election.

And one more quote from Pamela's post:

Similar state laws have resulted in persecution for Christians. In Philadelphia several years ago, a 73-year-old grandmother was jailed for trying to share Christian tracts with people at a homosexual festival.

Rep. Virginia Foxx, R-N.C., said H.R. 1913 will create "thought crimes," and U.S. Rep. Trent Franks, R-Ariz., said it will end equality in the U.S.

Gohmert warned the law will be used against pastors – or anyone else – who speaks against homosexuality or other alternative sexual lifestyle choices. He said it provides that anyone who through speech "induces" commission of a violent hate crime "will be tried as a principal" alongside the active offender.

Critics say that would allow for prosecutions against pastors who preach a biblical ban on homosexuality if someone who hears such a message later is accused of any crime.

Andrea Lafferty, executive director of the Traditional Values Coalition, said, "A pastor's sermon could be considered 'hate speech' under this legislation if heard by an individual who then acts aggressively against persons based on 'sexual orientation.' The pastor could be prosecuted for 'conspiracy to commit a hate crime'" she said.

On the other side of the religious liberty aisle, there's Republican Senator James Inhofe's recognition of the National Day of Prayer, which Obama refused to recognize publicly.

> The New Testament's Book of James states, "The prayer of a righteous man is powerful and effective." I wholeheartedly agree and personally rely on prayer in every aspect of my life. Today, we honor the "National Day of Prayer," a day that has been officially recognized since 1952 by the President of the United States, who issues an annual proclamation in its honor.
>
> "Across the country, people from different walks of faith and different walks of life gather together to pray for our nation. In 2008, over two million people attended 40,000 locally organized events nationwide, and the governors from all 50 states signed similar proclamations.
>
> "The National Day of Prayer is a traditional and fundamental part of our history. In 1775, while forming a nation, the Continental Congress invited the colonies to pray for wisdom. This first call to prayer has since become a tradition and has not

> ceased from reoccurring in the years that followed. In 1789, President George Washington issued the first presidential proclamation for prayer as he stated, “It is the duty of all nations to acknowledge the Providence of Almighty God, to obey His will, to be grateful for His benefits, and to humbly implore His protection and favor…” And in 1863, President Lincoln proclaimed a day of “humiliation, fasting, and prayer.”
>
> “Prayer is as important today as it was when our Founding Fathers first formed our nation. Today, may God continue to bless you all in a special way.

Michele Malkin talks about Obama’s refusal to hold a public prayer event, which Bush did for all 8 of his years, in this Fox News video clip. He talked so much about the importance of prayer during his campaigns, but I guess the mask is off now.

I know fundamentalist Christians who voted for Barack Obama based on his skin color, (which is the same color as my skin, by the way). Unbelievable! Their votes undermined the free expression of Christian beliefs in the public square. Newsflash! Barack Obama shows no evidence of being a Christian *in his policies*. On the contrary, his policies are deeply anti-Christian, anti-capitalism and anti-liberty. His skin color should have been *irrelevant* to the decision of who to vote for, for Christians.

UPDATE: The Maritime Sentry has a relevant video with Steve King and Sean Hannity.

Ex-atheist A. N. Wilson's reasons for returning to Christianity

May 8, 2009 | by Wintery Knight | Link | Original Link

UPDATE: A very special welcome to readers from 4Simpsons blog! If you do not have Neil's blog bookmarked, you are missing out on perceptive commentary on current events and apologetics, all packaged in an attractive and functional layout! For example, check out this post on Obama's record on abortion, and this post analyzing a recent encounter with a pro-choice challenger! Neil can fight!

Thanks so much for the link and the kind words, Neil! I appreciate it very much!

UPDATE: Welcome readers from Free Canuckistan! Thanks for the linky, Mr. WebElf!

This story is all over the Christian blogosphere, so let's try to cover all the people who've written about it.

Wilson's initial statement is found in his article in the New Statesman. (H/T Truthbomb Apologetics)

Excerpt where he describes his conversion to atheism:

> …I realised that after a lifetime of churchgoing, the whole house of cards had collapsed for me – the sense of God's presence in life, and the notion that there was any kind of God, let alone a merciful God, in this brutal, nasty world.

Yeah, that's why I would never send my kids to church until they begged and pleaded to go, and knew why they were doing it. The problem of evil and suffering that he mentions is a solid argument against God, one well worth responding too, that I answer fully here.

But another cause of his atheism was peer pressure – the desire to want to be thought of as smarter than others, the desire to not be bound by morality, the desire for autonomy from the hard task of seeking after the Lord in study and service. (More on this below)

> If I bumped into Richard Dawkins (an old colleague from Oxford days) or had dinner in Washington with Christopher Hitchens (as I did either on that trip to interview Billy Graham or another), I did not have to feel out on a limb. Hitchens was excited to greet a new convert to his non-creed and put me through a catechism before uncorking some stupendous claret. "So – absolutely no God?" "Nope," I was able to say with Moonie-zeal. "No future life, nothing 'out there'?" "No," I obediently replied. At last! I could join in the creed shared by so many (most?) of my intelligent contemporaries in the western world – that men and women are purely material beings (whatever that is supposed to mean), that "this is all there is" (ditto), that God, Jesus and religion are a load of baloney: and worse than that, the cause of much (no, come on, let yourself go), most (why stint yourself – go for it, man), all the trouble in the world, from Jerusalem to Belfast, from Washington to Islamabad.

He talks about the importance of the moral argument, which is the argument that converted *me* to Christianity so many years ago. There can be no doubt that when you meet an atheist, you are talking to someone who is disdainful of the demands of the moral law, (the objective moral standard that is imprinted on every human heart).

Everyone who has any conscience at all believes in God as the ground for that morality. It is *only* the immoral man who reduces morality to personal preferences or evolved social conventions. And there are so many immoral atheists today… inventing more and more speculations like Darwinism and postmodernism in order to justify full flight from the moral law they know is there.

> I haven't mentioned morality, but one thing that finally put the tin hat on any aspirations to be an unbeliever was writing a book about the Wagner family and Nazi Germany, and realising how utterly incoherent were Hitler's neo-Darwinian ravings, and how potent was the opposition, much of it from Christians; paid for, not with clear intellectual victory, but in blood. Read Pastor Bonhoeffer's book Ethics, and ask yourself what sort of mad world is created by those who think that ethics are a purely human construct. Think of Bonhoeffer's serenity before he was hanged, even though he was in love and had everything to look forward to.

Truthbomb Apologetics also linked to an online interview with Wilson. Peter Williams, a British Christian apologist, highlights one question, "Can you love God and agree with Darwin?", from the interview.

Here is Wilson's answer:

> I think you can love God and agree with the author of The Voyage of the Beagle, the Earth Worm, and most of the Origin of Species. The Descent of Man, with its talk of savages, its belief that black people are more primitive than white people, and much nonsense besides, is an offence to the intelligence – and is obviously incompatible with Christianity. I think the jury is out about whether the theory of Natural selection, as defined by neo-Darwinians is true, and whether serious scientific doubts, as expressed in a new book Why Us by James Lefanu, deserve to be taken seriously. For example, does the discovery of the complex structure of DNA and the growth in knowledge in genetics require a rethink of Darwinian "gradualism". But these are scientific rather than religious questions.

twoorthree.net has another analysis of the initial article.

A second article emerges

Here's Wilson's more recent article from the UK Daily Mail in which he describes his reasons for returning to the Christian faith even further. (H/T Apologetics 315)

The new article has a very striking title, "Religion of hatred: Why we should no longer be cowed by the chattering classes ruling Britain who sneer at Christianity". There are some neat parts to this article as well.

For example, why are atheists who are force-fed faith so angry?

> Like many people who lost faith, I felt anger with myself for having been 'conned' by such a story. I began to rail against Christianity, and wrote a book, entitled Jesus, which endeavoured to establish that he had been no more than a messianic prophet who had well and truly failed, and died.

This next point is the critical point of this entire story. Atheists dismiss God for three reasons. 1) They want to appear intelligent in comparison others (i.e. – pride, vanity), 2) they do not want to dedicate any time to seeking and serving the person who loves them most, and 3) they believe that God should give them happiness and their needs are not met by God.

When a person becomes an atheist, they are giving an answer to questions like "does God exist?" and "does God have a will for the way I ought to live?". Atheists do not accept that their purpose in life is to work on knowing God by first accepting Christ's sacrifice for their current rebellion and then by re-prioritizing their lives based on the character and deeds of Christ.

Instead of accepting the need for a Savior, and the process of following Christ, they want to *earn* eternal life by dedicating their efforts to projects *of their own choosing*. Atheists choose a project that they like and work on that hoping to somehow gain eternal life by excelling at that. Similarly, atheists choose a different moral standard (i.e. – yoga, vegetarianism, recycling, socialism, etc.) and work to fulfill this standard of their own choosing in the hope that meeting that standard will justify them morally with God.

The thought that they would have to discover and reflect on God's revealed character and love for people revealed in the origin and design of the universe, and in the incarnation and sacrifice of Jesus on the cross, is totally repulsive to them. They seize on the most childish opinions about God, (God is unknowable, Christians are stupid hypocrites, I don't want to be moral, I don't want to be unpopular, etc.), and refuse to engage in debate to correct those childish objections.

But let's hear from Wilson about the peer-pressure he received from smart atheists:

> Like most educated people in Britain and Northern Europe (I was born in 1950), I have grown up in a culture that is overwhelmingly secular and anti-religious. The universities, broadcasters and media generally are not merely non-religious, they are positively anti.
>
> To my shame, I believe it was this that made me lose faith and heart in my youth. It felt so uncool to be religious. With the mentality of a child in the playground, I felt at some visceral level that being religious was unsexy, like having spots or wearing specs.
>
> This playground attitude accounts for much of the attitude towards Christianity that you pick up, say, from the alternative comedians, and the casual light blasphemy of jokes on TV or radio.

> It also lends weight to the fervour of the anti-God fanatics, such as the writer Christopher Hitchens and the geneticist Richard Dawkins, who think all the evil in the world is actually caused by religion.
>
> The vast majority of media pundits and intelligentsia in Britain are unbelievers, many of them quite fervent in their hatred of religion itself.

Wilson goes on to explain what finally did work to change his mind. One of the reasons for his conversion is also the second reason why I converted: discomfort with the moral evil of the godless and their hatred of God. Observing the godless can create a powerful feeling of sympathy and allegiance to God revealed in Christ, such that you naturally rebel against those who reject God.

> Rather than being cowed by them, I relish the notion that, by asserting a belief in the risen Christ, I am defying all the liberal clever-clogs on the block: cutting-edge novelists such as Martin Amis; foul-mouthed, self-satisfied TV presenters such as Jonathan Ross and Jo Brand; and the smug, tieless architects of so much television output.

One thing you need to understand about being a Christian is that the life consists in being an ambassador for Christ and then taking the lumps from those who will mock you, blacklist you, expel you, suspend you, fire you, jail you, torture you and murder you. This path of suffering is rejected by atheists and church Christians alike, even though imitating Christ's suffering for obeying God rather than men is central to Christianity.

We humans somehow internalize the idea that God should desire our happiness, and our freedom to seek that happiness in whatever activities we choose to be meaningful for us. The idea that God may have made us for a purpose – to acknowledge and defend him in public in word and deed – is so repulsive to our wills that it is totally suppressed, not just from inquiry or discussion, but in our thoughts as well.

A third argument that convinced me, that Wilson also finds convincing, is the superior character of Christians when compared to atheists. Atheists have *no idea* how horribly immoral they look to Christians – about as immoral as Christians look to themselves. For once the horizontal dimension of loving your neighbor is dropped, and the vertical dimension of loving God is taken up, the mask is off. The horror of sin is revealed.

And in the face of that horror, men can do extraordinary deeds as they respond to God's forgiveness. Actions that are irrational on a naturalistic, materialistic universe are rational for Christians. Atheists simply cannot engage in self-sacrificial behaviors against their self-interest the way that Christians can. Doctrines like eternal life, the incarnation, the atonement, and objective morality, *make* self-sacrifice rational.

> And in contrast to those ephemeral pundits of today, I have as my companions in belief such Christians as Dostoevsky, T. S. Eliot, Samuel Johnson and all the saints, known and unknown, throughout the ages.
>
> When that great saint Thomas More, Chancellor of England, was on trial for his

> life for daring to defy Henry VIII, one of his prosecutors asked him if it did not worry him that he was standing out against all the bishops of England.
>
> He replied: 'My lord, for one bishop of your opinion, I have a hundred saints of mine.'
>
> Now, I think of that exchange and of his bravery in proclaiming his faith. Our bishops and theologians, frightened as they have been by the pounding of secularist guns, need that kind of bravery more than ever.

The Christian life is a life of self-sacrifice, self-control and bravery, punctuated by periods of loneliness and defeat. It is not for everyone, and it is certainly not for atheists. Responding in love to God's initiative in reaching out to us is the most difficult task that can ever be assigned to any human agent. Atheists, having rejected the laws of logic, scientific discovery, the demands of the moral law and the obligations of moral duties, are simply not up to the task.

Wilson concludes his case with a final argument:

> …an even stronger argument is the way that Christian faith transforms individual lives – the lives of the men and women with whom you mingle on a daily basis, the man, woman or child next to you in church tomorrow morning.

Let me just say that I have not had the happiest experiences in life, as I have alluded to elsewhere. Things are going great now, as you know from my bio. But I know, and I hope that others can see, that the kind of acts of love that I unleash on my neighbors cannot – *cannot* – be explained merely as a result of human effort. Life is hard, but God makes love possible in the midst of suffering.

William Lane Craig weighs in on this Daily Mail article in his audio blog here.

I am planning an *entire series* of posts on atheism and the Christian life next week, and I have been *interviewing atheists* in order to collect data for the series of posts. I highly recommend that you tune in to the blog next week for this series!

Friday night funny: Ann Coulter on The View, Ezra Levant meets HRC censor

May 8, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from the Blog of Walker! Happy to have you aboard!

OK, first this fun image I found at the Western Experience.

How about rooting for our side?

And then there's this video, also from the Western Experience, featuring Ann Coulter taking on one of the foul harpies on "The View".

You go, Ann! I remember the first time I discovered Ann Coulter columns when I was working in Chicago. Without having any idea what she looked like, I had the urge to send her roses. Smitten as I was, I went so far as to contact a friend of mine who was connected with Human Events, where she was working, to ask how to do it. She said that lots of people sent Ann flowers, so then I decided not to do it. But yes, I had butterflies for several days, especially after I saw her photo.

But let's continue with more Friday night funny!

Now, I hope everyone got a chance to listen to Canadian free speech activists Mark Steyn and Ezra Levant on the Milt Rosenberg show! Recently, Ezra was in Ottawa, (the capital of Canada), and he ran into the Inquisitor-in-Chief herself: JENNIFER LYNCH. Yes, *I know* that's a very ironic name for the head fascist of the Canadian Human Rights Commission.

Here's a clip of what transpired at their meeting:

> I took in a bit of Question Period when I was in Ottawa yesterday. I was in the Centre Block waiting for the elevator, and a kindly old lady gave me a huge smile, and said hello. I said hello back — perhaps it was a fan.Not quite. She introduced herself to me: she was Jennifer Lynch, the Chief Commissar of the

> Canadian Human Rights Commission.

Jennifer likes wasting taxpayer money by traveling around the world to left-wing meetings.

> I wasn't particularly surprised to bump into Lynch. It's Ottawa after all, and she's furiously lobbying MPs to keep the censorship provision in the Canadian Human Rights Act — and to keep her job. I was just surprised to bump into her in Canada. Other than the foreign affairs minister and the international trade minister, I doubt there's many people in Ottawa who rack up bigger travel expenses on the public dime than Lynch does. I mean, just to pick one of her countless junkets at random, here is the expense report from one of her jaunts to Vienna — she stuck taxpayers with an $8,200 tab to go to a 15th anniversary party, commemorating… another junket.

Ezra goes on to needle her some more, and then ends with this:

> Lynch was quiet now. But I was warming to my theme: "I think I'm going to file a hate speech complaint against myself," I told her. "Who do you think would win that one?"

UPDATE: I was reading Denyse O'Leary's free speech round-up #2 of 3 here, and she linked to Debra Gyapong's photos of Ezra's events in Ottawa where all of the "hate speech" was going on. Wow, there's pictures of Mark Steyn and my one of my favorite MPs Jason Kenney. On this page, Debra asks whether Ezra Levant could be the next Governor General of Canada. I hope so!

The GG is the Queen's official representative in Canada and has to sign all legislation that the Parliament passes. Ezra should be a good GG and I don't see why Prime Minister Stephen Harper doesn't just appoint him straight away. You really need to go over to Debra's site and check out these photographs and quotations. Canada is really turning against the PC-censorship of the left.

And here is cute cartoon from Malcolm Mayes that my friend Andrew sent me :

The truth about Canada's HRCs

More Ezra Levant videos from the Michael Coren TV show, here.

And for some really great details on the latest on free speech north AND south of the border, check out Denyse's O'Leary's 3 posts on the state of free speech here, here and here. Denyse is a thousand times more witty and charming than even Ann!

Happy Friday!

Denyse O'Leary tells about Uncommon Descent's contest to win FREE STUFF

May 9, 2009 | by Wintery Knight | Link | Original Link

Denyse has started up a contest over at Uncommon Descent where you can win the following stuff:

> 10 DVDs of Expelled,courtesy the producers.
>
> 10 DVDs of Privileged Planet, courtesy the producers.
>
> 5 subscriptions, including back issues, to the excellent Christian/theistic science and culture mag, Salvo, complete with recent back issues, courtesy the editor-in-chief.

I already have those DVDs but I want the subscription to Salvo.

Now, what must I do to win? Denyse says:

> I will pose a question based on a recent news story, and ask for responses within two weeks. I will publish the winning response in a subsequent post.
>
> You must go to Uncommon Descent and register to comment. (You will not receive any solicitations – at least none that originate from us.)
>
> *Rules:*
> 1. No more than 400 words in response. I will select the response I find most interesting and print it as a post. Be succinct.
> 2. New ideas impress me, even if I disagree. Rants and myths don't. Re abuse: Uncommon Descent is *not* competing for Troll Hole of the Year, so …
> 3. I will not correspond with anyone about the award. My In Tray is already a natural disaster. If you don't win, try again. And who knows, if this contest takes off, I may be offered more prizes.
>
> The first question will come shortly.

Well, according to Denyse's latest post on Colliding Universes, the first question *is here!*

> This is Contest Question 1 for Earn Free Stuff: **Does the multiverse help science make sense – or simply destroy science?**
>
> Question: For a free copy of Expelled, is this a way to do science? Note, you must register at Uncommon Descent to comment.

She has a link to an article that will help you answer, plus you can read my posts on the multiverse:

- My snarky post against crazy atheist responses to the fine-tuning argument (very insulting)
- My newer post on fine-tuning: much less insulting, but still somewhat insulting

- Dr. Walter Bradley's exposition of the fine-tuning argument
- Dr. Michael Strauss' take on untestable speculations to avoid the fine-tuning argument
- A related lecture on the requirements for making a habitable planet

OK, now get right to work on your answer, and I'll work on my answer. Denyse says that each contest will last about two weeks!

By the way, Denyse is a professional writer and editor. So watch your spelling and grammar!

Contrasting the moral values of an authentic Christian with an authentic Darwinist

May 9, 2009 | by Wintery Knight | Link | Original Link

Let's start with someone who acted consistently on the plain, intended meaning of the Christian worldview, as expressed in the New Testament.

The case of William Wilberforce, an authentic Christian

Consider this article from the Wall Street Journal about the abolitionist William Wilberforce.

> In fact, William Wilberforce was driven by a version of Christianity that today would be derided as "fundamentalist."
>
> …William Wilberforce himself, as a student at Cambridge University in the 1770s and as a young member of Parliament soon after, had no more than a nominal sense of faith. Then, in 1785, he began reading evangelical treatises and underwent what he called "the Great Change," almost dropping out of politics to study for the ministry until friends persuaded him that he could do more good where he was.
>
> And he did a great deal of good…[h]is relentless campaign eventually led Parliament to ban the slave trade, in 1807, and to pass a law shortly after his death in 1833, making the entire institution of slavery illegal. **But it is impossible to understand Wilberforce's long antislavery campaign without seeing it as part of a larger Christian impulse. The man who prodded Parliament so famously also wrote theological tracts, sponsored missionary and charitable works, and fought for what he called the "reformation of manners," a campaign against vice.**

> **Even during the 18th century, evangelicals were derided as over-emotional "enthusiasts" by their Enlightenment-influenced contemporaries.** By the time of Wilberforce's "great change," liberal 18th-century theologians had sought to make Christianity more "reasonable," de-emphasizing sin, salvation and Christ's divinity in favor of ethics, morality and a rather distant, deistic God. Relatedly, large numbers of ordinary English people, especially among the working classes, had begun drifting away from the tepid Christianity that seemed to prevail. **Evangelicalism sought to counter such trends and to reinvigorate Christian belief.**

> **…Perhaps the leading evangelical force of the day was the Methodism of John Wesley: It focused on preaching, the close study of the Bible, communal hymn-singing and a personal relationship with Jesus Christ.** Central to the Methodist project was the notion that good works and charity were essential components of the Christian life. Methodism spawned a vast network of

> churches and ramified into the evangelical branches of Anglicanism. Nearly all the social-reform movements of the 19th and early 20th centuries–from temperance and soup kitchens to slum settlement houses and prison reform–owe something to Methodism and its related evangelical strains. The campaign against slavery was the most momentous of such reforms and, over time, the most successful. **It is thus fitting that John Wesley happened to write his last letter–sent in February 1791, days before his death–to William Wilberforce. Wesley urged Wilberforce to devote himself unstintingly to his antislavery campaign, a "glorious enterprise" that opposed "that execrable villainy which is the scandal of religion, of England, and of human nature." Wesley also urged him to "go on, in the name of God and in the power of his might, till even American slavery (the vilest that ever saw the sun) shall vanish away before it."**
>
> Wesley had begun preaching against slavery 20 years before and in 1774 published an abolitionist tract, "Thoughts on Slavery." Wilberforce came into contact with the burgeoning antislavery movement in 1787, when he met Thomas Clarkson, an evangelical Anglican who had devoted his life to the abolitionist cause. Two years later, Wilberforce gave his first speech against the slave trade in Parliament.

> …This idea of slaving as sin is key. As sociologist Rodney Stark noted in "For the Glory of God" (2003), the abolition of slavery in the West during the 19th century was a uniquely Christian endeavor. When chattel slavery, long absent from Europe, reappeared in imperial form in the 16th and 17th centuries–mostly in response to the need for cheap labor in the New World–the first calls to end the practice came from pious Christians, notably the Quakers. Evangelicals, not least Methodists, quickly joined the cause, and a movement was born.

William Wilberforce believed that slaves were made in the image of God – that they were embodied souls who could be resurrected to eternal life. Wilberforce believed that the purpose of human life is to freely seek God, and to be reconciled with God through Christ. He wanted all men and women to have the opportunity to investigate and respond to God's self-revelation to them.

You can read more about Wilberforce's beliefs here and his public activities here. And you can still see modern-day abolitionists, like Scott Klusendorf, consistently acting out their Christian convictions in the public square. Only today they're called *pro-lifers*. By the way, like Wilberforce, I am also a Wesley-inspired Evangelical Protestant Christian. Hooah!

The case of Adolf Hitler, an authentic Darwinist

Now let's take a look at the opposite of Wilberforce someone who despised and rejected Christianity entirely. Adolf Hitler was strongly influenced by the anti-Christian zealot, Nietzche, but also by Darwin's evolutionary ideas such as human inequality, moral relativism, the non-existence of human rights, equality of humans with animals, denial of

the soul, and survival of the fittest.

You can see the entire case presented by tenured professor of history at the University of California, Dr. Richard Weikart, in a lecture presented at the University of California at Santa Barbara, here:

Here's the blurb on the lecture from the University of California Television web site:

> **First Aired: 11/15/2004**
> **58 minutes**
>
> In his book, From Darwin to Hitler: Evolutionary Ethics, Eugenics, and Racism in Germany (2004), Richard Weikart explains the revolutionary impact Darwinism had on ethics and morality. Darwinism played a key role in the rise not only of eugenics (a movement wanting to control human reproduction to improve the human species), but also on euthanasia, infanticide, abortion, and racial extermination. This was especially important in Germany, since Hitler built his view of ethics on Darwinian principles.

But for those who don't like watching video lectures given by tenured professors, with nice Powerpoint slides, in front of a live audience of students and faculty, at a major university, then here is an article by secular Jew David Berlinksi writing in Human Events to give us the briefest of summaries of Weikart's argument.

A little bio of David Berlinski:

> David Berlinski received his Ph.D. in philosophy from Princeton University and was later a postdoctoral fellow in mathematics and molecular biology at Columbia University. He has authored works on systems analysis, differential topology, theoretical biology, analytic philosophy, and the philosophy of mathematics, as well as three novels. He has also taught philosophy, mathematics and English at such universities as Stanford, Rutgers, the City University of New York and the Universite de Paris. In addition, he has held research fellowships at the International Institute for Applied Systems Analysis (IIASA) in Austria and the Institut des Hautes Etudes Scientifiques (IHES) in France.

He starts his Human Events piece like this:

> Published in 1859, Darwin's On the Origin of Species said nothing of substance about the origin of species. Or anything else, for that matter. It nonetheless persuaded scientists in England, Germany and the United States that human beings were accidents of creation. Where Darwin had seen species struggling for survival, German physicians, biologists, and professors of hygiene saw races.
>
> They drew the obvious conclusion, the one that Darwin had already drawn. In the struggle for survival, the fittest win out at the expense of their rivals. German scientists took the word expense to mean what it meant: The annihilation of less fit races.

> …At Hitler's death in May of 1945, the point was clear enough to the editorial writers of the New York *Times*. "Long before he had dreamed of achieving power," they wrote, [Hitler] had developed the principles that nations were destined to hate, oppose and destroy one another; [and] that the law of history was the struggle for survival between peoples … ".

Berlinski concludes by analyzing an answer given by Richard Dawkins to Ben Stein in the movie Expelled:

> Would he care to live in a society shaped by Darwinian principles? The question was asked of Richard Dawkins.
>
> Not at all, he at once responded.
>
> And why not?
>
> Because the result would be fascism.
>
> In this, Richard Dawkins was entirely correct; and it is entirely to his credit that he said so.

The difference between consistent Christianity and consistent Darwinism is the difference between day and night. There is not now, nor will there ever be, an atheist Wilberforce. Atheists live their lives seeking pleasure and avoiding social disapproval, and they will *never* be able to *consistently* and *rationally* sacrifice their self-interest to oppose the fashions of their culture in obedience to a higher objective moral standard.

Atheists acknowledge no higher moral standard. If there is no God and the universe is an accident, then there is *no way humans ought to be.* The only thing to do in life is to invent your own arbitrary "morals" and hold to that, or not, (you do whichever gives you pleasure, since there no ultimate accountability one way or the other), while avoiding social disapproval for breaking the arbitrary cultural standard of your time and place. That's atheist "morality".

The moral character of a consistent Christian towers above the base animal selfishness of a consistent atheist like a Colossus towers over an ant. Atheists understand morality like a cat in a library, seeing the words, but lacking all understanding of their meaning.

Here is a quote I am stealing from the Anchoress to summarize: "The Christian ideal has not been tried and found wanting. It has been found difficult; and left untried."

Other debates on atheism and morality

My summary of the William Lane Craig (of Biola) vs Shelly Kagan (of Yale) debate at Columbia University on the topic "Is God Necessary for Morality?" is here.

Here are some prior debates on the rationality of morality on atheism.

1. From Christianity Today, a written debate: Douglas Wilson vs. Christopher Hitchens
2. From the University of Western Ontario, a transcript of a public debate: William Lane Craig vs. Kai Nielsen
3. From Schenectady College, a transcript of a public debate: William Lane Craig vs

Richard Taylor
4. From Franklin & Marshall College, William Lane Craig vs. Paul Kurtz (audio, video1, video2, video3, video4, video5, video6, video7)
5. From the University of Massachusetts at Amherst, William Lane Craig vs. Louise Antony (audio1, audio2, video1, video2)

Further study

A good paper by Bill Craig on the problem of rationally-grounding prescriptive morality is here. My previous posts on this blog on this topic are here and here. The first one is about whether atheists can use an ungrounded, arbitrary standard to judge God for his "moral failures", the second (better) one is on why the concept of morality is literally meaningless on atheism.

Who cut federal spending more, Bush or Obama?

May 9, 2009 | by Wintery Knight | Link | Original Link

The Heritage Foundation is my favorite think tank, just like the Investors Business Daily podcast is my favorite podcast. These two news sources are heads and shoulders over anything else. Except for Commenter ECM, but that goes without saying.

Let's see what they have for us today!

First, let's get an answer to the question of who cut spending more, Bush (in his last year budget) or Obama (in his first budget)?

The graphic, from Keith Hennesey, tells all:

Who cut spending more? Bush or Obama?

Oh, that reminds me of a video I saw on the Maritime Sentry of the lovely Michele Bachmann trying desperately to persuade the silly people in Congress not to give more money to organizations like ACORN who are facing charges of voter fraud. But there's only *one* Michele and so *many* other unqualified people.

Well, let's see her speak anyway:

She's addressing Barney Frank, who is one of the people responsible for the recession in my opinion.

I don't know why they won't listen to her and do what she wants. When I see Michele speaking, I just want to give her whatever she wants. She seems so passionate, moral and competent, much more so than the other people who haven't actually run a business or home-schooled 5 children and 23 foster children.

Representative Michele Bachmann

She had a post on her blog about her amendment to block giving money to ACORN, too.

Excerpt:

> On Monday of this week, charges were brought in Nevada against ACORN and two of its former employees for voter registration violations, and today, the Allegheny County District Attorney in Pennsylvania charged seven employees of ACORN with forgery and election law violations, saying they filed hundreds of fraudulent voter registrations during last year's general election.
>
> It really could not be more timely as Chairman Barney Frank was just on the House floor trying to justify his amendment to the Mortgage Reform and Anti-Predatory Lending Act that will allow groups such as ACORN that have been indicted, or have employees who have been indicted, of voter fraud to receive millions in taxpayer funding.
>
> Last week, the House Financial Services Committee unanimously passed my amendment to prohibit the flow of your money to such groups, but Chairman Frank feels it necessary to take back his support for that commonsense language and raise the bar so that organizations would have to be convicted before their access to tax dollars would be cut off.
>
> While I realize that we are all innocent until proven guilty, ACORN has established a pattern of voter registration violations that seems to pop up election after election and in state after state. The courts are the appropriate place to try guilt and innocence. Congress has a fiduciary obligation to spend tax dollars wisely.
>
> Your taxpayer money must be held to the highest standard, and not used to engage in a proven pattern of voter registration violations.

Here's another story from the Heritage Foundation about Obama's interventions into the free market. The more he meddles, the fewer people will want to run businesses in the USA, and the more unemployment there will be. You'll remember that Obama tried to

force the banks to stiff creditors for pennies on the dollar, while giving his union supporters a much better bankruptcy deal than they deserved.

> "…I am indeed fearful writing this. It's really a bad idea to speak out. Angering the President is a mistake…" What country would you expect to hear a citizen make this statement? Venezuela? Cuba? Russia? Nope, those are the words of prominent hedge fund manager Clifford Asness, who wrote a now-famous and widely circulated open letter this week describing the intimidation techniques used by President Obama and his administration.
>
> Why did the President have to resort to such enhanced techniques of intimidation? Mainly because he was asking financial lenders to engage in the same unscrupulous acts his administration has been engaging in since January, i.e. picking winners and losers without concern for free market principles. The President wanted hedge funds to force a loss on investment onto their unknowing clients, so he could reward supportive union bosses in a "controlled" (i.e. Obama controlled) bankruptcy.

The rest of the post documents the ways in which government intervention and intimidation of private business hurts the economy. And they summarize Tom Lauria's testimony that I blogged about before:

> Tom Lauria, a prominent bankruptcy judge, and Democratic Party contributor, recently told WJR in Detroit: "One of my clients was directly threatened by the White House and in essence compelled to withdraw its opposition to the deal under threat that the full force of the White House press corps would destroy its reputation if it continued to fight." Certainly the White House press corps considers themselves independent of any revenge scheme the President may cook up, but then why has their silence on these issues been so loud?

And here is the big picture lesson:

> While the left and the right can agree to disagree on certain matters of this bailout, every American should be on one side of this intimidation debate, against what Michael Barone labeled "Gangster Government". Whether trying to strong arm the dissolution of a company to benefit its union bosses, or trying to use selective declassification of national security memos to prove a policy point, the White House needs to be held to the highest (not higher) standard. The best way to end this cycle of government intimidation is to get government out of these businesses to begin with. Without an end, there shall be no means.

Attack the free market and you attack all of our liberties, especially our precious freedom of religious expression. If I cannot earn an income and make purchases without government approval, then I am not free. We have to keep talking about this story until Obama understands.

My next story is from Victor Davis Hanson, writing in Investor's Business Daily. He makes

the case that America is strong, secure and prosperous for specific reasons. Mess with the design of the country and we will lose our liberty, security and prosperity.

His first example is environmental regulation in California:

> Now in California — the nation's richest farm state — the population is skyrocketing toward 40 million. Yet hundreds of thousands of acres of farmland this year are going out of production, and with them thousands of jobs.
>
> Why? In times of chronic water shortages, environmentalists have sued to stop irrigation deliveries in order to save threatened two-inch-long delta fish that need infusions of fresh water diverted from agricultural use. And for environmental and financial reasons, we long ago stopped building canals and dams in the Sierra Nevada to find sources of replacement irrigation water.

And what about domestic energy production?

> Developing such traditional sources of energy responsibly would save us trillions of dollars in imported fuels, keep jobs at home and allow the nation a precious window of energy autonomy as we steadily transfer to more wind, solar and renewable energy.
>
> If we exploit our own energy carefully offshore and in Alaska, it will mean less sloppy foreign drilling off places like Nigeria or in the fragile Russian tundra to feed American cars and trucks.

And what about being able to project military power abroad?

> Democrats and Republicans have also taken for granted having enough military power to intervene overseas to remove tyrants like Saddam Hussein, Slobodan Milosevic, Manuel Noriega and the Taliban — and to stop atrocities whenever we can. But such power takes hundreds of billions of dollars in expensive hardware and military personnel.
>
> He also wants to keep the defense budget static, or even cut it in some places.
>
> In our have-it-both-ways generation, we want to keep our involvements abroad while not worrying as much about the practical means to meet them.

And his last example, massive deficits… and expanded entitlement programs?

> Then there is the question of national debt. We are projected to run a record $1.7 trillion deficit — and may add $9 trillion to our existing $11 trillion in aggregate debt over the next eight years.
>
> Meanwhile, the president has outlined vast new entitlement programs in health care, education, environmental programs and infrastructure.

It's like we think that the USA is a magic place that will somehow keep running smoothly if we stop believing everything that got us the top spot in the first place. Shouldn't we send Obama to North Korea or something where his policies might actually be welcomed?

Democrats can’t handle any of these issues. Let’s put Michele Bachmann in charge in 2012.

Who is more responsible for the mass murders of history? Christians or atheists?

May 10, 2009 | by Wintery Knight | Link | Original Link

This is presented as an exchange with one of my commenters in response to the story about the nurse in the UK who was suspended who offending a patient by *asking to pray for the patient*.

Here is the initial post, provocative, but regular atheist readers know that I am a lamb, and this is just a trick to get first-time atheists to comment so that I can engage them.

Here is the first rebuttal from the challenger:

1) I have never read so much rubbish as I just have. Are you seriously saying that Atheists are responsible for the deaths of millions of people and yet you include none of the religions whose wars have led to countless more deaths?

2) [Wintery Knight paraphrases]: What did Christians do to stop Hitler in WW2?

3) [Wintery Knight paraphrases]: But isn't Christianity supportive of wars of aggression such as conducted by Germany in WW2?

4) There have been many good and bad, of faiths and of no faith yet so worried are you by the simple wish of some people to have church and state separated that you use half truths, leave out pertinent facts or omit them altogether. Some of you will even lie.

If that is the face of your christianity, then it is of little wonder that people turn away from it, either by finding another faith or by having no faith at all.

5) Your example of the nurse above, mentions nothing of the fact that she was asked by the patient to stop and or that she has a record of trying to impose her beliefs on those who wish to have none of it or are content with their own faith and have no need or desire for the zealotry displayed by this woman or indeed for others who feel they have a right to inflict their views on others.

And my first rebuttal:

Thanks for your comment. Sorry I had to edit your comment a bit, I hope I didn't change the meaning of what you said. Now don't be too unhappy, with me, let's have a dialog, at least for a bit.

Here's my response:

1) Here's my **source** for the 100 million deaths due to communism, an atheist system that represses free expression of faith. I can provide you with citations of atheist leaders in communist countries explaining how war flowed from their atheist views that the universe is an accident and humans are just animals and morality is a sham. I am only interested in defending Christianity, so for this point I need you to give me the list of wars

started for specifically Christian reasons, and then show me in the Bible where Jesus sanctions these wars. I also need a body count for each war in your list. You can include a body count for the Inquisitions and the witch trials, as well. Thanks.

2) On atheism, where is the moral standard that allows you criticize what the Nazis did? Let me help. Is it your personal opinion? Or is it the evolved standard in place in your culture at this time? Or is it an objective standard that governs any culture at any time in history? I need to know what you mean by right and wrong, on atheism, before I answer the charge. Next, please find for me the part in the Bible where Jesus urges his followers to engage in wars of aggression and genocide.

3) Again, I need an explanation, on atheism, for why wars of aggression are wrong, then the Bible verse that shows where Jesus supports wars of aggression and genocide. These things are not forbidden on atheism, (nothing is), but they are forbidden in Christianity.

4) Again, on atheism, what do you mean by good and bad? Also, we do not have an official church in the USA, so we do have separation of church and state. How do you think that separation of church and state should limit the Constitutionally-guaranteed right to free speech and to freedom of religious expression? In short, why do your unhappy feelings justify the removal of fundamental human rights, rights that are grounded in God, and not grounded anywhere on atheism, I might add.

5) What do you mean when you say that the nurse was imposing her beliefs? Do you mean that speaking freely to people should be controlled by the state? If not, how do you propose to prevent people from speaking freely about whatever they wish?

Thanks. Take it easy, we've got time.

And her second rebuttal:

Well, I'm disappointed that you felt a need to rewrite my original email but I can't say I'm too surprised.

I'm sorry, but when you said you had sources for the hundred million deaths caused by Atheism, I thought it would more than just a website sponsored by a discredited former U.S. President whose actions have led to the deaths of many of his fellow countrymen and women but also to thousands of Iraqis and who has postured on the world stage but done nothing for humanity.

You ask me for proof of wars started for specifically christian reasons. Well, I could start with the second Roman invasion of Britain, which also included most of Western Europe. Not a nice time to be an unbeliever of any sort, unlike during the first Romano invasion. We can then move on to the Crusades and the invasion of the Arab nations there with the subsequent savagery that attended them. Next? How about the Spanish Armada and the French/Spanish war with Britain based purely because one of our kings fell out with the catholic religion, and we should surely remember the Spanish Inquisition, that was a nasty little war all in itself.

Let's see, we've got the British civil war, again, over religion. I'm ignoring wars in Europe

that don't directly affect the UK, by the way. But let's not forget the Spanish invasion of South America and the mindless violence that erupted from that. Or indeed, the murder of thousands of North American Indians, all done with the blessing of the church. Two examples which could justly be called Holocausts.

We have various wars with Europe after that, but mostly over Empire (but yet again, an endeavour vigorously encouraged by the church) until we come to the Great War where it was your christian duty to fight the hun as much as it was your christian duty to fight the French/British/American troops, moving swiftly on to the second Great War, where Hitler's troops invaded Europe, sent millions to the camps, all with the motto "Gott mitt uns" giving the delusion that their "work" would be approved by a higher authority and all the while, the church, either protestant or catholic did nothing. How many dead is that? Who knows but even Stalin's excesses are reckoned to be around the 20 million mark, leaving 80 million others according to your figures. I very much doubt China lost eighty million during the Chinese Revolution.

There have been various smaller atrocities around the world, all in the name of religion. **You ask me to show you in the bible where jesus specifically sanctions these wars. Why should I need to do that**, it's your religion, and others, that have caused these wars and it has been the interpretation of those biblical words which have caused so much harm in this world. I don't need to specify anything, you need to defend your argument about the interpretations based on this book of your god. Mind you, what is your view on Gods instruction to Moses to go out and kill everything of the Amalekites? I believe that is in your bible.

As for asking me to provide specific casualty details, well, I think asking me to provide the casualty list for an invasion two thousand years ago is being a bit silly really, you know I can't provide such a list any more than you can. There are, of course, estimates, such as those for the English Civil War in which it has been said the dead and injured equalled that of the Great War. But then, in the examples you quote, there aren't specific casualty lists, only approximations.

As for Atheism, why shouldn't atheists have as good a knowledge of right and right as any one else, such as Sikhs, Muslims, Hindus or even Christians. You don't have to be a christian or be religious at all to be aware of a moral code which embraces right and wrong. Again, I fail to see why I should provide you with quotes in the bible where people are urged to wage war, if there are any, again, you know as well as I do that the interpretation of that book by its readers who use it as the sole authority on what's right and wrong, go out and do harm. I doubt very much there are any parts of the bible where it says go out and torture to death all those who do not believe but that's the very thing which was done in your gods name during the Spanish Inquisition and by others throughout history. You know this, yet you argue that it doesn't happen. I find it quite odd.

As for the nurse, she was asked by the patient not to pray or proselytise yet she ignored that specific request. She had the right to speak freely, and still does, but when a person

is asked not to do something and that person ignores that request, then you are not speaking freely, your are impinging on another persons rights and no matter what your belief, you don't have that right.

Now, 'm pretty sure, that you will alter this reply as you did my first post into something that fits your particular world view of atheism and Christianity but all it will show me, is that your faith in religion is so fragile, that you feel you have to shield it from any fully justified criticism. As others of your ilk do, the truth will be distorted, facts will be omitted or presented in a poor light and you will think you have done the will of your god. You will, of course, have done nothing of the kind, unless your god is a cruel vindictive being which you claim he isn't.

For me, all this nonsense about militant atheism and religion under attack is puerile and arrant nonsense. The hierarchy of the various churches see their comfortable positions under threat from a congregation now doing a bit more than just turning up and kneeling and are trying to cloud the issue with a smokescreen about how their religion is under attack. Which it isn't.

And my second rebuttal:

Atheism's record

Here is **R.J. Rummel**, a professor of political science at University of Hawaii:

> With this understood, the Soviet Union appears the greatest megamurderer of all, apparently killing near 61,000,000 people. Stalin himself is responsible for almost 43,000,000 of these. Most of the deaths, perhaps around 39,000,000 are due to lethal forced labor in gulag and transit thereto. Communist China up to 1987, but mainly from 1949 through the cultural revolution, which alone may have seen over 1,000,000 murdered, is the second worst megamurderer. Then there are the lesser megamurderers, such as North Korea and Tito's Yugoslavia.
>
> Obviously the population that is available to kill will make a big difference in the total democide, and thus the annual percentage rate of democide is revealing. By far, the most deadly of all communist countries and, indeed, in this century by far, has been Cambodia under the Khmer Rouge. Pol Pot and his crew likely killed some 2,000,000 Cambodians from April 1975 through December 1978 out of a population of around 7,000,000. This is an annual rate of over 8 percent of the population murdered, or odds of an average Cambodian surviving Pol Pot's rule of slightly over just over 2 to 1.
>
> In sum the communist probably have murdered something like 110,000,000, or near two-thirds of all those killed by all governments, quasi-governments, and guerrillas from 1900 to 1987. Of course, the world total itself it shocking. It is several times the 38,000,000 battle-dead that have been killed in all this century's international and domestic wars. Yet the probable number of murders by the Soviet Union alone–one communist country– well surpasses this cost of

> war. And those murders of communist China almost equal it.

Communism is a worldview that explicitly repudiates the truth of religion and the idea that man is created in the image of God. If God is dead, all things are permissible. Atheism, historically, has been the moral foundation for mass murder and genocide.

Christianity's record

For all of your examples, no link to the Bible was even attempted. The assertions that wars were conducted for religious purposes was made, but not substantiated with a single piece of evidence.

I'll help you again with a list. There are only a few areas where Christian doctrine appears to have been a factor:

– the Crusades (between 2 and 100 thousand according to Encarta, I say about 30 thousand)
– the Inquisition (about 2000 dead)
– the Salem witch trials (about 25 dead)

I won't worry too much about the 25 dead from the witch trials. Let's take a closer look at the others **with the help of Dinesh D'Souza**, who has sustained these points in debates against Hitchens and other prominent atheists:

The Crusades:

"The Crusades were a belated and necessary Christian enterprise to block Islamic invasion and conquest. Remember that before Islam, virtually the entire Middle East was Christian. Egypt, Syria, Palestine, Jordan—these areas were predominantly Christian. The Muslims conquered the region, and then Muslim armies invaded Europe, conquering parts of Italy and virtually all of Spain, which the Muslims ruled for nearly 700 years. The Muslims over-ran the Balkans and were at the gates of Vienna. Edward Gibbon, no friend of Christianity, says that if the Christians hadn't fought back then, today at Oxford and Cambridge—and by extension Harvard and Duke—we'd all be studying the teachings of Muhammad in the Arabic language. Western civilization, then called Christendom, was mortally threatened. The Crusades, for all their excesses, helped to prevent this disastrous outcome."

The Inquistions:

"Well, the best scholarship on the Inquisition shows that approximately 2,000 people were killed by the Spanish Inquisition over a period of 350 years. I would never apologize for the Inquisition, which I think represented a terrible strain in late-medieval Christianity. I am glad that Christianity is different now, and the closest thing you have to a religious inquisition today would be something like the regime of the ayatollahs in Iran. Still, how can you even compare the casualties of the Inquisition to those of the atheists' regimes? Even a second-rate atheist despot like Pol Pot killed more people in a month than the Inquisition managed to do in three centuries."

More on the Crusades here.

Do belt buckles on SS troops prove anything?

Here is **a historical assessment by Dinesh of Hitler's vicious hatred of Christianity**. Also, I recently wrote a post where I **contrasted the morality of an authentic Bible-believing Christian with an authentic Darwin-believing non-Christian**. The morality you inherited today in the West is a morality left-over from the prominence of Christianity in the last few centuries. It is based on Christian ideas, and explicitly so, ideas that have NO GROUNDING on atheism.

Please explain to me how a 3-word inscription on belt buckles undergirded Hitler's wars of aggression, and explain the real record of his hatred of Christianity in his own actual writings. On your view, you would have to argue that Barack Obama is a Christian, because he claimed to be one. Don't we actually have do some scholarly study to link external activities directly back to specific Biblical teachings in order to claim that there was a meaningful link? If I taught my parrot to claim to be a Christian in his speeches, would he also be a Christian?

What is the ground for a moral standard on atheism?

Again, you had nothing to say here because there is no standard of morality on atheism. None. Atheists do what they please. Indeed, that is the whole point of it – to rebel against morality. If you would like to try again to tell me where is the content and being of the atheist moral standard, I would be delighted to hear.

Until then, the moral language you use in praising this and condemning that is literally meaningless gibberish. There is no standard that you can use, on atheism, in order to praise or denounce anything in the world, past present and future. I offered you 3 alternatives for the source of the moral standard, you declined to answer. Answer the question, please. Where is this moral code that atheists follow? What is the reason for following it when it goes against their own self-interest? What does it matter, on atheism, whether atheists follow the moral code, or not?

Are you familiar with the concept of "heat death of the universe". Eventually, the usable energy in the universe will run down and no life will be possible. This occurs whether atheists act one way or another. What does it matter for atheists ultimately if they act this way or that way? Is it not the case that what is rational, on atheism, is for atheists to simply do what pleases them most at any given moment? What reason is there, given the meaningless of life on atheism, for putting selfishness second and morality (and you need to point me to the atheist moral standard) first?

The nurse

If you ask someone to shut up, and they don't shut up, do you then remove their means of earning a living? Do you imprison them? Do you torture them? Do you murder them? Do you remove their fundamental rights by means of state coercion?

Or, do you *grow up* and realize that in life you are going to hear things you disagree with and that is not a justification for destroying the fundamental liberties of individuals by imposing fascism on individual values.

This is where the impulse in atheism that justifies mass murder and genocide comes from. You feel strongly in the removal of the fundamental rights of those who disagree with you. The idea of tolerating other views seems wrong to you. Instead, atheism seems to bring out the fascist impulse, and you use the very means that you condemn in others against those who have different beliefs than you do. Show me where this idea is in atheistic prescriptions of morality. (I.e. – where is "you ought to love your enemies" on atheism?)

Here's an idea: how about going out right now and finding the first evangelical Christian you meet and buying them lunch in order to listen to why they are a Christian and what it means to them? I did that 3 times with atheists this week, and will be posting the results of my interviews in a highly-anticipated series about what atheists think. All of these atheists are my personal friends, they know my real identity and could blow my cover at any time. Do you have any Christian friends that you love with all your heart? I do. Love for enemies is explicitly taught by Jesus in the Bible.

Conclusion

Thanks for your comment. I enjoyed responding to it. Please comment again soon, I won't mind to hear your ideas. Differences of opinions are welcome here!

UPDATE: I gave her the last word here.

Are Obama's bailouts just pay-offs to left-wing special interest groups?

May 10, 2009 | by Wintery Knight | Link | Original Link

We looked at whether Al Gore's global warming alarmism was just a scam to increase his already considerable wealth by misleading people desperate to find meaning in life with a bunch of faith-based lies. This time, let's take a look at Obama's bailout activities and see whether the the bailouts are to stimulate the economy, or to reward people who voted for him.

For instance, California recently cut $74 million from its state budget by lowering the salaries of unionized workers. How did Obama respond? By threatening to withhold stimulus money unless the unions got the money back.

The radically leftist Los Angeles Times has the story. (H/T Hot Air)

> Reporting from Sacramento — The Obama administration is threatening to rescind billions of dollars in federal stimulus money if Gov. Arnold Schwarzenegger and state lawmakers do not restore wage cuts to unionized home healthcare workers approved in February as part of the budget.
>
> Schwarzenegger's office was advised this week by federal health officials that the wage reduction, which will save California $74 million, violates provisions of the American Recovery and Reinvestment Act. Failure to revoke the scheduled wage cut before it takes effect July 1 could cost California $6.8 billion in stimulus money, according to state officials. …
>
> The wages at issue involve workers who care for some 440,000 low-income disabled and elderly Californians. The workers, who collectively contribute millions of dollars in dues each month to the influential Service Employees International Union and the United Domestic Workers, will see the state's contribution to their wages cut from a maximum of $12.10 per hour to a maximum of $10.10.

And we know from Michelle Malkin that Obama is pressuring private companies to shaft their shareholders in order to give his union buddies a better deal than they deserve.

> Greed is good – until it gets in the way of a union-friendly restructuring deal. President Obama, generous recipient of Wall Street largesse, angrily derided a group of hedge fund managers this week as "speculators." The miffed president suggested that uncooperative firms were selfish for holding out on the government's Chrysler bankruptcy plans and refusing to make "sacrifices" to benefit the United Auto Workers.
>
> The "sacrifices" involved Chrysler debt holders agreeing to sell the debt to the government at prices determined by union-beholden bureaucrats instead of bankruptcy courts. The hedge firms balked. Obama sneered that the dissenters

> were looking for "unjustified taxpayer-funded bailout." But the holdouts never took banking bailout funds from Washington. And the targeted financial executives were simply doing what good money managers are supposed to do: put their clients' fiduciary interests first.

Michelle Malkin also reports on how Obama wants another $19 billion for his peeps at Fanie Mae. Remember, democrats caused this recession by forcing banks via regulations to make loans to Democrat voters against all common sense. Obama gets happy leftist feelings of superiority by redistributing wealth from the producers to the victims. And he thinks that if you went to expensive private schools and Harvard thanks to a rich grandmother, then you would feel good about him redistributing your money, too.

The story from Yahoo News Michelle links to says:

> Fannie Mae (FNM.P), the largest provider of U.S. home mortgage funding, said on Friday it needs more capital from the U.S. Treasury after a $23.2 billion loss in the first quarter, and warned government housing programs would cut deeper into its profitability.
>
> The government-controlled company said its regulator requested $19 billion from the Treasury under a funding commitment that on Wednesday was doubled to $200 billion. The credit, in the form of senior preferred stock purchases, was established as soaring losses led the government to push the company into conservatorship in September.
>
> As the nation's housing market reels in its worst downturn since the 1930s, credit-related expenses accounted for the majority of Fannie Mae's loss, at $20.9 billion. It also took a $5.7 billion loss on mortgage securities.
>
> Provisions for credit losses soared 85 percent as the U.S. economy faltered, expanding delinquencies — which have wreaked havoc on the entire financial system — to consumers with better credit, it said.

Oh, and here is news of a prospective bailout of Obama's buddies in the left wing media.

Inquisitr.com and Free Republic reported: (H/T Gateway Pundit)

> At the annual White House Correspondents Dinner in Washington DC Saturday evening (May 9), President Barack Obama ended on a serious note, pledging his undying support for journalists and specifically newspapers.
>
> President Obama spoke about media job losses and changes in the industry, then quoted Jefferson, "if he had the choice between Government with newspapers or newspapers without Government, he'd choose the latter." The gushing was perhaps understandable at a press function, but it's what he said next that foretold of a newspaper bailout.
>
> Obama told the crowd "Your ultimate success is essential to success of our democracy" before shortly saying "Government without a tough and vibrant media is not an option for the United States of America."

> The notable thing in context is that Obama primarily in the speech talks about newspapers, with other media outlets being mentioned second (collectively), or when making a joke (for example, noting that Jefferson hadn't seen Cable News.) It would appear from the speech clearly that Obama holds the mainstream media, and particularly newspapers above online media. It is clear that when he talked about "tough and vibrant media" that he is referring to mainstream media, and newspapers in particular.
>
> He concludes with the line that the problems in the media industry are "problems worth solving," which sounds an awful lot like the final word that there's going to be a newspaper bailout.

And remember I blogged recently about Michele Bachmann's effort to prevent taxpayer money from going to ACORN while they are facing criminal charges.

It's like Bush and Haliburton. Only that Bush stuff never actually happened, but this Democrat stuff is actually happening. Everything the Democrats hated about Bush? Like opposing dissent and free speech? Bush never did any of it. Democrats are the ones who are authoring hate crime bills and criminalizing blogging. Yeah, fascism is a solely a phenomenon of the left. Always has been, always will be.

Interview with the atheist, part 1: the questions

May 11, 2009 | by Wintery Knight | Link | Original Link

UPDATE: The answers are posted here.

Recently, I have been writing about morality on atheism. In one post, I contrasted the moral behavior of a consistent, authentic Christian, William Wilberforce, with the moral behavior of a consistent, authentic non-Christian Darwinist, Adolf Hitler. In another post, I engaged an atheist commenter about who is really responsible for the mass murders in history. And the post on British novelist A. N. Wilson's recent return to Christian faith which was partly due to his discovery of the objective moral law.

I decided to interview my atheist friends about God and morality. Yes, I have atheist friends, and yes, they read the blog, and yes, they know the Wintery Knight's true identity. So, I arranged some lunch meetings with them, and I asked them, and recorded their responses. Later on, I will be posting their replies and my comments about their replies, then some general comments about the Christian Life.

Who is safe to talk to?

In this post, I am going to explain to you clearly how to engage your atheist friends on these issues. But be careful. Some atheists have fascist tendencies – when they feel offended, some of them want to bring state to bear against those who make them feel bad. Atheists struggle with morality, it just doesn't sit well on their worldview, even though they sense God's law on their hearts, like we do.

If you want some advice about who to avoid, e-mail me. The easiest way to see if the person is safe, is to ask them for reasons why someone might accept positions that they don't hold. Ask them: "Why do people believe in God?", "What's good about capitalism?", and "Why are people pro-life?" and so on. If you can't hear any good reasons presented respectfully, then move on.

How to organize the engagement

My advice is to meet with the person one-on-one for lunch. Describe the questions, but don't give them the list: 45 minutes is needed to get through all the questions below. You should buy their lunch. Try to convey to them that this will be a safe place for them to tell what they think, and that you will keep what they say in confidence. Explain that you will not be responding or arguing, just asking questions.

You should definitely pray about it beforehand. Ask God to help you to keep calm. Ask him to help you not to be defensive. Also, it may help if you practice these questions on safe people, like family members, first. Yes, they are impossible to persuade, but they won't be as inclined to censor you. You need to practice hearing views you don't agree with, and saying the words "I'm sorry!" if you offend someone.

What are the questions to ask?

Below are the questions I used last week in the 5 interviews I did so far. I have more interviews scheduled this week with an agnostic and an atheist, so I may use different

questions.

1) Do you believe that the universe was brought into being out of nothing by a person (agent)? Is it possible that this agent could communicate to us, or that we could discover something about that agent? (i.e. – does God exist, is he knowable)

2) Explain to me in which religion you were raised by your parents, if any. How did your parents approach religion in the home? (strict, lax, etc.)

3) What events in your past affected your beliefs about God's existence and knowability? (e.g. – I studied biology, comparative religions or anthropology, or I met a girl I liked)

4) What are your main objections to belief in God's existence and knowability today? (e.g – suffering, pluralism, hiddenness)

5) This salt shaker (grab salt shaker and brandish it in a non-threatening way) exists because it is made of matter and occupies space. What is the mode of existence of moral values and moral duties, on atheism? Where do they exist, and what do they exist as? (e.g. – in people's minds, as descriptions of behavior, in God's mind)

6) Free will is required in order for humans to act in ways that are morally responsible. You cannot assign praise or blame to anyone if they do not have free will. What is the rationale for free will on atheism? If there is no free will, on what grounds can atheists praise or condemn any behavior? (free will means the ability to act or not act)

7) Suppose you are an atheist journalist writing a story in atheistic North Korea in which you criticize the atheist leader Kim Jong Il. His secret police burst through the front door of your apartment and drag you off you a torture chamber. You are told that you are about to be personally executed by the dictator himself. On what basis would you plead for your life, on atheism? (i.e. – how would you persuade a powerful atheist to do right)

8) Suppose that you are strolling along the river in the winter, and you cross a bridge. Suddenly, you hear shouts for help coming from the icy water below. A little girl has fallen in the water and will die in minutes unless you jump in. There is no one else around to save her. You have no relatives/dependents. You can swim. There is an even chance that you will both die if you try to save her. Do you try? How is this rational on your worldview? (i.e. – how is self-sacrifice rational on atheism)

9) Suppose you travel back in time to the United Kingdom, when slavery is still legal! You meet William Wilberforce. He says that he has been battling slavery hard for 20 years, on the basis of Christian convictions, but that today he wants to let you try it in his place. On atheism, on what rational grounds could you try to persuade them? (If they say yes, ask them if they are pro-life and what they have done to support the pro-life movement)

10) Consider the heat death of the universe, which is the theory that the amount of usable energy is going to run out at some point in the finite future, as it disperses in space. On atheism, what is the ultimate significance of your moral decisions? How does it does it affect your fate, or the fate of anyone else you act on ultimately? What does it matter to you and to the species ultimately whether you act morally or not? (i.e. – how do your good and evil actions change where you and everyone else ends up?)

11) What is your purpose in life, and why did you choose that purpose? Is it just yours, or for everyone else too?

12) Suppose Jesus appeared to us right now and addressed you directly with the following words: "I'm really here and you need to *follow me* in order to flourish and achieve the goal for which I created you". He then glares suspiciously at me, snatches a few fries from *my* plate, eats them, and then disappears. Later on, the Ghostbusters show up and confirm that Jesus was no ghost, but really God stepping into history. And everyone in the restaurant saw and heard exactly what you and I saw and heard. How would you proceed? How would you find out what to do? (i.e. – the atheist now knows Christianity is true, and I want to see what they think they should do in order to act like a Christian)

13) What would be the most difficult thing about becoming a Christian for you? Would it be the moral demands? The demands on your time? The unpopularity, humiliation and persecution that you would face? How would you feel about publicly declaring your allegiance for Christ and facing the consequences? (i.e. – they have become a Christian, what is the most difficult adjustment from your current life?)

Your assignment

If you are an atheist, please go ahead and answer the questions, and e-mail your answers to me. Don't leave a comment, use e-mail. This is not about winning and losing, it is about promoting understanding between two opposing teams. I will post non-polemical atheist responses as separate blog posts, and link to your blog if you have one. Answers must be 1-2 lines, at most.

If you are a Christian, start practicing these questions on your safe or Christian friends, and write down their answers. Read the materials below and understand the arguments. Then interview some of your atheist friends and write down their answers. Send me the results of your interviews and I will post them as separate blog posts. Send me any other questions you think of, too!

NOTE: If I interviewed you and you didn't get all these questions, e-mail me your response to the ones I missed and I'll add your reply to the list. But you can't change the answers you already gave!

Atheists: come up with your own list of difficult questions and send them to me. I will post my replies in a separate blog post and link to your blog. Your questions should expose my weaknesses, but not be insulting. This is getting to know each other, it's not the time for snarkiness. I am doing an interview series on Christians in a couple of weeks, and I may include your questions in my list.

Debates on atheism and morality

My summary of the William Lane Craig (of Biola) vs Shelly Kagan (of Yale) debate at Columbia University on the topic "Is God Necessary for Morality?" is here.

Here are some prior debates on the rationality of morality on atheism.

1. From Christianity Today, a written debate: Douglas Wilson vs. Christopher Hitchens
2. From the University of Western Ontario, a transcript of a public debate: William Lane

Craig vs. Kai Nielsen
3. From Schenectady College, a transcript of a public debate: William Lane Craig vs Richard Taylor
4. From Franklin & Marshall College, William Lane Craig vs. Paul Kurtz (audio, video1, video2, video3, video4, video5, video6, video7)
5. From the University of Massachusetts at Amherst, William Lane Craig vs. Louise Antony (audio1, audio2, video1, video2)

Further study

A good paper by Bill Craig on the problem of rationally-grounding prescriptive morality is here. My previous posts on this blog on this topic are here and here. The first one is about whether atheists can use an ungrounded, arbitrary standard to judge God for his "moral failures", the second (better) one is on why the concept of morality is not rationally grounded on atheism.

Free speech in Canada, the United Kingdom and Cuba

May 11, 2009 | by Wintery Knight | Link | Original Link

My friend Jojo writes to inform me that I *must* blog about the state of free speech in Canada, so I will do it. But I am worried that my readers do not like to hear about other countries, like Canada. Just last week I blogged about Stephen Harper traveling to visit the Canadian troops in Afghanistan, and did not see a big hit count on that story, even thought I thought it was awesome!

Here is Jojo's article on free speech. In the most Conservative province of Alberta, the "conservative" Ed Stelmach that they elected in the primaries is blocking HRC reform, and increasing the HRC budget! Since only the Conservatives can win in Alberta, all the Liberal and NDP (socialist) people vote in the primary and they end up with the equivalent of Arlen Specter as the Conservative nominee!

I had blogged about Ezra Levant's support for Stephen Boissoin before, and about Lindsay Blackett's intent to reform the Alberta HRC. But it looks like Stelmach is going to block Blackett's effort to reform the Alberta HRC!

And here is the excerpt for Alberta:

> Lindsay Blackett, Minister of Culture and Community Spirit, oversees Alberta's Human Rights Commission. He announced plans to reform the human rights code and commission. He disparagingly called the commission a "Kangaroo Court," and hinted at the likelihood that the government would repeal the censorship provisions in the provincial human rights code so that the commission could not be used as a weapon against free speech.
>
> Bu Premier Stelmach sent his black Culture Minister to the back of the bus. The government's set of amendments to Alberta's human rights industry is preserving the censorship provisions.
>
> Not only that, but professing Christian Premier Stelmach is rewarding the anti-Christian bigotry of Alberta's HRC by giving them a raise – a budget increase of $1.7 million – in the middle of a recession – in a deficit budget.

Note to conservatives: have some sort of ideology test for delegates. And then we move to Ontario, where one the 4 candidates I blogged about before is promising to abolish the Ontario HRC entirely:

> The fight against human rights commissions moves to Ontario with Ontario Progressive Conservative leadership candidate Randy Hillier advocating the elimination of that province's Human Rights Commission. Mr. Hillier's leadership campaign platform includes a number of freedom-oriented and private property rights entrenching proposals. Mr. Hillier recognizes that the Human Rights Commission is guilty of serious violations of Ontarians' fundamental freedoms.

> Additionally, defending his proposal to abolish Ontario's HRC, Mr. Hillier said that real human rights are so important that they should be defending in real courts, not delegated to Kangaroo Courts.
>
> To vote in Ontario's provincial PC leadership campaign, you need to be a member of the PC party by May 14th.
>
> I haven't heard any pro-freedom comments from the other three leadership candidates, especially in reference to human rights commissions. In fact, there seems to be a real paucity of tangible policy proposals from the other three candidates, so I don't know where they stand, or what I can hold them accountable to, if any of them become the next leader of the Ontario PC Party.

Now on to the UK, where things are definitely taking a turn for the worst! The Australian has this report about Britain.

This is scaring the snark out of me:

> Countryside Restoration Trust chairman and columnist Robin Page said at a rally against the Government's anti-hunting laws in Gloucestershire in 2002: "If you are a black vegetarian Muslim asylum-seeking one-legged lesbian lorry driver, I want the same rights as you." Page was arrested, and after four months he received a letter saying no charges would be pressed, but that: "If further evidence comes to our attention whereby your involvement is implicated, we will seek to initiate proceedings." It took him five years to clear his name.

And this is worse still, because she just a child:

> In September 2006, a 14-year-old schoolgirl, Codie Stott, asked a teacher if she could sit with another group to do a science project as all the girls with her spoke only Urdu. The teacher's first response, according to Stott, was to scream at her: "It's racist, you're going to get done by the police!" Upset and terrified, the schoolgirl went outside to calm down. The teacher called the police and a few days later, presumably after officialdom had thought the matter over, she was arrested and taken to a police station, where she was fingerprinted and photographed. According to her mother, she was placed in a bare cell for 3 1/2 hours. She was questioned on suspicion of committing a racial public order offence and then released without charge. The school was said to be investigating what further action to take, not against the teacher, but against Stott. Headmaster Anthony Edkins reportedly said: "An allegation of a serious nature was made concerning a racially motivated remark. We aim to ensure a caring and tolerant attitude towards pupils of all ethnic backgrounds and will not stand for racism in any form."

The article is filled with anti free speech madness:

> A bishop was warned by the police for not having done enough to "celebrate diversity", the enforcing of which is now apparently a police function. A Christian

> home for retired clergy and religious workers lost a grant because it would not reveal to official snoopers how many of the residents were homosexual. That they had never been asked was taken as evidence of homophobia.
>
> Muslim parents who objected to young children being given books advocating same-sex marriage and adoption at one school last year had their wishes respected and the offending material withdrawn. **This year, Muslim and Christian parents at another school objecting to the same material have not only had their objections ignored but have been threatened with prosecution if they withdraw their children.**

And naturally, Christian lambs are the target of atheist wolves:

> There have been innumerable cases in recent months of people in schools, hospitals and other institutions losing their jobs because of various religious scruples, often, as in the East Germany of yore, not shouted fanatically from the rooftops but betrayed in private conversations and reported to authorities. The crime of one nurse was to offer to pray for a patient, who did not complain but merely mentioned the matter to another nurse. A primary school receptionist, Jennie Cain, whose five-year-old daughter was told off for talking about Jesus in class, faces the sack for seeking support from her church. A private email from her to other members of the church asking for prayers fell into the hands of school authorities.

Maybe things are different in the UK, which may explain a recent exchange I had with a British atheist about a recent audio debate regarding that nurse. Read the exchange and consider how far gone the UK must be when the mere fact that a non-Christian hears something they don't like is grounds for removing fundamental rights to free speech and freedom of religious expression.

I also noticed some comments from Ed West, who blogs for the UK Telegraph here, talks about the SECULAR THEOCRACY or ATHEOCRACY.

Excerpt:

> Lib Dem MP Evan Harris felt very smug about overturning Britain's long disused blasphemy laws last years, and was made "Secularist of the Year", even though Britain hasn't been in any way an Anglican theocracy since the early Victorian era. This – arresting people for having unfashionable views, however objectionable – is a real theocracy. If you want to fight for freedom, Dr Harris, fight for the peoples' right to be racist or sexist or Islamophobic or simply rude.
>
> This atheocracy derives from the incredibly liberal but also incredibly intolerant anti-discrimination morality that spread through Britain's universities in the 1970s, 80s and 90s.
>
> It became known as "political correctness", which itself became a tedious cliche because we journalists overused it…. The point of political correctness was that it

> closed down debate. Political correctness sought – in true Orwellian fashion– to make contrary ideas utterly verboten.

Everyone is so surprised to find out that atheist rule is totalitarian. Excuse me? Who do you think killed 100 million people in the 20th century alone? (Hint: It was wasn't followers of Jesus, who are obligated to love their enemies). Atheism leads to fascism! Wake up!

Where on the planet are atheists in charge of states? Well, there's North Korea, Cuba, Venezuela… Hey! What's going on in atheistic Cuba? (H/T Mere Rhetoric)

> Cuba is further limiting access to the World Wide Web for its citizens, in what many believe is an effort to rein in a small but increasingly popular group of bloggers who are critical of the government. In a move seen as aimed at anti-government bloggers, Cuba is further limiting access to the World Wide Web Only government employees, academics and researchers are allowed their own Internet accounts, which are provided by the state, but only have limited access to sites outside the island. Ordinary Cubans may open e-mail accounts accessible at many post offices, but do not have access to the Web. Many got around the restrictions by using hotel Internet services. But a new resolution barring ordinary Cubans from using hotel Internet services quietly went into place in recent weeks, according to an official with Cuba's telecom monopoly, hotel workers and bloggers.

What does Santayana say about those who are ignorant of the lessons of history?

UPDATE: Just a reminder that the Democrats are trying to pass a hate crime bill and a bill to criminalize blogging as well, in the USA.

Videos from Zo, Steven Crowder and How the World Works

May 11, 2009 | by Wintery Knight | Link | Original Link

Here's Alfonzo Rachel's latest video on RINOs, abortion, and our mounting debt to China:

Why can't I talk like that? Oh, because I'm a software engineering nerd! That's why.

And here's Steven Crowder's latest video on National Prayer Day:

Steven says this on Big Hollywood under the video:

> For all of you atheist Libertarians who will undoubtedly be offended by this…
> Don't worry, you'll have plenty of time to complain about it while you're in hell.

These guys are solid across the board on issues of interest to Christians and conservatives. I am so glad to see talented Christians making a difference in the blogosphere! Bookmark their blogs! They post new videos every week.

Here is one more video by How the World Works, explaining media bias:

The media is an arm of the Democratic party.

By the way, did you see my first ever Friday night funny on media bias? It was hilarious!

Unemployment rate tracking above Obama's projection

May 12, 2009 | by Wintery Knight | Link | Original Link

I have an idea. Let's put a Democrat ACORN lawyer in charge of the economy during a recession caused by Democrats and ACORN. What could go wrong?

This: (From Hot Air, H/T Ace of Spades)

> Barack Obama pushed for almost $800 billion in stimulus spending by claiming that it would save or create millions of jobs this year. Critics pointed out that most of the spending started in 2010 and more than half of it came in 2011 or later, calling the stimulus useless at best for salvaging jobs, let alone creating them. The White House has quietly agreed with its critics, according to the New York Times, and now says it expects to see no hiring rebound in 2009.

I can't believe what I'm reading. Are you telling me that the Marxist-in-Chief blew trillions of taxpayer dollars on big government wastefulness, and he created NO JOBS?

Hot Air continues:

> We just got done hearing Obama take credit for saving 150,000 jobs — which his administration never documented. Now we're hearing that the stimulus package demanded by Obama and passed over near-unanimous Republican objections won't actually make any difference at all. The cure, Obama and his team now admit, is private-sector growth.

Take a look at the numbers below. We are getting worse unemployment numbers for Mr. Teleprompter than if *he had never spent a dime of taxpayer money at all.*

Chart by Geoff from Innocent Bystanders

Hot Air explains:

> Actually, only the red indicators come from Geoff. The chart itself comes from page 5 of an analysis prepared by Romer and Obama's council of economic

> advisers in support of the $787 billion Porkulus plan.
>
> We’re already past 8.8%, well on the way to 9.5%, above her predictions in either case. They predicted that the upper curve would occur *without* spending $800 billion on government make-work, and that passage would prevent the severe spike in unemployment. Now Romer admits that the upper curve will happen anyway.

Remember under George W. Bush, when unemployment averaged about 5% over the course of his two terms? Yeah, I miss him too.

4Simpsons explains why tariffs turn recessions into depressions

May 12, 2009 | by Wintery Knight | Link | Original Link

I was browsing around on 4Simpsons, my favorite Christian Living blog, and I found this gem of a video on Neil's latest round-up of links. I love this blog, because you get solid economics, solid social conservatism and solid apologetics.

Here's the video:

It features Amity Shlaes, whose voice I find irresistible! And Jagdish Bhagwati, too.

If you are a Christian and you voted for Democrats, please listen to this lecture by Jay Richards on the "Myths Christians Believe about Wealth and Poverty". When Jay mentions the "Trading Game" and networking theory, I had to study that in grad school e-commerce: "Metcalfe's Law" and "network externalities".

If you want to read the book by Henry Hazlitt that he mentions, it's all posted online here. But I recommend Robert P. Murphy's "The Politically Incorrect Guide to Capitalism" as the best economics book for beginners. Better than Tom Sowell's "Basic Economics"? For beginners, yes! Get both, they're all you need to understand basic economics.

Now, remember how leftist Democrats were always complaining about how much the world hated us because of Bush? Yeah, they didn't really hate us then, (because they all voted in conservatives themselves!), but they really hate Obama's trade policies now!

Take a look at what Canadians think of Obama's Buy American anti free trade policy: (H/T My best friend, Andrew who has a perfect marriage)

> The dire predictions about Buy American are coming true. From pipes and water pumps to steel beams and office furniture, a wide range of Canadian manufacturers are suddenly finding themselves shut out of traditional markets south of the border, according to industry and government officials.

> …Canadian Manufacturers and Exporters (CME) has compiled a list of seven pieces of legislation now before Congress that contain overtly protectionist language. They include bills to fund local sewer and water projects, expand broadband access, build smart electrical grids, replace Air Force One, purchase 100,000 hybrid vehicles, and build and renovate government buildings.

> …Canadian steel makers and fabricators are feeling the impact of Buy American restrictions, which were inserted into the stimulus bill to appease U.S. steel makers and workers. Companies are losing orders, threatening $1-billion-a-year worth of exports, according to Ed Whalen, president of the Canadian Institute of Steel Construction.

Who loses from Americans paying too much for materials and products? Canadian companies and consumers are hurt from lost revenue, so they lay people off and buy less

of our stuff. US companies pay more for materials, so they lay people off. US Consumers, who must pay more for products they could have got cheaper. And taxpayers, whose money is wasted by paying too much for government projects.

And who gains from protectionism? Why Obama's union supporters and donors, that's who. It's basically a legal way of rewarding the people who put you in office ,and buying the next election with money confiscated from the productive private sector, i.e. – your boss.

A comprehensive article about Obama's plans for energy policy, which will really destroy the economy and cost us piles of jobs, is here.

Should atheists or Christians be blamed for communism's 100 million deaths?

May 12, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from the the Western Experience! Thanks for the link, Jason!

I have had some atheist commenters lately. Initially, I try to post a provocative article to attract them, and then I make a conscious effort to be polite as they challenge my initial post. Recently, I had this exchange with a commenter called Robert, and I thought this was worth posting to see what you all thought of my style. Was I too mean?

I think it's important that angry atheists who want to blame God for atrocities should actually know what God is like, as revealed in the Bible, and especially in the life of Jesus. For that topic, check out a post by Neil, on 4Simpsons blog, that expresses the problem that I am trying to resolve below.

Here is the initial post that generated the challenge, which talks about who is more responsible for the mass murders of communism: Christians Or atheists? (By the way, I see that Chad, on Truthbomb Apologetics, has posted a breakdown of the numbers murdered and who did the murdering)

.

.

Here is Robert's first rebuttal:

Communism did not arise from atheism. In fact, some of the first communists were Christians, and there are even Christian communists today. Communism actually owes an intellectual debt to Christians and the Bible. You can read more in my article on atheism and communist atrocities found here. More articles debating Christian apologists Dinesh D'Souza and Dr. David Aikman can be found at my site too (yes, these guys actually responded to me).

It's interesting you quote Dr. Rummel as a source for your views. Do you know what else he wrote?

> Q: Is atheism the principal factor in democide, such as that committed by the "Big Three," Stalin, Mao, and Hitler?
>
> A: No. I find that religion or its lack – atheism – have hardly anything to do in general with wide-scale democide. The most important factor is totalitarian power. Whether a church, atheists, or agnostics have that power is incidental – it is having the power that is a condition of democide. Incidentally, some ideologies, such as communism, function psychologically and sociologically as though a religion. The only distinction is whether the subject is a god or a man, such as Marx, Lenin, Hirohito, Hitler, Mohammed, Kim Ill sung, Mao, etc.

Your view is explicitly debunked by the very scholar you use to support it.

.
.
And here is my reply:

I trust Rummel's numbers, not his personal opinions about the numbers. All totalitarian systems that murdered massive numbers of people have been atheistic, because the content of the worldview (materialism) does not forbid it. Atheism does not have a ground for human rights, human dignity, etc. The content of the worldview makes the murders possible.

Communism is a system of economics built upon materialist atheism. No Christian can believe in atheism, the two are mutually exclusive. Marx himself wrote about atheism and he was an aggressive atheist. His economic views emerged directly from his metaphysics. That is why Marx wrote that "religion is the opium of the people", while the New Testament says that if a man does not work, neither shall he eat. The New Testament values private, voluntary charity. Marx values redistribution of wealth by a fascist state.

Here is a citation from **a communist web site**:

> In the body of his study Marx pointed out that: "The proofs of the existence of God are either mere hollow tautologies… all proofs of the existence of God are proofs of his non-existence." (Marx, The Difference Between the Democritean and Epicurean Philosophy of Nature, 1841, MECW 1.)
>
> …In 1841 Marx and Bauer planned to publish a radical philosophical periodical, Archives of Atheism. The views of some contemporaries give some indication of the scope of their project.
>
> Arnold Ruge wrote: "**Bruno Bauer, Karl Marx, Christiansen and Feuerbach are forming a new montagne and are making atheism their slogan. God, religion, immortality are cast down from their thrones and man is proclaimed God.**"
>
> And Georg Jung wrote to Ruge: "If Marx, Bruno Bauer and Feuerbach associate to found a theological-philosophical review, God would do well to surround himself with all the angels and indulge in self-pity, for these three will certainly drive him out of his heaven… **For Marx, at any rate, the Christian religion is one of the most immoral there is.**" (David McLellan, Marx before Marxism, 1970)
>
> **Flowing from his atheism, Marx opposed organised religion and the role of religion in politics.** A flavour of Marx's attitude can be gleaned from his journalism at the time.
>
> …in "The Leading Article" in No. 179 of the Kölnische Zeitung (1842), Marx accused the Prussian state of disseminating Christian dogma, criticised the police and the censor for protecting religion and insisted that no distinction should be made between religion as belief and the religious establishment. (MECW 1)

Robert's comment gives me a chance to plug Jay Richards' new book from Harper-Collins.

Now Jay Richards is a Princeton educated theologian and philosopher, who writes advanced books about the nature of God. Whatever he says about whether Christianity is more compatible with capitalism or communism should be considered authoritative for Christians. His specialty is explaining what is and is not compatible with orthodox Christianity, and he is the best.

—-

Money, Greed and God: Why Capitalism Is the Solution and Not the Problem

Does capitalism promote greed? Can a person follow Jesus's call to love others and also support capitalism? Was our recent economic crisis caused by flaws inherent to our free market system? Jay Richards presents a new approach to capitalism, revealing how it's fully consistent with Jesus's teachings and the Christian tradition, while also showing why this system is our best bet for renewed economic vigor.

The church is bombarded with two competing messages about money and capitalism:

* wealth is bad and causes much of the world's suffering
* wealth is good and God wants you to prosper and be rich

Richards exposes these myths, and other common misconceptions about capitalism, and reveals the surprising ways that capitalism is, in fact, the best system to respond to the biblical mandates of alleviating poverty and protecting the environment. Money, Greed, and God equips readers to take practical steps in their own lives to conduct business, worship God, and serve others without falling into the "prosperity gospel" trap.

—-

You can listen to a good lecture featuring Jay Richards on the **agreement between Christianity and capitalism here**.

—-

And don't forget agnostic historian/sociologist Rodney Stark's book: "**The Victory of Reason: How Christianity Led to Freedom, Capitalism, and Western Success**".

So, I think you're mistaken. What is that noise I hear? The theme from Jaws? Oh, my God! Run! It's ECM! He's coming for you!

.

.

And here is Commenter ECM, who is a deist:

Communism did not arise from atheism.

I'd say he makes a more compelling argument than you do, unless we're supposed to simply take you at your word.

In fact, some of the first communists were Christians, and there are even Christian communists today.

Wow, no kidding: you're telling me that in a day and age when Christianity was as ubiquitous as the preening of religious atheists on the Internet that some of them might

just be Christians? Wow, my mind is, like, totally blown.

Of course there is the sticky points that WK makes and the simple fact that, based on the quotes below (and writings and beliefs) of the arch-priests of communism that the two are painfully and obviously mutually-exclusive but, hey, you're making a point here…I think…so to hell with intellectual honesty.

Communism actually owes an intellectual debt to Christians and the Bible. You can read more in my article on atheism and communist atrocities found here.

Again, so what? Most of the philosophies in human history owe a debt, no matter how potentially perverse, to the ones that came before and is, generally, what one might call 'progress.' (Though i'll be the first to admit that 'progress' isn't a good unto itself.) As a key example, does it bother you that science, as we understand it, owes a tremendous debt to Christianity, i.e. it wouldn't exist in the terms we comprehend without its influence.?

More articles debating Christian apologists Dinesh D'Souza and Dr. David Aikman can be found at my site too (yes, these guys actually responded to me).

And (again!) so what? What does that have to do with what you're arguing here? I mean, other than self-promotion and/or auto-ego stroking.

With all that said, though, I figured I'd pull some quotes from the leading lights on communism to show the depths of their tolerance and belief in religion and how that might make Christian communists (whatever they are) sorely confused at best and devious liars using Christianity as a foil to make converts at worst:

Marx:

The foundation of irreligious criticism is: Man makes religion, religion does not make man. Religion is indeed the self-consciousness and self-esteem of man who has either not yet won through to himself or has already lost himself again. But man is no abstract being squatting outside the world. Man is the world of man, state, society. This state and this society produce religion, which is an inverted consciousness of the world, because they are an inverted world. Religion is the general theory of this world, its encyclopaedic compendium, its logic in popular form, its spiritual point d'honneur, its enthusiasm, its moral sanction, its solemn complement and its universal basis of consolation and justification. It is the fantastic realization of the human essence since the human essence has not acquired any true reality. The struggle against religion is therefore indirectly the struggle against that world whose spiritual aroma is religion.

Lenin:

Religion is one of the forms of spiritual oppression which everywhere weighs down heavily upon the masses of the people, over burdened by their perpetual work for others, by want and isolation. Impotence of the exploited classes in their struggle against the exploiters just as inevitably gives rise to the belief in a better life after death as

impotence of the savage in his battle with nature gives rise to belief in gods, devils, miracles, and the like. Those who toil and live in want all their lives are taught by religion to be submissive and patient while here on earth, and to take comfort in the hope of a heavenly reward. But those who live by the labor of others are taught by religion to practice charity while on earth, thus offering them a very cheap way of justifying their entire existence as exploiters and selling them at a moderate price tickets to well-being in heaven. Religion is opium for the people. Religion is a sort of spiritual booze, in which the slaves of capital drown their human image, their demand for a life more or less worthy of man.

Mao Zedong:

But, of course, religion is poison. It has two great defects. It undermines the race (and) retards the progress of the country. Tibet and Mongolia have been poisoned by it.

(Note: having read several of your blog posts, I am fairly certain you would agree with the statement 'religion is poison', yes? Incidentally, this is why most blogs like this one require comment moderation: far too many religious atheists are unable to be civil and decent in debate, even when they are busily assuring the rest of us that they have lots of "empathy" for those with which they disagree.)

Anyway, those are just a few of the big-time communists (you can, I'm sure, dig up more from, say, monsters like Pol Pot and Stalin) and how they view religion and not a one of them has a kind word for it. It's also painfully clear that communism sees relgiion as an arch-rival that must be stomped out of existence with extreme prejudice, and that one of the pillars of communism is, obviously (yes, **obviously**), rabid, blood-thirsty, atheism–how anyone that's read the Communist Manifesto or the writings and speeches of any number of communist leaders could believe otherwise calls into question the intellectual honesty of the individual in question.

Round-up of stories on fiscal, social and foreign policy

May 13, 2009 | by Wintery Knight | Link | Original Link

Gateway Pundit reports that the Democrat government has raised the average wage of government employees by over $2600 during a recession caused by the Democrat's own policy of forcing private banks via regulation to make risky loans to Democrat special interest groups.

Excerpt from the CBS article:

> President Obama's call last year for "shared sacrifice" doesn't extend to federal employees, at least based on the details of his administration's 2010 budget released this week.
>
> At a time when the official unemployment rate is nearing double digits, and 6.35 million people are receiving unemployment benefits, the U.S. government is on a hiring binge.
>
> Executive branch employment — 1.98 million in 2009, excluding the Postal Service and the Defense Department — is set to increase by 15.6 percent for the 2010 fiscal year. Most of that is thanks to the Census Bureau hiring 102,000 temporary workers, but not counting them still yields a net increase of 2 percent in one year.
>
> There's little belt-tightening in evidence in Washington, D.C.: Counting benefits, the average pay per federal worker will leap from $72,800 in 2008 to $75,419 next year.

So much for communism, the economic system of those who are unable to revise their beliefs in the face of reality and history. I recommend that those who voted for Obama read Robert P. Murphy's "The Politically Incorrect Guide to Capitalism", the best economics book for complete beginners. I wonder why American atheistic leftists are still living in the capitalist USA instead of in North Korea or Cuba? Oh, I know: hypocrisy!

And then there is the story of 5 of the 6 wannabe-Jihadists from a Miami terror cell were finally convicted for their part in a plot to attack the Sears Tower in Chicago.

The Jawa Report cites this Chicago Tribune article:

> Ringleader Narseal Batiste, 35, was the only one convicted of all four terrorism-related conspiracy counts, including plotting to provide material support to terrorists and conspiring to wage war against the U.S. Batiste, who was on the vast majority of hundreds of FBI audio and video tapes, faces up to 70 years in prison.
>
> Batiste's right-hand man, 29-year-old Patrick Abraham, was convicted on three counts and faces 50 years behind bars. Convicted on two counts and facing 30

> years are 24-year-old Burson Augustin, 25-year-old Rotschild Augustine and 33-year-old Stanley Grant Phanor. Naudimar Herrera, 25, was cleared of all four charges.

Jihad Watch notes some bias in the coverage by AP, where they leave the identity and motives of the attackers to the last few paragraphs.

> …Prosecutors Richard Gregorie and Jacqueline Arango focused on the group's intent as captured on dozens of FBI audio and video recordings. Batiste is repeatedly heard espousing violence against the U.S. government and saying the men should start a "full ground war" that would "kill all the devils."

> **"I want to fight some jihad,"** Batiste says on one tape.

> A key piece of evidence is an FBI video of the entire group pledging an oath of allegiance, or "bayat," to al-Qaida and Osama bin Laden in a March 16, 2006, ceremony led by an Arabic-speaking FBI informant posing as "Brother Mohammed" from al-Qaida. Testimony also showed the men took photographs and video of possible targets in Miami, including the FBI building, a courthouse complex and a synagogue.

Oooh, but there's no such thing as media bias! The media is certainly not an arm of the Democrat party that covers their every policy blunder. (H/T Gateway Pundit)

Remember, the media elite has to cover for the Democrats. Who else would give them a bailout of taxpayer money?

Interview with the atheist, part 2: the answers

May 13, 2009 | by Wintery Knight | Link | Original Link

Last time, we went over the plan for this atheist interviewing operation, including the list of questions and how you can participate by sending in your own questions and answers.

The order of the answers is rotated so different people are listed first, second, etc. Note that all attempts to malign theism or Christianity or to employ *tu quoque* arguments in your answers were DELETED. Wherever possible, I sought clarification. I will answer the questions myself later, and then you may comment on my answers.

Atheist/Agnostic/Unitarian answers: [10 respondents]

Question 1: Is there a God? [YES: 1 NO: 8] and is he knowable in principle, if he existed? [YES: 2 NO: 1]

- It just didn't seem to make sense. No matter how hard I tried to include scientific fact and personal experience into religion there came point when there was so much, indeed overwhelming evidence, that religion was based on a premise (a hypothesis) that did not stand up to testing.
- There is no God, and we can know he does not exist
- There is no God, I have no presumptions or beliefs concerning the "origins of the universe".
- Don't know. Don't know
- There is a God, but he is remote, unknowable and disinterested in humans

Question 2: Which religion were you raised in?

- Jewish. Strict
- Atheist (x3)
- Catholicism (x2)
- Catholic, strict.
- Hinduism
- Episcopalian. They took it seriously but not literally.
- Quaker

Question 3: Explain some events, not arguments yet, that altered your spiritual worldview.

- I prayed to pass an important exam, and I failed (unanswered prayer)
- None
- Parental abandonment
- I found the beliefs and practice of the Catholic church to be irrational and contrived
- Unanswered questions from early age onwards

Question 4: What are your main objections to God's existence and knowability?

- I have nothing against religious belief. I don't feel that I need it to cope with or explore life.
- All religions are all man-made
- All religions are the same
- Religions all have the same goal, to make people act morally
- Religions all have the same goal, to make civilization survive
- Belief is when you suspend critical thinking because you want, so much, for something to be true. That's not very grown up, is it?
- Evolution shows that a Creator and Designer aren't needed to explain life
- The world operates according to natural laws. Even if Creator God, no obvious mechanism how this Creator can communicate with people.
- Progress of science, naturalistic explanations of natural phenomena
- The hiddenness of God
- There is too much moral evil and suffering in the world
- The suffering in the world makes me wonder whether God is good, even if he existed
- I don't a reason why God would allow certain instances of suffering
- The plurality of religions, and the way your religion is set by where you were born
- God is unknowable because he is non-material, eternal, etc.
- I don't find the scientific arguments from the big bang and fine-tuning arguments convincing because science changes all the time
- I don't to drop my own personal moral standard and purpose and exchange it for anyone's else's
- As long as people are good, then then they should not be punished in Hell for an eternity
- Biblical contradictions
- Bible outdated
- I don't like the idea of Hell
- Religion is not testable
- There is no empirical evidence
- Canonization was done by the victors at Nicea
- Religious believers are not significantly more moral than non-believers

Question 5: What is the ontology of moral values and moral duties? [Individual relativism: 8] [Cultural relativism: 2] [Objective: 0]

- Subjective. The standard varies by each individual. What we ought to do is whatever we want to do.
- Subjective/Cultural. The standard varies by each culture's evolved social conventions. What we ought to do is to do whatever the majority of the people are doing in the society we live in. Morality is like driving/traffic laws, just do what is right for where you live
- Subjective. Abstract values can only exist in brain states of individual people
- Subjective. They reflect properties of the mind. They can be codified as law and

custom.
- Subjective. Moral values are ideas that get passed from person to person.
- Subjective/Cultural. They don't exist. What does exist is a social contract that we make with each other so that we might have a better life.
- Subjective. Morality exists in our minds and, given what we know about our animal cousins, likely evolved in us as a means to ensure group cooperation and safety.
- Subjective. Moral and ethical values appear to be properties of minds (which are themselves physical entities with complicated causal explanations).

Question 6: Does your worldview ground free will, which is required for consciousness, rationality, moral judgments, moral choices and moral responsibility? [NO: 8] [YES: 0]

- There isn't any
- I don't know
- No good evidence for free will, and people do what they do because of genes and environment. Still, to the extent that we can change our environment, it's worthwhile to create an environment that deters atrocities.
- There is no free will.
- I do not think the concept of "free will" is logically coherent.
- I don't think that there is such a thing as free will – not in the sense that you mean anyway.

Question 7: Is there a way for you to rationally persuade an atheist dictator to grant you mercy? [NO: 10] [YES: 0]

- There is no way
- I would be pleading for my life for the sake of life itself, or if I had dependents, I would ask to be spared for their sake.
- It would be pretty pointless wouldn't it? When bad people do things for their own good you can't persuade them to do otherwise.
- Would point out that international sanctions might get tighter if Kim commits atrocity
- I don't know
- There's no way to get mercy from an atheist who wishes to harm you and does not fear human reprisal.
- I would probably ask what he wants from me to spare my life.

Question 8: Is it rational for you to risk your life to save a stranger? [NO: 10] [YES: 0]

- It would be an emotional or intuitive decision. Not a time for rational calculation.
- Self-sacrificial acts are not rational on atheism, there is no reason to do it
- No
- Self-sacrifice isn't necessarily rational, but not everything an atheist does has to be purely rational.

- I use happiness in more of an Aristotelian sense. Happiness is not something that I necessarily feel at this very moment. I know that I would feel bad if the little girl died, but it would be more than just immediate feelings.
- I behave in a way that I hope others will. It works pretty well most of the time.

Question 9: Could you condemn slavery in a society where it was accepted, on rational grounds? [NO: 10] [YES: 0]

- No. I do not believe in praise and blame and judging others. I would not try to persuade them for fear of repercussions, up to and including my death at their hands
- I would not because slavery is the custom of that society. Each society has different customs, and slavery is their custom. If I moved there, I would not oppose it because I would get used to it
- Would use evidence that all people are basically similar neurologically, and ask slaveowners to empathize with enslaved. Might work with Thomas Jefferson.
- I don't know
- No but I personally oppose suffering
- I can oppose slavery by merely opposing slavery. True, moral subjectivism does not provide an objective basis for deciding the question of slavery, in and of itself.
- If I traveled back into time then it would be me who traveled. So I would oppose slavery. If I were born into that time period, it would be different.
- I would argue that people deserve the right to be free from slavery because I think that's a good idea.
- I wouldn't "use" atheism as it doesn't come with any particular tenets or morals or behavioral requirements.
- I would oppose slavery because I would *want* to, not because I think there's some extrinsic reason I ought to.

Question 10: Is there ultimate significance for acting morally or not? I.e. – does it affect your or anyone else's destination if you act morally or not? [NO: 10] [YES: 0]

- There is no ultimate significance
- Acting morally makes life easier
- Too long after I'm dead for me to care about.
- It always matters to maximize my happiness now. I don't care what happens in 20 billion years.
- There's a preceding question that hardly ever gets asked. "Is there a meaning to life?" I don't think there is.

Question 11: Is there an objective purpose to life, (or does each person decide for themselves)? [NO: 10] [YES: 0]

- Mine is to feel good about myself and to feel respected by others.

- Mine is to enjoy it. I'd hope that I go about it in a way that doesn't interfere with others enjoyment and that when it does we can compromise.
- Mine is to relieve inordinate suffering, while leaving room for constructive suffering that lead to creativity and progress. Based on empathy.
- Mine is to help the species survive by having lots of children, because that lasts after you die
- Each person decides for themselves. My purpose is to have happy feelings
- My purpose is to have happy feelings by doing what most of the other people are doing and avoiding social disapproval
- I have no "objective" purpose. I do what I can to be happy, all things considered.
- To live as contented as possible. To find answers to big questions. To prepare my children for adulthood. I chose these things because that's what I like. I don't care what another's purpose is as long as they don't harm anyone.
- My purpose is to seek happiness while doing no harm (or as little harm as is it may be possible to do) for as long as I'm alive. Of course it's just my own purpose – I can't presume to choose another's purpose. That being said, I do presume everyone has more or less the same goal of happiness and fulfillment, but the precise methods of going about it are always going to vary from person to person.
- I want to be happy. I generally like other people, and I want them to be happy too.

Question 12: Would you follow (and *how* would you follow) Jesus at the point where it became clear to you that Christianity was true? [NO: 7] [YES: 2]

- I have no idea
- I would not follow. My own goals are all that I have, and all that I would continue to have in that unlikely situation. I would not yield my autonomy to anyone no matter what their authority to command me
- I would not follow, because God doesn't want humans to act any particular way, and he doesn't care what we do
- I would not follow. Head is spinning. Would go to physician to find out if hallucinating.
- If I found there was no trickery? I'd have to change my mind wouldn't I! Not really likely though is it?
- I would keep doing what I am doing now, acting morally. That's what all religions want anyway. (In response to my triumphant scribbling, he realized he had fallen into a trap and changed his answer to the right answer) Oh, wait. I would try to try to find out what Jesus wanted and then try to do that.
- I hope I would be courageous enough to dedicate my life to rebellion against God.
- I would not have to change anything unless forced to and all that would change is my actions not my values. I would certainly balk at someone trying to force me to change my behavior as would you if you were at the mercy of a moral objectivist who felt that all moral goodness is codified in the Koran.
- He would have to convince me that what he wants for me is what I want for me.

Question 13: What would be the hardest adjustment you would have to make to live a faithful, public Christian life?

- I don't know
- It would not be that big of a change for me. I already act morally, I'm already public about my beliefs, and I don't care what people think about what I believe. I don't mind disagreeing with people and being unpopular for it. I think the 10 commandments are good. I could find out what to do and start doing those things.
- I would not be able to believe in miracles, so there would be cognitive dissonance
- Sacrificing my personal moral standards to take up a standard from a book that is very old and outdated
- The most difficult would be the fact that I believe something without good evidence.
- I work many hours a week for institutions and organizations that are charitable. I'm certainly not going to swap those for hours for "prayer time" and waste them.
- I would certainly balk at someone trying to force me to change my behavior as would you if you were at the mercy of a moral objectivist who felt that all moral goodness is codified in the Koran. Obviously, it is possible that if I became a Christian, then I would have different values then I have now.
- The most difficult thing would be trying to believe the ridiculous claims of Christianity. As for what a Christian finds difficult, how would I know?
- I could never obey God from gratitude and love, only from servility inspired by fear and cowardice. I do not see myself as servile, fearful or cowardly, and to behave in such a manner would injure my self-esteem and self-image.

To my atheist interviewees: Thank you for giving me these answers. I will be commenting on them shortly, and posted my own answers.

Bear in mind: It does not matter to me whether you can do something irrationally by an act of will, (supposing that you could even have free will on a materialistic, deterministic universe). I only cared whether you could give a rational argument based on evidence. When the chips are down, people act on what is rational to them.

UPDATE: Hot Air on the atheism agenda.

Four-minute overview of 11 arguments for Christianity by William Lane Craig

May 13, 2009 | by Wintery Knight | Link | Original Link

I thought that I would post a few videos from the two debates featuring William Lane Craig and Christopher Hitchens. The first video may be useful to Christians who have never heard any arguments for the existence of God. (See my index of apologetics posts for some arguments and responses)

Here is Bill's concluding speech from the first skirmish at the Dallas Christian Book Expo debate:

Here is a video clip of an exchange they had in their debate at the massive Biola University showdown:

And here are some snippets from the pre-debate press interviews with Craig and Hitchens:

Here's more information of the Biola University debate between Craig and Hitchens.

Remember what the atheist reaction in the blogosphere was: (H/T MandM)

> When Debunking Christianity puts up a post entitled William Lane Craig "Won by a Landslide" Against Hitchens I think it is safe for all to say Craig bested Hitchens.
>
> Common Sense Atheism states "Craig was flawless and unstoppable. Hitchens was rambling and incoherent, with the occasional rhetorical jab. Frankly, Craig spanked Hitchens like a foolish child."

Now that we have the answers to the atheist questionnaire, we'll be able to answer *why* people become atheists shortly. We'll see in the coming days!

Here's a hint from atheist philosopher Thomas Nagel of New York University. Nagel says this:

> "In speaking of the fear of religion, I don't mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn't just that I don't believe in God and, naturally, hope that I'm right in my belief. It's that

> I hope there is no God! I don't want there to be a God; I don't want the universe to be like that."
> ("The Last Word" by Thomas Nagel, Oxford University Press: 1997)

By the way, Nagel is *not*, I repeat, *not* a the kind of atheist I usually rail against. He is one of the informed ones, and has even argued in defense of intelligent design as science, as has another informed atheist Bradley Monton. These are fair, honest, educated atheists – like Anthony Flew and Dean Kenyon were before they changed their minds. More on Nagel's paper, and Monton's reaction.

BONUS:

Remember the debate between William Lane Craig and Internet Infidel Richard Carrier? Audio of the debate is here. Carrier's admission of defeat is here, on his blog. Craig's two-part post-debate response to Carrier (MP3 podcasts) is here and here.

NRSC backs RINO Crist against conservative Rubio

May 13, 2009 | by Wintery Knight | Link | Original Link

Yes, when I champion the Republican party, obviously I mean the conservatives within the Republican party. (See my blogroll, and notify me if any changes are needed. I would also link to true conservatives in other countries!).

I think we need to remember that the NRSC has an abysmal record at picking and backing the right candidates. Not only did they opposed Pat Toomey when he ran against that squish Arlen Specter, (now a Democrat), but now they are backing Crist against a Cuban-American.

Excuse me? Without a conservative message, we cannot win.

Here is the main post about Rubio vs Crist from the Maritime Sentry:

> The NRSC has once again decided to stick it to us Conservatives in an extremely rare move; they immediately came out and endorsed Gov. Crist over Conservative Marco Rubio. Even appearing to go so far as to try and get Rubio to drop out. Of course, obviously, we should never support the NRSC I was hopeful that when Sen. Cornyn, a Texan, took over he would recruit Conservatives.
>
> Instead he has made it apparent he will only recruit and support RINO's. He supported Specter before his defection, he encouraged Ridge to run, and now he is taking sides in an open primary to support Crist. What good does it do us if we elect Senators who agree with the Democrats the majority of the time. It is just repeating the mistakes of the Bush years. Senator Cornyn should step down.

And what should we do?

> Until the establishment wants to support Conservatives they should receive no support from the base. I am actually quite excited about this development though. They are not hiding the fact that they plan on blowing us Conservatives off. If we get behind good Conservative candidates like Rubio and Toomey. The grassroots could be responsible for electing Conservative candidates and putting the Party establishment on notice. They believe Crist will raise more money than Rubio; let's prove them wrong.

Marco Rubio profile video:

Marco Rubio on Fox News:

This is exactly the kind of candidate the NRSC should be backing! My previous post on Rubio and Toomey's candidacy announcements is here, and there are more videos in that post!

Interview posted at NRO!!!

UPDATE: Here is an interview over at the National Review blog with Rubio! (H/T The Maritime Sentry)

Excerpt:

> FREDDOSO: How are [Republicans] failing?
>
> RUBIO: Two things. There's one group of Republicans who feel our slogan should be, "If you can't beat them, join them." That, in essence, it's too hard to take on this expansion of government, this overreliance on government to grow our economy and create jobs. And so what we should do is just be more like the Democrats. Another group of Republicans believes that we should basically be the party of opposition without any ideas in return — that all we have to offer is ideology, but without any new ideas behind the ideology.
>
> I think both sides of that debate are wrong. We are a party that should have a very clear vision about government's role in our economy and government's role in our country, and we should back that up with specific solutions for the future. That's what I've built my career on, and that's what our candidacy should be about.

And here's my favorite, oh, how I wish that the economic-illiterates could understand this:

> FREDDOSO: What do you make of President Obama's plans to change the taxation of deferred corporate income?
>
> RUBIO: He's dealing with a symptom rather than the cause. There's a reason why companies move their assets overseas and do these things. Those are legal loopholes that exist because they're trying to escape the punitive and anti-competitive nature of the American tax system. If we had a system that's fair, there are few countries in the world people would rather do business in. . . . Our laws are stable; their contracts will be enforced here; we have a system of infrastructure that's still superior to the rest of the world; we still produce the best college graduates in the world. So all things being equal, everyone would rather be in America doing business and headquartering their companies here.
>
> And there's another thing that's really wrong with our tax system, and we've been complicit in it as Republicans. We've allowed the system grow so complicated that it benefits those people who can afford to hire lawyers and accountants to find loopholes, and lobbyists to create loopholes. And I think the Republican party stands to blame for that as well. So I think the Republican party is ripe for reform — if not from the inside out, then from the outside in.

You want to shut down manufacturing and ship jobs overseas? Elect a democrat who will raise corporate taxes, regulate companies with mandatory health-care and impose cap and trade. Mark my words: unemployment will be 12% by December, if cap and trade passes. And rising!

How progressive social policy enlarges the size of government

May 14, 2009 | by Wintery Knight | Link | Original Link

Great editorial by Ed West writing in the UK Telegraph. Is it possible to be a social leftist and a fiscal conservative? Or does the former impact the latter negatively? West's editorial assesses the impact of feminism and sex education on government budgets, which receive much funding from the productive private sector.

First, Britain's social program for unwanted children is seeing record enrollment:

> Last night's Rageh Omaar programme, Lost in Care, is timely. The number of unwanted children in Britain has reached 80,000, and that figure was calculated before the recent Baby P surge. Of those unwanted kids, 10,000 live in children's home.

And what are the costs to the taxpayer for this skyrocketing number of unwarranted children?

> The show reminded us how awful the statistics are for care home children; only 13 per cent get good GCSEs [high school diplomas] and almost half achieve no qualifications. One in four prisoners were in care, as were one in three homeless. and one in five girls in care are pregnant within a year of leaving. No wonder there is currently a desperate drive to find more foster parents, a calling that is seriously heroic.

Well, I already talked about how leftist domestic policies destroy marriage here (socialism), here (same-sex marriage) and here (no-fault divorce). But the interesting thing is the *cost* of the anti-family, anti-child policies of the left. They were in such a rush to rebel against social conservatives, that it never occurred to them that those moral rules were in place to protect the interests of all parties.

> Recklessly impregnating someone or getting pregnant without the ability or willingness to look after that child ruins another person's life, and also costs the state £25,000 a year for that matter.

This is the problem with people who enact policies based on the need to feel compassionate and superior, while disregarding the logical consequences. Should we really be voting in people who undermine traditional morality run our government? If we do, it will cost us. To see more about how leftist policies increased the size of government and raised tax rates, see this previous post.

For more news from abroad, check out my recent post on the state of free speech in Canada, the United Kindom and Cuba.

UPDATE: Just noticed this over at OneNewsNow: Obama would ax abstinence-only

funding.

Excerpt:

> If Congress approves President Obama's budget requests, there will be no more federal funding of abstinence-only education programs.
>
> Barack Obama has recommended completely zeroing out Title V abstinence programs to states, as well as abstinence education programs to community-based organizations (CBAE) and replacing them with more than $100 million for contraceptive-based sex-education programs. The massive omnibus bill signed by the president had already reduced funding to abstinence programs by $14 million.

And then there is this story from mensactivism.org, entitled "Number of Unwed Moms in the U.S. Rising.

> Story here. Excerpt:
>
> '(AP) The percentage of births to unmarried women in the United States has been rising sharply, but it's way behind Northern European countries, a new U.S. report on births shows.
>
> Iceland is the leader with 6 in 10 births occurring among unmarried women. About half of all births in Sweden and Norway are to unwed moms, while in the U.S., it's about 40 percent.
>
> France, Denmark and the United Kingdom also have higher percentages than the United States, according to the report from the U.S. Centers for Disease Control and Prevention.'

Oh, well. Ideology beats out fiscal prudence, I guess. I don't think that immorality of the parents is too good for the children who are affected, either. Bible: 1, Atheists: 0.

The relationship between science, faith and academic freedom

May 14, 2009 | by Wintery Knight | Link | Original Link

I blogged recently about atheist philosophers Thomas Nagel and Bradley Monton, informed atheists, who both support the idea that intelligent design could potentially be researched using ordinary scientific methods. I thought it was interesting especially in the case of Nagel, who has this famous quote about his reasons for adopting atheism:

> "In speaking of the fear of religion, I don't mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: **I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn't just that I don't believe in God and, naturally, hope that I'm right in my belief. It's that I hope there is no God! I don't want there to be a God; I don't want the universe to be like that.**"
> ("The Last Word" by Thomas Nagel, Oxford University Press: 1997)

The thing is, Thomas Nagel has written a paper supporting ID as science, and now I've learned that he is rejecting Darwinism as a full explanation of human origins. (H/T Denyse O'Leary's related post at the Post-Darwinist). Nagel contrasts the idea that natural selection is responsible for our mental capacity, or whether some other explanation is needed.

Nagel writes:

> I see no reason to believe that the truth lies in the first alternative. The only reason so many people believe it is that advanced intellectual capacities clearly exist, and this is the only available candidate for a Darwinian explanation of their existence. So it all rests on the assumption that every noteworthy characteristic of human beings, or of any other organism, must have a Darwinian explanation. But what is the reason to believe this? Even if natural selection explains all adaptive evolution, there may be developments in the history of species that are not specifically adaptive and can't be explained in terms of natural selection. Why not take the development of the human intellect as a probable counterexample to the law that natural selection explains everything, instead of forcing it under the law with improbable speculations unsupported by evidence? We have here one of those powerful reductionist dogmas which seem to be part

> of the intellectual atmosphere we breath.

It's interesting that Nagel is breaking from the pack, because my post about A. N. Wilson's return to faith highlighted the peer-pressure that atheists feel with regards to the need to project intelligence to their peers. It's almost as they feel the need prove themselves as better than other people, perhaps to make up for some past rejection that gave them a deep sense of being unworthy.

Wilson said:

> If I bumped into Richard Dawkins (an old colleague from Oxford days) or had dinner in Washington with Christopher Hitchens (as I did either on that trip to interview Billy Graham or another), I did not have to feel out on a limb. Hitchens was excited to greet a new convert to his non-creed and put me through a catechism before uncorking some stupendous claret. "So – absolutely no God?" "Nope," I was able to say with Moonie-zeal. "No future life, nothing 'out there'?" "No," I obediently replied. At last! I could join in the creed shared by so many (most?) of my intelligent contemporaries in the western world – that men and women are purely material beings (whatever that is supposed to mean), that "this is all there is" (ditto), that God, Jesus and religion are a load of baloney: and worse than that, the cause of much (no, come on, let yourself go), most (why stint yourself – go for it, man), all the trouble in the world, from Jerusalem to Belfast, from Washington to Islamabad.

Anyway, Denyse O'Leary also talks about some research done by Jeffrey Schwartz on her blog the Mindful Hack. I saw Schwartz present this research before in a live debate with Michael Shermer, another atheist I like somewhat. (I own, and have watched dozens of debates and hundreds of academic lectures – and I sponsor them, too! I love civil, fact-based disagreements!)

Denyse cites from a forthcoming paper of hers, as follows:

> UCLA psychiatrist Jeffrey Schwartz, a practitioner of Buddhist mindfulness, saw OCD as a good candidate for a non- pharmaceutical—essentially non-materialist—approach to treatment….
>
> Schwartz used neuroscience techniques to identify the cause of the disorder. Specifically, the cause is most likely a defect in the neural circuitry connecting the orbitofrontal cortex, cingulate gyrus, and basal ganglia, from which panic and compulsion are generated. When this "worry circuit" is working properly, we worry about genuine risks and feel the urge to reduce them. But, Schwartz found, when that modulation is faulty, as it is when OCD acts up, the error detector can be overactivated. It becomes locked into a pattern of repetitive firing. The firing triggers an overpowering feeling that something is wrong, accompanied by compulsive attempts to somehow make it right.
>
> He then developed a four-step program (Relabel, Reattribute, Reassign, and Revalue) to help patients identify and reassign OCD thoughts, until they felt that

> they were diminishing in severity. Schwartz was not simply getting patients to change their opinions, but to change their brains. Subsequent brain imaging showed that the change in focus of attention substituted a useful neural circuit for a useless one. For example, it substituted "go work in the garden" for "wash hands seven more times." By the time the neuronal traffic from the many different activities associated with gardening began to exceed the traffic from washing the hands, the patient could control the disorder without drugs. The mind was changing the brain.

Schwartz called this "mental effort" in the debate, and he used the treatment successfully on people like Leonardo DiCaprio.

The issue of mind as a non-material cause is an area of specialty for Denyse. She recently wrote a book on it for Harper-Collins called "The Spiritual Brain". I bought 7 copies of that book and gave them to 6 of my friends for their Christmas presents. (One was for me!) Check it out. I hate (but use) philosophical arguments for substance dualism. Her book provides lots of hard scientific evidence that I prefer to use instead.

Atheism, science and free speech

As Denyse O'Leary notes in her post on Colliding Universes, Christian researchers in the sciences have to jump through hoops to keep their jobs and get tenure, in an establishment *dominated* by activist atheists. She links to this story in Science, regarding a Christian professor who is brilliant, but who has to watch his step in secular-leftist-dominated academia.

> Szilágyi sees his religious faith and his research efforts as two complementary aspects of his life. Within the scientific environment, "I have some options where I can express my faith," Szilágyi says. He directly referred to God both in the acknowledgements of his master's and doctoral dissertations and while receiving his awards. He runs a Bible-study group for young adults, and together with a friend he founded a Christian scientific group.
>
> But although Szilágyi's views often lie far outside the scientific mainstream, he expresses those views only off-campus and in his personal time. For him, "the debate over evolution, design, creation, supernatural intelligence, etc., is not a scientific question in the first place but the collision of worldviews, the confrontation of materialism and idealism," he says. He takes the Bible literally, but when he lectures on the subject–outside of work–he presents what he calls "the options" and indicates which one "to me … seems to be more probable." But he insists that it is up to "everybody to make his or her own decision."
>
> "As a Christian who works in the field of science, I find it quite important to deal with the relation of Christianity and science," Szilágyi says. But "I know that it is a minefield in today's scientific life and can be quite dangerous for one's scientific career. … Therefore, I do these activities absolutely separately from my university work. … I am very cautious and careful that whenever I am talking

> [about these issues] I do not represent my university.
>
> “My belief is very important for my career because this is the first thing that gives me my motivations so that I could work hard and I could achieve the best I can,” Szilágyi says.

Denyse, who sees the battlefield better than anyone I know, comments:

> It is sad when talented people must grovel and cringe just to keep their jobs. The thing is, in the end, that never works.
>
> “Theistic evolution” is just a way of adjusting to a world run by atheists.
>
> Practical questions like “Does the world show evidence of design” are scientific if the answer appears to be no, but unscientific if it appears to be yes.

Denyse also wrote about this comment on the Post-Darwinist, which emerged during the recent Texas School Board hearings.

> “If our students do not feel the freedom to simply raise their hand and ask a question in science class, then we are no longer living in the United States of America.”
>
> Common sense, combined with the pressure of at least 14,000 constituent communications in favor of allowing students to discuss all sides of science theories, finally prevailed.

You may also remember the case of Guillermo Gonzalez, who, despite outperforming virtually everyone in his department, was denied tenure thanks to a crusade by an activist atheist professor of religious studies, Hector Avalos. Persecution of outspoken Christians by secularists goes on all the time in academia. If you come out as a Christian, the secularists will be offended, and then you have to suffer the consequences.

And don’t forget, as public Christianity declines in the face of persecution by secularists, so has the right to free speech. The Democrats have recently tabled bills to enact hate crime laws and to imprison bloggers who are critical of the government.

Evaluating Democrat policies on the budget, health care and cap and trade

May 14, 2009 | by Wintery Knight | Link | Original Link

A Harvard economist says that tax hikes will kill the recovery: (H/T John Boehner, Mike Pence)

Harvard economist Martin Feldstein writes in the Wall Street Journal:

> Even if the proposed tax increases are not scheduled to take effect until 2011, households will recognize the permanent reduction in their future incomes and will reduce current spending accordingly. Higher future tax rates on capital gains and dividends will depress share prices immediately and the resulting fall in wealth will cut consumer spending further. Lower share prices will also raise the cost of equity capital, depressing business investment in plant and equipment.

Tax hikes for the poor:

> Mr. Obama's biggest proposed tax increase is the cap-and-trade system of requiring businesses to buy carbon dioxide emission permits. The nonpartisan Congressional Budget Office (CBO) estimates that the proposed permit auctions would raise about $80 billion a year and that these extra taxes would be passed along in higher prices to consumers. Anyone who drives a car, uses public transportation, consumes electricity or buys any product that involves creating CO2 in its production would face higher prices…
>
> But while the cap-and-trade tax rises with income, the relative burden is greatest for low-income households. According to the CBO, households in the lowest-income quintile spend more than 20% of their income on energy intensive items (primarily fuels and electricity), while those in the highest-income quintile spend less than 5% on those products.

Bye-bye, American manufacturing sector. Or maybe Obama will nationalize the entire industry, who can say? He's already practically doing it now.

Remember the no tax increases pledge that Obama made? Kevin Boland writes:

> If you drive a car or flip on a light switch – Democrats have a new national energy tax for you. If you're a small business owner or if you're employed by one – Democrats have a new tax for you. If you're a charity – Democrats have a new tax for your donors. If you're looking to produce more American energy – Democrats have a new tax for you. If you own stock – Democrats have a new tax for you. And when you're finally able to relax – after paying all your taxes to Uncle Sam – and you want to kick back, relax, and have a cold beer, you guessed it, Democrats may have a new tax for you too.

USA Today asks where the promised fiscal restraint of Mr. ACORN lawyer has gone off to. (H/T Mike Pence)

> When it comes to federal spending, there's a pattern emerging with President Obama, and it's not a flattering one. The president says all the right things about the importance of getting the deficit under control, but his actions don't come close to matching his rhetoric.
>
> An early sign of the disconnect was his heavily publicized demand last month that his Cabinet secretaries shave $100 million from their administrative budgets. Obama said the cuts would "send a signal that we are serious about how government operates" and would help close the "confidence gap" with skeptical Americans. Those cuts amounted to a less-than-confidence-inspiring 0.003% of the 2009 budget, or about 3 cents out of every $1,000.
>
> Then, when he unveiled his 2010 budget last week, Obama made a big deal of his demand for $17 billion in cuts, insisting that the cuts "even by Washington standards … are significant" and that $17 billion is "real money."
>
> The president got it backward. Out in the rest of the world, $17 billion is a ton of money. But in Washington, where the president is proposing to spend $3.6 trillion next year, $17 billion looks puny – a little less than half a percent of the budget, or the equivalent of cutting a $100 grocery bill by handing back a 50-cent pack of gum.

Anybody who read David Freddoso's book or looked up Obama's voting record could have known that his rhetoric was just lies for the gullible.

Over to the health care issue, where John Shadegg explains how capitalism is the right way to reduce health care costs.

> President Obama's pledge to work with health care providers and insurers to scale back costs misses the entire point: health care costs are so high because we are not giving patients choice and forcing insurers to compete. We need robust market reforms – not symbolic gestures. The way to lower prices is to put control in the hands of patients. We need to empower Americans by giving them the freedom to either keep their employer plan or purchase the plan of their choice through a tax credit. Choice and competition will drive prices down and quality up.

Shadegg goes on to explain why the Obama plan does *none* of this. And why should it? We already know that the Democrats want private health care to fail, so they can usher in single-payer health care. (Just they want private industry to fail so they can nationalize more of the free market)

> Putting 120 million Americans on government coverage will create a monopoly that sends costs skyrocketing. Choice will be lost because the enormous government-run plan will put the private plans out of business. In other words, if

> you like what you have, you will lose it. And while health insurance will be provided, health care will not – like every nationalized health plan across the world, as costs escalate, care will be slashed, patients waitlisted, drugs denied.

Meanwhile, Michele Bachmann notes the looming entitlement crisis is now closer than ever, with the Medicare insolvency date moving earlier.

> Yesterday, the Medicare and Social Security Trustees issued a new report that laid out unequivocally that our current Medicare and Social Security programs are on a path for financial implosion and are in need of serious reform.
>
> In fact, the Medicare insolvency date has moved up to 2017. And, that doesn't include the impact of the so-called "stimulus" bill, which could accelerate insolvency by about 6 months.
>
> And, we're facing a strain on Social Security like never before, with nearly 80 million retiring Baby Boomers tapping into the funds soon we'll be spending more to pay benefits than what the system receives in payroll taxes. Yet, we continue to carry on with the status quo, every now and then saying that we need to reform it, but not actually doing anything about it.

Michele is trying to do something about it, but the House is filled with Democrats who never ran a business in their entire lives.

> I've introduced the Truth In Accounting Act to make government finances truly transparent and open. Not only would financial commitments be crystal clear to Congress, but also to the taxpayers.
>
> Currently, when Congress and the President prepare budget proposals and pass spending bills, they have the luxury of ignoring shortfalls year after year. They prepare, present, and approve budgets which project these estimates over the short-term – usually five or ten years. And, there are a lot of things that can be done on paper to paper over the long-term shortfalls.
>
> My Truth in Accounting Act would require the President to consider these long-term shortfalls when he proposes his budget. And, it would require both the GAO (Government Accountability Office) and the U.S. Treasury to report this information to the Congress so that the numbers can be used when we're finalizing the annual budget.
>
> Furthermore, my legislation would require that the report be translated into easily comprehensible terms so that nothing could be hidden by complex jargon. The government's fiscal imbalance would be presented in the whole, and as distributed per person, per worker, and per household.

I hope she is somehow able to pass this bill.

Which is more cruel and immoral? Waterboarding or abortion?

May 14, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Hot Air reports: Sweden legalizes sex-selection abortions! Sweden, the most secular nation on the planet!

Dr. Frank Turek has a post here, examining whether pro-abortion Democrats are inconsistent for calling waterboarding torture, when the procedures used to kill the unborn can be far more cruel and painful. Turek is a former naval fighter pilot (8 years served), who served in the Pacific, the Indian Ocean and the Persian Gulf.

Turek actually was waterboarded as art of his SERE training, in case of capture and interrogation. He's now a full time Christian debater, and he now debates people like Christopher Hitchens. Christianity is definitely a step up in terms of excitement and danger from his previous job, where I imagine he spent time on dull chores such as landing on pitching carrier decks at night, dodging SAMs and triple-A, etc.

He writes:

> Now, despite decades of its use on American service members, President Obama declares that waterboarding is torture when used on terrorists. Is it? Reasonable people cannot disagree whether scalding a person's skin, dismembering him, or beheading him constitutes torture. Those are undeniably torturous acts that our enemies have inflicted on Americans. But since waterboarding leaves no permanent physical damage, reasonable people can disagree over whether or not it's actually torture and should be used on terrorists.

He then goes on to talk about whether the Democrats are being inconsistent on what counts as torture.

> Despite being against waterboarding, President Obama does not seem to think that scalding, dismembering, or beheading is torture in all circumstances. In some circumstances, the President actually approves of such treatment, so much so that he is now exporting it to other countries with our tax dollars. He's even thinking of forcing certain Americans to inflict it on the innocent.
>
> **In fact, the President along with most in his party and some in the Republican Party, think that such brutality is a Constitutional right, which they cleverly disguise with the word "choice." Choice in these circumstances actually means scalding, dismembering, or de-braining a living human being—which is literally what saline, D&C, and partial birth abortions respectively accomplish.**

I won't give the whole article away, but you *must* read it. I don't link to Turek a lot, but this is awesome.

British flight attendant fired for refusing to behave as a Muslim

May 15, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from the Maritime Sentry! A conservative blog without peer. I see they have posted a new Michele Bachmann video, but I can't see it from work. Can someone watch it and leave a comment about it?

Wow, check out this Washington Times article I just found on OneRedThread. Apparently, female flight attendants on British Midland Airways have got to start acting as if they are Muslims, in order not to offend Muslims. Excuse me? THEY AREN'T MUSLIMS. Why should people be forced by the state to act as though they accept a religion (or no religion), when that's not what they believe???

This is insanity:

> …British Midland Airways is going to absurd and insulting lengths to patronize backward habits of the Middle East by forcing its female flight attendants to dress and behave in a stereotype of subservient Saudi women. When flight attendant Lisa Ashton stood up to the policy, she was fired.
>
> …In addition to wearing the traditional abaya, the policy stated that, "it is expected that female crew members walk behind their male counterparts in public areas such as the airport, no matter what rank."
>
> …
>
> Miss Ashton's union representative told her the abaya was considered "an item of uniform" and that refusal to wear it should be treated as "a potential disciplinary matter." Miss Ashton went to great lengths to avoid coming into conflict with the policy. … When her time finally came to fly to Saudi Arabia, she refused, and was suspended.
>
> … She appealed her case but a labor tribunal accepted BMI's argument that the airline introduced the requirements "entirely from the need to conform to local customs, practices and law in Saudi Arabia."

I have an idea. How about everybody has free speech and freedom of religion and freedom of conscience, and the people who get offended by those rights can just *grow up*. Why is it that on any given day you have some atheist, and/or left-wing activist is complaining that other people have human rights and that the free exercise of these rights should be prevented by the state?

This is exactly the same as the recent case where the Christian nurse was suspended because an atheist complained when the nurse offered to pray for her. Newsflash! Let people act on what they believe! Don't try to change them so that they believe what you believe, using the power of the state. That's fascism – the state overriding the values of

individuals.

Excerpt:

> The incident which led to her suspension took place at the home of a woman patient in Winscombe, North Somerset.
>
> “It was around lunchtime and I had spent about 20 to 25 minutes with her. I had applied dressings to her legs and shortly before I left I said to her: ‘Would you like me to pray for you?’.
>
> “She said ‘No, thank you.’ And I said: ‘OK.’ I only offered to pray for her because I was concerned about her welfare and wanted her to get better.”
>
> However, after the incident on December 15, she was contacted by the trust and asked to explain her actions.

Everyone: stop being offended victims!

Videos showing the folly of government-run health care

May 15, 2009 | by Wintery Knight | Link | Original Link

Get your butt over to Hot Air right now, and read this post on health care policy by my blog-friend Laura, who blogs at Pursuing Holiness. Laura writes about the myth of the millions of uninsured who cannot afford coverage. She outlines the many ways in which free care is available to everyone, including illegal immigrants, and those who cannot pay the full price. This is a MUST READ post.

Excerpt from Laura's post:

> ...basic care and life-saving care is available to every human being who manages to set foot in this country, regardless of their ability to pay.
>
> ...Thanks to EMTALA, emergency rooms are required to help you.
>
> ...Thanks to hundreds of thousands of charity hospitals and community health centers – via both charities and government – you can get free or sliding-scale payment care.

I wanted to supplement her post with some of my own videos.

Two Women:

The Lemon:

And one more video from On The Fence Films called "Dead Meat".

> ***Dead Meat*** is a 25 minute short film which shows the reality of health care under Canada's socialized medical system: Canadians wait … and wait … and wait. … And sometimes they die while waiting for *free* government health care.

Previous posts from me:

- Walter Williams on Sweden's health care system. (Yes, the same Sweden that just legalized sex-selection abortions)
- Government-run health care is bad for patients and liberty (Links to some useful podcasts on health care)

How to engage pro-abortion commenters and win

May 15, 2009 | by Wintery Knight | Link | Original Link

Neil from 4Simpsons posted a MUST-READ exchange with a pro-abortion commenter here. It's entertaining and informative. I'll just paste in a few excerpts below, so you can get the flavor of the exchange.

Here's an effective exchange: (the challenger is in *italics)*

Then I suppose you're equating an aborted fetus with a conscious, adult human? Something doesn't seem quite right there; unless, you are actually thinking of the adult human beings the unborn will grow into when you say abortion kills the same kind of human beings genocide and the other transgressions do.

What kind of fetus are you speaking of? If it is a human fetus then she is a human being at a particular stage of development deserving of having her life protected. She isn't an adult, but neither are toddlers. Your rationale could plug in *human toddler* instead of *human fetus* and claim that the "toddler will grow into" being an adult, but it would still involve killing an innocent human being.

This is kind of what I was getting at earlier when I mentioned something about equating an unborn human being with one outside the womb. If you're saying the fertilized egg is a human being are you saying there's no difference between us and that egg?

Of course there are differences: Size, level of development, environment and dependency. My claim is that none of those differences gives rise to the right to destroy those human beings.

And here are couple more funny parts:

I suppose it depends on how you define "me," or "I," or "you." I'm pretty sure when we say those things, we are talking about the present us. If you really want to get philosophical, the "me" you will respond to after I post this will technically not be the same "me" as the one who wrote this because some time has elapsed and we are all in a constant state of change/growth.

Try committing a crime then sharing that philosophy with the judge. I'll come visit you when I'm doing prison ministry 😉 .

I'll spell it out for you: There is a 1:1 correlation between the human fetus and the subsequent human being. If you arm had been ripped off in utero, you'd only have one arm now. That was you in your mother's womb, not a potential you. It was you at that particular stage of development.

And the last one before you click over to read the whole thing!

Honestly, Neil, I think abortion is a sad state of affairs for any society; that circumstances permit individuals to find themselves in the process of bringing about human life they did not intend to is sad.

That is a bad argument. These people had sex. Pregnancy is a potential outcome of sex.

They didn’t wake up one day and realize they’d had an accidental in vitro fertilization or an immaculate conception.

Do you find it sad that actions have consequences? Boo-hoo. But don’t kill an innocent human being over actions you regret.

The pro-life issue is such a fun issue to debate, because it’s like the big-bang, fine-tuning and habitability arguments from the progress of science. The facts are all on our side, the delusions are solely theirs. And the more science progresses, the worse it gets for them. All you need to do is prepare and study like Neil has, and one day you’ll be as effective as he is in this exchange.

Friday night funny: waterboarding, same-sex marriage and capitalism

May 15, 2009 | by Wintery Knight | Link | Original Link

Our first Friday night funny this Friday comes to us from Scrappleface, by Scott Ott. He reports on a story that you may not have heard about this week, the CIA's offer to help Nancy Pelosi remember when she voted for the same interrogation techniques that she now opposes.

Excerpt:

> In an effort to clarify exactly when House Speaker Nancy Pelosi knew that the U.S. employed enhanced interrogation techniques, like waterboarding, on terrorists, the CIA today offered to question the California Democrat.
>
> "With the passage of time, memory gets clouded," said a CIA source who spoke on condition of anonymity. "But we have learned how to clear away the clouds, and bring into sharp focus the relevant details."
>
> Rep. Pelosi initially said she had not been briefed on the harsh interrogation methods, then said she thought the briefings she did receive were theoretical in nature, and now her associates say the Speaker knew in early 2003, but didn't protest out of respect for 'appropriate' legislative channels.
>
> "A woman in Nancy Pelosi's high-stress position, can get overwhelmed by the constant drip, drip, drip of information," the CIA source said. "It's easy to lose isolated details among the battery of facts that assault her daily. But a little time alone with one of our seasoned counselors should remedy that."

Our next funny is also from Scott Ott. It turns out that proponents of same-sex marriage are not at all happy with the way that heterosexuals undermining the sanctity of same-sex marriage.

Excerpt:

> The boom in childbirth by unwed mothers has some American homosexuals concerned about the sanctity of their newly-minted marriages, according to a spokesman for the Defense of Gay Marriage Association (DOGMA).
>
> Some 40 percent of all children are now born to unwed mothers, according to National Center for Health Statistics. Among minority groups, the news is even more stunning. Black single Moms give birth at twice the White rate, and Hispanic solo mothers bear babies at triple the rate.
>
> "All of this is bad news for the institution of traditional gay marriage," said the unnamed source at DOGMA. "It's hard not to see this as another example of homophobia. Gays finally start getting the right to marry, and what happens? We see straights abandoning the practice. Heterosexual bigots are looking at

> marriage and apparently saying, 'That's so gay!'"
>
> The advocacy group claims that no society has survived the collapse of the institution of marriage, and it backs a Constitutional amendment forcing cohabiting couples to wed.

I would support a Constitutional amendment banning out-of-wedlock birth – as Captain Capitalism noted in an earlier post, unwed motherhood is nothing but child abuse. Co-habitation, no-fault divorce, government-run day care, and drugs for controlling children are anti-child policies. I am against pre-marital sex. I am for abstinence and chastity. I value the rights of children over the "happiness" of irresponsible adults.

And our final story this week is from IMAO.us. I used to spend hours reading over his old "In My World" posts. I just love things that are totally made-up in which very serious people do very silly things. Frank links to this video in which you can learn more about capitalism than you can while getting a Law degree from Harvard!

Happy Friday!

UPDATE: I cannot let this go unblogged: What happens with Jim Treacher joins Nancy Pelosi and Haiku?

You get Pelosiku!

From Hot Air and Michelle Malkin:

> What's this trigger do?
> Ouch, my right foot really hurts
> Let's try the left one
>
> ***
>
> As I tell my tales
> Watch me blink out in Morse Code:
> "I'm a lying [bleep]"
>
> ***
>
> I am not lying
> Except for what I just said
> And what I'll say next
>
> ***
>
> I've been a liar
> A lot longer than Barack
> But without his gift

Leave yours in the comments!

Has the university become intolerant and close-minded?

May 16, 2009 | by Wintery Knight | Link | Original Link

This article by prestigious McGill University ethicist Margaret Somerville is worth reading. (H/T Commenter ECM) She is one of the leading defenders of traditional marriage in Canada. She is a moderate social conservative. Here is a brief summary of her case against same-sex marriage. Her short article in the journal Academic Matters is about the intolerance of the leftist university elites against their opponents.

Here is the abstract:

> In this edited excerpt from her Research and Society Lecture to the 2008 Congress of the Humanities and Social Sciences, ethicist Margaret Somerville argues that universities are becoming forums of intolerance. Keeping the university as an intellectually open and respectful place is critical, she says, to finding the "shared ethics" essential to maintaining healthy, pluralistic democracies.

And here is an excerpt in which she discusses the impact of moral relativism on moral disagreements:

> That is where political correctness enters the picture. It excludes politically incorrect values from the "all values are equal" stable. The intense moral relativists will tolerate all values except those they deem to be politically incorrect—which just happen to be the ones that conflict with their values.
>
> Political correctness operates by shutting down non-politically correct people's freedom of speech. Anyone who challenges the politically correct stance is, thereby, automatically labeled as intolerant, a bigot, or hatemonger. The substance of their arguments against a politically correct stance is not addressed; rather people labeled as politically incorrect are, themselves, attacked as being intolerant and hateful simply for making those arguments. This derogatorily -label-the-person-and-dismiss-them-on-the-basis-of-that-label approach is intentionally used as a strategy to suppress strong arguments against any politically correct stance and, also, to avoid dealing with the substance of these arguments.
>
> It is important to understand the strategy employed: speaking against same-sex marriage, for example, is not characterized as speech; rather, it is characterized as a discriminatory act against homosexuals and, therefore, a breach of human rights or even a hate crime. Consequently, it is argued that protections of freedom of speech do not apply.

She illustrates with some examples:

> We need to look at what “pure” moral relativism and intense tolerance, as modified by political correctness, mean in practice. So let ‘s look at the suppression of pro-life groups and pro-life speech on Canadian university campuses. Whatever one’s views on abortion, we should all be worried about such developments. Pro-choice students are trying to stop pro-life students from participating in the collective conversation on abortion that should take place. In fact, they don’t want any conversation, alleging that to question whether we should have any law on abortion is, in itself, unacceptable.
>
> In some instances some people are going even further: they want to force physicians to act against their conscience under threat of being in breach of human rights or subject to professional disciplinary procedures for refusing to do so. The Ontario Human Rights Commission recently advised the College of Physicians and Surgeons of Ontario to this effect.
>
> Political correctness is being used to try to impose certain views and even actions that breach rights to freedom of conscience; to shut down free speech; and to contravene academic freedom. I do not need to emphasize the dangers of this in universities. The most fundamental precept on which a university is founded is openness to ideas and knowledge from all sources.

She spends the rest of the paper arguing for a system of “shared ethics” that grounds open, respectful debate between disagreeing parties. I hope this catches on before secular-left moves from censorship to outright violence, against those who would dare to disagree with them.

A short bio of Margaret Somerville

Margaret Somerville is Samuel Gale Professor in the Faculty of Law and a professor in the Faculty of Medicine at McGill University and is the founding director of the McGill Centre for Medicine, Ethics and Law. In 2004, she received the UNESCO Avicenna Prize for Ethics in Science and in 2006 delivered the prestigious Massey Lectures.

Democrat terrorist sentenced to two years in prison

May 16, 2009 | by Wintery Knight | Link | Original Link

Story from the Minneapolis Star Tribune. (H/T Gateway Pundit)

> A protester from Texas has been sentenced to two years in prison for possessing Molotov cocktails during the Republican National Convention last September.
>
> U.S. District Judge Michael Davis on Thursday also sentenced Bradley Neal Crowder to three years of supervised release.
>
> The 23-year-old Austin, Texas, man was part of a group from Austin that allegedly planned to disrupt the convention in St. Paul last September. He pleaded guilty in January.

Gateway Pundit asks: “Maybe he’ll [enjoy an] illustrious teaching career when he gets out?”. Indeed.

Sweden legalizes sex-selection abortions

May 16, 2009 | by Wintery Knight | Link | Original Link

Story from Hot Air.

Excerpt:

> Sweden has approved gender-specific abortions, allowing parents to rid themselves of an unwanted daughter in a closely-watched ethics case…
>
> Last month, I noted the opposition of the abortion-rights group Center for Reproductive Rights to the same practice in China, where the state's one-child policy makes gender selection more important for parents. Sweden has no such restrictions; in this case, the woman already had two daughters and wants a son. CRR opposed the Born Alive Infant Protection Act, putting their fright over what they call "fetus rights" over their objections to gender-specific infanticide.
>
> At least Sweden remained consistent. Unlike the CRR, their decision reluctantly noted that the woman's motivation was irrelevant if one accepts that someone can "choose" to end human life as a right. One wonders whether CRR will protest this decision in Sweden as they do in China, extending their intellectual confusion over the nature of "choice" as an absolute right.

Keep in mind that Sweden is the most secular nation in the world. What did we learn from the responses to our survey of atheists that would explain why they would support such barbarism?

We learned that atheists believe:

- There is no such thing as human rights or human dignity, objectively speaking
- There is no such thing as moral values or moral duties, objectively speaking
- The purpose of life is happiness in the here and now
- There is no ultimate significance to any actions – it doesn't matter what you do, your end is the same
- Our actions are biologically determined, so we're not responsible anyway
- There is no after-life, no accountability after death for actions
- Morality is determined by each person's personal preferences, or arbitrary cultural conventions

On atheism, the weak have no *objective* human rights or human dignity, because people are just arrangements of matter, not creatures made in the image of God. On atheism, there is no purpose for the weak, such as the purpose of freely coming to know God, that would give them dignity and value, regardless of their social utility.

So, the strong can oppress the weak, even to the point of slavery or murder, in order to maximize their own happiness in the short time they are allotted to live. On atheism, why not? Why let anyone else offend you, burden you and diminish your happiness, if you can

use force to silence or destroy them?

Bill Maher mocks Carrie Prejean's stand on marriage

May 17, 2009 | by Wintery Knight | Link | Original Link

Spotted this video over at Hot Air, posted by AllahPundit, who is an atheist. He is beginning to question whether atheism leads to great heights of moral behavior. You'll recall that this is one of the factors that convinced A.N. Wilson, as well as the Wintery Knight himself.

Atheism maintains that the universe is an accident, that there is no objective moral standard, no free will, no accountability when you die, no ultimate significance to our actions, no after-life, and no one to whom moral duty is owed. Bill Maher is a committed atheist. Let's see what counts as morality on atheism.

And here is an excerpt from AllahPundit's comments:

> A quickie from last night's show displaying all the charm and subtlety we've come to expect, and surely the first time in his life that he's had an unkind word to say about breast implants. There's something cosmically apt about him attacking her: No one in American media better embodies the lefty paradox of libertinism paired with judgmentalism, therefore no one's better qualified to prosecute her for the left's capital crime of hypocrisy.

Why are atheists making moral judgments in an accidental universe, where their moral standards are just their own personal preferences, or at best the arbitrary conventions of their society? Why even attribute blame to Carrie Prejean if she doesn't even have free will, which is an impossibility on atheism, since we are just mindless matter?

There are some things that other people do that I don't like based on personal preferences. For example, I do not like people who spend a lot of time following sports or watching popular movies in the theater. But I don't insult them for not complying with my preferences. And that's all morality is, on atheism. Individual preferences and cultural conventions.

You can only judge others if there is an objective standard that is binding on this other person. What sense does it make to mock and deride people who have different preferences than you do? It seems as if atheists *do* believe in objective morality, however inconsistently. But only when judging others, never when judging themselves.

Is Obama saving or creating jobs?

May 17, 2009 | by Wintery Knight | Link | Original Link

KSDK reports that Obama's cuts in defense spending will cost St. Louis 30,000 jobs. (H/T Gateway Pundit)

Excerpt:

> Thousands of jobs could be in jeopardy at St. Louis' second largest employer: Boeing.
>
> The aerospace company announced the government's planned defense budget cutbacks will slow production of two locally-built planes and eliminate the jobs of the employees who make them. Michael Moran has helped build hundreds, if not thousands, of C-17 cargo planes.
>
> …The bottom line is Boeing needs to get through to President Obama, Congress and Secretary Gates. If not, they stand to lose more than 5,000 jobs at Boeing in St. Louis, and 30,000 total local jobs, including suppliers.
>
> Boeing executives are reaching out to anyone who will listen. They're trying to get Congress to put the planes back in the budget.

The video is here.

And remember the protectionist regulations Obama included in his Porkulus bill? Recently, we talked about how the "Buy American" provisions of the stimulus bill caused American companies to stop buying anything from Canada for their projects. Well guess what? The Canadians were not amused.

Here's the story from the left-wing Washington Post. (H/T Ace of Spades)

> This week, the Canadians fired back. A number of Ontario towns, with a collective population of nearly 500,000, retaliated with measures effectively barring U.S. companies from their municipal contracts — the first shot in a larger campaign that could shut U.S. companies out of billions of dollars worth of Canadian projects.

And it's going to cost American jobs:

> The new buy American provisions, the company said, are being so broadly interpreted that Duferco Farrell is on the verge of shutting down. Part of an increasingly global supply chain that seeks efficiencies by spreading production among multiple nations, it manufactures coils at its Pennsylvania plant using imported steel slabs that are generally not sold commercially in the United States. The partially foreign production process means the company's coils do not fit the current definition of made in the USA — a designation that the stimulus law requires for thousands of public works projects across the nation.
>
> In recent weeks, its largest client — a steel pipemaker located one mile down the

> road — notified Duferco Farrell that it would be canceling orders. Instead, the client is buying from companies with 100 percent U.S. production to meet the new stimulus regulations. Duferco has had to furlough 80 percent of its workforce.
>
> “You need to tell me how inhibiting business between two companies located one mile apart is going to save American jobs,” said Bob Miller, Duferco Farrell’s executive vice president. “I’ve got 600 United Steel Workers out there who are going to lose their jobs because of this. And you tell me this is good for America?”

Losing your job sucks, and there’s going to be a lot more of it until people shut off their televisions and pick up some books on economics, like the Federalist Papers or The Road to Serfdom. Learn a little about what made our country *not like North Korea*. Our prosperity wasn’t an accident, it was the result of a set of decisions made by men who believed in God, human rights and free enterprise.

UPDATE: The Competitive Enterprise Institute has more on the trade war with Canada.

Are the oceans warming?

May 17, 2009 | by Wintery Knight | Link | Original Link

We actually have a pretty comprehensive way of measuring the changes in the temperature of the oceans. We use a submersible sensor called an "Argo Buoy" in order to do the measurements. Since 2003, 3000 of them have been taking measurements in all the oceans of the world. The purpose of the buoys is to provide scientists with confirmation that the globe is really warming. But all was not well.

But the Vancouver Sun reports: (H/T Commenter ECM)

> So why are some scientists now beginning to question the buoys' findings? Because in five years the little blighters have failed to detect any global warming. They are not reinforcing the scientific orthodoxy of the day, namely that man is causing the planet to warm dangerously. They are not proving the predetermined conclusions of their human masters. Therefore they, and not their masters' hypotheses, must be wrong.
>
> In fact, "there has been a very slight cooling," according to a U.S. National Public Radio (NPR) interview with Josh Willis at NASA's Jet Propulsion Laboratory, a scientist who keeps close watch on the Argo findings.

Well, maybe the climate models predicted some cooling?

> The big problem with the Argo findings is that all the major climate computer models postulate that as much as 80-90 per cent of global warming will result from the oceans warming rapidly then releasing their heat into the atmosphere.

But surely the other models are being confirmed by observations?

> Modellers are also perplexed by the findings of NASA's eight weather satellites that take more than 300,000 temperature readings daily over the entire surface of the Earth, versus approximately 7,000 random readings from Earth stations.
>
> In nearly 30 years of operation, the satellites have discovered a warming trend of just 0.14 C per decade, less than the models and well within the natural range of temperature variation.

But maybe if we wait for a while, scientists will discover new measurements that are the opposite of these measurements. The new measurements will confirm that global warming is real, that scientists need more grant money, and that socialists must take control of the economy *right now* in order to save us from the horrible Flying Spaghetti Global Warming Monster! Those 700 dissenting scientists? Paid off by big oil! All of them!

The polar ice caps were also paid off by big oil. How else do you explain their refusal to melt?

UPDATE: NASA study shows that solar activity is responsible for past global warming.

Why do people oppose same-sex marriage?

May 17, 2009 | by Wintery Knight | Link | Original Link

UPDATE: The research paper seems to have expired from the FRC web site, but you can see the whole thing here.

I found this research paper at the Family Research Council web site. The paper compares same-sex couples and heterosexual married couples, in the following ways:

- relationship duration
- monogamy vs. promiscuity
- relationship commitment
- number of children being raised
- health risks
- rates of intimate partner violence

Are there really significant differences between the two arrangements? Let's take a look at the some of the data.

Relationship duration

% of Marriages Remaining Intact
Source: National Center for Health Statistics, Centers for Disease Control and Prevention (2001)

Length of Current Homosexual Relationship
Source: 2003-2004 Gay/Lesbian Consumer Online Census

Monogamy vs Promiscuity

% Reporting Sexual Fidelity
Sources:Laumann, The Social Organization of Sexuality, 216; McWhirter and Mattison, The Male Couple: How Relationships Develop (1984): 252-253; Wiederman, “Extramarital Sex,” 170.

Rates of intimate partner violence

Intimate Partner Violence
Sources: “Extent, Nature, and Consequences of Intimate Partner Violence,” U.S. Department of Justice: Office of Justice Programs: 30; “Intimate Partner Violence,” Bureau

of Justice Statistics Special Report:11.

Conclusion

Marriage is a relationship that has a specific purpose. That purpose is to bind together two opposite natures and to produce children that are biologically linked to the parents. The children gain the benefits of being parented by the two different natures, so they get two perspectives. The fact that the children are genetically linked to two parents helps to ensure the stability of the commitment, as we see in the animal kingdom where animals protect their young.

The goal of marriage is not to increase the happiness of the adults, or to "recognize" the love of adults. The goal of marriage is have two people enter into a relationship where they understand that it is not about adults being fulfilled. Marriage is about people having a goal of raising children, which are tremendously stressful to raise. Marriage requires self-denial and sacrifice in order to raise those children – that is the main point of it. It also requires fidelity and chastity, so that the environment is kept stable for the children over a long period of time.

Children benefit from the stability that is more common in traditional marriages than it is in other arrangements, including heterosexual co-habitation which is similarly unstable (50% greater chance of divorce, more domestic violence, etc.). Therefore, it is important to keep the concept of marriage separate from other kinds of relationships so that the focus on commitment for the sake of the children is clear to those who contemplate marriage. Society needs to give special recognition to married couples, in view of their child-focused commitment.

I apologize in advance if this post causes anyone any harm or distress, I am just trying to explain why people have that opinion. They could be wrong, but that is the case they make. Obviously, married couples fall short of the goal, but that is their goal.

Further study

Two much bigger challenges to marriage are big-government socialism and *especially* no-fault divorce. I also wrote about same-sex marriage and co-habitation before, in the context of European states like Sweden and Norway.

You may also be interested in a recent post about whether homosexuality is caused by a "gay gene".

Indian Christians cheer election results

May 18, 2009 | by Wintery Knight | Link | Original Link

In September of 2008, the Wall Street Journal reported on anti-Christian violence in India:

> In the past week in Karnataka, the southern Indian state that is home to India's high-technology capital of Bangalore, at least 17 attacks have been reported on churches and prayer halls, according to local Christian groups, independent monitors and police….Christians, who make up roughly 2% of India's 1.1 billion population, have periodically been the targets of violence by Hindu-extremist groups who oppose Christian missionaries and the conversion of Hindus. Christianity has proven popular among those on the lowest rungs of Hinduism's caste hierarchy, in part because Christian groups often offer education and health care.
>
> Christians and churches also have been targeted in Kerala in southern India, Madhya Pradesh in central India and Uttar Pradesh in the north.
>
> The incidents follow attacks on Christians in the eastern state of Orissa starting last month that have left about 25 dead. The Orissa attacks were sparked after a Hindu-fundamentalist leader, Swami Laxmanananda Saraswati, was found dead in a temple. Orissa police have said they suspect Maoist rebels for the deaths, but Hindu-extremist groups blame Christian missionaries.
>
> The violence has taken on a political tinge as India prepares for national elections that must be held before May.

The article talks about the two main parties in the May elections:

> The opposition Hindu nationalist Bharatiya Janata Party is viewed as ideologically aligned with the extremist Hindu groups, such as the Bajrang Dal, that minority groups and some other parties blame for stoking the violence.
>
> The BJP and the Congress Party are India's two main national parties. The current government is a Congress-led coalition.
>
> …"The BJP has always fallen back on a strategy that polarizes people on communal lines to get what they imagine will be electoral gains," said Jayanti Natarajan, a Congress spokeswoman.

Check out these comments by the BJP, it's scary:

> Kalyan Singh, BJP national vice president, said the party doesn't believe in sectarian agitation. "We condemn the violence in Orissa, but the main and deep root is the mass conversions by the Christian missionaries," which the BJP opposes, he said.
>
> Bajrang Dal is a militant youth wing of the Vishva Hindu Parishad, a Hindu-nationalist organization. Prakash Sharma, Bajrang Dal's national head, said in an

> interview that the death of Mr. Saraswati in Orissa was "under the inspiration of the Christian missionaries and converts." He said that as a result, "people all over India are responding spontaneously against them." Asked if he could cite evidence of Christian culpability for the death, he failed to do so.
>
> He denied any involvement of Bajrang Dal in the riots against Christians in Orissa and Karnataka.

CNS reported on the anti-Christian campaign waged by the BJP:

> **Orissa is one of five Indian states where BJP authorities have passed anti-conversion laws which the U.S. State Department says infringe upon an individual's right to change religion.**
>
> …Christians say those who have become believers do so willingly, and in the process escape the discriminatory caste system.
>
> The Christian ministry Open Doors, which maintains a watchlist of countries where Christians face the worst persecution, this year moved India to 22nd place, up from 30th last year.

The May elections are now completed! And here are the election results so far, from the BBC: (H/T Dr. Roy)

> State television says Congress's alliance has won or is ahead in 263 seats, compared with the BJP's (154), the Third Front (60) and others (66).
>
> …Prakash Karat, the leader of the Communist Party of India (Marxist), the key mover in the Third Front, accepted Congress had won.
>
> "The CPM and the Left parties have suffered a major setback," he said.

It's a Parliamentary system with 543 seats, you need a governing coalition with the majority of seats to govern.

Dr. Roy says:

> …There will no need for commies to be part of the governing coalition. There was 60% turnout. Unfortunately 60 people died in attacks by maoist terorrists. Congress and its allies have won in Tamil Nadu. Probably not very good news for the ltte. The Prime minister will be ManMohan Singh for now, but it is likely a Gandhi will be PM in the not too distant future.

Great news for Christians in India!

UPDATE: The Competitive Enterprise Institute says that it's a victory for free market capitalism, as well! Bonus!

Featured blog: Muddling Toward Maturity

May 18, 2009 | by Wintery Knight | Link | Original Link

I just discovered this blog "Muddling Toward Maturity". The blog links to a lot of interesting stories I haven't seen anywhere else!

Here are a couple:

A review of Mark Levin's new book "Liberty and Tyranny" by Andrew C. McCarthy in the New Criterion

Excerpt from the review:

> [Levin] is especially trenchant on the animating role of faith in the American founding, and, consequently, its place atop the statist hit-list. The Framers understood "that liberty and religious liberty are inseparable." But Christianity, unapologetically, was and is America's dominant religion and it is undeniable that Judeo-Christian values heavily influenced our founding law. The point of religious liberty was to forfend the establishment of a theocracy of the type Tocqueville discerned in the Islamic world, where the Qur'an imposed not merely religious tenets but control over every aspect of life. The Supreme Court's fabrication of a "wall of separation" in its 1947 *Everson* decision (authored by one-time Klansman Hugo Black, the first justice appointed by FDR), installing official hostility to religion, was "a wretched betrayal of America's founding." As a result, "American courts sit today as supreme secular councils, which, like Islam's supreme religious councils, dictate all manner of approved behavior respecting religion."
>
> A strong proponent of constitutional originalism, Levin particularly laments FDR's "Second Bill of Rights," the initiative Obama has thrown into high gear. These "positive rights"—economic and social welfare benefits, not rights but redistributions—are "tyranny's disguise": the statist's "false promises of utopianism … to justify all trespasses on the individual's private property." Like freedom of conscience, property is part of liberty's irreducible core, and is thus exalted in our founding law. So, like religion, it is forever in the statist's cross-hairs as he seeks to micromanage every vestige of autonomy from employment to healthcare to the type of cars we drive.

Deep thinking on big ideas. That's what we can expect from Mark Levin. And I love it when Jewish people are supportive Christians! My favorite three radio shows are Dennis Prager, Michael Medved and Mark Levin. All three are Jewish!

Now the next link is special to me, because I have a copy of the book Rare Earth in my overhead shelf at work. It's written by atheist Peter Ward and agnostic Donald Brownlee, and it documents all the characteristics that are needed to create a habitable planet. The book kicks butt.

Why We Need Earthquakes by Dinesh D'Souza, writing in Christianity Today.

Excerpt from the article:

> Ward and Brownlee ask: Why do natural disasters such as earthquakes, seaquakes, and tsunamis occur? All three are the consequence of *plate tectonics*, the giant plates that move under the surface of the earth and the ocean floor. Apparently our planet is unique in having plate tectonics. Ward and Brownlee show that without this geological feature, there would be no large mountain ranges or continents.
>
> While natural disasters occasionally wreak havoc, our planet needs plate tectonics to produce the biodiversity that enables complex life to flourish on earth. Without plate tectonics, earth's land would be submerged to a depth of several thousand feet. Fish might survive in such an environment, but not humans.
>
> Plate tectonics also help regulate the earth's climate, preventing the onset of scorching or freezing temperatures that would make mammalian life impossible. In sum, plate tectonics are a necessary prerequisite to human survival on the only planet known to sustain life.

Muddling Toward Maturity also links to some other similar articles, that go into more detail.

What are the minimal requirements for rational morality?

May 18, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from the the Western Experience! Thanks for the link, Jason!

Last week, I posted a list of 13 questions that Christians could use to get discussions going with their atheist friends. Basically, you ask your atheist friend out to lunch, ask them the questions. We got 10 responses to the questions, which I summarized here. And I had lunch with another one of my friends, another Jewish atheist, who goes to a Reformed synagogue, as well.

Basically, the questionnaire's purpose is to establish whether atheism provides a *rational* foundation for moral behavior. Specifically, can atheism account for the minimal requirements for *rational* moral behavior (see below).

1) Objective moral values

There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.

2) Objective moral duties

Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?

3) Moral accountability

Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?

4) Free will

In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.

5) Ultimate significance

Finally, beyond the concept of reward and punishment in 3), we can also ask the question

“what does it matter?”. Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you’ve finished eating them, you die for real and that’s the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It’s hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

Tomorrow, I will explain why the answers given by the atheists show that the worldview of atheism offers *none* of these 5 requirements, and that therefore morality is really, really, really irrational on atheism. Atheist can look over their shoulders at their neighbors, and act like them in order to feel happy that they are acting consistently with the arbitrary fashions of their herd, but that’s *all* they can do, on atheism.

Further study

You can get the full story on the requirements for rational morality in a published, peer-reviewed paper written by William Lane Craig here. You can also hear and see him present the paper to an audience of students and faculty at the Georgia Institute of Technology in 2008. The audio is clipped at 67 minutes, the video is the full 84 minutes. There is 45 minutes of Q&A, with many atheist challengers.

The video of this lecture is the *best material you can get* on this issue, and the Q&A from the hostile audience is *vital* to the lesson. More debates on atheism and morality can be found on the debate and lecture page.

You can find a post contrasting the morality of an authentic, consistent Christian with an authentic, consistent non-Christian here. A post examining how atheism is responsible for the deaths of 100 million innocent people in the 20th century alone is here. A post analyzing the tiny number of deaths that religion was responsible for is here.

Is Obama a pro-life or pro-choice President?

May 19, 2009 | by Wintery Knight | Link | Original Link

From NewsBusters, we get a nice list of things Obama has done for the unborn.

- January 23, 2009 – Forces taxpayers to fund pro-abortion groups that either promote or perform abortions in other nations. Decison to overturn Mexico City Policy sends part of $457 million to pro-abortion organizations.
- February 27, 2009 – Starts the process of overturning pro-life conscience protections President Bush put in place to make sure medical staff and centers are not forced to do abortions.
- March 9, 2009 – Obama signed an executive order forcing taxpayer funding of embryonic stem cell research.
- March 11, 2009 – Obama signed an executive order establishing a new agency within his administration known as the White House Council on Women and Girls. Obama's director of public liaison at the White House, Tina Tchen, an abortion advocate, became director of it.
- March 11, 2009 – Obama administration promotes an unlimited right to abortion at a United Nations meeting.
- March 17, 2009 – Obama makes his first judicial appointment and names pro-abortion federal Judge David Hamilton to serve on the Seventh Circuit Court of Appeals.
- March 26 – President Obama announced $50 million for the UNFPA, the UN population agency that has been criticized for promoting abortion and working closely with Chinese population control officials who use forced abortions and involuntary sterilizations.
- April 23 – Refused to appeal a ruling requiring the FDA to allow 17-year-old girls to purchase the morning after pill without either a doctor visit or parental involvement beforehand.
- May 5 – Details emerge about a terrorism dictionary the administration of President Barack Obama put together in March. The Domestic Extremism Lexicon calls pro-life advocates violent and claims they employ racist overtones in engaging in criminal actions.
- May 8 – President Obama releases a new budget that allows the Legal Services Corporation to use tax dollars to pay for pro-abortion litigation.
- May 8 – President Obama's new budget calls for taxpayer funded abortions in the nation's capital, and eliminates all federal funding for abstinence-only education.

And we shouldn't be surprised at his record on social issues in office, because those of us who *can* inform ourselves, using means other than television commercials during sports telecasts, knew about Obama's record before he started to run for office:

- Obama expressed support for legislation that would repeal the Hyde Amendment, which protects pro-life citizens from having to pay for abortions, and which has been credited with saving over a million lives.
- Obama, unlike even many allegedly "pro-choice" legislators, opposed the ban on partial-birth abortions when he served in the Illinois legislature and condemned the Supreme Court decision that upheld legislation banning this heinous practice.
- On the campaign trail, Obama referred to a baby conceived inadvertently by a young woman as a "punishment" that she should not have to endure.
- Obama has stated that women's equality requires access to abortion on demand.
- Obama, despite the urging of pro-life members of his own party, did not and has not endorsed or offered support for the Pregnant Women Support Act, the signature bill of Democrats for Life, meant to reduce abortions by providing assistance for women facing crisis pregnancies.
- Obama, as an Illinois state senator, opposed legislation to protect children who are born alive, either as a result of an abortionist's unsuccessful effort to kill them in the womb, or by the deliberate delivery of the baby prior to viability. The Obama campaign lied about his vote until critics produced documentary proof of what he had done. In fact, Obama continued to lie about his inhuman voting record in regard to the Illinois Born-Alive Infants Protection Act, and even stooped so low as to run a disgusting television ad **attacking the disabled survivor of a botched abortion.**

And don't forget his plans to enact the Freedom of Choice Act (FOCA), which *denies* Christian doctors and nurses the freedom to choose *not* to perform abortions, in violation of their consciences:

> But Obama the presidential candidate also promised that "the first thing I'd do as President is sign the Freedom of Choice Act (FOCA)," which would create a federally guaranteed "fundamental right" to abortion through all nine months of pregnancy, including "a right to abort a fully developed child in the final weeks for undefined 'health' reasons", and would abolish virtually every existing state and federal limitation on abortion, including parental consent and notification laws for minors, state and federal funding restrictions on abortion, and conscience protections for pro-life citizens working in the health-care industry.

A lot of pro-lifers say that abortion is the new slavery – you pick a group of people and dehumanize them because they are weaker than you are, for your own financial gain. At least the slave owners didn't kill the slaves, though.

Other blogs writing on abortion:

- Hot Air: Obama's speech at Notre Dame
- Nice Deb: Audio of Obama arguing in favor of infanticide in the Illinois legislature
- Heritage Foundation: Contrasting the Notre Dame speech with Obama's actual policies

- Western Experience: Pro-life protesters arrested at Notre Dame

The full story of nurse Jill Stanek, who blew the whistle on infanticide in Illinois hospitals, in case you missed it.

UPDATE: Hot Air has video of John Piper speaking about what Obama's pro-abortion stance really means: 1,000,000 dead babies every year. (H/T Gateway Pundit)

Ironic, because I was just listening to John Piper's sermon on William Wilberforce, who abolished the "abortion" of his day: slavery.

Is Obama keeping America safe?

May 19, 2009 | by Wintery Knight | Link | Original Link

Let's see how Obama is performing on national security issues. Most of these links courtesy of Free Canuckistan.

Former FBI agent tells NewsMax that Obama is making another 9/11 "inevitable". (H/T Infidel Blogger Alliance)

> A former FBI agent who recently won a lawsuit defeating FBI attempts to muzzle him tells Newsmax that the agency's morale may be at its lowest ebb ever, and warns the "chilling" effect of Obama administration policies is making another terrorist attack on the U.S. homeland "inevitable."
>
> ..."I'm not exactly sure where the president is coming from, but all the signals he gives out is that the United States is prepared to talk peace, we're not going to do anything to upset any of the people that are conducting all these terrorist acts, we're going to back out of everything we've done before, we're going to apologize for everything we've done in the past – what kind of signals does that send?" Vincent asks. "It sends a signal of weakness and: 'We are not willing to try and stop what you have planned.'"

Yes, this is what happens when the people claim that Bush could have kept us safe without force or surveillance. We already know how Obama's leftist diplomacy works. We were attacked *multiple* times during Clinton's presidency, and Clinton was like Churchill or Thatcher, compared to the Obama.

IBD had this editorial by economist Thomas Sowell regarding Obama's national security performance:

> In 1938, with Hitler preparing to unleash a war in which tens of millions of men, women and children would be slaughtered, the play that was the biggest hit on the Paris stage was a play about French and German reconciliation, and a French pacifist that year dedicated his book to Adolf Hitler.
>
> When historians of the future look back on our era, what will they think of our time? Our media too squeamish to call murderous and sadistic terrorists anything worse than "militants" or "insurgents"? Our president going abroad to denigrate the country that elected him, pandering to feckless allies and outright enemies, and literally bowing to a foreign tyrant ruling a country from which most of the 9/11 terrorists came?

There was a time when American elected Presidents like Reagan and Bush. Those presidents believed in and fought for the cause of liberty. But that time is gone.

> ONE of the world's most courageous women is locked away in a miserable rat-hole in Rangoon. Her "crime"? Demanding freedom for her people.

> …Of course, with an "election" coming up next year, Burma's kooky generals have every reason to keep their country's most beloved democrat under lock and key — and most of the world sees through the sham. Voices from Congress to the European Union have demanded Suu Kyi's release.
>
> And the Leader of the Free World? Silence.
>
> What a change from the previous White House, which had two champions of Burmese freedom in President George and, especially, Laura Bush. Their backing of Suu Kyi was part of a much broader campaign for freedom fighters around the world. Bush sent a clear message to those risking everything for their freedom: If you stand up for liberty, the president will stand with you.
>
> Now, that message is muffled. In recent weeks, some of the worst human-rights violators have seized and detained US citizens — from journalists Roxana Saberi in Iran and Laura Ling and Euna Lee in North Korea, to prisoner John William Yettaw in Burma — with nary a word from President Obama in reply.

Not to mention the forced conversion of Christian children in Egypt to Islam, or the actual torture that goes on in North Korea. (H/T Half Done)

God help us all if the President of the United States is more concerned with scoring political points than improving liberty, prosperity and security, at home and abroad. There is a price to pay for the moral decay that results from rejecting objective morality. When threats arise, the secular left blames America and praises the enemies of liberty and prosperity, as Evan Sayet has argued.

UPDATE: The Heritage Foundation linked to a couple more national security stories.

- In remarks to a foreign-policy group in Los Angeles yesterday, CIA Director Leon Panetta suggested that comments like House Speaker Nancy Pelosi's recent critiques of the CIA could be detrimental to American national security.
- CIA officials warn that new rules may hinder effective interrogations.

Is morality rational, on atheism?

May 19, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from the the Western Experience! Thanks for the link, Jason!

Last week, I posted a list of 13 questions that Christians could use to get discussions going with their atheist friends. We got 10 responses to the questions. Yesterday, we took a look at the minimal requirements for robust, prescriptive morality. Today, we'll evaluate atheism, as represented by the 10 respondents to the survey, to see whether the minimal requirements are rationally grounded by atheism.

1) Objective moral values: **NOT GROUNDED**

All ten respondents stated that moral values have no mind-independent existence. In other words, they are purely subjective. Eight of the respondents thought that each person should decide for themselves what is moral for them, and 2 thought that each person should act in accordance with the arbitrary social conventions of the culture where they lived. Those standards change over time and in different places, of course. They are arbitrary.

2) Objective moral duties: **NOT GROUNDED**

All ten respondents said that there was no such thing as objective moral values, and so there can be no objective moral duties either. Most people said that their own preferences were the source of *subjective* moral values. But a duty owed to oneself can be canceled when things get difficult. The best attempt was the social contract answer, but this fails because the social contract is arbitrary. There is no reason to limit your happiness because of an arbitrary social contract, so long as you can escape the social consequences of disobedience.

3) Moral accountability: **NOT GROUNDED**

Nine respondents did not believe in God. The one who did believe said that God did not care about our actions. Therefore, there is no accountability for the decisions we make. So long as we can avoid the consequences for violating the arbitrary fashions of the time and place where we live, nothing will happen to us if we put our happiness above the needs of our feelings of "empathy" for others.

4) Free will: **NOT GROUNDED**

All ten respondents were materialists, and therefore did not believe in minds or souls independent of the material that makes up the body. Therefore, everything that humans do is fully determined by the genetic programming and the sensory inputs. To expect moral choices or moral responsibility on atheism is like expecting the same from a computer. Physical systems don't have free will. There is no "ought to do" for lumps of matter that are not designed by anyone for any specific purpose.

5) Ultimate significance: **NOT GROUNDED**

All ten of the respondents were materialists, so life ends in the grave for them. Scientists

have discovered that in the future, the amount of usable energy, such as the heat and light emitted by stars, will run down to zero, the “heat death of the universe”. What this means is that the entire universe will become cold and lifeless at some point. Humans are therefore doomed to extinction no matter how they act.

Conclusion

On atheism, there is no reason for an atheist to constrain his pursuit of happiness. If he does take into account the needs of others because of feelings and emotions (“empathy”), he is acting irrationally. Feelings are not logical arguments. There is no such thing as a “moral” action on atheism, all actions are undertaken for pleasure or personal preference.

In the survey results, *none* of the ten respondents could oppose slavery on rational grounds, *none* of the ten respondents could perform self-sacrificial acts on rational grounds, and *none* of the ten respondents could explain why murder was wrong, on rational grounds. They may have chosen the right alternative, but only based on emotion, not on reason.

As Greg Koukl argues, morality is not rationally grounded on atheism. Now, it is true that atheists act inconsistently in ways that seem to be moral. This is because:

1. Judeo-Christian morality is still floating around in out Western society, even though it is on the way out due to materialist persecution of public religious expression and the Judeo-Christian theology that grounded morality
2. Regardless of what materialism says, God made the universe with objective moral values, and humans with free will, so even if people say that morality is relative and that they are machines, they may still act inconsistently to do the right thing, since their views are mistaken, especially if the costs are minimal

But when the heat is really on, they will cave in to their desires. Rational grounding is needed in order to do the right thing when there are consequences for doing the right thing.

Further study

You can get the full story on the requirements for rational morality in a published, peer-reviewed paper written by William Lane Craig here. You can also hear and see him present the paper to an audience of students and faculty at the Georgia Institute of Technology in 2008. The audio is clipped at 67 minutes, the video is the full 84 minutes. There is 45 minutes of Q&A, with many atheist challengers.

The video of this lecture is the *best material you can get* on this issue, and the Q&A from the hostile audience is *vital* to the lesson. More debates on atheism and morality can be found on the debate and lecture page.

You can find a post contrasting the morality of an authentic, consistent Christian with an authentic, consistent non-Christian here. A post examining how atheism is responsible for the deaths of 100 million innocent people in the 20th century alone is here. A post

analyzing the tiny number of deaths that religion was responsible for is here.

Who has the better economy? Canada or the USA?

May 20, 2009 | by Wintery Knight | Link | Original Link

Hans Bader at the Competitive Enterprise Institute reports:

> 1.2 million Americans have lost their jobs since the $800 billion stimulus package was signed into law.
>
> The stimulus package has directly destroyed tens of thousands of jobs. A provision in the stimulus package that blocked 97 Mexican truckers from U.S. roads "caused Mexico to retaliate with tariffs on 90 goods affecting $2.4 billion in U.S. trade," destroying 40,000 American jobs.
>
> It also ignited a *trade war with Canada*. In response to vague "buy American" provisions in the stimulus package, "A number of Ontario towns, with a collective population of nearly 500,000, retaliated with measures effectively barring U.S. companies from their municipal contracts — the first shot in a larger campaign that could shut U.S. companies out of billions of dollars worth of Canadian projects."
>
> Yet, Obama had the audacity to claim that only passing the stimulus package would save us from "irreversible decline" and economic ""disaster".
>
> Obama's policies echo those of Herbert Hoover, who helped spawn the Great Depression through his protectionism and tax increases.

Remember how Democrats used to complain about Bush and his "tax cuts for the rich"? Yeah, it's strange how only people who pay taxes (59% of the public) can actually get tax cuts, isn't it. But Obama has an even better idea: "tax hikes for the poor".

The Washington Post reports on Obama's new car tax: (H/T Heritage Foundation, Michelle Malkin, Stop the ACLU, Gateway Pundit)

> A senior administration official said the new standards would raise the cost of an average car by $1,300, $600 of which could be attributed to the rules being announced today.

This is not to mention the electricity tax (cap and trade), the cigarette tax, taxing employee health care plans, and the rising cost of living caused by protectionism.

On the other hand, let's take a look at Canada in relation to the United States, courtesy of the Cato Institute. (H/T Heritage Foundation)

The Cato Institute writes:

> **Spending:** Spending by all levels of the Canadian government peaked at 53 percent of the country's GDP in the early 1990s, then plunged to 40 percent in 2008. U.S. government spending has risen, reaching 39 percent of GDP in 2008. And with the stimulus package, that number is likely to jump even higher.

Government spending as % of GDP

> **Debt:** The Canadian government cut its debt from 71 percent of GDP in 1995 to 32 percent in 2008. Under President Obama's budget plan, U.S. federal public debt will jump from 41 percent of GDP in 2008 to more than 60 percent next year.

Federal debt as % of GDP

> **Deficits:** Canada has balanced its budget every year since 1998 — not by raising taxes, but by cutting spending. The United States balanced its budget for four years in the late 1990s, but now deficits are so large that it's difficult to imagine that ever happening again.

Surplus / Deficit as % of GDP

> **Corporate Taxes:** Canada has cut the corporate tax rate from 28 percent to just 15 percent, and most provinces have trimmed corporate taxes as well. The U.S.

> federalstate rate stands at about 40 percent, and the Obama administration is planning to increase corporate taxes.

Corporate tax rates

It’s important to note that the Liberal party in Canada is socially progressive, but moderate on fiscal issues. Of course, now that the Conservatives have been running things, it’s gotten even better. It would be great if they could win a majority. The biggest problem in Canada right now is the fascist Human Rights Commissions, but there are candidates from the Conservative Party who intend to abolish the HRCs in BC and Ontario.

Are Obama's policies weakening America's security, liberty and prosperity?

May 20, 2009 | by Wintery Knight | Link | Original Link

In this American Spectator piece entitled "Obama the Destroyer", Quin Hillyer recounts the many deeds that Obama performed in order to weaken America.

Hilyer writes:

> If somebody were deliberately trying to undermine the very fabric of these United States, he would first vow not just to change its policies but to completely "change America," and then would do just about everything Barack Obama already has begun to do as president.

He then lists some of the specific areas that Obama has weakened:

- contract law (which is part of the foundation of capitalism and free enterprise)
- strict interpretation of the Constitution
- counter-terrorism (released interrogation techniques)
- responsible spending and size of government
- energy production
- missile defense
- military preparedness and research
- border security
- transparency and free/open debate on legislation
- freedom of choice in health care
- the integrity of the voting/census system
- diplomacy and foreign policy

I could name at least a half-dozen more areas not on that list, such as the Western Experience's post about Obama's decision to weaken our nuclear capabilities. In fact, Jason has a whole article on the Obama's naive, weak foreign policy.

But foreign policy is one thing, what about the cost of the trillions in spending? Writing in the Weekly Standard, Irwin M. Stelzer explains that there are only two ways out of the massive deficits that Obama has run up: Higher taxes, which destroys economic growth and ships jobs overseas, and hyperinflation, which impoverishes the poorest among us by making them pay more for everything.

He lists all the mistakes that the ACORN lawyer has made, and concludes:

> We are also certain to see the portion of our pay that we actually get to take home decline significantly. The debt that Obama is running up will have to be repaid. Already, there are grumblings in the market about the future of the dollar, with the Chinese not the only one of our creditors worrying that we will inflate our way out of our obligations. Run the presses, make dollars cheaper,

> and use the debased currency to repay debts.
>
> …But inflation is not the only possibility. Instead, politicians, remembering the fate of Jimmy Carter when he allowed inflation to climb towards 20 percent, will try to restore fiscal sanity by raising taxes. Harvard economist Martin Feldstein, who supported the president's stimulus package, puts the needed tax increase at $1.1 trillion over the next decade; the International Monetary Fund puts the figure at $1.9 trillion, a sum the magnitude of which is better understood when written as $1,900,000,000,000.

And don't forget the looming problem of entitlements. You remember. Social Security and Medicare? Costs ballooning out of control? Matthew Continetti writes about it in the Weekly Standard:

> The trustees conclude that a combination of lavish benefits, an aging population, and a moribund economy has brought the United States's social insurance system close to bankruptcy. Medicare is already running a deficit, and the trustees say that it will be totally out of money by 2017. Social Security will be in the red as soon as 2016. That's a problem not only for Social Security. It's a problem for the federal budget.
>
> …Meanwhile, bizarrely and perversely, Obama and the Democrats on Capitol Hill say that the only way to fix America's spending problem–we are not making this up–is to spend more money. More on energy. Health care. Education. The three pillars of the president's "new foundation." Don't worry about the cost, Obama says. The rich guy at the other table will pick up the bill.

What sort of person would spend trillions of dollars in a recession with a looming entitlement crisis? Oh, I know. An unqualified spendthrift who can't even keep his own financial house in order.

Gateway Pundit reminds us that the Democrats understand that their cap and trade bill with hurt the poorest people the most. And they don't care! Most of them are probably like Al Gore, who owns assets that will benefit from the unnecessary government regulations.

Gateway Pundit writes at the American Issues Project:

> The potential cost of the democrat's cap and trade policy is enormous. It will likely cost $700 to $1,400 dollars per family per year. The Department of Energy estimated that a similar bill, S. 2191, the Warner-Lieberman cap-and-trade proposal, will increase the cost of coal for power generation by between 161 percent and 413 percent. Human Events reported that the DOE estimated GDP losses (see chart) over the 21-year period they forecast, at between $444 billion and $1.308 trillion. There are estimates that the bill could increase unemployment by 2.7 percent or about 4 million jobs.
>
> White House Budget Director Peter Orszag was on "This Week" with George

> Stephanopoulos in March. During his interview Orszag admitted that Obama's proposed cap and trade energy legislation will increase energy costs for everyone. The Heritage Foundation reported that cumulative GDP losses for 2010 to 2029 approach $7 trillion. Single-year losses exceed $600 billion in 2029, more than $5,000 per household. Job losses are expected to exceed 800,000 in some years, and exceed at least 500,000 from 2015 through 2026. In Missouri and the Midwest where energy is "cheap" the democrat's legislation would cause electricity rates to double. Even the far left Huffington Post admits that the approach taken by the Waxman-Markey bill does not alleviate the problem whereby household consumers will pay higher energy costs.

The article continues here.

Remember when Obama said this in 2008?

> *"Under my plan of a cap and trade system electricity rates would necessarily skyrocket. Businesses would have to retrofit their operations. That will cost money. They will pass that cost onto consumers."*

What? You voted for Obama and the MSM didn't tell you that he said that? I'm shocked.

Is morality rational, on Christian theism?

May 20, 2009 | by Wintery Knight | Link | Original Link

Last week, I posted a list of 13 questions that Christians could use to get discussions going with their atheist friends. We got 10 responses to the questions. On Monday, we took a look at the minimal requirements for robust, prescriptive morality. On Tuesday, we evaluated whether the minimal requirements are rationally grounded on atheism. Today, we'll evaluate Christianity.

The case for Christian theism

Christian morality is based on the objective truth of the Christian faith. So, let's recall how people argue for Christianity.

Arguments for theism:

- The argument from abstract objects
- The argument from contingency
- Kalam cosmological argument
- Fine-tuning of cosmological constants
- Galactic, stellar and planetary fine-tuning
- Origin of biological information in the simplest replicating cell (Advanced article – First Things)
- Sudden origins of all major body plans in the 3-5 million year Cambrian explosion (Very Advanced – peer-reviewed paper!)
- The moral argument (see below)
- The argument from non-physical minds
- The argument from near-death experiences
- The argument from irreducibly complex molecular machines (Michael Behe)
- The argument from evil (yes, that's what I said)
- The arguments from mathematical effectiveness, simplicity and beauty (Eugene Wigner)
- The argument from the incompatibility between naturalism and rationality (Alvin Plantinga)
- The argument from the natural limits to biological change (Ray Bohlin)
- Etc.

And then there are arguments for Christianity in particular:

- The minimal facts case for the resurrection
- The argument for the resurrection from changes in Jewish belief and practice
- The argument from fulfilled prophecy
- The argument from accuracy in describing the human condition
- The logical consistency and testability of Christianity
- The superior moral character of authentic Christians in history

- Etc.

And here are the rebuttals and refutations to the arguments *against* Christian theism:

- Postmodernism, relativism and skepticism
- The problems of evil and suffering
- Divine hiddenness
- Religious pluralism
- The fate of the unevangelized / divine sovereignty vs free will
- Incoherence in the concept of God
- Isn't faith supposed to be irrational and evidence-free? (only for atheists, not for Christians)
- Materialist speculations against the kalam and fine-tuning arguments
- The progress of science
- Etc.

So, let's assume Christian theism is true, and go on to see if it rationally grounds the minimal requirements for morality.

Evaluation

1) Objective moral values: GROUNDED

Objective moral values are grounded in God's unchanging nature. His own character is the standard for what counts as good and evil. The standard is not variable, but fixed, by God's unchanging nature.

2) Objective moral duties: GROUNDED

Objective moral duties are grounded in God's commands, which flow from the values in his nature and become duties for his creatures.

3) Moral accountability: GROUNDED

On Christian theism, there is a final judgment after death in which good will be rewarded and evil will be punished, proportionally.

4) Free will: GROUNDED

On Christian theism, each person is a union of a material body and a non-material mind / soul. The actions of the non-material mind / soul are not determined by material processes, and humans are therefore able to make real choices.

5) Ultimate significance: GROUNDED

On Christian theism, death is not the end of the story. Each moral action performed is part of on ongoing relationships with God, and people. So, no action is meaningless, because all your actions relate to God, who exists eternally, or to other people, who also exist eternally into the future.

Conclusion

Christian theism grounds all of the minimal requirements needed for rational morality. In Christian theism, we see the fusion of prudence (Acting morally is what I am designed to

do in order to flourish, i.e. – “eudaimonia”) and submission to a loving God (I will act morally to respect God, because he loves me the most). More to come on the latter point!

Tomorrow, I’ll post my own answers to the 13 questions, since Commenter ECM and moderate-leftist unitarian Rick demand that I do.

Further study

You can get the full story on the requirements for rational morality in a published, peer-reviewed paper written by William Lane Craig here. You can also hear and see him present the paper to an audience of students and faculty at the Georgia Institute of Technology in 2008. The audio is clipped at 67 minutes, the video is the full 84 minutes. There is 45 minutes of Q&A, with many atheist challengers.

The video of this lecture is the *best material you can get* on this issue, and the Q&A from the hostile audience is *vital* to the lesson. More debates on atheism and morality can be found on the debate and lecture page.

You can find a post contrasting the morality of an authentic, consistent Christian with an authentic, consistent non-Christian here. A post examining how atheism is responsible for the deaths of 100 million innocent people in the 20th century alone is here. A post analyzing the tiny number of deaths that religion was responsible for is here.

Obama's car regulations will kill more Americans than the Iraq war

May 21, 2009 | by Wintery Knight | Link | Original Link

The Heritage Foundation reports on Obama's proposed regulations on fuel economy.

> Time for practice. Time to pile into the…Toyota Prius? Maybe the Yaris. Or surely the Smart Car will do. Those are three of eleven cars that meet President Obama's new emissions standards that include "nothing larger than a midsize sedan, even when you include hybrids."

Eleven choices of vehicle? The soccer moms will not be liking that.

But it gets worse. It's going to cost another 50,000 jobs added on to Obama's massive count.

Keith Henessey writes: (H/T Competitive Enterprise Institute)

> **NHTSA estimated that a similar option would cost almost 50,000 U.S. auto manufacturing jobs over five years.**

> See Table VII-1 on page 586 of the NHTSA analysis. NHTSA estimated that the TC=TB option, which I'm using as a proxy for the Obama plan, would result in the following job losses among U.S. auto workers:

> | MY 2011 | MY 2012 | MY 2013 | MY 2014 | MY 2015 |
> |---|---|---|---|---|
> | 8,232 | 24,610 | 30,545 | 36,106 | 48,847 |
>
> Compared to the Bush draft final rule, this is **37,000** more jobs lost.
>
> Since I know this table is inflammatory, I will anticipate some of the responses:
>
> - This is an estimate for the job loss from the TC=TB option analyzed by NHTSA in 2007. This is the closest proxy for the Obama rule, and I'm convinced it's a good proxy until someone demonstrates otherwise. But technically, it's not a job loss estimate for the Obama proposal.
> - This estimate was done in a different economic environment (late 2008), and before the U.S. government owned 1.5 major U.S. auto manufacturers. My guess, however, is that these changed conditions should push the estimated job loss *up* from the above estimate, rather than down.
> - There's a false precision in the above table. It's just what NHTSA's model spits out. …I don't put any weight on the precise annual estimates.

And it gets even worse than that.

Steve Milloy writes about the really bad problem on Green Hell blog: (H/T Gateway Pundit)

> The Obama administration's proposed mileage standards that will be announced

> today may kill more Americans at a faster rate than the Iraq War — his signature issue in the 2008 presidential campaign.
>
> Obama's standards will require automakers to meet a 35 miles-per-gallon standard by 2016 — four years earlier than the same standard imposed by the Energy Security and Independence Act of 2007.
>
> As discussed in my new book Green Hell, the only way for carmakers to meet these standard is to make smaller, lighter and deadlier cars.
>
> The National Academy of Sciences has linked mileage standards with about 2,000 deaths per year. The National Highway Traffic Safety Administration estimates that every 100-pound reduction in the weight of small cars increases annual traffic fatalities by as much as 715.
>
> In contrast in the more than *six years* since the Iraq war began, there have been 4,296 deaths among American military personnel.

The Iraq war cost 550 billion and 4300 lives. And for this we got more liberty and security. Obama is spending trillions and trillions of dollars, and he wants to kill 2,000 Americans per year? I am not even talking about his subsidies to kill more unborn babies at home and abroad. This is on top of that!

Obama cuts missile defense as Iran test-fires missile that can hit Israel

May 21, 2009 | by Wintery Knight | Link | Original Link

Yesterday I linked to the story about Obama's decision to weaken our nuclear capabilities, and a while back I blogged about the ACORN lawyer's cuts to missile defense, just as North Korea was ramping up its medium-range missile program.

Here is a quick refresher:

Closing Velocity had some more details on the missile defense cuts. (H/T Hot Air)

> 5. Total cuts in missile defense: $1.4 billion or roughly 15%.
> 6. Cancel second Airborne Laser (ABL) aircraft, keep the one remaining ABL prototype as a testbed and revert to pure R&D.
> 7. No increases in Ground-based Interceptor (GBI) deployment in Alaska. Remaining silos will stay unfilled. European GBIs will be decided on later during the Quadrennial Defense Review (QDR).
> 8. Termination of the Multiple Kill Vehicle (MKV) program.

Well, now we can add Iran to the list of nations emboldened by Obama's weak foreign policy.

The Heritage Foundation reports: (from their 33 Minutes blog)

> Earlier this week we mentioned Iran's defiance and nuclear ambitions, President Barack Obama's too-friendly request to enter into talks with Iran, the necessity to build agreed-upon missile defense shields in Poland and the Czech Republic, and Israel's desire to take more aggressive action against Iran. Today's post reaffirms why we blogged about these issues.
>
> My Way News reports that Iran test-fired an advanced missile today, with a range far enough to hit Israel, southeastern Europe, and our bases in the Middle East. Mahmoud Ahmadinejad made this claim. So, despite Obama's "tough" words of warning, Iran is busy developing and apparently testing its ballistic missile capability.
>
> That Iran doesn't have nuclear capability at this very moment is beside the point. A team of U.S. and Russian scientists just released a report stating Iran would have such capability in as few as five years. In light of this recent missile test-fire, will our president take a more aggressive approach to dealing with Iran, or will he stand by his decision to give the rogue nation a year-end deadline?

Here's Nile Gardiner and a leftist journalist on MSNBC:

This reminds me of a quotation from Ronald Reagan's debate against the 2nd worst president ever, Democrat Jimmy Carter.

> And I'm only here to tell you that I believe with all my heart that our first priority

> must be world peace, and that use of force is always and only a last resort, when everything else has failed, and then only with regard to our national security. Now, I believe, also, that this meeting this mission, this responsibility for preserving the peace, which I believe is a responsibility peculiar to our country, and that we cannot shirk our responsibility as a leader of the free world because we're the only ones that can do it. **Therefore, the burden of maintaining the peace falls on us. And to maintain that peace requires strength. America has never gotten in a war because we were too strong.**

We had 8 years of constant terrorist attacks with the Democrat Clinton. We had 7 years of security, liberty and properity with the Republican Bush, who had the moral clarity, (from his Christian worldview), to oppose tyranny. Let's see how well Obama's diplomacy works. Somehow, I don't think Obama's appeasement of torturing, murdering dictators will be as effective as peace through strength.

UPDATE: Gateway Pundit links to details on the missile. Range is 2000 km, two-stage solid fuel.

Interview with the Christian: why I am a Christian

May 21, 2009 | by Wintery Knight | Link | Original Link

Please see my new testimony page, in which I explained how I became a Christian by answering the survey questions.

Some debates are posted here, and my index of arguments pro and con are listed here.

Selling single-payer health care with lies

May 22, 2009 | by Wintery Knight | Link | Original Link

Holy Snark!

You *will* watch this 3 minute video about the Democrats' plan for single-payer health care *right now*! (H/T Heritage Foundation)

This video is courtesy Verum Serum, the same guys who brought us that Jan Schakowsky video where she admits that Obama's plan will destroy private medical insurance. They seem to be a Christian blog, so I blogrolled them, along with Bush White House economist Keith Hennessey, who I linked to twice.

Quick quote from Heritage Foundation's post:

> As Yale professor Jacob Hacker says in the video: "Someone once said to me this is a Trojan Horse for single payer and I said well its not a Trojan Horse, right? Its just right there."
>
> And then later: "One of the virtues of it though is that you can at least make the claim that there is a competitve system between the public and private sectors."

Don't forget some other videos I posted on health care, (that post has a link to Laura's amazing post on health care that was on Hot Air, which had more helpful videos!).

Michelle Malkin has some ideas about what the grassroots can do! We can fight this.

A comprehensive, point-by-point refutation of government-run health care is here, at the Heritage Foundation.

They cover:

- the hidden costs of government-run health care, that are paid by the private sector
- the low efficiency and low quality of existing government plans like Medicare and Medicaid
- how government-run health care would lead to controls on your private life to reduce health costs
- the real solution to the health care mess: competition, de-regulation and consumer choice

Some good news on health care

OK, Heritage Foundation had this story on a bill introduced by Republican senators Tom Coburn and Richard Burr. It's called the "Patient's Choice Act".

Excerpt: (I bolded the stuff I liked)

> As Galen Institute President Grace-Marie Turner and Joseph Antos with American Enterprise Institute note in The Wall Street Journal, the legislation "provides a path to universal coverage by redirecting current subsidies for health insurance to individuals. It also provides a new safety net that guarantees access to

> insurance for those with pre-existing conditions."
>
> By restructuring the tax treatment for health insurance, the plan would give every taxpayer direct assistance to buy private health insurance, and end the inequities that plague the current system. The bill would shift the $300 billion annual tax exclusion for employer-based health benefits toward refundable tax credits for families and individuals. Families would get $5,700 a year and individual consumers would get $2,300 a year to purchase private plans and invest in health savings accounts (HSAs).
>
> Low-income families would receive a supplemental debit card worth up to $5,000 that would help them pay for health coverage and out-of-pocket medical bills. **They'd also be incentivized to make the most of their health care dollars since the remaining balance on their card would roll over to the next year. The expected expansion of private health plans would reduce the dependence of many uninsured Americans on the hospital emergency rooms for routine care, saving American taxpayers billions of dollars.**
>
> "The combination of the refundable tax credit and debit card gives lower-income Americans a way out of the Medicaid ghetto so they can have the dignity of private insurance," Turner and Antos add.

This is what Republicans would do if we could elect enough of them.

Understanding the challenge of becoming a Christian

May 22, 2009 | by Wintery Knight | Link | Original Link

One thing that I have noticed as I compiled the results of the survey is that *none* of these non-Christians understood what Christianity is about, and none of them have tried to find out, and none of them wanted to find out. All but one refused to follow Jesus even if it became *clear* to them beyond a shadow of a doubt that Christianity were true. And he initially answered as the others did.

Somehow, people have gotten into their heads the idea that religions are all the same, and that the purpose of religion is to make people "good", (or worse, "happy"). And when they say "good", they mean being nice to others. Surprise! The purpose of Christianity is NOT to make you be nice to others nor to make you happy. In fact, no amount of being nice is going to please God, unless something even more important is secured first.

The purpose of Christianity is three-fold. You must expend time, effort and wealth:

1. KNOWING GOD'S CHARACTER AS HE REALLY IS.
2. KNOWING WHAT GOD HAS DONE IN HISTORY.
3. RESPONDING TO AND PURSUING GOD, AS HE REVEALS HIMSELF TO YOU.

You don't decide what your purpose is, God does. God was there before the universe and his character was set before you were even born. He created you and designed you for a purpose.

I wanted to highlight a story in Daniel 3 in order to show what it is that atheists choose not to do, which God considers *moral*. An atheist cannot stand for God in public, and remain faithful and loyal to him in the midst of suffering and persecution. And Christians *are required* do this. This is following the example of the Old Testament prophets, as well as Jesus himself.

It should be no comfort to atheists that they stick to their chosen diet, or stop at stop signs, practice yoga and recycle. God is not the least bit interested in your compliance with your own arbitrary personal preferences, nor the arbitrary standard of your culture in the time and place you live in. *That's not morality! T*hat's just giving yourself happy feelings by effortlessly complying with made-up standards*.*

One way of loving God, (which is the most important commandment), is by keeping faith with God publicly, even when things *don't go your way*. Atheists can't do that. It just isn't rational for people who will be alive for 75 years and then gone, to deny themselves for any higher purpose, especially when it involves suffering. And when being good isn't rational, *people don't do it,* especially when it's hard to do*.*

That is why it is impossible to please God unless you first believe certain things that are only possible if God exists. For example, you need an objective moral standard, free will, someone to whom duty is owed, moral accountability, moral significance, etc.

And to illustrate what counts with God, let's take a look at this sermon on Daniel 3 that I

found that tells the story of Daniel and his 3 friends.

The Scripture is here. You'll need to read this if you don't know the story.

And the sermon excerpt is here:

> Now, before we set up Nebuchadnezzar as the worst guy ever, we don't have to go back very far to see similar things that have happened in our own day and age. Every totalitarian the regime in the 20th century had statues erected in honor of their own tyrant. Whether it was statues of Lenin in the Soviet Union, statues of Mao in China, or statues of Saddam Hussein in Iraq, people had to pay homage to these statues is they wanted to advance in society, and in some cases, simply to stay alive. Usually one was allowed to keep believing in whatever 'god' they wanted as long as it was subordinate to the empire. Allegiance to the state was more important than allegiance to any god.
>
> Our society is certainly different in that we don't have a dictator, and nobody, at least not yet, is threatening to shoot us or toss us into a fiery furnace. But in some ways our society is actually worse, mostly because its pressure is very subtle and sometimes we don't even realize it's going on. Our culture places the same type of pressure on each one of us to put God in second place. We find ourselves constantly pressed to keep our beliefs private and secondary. We can believe whatever we want as long as we don't ever talk about it.
>
> …Shadrach, Meshach, and Abednego… had failed to bow down and worship the statue, thereby disrespecting not only the statue but the king as well.
>
> They were accused of ingratitude, verse 12, "There are certain Jews whom you have appointed," and impiety," they do not serve your gods or worship the golden image that you have set up." But the fundamental element of both these charges was their offense against Nebuchadnezzar himself. But that's not how Shadrach, Meshach, and Abednego saw it.
>
> They were simply trying to be obedient to the commandment, Exodus 20:45a, "You shall not make for yourself a carved image, or any likeness of anything that is in heaven above, or that is in the earth beneath, or that is in the water under the earth. 5 You shall not bow down to them or serve them, for I the Lord your God am a jealous God …"
>
> It's worth noting that there were only three men in the whole crowd who refused to bow down to Nebuchadnezzar's statue…. this highlights the fact that sometimes standing up for God can be a lonely activity. And it doesn't matter if you're standing on the national stage or you're simply visiting with all your unbelieving relatives who think you're some sort of moronic freak. There are times in life when doing what's right means you can't hide in the crowd.
>
> …I've come to see this same battle being fought daily in my heart over much lesser issues. Am I going to declare the Lord to be my primary allegiance, come what may, or will I bow to the multitude of idols that the world presents? Unless

> you're an actor, our idols aren't usually golden statues. Our idols are the various pleasures, desires, and attitudes that the culture tells me I need to have in order to live a fulfilled and worthwhile life.
>
> For some, their golden image is the respect and admiration and acceptance of others. For a lot the young adults here, high school and college, there's the pressure to be part of the "in crowd," even though the cost of admission to this club is that we shouldn't show respect to our parents, or talk about God, or keep ourselves pure until marriage. This image of acceptance says, "Bow to me or I'll throw you into the fiery furnace of the mockery and ridicule of your peers.'

Notice how this example of obedience and endurance parallels the life of Jesus, as well, which provides the model for Christians who are called upon to do the same – and this is central to Christianity. Where is this on atheism? Clearly, atheists cannot meet this standard. It is *irrational*, on atheism, to perform acts of self-sacrifice like this in obedience to an objective moral law, and to the moral lawgiver.

So, what is important to Christians is not what is important to atheists, obviously. Our primary goal is not our feelings and well-being, or being "nice" to others or being liked by others. That is *irrelevant*. What is considered *normal* in Christianity is put yourself second, and to put God first, under fire. That is loving God. The most important commandment.

Greg Koukl put it nicely in one of his lectures in the Q&A session when he said "With respect to God's purposes in the world, your happiness is expendable". That is the *normal Christian life*. And it isn't for everyone.

Friday night funny: Nancy Pelosi, Michele Bachmann and capitalism

May 22, 2009 | by Wintery Knight | Link | Original Link

Here's Canadian-raised comedian Steven Crowder's latest video. This one made me laugh out loud, and you will too! (H/T IMAO.us)

And here's the lovely Michele Bachmann staying calm against Barney Frank. Beauty and the Beast! (H/T The Maritime Sentry)

Remember, Democrats caused the recession and Republicans tried to stop it! And Barney Frank was one of the main players in causing this recession, as you can see from the linked New York Times article. Now Michele has to come in and try to clean up their mess.

Fun cartoons

Here is an old-fashioned video on capitalism. I feel so subversive even showing them to you. This is the kind of thing real Americans used to learn about before the public schools were taken over by marxists, feminists and draft-dodging leftists! (H/T IMAO.us)

Part 1:

Part 2:

More old-fashioned capitalist propaganda here! This one is about energy production, enterprise and competition. It has little green men with pointy ears!

Happy Friday!

Women dominate the classroom, so why are they so unhappy?

May 23, 2009 | by Wintery Knight | Link | Original Link

Check out this story entitled "At the science fair, girls dominate the class" from the Canada's Globe & Mail newspaper. (H/T My friend Andrew)

Excerpt:

> As female students increasingly dominate in science competitions across the country, educators are facing a conundrum that requires more social analysis than hard science: Boys are not just getting beaten by girls — they're not even showing up.
>
> Five years ago, boys made up 55 per cent of the competitors at the annual Canada-Wide Science Fair, a national competition where youth in grades 7 to 12 compete against other regional representatives. After a steady decline, this year boys are in the minority at 44 per cent.
>
> Girls are also claiming the lion's share of prize money available each year: Eight of the last nine overall winners have been female.
>
> …Megan Hawse, 13, … plans to apply for a provincial internship program that promotes women in science and engineering — but there isn't a similar program for her male classmates.

I guess none of these educrats have read any books like Christina Hoff Sommers' "The War Against Boys".

What caused the decline in male achievement?

Feminism did.

Let's take a look at just one of the reasons why. There are almost no male teachers in the schools, due to discrimination against men.

Consider Australia: (from the Sydney Morning Herald)

> According to… the NSW Teachers Federation, as of June 30, 2005, there were 14,446 female primary school teachers in NSW compared with just 2820 who were male.
>
> In Victoria for the same period, according to the Australian Bureau of Statistics, there were 15,640 primary school female teaching staff as opposed to 3952 who were male.
>
> "It's very striking to realise that 80 per cent of non-readers and problem learners are boys. We can speculate as to whether this is a direct consequence of the inadvertent femininity of schools."
>
> "Boys need role models who can show them that learning is a masculine activity,

> that men are interested in them, and are not always remote, critical or uncaring," says Biddulph.
>
> "This may be their only chance to experience men who are nonviolent, friendly, good at dealing with misbehaviour and interested in their development. Men can show boys that the world of reading, writing, music, art and learning is as much a man's as a woman's world."

What about the United Kingdom: (from the BBC)

> The YouGov survey of 603 children aged eight to 11 shows 51% of boys believe they are better behaved with a male teacher – and 42% say they work harder.
>
> At present, a large majority of teachers in England's primary schools are women with only 16% being men.
>
> Currently one in 12 pupils will have gone through primary school without ever having been taught by a man.
>
> …There were indications that having male teachers could help boys' overall experience of school – with 44% agreeing that male teachers "help them to enjoy school more" and 37% of boys saying it made them feel more self-confident.
>
> More than a quarter of boys agreed that male teachers "understand them better" and could be "relied upon for good advice".

And so we graduate class after class of feminized, irresponsible, underachieving men. They can't earn a living or make a commitment, but they are well trained in drinking, partying and pre-marital sex.

How has this affected women?

Women are more unhappy than ever

Ann Althouse notes that women are more unhappy than ever, according to a new survey.

And no wonder! Women are generally more satisfied by fulfilling relationships with a loving husband and children. Spending all of this government money on things like day care, birth control, abortions, scholarships, etc. incentivizes women to get away from the things that women really want. Naturally, women should have the same opportunities as men to accomplish anything they want to. But they should not be coerced by an ideology.

I wonder what women will do to find husbands and children now? I am not sure that sperm donors, divorce settlements and big government welfare programs are adequate to take the place of loving husbands and fathers, the way that Democrats seems to think. The more the state taxes, regulates and controls the behavior of men, the less men will want to engage in any enterprise, including marriage and parenting.

Marriage, family and children are *way* more important than making money. Everyone who reads my blog knows that I think that Michele Bachmann is an exemplary woman. But remember – she had 5 children and 23 foster children and she home-schooled them for 5 years in between her time as a tax lawyer, business owner, state senator and a

Congresswoman. If you’re looking for a first female President, look no further.

Further study

Don’t forget my 3 part series on why Democrat policies, which single women overwhelmingly support, discourage men from marrying, here (socialism), here (same-sex marriage & cohabitation) and here (no-fault divorce).

Why don’t thoughtful Christians vote for Democrats?

May 23, 2009 | by Wintery Knight | Link | Original Link

Over at 4Simpsons, Neil takes a United Church minister to task for upholding the policies of the Democrats. I thought it was a great summary of why Christians should not be voting for the Democrats. We cannot live authentic Christian lives when our money is taken from us and spent by a secular-leftist state that has *no* sympathy for our Christian goals and ideals.

We need to keep our own money, have a choice of employers, a choice of service providers, and our fundamental freedoms must be secured by unbiased courts that strictly interpret the law. At a minimum, I need to be able to *choose* how my children are educated. I will not marry or have children if the state is going to confiscate my money and indoctrinate my children.

Anyway, here is Neil’s post, and I’ll cite you an excerpt.

> No, Democrats support socialism and job and wealth destroying policies. Some of them have good intentions but know nothing about history, economics or basic human nature.
>
> Democrats support unrestricted destruction of the “least of these,” the unborn.
>
> Democrats ignore the incredible success of the United States and capitalism, which has done more to lift people out of poverty than any other -ism.

Highly recommended, especially the last paragraph. There is only one group of people that can cause me to become upset, and it is fake Christians who are lazy, ignorant and cowardly.

Exploding the myth of “Deadbeat Dads”

May 24, 2009 | by Wintery Knight | Link | Original Link

Dr. Stephen Baskerville e-mailed met to let me know about an important article in the Washington Times about the new show on the anti-male “Lifetime” network. If you want to understand why men don’t want to be husbands and fathers any more, read this entire piece.

Excerpt:

> More than 90 percent of fathers with joint custody paid the support due, according to a Census Bureau report (Series P-23, No. 173). So deadbeats are in the minority. Also, most so-called deadbeat dads actually are dead broke. Two-thirds of men who fail to make child-support payments earn poverty-level wages, according to the Federal Office of Child Support Enforcement. Most of the others are unemployed.
>
> Bruce Walker, executive coordinator at the District Attorneys Council in Oklahoma City, who ran the state’s child-support enforcement program for three years and jailed hundreds of fathers for nonpayment, told the Newark Star-Ledger in 2002: “These men are seldom the mythical monsters described by politicians.”
>
> “Many times I prosecuted impoverished men,” he told the Star-Ledger. “I prosecuted one deadbeat dad who had been hospitalized for malnutrition and another who lived in the bed of a pickup truck.”

On his blog, Dr. Baskerville links to some responses to the article, including his own:

> Two powerful letters in response were published Wednesday:
> http://washingtontimes.com/news/2009/may/20/the-demonization-of-dads/
> http://washingtontimes.com/news/2009/may/20/love-and-divorce/
>
> My own letter was published Thursday (full letter below):
> http://www.washingtontimes.com/news/2009/may/21/the-agony-of-child-support/

All three are worth reading because they are full of statistics that will shock you. Here is the best bit from the third:

> Ostensibly created to recover welfare costs, child support enforcement on the federal level has failed and now costs taxpayers more than $3 billion annually. More seriously, it pays mothers to divorce or forgo marriage, thus creating the very problem it is supposed to alleviate.
>
> Mothers are not the only ones who profit from fatherless children. State governments generate revenue from child support at federal taxpayers’ expense. By paying states according to the amount of child support they collect, federal programs give states an interest in more fatherless children. The more broken

> homes there are, the more revenue for the state.

Don't forget to read the facts on the lack of male teachers in the schools, which undermines men's ability to achieve and to be responsible. And when you're done with that, you can read about the problem of no-fault divorce and the family court system. (A shorter version is linked here)

For those of you who are pro-life or pro-traditional marriage, I want to advise you that this issue is also a very important, although under-reported, issue for social conservatives. Fathers matter, and the state has policies in place that are discouraging men from their traditional role in the family. In the case of a divorce, fathers almost never get custody, and sometimes they do not see their children for years.

Before, I wrote about the fact that 40% of new births are to unwed mothers. Generous benefits provided by the government ensure that fathers are dispensable. Over 20 million children in the United States are raised without a father in the home. And I'm sure you know the social costs to young men and women: violence, anxiety, promiscuity, unwed motherwood, teen pregnancy, abortion, suicides, depression, drug addiction, etc.

And don't even get me started on the false allegations of rape, harassment, etc., such as the recent Duke University lacrosse scandal. Women who make these false allegations are almost never punished! Over two-thirds of divorces are initiated by women for "irreconcilable differences". You have to understand that thoughtful men notice these things, and they will make decisions accordingly.

Surprise! Men don't like being treated poorly by the state. Treat us poorly enough and we'll find other things to do with our lives than get marriage and raise children. To see what that might look like, take a look at this article on birth rates in countries that are further along the marxist-feminist agenda than the United States.

More in my series on how Democrat policies discourage marriage: Part 1 is here and Part 2 is here and Part 3 is here.

One of the best things about being a Christian is other Christians

May 24, 2009 | by Wintery Knight | Link | Original Link

I wanted to highlight some of the Christian blogs that I've discovered since I started blogging.

The top one in the list is definitely Neil Simpson's blog. I was just reading over there today and he was really hard on poor Dawn Eden, whose book on chastity I have read. I recommend it, although she doesn't go as far as I would. Anyway, she's responded in the comments. She is currently taking classes in philosophy and theology, so it should be a good fight between her and Neil! Dawn's blog is here.

I also noticed this post over on Laura's blog, but it's cross-posted on Hot Air. Laura writes about how the left implicitly doesn't trust parents to make decisions about how they address the topic of sex when talking to their own children. She writes about the left's view of parents:

> Our teens are political pawns for the left. They're helpless victims of our prudery, children that the government needs to provide for at every turn with health insurance and free college tuition (but don't deserve an adequate secondary education except when it's time to raise taxes), socially and technologically savvy enough to make their own entertainment and political choices free from our censorship, mature and wise enough to choose abortion (but not give birth), and 18 year old babies who need to be protected from sneaky military recruiters and beer. The rallying cry may be "it's for the children!" but the only really consistent position I see in the left is that parents do not know best; government does.

Over on Muddling Toward Maturity, he links to a Chuck Colson story on how the self-esteem movement in education and parenting has undermined civility in our children. Here is an excerpt from Chuck Colson:

> Whether or not today's kids are actually "ruder than ever," the article and others like it reflect the sense that something has gone wrong in the way we raise our children. Specifically, it has to do with "popular parenting movements focusing on self-esteem."
>
> These movements produce parents who "[respond] with hostility to anyone they perceive as getting in the child's way." By "getting in the child's way," they mean doing anything that might make the child feel less-than-wonderful about him or herself—in the classroom, among their peers, or on the playing field.

Denyse O'Leary takes on the theistic evolutionists here at Post-Darwinist. I love it when she gets mad at them! She gets right to the heart of the issue: is there *objective* evidence

of intelligent agency active in nature? Intelligent design supporters say YES, atheists and theistic evolutionists (but I repeat myself) say NO.

A video of Denyse talking about her book "The Spiritual Brain" here: (H/T Mindful Hack)

She talks about whether faith is *good* for people, and how people invent genes to explain their bad behavior.

Kreitsauce writes about the importance of self-denial and self-sacrifice in the Christian worldview, which is neglected these days now that the church has bowed to the society at large and reduced Christianity to feelings of happiness.

> Discipleship, in contrast to narcissism, brings true satisfaction with life, because life gains a whole new sense of meaning and purpose. We have real freedom to do what is right, to live a life of intimacy with God. This life of discipleship and self-denial does not mean living without desire or without anything that brings pleasure. God does not call us to the monastery but to live life in the world but not of the world.

Chad at Truthbomb Apologetics has a post up that I will be writing about shortly, because it's that good. He links to an episode of Casey Luskin's ID The Future podcast featuring a discussion between a Darwinist and Socrates. He has an excerpt from the dialog here on his blog. The entire dialog is in a PDF on his site.

Tough Questions answered has an analysis showing which "Christian" groups swung from Bush to Obama, as well as this post on post-Christian morality in secular-leftist European nations. TQA cites this article from First Things that argues what I have been arguing recently in my series on atheism and morality.

> Over time human rights, now almost universally accepted among Europeans, will themselves come to be seen as so many arbitrary constructions that may, on utilitarian grounds, be revoked—because there is nothing intrinsic about human beings such that they are not to be ill-treated or violated or even killed. Even now, many do not want to be bothered with the infirm elderly or damaged infants, so we devise so-called humane ways to kill them and pretend that somehow they chose (or would have chosen) to die. Elderly patients are being killed in the Netherlands without their consent. A new protocol for euthanizing newborns with disabilities is institutionalized in the Netherlands…
>
> The Australian utilitarian Peter Singer predicts confidently that the superstition that human life is sacred will be definitively put to rest by 2040.
>
> …In an interview for a British magazine during the summer of 2005, Singer said that if he faced the quandary of saving from a raging fire either a mentally disabled child, an orphan child nobody wanted, or normal animals, he would save the animals. If the child had a mother who would be devastated by the child's death, he would save the child, but unwanted orphans have no such value.

Yes, there is consistent, authentic atheist morality: the happiness of the strong trumps

the non-existent human rights of the weak.

My buddy Rich and I scrap over whether chastity is better than marriage over at the Pugnacious Irishman. (He's getting married shortly, and my friend Robb is getting married tomorrow, so it's a hot topic for me!)

Over on the Western Experience, Jason has a post up on how Dick Cheney is taking on Obama on his lousy policies. Here's a clip:

Unqualified teleprompter-reader versus qualified statesman. Nice Deb has a complete round-up here, featuring Michelle Malkin and others. I have to tell you, I am really liking what Liz Cheney has to say these days, as well.

By the way, if you're into Obama versus the evidence, check out this video on the real value of Obama's health care reforms, which I found at the Christian blog Verum Serum.

If you have not bookmarked this blog, better do it. They are a new blog, but they are producing high-quality videos and getting linked by major blogs.

What are our troops doing on Memorial day?

May 25, 2009 | by Wintery Knight | Link | Original Link

I thought that I would observe Memorial day by taking some time to read about the exploits of our military forces in the field, so that I would be able to more fully appreciate the sacrifices they are making to provide me with liberty, prosperity and SECURITY.

I looked around and found this article by Bill Roggio, on the Long War Journal. (H/T Foundation for Defense of Democracies)

Excerpt:

> Afghan commandos and US troops are battling the Taliban for control of a region in northern Helmand province that serves as a command and control center as well as a major drug processing center.
>
> The combined forces launched an attack against the Taliban in the town of Marja in the Nad Ali District late at night on March 18. The town is described by the US military as "a main command node" and a "hub of narcotics processing" for the Taliban in Helmand province. According to *Quqnoos*, an English language Afghan news outlet, Marja has been under Taliban control for more than a year and a half.
>
> Afghan commandos and US forces took control of the center of the town and targeted the bazaar, which is described as "a nucleus of militant activity." There the forces discovered two "war rooms stocked with maps, communication equipment, Russian-made night vision goggles and US military vehicle parts," as well as a variety of weapons.
>
> The soldiers also discovered a large amount of home made explosives and "packaged into gallon-size drums and prepared for use in vehicle-borne improvised explosive devices," as well as 14,750 kilograms of black tar opium, 11 kilograms of processed heroin and 30 kilograms of morphine.
>
> Thirty-four Taliban fighters have been killed during what the US military called heavy fighting to control the town. Sixteen fighters were killed in an airstrike in the bazaar as the Taliban attempted to retake control of the town. Six more Taliban fighters surrendered during Coalition raids in the town.

For more reading, why not check out some of the military bloggers?

- BlackFive
- Mudville Gazette
- Froggy Ruminations
- Michael Yon
- Bill Roggio
- Adventures of Chester

If you want to help out our troops, you can send them things through Soldier's Angels. Earlier this year, I won a contest in our office for sending the most stuff to our adopted units! It's fun! If anyone wants a list of what they like to get, please e-mail me.

For our Canadian readers, I understand that your Memorial Day is November the 11th, to celebrate the armistice of the first world war. But in case you like to be reminded about your important role in providing freedom from tyranny, here is something I wrote recently about your prime minister Stephen Harper, and his surprise visit to see the Canadian troops deployed in Afghanistan. There are photos!

God Bless our troops!

Another way that the secular left kills millions of people

May 25, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from the the Western Experience! Thanks for the link, Jason!

On this blog, we've talked about how the secular left killed 100 million people in the wars of atheistic communism, and we analyzed why atheism leads naturally to these atrocities by elevating the pursuit of selfish happiness over the human rights of others, (because human rights and rational morality are not rationally grounded on atheism).

We've also talked about the 50 million unborn children killed by abortionists in the United States alone, since abortion was made legal. That's millions of unborn children killed so that adults can be irresponsible about their sexual choices, and not have to deal with the consequences.

But there is another way that leftists kill millions of innocent people…

Here is an article about it from the Wall Street Journal. (H/T Green Hell)

Excerpt:

> In 2006, after 25 years and 50 million preventable deaths, the World Health Organization reversed course and endorsed widespread use of the insecticide DDT to combat malaria. So much for that. Earlier this month, the U.N. agency quietly reverted to promoting less effective methods for attacking the disease. The result is a victory for politics over public health, and millions of the world's poor will suffer as a result.
>
> The U.N. now plans to advocate for drastic reductions in the use of DDT, which kills or repels the mosquitoes that spread malaria. The aim "is to achieve a 30% cut in the application of DDT worldwide by 2014 and its total phase-out by the early 2020s, if not sooner," said WHO and the U.N. Environment Program in a statement on May 6…
>
> **"Sadly, WHO's about-face has nothing to do with science or health and everything to do with bending to the will of well-placed environmentalists," says Roger Bate of Africa Fighting Malaria. "Bed net manufacturers and sellers of less-effective insecticides also don't benefit when DDT is employed and therefore oppose it, often behind the scenes."**

UPDATE: You can find more quotations from environmentalists about their real goals in this post.

The biggest mystery in the world is how the secular left managed to paint themselves as rational and non-violent. Maybe we should be reminding them about what it takes to be moral, and why their secular-left worldview doesn't ground morality. Ideas have

consequences. When people on the left try to find meaning and purpose in unscientific delusions like eco-fascism, there will be consequences.

Cap and Trade

And don't think that we in the West will avoid the consequences of eco-fascism. Once the Democrats' cap-and-trade bill is passed, we can look forward to our own disasters.

The Heritage Foundation lists 10 things we can expect from the Waxman-Markey cap-and-trade bill:

> **KILLS MORE JOBS AND KILLS THE ECONOMY**
>
> ***Cap and Tax Top Ten List***
>
> 1. Cap and Trade Is a Massive Energy Tax
> 2. It Will Not Make a Substantive Impact on the Environment
> 3. It Will Kill Jobs
> 4. It Will Cause Electricity Bills and Gas Prices to Sharply Increase
> 5. It Will Outsource Manufacturing Jobs and Hurt Free Trade
> 6. It Will Make You Choose Between Energy, Groceries, Clothing, and Haircuts
> 7. It Will Be Highly Susceptible to Fraud and Corruption
> 8. It Will Hurt Senior Citizens, the Poor, and the Unemployed the Worst
> 9. It Will Cost American Families Over $3,000 a Year
> 10. President Obama Admitted "Electricity Rates Would Necessarily Skyrocket" Under a Cap-and-Trade Program (January 2008) –*follow link for video*

More details are at the linked article.

Further study

Myron Ebell of the Competitive Enterprise Institute argues that this bill will be the biggest tax increase in the history of the world. (H/T Heritage Foundation)

Steven Pearlstein of the Washington Post notes that the bill creates huge opportunities for fraud, waste and corruption. (H/T Chilling Effect, Heritage Foundation)

How can we smarten up young people who voted for Obama?

May 25, 2009 | by Wintery Knight | Link | Original Link

I was browsing on Captain Capitalism's web site and I found this article where he denounces the idiocy of today's youth, who have destroyed their own future by voting in droves for Barack Obama.

Here's an excerpt from the article: (H/T Small Dead Animals)

> Young (latin for – idiots who are too young to know what they're talking about and should not be able to vote until they're 35) Americans voted in droves for Barack Obama. Why they did this can be summarized why they voted for Stevie or whoever it was that won the latest round of American Idol. It was a popularity contest. Nobody bothered to look at his projected spending. Nobody bothered to see whether there was enough money to pay for his promises. Nobody held him up to any kind of standard or rigor that should have been applied to the president of the United States. And the reason why is that's "lame man. Why do you have to kill our good time? Why do you have to be such a downer, man? Who cares about economics and finance and the budget. Can't you just be for hope and change? Besides he's cool. Did you see his pecks? Geez, you're such a nerd!"

How are we going to fix these pampered ignoramuses?

Well, for one thing, we can start by pulling them out of public schools run by the secular-left teacher's unions, and shove them into homeschooling or private schools. But failing that, you can show them an article like this one, from the New York Post, which talks about what "greedy corporations" and "the rich" do when you start to confiscate their profits more and more. *They stop producing and/or leave.*

Excerpt: (H/T The Cato Institute)

> Politicians like to talk about incentives — for businesses to relocate, for example, or to get folks to buy local. After reviewing the new budget, I have identified the most compelling incentive of all: a major tax break *immediately* available to *all* New Yorkers. To be eligible, you need do only one thing: move *out* of New York state. Last week I spent 90 minutes doing a couple of simple things — registering to vote, changing my driver's license, filling out a domicile certificate and signing a homestead certificate — in Florida. Combined with spending 184 days a year outside New York, these simple procedures will save me over $5 million in New York taxes annually.
>
> …This problem didn't begin with the current recession. New York faced a $6 billion shortfall before the economic downturn. However, in the face of economic turmoil, Gov. Paterson, Assembly Speaker Sheldon Silver and Senate Majority Leader Malcolm Smith looked to the unions and special interests, who answered

> with one voice: *raise taxes*. That was irresponsible — and may just prove to be counterproductive, since the top 1 percent of earners account for about 50 percent of state revenue and are the ones who can and will leave.

It’s called Going Galt.

North Korea conducts second nuclear test, Obama sternly disapproves

May 26, 2009 | by Wintery Knight | Link | Original Link

Story from the New York Times. (H/T Stop the ACLU)

Excerpt:

> North Korea announced on Monday that it had successfully conducted its second nuclear test, defying international warnings and drastically raising the stakes in a global effort to get the recalcitrant Communist state to give up its nuclear weapons program.
>
> Word of the test sent a shudder through Asian financial markets and clearly **caught South Korea and the United States off guard**. The news hit just as South Korea's government and people were mourning the suicide of former President Roh Moo-hyun. And hours after the test was reported, South Korean state media reported that the North had fired a short-range missile.

Stop the ACLU has reactions from around the blogosphere.

- Michelle Malkin: Emergency wrist-slap to follow.
- Ameripundit: Clearly this situation calls for additional appeasement. Oh, and a speech on how the United States should eliminate its nuclear weapons stockpile.
- Ace of Spades: This failure of diplomacy clearly shows the need for more diplomacy…. missile defense remains unproven.

Obama who recently cut missile defense funding, and defunded our nuclear weapons program, has issued this sternly-worded statement of appeasement to the communist dictator. Democrats, what did you expect? Did you even try to assess his voting record and qualifications during the election? *This was all as plain as day to anyone who could be bothered to read about Obama before his election.*

What about Hugo Chavez?

The Washington Post also reports on Obama's very good communist friend Hugo Chavez. (H/T Stop the ACLU, Nice Deb)

Excerpt:

> WHILE THE United States and Venezuela's neighbors silently stand by, Hugo Chávez's campaign to destroy his remaining domestic opposition continues. On Thursday night state intelligence police raided the Caracas offices of Guillermo Zuloaga, the president of the country's last independent broadcast network, Globovision. They claimed to be looking for evidence of irregularities in the car dealership that Mr. Zuloaga also runs. In fact this was a thinly disguised escalation of an attack that Mr. Chávez launched this month against Globovision.

> In February Mr. Chávez eliminated the limit on his tenure as president after a one-sided referendum campaign that included ugly attacks on Venezuela's Jewish community. Since then he has imprisoned or orchestrated investigations against most of the country's leading opposition figures, including three of the five opposition governors elected last year. The elected mayor of Maracaibo, who was the leading opposition candidate when Mr. Chávez last ran for president, was granted asylum in Peru last month after authorities sought his arrest on dubious tax charges. The National Assembly, controlled by Mr. Chávez, is considering legislation that would eliminate collective bargaining and replace independent trade unions with "worker's councils" controlled by the ruling party. Another new law would eliminate foreign financing for independent non-government groups.

Obama can't object, because that's what his Democrat constituents approve of doing with the right in this country.

What about Ahmadinejad?

If you can't remember his name, think of "I'm mad in a Jihad". Remember, Iran recently tested medium range missiles capable of hitting Israel.

How religious faith drives the delusion of Darwinism

May 26, 2009 | by Wintery Knight | Link | Original Link

Commenter ECM alerted me to Cornelius Hunter's new blog "Darwin's God". Cornelius is a software engineer like me who rose up the ranks of the firm through "sweat equity", and was able to eventually pursue a PhD in Biophysics from the University of Illinois. I have his first book "Darwin's God" and I read it. His thesis is basically that theological beliefs about what God would and would not do are the driving force behind evolution.

Evolution and the problem of evil

Here is his latest post about a debate that occured at Westminster Abbey between an atheistic evolutionist and a theistic evolutionist.

Here's what the theistic evolutionist said:

> Alexander is a theist and Jones an atheist. But they both agree that God would not have created what we find in this world. Everything from programmed cell death to the extinction of so many species and the food chain points to a massive economy of death in nature. With this sort of evidence, "What kind of a designer," asks Alexander, "are you going to end up believing in?
>
> …According to Alexander, this problem of death and evil does not leave much room for a divine creator. Alexander concludes that God did not create the details of the world. He is thus absolved of the world's many evils. He implemented a framework of sorts, but let unguided processes do the rest.

And here's what the atheist evolutionist said:

> As with Alexander, Jones also finds that biology does not meet with his expectations of divine creation. "The feeblest of designer," Jones has written, could improve the design of the human eye. This and other examples, says Jones, shows that complex organs are "not the work of some great composer but of an insensible drudge: an instrument, like all others, built by a tinkerer [i.e., the evolutionary process] rather than by a trained engineer." As with Alexander, Jones' religious sentiment mandates some sort of evolution to be true.

So let's think about what causes people to become evolutionists, beyond the normal answers of peer-pressure, career preservation, wanting to be thought of as smart, wanting to rebel against parents, wanting to have sex and drink alcohol, etc. Is it about science? No. It's about knowing what God *would* do and observing that the world does not correspond to these ideas of what atheists think God would do.

Remember that post I wrote a while back about Christopher Hitchens' case against God. *None* of his arguments against God were based on evidence, but only on his personal preferences. God wouldn't have done it that way. God should have done it this way. I don't like this theology. I don't like that feature of the universe. It's just a long-running

temper tantrum against any kind of authority, regardless of the evidence.

Here's Dawkins explaining how unobservable aliens must ave evolved, even if Dawkins doesn't have any evidence:

He doesn't even need to see the evidence that we evolved. He knows that God wouldn't have created the life this way, and so the evidence is *irrelevant*.

Evolution and the problem of sub-optimal design

Another way that assume that evolution is true, other than childhood trauma and the desire to be morally evil, is by assuming that if material forces did not do the creating, then the design must be optimal. Now I am a software engineer, with undergraduate and graduate degrees, a published paper that I presented at the IEEE and a patent in wireless technology. My specialty is architecture. So I will tell you.

There is no such thing as an optimal design.

As part of my graduate course work, I had to study the work done at the Software Engineering Institute at the Carnegie-Mellon University. They have invented an entire methodology for designing software based on analyzing trade-offs between alternative architectural candidates. They use use case scenarios, disaster scenarios, maintenance scenarios and other scenarios in order to evaluate how well each architecture performs.

All of the architectures can satisfy the so-called "functional requirements". But the architectures differ in their ability to satisfy non-functional requirements, the "-ilities". These can include performance, maintainability, security, extensibility, testability, simplicity, re-usability. This is the bread and butter that software engineers like me have to deal with every day.

Here's an excerpt from a related post from Uncommon Descent:

> It is simply impossible for one architecture to have all the "ilities" because many conflict. For instance, if I want high "security" I am going to have to give up a good deal of "interoperability". A large part of architecture is actually deciding what you are going to give up, which incidentally affects how the architecture can change in the future (i.e. usually it cannot "evolve" to conform to different "ilities"). This is all still fairly new, but we are now able to judge architectures in terms of the "ilities" they match and the "ilities" they do not match. A better understanding of the conflicts between certain "ilities" is gradually developing.

When I worked in the embedded space on operating systems like VxWorks, we regularly traded-off memory against speed. It's the nature of the engineering business. And make no mistake – God is a *software engineer.* He writes code.

Conclusion

Hunter's article concludes with this:

> Have the theists sold out? Have the theists been duped? Are they afraid to stand up for themselves? Are the atheists taking over? No, no, no, and no. The theists and atheists are united in their religious beliefs about God and how he would

> interact with the world. They may have their differences, but regarding evolution those differences are irrelevant. Their shared religious convictions mandate evolution. Religion drives science and it matters.

I have an idea. Let's keep religion out of science and decide how we really got here, no holds barred. Instead of blocking debates and persecuting dissent, let's actually have a debate about origins, and not rule intelligent causes out before we look at the evidence.

Further study

Atheist responses to scientific arguments for theism are fun to understand. Atheists attribute the beginning of the universe to untestable theories and the fine-tuning to an unobservable multiverse. (And don't forget their lame responses to galactic, stellar and planetary habitability arguments)

http://www.uncommondescent.com/intelligent-design/ilities-judging-architecture-and-design/

Should Obama pick judges who favor Democrat special interest groups?

May 26, 2009 | by Wintery Knight | Link | Original Link

Yes, I know he calls it "empathy". And by empathy he means twisting the law to benefit the people who voted for him. What you don't believe me? Well, check out the evidence here about who Obama's bailouts really benefit. Nice Deb even links to a story that questions whether the recent Chrysler dealership closures were made because the owners donated to Republican candidates.

Now, what kind of judges does someone like Obama need to install in order to back his authoritarian regime? Well, it has to be someone who will help him to punish the people who disagree with him. Someone who believes that there are good Americans (Democrats) and bad Americans (Republicans), and that the laws should apply differently to those different groups.

Let's take a look at what my favorite two economists, Thomas Sowell and Walter Williams have to say about this.

Thomas Sowell

Thomas Sowell has a four-part series on Obama's judicial philosophy.

In part one, Sowell asks what it means that Obama will pick judges who come from certain groups, and who believe in twisting the law to favor those groups.

> That President Obama has made "empathy" with certain groups one of his criteria for choosing a Supreme Court nominee is a dangerous sign of how much further the Supreme Court may be pushed away from the rule of law and toward even more arbitrary judicial edicts to advance the agenda of the left and set it in legal concrete, immune from the democratic process.
>
> Would you want to go into court to appear before a judge with "empathy" for groups A, B and C, if you were a member of groups X, Y or Z? Nothing could be further from the rule of law. That would be bad news, even in a traffic court, much less in a court that has the last word on your rights under the Constitution of the United States.
>
> Appoint enough Supreme Court justices with "empathy" for particular groups and you would have, for all practical purposes, repealed the 14th Amendment, which guarantees "equal protection of the laws" for all Americans.

In part two, Sowell talks about Olive Wendell Holmes' strict constructionist jurisprudence, which allowed citizens to undertake economic enterprises because they could predict how the law would be enforced.

> Justice Holmes saw his job to be "to see that the game is played according to the rules whether I like them or not."

> That was because the law existed for the citizens, not for lawyers or judges, and the citizen had to know what the rules were, in order to obey them.
>
> He said: “Men should know the rules by which the game is played. Doubt as to the value of some of those rules is no sufficient reason why they should not be followed by the courts.”
>
> Legislators existed to change the law.

In part three, Sowell talks about why the judiciary must remain impartial as a check on the power of the legislative and executive branches.

> Barack Obama’s vision of America is one in which a President of the United States can fire the head of General Motors, tell banks how to bank, control the medical system and take charge of all sorts of other activities for which neither he nor other politicians have any expertise or experience.The Constitution of the United States gives no president, nor the entire federal government, the authority to do such things. But spending trillions of dollars to bail out all sorts of companies buys the power to tell them how to operate.
>
> Appointing judges to the federal courts– including the Supreme Court– who believe in expanding the powers of the federal government to make arbitrary decisions, choosing who will be winners and losers in the economy and in the society, is perfectly consistent with a vision of the world where self-confident and self-righteous elites rule according to their own notions, instead of merely governing under the restraints of the Constitution.

In part four, Sowell explains how big government socialists like Obama view the Constitution as an obstacle to be overcome.

> Judicial expansion of federal power is not really new, even if the audacity with which that goal is being pursued may be unique. For more than a century, believers in bigger government have also been believers in having judges “interpret” the restraints of the Constitution out of existence.
>
> They called this “a living Constitution.” But it has in fact been a dying Constitution, as its restraining provisions have been interpreted to mean less and less, so that the federal government can do more and more.
>
> For example, the Constitution allows private property to be taken for “public use”– perhaps building a reservoir or a highway — if “just compensation” was paid. But that power was expanded by the Supreme Court in 2005 when it “interpreted” this to mean that private property could be taken for a “public purpose,” which could include almost anything for which politicians could come up with the right rhetoric.

Walter Williams

And Walter Williams writes about the dangers of empathy using last year’s Super Bowl as

an example.

> The Pittsburgh Steelers have won six Super Bowl titles, seven AFC championships and hosted 10 conference games. No other AFC or NFC team can match this record. By contrast, the Arizona Cardinals' last championship victory was in 1947 when they were based in Chicago. In anyone's book, this is a gross disparity. Should the referees have the empathy to understand what it's like to be a perennial loser and what would you think of a referee whose decisions were guided by his empathy? Suppose a referee, in the name of compensatory justice, stringently applied pass interference or roughing the passer violations against the Steelers and less stringently against the Cardinals. Or, would you support a referee who refused to make offensive pass interference calls because he thought it was a silly rule? You'd probably remind him that the league makes the rules, not referees.
>
> I'm betting that most people would agree that football justice requires that referees apply the rules blindly and independent of the records or any other characteristic of the two teams. Moreover, I believe that most people would agree that referees should evenly apply the rules of the games even if they personally disagreed with some of the rules.

But what if the Steelers had lost due to referee partiality? Well, presumably they would *stop playing the game*. And when enough small businesses get tired of being sued by special interest group plaintiffs, we will all be working for the government and that will be the end of our liberty.

Further study

Probably one of the greatest books ever written is Thomas Sowell's "A Conflict of Visions". Go out right now and buy it if you don't have it, but be warned, it was a tough read for a software engineer like me, and my Dad also found it difficult when I gave it to him.

Everything you need to know about the SCOTUS pick

May 26, 2009 | by Wintery Knight | Link | Original Link

If you haven't already bookmarked Verum Serum, now is the time to do it.

Verum Serum's May 3rd post discussed Obama's SCOTUS pick, Sonia Sotomayor.

The post features this video of the nominee from a Duke University panel in 2005.

Quote from the video: (H/T Heritage Foundation via Commenter ECM)

> "All of the legal defense funds out there, they're looking for people with Court of Appeals experience. Because it is — Court of Appeals is where policy is made. And I know, and I know, that this is on tape, and I should never say that. Because we don't 'make law,' I know. [Laughter from audience] Okay, I know. I know. I'm not promoting it, and I'm not advocating it. I'm, you know. [More laughter] Having said that, the Court of Appeals is where, before the Supreme Court makes the final decision, the law is percolating. Its interpretation, its application.

Verum Serum's May 5th post has some quotes from a speech she gave at UC Berkeley, at a conference sponsored by the *Berkeley La Raza Law Journal*.

Here's one of the quotes from Verum Serum:

> Whether born from experience or inherent physiological or cultural differences, a possibility I abhor less or discount less than my colleague Judge Cedarbaum, our gender and national origins may and will make a difference in our judging. Justice O'Connor has often been cited as saying that a wise old man and wise old woman will reach the same conclusion in deciding cases…I am also not so sure that I agree with the statement. First, as Professor [Martha] Minnow has noted, there can never be a universal definition of wise. Second, **I would hope that a wise Latina woman with the richness of her experience would more often than not reach a better conclusion than a white male who hasn't lived that life**. (emphasis added)

Nice Deb comments: "Imagine the hue and cry if a white male had said that about a Hispanic female."

And one more from Verum Serum:

> I willingly accept that we who judge must not deny the differences resulting from experience and heritage but *attempt*, as the Supreme Court suggests, continuously to judge when those opinions, sympathies, and prejudices are appropriate.

> There is always a danger embedded in relative morality, but since judging is a series of choices that we must make, that I am forced to make, I hope I can make them by informing myself on the questions I must not avoid asking and

> continuously pondering. We…must continue individually and in voices united in organizations that have supported this conference, to think about these questions and to figure out how we go about creating the opportunity for there to be more women and people of color on the bench so we can finally have statistically significant numbers to measure the differences we will and are making.

You need to click through and read the rest of the quotes. Heritage Foundation has more quotes from the same speech, and some other quotes from her published papers.

Here's one of the additional quotes from her published work:

> The constant development of unprecedented problems requires a legal system capable of fluidity and pliancy. Our society would be strait-jacketed were not the courts, with the able assistance of the lawyers, constantly overhauling the law and adapting it to the realities of ever-changing social, industrial and political conditions; although changes cannot be made lightly, yet law must be more or less impermanent, experimental and therefore not nicely calculable. Much of the uncertainty of law is not an unfortunate accident: it is of immense social value.

The Heritage Foundation has more here, on their rapid response page.

And what about her judicial temperament, which is of critical importance?

John Lott has this quote on his blog from the Almanac of the Federal Judiciary:

> Sotomayor can be tough on lawyers, according to those interviewed. "She is a terror on the bench." "She is very outspoken." "She can be difficult." "She is temperamental and excitable. She seems angry." "She is overly aggressive–not very judicial. She does not have a very good temperament." "She abuses lawyers." "She really lacks judicial temperament. She behaves in an out of control manner. She makes inappropriate outbursts." "She is nasty to lawyers. She doesn't understand their role in the system–as adversaries who have to argue one side or the other. She will attack lawyers for making an argument she does not like."

And how smart is she?

Here's Eric Posner writing on the Volokh Conspiracy blog:

> The most complete effort so far to evaluate federal appellate judges is this paper by Stephen Choi and Mitu Gulati. Choi and Gulati use data from Lexis to measure three aspects of the judge's performance—productivity, opinion quality, and independence.
>
> …To determine how Sotomayor would do in the ranking, I had some research assistants collect her data for the years 1999-2001. To address the "freshman effect" (the possibility that her statistics are worse for her earliest years because of inexperience), we also looked at her data from 2006.

> …*Productivity*. Judges write opinions, which provide guidance to lawyers and the public. All else equal, a judge who writes more opinions is more productive, and provides a greater social benefit. Over the three year period from 1998 to 2000, the most productive judge published 269 opinions, the least productive judge published 38 opinions, and the mean was 98.1. For the comparable period from 1999-2001, Judge Sotomayor published 73 opinions. She would have ranked 68th out of 98.
>
> *Quality (1)*. Choi and Gulati measure quality by counting citations to a judge's top twenty opinions… The range is 96 to 734, with a mean of 277.9. Judge Sotomayor's statistic is 231, which would place her 59th.
>
> *Quality (2)*. Judge Sotomayor's opinions from 1999-2001 were cited 289 times in law reviews and other legal periodicals through May 31, 2004… Sotomayor would have ranked 65th.
>
> *Quality (3)*. Choi and Gulati also check what they call "invocations"—the frequency with which opinions written by other judges refer to the judge in question by name… Invocations range from 0 to 175 (excluding two outliers, the highest is 23), with a mean of 32. Judge Sotomayor was invoked 0 times (tied for last).
>
> *Independence*. Judges should decide cases in a non-partisan way… A score of 0 means that a judge is just as likely to disagree as agree with a co-partisan (or opposite-partisan). Negative scores mean that a judge is more likely to agree with co-partisans. Judge Sotomayor's score is -0.153 …which would have placed her 55th.

And how liberal is she?

Wendy Long at Bench Memos has that angle covered.

> Judge Sotomayor is a liberal judicial activist of the first order who thinks her own personal political agenda is more important that the law as written. She thinks that judges should dictate policy, and that one's sex, race, and ethnicity ought to affect the decisions one renders from the bench.
>
> She reads racial preferences and quotas into the Constitution, even to the point of dishonoring those who preserve our public safety. On September 11, America saw firsthand the vital role of America's firefighters in protecting our citizens. They put their lives on the line for her and the other citizens of New York and the nation. But Judge Sotomayor would sacrifice their claims to fair treatment in employment promotions to racial preferences and quotas. The Supreme Court is now reviewing that decision.
>
> She has an extremely high rate of her decisions being reversed, indicating that she is far more of a liberal activist than even the current liberal activist Supreme Court.

Isn’t there are word to describe a person that discriminates against people based on their race?

Verum Serum has a video of the White House and left-wing media responses to these shocking challenges to the pick. Charles Shumer warns the GOP not to oppose her in this video at Hot Air. Michelle Malkin and Gateway Pundit go over her liberal credentials in detail.

CRISIS! British politicians caught abusing expense accounts

May 27, 2009 | by Wintery Knight | Link | Original Link

I remember when Stephen Harper took over from the corrupt left-wing Liberal party in Canada, the first thing he did was to pass the Federal Accountability Act, which requires all expense claims to posted on government web sites for the public to see. Conservative MPs could be seen having business meetings at Subway, while Liberals bilked the public for thousands for various junkets. I was so happy for the Canadians.

But the Conservative Party isn't running things in secular socialist Britain…

Muddling Towards Maturity posted on the whole sordid story, which appeared in the National Review.

David Pryce-Jones writes:

> It turns out that the Blair-Brown Labour government could not bring itself to raise salaries for MPs, but instead set up "the system" of allowances that were privileged and kept secret. An MP could claim thousands of pounds more or less on his own say-so, with shaky receipts for dubious expenditure, and the result is that some have built property portfolios worth a million pounds or more.
>
> …Supervising this milking of "the system" was Michael Martin, the Speaker. In the early days of Tony Blair, this man was press-ganged into a job for which he was unfit. An old hardline socialist and trade-union man, he saw himself as defender of entitlements rather than liberty and proper government. He put in outrageous claims for himself and his wife. He did his very best to suppress information about the embezzling and spivery going on under him, in the classic manner of a trade unionist getting whatever he could for his comrades.

READ. THE. WHOLE. THING.

And Muddling also linked to this updated story in the New York Post, entitled "The Mother of All British Scandals".

> …A government minister, one of the richest men in the House of Commons, claimed $150,000 from the taxpayer to finance the mortgage on a "second home." (He already had seven.) A leading Tory repaired the moat around his stately home on expenses.
>
> Sometimes, the claims were trivial and comically embarrassing: tampons, diapers, the repair of leaky pipes, ice-cube trays ($2.50), hair straighteners ($150) and Scotch eggs ($1.25). Taxpayers unknowingly rented two pornographic movies for the husband of another Cabinet minister. A Tory spokesman on "skills and education" hired an electrician to change his light bulbs. (Cost to the taxpayer? About $225.)

> The worst claims bordered on the fraudulent — and some stepped over that border. One MP claimed mortgage-interest payments of about $17,000 on a house that had no mortgage. Another took $55,000 in expenses on a necessary "second home" near Parliament, when his primary home was only a few hundred yards away.
>
> Many MPs "flipped" — i.e., changed their homes from primary to secondary in order to receive second-home allowances. One MP flipped three times and got more than $150,000 of public money.
>
> …Prime Minister Gordon Brown claimed $8,000 to pay for his brother to clean his London apartment. My favorite example, though, is the case of Sinn Fein MPs from Northern Ireland who claimed about $750,000 in expenses to attend a Parliament that they refuse to attend on principle.

This is absolutely amazing. **Read the whole thing!**

Ed West has more on this story. First of all, the British government hands out taxpayer money to lobbying firms, in order to be lobbied for policies they really want to enact anyway. And here, he talks more about solutions to the problem of government entitlements.

Does the new Ida fossil prove evolution?

May 27, 2009 | by Wintery Knight | Link | Original Link

Well, if it does, doesn't that mean that evolution wasn't proved before?

But I digress. Whenever you have questions about evolution and culture, there is *only one* blog that you really need to read, and that's Denyse O'Leary's Post-Darwinist. She has written no less than THREE stories on the Ida fossil, so let's take a look at see what she's found.

First, on May 19th, she noted that the lemur-like fossil contradicted the current best naturalistic theory of human origins.

> [The] fossil doesn't "explain" human evolution; it complicates the picture. The theory that was gaining ground was that humans were descended from tarsier-like creatures, but this fossil, touted as a primate ancestor, is a lemur-like creature.

Second, on May 21st, she added:

> This recent Messil Pit find bolsters the case of the lemur supporters against the previously dominant tarsier supporters.
>
> That only creates more confusion about origins, it seems to me, rather than resolving anything.
>
> Where you have opposing histories, evidence that strengthens one history must weaken the other.
>
> It does not necessarily add up to a gain in information.
>
> What if the tarsier advocates find a fossil that bolsters *their* case in, say, 2012?
>
> And who's to say that won't happen – as it has happened already?

Everything gets so complicated, once you look past the "missing link" sound-bites. But many people looking for validation for their atheist lifestyle will never bother – so long as the cultural authorities can offer them some Piltdown Man or Archaeoraptor or Haeckel's embryos or Peppered Moths, etc., to justify their atheistic faith.

Denyse also points to a round-up of links from Access Research Network, as well as a New Scientist story that is skeptical of Ida's status as *the* missing link.

Third, on May 25th, she linked to this story from the UK Times Online:

> … in the research paper detailing the discovery, the scientists had painted a rather different picture. Ida, they said, "**could represent a stem group from which later anthropoid primates (including humans) evolved but we are not advocating this here**".

And more:

> Robert Foley, professor of human evolution at Cambridge University, believes many people misunderstand the huge timescales involved in assessing fossils.
>
> “This animal lived around 47m years ago but human-like creatures only appeared in the last 2m years,” he said. “That’s a gap of around 45m years with many other species lying between us and that era. Any one of them could be called a missing link. Really, the term is meaningless.”

Now I know what my many atheist readers are saying: “we’re only skeptical of *your* beliefs! Not *our* beliefs!”. Well, I’m sorry, true believers, to throw cold water on you.

The most productive taxpayers flee higher tax rates

May 27, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from Pursuing Holiness! Thanks for the link, Laura! Laura knows about this from experience – she runs her own information technology business, and is scaling it back. Go read her post, too!

A few days back, I posted on the Cato Institute's story about the New York businessman who shifted his residence to Florida to avoid paying confiscatory tax rates to the greedy socialists in Albany.

Well, that's not the only place where this is happening. There is a reason why freedom-hating atheists had to build Gulags and walls to keep people from escaping their communist prison. When tax rates go up, the most productive citizens either stop working or they leave entirely!

Here is a story from the UK Times Online about the exodus of British taxpayers from Gordon Brown's corrupt socialist regime.

Excerpt:

> SOL ZAKAY, the billionaire property tycoon, is the latest entrepreneur to quit Britain after the introduction of a 50% tax rate on high earners.
>
> …Zakay joins a growing list of businessmen and City financiers disenchanted at the new tax rate as well as the proposed changes to EU regulation of private-equity and hedge funds.

And here is a story from the Wall Street Journal about Maryland taxpayers fleeing their left-wing state's tax hikes.

> Maryland couldn't balance its budget last year, so the state tried to close the shortfall by fleecing the wealthy. Politicians in Annapolis created a millionaire tax bracket, raising the top marginal income-tax rate to 6.25%. And because cities such as Baltimore and Bethesda also impose income taxes, the state-local tax rate can go as high as 9.45%. **Governor Martin O'Malley, a dedicated class warrior, declared that these richest 0.3% of filers were "willing and able to pay their fair share." The Baltimore Sun predicted the rich would "grin and bear it."**
>
> One year later, nobody's grinning. **One-third of the millionaires have disappeared from Maryland tax rolls. In 2008 roughly 3,000 million-dollar income tax returns were filed by the end of April. This year there were 2,000, which the state comptroller's office concedes is a "substantial decline." On those missing returns, the government collects 6.25% of nothing. Instead of the state coffers gaining the extra $106 million the politicians predicted, millionaires paid $100 million *less* in taxes than they did last year — even at higher rates.**

When the most productive taxpayers stop producing, they take your jobs with them. It's called the Laffer curve. Maybe you progressives should read about it. Think about the way the world *actually works in reality*. And then ask yourself a very important question. A question that you never heard answered in Harvard Law School.

Who is John Galt?

UPDATE: Hot Air notes that IRS revenues are dropping rapidly. Gateway Pundit adds: 16K jobs lost PER DAY since stimulus passed. Gateway Pundit reports Democrats consider national sales tax (hurts the poor disproportionately, just like cap and trade), and China has warned democrats about printing more money.

CRISIS! Is Obama shutting down Chrysler dealerships owned by Republicans?!

May 28, 2009 | by Wintery Knight | Link | Original Link

Have we elected a worst left-wing fascist than Stalin? Time will tell.

Gateway Pundit has multiple stories.

First story excerpt:

> **Are we looking at the biggest political scandal since Watergate?**
>
> **Big Dem Donor Group allowed to keep all 6 Chrysler dealerships open…. Local competitors eliminated by Obama's task force!!**
>
> Earlier it was reported that the Obama Administration may have targeted GOP donors in deciding which Chrysler dealerships would have to close their doors.
>
> Now there's this…
> RLJ-McLarty-Landers is owned by three men.
> One was the former Chief of Staff for President Clinton.
> One is the founder of Black Entertainment Television and a huge Obama supporter.
> All 6 of their Chrysler dealerships will remain open.
> ***And, get this…*** Their local competitors have been eliminated!

Second story excerpt:

> But, so far in the shutdown list **there is an extremely high correlation between dealers closing and congressional districts BHO lost.**
>
> **Texas** is getting killed and Blue States are sliding by. **Florida** is also taking major hits and nearly all are in Republican Congressional Districts.
>
> Little **West Virginia is getting hammered**…
>
> **UPDATE:** Here is a list of the closings— Notice all of the Texas and Florida closings.

Last story excerpt:

> ***Now this…***Rep. Vern Buchanan (R-Fla) lost his Chrysler dealership in Florida.
>
> ***Again…*** It was Obama's task force who made the decision about which dealerships would close and which would stay open.

Leave your suggestion for the name of this fiasco in the comments. I'll start: Chrysler-gate. Serfdom-gate. Union-gate. Commie-gate. Banana-Republic-gate.

UK: Most teenage pregnancies end in abortion

May 28, 2009 | by Wintery Knight | Link | Original Link

Startling news from the other side of the pond.

Story here. (H/T My friend Andrew, who has an amazing marriage to Jen)

Excerpt:

> Most pregnancies among girls under 18 ended in abortion last year.
>
> Out of around 40,000 pregnancies more than 20,000 were terminated – the first time more had chosen this option than become mothers.
>
> The figure is higher than 2007, when it just hit 50 per cent, and consistent with a steady upwards trend since the Government started its controversial Teenage Pregnancy Strategy in 1999.
>
> Figures out on May 21 will also show that for the first time the number of abortions performed on women living in England and Wales topped 200,000.
>
> **The teenage pregnancy strategy, which has cost taxpayers more than £300million, was meant to halve the number of conceptions among girls under 18 in England between 1998 and 2010.**
>
> **Ministers have tried to slash teenage pregnancies by freely handing out contraceptives and expanding sex education.**
>
> **But the fall in pregnancy rates has not met Government targets, and in 2007 the rate actually rose.**
>
> **Teenage pregnancy rates are now higher than they were in 1995. Pregnancies among girls under 16 – below the age of consent – are also at the highest level since 1998.**

And:

> Phyllis Bowman, of the Right to Life group, said: 'Contraception campaigners and clinics depend for their living on providing contraception and abortion to underage girls.
>
> 'The Government listens to them, but they are responsible for this disaster.
>
> 'We have the highest level of sexually transmitted disease in Europe and the highest level of sexual activity among teenagers in Europe.
>
> 'Unicef says we have the unhappiest teenagers in Europe.
>
> 'The young have been deliberately sexualised in a culture which sneers at the idea of telling teenagers they should not have sex.'

"When you tax something you get less of it, and when you reward something you get more of it." – Jack Kemp

I have an idea. Let's find a special group of people. They must believe that the entire

physical universe popped into being, fine-tuned for life, uncaused, out of absolute nothing. They must believe that the massive amount of DNA code in each cell sequenced itself, by chance. They must believe that morality and human rights are *illusory.* And that the purpose of life is to have happy feelings, even if it means exploiting the weakest among us.

Then let's vote them into office so that they can impose their irrational worldview on us by government coercion!

What could go wrong?

Is the presupposition of naturalism a science stopper?

May 28, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from 4Simpsons! Thanks for the link Neil!

In cosmology, we had to wait *decades* for the theism-friendly big bang theory to beat out atheism-friendly theories like the eternal universe model, the steady-state model, the oscillating model, etc. Piles of taxpayer money *wasted* trying to prove atheistic flights of fancy. But in the end, the evidence for the big bang was too much for the atheistic theories, and we beat them out.

Junk DNA

And here is another example of how atheism is bad for scientific inquiry: "Junk DNA".

The purpose of the genome is to contain the instructions that allow the cell to build functional sequences of smaller components. If the sequences are done right, you get a folded-up protein that can be used for all kinds of things.

But what those parts of the genome that *don't* code for proteins? Well, atheists have been calling them "Junk DNA" and hailing it as proof that there is no designer to life. I can remember Christian groups like Reasons to Believe predicting that a purpose for "Junk DNA" would be found. But atheists pooh-pooh'd that idea. Gee, I wonder who was right? The same people who are *always* right: THEISTS.

Denyse O'Leary cites this Princeton University press release on Post-Darwinist:

> Now researchers from Princeton University and Indiana University who have been studying the genome of a pond organism have found that junk DNA may not be so junky after all. They have discovered that DNA sequences from regions of what had been viewed as the "dispensable genome" are actually performing functions that are central for the organism. They have concluded that the genes spur an almost acrobatic rearrangement of the entire genome that is necessary for the organism to grow.
>
> …The term "junk DNA" was originally coined to refer to a region of DNA that contained no genetic information. Scientists are beginning to find, however, that much of this so-called junk plays important roles in the regulation of gene activity. No one yet knows how extensive that role may be.

She's got a stack of other related links at the bottom of the post.

Commenter ECM also sent me this story from Cornelius Hunter's new blog.

Excerpt:

> One problem with evolution is its strong bias toward viewing everything in biology as a kludge. When a newly discovered structure is examined, evolutionists take one look and conclude it is leftover junk. After all, blind,

> unguided mutations and other processes just happened to produce everything we see. The evolutionist's going in position is that biology is a fluke. We're lucky anything works.

Hunter then cites this passage from some naturalist researchers who study "junk DNA":

> Here we have a molecule that serves an important role in how cells function and survive, but it contains these puzzling 'junk' sequences that don't seem to have any apparent purpose. Our work suggests that this disorder is really a way of creating flexibility, allowing the protein to function as a molecular switch, a process that is thought to go wrong in certain diseases.
>
> Evolution has provided researchers with convenient modular structures, areas that are repeated over and over again to make up proteins, and so we tend to dismiss the interspersed disordered sequences that don't seem to have any definable structure. Here we show that the weak molecular interactions in a disorganized protein sequence are essential in giving this protein its unique attributes.

Know what? If you substitute "Flying Spaghetti Monster" in there for "Evolution", it makes just as much sense! Try it! Evolution causes toothpaste to come out of the toothpaste tube when you squeeze it, and Shakespearean rhyming couplets to rhyme, and my Java code to compile. It's all evolution!

Conclusion

Atheists, always remember this quote from agnostic NASA astronomer Robert Jastrow, regarding the progress of science:

> For the scientist who has lived by his faith in the power of reason, the story ends like a bad dream. He has scaled the mountains of ignorance; he is about to conquer the highest peak; as he pulls himself over the final rock, he is greeted by a band of theologians who have been sitting there for centuries.

In the 1920s, there was no theory about a universe that begins to exist out of nothing, no fine-tuning, no DNA, no Cambrian explosion, nothing. Then science progressed, reducing atheism to a kind of childish delusion, still believed by ignorant snake-handlers and people with certain persistent moral, … ah… issues. But that's what psychiatrists are for!

Science is always for us, it's never for you. You have faith. Blind faith. We have all the evidence. We invented science, and every new discovery makes your materialism look more silly and naive… you bravely hold out hope for some hopeful Flying Spaghetti Monster to swoop in and rescue your atheism from the big, bad mind-independent reality. When will you grow up?

There is no Flying Spaghetti Monster!

What is it like to be a Christian in an Islamic state?

May 29, 2009 | by Wintery Knight | Link | Original Link

Robert Spencer's Jihad Watch links to some interesting stories.

First, this story from Singapore, from AFP:

> A Christian Singaporean couple were found guilty of sedition on Thursday for distributing evangelical publications that cast Islam in a negative light, court officials said.
>
> Ong Kian Cheong and his wife Dorothy Chan had been charged with distributing a seditious publication to two Muslims in October and March 2007 and sending a second such booklet to another Muslim in December that same year, a district court official told AFP.
>
> The publications were found to have promoted feelings of ill-will and hostility between Christians and Muslims, the Straits Times said on its website….
>
> The sedition charge carries a jail term of up to three years or a fine of up to 5,000 Singapore dollars (3,437 US) or both….

I'm surprised, because Singapore has one of the most free economies in the world, next to Hong Kong. I guess someone there cannot tolerate a public discussion about which religion is more likely to be true. This story reminds me of atheists, who sometimes sue people for offering to pray for them.

Second, this story from Pakistan, from Compass Direct News:

> Nine pastors from two neighboring villages in Pakistan could face prison time for using loudspeakers to broadcast prayers and sermons from their churches on Easter Sunday. Martinpur and Youngsnabad, 150 kilometers (93 miles) east of Lahore, are majority Christian villages. The nine pastors who lead congregations there say that local Muslim security forces have twisted the law to solicit a bribe….

This reminds me of the left-wing ACLU, which sometimes sues people for mentioning Jesus in speeches.

Third, this story from Tanzania, from Compass Direct News:

> Worship in a house church near Zanzibar City, on a Tanzanian island off the coast of East Africa, did not take place for the third week running on Sunday (May 24) after Muslim extremists expelled worshippers from their rented property. Radical Muslims on May 9 drove members of Zanzibar Pentecostal Church from worship premises in a rented house at Ungunja Ukuu, on the outskirts of Zanzibar City.
>
> Angered by a recent upsurge in Christian evangelism in the area, church members said, radical Muslims had sent several threats to the Christians warning them to stop their activities. The church had undertaken a two-day evangelism

> campaign culminating in an Easter celebration. On the morning of the attack, more than 20 church members had gathered for Saturday fellowship when word reached them that Muslim extremists were about to attack.
>
> As the radical group approached, the Christians fled in fear of their lives. “The group was shouting, saying, ‘We do not want the church to be in our locality – they should leave the place and never come back again,’” said one church member who requested anonymity.

Scary, but free speech is regulated in Canada, too, thanks to those Human Rights Commissions.

Fourth, this story from Pakistan, from Worthy news:

> Suspected Muslim militants with links to the terror groups Al Qaeda and the Taliban attacked a historic church in northwestern Pakistan and burned Bibles and other Christian books, but police are reluctant to investigate the case and detain suspects, Christians said Tuesday, May 26.
>
> The destruction of the St. George Grecian Church was discovered by workers renovating the building, said the church’s pastor Ijaz Masih in a statement distributed by rights group International Christian Concern (ICC).
>
> Masih said that shortly after he presided over a Sunday service, workers “were shocked when they arrived” in the morning of May 12, “and **found the church’s cross broken in pieces, the altar demolished and partially burned, Bibles and hymnbooks burned and torn apart, and the pews reduced to ashes.”**

Well, the secular left does commit violent acts against defenders of traditional marriage.

I was surprised to learn from an Indian commenter that Christians are also persecuted in certain areas of India for evangelizing. Why do states insist on forcing their view of evangelism on individuals who have a different view? I wouldn’t force my view on anyone else, yet atheists and some nationalist Hindus and fundamentalist Muslims seem to do it all the time.

And it isn’t just dogma or strongly-held beliefs that causes extremism. There is no room for coercion in Bible-based Christianity. The more you believe in Christianity, the less you believe in coercion, and the more you believe in persuasion by reason and evidence. That’s what Jesus did.

Atheist explains why Christians ought to evangelize him

May 29, 2009 | by Wintery Knight | Link | Original Link

Here's a neat video from a normally mean atheist, named Penn. Since I don't own a TV, I have no idea who he is, but this is a thoughtful talk. Penn does not expect Christians to act like atheists in public.

From this, we learn two things:

1. Making fun of atheists on the Internet is one thing, but if you have atheists that you relate to in person, be nice.
2. Some atheists are grown-ups. They admire authentic, consistent Christianity, boldly expressed.

I will be surveying Christians soon to see why we don't do what Penn says, and I'll publish the results.

By the way, blogging is light today, because I had to work on a guest post for someone.

If you haven't read any of my mentoring posts, you can read some of those to keep busy!

Mentoring

- the importance of being able to argue both sides of a question
- why does talking about religion make people uncomfortable?
- how to talk to your co-workers about your faith

Apologetics advocacy

- does the Bible teach that faith is opposed to logic and evidence?
- the six enemies of apologetic engagement
- why men flee the feminized church

The challenge of postmodernism

- the problem of religious pluralism and religious truth claims
- the problem of postmodern skepticism: why Christians won't debate
- isn't faith is opposed to reason and evidence? (a debate)

My testimony is here, in case you missed it.

Friday night funny: Evangelism, names, unions and capitalism

May 29, 2009 | by Wintery Knight | Link | Original Link

First video here, for those of you haven't seen this.

He loves apologetics, too.

He played cornerback in the NFL, and I played cornerback in high school. For one year. Back-up bench warmer.

Second, a video from the BBC here: (H/T Jill Stanek)

And a cartoon from IMAO.us on capitalism:

Commenter ECM sent me this video from Double Plus Undead:

Yeah, these are the kind of people that Obama is kow-towing to now. Newsflash! Democrats are not good people, which is why we shouldn't be subsidizing their poor decisions with our money. It just encourages them, like feeding racoons.

Three funny Christian videos are here. (H/T Commenter ECM)

Happy Friday!

UPDATE: One more from ECM: Lightbulbs or dimwits! These are pretty funny!

Hugh Hewitt demolishes MSNBC's Larry O'Donnell

May 30, 2009 | by Wintery Knight | Link | Original Link

I was browsing over at my buddy Muddling's blog and I found this amazing story. (He finds, without fail, the best stories!)

Hugh Hewitt does a great interview, the best in the business. He's interviewed tons of people in the mainstream media over the years. This time, he interviews Larry O'Donnell. This is a must listen. I feel like I should put in a policy on the blog that no citations of left-wing journalists will be permitted.

Excerpt:

> HH: What was the last book you read about terrorism?
>
> LO'D: The last…I don't think I've read a book about terrorism.
>
> HH: Ever?
>
> LO'D: No.
>
> HH: About al Qaeda?
>
> LO'D: No.
>
> HH: About…how about the mullahs in Iran?
>
> LO'D: No.
>
> HH: I'm just stunned.
>
> LO'D: Well, I'll tell you, I've read Bob Woodward's books about the accounts inside the Bush administration from what they were doing from the day they got sworn in, okay?
>
> HH: You've never read a book about terrorism?
>
> LO'D: There is no, there is absolutely no evidence, and I defy you today, Hugh,
>
> HH: Larry, you've never read a book about terrorism?
>
> LO'D: I defy you to point to me, point to me a citation of one memo or one meeting that Dick Cheney was in where he says anything about al Qaeda.
>
> HH: Larry, I've got to go lie down. I really do. Do you think you're a well-informed MSNBC, by MSNBC standards, do you think you're above the grade of people on that network?
>
> LO'D: That's a trick question, Hugh.

Good Lord, it's his *job* to know about these things. Where is he getting his news stories? Daily Kos? Firedog Lake? Feministing?

Now Hugh asks him to substantiate an assertion that he made:

> HH: You said people have been prosecuted for exactly this. Did you mean for waterboarding?

> LO'D: Yeah.
>
> HH: Who?
>
> LO'D: Well, we've done it, you know, this country has prosecuted that, that, torture method before.
>
> HH: When?
>
> LO'D: Um, I don't know, what's…I think it is was…umm, I don't know. I…you know, I've…I know that we've done it, and I don't have the research in front of me as to exactly when we've prosecuted who for it and which conflict.

Hot Air has a link to the transcript and MP3 podcast.

The Media Research Center has some admissions about media bias from the lefties themselves.

Assessing Bart Ehrman's case against the resurrection of Jesus

May 30, 2009 | by Wintery Knight | Link | Original Link

Let's start by listing some of Bart's debates, and then we can take a look at his argument.

Bart Ehrman's debates

1. William Lane Craig vs. Bart Ehrman. The full transcript of the debate is here, so you can follow along with the video.
2. Mike Licona's first debate with Ehrman (audio, video).
3. Ehrman's debate with Peter Williams on the UK-based Unbelievable radio show.
4. Ehrman's debate with Dan Wallace
5. Ehrman's second debate with Licona can be ordered here for $10. Review is here.

Here's William Lane Craig's opening speech against Bart: (in 12 parts)

Part 1 of 12:

Part 2 of 12:

Bart's argument

Bart Ehrman has a standard case based on 1) manuscript variants and 2) David Hume's argument against miracles. Basically, he says that because the massive number of manuscripts contains a massive number of minor disagreements (see below), that the Bible cannot be trusted and therefore we can't know whether Jesus rose bodily from the dead.

In Ehrman's debate with Peter Williams on the UK-based Unbelievable radio show, and in Ehrman's debate with Dan Wallace, Ehrman lists the 4 worst problems caused by the invariants:

1. the woman caught in adultery (John 7:53-8:11) is a late addition not present in the earliest manuscripts
2. the long ending of Mark (Mark 16:9-20) is a late addition not present in the earliest manuscripts
3. Jesus was angry and not compassionate when he healed the leper (Mark 1:41)
4. that Jesus died apart from God, and not by the grace of God (Hebrews 2:9)

I personally dislike that story in 1), because I think a lot of feminized Christians like it because they do not want to have their happiness diminished by moral judgments. They misunderstand this passage to support self-serving moral relativism and postmodern hedonism. Or worse, anti-capital-punishment. Eww.

This Bible verse is a favorite of all the liberal "Christian" women I've met. I've noticed that they are terrified of moral judgments and they don't like to have to do anything for God, like study apologetics. I don't like that. So I say: *throw the girly-verse out!* If you want a

good verse that shows that Jesus liked women, you should be reading the woman at the well story. Or the women witnesses to the empty tomb.

Regarding 2), I like that long ending because it's more useful from an apologetics standpoint. So I do care about this invariant, and I just don't use that ending when I debate. For 3), I prefer angry Jesus to compassionate Jesus. And for 4) I really don't care. It's Hebrews! It's not like it's Mark or 1 Corinthians 15.

Ehrman's argument against miracles is really just David Hume's argument against miracles, which even non-Christian scholars, like John Earman, have defeated at the highest level here:

- Hume's Abject Failure: The Argument Against Miracles, Oxford University Press, 2000.

So, one can easily see that Bart Ehrman's case is silly and amounts to nothing in a formal debate on the resurrection. If you want to understand why he is selling so many books, just like Dan Brown, you need to understand that people want space to invent a Jesus that they like. Bart gives them that space by fueling their skepticism of traditional Christianity.

Responding to Bart Ehrman with the minimal facts

Bart seems to be under the misapprehension that Christians argue for the resurrection by assuming the whole Bible is inspired. But we don't. We use a minimal facts case where each fact had to pass a battery of standard historical tests for the genre of historical biography.

- The historical criteria and the standard minimal facts case.
- The list of minimal facts that are accepted by all non-Christian scholars.
- The earliest and best source for the minimal facts.
- Some additional details about the empty tomb sources.
- And some details about the first witnesses to the empty tomb.

We come up with a list of minimal facts like this list:

- the burial narrative
- the empty tomb
- the appearances
- the early belief in a bodily resurrection

We argue that the bodily resurrection is the best explanation of these facts, and we refute all naturalistic explanations of these minimal facts like these:

- Jesus wasn't really dead
- Someone stole the body
- The appearances were hallucinations

One other thing that may be of interest is British scholar N.T. Wright's case for the resurrection, based on the changes introduced in the belief and practice of the first Jewish converts to Christianity.

Further study

For further study of Licona and Ehrman, I would recommend the book "The Case for the Resurrection of Jesus", by Gary Habermas and Mike Licona on the resurrection, which is the best introductory book you can get on how to argue the minimal facts case.

If you like Lee Strobel's interviewing style, then you can't go wrong with this book, "The Case for the Real Jesus" and his earlier book "The Case for Christ". All the Lee Strobel books are excellent, the best books that a beginner can get – the ground floor of apologetics, so to speak.

If you prefer books featuring debates between opposing scholars, check out William Lane Craig against Gerd Ludemann here, (audio of their re-match is here), William Lane Craig against John Dominic Crossan here, (audio of the debate is here), or N. T. Wright against John Dominic Crossan here, (audio of the debate *only* is here).

Gary Habermas, (has dual doctorates from Oxford and Michigan State) is also a good source.

He debates a Duke University professor here: (one of my favorites)

Two Views on the Resurrection: Dialog with Dr. Joel Marcus, Professor of New Testament and Christian Origins at Duke University Divinity School
PART I (8MB) :|: PART II (8MB) :|: PART III (8MB) [MP3 files]

And he responds to Dan Brown's fictional novels here:

Cracking the Da Vinci Code
PART I (8MB) :|: PART II (8MB) :|: PART III (5MB) :|: PART IV (5MB) [MP3 files]
Lecture given at the 4th Annual Worldview Apologetics Conference
April 21-22, 2006, Seattle, Washington

The war on parents in Canada, Germany and New Zealand

May 31, 2009 | by Wintery Knight | Link | Original Link

Everyone is complaining about men not wanting to be responsible and get married these days, but no one is paying attention to the incentives that cause men to stay clear of a relationship that is completely regulated by the state. Men don't want to be coerced to do things.

The problem with the political left is that they never understand what incentives they are creating when they start controlling private interactions between individuals. Take a look at the stories below and ask yourself: is this going to make men and women want to marry and have children?

In Canada:

> A Quebec youngster has used the courts to avoid parental discipline in a "landmark" case. The 12-year-old girl, who is too young to be named, went to court to force her father to overturn his decision not to allow her to go on a school trip. Her father had decided to ground her after he found out she had posted photos of herself on a dating website against his wishes.
>
> The sixth grader then took her father to court, arguing that his punishments were too severe.
>
> Madam Justice Suzanne Tessier of the Quebec Superior Court ruled today that denying the girl permission to go on the school trip was an excessive punishment. The girl's lawyer, Lucie Fortin, said, "She's becoming a big girl" and described the school trip as "a unique event in her life", the Globe and Mail reported.

In Germany:

> A homeschooling family in Southern Germany spent six hours in a grueling German Family Court session this week with the hopes of regaining custody of their six homeschooled children, who have been held in state custody since January. After the long and confusing session, the Gorbers regained custody of their 3-year-old son. The judge, meanwhile, retained custody of five other Gorber children now being kept in foster care and youth homes pending a court-ordered psychological evaluation of the parents. The court did allow increased visitation for some of the children up from one hour every two weeks that had been permitted since the children were seized in a surprise raid by the youth welfare office ("Jugendamt") and police.

In New Zealand:

> Green MP Sue Bradford's controversial child discipline bill was tonight passed by

> Parliament, with only seven MPs voting against it.
>
> The bill removes from the Crimes Act the statutory defence of "reasonable force" to correct a child, meaning there will be no justification for the use of force for that purpose.

But it doesn't even work because it targets law-abiding people only! (Just like gun control!)

It's very much like the Democrat party's complaints about outsourcing. *The left caused outsourcing* with their interventionist war on "the rich" and "greedy corporations". We need to move away from noble-sounding intentions fueled by the need to feel superior, and talk about actual incentives and actual effects of policies.

Sex education and taxes

Laura posted on the state interfering with parents' right to educate their own children about sex: (CP link)

> No, we generally are not in favor of sex ed at school. If "comprehensive" sex education included what it did when I took it in the early 80s – basic human anatomy, puberty, tab A fits into slot B, birth control methods include the following… even in the conservative evangelical circles I run in, few would object. That's all stuff we tell kids at home after we opt them out of sex ed at school- along with the main message of "Don't do this; it's not time in your life yet for this." What we object to is the attitude that teen sex is normal and inevitable and we should quit squawking about it. We object to schools teaching bizarre sex practices like fisting. We object to the theory that teenagers are mindless bags of hormones who can't be expected to control themselves.
>
> …Our teens are political pawns for the left. They're helpless victims of our [= parents'] prudery, children that the government needs to provide for at every turn with health insurance and free college tuition (but don't deserve an adequate secondary education except when it's time to raise taxes), socially and technologically savvy enough to make their own entertainment and political choices free from our censorship, mature and wise enough to choose abortion (but not give birth), and 18 year old babies who need to be protected from sneaky military recruiters and beer. The rallying cry may be "it's for the children!" but the only really consistent position I see in the left is that parents do not know best; government does.

Laura also posted on how socialism takes money away from the family:

> When we charge people more to earn money via income taxes, regulations, and similar means, history has proved time and again that people earn less money. Whether that's by choice, where people like me purposely throttle back our income in order to pay fewer taxes, or by government fiat, where government takes more money from businesses, the bottom line is that productivity goes

> down and everybody, including the government, gets less money out of the system.

By the way, I notice that Laura has a new post up at Hot Air's Green Room, (CP link), on how families can send the socialists a message by cutting off their supply of money, *legally*. She runs a business, so she knows what she is talking about.

Further study

Recently, I blogged about the myth of "dead-beat Dads". And about how the feminist state's discrimination against male teachers is negatively impacting young men. And there is my series on how Democrat policies discourage marriage: Part 1 is here and Part 2 is here and Part 3 is here.

Assessing feminism's results: the hook-up culture

May 31, 2009 | by Wintery Knight | Link | Original Link

This must-read ABC news story should help to open some eyes. (H/T Muddling Towards Maturity)

Canadian filmmaker Sharlene Azam interviews some young people about the quality of their relationships in the brave new world of feminism.

Prostitution:

> "Five minutes and I got $100," one girl said. "If I'm going to sleep with them, anyway, because they're good-looking, might as well get paid for it, right?"
>
> Another girl talked about being offered $20 to take off her shirt or $100 to do a striptease on a table at a party.
>
> The girls are almost always from good homes, but their parents are completely unaware, Azam said.

Coercion:

> "I think there's very much trading for relationship favors, almost like 'you need to do this [to] stay in this relationship,'" one girl told "Good Morning America."
>
> "There's a lot of social pressure," said another. "Especially because of our age, a lot of girls want to be in a relationship and they're willing to do anything."

Self-destruction:

> "I mean, we're not looking for our future husbands," one girl said. "We're just looking for, maybe like … at our age, especially, I think all of us, both sexes, we have a lot of urges, I guess, that need to be taken care of. So if we resort to a casual thing, no strings attached, it's perfectly fine."
>
> Azam said she thinks the "no strings attached" romances could be a defense mechanism against a greater disappointment.
>
> "A lot of girls are disappointed in love," she said. "And I think they believe they can hook up the way guys do and not care.

Why feminism is to blame

It was feminism that sought to replace fathers with government social programs. Feminism that raised taxes to provide social safety nets for women who could not be bothered to choose boyfriends wisely. Feminism that instituted no-fault divorce to encourage women to divorce men for money. And feminism that pushed women out of the home via high tax rates, so that children would be indoctrinated by left-wing public schools.

Let me be clear: the Democrat party is *anti-family.* Their policies destroy love, marriage and parenting. The secular-marxist-feminist left wants to control people. Free market

capitalism, the family and robust religious beliefs are obstacles to their fascist goals. Feminism opposes the family, secularism opposes the integration of faith and public actions, and marxism opposes free market capitalism – the ground of liberty itself.

I think that young people are uninformed/unwise/un-parented enough to believe that these experiences are not scarring them emotionally. I am a man and growing up I knew intuitively that sexual intimacy with women followed by separation would be a catastrophe emotionally. The only way to properly assess the opposite sex is by keeping clear of their insecure, godless, soulless, clutching arms. Physical contact kills objectivity.

Young people are the most shallow people in the world. They judge people on appearances, and they try to use people to make themselves happy. Christian young people are not taught to view relationships as alliances made for the benefit of God's purposes in the world. Instead, young people don't know whether God exists, what he is like, and how to involve his goals and character in their decision making.

When I was a young man, I dreamed about romance, courtship, poetry, roses, marriage and lifting up my children in front of my face. I made decisions to prepare for that vision: chastity, investing, frugality, studying theology and apologetics, etc. I made sure that I could satisfy the demands of being a husband and father. I spent equal time on computer science, to make money, and on Christianity, to gain knowledge, wisdom and character.

I would say that the vast majority of young people today repudiate that vision of family with their actions. Their morality is moral relativism. Their epistemology is postmodernism. Their purpose in life is hedonism. This is not liberating. On the contrary: their actions removed their ability to marry, relate to a spouse and parent children. The more Christianity retreats, the more atheist "morality" steps in.

If atheism is true, then there is no real way we ought to be. Each person struggles with others to secure feelings of happiness. Other people don't have any purpose except to be forced to make us happy. There is no morality. There is no free will. There is no moral accountability. There is no ultimate significance. There is no purpose. And children, born and unborn, are the biggest victims of all.

Is the murder of abortion-performing doctors like George Tiller morally wrong?

May 31, 2009 | by Wintery Knight | Link | Original Link

The Wintery Knight Blog strongly condemns all abortion-related violence, whether it's committed against the born or the unborn.

The news story is linked here by Stop the ACLU, Sweetness and Light, Patterico's Pontifications, Michelle Malkin, Hot Air and Gateway Pundit.

Can Christians condemn the murder of George Tiller?

Yes, Christians can, and yes, Christians do, condemn any and all violence against abortion doctors. And so do I. I believe that murder is objectively wrong, whether it is performed against born or unborn victims.

Morality is rational on Christianity because Christianity grounds the minimal requirements for meaningful morality. (The post also contains arguments and evidence for Christian theism and responses to the arguments against Christian theism)

The Bible says: "You shall not murder".

So, anyone who murders the born or the unborn is not a Christian and is not being moral. I am a Christian, and therefore I strongly condemn any violence against doctors who perform abortions, including George Tiller. The murderer of George Tiller was wrong, had no justification for what he did, and he should get the death penalty.

UPDATE: My pro-life friend Neil from 4Simpsons reacts:

> I subscribe to over 100 blogs. Well over a dozen have commented on this. I've yet to see one that didn't condemn the murder, though I'm sure the MSM will ignore the clear and consistent principles of the pro-live movement and try to demonize and broad-brush us with this.

Now let's see whether murder is wrong on the atheist worldview…

Can atheists condemn the murder of George Tiller?

The goal is to see whether humans ought to adopt the moral point of view, on atheism. Does atheism ground the the minimal requirements for morality? Is it rational to do the right thing on atheism?

Requirement 1) Objective moral values: **NOT GROUNDED**

On atheism, moral values have no mind-independent existence. In other words, they are purely subjective. Either you invent your own personal standard or you adopt the standards of the majority of your herd, in the time and place in which you live. Those herd standards change over time and in different places, of course. They are arbitrary conventions. And there is no reason why your preferences are better than anyone else's preferences, even a murderer's. On atheism, a murderer and a non-murderer just have different preferences.

Requirement 2) Objective moral duties: **NOT GROUNDED**

On atheism, there is no such thing as objective moral values, and so there can be no objective moral duties either. Atheism is committed to materialism, and objective moral values and moral duties are non-material. Atheists can only ground *subjective* moral values and moral duties. But a duty owed to oneself can be canceled when things get difficult. Even a social contract is arbitrary. There is no reason to limit your happiness because of an arbitrary social contract, so long as you can escape the social consequences of disobedience.

Requirement 3) Moral accountability: **NOT GROUNDED**

On atheism, there is no accountability after death for the decisions we make in life. So long as we can avoid the consequences for violating the arbitrary fashions of the time and place where we live, nothing will happen to us if we put our happiness above the needs of our feelings of "empathy" for others.

Requirement 4) Free will: **NOT GROUNDED**

On atheism, there are no minds or souls independent of the material that makes up the body. Therefore, everything that humans do is fully determined by the genetic programming and the sensory inputs. To expect moral choices or moral responsibility on atheism is like expecting the same from a computer. Physical systems don't have free will. There is no "ought to do" for lumps of matter that are not designed by anyone for any specific purpose.

Requirement 5) Ultimate significance: **NOT GROUNDED**

On atheism, life ends in the grave for them. Scientists have discovered that in the future, the amount of usable energy, such as the heat and light emitted by stars, will run down to zero, the "heat death of the universe". What this means is that the entire universe will become cold and lifeless at some point. Humans are therefore doomed to extinction. It doesn't matter ultimately how an atheist acts – they end up the same no matter what they do. The only action that is rational on atheism is the selfish pursuit of pleasure and happiness.

Can atheist scholars ground morality rationally?

Let me cite the views of atheist scholars from a previous post. These are the people who are the most committed, authentic atheists, and who have thought through what it means to be an atheist at the highest level.

> The idea of political or legal obligation is clear enough… Similarly, the idea of an obligation higher than this, referred to as moral obligation, is clear enough, provided reference to some lawgiver higher…than those of the state is understood. In other words, our moral obligations can…be understood as those that are imposed by God…. But what if this higher-than-human lawgiver is no longer taken into account? Does the concept of moral obligation…still make sense? …The concept of moral obligation [is] unintelligible apart from the idea of God. The words remain but their meaning is gone. (Richard Taylor, Ethics, Faith,

> and Reason (Englewood Cliffs, N. J.: Prentice-Hall, 1985), p. 83-84)
>
> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Source: Richard Dawkins)
>
> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory. (Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

The late atheist philosopher J. L. Mackie said that moral properties are "queer" given naturalism "if there are objective values, they make the existence of a god more probable than it would have been without them. Thus we have a defensible argument from morality to the existence of a god."

Conclusion

In my survey of atheist views, *none* of the ten respondents could oppose slavery on rational grounds, *none* of the ten respondents could perform self-sacrificial acts on rational grounds, and *none* of the ten respondents could explain why murder was wrong, on rational grounds. They may have chosen the right alternative, but only based on emotion, not on reason. Morality is not rational on atheism and there is no way to condemn immorality in others.

So long as an person can escape the consequences of his actions, there is nothing wrong with murder, on an atheistic worldview. Atheists can express what they personally like and don't like, or what the customs are in their society in a certain time and place. There is no "moral ought" on atheism, no principled reason to act any particular way except to be "happy" and to avoid social disapproval from acting unconventionally. So, keep that in mind in the coming days as you discuss the George Tiller story with atheists.

Further study

You can get the full story on the requirements for rational morality in a published, peer-reviewed paper written by William Lane Craig here. You can also hear and see him present the paper to an audience of students and faculty at the Georgia Institute of Technology in 2008. The audio is clipped at 67 minutes, the video is the full 84 minutes. There is 45 minutes of Q&A, with many atheist challengers.

The video of this lecture is the *best material you can get* on this issue, and the Q&A from the hostile audience is *vital* to the lesson. More debates on atheism and morality can be found on the debate and lecture page.

You can find a post contrasting the morality of an authentic, consistent Christian with an authentic, consistent non-Christian here. A post examining how atheism is responsible for the deaths of 100 million innocent people in the 20th century alone is here. A post analyzing the tiny number of deaths that religion was responsible for is here. A post examining other ways that the secular-left kills millions of people is here.

The Wintery Knight Blog strongly condemns all abortion-related violence, whether it's committed against the born or the unborn.

Why social conservatives should be fiscal conservatives

June 1, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from the Maritime Sentry! Thanks for the link!

We socially-conservative men need lots of things in order to have a successful family, and those things are all supported by free market capitalism.

Here is what I would need to marry and to run a family:

- a job
- the ability to to keep almost all of what I earn
- the ability to spend what I earn on whatever I want
- complete freedom from government influence across the board
- the ability to find Christian services and products in the marketplace
- the ability to find a new job if I get terminated for being a public Christian at work

The best way to achieve my social conservative goals is by voting for the economic system that will allow me to get the money and liberty to pursue the social goals.

Here are some things that raise the price of consumer goods and reduce my opportunities to find employment: (add yours in the comments)

- workers unions
- tariffs
- corporate taxes
- regulations
- environmentalists
- trial lawyers

And here are some others that have other nasty effects:

- public schools: they substitute PC leftist indoctrination for a real education
- teacher's unions: they deny me school choice, protect unqualified teachers and indoctrinate my children with lefty crap
- welfare programs: they waste tax money and destroy the need for real men and diminish the role of husbands and fathers
- gun control: they disarm the law-abiding sector of the society in order to protect criminals
- feminists: they reduce the pool of marriage-minded women by indoctrinating women to oppose chastity, family, men, God and children… and they favor no-fault divorce
- socialists: they want government to control how I can spend my money on things like health care – they don't want me to buy health care myself, they want me to pay for everyone else's health care and then get in line

- secularists: they are annoyed by the thought that I might spend my money in ways that increases the influence of Christianity and they will try to stop me from doing so
- naturalists: they waste money speculating about ways to explain the effects of intelligence in nature without implicating an intelligence

Many of these aggravating factors have gotten worse because of the recession. We know why we are in a recession right now: because the Democrats forced banks to make loans to people who could not afford them. Obama himself worked for ACORN to sue banks like Citibank.

Consider this article from the American Thinker to see how Obama has affected the businesses where people work to earn the money they need to fuel their marriage and parenting activities.

Excerpt: (H/T 1RedThread)

> On Thursday, May 14, 2009 I was notified that my Dodge franchise, that we purchased, will be taken away from my family on June 9, 2009 **without compensation** and given to another dealer at **no cost** to them. My new vehicle inventory consists of 125 vehicles with a financed balance of 3 million dollars. This inventory becomes impossible to sell with **no factory incentives** beyond June 9, 2009. Without the Dodge franchise we can no longer sell a new Dodge as "new," nor will we be able to do any warranty service work. Additionally, my Dodge parts inventory, (approximately $300,000.) is virtually worthless without the ability to perform warranty service. There is no offer from Chrysler to buy back the vehicles or parts inventory.
> Our facility was recently totally renovated at Chrysler's insistence, incurring a multi-million dollar debt in the form of a mortgage at Sun Trust Bank.
> …This is beyond imagination! My business is being stolen from me through NO FAULT OF OUR OWN. We did NOTHING wrong.This atrocity will most likely force my family into bankruptcy. This will also cause our 50+ employees to be unemployed. How will they provide for their families? This is a total economic disaster.

Obama has destroyed capitalism and the rule of law in this country. What happens to a man who has his means of earning a living, which is the fuel of his marriage and parenting engine, removed? Obama took trillions from the private sector to spend on his own special interest groups, like ACORN and auto worker's unions.

Wrecking the economy is *good* for Democrats because their goal is to replace responsible men with the federal government. Single women, who vote overwhelmingly Democrat, prefer the guarantee of security from government handouts over the responsibility of having to choose and relate to a moral, responsible husband and father.

Here is the article from the Wall Street Journal:

And the excerpt:

> For example, for black males ages 20 to 24, the unemployment rate is close to 50 percent; in the black community overall, men have absorbed 100 percent of the job losses 463,000 jobs since the recession started in November 2007.
>
> And even if the economy grows by the forecasted 1.3 percent, it's not enough to create job growth, says Mr. Sum, who doesn't anticipate any net job growth until 2011.
>
> "From a fatherhood perspective, it's going to have an enormous impact on an already fragile community," says Roland Warren, president of the National Fatherhood Initiative, a nonprofit group aimed at "increasing the proportion of children growing up with an involved, responsible and committed father."
>
> "So much of the traditional view of the father revolves around his ability to provide," says Mr. Warren, who writes a column for The Washington Times.
>
> …Meanwhile, black women have experienced a small net job gain during this recession, mainly due to the fact that they are overwhelmingly employed in health care and education, two sectors that haven't experienced huge layoffs since November 2007, Mr. Sum says.

The article tries to make a case that men can have an influence in the family without earning money. In the vast majority of cases that is just not going to work. Men need to have authority in the family to have a positive impact, and that authority that is guaranteed by their role as primary provider.

Let me be clear. Welfare programs that reward people for choosing to have children from the wrong sorts of men come at the expense of good men. Good men pay the taxes for the welfare, and good men are passed over because the government is a substitute – a safety net – which removes the need for women to be choosy about men. When you have compassion on people for choosing bad men, you are encouraging them to continue to do so.

Before you vote, think about whether government welfare programs are an adequate substitute for a husband and father. You can have one or the other, but you can't have both. I know an awful lot of single-mothers who voted Democrat in the last election and had no idea that they had just voted to destroy the male roles of husband and father. Ideas have consequences.

Further study

Recently, I blogged about how government intrudes into the family and about the myth of "dead-beat Dads". And about how the feminist state's discrimination against male teachers is negatively impacting young men. And there is my series on how Democrat policies discourage marriage: Part 1 is here and Part 2 is here and Part 3 is here.

Can same-sex marriage and religious liberty co-exist?

June 1, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from 4Simpsons! Thanks for the link Neil!

Maggie Gallagher has written an article in the National Review asking whether same-sex marriage will crowd out fundamental liberties, such as the religious liberty.

First, we need to understand that the public expression of religious convictions is a buffer against fascism, just like free market capitalism and the family unit.

Maggie writes:

> Take "religious liberty." Religious liberty is a deeply American solution to a perennial problem. It means that every individual has a right to pursue ultimate meaning without coercion from the government. Totalitarian governments repress religion because they recognize faith communities as competitors with the state's power to define — or redefine — human rights.
>
> But a funny thing happened on the way to defeating Communism. Religion has emerged as the sole institution standing in the way of a powerful neo-statist liberalism, in which equality doctrines are used not as a shield but as a sword — to legitimate state intrusion into once-private realms.
>
> In practice, religious voters are the core of resistance to social liberalism, and they empower economic conservatism by providing a much broader base of voters for a center-right coalition government.

How will the left get rid of rights like the right to free speech, and the right of religious liberty, which stand in the way of their socialist road to fascism? Well, they might be able to use same-sex marriage.

Maggie goes on to wonder what the left will do in the USA, given what the left is doing in the UK:

> Consider what is happening right now in Great Britain, our closest sister democracy and the one with the strongest free-speech tradition. How does the British government treat religious liberty when it clashes with "gay equality"?
>
> Can the British government force a Catholic school to retain a principal who enters a civil union? Yes, it already has. How can that be, given British religious liberty? Well, the government says that if a religion teacher at a Catholic school enters a gay union publicly, he or she could be fired. But nobody else.
>
> Can the government fine an Anglican bishop who refuses to hire an actively and proudly gay youth minister? Yes, it already has. (How is this justified by the above principle? I don't know. I just know the government can do it, because it has.)

Consider this story from the UK Telegraph.

> Religious groups are to be forced to accept homosexual youth workers, secretaries and other staff, even if their faith holds same-sex relationships to be sinful.
>
> …Maria Eagle, the deputy equalities minister, has now indicated that it will cover almost all church employees."Members of faith groups have a role in making the argument in their own communities for greater LGBT acceptance, but in the meantime the state has a duty to protect people from unfair treatment."

But limitations on our rights because of same-sex marriage are already here, because of secularism. The denial of fundamental human rights, (which are illusory if God does not exist), is quite widespread in Canada and the United States. Atheists want to be happy, and they will sweep aside your Constitutional rights in order to get that happiness.

Consider the case of Julie Ward.

> Ms. Ward was enrolled in a graduate program at the school and as part of her education was required to enroll in a counseling practicum. In that practicum, she was assigned a case involving a homosexual who needed help. Ms. Ward did not feel that she could affirm the student's homosexual lifestyle because of her Christian beliefs, so she asked her supervisor what she should do. His advice was to refer the student to a counselor who had no qualms with affirming homosexual behavior. That is what she did, and it was all done before she saw the student. There was no counseling that took place between the two, there was no confrontation between the two, and there was no condemnation of homosexuality — just an honest confession of her deeply held religious belief.
>
> Julea was summoned to appear before a disciplinary hearing and told that if she wanted to continue on with her graduate program, she would have to submit to a "remediation" program so that she could see "the error of her ways." She refused to be forced into a re-education program designed to convert her from biblical faith, and as a result, she was kicked out of school. There's your tolerance.

And consider homosexual indoctrination for 5-year olds. (H/T Stop the ACLU)

> A California school district seems intent on teaching pre-school children to accept the homosexual lifestyle.
>
> The Alameda Unified School District announced it was considering a supplemental curriculum to eradicate "homophobia" in kindergarten children. Brad Dacus, founder of the Pacific Justice Institute (PJI), said the meeting room for the public session earlier this week was overcrowded with angry parents.
>
> "Nowhere at anytime did it give any protection for children being bullied because of their faith, their religion, their size, their race, ethnicity," he points out. "It is only going to give this special anti-bullying protection for homosexuals and

> transsexuals."
>
> …Parents cannot opt out their children from the curriculum.

No wonder men don't want to marry and have kids, and have the whole thing regulated by the government. If you can't even pass on your worldview to your kids, or express your beliefs in public, because of all the left-wing cry-babies who are so intolerant that they can't bear to hear other points of view, then why bother marrying and having children? If single women really wanted husbands and children, they wouldn't vote Democrat (= anti-family).

Same-sex marriage activists believe in compelling celebration, respect and approval from Christians against their will and in violation of their human rights. If SSM ever became law, our entire society would be re-made so that no public expression of preference for traditional marriage would go unpunished.

Further study

Muddling Towards Maturity linked to two commentaries (one, two) by Chuck Colson listing the many examples of discrimination, including: the coercion of Christian business eHarmony to open up a business to homosexuals, suing people for refusing to facilitate weddings, suing doctors for refusing to provide therapy or in vitro fertalization, forcing adoption agencies to place children with same-sex couples, etc.

I documented the persecution of defenders of traditional marriage here.

Who did Obama pick to handle the re-organization of General Motors?

June 2, 2009 | by Wintery Knight | Link | Original Link

Look!Obama is appointing the best and the brightest person possible to oversee the bankruptcy re-organization of GM!

First, you need to know about Obama's take-over of GM, which is pure communism.

Here's the story from CNSNews:

> Without the prior approval of Congress or any legislation authorizing the act, President Obama plans to announce on Monday that the federal government will take a 60-percent ownership stake in General Motors as part of a bankruptcy and reorganization plan for the company.
>
> The White House on Sunday night announced that the plan will require the federal government to provide another $30 billion of taxpayer money to General Motors, on top of the $20 billion in aid the federal government already has given the company.

And guess who Obama's picked to supervise the bankruptcy and reorganization?

Here's the left-wing New York Times article: (H/T Hot Air)

> It is not every 31-year-old who, in a first government job, finds himself dismantling General Motors and rewriting the rules of American capitalism.
>
> But that, in short, is the job description for Brian Deese, a not-quite graduate of Yale Law School who had never set foot in an automotive assembly plant until he took on his nearly unseen role in remaking the American automotive industry.
>
> Nor, for that matter, had he given much thought to what ailed an industry that had been in decline ever since he was born. A bit laconic and looking every bit the just-out-of-graduate-school student adjusting to life in the West Wing — "he's got this beard that appears and disappears," says Steven Rattner, one of the leaders of President Obama's automotive task force — Mr. Deese was thrown into the auto industry's maelstrom as soon the election-night parties ended.
>
> "There was a time between Nov. 4 and mid-February when I was the only full-time member of the auto task force," Mr. Deese, a special assistant to the president for economic policy, acknowledged recently as he hurried between his desk at the White House and the Treasury building next door. "It was a little scary."

Ed Morrissey comments:

> *Scary*? Well, yes, and not just for Mr. Deese, whose executive experience actually is less than Obama's. He's never run *any* business, let alone worked in

> the auto industry. **He joined the Hillary Clinton campaign by taking a hiatus from law school, which he began after working as an assistant to Gene Sperling, now an advisor to Tim Geithner. His entire resume consists of campaign work.**
>
> Perhaps Deese will do a good job, but I'm not terribly sanguine about the prospects of GM prospering under the guidance of someone who hasn't ever met a payroll or sold a car. A President who took his own job seriously would never have appointed a second-tier adviser to this position. A national media who took their jobs seriously wouldn't let him get away with it, and don't count this NYT piece in their favor. They give a glowing report to this political-hackery appointment.

Heck of a job, Deesie!

Nice Deb has reactions from around the blogosphere here. Here's one from the Heritage Foundation:

> Will the new majority owner of General Motors — the United States Government — take an active role in managing the firm as it struggles for viability? In a statement earlier today, President Obama insisted that the government wouldn't impose it's own political agenda on GM.
>
> "What we are not doing, what I have no interest in doing, is running GM," he declared. Calling the government a "reluctant shareholder", he declared that "GM will be run by a private board of directors and management team with a track record in American manufacturing that reflects a commitment to innovation and quality…They and not the government will call the shots and make the decisions about how to turn this company around… When a difficult decision has to be made like where to open a new plant or what type of new car to make, the new GM, not the US government will make that decision".
>
> This sounds reassuring, but in fact this non-interference pledge was broken even before he started speaking, as the White House was already trumpeting a pledge extracted from GM to "build a new small car in an idled UAW factory", furthering the President's environmental goals as well as pleasing his labor allies.

I think a law student/Hillary campaign lackey is the best candidate available. He's a Democrat, at least, so you know you're getting superior economic reasoning power. And GM just asked for another 30 billion, presumably to pay for their union member pensions and benefits. What do you expect when the President and Democrat Congress are running trillion-dollar deficits?

His Supreme Court nominee has similar qualifications. She's Hispanic *and* female – female *and* Hispanic. And she thinks her sex and race will make her a better judge than white male candidates. The best and brightest!

Featured blog: Dr. Jennifer Roback Morse

June 2, 2009 | by Wintery Knight | Link | Original Link

One of my favorite topics is the interplay between economics and marriage. And the best blog on the topic is Dr. Jennifer Roback Morse. She has excellent credentials as a sound fiscal conservative and a staunch social conservative. She is not only solid on abortion and traditional marriage, but she is one of the few people with enough vision to know the damage caused to the family by no-fault divorce and big government, as well.

Note to you young men who are thinking of marrying: marry someone like Dr. Morse, who understands how economic policy affects the marriage. Regular readers will know how I regularly gush over Michele Bachmann's attempts to try to wrestle with Democrats to cut spending. That is how wives ought to be – defending their family from high taxes and regulations.

Articles

Here is one of the papers from Dr. J that I really liked. (the PDF version is better!)

In the paper, she addresses many topics related to feminism:

- work/parenting balance
- no-fault divorce
- marriage vs. cohabitation
- domestic violence
- fertility
- single-mother subsidies
- income disparities
- recreational sex
- power struggles in marriage

She also discusses remedies from a Catholic perspective. (Note: the Wintery Knight is a proud evangelical Protestant)

Dr. J's full list of articles is here.

Lecture

Here is a 30-minute lecture version of that paper by Dr. J, if you prefer watching and listening to reading. The title is "Freedom, the Family and the Market".

The description of the lecture is:

"The socialist ideal of equality has played an independent role in the breakdown of the family. Socialism has attacked the family directly, and has adopted policies that have led to demographic collapse. Christianity and capitalism offer more appealing solutions to the problems socialism claims to solve."

I highly recommend this lecture. It's as good as William Lane Craig, just on a different topic. This lecture is especially suitable for men.

Here's her bio:

> Born into a Catholic working class family, Dr. Morse earned a doctorate in economics during her twelve year lapse from the faith. A committed career woman before having children, she taught economics for fifteen years at Yale University and George Mason University.
>
> The devastating experience of infertility brought her to her knees and back to the practice of the Catholic faith. In 1991, she and her husband adopted a two year old Romanian boy, and gave birth to a baby girl. She left her full-time university teaching post in 1996 to move with her family to California. She is now a part-time Research Fellow at the Acton Institute for the Study of Religion and Liberty.
>
> Dr. Morse writes about the family and the free society. Her first book, Love and Economics: Why the Laissez-Faire Family Doesn't Work, shows why the family is the necessary building block for a free society and why so many modern attempted substitutes for the family do not work. Her second book, Smart Sex: Finding Life-Long Love in a Hook-Up World, exposes the sexual revolution's fraudulent promise of freedom and points the way to the most thrilling adventure of all–life-long love.
>
> Her public policy articles have appeared in Forbes, Policy Review, The American Enterprise, Fortune, Reason, the Wall Street Journal, Vital Speeches, and Religion and Liberty.
>
> Dr. Morse's scholarly articles have appeared in the Journal of Political Economy, Economic Inquiry, the Journal of Economic History, Publius: the Journal of Federalism, the University of Chicago Law Review, and the Harvard Journal of Law and Public Policy, Social Philosophy and Policy, The Independent Review, townhall.com, and The Notre Dame Journal of Law Ethics and Public Policy.

I know I don't have to tell you George Mason University is home to Walter Williams, one of my two favorite living economists, whose work I often feature. GMU has the best economics school in the entire nation, featuring 2 Nobel prize winners. (Their only black mark is their shoddy treatment of intelligent design theorist Dr. Caroline Crocker).

Why should Christians embrace chastity?

June 2, 2009 | by Wintery Knight | Link | Original Link

Christians should be chaste because research shows that sex before marriage decreases marital stability.

Story from Life Site News. (H/T Mary)

Excerpt:

> Couples who reserve sex for marriage enjoy greater stability and communication in their relationships, say researchers at Brigham Young University.
>
> A new study from the Mormon college found that those couples who waited until marriage rated their relationship stability 22 percent higher than those who started having sex in the early part of their relationship. The relationship satisfaction was 20 percent higher for those who waited, the sexual quality of the relationship was 5 percent better, and communication was 12 percent better.
>
> The study, published in the American Psychological Association's Journal of Family Psychology, involved 2,035 married individuals who participated in a popular online marital assessment called "RELATE." From the assessment's database, researchers selected a sample designed to match the demographics of the married American population. The extensive questionnaire included the question "When did you become sexual in this relationship?"
>
> Couples that became sexually involved later in their relationship – but prior to marriage – reported benefits that were about half as strong as those who waited for marriage.
>
> […]Sociologist Mark Regnerus of the University of Texas at Austin, who was not involved in the study, responded to its findings, saying that "couples who hit the honeymoon too early – that is, prioritize sex promptly at the outset of a relationship – often find their relationships underdeveloped when it comes to the qualities that make relationships stable and spouses reliable and trustworthy." Regnerus is the author of *Premarital Sex in America*, a book forthcoming from Oxford University Press.
>
> Because religious belief often plays a role for couples who choose to wait, Busby and his co-authors controlled for the influence of religious involvement in their analysis.
>
> "Regardless of religiosity, waiting helps the relationship form better communication processes, and these help improve long-term stability and relationship satisfaction," Busby said.

Research matters when discussing morality

Young men and women growing up really need to be informed by their parents what they are going to want to be doing long term, and what they should be doing today to

accomplish those goals. Young people benefit greatly from the guidance of older and wiser people, but in defining goals and defining the steps to reach those goals. To be a convincing parent, you have to be convinced yourself. And to be convinced yourself, you need to be seen as having knowledge, not just opinions, but knowledge. Having the right peer-reviewed papers at hand will help you to be a better parent.

My previous post on research showing how sex before marriage greatly reduces the stability of marriage. That post contains even more research showing that having even ONE pre-marital sex partner can GREATLY reduce the probability that the marriage will last. And it gets worse as you add more partners.

Christians and chastity

What should Christians know about the purpose of chastity?

1. Chastity is not just abstinence

Chastity is not just abstaining from sex. Chastity is the Christian virtue by which Christians take God's character and goals into account in their relationships with the opposite sex. Probably about 99.9% of the people in the world look at members of the opposite sex and think "what's in it for me?". Chastity allows you to look at members the opposite sex, even the unattractive ones, and ask "what's in it for God?".

I've written about how the goal of life on atheism is to be happy. One of the consequences of this is that atheists look at other people as objects that can make them happy or not, depending on how resistant they are to sticks and carrots. In Christianity, chastity is the gift that allows you to look at people you are not attracted to in the least and to love them enough to help them grow in the knowledge of God.

2. Physical contact clouds the judgment

Chastity allows you to make a better decision about who you are going to marry. When you are desperate to be loved (women) or desperate for physical intimacy (men) it's easy to hide the bad parts of yourself and to overlook the flaws of others. Physical contact leads to rushed commitments and emotions that are difficult to undo later once you learn more about the other person's moral and spiritual beliefs.

Chastity allows you to keep God in the picture as you evaluate prospective mates. Instead of looking at candidates who will fulfill your needs, you look for candidates who benefit God, perhaps because they are skilled at explaining Christianity to your future children. Without chastity, women choose men who are amoral, to avoid being judged, and men choose women solely on appearance, who are unqualified for married life.

3. Sex without commitment destroys the capacity for trust and vulnerability

When persons have sex outside of a lifelong commitment, they have to make an effort to separate their emotions from the physical activity. This leads to a kind of "guarded" condition where a person is no longer free to be really engaged emotionally in a relationship. For example, women lose feminine qualities like trust and vulnerability, which are necessary to attract good men without using sex appeal. (Men can tell)

In addition, I would say that when a relationship is kept platonic, the break-ups are going

to be a lot less damaging emotionally. All my relationships have been platonic, so even when the break-ups occurred, there was never any physical element to add to the pain. It is important for people to go after the best spousal candidate they can find, not to settle for some amoral loser just to avoid the pain of rejection.

Obama agrees with Ahmadinehad: Iran should have nukes

June 3, 2009 | by Wintery Knight | Link | Original Link

First, this graphic from the Heritage Foundation about what would happen if North Korea hit Seattle with a long-range nuclear missile.

What if North Korea nuked Seattle?
Excerpt:

> "North Korea has positioned its most sophisticated long-range ballistic missile at a launch site for a test firing that could come within weeks," the Los Angeles Times reports from Seoul, citing a South Korean newspaper account.

Next, Obama has decided that Iran should be allowed to go nuclear. Keep in mind that Iranian forces have been one of the key players in supplying the means to kill our troops in the field.

Story from the Washington Post. (H/T Gateway Pundit)

Excerpt:

> President Barack Obama suggested that Iran may have some right to nuclear energy – provided it proves by the end of the year that its aspirations are peaceful.
>
> In a BBC interview broadcast Tuesday, he also restated plans to pursue direct diplomacy with Tehran to encourage it set aside any ambitions for nuclear

> weapons it might harbor.
>
> …"What I do believe is that Iran has legitimate energy concerns, legitimate aspirations," Obama said, adding that the international community also "has a very real interest" in preventing a nuclear arms race.

Stop the ACLU has another related story here.

> **…just last month Obama approved a nuclear power deal with the United Arab Emirates, as well. So, it's nuclear power for everyone but the U.S.**

The Heritage Foundation asks:

- what % of GDP is spend on defense?
- what % of GDP is spent on entitlements like Medicare, Medicaid and Social Security

Find the facts, here.

More stories about Obama's cuts to missile defense and to our own nuclear program.

Canada seeks to sell government-run firms

June 3, 2009 | by Wintery Knight | Link | Original Link

My Canadian friends are telling me that Prime Minister Stephen Harper is under fire for offering 9.5 billion dollars to GM. I tell them, who cares? Canada is 10% the size of the USA, so that would be 95 billion for us. I still believe in Harper, and in any case, he already expressed that his preference would be to let the companies go bankrupt.

But let's take a look at the latest news from Canada. In Canada, they have corporations that are owned by the government called Crown corporations. Some of them are losing money. So what does Harper want to do about that?

Check out this story from the National Post. (H/T My friend Andrew, the perfect father)

> The federal Department of Finance has flagged several prominent Crown corporations as "not self-sustaining," including the CBC, VIA Rail and the National Arts Centre, and has identified them as entities that could be sold as part of the government's asset review, newly released documents show.
>
> …Finance Department documents, obtained by Canwest News Service under the Access to Information Act… reveal that the government will consider privatizing Crown corporations that require public subsidies to stay afloat.
>
> "The reviews will also examine other holdings in which the government competes directly with private enterprises, earn income from property or performs a commercial activity," states a Finance briefing note dated Dec. 2, 2008. "It includes Crown corporations that are not self-sustaining even though they are of a commercial nature."
>
> In the briefing note, the Finance Department identifies nine Crown corporations that fall in that category, including Atomic Energy of Canada Ltd., the CBC and VIA Rail.

CBC is their NPR/PBS and Via Rail is their AMTRAK. Harper is taking a lot of heat right now because he is running a 50 billion dollar deficit. That's chump change compared to our nearly 2 trillion dollar deficit this year alone, with no end in sight. Not only that, but Heritage Foundation reports that Obama's calling up the mayor of Detroit and reassuring him that GM will not move their headquarters to Warren, from Detroit.

Are things beginning to turn around in Alberta?

June 3, 2009 | by Wintery Knight | Link | Original Link

Political Map of Canada

I blogged before about the California school district that is indoctrinating 5-year olds with homosexual propaganda in kindergarten. Well, Canada had a similar problem in the province of British Columbia, where the entire curriculum was going to be designed by gay activists. Now, you might think that the Canadians would be a lot more leftist on such issues, you'd be wrong.

Alberta has a bill in the works to give rights to parents to opt out of programs like this.

Check out this story from the Globe and Mail. (H/T My friend Andrew)

> Bill 44, which proposes amendments to Alberta's Human Rights, Citizenship, and Multiculturalism Act, contains two significant changes. The first adds sexual orientation to proscribed grounds of discrimination. This would bring Alberta's human rights legislation into conformity with a Supreme Court of Canada ruling that "read in" sexual orientation after it had been deliberately omitted three times by the Legislative Assembly in Edmonton. The amendment has been widely praised.
>
> Section 11 of the new act is more controversial. It requires that parents be notified whenever instructional materials are taught dealing "explicitly with religion, sexuality or sexual orientation." If parents object in writing, the student can be excused from class.
>
> According to Rob Anderson, Conservative MLA from Airdrie-Chestermere, a riding just north of Calgary, Bill 44 "is one of the most positive and meaningful advances for human rights that this province and this country has seen for many years." Specifically, he explained, the "parental rights clause" enshrines Article 26 (3) of the United Nations universal declaration of human rights: "Parents have a prior right to choose the kind of education that shall be given to their children."

> Premier Ed Stelmach added that his government “supports a very, very fundamental right and that is parental rights with respect to education.”

This article was written by a political science professor at the University of Calgary, which is the school where their prime minister Stephen Harper got both his degrees in economics. They are known for their conservative views. They even have a special name: the “Calgary School” of economics, just like you might talk about the “Chicago School” and the “Austrian School”. Awesome!

Here’s a letter to the editor from a University of Lethbridge (Alberta) professor that I found in the National Post, (H/T Blazing Cat Fur)

> Bill 44 is a response to a B. C. Human Rights Tribunal decision mandating two gay activists to commandeer the Ministry of Education in that province to impose a “social justice” course into the curriculum. Parents’ rights, never mind those of local school boards, were overridden.
>
> The B. C. example and Alberta’s Bill 44 indicate how HRCs have poisoned politics in those two provinces.
>
> Now everyone, not just Christian preachers, has to worry about getting dragged before an HRC. A former chairman of the Calgary School Board once proclaimed the state “owns” children who must be liberated from the supposedly claustrophobic viewpoints of their parents. This goes to show how little this debate has to do with promoting critical thinking or cosmopolitanism, as the Post’s article suggests.
>
> If there is an upside to this, perhaps now there will be sufficient support across the political spectrum to dismantle the HRCs.

Go Canada, eh?

Michelle Malkin asks: Is an abortionist worth more than a military recruiter?

June 4, 2009 | by Wintery Knight | Link | Original Link

Michelle Malkin

My friend Andrew drew my attention to Michelle Malkin's most recent column. It's a must-read!

Michelle starts by talking about two murders that occurred at almost the same time. Which one was more important to Obama and the left-wing media, and why?

She writes:

> When a right-wing Christian vigilante kills, millions of fingers pull the trigger. When a left-wing Muslim vigilante kills, he kills alone. These are the instantly ossifying narratives in the Sunday shooting death of Kansas late-term abortionist George Tiller versus the Monday shootings of two Arkansas military recruiters.
>
> Tiller's suspected murderer, Scott Roeder, was white, Christian, anti-government, and anti-abortion. The gunman in the military recruiting center attack, Abdul Hakim Mujahid Muhammad, was black, a Muslim convert, anti-military, and anti-American. Both crimes are despicable, cowardly acts of domestic terrorism. But the disparate treatment of the two brutal cases by both the White House and the media is striking.

In the column Michelle notes the following differences between the two stories:

- Obama issued a statement condemning the murderer of the abortionist, but not the murder of the military recruiters
- The Justice Department dispatched federal marshals to protect abortion clinics, not military recruitment offices
- The left-wing media labeled the murderer of the abortion doctor a terrorist, not the murderer of the military recruiters
- The left-wing media blamed conservative media for one murder, but militant Islam

was not blamed for the other murders

Michelle asks what Obama had to say about the deaths of two of our brave soldiers:

> …President Obama said nothing. The Justice Department was mum. And so were the legions of finger-pointing pundits happily convicting the pro-life movement and every right-leaning writer on the planet of contributing to the murder of George Tiller. Obama's omission, it should be noted, comes just a few weeks after he failed to mention the Bronx jihadi plot to bomb synagogues and a National Guard airbase during his speech on homeland security.

She goes on to catalog some more incidents showing where the real threat of domestic terrorism lies. Most of them I had *never even heard of.* It just goes to show you that some victims are more equal than others, especially when you are trying to squash down the good and lift up the evil – so that the distinctions that make people able to judge others will be demolished. Abortion good, patriotism bad. Feminism good, military service bad.

Watch this video with Evan Sayet and you'll learn how the secular-left thinks.

Another video by Evan Sayet is linked here.

We need to understand how it has become possible for the secular-left to be viewed as "moral" while faithful conservatives are viewed as "immoral". One worldview views the universe as an accident and human rights as fictions. The other believes that God grounds human rights and that every person has a purpose that makes them valuable: to know God.

UPDATE: Nice Deb says that the anti-war left is to blame for the death of the military recruiters. Turnabout is fair play. She has a lot more at that link, too.

Obama’s corporate tax hike would cause Microsoft to outsource jobs

June 4, 2009 | by Wintery Knight | Link | Original Link

This Bloomberg article may be helpful to those Democrats who voted for Obama because they hoped that Obama would stop outsourcing by taxing “the rich” and by taxing “greedy coporations”. (H/T Club For Growth)

Excerpt:

> Microsoft Corp. Chief Executive Officer Steven Ballmer said the world’s largest software company would move some employees offshore if Congress enacts President Barack Obama’s plans to impose higher taxes on U.S. companies’ foreign profits.
>
> “It makes U.S. jobs more expensive,” Ballmer said in an interview. “We’re better off taking lots of people and moving them out of the U.S. as opposed to keeping them inside the U.S.”
>
> …In a roundtable discussion today, Ballmer, Symantec Corp. Chairman John Thompson and the heads of smaller companies such as privately held Bentley Systems, an Exton, Pennsylvania-based maker of engineering software, said such policies would hurt domestic investment, reduce shareholder value and increase the cost of employing U.S. workers.

See, there’s a difference between what Obama thinks will happen (fantasy) and what actual will happen (reality). He is probably very surprised that corporations are responding to his socialism by shipping jobs overseas. What an unexpected surprise! Let’s recall the simplest possible economics lesson from Henry Hazlitt’s “Economics in One Lesson”.

> From this aspect, therefore, the whole of economics can be reduced to a single lesson, and that lesson can be reduced to a single sentence. *The art of economics consists in looking not merely at the immediate but at the longer effects of any act or policy; it consists in tracing the consequences of that policy not merely for one group but for all groups.*

Obama shows no evidence of knowing this lesson. And *neither does anyone who voted for him.* And it isn’t just that he and his voting bloc seem to know nothing about economics, it’s that they seem not to know anything about *anything*. And this, coupled with disregard for the unemployment rate, the budget deficit and the national debt, is what fuels his domestic policy.

Isn’t it mysterious that Bush cut taxes across the board, and tax revenues skyrocketed, while unemployment dove down below 5%? It’s a mystery! At least it’s a mystery to people who have never cracked open a book.

How communists operate

Here's a preview of what we can expect from someone like Obama, who has no doubt absorbed the views of many left-wing arts professors, who, like him, have probably never run so much as a lemonade stand. Chavez doesn't even have a college degree. (I have not seen Obama's grades, he hasn't ever released them – but he used alcohol, pot and cocaine).

IBD writes about Chavez:

> It ought to worry people that what's happening at GM is perfectly recognizable in Caracas.
>
> In 2004, Chavez began by expropriating cattle ranches in Venezuela, saying he only wanted to clarify property rights, not confiscate land. End result: Virtually all productive land now is in his hands, redistributed to his loyalists in serfdom.
>
> After that, he went after the U.S. oil industry, snagging prizes like Exxon Mobil's $1 billion heavy-oil complex on the Orinoco River in 2007, citing a different legal issue: tax disputes.
>
> He did similar expropriations with steel, cement, ports, banks, sugar, rice, pretty much any industry that was viable.
>
> Running out of companies to steal, he now persecutes private media — not, he claims, to stifle dissent, but to protect children from smut, his pretense for shutting down RCTV in 2007.
>
> For the last remaining nonstate TV station, his concern is now environmental desecration, with Chavistas using the pretense of some old antlers on the wall of a Globovision executive following an open-ended state raid as the excuse to shut down the TV station.
>
> Whatever Chavez's legal concerns are, the punishment is always the same: expropriation and more power to the state, the two pillars of socialism.

Read the whole thing, it goes on to juxtapose Obama and Chavez. (MP3 Podcast is here)

Chinese scientists announce stem-cell research breakthrough

June 4, 2009 | by Wintery Knight | Link | Original Link

Previously, I blogged about how scientists had discovered a way to prevent ethical adult stem cells from being infected with cancerous mutations. I've also written about some of the proven cures that have been developed with adult stem cells and compared it with the number of cures developed by unethical embryonic stem-cell research, i.e. – NONE.

But now we learn about a new source of functional stem cells: PIGS! That's right, PIGS!

Check out this story from the BBC.

Excerpt:

> Chinese scientists have given cells from adult pigs the ability to turn into any tissue in the body, just like embryonic stem cells.
>
> They hope the breakthrough could aid research into human disease, and the breeding of animals for organ transplants for humans.
>
> The study appears online in the Journal of Molecular Cell Biology.
>
> …Tests showed that the reprogrammed cells were capable of becoming any of the cell types that make up the three layers in a developing embryo.

Now you say, "Wintery! What good are pig stem cells for human beings?" So I'll tell you.

> Dr Xiao said pigs were a potentially ideal source of organs for transplant, as their organs were similar in function and size to those found in humans.
>
> He said reprogrammed stem cells could potentially be used to make a pig organ compatible to the human immune system, minimising the risk of rejection.
>
> The cells could also be used to mimic human disease in pigs, allowing scientists to test new therapies without requiring human volunteers.

There's more in the story, it's worth a look!

BONUS (depressing, though)

My elusive friend Richard e-mails me this article from the CBC, which talks about Quebec's plan to pay for screenings for pregnant women to see if their child has Down's syndrome. The article states that "statistics in other countries show that 90 per cent of women end their pregnancy after a positive test." Quebec is the most secular and left-wing province in Canada.

What is it about the weak that causes leftists to want to kill them? Is it because they desire happiness for themselves above all and do not believe that humans have certain inalienable rights guaranteed by God? Is it because they believe that there is no value in suffering a little in order to take care of others has no value in a mindless, accidental universe where the only purpose is to have happy feelings until you die?

Walter Williams evaluates American academic performance

June 5, 2009 | by Wintery Knight | Link | Original Link

The article is here in Townhall.com. The left is always complaining that they need more money to raise test scores, and that schools are underfunded. But is more money the answer?

Excerpt:

> The teaching establishment and politicians have hoodwinked taxpayers into believing that more money is needed to improve education. The Washington, D.C., school budget is about the nation's costliest, spending about $15,000 per pupil. Its student/teacher ratio, at 15.2 to 1, is lower than the nation's average. Yet student achievement is just about the lowest in the nation. What's so callous about the Washington situation is about 1,700 children in kindergarten through 12th grade receive the $7,500 annual scholarships in order to escape rotten D.C. public schools, and four times as many apply for the scholarships, yet Congress, beholden to the education establishment, will end funding the school voucher program.

Teacher's unions are not interested in being paid to perform, they want to be paid regardless of whether they perform. That is why they oppose voucher programs, which give parents a choice. If parents can choose, then schools that insist on retaining teachers who can't teach will finally come under pressure to fire those teachers and find some better ones. More money thrown into the fire is not the answer.

Williams continues:

> Any long-term solution to our education problems requires the decentralization that can come from competition. Centralization has been massive. In 1930, there were 119,000 school districts across the U.S; today, there are less than 15,000. Control has moved from local communities to the school district, to the state, and to the federal government. Public education has become a highly centralized government-backed monopoly and we shouldn't be surprised by the results. It's a no-brainer that the areas of our lives with the greatest innovation, tailoring of services to individual wants and falling prices are the areas where there is ruthless competition such as computers, food, telephone and clothing industries, and delivery companies such as UPS, Federal Express and electronic bill payments that have begun to undermine the postal monopoly in first-class mail.

Here is an article from the extremely left-wing Los Angeles Times that explains what it takes for a school to succeed. A school needs stay away from unions and educational bureaucrats, and stick with the basics: math, reading, writing and *discipline.* Let's take a look at an Oakland school that serves the poorest, underprivileged minorities, but still

manages to deliver the goods.

What kind of teachers teach in the American Indian Public Charter schools?

> "**We are looking for hard working people who believe in free market capitalism**. . . . Multicultural specialists, ultra liberal zealots and college-tainted oppression liberators need not apply."

Good start. But are they "progressive"?

> That, it turns out, is just the beginning of the ways in which American Indian Public Charter and its two sibling schools spit in the eye of mainstream education. These small, no-frills, independent public schools in the hardscrabble flats of Oakland sometimes seem like creations of television's "Colbert Report." **They mock liberal orthodoxy with such zeal that it can seem like a parody.**

Well, surely they must embrace teacher's unions?

> School administrators take pride in their record of frequently firing teachers they consider to be underperforming. Unions are embraced with the same warmth accorded "self-esteem experts, panhandlers, drug dealers and those snapping turtles who refuse to put forth their best effort," to quote the school's website.

But what about the need for compassion, tolerance and empathy?

> Conservatives, including columnist George Will, adore the American Indian schools, which they see as models of a "new paternalism" that could close the gap between the haves and have-nots in American education. Not surprisingly, many Bay Area liberals have a hard time embracing an educational philosophy that proudly proclaims that it "does not preach or subscribe to the demagoguery of tolerance."

The LA Times article shows that conservative, anti-union schools work for the poorest children. But there are challenges that are blocking the expansion of charter schools, such as "hostile state legislatures and arbitrary caps", according to the Heritage Foundation.

Their article cites Rep. Buck McKeon (R-CA) as follows:

> These caps are often the consequence of legislative trade-off – representing political deal-making designed to appease special interests who prefer the status quo rather than reasoned education policy. As a result of the caps, children across the country now languish on daunting wait lists, just waiting to enroll in the public school of their choice, simply because it happens to operate as a charter. **An estimated 365,000 students are on charter school wait lists today. That's enough students to fully enroll 1,100 new averaged-size charter schools.**

As I discussed before, there are almost no males involved in education in the classroom, which means that the classrooms will emphasize compassion, tolerance, equal outcomes, non-judgmentalism and self-esteem. Competition and excellence are definitely out. In order for Americans to continue to have the same level of prosperity, we need to focus on academic excellence, not secular-leftist indoctrination.

What is intelligent design? What is capitalism?

June 5, 2009 | by Wintery Knight | Link | Original Link

Two new books have just come out by two of my favorite people in the whole world:

- Stephen C. Meyer (Ph.D from Cambridge University)
- Jay W. Richards (Ph.D from Princeton University).

Meyer's book is about intelligent design, and Richards' book is about capitalism. Let's take a look.

What is intelligent design?

To understand what intelligent design is, you can watch two DVDs that are now online at Youtube. Both videos are by Illustra Media.

Here are the 2 playlists:

- Unlocking the Mystery of Life (12 videos in a playlist)
- The Privileged Planet (12 videos in a playlist)

I give these videos my highest recommendation. If you have not seen them, you must see them.

Stephen C. Meyer's new book

The new book by Stephen C. Meyer is called "Signature in the Cell: DNA and the Evidence for Intelligent Design". It is being published by Harper-Collins.

Signature in the Cell

Here is the blurb:

Meyer tells the story of the successive attempts to solve this mystery of DNA and argues that fundamental objections now exist to the adequacy of all purely naturalistic or materialistic theories. The book then proposes a radical alternative based upon developments in molecular biology and the information sciences: it proposes the design hypothesis as the best explanation for the origin of the information necessary to produce the first life.

SIGNATURE IN THE CELL will not merely provide a critique of evolutionary theories. It also shows that, based on our uniform and repeated experience-the basis of all scientific reasoning about the past-there is a strong positive case for intelligent design. From our experience we know that intelligence alone produces large amounts of information. Thus, the book shows that the argument for intelligent design from DNA is not based on ignorance or a desire to "give up on science," but instead upon just the opposite: our growing scientific knowledge of the inner workings of the cell and our experience-based knowledge of the cause-and-effect structure of the world. For just this reason the argument for design can be formulated as a rigorous and positive scientific argument-specifically one called "an inference to the best explanation." The book shows, ironically, that the argument for intelligent design from DNA is based on the same method of scientific reasoning that Darwin himself used.

I pre-ordered mine! You can see Stephen Meyer debating against Skeptic magazine's editor Michael Shermer here.

Now let's turn to Jay W. Richards' book.

What is capitalism?

To understand what capitalism is, you can watch this lecture entitled "Money, Greed and God: Why Capitalism is the Solution and Not the Problem" by Jay W. Richards, delivered at the Heritage Foundation think tank, and televised by C-SPAN2. The book has the same title, and is published by Harper-Collins.

Money, Greed and God

Here is the blurb:

Does capitalism promote greed? Can a person follow Jesus's call to love others and also support capitalism? Was our recent economic crisis caused by flaws inherent to our free market system? Jay Richards presents a new approach to capitalism, revealing how it's fully consistent with Jesus's teachings and the Christian tradition, while also showing why this system is our best bet for renewed economic vigor.

The church is bombarded with two competing messages about money and capitalism:

> - wealth is bad and causes much of the world's suffering
> - wealth is good and God wants you to prosper and be rich

Richards exposes these myths, and other common misconceptions about capitalism, and reveals the surprising ways that capitalism is, in fact, the best system to respond to the biblical mandates of alleviating poverty and protecting the environment. *Money, Greed, and God* equips readers to take practical steps in their own lives to conduct business, worship God, and serve others without falling into the "prosperity gospel" trap.

I can hardly wait to get my copy!

If you can't see the Richards video, here is an audio lecture by Jay Richards on the "Myths Christians Believe about Wealth and Poverty". Also, why not check out this series of 4 sermons by Wayne Grudem on the relationship between Christianity and economics? (a PDF outline is here)

Friday night funny: overdue account, private property, civics

June 5, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Spotted this video linked at Nice Deb:

Cute video of the best kind of bird ever made!

This is the funniest thing I ever got in an e-mail. It's a real e-mail exchange.

It starts like this:

> **From: Jane Gilles**
> **Date: Wednesday 8 Oct 2008 12.19pm**
> **To: David Thorne**
> **Subject: Overdue account**
>
> Dear David,
> Our records indicate that your account is overdue by the amount of $233.95. If you have already made this payment please contact us within the next 7 days to confirm payment has been applied to your account and is no longer outstanding.
>
> Yours sincerely, Jane Gilles

Click here for the rest of the exchange.

Second, here is a catchy tune for you to brighten your day from IMAO.us: (H/T Free Canuckistan)

And our weekly lesson in capitalism also from IMAO.us. (You have to click through to see the video)

Happy Friday!

UPDATE: I noticed that Dawn Eden had posted a serious post by Catholic Mark Shea about the different ways that Catholics and Evangelicals talk. Evangelicals are masculine and Catholics are feminine. Everybody knows that!

It's funny to hear Catholics described like this, but it's so true:

> Similarly, Catholics should not dismiss Evangelicalism as simplistic chatter merely because Evangelicals tend to be more verbal about their faith. **There is nothing noble or spiritual about the common lay Catholic's inability to be always ready to give an account of the hope within us (cf. 1 Pet. 3:15).**

But we Evangelicals also get whacked:

> [1] Back in my Evangelical days, I saw a cartoon in *The Wittenburg Door* featuring an earnest Evangelical hunched over in prayer with eyes clamped shut, pleading, "Oh Lord, I just really worship you and I just really want to come before

> you and just really pray that you would just really take the words just and really out of my prayer vocabulary." Not all spontaneous prayer is up to the glory of the task, and there is much wisdom in Catholics using the great and poetic prayers of the saints as their own.

It's funny because it's true!

Free speech: Mark Steyn radio interview and Ezra Levant radio debate!

June 6, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from Blue Like You! Thanks for the link Joanne!

Canadian/American free speech activist Mark Steyn on the line with Chicago radio show host Milt Rosenberg. Commercial free!

Extension 720 – Mark Steyn – June 1, 2009

URL : http://www.wgnradio.com/media/mp3file/2009-06/47337079.mp3

Duration : 1 hours 29 mins 26 secs

He re-caps the history and outcome of his trial in Canada for offending Muslims, and goes on to discuss his previous book "America Alone: The End of the World As We Know It" and his new book "Lights Out: Islam, Free Speech And The Twilight Of The West". He reviews the state of free speech, Western Civilization, single-payer health care, welfare, anti-Western attitudes in education, and the 2008 election results.

BONUS

Ezra Levant reports on his debate against secular-leftist professor Lucie Lamarche on CBC radio. Note that the start time is 1:12 into the show. Press pause, let the clip buffer for a few minutes, then drag the slider to the 1:12 position.

> Last Sunday I was on Michael Enright's CBC radio show, The Sunday Edition, debating human rights commissions along with Keith Martin, the Liberal MP, and a nutty professor called Lucie Lamarche.
>
> You can listen to the show here — it's the May 31 edition. **The debate starts at about 1 hour and 12 minutes into the show.**
>
> [Lamarche] loses her grip at 1:25 when Enright challenged her on the lack of due process and natural justice in HRCs. Her first response is to dismiss the horrors of HRCs as my own personal story. When I pushed back, citing the very section of the Alberta act that allows warrantless search and seizures, and pointing out that targets of HRCs don't get legal aid, she just collapsed, saying that "discrimination is about attitudes… and transformation. It's not only about due process."
>
> Oh. So to hell with the law or fairness. Guys like me need to have our attitudes transformed. It's not law. It's brutal politics pretending to be the law.
>
> I like this Lucie Lamarche — for her honesty.
>
> After a few minutes of her reading her talking points — likely authored by the battallion of PR flacks at the Canadian Human Rights Commission — she just stops pretending that HRCs are about justice. They're about politics and propaganda — making political dissidents like me conform to the "official line". And the high costs? That's just an additional punishment for our thought crimes.

> Seriously: when she ran out of her prepared talking points, she said what she truly believed: this was about transforming attitudes.

Ezra also hints at which kind of people fight back to defend human rights, and what kind of people destroy human rights:

> Readers, do you think that Orwell or Solzhenitsyn would call Lamarche a defender of human rights, or a destroyer of them?
>
> Do you think that giving the state the power to transform your attitudes is a protection of your freedoms, or an abridgement of them?
>
> Do you think that Lucie Lamarche follows in the footsteps of dissidents who challenged the conventional wisdom, like Martin Luther King and Mahatma Gandhi — or is she a descendant of the censors and bullies who tried to shut those two up?

Do not miss this debate podcast! Ezra is on fire!

And remember: we know that the secular-left believes in pounding down the good and lifting up the evil, so that moral judgments become impossible and no one feels badly for being morally evil. Remember Evan Sayet's explanation for how progressives think: moral equivalence, postmodernism and moral relativism. And atheists do not have the ability to resist Islamo-fascism: they want to be happy, not to be heroes.

Obama loses 2.19 million jobs, 9.4% unemployment, worst in 25 years

June 6, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome readers from 4Simpsons! Thanks for the link Neil!

Gateway Pundit has the story in graphs. (H/T Lonely Conservative)

What was the unemployment rate under Bush?

> **Despite the recession he inherited, 9-11, stock market scandals, Hurricane Katrina and two wars in Iraq and Afghanistan, the unemployment rate during the Bush years averaged out to 5.27%.** (Misery Index)

How about so far under Obama?

> The US economy lost 598,000 jobs in January.
> The US economy lost 706,000 jobs in February.
> The US economy lost 742,000 jobs in March.
> The US economy lost 545,000 jobs in April.
> And, in May the US economy lost 345,000 jobs.

Here's a graph that may help you to understand how bad Obama really is, compared to Bush:

US Unemployment Rate

Clinton's rate is good because Newt Gingrich was in charge of the House in 1994 onward, and the House is where all spending bills originate

Hot Air reports (with a graph) that the unemployment rate is *worse* than the White House predicted it would be if they *hadn't* passed the stimulus:

> We are heading towards double-digit unemployment *and* doing that while we incur the massive debt of the unstimulating stimulus package. **We could just as easily have kept the money and ridden out the unemployment, much as we're forced to do now, only being a lot poorer while doing it.**

> Why is this important? It demonstrates that the President and his economic advisers have gotten pretty much everything about this economic collapse wrong. Instead of contracting government spending and shoring up the credibility of the currency, they're setting records in dissipating it instead. **Instead of focusing on fixing the problem that government explicitly created — mortgage-backed securities — they've literally left that for last while they waste money chasing every Democratic constituency but ignoring the actual cancer in the financial system.**

Bush was cutting into the deficit until the Democrats Community Reinvestment Act caught up with him in 2008. But Obama has ruined Bush's effort to balance the budget, with his massive redistributions of wealth.

Obama's projected deficits

And the Heritage Foundation shows that the national debt is getting much worse under Obama's tax and spend policies:

Debt as % of GDP under Obama
The Heritage Foundation writes:

> The national debt is skyrocketing. In 2009 publicly held debt is projected to jump to 54.8 percent of GDP, up from 40.8 percent in 2008. A year to year increase of this size hasn't occurred since World War II. While the main causes of this massive increase – $787 trillion economic "stimulus" and the $700 billion Troubled Asset Relief Program (TARP) – are sure to be debated for some time, the truly freighting revelation should be not what has already taken place, but what our elected officials have planned.
>
> President Obama's budget, if passed, would send debt to levels 26.3 percent of GDP over current law. Although President Obama has publicly stated his desire to both bring down deficits and reform entitlements under his watch, his actions don't match his words.

Who caused the recession? The democrats caused the recession, Bush tried to stop them in 2003. And Obama's spending spree is only making things worse. We have a worse economy than Canada now, in every measure that counts. Obama's planned tax hike is causing companies like Microsoft to ship jobs overseas, and his cap and trade plan will cost us even more jobs.

High tax rates cause the most productive people to stop working, costing us jobs. Obama is to blame. His total ignorance of economics means that he will be playing whack-a-mole with the US economy – always inventing new interventions into the market to fix the problems his last intervention caused.

What are the real goals of environmentalist radicals?

June 6, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from In Haught Pursuit! Thanks for the link!

Today I've been listening to the audio book version of Christopher C. Horner's "The Politically Incorrect Guide to Global Warming and Environmentalism". And I thought that I would share with you some quotations from the environmentalist radicals to shed some light on their real motivations.

In the audio book, Horner is tracing the evolution of the modern environmentalist movement back to two failed groups: 1) people who predicted overpopulation and 2) people who advocated for communism. Both of these groups failed, but their aims (mass murder) live on in the abortion and environmentalist movements. Let's take a look at the real views of environmentalists.

Economist Walter Williams puts it this way:

> The authors of the study don't quite reach a conclusion that I've reached about environmental activists, whose agenda calls for private property confiscation and control over the lives of ordinary citizens. Back in the 60s and 70s, America's leftists called themselves socialists and communists. They were the people who paraded around college campuses singing praises of support to tyrants like Mao Zedong, Ho Chi Minh, Fidel Castro and Pol Pot. Today, the communist system and its promises have been revealed as both a miserable failure and a system of unprecedented brutality. Thus, communism and socialism have become an embarrassment, so environmentalism is the name for an old agenda.

Here is an article by Mr. Horner from the National Review to help us with some actual quotations by environmentalists.

1. Radical environmentalists hate capitalism because it helps the poor.

> "Giving society cheap, abundant energy… would be the equivalent of giving an idiot child a machine gun," says green godfather Paul Ehrlich. Oh, the horrors of subjecting millions to affordable heating, lighting and cooling, transportation, and other freedoms.
>
> …the greens [affirmed] their agenda at the August World Summit on Sustainable Development in Johannesburg… Among their projects: impeding technology that increases agricultural abundance, even the shipment of food to famine-stricken countries like Zimbabwe; lamenting the pernicious influence of indoor plumbing; and complaining that the poor shouldn't want (or get) such comforts as electricity because there are larger, Gaia-centric considerations at play.

2. Radical environmentalists favor mass murder of the poor, and not just by abortion and technological regress.

- “To feed a starving child is to exacerbate the world population problem.” Lamont Cole (as quoted by Elizabeth Whelan in her book *Toxic Terror*)
- “This is as good a way to get rid of them as any.” Charles Wursta, Chief Scientist for the Environmental Defense Fund, commenting on the likelihood of millions dying from a global ban on DDT (also quoted in *Toxic Terror*)
- “I got the impression that instead of going out to shoot birds, I should go out and shoot the kids who shoot birds.” Paul Watson, founder of Greenpeace (quoted in *Access to Energy*, vol. 10, no. 4, Dec. 1982)
- “The right to have children should be a marketable commodity, bought and traded by individuals but absolutely limited by the state.” Kenneth Boulding, originator of the “Spaceship Earth” concept (quoted by William Tucker in *Progress and Privilege*, 1982)
- “The only real good technology is no technology at all. Technology is taxation without representation, imposed by our elitist species [man] upon the rest of the natural world.” John Shuttleworth, *Friends of the Earth* manual writer

And In the Walter Williams article I cited earlier, he adds a couple more:

> Then there are statements like those of David Brower, founder of Friends of the Earth, and former executive director of Sierra Club: “While the death of young men in war is unfortunate, it is no more serious than the touching of mountains and wilderness areas by humankind.” David M. Graber, research biologist with the National Park Service wrote, “Human happiness, and certainly human fecundity, are not as important as a wild and healthy planet.” John Davis, editor of Earth First Journal, says, “Human beings, as a species, have no more value than slugs.” Davis also opined, “I suspect that eradicating small pox was wrong. It played an important part in balancing ecosystems.”

> These people have an abiding contempt for humankind. They seek to accomplish their agenda with useful idiots in and out of government and make use of what H.L. Mencken warned us about, “The whole aim of practical politics is to keep the populace alarmed, and hence clamorous to be led to safety, by menacing it with an endless series of hobgoblins, all of them imaginary.”

Environmentalism is really about controlling others. And when your kids go to public schools to be taught by the left, they are indoctrinated to have these environmentalist beliefs: that humans are bad and that we need to die. The mass murders that emerged from the secular-left are not aberrations – they really do believe in killing hundreds of millions of innocent people with communism, abortion DDT bans, etc.

Featured blog: Pursuing Holiness

June 7, 2009 | by Wintery Knight | Link | Original Link

I've been featuring a lot of conservative women lately, and not just Marsha Blackburn and Michele Bachmann. Earlier this week I featured Dawn Eden, who is a champion of chastity, and Dr. Jennifer Roback Morse who champions parenting, men and the family. (I found a very frank, funny podcast by Dr. J where she is speaking to a Catholic church about chastity, marriage and parenting – her podcast feed is here)

How are women different than men?

Here are some ways that women are different than men:

1. women tend to favor gun control, because guns are loud and scary
2. women tend to emphasize having their needs met by Christianity over theology and apologetics
3. women tend to favor compassion and forgiveness over responsibility and moral obligations

Well, let's just see what Laura over the Pursuing Holiness blog thinks about all of that!

1. Laura likes guns

She writes:

> Consider, for example, the New Bethel Church in Louisville, KY. Pastor Ken Pagano has decided to have a Gun Day at church. The Gun Day will include patriotic music and gun safety information. After all, recent shootings at churches have illustrated the need for responsible, defensive gun ownership.
>
> I thought to myself, S*weet, maybe I should convert to the Assemblies of God and be a part of this.*

Read the rest here.

2. Laura likes God

She writes:

> What if church was about worshiping and learning about a holy and sovereign God? A radical idea, I know.
>
> …What's the point of filling a church with benchwarmers, or in turning a church into a community organization where people perform service in order to fulfill their own moral code instead of for the glory of God? We have a country full of people and groups intent on self-gratification. If the church is no different, people may as well sleep in on Sundays.

Read the rest here.

3. Laura likes moral obligations

She writes:

> Is there something morally wrong about being required to pay for [medical] services we willingly received? It's far more morally wrong to have people throw in the towel and just refuse to pay, but even that is an option that society chooses to accept via bankruptcy laws.
>
> I really don't understand why people are buying into the idea that it's some massive, morally unsound, *unfair* burden to pay for the medical services that they willingly received. It's *entirely* fair. You asked for those services, you accepted them, and now you need to quit whingeing and pay up.

Read the rest here.

Laura's blog is called Pursuing Holiness.

Which cable news network has the worst media bias?

June 7, 2009 | by Wintery Knight | Link | Original Link

Why I think that MSNBC is the most biased channel

Listen to Ed Schulz, who works for MSNBC, as he takes a call from a mildly critical caller to his radio show. (H/T NewsBusters)

See, an outburst like this is why I am not at all convinced that left-wingers would protect the rights to free speech of those who disagree with them. It seems to me that there is some fundamental disrespect for the human rights of others that is grounded by the secular-left's worldview.

Here's another left-winger, Tamarin Hall, from MSNBC. (H/T Hot Air)

Here's another MSNBC left-winger, Rachel Maddow. (H/T American Power Blog via Blazing Cat Fur)

News Busters has more detail on Maddow's reaction to Obama's Cairo speech here.

The best one of all is here at Hot Air, in which Newsweek's Evan Thomas is interviewed by Chris Matthews on MSNBC! Thomas says, "I mean in a way Obama's standing above the country, above – above the world, he's sort of God.".

Check out this interview by Keith Olbermann, also of MSNBC, with Steven Crowder.

Well, it's not really Keith. So this video is fake, but accurate.

Contrast MSNBC with FoxNews

Contrast the fawning over Obama you see on MSNBC, with Charles Krauthammer on Fox News. (H/T Hot Air)

Krauthammer is too moderate for me, but at least he's a journalist, not a sycophant.

The Western Experience

Here is a more even-handed reaction to Obama's Cairo speech from Jason at the Western Extern Experience. He has a round-up of stories from Lebanon, Palestine and Iran that shows what is really at stake.

Here are a few of the more disturbing headlines:

- Guardian UK | Lebanon vote likely to shift power to Hezbollah
- Fox News | Obama Overture to Hamas Suggests Inevitability of Terror Group's Dominance Among Palestinians
- Washington Post | Iran in major nuclear expansion, UN oversight harder

This is what Obama should have talked about, but didn't. Appeasement didn't work for Chamberlain or Carter, and it won't work for Obama.

What's at stake?

The Washington Post reports that drug cartels use submarines to move massive amounts of drugs into the United States. The write that "U.S. officials fear that the rogue vessels

could be used by terrorists intent on reaching the United States with deadly cargos". Maybe Obama should be focused on defending the United States instead of apologizing on our behalf in order to send tingles up the legs of MSNBC talking heads.

Will Obama's speeches deter aggression of this sort? Or will they be viewed as evidence that no reprisals would follow such an attack?

UPDATE: Muddling Toward Maturity links to a substantive refutation of Obama's Cairo speech by Caroline Glick writing in the Jerusalem Post.

GREAT NEWS! Lebanon elects anti-Syrian coalition!

June 8, 2009 | by Wintery Knight | Link | Original Link

Wow! This is the best news I've heard all week!

Yahoo news reports: (H/T My Dad)

> An anti-Syrian coalition defeated Hezbollah in Lebanon's parliamentary election on Sunday in a blow to Syria and Iran and a boost to the United States.
>
> …Lebanon's rival camps are at odds over Hezbollah's guerrilla force, which outguns the Lebanese army, and ties with Syria, which dominated Lebanon for three decades until 2005.
>
> …The United States, which lists Hezbollah as a terrorist group, has linked future aid to Lebanon to the shape and policies of the next government. Hezbollah, which says it must keep its arms to deter Israel, is part of the outgoing cabinet.
>
> The anti-Syrian coalition has enjoyed firm backing from many Western countries since the 2005 assassination of Hariri's father Rafik al-Hariri.
>
> The coalition took power in an election following Hariri's killing, but struggled to govern in the face of a sometimes violent conflict with Hezbollah and its allies.

This good news follows on the good news of India's election results, which I reported on here.

GREAT NEWS! Center-right parties win EU election!

June 8, 2009 | by Wintery Knight | Link | Original Link

Story is here at the BBC, entitled "European voters punish the left". (H/T Gateway Pundit via Commenter ECM)

Excerpt:

> **Centre-right parties have done well in elections to the European Parliament at the expense of the left, according to exit polls and initial results.**
>
> **…Centre-left parties are projected to have lost almost a quarter of their seats, while the centre-right is only slightly down.**…The BBC's Jonny Dymond in Brussels says it looks as if the centre-right European People's Party (EPP) will continue to hold power in the parliament.

Some specifics:

- French President Nicolas Sarkozy's UMP trounced socialist opponents, while greens from the Europe-Ecologie party also made gains
- German Chancellor Angela Merkel's governing centre-right grouping lost ground but finished ahead of its rivals. The Social Democrats, Ms Merkel's partners in the grand coalition, saw their worst election showing since World War II with just 20.8%
- In Italy, Prime Minister Silvio Berlusconi's centre-right coalition is ahead of the socialist opposition, with between 39% and 43% of the vote, exit polls suggested. The Italian group may be the largest within the EPP
- In the UK, the governing Labour Party is expecting a serious defeat, slipping to third place
- Spain's governing Socialists were slightly behind the opposition Popular Party, according to partial results
- Poland's governing centre-right Civic Platform has gained ground at the expense of the Eurosceptic Law and Justice Party
- Early results show Portugal's ruling Socialists dropped a massive 18 percentage points, losing out mainly to Greens and far-left parties

In the United Kingdom, Gordon Brown's left-wing Labour Party lost badly:

> **Labour is facing an historic defeat in European elections which have seen the BNP gain its first seat in Brussels.**
>
> Labour may dip below 20% of the popular vote in what deputy leader Harriet Harman called a "very dismal" night.
>
> The party lost 12% of its vote in Wales, where they were beaten by the Tories for the first time since 1918.
>
> The BNP win in Yorkshire and Humberside was branded a "sad day" by the Tories

> and Labour but the party said it was a blow against EU “dictatorship”.
>
> With results starting to flow in, Labour looks on course to finish behind the UK Independence Party, which is currently on 17%, increasing pressure on Prime Minister Gordon Brown, who is facing calls from leading figures within his own party to stand down.
>
> Labour has been beaten into fifth place behind the Greens in two English regions – the South-East and South-West.
>
> The Conservatives on course to repeat their victory of 2004 with 27% of the vote, but without significantly increasing their share of the vote.
>
> The Lib Dems are neck-and-neck with Labour on 16%.

And there are also local level elections in the UK, where the Conservatives gained over 10% from their already impressive showing in 2004.

> In the English local elections held on Thursday the Conservatives got a projected 38% of the vote, the Lib Dems 28% and Labour 23%.
>
> In the 2004 European elections the Conservatives won 26.7% of votes, Labour 22.6%, UKIP 16.1%, the Lib Dems 14.9%, the Greens 6.3% and the BNP 4.9%.

The BBC also has a country-by-country breakdown here in text, and an animated version showing seat counts by country.

I blogged before about the good news from the Lebanon and India election results as well.

UPDATE: Western Experience links to a more recent overview from the Wall Street Journal.

Patients United gets advanced copy of Obama's health care plan

June 8, 2009 | by Wintery Knight | Link | Original Link

And the news so far is not good…

Hot Air has the story, along with a video of Amy Menefee from Patients United Now. (H/T Stop the ACLU)

The bill is HUGE, so right now conservative bloggers are scouring it to find out what's in it.

Here's what Ed Morrissey found so far in the bill, on pages 39-40:

> (1) IN GENERAL – A State shall keep an accurate accounting of all activities, receipts, and expenditures of any Gateway operating in such State and annually submit to the Secretary a report concerning such accountings.
>
> (2) INVESTIGATIONS – The Secretary may investigate the affairs of a Gateway, may examine the properties and records of a Gateway, and may require periodical reports in relation to activities undertaken by a Gateway. A Gateway shall fully cooperate in any investigation conducted under this paragraph.

Ed writes:

> "Gateway" means "provider," and this appears to do away with that pesky Fourth Amendment, which normally requires search warrants and probable cause to access the records of individuals and businesses. Not under ObamaCare! Now, everyone belongs to the government … rather than the other way around. George Orwell, call your office!

Amy Menefee's group is running this TV ad to help Americans to understand the perils of single-payer health care by learning from the Canadians, who are stuck in waiting so long that they die, or bite the bullet and come here to pay out of pocket. Patients United Now has the entire 167 page bill online and it is searchable, for those of you who would like to take a look at it.

My previous post on socialized medicine linked to even more horror stories from other countries with socialized medicine.

UPDATE: Commenter ECM sent me this story about how the CBO is not counting the costs of mandatory health care for the uninsured in their estimates, because they are charging it against private insurers!

> Typically, the CBO scores legislation only after it has been finalized. But in a May 27 issue brief, the CBO took a proactive stance on budgetary treatment of proposals to change the nation's health insurance system. A federal mandate requiring individuals to have a minimum amount of health insurance would not be counted as a government expense "because the federal government imposes

> a variety of mandates on private entities whose associated costs are not included in the budget," said CBO director Douglas Elmendorf in a blog explaining the brief.

NOT GOOD!

NASA study links solar activity and global warming

June 8, 2009 | by Wintery Knight | Link | Original Link

Watts Up With That is reporting that a NASA study is FINALLY acknowledging that the Sun is responsible for past warming not man! (H/T Small Dead Animals)

Excerpt:

> A study from NASA's Goddard Space Flight Center in Greenbelt, Maryland looking at climate data over the past century has concluded that solar variation has made a significant impact on the Earth's climate. The report concludes that evidence for climate changes based on solar radiation can be traced back as far as the Industrial Revolution.
>
> Past research has shown that the sun goes through eleven year cycles. At the cycle's peak, solar activity occurring near sunspots is particularly intense, basking the Earth in solar heat.

But don't get too excited, because there is *no way* that a government-run agency is going to give back money to the taxpayer by hinting that there is no such thing as man-made global warming, regardless of scientific evidence.

> While the NASA study acknowledged the sun's influence on warming and cooling patterns, it then went badly off the tracks. Ignoring its own evidence, it returned to an argument that man had replaced the sun as the cause current warming patterns. Like many studies, this conclusion was based less on hard data and more on questionable correlations and inaccurate modeling techniques.

Don't forget to read my recent post which contains quotations from real environmentalists.

Commenter ECM has more

UPDATE: ECM sent me the following related stories:

- Record low day temperature in Green Bay for June 6 (52 degrees!)
- Dickinson, North Dakota sees first June snowfall in 60 years
- Scientists say "green transport" can emit more than non-green transport

Richard Dawkins debates John Lennox: Does God Exist?

June 8, 2009 | by Wintery Knight | Link | Original Link

Audio of the debate is hosted by my buddy Brian Auten who operates the Apologetics 315 blog.

You can download the full MP3 audio here.

I listened to this debate and thought that Dawkins did well against Lennox. It is a very short debate. This is not a rigorous academic debate, as neither participant argued in a formal manner. Dawkins came across as firm, but gracious, and he does a lot better than Hitchens did in his recent debate against Craig.

This debate is recommended for beginners to get a bird's eye view of some of the issues before moving on to professional academic debates featuring analytical philosophers such as William Lane Craig, Walter Sinott-Armstrong, etc. They don't really go into complicated details.

My favorite academic debate is this one featuring William Lane Craig vs Walter Sinnott-Armstrong on the problems of evil and suffering. Another great debate featuring Bill Craig and Austin Dacey is here (video) and their re-match is here (audio).

A huge list of other William Lance Craig debates is here, courtesy of ChristianJR4.

Rich trust-fund leftists caught spying for Cuba

June 9, 2009 | by Wintery Knight | Link | Original Link

Heritage Foundation has the story:

> Move over, Bill Ayers, you've got company. The arrest of retired State Department intelligence analyst Walter Kendall Myers has apparently uncovered yet another overweened Social Register Rebel in our midst. Myers and his wife, Gwendolyn, were arrested on June 5 and charged with being espionage agents for Fidel Castro for 30 years.
>
> …Kendall Myers got his PhD and later taught at Johns Hopkins/SAIS…
>
> Myers's mother's pedigree (AT&T money and top-drawer National Geographic Society founders) even topped Ayers's father's Commonwealth Edison/Chicago fortune. Both of these bad boys seemingly felt so bad about living large off the sweat of their ancestors that they became hard-core leftists and turned on their fellow Americans.

A bit more in a subsequent post:

> Cases like those of Defense Intelligence Agency analyst Ana Belen Montes, convicted in 2002 of spying for Cuba, or the five Cubans convicted in Miami in 2001 on 26 counts of spying for the regime, demonstrate the ability of the Cuban operatives to work in the U.S. to the detriment of U.S. national security and interests.

What about Barack Obama?

Barack Obama launched his presidential campaign from the house of his friend, Bill Ayers. He was raised by a rich grandmother and went to expensive private schools, where he took illegal drugs like cocaine. His mentor Frank Marshall Davis was a member of the Communist Party and a Soviet-sponsored activist. I've posted before about whether Obama is destroying the United States with his policies. He voted against missile defense, but he favors nuclear plants for Iran.

And we know that Obama is traipsing around with dictators in Venezuela and is even trying to normalize relations with Cuba. Who cares about the torture and unlawful imprisonment that goes on in Cuba and Iran? Obama's response to North Korea hasn't been inspiring.

CRISIS! Evaluating the leaked Democrat health care bill

June 9, 2009 | by Wintery Knight | Link | Original Link

Keith Hennessey is the go-to guy for analyzing economic policies. He takes a look at the leaked draft of the health care bill that I blogged about before. He lists 15 things you need to know about the draft bill.

Below I've listed a few of the scariest parts.

Mandatory coverage

> The Kennedy-Dodd bill would create an individual mandate requiring you to buy a "qualified" health insurance plan, as defined by the government. If you don't have "qualified" health insurance for a given month, you will pay a new Federal tax. Incredibly, the amount and structure of this new tax is left to the discretion of the Secretaries of Treasury and Health and Human Services (HHS), whose only guidance is "to establish the minimum practicable amount that can accomplish the goal of enhancing participation in qualifying coverage (as so defined)." The new *Medical Advisory Council* (see #3D) could exempt classes of people from this new tax. To avoid this tax, you would have to report your health insurance information for each month of the prior year to the Secretary of HHS, along with "any such other information as the Secretary may prescribe."

Employer mandate

> The bill would also create an employer mandate. Employers would have to offer insurance to their employees. Employers would have to pay at least a certain percentage (TBD) of the premium, and at least a certain dollar amount (TBD). Any employer that did not would pay a new tax. Again, the amount and structure of the tax is left to the discretion of the Secretaries of Treasury and HHS.

Mandatory services that I don't use

> A qualified plan would have to cover "essential health benefits," as defined by a new *Medical Advisory Council (MAC)*, appointed by the Secretary of Health and Human Services… The MAC would have to include items and services in at least the following categories: ambulatory patient services, emergency services, hospitalization, **maternity and new born care**, medical and surgical, **mental health**, prescription drugs, rehab and lab services, preventive/wellness services, **pediatric services**, and anything else the MAC thought appropriate.

That's just redistribution of wealth for elective services, right there. I wonder whether support for contraceptives and abortion would also be required.

Premiums not related to lifestyle risks

> Health insurance plans could not charge higher premiums for risky behaviors: "Such rate shall not vary by health status-related factors, … or any other factor not described in paragraph (1)." Smokers, drinkers, drug users, and those in terrible physical shape would all have their premiums subsidized by the healthy.

Guaranteed issue and renewal

> All health insurance would be required to have guaranteed issue and renewal, modified community rating, no exclusions for pre-existing conditions, no lifetime or annual limits on benefits, and family policies would have to cover "children" up to age 26.
>
> …Guaranteed issue and renewal combined with modified community rating would dramatically increase premiums for the overwhelming majority of those Americans who now have private health insurance. New Jersey is the best example of health insurance mandates gone wild. In the name of protecting their citizens, premiums are extremely high to cover the cross-subsidization of those who are uninsurable.

Massive wealth redistribution, especially to Democrats

> People from 150% of poverty up to 500% (!!) would get their health insurance subsidized (on a sliding scale). If this were in effect in 2009, a family of four with income of $110,000 would get a small subsidy. The bill does not indicate the source of funds to finance these subsidies.
>
> …People in high cost areas (e.g., New York City, Boston, South Florida, Chicago, Los Angeles) would get much bigger subsidies than those in low cost areas (e.g., much of the rest of the country, especially in rural areas). The subsidies are calculated as a percentage of the "reference premium," which is determined based on the cost of plans sold in that particular geographic area.

Hennessey then goes on to explain all of the implications of his 15 points. READ IT ALL.

BONUS

Verum Serum has 2 posts up where they examine:

Comparing patient outcomes for cancer treatment in the USA vs Europe

Related chart:

Cancer mortality rates

AND:

Obama’s plan to pass the health care bill unilaterally, under a bi-partisan smokescreen

They have a plan to bypass the likely Republican filibuster. It’s a done deal.

Why do Democrats live far beyond their means?

June 9, 2009 | by Wintery Knight | Link | Original Link

Republicans typically enjoy massive support from people who actually know how the world works, namely, small business owners, investors and entrepreneurs. But do Barack Obama and his new Supreme Court nominee know how the world works?

Sonia Sotomayor

Let's look at Obama's Supreme Court nominee first.

Here is what she says:

> I would hope that a wise **Latina woman** with the richness of her experience would more often than not reach a better conclusion than a **white male** who hasn't lived that life.

So she discriminates against people based on sex and race. There are words for people who discriminate against others based on sex and race.

The American Thinker reports on how she lives within her means: (H/T Commenter ECM)

> Sotomayor's annual earnings come to $196,000 a year ($170,000 a year as an appeals judge and $26,000 for part-time teaching). She has served as an appeals judge for 17 years. This service was preceded by lengthy tenure at a corporate law firm of Pavia and Harcourt, where she was a partner, and presumably was well compensated.
> Yet after a career that has spanned 25 years, Ms Sotomayor only has one thousand dollars in net savings. As reported in the *New York Post*, Sotomayor's bank account holds $31,985. Her credit cards debts are $15,823, and she has $15,000 in unpaid dental bills. That leaves her with $1,162. Sotomayor's total assets, revealed as $708,068, consist almost entirely of equity in her Manhattan apartment.

And here is what it means for us:

> If confirmed as a Supreme Court justice, Ms Sotomayor will be ruling on numerous cases that involve investors, savers, corporate profits, business regulation, and related free-market issues…. the fact that Ms Sotomayor, after so many years of highly paid professional work, has no savings or investments and no experience or apparent "empathy" with savers or investors, should be highly troubling to the tens of millions of Americans who do have investments, 401Ks, and personal savings.

And here is how this has affected her previous rulings:

> In one of her most important rulings (as reported in the *New York Times*), Sotomayor ruled that corporations must address environmental concerns in the

> most radical manner without consideration of the cost. If one particle of pollutant remains to be removed, even at the cost of bankrupting all of the companies in the S&P 500 index, that particle must be removed. If a small business has failed to purchase the most advanced equipment available to address environmental concerns, even if the price of that equipment is one hundred times the revenue of the business in question, the equipment must be purchased. That is how much "empathy" we can expect from Judge Sotomayor.

If she is confirmed, she will probably hurt our free market capitalist system, and the liberties grounded by it. The more that the court hurts business and commerce with judicial activism, the more we lose our jobs, our incomes and our liberty itself.

Barack Obama

Now, let's take a look at how Obama lives. First of all, it's well known that Obama was raised with a silver spoon in his mouth and went to all the best private schools, where he snorted expensive cocaine. And he awarded massive taxpayer grants to the hospital where his wife worked after her salary was *nearly tripled*.

The National Review reports:

> One of Obama's Earmark Requests Was for the Hospital That Employs Michelle Obama.
>
> Dan Riehl notes, via Amanda Carpenter, that in the list of earmarks he requested, $1 million was requested for the construction of a new hospital pavilion at the University Of Chicago. The request was put in in 2006.
>
> You know who works for the University of Chicago Hospital?
>
> Michelle Obama. She's vice president of community affairs.
>
> As Byron noted, "In 2006, the Chicago Tribune reported that Mrs. Obama's compensation at the University of Chicago Hospital, where she is a vice president for community affairs, jumped from $121,910 in 2004, just before her husband was elected to the Senate, to $316,962 in 2005, just after he took office."

The NY Daily News reports on how well the Obamas live within their means. (H/T Sweetness and Light)

> A close examination of their finances shows that the Obamas were living off lines of credit along with other income for several years until 2005, when Obama's book royalties came through and Michelle received her 260% pay raise at the University of Chicago. This was also the year Obama started serving in the U.S. Senate.
>
> In April 1999, they purchased a Chicago condo and obtained a mortgage for $159,250. In May 1999, they took out a line of credit for $20,750. Then, in 2002, they refinanced the condo with a $210,000 mortgage, which means they took out about $50,000 in equity. Finally, in 2004, they took out another line of credit for $100,000 on top of the mortgage.

> Tax returns for 2004 reveal $14,395 in mortgage deductions. If we assume an effective interest rate of 6%, then they owed about $240,000 on a home they purchased for about $159,250.
>
> This means they spent perhaps $80,000 beyond their income from 1999 to 2004.
>
> The Obama family apparently had little or no savings during this period since there was virtually no taxable interest shown on their tax returns.
>
> These numbers clearly show the Obamas were living beyond their means and they might have suffered financially during the decline in housing prices had they relied on taking ever larger amounts of equity from their home to pay the bills.

And what did the Obamas learn from this?

> But in 2005, Obama's book sales soared and the royalties poured in. Michelle explained, "It was like Jack and his magic beans."
>
> Without those magic beans, the Obama family would have eventually suffered the consequences of too much debt.
>
> President Obama has never faced consequences in his private life when it comes to managing money. He always had enough money simply by borrowing more and more. And just when things got tight, those magic beans came along to save the day.

I guess this explains Barack Obama's fiscal policy and his surprise at the consequent surge in unemployment. But he can count on his new judge to back him to the hilt in all of his unconstitutional interventions in the free market – neither of them knows the slightest thing about saving and investing… just borrowing and spending.

Meet two conservative women who are better than Sarah Palin

June 10, 2009 | by Wintery Knight | Link | Original Link

I noticed a story up at Hot Air about that Hollywood idiot David Letterman making fun of Sarah Palin, and it occurred to me to remind my readers that *we have better women* who can represent our views, among them Michele Bachmann and Marsha Blackburn.

First, let me just say that Sarah Palin is NOT conservative on issues like private schools and vouchers, as well on global warming. While Michele Bachmann took time off to homeschool a bunch of her children, (she has 5 natural-born and 23 foster children), we all know about Palin's weaknesses with her children.

Let's see what real conservative women can do.

Representative Michele Bachmann

Michele Bachmann

Her official blog is here.

Her video clips are here.

Here is a sample video – she wants to drill in ANWR so that we can all pay less for gas. (If you click on the video to go to YouTube, they've got an HQ button for high quality!)

Here is another sample video – she can defend capitalism and the rule of law as articulately as Thomas Sowell or Walter Williams might. (If you click on the video to go to YouTube, they've got an HQ button for high quality!)

Her most recent issue is trying to stop the Democrats from giving money to ACORN while they are charged with criminal offenses, such as voter fraud. Here she is speaking with Glenn Beck on that very issue.

Representative Marsha Blackburn

Marsha Blackburn

Her official blog is here.

And here is a recent video clip where she exposed Al Gore's financial reasons for supporting cap and trade.

I noticed that the Heritage Foundation featured a video clip of her today regarding health care.

Could the building blocks of life have emerged spontaneously on the early Earth?

June 10, 2009 | by Wintery Knight | Link | Original Link

The origin of life

There are two problems related to the origin of the first living cell, on atheism:

1. The problem of getting the building blocks needed to create life – i.e. the amino acids
2. The problem of creating the functional sequences of amino acids and proteins that can support the minimal operations of a simple living cell

Normally, I concede the first problem and grant the atheist all the building blocks he needs. This is because step 2 is impossible. There is no way, on atheism, to form the sequences of amino acids that will fold up into proteins, and then to form the sequences of proteins that can be used to form everything else in the cell, including the DNA itself. But that's tomorrow's topic.

Today, let's take a look at the problems with step 1.

The problem of getting the building blocks of life

Now you may have heard that some scientists managed to spark some gasses to generate most of the 20 amino acids found in living systems. These experiments are called the "Miller-Urey" experiments.

The IDEA center has a nice summary of origin-of-life research that explains a few of the main problems with step 1.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere,[11, 12] however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing).[15, 16] The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.[11]

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days[20] (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments[19]).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – O_3) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).[20, 21, 22] This radiation could destroy methane within a few tens of years,[23] and atmospheric ammonia within 30,000 years.[15]

And there were three other problems too:

> At best the processes would likely create a dilute "thin soup,"[24] destroyed by meteorite impacts every 10 million years.[20, 25] This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only "left-handed" ("L") amino acids and "right-handed" ("R)" genetic molecules. This is called "chirality," and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce "racemic" mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming.

The progress of science

As science has progressed, the discoveries have proved out the need for a Creator and Designer in every area – the big bang, cosmic, galactic and stellar fine-tuning, the Cambrian explosion, etc…. and even the origin of life.

> "More than 30 years of experimentation on the origin of life in the fields of chemical and molecular evolution have led to a better perception of the immensity of the problem of the origin of life on Earth rather than to its solution. At present all discussions on principal theories and experiments in the field either end in stalemate or in a confession of ignorance. New lines of thinking and experimentation must be tried."
>
> (Dose, Klaus, "The Origin of Life: More Questions Than Answers," Interdisciplinary Science Reviews, Vol. 13, No. 4, 1988, p.348.)

Meanwhile, atheists are left to have blind faith that the progress scientists have made during decades of research will be miraculously overturned by new evidence that their

beloved unobservable Flying Spaghetti Monster, (peas be upon him), did it. Hey! Don't blaspheme against the non-supernatural powers of his noodly appendage! (Two Ph.Ds in biology will not save you from the wrath of the Darwoid cultists!)

To see how bad this gets for atheists, watch this video where Dawkins says that unobservable aliens evolved somewhere else and then seeded the Earth with life. He has *no evidence* that these aliens did evolve (no fossil record), and even worse, he does not know *whether they even exist*. Nevertheless, that is the state of atheism today – an unobservable Flying Spaghetti Monster evolved somewhere else and seeded the Earth with life.

What else could have happened?

Further study

One of my favorite resources on the origin of life is this interview from the University of California with former atheist and origin of life researcher Dean Kenyon. Kenyon, a professor of Biology at San Francisco State University, wrote the textbook on "chemical evolution", which is the view that chemicals can arrange themselves in order to create the first living cell, without intervention.

This interview from the University of California with another origin of life researcher, Charles Thaxton, is also one of my favorites.

You'll need Quicktime to see the videos, or buy the videos from ARN. (Kenyon, Thaxton) I have both of them – they rock!

Debate: June 11, 2009 in Toronto: Tony Costa vs. Habeeb Alli

June 10, 2009 | by Wintery Knight | Link | Original Link

Christianity vs. Islam debate

Tony Costa e-mailed me to notify my readers in Ontario about a debate scheduled for this Thursday!

Details here.

- Date: June 11, 2009 @ 7 PM
- Place: 4140 Finch Avenue East, Scarborough, Ontario
- Price: FREE!

For some background, check out my post on the doctrine of the Trinity.

The Christian doctrine of the Trinity

Other debates on Christianity and Islam featuring William Lane Craig

Opponent	Debate Topic	Audio	Video
Jamal Badawi	The Concept Of God In Islam and Christianity	Audio	Video
Shabir Ally	Did Jesus Rise From The Dead?	Audio	Video
Shabir Ally	The Concept Of God In Islam and Christianity	Audio	Video
Shabir Ally	Who Is The Real Jesus?	Audio	Video

Courtesy of ChristianJR4 who maintains a full list of Bill Craig debates here. I helped to sponsor the last 3 of those debates!

Will Al Gore make billions if cap and trade passes?

June 10, 2009 | by Wintery Knight | Link | Original Link

I spotted this story over on Steve Milloy's Green Hell blog.

He writes:

> Al Gore's venture capital firm has invested $6 million in a software company that stands to make billions of dollars from cap-and-trade regulation — further fueling controversy that Gore lied about his profiteering from cap-and-trade to Rep. Marsha Blackburn (R-TN) and the House Energy and Environment Subcommittee during testimony in April.
>
> Hara Software sells software to help track greenhouse gas emissions. The market for such software is now about $2.5 billion dollars in size, and is expected to grow by a factor of ten to $25 billion if cap-and-trade legislation is enacted, according to Hara CEO Amit Chatterjee.
>
> …Gore is also under fire for lying to Rep. Steve Scalise (R-LA) at the same congressional hearing about his relationship with Goldman Sachs.

My post featuring the video of Congresswoman Marsha Blackburn grilling Al Gore on his investments is here.

Round-up of recent Republican legislative initiatives

June 11, 2009 | by Wintery Knight | Link | Original Link

Tom Coburn

The Maritime Sentry had this post about Senator Tom Coburn's Patient's Choice Act.

> "The Patients' Choice Act of 2009," transforms health care in America by strengthening the relationship between the patient and the doctor; using choice and competition rather than rationing and restrictions to contain costs; and ensuring universal, affordable health care for all Americans.

Tom Coburn is a medical doctor, not an ACORN lawyer who sues banks to force them to make risky loans. Commenter ECM sent me this article he wrote for the left-wing Huffington Post, in which he explains his new bill.

Marsha Blackburn

Congresswoman Blackburn urged the Senate not to pass the Democrat health care bill, citing the experience gleaned from Tennessee's own bankrupt single-payer system.

> In 1995, the state implemented TennCare, a health program modeled after Medicaid. While it covered more uninsured adults, the budget-busting program grew at a 1.5-percent annual rate, with costs skyrocketing from $2.5 billion in 1995 to $8 billion by 2004, Blackburn said.
>
> "This program started to consume every new dollar that was generated in the state," Blackburn said. Additionally, Tennessee residents who already had private health insurance were dropping their plans to get on the free health program, she said. "We started hearing stories of individuals trying to buy 'uninsurable' letters so they could get on TennCare."
>
> By 2005, Tennessee Gov. Phil Bredesen cut 170,000 adults from the program and reduced benefits for thousands more to get a handle on the soaring costs. "Our experience with trying to do universal coverage ended up being a disaster," he recently told the AP.

Don't forget about Mitt Romney's socialized health care plan in Massachusetts, which is also bankrupt. When you make something "free" demand skyrockets, and the people who are being taxed to pay for it stop working or leave. That's reality.

Lamar Alexander

Senator Lamar Alexander introduced a bill last week to distribute the government's newly acquired stock in GM and Chrysler to taxpaying Americans.

> "Instead of the Treasury owning 60 percent of shares in the new GM and 8 percent of Chrysler, you would own them, if you were one of about 120 million individuals who paid taxes on April 15," Alexander explained. "This is the fastest way to get the stock out of the hands of Washington and back into the hands of

> the American people in the marketplace where it belongs. The stock certificates would be in your name, not that of your government."
>
> …"It would be helpful to GM and Chrysler if they had 120 million Americans interested in their success."

And Senator Mike Johanns urges oversight on the TARP money already redistributed to the Obama's union special interests, who desperately need it to pay for their underfunded pensions. In contrast, Democrat Barney Frank called GM's CEO to complain about a GM warehouse closing in his home state. (Recall that Obama called the mayor of Detorit to assure him that GM would not be moving their headquarters out of Detroit). The Road to Serfdom.

Mike Pence

Congressman Mike Pence introduces the American Energy Act, a bill to increase clean domestic energy production.

The bill has 4 main objectives:

- Increase production of American-made energy in an environmentally-sound manner.
- Promote new, clean and renewable sources of energy such as nuclear, clean-coal-technology, wind and solar energy.
- Encourage greater efficiency and conservation by extending tax incentives for energy efficiency and rewarding development of greater conservation techniques and new energy sources.
- Cut red-tape and reduce frivolous litigation.

Good idea since gas prices are up $1.00 per gallon from the beginning of the year.

Bobby Jindal

Bobby Jindal, my pick in 2012 for President, is championing EIGHT bills to get tough on criminals.

Here are two of them:

- House Bill 445 will, as reported by the *Baton Rouge Advocate*, "suspend a license for two years the first time a driver refuses to take a Breathalyzer test [and] a subsequent refusal would strip a driver's license for four years."
- Senate Bill 166 would, as stated in the *New Orleans Times-Picayune*, "change the offense of driving with a suspended license for a previous DWI-related conviction from a traffic law violation to a violation of the criminal code."

The rest are here, addressing child abuse, child welfare, sexual misconduct by teachers, monitoring of sex offenders, and more!

Glenn Beck compares Alaska and California

June 11, 2009 | by Wintery Knight | Link | Original Link

Commenter ECM spotted this video. This is something that we all need to watch twice.

If I had to rate candidates, I would rate Obama as an F, McCain as a C, and Sarah Palin as a A-. She only had a few flaws, and we missed out on her superior policies because of the left-wing media and an economically illiterate electorate.

Remember why people voted against Sarah Palin?

We could have had a fiscal conservative that would have turned around the Democrat-caused recession. But many people believed the media and the comedians instead of a proven voting record and a sound balance sheet. So remember to blame the left-wing media if you lose your job and your electricity costs go through the roof!

US Unemployment Rate

Who cut spending more? Bush or Obama?

Budget Deficit

Public Debt Outlook

I am worried about the future… we should have elected Sarah Palin.

Could life have emerged spontaneously on the early Earth?

June 11, 2009 | by Wintery Knight | Link | Original Link

Last time we saw how the progress of science in the last 30 years has proved that the environment of the early Earth would not have allowed the emergence of the basic building blocks of life. This time, let's allow the atheist to assume the building blocks were created by the noodly appendage of the Flying Spaghetti Monster, (peas be upon him), and see whether it's possible for the blocks to chain themselves together to make a living cell withinin a reasonable amount of time (400 million years, say).

For this post, I will be referencing an article by Stephen C. Meyer, which he published in the Catholic journal "First Things". I chose this article deliberately because it was written at the level of an ordinary layman, so we could all understand everything well enough to feel confident explaining it to our neighbors. All unattributed quotes are from this article.

The combatants

The contest over origins features two opposing points of view:

- A Creator and Designer is responsible for the origin of life
- Matter, chance and long periods of time are sufficient to explain the origin of life

What's at stake?

Atheistic Cornell University professor Will Provine explains what logically follows from naturalistic evolution:

> There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either. What an unintelligible idea.

So, the stakes are high.

Why doubt the apparent design in nature?

There are two main reasons why atheists doubt the appearance of design in nature:

- David Hume's argument against miracles (refuted at the highest levels by non-Christian scholars)
- Charles Darwin's theory of evolution (refuted by the Cambrian explosion, irreducible complexity, the natural limits of biological change, the incompatibility of naturalistic evolution and rationality, etc.)

Minimal life functionality requires information

In order for a living organism to support life, it must be able to perform minimal functions:

- store information
- transmit information
- edit information
- use that information to regulate metabolic processes

There must be sufficient information inside the cells of that organism to support those functions. How does this information exist in the cell, and where did it come from?

Atheism is a pre-scientific worldview

Meyer describes the primitive superstitions of tribes of atheists living in primitive, pre-scientific cultures:

> …in the 1870s and 1880s scientists assumed that devising an explanation for the origin of life would be fairly easy….they assumed that life was essentially a rather simple substance called protoplasm that could be easily constructed by combining and recombining simple chemicals such as carbon dioxide, oxygen, and nitrogen. …just as salt could be produced spontaneously by adding sodium to chloride, so… could a living cell be produced by adding together several chemical constituents and then allowing spontaneous chemical reactions to produce the simple protoplasmic substance that they assumed to be the essence of life.

Atheists believe in all kinds of primitive pre-scientific myths, like the eternal universe, etc., which the progress of science has falsified. Can the progress of science falsify the atheistic superstitions about the origin of life?

The Oparin-Haldane hypothesis

Atheists began to panic in the early 20th century as discoveries began to pile up confirming the that the entire physical universe, and time itself, was created by a supernatural force that existed transcendentally, independent of matter, energy, space and time. (See here for a listing of 6 of these discoveries from the progress of science). Atheists decided that they'd better get involved in this "science" thing that the Christians had started.

Meyer reports on one of their first groundless speculations:

> During the 1920s and 1930s a more sophisticated version of this so–called "chemical evolutionary theory" was proposed by a Russian biochemist named Alexander I. Oparin…. Oparin, like his nineteenth–century predecessors, suggested that life could have first evolved as the result of a series of chemical reactions.

It was hoped that that the Flying Spaghetti Monster would appear to his true believers and ground this blind speculation, allowing atheists to continue in their flight from rationality and moral obligations.

The Miller-Urey experiment

Pre-biotic synthesis (see below) produces amino acids, which are the first step in explaining the origin of the simplest life, on atheism:

How did life begin?

As we saw last time, the Miller-Urey experiments that were designed to produce the building blocks of life (amino acids) were horribly flawed and did not reflect the conditions that would have existed on the early Earth.

I'll summarize the problems with the experiment:

- the gasses were used in the experiment were not those present on the early Earth
- molecular oxygen was excluded from the experiment
- Harmful UV radiation was filtered out by the experimenter intervention
- interfering cross-reactions were prevented by experimenter intervention

Other problems:

- extinction events, such as meteorite impacts, were excluded not considered
- the chirality problem (left-handed amino acids, right-handed sugars) was not considered
- the problem of getting all peptide bonds was not considered

This experiment, though flawed, still exists in biology textbooks today, along side faked photographs of peppered moths and doctored drawings of embryos. All must praise the Flying Spaghetti Monster, and at taxpayer expense!

The problem of biological information

To create life, you need to sequence amino acids into proteins, and sequence the nucleotides on DNA strands.

Meyer explains:

> To form a protein, amino acids must link together to form a chain. Yet amino acids form functioning proteins only when they adopt very specific sequential arrangements, rather like properly sequenced letters in an English sentence. Thus, amino acids alone do not make proteins, any more than letters alone make words, sentences, or poetry. In both cases, the sequencing of the constituent parts determines the function (or lack of function) of the whole.

> …As it turns out, specific regions of the DNA molecule called coding regions have the same property of "sequence specificity" or "specified complexity" that characterizes written codes, linguistic texts, and protein molecules. Just as the letters in the alphabet of a written language may convey a particular message

> depending on their arrangement, so too do the sequences of nucleotide bases (the A's, T's, G's, and C's) inscribed along the spine of a DNA molecule convey a precise set of instructions for building proteins within the cell. The nucleotide bases in DNA function in precisely the same way as symbols in a machine code. In each case, the arrangement of the characters determines the function of the sequence as a whole…. In the case of DNA, the complex but precise sequencing of the four nucleotide bases (A, T, G, and C) stores and transmits the information necessary to build proteins.
>
> …As Bernd–Olaf Kuppers recently stated, "The problem of the origin of life is clearly basically equivalent to the problem of the origin of biological information."

How do atheists account for this biological information?

Atheistic superstitions about the biological information

Le's take a look at the atheist's faith-based explanations of the origin of life: chance, law and self-organization.

For the first one, let's calculate the odds of building a protein composed of a functional chain of 100 amino acids, by chance. (Think of a meaningful English sentence built with 100 scrabble letters, held together with glue)

1. Chance:

- BONDING: You need 99 peptide bonds between the 100 amino acids. The odds of getting a peptide bond is 50%. The probability of building a chain of one hundred amino acids in which all linkages involve peptide bonds is roughly (1/2)^99 or 1 chance in 10^30.
- CHIRALITY: You need 100 left-handed amino acids. The odds of getting a left-handed amino acid is 50%. The probability of attaining at random only L–amino acids in a hypothetical peptide chain one hundred amino acids long is (1/2)^100 or again roughly 1 chance in 10^30.
- SEQUENCE: You need to choose the correct amino acid for each of the 100 links. The odds of getting the right one are 1 in 20. Even if you allow for some variation, the odds of getting a functional sequence is (1/20)^100 or 1 in 10^65.

The final probability of getting a functional protein composed of 100 amino acids is 1 in 10^125. Even if you fill the universe with pre-biotic soup, and react amino acids at Planck time (very fast!) for 14 billion years, you are probably not going to get even 1 such protein. And you need at least 100 of them for minimal life functions, plus DNA and RNA.

Research performed by Doug Axe at Cambridge University, and published in the peer-reviewed Journal of Molecular Biology, has shown that the number of functional amino acid sequences is tiny:

> Doug Axe's research likewise studies genes that it turns out show great evidence of design. Axe studied the sensitivities of protein function to mutations. In these "mutational sensitivity" tests, Dr. Axe mutated certain amino acids in various

> proteins, or studied the differences between similar proteins, to see how mutations or changes affected their ability to function properly. He found that protein function was highly sensitive to mutation, and that proteins are not very tolerant to changes in their amino acid sequences. In other words, when you mutate, tweak, or change these proteins slightly, they stopped working. In one of his papers, he thus concludes that "functional folds require highly extraordinary sequences," and that functional protein folds "may be as low as 1 in 10^77."

The problem of forming DNA by sequencing nucleotides faces similar difficulties. And remember, mutation and selection cannot explain the origin of the *first* sequence, because mutation and selection require replication, which does not exist until that first living cell is *already in place*.

2. Law:

The idea here is that components, such as nucleotides, might have special bonding affinities that might cause them to bond together spontaneously into functional sequences. Like if certain SCRABBLE tiles had an affinity for certain other tiles that caused them to bond together whenever they met.

Meyer writes:

> Consider what would happen if the individual nucleotide "letters" in a DNA molecule *did* interact by chemical necessity with each other. Every time adenine (A) occurred in a growing genetic sequence, it would likely drag thymine (T) along with it. Every time cytosine (C) appeared, guanine (G) would follow. As a result, the DNA message text would be peppered with repeating sequences of A's followed by T's and C's followed by G's.

3. Self-organization:

The idea here is that some spontaneous order might arise due to some physical force, just like rocks sort themselves by size in a rock agitator because of gravity.

Meyer writes:

> …just as magnetic letters can be combined and recombined in any way to form various sequences on a metal surface, so too can each of the four bases A, T, G, and C attach to any site on the DNA backbone with equal facility, making all sequences equally probable (or improbable). The same type of chemical bond occurs between the bases and the backbone regardless of which base attaches. All four bases are acceptable; none is preferred. In other words, differential bonding affinities do not account for the sequencing of the bases. Because these same facts hold for RNA molecules, researchers who speculate that life began in an "RNA world" have also failed to solve the sequencing problem…

Understanding what creates information

The bottom line is that in order for software code, or even English letters, to be functional, it needs to defy ordering mechanisms. Biological sequences are functional for

the same reason that software code or English text is functional – because some intelligent agent *chose* an irregular sequence of characters in order to achieve a specific purpose. Look at the letters in this post – they are not ORDERED by physical laws. They are SELECTED by an intelligent agent.

Meyer writes:

> To see the distinction between order and information, compare the sequence "ABABABABAB ABAB" to the sequence "Time and tide wait for no man." The first sequence is repetitive and ordered, but not complex or informative.

What causes specified, complex sequences?

> …the information contained in an English sentence or computer software does not derive from the chemistry of the ink or the physics of magnetism, but from a source extrinsic to physics and chemistry altogether. Indeed, in both cases, the message transcends the properties of the medium… Our experience with information–intensive systems (especially codes and languages) indicates that such systems always come from an intelligent source…

And this is what everybody means by "intelligent design". This design inference came from the progress of science. The more we discovered about the cell, the more nature pointed towards a creative, designing intelligence. The only option left to atheists now is *blind faith that the Flying Spaghetti Monster will swoop in and undo the progress of science over the last 100 years.* Good luck with that, atheists!

Further study

One of my favorite resources on the origin of life is this interview from the University of California with former atheist and origin of life researcher Dean Kenyon. Kenyon, a professor of Biology at San Francisco State University, wrote the textbook on "chemical evolution", which is the view that chemicals can arrange themselves in order to create the first living cell, without intervention.

This interview from the University of California with another origin of life researcher, Charles Thaxton, is also one of my favorites.

You'll need Quicktime to see the videos, or buy the videos from ARN. (Kenyon, Thaxton) I have both of them – they rock!

Obama releases terrorists to Bermuda, forces FBI to mirandize captured terrorists

June 12, 2009 | by Wintery Knight | Link | Original Link

Releasing captured terrorists

The President of the United States is releasing capture terrorists, known allies of Al-Quaeda and the Taliban, so that they can attack us again.

ABC News reports: (H/T Hot Air)

> The Obama administration put out some seemingly mixed messages on the Uighur transfer, saying that their release to Bermuda would make the US safer, while insisting the government would guard against their travel to the US.
>
> An Obama administration source told ABC News that "the Uighurs will not be able to travel to the United States unless the U.S. government consents in advance."

See, the thing is, during Clinton's 2 terms, the United States was attacked abroad four times, so terrorists don't have to be in the country to hurt us. So restricting them from traveling to the US solves *nothing*, since they can travel somewhere else and attack us there.

The UK Times says that the British, who own Bermuda, are furious that weren't consulted:

> The British Government responded with ill-disguised fury tonight to the news that four Chinese Uighurs freed from Guantanamo Bay had been flown for resettlement on the Atlantic tourist paradise of Bermuda.
>
> The four arrived on Bermuda in the early hours, celebrating the end of seven years of detention after learning that they were to be accepted as guest workers.
>
> But it appears that the Government of Bermuda failed to consult with the Foreign and Commonwealth Office on the decision to take in the Uighurs – whose return is demanded by Beijing – and it could now be forced to send them back to Cuba or risk a grave diplomatic crisis.
>
> Bermuda, Britain's oldest remaining dependency, is one of 14 overseas territories that come under the sovereignty of the United Kingdom, which retains direct responsibility for such matters as foreign policy and security.

National security you can believe in! Leftists hates the good and love the evil, as Evan Sayet explained.

Forcing the FBI to give terrorists miranda rights

But Obama the hawk is not just releasing terrorists so they can attack our assets abroad. He's also forcing the FBI to give miranda rights to terrorists captured on the battlefield – to make sure they don't reveal their nice plans to any sneaky counter-terrorism experts.

The Weekly Standard had the scoop: (H/T Michelle Malkin)

> When 9/11 mastermind Khalid Sheikh Mohammad was captured on March 1, 2003, he was not cooperative. “I’ll talk to you guys after I get to New York and see my lawyer,” he said, according to former CIA Director George Tenet.
>
> Of course, KSM did not get a lawyer until months later, after his interrogation was completed, and Tenet says that the information the CIA obtained from him disrupted plots and saved lives. “I believe none of these successes would have happened if we had had to treat KSM like a white-collar criminal — read him his Miranda rights and get him a lawyer who surely would have insisted that his client simply shut up,” Tenet wrote in his memoirs.
>
> If Tenet is right, it’s a good thing KSM was captured before Barack Obama became president. For, the Obama Justice Department has quietly ordered FBI agents to read Miranda rights to high value detainees captured and held at U.S. detention facilities in Afghanistan, according a senior Republican on the House Intelligence Committee.

And my friend Andrew e-mailed me this story from Fox News, which has more details.

MUST SEE! Michele Bachmann goes nuclear against gangster government!

June 12, 2009 | by Wintery Knight | Link | Original Link

Representative Michele Bachmann

UPDATE: For all the people that are searching for Michele Bachmann, this blog is FILLED with stories on Michele Bachmann!!! Here is a good summary of some of her best material. Here's her latest video.

More recent posts

Here are my recent posts on Michele Bachmann:

- Michele Bachmann defends free trade at the Heritage Foundation
- MUST-SEE: Michele Bachmann explains why the US dollar is in serious trouble

- New Michele Bachmann video on the future of Obamacare
- MUST-READ: Michele Bachmann open to running for President in 2012!

Michele Bachmann's amazing speech

This video is a MUST SEE. (H/T Doug Groothuis)

Here is the article by Michael Barone that she cited.

What is gangster government?

> To start with the obvious, even though Obama denies that he will manage the companies, we have all learned by now that he has no problem doing the very thing he is denying. (In ordinary life this political artfulness is called lying). He fired one CEO, forced Chrysler to accept Fiat (WSJ.com 6/5/09), told GM that it cannot move its headquarters out of Detroit (WSJ.com 6/3/09), and may have

> ordered that whoever buys GM's European auto maker Opel must agree not to export cars to the U.S.. (WSJ.com 6/1/09) These decisions were made in secret with no Congressional oversight, by a man with no training or experience of any kind in business, never mind the auto business. The companies will be run by politicians, who will make decisions for the benefit of political agendas rather than on sound business principles. The result will be that the auto companies and the union will not make the deep changes required to make the companies profitable, so we can anticipate many more cash infusions.

Gary Jason writes about how Obama is intervening in the free market to screw creditors and take care of his union supporters with taxpayer bailouts.

> I will argue that the unprecedented action by the current administration in manipulating the bankruptcies of Chrysler and GM, and in effect nationalizing the companies, is egregiously unethical by every one of these major ethical perspectives. For this reason, I believe that this action makes it morally imperative for Americans to boycott these socialized companies.
>
> … the Obama administration spent tens of billions in taxpayers' dollars to take control of the companies and force the outcome it wanted. Obama, who received millions in contributions from the United Auto Workers union, has forced a settlement that will give UAW far more equity in the companies when they come out of bankruptcy than it was due compared to the secured debt holders.[i] Obama's agents used threats and intimidation (calling holdout bondholders speculators and hedge funds at one point) to get the creditors to accept being shafted. (WSJ.com 5/11/09)The result is that the vast majority of the two companies will be almost clearly owned by the federal government and the UAW, and the UAW arguably controls the federal government.
>
> The result is drenched in irony. The UAW was a major reason why the companies hit the wall, and now the UAW will be rewarded with major control and ownership. It is as if a rape victim were forced to marry her rapist. The result makes the crony capitalism we saw in Russia look clean by comparison; it, at least, was a kind of capitalism.

And what are the long-term consequences?

> …To start with the obvious, even though Obama denies that he will manage the companies, we have all learned by now that he has no problem doing the very thing he is denying. (In ordinary life this political artfulness is called lying). He fired one CEO, forced Chrysler to accept Fiat (WSJ.com 6/5/09), told GM that it cannot move its headquarters out of Detroit (WSJ.com 6/3/09), and may have ordered that whoever buys GM's European auto maker Opel must agree not to export cars to the U.S.. (WSJ.com 6/1/09) These decisions were made in secret with no Congressional oversight, by a man with no training or experience of any kind in business, never mind the auto business.

> The companies will be run by politicians, who will make decisions for the benefit of political agendas rather than on sound business principles. The result will be that the auto companies and the union will not make the deep changes required to make the companies profitable, so we can anticipate many more cash infusions.
>
> Worse yet, we can foresee that now that the UAW and feds have control of Chrysler and GM, they won't stop there. Their natural instinct will be to achieve monopolistic control. The UAW has helped drive Chrysler and GM to the wall and is now co-owner with the government of most of the equity. They will likely next target Ford, to get equity ownership of it. Then look for the UAW and the administration it controls to attempt to force the employees of foreign auto makers in this country to join the UAW, or use environmental and other regulatory laws to put those companies out of business.

Obama and the Democrats are willing to use threats and intimidation to ram through their socialist policies. Here is a long list of unconstitutional interventions. (H/T 4Simpsons) He does not care about laws and rights – he wants power over your liberty. He wants to control your life.

The Road to Serfdom

For those of you who did not know before, the greatest economics book of the 20th century was Nobel-prize winning economic F.A. Hayek's "The Road to Serfdom", which is analyzes the history of socialism and fascism in Nazi Germany and Russia. This book is #1 on Human Events' Top 10 books every Republican should read.

Human Events writes:

> Friedrich Hayek (1899-1992) was an Austrian economist awarded the Nobel Prize in 1974. He defended capitalism and individual liberty against collectivism. In "The Road to Serfdom," he describes how government planning of the economy leads to tyranny. President Reagan cited Hayek as one of his favorite economists. "To decentralize power is to reduce the absolute amount of power, and the competitive system is the only system designed to minimize the power exercised by man over man," wrote Hayek. "Who can seriously doubt that the power which a millionaire, who may be my employer, has over me is very much less than that which the smallest bureaucrat possesses who wields the coercive power of the state and on whose discretion it depends how I am allowed to live and work?"

When Michele Bachmann stands up on the floor of the House and advocates against government intervention in the free market, she is literally standing between the American people and mass-murdering, rights-trampling, faith-destroying communism.

And by the way, Obama means to do the exact same thing with the health care and energy sectors.

BONUS

Don’t forget my recent post which has even more amazing and encouraging videos of Michele Bachmann and Marsha Blackburn defending the American way. Or click here to see all of my Michele Bachmann posts. You can read more about her strong Christian faith in this article from World Magazine.

Does the Cambrian explosion disprove Darwinian evolution?

June 12, 2009 | by Wintery Knight | Link | Original Link

I made you all suffer this week by reading two long posts on the origin of life:

- The problem of making the building blocks needed for life
- The problem of making the biological information needed for life

So now I'm going to be nice and let you learn about the Cambrian explosion through videos! Yeah! Because it's Friday.

What is the Cambrian explosion?

Same story as always. Primitive tribes of atheists living during pre-scientific times naively attributed the diversity of life to the Flying Spaghetti Monster's noodly appendage, working over billions of years. But then science progressed, discoveries were made, and all rational people accepted that virtually all the basic body plans emerged, fully-formed, in a 3-5 million year period, about 540 million years ago. And no new body plans have emerged since.

The best explanation of the sudden origin of nearly all animal body plans in the blink of an eye is that an intelligent designer provided the required software code for all of these brand new body plans. New instructions, like new Java code or new English sentences, require an intelligent cause. Period.

Part 1: (7:50)

Part 2: (3:25)

Yes, the people in the videos have Ph.Ds from Cambridge, Yale, Berkeley, etc. They are much smarter than any atheists, and they win any debates with atheists that dare to debate them. (Which is why atheists prefer censorship instead of debate, and blind faith instead of evidence)

Don't worry, if you are an atheist, I'm sure that the noodly appendage of the hopeful Flying Spaghetti Monster will eventually overturn decades of scientific progress very soon, and then you can be comfortable avoiding moral obligations, being self-centered, thinking you are better than other people, and pursuing happy feelings at the expense of the liberties and rights of other people.

Further study

Advanced students can read more about the Cambrian explosion a published peer-reviewed book chapter (Michigan State University Press, 2003) or in a peer-reviewed research paper (Proceedings of the Biological Society of Washington, 2007).

If you are totally lost on the question of origins, you can watch two DVDs that are now online at Youtube. Both videos are by Illustra Media. This is the place for complete

beginners to get started.

Here are the 2 playlists:

- Unlocking the Mystery of Life (12 videos in a playlist)
- The Privileged Planet (12 videos in a playlist)

Friday night funny: Obama's magic speeches and wise Latina writings

June 12, 2009 | by Wintery Knight | Link | Original Link

Scrappleface reports that Obama's Cairo speech has *worked!*

> "I suppose I've been a bit unreasonable, testy, even dictatorial at times," said the contrite Iranian leader. "After that speech, I feel like my eyes have been opened. How could I have missed all of the common ground we share with America and Israel. I'm going to have Barack over to the house, and let him know that Iran's nuclear ambitions can take a back seat to our desire for true brotherhood and unity. And boy, do I ever owe those Jews a big apology?"

According to Press Secretary Gibbs, Obama plans a similar speech… for atheists:

> "Most peace-loving atheists want nothing more than to be left alone to pursue sensory stimulus, pass along their DNA, and then to allow their carbon molecules to reunite with the soil," said Gibbs, "but instead they bear the reproach of those who blame them for the actions of Hitler, Stalin, Mao, Pol Pot and George Soros.

> …Like most Americans, atheists want safety for their offspring, those charming little vessels of genetic code," said Gibbs. "They want the right to elect representatives who will make laws guaranteeing survival of the fittest. They want freedom to speak whatever ideas the electro-chemical reactions in their brains happen to produce…."

Steven Crowder meets Alfonzo Rachel, and they explain what Republicans are *really like.* (H/T 4Simpsons, Hot Air)

Oh, I know I'm just like those two! Well, I look more like Zo than Crowder.

Here are some of Ronald Reagan's best lines: (H/T Club For Growth)

Barney Frank's fascist tendencies are showing: (H/T Michelle Malkin)

You can also read some of the wise Latina's writings. (H/T Muddling Towards Maturity)

LifeNews reports on her interview with Senator Demint:

> "When I asked if an unborn child has any rights whatsoever, I was surprised that she said **she had never thought about it**," he said. "This is not just a question about abortion, but about respect due to human life at all stages — and I hope this is cleared up in her hearings."

Happy Friday!

Indian government says sex education promotes promiscuity

June 13, 2009 | by Wintery Knight | Link | Original Link

Story from Life Site News.

Excerpt:

> The Indian government has rejected western-style sex education programs, saying they do nothing to solve the problem of teenage pregnancy but only exacerbate the problem by promoting sexual promiscuity.
>
> A government report on the matter was issued in response to a citizen-launched petition against a decision by the Union Ministry of Human Resource Development (HRD) to start sex-education in schools. The program had been touted as a means of preventing the spread of AIDS and other sexually transmitted diseases. Materials for teachers and facilitators in India included explicit details about "alternative methods" of sex, including anal and oral sex, presented as a means of avoiding AIDS.
>
> According to the government, the curriculum prepared with material from UNICEF, had "shocked the consciences" of the country and was described as "quite frightening." If implemented, the report said, it would "promote promiscuity of the worst kind." The report was issued in March by a committee of the Rajya Sabha, the upper house of the Indian Parliament, and says that the introduction of sex education in India's schools should at least be delayed until the issue has been fully debated in public.

Here is my post regarding homosexual sex education for kindergarten students in the USA. Here is another post about Alberta's proposed Bill 44 which allows parents to opt their children out of sex education.

American university gender gap: 57% female, 43% male

June 13, 2009 | by Wintery Knight | Link | Original Link

Story here in the Gainesville Sun.(H/T Why Boys Fail)

They focus mostly on the gender gaps in Florida universities, but I think these schools reflect the national situation. Boys are falling behind girls in schools, and in life.

Excerpt:

> Women make up 57 percent of college enrollment nationally, according to the most recent federal statistics. In Florida, five of the 11 state universities have female enrollments topping 60 percent.
>
> …Graduation rates support the thought. More than 63 percent of women graduate from UF in four years, compared with 42 percent of men.

I agree with this statement from Thomas Mortenson, a senior scholar at the Pell Institute for the Study of Opportunity in Higher Education:

> He calls for changing the way in which boys are educated. Boys learn through a more active, hands-on learning style than girls, he said. Mischief-making boys are treated as criminals or sent to special education classes, he said.
>
> "Boys aren't allowed to be boys today," he said. "They're treated as defective girls."

Does anyone care enough to ask men why they are not motivated? Are there proper schools, teachers and incentives in place to prod men towards responsible manhood?

Debate: Must morality be grounded by God?

June 14, 2009 | by Wintery Knight | Link | Original Link

"Unbelievable", is a show broadcast every Saturday in the UK. Every week, they feature a debate between a Christian and a non-Christian. The debate this week was on the moral argument, which argues that meaningful morality, including free will, human rights, moral rules, moral obligations, and moral significance, *must* be grounded in God.

THIS IS A MUST-LISTEN.

The debate starts a bit into the podcast, after they review audience reactions to last week and preview the next week's topic.

Here is the link to the podcast. (MP3 audio)

If you have trouble with that link, try here instead.

The atheist Paul Orton argues this:

- no moral absolutes
- morality is a set evolved conventions
- the set varies by time and place

The Christian David Robertson argues this:

- morality is meaningless unless there are moral absolutes
- cultural relativism doesn't rationally ground moral judgments
- the Bible does not teach that slavery is good

One of the best parts of the debate is when David contrasts H.G. Wells, an atheistic socialist who embraced socialism and fascism as a natural extension of his atheism, and a Christian, William Wilberforce who spent over two decades of his life trying to free the slaves in the UK.

This debate can be seen as an illustration of the thesis that I advanced in my series of posts on atheism and morality, in which I argued that atheism does not ground the minimal requirements for rational morality.

Further resources

This page contains a link to an excellent lecture on the ontological foundations of rational morality, as well as a number of debates between Christians and atheists on whether morality is rationally grounded by the worldview of atheism. And you can find some other apologetics posts here, including an article on whether the the moral statements of atheists are even intelligible, on atheism.

The best book ever written on this topic is Greg Koukl and Francis J. Beckwith's "Relativism: Feet Firmly Planted in Mid-Air". You can see Greg deliver a lecture about relativism to an audience of students and faculty at UCLA (MP3 audio here). If you want to read something free on the web that explains the problems with moral relativism, which

is the view of morality that *is* grounded by atheism, look here.

Does legalized abortion increase or decrease child abuse?

June 14, 2009 | by Wintery Knight | Link | Original Link

Neil Simpson has created a round-up of links on his blog. All the stories in his round-up are interesting, but this one by Randy Alcorn caught my eye. It's entitled "The Rise of Child Abuse as a Result of Abortion". You have to skip down a bit to get to the main point as he first talks for a while about his evil twin.

Here is his thesis:

> My belief is that when people believe it's okay to kill a child before he's born, because an adult has rights over his life, then inevitably it will become more acceptable to beat him up once he's born.

And here is his proof:

> In 1973, when abortion was first legalized, United States child abuse cases were estimated at 167,000 annually. According to the U.S. Department of Health and Human Services, approximately 903,000 children were victims of abuse during 2001, a number more than five times greater.

Obviously, this is not counting the 49 million murders of actual children.

Now you might say: "Wintery! Doesn't abortion decrease child abuse by eliminating unwanted children?".

Randy says no:

> University of Southern California professor Edward Lenoski conducted a landmark study of 674 abused children. He discovered that 91 percent of the parents admitted they wanted the child they had abused.
>
> "Studies indicate that child abuse is more frequent among mothers who have previously had an abortion." Dr. Philip Ney's studies indicate that this is partially due to the guilt and depression caused by abortion, which hinders the mother's ability to bond with future children. He documents that having an abortion decreases a parent's natural restraint against feelings of rage toward small children.
>
> The attitude that results in abortion is exactly the same attitude that results in child abuse. Furthermore, if she doesn't abort, the mother can look at her difficult three-year-old and think, "I had the right to abort you." The child owes her everything; she owes the child nothing. This causes resentment of demands requiring parental sacrifice. Even if subconscious, the logic is inescapable: If it was all right to kill the same child before birth, surely it's all right to slap him around now.

I think we need to realize what is going through the mind of young women: they want to be happy and they are willing to murder innocent children in order to secure their own happiness. They do not see why anyone else's rights should limit their own pursuit of happiness. After all, it's survival of the fittest. The majority of single women are pro-abortion. They believe that their own happiness matters more than moral values and moral duties.

Consider how women voted in 2008:

> Unmarried women supported Barack Obama by a 70-to-29 percent margin, and they voted for Democratic House candidates by a similar margin — 64-to-29 percent. These margins mean that unmarried women edged out both younger voters and Hispanic voters as the demographic with the strongest support for President-elect Obama. These unmarried women voters joined with younger voters and people of color to create what GQR calls a "new American electorate" — voters with a decided preference for liberal candidates.
>
> Overall, women strongly supported Senator Obama over Senator McCain (56 percent for Obama, 43 percent for McCain). Men split their votes about evenly between the two presidential candidates, with 49 percent for Obama and 48 percent for McCain.

Obama is the most pro-abortion President there has ever been.

In my series of posts on atheism and morality, I explain why moral relativism is the result of atheism. If you want to stop abortion, there are two things to do. 1) You need to start convincing women that God exists, that objective morality is real, and that moral obligations trump the pursuit of selfish happiness. 2) You need to vote to cut off all taxpayer subsidies for pre-marital sex; sex education, contraception, single motherhood and abortion.

Obama silent following rigged Iranian election and protester beatings

June 14, 2009 | by Wintery Knight | Link | Original Link

Why doesn't Obama stand up for freedom and democracy in Iran?

Fox News reports that the election was fraudulent, accoring to U.S. analysts: (H/T Hot Air)

> U.S. analysts find it “not credible” that challenger Mir Hossein Mousavi would have lost the balloting in his hometown or that a third candidate, Mehdi Karoubi, would have received less than 1 percent of the total vote, a senior U.S. officials told FOX News.

Hot Air has tons of updates at the link above, and a video of the protest.

The UK Times reports: (H/T Pajamas Media)

> In the Iranian capital’s most serious unrest for 10 years, thousands of liberals who claimed the election had been rigged vented their fury in running battles with police.
>
> They fought officers armed with batons and stun grenades, set fire to police vehicles and threw stones at government buildings.
>
> I saw police in camouflage uniforms and black flak jackets respond by firing the grenades from motorcycles into a crowd that chanted “Down with the dictator” and denounced what it called a stolen election.
>
> In a stand-off near the interior ministry, which oversaw the count, opposition supporters formed barricades of burning tyres, sending plumes of smoke over

> the city. Helmeted police chased protesters who became detached from the main group and beat them with truncheons.

Hot Air linked to this BBC video, in which protests cry for freedom are beaten by police: (H/T Hot Air)

Fox News reports on the response of the Obama administration: (H/T Gateway Pundit)

> The Obama administration would not describe the outcome as legitimate or illegitimate or deem a victory by Mousavi as necessarily better.
>
> "We're not going to characterize what would have been a better or worse scenario," the official said. "We will deal with this as it is, not as we wish it to be.

And they also report on the Republican response, which is quite different:

> "There appears to be pretty good evidence that this is a cooked election," Rep. Dan Lungren, R-Calif., told FOX News. "And the most depressing thing for me is we were going to see whether in fact the true leaders of this country, the religious leaders, were going to allow for a real election to have an expression of the people.

Michael Ledeen describes the atrocities:

- *Mousavi and Karrubi, the two "reformist" candidates in Friday's "elections" are under house arrest, along with dozens of their followers;*
- *"Reformist" journalists and activists have been rounded up and jailed;*
- *Cell phones (including, after a day's delay, international cell phones) have been blocked, access to internet has been filtered, facebook is unreachable, and you can't tweet (can the silencing of Western reporters be far behind?);*
- *In Tehran, student dormitories are surrounded by security forces.*

The Tehran Journal claims 50-100 protesters are dead. (H/T Gateway Pundit)

The NYT reports on Obama's response:

> The Obama administration is determined to press on with efforts to engage the Iranian government, senior officials said Saturday, despite misgivings about irregularities in the re-election of President Mahmoud Ahmadinejad…

Business as usual… just keep talking with them, and hope they will forgive us for all our misdeeds. There is not going to be a challenge to this coup from the White House… the Iranian people are on their own.

Gateway Pundit linked to some photos are here and here.

Hot Air has links to Twitter channels if you want to keep on top of the unfolding story.

Democrat health care bill requires 600 billion dollar tax hike

June 15, 2009 | by Wintery Knight | Link | Original Link

Welcome visitors from 4Simpsons! Thanks for the link Neil!

Bloomberg reports:

> Health-care overhaul legislation being drafted by House Democrats will include $600 billion in tax increases and $400 billion in cuts to Medicare and Medicaid, Ways and Means Committee Chairman Charles Rangel said.
>
> Democrats will work on the bill's details next week as they struggle through "what kind of heartburn" it will cause to agree on how to pay for revamping the health-care system, Rangel, a New York Democrat, said today. The measure's cost is reaching well beyond the $634 billion President Barack Obama proposed in his budget request to Congress as a 10-year down payment for the policy changes.
>
> Asked whether the cost of a health-care overhaul would be more than $1 trillion over a decade, Rangel said, "the answer is yes." Some Senate Republicans, including Senator Orrin Hatch of Utah, say the costs will likely exceed $1.5 trillion.

> …That won't be enough to cover the overhaul costs. Obama said this week he plans in the coming days to disclose more proposals for raising "additional sources of revenue." In a letter last week to Senate Democrats drafting legislation he said he will be proposing between $200 billion and $300 billion in further Medicare and Medicaid cuts.

If you think that tax hikes on "the rich" won't affect you, you're naive. The rich are the people you work for. If Obama starts confiscating your money, they will ship your job overseas where taxes are lower. That's just the way it is. The most productive people in the world are not just going to hand over their money to Obama to redistribute to unions, bureaucrats, the United Nations, ACORN and Planned Parenthood.

Stem cells in India

Meanwhile, here is a neat health care story so you will know where to go for medical treatment (India) after Obama tells you that you will have to wait two years behind people who voted *for* him.

> "It was the first time in eastern India that such a transplant was being performed on a child," he said….Pramita's bone marrow, which contain stem cells, was collected from her spinal cord. It was successfully transplanted in her body in April 2009. The entire process took two months during which she was kept isolated in a sterilised room with high efficient particulate air (HEPA) filter. "We

> will do a follow-up on her health for the next six months since she may contract infection during this period and so has to follow some restrictions. But after that she can lead a normal life and can resume her dance lessons without any problem," Dr. Mukhopadhyay said.

For more on stem cell research, see this post.

Two must-see media interviews with Sarah Palin

June 15, 2009 | by Wintery Knight | Link | Original Link

Welcome visitors from the Maritime Sentry! Thanks for the link!

Sarah Palin is looking very good as a contender in 2012. I am still favoring Governor Jindal in Louisiana, with Governor Sanford in South Carolina as #2. But Palin is definitely in the mix!

- Here she is debating left-wing extremist Wolf Blitzer on CNN.
- Here she is debating left-wing extremist Matt Lauer on NBC.

I am so happy when I see women standing up for fiscal conservatism, social conservatism and a strong foreign policy. I am going to give her 2 A+ ratings for these two tough media interviews. She understands the vision of small government and low taxes. And she has a talent for explaining it in a winsome, engaging manner. The trouble is that Democrat voters are so ignorant about economics that she has to explain it very slowly.

UPDATE: This post seems to be popular. Don't forget my previous post about two women I think are even better conservatives than Sarah Palin. And here is the best of those two attacking Democrats in a super video clip.

Robert P. Murphy explains why he is public about his faith

June 15, 2009 | by Wintery Knight | Link | Original Link

I am always appreciative of Christian scholars who are can rise to the top of their professions without hiding their faith. One top economist is Robert P. Murphy, author of the *best* entry-level economics textbook out there, called "The Politically Incorrect Guide to Capitalism". Rob also has a new book out called "The Politically Incorrect Guide to the Great Depression and the New Deal".

Recently, Rob posted about why he is public about his faith, especially given the discomfort felt by the many famous economists that he works with.

Excerpt:

> I remember when I was an atheist, I was extremely uncomfortable one time when a guy's wife asked me if I knew Jesus….
>
> In contrast, what I do is make my views known on this blog (or in public forums if it is appropriate), and I have even restricted the Jesus talk to Sundays. I absolutely love it when a bunch of you regular readers say things like, "Jeez Bob, you're a good economist and very logical on a lot of things, but you went off the deep end with this God stuff." So that's part of my point in doing it, is to show that I think the doctrines of Christianity make sense and are logical. I utterly reject the idea–which many simple Christian folk have advanced–that you shouldn't think too much about Biblical matters, or that you shouldn't use your reason when contemplating God.

This is exactly my view as well. I like to tell people what I believe and why as I get to know them, then leave it up to them to come back to me with questions.For me this serves two purposes: 1) That person will know that at least one smart person (me) still believes in Christianity and 2) That person will have a resource in case they decide to try to respond to God's seeking after them.

Further study

For more about integrating your vocation and your faith, and being a public Christian where you work, check out these posts from my index of apologetics.

Mentoring

- the importance of being able to argue both sides of a question
- why does talking about religion make people uncomfortable?
- how to talk to your co-workers about your faith

Apologetics advocacy

- does the Bible teach that faith is opposed to logic and evidence?

- the six enemies of apologetic engagement
- why men flee the feminized church

Democrats still silent on Iran, but Republican whip Eric Cantor takes a stand

June 16, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from iPandora! Thanks for the link Matthew!

Before we start, head on over to Gateway Pundit and take a look at some of the photos and videos he's assembled. Go on, I'll wait.

Here's one to get you started:

Iranian women come to the aide of a man being beaten

Time magazine says that one protester rally drew between 2-3 million people. (H/T Hot Air)

Compare this article from the UK Telegraph about Obama's response with the response of the Republican whip Eric Cantor.

The Telegraph article says:

> The Obama administration's response to Mahmoud Ahmadinejad's fraudulent election victory is cowardly, lily-livered and wrong. The White House's refusal to officially question the result or even condemn the brutal suppression of opposition protestors, is undermining America's standing as a global power, and is little more than a face-saving, cynical exercise in appeasement that will all end in tears.

That's right. The world hates us. (And not just over Obama's naive protectionism). Although Reagan and George W. Bush might have sided with freedom-lovers against tyranny, Obama prefers to free America-hating terrorists, who mocks his own country to get a pat on the head from ruthless dictators, who gives Iran a free pass on nuclear plants, and who cuts missile defense as North Korea launches missiles over Japan.

Vice President Joe Biden on Sunday's *Meet the Press*:

> "we're going to withhold comment… I mean we're just waiting to see."

Secretary of State Hillary Clinton in a statement on Saturday:

> "the United States has refrained from commenting on the election in Iran"

White House spokesman Robert Gibbs:

> "impressed by the vigorous debate and enthusiasm this election generated."

Now, you might think that Germany, led by Dr. Angela Merkel, might be worse than Obama. But you'd be *very* wrong. Merkel is a conservative – she believes in freedom, and her statement shows that Germany has elected someone a backbone, someone who cares about what goes on in other nations.

> …the Germans, who shamefully happen to be Europe's biggest exporters to Iran, strongly denounced the crackdown on protestors, as have a number of European governments. Foreign Minister Frank Walter Steinmeier condemned the "brutal actions" against demonstrators, and summoned the Iranian Ambassador to Berlin in protest.

UPDATE: France piles on. FRANCE! But Sarkozy is a conservative, not a radical leftist like Obama. (H/T Gateway Pundit)

> French President **Nicolas Sarkozy on Tuesday branded Iran's election result a fraud** as the international outcry over the security forces' crackdown on the opposition in Tehran intensified.
>
> Governments from Asia to Europe voiced concern about the violence that erupted Monday during rallies protesting the hardliner Mahmoud Ahmadinejad's re-election, with US President Barack Obama saying he had "deep concerns" while also not wanting to meddle in Iran's affairs.
>
> But while some governments tried to avoid taking sides, Sarkozy said the unrest was a direct result of Ahmadinejad's failings in his first term.
>
> **"The extent of the fraud is proportional to the violent reaction,"** said the French leader.

MUST-SEE: Brit Hume calls out the Democrats on their moral equivalence and hypocrisy: (H/T Hot Air)

What do you expect from a party of godless hedonists? They want "free" health care… who cares about other people's human rights? They were never interested in helping others… they just want to steal what other people worked for. It's all about the money.

Hot Air links to a Fox News poll in which 66% of respondents said that Obama was not being tough enough on Iran. Presumably the blame-America-first crowd who voted for him will be pleased with his inaction. What do they care about liberty? George W. Bush

push liberty harder than any president since Ronald Reagan. Now we have to watch pro-democracy protesters die, while President Pantywaist dithers over health care.

Republicans speak out against tyranny

Let's take a look at Eric Cantor's statement in The Hill. (H/T Gateway Pundit)

> "The Administration's silence in the face of Iran's brutal suppression of democratic rights represents a step backwards for homegrown democracy in the Middle East," Cantor said. "President Obama must take a strong public position in the face of violence and human rights abuses. We have a moral responsibility to lead the world in opposition to Iran's extreme response to peaceful protests.
>
> "In addition, Iran's clerical regime has made clear that its nuclear program will move forward," he said. "The United States cannot trust the aspirations of a nation that is a state-sponsor of terrorism, and the Administration must work with Congress to do everything in its power to deny Iran nuclear weapons."

He's the House Republican Whip.

Mark Steyn argues that big government means less liberty

June 16, 2009 | by Wintery Knight | Link | Original Link

ECM sent this New Criterion article by Mark Steyn, Canada's National Treasure, along with Ezra Levant, and Stephen Harper.

Have you heard about Paul A. Rahe's new book entitled "Soft Despotism, Democracy's Drift"? I heard an interview with the author on Milt Rosenberg's radio show, and the podcast is here. But I also found this book review by Mark Steyn, which seems to be popular in the blogosphere. It's a long read, but you will find it stimulating – especially the citations of Alexis de Toqueville. Prescient.

Excerpt:

> ...the consequence of funding the metastasization of government through the confiscation of the fruits of the citizen's labor is the remorseless shriveling of liberty.Is it, as Mark Levin's caller said, "inevitable"? No, not quite. But it seems like the way to bet. When President Bush used to promote the notion of democracy in the Muslim world, there was a line he liked to fall back on: "Freedom is the desire of every human heart." Are you quite sure? It's doubtful whether that's actually the case in Gaza and Waziristan, but we know for absolute certain that it's not in Paris and Stockholm, London and Toronto, Buffalo and New Orleans. **The story of the Western world since 1945 is that, invited to choose between freedom and government "security," large numbers of people vote to dump freedom every time—the freedom to make their own decisions about health care, education, property rights, and eventually (as we already see in Europe, Canada, American campuses, and the disgusting U.N. Human Rights Council) what you're permitted to say and think.**

If you think you can run a Christian life in a welfare state run by secular socialists, think again. Their goals and values are not your goals and values, and they will force their goals and values on you, and on your children.

And ECM also send me this article by Mark Steyn in the National Review, regarding single-payer health care.

Excerpt:

> When President Obama tells you he's "reforming" health care to "control costs," the point to remember is that **the only way to "control costs" in health care is to have less of it**. In a government system, the doctor, the nurse, the janitor, and the Assistant Deputy Associate Director of Cost-Control System Management all have to be paid every Friday, so **the sole means of "controlling costs" is to restrict the patient's access to treatment**. **In the Province of Quebec,**

> **patients with severe incontinence — i.e., they're in the bathroom twelve times a night — wait three years for a simple 30-minute procedure**. True, Quebeckers have a year or two on Americans in the life-expectancy hit parade, but, if you're making twelve trips a night to the john 365 times a year for three years, in terms of life-spent-outside-the-bathroom expectancy, an uninsured Vermonter may actually come out ahead.

In Canada, you can deliver babies yourself while you wait. (H/T ECM)

And the same thing happens in the UK.

The Wintery Knight teaches capitalism… using short video clips!

June 16, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome visitors from IMAO.us! Thanks for the link Harvey!

Have you ever heard an American-Idol-watching Dummocrat approve of Obama plans to tax the rich? Watch this video from the Center for Freedom and Prosperity (H/T Hot Air) and learn the facts you'll need to defeat them in a debate.

Here are a few more videos from America's golden age when everyone could explain why the country was founded, and why our free market capitalist economy was the envy of the world. (I stole these from IMAO.us)

The importance of economic growth:

Have fun learning!

Why won't Christians defend their faith in public?

June 16, 2009 | by Wintery Knight | Link | Original Link

UPDATE: The Pugnacious Irishman has linked to me! Thank you for the link Rich! EVERYONE: GO READ HIS POST RIGHT NOW!

UPDATE: Neil Simpson has a debate going on about whether faith is opposed to reason. 50+ comments so far.

Shout out: Brian Auten of Apologetics 315 helped me to make this post nicer. He's much nicer than I am.

I would like to describe a situation that arises frequently that concerns me. The situation I describe below brings out a flaw I see in the way that rank-and-file Christians respond to criticisms of Christianity in the public square.

Here is the situation

Eve is busy programming away at her desk, rushing to check in her unit tests so she can spend her lunch hour reading the latest Stephenie Meyer horror novel, or looking through an Avon catalog. Suddenly Eve hears Alice talking to Bob on the other side of her cube. She stops typing to listen to the following unencrypted conversation.

Alice: I was watching a documentary on the Discovery Channel last night that said that the universe has always existed, so there is no God!

Bob: I was watching a documentary on PBS last night showing simulations of how the first life started on Earth! God didn't do it!

Alice: I saw "Inherit the Spin" on the weekend! The only reason people oppose evolution is because of the Bible! Not because of science!

Bob: I'm going to see "The Va Dinci Code" this weekend! It says that the Gospels are unreliable and that Jesus didn't even die on the cross!

Alice: I just bought the latest Dichard Rawkins book "Christians Should Be Fed to Lions and the Bible Should Be Burned"!

Bob: I will read that as soon as I finish Histopher Chritchens' book "Why God is the Evilest, Stupidest Person in the World"!

Eve double-majored in business and computer science at the Indian Institute of Technology, and has an MBA from the London School of Economics. She has spent a ton of time, effort and money studying very difficult subjects for her job, and she even publishes research. She works full-time and runs her own business part-time, and earns about 200K per year. She lives in a huge house, drives a huge car, and goes on vacation abroad to all the best vacation spots.

Eve thinks she is a Christian. She has attended church since childhood, her husband is a church elder and she sings in the church choir. She reads the Bible and prays. She gives money to the poor. She teaches Sunday school to children. She has even read all of the Narnia novels three times!

But even though God is being maligned in Alice and Bob's conversation, Eve is not going to stand up to defend God's reputation to them, (or even to her own children, who are both committed atheists).

Why won't Eve stand?

I am wondering if anyone can explain to me why it is that most church Christians are not able or not willing to make a public defense when God's reputation is called into question. It seems to me that there are two bad effects that follow from Eve's unwillingness to stand up and invite Alice and Bob to lunch so that she can address their questions and concerns.

1) God's reputation is being trashed by Alice and Bob on the basis of lies they've swallowed from pop culture. These lies about God's existence and character could be easily corrected with a minimal amount of study, which Eve is capable of. If someone said similar lies about her husband or children, she *would* speak up, but she won't speak up for God.

2) Alice and Bob are bound for Hell unless someone cares enough to correct their mistaken beliefs, which, along with their sinfulness, is what is keeping them from a relationship with God that would go on in Heaven. If Eve's husband or children were mistakenly about to drink poison thinking it was Aspirin, then Eve *would* speak up. But to save her co-workers from Hell, she won't speak up.

Eve is capable of studying to defend the faith, because of her great success in other areas where so much time and effort were required to master difficult material. So why has she not applied herself to answering public challenges to her Christian faith from her professors, teachers, actors, the media, politicians, scientists, historians, etc.?

It seems to me that if she did spend some time studying, and then made her defense to her co-workers, then two things would follow:

D1) Eve would be demonstrating her love for God and her friendship with God by protecting his reputation when it is called into question by unbelievers in public settings. That's what friends do – if Eve wanted to be God's friend, she would care that no one believed lies about him and told lies about him in public settings.

D2) Eve would be demonstrating her love for her neighbor if she was able to correct some of these false beliefs, such as that the universe is eternal, or that a historical case cannot be made for the resurrection, or that evil is not compatible with theism. It's important for Alice and Bob to know that Christianity is not stupid.

So why is it that Eve is able to go to church for 20 years, sing in the choir, read the Bible, read the Narnia stories, pray on her knees, and yet still be unwilling to do the best thing for God and the best thing for her neighbor?

Questions for my readers

Can anyone help me to understand why Christians are willing to accept this? Why is this not being addressed by churches?

Do you have an experience where a Christian group stifled apologetics? Tell me about

that, and why do you think they would do that, in view of the situation I outlined above? My experience is that atheists (as much as I tease them) are FAR more interested in apologetics than church Christians. Why is that?

My answers

My answers to these problems are given in the following previous posts.

In general:

- Christians think that the Bible teaches that faith is irrational and unprovable
- Christians don't know how to discuss faith in public without upsetting others
- Christians don't think that their silence harms God or their neighbors
- Christians don't treat their faith as seriously as their academic and professional work
- Christians are afraid to study because they think that they'll have doubts
- Christians don't believe that reasons and evidence lead people to faith
- Many churches are feminized, and therefore knowledge and disputes are discouraged

Also, this debate I blogged about before talks about postmodernism and relativism, which has infected the church and has an impact on this question of whether we will study and defend our beliefs in public. I highly recommend giving it a listen – you will learn something about how we got to this point.

Disclaimer:

I want to clear that this is a problem for male and female Christians. I have seen it manifested by equal numbers of men and women in leadership roles. I picked these names because there is a running gag in computer network security where these names are used to describe the actors. Eve is the eavesdropping hacker, get it?

Obama believes the Ayatollah but what would Ronald Reagan do?

June 17, 2009 | by Wintery Knight | Link | Original Link

Breitbart reports on Obambi's latest effort to be loved by bloodthirsty dictators abroad.(H/T Stop the ACLU)

Excerpt:

> President Barack Obama says he believes supreme leader Ayatollah ali Khamenei has deep concerns about the civil unrest that has followed the hotly contested presidential election there.
>
> Obama repeated Tuesday at a news conference his "deep concerns" about the disputed balloting. He said he believes the ayatollah's decision to order an investigation "indicates he understands the Iranian people have deep concerns."
>
> **But at the same time, Obama said it would not be helpful if the United States was seen by the world as "meddling" in the issue.**

What do other Western countries have to say about Iran?

Germany

Germany denounces the suppression of democracy:

> …the Germans, who shamefully happen to be Europe's biggest exporters to Iran, strongly denounced the crackdown on protestors, as have a number of European governments. Foreign Minister Frank Walter Steinmeier condemned the "brutal actions" against demonstrators, and summoned the Iranian Ambassador to Berlin in protest.

Merkel is a *conservative*, not a moral relativist secular-leftist. Freedom means something to her.

France

France denounces the suppression of democracy: (H/T Lucianne)

> French President **Nicolas Sarkozy on Tuesday branded Iran's election result a fraud** as the international outcry over the security forces' crackdown on the opposition in Tehran intensified.
>
> Governments from Asia to Europe voiced concern about the violence that erupted Monday during rallies protesting the hardliner Mahmoud Ahmadinejad's re-election, with US President Barack Obama saying he had "deep concerns" while also not wanting to meddle in Iran's affairs.
>
> But while some governments tried to avoid taking sides, Sarkozy said the unrest was a direct result of Ahmadinejad's failings in his first term.

> **“The extent of the fraud is proportional to the violent reaction,”** said the French leader.

Sarkozy is a *conservative*, not a moral relativist secular-leftist. Freedom means something to him.

Canada

Canada denounces the suppression of democracy:

> “We have called for a full and transparent investigation into electoral fraud and discrepancies,” Foreign Affairs Minister Lawrence Cannon told Parliament in Ottawa, as the government called Iran’s top diplomat on the carpet to explain the reported beating and detention of a freelance Canadian journalist in Tehran following Friday’s contested ballot.
>
> “The security force’s brutal treatment of peaceful demonstrators is unacceptable.”
>
> “The government of Canada calls for freedom, democracy, human rights and the rule of law in Iran, and urges the country to fully respect all of its human rights obligations, both in law and in practice. We also continue to call on Iran to comply immediately with its legal obligations concerning its nuclear program.”

Harper is a *conservative*, not a moral relativist secular-leftist. Freedom means something to him.

What about the Republicans?

Consider conservative Republicans like Mike Pence: (H/T Hot Air)

Nice Deb has the full transcript of Pence’s speech.

Excerpt:

> We are witnessing a Tiananmen in Tehran, and the United States of America must stand in the gap on behalf of those brave Iranian citizens who are standing for free and fair elections, democracy and basic rights.
>
> Let me say from my heart, the American cause is freedom and in this cause the American people will not be silent, here or abroad. If the President of the United States won’t express the unqualified support of our nation for the dissidents in the streets of Tehran, this Congress must.

What will you do about it, Republican Congressman Mike Pence?

> Today I’m introducing a resolution that will do just that. It will express its concern regarding the reported irregularities of the presidential election of 12 June, 2009. It will condemn the violence against demonstrators by pro-government militia in Tehran in the wake of the elections. It will affirm our belief in the universality of individual rights and the importance of democratic and fair elections. And lastly, and most importantly, it will express the support of the American people for all

> Iranian citizens who struggle for freedom, civil liberties and the protection of the rule of law.

Read the whole thing to find out about his Hungarian neighbor. I have Lebanese neighbors, and they say the same things – the USA is the guardian of freedom in the world. Our military might is the reason why countries like South Korea are free. We should not have elected Democrats who let let innocent people die while bashing liberty and prosperity to foreign dictators. Being a Democrat means being an amoral coward. It means being interested in your own comforts, provided stealing from those who work, and ignoring the real poor and oppressed who languish under despots abroad.

Why can't Obama give a speech like this? Because Obama is a *Democrat*, and Democrats are moral relativists. Always remember how Evan Sayet explained why progressives hate what is good and love what is evil. They believe in abolishing moral distinctionsso that all disagreements will disappear, and so they must side with tyrants and terrorists against freedom and prosperity.

What would Reagan do?

Remember what it was like to have a Christian President, who beleived in God, and objective morality, and wanted everyone in the world to enjoy certain inalienable rights, guaranteed by their Creator? Remember "The Speech" he gave in 1964?

And his speech at the Berlin wall?

And his 40th anniversary of D-Day speech?

There is a difference between Republicans and Democrats. Those who have high ideals and those who act like spoiled children.

And remember when the atheistic communists were oppressing Poland, and the left was mocking Ronald Reagan for his "naive" anti-communism and his irrational Christian beliefs? That's right, atheists hate Christianity, and the human rights grounded by it. And they hate capitalism, too. But Reagan didn't care what the secular left though of his faith and his foreign policy. He didn't want to be loved by dictators. He stood with Poland.

> We view the current situation in Poland in the gravest of terms, particularly **the increasing use of force against an unarmed population and violations of the basic civil rights of the Polish people**.
>
> Violence invites violence and threatens to plunge Poland into chaos. **We call upon all free people to join in urging the Government of Poland to reestablish conditions that will make constructive negotiations and compromise possible.**
>
> …The Polish nation, speaking through Solidarity, has provided one of the brightest, bravest moments of modern history. **The people of Poland are giving us an imperishable example of courage and devotion to the values of freedom in the face of relentless opposition. Left to themselves, the Polish people would enjoy a new birth of freedom.** But there are those who oppose the idea of freedom, who are intolerant of national

> independence, and hostile to the European values of democracy and the rule of law.
>
> Two Decembers ago, freedom was lost in Afghanistan; this Christmas, it's at stake in Poland. **But the torch of liberty is hot. It warms those who hold it high. It burns those who try to extinguish it.**

Story from Hot Air. Please click over and read ALL of Reagan's speech.

This is Reagan.

> And I'm only here to tell you that I believe with all my heart that our first priority must be world peace, and that use of force is always and only a last resort, when everything else has failed, and then only with regard to our national security. Now, I believe, also, that this meeting this mission, this responsibility for preserving the peace, which I believe is a responsibility peculiar to our country, and that we cannot shirk our responsibility as a leader of the free world because we're the only ones that can do it. **Therefore, the burden of maintaining the peace falls on us. And to maintain that peace requires strength. America has never gotten in a war because we were too strong.**

Does this sound like Obama?Does Obama believe this? Can a secular-leftist fight for these ideals?

Does it sound like a man who could win the cold war and liberated millions of people without fighting a world war?

And also see my essay on Reagan's doctrine of "Peace through Strength" to understand why Reagan mattered.

ABCNews refuses to allow Republican response to Obama's health care propaganda

June 17, 2009 | by Wintery Knight | Link | Original Link

ABC News sheds all pretense of objectivity. (H/T Hot Air)

Drudge reports: (H/T Gateway Pundit)

> On the night of June 24, the media and government become one, when ABC turns its programming over to President Obama and White House officials to push government run health care — a move that has ignited an ethical firestorm!
>
> Highlights on the agenda:
>
> ABCNEWS anchor Charlie Gibson will deliver WORLD NEWS from the Blue Room of the White House.
>
> The network plans a primetime special — 'Prescription for America' — originating from the East Room, exclude opposing voices on the debate.

Republicans asked for a response, as is customary:

> As the national debate on health care reform intensifies, I am deeply concerned and disappointed with ABC's astonishing decision to exclude opposing voices on this critical issue on June 24, 2009. Next Wednesday, ABC News will air a primetime health care reform "town hall" at the White House with President Barack Obama. In addition, according to an ABC News report, GOOD MORNING AMERICA, WORLD NEWS, NIGHTLINE and ABC's web news "will all feature special programming on the president's health care agenda." This does not include the promotion, over the next 9 days, the president's health care agenda will receive on ABC News programming.

ABC posted a rejection on their blog. (H/T Michelle Malkin)

> I hope we can all agree that a robust debate of health care issues and potential policies is in order.

and below their rejection letter:

> **The comments to this entry are closed.**

Gateway Pundit notes:

> **The last time Obama held a "town hall meeting" in the White House ALL of the participants were campaign supporters.**
>
> **The Director of Communications for the White House Office of Health Reform, since last month, is former ABC News correspondent Linda Douglass.**

Shouldn’t they at least pretend to be objective?

UPDATE: Stop the ACLU writes that they also refused *commercials* that opposed Obama’s health care plan.

New research paper highlights the importance of fathers

June 17, 2009 | by Wintery Knight | Link | Original Link

Story here on Florida International University's web site:

Who did the research:

> FIU's Fatherhood Lab explores these issues and Psychology Professor Gordon Finley, who runs the lab, focuses specifically on how divorce impacts fathers and the development of their children. Finley has found that a father's role is unique and far too often neglected by the family court system.

What did they find:

> Using questionnaires and a retrospective technique in which he asked 1,989 young adults to think back on their relationship with their fathers, Finley found that children of divorce *really* miss their fathers. According to Finley, they are denied a relationship with them because of present-day family law and court practices.
>
> "Divorce marginalizes or severs a father's relationship with his child," he says. "In reality, the father becomes a visitor in his or her life. He is no longer a father in the very literal sense."

Recently, I blogged about why social conservatives should be fiscal conservatives.

But you fiscal conservative readers – shouldn't you be social conservatives, too?

> The statistics are alarming: children from fatherless homes account for 63 percent of youth suicides, 85 percent of all children that exhibit behavioral disorders and 71 percent of all high school dropouts. And 37 percent of fathers have no access or visitation rights to their children.

Read the whole thing, especially if you don't usually care about social conservatism. It matters. The family is a bulwark against state power, and is the first thing to go as socialism progresses into fascism

More on this topic later in the week

Further study

Recently, I blogged about how government intrudes into the family and about the myth of "dead-beat Dads". And about how the feminist state's discrimination against male teachers is negatively impacting young men. And there is my series on how Democrat policies discourage marriage: Part 1 is here and Part 2 is here and Part 3 is here.

Michele Bachmann explains why government should not meddle in the free market

June 18, 2009 | by Wintery Knight | Link | Original Link

Video was found by the Maritime Sentry, a conservative policy-oriented blog.

We've seeing a lot of my two favorite Congresswomen lately. Did you miss the previous posts?

- Michele attacks Democrats on nationalization of industries
- Michele defends capitalism, Marsha exposes Al Gore's corruption

If we had elected these two as POTUS and VPOTUS, we would not be spending trillions of dollars on single-payer health care.

CRISIS! Obama fires Inspector General after investigation of Democrat corruption

June 18, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Hot Air says 2 IGs have been fired, and a 3rd is in trouble.

Michelle Malkin's latest column explains the incident from the beginning. But I'll jump to the middle for the excerpt.

Excerpt:

> The second program Walpin challenged is the non-profit St. HOPE Academy, run by Obama supporter Kevin Johnson, the Democrat mayor of Sacramento and a former NBA basketball star. In a special May 2009 report, Walpin's office blew the whistle on a highly politicized U.S. Attorney's Office settlement with Johnson and his deputy, Dana Gonzalez. The pair exploited nearly $900,000 in AmeriCorps funding for personal and political gain.

> But in the wake of Johnson's mayoral victory and President Obama's election in November, the U.S. Attorney's Office in Sacramento rushed to settle with the new mayor so he could avail himself of federal stimulus funds and other government money. It was, Walpin said in his special report last month, "akin to deciding that, while one should not put a fox in a small chicken coop, it is fine to do so in a large chicken coop! The settlement…leaves the unmistakable impression that relief from a suspension can be bought."
>
> Shortly after, the White House announced that it had "lost confidence" in Walpin. With Walpin's removal, the top management positions at AmeriCorps' parent organization are now all open. The decks are clear to install lackeys who will protect the government volunteerism industry and its Democrat cronies. And a chilling effect has undoubtedly taken hold in every other inspector general's office in Washington.

This is a MUST-READ.

Let's see what hope and change really means. Nothing like this abuse of power ever happened in 8 years under George W. Bush. Bush was an evangelical Christian who took morality and honor seriously. Even if he sometimes made mistakes, they were generally mistakes of policy – not abusing his power to cover up corruption.

In a Hot Air post we learn that Democrat Senator Claire McCaskill isn't happy about Walpin's dismissal.

> "The White House has failed to follow the proper procedure in notifying Congress as to the removal of the Inspector General for the Corporation for National and Community Service. The legislation which was passed last year requires that the president give a reason for the removal. 'Loss of confidence' is not a sufficient

> reason. I'm hopeful the White House will provide a more substantive rationale, in writing, as quickly as possible," McCaskill said.

Ed Morrissey writes "They can't provide the *real* reason, which is that Walpin went after a political ally of the President's."

Fox News has more about Walpin. (H/T Hot Air)

> In the letter, White House Special Counsel Norman Eisen wrote that Walpin was "confused" and "disoriented" at a May board meeting, was "unduly disruptive," and exhibited a "lack of candor" in providing information to decision makers.
>
> "That's a total lie," Walpin said of the latter charge. And he said the accusation that he was dazed and confused at one meeting out of many was not only false, but poor rationale for his ouster.
>
> "It appears to suggest that I was removed because I was disabled — based on one occasion out of hundreds," he said.
>
> "I would never say President Obama doesn't have the capacity to continue to serve because of his (statement) that there are 57 states," Walpin said, adding that the same holds for Vice President Biden and his "many express confusions that have been highlighted by the media." Obama mistakenly said once on the campaign trail that he had traveled to 57 states.

When tyranny comes to a nation, the honest men are the first against the wall.

The Pugnacious Irishman invites Christians to defend their faith

June 18, 2009 | by Wintery Knight | Link | Original Link

His post is boldly entitled “Walking Around with our Pants Around our Ankles”.

A little bit about Rich: his background is in teaching and his most recent post was in a school in a very rough part of Los Angeles.

Rich makes an important point about the need to find people who disagree with you and engage them. You won’t find them in your house or in your church. You’ve got to go to the workplace or the university campus and start making friends with them to find out what they believe and whether they are open to new ideas!

Rich reacts to my post from yesterday here:

…Another thing is that when people are caught in an environment where they have to defend God’s honor, they suddenly become starved for the kind of training Wintery advocates. If you regularly find yourself amidst a bunch of atheists, agnostics, and Muslims who are constantly challenging you on the reasonableness of your faith, chances are, you’ll start searching for answers pretty quickly. Hey, it happened to me. In other words, if your pants fall down, buying a belt suddenly moves up a few notches on your priority list.

The kicker is that many people never experience that felt need; they are sequestered in an environment of comfort. A decent number go to great lengths to maintain this bubble, avoiding being exposed. They are walking around in closeted quarters, with the shutters drawn and drapes pulled down, oblivious to the fact that their trousers are hanging around their ankles.

Many people assume apologetics is all about merely “winning an argument,” but nothing could be further from the truth. WK puts it in the proper perspective: it’s about defending God’s honor in public. If someone were clowning on your spouse at work, wouldn’t you want to stand up and say something?

That’s the first key point about apologetics: protecting God’s reputation as a way of participating in a friendship with God. He’s also got some book recommendations in his post for beginnners and I could not agree more. I own every stinking one of them!

And he’s got an update here, where he makes the second key point about apologetics.

Excerpt:

> Addition to today’s post: I don’t think I underscored enough another motivation of apologetics–love.
>
> **Why defend the faith? Because we love our neighbors.**

This is a good point for Christians who value love. *Apologetics is love*. It’s one way that

you can love your neighbor. God expects us all to spend some time responding to his overtures to us in nature, in conscience, and in history. It does no good to help atheists to ignore God’s calling by keeping silent about God’s will for that person.

Paul Ryan explains the vision of conservativism

June 18, 2009 | by Wintery Knight | Link | Original Link

Rep. Paul Ryan

This article is long! You will have to print it out and read it in little bits. It took me 15 minutes to read!

The title is "How Will Conservatism Become Credible Again?". Paul Ryan is one of the "ideas" conservatives in the Congress. His job is to think up new bills and initiatives that reflect conservative ideals.

Let's learn about America

Here, he talks about how the conservative vision of government values liberty and personal responsibility over equality of outcomes and "social justice":

> Nowhere was the Western tradition epitomized more memorably than in the Declaration of Independence. By "the laws of nature and of nature's God," all human beings are created equal…not in height, or skills, or knowledge, or color, or other nonessentials…but equal in certain inalienable rights – to live, to be free, and to fulfill their best individual potential, including the right to the "material" such as property needed to do this. Each individual is unique and possesses rights and dignity. There are no group or collective rights in the Declaration. Nor does basic human equality imply "equal result." It means "equal opportunity": every person has a right not to be prevented from pursuing happiness, from developing his or her potential. The results should differ from one to another because "justice" or "fairness" gives each individual what each has earned or merited.
>
> The great conservative purpose of government is to secure these natural rights

> under popular consent. Protecting every person's life, liberty, and pursuit of happiness should be the great and only mission of legitimate government.

He talks about how the Constitution's purpose is to enable prosperity through free market capitalism:

> The authors of the Constitution surrounded economic freedom with a multitude of guarantees: freedom of contract against government interference… private property rights… patents and copyrights…standard weights, measures, and monetary values…punishment of counterfeits…freedom under law for interstate and foreign commerce…enforcement of agreements in law courts… uniform bankruptcy laws, and other protections.
>
> They promoted Smithian free markets to produce resources for strong military defenses and to keep America free of economic dependency on other nations. But they also expected commercial life to encourage certain moral qualities: personal responsibility to work, save, create businesses, hire employees, pay off their debts, earn the rewards of merited effort, moderate appetites, practice honesty and justice in business dealings, self-discipline, industriousness, timeliness, plus trust and confidence in other persons.

And he talks about how America is a country where social conservatives and fiscal conservatives should be united:

> A "libertarian" who wants limited government should embrace the means to his freedom: thriving mediating institutions that create the moral preconditions for economic markets and choice. A "social issues" conservative with a zeal for righteousness should insist on a free market economy to supply the material needs for families, schools, and churches that inspire moral and spiritual life. In a nutshell, the notion of separating the social from the economic issues is a false choice. They stem from the same root.

Did you know that Republicans believe in the right to life, the sanctity of marriage and the public expression of faith? These values were present at our founding, and Republicans hold to them because they are American values.

> Since America's first political principles establish a high but limited mission of securing the natural rights of all, conservatives should expect government to fulfill that entire mission…by enforcing every human being's **natural right to life**, which is the first clause of the social compact that formed America, the Declaration of Independence.
>
> A credible conservatism will also seek to secure the **privileged legal status of marriage**. The traditional family must be protected as the indispensable mediating institution for developing the moral qualities of a free people.
>
> A credible conservatism will **resist the purging of faith from the public square**. It will make public space for the practice of faith because belief is a

> central pillar of a free and prosperous society. Nor can government welfare programs substitute for the faith-based love that unites citizens in free bonds of charity and compassion.

Recommended for my readers from at home, or abroad, who need a refresher on the vision of conservatism… or a breath of fresh air from the fetid leftist gasses emanating from the White House.

More articles on conservatism from the New Ledger are here.

We haven't forgotten our principles.

Understanding Obama's health care reform bill… with video clips!

June 19, 2009 | by Wintery Knight | Link | Original Link

Sen. Tom Coburn

Tom Coburn

These video clips feature one of the conservatives I like, Senator Tom Coburn! (H/T Club for Growth)

Tom Coburn is a medical doctor, and ran a medical business. He gives you the inside view of why American health care needs changing, and why big government socialism is not the answer. This is not *just* a lesson in health care. Listen closely – this is a lesson in economics, and it shows the vision of free-market capitalism, liberty and personal responsibility that drives the policies of the right-wing.

Part 1:

Part 2:

And here is Ronald Reagan talking about the loss of liberty that follows when a country adopts socialized medicine. (H/T Club for Growth)

This is the easiest way to learn about health care policy.

Note: If you prefer to learn about socialized vs consumer-driven health care with podcasts, click here.

More details from a think tank

Here is a comprehensive treatment of the problems of health care today, and the right way to reform it. This article by the founder of the Heritage Foundation, Edwin Feulner, Ph.D., is so long that it is exactly the kind of thing that lefties like commenter Jerry won't have the patience to read! This is the best thing to read in this post if you can only read one thing.

Here is are some of the myths he corrects:

If you like your health care package you can keep it

"…a public plan will lead many employers to drop private health coverage for their workers and dump them into the public plan… According to independent analyses, as many as 119 million Americans could end up in a public plan…."

The end goal is not a single payer system

"…The "single payer" here is Uncle Sam, using taxpayers' money, and not just paying the bills but calling the shots and deciding what care every American will get—or not get…."

The end goal is not a single payer system

"…Congress's own watchdog–have issued preliminary estimates that the cost could be high as $2 trillion over 10 years, with most of that borrowed money…"

The quality of your health care will get better

"…Medicare has huge gaps in coverage. Medicaid's quality is notoriously bad. They both offer substandard care compared to most private insurance plans…"

And of course his letter also gives conservative solutions to the problem of rising health care costs. The Heritage Foundation is my favorite think tank. Conservative across the board – not just on fiscal issues.

James Demint

And conservatives like James Demint are getting this message out to the public, too.

Sen. James Demint

Here is Senator Demint's article in Forbes magazine. He answers the question: "What is the cause of our current health care problems? Is it the free market? Or is it government intervention into the free market?"

Excerpt:

> …Washington politicians make it hard for individuals to own their own health insurance policies. Government gives tax benefits to businesses to provide group health plans to employees, but offers no such tax benefit to individuals who try to buy their own plan for themselves or their family. Government prevents consumers from shopping for better plans across state lines, which limits competition and drives up prices. Government health care programs like Medicare and Medicaid pay doctors and hospitals less than the full value of their

> services, and the difference gets priced into the higher premiums paid by people who do have insurance.
>
> In other words, politicians deliberately restrict consumer choice, drive up prices, underpay doctors and hinder both access and portability. Then they turn around, blame the free market for the health care crisis and say the only way to save the system is a government takeover of health insurance in the form of a so-called "public option."

And he's goes on to explain conservative solutions to the problem of rising health care costs. A great article from one of my favorite conservatives.

The real costs of Obama's plan

Keith Hennessey has an analysis of the costs of Obama's new government-controlled, rationed health care plan. You may have heard that the CBO has issued an estimate about the costs of Obama's plan: 1 Trilliion over 10 years. Keith says that the number is actually closer to 1.3 trillion.

Health care subsidies over 6 years

Keith took at closer look at the CBO's 1 Trillion estimate, which includes only ONE area where money will need to be spent (subsidies for the poor). He found that many items in the Democrats' health care bill were not included in the CBO estimate!

Excerpt:

1. The budgetary effects of neither the individual mandate nor the employer mandate are included in this score. I think CBO will find these provisions would raise revenues for the government and reduce the deficit. While the leaked draft of Kennedy-Dodd was specific about the employer mandate, the official version has just the placeholder language, "Policy under discussion." Both mandates leave wide discretion for the Secretaries of Treasury and HHS to create a level and structure of taxation "to accomplish the goal of enhancing participation in qualifying coverage." It is extremely difficult for CBO and their tax counterparts, the Joint Committee on

Taxation (JCT) staff, to estimate something like this.
2. The estimate does not include the budgetary cost of expanding Medicaid to childless adults with income below 150% of the poverty line. I expect that this will add hundreds of billions of dollars to the cost over the next decade.
3. It does not include the requirement that health plans define "children" as dependents up to age 27. I expect this will raise costs.
4. It does not include the effects of the Medical Advisory Council's ability to define benefits, or the requirements that plans rebate premiums to the insured. I think this too will raise costs.
5. It does not include the budget effect of having a "public plan option."
6. There are a bunch of other programs in the bill, including a new disability program and lots of new public health programs.

Keith will be posting more articles on his blog as he calculates the real costs of Obama's plan.

The bottom line

Obama's health care plan is simply "Obama knows best". You will pay money to Obama, based on your income, (not on your health risks). And then Obama will decide whether government will give you any health care. He'll probably make these decisions the same way he makes other decisions: based on whether you are one of his unionized supporters, whether you donated to Democrats, or whether you investigate his corrupt dealings.

Obama thinks that you are more satisfied with the service at your local DMV than you are with Amazon.com. And he plans to make sure that you are dealing with government bureaucrats, not with private businesses, when you need health care. Who gives you better service? The government, that isn't trying to compete with anyone to meet your needs? Or private businesses, which do need to compete to earn your business?

Further study

You can watch some videos containing horror stories from countries that have adopted single-payer health care, too.

My previous post on socialized medicine linked to even more horror stories from other countries with socialized medicine.

http://www.youtube.com/swf/l.swf?iurl=http%3A%2F%2Fi2.ytimg.com%2Fvi%2FAe2XEl5952A%2Fhqdefault.jpg&fexp=903902%2C902800&title=McCain%3A+%27This+is+a+joke%27+on+health+care&length_seconds=172&avg_rating=5.0&video_id=Ae2XEl5952A&showinfo=0&allow_embed=1&swf=http%3A%2F%2Fs.ytimg.com%2Fyt%2Fswf%2Fcps-vfl103922.swf&sk=_0zSL5HkbumJPmD211uCey-iMAHfrOKbC&fs=0&allow_ratings=1&rel=1&amp=&cr=US&eurl=http%3A%2F%2Fwww.verumserum.com%2F%3Fp%3D6405&showsearch=0

What can the political contributions of journalists tell us about media bias?

June 19, 2009 | by Wintery Knight | Link | Original Link

Commenter ECM sent me this link from Ace of Spades.

The story is from Riehl Worldview.

Excerpt:

> In the face of ABC's pending Obamanation on health care reform, that's especially troubling given the tremendous imbalance in ABC's record of recent political contributions.
>
> None of the four McCain contributors, which includes Elizabeth Hasselbeck, are from journalists at ABC. Meanwhile, approximately 130 ABC employees gave money to Obama. That's close to a 33 – 1 ratio. Yet, ABC officially announced that they and they alone would manage what questions were asked of Obama about his program, including from the audience.
>
> It strikes me as simply unwise to entrust such a significant portion of the debate around a policy that will impact American lives, potentially forever, to just one organization with such an imbalance in their political views.
>
> An analysis of contributions to the Obama and McCain campaign shows that ABC employees contributed more than $160,000 to the Obama campaign versus less than $5,000 to the McCain campaign.

And ECM also sent me this link on Ace of Spades.

Apparently, the left-wing New York Times and the Wall Street Journal are re-writing headlines to make Obama look better, despite polls showing that the public is growing increasingly disenchanted with his amateurish bumbling.

Ace writes:

> The NYT poll I hadn't heard of, so I clicked on it. The headline…
> **Obama Poll Sees Doubt on Budget and Health Care**
>
> …But the article originally ran with a more interesting headline, as the Rhetorican notes.
> **In Poll, Obama Is Seen as Ineffective on the Economy**
>
> …Similarly, the WSJ article on their own poll went from…
> **Rising Doubts Threaten to Overshadow Obama's Agenda**
>
> to…
> **Public Wary of Deficit, Economic Intervention**

Here are my previous posts on media bias at the left-wing ABCNews and the left-wing MSNBC.

Friday night funny: Fleeing communism, velcro, single-payer health care

June 19, 2009 | by Wintery Knight | Link | Original Link

This is the funniest thing I have seen all week! (H/T Pugnacious Irishman)

There's a little grown-up content at the end, there, so watch out!

And this one was sent to me by commenter ECM:

I found that YouTube version of the video on the Heritage Foundation blog.

Scott Ott of Scrappleface.com wrote a hilarious satire of Obama voters for the Washington Examiner.

Excerpt:

> While opinion polls indicate a growing concern among Americans that their new president has no coherent plan to reverse the nation's economic woes, and lacks the principled conviction to boldly address crises in Iran, North Korea and the Middle East, still a majority say they love "the idea of an Obama presidency."
>
> A new Wall Street Journal/NBC News poll shows that 56 percent still of approve of President Barack Obama "as a theoretical concept," even as support for his handling of the economy and foreign policy has slipped in recent days.
>
> **…In an unrelated poll, 79 percent of women said they would "continue to date a hot guy with a great car even if he made me pay his way into the movies and I lived in constant fear that his reckless driving was going to get me killed."**

My God, Scott has talent. If you feel that the people who voted for Obama made a mistake, and you want to make fun of them, this is your article. You will laugh, and then you will cry.

Scott is actually on fire this week:

- Obama: 46 Million in America Live Without Haircare
- Obama Extends Job Benefits to Gay Partners, BFFs
- If Sanctions Fail, U.N. Threatens to Nuke North Korea

These are all very funny posts.

Frank J. Fleming of IMAO.us has a post up at Pajamas Media:

Excerpt:

> Okay, liberals, I have a radical idea I want to run by you: the Iranian government is bad and worthy of some of your outrage.
>
> Yeah, I know, it sounds crazy. Iran is not a beauty queen speaking out against gay marriage, or Sarah Palin. Why in the world would you want to direct any

> scorn towards a brutal theocracy seeking nuclear weapons? It’s not obvious, but let me explain.

The second page is even funnier than the first! I wish Frank was still writing “filthy lies” about Glenn Reynolds and his puppy-blending habit. That was really funny! Maybe I should try that. I could write a filthy lie about Richard Dawkins, claiming he’s really a secret Southern Baptist, who just loves to sing praise hymns. I could photoshop some fake evidence of Dawkins with his hands raised and eyes closed in church. I think that would work!

Happy Friday!

Understanding the effect of sex on your brain chemistry

June 20, 2009 | by Wintery Knight | Link | Original Link

This article was sent to me by my friend Andrew. It's by Marcia Segelstein.

Marcia is trying to make the same point about sex that Miriam Grossmann made in her book "Unprotected". The point is that although bureaucrats and educrats love to tell people about the riskiness of behaviors like smoking and obesity, they don't tell people the truth about the dangers of casual sex, because they don't want to antagonize special interest groups like feminists and gay activists.

In the article, Marcia talks about the mental effects of casual sex. She talks about dopamine first, but the one I want to tell you about is called oxytocin. It is very important that you parents of young ladies understand this and present this evidence to your daughters. (The male version of this phenomenon is also explained in the article, it's called *vasopressin*).

Excerpt:

> Oxytocin is another important brain chemical we are now learning more about. Oxytocin helps females, in particular, bond with other people. When a new mother breastfeeds her infant, for example, oxytocin floods her brain. The effect is powerful. She feels a strong desire to be with her baby, and is willing to suffer the sleepless nights and inconveniences that come with having a baby.
>
> Oxytocin also helps females bond with men. When a woman and man touch each other in a loving way, oxytocin is released in her brain. It makes her want more of that loving touch, and she begins to feel a bond with her partner. Sexual intercourse leads to the release of even more oxytocin, a desire to repeat the contact, and even stronger bonding. But, like dopamine, oxytocin is values-neutral. It's a chemical reaction, or, as the authors write: "[I]t is an involuntary process that cannot distinguish between a one-night stand and a lifelong soul mate. Oxytocin can cause a woman to bond to a man even during what was expected to be a short-term sexual relationship." So when that short-term relationship ends, the emotional fallout can be devastating, thanks to oxytocin.
>
> Another significant finding about oxytocin is that it produces feelings of trust. That can be good or bad, depending on the situation. "While the hormonal effect of oxytocin is ideal for marriage, it can cause problems for the unmarried woman or girl who is approached by a man desiring sex….[T]he warning is that a woman's brain can cause her to be blindsided by a bad relationship that she thought was good because of the physical contact and the oxytocin response it generates."

This is why Dr. Jennifer Roback Morse says that the only smart sex is married sex.

Otherwise you are just coarsening your own self. Neil Simpson calls this the duct tape theory of sex. He explains why sex is like duct tape here. Don't order your children around – give them the data so they understand the *why* of chastity.

How government forces private firms out of business with predatory pricing

June 20, 2009 | by Wintery Knight | Link | Original Link

This article on Fox News' Forum is by John Lott. He explains the threat of predatory pricing as it relates to Obama's health care plan.

First, Lott explains the stated goal of Obama's plan:

> President Obama is selling government health insurance to the American people as the way to save money. That government health insurance will merely provide competition to keep private insurance companies from gouging their customers.

But here is the problem with a parallel system run by the government:

> There are a couple of problems with Obama's argument. Government is just not known for its cost effectiveness or quality. And the way for government enterprises to survive is with massive taxpayer subsidies and charging customers prices below the firm's actual costs, driving more efficient private firms out of business. These subsidies mean that when government enterprises "win" they do so by driving more efficient private firms out of business.

Here is an an example of how it works with USPS vs Fedex:

> The U.S. Postal Service would often increase its first-class mail rate, where it had a monopoly, to raise money to subsidize its overnight delivery service where it faced stiff competition. For example, it raised first-class mail to thirty-three cents in January 1999 and simultaneously reduced the price of domestic overnight express mail from $15.00 to $13.70, even though it was already losing money at the $15.00 rate. The price, which was lowered in response to increasingly successful competition in overnight delivery from FedEx and UPS Overnight, remained below $15.00 for the next seven years. Clearly the Postal Service was not able to drive its competitors out of business with this maneuver, in part because its on-time delivery record and quality was poorer.
>
> The Postal Service lost money on its overnight deliveries despite advantages that FedEx and UPS could only dream of. The Postal Service is exempt from paying state sales, property and income taxes. And it uses some of the most expensive real estate in the country — rent-free. The competition that Obama advocates between government and private insurance companies isn't going to be any fairer.

The government can run huge deficits, effectively transferring money from the productive private sector into their parallel public competitor, with the end goal being complete control of consumer purchases. Obama intends to run private companies out of business

so that you have only one place where you can go to purchase health care: OBAMA. And you will do anything he tells you in order to get that health care.

It’s all about controlling your behavior by taking your money and then restricting your access to services. The end goal is that everyone will have equal life outcomes regardless of how hard they work, and how risky and/or immoral their lifestyle. Democrats do not trust you to keep the money you earn, and to spend your money on the things that you want. They think government knows best.

In his book “Freedomnomics”, Lott has even more examples of predatory pricing. I recommend that book, especially for the chapter on abortion and crime. Pro-lifers will find the book very useful. It’s important for people to understand that the more involved government gets in the free market, the less liberty we have as consumers.

What is the Chief of the Human Rights Commission like?

June 20, 2009 | by Wintery Knight | Link | Original Link

I was browsing on "The Blog of Walker" and I found some links to a speech given by Jennifer Lynch, the head fascist at the Canadian Human Rights Commission. It's interesting because she is exactly the kind of person that I would expect Obama to put in charge as the Free Speech Czar, given his record of suppressing dissent.

Take a look at his post:

> First there was the speech.
>
> …Now she's actually going to go mano-a-chicko with Ezra Levant on the Roy Green Show! Well…sort of. I guess the excitement would be too much for her delicate constitution, so she'll be on the show after Ezra's had his say, or even before – it doesn't really matter as long as she doesn't have to deal with that icky fellow who's been keeping her up at night with head-aches and upset stomach these past few months (although I'm just guessing as to that).

Mark Steyn links to other responses to the the speech. But let's focus on Ezra Levant's response.

The speech given by Canada's Chief Fascist

Here is a post written by free speech activist Ezra Levant about Lynch's hate-filled speech:

> On Monday, Jennifer Lynch, the chief commissar of the Canadian Human Rights Commission, gave a speech to her fellow censors at the human rights industry's annual trade show in Montreal. It was such a grotesque speech, any self-respecting government ought to fire her for uttering it. It revealed Lynch's complete misunderstanding of the nature of human rights, the right of citizens to question their government, and the government's proper attitude towards peaceful criticism.
>
> It was the speech of an angry bigot.
>
> It showed Lynch to be temperamentally unsuitable for any public office, especially a prosecutorial office with powers similar to those of real police. She's bitter, vindictive, paranoid and motivated by anger and vengeance. If she was a real cop, answerable to an internal affairs branch, she'd be put on leave and investigated for her rage-filled rant.
>
> Lynch's speech was that of a bureaucrat at war with Canadian citizens. It was a speech of a bully who seeks the power to destroy those who oppose her.
>
> … Lynch's speech, in which she catalogues her enemies and denounces them, was a formal, public utterance, vetted by the CHRC's half-dozen PR staff. It was

> clearly written by Lynch herself – the personal venom of it just couldn't be faked.

He then goes on to provide excerpts of the speech that are particularly hateful and bigoted. Witness the secular-left in their full fascist flowering! Unhinged and unmasked. This is what they learn in university – that there way is the right way and that all dissent to their agenda proceeds from racism, sexism, etc.

My friend Andrew sent me an article from Canada's National Post about her speech.

Excerpt:

> Contrast such criticism, though, with the chill writers and other public figures feel knowing that if their words offend any minority favoured by a rights commission, the commissioners may, on behalf of the complainant (and at taxpayers' expense), compel testimony, seize documents, search private offices and impose fines and other penalties. The CHRC, too, has a frighteningly undemocratic 100% conviction rate in hate-speech cases.

These laws were brought in by the secular-left in Canada. We just elected the secular left here in the United States. Can we expect the same kind of suppression of free speech from Obama?

Recall that the Democrats have already put forward a hate crime bill and a bill to criminalize blogging, with sentences up to 2 years. The hate crimes bill passed the House, while the blog-crime bill is still in committee.

Will Canada's Chief Fascist debate?

Ezra "debated" her on Saturday on the radio. (H/T Blazing Cat Fur)

But she would not go against him head-to-head. Instead she wanted to speak after him, so that she could not be corrected or rebutted. There you see the full expression of the left – they cannot stand that you are allowed to talk back to them, and they want to silence you – regardless of evidence.

This is how Darwinism and Global Warming are being put through by the secular-left right now. Stifle dissent, choke off debate, malign your opponent's motives, coerce them with the force of government.

I will update this post with Ezra's reflections on the "debate".

Further study

- Mark Steyn radio interview and previous Ezra Levant debate
- Ezra Levant and Mark Steyn on Milt Rosenberg's radio show
- Ezra Levant videos from the Michael Coren TV show, here.
- Evan Sayet's speeches on how progressives think

CRISIS! Obama cuts off funding for pro-democracy movement in Iran!

June 21, 2009 | by Wintery Knight | Link | Original Link

Why did Obama cut off her funding?

Saturday news

Obama cuts funding for pro-democracy groups in Iran. He's finally choosing a side!

From Newsmax:

> Newsmax has learned that **the Obama administration also has zeroed out funding for pro-democracy programs inside Iran** from the State Department budget for fiscal 2010, just as protests in Iran are ramping up.
>
> Funding for pro-democracy programs began in 2004, when Congress earmarked $1.5 million of the State Department budget for "educational, humanitarian, and non-governmental organizations and individuals inside Iran to support the advancement of democracy and human rights in Iran."
>
> The funding ramped up dramatically two years later, when Secretary of State Condoleezza Rice requested $75 million for pro-democracy programs. More than half of the $66.1 million Congress finally appropriated went to expand U.S. government-funded Persian language broadcasting services at Voice of America and Radio Free Europe/Radio Liberty.
>
> But **no money has been earmarked for such programs in the administration's fiscal 2010 foreign operations budget request**. Congressional sources told Newsmax they doubted that a Democrat-controlled Congress would add it when the budget comes before a committee next week.

Iranian fascists shoot women and student protesters dead, *on camera*. Graphic videos at the linked story.

Iranian fascists beat women and student protesters, *on camera.* Graphic video at the linked story.

Iranian fascists shoot a young man on the street, *on camera.* Graphic video at the linked story.

Iranian fascists open fire on crowds of pro-democracy protesters.

Michelle Malkin has photos here.

Hot Air reports that Obama takes a leisurely trip to the ice cream parlor.

Obama's tepid response

Here is Obama's lame, insecure, moral equivalence, moral relativist, politically correct response:

> "The Iranian government must understand that the world is watching. We mourn each and every innocent life that is lost," Obama said in a statement.

Something tells me that Ronald Reagan and George W. Bush would have gone a lot further. But those two are coming from a worldview where humans have certain inalienable rights, grounded by a Creator, and that no one has a right to take away those rights. Reagan and Bush were not afraid to speak divisively in order to condemn evil, and praise the good. Is that so hard for Democrats to do?

Hot Air notes that even the extremist left-wing web site "The Nation" is criticizing Obama's response to Iranian fascism.

Excerpt: (H/T Hot Air)

> President Obama's tepid response to the evidence the Iranian election was stolen from the people of that country by current president President Mahmoud Ahmadinejad and his thuggish allies is disappointing. …
>
> The president says he entertains "deep concerns about the election" in Iran. Well, who doesn't? Expressing concern is "nice," it's "diplomatic"–in the worst sense–but it is not sufficient to the circumstance…

The Nation article also has some nice citations of conservative French leader Sarkozy, who has courage, moral conviction, and moral clarity.

ECM sent me this link to a post on Ace of Spades, regarding the Department of Defense written exam. Do you know know what counts as a form of "low-level terrorism" in Obama's regime? Is it attacking the Pentagon? IEDs? Hate crimes? or *PROTESTS?* Click here to find out.

Ralph Peters

Very angry column is here. (H/T Berman Post)

Excerpt:

> SILENCE is complicity. Our president's refusal to take a forthright moral stand on the side of the Iranian freedom marchers is read in Tehran as a blank check for the current regime.
>
> The fundamentalist junta has begun arresting opposition figures, with regime mouthpieces raising the prospect of the death penalty. Inevitably, there are claims that dissidents have been "hoarding weapons and explosives."
>
> Foreign media reps are under house arrest. Cellphone frequencies are jammed. Students are killed and the killings disavowed.
>
> And our president is "troubled," but doesn't believe we should "meddle" in Iran's internal affairs. (Meddling in *Israel's* domestic affairs is just fine, though.)
>
> We just turned our backs on freedom.

This article by Ralph Peters is MUST-READ. We used to be a great nation that cared about the plight of the oppressed peoples abroad. But not anymore.

The Berman Post post has a HUGE number of links, if you're into this story, as I am.

Republican Mike Pence

His resolution condemning the Islamic fascists brutal suppression of peaceful pro-democracy protesters passed in the House.

His speech can be viewed here:

Excerpt:

> "This resolution simply states that the House of Representatives expresses its support for all Iranian citizens who embrace the values of freedom, human rights, civil liberties and the rule of law. It also condemns the ongoing violence against demonstrators by the government of Iran and pro-government militias, as well as the ongoing government suppression of independent electronic communication through interference with the Internet and cell phones. And lastly, it affirms the universality of individual rights and the importance of democratic and fair elections.

His full statement following the passage of his pro-democracy bill is here. I should just note that Mike Pence is a devout Christian, and that human rights and human dignity are grounded by his worldview. He is saying such things because it is rational for him to say such things, on his worldview of Christian theism.

How much profit does the non-profit Planned Parenthood make?

June 21, 2009 | by Wintery Knight | Link | Original Link

This article from the American Spectator provides the answer.

Excerpt:

> Left-wing activists are indignant at obscene oil company profits, hefty CEO bonuses, and sweet golden parachutes — but what about expansion of the No. 1 violator of human rights in the United States?
>
> No, it's not Dick Cheney and the CIA. It's Planned Parenthood. The abortion giant took home $85 million in "excess of revenue over expenses" (a nifty way of saying profits) and had an operating budget of over $1 billion for the 2007-2008 fiscal year, according to its latest annual report. Included in that budget was $350 million in "government grants and contracts" (an equally nifty way of saying your tax dollars). An increase in the number of abortions performed helped fuel the profits.

Should government money be going to special interest groups that helped Obama to get elected?

> Uncle Sam helps, too. The federal government has morphed into Planned Parenthood's sugar daddy, and the co-dependency is only going to get worse in the age of Obama. Fully one-third of the organization's revenue last year came from the government, compared with less than one-fourth from private contributions. If Planned Parenthood can't get your money voluntarily, its advocates in Congress will coercively.
>
> That's why limited government advocates have a stake in the pro-life cause. On April 15, over one million Americans flocked to state capitals, public parks, and town halls to protest runaway government spending — and rightly so. Although most of the movement's furor was directed at bailouts and stimulus packages, government's love tryst with the abortion lobby should be exhibit A in the tea partiers' future arsenal.
>
> The first target should be Obama's executive order rescinding the Mexico City Policy, which had ensured that American taxpayer funds would never be used for overseas abortions. The move didn't get much ink because of the media's preoccupation with the economic crisis, but it stands as an example of both Obama's abortion radicalism and intention, even in a troubled economy, to throw public money at groups that helped him get elected.

Yet another reason why fiscal conservatives should be social conservatives.

Was Hitler a Christian? Is Nazism similar to Christianity?

June 21, 2009 | by Wintery Knight | Link | Original Link

Muddling Towards Maturity links to a few articles by Jonah Goldberg, a Jewish author who wrote a lengthy history of fascism that was on the New York Times Bestseller list for several months. Since Goldberg is Jewish, I think it's fair to say that we will get a unbiased answer to this question from someone who spent a lot of time studying it for his book.

Goldberg's posts are here and here. He reproduces the FULL excerpts from his book *Liberal Fascism* that deal with the relationship between Hitler & Christianity. I will be giving you excerpts from the excerpts, but you must click through to read the chapter.

So, let's take a look at what Hitler actually did in his policies.

Let's start with the first post.

1) Hitler wanted Christianity removed from the public square

> Like the engineers of that proverbial railway bridge, the Nazis worked relentlessly to replace the nuts and bolts of traditional Christianity with a new political religion. The shrewdest way to accomplish this was to co-opt Christianity via the Gleichschaltung while at the same time shrinking traditional religion's role in civil society.

Do you want Christianity removed from the public square? If so, then you are like Hitler.

Do you want to minimize Christianity's role in civil society? If so, then you are like Hitler.

2) Hitler banned the giving of donations to churches

> Hitler banned religious charity, crippling the churches' role as a counterweight to the state. Clergy were put on government salary, hence subjected to state authority. "The parsons will be made to dig their own graves," Hitler cackled. "They will betray their God to us. They will betray anything for the sake of their miserable little jobs and incomes."

Do you want to ban charitable contributions to churches? If so, then you are like Hitler.

3) Hitler replaced Christian celebrations with celebrations of the state

> Following the Jacobin example, the Nazis replaced the traditional Christian calendar. The new year began on January 30 with the Day of the Seizure of Power. Each November the streets of central Munich were dedicated to a Nazi Passion play depicting Hitler's Beer Hall Putsch. The martyrdom of Horst Wessel and his "old fighters" replaced Jesus and the apostles. Plays and official histories were rewritten to glorify pagan Aryans bravely fighting against Christianizing foreign armies. Anticipating some feminist pseudo history, witches became martyrs to the bloodthirsty oppression of Christianity.

Do you want to replace Christian traditions and holidays with secular traditions and holidays? If so, then you are like Hitler.

4) Hitler favored the complete elimination of Christianity

> When some Protestant bishops visited the Fuhrer to register complaints, Hitler's rage got the better of him. "Christianity will disappear from Germany just as it has done in Russia . . . The Germanrace has existed without Christianity for thousands of years . . . and will continue after Christianity has disappeared . . . We must get used to the teachings of blood and race."

Do you favor the complete elimination of Christianity? If so, then you are like Hitler.

5) Hitler favored the removal of mandatory prayers in schools

> In 1935 mandatory prayer in school was abolished…

Do you favor the removal of prayer from schools? If so, then you are like Hitler.

6) Hitler favored the banning of Christmas carols and nativity plays

> …and in 1938 carols and Nativity plays were banned entirely.

Do you favor the banning of Christmas carols and nativity plays? If so, then you are like Hitler.

7) Hitler abolished religious instruction for children

> By 1941 religious instruction for children fourteen years and up had been abolished altogether….

Do you favor abolishing religious instruction for children? If so, then you are like Hitler.

(Now we are on to the second post)

8) Hitler opposed the ideas of universal truth and objective moral absolutes

> …Just as the Nazi attack on Christianity was part of a larger war on the idea of universal truth, whole postmodern cosmologies have been created to prove that traditional religious morality is a scam, that there are no fixed truths or "natural" categories, and that all knowledge is socially constructed.

Do you oppose the idea of universal truth? If so, then you are like Hitler.

Do you oppose the idea of objective moral absolutes? If so, then you are like Hitler.

One more that Goldberg doesn't mention

Hitler was against homsechooling and school choice. He favored compulsory government-run (public) schools.

> "The Youth of today is ever the people of tomorrow. For this reason we have set before ourselves the task of innoculating our youth with the spirit of this community of the people at a very early age, at an age when human beings are still unperverted and therefore unspoiled. This Reich stands, and it is building

> itself up for the future, upon its youth. And this new Reich will give its youth to no one, but will itself take youth and give to youth its own education and its own upbringing."

Do you oppose homeschooling and school choice? If so, then you are like Hitler.

Conclusion

It doesn't rally matter what a person says in his public speeches, because politicians lie all the time in order to get votes from particular groups, or to maintain their popularity. We need to look at what policies a politician actually enacts to see what he really believes. For example, Barack Obama had a number of pro-life advertisements during his campaign, but he is the most pro-abortion President ever in his actual policies.

Adolf Hitler was a man influenced by two big ideas: evolution and socialism. His party was the national SOCIALIST party. He favored a strong role for the state in interfering with the free market. He was in favor of regulating the the family so that the state could have a bigger influence on children. And he favored the idea of survival of the fittest. His ideas are 100% incompatible with Christianity and capitalism, two ideas which fit together hand in glove.

How about you? Do you lean to the left in your politics? Did you vote for fiscally-liberal Democrats who redistribute wealth from "the greedy rich" to the deserving poor by government coercion? Do you believe in evolution?

Does your belief system ground inalienable rights, including the right to life, which would make mass murder irrational? Christianity says that all men are made in the image of God, for the purpose of knowing God. Do you believe that? Or do you believe that we are just bundles of molecules here by accident?

Further study

I did a series of posts a while back that asked the question: is morality compatible with atheism? Do concepts like moral values, moral duties, free will, moral accountability, and moral significance rationally grounded by atheism?

I did a comparison of a consistent authentic Christian, William Wilberforce, with a consistent authentic evolutionist, Adolf Hitler. These two are totally opposed in every way, because their worldviews are diametrically opposed. Another prominent Christian at the time, Dietrich Bonhoeffer, also opposed Hitler and was executed for his part in a plot to assassinate Hitler.

In another post, I asked whether Christians or atheists are more responsible for the mass murders of history. I did the body count and the analysis of worldviews to determine which worldview doesn't oppose the murder of millions of innocent people.

In another post, I looked at the ideas that kill millions of innocent people, including economic theories, scientific theories and social theories. Is there a common denominator between these ideas that have killed millions of people?

Here is an audio lecture by Jay Richards on the "Myths Christians Believe about Wealth and Poverty". His new book is called "Money, Greed and God: Why Capitalism is the

Solution and Not the Problem”. To understand what capitalism is, you can watch this lecture about the book. Here is a series of 4 sermons by Wayne Grudem on the relationship between Christianity and economics?.(a PDF outline is here)

12-year-old girl sues Dad for grounding her… and wins!

June 21, 2009 | by Wintery Knight | Link | Original Link

Here is a story from Canada that shows why we need to be careful about enacting compassionate, non-judgmental, feminized social policies.The more you reduce the male role and male authority in the family, the fewer men will want to take on the responsibilities of being a Dad. We need to be careful not to replace husbands and fathers with big government social programs and intrusive, anti-male courts.

Excerpt:

> A Gatineau father lost an appeal Monday after a lower court ruled last June that he had issued a too severe punishment against his 12-year-old daughter.
>
> The case involves a divorced man who says that in 2008 he caught the girl, over whom he had custody, surfing websites he had forbidden and posting "inappropriate pictures of herself" online. The girl's father told her as a consequence that she would not be allowed to go on her class' graduation trip to Quebec City, even though her mother had already given permission for her to do so.
>
> The girl then contacted a legal-aid lawyer who was involved in the parents' custody battle, who convinced the court to order that the girl be allowed to go on the trip with her class. The father appealed the decision on principle, although his daughter went on the trip in the meantime.
>
> The appeals court reportedly warned in its ruling that the case should not be seen as an open invitation for children to take legal action against their parents when grounded.
>
> The girl now lives with her mother.

There is more to the story.

You may think that this would be overturned on appeal, but the father LOST his appeal, too.

So, what the daughter, wife, prosecuting attorney and judge (all feminists?) are all telling this Dad that he can donate sperm, pay bills, and pay taxes for feminist social programs, but that he cannot PARENT his own children. Somehow, the idea that certain victim groups should have complete autonomy from moral standards, moral judgment and from the consequences of their actions has been enshrined into the law and the government.

- Does anyone care what men want, or should we just be ordered around like little boys?
- Do we really think that state coercion is going to make men be more involved with their marriages and children?

I think that marriage should allow men to express themselves as fathers, just as much as women can express themselves as mothers. Parenting should be an equally shared responsibility, and the father should have as much parental authority as the mother. Equality.

Compassion vs standards

Here is a pretty good article by Jewish scholar Dennis Prager that argues against compassion and for moral standards. He tells a story of a team losing a baseball game 24-7, when the scoreboard is reset to 0-0 DURING THE GAME. He then asks what beliefs would motivate this action.

> As is happening throughout America, compassion trumped all other values.
>
> Truth was the first value compassion trashed. In the name of compassion, the adults in charge decided to lie. The score was not 0-0; it was 24-7.
>
> Wisdom was the second value compassion obliterated. It is unwise to the point of imbecilic to believe that the losing boys were in any way helped by changing the score. On the contrary, they learned lessons that will hamper their ability to mature.

He lists the lessons that the winning and losing boys learned from this compassionate act, and how they will act in the future. Then he continues his list.

> Building character was the third value trumped by compassion. People build character far more through handling defeat than through winning. The human being grows up only when forced to deal with disappointment. We remain children until the day we take full responsibility for our lives.
>
> …The fourth value that compassion denied here was fairness. It is remarkable how often compassion-based liberals speak of "fairness" in formulating social policy given how unfair so many of their policies are. It was entirely unfair to the winning team to have their score expunged, all their work denied. But for the compassion-first crowd, the winning team is like "the rich" who earn "too much" and should therefore be penalized with a higher tax rate; the winning team scored "too many" runs to be allowed to keep them all.

The standards that are undermined by compassion can be moral standards or standards of rationality. The former is under attack from moral relativism, and the latter is under attach from postmodernism. But I guess parents don't really care enough to teach their children about these ideas, and when the children grow up, they vote for the policies that follow from moral relativism and postmodernism: policies of the secular left.

Recall that in my survey of atheists, the guiding principle was not truth, but happiness. Atheists want to feel happy, not to feel obligated to find out the way the world really is, and then to adjust their conduct to this truth. Even if Christianity were proven true, and they were then faced with rational and moral obligations, they would not feel obligated – they would continue to please themselves as before, *anyway.*

UPDATE: ECM send me two additional stories:

- David Warren reflects on how women will suffer most from the feminization of society
- Michael Wilson writes about how government encourages the breakdown of the family

Further study

This week, I blogged about a new study that shows the importance of fathers to the development of children.

Recently, I blogged about how government intrudes into the family and about the myth of "dead-beat Dads". And about how the feminist state's discrimination against male teachers is negatively impacting young men. And there is my series on how Democrat policies discourage marriage: Part 1 is here and Part 2 is here and Part 3 is here.

How is well is Britain's National Health Service working?

June 22, 2009 | by Wintery Knight | Link | Original Link

The UK has a two-tier health care system, just like India does. One tier is private, the other is public. The British system is called the National Health Service (NHS). Everyone has to pay into the NHS, but only some people are treated. Since the government is paying for all NHS service, the decision about what will and will not be covered is not left to individuals. The state decides what gets treated or not.

British journalist Melanie Phillips writes about it in her latest column.

Excerpt:

> ...central government should not be making such decisions in the first place. It is wrong for a politician or some Whitehall bean-counter to say people can't have IVF or the latest drug to combat Alzheimer's.
>
> Whether or not these things are efficacious or worth the money is a calculation central government should not be making. It should be no business of the state to tell us what treatments we can and can't have.
>
> But as long as the Government controls the purse-strings, it is entitled to make up the rules. What's wrong is that it does control the purse-strings. It's our money, and we should be entitled to decide how to spend it.
>
> For we now know beyond a shadow of a doubt that the Government cannot be trusted to spend it properly. We know about the serial computer debacles.
>
> We know about the huge profligacy and waste, with the idiotic non-jobs of 'diversity outreach co-ordinator' and such-like.
>
> We know that in both health and education, gazillions have been poured straight into a black hole. We know that, while the extra money has undoubtedly brought about some improvements in the NHS, most of it has been wasted.

She also talks about the problem of choice in education in the same article.

Be careful who you trust your money to. Maybe you should be handling these decisions yourself, instead of putting your faith in strangers who get paid regardless of whether you get what you want, or not. Government-run services are not like the free market. You pay and then you pray with government-run social programs. When you buy from a private business, they *have* to meet your needs, or they go out of business.

UPDATE: Neil Simpson has a good article linked in his round-up about how single-payer health care will require that services be rationed.

Is it a good idea to raise taxes on your rich, greedy employer?

June 22, 2009 | by Wintery Knight | Link | Original Link

It's a great idea, if you want to lose your job!

John Jay Ray writes about what it takes to start and run a small business over at Stop the ACLU.

Do people even understand where their job comes from? What kind of person is willing to start their own business? Is the government a help or a hindrance to them? Some people have never even thought about who hires them and pays their salary. I think this article will really help people to start thinking about it.

Excerpt:

> **To All My Valued Employees:**
>
> There have been some rumblings around the office about the future of this company, and more specifically, your job. As you know, the economy has changed for the worse and presents many challenges. However, the good news is this: The economy doesn't pose a threat to your job. What does threaten your job however, is the changing political landscape in this country.
>
> However, let me tell you some little tidbits of fact which might help you decide what is in your best interests. First, while it is easy to spew rhetoric that casts employers against employees, you have to understand that for every business owner there is a Back Story. This back story is often neglected and overshadowed by what you see and hear. Sure, you see me park my Mercedes outside. You've seen my big home at last year's Christmas party. I'm sure; all these flashy icons of luxury conjure up some idealized thoughts about my life.
>
> However, what you don't see is the BACK STORY: I started this company 28 years ago. At that time, I lived in a 300 square foot studio apartment for 3 years. My entire living apartment was converted into an office so I could put forth 100% effort into building a company, which by the way, would eventually employ you. My diet consisted of Ramen Pride noodles because every dollar I spent went back into this company. I drove a rusty Toyota Corolla with a defective transmission. I didn't have time to date.
>
> Often times, I stayed home on weekends, while my friends went out drinking and partying. In fact, I was married to my business — hard work, discipline, and sacrifice. Meanwhile, my friends got jobs. They worked 40 hours a week and made a modest $50K a year and spent every dime they earned. They drove flashy cars and lived in expensive homes and wore fancy designer clothes. Instead of hitting the Nordstrom's for the latest hot fashion item, I was trolling through the discount store extracting any clothing item that didn't look like it was

> birthed in the 70’s. My friends refinanced their mortgages and lived a life of luxury.
>
> I, however, did not. I put my time, my money, and my life into a business with a vision that eventually, some day, I too, will be able to afford these luxuries my friends supposedly had. So, while you physically arrive at the office at 9am, mentally check in at about noon, and then leave at 5pm, I don’t. There is no “off” button for me. When you leave the office, you are done and you have a weekend all to yourself. I unfortunately do not have the freedom. I eat, and breathe this company every minute of the day. There is no rest. There is no weekend. There is no happy hour. Every day this business is attached to my hip like a 1 year old special-needs child.

This is a great article to send to anyone you know who voted Democrat. We need to educate Democrat voters about basic economics so that they never vote Democrat again! Somehow, we have gotten to a point in this country where we think that stealing from people who take tons of risks to provide us all with jobs are greedy and evil, and that we can pillage their profits with impunity.

We need to tell the heroic stories of hard-working entrepreneurs, and stop listening to anti-business government bureaucrats, ivory tower academics, Hollywood stars, and union layabouts. We need to realize that people who understand business make this economy run, not a bunch of perpetual adolescents insulated from real life.

Do affirmative action policies help or hurt quality of service?

June 22, 2009 | by Wintery Knight | Link | Original Link

Commenter ECM sent me an article from a newspaper in Annapolis, Maryland, written by a professor at the Naval Academy. The author is a professor of English, and he doesn't think that affirmative action provides taxpayers with good quality service. Quality of service is very important because the Navy keeps us safe from harm. They have an important job, so shouldn't we be hiring the best candidates?

Excerpt:

> Midshipmen are admitted by two tracks. White applicants out of high school who are not also athletic recruits typically need grades of A and B and minimum SAT scores of 600 on each part for the Board to vote them "qualified." Athletics and leadership also count.
>
> A vote of "qualified" for a white applicant doesn't mean s/he's coming, only that he or she can compete to win the "slate" of up to 10 nominations that (most typically) a Congress(wo)man draws up. That means that nine "qualified" white applicants are rejected. SAT scores below 600 or C grades almost always produce a vote of "not qualified" for white applicants.
>
> Not so for an applicant who self-identifies as one of the minorities who are our "number one priority." For them, another set of rules apply. Their cases are briefed separately to the board, and SAT scores to the mid-500s with quite a few Cs in classes (and no visible athletics or leadership) typically produce a vote of "qualified" for them, with direct admission to Annapolis. They're in, and are given a pro forma nomination to make it legit.
>
> Minority applicants with scores and grades down to the 300s with Cs and Ds (and no particular leadership or athletics) also come, though after a remedial year at our taxpayer-supported remedial school, the Naval Academy Preparatory School.
>
> By using NAPS as a feeder, we've virtually eliminated all competition for "diverse" candidates: in theory they have to get a C average at NAPS to come to USNA, but this is regularly re-negotiated.

Try and reflect on the fact that when quality goes down in an area where performance means life or death, the consequences for NOT hiring the best could be disastrous.

Does the academic left use rational arguments or intimidation in debates?

June 22, 2009 | by Wintery Knight | Link | Original Link

Muddling Towards Maturity has found yet another interesting post for us. This post is by David French, who writes at the National Review.

The full post:

> Late yesterday afternoon, I happened to catch a short-but-insightful lecture by one of my favorite Christian apologists, Ravi Zacharias. In the midst of an interesting discussion about the allure of Eastern mysticism in Western culture, he made a fascinating statement (I'm paraphrasing): In the battle of ideas, stigma always beats dogma. In other words, through stigmatization, one can defeat a set of ideas or principles without ever "winning" an argument on the merits.
>
> I was instantly reminded of not just my own experiences in secular higher education, but also the experiences I see and hear every day while defending the rights of students and professors. Why convince when you can browbeat? Why dialogue when you can read entire philosophies out of polite society? That's not to say there aren't intense debates on matters of public policy, but all too often we see social conservatism not so much engaged as assaulted.
>
> I fear that we like to comfort ourselves by saying something like, "kids see through this heavy-handed nonsense." This is simply wishful thinking. Most people don't like to be labeled as "bigots," and they often assume that such overwhelming ideological consensus is the product of considered thought. If "everyone" seems to believe something (especially when "everyone" includes all of your professors and other academic authorities), then mustn't it be true?
>
> Here's a question for conservative parents and teachers: Are we really equipping young people to face the challenges of college if we teach them arguments? Or should we instead be primarily preparing them to face scorn and hate with inner toughness and good cheer? After all, when a professor calls you a "fascist bastard" for defining marriage as a union between a man and a woman, what is he doing if not trying to defeat dogma with stigma?

Below, I'll give my thoughts on this.

My thoughts on the academic left

First of all, from a practical point of view, never take anything except math, engineering or computer science at the university, unless you are really passionate about some other field. Everything else is so politicized that you may be forced to assent to things you do not believe in order to pass. There is not a shred of open-mindedness or tolerance for other viewpoints in today's leftist campuses. It's just fascism all the way.

Secondly, young conservatives and Christians need to get used to staying calm while ideas that they don't agree with are shouted in their faced in the typical vulgar, abusive manner that secular leftists seem to find so fetching these days. The best way to do that is to watch as many debates as possible in advance and get used to sitting still and disagreeing while someone else explains their point of view.

Thirdly, other points of view are only annoying if you have lousy reasons for your own point of view. If you put the time in learning your arguments and evidence, and the best that could be argued against you from the other side, then there should be no problem. Just repeat what Jay Richards said after his debate with atheistic journalist Christopher Hitchens: "a sneer is not an argument, an insult is not evidence". Richards has a Ph.D from Princeton University… Hitchens does not.

Fourthly, we need to start making it common knowledge that atheism does not ground morality and that is a worldview that is responsible for at least a hundred million deaths in the last 100 years alone. That point must be made over and over – when someone claims to be an atheist it should be immediately put to them that meaningful morality is not rationally grounded by their worldview. Don't let them make any moral judgments without challenging them on the foundations of morality.

Example of what students can expect from left-wing fascists on campus

Don Feder has a list of campus violence incidents against conservative speakers in a OneNewsNow article.

Here are a couple of the incidents in his list:

> When she attempted to speak at Penn State in 1999, black conservative Star Parker was forced from the stage. Parker described the experience as "very frightening" and said she "feared for my life." Parker's hatefulness was her contention that single mothers are better off with jobs than on welfare, based on her own experience.
>
> At Emory University in 2006, David Horowitz gave a lecture as part of Islamo-Fascism Awareness Week. To show their outrage at the comparison of radical Islam to fascism, protestors behaved like fascists. A mob of over 300, from groups like Amnesty International, Veterans for Peace, and Students for Justice in Palestine, waved signs and shouted, "Does George Bush respect anybody's rights?" and "Why don't you talk about fascism in America?" mixed with chants of "Racist, sexist, anti-gay, David Horowitz go away!" (They can't reason. But they sure can rhyme.) "Are we going to talk about who killed JFK?" one protestor demanded. (The Zionist-CIA-Karl Rove-AIG Executives cabal?). Horowitz (who had to be escorted off stage) observed, "This is exactly what the fascists did in Germany in the 1930s." True, but at least they weren't hypocrites claiming they were motivated by concern for minority rights.

This is the tolerant, open-minded left. The same tolerant left that brought secular-socialist mass-murdering regimes into power in Russia, Italy and Germany. And they kill millions in

many ways. You will never find right-wing advocates of free market capitalism and human rights treating their opponents like this. We don’t take positions based solely on emotions, so there is no need for us to use violence to win an argument.

ACORN sues whistleblower for exposing their secrets

June 23, 2009 | by Wintery Knight | Link | Original Link

Let's learn about ACORN

In case you don't know anything about ACORN, Michelle Malkin can introduce this organization. (post dated June 20, 2008)

Excerpt:

> The radical left-wing, government-subsidized group ACORN uses your tax dollars to engage in voter fraud, enrich itself as part of the mortgage counseling racket, and serve as an activist branch of the Democrat Party.
>
> There's more. Ashley Eiler e-mails about a new report: "The Consumers Rights League just released a collection of whistleblower documents from an ACORN staffer that raise some new concerns about how the organization has established policies for its housing counselors to use undocumented / under-the-table income for processing loan applications from low-income individuals. In addition to pushing these and other exotic loans, the documents reveal that ACORN has engaged in some apparently illegal activities by commingling government funds from its tax-exempt offshoot entities to fight political battles against corporate lenders. "

Who has close ties to this suspicious group? Is it Dick Cheney?

Obama's close relationship with ACORN

Michelle Malkin can tell you all about Obama's close ties with ACORN. (post dated June 25, 2008)

Excerpt:

> Who in Washington will fight to ensure that your money isn't being spent on these radical activities?
>
> Don't bother asking Barack Obama. He cut his ideological teeth working with ACORN as a "community organizer" and legal representative. Naturally, ACORN's political action committee has warmly endorsed his presidential candidacy. According to ACORN, Obama trained its Chicago members in leadership seminars; in turn, ACORN volunteers worked on his campaigns. Obama also sat on the boards of the Woods Fund and Joyce Foundation, both of which poured money into ACORN's coffers. ACORN head Maude Hurd gushes that Obama is the candidate who "best understands and can affect change on the issues ACORN cares about" — like ensuring their massive pipeline to your hard-earned money.
>
> …For excellent background on Obama and ACORN, see Stanley Kurtz's NR piece here, plus City Journal pieces here and here. Also here and here.

This article has some startling numbers on ACORN's operations.

How is ACORN funded?

ACORN is funded by taxpayer money, and Obama's porkulus bill included 4.19 billion dollars for his former employer. (post dated January 26, 2009)

Excerpt:

> House GOP leader John Boehner's office reports that the left-wing voter fraud/illegal alien/housing entitlement racketeers at ACORN "could get billions" more in federal taxpayer funding from the Democrats' stimulus bill.

Remember, these guys are accused of voter fraud, and they are being asked by Obama to go door-to-door to assist with the US census. I'm sure they will not use that opportunity to commit more voter fraud. Not at all.

ACORN sues whistleblower

Remember that whistleblower that I mentioned earlier? Michelle has the latest news.

Excerpt:

> The White House is on a witch hunt against inspectors general who blow the whistle on waste, fraud, and abuse of taxpayer dollars.
>
> And now, taxpayer-subsidized ACORN affiliate Project Vote — where President Obama cut his teeth as a community organizer and learned Leftist intimidation tactics up close and personal — is going after whistleblower Anita MonCrief and an anonymous "John Doe" defendant for posting invaluable documents that reveal the money-shuffling racket.
>
> Obama. ACORN. Project Vote. Corrupt birds of a feather bully together.
>
> The scoop: Project Vote has filed a federal lawsuit against MonCrief for blogging about her experience and knowledge of the non-profit 501(c)(3) organization's partisan and political activities, including coordination with the Obama campaign. Project Vote seeks compensatory damages and exemplary damages "of at least $5 million" and all costs and attorney's fees on trumped-up charges of "trademark infringement" and publication of "trade secrets."

Should we be surprised that the left is willing to bully and intimidate people for exposing them?

ACORN was instrumental in causing the current recession by suing banks so that they would be forced to make loans to people who would never be able to pay the money back. Remember, Democrats caused this recession and Republicans tried to stop them.

What is our exit strategy from the quagmire of this unilateral war?

June 23, 2009 | by Wintery Knight | Link | Original Link

The world is angry with our policies

Look, even the National Review wants us out of this unilateral war that is making the whole world hate us!

> Canada and Mexico, our top two export markets, are embroiled in trade feuds with the U.S., both triggered by American protectionism. As a global leader and a decent hemispheric neighbor — especially during these economic doldrums — the United States immediately should rejoin Canada and Mexico on the road to free trade.
>
> …Obama's $410 billion omnibus spending plan defunded a pilot program in which about 100 Mexican trucks were allowed to drive goods into the U.S. beyond a 25-mile frontier zone. American trucks were given equal access to Mexican destinations. (Removing goods from one country's trucks and reloading them onto the other's for onward travel has boosted transit costs anew. These eventually increase price tags.)
>
> Mexico correctly argues that the North American Free Trade Agreement, which President Clinton signed in 1995, opened U.S. roads to Mexican trucks. However, Washington kept dragging its feet. In 2002, Congress imposed 22 safety regulations on Mexican (but not Canadian) trucks, and it was only in 2007 that the Bush administration started the pilot program. In exasperation at the cancellation of this initiative, Mexico has raised tariffs on 90 American exports worth $2.4 billion, including grapes and toilet paper. This reportedly will kill 40,000 American jobs. Mexico's backlash against U.S. protectionism interrupted its *unilateral* reduction of average industrial tariffs from 10.4 percent in 2008 to a projected 4.2 percent in 2013.
>
> Even worse, June 1 brought word that Canacar — an association of 4,500 Mexican trucking companies — had filed a grievance with the U.S. State Department seeking $6 billion in damages because of the pilot program's termination and the resulting brick wall that arose in front of big rigs at the border.
>
> "We want reciprocity," Canacar attorney Pedro Ojeda told the *Wall Street Journal*. "The U.S. has notoriously not kept its commitments."

I mean trade war, of course.

The world is angry with America

Andrew Roth writes:

> China has now retaliated with a "Buy China" provision in their own stimulus bill.

> Canada has complained and all Secretary of State Hillary Clinton has done in response is pledge "cooperation." No, we don't need pledges. We need to revoke "Buy American." We need to kill it.

Here is a list of countries that are angry with Obama's short-sighted protectionism. He wants to isolate America from the rest of the world by refusing to sign trade deals with them.

> Canada ($600B) passes resolution to counter "Buy American" policy.
>
> The European Union ($639B) calls it the "worst possible signal."
>
> Japan ($204B) warns the United States, and Australia ($32B) threatens retalitory measures.
>
> After slamming the "Buy American" policy, India ($43B) raised tariffs.
>
> Singapore ($43B) is concerned with "Buy American."
>
> The president of Brazil ($62B), a former *labor activist*, criticizes Buy American and has threaten to challenge the U.S. at the WTO.
>
> France's ($72B) Nicholas Sarkozy wants a "Buy France" provision for french auto companies.

Big Labor opposes free trade, and Big Labor helped to get Obama elected.

So now we get a trade war.

GOOD NEWS! Democrat PR firm recommends dropping global warming

June 23, 2009 | by Wintery Knight | Link | Original Link

Story here from Steve Milloy's Green Hell blog.

Excerpt:

> A public relations firm advising Democrats on climate legislation says that global warming alarmism needs to be dropped.
>
> According to a memo from Greenberg Quinlan Rosner Research, global warming should not be used as the "primary frame"…

Here's a quote from the firm's memo:

> Awareness about global warming is broad, and some in the public are seriously concerned about it. But almost no one in our groups expressed such concern; for most voters, global warming is not significant enough on its own to drive support for major energy reform. So while it can be part of the story that reform advocates are telling, global warming should be used only in addition to the broader economic frame, not in place of it.

See, the news isn't all bad!

My big post on cap and trade is here, so you can learn what the Democrats have planned for us.

Why does the secular-left denigrate stay-at-home moms, marriage and family?

June 23, 2009 | by Wintery Knight | Link | Original Link

Alberta Minister of Finance, Iris Evans.

There was an interesting story that broke last week about the Alberta Finance Minister's comment that the best way to raise children is by having one parent stay home with them during the early childhood years.

Well, D'UH! Only a moron who is ignorant of parenting research doubts that!

But what was interesting was the reaction of the secular-left to her comments.

Excerpt:

> Following the speech, however, the Minister was sharply criticized for her comments by Alberta Liberal leader David Swann, who called for her to apologize. Swann said Evans should be fired should she not do so. "If she really said these things, she must apologize," said Swann. "If she doesn't apologize, the premier must fire her. … These are truly outrageous claims. I have never been as stunned by the sheer arrogance and ignorance of the Tories as I am today."
>
> According to Swann, "In a sense, Iris Evans did us all a favor by revealing her contempt for the sacrifices made by hard-working Alberta families." Swann suggested that Evans' comments prove that the current PC government of Alberta is a "group of small-minded social conservatives who don't understand the problems of ordinary Albertans."

Are leftists totally stupid or something? I would LOVE to stay at home with my children, if I ever found woman I liked and got married and had some. Relationships and debates are even more interesting than programming all day. (And programming is very interesting!) Why are people so focussed on making and spending money? What could be more important than introducing children to God?

Economist Walter Williams evaluates whether teachers are earning their huge salaries

June 24, 2009 | by Wintery Knight | Link | Original Link

I wanted to review a previous post before I go on to discuss some news regarding teacher's unions and whether they contribute to improving the academic performance of their customers (students).

Here is my recent post about Walter Williams, on the education system.

I want to highlight this part where Williams explains how the schools that charge taxpayers the most money achieve the worst academic results for their customers (students):

> The teaching establishment and politicians have hoodwinked taxpayers into believing that more money is needed to improve education. The Washington, D.C., school budget is about the nation's costliest, spending about $15,000 per pupil. Its student/teacher ratio, at 15.2 to 1, is lower than the nation's average. Yet student achievement is just about the lowest in the nation.

In that same post, I linked to an L.A. Times article about a charter school that produces amazingly high academic output for a tiny fraction of the cost, and with some very poor students who are from first-generation immigrant families that can barely speak English.

Here is the secret of this high-performing school:

> That, it turns out, is just the beginning of the ways in which American Indian Public Charter and its two sibling schools spit in the eye of mainstream education. These small, no-frills, independent public schools in the hardscrabble flats of Oakland sometimes seem like creations of television's "Colbert Report." **They mock liberal orthodoxy with such zeal that it can seem like a parody.**
>
> …School administrators take pride in their record of frequently firing teachers they consider to be underperforming. Unions are embraced with the same warmth accorded "self-esteem experts, panhandlers, drug dealers and those snapping turtles who refuse to put forth their best effort," to quote the school's website.

Read the whole post for the whole amazing story.

Below, Ed Morrissey explains *why* public schools suck up so much taxpayer money, while providing horrible results.

Do teacher unions help students to learn?

This is a MUST-READ story from Ed Morrissey, writing at Hot Air. (H/T Ace of Spades)

In a free market capitalist system, teachers, like other grown-ups, are paid based on their

performance. Parents should have a choice of schools, and they should be able to pull their children out of any school that doesn't produce a quality education for their customers, the children. But what happens when the government, to please their union supporters, decouples teacher pay from educational outcomes?

Yahoo News reports:

> Hundreds of New York City public school teachers accused of offenses ranging from insubordination to sexual misconduct are being paid their full salaries to sit around all day playing Scrabble, surfing the Internet or just staring at the wall, if that's what they want to do.
>
> Because their union contract makes it extremely difficult to fire them, the teachers have been banished by the school system to its "rubber rooms" — off-campus office space where they wait months, even years, for their disciplinary hearings.
>
> The 700 or so teachers can practice yoga, work on their novels, paint portraits of their colleagues — pretty much anything but school work. They have summer vacation just like their classroom colleagues and enjoy weekends and holidays through the school year.

> …"You just basically sit there for eight hours," said Orlando Ramos, who spent seven months in a rubber room, officially known as a temporary reassignment center, in 2004-05. "I saw several near-fights. `This is my seat.' `I've been sitting here for six months.' That sort of thing."

Unbelievable. These unions got Obama elected and they are no different than the auto union workers who expect something for nothing. Who cares about whether children learn anything? So long as Democrat supporters get their taxpayer money, why should they have to produce any results?

Ed Morrissey continues:

> If ever one wanted an argument against Card Check, this would be it. Imagine if you will an entire private sector with "rubber rooms" filled with employees left dangling in limbo because their union contracts made them "extremely difficult to fire." There are enough teachers in these rooms in NYC to fill several schools, and yet the taxpayers are shelling out money to have them sit in rooms, play Scrabble, and act like children.
>
> The Big Apple isn't alone in this process, either. Los Angeles has almost 200 teachers in rubber rooms at the moment. Apparently, neither system has the competence nor the inclination to process wrongful conduct or poor-performance hearings with any speed, which is not just unfair to the taxpayers, but also unfair to those teachers wrongfully accused of either or both.
>
> If this was the private sector, it would at least get handled expeditiously, as no business can afford to have hundreds of people sitting around and producing

> nothing. Perhaps as well as a cautionary tale about Card Check and the expansion of unions, it also serves as warning to those who want to replace the private sector in health care and energy production with public employees instead.

This is why I am a small-government capitalist. I want Democrat-supporting unions abolished. Let them earn their salaries like everyone else who works in the free market economy. Consumers deserve performance in exchange for their hard-earned money. And if consumers don't get value, we should demand refunds so that we can take our money to a competitor.

To understand why school choice matters, take look at this video posted over at the Heritage Foundation, featuring 14-year old Johnathan Krohn. Notice how he is the only one of the panel of 3 kids who isn't reciting memorized facts but is actually make a cause-and-effect economics argument.

How big business and enviro-charlatans benefit from Obama's cap-and-trade energy tax

June 24, 2009 | by Wintery Knight | Link | Original Link

Recently, I posted about the economic effects of the Waxman-Markey cap-and-trade bill, including how it would impact individual families. I wrote about the true effects of Obama's green jobs initiative, which will actually decrease employment instead of increasing it.

I also posted before about scientific dissent from global warming, the alleged melting polar ice caps, Obama's planned tax hikes on oil and gas, deceptive alarmism to procure research funding, the alleged warming of the oceans, and the use of made-up crises in order to impose socialism. You can also read the testimony of a Princeton University physicist who is against global warming alarmism.

Who will pay for cap-and-trade?

ECM e-mailed me this story from PowerLine Blog, which explains how much each state will pay if cap and trade passes. John Hinderacker asks whether Obama things that the electorate is stupid enough to believe that the firms who must absorb this tax will just take it out of their profits and leave consumers untouched. He argues that Obama thinks we are stupid enough to believe that.

One commenter to the post writes:

> No, he like many liberals actually believe corporations don't pass on the tax to consumers but it is extracted from profits (lowering them). Remember, they have a very static, zero-sum view of the world.

This is also my view of Obama. He has been indoctrinated with socialist views and he has *no freaking idea* why they don't work. He will be as shocked and surprised as any child is when they first learn that the Tooth Fairy is a myth. But that won't stop him from nationalizing companies once he sees the mess that his interventions have made. Probably his handlers have this all planned out for him.

And where will that money be redistributed to?

But today I wanted to tell you about the people and corporations that are actively pushing for cap-and-trade, because if it passes they will suddenly become very, very rich.

The full story is posted at Steve Milloy's Green Hell blog.

Big business meddling in government

Excerpt:

> Although many businesses have been coerced into supporting Waxman-Markey, much of big business has actively pushed for the bill. Many Wall Street banks hope to profit from the trading of the $9 trillion in emissions allowances to be created under Waxman-Markey. Goldman Sachs would be the preeminent global

> warming bookie as it owns the exchanges where carbon allowances would be traded.
>
> General Electric, whose CEO sits on Barack Obama's Economic Recovery Advisory Board, was instrumental in putting together the U.S. Climate Action Partnership (USCAP), a bizarre big business-environmental activist group lobbying consortium that is a primary driver of global warming legislation. USCAP has even taken credit for drafting parts of Waxman-Markey. GE, it seems, would like a federal law requiring electric utilities buy the wind turbines and other energy technologies manufactured by — guess who — GE.
>
> Republican James Sensenbrenner recently asked the Department of Justice to investigate USCAP members General Motors and Chrysler for illegally using taxpayer bailout money to lobby for global warming legislation. AIG, the insurance giant that is now a ward of U.S. taxpayers, only dropped out of USCAP after Rep. Joe Barton pointed out the illegality of accepting federal money and then using it to lobby the federal government.

Enviro-charlatan greed

Excerpt:

> And then there's Al Gore, who stands to become the first "carbon billionaire" through his partnership in the venture capital firm of Kleiner Perkins Caufield and Byers and the UK-based investment firm of Generation Investment Management. When Gore testified in favor of global warming legislation before the Senate Foreign Relations Committee in January, he failed to disclose his personal financial interests and no Senator came close to asking him about them.
>
> When he testified in April before the House Energy and Environment Subcommittee in favor of Waxman-Markey, Gore again failed to disclose his conflicts-of-interest. When Reps. Marsha Blackburn (R-TN) and Steve Scalise (R-LA) probed into these matters, Gore feigned ignorance and pretended that he would not personally benefit from Waxman-Markey. Although Rep. Waxman made baseball players testify under oath to Congress about the comparatively petty issue of drug use in baseball, he did not subject Gore to penalty for perjury.

And more fascism, too

> Competing for most-appalling character in the Waxman-Markey saga is Rep. Ed Markey. Immediately after the head of Warren Buffet's electric utility unit testified against Waxman-Markey's cap-and-trade provision, Markey fired off a letter to the Federal Energy Regulatory Commission (FERC) specifically requesting that Buffet's utility be investigated. After being rebuked by House Republicans for this blatant intimidation, Markey then asked FERC to expand the requested investigation to all investor-owned utilities, rather than appearing to single out Buffet's. Now all utilities are under operating with a Markey-pointed

> gun to their heads.

They told lies about Bush's "abuses of power" all through his presidency. Now that they are in control, and every new day brings to light more greed, bullying, corruption and fraud than we saw in Bush's entire eight years in office. And that's not even to mention that the average unemployment rate under Bush was about *half* of what it is today under Obama.

Kevin Boland reports on John Boehner's blog that the bill is up for a floor vote in the House this week.

Keith Hennessey explains the looming crisis of entitlement spending

June 24, 2009 | by Wintery Knight | Link | Original Link

This is the best post I have ever seen on the problem of demographics and entitlement spending, which is due to explode in about a few years. I'll summarize so that you will click through and read this post for yourself. There is almost no text in the post, it is all graphs, and they are self explanatory. It will take your about 5 minutes to scare yourself into a coma.

Summary of the post:

- There are 3 entitlement programs: social security, medicare and medicaid
- These programs are funded by taxes on young people who are still working
- These 3 programs currently cost 9% of GDP.
- By 2050, the costs will have doubled to 18% GDP.
- Some of this increase will be due to excess growth in health costs
- And some of this increase will be due to demographics

Let me talk more about the demographics problem:

- More people are living longer
- That means that benefits are being paid out over more years, per person
- A huge group of babies from the Baby Boom started retiring in 2008
- But the number of younger workers who pay their benefits is not growing fast enough
- The number of workers needed to pay each retiree's benefits is shrinking
- Taxes will have to increase, or benefits will have to decrease

Please read the article. It will help you to put Obama's massive spending and tax hikes in perspective. By the way, this is a great post to forward to your friends and neighbor's who voted for Obama who do not like to read about economics and finance.

Should we prefer a President who has moral standards and character?

June 24, 2009 | by Wintery Knight | Link | Original Link

By Michael Ramirez (cropped image, click for full size!)
Image H/T The Western Experience.

Let's take a closer look at Obama's response to the Iranian crackdown, courtesy of the Heritage Foundation. They reproduced FOUR of Obama's talking points in their post, two which I quote in full below:

> **Only history can tell.** As though Hegelian historical forces were at play, on which the president of the United States can have no impact, Mr. Obama was at pains to state that only time will tell how the situation in Iran is resolved. Repeatedly, the president stated that "we are watching," "we are waiting to see how this plays itself out," "we have to monitor the situation." Or, at the very end of the press conference, "The Iranian people know that we are watching." That must be a great comfort to them.
>
> **The choice is up to the Iranian government.** If the Iranian government wants to follow the path to international acceptance that Mr. Obama has graciously opened for them, they will have to behave according to international accepted norms of behavior. If not, that is really too bad. Mr. Obama repeatedly declined the opportunity to spell out any consequences for the violence. He did not even want to say that Iranian diplomats might be disinvited from July 4 celebration at the U.S. embassies. Our doors are open, and if the Iranians want to walk in, that is their choice, in other words.

In an article from Forbes magazine, there is an analysis of Obama's answers to the questions of challengers, who thought that he should have done more to help the cause

of freedom in Iran. (H/T Stop the ACLU)

Excerpt:

> [Obama] is a man who embodies the opposite of the courage to act. His appalling ignorance of history prompted him to claim at his press conference that "the Iranian people … aren't paying a lot of attention to what's being said … here." On the contrary, from their jail cells in the Gulag, Soviet dissidents took heart from what was being said here–as all dissidents dream that the leader of the free world will be prepared to speak and act in their defense.
>
> The president's storyline that we don't know what has transpired in Iran is an insult to the intelligence of both Americans and Iranians. Our absence from the polling booths doesn't mean the results are a mystery. The rules of the election were quite clear. Candidates for president must be approved by the 12-member Council of Guardians. As reported by the BBC, more than 450 Iranians registered as prospective candidates while four contenders were accepted. All 42 women who attempted to run were rejected. So exactly what part of rigged does President Obama not understand?
>
> Instead of denouncing the fake election, President Obama now tells Iranians who are dying for the real thing "the United States respects the sovereignty of the Islamic Republic of Iran." Whose sovereignty is that? The Hobbesian sovereign thugs running the place? Sovereignty to do what? To deny rights and freedoms to their own people? In a state so bereft of minimal protections for human dignity, why should the sovereignty of such a government be paramount?
>
> But President Obama didn't want to dwell on the daily reality of sovereign Iran: A criminal code that permits stoning women to death for alleged adultery and hanging homosexuals for the crime of existing. Instead, he repeatedly invoked "respect" for "their traditions and their culture."
>
> This is the same mantra he espoused to the Islamic world in Cairo when three times he spoke of the "rights" of Muslim women to cover up their bodies. Knowing full well that women in the Muslim world face the contrary problem of surviving after refusing to cover up their bodies, he never once dared to mention that this was also a human right. What part of cultural relativism and traditional oppression does President Obama not know how it plays out?

And now I want to ask a question about the vocation of the President of the United States of America, the leader of the Free World.

Does morality and character matter in a President?

I found these two videos posted by Smitty at The Other McCain.

First, compare Barack Obama vs. Ronald Reagan.

Notice how Ronald Reagan appeals to fundamental human rights, human dignity and the high ideal of freedom. And then he backs up his fine words with teh threat of economic

disaster for Poland’s government if they refuse to comply.

Second, here’s John McCain, the President we could have had, if we had voted purely on substance.

Morality matters. Character counts.

Obama’s secular worldview provides no rational grounding for morality or character. He craves the power to control the lives of others. The plight of the weak and powerless means nothing to him.

Wintery Knight Blog cited in Republican Congressman's TV advertisement

June 25, 2009 | by Wintery Knight | Link | Original Link

Well, not exactly, but check this out.

Here is the story about the 30-second TV ad on RealClearPolitics. You can watch the TV ad on that page.

Excerpt:

> Political observers looking to see how the stimulus battle might play out in the 2010 midterms have an early example in the Kansas Senate race. Rep. Todd Tiahrt (R) launched the first TV ad of that campaign today, and it slams President Obama and House Speaker Nancy Pelosi while urging Kansans to join him in his fight against the government spending program.
>
> "These two Washington politicians, Obama and Pelosi, sold America a bill of goods," a narrator says in the 30-second spot. The Recovery Act hasn't worked, it continues, but "one Kansas conservative" is fighting to stop it.

Here is the ad's script:

> "These two Washington politicians, Obama and Pelosi, sold America a bill of goods. A so-called stimulus plan. Since then, more homes are in foreclosure. More than two million jobs lost. And the economy is hurting. But one Kansas conservative, Todd Tiahrt, said the bailouts and stimulus were wrong from the start. Now, Tiahrt's fighting to stop it. Go to this Web site. Help Todd Tiahrt stop Obama and Pelosi now."

Here is the image showing the title of my post:

Image from the TV commercial.
This is the post I wrote that they cited.

And here the online news site that did the search to find that my blog was the one being cited.

I've notified RealClearPolitics to see if we can get a link, at least!

Obama restores diplomatic ties with Venezuela and Syria

June 25, 2009 | by Wintery Knight | Link | Original Link

Venezuela

The extremely left-wing Al-Jazeera reports that Obama intends to reinstate diplomatic relations with Venezuela. (H/T Gateway Pundit)

Excerpt:

> The United States and Venezuela are to reinstate ambassadors to Caracas and Washington, setting aside a diplomatic spat that soured ties last year.
>
> The two nations expelled each other's envoys last September in a dispute involving allegations by Bolivia, a close ally of Venezuela, that Washington was meddling in its internal affairs.
>
> The normalisation of diplomatic ties "will take place in the coming days, and as soon as the ambassadors have resumed their functions we will move forward to a more fluid communication," Nicolas Maduro, the Venezuelan foreign minister, said on Wednesday.

Venezuela is a well-known sponsor of terrorism in neighboring Colombia, as well as a communist nation, with all the standard losses of liberty and prosperity that entails.

Syria

Syria is a puppet of Iran and a supporter of Hezbollah, which menaces Israel from the north with terrorist attacks. George W. Bush withdrew the last ambassador after it came out that Syria was involved in the assassination of Rafik Hariri in Lebanon. But Obama thinks it's a good idea to re-instate relations with them, as well.

The extremely left-wing Associated Press reports:

> President Barack Obama plans to return an ambassador to Syria, filling a post that has been vacant for four years and marking an acceleration of Washington's engagement with the Arab world, the White House said on Wednesday.
>
> Presidential spokesman Robert Gibbs said Obama's decision was aimed at fulfilling his promise to show more U.S. engagement in the Arab world and not a response to any explicit policy change on Syria's part.
>
> He cited a series of meetings between Syrian and U.S. officials since Obama took office.
>
> "This strongly reflects the administration's recognition of the role Syria plays, and the hope of the role that the Syrian government can play constructively, to promote peace and stability in the region," Gibbs said.

Obama wants to dialogue with ruthless, murdering dictators – the kind of people the left

regards as good.

What it means

Briefly, when the US is seen as consorting with terrorist-supporting regimes, it is a blow to all the freedom-loving people in the world. Instead of supporting those who are imprisoned, beaten, tortured and murdered by the dictators, Obama is supporting the dictators, by giving their terrorist-supporting regimes legitimacy in the eyes of the public, and discouraging pro-democracy movements.

Stephen Meyer explains the design of DNA at the Heritage Foundation

June 25, 2009 | by Wintery Knight | Link | Original Link

THIS IS A MUST-SEE VIDEO!!!

The Heritage Foundation is by far my favorite think tank. If any of my readers have a blog, and you would like to get into policy a little bit, I highly recommend them. My Christian readers may be worried that think tanks are too focussed on fiscal conservatism and that they neglect foreign policy and social conservatism, including faith issues. You will not have that problem with the Heritage Foundation.

This time, they hosted one of my top 5 Christian scholars, Dr. Stephen C. Meyer, so that he could give a lecture to the public about the evidence for an intelligent designer of DNA.

The video and audio of the lecture is posted here, at The Foundry. (H/T The Discovery Institute)

I have seen Meyer give this lecture live. He steals his children's toys to explain DNA to people! *I am begging you*: do not be afraid of learning about scientific evidence. Watch the lecture!!! And then watch it again!!!

Information about Dr. Meyer from that page:

Stephen C. Meyer is Director and Senior Fellow of the Center for Science and Culture at the Discovery Institute in Seattle. Dr. Meyer earned his Ph.D. in the History and Philosophy of Science from Cambridge University for a dissertation on the history of origin of life biology and the methodology of the historical sciences.

And you can listen to a wonderful podcast with Stephen Meyer, too!

> This episode of **ID the Future** tells the story of how philosopher of science Stephen C. Meyer first began his quest for the origin of life. How did one of the architects of the intelligent design movement move from the oilfields of Texas to the study halls of Cambridge to pursue the mystery of where biological information originated? Listen in and find out. The new book, *Signature in the Cell*, tells the rest of the story, the culmination of over 20 years of study and research on the origins of life.

I wrote about the evidence for intelligent design in the cell here, using a paper published by Stephen Meyer. Watch the lecture, and read the paper.

Don't forget to bookmark the Heritage Foundation's blog!

Further study

One of my favorite resources on the origin of life is this interview from the University of California with former atheist and origin of life researcher Dean Kenyon. Kenyon, a professor of Biology at San Francisco State University, wrote the textbook on "chemical

evolution”, which is the view that chemicals can arrange themselves in order to create the first living cell, without intervention.

This interview from the University of California with another origin of life researcher, Charles Thaxton, is also one of my favorites.

You’ll need Quicktime to see the videos, or buy the videos from ARN. (Kenyon, Thaxton) I have both of them – they rock!

Responding to the parable of the blind men and the elephant

June 25, 2009 | by Wintery Knight | Link | Original Link

This article on Stand to Reason is worth reading again and again until you get it! We live in a postmodern world, where people believe that religion is a matter of personal preference. Young people especially assert that no knowledge of God is possible, and that we are all grasping at straws when it comes to knowing God and making sense of morality.

First, let's take a look at the parable:

In the children's book, *The Blind Men and the Elephant*, Lillian Quigley retells the ancient fable of six blind men who visit the palace of the Rajah and encounter an elephant for the first time. As each touches the animal with his hands, he announces his discoveries.

The first blind man put out his hand and touched the side of the elephant. "How smooth! An elephant is like a wall." The second blind man put out his hand and touched the trunk of the elephant. "How round! An elephant is like a snake." The third blind man put out his hand and touched the tusk of the elephant. "How sharp! An elephant is like a spear." The fourth blind man put out his hand and touched the leg of the elephant. "How tall! An elephant is like a tree." The fifth blind man reached out his hand and touched the ear of the elephant. "How wide! An elephant is like a fan." The sixth blind man put out his hand and touched the tail of the elephant. "How thin! An elephant is like a rope."

An argument ensued, each blind man thinking his own perception of the elephant was the correct one. The Rajah, awakened by the commotion, called out from the balcony. "The elephant is a big animal," he said. "Each man touched only one part. You must put all the parts together to find out what an elephant is like."

Enlightened by the Rajah's wisdom, the blind men reached agreement. "Each one of us knows only a part. To find out the whole truth we must put all the parts together."

And then Greg explains why this is a problem for Christianity:

The religious application holds that every faith represents just one part of a larger truth about God. Each has only a piece of the truth, ultimately leading to God by different routes. Advocates of Eastern religions are fond of using the parable in this way.

The second application is used by skeptics who hold that cultural biases have so seriously blinded us that we can never know the true nature of things. This view, de rigueur in the university, is called post-modernism.

This skepticism holds for all areas of truth, including the rational, the religious, and the moral. In Folkways, a classic presentation of cultural relativism, anthropologist William Graham Sumner argues that morality is not objective in any sense. "Every attempt to win an outside standpoint from which to reduce the whole to an absolute philosophy of truth and right, based on an unalterable principle, is delusion," he states.

Sumner is making a very strong assertion about knowledge. He says that all claims to know objective truth are false because each of us is imprisoned in his own culture, incapable of seeing beyond the limits of his own biases. Sumner concludes, therefore, that truth is relative to culture and that no objective standard exists.

I want everyone reading who doesn't know how to respond to this challenge to click through to STR's web site, read the correct response, and then explain it to your spouse, children and/or pet(s). (If Dennis Prager can lecture geese in Ohio, then you can explain the blind men and the elephant to your pet(s)) The important thing is that you feel comfortable explaining it to other people.

You learn these things by reading, and then by trying to explain what you've learned to people around you – especially to the people who don't agree with you. So, go to work, and leave a comment about your experience below!

One last thing. Christians – I *forbid* you to argue using parallels, analogies or parables like this. (I'm looking at you, my Catholic readers!) When you argue for your view, don't use these whacky stories. Jesus used *miracles* to prove his statements. But you can't perform miracles. So you can argue using the miracles in nature, and the miracle of the resurrection from history. Find your evidence here, and see it applied in debates here.

Women are becoming more violent towards their partners

June 26, 2009 | by Wintery Knight | Link | Original Link

I noticed this story in Australia's Daily Telegraph.

Excerpt:

> Shocking figures have revealed that the number of women who have been charged with domestic violence-related assault has soared by 159 per cent over the past eight years.
>
> The figures, from the NSW Bureau of Crime Statistics, show 2336 women faced court on charges of domestic violence in 2007, mainly for bashing their husbands, compared with just 818 in 1999.
>
> ….The figures show that although the number of women prosecuted for general assault remained stable between 1999 and 2007, there was an increase of 11 per cent a year in the number of women prosecuted for domestic violence.
>
> During the same period, domestic violence charges against men rose by 2.3 per cent a year.

I am at a loss to understand why this is. Does anyone have a theory about why this is happening? Leave a comment if you do.

I wrote before about the problem of domestic violence against males, on the first day I started my blog. It turns out that these Australian numbers are echoing the numbers in Canada and the UK that I cited in that post:

UK numbers:

> In the event, the CASI method found relatively high levels of male victimisation, to the extent that men appear to be at equal risk to women of domestic assault (4.2% of both sexes reported an assault in the last year).

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

Here is a related research paper on the problem of domestic violence against men, writen by Dr. Linda Kelly, a professor of Law at Indiana University School of Law.

The Democrat war on science destroys our prosperity and our consciences

June 26, 2009 | by Wintery Knight | Link | Original Link

Here are a couple of stories from IBD showing how the secular-left twists science in order to advance their socialist policy.

Obama's cap-and-trade bill

The story is here. (H/T The Chilling Effect)

> All Americans in the Midwest, South and Rocky Mountain regions will be most drastically affected because the climate change legislation will destroy the nation's coal industry and the low-cost electricity it has provided to these regions for generations.
>
> Wealth will be transferred away from almost every state to the West Coast and New England.
>
> …Reliable estimates show that this bill will cost each American family at least $3,000 more in energy costs each year, notwithstanding the $2 trillion cost to the economy in just eight years.
>
> …All these countries have stated that they will not place any restrictions on carbon dioxide emissions. China alone, which has surpassed the United States in carbon dioxide emissions, brings a new 500-megawatt coal-fired power plant on line every week. They will have low-cost electricity, and America will massively export more jobs to them.

I blogged here about the costs of this energy tax in more detail.

Stem-cell research

The story is here.

Excerpt:

> Inspectors general are apparently not the only ones to pay for annoying the White House by doing their job. The 18-member council existed to provide the president with advice on the moral and ethical implications of the rapid advances in science and medical research. It exists no more.
>
> The council existed to ponder whether we should do something just because we can. Apparently President Obama wanted not advice but agreement on such matters, particularly with regard to one of the panel's areas of interest, embryonic stem cell research. So he has fired them.
>
> Reid Cherlin, a White House press officer, told the New York Times that Obama saw the panel as "a philosophically leaning advisory group" handpicked by the Bush administration, and that he wanted to appoint a new bioethics commission

> that instead offered “practical policy options.”

I blogged here about the advantages of adult stem cell research compared to embryonic stem-cell research.

Obamacare exposed: rationing for thee but not for me

June 26, 2009 | by Wintery Knight | Link | Original Link

Previous health care posts

We need to learn from what goes on in other countries.

- Consider the rationing of health care in the UK
- In Canada, you can deliver your own babies while you wait
- Single-payer health care explained with videos
- More videos showing socialized medicine horror stories
- Keith Hennessey explains Obamacare in 15 points

The latest news

All communists are the same. They only want YOUR wealth to be redistributed, not theirs. In Obama's socialist America, all the people are equal, but Obama is more equal than the others.

Check out this story from Hot Air. (H/T ECM)

> President Obama struggled to explain today whether his health care reform proposals would force normal Americans to make sacrifices that wealthier, more powerful people — like the president himself — wouldn't face.
>
> The probing questions came from two skeptical neurologists during ABC News' special on health care reform, "Questions for the President: Prescription for America," anchored from the White House by Diane Sawyer and Charles Gibson.
>
> Dr. Orrin Devinsky, a neurologist and researcher at the New York University Langone Medical Center, said that elites often propose health care solutions that limit options for the general public, secure in the knowledge that if they or their loves ones get sick, they will be able to afford the best care available, even if it's not provided by insurance.
>
> Devinsky asked the president pointedly if he would be willing to promise that he wouldn't seek such extraordinary help for his wife or daughters if they became sick and the public plan he's proposing limited the tests or treatment they can get.
>
> The president refused to make such a pledge, though he allowed that if "it's my family member, if it's my wife, if it's my children, if it's my grandmother, I always want them to get the very best care.["]

The video is here at RealClearPolitics.

Read the whole thing, and remember what single-payer health care means, more demand, less supply, waiting lists, rationing and denials of service. But only for you

plebians – NOT for Obama and his family.

Friday night funny: Brian Regan and term limits

June 26, 2009 | by Wintery Knight | Link | Original Link

Reformed theology blogger Tim Challies had a post up about a funny CLEAN comedian named Brian Regan. This is really funny stuff.

Brian Regan goes to the doctor:

Brian Regan calls UPS for a pick-up:

Brian Regan goes to the grocery store:

Brian Regan goes to the emergency room, part 1 of 2:

Brian Regan goes to the emergency room, part 2 of 2:

I've driven myself to the emergency room for food poisoning, and was dismissed after 45 minutes. They told me stop breathing shallow and stop throwing up! So I did that. Then they sent me home.

One more: Brian Regan goes to the airport:

And for those who don't get YouTube through their company's proxy server, here is something funny from Frank J. of IMAO.us, on term limits. Inventing ridiculous things is what I find the most humorous.

Excerpt:

> This whole Sanford mess reminds me of the main problem with politics: Politician. Apparently, normal people don't want to go into politics, so we mainly gets weirdos. Fred Thompson used the Sanford incident to argue for term limits, the idea being if we have to have politicians, at least let's not keep them around too long.
>
> Here's my idea: Kidnapping.

Happy Friday!

Counting the cost of the Waxman-Markey energy tax

June 27, 2009 | by Wintery Knight | Link | Original Link

Update from the Heritage Foundation.

What happened:

> The Waxman Markey Cap and Trade bill passed by a narrow margin tonight, 219 to 212 with 8 Republicans supporting and 44 Democrats voting against, hardly overwhelming support.

What it means:

> The Heritage Foundation's Center for Data Analysis found that by 2035 gasoline prices would increase 58 percent, natural gas prices would increase 55 percent, home heating oil would increase 56 percent, and worst of all, electricity prices would jump 90 percent.
>
> But the direct tax on household energy use is just the beginning. The energy tax also hits producers. As the higher production costs ripple through the economy, the household pocketbooks get hit again and again. When all the tax impacts have been added up, the average per-family-of-four costs rise by $2,979 per year. In the year 2035 alone, the cost is $4,609. And the costs per family for the whole energy tax aggregated from 2012 to 2035 are $71,493.

The eight Republicans who voted for it. (From Green Hell)

ECM sent me the findings of two *more* studies from The Beacon Hill Institute, at Suffolk University in Boston. The studies were linked by the American Spectator.

Excerpt:

"Contrary to the claims made in these studies, we found that the green job initiatives reviewed in each actually causes greater harm than good to the American economy and will cause growth to slow," reported Paul Bachman, Director of Research at the Beacon Hill Institute, one of the report's authors….

And:

If the United States were to cut emissions alone, with no cutbacks (relative to trend) by other countries, it would bear the full cost of abatement (PV = $3.85 trillion) while reaping only about $0.27 trillion in benefits. This represents a net cost, relative to doing nothing, of $3.42 trillion. It would cost the United States $154 billion by 2020 and $1.318 trillion by 2050.

Green Hell linked to a must-see video of Rep. John Boehner filibustering the bill in the House. No one has even read the 1200-page bill, or the 300-page amendment.

Gateway Pundit has a video of Rep. Paul Broun trying to tell the House that global warming is junk science:

Gateway Pundit has a video of Rep. Tom Price requesting a moment of silence to recognize the 2 million plus who will lose their jobs for the sake of junk science and inflated egos.

The Western Experience talks about the experiences of other countries who have tried to enact similar laws.

> What is totally sad in the bill's passing is, like socialism, it has been a total failure wherever it has been tried. Across Europe and even down to Australia, this nonsense has been scrapped. The economist in Spain blamed their own version of a climate change bill on their tragically high unemployment rate of 18 percent. The government reports that for every "green job" created equaled two losses in other private sector jobs. Energy prices have skyrocketed and businesses find it too expensive to produce. Therefore, they pass on the costs by cutting back production, which are driving prices higher, and laying off employees, which are driving unemployment numbers higher. Sounds like a recipe for contraction.

Why can't we learn from the mistakes of other countries?

Hot Air says that the bill will almost certainly die in the Senate.

Further study

Recently, I posted about the economic effects of the Waxman-Markey cap-and-trade bill, including how it would impact individual families. I wrote about the true effects of Obama's green jobs initiative, which will actually decrease employment instead of increasing it.

I also posted before about scientific dissent from global warming, the alleged melting polar ice caps, Obama's planned tax hikes on oil and gas, deceptive alarmism to procure research funding, the alleged warming of the oceans, and the use of made-up crises in order to impose socialism. You can also read the testimony of a Princeton University physicist who is against global warming alarmism.

Peer-reviewed paper says there is no atheistic explanation for the Cambrian explosion

June 27, 2009 | by Wintery Knight | Link | Original Link

Story from the Discovery Institute.

A new peer-reviewed paper has been published that concludes that there is no material explanation for the massive amounts of information introduced during the Cambrian explosion, when all of the phyla came into being in the blink of an eye, geologically speaking, with *no fossilized precursors.*

Excerpt:

> Thus, elucidating the materialistic basis of the Cambrian explosion has become more elusive, not less, the more we know about the event itself, and cannot be explained away by coupling extinction of intermediates with long stretches of geologic time, despite the contrary claims of some modern neo-Darwinists.

Once again, the progress of science brings light.

The DI post goes on to cite another passage from the paper:

Beginning some 555 million years ago the Earth's biota changed in profound and fundamental ways, going from an essentially static system billions of years in existence to the one we find today, a dynamic and awesomely complex system whose origin seems to defy explanation. Part of the intrigue with the Cambrian explosion is that numerous animal phyla with very distinct body plans arrive on the scene in a geological blink of the eye, with little or no warning of what is to come in rocks that predate this interval of time. The abruptness of the transition between the ''Precambrian'' and the Cambrian was apparent right at the outset of our science with the publication of Murchison's *The Silurian System*, a treatise that paradoxically set forth the research agenda for numerous paleontologists — in addition to serving as perennial fodder for creationists. The reasoning is simple — as explained on an intelligent-design t-shirt.

> Fact: Forty phyla of complex animals suddenly appear in the fossil record, no forerunners, no transitional forms leading to them; ''a major mystery,'' a ''challenge.'' The Theory of Evolution – exploded again (idofcourse.com).

Although we would dispute the numbers, and aside from the last line, there is not much here that we would disagree with. Indeed, many of Darwin's contemporaries shared these sentiments, and we assume — if Victorian fashion dictated — that they would have worn this same t-shirt with pride.

Here is the reference for the paper:

> (Kevin J. Peterson, Michael R. Dietrich and Mark A. McPeek, "MicroRNAs and metazoan macroevolution: insights into canalization, complexity, and the

> Cambrian explosion," *BioEssays*, Vol. 31 (7):736 – 747 (2009).)

I linked before to a bunch of easy-to-understand videos that explain the Cambrian explosion. That post has a link to another peer-reviewed research paper written by Stephen C. Meyer, on the Cambrian explosion.

Christian parents: be sure to encourage your children to do the best they can in science, and push them to go on to graduate school to earn their Ph.Ds. We really need to have people working on these problems who are not wedded to the pre-supposition of atheism. We need to have people who are open-minded and willing to go wherever the evidence leads.

Further study

One of my favorite resources on the origin of life is this interview from the University of California with former atheist and origin of life researcher Dean Kenyon. Kenyon, a professor of Biology at San Francisco State University, wrote the textbook on "chemical evolution", which is the view that chemicals can arrange themselves in order to create the first living cell, without intervention.

This interview from the University of California with another origin of life researcher, Charles Thaxton, is also one of my favorites.

You'll need Quicktime to see the videos, or buy the videos from ARN. (Kenyon, Thaxton) I have both of them – they rock!

Understanding the effects of moral relativism on New Zealand schools

June 27, 2009 | by Wintery Knight | Link | Original Link

Previously, I had discussed why atheism is not able to ground the minimal requirements for rational moral behavior.

Now let's see an example of the effects of not being able to make moral judgments about good and evil.

An example from the education system

I was reading over on the MandM blog, which is based in New Zealand and I found a post about the bullying problems that their 14-year-old son was having in his school. Schools are *notorious* breeding grounds for moral relativism – that is where young minds are brainwashed with "values clarification" programs. Students learn to make up their own values based on personal preferences.

Here is what happened to their son Christian:

> Christian began attending Liston at the start of 2008 as a Year 9 student. Since that time he has been repeatedly bullied by other students. This bullying included being called names, threatened, being taunted about his medical condition (he has Aspergers Syndrome – see the attachment "medical condition"); he has been shoved, choked, hit, punched, knocked over, kicked, had his pants pulled down and has been dragged across the concrete while a student filmed him on his cell phone. During class, he has had objects thrown at him, he has been hit, punched, kicked, he has been knocked out of his desk, has had people steal his belongings, call him names and taunt him about his condition.

And this is what the teachers did:

> Frequently the response of the teachers in these classes to these incidents has not been adequate, often it has been [to have] him moved instead of the bully.
>
> To our knowledge, no student has been stood down, reported to the board of trustees or even had their parents phoned over the assaults and harassment they have committed against our son in his year and a half at Liston, including the repeat offenders.

And here's what it means:

> It seemed to us (aside from the repeat offenders) that as each bully was dealt with another one popped up to take his place. **This suggested to us that a culture of bullying had developed within the school; that to the other students, bullying didn't come with serious consequences: your parents didn't get told, you were not at risk of being stood down and the**

> **teachers didn't really view it as anything serious anyway when it happened in the classroom.**

This is the problem with the moral relativism, which has become dominant as Christianity has retreated. It is irrational for an atheist to stand up to evil and injustice if it involves possible unpleasantness for them. The moral relativist, believes that there is no distinction between the victim and the bully – and this prevents the relativist from standing up to the bully and stopping their bullying.

You can see an example of this moral relativism going on right now with Obama and the Iranian dictators.

New Zealand's anti-smacking law

It has been argued by family-values advocates that children need to form their conscience and moral sense by relating to their parents, especially their mother, at a very early age. Anxiety and aggression in children increases as the family is weakened or broken up by things like day care and no-fault divorce.

The disintegration of the family is aided by many progressive policies enacted by the political left. The left is wedded to moral relativism, because the left is secular. And they even desire to force moral relativism on families. What that means to parents is that the state can criminalize moral judgments with hate crime laws, restrictions on speech and even restrictions on parenting.

In New Zealand, the country is actually having a referendum about their "anti-smacking" law. The current law is that parents are prohibited from physically disciplining their children. I would think that this law would exacerbate the bullying problem in the schools. [Note: I fixed this paragraph to reflect the fact that the law is already in place, and the referendum is *non-binding!*]

UPDATE: I noticed a post about how Christians are allowed to make moral judgments, including judgments against bullies, also on MandM.

Does Obama's stimulus bill discriminate against men?

June 28, 2009 | by Wintery Knight | Link | Original Link

Check out this story from Hans Bader of the Competitive Enterprise Institute.

It turns out that the $800 billion stimulus bill (porkulus-1) was altered in order to discriminate against the blue-collar men who are losing the lion's share of jobs in the Democrat-caused recession.

Excerpt:

> Christina Hoff Sommers points out that "of the 5.7 million jobs Americans lost between December 2007 and May 2009, nearly 80 percent had been held by men. . . .Men are bearing the brunt of the current economic crisis because they predominate in manufacturing and construction, the hardest-hit sectors, which have lost more than 3 million jobs since December 2007. Women, by contrast, are a majority in recession-resistant fields such as education and health care, which gained 588,000 jobs during the same period."
>
> But when the Administration floated the concept of "an ambitious . . . stimulus program to modernize roads, bridges, schools, electrical grids, public transportation, and dams" as a way of "reinvigorating the hardest-hit sectors of the economy," "Women's groups were appalled," asking "Where are the New Jobs for Women?" and denouncing what they called "The Macho Stimulus Plan."

And what did Obama do in response to this feminist pressure?

> The Obama Administration quickly knuckled under to this pressure, replacing its recovery package with an $800 billion stimulus package that instead "skews job creation somewhat towards women" by spending money instead on social services like welfare that are administered mostly by female employees.
>
> "A recent Associated Press story reports: 'Stimulus Funds Go to Social Programs Over 'Shovel-ready' Projects.' A team of six AP reporters who have been tracking the funds find that the $300 billion sent to the states is being used mainly for health care, education, unemployment benefits, food stamps, and other social services." Or, as another AP report put it, "Stimulus Aid Favors Welfare, Not Work, Programs."
>
> The stimulus package also repealed welfare reform…

Read the whole thing. I think this is very interesting given the fact that it was these blue-collar unions who helped to get Obama elected. If there is a silver-lining to Obama's socialism, this has to be it.

I think the most interesting question to ask about this story is: do single women, who voted for Obama 60-35, expect to find husbands and fathers for their children? Or will

they all marry the government?

What can you learn by reading apologetics books?

June 28, 2009 | by Wintery Knight | Link | Original Link

For beginning apologists, I wanted to recommend a series of 3 books designed to give you coverage of most of the issues. Each book is a collection of short chapters designed to introduce you to the various areas that are likely to come up in disputes.

Here they are:

1. "The Case for a Creator" by Lee Strobel
2. "Passionate Conviction" edited by William Lane Craig and Paul Copan
3. "Contending with Christianity's Critics" edited by William Lane Craig and Paul Copan

I just wanted to show you the table of contents so that you could get an idea about what you might learn by reading through these books.

The Case for a Creator

Here is the table of contents. (Watch the book's DVD on YouTube)

1. White-Coated Scientists Versus Black-Robed Preachers
2. The Images of Evolution
3. Doubts About Darwinism: An Interview with Jonathan Wells
4. Where Science Meets Faith: An interview with Stephen C. Meyer
5. The Evidence of Cosmology: Beginning with a Bang; An interview with William Lane Craig
6. The Evidence of Physics: the Cosmos on a Razor's Edge; An interview with Robin Collins
7. The Evidence of Astronomy: The Privileged Planet; An interview with Guillermo Gonzalez and Jay Wesley Richards
8. The Evidence of Biochemistry: The Complexity of Molecular Machines; An Interview with Michael J. Behe
9. The Evidence of Biological Information: The Challenge of DNA and the Origin of Life; An Interview with Stephen C. Meyer
10. The Evidence of Consciousness: The Enigma of the Mind; An Interview with J.P. Moreland
11. The Cumulative Case for a Creator

Passionate Conviction

Here is the table of contents. (Sample chapter in a PDF)

PART 1 WHY APOLOGETICS?

- In Intellectual Neutral by William Lane Craig
- Living Smart by J. P. Moreland

PART 2 GOD

- Why Doesn't God Make His Existence More Obvious to Us? by Michael J. Murray
- Two Versions of the Cosmological Argument by R. Douglas Geivett
- The Contemporary Argument for Design: An Overview by Jay W. Richards
- A Moral Argument by Paul Copan

PART 3 JESUS

- Revisionist Views about Jesus by Charles L. Quarks
- What Do We Know for Sure about Jesus' Death? by Craig A. Evans
- Jesus' Resurrection and Christian Origins by N. T. Wright

PART 4 COMPARATIVE RELIGIONS

- Christianity in a World of Religions by Craig J. Hazen
- The East Comes West (or Why Jesus instead of the Buddha?) by Harold Netland
- Christ in the New Age by L. Russ Bush
- Islam and Christianity by Emir Fethi Caner

PART 5 POSTMODERNISM AND RELATIVISM

- The Challenges of Postmodernism by J. P. Moreland
- Is Morality Relative? by Francis J. Beckwith
- Reflections on McLaren and the Emerging Church by R. Scott Smith

PART 6 PRACTICAL APPLICATION

- Dealing with Emotional Doubt by Gary R. Habermas
- Apologetics for an Emerging Generation by Sean McDowell

Contending with Christainity's Critics

Here is the table of contents. (Sample chapter in a PDF)

PART 1 THE EXISTENCE OF GOD

- Dawkins's Delusion by William Lane Craig
- At Home in the Multiverse? by James Daniel Sinclair
- Confronting Naturalism: The Argument from Reason by Victor Reppert
- Belief in God: A Trick of Our Brain? by Michael J. Murray
- The Moral Poverty of Evolutionary Naturalism by Mark D. Linville
- Dawkins's Best Argument Against God's Existence by Gregory E. Ganssle

PART 2 THE JESUS OF HISTORY

- Criteria for the Gospels' Authenticity by Robert H. Stein
- Jesus the Seer by Ben Witherington III

- The Resurrection of Jesus Time Line by Gary R. Habermas
- How Scholars Fabricate Jesus by Craig A. Evans
- How Badly Did the Early Scribes Corrupt the New Testament? An Examination of Bart Ehrman's Claims by Daniel B. Wallace
- Who Did Jesus Think He Was? by Michael J. Wilkins

PART 3 THE COHERENCE OF CHRISTIAN DOCTRINE

- The Coherence of Theism by Charles Taliaferro and Elsa J. Marty
- Is the Trinity a Logical Blunder? God as Three and One by Paul Copan
- Did God Become a Jew? A Defense of the Incarnation by Paul Copan
- Dostoyevsky, Woody Allen, and the Doctrine of Penal Substitution by Steve L. Porter
- Hell: Getting What's Good My Own Way by Stewart Goetz
- What Does God Know? The Problems of Open Theism by David P. Hunt

Before you can mount a detailed defense on any of these questions, it helps to be able to recognize them all!

By the way, you can get a head start on the first one if you just connect to YouTube and watch the movies "Unlocking the Mystery of Life" and "The Privileged Planet".

Polar bear expert suppressed for telling inconvenient truth

June 28, 2009 | by Wintery Knight | Link | Original Link

Polar bear population has increased 5 times in the last 50 years

First, polar bear populations are BOOMING worldwide as the current global cooling phase continues.

Gateway Pundit has a round-up with all the numbers.

Excerpt:

> Polar bear numbers in Canada have increased in 11 of 13 regions in recent years.
>
> Another report shows that polar bear encounters on the North Slope oil fields have risen to record levels the last two years. The global warming religionists blame the increase in polar bear sightings on shrinking ice flows. So, now the alarmists are blaming manmade global warming on **both** increased and decreased polar bear populations.
>
> There are 5 times as many polar bears today as there were 50 years ago…
>
> In August 2008 Alaska Governor Sarah Palin sued the federal government seeking to reverse the decision to put the polar bear on the threatened species list.

A new US Senate report says:

> The U.S. Fish & Wildlife Service estimates that the polar bear population is currently at 20,000 to 25,000 bears, up from as low as 5,000-10,000 bears in the

> 1950s and 1960s.

But it's much worse than that.

The suppression of the evidence

Not only is the number of polar bears 5 times higher than it was 50 years ago, but the research of the most prestigious scientists is being suppressed.

Consider this story from the UK Telegraph. (H/T ECM)

Excerpt:

> Over the coming days a curiously revealing event will be taking place in Copenhagen. Top of the agenda at a meeting of the Polar Bear Specialist Group (set up under the International Union for the Conservation of Nature/Species Survival Commission) will be the need to produce a suitably scary report on how polar bears are being threatened with extinction by man-made global warming.
>
> This is one of a steady drizzle of events planned to stoke up alarm in the run-up to the UN's major conference on climate change in Copenhagen next December. But one of the world's leading experts on polar bears has been told to stay away from this week's meeting, specifically because his views on global warming do not accord with those of the rest of the group.
>
> Dr Taylor… was voted down by its members because of his views on global warming. The chairman, Dr Andy Derocher, a former university pupil of Dr Taylor's, frankly explained in an email (which I was not sent by Dr Taylor) that his rejection had nothing to do with his undoubted expertise on polar bears: "it was the position you've taken on global warming that brought opposition".
>
> Dr Taylor was told that his views running "counter to human-induced climate change are extremely unhelpful". His signing of the Manhattan Declaration – a statement by 500 scientists that the causes of climate change are not CO2 but natural, such as changes in the radiation of the sun and ocean currents – was "inconsistent with the position taken by the PBSG".

Newsbusters has more on the suppression of the dissenting expert.

http://epw.senate.gov/public/index.cfm?FuseAction=Minority.Blogs&ContentRecord_id=d6c6d346-802a-23ad-436f-40eb31233026

Round-up of stories from around the world

June 29, 2009 | by Wintery Knight | Link | Original Link

United Kingdom

Here's an article from the BBC News from reader Steven about the suppression of the rights of medical personnel by secular humanists. This time, we get some good news.

Excerpt:

> Doctors are demanding that NHS staff be given a right to discuss spiritual issues with patients as well as being allowed to offer to pray for them.
>
> Medics will tell the British Medical Association conference this week that staff should not be disciplined as long as they handle the issue sensitively.
>
> The doctors said recent cases where health workers had got into trouble were making people fearful.
>
> But atheists said it was wrong to mix religion and health care.

I also noticed this related article on LifeSiteNews linked by Binks in his latest round-up. Another Christian nurse gets flak from the atheistic fascists for daring to not behave as an atheist in public.

Excerpt:

> Nurse Slatter was told by her employer, the Gloucestershire Royal Hospital, that the 1-inch gold necklace could "harbour and spread infections" or be used as weapon. She refused the hospital's suggestion that she carry the necklace in her pocket and has resigned, saying she would not choose between her job and her religion.
>
> …Many of these clashes have been the result of action by homosexual activists and the help of the Labour government's "anti-discrimination" laws. Most recently, the General Teaching Council for England (GTCE) has issued draft "guidance" for schools that say teachers must hide their religion from students and colleagues. They must "promote equality and value diversity" by keeping their religious beliefs to themselves it said.

You can listen to a debate here that shows how naturally atheism leads to fascism in places like the UK. Or you can read my exchange with a British fascist here. (Fascism is the system of government in which individual rights, such as the right to free speech, are curtailed by the state)

India

You might remember that I blogged about the persecution of Christians in the eastern state of Orissa when I covered the recent Indian election.

Orissa is one of the states where Christians are really in the minority and there are Hindu

schools teaching the Hindu-nationalist doctrine of Hindutva, which is extremely hostile to Christianity.

Well, Shalini sent me some good news about the situation in Orissa:

Excerpt:

> Home Minister P Chidambaram, who is on a two-day visit to Orissa, visited one of the relief camps in riot-hit Kandhmal district on Friday.
>
> While speaking to the victims, he apologised for the conditions they had to face in the wake of a series of communal clashes following the killing of 85-year-old VHP leader Swami Laxmananda Saraswati in August 2008.
>
> …Condemning the incident, Chidambaram asked them to start life afresh, build the churches and practice their religion.
>
> "Whatever happened was wrong. Build your churches and practice your dharma," he said.
>
> When some refugees spoke of fear of RSS and Bajrang Dal, the Home Minister assured then that the guilty will be "prosecuted and punished."

I hope that this is a sign of better things to come for Indian Christians. I must admit that I spoke to a few Indian Hindus here in the USA, and they were not supportive of the rights of Christians to evangelize or to exercise freedom of religious expression in India.

Australia

Looks like Australia is considering implementing Human Rights Commissions, exactly like the ones that Canada has. Story from Life Site News. (H/T Free Canuckistan)

Excerpt:

> Australian life and family advocates are deeply concerned with plans by a government agency to institute new "human rights" legislation modelled on that of Canada's Charter of Rights and Freedoms. The Endeavour Forum, a national pro-life and pro-family advocacy group, has submitted a brief to a consultative committee, warning that since the Australian Human Rights Commission (AHRC) has "consistently failed" to protect the Christian values of the majority of Australians, "its probable recommendations will diminish, not enhance, our freedom."
>
> The AHRC is conducting national consultations on a proposed Human Rights Charter that is supported by the Attorney General, Robert McClelland, who has argued that since other countries, such as Canada, have such documents, Australia should follow suit.

And to think there was a time when I wanted to move to Queensland! Ha!

Canada

A Quebec court will hear from a Catholic school that is resisting the anti-Christian curriculum that is being pushed by the province. The article is from LifeSiteNews courtesy

of Binks.

Excerpt:

> Loyola Catholic High School has finished presenting its case in court against Quebec's mandatory Ethics and Religious Culture (ERC) program. The case was launched after the Department of Education refused to allow the school to continue teaching its own Catholic-centered religion course.
>
> The private Catholic boys' school objects to the province's mandatory course on the grounds that it conflicts with the school's Catholic character and presents a relativistic world-view of religion.
>
> …Quebec Education Minister Michelle Courchesne has denied all applications for exemption from the ERC and has made it clear that any religious education program that promotes one religion over any other is not acceptable.

Quebec is the most secular, left-wing province in Canada.

Pakistan

I spotted this story over at The Lambeth Walk blog. It recounts the details of some anti-Christian crimes in Muslim-dominated Pakistan.

Excerpt:

> Recently two very disturbing cases have emerged from Pakistan which give some insight into the risks which non-Muslims face in Muslim countries, particularly if they fail to pay the jizya.
>
> The first concerns a Christian man who was sexually abused, raped and murdered for refusing to convert to Islam…
>
> The second case involves the police torturing a Christian man and then denying him medical treatment…

Here's another one from Weasel Zippers, also via Binks.

Excerpt from the linked BosNewsLife article:

> **Two Pakistani Christians remained detained Thursday, June 25, on false charges of "blasphemy" and "robbery", advocacy groups said.**
>
> Asia Bibi, 37, was reportedly detained by police on allegations of blasphemy in the village of Ittanwali in Punjab province on June 19, following heated discussions about Islam with Muslim women who work with her on a farm.
>
> **"Bibi told them that Christ died on the cross for their sins and asked them what Mohammed had done for them,"**said Voice Of the Martyrs Canada (VOMC), which monitored the case. "Our Christ is the true prophet of God and yours is not true," Bibi reportedly said.

Something to pray about, and there's no time like the present for prayer.

Mauritania

Al-Qaeda kills an American missionary in Mauritania. Story from Jihad Watch, via Binks. Excerpt from the linked AFP story:

> The man was shot several times in the head from close range after he resisted an apparent kidnap attempt, a witness told AFP, after the shooting outside a private language and computer school run by the American.

> "A foreigner has been shot dead, apparently by **youths** who fled. We are investigating the case," police said, while the interior ministry identified the man as Christopher Logest and said he also worked for a charity, Noura.

Mauritania is in northwest Africa.

Pro-lifer dodges SUV driven by pro-abortionist

June 29, 2009 | by Wintery Knight | Link | Original Link

Gee. I wonder who is more likely to take an innocent life? A pro-lifer? Or a pro-abortionist?

Let me think about it.

While I think, you can read this excerpt from a LifeSiteNews story.

> James Canfield, a regular pro-life protester of a Planned Parenthood and Women's Health Center in Chico, California, was almost run down during a protest last Wednesday, according to the Chico Enterprise Record. His alleged attacker, Matthew Haver, was charged with assault with a deadly weapon.
>
> Witnesses reported that a man driving an SUV attempted to strike Canfield, who dove out of the way and was not seriously injured. The license plate of the SUV was taken down and was traced back to Haver, who was then arrested.

I'm still thinking…

Gay Duke University health expert charged with selling adopted 5-year old for sex

June 29, 2009 | by Wintery Knight | Link | Original Link

WARNING: Mature subject matter.

Here's the full story from Newsbusters.

> Frank Lombard is an associate director at Duke University's Global Health Institute and a homosexual who was charged last week with the molestation of his adopted 5-year-old black son and actively trying to sell him for sex on the internet.
>
> The 40 words above are 40 more than the Main Stream Media has said on this horrible story.
>
> In nearly a week since Lombard was arrested, not one national broadcast or cable television news show has picked up the story. Compare this to the weeks on end of sensational coverage of the white male lacrosse players of the same university charged with rape several years ago.
>
> At the time of this post not one television show has reported the story and only 17 newspapers in the United States featured it – a majority of which are only small local newspapers.
>
> And most of these articles cited the American Press' report on the events, which was as follows:
>
> **AP)** WASHINGTON – A Duke University official has been arrested and charged with offering his adopted 5-year-old son for sex.
>
> Frank Lombard, the school's associate director of the Center for Health Policy, was arrested after an Internet sting, according to the FBI's Washington field office and the city's police department.
>
> According to an affidavit by District of Columbia Police Det. Timothy Palchak, an unnamed informant facing charges in his own child sex case led authorities to Lombard.
>
> Authorities said that Lombard tried to persuade a person -who he did not know was a police officer -to travel to North Carolina to have sex with Lombard's child.
>
> The detective's affidavit charges Lombard identified himself online as "perv dad for fun," and says that in an online chat with the detective, Lombard said he had sexually molested his son, whom he adopted as an infant.
>
> The court papers say Lombard also invited the undercover detective to North Carolina to have sex with the young boy, and even suggested which hotel he should use."
>
> In response to the AP report, which most of the newspapers used almost

> verbatim, Mike Adams of Townhall made the observation that “The Associate Press (AP) did not mention the fact that the five-year old offered up for molestation was black. Bringing that fact to light might be damaging to the political coalition that exists between blacks and gays. Nor did the AP mention that the adopted child is being raised by a homosexual couple. Bringing that fact to light might harm the gay adoption movement.”
>
> With this shocking lack of coverage of an even more shocking story, many are asking why this did not make the front pages and top headlines like the Duke lacrosse team scandal did. Thomas Lifson of American Thinker posited that “identity politics … apparently trumps all sense of outrage.”

Thanks to ECM to alerting me to this story. Notice how this story is not covered as well as the Matthew Sheppard story or the George Tiller story was. I wonder why. I guess some victims of violence are more equal than others.

SCOTUS overturns Sotomayor's decision against white male firefighters

June 30, 2009 | by Wintery Knight | Link | Original Link

Obama's Supreme Court pick made a decision that was so bad that it was rejected by all NINE justices of the Supreme Court.

Story from DRJ, guest posting at Patterico:

> ABC News reports the Supreme Court ruled today that the white New Haven firefighters were unfairly denied promotions because of their race, reversing an appellate decision by Supreme Court nominee Sonia Sotomayor.

The ABCNews article states:

> "I think the import of the decision is that cities cannot bow to politics and pressure and lobbying by special interest groups, or act to achieve racial quotas," said Karen Torre, the attorney for the firefighters. "If the test is job-related, especially in a dangerous occupation, then the fact that more African Americans pass, or more Hispanics pass, or more whites pass, isn't sufficient grounds to ignore the results of an occupational test."

Sotomayor ruled against the white male firefighters, and in favor of affirmative action. Wise Latina indeed!

Wendy Long Bench Memos explains what it means:

> Not a Single Justice Agreed with Sotomayor
>
> Frank Ricci finally got his day in court, despite the judging of Sonia Sotomayor, which all nine Justices of U.S. Supreme Court have now confirmed was in error. She essentially committed judicial malpractice.
>
> That even Justice Ginsberg and the dissenters would have remanded — undoing what Judge Sotomayor did — confirms that Sotomayor is a far-left liberal judicial activist who ignores the law and rules on her own personal agenda, even beyond the current liberals on the Court.

ECM sent me an article from Gateway Pundit, who notes that Sotomayor was overturned SIXTY-SIX PERCENT of the time by the Supreme Court.

Hot Air explains what this means for her confirmation:

> This creates a big problem for Obama and the Democrats in Congress. They certainly have the votes to confirm Sotomayor, but their big sell — that she was one of the appellate court's most brilliant minds — just took a body blow on this decision. Most people want to move past the old arguments on race and hiring, feeling that forty years of affirmative-action policies have run their course.

> Having to defend a jurist who attempted to impose them in a court case will not make Sotomayor seem moderate or reasonable at all, but extreme and perhaps less than competent.
>
> Ironically, the Democrats have pushed for an earlier confirmation hearing, as soon as mid-July, while Republicans wanted a September date. I suspect the two may switch sides now, with the GOP wanting to hold the hearings in the wake of Sotomayor's high-profile reversal, and Democrats perhaps hoping that other stories will eclipse it. Regardless of when this confirmation hearing takes place, expect *Ricci* to play a central part in the questioning.

This is good news for everyone who believes in the rule of law.

Obama supports socialist dictator against democracy in Honduras

June 30, 2009 | by Wintery Knight | Link | Original Link

Why does Obama only meddle when the pro-democracy side is winning? (Image from IBD's Michael Ramirez, sent to me by ECM).

First, I really recommend you take a look at this beautifully-written article by Mary Anastasia O'Grady in the WSJ. It explains how the Honduran military was authorized by their Supreme Court to prevent their leftist dictator from extending his reign beyond the term limits required by law.

Excerpt:

> It seems that President Mel Zelaya miscalculated when he tried to emulate the success of his good friend Hugo in reshaping the Honduran Constitution to his liking.
>
> …That Mr. Zelaya acted as if he were above the law, there is no doubt. While Honduran law allows for a constitutional rewrite, the power to open that door does not lie with the president. A constituent assembly can only be called through a national referendum approved by its Congress.
>
> But Mr. Zelaya declared the vote on his own and had Mr. Chávez ship him the necessary ballots from Venezuela. The Supreme Court ruled his referendum unconstitutional, and it instructed the military not to carry out the logistics of the vote as it normally would do.

But O'Grady is not optimistic that it will stick, especially with the pro-dictator Obama offering support to the dictator Zelaya via Hillary Clinton:

> But Honduras is not out of the Venezuelan woods yet. Yesterday the Central American country was being pressured to restore the authoritarian Mr. Zelaya by the likes of Fidel Castro, Daniel Ortega, Hillary Clinton and, of course, Hugo

> himself. The Organization of American States, having ignored Mr. Zelaya's abuses, also wants him back in power. It will be a miracle if Honduran patriots can hold their ground.

Read the whole thing, it's worth it.

But the best ongoing coverage of the Honduras situation is at Fausta's blog. The main the thing I want to note from her coverage is that she has many links to other sites.

Excerpt:

> This is why Zelaya was removed from power: all branches of government and the country's institutions recognized that he had broken the law.

Check out this story from the WSJ: (H/T Gateway Pundit)

> The Obama administration worked in recent days to prevent President Manuel Zelaya's ouster, said a senior U.S. official. The State Department, in particular, communicated to Honduran officials on the ground that President Barack Obama wouldn't support any nondemocratic transfer of power in the Central American country.
>
> "We had some indication that a move against Mr. Zelaya was afoot," said a U.S. official briefed on the diplomacy. "We made it clear it was something we didn't support."
>
> Secretary of State Hillary Clinton joined Obama Sunday in criticizing the Honduran coup and calling for the restoration of the democratic process.
>
> "We call on all parties in Honduras to respect the constitutional order and the rule of law, to reaffirm their democratic vocation, and to commit themselves to resolve political disputes peacefully and through dialogue," Clinton said in a statement.

We saw above that everything that the Honduran government did was within the rule of law, and yet Obama and Hillary are following Chavez's lead and making it sound like Zelaya was following the law!

Thanks to ECM for notifying me about this story.

Argentina

Just a quick link to Fausta's blog again to note that other left-wing socialists were kicked out in the Argentinian election.

FRC opposes Obama’s school safety nominee

June 30, 2009 | by Wintery Knight | Link | Original Link

Democrat President Barack Obama has nominated Kevin Jennings to head the Office of Safe and Drug Free Schools.

The Family Research Council has issued a press release announcing their disapproval. I found it linked at Muddling Towards Maturity.

Excerpt:

> As the former president of the Gay, Lesbian, and Straight Education Network, Mr. Jennings worked tirelessly to bring the homosexual agenda into our nation’s classrooms, even in grades as young as kindergarten. In addition, in his autobiography, Mr. Jennings expresses no regret about his past drug abuse or recognition of its risks. Instead, he seems amused. In his words, “[W]atching the planes take off and land is actually quite fun when you are drunk and stoned.”
>
> Jennings has spoken publicly about a high school student he once counseled who was in a sexual relationship with an older man he met in a bus station – yet Jennings never reported this abuse to the authorities, the school, or the child’s parents.

Muddling linked to the FRC’s ad here.

How could Christians vote for Obama?

It might be worth reflecting for a moment on who put Obama into office. (Source: First Things)

	% Electorate	2008 Obama	2008 McCain
Minority Religious Groups			
Black Protestants	11	95	5
Other Faiths	5	81	19
Ethnic Catholics/Other Christians	6	74	26
Ethnic Protestants	8	52	48
Unaffiliated	12	75	27
White Catholics			
Moderate Catholics	7	46	54
Centrist Catholics	6	34	66
Traditionalist Catholics	6	39	61
White Mainline Protestants			
Moderate Mainline Protestants	6	61	39
Centrist Mainline Protestants	6	51	49
Traditionalist Mainline Protestants	4	32	68
Other Christians	3	28	72
White Evangelical Protestants			
Moderate Evangelical Protestants	3	45	55
Centrist Evangelical Protestants	9	31	69
Traditionalist Evangelical Protestants	15	11	89
ALL	100	54	46

Should Christians have voted for Obama?
I'm sure that many of these Christians (?) voted for Obama because they didn't like spending 550 billion dollars on two wars to protect America from Islamic fascism while liberating people living in dictatorships. Or maybe because they didn't see how taxing the greedy rich could be bad. Or maybe they thought that Obama was pro-life and pro-family regardless of his actual voting record.

Ideas have consequences. Elections matter.

UPDATE: Whoa! Just noticed this story at Pamela Geller's blog. It turns out that Jennings is worse than described by the FRC! Warning: the link describes extreme sexual practices supported by Jennings.

California Democrat leader says free speech is terrorism

June 30, 2009 | by Wintery Knight | Link | Original Link

Speaking out against my tax increases is terrorism! Give me your money, and shut up! Stop the ACLU links to this LA Times interview with California Speaker of the House Karen Bass. As you know, California is in the worst financial crisis in all 50 states. Karen is very angry that Republicans are pressured by voters to vote against tax increases. She thinks that Republicans should vote like Democrats, regardless of what their constituents want.

Excerpt:

> **How do you think conservative talk radio has affected the Legislature's work?**
>
> The Republicans were essentially threatened and terrorized against voting for revenue. Now [some] are facing recalls. They operate under a terrorist threat: "You vote for revenue and your career is over." I don't know why we allow that kind of terrorism to exist. I guess it's about free speech, but it's extremely unfair.

See, California is running a 24.3 BILLION dollar deficit, which is half the deficit that Canada is running this year. It's so bad that they are issuing IOUs to contractors. And the Democrats think that tax hikes are the answer. By the way, her background is "community organizing" as well.

Hot Air has more here:

> There's a lot of stupidity and tyranny locked into those few words. The First Amendment guarantees the right to petition the government for redress of grievances, even apart from the "free speech" issues Bass casually discards. Elected politicians are accountable to the people who elect them in a free society. Politicians do not acquire lordly status when they go to the Assembly, or anywhere else.
>
> Usually, politicians are smart enough to at least pay lip service to getting feedback from their constituents. Instead, Bass calls them "terrorists" for … what? Calling their representatives and telling them not to raise taxes even higher, in the state with the sixth-highest per capita tax burden in the nation?

> Expressing their opinions? Telling politicians they won't get their support if they vote for a tax hike? That's *democracy*, not terrorism, although I'm hardly surprised that Bass can't tell the difference.
>
> …Beware the politicians who consider dissent terrorism. They're either idiotic beyond belief, or tyrants waiting for an opportunity. Bass might just be both.

Remember when dissent was the highest form of patriotism? Yeah, now dissent makes you a terrorist. This is what secularism and socialism amounts to: disagree with me and you're the worst person in the world and anything I do to you is morally justified.

There is no difference between communists in North Korea and communists is the United States. They believe the same things. They are just on different stages of the same road to serfdom.

Planned Parenthood conceals rape and breaks the law

July 1, 2009 | by Wintery Knight | Link | Original Link

Story is at Hot Air. (H/T The Pugnacious Irishman)

Ed Morrissey writes:

> Lila Rose and Jackie Stollar have another of their series of exposés of Planned Parenthood clinics and their refusal to follow the law in reporting sexual abuses of underaged girls. This time, Lila and Jackie went to Birmingham, Alabama to procure an abortion as a 14-year-old girl impregnated by a 31-year-old man. According to Alabama law, that's statutory rape, and the law requires any health-care provider to report it to law enforcement. Does this PP clinic follow the law?

Click through to Hot Air and watch the video to find out what happens!

LaShawn Barber notes the pro-abortion response to being caught:

> *U.S. News and World Report* blogger Bonnie Erbe wants to know why the pro-life crusader hasn't been arrested for trespassing or fraud, and – get this – Planned Parenthood has posted Lila Rose's picture so its disgraceful workers will be on the alert.

Pro-life spies kick butt!

Also see my previous post on how the "non-profit" Planned Parenthood makes millions in profits while still receiving taxpayer subsidies.

Sarah Palin photos: not as hot as Michele Bachmann

July 1, 2009 | by Wintery Knight | Link | Original Link

Former Alaska governor Sarah Palin

ECM, Hot Air and Muddling alerted me this story in Runner's World featuring Sarah Palin. I think Sarah Palin is getting a lot of interest from this article, and most because of the photos. But there is more to a political candidate than looks.

Introducing Michele Bachmann

Allow me to introduce you to someone who is even better than Sarah Palin: Congresswoman Michele Bachmann.

Rep. Michele Bachmann

About Michele Bachmann:

> Congresswoman Bachmann is a leading advocate for tax reform, a staunch opponent of wasteful government spending, and a strong proponent of adherence to the Constitution, as intended by the Founding Fathers. She believes government has grown exponentially, with ObamaCare being the most recent example of its uninhibited growth. Congresswoman Bachmann wants government to make the kind of serious spending decisions that many families and small businesses have been forced to make. She is a champion of free markets and she believes in the vitality of the family as the first unit of government. She is also a defender of the unborn and staunchly stands for religious liberties.
>
> Prior to serving in the U.S. Congress, Bachmann served in the Minnesota State Senate. She was elected to the Minnesota State Senate in 2000 where she championed the Taxpayers Bill of Rights. Before that, she spent five years as a federal tax litigation attorney, working on hundreds of civil and criminal cases. That experience solidified her strong support for efforts to simplify the Tax Code and reduce tax burdens on family and small business budgets. Congresswoman Bachmann also led the charge on education issues in Minnesota calling for the abolishment of Goals 2000 and the Profiles of Learning in its school. She recognized the need for quality schools and subsequently started a charter school for at-risk kids in Minnesota.
>
> Congresswoman Bachmann sits on the Financial Services Committee (FSC) and the Permanent Select Committee on Intelligence. The FSC is tasked with oversight of numerous financial sectors including housing, real estate and banking. This gave the Congresswoman keen insight into the housing crisis and

> credit crunch, leading her to be a staunch opponent of the taxpayer-funded bailout of Wall Street and the Dodd-Frank legislation. Serving on the Intelligence Committee was a welcomed opportunity for Congresswoman Bachmann as she has consistently advocated peace through strength to ensure America's national security. As a mother of five children and 23 foster children, she has a deep appreciation for that portion of the Oath of Office in which members of Congress vow to support and defend the Constitution of the United States against all enemies, foreign and domestic.
>
> In July 2010 Congresswoman Bachmann hosted the first Tea Party Caucus meeting because she saw the need for Tea Partiers to have a listening ear in Congress. She is seen as a champion of Tea Party values including the call for lower taxes, renewed focus on the Constitution and the need to shrink the size of government.

Let's learn a bit more about her from this profile article.

Excerpt:

> Michele Bachmann was a self-styled "education researcher" making a run for a Minnesota school board seat in 1999 when the question came up at a candidate forum: If elected, would she serve all four years?
>
> Maybe not, she said.
>
> Bachmann, now a three-term congresswoman and tea party favorite who may run for president in 2012, opened up about a confrontation she'd had with a state senator over Minnesota's new school standards.
>
> "I told him that if he's not willing to be more responsive to the citizens, that I may have to run for his seat or find someone else who would do so," she said, according to a newspaper account of the meeting.
>
> Bachmann lost the school board race, but then knocked off the senator, a fellow Republican, just months later using the standards as her primary issue.
>
> It was an early indicator of a recurring theme: Bachmann often wins by losing.
>
> […]The race would test her resilience because she would start far back. But as a little-known House member only a few years ago, Bachmann became hero of the conservative tea party movement in part by fighting losing battles with the GOP establishment. Her path to Congress was paved by failed efforts to pass a ban on gay marriage in the Minnesota Legislature.
>
> "She is very good at turning lemons into lemonade all the time," said Sal Russo, a California political consultant who came to know Bachmann through the tea party.
>
> […]From her first involvement in politics, the 55-year-old Bachmann has shown a determination to keep pressing forward and find opportunities, even when the way seemed blocked.

> In the late 1990s, Bachmann was a stay-at-home mother of five in Stillwater, a scenic St. Croix River town east of St. Paul. Then she was drawn into a revolt over education standards.
>
> […]"People had been predicting her demise since Day One: 'Oh, she's a radical, she's too far right, she's too outspoken, she's too inflammatory,'" Pulkrabek said. "The fact of the matter is, with the exception of the first race, she wins."
>
> Parlaying her school board defeat into a victorious legislative campaign, she moved to the state Senate and seized on a new issue.
>
> Around Thanksgiving 2003, justices in Massachusetts ruled the commonwealth couldn't prevent same-sex marriage. Bachmann hit the phones, reaching out to fellow conservatives about making sure gay marriage would stay illegal in Minnesota.
>
> […]Jeff Davis heard her public appeal through his car radio. Not politically involved at the time, Davis came to the Capitol and pledged to help Bachmann.
>
> […]"She's an energizer. She influences people around her," Davis said. The drive instantly elevated Bachmann's political profile, he said. "It was a launch point."
>
> […]Bachmann's victory in that race brought her to the national stage and prompted a new focus on fiscal issues. She harnessed the outrage of the tea party, a fledgling political force inflamed by debates over government bailouts and a far-reaching health law pursued by President Barack Obama.
>
> Her outspoken opposition did not stop the health law, but it got her much more television exposure and helped make her a face of the new resistance. In one Fox News interview, Bachmann urged viewers to flood Washington and "go up and down through the halls, find members of Congress, look at the whites of their eyes and say, 'Don't take away my health care.'"
>
> Amy Kremer remembers seeing Bachmann's television plea while on a Tea Party Express bus heading between rallies in Washington state. The next week, Kremer joined Bachmann in the nation's capital for a big tea party protest.
>
> "You can tell the ones who have the passion, the fire in the belly and are truly speaking from the heart. She's one of those," Kremer said. "That comes through."

The article goes on to explain how Michele got to be a three-term Congresswoman in one of the most liberal states in the entire country.

Read this interview with World Magazine.

Excerpt:

> As her politics changed, so did her faith. She attributes a turning point to watching Francis Schaeffer's Christian worldview video series, *How Should We Then Live?* "In college I felt like in some ways my mind had been saved," she said.

> For Bachmann, who is a member of Salem Lutheran Church in Stillwater, Minn., being a Christian and a politician means fighting for compassion—individual compassion. “People confuse compassion with government being compassionate with other people’s money versus people being compassionate with their own money,” she said.
>
> For the Bachmanns, opening their family’s home to teenage girls was a way to express their Christian faith and live out good economics. That didn’t mean it wasn’t challenging. At one point, Bachmann was nursing a newborn, juggling two toddlers, homeschooling two children, and overseeing four foster teenage girls. “I was so tired, I could hardly pick my head up off the pillow,” she admitted. These days, all of her foster children have moved on, but she still makes time for her mostly grown children, who range in age from 26 to 14.
>
> …Bachmann says for her one thread ties all the day’s obligations together: “radical abandonment to God’s call.”

Listen to this interview with Michele Bachmann, by Pamela Geller. (The linked post has an MP3)

Excerpt:

> Bachmann: Right. We actually, this is a man-made, government-made disaster, this economic conundrum we’re in right now. We could see ourselves go forward next quarter already if we do a few things, if we would do this. If we would permanently zero out the capital gains tax for four years, so that we could let people know that for four years there would be zero capital gains tax. Take the business tax rate from the second highest in the world, 34%, and cut that down to 9% for a corporate tax rate, that would be bring in foreign investment and jobs back into the United States. Completely eliminate the death tax, completely eliminate the alternative minimum tax, and then I think that we need to bold on income tax. Scrap the income tax code, and put into place a tax system where everyone has to get in on the game.
>
> Whether it’s through a national sales tax, or whether it’s through a flat tax, and my personal opinion, I’d love to see in our perfect world a flat tax rate that’s no more than 10% on any American on the federal level, and then that’s it. And then we would pull way back on our spending, including eliminating the federal department of education. We don’t need the federal department of education, that function needs to happen at the state level. And then we need to go through, dramatically change what government does, that we truly are a constitutional government acting under our enumerated powers, and then we do no more, because the number one duty of government is to protect the health and the safety of the American people, and we need to make sure that we focus on first things first.

And she is very pretty, just like Sarah Palin:

Rep. Michele Bachmann

Let's look at how she does in interviews.

First, Bret Baier spends some time with Michele going over her pluses and minuses as a candidate: (MP3 version here – 3 Mb)

Second, here is another interview with popular social conservative Mike Huckabee: (MP3 version here – 3 Mb)

You can learn more about Michele in the links below.

Campaign speeches, interviews and debates

Does the Bible condone slavery?

July 1, 2009 | by Wintery Knight | Link | Original Link

Matt and Madeleine Flanagan have a wonderful post up to answer this thorny question. These guys are professional apologists, not amateurs, like me! They have *footnotes* in their post!

Your strategy

If someone asks you a question like this, there are two responses you need to make:

1. Explain why the Bible does not condone slavery
2. Ask the challenger why slavery is wrong, on their worldview

Let's start with number 1.

Does the Bible condone slavery?

MandM's response is based on the writings of John Locke in his "Second Treatise on Civil Government". Locke based his argument on a reading of Exodus 21, where the rules of "slavery" are defined.Locke's argument is that the definition of slavery in the Bible is not the same as the slavery of modern times.

MandM quotes Locke's argument. Then they summarize it:

> [1] If a person is a slave then that person is "under the absolute, arbitrary power of another, to take away his life, when he pleases."
> [2] The institution referred to in scripture that people could sell themselves into, was not one where they were "under an absolute, arbitrary, despotical power."

Then they explain some reasons why the indentured servitude in the Bible is not the same as slavery in the last few hundred years.

- there was no kidnapping of an indentured servant, they served voluntarily in order to get rid of a debt
- there was no racial component to indentured servitude
- killing an indentured servant was a capital offense, striking one was illegal
- indentured servitude was for 6 years, not for a lifetime
- if the indentured servant fled from an abusive master, it was illegal to return teh servant to his master

References are provided for each of these points.

So the Biblical concept of "slavery" wasn't what we mean as slavery when we look at British, Arab, or American slavery in history. Instead, the Bible is talking about *indentured servitude.*

What's wrong with slavery, on atheism?

I think a more fundamental question that needs to be pressed on the atheist is whether

slavery is wrong on *their* worldview. I've argued elsewhere that worldviews like atheism do *not* support the minimal requirements for rational morality.

Specifically, atheism does not ground:

1) Objective moral values: where is the standard?
2) Objective moral duties: to whom are moral duties owed?
3) Moral accountability: will I get caught if I am immoral?
4) Free will: are humans capable of free choice?
5) Ultimate significance: does it matter ultimately?

NEVER let atheists get away with making any moral statements, because even though an individual atheist might get lucky and act morally based on the objective moral law that God actually made, their actions are not rationally grounded by their worldview. Call them out!

This actually came out in the comments for MandM's post, where John W. Loftus, a prominent lay-atheist, chimed in.

Here is a sample comment:

> Rob says: (from Manawatu Christian Apologetics)
>
> I presume John Loftus is a born-again atheist? If this is so, then upon what grounds would he criticize slavery at all?
>
> If atheism is true truth, then I fail to see any possible ground that could provide a basis for outrage against moral evil, since moral evil cannot exist.
>
> Indeed, if the universe is material only, then at what time did atoms create morality?
>
> So John Loftus has to assume a Biblical morality to attack Biblical morality, but he would then be rejecting the basis for his indignation at slavery in the South, or any other slavery for that matter. He cannot logically have his cake and eat it too.

I can't recommend this post *and* the comments enough. This is a great post and the comments are totally awesome, although you may find them difficult to understand. You will learn a lot from this post and exchange.

I am really impressed with MandM's blog. Please pay them a visit and have a look yourself.

Democrats use TARP money to shore up personal fortunes

July 1, 2009 | by Wintery Knight | Link | Original Link

Story from the Washington Post. Senator Daniel Inouye (DEMOCRAT) intercedes to have TARP funds redirected to the floundering "Central Pacific" bank, which he owns.

But I prefer Hot Air's summary.

> In other words, Inouye interceded to get TARP funds to secure his personal assets. He used his political clout on Capitol Hill to get Treasury to approve a "marginal" application that had already been rejected once, in order to save his own bank from collapse. Central Pacific had already been in trouble with the FDIC even before the collapse in the lending and financial sector, thanks to bad management practices and undercapitalization. The FDIC had required a change in management and $40 million more in capitalization, which is why Treasury was reluctant to give CP a bailout check in the first place.
>
> Inouye isn't the first member of Congress to have used TARP to rescue personal fortunes. Maxine Waters did the same thing with OneUnited of Massachusetts, where she and her husband had significant investments. In that case, Waters arranged a meeting between OneUnited and regulators, while Barney Frank wrote legislation that required Treasury to grant special consideration to OneUnited's TARP application.

A second Hot Air piece about the corruption in the cap-and-trade bill.

> Remember that last-minute, 300-page amendment to the cap-and-trade bill that hit the House just hours before the vote approving it? The one that Democrats insisted on putting up for a vote before anyone had the chance to read it? When one reads the contents of it, as the Washington Times' Edward Felker did, it becomes apparent why Henry Waxman and Edward Markey pushed it through so quickly. It was a payoff for Rep. Marcy Kaptur (D-OH) to turn her back on coal-producing Ohio and vote to kill the economy in her state, and she wasn't alone…
>
> …The amendment itself got published in the wee hours of Friday morning. By the time the House came to order and began debate, it hadn't yet been noted by the media.
>
> In essence, Waxman and Markey bought Kaptur with our money. They spent $3.5 billion for a single vote in Congress, and Kaptur had willingly put herself up for sale. Never mind that Ohio will get [hit] hard by caps on the use of coal. Ohioans will lose jobs, their energy bills will skyrocket, and that will have an inflationary effect on all goods and services as the jobless rate escalates.

More Democrat corruption in Michigan

But this is not the only corruption going on with those sneaky Democrats.

Michigan Democrats are involved in yet another corruption scandal. I wonder if these Democrats keep their piles of cash in freezers like the Louisiana Democrats do.

Here's the story from the BlogProf. This blog has been tracking the story from its inception.

Excerpt:

> Ever since Monica Conyers became a convicted felon, a big chunk of the the most powerful Michigan Democrats have been somehow connected to the growing scandal. Husband John Conyers somehow wrote a letter to the EPA to open toxic deep wells that he vehemently opposed, which was a boost to Jim Pappas who was bribing Monica for the favor. In the middle was Monica Conyers advisor Sam Riddle. In addition, Pappas hired U.S. Sen Debbie Stabenow's husband, Tom Athens, to illegally lobby for the same deal, all the while Stabenow publicly came out against Canadian trash imports, including those that we to be injected into said wells.
>
> Since the conviction of Monica, Riddle has been talking. What he said today raised many eyebrows throughout the state, now ensnaring the Michigan Democrat Party, Jennifer Granholm, Mark Brewer chairman of the Michigan Democratic Party, and Bernard Kilpatrick father of disgraced felon ex-mayor Kwame Kilpatrick. From The Detroit News: Riddle: FBI probed $50K deal with Dems.

People who trash the free exercise of religion, traditional morality, the rule of law and family should not be expected to act honestly. Morality requires certain metaphysical beliefs, which Democrats, being secular socialists, just don't have grounded by their worldview.

We can't elect people who believe that it's OK to kill defenseless unborn children for convenience and then expect them to have integrity. It's not rational for someone like that to act morally. If they are willing break the big moral laws, they'll have no trouble breaking the small ones, too.

Honduras defies Obama-supported socialist dictator

July 2, 2009 | by Wintery Knight | Link | Original Link

Background

The Honduran Constitution specifies that Presidents are only allowed to serve one-term. The current President Zeyala decided that things would be better if he were allowed to serve indefinitely. He tried to arrange a referendum to redo the Constitution so that he could serve a second term.

The Supreme Court declared that the Constitution does not allow the president to call a referendum, only the Congress can do that. So, they ordered the army to prevent the dictator from carrying out his plan to seize power anyway.

But Obama loves communist dictators. He would not side with the Iranian people against their Islamo-fascist dictator, and he will not side with the Honduran people against their communist dictator. It makes you wonder what Obama has against Constitutions, liberty, free market capitalism and limits on power, doesn't it?

The latest

Obama's UN representative introduced a resolution in the United Nations, along with other Marxist dictatorships in Venezuela and Bolivia, to support the Marxist dictator of Honduras.

The Hill reports: (H/T Gateway Pundit)

> The U.S. co-sponsored a successful U.N. resolution supporting Honduras's ousted leader Tuesday as Republicans began to speak out against the Obama administration's condemnation of the overthrow.
>
> Manuel Zelaya, who was arrested and forced into exile Sunday, addressed the U.N. General Assembly after the unanimous vote on the resolution sponsored in part by Bolivia, Mexico, Venezuela and the United States.
>
> "The resolution that the United Nations has just adopted unanimously … expresses the indignation of the people of Honduras and the people worldwide," said Zelaya, who began his speech by thanking Venezuela and Ecuador.

Obama even wants to speak with the exiled dictator:

> …"I believe, if he — if he does come either today or tomorrow, that he will likely meet with officials from the State Department, some of whom, as I said, have been in contact," White House press secretary Robert Gibbs said in Tuesday's briefing, repeating this when pressed by a reporter about whether Zelaya would meet with Obama.
>
> Venezuelan President Hugo Chavez has urged Zelaya to try to speak with Obama while in D.C., saying the American president's support would "deliver a major blow" to Honduras's interim government.

But the Republicans in Congress are siding with the Honduran people, and against socialist dictators:

> "Manuel Zelaya trampled the Honduran Constitution by pushing for his illegal referendum to allow him to rule indefinitely, and by firing the top military official, General Romeo Vasquez Velasquez, when he refused to comply with Zelaya's unconstitutional orders," Rep. Connie Mack (R-Fla.) said in a statement to The Hill on Tuesday.
>
> "There is little doubt that Zelaya, in his blatant power grab, has moved Honduras down a dangerous path toward less freedom, less security, and less prosperity. He consistently ignored the checks and balances which are essential to a democratic government."
>
> The referendum had been judged illegal by Honduras's highest court and was opposed widely through political and military circles, including within Zelaya's own party.

The Wall Street Journal reports: (H/T Gateway Pundit)

> Hondurans are understandably afraid that, backed by Chávez agents and money, it could lead to similar antidemocratic subversion there. In Tegucigalpa yesterday, thousands demonstrated against Mr. Zelaya, and new deputy foreign minister Marta Lorena Casco told the crowd that "Chávez consumed Venezuela, then Bolivia, after that Ecuador and Nicaragua, but in Honduras that didn't happen."
>
> It's no accident that Mr. Chávez is now leading the charge to have Mr. Zelaya reinstated, and on Monday the Honduran traveled to a leftwing summit in Managua in one of Mr. Chávez's planes. The U.N. and Organization of American States are also threatening the tiny nation with ostracism and other punishment if it doesn't readmit him.
>
> …As for the Obama Administration, it seems eager to "meddle" in Honduras in a way Mr. Obama claimed was counterproductive in Iran. Yet the stolen election in Iran was a far clearer subversion of democracy than the coup in Honduras. As a candidate, Mr. Obama often scored George W. Bush's foreign policy by saying democracy requires more than an election — a free press, for example, civil society and the rule of law rather than rule by the mob. It's a point worth recalling before Mr. Obama hands a political victory to the forces of chavismo in Latin America.

Meanwhile, the Honduran people marched in the streets against Obama and his communist dictator buddies, reports Gateway Pundit.

Hondurans protest against the unilateral meddling in their national affairs by Cowboy Socialist Barack Obama

Imagine what conservative Christian Republicans like Ronald Reagan and George W. Bush would have done in a similar situation. They would have defended the rights and liberties of the people from the arbitrary power of socialist dictators. But they understood the value of liberty, democracy and human rights. They were prepared to take stands against the tyrannies of communism and fascism. They did not want to be loved by evil tyrants.

UPDATE: Ed Morrissey at Hot Air notes that even the socialists at the New Republic are condemning Obama for neglecting the Honduran Constitution and the will of the people. (H/T Stop the ACLU)

Round-up of news on Obama's economic policies

July 2, 2009 | by Wintery Knight | Link | Original Link

Tax policies that destroy traditional families

New taxes on married couples with intact families to subsidize out-of-wedlock births. (This is basically an incentive to not marry, by the way)

Hans Bader at the CEI's blog reports: (H/T ECM)

> Not content with repealing welfare reform through the job-killing stimulus package, and proposing a massive marriage penalty in the tax code, Obama and his Congressional allies are now planning to make married and widowed taxpayers subsidize benefits for which they are not eligible, such as payments to households with out-of-wedlock births. For example, they are pushing a bill that will allow even households that receive tens of thousands of dollars a year in child support to demand food stamps.
>
> …Intact families, and widows, usually have every dollar they make considered in whether they qualify for food stamps. But under the Obama-backed proposal, unwed mothers, and divorced mothers, would not, since the child-support dollars they receive would be arbitrarily excluded.

Stop and think about what sorts of incentives this creates. What kind of man would be stupid enough to consider getting married and being a father to his own children? This is how Democrats destroy the family with tax policies, so that women with children depend on the state, and the state can in turn influence the way children are raised by getting them into day care, pre-K and government-run schools.

The goal is to prevent parents from influencing their own children with benighted traditional beliefs about traditional religion and morality. According to Democrats, that is the job of qualified public school teachers using approved teaching materials designed by experts like Kevin Jennings. And besides, the more children are raised without fathers, the more government jobs are created to deal with the fallout.

And there's more:

> The Obama-backed bill also increases the federal matching funds states receive for maximizing their collection of child support payments, giving them an incentive to artificially jack up child support obligations in order to reap federal money (as many states did in the aftermath of the 1988 Family Support Act), even if that means forcing fathers who have never missed a payment to pay much more than the actual cost of raising a child. I have previously written about how court-ordered child support payments generally exceed the actual cost of raising a child under most existing state child-support guidelines.

Democrat women that I know (single/divorced women and single/divorced mothers) are so mystified as to why men are not lining up to marry them. Maybe they should be

thinking about the policies that they actually voted in favor of – they are not husband-friendly or father-friendly.

Democrat women think that they can crush the last drop of liberty and autonomy out of a man, and still expect him to love, protect and provide for women and children. Inexplicable. They want the security of the state and they don't realize how it decreases the number of men willing to make commitments.

Home sales will require government approval

The Democrats cap-and-trade bill will require you to fix your house up to be eco-friendly, before you will be allowed to sell it. What? Global warming isn't going to solve itself, you know…. Oh, wait!

CNSNews reports on what we can expect. (H/T Gateway Pundit)

> The 1,400-page cap-and-trade legislation pushed through by House Democrats contains a new federal policy that residential, commercial, and government buildings be retrofitted to increase energy efficiency, leaving it up to the states to figure out exactly how to do that.
>
> This means that homeowners, for example, could be required to retrofit their homes to meet federal "green" guidelines in order to sell their homes, if the cap-and-trade bill becomes law.

This is the first time since these subprime mortgage bank bailouts started that I've ever been happy about renting.

New Republican cap-and-trade TV ad

Here's the new ad put out by Republicans to educate the public about the cap-and-trade bill that just passed the house. (H/T ECM)

Now that's a great ad.

Why Democrats voted for Obama

Because they don't know anything about economics!

The second one is from Nice Deb.

Christina Hoff Sommers explains feminist myth-making

July 2, 2009 | by Wintery Knight | Link | Original Link

Dr. Christina Hoff Sommers

This story was sent to me by ECM, but I also saw posted at Dinocrat.com, Jennifer Roback Morse and Muddling Towards Maturity.

How reliable are the stories you read in women's studies textbooks? Does violence against women really increase on Superbowl Sunday? Or is it just a ploy to create a made-up crisis to justify transferring wealth from taxpayers to feminists for research, social programs, etc.?

Excerpt:

> One reason that feminist scholarship contains hard-to-kill falsehoods is that reasonable, evidence-backed criticism is regarded as a personal attack.
>
> Lemon's *Domestic Violence Law* is organized as a conventional law-school casebook — a collection of judicial opinions, statutes, and articles selected, edited, and commented upon by the author.
>
> …in a selection by Joan Zorza, a domestic-violence expert, students read, "The March of Dimes found that women battered during pregnancy have more than twice the rate of miscarriages and give birth to more babies with more defects than women who may suffer from any immunizable illness or disease." Not true. When I recently read Zorza's assertion to Richard P. Leavitt, director of science information at the March of Dimes, he replied, "That is a total error on the part of the author. There was no such study." The myth started in the early 1990s, he explained, and resurfaces every few years.
>
> Zorza also informs readers that "between 20 and 35 percent of women seeking

> medical care in emergency rooms in America are there because of domestic violence." Studies by the federal Centers for Disease Control and Prevention and the Bureau of Justice Statistics, an agency of the U.S. Department of Justice, indicate that the figure is closer to 1 percent.

Sommers is a Christian equality-feminist who writes against activist "gender" feminism. I have her first two books. She is a professional philosopher who understands men and tells the truth.

You can read more about what constitutes feminist research in this article by Rod Dreher.

Further study

My previous story on domestic violence showed that female-instigated DV is rising in Australia, and that rates of DV are similar in Canada and the UK.

Previously, I blogged about a new study that shows the importance of fathers to the development of children.

I also blogged about how government intrudes into the family and about the myth of "dead-beat Dads". And about how the feminist state's discrimination against male teachers is negatively impacting young men. And there is my series on how Democrat policies discourage marriage: Part 1 is here and Part 2 is here and Part 3 is here.

Dr. Linda Kelly Hill

Here is a related research paper by Dr. Linda Kelly, a professor of Law at Indiana University School of Law.

Round-up of news from around the world

July 2, 2009 | by Wintery Knight | Link | Original Link

Pro-freedom protesters in Honduras defy Obama and CNN

So much foreign policy news!

Iraq

Jason over at The Western Experience has a number of good stories up.

He writes that Iraq is struggling to find foreign investors for its oil fields.

Excerpt:

> …the Iraqi government has to decide on how to lure foreign investors and oil firms to setup shop in the many rich oil fields. With modern development, industry and organization Iraq could be a major producer and, potentially, one of the major countries in the world in just a few decades. So far, things haven't exactly happened in the order many experts and investors hoped. The hang up is, of course, price per barrel. Companies were asking too much for operating in the country in the eyes of the government. Still, others were willing to operate at loss just to get a foothold in the new market.

It's funny, because if our war in Iraq were really a war for oil, why is Iraq taking offers to see who will be drilling for all that oil? (The offers are also coming from China, Russia and India, not just the USA)

Egypt

Robert Spenser of Jihad Watch links to this Assist News article about the state of Christian liberty in Egypt.

Excerpt:

> Since early 2007 the Egyptian government has been appeasing Muslim fundamentalists by settling matters of sectarian conflict out of court in line with Islamic Sharia law. That prohibits Christians from bringing evidence against

> Muslims. **The government brokers 'reconciliation' sessions where the Christians are forced to drop all the charges they are making (arson, looting, assault, kidnap, robbery, criminal damage, rioting, torture, rape, murder) in exchange for Muslim guarantees of 'peace'.**
>
> **…Not only is violence against Christian individuals, churches and communities escalating dangerously, but the courts are increasingly subordinating the Constitution to Sharia law.** Notably, the courts are refusing to allow Muslims the right to convert. The consequences of this are huge. A woman who is officially registered as a Muslim must by law marry a Muslim and the children of a man officially registered as a Muslim are automatically deemed Muslim by the State. **The few who have courageously challenged this have been forced into hiding to preserve their lives.**

Please pray for our Christian brothers and sisters in other countries.

Sri Lanka, Iran, Pakistan, Afghanistan, Georgia, etc.

Wow! Michael Totten has a super-long interview with Robert Kaplan, a moderate who writes about the U.S. military and global conflicts in the most far-flung places in the world.

Excerpts:

> **Kaplan:** …The Tamil Tigers had human shields by the tens of thousands, not just by the dozens and hundreds like Al Qaeda. They put people between themselves and the government and say "you have to kill all the people to get to us." So the government obliged them. The government killed thousands of civilians.
>
> **Kaplan:** …The Sri Lankan government was elected in 2005 to win the war. And it has done that. Extremely brutally. It's a government that's very nationalist Sinhalese Buddhist. These are not the Richard Gere's "peace and love" Buddhists. These are the real blood and soil Buddhists, where Buddhism is like any other religion when it's threatened and it's defending a piece of territory. It can be very brutal.

Wow, this thing was really messy. You have suicide bombing terrorists with human shields on the one side, and a journalist-killing authoritarian government on the other side. There were no good guys. What a mess. These militant Buddhists remind me of the militant nationalist Hindus I talked about before.

And here is a guest post about Russia and Georgia.

Honduras timeline

Here is a pretty useful timeline of events from Atlas Shrugs for the current democratic crisis in Honduras. This article really emphasizes the socialist policies of the wanna-be dictator. The person who provided it is an American investor living in Honduras.

Excerpt:

> I have been disgusted at the world reaction to these events. It's like they only

> looked at what happened on Sunday morning and ignored what events led to that day. I don't understand how the removal of Zelaya was anything less than a small country demanding that their country remain democratic. Their constitutional process worked exactly right to remove a rogue president with an agenda that was detrimental to the Honduran constitution and society. While the actions o f June 28 would fit some definitions of a coup, it was certainly a legal and CONSTITUTIONAL coup. There have been several articles written that state that it was a MANDATORY coup. That's a very difficult concept for most people from the first world to understand, but there are some coups that are good and even required.

I hope that Honduras can bear up under the economic sanctions they are likely to face – and no help from Obama, either. He seems to prefer Chavez and Ahmadinejad.

Do biology textbooks lie to prove evolution?

July 3, 2009 | by Wintery Knight | Link | Original Link

Lately, a lot of people have been stopping by the blog to learn about the how left-leaning scientists are producing faked evidence of global warming in order to support President Obama in his efforts to pass cap and trade.

- oceans are warming – NOT!
- polar ice caps are melting – NOT!
- polar bear populations are decreasing – NOT!
- global warming is caused by humans – NOT!

…and so on.

You might even see evidence against global warming being suppressed. Michelle Malkin writes about the suppression of an EPA report that would have undermined the rationale for the cap-and-trade bill.

Excerpt:

> The Obama administration doesn't want to hear inconvenient truths about global warming. And they don't want you to hear them, either. As Democrats rush on Friday to pass a $4 trillion-dollar, thousand-page "cap and trade" bill that no one has read, environmental bureaucrats are stifling voices that threaten their political agenda.
>
> The free market-based Competitive Enterprise Institute in Washington (where I served as a journalism fellow in 1995) obtained a set of internal e-mails exposing Team Obama's willful and reckless disregard for data that undermine the illusion of "consensus." In March, Alan Carlin, a senior research analyst at the Environmental Protection Agency, asked agency officials to distribute his analysis on the health effects of greenhouse gases. EPA has proposed a public health "endangerment finding" covering CO2 and five other gases that would trigger costly, extensive new regulations of motor vehicles. The open comment period on the ruling ended this week. But Carlin's study didn't fit the blame-human-activity narrative, so it didn't make the cut.
>
> On March 12, Carlin's director, Al McGartland, forbade him from having "any direct communication" with anyone outside his office about his study. "There should be no meetings, emails, written statements, phone calls, etc."

It's important to understand that left-leaning scientists have many reasons for doing things like this. Some of the reasons are political.

Here are just two examples.

1. Many academics spend their entire lives in academia working on esoteric research

of marginal utility. They depend for their livelihoods in large measure on research money awarded by the government. They therefore tend to want to prove their importance to the public and the government by inventing crises that require more research money and bigger government budgets.
2. In additional, many academics are jealous of hard-working entrepreneurs in private industry, who are able to earn more money by pleasing customers with useful products and services than they can by talking and writing papers on topics of marginal utility.

For these reasons and others, it is common for a "scientific consensus" to emerge among left-leaning scientists to prove things that are not true in order to achieve certain social and/or political results desired by these left-leaning scientists. (Note: you can verify that the majority of university professors are left-leaning by looking at their political donations – which are *overwhelmingly* Democrat)

Evolution

Evolution is virtually identical to global warming. Naturalists embraced evolution for many reasons, none of them related to actual evidence.

Among these reasons are the following:

1. As Cornelius Hunter has documented, naturalists felt that if God were the designer of life, then he wouldn't have done it in a way that involved so much suffering and waste.
2. Naturalists, like everyone else, are resentful of the demands of the moral law on their autonomy. Rather than wasting time on theology and religious observances, they would prefer to be doing whatever they want – without any social disapproval. A theory like evolution could be foisted on the public in order to marginalize God, and his obligations, in one swoop.

Let's learn about one of the ways that naturalists lie to the public in order to achieve desired social and political ends.

Lies my biology textbook told me

Jonathan Wells, a biologist with Ph.Ds from Yale and UC Berkeley, writes about one example of fake evidence here:

> Charles Darwin thought that "by far the strongest" evidence that humans and fish are descended from a common ancestor was the striking similarity of their early embryos. According to Darwin, the fact that "the embryos of the most distinct species belonging to the same class are closely similar, but become, when fully developed, widely dissimilar… reveals community of descent." [2] To illustrate this, German Darwinist Ernst Haeckel made some drawings in the 1860s to show that the embryos of vertebrates (fish, amphibians, reptiles, birds and mammals) look almost identical in their earliest stages.
>
> But Haeckel faked his drawings. Not only do they distort vertebrate embryos by

> making them appear more similar than they really are (in a way that Stephen Jay Gould wrote "can only be called fraudulent" [3]), but they also omit classes and stages that do not fit Darwin's theory. *Most significantly, Haeckel omitted the earliest stages, in which vertebrate embryos are strikingly different from each other.* The stage he portrayed as the first is actually midway through development. Yet according to Darwin's logic, early *dis*-similarities do *not* provide evidence for common ancestry.
>
> Haeckel used his faked drawings to support not only Darwinian evolution, but also his own "Biogenetic Law," which stated that embryos pass through the adult stages of their ancestors in the process of development.
>
> …Haeckel's drawings were exposed as fakes by his own contemporaries, and his Biogenetic Law was thoroughly discredited by 20th century biologists. It is now generally acknowledged that early embryos never resemble the adults of their supposed ancestors. A modern version of recapitulation claims that early embryos resemble the *embryos* of their ancestors, but since fossil embryos are extremely rare, this claim is little more than speculation based on the assumption that Darwin's theory is true.

Now the standard response from Darwinists: *no textbooks are still using the fraudulent embryo images*. Is it true? It's as true as global warming!

You can see the actual faked pictures from the modern textbooks here. These textbooks were being produced as late as 2004, even though the fraud was detected in the 1800s! Is this the vaunted self-correction of science, or science being twisted to support social and political goals?

And this excerpt from that article is interesting:

> Some Darwinists continue to deny that there has been any misuse of Haeckel in recent times. If that is the case, why did Stephen Jay Gould attack how textbooks use Haeckel in 2000? Gould wrote: "We should… not be surprised that Haeckel's drawings entered nineteenth-century textbooks. But we do, I think, have the right to be **both astonished and ashamed by the century of mindless recycling that has led to the persistence of these drawings in a large number, if not a majority, of modern textbooks!**" (emphasis added) Similarly, in 1997, the leading embryologist Michael K. Richardson lamented in the journal *Anatomy and Embyology* that "Another point to emerge from this study is the **considerable inaccuracy of Haeckel's famous figures**. These drawings are **still widely reproduced in textbooks** and review articles, and continue to exert a significant influence on the development of ideas in this field." (emphases added)

And you can read about the 700 scientists who doubt that natural selection and mutation are sufficient to produce the diversity of life here.

Obama loses 2.5 million jobs, 9.5% unemployment, worst in 26 years

July 3, 2009 | by Wintery Knight | Link | Original Link

When Democrats talk about economic policies, they don't actually know what they are talking about. They just make up numbers and conducting kabuki-theater townhalls with pre-screened questions from hard-core Democrat activists. They'll say whatever is necessary in order to maintain power.

Want proof?

Here's proof from the Heritage Foundation. Democrats promised us that if their pork-filled spending bills were passed, that unemployment would be much lower than if we did nothing at all. But guess what? They passed the spending bills and unemployment is MUCH HIGHER now than if we had done nothing at all.

Obama's massive spending bills caused us to have a much higher unemployment rate than if we had not spent one thin dime

That means that we are now stuck with trillions of dollars in spending, massive budget deficits and a ballooning national debt. And not only did it not help unemployment, it actually HURT the unemployment rate.

Heritage writes:

> In January, President Obama pressed for an $800 billion economic "stimulus" package to turn the economy around. Though the bill largely consisted of increased spending on traditional liberal priorities, the President claimed that it would "create or save" 3.5 million jobs. The President's economic advisors

> predicted that unemployment would rise to 9 percent by 2010 if Congress did not pass the stimulus bill, but that with the stimulus unemployment would stay below 8 percentage points.
>
> Congress passed the stimulus bill in February 2009 and the President has repeated his claims. President Obama recently said that the stimulus bill has already created or saved 150,000 new jobs and that it will "create or save" another 600,000 jobs by the end of the summer. Asked when the public should begin to judge the effects of the stimulus, White House Press Secretary Robert Gibbs said "I think we should begin to judge it now."

Surprise! You can't borrow and spend your way out of debt. Maybe having rich parents is not the best preparation for higher office, yes?

Where is President Bush when you need him?

Comparison of Bush and Obama unemployment rates

Bush "spent" money on trillions of dollars in tax cuts. That's how you stimulate an economy. Put the money back in the private sector – in the hands of working families and businesses – not in the hands of bureaucrats.

How out-of-touch are the Democrats?

The Wall Street Journal reports on how sincere the Democrats are in their empathy for the common man. (H/T Hot Air)

Excerpt:

> The spending on overseas travel is up almost tenfold since 1995, and has nearly tripled since 2001, according to the Journal analysis of 60,000 travel records. Hundreds of lawmakers traveled overseas in 2008 at a cost of about $13 million. That's a 50% jump since Democrats took control of Congress two years ago.
>
> The cost of so-called congressional delegations, known among lawmakers as "codels," has risen nearly 70% since 2005, when an influence-peddling scandal led to a ban on travel funded by lobbyists, according to the data.

> Although complete travel records aren't yet available for 2009, it appears that such costs continue to rise. The Journal analysis shows that the government has picked up the tab for travel to destinations such as Jamaica, the Virgin Islands

> and Australia's Great Barrier Reef.

People are suffering under a recession caused by the Democrats and they just keep collecting and spending more and more of our money!

We knew that Democrats would do this: we had access to their voting records, their pork and earmark records, their records on spending, waste and other issues. People who studied their voting records and voter guides knew that Democrats would mess up the economy.

The Republican response

Read this statement by Eric Cantor and you will hear a completely different attitude from the Democrats.

Excerpt:

> "First and foremost, the American people are concerned about the economy, job creation and the unsustainable debt obligations incurred in the last 6 months.
>
> Beginning in January, House Republicans laid out a serious and substantive agenda that put jobs first. House Democrats, along with the White House, instead took an unfocused, 'go it alone' approach that has fallen well short of its goals and has failed to create jobs.
>
> "Inexplicably, instead of focusing on jobs and restoring the financial security that has been lost by millions of struggling families, the President continues to push an agenda that the majority of Americans are uneasy with. The American people do not support a government healthcare plan that will increase costs, reduce patient choice and flexibility, and lower the quality of care available in our country. The American people do not support the radical Cap & Tax plan which will impose a hard-hitting tax upon families and small businesses costing our struggling economy thousands of jobs.
>
> "As job losses continue to mount, families' worries about losing their healthcare, paying their mortgage, and sending their children to college continues to intensify. Employment must be our focus, yet Speaker Pelosi and the unchecked Democrat majorities continue to increase Washington's hand in the free market, at the expense of job creation. **At some point, even the Speaker must realize that enough is enough.**

Mike Pence gives his assessment of the situation here.

My favorite lectures from J.P. Moreland, Walter L. Bradley and Philip E. Johnson

July 3, 2009 | by Wintery Knight | Link | Original Link

These are the lectures that made me who I am today!

Dr. J.P. Moreland

B.S. in Chemistry, University of Missouri
M.A. in Philosophy, University of California Riverside
Th.M. in Theology, Dallas Theological Seminary
Ph.D. in Philosophy, University of Southern California

- Atheism, Theism, and the Meaning of Life
- The Importance of the Mind in Christian Living

Dr. Walter L. Bradley

Ph.D. in Materials Science, University of Texas at Austin, 1968
B.S. in Engineering Science, University of Texas at Austin, 1965

- Truth in Religion
- Scientific Evidence for an Intelligent Designer
- Journey to Faith (His testimony)
- Giants in the Land (low volume, but it's my favorite lecture of all)

Dr. Philip E. Johnson

A.B., Harvard University, 1961
J.D., University of Chicago, 1965

- The Grand Metaphysical Story of Science
- Can Science Know the Mind of God?
- Darwinism on Trial

Happy Independence Day!

July 4, 2009 | by Wintery Knight | Link | Original Link

The Stars and Stripes

The Declaration of Independence

You can listen to conservative writer Scott Ott reading the Declaration of Independence here, and follow along with the complete text here.

The best book to read about the Revolutionary War is David McCullough's 1776, which I highly recommend. The audio book version is awesome.

Whenever I drive on long trips, I always practice singing "The Star-Spangled Banner" and "America the Beautiful".

Even if you are not an American, you can be an honorary American, just for today, if you sing the songs below. God knows that there are other people in the world that love freedom and look to the United States as the model.

If we fall now, then you other freedom-loving people abroad must be ready to pick up the torch!

United States Air Force

The Star Spangled Banner

Lyrics:

"Oh, say can you see by the dawn's early light
What so proudly we hailed at the twilight's last gleaming?
Whose broad stripes and bright stars thru the perilous fight,
O'er the ramparts we watched were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,

Gave proof through the night that our flag was still there.
Oh, say does that star-spangled banner yet wave
O’er the land of the free and the home of the brave?

On the shore, dimly seen through the mists of the deep,
Where the foe’s haughty host in dread silence reposes,
What is that which the breeze, o’er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning’s first beam,
In full glory reflected now shines in the stream:
‘Tis the star-spangled banner! Oh long may it wave
O’er the land of the free and the home of the brave!

And where is that band who so vauntingly swore
That the havoc of war and the battle’s confusion,
A home and a country should leave us no more!
Their blood has washed out their foul footsteps’ pollution.
No refuge could save the hireling and slave
From the terror of flight, or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O’er the land of the free and the home of the brave!

Oh! thus be it ever, when freemen shall stand
Between their loved home and the war’s desolation!
Blest with victory and peace, may the heav’n rescued land
Praise the Power that hath made and preserved us a nation.
Then conquer we must, when our cause it is just,
And this be our motto: “In God is our trust.”
And the star-spangled banner in triumph shall wave
O’er the land of the free and the home of the brave!”

America the Beautiful

Lyrics:

“O beautiful for spacious skies,
For amber waves of grain,
For purple mountain majesties
Above the fruited plain!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for pilgrim feet
Whose stern impassioned stress
A thoroughfare of freedom beat
Across the wilderness!

America! America!
God mend thine every flaw,
Confirm thy soul in self-control,
Thy liberty in law!

O beautiful for heroes proved
In liberating strife.
Who more than self their country loved
And mercy more than life!
America! America!
May God thy gold refine
Till all success be nobleness
And every gain divine!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for halcyon skies,
For amber waves of grain,
For purple mountain majesties
Above the enameled plain!
America! America!
God shed his grace on thee
Till souls wax fair as earth and air
And music-hearted sea!

O beautiful for pilgrims feet,
Whose stem impassioned stress
A thoroughfare for freedom beat
Across the wilderness!
America! America!
God shed his grace on thee
Till paths be wrought through
wilds of thought
By pilgrim foot and knee!

O beautiful for glory-tale
Of liberating strife
When once and twice,
for man’s avail

Men lavished precious life!
America! America!
God shed his grace on thee
Till selfish gain no longer stain
The banner of the free!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
Till nobler men keep once again
Thy whiter jubilee!"

Here is my favorite version of America the Beautiful, sung by Ray Charles. This is the same version you hear on the Mark Levin show on Friday. Perfection.

George Washington

Washington Crossing the Delaware

For those of you who know nothing about the United States, you should read the story of Washington crossing the Delaware. At this point in the Revolutionary War, the British commanders had achieved a stunning series of victories against the Americans. They had even sent word home to the King that the war was over, and that the Americans would be forced to surrender. But Washington did not give up.

Ronald Reagan

Ronald Reagan

Here is a portion of Ronald Reagan's farewell speech:

Excerpt:

> I've spoken of the shining city all my political life, but I don't know if I ever quite communicated what I saw when I said it. But in my mind it was a tall proud city built on rocks stronger than oceans, wind-swept, God-blessed, and teeming with people of all kinds living in harmony and peace, a city with free ports that hummed with commerce and creativity, and if there had to be city walls, the walls had doors and the doors were open to anyone with the will and the heart to get here. That's how I saw it, and see it still.
>
> And how stand the city on this winter night? More prosperous, more secure, and happier than it was eight years ago. But more than that; after two hundred years, two centuries, she still stands strong and true on the granite ridge, and her glow has held steady no matter what storm. And she's still a beacon, still a magnet for all who must have freedom, for all the pilgrims from all the lost places who are hurtling through the darkness, toward home.

This is no ordinary nation.

Any more ideas?

Put your suggestions for more songs and speeches in the comments!

Remember to be grateful for the Founding Fathers, and other patriots, who risked everything for liberty in the Revolutionary war. Be grateful to those men and women still fighting abroad to keep those freedoms safe from evil. And most of all, be grateful to God that America is still the beacon of liberty.

Happy Independence Day!

John Boehner asks: where are the jobs?

July 5, 2009 | by Wintery Knight | Link | Original Link

This is a pretty good ad featuring House Republican Leader John Boehner. The ad argues that government spending is not creating any jobs.

H/T Nice Deb.

Senate bill would fine people $1000 for refusing medical coverage

July 5, 2009 | by Wintery Knight | Link | Original Link

Story from Fox News.

> Americans who refuse to buy affordable medical coverage could be hit with fines of more than $1,000 under a health care overhaul bill unveiled Thursday by key Senate Democrats looking to fulfill President Barack Obama's top domestic priority.
>
> The Congressional Budget Office estimated the fines will raise around $36 billion over 10 years. Senate aides said the penalties would be modeled on the approach taken by Massachusetts, which now imposes a fine of about $1,000 a year on individuals who refuse to get coverage. Under the federal legislation, families would pay higher penalties than individuals.
>
> In a revamped health care system envisioned by lawmakers, people would be required to carry health insurance just like motorists must get auto coverage now. The government would provide subsidies for the poor and many middle-class families, but those who still refuse to sign up would face penalties.

H/T Nice Deb.

The Democrats make war on science to protect their faith-based policies

July 6, 2009 | by Wintery Knight | Link | Original Link

Did everyone hear about how the EPA, (a government agency), suppressed a report questioning global warming? Basically, the Democrats wanted to pass the cap-and-trade bill without facing any criticism of their faith in man-made global warming. So they told Carlin not to publish his report or speak about it to anyone. Alan Carlin went ahead and released the report to CEI anyway. And now he tells the whole story in the WSJ.

In the Wall Street Journal. (H/T CEI)

> Mr. Carlin and a colleague presented a 98-page analysis arguing the agency should take another look, as the science behind man-made global warming is inconclusive at best. The analysis noted that global temperatures were on a downward trend. It pointed out problems with climate models. It highlighted new research that contradicts apocalyptic scenarios. "We believe our concerns and reservations are sufficiently important to warrant a serious review of the science by EPA," the report read.
>
> The response to Mr. Carlin was an email from his boss, Al McGartland, forbidding him from "any direct communication" with anyone outside of his office with regard to his analysis. When Mr. Carlin tried again to disseminate his analysis, Mr. McGartland decreed: "The administrator and the administration have decided to move forward on endangerment, and your comments do not help the *legal* or *policy* case for this decision. . . . I can only see one impact of your comments given where we are in the process, and that would be a very negative impact on our office." (Emphasis added.)
>
> Mr. McGartland blasted yet another email: "With the endangerment finding nearly final, you need to move on to other issues and subjects. I don't want you to spend any additional EPA time on climate change. No papers, no research etc, at least until we see what EPA is going to do with Climate." Ideology? Nope, not here. Just us science folk. Honest.
>
> The emails were unearthed by the Competitive Enterprise Institute. Republican officials are calling for an investigation; House Energy Committee ranking member Joe Barton sent a letter with pointed questions to Mrs. Jackson, which she's yet to answer. The EPA has issued defensive statements, claiming Mr. Carlin wasn't ignored. But there is no getting around that the Obama administration has flouted its own promises of transparency.

In case you missed it, CEI wrote a lot more about the Democrats' war on science here and here.

I blogged previously about how the Democrats undermine science in the university with

their affirmative action policies, and how they insist on spending money on unproven ESCR, when ASCR has all the proven cures.

Stephen C. Meyer podcasts on intelligently designed DNA

July 6, 2009 | by Wintery Knight | Link | Original Link

Stephen C. Meyer podcasts on intelligently designed DNA

The Making of an ID Theorist: Stephen C. Meyer and the Origin of Life

This episode of **ID the Future** tells the story of how philosopher of science Stephen C. Meyer first began his quest for the origin of life. How did one of the architects of the intelligent design movement move from the oilfields of Texas to the study halls of Cambridge to pursue the mystery of where biological information originated? Listen in and find out. (MP3 file)

Delving Into Science at Cambridge: Stephen C. Meyer and *Signature in the Cell*

On this episode of **ID the Future** philosopher of science Stephen C. Meyer continues the story of how he became involved in intelligent design, sharing some of what he studied while at Cambridge University. What methods do scientists use to study biological origins? Is there a distinctive method of historical scientific inquiry? Meyer set off to investigate not only the history of scientific ideas about the origin of life, but also questions about the definition of science and about how scientists study and reason about ancient events in the past. Listen in and learn, and check out Dr. Meyer's new book, *Signature in the Cell*, which tells more of the story, the culmination of over 20 years of study and research on the origins of life. (MP3 file)

DNA Evidence for Design: Stephen C. Meyer and *Signature in the Cell*

On this episode of **ID the Future** CSC Director Stephen C. Meyer explains the problem that information presents to origin of life researchers within a naturalistic paradigm. Information within the cell presents a daunting challenge to Darwin's theory — and provides significant evidence for a signature of a designing intelligence, as Meyer explains in his new book. (MP3 file)

The Design Argument Is Unrefuted: Stephen Meyer Responds to Critics With *Signature in the Cell*

On this episode of **ID the Future** philosopher of science Stephen C. Meyer responds to critics of intelligent design, such as Richard Dawkins and his book, *The God Delusion*. (MP3 file)

BONUS

Hear Stephen C. Meyer on the popular, nationally-syndicated Michael Medved show. (H/T Discovery Institute)

How do we stop the mass exodus of men from the church?

July 6, 2009 | by Wintery Knight | Link | Original Link

Pastor Kreitsauce wrote a post a while back discussing the exodus of men from the church.

Here are the numbers fro the web site Church for Men:

- American churches on average display an incredible gender gap- 69% women and 31% men. That translates to about 13 million more women attending than men.
- 1 in 4 “churched” women will attend the Sunday service without their husbands, while 80% of attendees at the midweek services are women.
- Over 70% of boys raised in church will drop out by the end of their college years.
- At Christian colleges, the ratio of female to male students is 2 to 1.

Kreitsauce writes:

> Men seem to enjoy theology, philosophy, politics, ethics, and science more than women do. They love debate, contest, competition, adventure, challenges, danger, risk, and achievement in a unique way. It isn’t that these are “men’s areas”, but there is something different in how men are wired that gives them an affinity for these things. As John Eldridge’s book *Wild at Heart* observes, our self-worth is intimately connected to these things. Men don’t feel complete unless they are accomplishing, building, and standing on something larger than themselves. As Christian comedian Jeff Allen has said, men need something worth dying for to make them truly come to life.
>
> So what’s a church to do?

Click through and read his solutions. I agree with his solution, and this is what I do in my own life!

Venezuela nationalizes Spanish-owned bank

July 7, 2009 | by Wintery Knight | Link | Original Link

More communism from Obama's communist buddy.

Excerpt:

> President Hugo Chavez's government assumed control of Venezuela's third-largest bank on Friday – making the state the largest player in the nation's banking system.
>
> The purchase of the Spanish-owned Banco de Venezuela gives Chavez's socialist government control over more than one-fifth of bank deposits as he tightens his grip over the economy.
>
> The acquisition will "strengthen the public banking system," which favors sectors including agriculture, energy, housing and tourism, Finance Minister Ali Rodriguez said in a statement.
>
> …Combined with other state banks, the government will now control about 21 percent of deposits and 16 percent of loans, a payroll of 15,000 employees and 651 bank branches.
>
> …Like the rest of the economy, Venezuela's banking sector is already highly regulated, with the government dictating interest rates and commissions.
>
> Under Chavez, Venezuela has nationalized major players in the steel, electricity and other sectors, including four major oil projects, since 2007.
>
> The Venezuelan consulting firm Ecoanalitica calculates those nationalizations have cost Chavez's government some $23 billion.

Things are so much more efficient when no one owns anything except the state bureaucrats. Look how well the Soviet Union did.

Understand Obama’s health care plan with LEGO videos

July 7, 2009 | by Wintery Knight | Link | Original Link

I spotted this amusing video over at the Heritage Foundation.

And here’s one about Obama’s crazy spending and the ballooning debt:

And one more about the jobs *lost* after passing Obama’s 800 billion dollar spending bill:

By the way, I hope you all listened to those 4 podcasts about Stephen C. Meyer and his argument from DNA. They’re good!

Understanding what cap-and-trade actually does

July 7, 2009 | by Wintery Knight | Link | Original Link

I thought I would put together a few snippets to help everyone understand what Obama's cap-and-trade energy tax actually does.

It's a massive government intervention in the free market

The Heritage Foundation explains the point of cap and trade.

> One of the most contentious provisions in the bill is the use of offsets to reduce carbon dioxide emissions, in which "a manufacturing plant in, say, Gary, Ind., that is exceeding its 'permitted' expulsion of CO2, could continue to commit this sin against humanity by paying for a Brazilian farmer to plant some trees in the rain forest.... Of course, to guard against some nefarious polluter trying to cheat Uncle Sam and the world by claiming bogus 'offsets,' here must be a monitoring mechanism. Enter the 'Offsets Integrity Advisory Board' — yet another group of scientific 'experts' that would be tasked with compiling a list of qualifying offsets around the globe."
>
> Cap and trade is a regulatory nightmare that would hand over more power and money to the government with the intention of reducing global temperatures. The problem with that, however, is the Waxman-Markey cap and trade bill will only reduce temperatures by an amount almost too small to measure. The bigger problem is that consumers' pocketbooks will be hit hard by this bill. The Heritage Foundation's Center for Data Analysis found that by 2035, gasoline prices would increase 58 percent, natural gas prices would increase 55 percent, home heating oil would increase 56 percent, and worst of all, electricity prices would jump 90 percent. After all, the goal of cap and trade is to drive up energy prices so high that people will use less. Yet in Missouri, state legislators are considering a bill that would charge consumers for saving electricity.

That's enough to scare the snark out of you, but there's much more to it than that.

The bill provides opportunities for corruption

Consider this National Review Online post, which counts 50 reasons why cap-and-trade is bad. (H/T Club for Growth)

I cannot excerpt the 50 points. I read through them and each one is more horrible than the last. Any of the 50 would be sufficient to cause an honest man to cry like a baby. (The print version of the article is easier to read – please send it to all your friends, too!)

The Democrats didn't even read the bill

And remember, none of the Democrats who voted for the energy tax actually read it.

Excerpt:

> Recall the passing of Waxman-Markey by the House, which had 300 pages added

> 18 hours before the floor vote–almost certainly going unread by most members of Congress. Furthermore, the nonplussed responses from administration backers and Democrats in Congress–when pressed to read the legislation they vote on or support–should be infuriating to anyone in favor of transparency and responsibility in government. As CEI Adjunct Fellow Fran Smith noted, some on the left went as far to claim that members of Congress uncomfortable with voting for climate change legislation in the dark were guilty of "treason against the planet."

Yes, there's that vaunted leftist morality again. Cutting missile defense is good, but not passing an energy tax is treason.

Are teacher unions interested in helping your children to succeed in life?

July 7, 2009 | by Wintery Knight | Link | Original Link

This is a great article from the Wall Street Journal. (H/T Club for Growth)

Excerpt:

> In her weekly "What Matters Most" newspaper column, Randi Weingarten recently bid the Big Apple farewell. Ms. Weingarten has been elevated to president of the national American Federation of Teachers from head of its New York City affiliate, and she had some notable parting words: "One of the most rewarding (and exhausting) things about working in public education in New York City is that it is the best laboratory in the world for trying new things."
>
> Well, it could be, if it weren't for Ms. Weingarten's union. Since taking over in 1998, she has done everything she could to block significant reforms to New York's public schools. Take her opposition to charter schools. She resisted raising the state cap on charters from 100 unless the union could organize them. (She lost and the cap now is 200.)
>
> Ms. Weingarten was also against merit pay for individual teachers. She supported a law that bars school districts from linking teacher tenure to student test scores. In return for even the mildest pension reforms, Ms. Weingarten recently won a concession that teachers no longer need to work on the two days before the start of the school year. Meanwhile, she has fought to ensure that the Absent Teacher Reserve Pool keeps allowing teachers whom no principal wants to hire to receive their full salaries. New York spends an estimated $150 million on this and on Teacher Reassignment Centers (for instructors who have been accused of misconduct) alone.
>
> Speaking of money, Ms. Weingarten has long been among the union leaders claiming that more cash will fix public education. Mayor Michael Bloomberg has paid for the modest reforms he's been able to implement by increasing spending to $22 billion from $13 billion, much of that in teacher salaries. The four-year high school graduation rate in New York City is now 56%. In union politics, results like these are how you win a promotion to national leadership.

I blogged before about the NYC teachers removed from their duties who are still being paid.

But there's more to it than that. My Christian readers should also be aware that teacher's unions, like most unions (but not all!), are also very interested in promoting left-wing, anti-family social programs. (Weingarten herself is openly gay)

- Teachers' union to consider abortion issue. (H/T Jennifer Roback Morse)

- NEA to consider full support of homosexual ‘marriage’. (H/T Jennifer Roback Morse)

If you missed my post about Obama’s appointment of a gay activist to be the director of “safe schools”, check it out here.

The take-home lesson for you is not to vote for Democrats just because they say they will spend more money on education. What Democrats really mean is that they will spend more money on teacher’s unions, so that the teachers can turn around and advocate for leftist policies, like abortion and same-sex marriage, using union dues.

85 sharia courts operating in Britain

July 7, 2009 | by Wintery Knight | Link | Original Link

This article from the UK Guardian was sent to me by my friend Andrew.

Excerpt:

> There are as many as 85 sharia courts operating in Britain, according to a new report.
>
> Academic Denis MacEoin, the report's author, said the existence of the courts practising Islamic law could lead to different legal standards being applied to Muslim and non-Muslim citizens.
>
> He said many of the courts operate out of mosques and their rulings are closed off to non-Muslims.
>
> In previous reports it was claimed there were only five sharia courts in the UK, working in London, Manchester, Bradford, Birmingham and Nuneaton.
>
> …The report states: "Among the rulings … we find some that advise illegal actions and others that transgress human rights standards as they are applied by British courts."

This is the same UK that has effectively banned the public expression of Christianity, such as asking to pray for someone. Like Evan Sayet says: the modern progressive believes that evil is good, and good is evil. Their aim is to squash everyone down to the same level so that there are no disagreements about who is right and who is wrong.

Understanding the effects of government-run health care

July 8, 2009 | by Wintery Knight | Link | Original Link

Previous health care posts

Before we see today's post, here are some of my previous posts on health care.

- Obama plans health care rationing for you, but not for him!
- Consider the rationing of health care in the UK
- In Canada, you can deliver your own babies while you wait
- Single-payer health care explained with videos
- More videos showing socialized medicine horror stories
- Keith Hennessey explains Obamacare in 15 points

Socialized medicine by the numbers

I was having a nice chat today with a friend about whether we should expect government-run health care to work as well as private health care. I asked to him to reflect on how incompetent government offices are for services like driver's licenses, vehicle titles, immigration, postal services, etc. Then I asked him how satisfied he was shopping online from Amazo.com or in person at Wal-mart. A private seller in the free market needs to meet your needs better than other competitors, so you will get good service – because you have a free choice. But what happens when you have only *one* option?

Hot Air has a post by DirectorBlue that analyzes government-run health care.

Here are just a few of his numbers related to waiting times:

> **14**: The percentage of all patients in Britain who **wait more than one (1) year** to receive treatment after a referral by a general practitioner. Half of all National Health Care patients in Britain wait between 18 and 52 weeks for treatment.
>
> **90**: Number of days, on average, each Canadian patient must wait for an MRI under the Canadian government-run health care system.
>
> **750**: The estimated number of people waiting in line (in the pouring rain) at Britain's Bury Office attempting to register for dental care.
>
> **10,000**: Number of Canadian breast cancer patients to file a class action lawsuit against Quebec's hospitals because, on average, they were forced to wait 60 days to begin post-operative radiation treatments.
>
> **443,849**: The number of British patients of the National Healthcare Service (NHS) who waited **four or more weeks for inpatient admittance into a hospital** (Excel file) in May of 2009 (more than 75% of all patients).
>
> **1,500,000**: The number of Canadians who do not have — and cannot find — a

> general practitioner/primary care physician due to shortages in medical staff: "In Norwood, Ontario, *20/20* videotaped a town clerk pulling the names of the lucky winners out of a lottery box. The losers must wait to see a doctor… Shirley Healy, like many sick Canadians, came to America for surgery. Her doctor in British Columbia told her she had only a few weeks to live because a blocked artery kept her from digesting food. Yet Canadian officials called her surgery 'elective.' …'The only thing elective about this surgery was I elected to live,' she said."

The article also discusses the costs of socialized medicine, patient outcomes, illegal immigrants, fraud, waste, etc.

Needless to say, this is a MUST-READ. Send it to all your friends!

Who caused the recession? How did the housing bubble happen?

July 8, 2009 | by Wintery Knight | Link | Original Link

Republicans on the House Oversight have released a report that explains what caused the subprime crisis.

I can't read the whole thing! But Hot Air has the key facts so you don't have to read it either!

> ** Political pressure led to the erosion of responsible lending practices:*
>
> *In the early 1990s, Fannie and Freddie began to come under considerable political pressure to lower their underwriting standards, particularly on the size of down payments and the credit quality of borrowers. (p.6)*
>
> ** Lower down payments led to housing prices that outpaced income growth: Once government-sponsored efforts to decrease down payments spread to the wider market, home prices became increasingly untethered from any kind of demand limited by borrowers' ability to pay. Instead, borrowers could just make smaller down payments and take on higher debt, allowing home prices to continue their unrestrained rise. Some statistics help illustrate how this occurred. Between 2001 and 2006, median home prices increased by an inflation-adjusted 50 percent, yet at the same time Americans' income failed to keep up. (p. 11)*
>
> ** Members of an "affordable housing" coalition shared profits with political allies to help legitimize their business practices: Fannie Mae created and used The Fannie Mae Foundation to spread millions of dollars around to politically-connected organizations like the Congressional Hispanic Caucus Institute. It also hired well-known academics to give an aura of academic rigor to policy positions favorable to Fannie Mae. One paper coauthored by now-Director of the Office of Management and Budget Peter Orszag, concluded that the chance was minimal that the GSEs were not holding sufficient capital to cover their losses in the event of a severe economic shock. The authors suggested that "the risk to the government from a potential default on GSE debt is effectively zero," and that "the expected cost to the government of providing an explicit government guarantee on $1 trillion in GSE debt is just $2 million." (p.7)*
>
> ** The Government Sponsored Enterprises led the way into the housing crisis: Fannie Mae and Freddie Mac were leaders in risky mortgage lending. According to an analysis presented to the Committee, between 2002 and 2007, Fannie and Freddie purchased $1.9 trillion of mortgages made to borrowers with credit scores below 660, one of the definitions of "subprime" used by federal banking regulators. This represents over 54% of all such mortgages purchased during those years. (p.24)*

My comprehensive post on this issue is here. In that post, I collected videos of Democrats admitting that their plan was to force banks to make loans to unqualified borrowers, as well as news articles by the New York Times and Los Angeles Times on the topic.

John McCain tells Obama that Honduras was right to kick Zelaya out

July 8, 2009 | by Wintery Knight | Link | Original Link

The Hill has a post up about McCain's response to the Honduras crisis. (H/T Gateway Pundit)

They quote McCain's Twitter feed:

> Violence and unrest in Honduras & China – we need to continue to stand up for human rights and democracy around the world!

> I regret the military takeover in Honduras, but it's clear President Zelaya was in violation of his country's constitution.

The Hill writes:

> McCain's statement runs in direct conflict with the Obama administration's position on the coup. Last week, the president said that the coup was "not legal" and that Zelaya is still the president of the Latin American nation.
>
> Members of Congress have generally been mum on the situation, but some tensions are beginning to show, especially amongst Republicans. Rep. Connie Mack (R-Fla.) said that Zelaya "trampled on the Honduran constitution" and called the Honduran president's effort to extend his term a "blatant power grab."
>
> Zelaya proposed a constitutional referendum that would allow him to seek reelection, superceding term limits layed out in the country's constitution. Members of the Honduran military arrested him and forced him into exile on June 29.
>
> Secretary of State Hillary Clinton met with the ousted president today.

Is Rick Warren an orthodox Christian?

July 8, 2009 | by Wintery Knight | Link | Original Link

In my view, Warren minimizes sin and judgment in order to appeal to "seekers". He doesn't defend traditional marriage. He seems to think that Christianity is about doing nice things for people, and making everyone feel good, instead of telling them the truth.

Well, Neil Simpson's latest round-up has an article about Warren's latest blunder.

Neil writes:

> Rick Warren doesn't understand the concept of unequally yoked. It isn't just about not marrying unbelievers, it is about not partnering with them in spiritual enterprises. We should share the Gospel with Muslims, not do "ministry" together.

The post he links to at Slice of Laodicea cites this Washington Times article:

> The Rev. Rick Warren, one of America's best-known evangelical Protestant pastors, pleaded with about 8,000 Muslim listeners on Saturday night to work together to solve the world's greatest problems by cooperating in a series of interfaith projects.
>
> "Muslims and Christians can work together for the common good without compromising my convictions or your convictions," Mr. Warren said during an evening session of the annual convention of the Islamic Society of North America (ISNA) at the Washington Convention Center.
>
> "I am not interested in interfaith dialogue but interfaith projects," said the pastor of the 24,000-member Saddleback Church in Lake Forest, Calif., who is widely known for his bestseller "The Purpose-Driven Life."…

My advice: Never trust Christians who think that Christianity is *just* about helping the poor. That is a peripheral issue, which some Christians focus on in order to avoid debates about the main issues of Christianity. The main issues are "Does God Exist?" and "Who was Jesus?". Why people follow these left-wing social justice mega-church pastors instead of solid Christian scholars is beyond me. Just another reason why Christians should be fiscal conservatives.

Michael Medved interviews Stephen C. Meyer about his new book on DNA

July 8, 2009 | by Wintery Knight | Link | Original Link

Hear Stephen C. Meyer on the popular, nationally-syndicated Michael Medved show. (H/T Discovery Institute)

This is a hugely popular radio show.

I just received my copy of the "Signature in the Cell" book from the Discovery Institute in the mail today. My former co-worker Robb got his last week. It's a ~600 page hardcover, so perhaps Robb and I should have a contest to see who can finish it first! It has huge print and lots of space, and beautiful illustrations on practically every page. I'm so excited – I can tell that I am going to learn a lot by reading this book.

Turkish TV show offers prizes for convincing atheists to convert

July 8, 2009 | by Wintery Knight | Link | Original Link

I would be very happy if everyone could comment on the following story from CNN.

Excerpt:

> A Turkish television show is offering contestants what it claims is the "biggest prize ever" — the chance for atheists to convert to one of the world's major religions.
>
> The show, called "Tovbekarlar Yarisiyor," or "Penitents Compete," features a Muslim imam, a Catholic priest, a Jewish rabbi and a Buddhist monk attempting to persuade 10 atheists of the merits of their religion, according to CNN Turk.
>
> …Ahmet Ozdemir, deputy director of Turkish channel Kanal T, which will air the show from September, said the program aimed to "turn disbelievers on to God."
>
> "People are free to believe anything they want. Our program does not have a say," he said, according to Turkish newspaper Hurriyet.

But the Muslims don't approve:

> But the show has been condemned by Turkish religious leaders. The head of the country's supreme council of religious affairs, Hamza Aktan, told CNN Turk that it was "disrespectful" to place different faiths in competition with each other and accused Kanal T of using religion to boost ratings.

Wow, the Muslim theologian doesn't like to debate! I wonder why?

My take is that this is a very positive thing, and we need a lot more of it.

Democrat Majority Leader Steny Hoyer says we may need another massive stimulus

July 9, 2009 | by Wintery Knight | Link | Original Link

Budget Deficit

The first two spending bills didn't work, so we just need to keep trying harder to spend our way out of debt!

Check out this story from Reuters. (H/T Gateway Pundit)

Excerpt:

> U.S. leaders should be open to the possibility of a second stimulus package to jolt the economy out of a recession still causing job losses, House of Representatives Majority Leader Steny Hoyer said on Tuesday.
>
> …President Barack Obama led the charge for a two-year $787 billion stimulus package that his fellow Democrats who control Congress pushed through the House and Senate in February and he has argued it would help create or save up to 4 million jobs.

Create 4 million jobs? He's *lost* 2.5 million jobs so far. Maybe he doesn't know what the word *create* means?

Michelle Malkin lists a few more of the Democrats in favor of more government spending.

Excerpt:

> As you all have heard, Laura D'Andrea Tyson, the Clinton economic adviser now on Team Obama, has floated a second stimulus plan. Democrat Sen. Sheldon Whitehouse of Rhode Island has echoed the call. Other Democrats are open to it.
>
> Only 10 percent of Porkulus One has been spent, misspent, or gone untracked, but who's counting?
>
> I've uploaded two documents for your perusal this morning: The first is a GAO report on stimulus spending by states and localities, which will be released this morning at a House oversight hearing.
>
> You can read the whole thing here.
>
> Bottom line: The funds are not being spent on what they're supposed to be spent on. States made up their own criteria for spending. School and transportation bureaucrats preserved their own jobs instead of "stimulating" others.
>
> The second document is a GOP memo dissecting the failures of Porkulus One.
>
> You can read the whole thing here.

Michelle lists a few of the key findings from the second document.

National Debt

Why didn't the massive Democrat spending spree work?

This is lesson one of Economics 101. When government spends money, the money comes out of the private sector. Government is not even close to allocating capital and producing wealth as efficiently as the free market system.

Ed Morrissey explains:

> Here's where we get into the "saved or created" dodge of the Obama administration. The Porkulus money may have "saved" jobs, but they were government jobs, not the private sector. Most government employees have union representation, primarily by the SEIU. The only jobs Porkulus may have saved were those of bureaucrats in state government, and mostly to make sure the unions stay on the side of the Democrats.
>
> None of that money went into promoting growth in the private sector, which is why unemployment skyrocketed. Capital stayed out of the market, in part because of fears of confiscatory tax increases and in part because of the amount of regulation threatened by the Obama administration, and what capital was left will get eaten up by the cost of Porkulus eventually. And the GAO says it will take months just to get effective reporting on how that money gets spent, regardless of where it goes.

Obama's support is now virtually 50-50 according to Rasmussen Reports.But he won't care, because he's the Obamessiah! As long as the left-wing fascists and terrorists love him, who cares what economically-literate peons like us think?

Democrat Waxman believes that opposing Obama's energy tax is equivalent to opposing America

July 9, 2009 | by Wintery Knight | Link | Original Link

Check out this Politico.com post. (H/T Hot Air)

Excerpt:

> Rep. Henry Waxman (D-Calif.), who has had an eventful couple of weeks to say the least, believes House Republican opposition to climate change legislation and the stimulus indicates they're cheering against the good ol' US of A.
>
> "It appears that the Republican Party leadership in the Congress has made a decision that they want to deny President Obama success, which means, in my mind, they are rooting against the country, as well," the powerful House Energy and Commerce Committee chairman told WAMU radio host Diane Rehm on Tuesday morning, promoting his new book, "The Waxman Report."

All the lies they spoke about that Christian fascist Bush was just so much projection, foreshadowing how they themselves would deal with "unpatriotic" dissent.

Al Gore and Goldman Sachs

In a related story, repeat college drop-out Al Gore (NOT A SCIENTIST) equated his war on global warming to the war against Nazism.(H/T Gateway Pundit)

Excerpt:

> Al Gore today compared the battle against climate change with the struggle against the Nazis.
>
> …Speaking in Oxford at the Smith School World Forum on Enterprise and the Environment, sponsored by The Times, Mr Gore said: "Winston Churchill aroused this nation in heroic fashion to save civilisation in World War II."

And he has good reason to do so, given that his personal fortune has skyrocketed from $2 million to over $100 million. Oh, don't let those tolerant Democrats fool you. If you oppose their greed and lust for power, then you're worse than Satan. How dare you assert your rights to liberty and prosperity against the power of their oligarchy?

And he isn't the only one who is ready to cash in. The employees of investment firm Goldman Sachs donated tons of money to Democrats, and they are positioned to strike it rich if cap-and-trade passes. Steve Milloy writes that "Goldman Sachs has spent millions of dollars lobbying for cap-and-trade legislation in anticipation of making billions of dollars at the expense taxpayers and consumers."

The war on small business

Here is a Fox News article that describes how the cap-and-trade bill championed by Democrats like Waxman and Gore destroys small businesses. (H/T Gateway Pundit)

Excerpt:

> David McArthur, vice president of the 52-year-old family operation, a Gateway City institution, is one of a growing number of business owners and taxpayers nationwide who are mobilizing against the so-called cap-and-trade bill, which would levy harsh fines on energy consumption that harms the environment.
>
> McArthur told FOXNews.com that every aspect of his business relies on the forms of energy targeted by the American Clean Energy and Security Act, and that his congressman, Carnahan, was supporting "a direct tax increase on small business" by voting for it.
>
> "We make (our product) with electricity, we bake it with gas, we refrigerate and freeze it with electricity and we distribute it with gas and oil," said McArthur, who said he worries that high prices could cost his company up to $15,000 a year in an industry with a very tight margin for profit.

This is cause-and-effect, people. There is a reason why Cuba and North Korea are poor today – they voted in radical leftists just like Obama. This is the way the world actually works.

Obama's energy tax ships jobs overseas

The Times Online reports that India and China decided against crippling their economies for the myth of global warming. (H/T Hot Air)

Excerpt:

> As world leaders sat down for a working lunch at the start of a three day meeting of the G8, it emerged that negotiations had failed to reach agreement on halving greenhouse gas emissions by 2050.
>
> Summit negotiators, who do the hard bargaining before the heads of state arrive to complete the agreements, failed to make progress on the issue in talks that continued late last night. China and India are understood to have blocked any mention of the target in the draft communiqué, insisting that the developed economies should promise to cut their own emissions sharply by 2020 before asking developing nations to commit to a long term target.
>
> The breakdown in negotiations has undermined President Obama's chances of producing a diplomatic coup when he chairs talks on climate change at a meeting of the 17-nation Major Economies Forum tomorrow.

Where do you think all our manufacturing jobs will go when it becomes expensive to manufacture goods here?

Meanwhile, WattsUpWithThat reports that Prince Edward Island in Canada is seeing the first frost *ever* in July.

How Obama rewards his most prolific fundraisers with crony appointments

July 9, 2009 | by Wintery Knight | Link | Original Link

Story from the Washington Times. (H/T Verum Serum)

Morgen at Verum Serum writes:

> These top fundraisers are known as "bundlers". Since campaign finance laws restrict any one individual from donating more than $2400 to a single candidate, these bundlers achieve prominence within a campaign by soliciting for and then – you guessed it – bundling up individual donations received via their extended network of friends, family, business contacts, etc. While exact figures are not available, the top bundlers within the Obama campaign each delivered in excess of $1 million in campaign contributions, and there were nearly 50 bundlers who were responsible for at least $500K in donations.
>
> As the Times notes, it's somewhat of a Washington tradition for an incoming President to appoint choice ambassadorships to key political donors and allies. While this may be the case, for a President who declared a "new era" of accountability, and who championed ethics reform while in the Senate, a look at the appointments made to date reveals what I think is a surprising level of cronyism on the part of this Administration. And notably, many of these appointments extend outside the relatively ceremonial realm of diplomatic posts.

What sort of positions are they talking about? Just harmless ambassadorships?

> Special Counsel to the President
> Chairman, FCC
> General Counsel, Dept. of Energy
> Deputy Asst. Attorney General
> Associate Attorney General
> Under-Secy. for International Trade
> Chairman, Corp. for Nat'l & Community Service
> Asst. Attorney General, Civil Div.
>
> By my calculation, nearly half of the top level of Obama campaign bundlers have been rewarded with some sort of role within the government.

And it gets worse:

> Robert Wolf is the Chairman/CEO of investment bank UBS and given his influence on Wall Street may in fact be the largest bundler of them all. Significantly, Wolf's firm seems to be mired in several tax-related scandals; and they were also a key counter-party recipient of funds from AIG, courtesy of the U.S. tax payer. However, apparently all this was not enough to deter the President from naming

> Wolf to his Economic Advisory Council.

Verum Serum has the full list of donors, the total funds raised by each one, and the appointments.

What do you expect from the affirmative action President, whose private-school education was paid for by his rich grandmother?

MUST-LISTEN: William Lane Craig takes on prominent atheist Daniel Dennett

July 9, 2009 | by Wintery Knight | Link | Original Link

This audio records a part of the Greer-Heard debate in 2007, between prominent atheist Daniel Dennett and lame theistic evolutionist Alister McGrath. Craig was one of the respondents, and this was the best part of the event. It is a little bit advanced, but I have found that if you listen to things like this over and over with your friends and family, and then try to explain it to non-Christians, you'll get it.

By the way, this is mostly original material from Craig, dated 2007, and he delivers the speech perfectly, so it's entertaining to listen to.

Craig presents three arguments for a Creator and Designer of the universe:

- the contingency argument
- the kalam cosmological argument
- the teleological argument

He also discusses Dennett's published responses to these arguments.

Dennett's response to Craig's paper

Here is my snarky paraphrase of Dennett's reponse: (I haven't been snarky all day!)

- Craig's three arguments are bulletproof, the premises are plausible, and grounded by the best cutting edge science we know today.
- I cannot find anything wrong with his arguments right now, but maybe later when I go home it will come to me what's wrong with them.
- But atheism is true even if all the evidence is against it today. I know it's true by my blind faith.
- The world is so mysterious, and all the science of today will be overturned tomorrow so that atheism will be rational again. I have blind faith that this new evidence will be discovered any minute.
- Just because the cause of the beginning of time is eternal and the cause of the beginning of space is non-physical, the cause doesn't have to be God.
- "Maybe the cause of the universe is the idea of an apple, or the square root of 7". (HE LITERALLY SAID THAT!)
- The principle of triangulation might have brought the entire physical universe into being out of nothing.
- I don't understand anything about non-physical causation, even though I cannot even speak meaningful sentences unless I have a non-physical mind that is causing my body to emit the meaningful sentences in a non-determined manner.
- Alexander Vilenkin is much smarter than Craig and if he were here he would beat him up good with phantom arguments.

- Alan Guth is much smarter than Craig and if he were here he would beat him up good with phantom arguments.
- This science stuff is so complicated to me – so Craig can't be right about it even though he's published about it and debated it all with the best atheists on the planet.
- If God is outside of time, then this is just deism, not theism. (This part is correct, but Craig believes that God enters into time at the moment of creation – so that it is not a deistic God)
- If deism is true, then I can still be an atheist, because a Creator and Designer of the universe is compatible with atheism.
- I'm pretty sure that Craig doesn't have any good arguments that can argue for Christianity – certainly not an historical argument for the resurrection of Jesus based on minimal facts, that he's defended against the most prominent historians on the planet in public debates and in prestigous books and research journals.

I was in the second row at the Baylor Conference on intelligent design when Guth debated Craig on the origin of the universe. Guth admitted afterwards that the universe did require a cause.

I do not recommend purchasing the whole 2007 debate, because McGrath is a squish. You're better off with the 2005 and 2008 sets. The 2006 one is OK, but not great. I don't have the 2009 one yet, but it looks good.

What should wives do when they are not in the mood for sex?

July 9, 2009 | by Wintery Knight | Link | Original Link

Dennis Prager features a lot of discussions about male-female relationships on his show, particularly during the male-female hour. I think this is one of the parts of his show that I really like best, because he knows what he is talking about and has on great female guests like Alison Armstrong.

He did a two part series a while back on 1) male sexuality and 2) what women should do about it within a marriage.

Part 1 is here.

Excerpt:

> It is an axiom of contemporary marital life that if a wife is not in the mood, she need not have sex with her husband. Here are some arguments why a woman who loves her husband might want to rethink this axiom.
>
> First, women need to recognize how a man understands a wife's refusal to have sex with him: A husband knows that his wife loves him first and foremost by her willingness to give her body to him. This is rarely the case for women. Few women know their husband loves them because he gives her his body (the idea sounds almost funny). This is, therefore, usually a revelation to a woman. Many women think men's natures are similar to theirs, and this is so different from a woman's nature, that few women know this about men unless told about it.
>
> This is a major reason many husbands clam up. A man whose wife frequently denies him sex will first be hurt, then sad, then angry, then quiet. And most men will never tell their wives why they have become quiet and distant. They are afraid to tell their wives. They are often made to feel ashamed of their male sexual nature, and they are humiliated (indeed emasculated) by feeling that they are reduced to having to beg for sex.
>
> When first told this about men, women generally react in one or more of five ways…

He then explains the 5 ways that women respond to this. I think this whole problem of women not understanding men, of treating men as objects, and of demeaning male feelings and values, is very serious. In my opinion, there is a whole lot of work that needs to be done by women in order to fix this problem.

Part 2 is here.

Excerpt:

> Here are eight reasons for a woman not to allow not being in the mood for sex to determine whether she denies her husband sex.

He then explains the eight reasons and then makes a general point about women that I think needs to be emphasized over and over and over. (This is one of the things that makes me not want to marry)

> That solution is for a wife who loves her husband — if she doesn't love him, mood is not the problem — to be guided by her mind, not her mood, in deciding whether to deny her husband sex.

I think he overdoes it in describing how sex-crazed men really are, but he is probably talking about men in general as opposed to Christian men. Christian men have other things that they are trying to do with women, such as influence their worldviews and make them stronger in apologetics.

We have a few brave female commenters on the Wintery Knight blog, and they are all wonderful, so I am wondering whether they are brave enough to comment on this topic. Or maybe they can send me their comments by e-mail and give me permission to post them anonymously instead.

Obama's federal aid overwhelmingly given to Democrat-supporting counties

July 10, 2009 | by Wintery Knight | Link | Original Link

USA Today reports. (H/T Gateway Pundit)

Excerpt:

> Billions of dollars in federal aid delivered directly to the local level to help revive the economy have gone overwhelmingly to places that supported President Obama in last year's presidential election.
>
> That aid — about $17 billion — is the first piece of the administration's massive stimulus package that can be tracked locally. Much of it has followed a well-worn path to places that regularly collect a bigger share of federal grants and contracts, guided by formulas that have been in place for decades and leave little room for manipulation.
>
> "There's no politics at work when it comes to spending for the recovery," White House spokesman Robert Gibbs says.
>
> Counties that supported Obama last year have reaped twice as much money per person from the administration's $787 billion economic stimulus package as those that voted for his Republican rival, Sen. John McCain, a USA TODAY analysis of government disclosure and accounting records shows. That money includes aid to repair military bases, improve public housing and help students pay for college.
>
> The reports show the **872 counties that supported Obama received about $69 per person**, on average. The **2,234 that supported McCain received about $34.**

This reminds of Obama's doings in Chicago.

$18 Million Dollar Contract goes to Democrat-supporting IT firm

David Freddoso broke a story today about an $18 million dollar IT contract awarded to a firm that donates exclusively to Democrat House Majority Leader Steny Hoyer. (H/T Hot Air)

Here is an excerpt from the Washington Examiner story:

> ABC reports this morning that the Maryland firm Smartronix has won what seems like an enormous $18 million contract to re-design the Recovery.gov website. Approximately $9.5 million would be spent by January in order to make "Recovery 2.0" out of the site that is supposed to track the spending of federal stimulus funds in detail.
>
> Smartronix, a medium-sized Maryland-based firm (over 500 employees) founded in 1995, boasts a large number of government clients, mostly military. The

> company appears to have just one important political connection: according to FEC records, Smartronix president, Mohammed Javaid, vice president Alan Parris, and partner John Parris have together given $19,000 to House Majority Leader Steny Hoyer (D) since 1999. There is no record of a Smartronix employee contributing to any other federal politician.
>
> **UPDATE: Smartronix got $260 million in other federal contracts**
>
> Smartronix has received more than $260 million in federal contracts since the year 2000, with the top awarding agencies being the U.S. Navy, Federal Technology Service, U.S. Air Force, U.S. Minerals Management Service, and the Office of Policy, Management and Budget (not clear which department or agency issued this contract), according to USASpending.gov.
>
> Nearly $180 million of the contracts awarded to Smartronix during the period 2000-2009 were awarded on less-than-competitive basis, including $21 million for non-competitive awards. Another $33 million was awarded in competitive processes in which Smartronix was the sole bidder.

And one of my co-workers noticed that this even got posted on SlashDot with 341 comments so far!

The Republican response

House Republicans released this new ad about the staggering 9.5% unemployment rate.

H/T Gateway Pundit.

NEA General Counsel explains the real goals of teacher unions: MONEY and POWER

July 10, 2009 | by Wintery Knight | Link | Original Link

Story here at the Heritage Foundation.

NEA General Counsel Bob Chanin tells the world the top priority of the largest teacher union in the USA.

Are they concerned with providing a quality education for our children?

Here is the video:

And the transcript:

> **Despite what some among us would like to believe it is not because of our creative ideas; it is not because of the merit of our positions; it is not because we care about children; and it is not because we have a vision of a great public school for every child.**
>
> **The NEA and its affiliates are effective advocates because we have power. And we have power because there are more than 3.2 million people who are willing to pay us hundreds of million of dollars in dues each year because they believe that we are the unions that can most effectively represent them; the union that can protect their rights and advance their interests as education employees.**
>
> This is not to say that the concern of NEA and its affiliates with closing achievement gaps, reducing drop rate rates, improving teacher quality, and the like are unimportant or inappropriate. To the contrary these are the goals that guide the work we do. But they need not and must not be achieved at the expense of due process, employee rights, or collective bargaining.
>
> That is simply too high a price to pay.

The Heritage Foundation notes that union dues are *not voluntarily* in many parts of the USA.

> First of all, there is little that is voluntary about the millions in dues paid to the NEA every year. The NEA is strongest in states without right to work laws, and if you want to teach in a public school that is under an NEA contract in those jurisdictions (like California and New York), you must pay dues to the NEA. It is the law. There is nothing voluntary about it. Second, that is tax payer money he's talking about, which is exactly what is so corrupting about public sector unions: the government is lobbying itself for its own expansion.

And what happens when you value the rights of incompetent teachers ahead of the rights of parents and children?

> And what are “employee rights” and “due process,” you might ask? Well, those are what require New York City to pay 700 union teachers $65 million a year to do nothing. Same thing in Los Angeles, where 165 union teachers collect a total of $10 million a year from tax payers for doing nothing.

It is very important to note that he gets a standing ovation from the teachers present at the convention. These are the people who teach your children. Or rather, these are the people who want to *indoctrinate* your children to accept *their values,* and to be *paid by you* for doing it.

ECM also sent me this article from Betsy’s Page via Granite Grok.

Excerpt:

> Sometime last year, while negotiating a teacher contract for the KIPP Ujima Village charter middle school in Baltimore, founder Jason Botel pointed out that his students, mostly from low-income families, had earned the city’s highest public school test scores three years in a row. If the union insisted on increasing overtime pay, he said, the school could not afford the extra instruction time that was a key to its success, **and student achievement would suffer.**
>
> **Botel says a union official replied: “That’s not our problem.”**
>
> Such stories heat the blood of union critics. It is, they contend, a sign of how unions dumb down public education by focusing on salaries, not learning.

They don’t care about your children’s education or career.

Economist Thomas Sowell explains the housing boom and bust

July 10, 2009 | by Wintery Knight | Link | Original Link

My favorite living economist!

The links below will take you to streaming videos.

- Part 1 (7 minutes) The economics of the housing boom.
- Part 2 (6 minutes) The politics of the housing boom.
- Part 3 (6 minutes) The origins and unique features of the housing bust.
- Part 4 (6 minutes) The pitfalls of New Deal thinking.
- Part 5 (9 minutes) The economic proposals of the Obama administration.

Thanks to ECM for notifying me about these videos!

About Thomas Sowell

Thomas Sowell has studied and taught economics, intellectual history, and social policy at institutions that include Cornell, UCLA, and Amherst. Now a senior fellow at the Hoover Institution, Sowell has published more than a dozen books. His latest book is The Housing Boom and Bust.

The worst pro-abortion argument ever!

July 11, 2009 | by Wintery Knight | Link | Original Link

From Neil Simpson.

The challenge:

> Some pro-legalized abortions take the view that technically speaking the unborn are parasites and that they are fair game for destruction because they are dependent on the mother and consume some of her resources. As weird as that argument is I actually like when they present it. I think that middle grounders will immediately realize what a horribly wrong attempt it is to de-humanize the unborn.

The response:

> By that line of reasoning, a woman would be totally justified in killing her baby a day before its due date.
>
> That absurdity aside, their analysis fails (at least legally, if not morally). **While you are never responsible for keeping someone else alive, you are responsible for doing so if you created the situation in which they are dependent upon you.** The classic example is a person who is drowning in the ocean. You, as a boater with a life preserver, are under no obligation to help them out of the water. If, however, you were the one who chucked her overboard, then watched her drown, you can bet that a jury would convict your immoral butt for murder, not for ruining her clothes by getting her wet.
>
> Likewise, you are under no obligation to give a dying person a kidney to save his life, but, if you ripped his kidneys out of his body, you would be charged with murder if he died from those injuries. If the only way to avoid his death is to give him your kidneys, you can bet that your options are to fork over an organ or be charged with murder.

I find it scary that people think of little babies as parasites in the first place!

Is illegal immigration helping to drive California bankrupt?

July 11, 2009 | by Wintery Knight | Link | Original Link

Story from the extremely left-wing LA Times. (H/T commenter ECM)

Excerpt:

> The largest costs to California's budget from its illegal residents are in three areas:
>
> * Education: The state has no official count of how many students are in the country illegally because school districts do not ask. But the state legislative analyst estimated, based on data from the Pew Hispanic Center, that the state's 6.3 million public school students include about 300,000 illegal residents. At an annual cost of about $7,626 each, the total comes to nearly $2.3 billion.
>
> * Prisons: In fiscal year 2009-10, California expects to spend about $834 million to incarcerate 19,000 illegal immigrants in the state's prisons. In Los Angeles County, illegal immigrants add between $370 million and $550 million annually to criminal justice costs, including prosecution, defense, probation and jails, according to Supervisor Mike Antonovich.
>
> * Healthcare: The expected state tab for healthcare in fiscal 2009-10 is $703 million for as many as 780,000 illegal immigrants. Of that, $486 million goes to emergency services. But low-income illegal residents are also eligible for some nonemergency health services, including prenatal and postpartum care, abortions, breast and cervical cancer treatment and certain types of long-term care, such as stays in nursing homes. Most of the nonemergency care for illegal immigrants was authorized by the Legislature in the 1980s.

The story was linked by Fausta's blog and Fausta noted this:

> In addition, the article states that 48,000 children in families headed by illegal immigrants receive a monthly average of $472.

Compassion sounds so wonderful until you have to pay for it during a recession. I am in favor of increased legal immigration and work permits. Anyone who can find a job, learn English and American civics, obey the law, and pay for their own education and health care for 5 years should get a green card. But there should be no pathway to a green card *ever* for anyone who entered the country illegally at any time.

9th Circuit CA says Christian pharmacists must dispense abortion-causing pill

July 11, 2009 | by Wintery Knight | Link | Original Link

Earlier today, I posted about how to respond to the pro-abortion argument that states that abortion is OK because babies are parasites and women should not be obligated to carry them for 9 months.

Pharmacies forced to dispense the morning-after pill

I noticed this (left-wing) LA Times article on Hot Air.

Excerpt:

> Pharmacists are obliged to dispense the Plan B pill, even if they are personally opposed to the "morning after" contraceptive on religious grounds, a federal appeals court ruled Wednesday.
>
> In a case that could affect policy across the western U.S., a supermarket pharmacy owner in Olympia, Wash., failed in a bid to block 2007 regulations that required all Washington pharmacies to stock and dispense the pills.
>
> Family-owned Ralph's Thriftway and two pharmacists employed elsewhere sued Washington state officials over the requirement. The plaintiffs asserted that their Christian beliefs prevented them from dispensing the pills, which can prevent implantation of a recently fertilized egg. They said that the new regulations would force them to choose between keeping their jobs and heeding their religious objections to a medication they regard as a form of abortion.

Notice the important distinction made by Ed Morrissey here:

> There have been two different issues in the legal fight over Plan B. In one group, pharmacists not working for themselves — for instance, at chain pharmacies — objected to dispensing the pill and wanted job protection despite their refusal. Those cases hardly stand up to scrutiny. The owner of the pharmacy has the right to decide on his own inventory and what to sell, and the employees of that pharmacy either should follow that policy or find a job somewhere else if it offends them. It falls into the same category as a cashier who refuses to handle meat at the checkout counter because he's a vegetarian.
>
> **However, this is something else. The owners of the pharmacy do not want to stock the pills for their own reasons. Even apart from religious grounds, that still seems to be their decision in the marketplace. If they don't want to sell aspirin, or Ginsu knives, or inflatable life vests for swimming pools, that should be their decision, too. If their customers object to their policies, they will find other pharmacies to patronize.** The government has a public interest in telling retailers what they *cannot* sell for

> safety reasons (like dynamite, as an example), but should not force business owners to sell something they do not want to sell.

Let's have the facts: The "morning after" pill kills an unborn human person.

(UPDATE: that link is for RU-486! My mistake, but Plan B can also cause an abortion in some cases by preventing implantation, see the comments below)

And this is another reminder why it was crazy for "Christians" to vote for Obama to steal the money from their rich neighbors. When you vote for left-wing socialists because you covet other people's money, do not be surprised when the socialist comes after your Christian beliefs soon after. There are a lot of people in church on Sunday morning who need to be reading about economics and capitalism on Sunday night.

How do Democrat policies stimulate the economy?

July 12, 2009 | by Wintery Knight | Link | Original Link

Consider this Washington Times article to see how it works. (H/T Gateway Pundit)

Excerpt:

> The Obama administration revealed last week that **as much as $16.1 million from the stimulus program is going to save the San Francisco Bay Area habitat of, among other things, the endangered salt marsh harvest mouse.**
>
> That has revived Republican criticism that the pet project was an "invisible earmark" in the massive spending bill for Mrs. Pelosi, whose San Francisco district abuts the Bay, and epitomizes what Republicans say is the failure of stimulus spending so far to help an economy still shedding jobs.
>
> "Lo and behold, the government has announced that **the mouse is getting its money after all**," House Minority Leader John A. Boehner, Ohio Republican, said, standing beside a poster of the furry varmint. "Speaker Pelosi must be so proud."
>
> Mrs. Pelosi's office was quick to dismiss the criticism.

My preferred stimulus was to spend under $400 billion and to temporarily suspend the employer portion of payroll taxes, so that American employees would go on sale. When people have jobs, then they are comfortable spending money. But Obama and Pelosi preferred to spend the money on mice. American workers or mice? Which one stimulates the economy?

Earlier this week I wrote about how well the first two stimulus bills worked, and how the Democrats would like to pass a third stimulus bill.

Raising taxes

Democrats also think that raising taxes on businesses and individuals will stimulate the economy. See, when the unemployment rate goes to 9.5%, and everyone has to pay more for electricity and gas, then Democrats believe that people will spend *more*.

Consider this article from Politico which lists some of the ideas they are considering. (H/T Michelle Malkin)

Excerpt:

> — Broaden the 1.45-percent Medicare tax on earned income to "passive income," which could include money from capital gains, rental properties and businesses that do not require direct participation. This could raise $100 billion.
>
> — Levy a five-percent surtax on individuals who earn more than $500,000 and couples that make $1 million.
>
> — Tax health benefits at a higher level than had been considered. Two scenarios

> are in play. Taxing plans worth more than $20,300 for a family and $8,300 for an individual could raise $240 billion. Increasing the cut-off to plans worth more than $25,000 would bring $90 billion.
>
> — Capping the tax break on itemized deductions at 28 percent, as President Barack Obama had proposed, or freezing the top deduction rate at 35 percent when the Bush tax cuts expire in 2010. The first scenario would raise $168 billion, while the second would collect $90 billion.
>
> — Issue tax credit bonds to pay for the proposed Medicaid expansion, raising $75 billion.
>
> — Charge fees to pharmaceutical manufacturers, bringing in as much as $20 billion, and insurance providers, raising $75 billion.
>
> – Raise taxes on sodas and sugary drinks. A 3-cent hike could pick up $30 billion, and a 10-cent hike could make $100 billion. This one already appears out of favor: Many senators have specifically ruled out the sugar tax, and a Senate Democratic source said it was the one option that was clearly not gaining traction with committee members.

Try to think about what effect this will have on the person who rents you your apartment, who supplies your employer with capital, or who pays your salary. Try to think about whether you will pay more or less for the goods and services you need when the people who provide them are attacked by the government. Try to think about what effect increased borrowing will have on the prosperity of your children.

In Iran, two jailed Christian women face execution

July 12, 2009 | by Wintery Knight | Link | Original Link

Marzieh Amirizadeh, 30, and Maryam Rustampoor, 27 are in an Iranian prison for converting to Christianity

BosNewsLife reports. (H/T Gateway Pundit)

Excerpt:

> Two detained Christian women are "in danger of being forgotten" amid concerns they may face execution, Iranian Christians said Tuesday, July 7.
>
> Marzieh Amirizadeh, 30, and Maryam Rustampoor, 27, have been held for over four months in Tehran's notorious Evin prison apparently for converting to Christianity from Islam.
>
> Iranian Christians and rights investigators said the two young women, who were arrested March 5, suffered sleep deprivation as part of police interrogations and were held in solitary confinement for three weeks in May and early June.
>
> …There was still no clarity regarding the case of the two Christian women, Tuesday, July 7, with one judge reportedly telling them they were both to be executed as 'apostates'. "Maryam and Marzieh have responded with courage, however, telling the judge to 'expedite his sentence'," said Pray for Iran, an Internet initiative of Iranian churches.

I find this story to be the most depressing thing in the world. I look at the pictures of the two women and I just want to cry. Here I am in the USA, surrounded by postmodern-relativist "Christian" feminists who vote for abortion, big government and higher taxes. Meanwhile, the real Christian women that I should be protecting and providing for are on the other side of the world in a filthy jail cell.

Female Iranian pro-democracy protester was a Christian

Neda Soltani was a Christian

One other thing. That woman who was murdered by the Iranian dictatorship while peacefully protesting the rigged Iranian election was also a Christian. You can read more about her here on Robert Spenser's Jihad Watch. (H/T Nice Deb, Atlas Shrugs)

He writes:

> This is the poor young woman who was shot dead by Iranian security forces, and whose bleeding face became an image of the brutality and humanity of the mullahs. Now it turns out the Neda Soltani was a Christian — a telling indication that the analysts who dismissed the protesters as simply wanting more Sharia, or better Sharia, or Sharia with a different face, were wrong: it just wasn't that simple.

Christians don't want *any* Sharia. We want the freedom to convert and to live publicly and authentically as Christians.

Video of her assassination: (WARNING: GRAPHIC!)

Where are all the feminists? Oh yes – they are running the Human Rights Commissions that suppress the free speech of Christians whenever Muslim agitators complain about being offended. And Obama didn't do anything to help the voters in Iran or Honduras, either.

CRISIS! Science czar advocated forced abortions, mass sterilizations and totalitarianism

July 12, 2009 | by Wintery Knight | Link | Original Link

Report here by ZombieTime, featuring quotations, page scans and photographs of the actual pages from the book. (H/T Hot Air, Michelle Malkin)

The report linked above is a MUST-READ. It is important that we understand the thinking of people on the secular left. We need to understand why they oppose traditional morality, religion and capitalism. We need to look at the writings of the most committed secular leftists, environmentalists, feminists and environmentalists and ask ourselves whether we should be voting for these people.

Here is the book cover:

The book authored by John Holdren, Obama's science czar

Here are the main points in the parts cited at ZombieTime's report:

> - Women could be forced to abort their pregnancies, whether they wanted to or not;
> - The population at large could be sterilized by infertility drugs intentionally put into the nation's drinking water or in food;
> - Single mothers and teen mothers should have their babies seized from them against their will and given away to other couples to raise;
> - People who "contribute to social deterioration" (i.e. undesirables) "can be required by law to exercise reproductive responsibility" — in other words, be compelled to have abortions or be sterilized.
> - A transnational "Planetary Regime" should assume control of the global economy and also dictate the most intimate details of Americans' lives — using an armed international police force.

When you're done reading the report, come back here I will explain how people born and raised in this country of liberty can even think things like this, much less advocate for

them in public.

Michelle Malkin's post had this video that explains where Holdren's views came from:

And left-wing Supreme Court Justice Ruth Bader-Ginsburg has similar views.

She says this in a New York Times interview:

> Frankly I had thought that at the time Roe was decided, there was concern about population growth and particularly growth in populations that we don't want to have too many of.

This is the mindset of the secular left. The secular left doesn't want to have too many babies of a certain color or gender, so they kill them. Because there is no purpose to life except to be happy, and the strong need to be happy even at the expense of the weak.

The denial of God matters

If there is no God, then survival of the fittest is true. Those who are deemed unfit by the secular left elites may be culled by abortion or eugenics so that they do not use too many of the world's resources. This way, the happiness of the strong can be maximized. And that is the purpose of life on atheism – to maximize your happy feelings at the expense of others weaker than you.

The nihilism of the secular left makes them try to prevent future crises by seizing control. There are no human rights in an accidental, materialist universe, so there are no objective restraints on their exercise of power. In contrast, Christians believe that God is in control of history, and that other people have human rights and were made to freely respond to God, if they want to.

The job of Christians is to make sure that everyone has a chance to respond, and that means other people need to have liberty, prosperity and security to give them time to respond. People have value because they can respond to God. And even those who can't or won't respond have a human rights. The needs of others give Christians the opportunity to exercise love instead of selfishness. We were made to be good.

In Christianity, Christians are admonished not to compare themselves to others, and especially not to think that they are better than others. Christians are only allowed to voice their disagreement, set an example and try to persuade others. It is actually the worse sin (pride) to compare yourself to others and look down at them. In Christianity, everyone is equally loved by God, and having different views doesn't change their value.

Secular leftists are different. When they turn away from God (and ultimate purpose and meaning), they feel a tremendous pressure to do something important in the world in order to maintain the illusion of having meaning and purpose. As they carry out their plans, the pride of comparing themselves to others grows, until they start to think they should really be controlling others, and even killing those who are "unfit".

There is all the difference in the world between a Christian and a secular leftist.

Further study

I wrote an entire series here about how the worldview of the left, which begins with the

denial of God, does not provide an adequate grounding for human rights, human dignity, moral values, free will, ultimate significance, and moral accountability.

Frank the Firefighter gets “Joe the Plumber” treatment from Democrats

July 12, 2009 | by Wintery Knight | Link | Original Link

If you disagree with Dear Leader, the power of the state will be used against you, comrade!

Here is the article from McClatchy. (H/T Verum Serum, John Lott)

Excerpt:

> Supporters of Supreme Court nominee Sonia Sotomayor are quietly targeting the Connecticut firefighter who’s at the center of Sotomayor’s most controversial ruling.
>
> On the eve of Sotomayor’s Senate confirmation hearing, her advocates have been urging journalists to scrutinize what one called the “troubled and litigious work history” of firefighter Frank Ricci.
>
> This is opposition research: a constant shadow on Capitol Hill.
>
> “The whole business of getting Supreme Court nominees through the process has become bloodsport,” said Gary Rose, a government and politics professor at Sacred Heart University in Fairfield, Conn.
>
> On Friday, citing in an e-mail “Frank Ricci’s troubled and litigious work history,” the liberal advocacy group People for the American Way drew reporters’ attention to Ricci’s past. Other advocates for Sotomayor have discreetly urged journalists to pursue similar story lines.
>
> Specifically, the advocates have zeroed in on an earlier 1995 lawsuit Ricci filed claiming the city of New Haven discriminated against him because he’s dyslexic. The advocates cite other Hartford Courant stories from the same era recounting how Ricci was fired by a fire department in Middletown, Conn., allegedly, Ricci said at the time, because of safety concerns he raised.
>
> The Middletown-area fire department was subsequently fined for safety violations, but the Connecticut Department of Labor dismissed Ricci’s retaliation complaint.
>
> No People for the American Way officials could be reached Friday to speak on the record about the press campaign.

Laws and morals should not constrain mighty elites like Obama! He knows he is right, and all his enemies are just stupid and evil racist, sexist homophobes! Why should his power be constrained by laws, human rights and the arbitrary moral customs of this time and place?

MUST-SEE: Michael Coren blasts moral equivalence in a debate against leftists

July 12, 2009 | by Wintery Knight | Link | Original Link

MUST-SEE Video from the Michael Coren TV show. (H/T Blazing Cat Fur, Vlad Tepes)

Topic: Is there such a thing as Islamic fundamentalism? Is it a concern?

Michael Coren's opponents say there is no threat of Islamic violence:

- Marilyn Churley, NDP representative (the secularist socialist party of Canada)
- Krisna Saravanmutta, President of the York Federation of Students (where Jewish students are persecuted and pro-life groups are banned)

Well, what about this violence?

This CNN report documents Muslim terrorists bombing churches in Iraq. (H/T Vlad Tepes)

Excerpt:

> At least four people were killed and 32 wounded as six Baghdad-area churches were bombed within 24 hours, officials told CNN.
>
> The first bombing took place Saturday night at St. Joseph's church in western Baghdad, according to an Interior Ministry official. Two bombs placed inside the church exploded at about 10 p.m. No one was in the church at the time of the attack.
>
> Sunday afternoon, three bombs exploded outside churches, wounding eight civilians, the official said. The bombs detonated within a 15-minute span, between 4:30 and 4:45 p.m. Two of the churches are in central Baghdad's al-Karrada district, and the third is in al-Ghadeer in eastern Baghdad.
>
> Sunday evening, a car bomb exploded outside a church on Palestine Street in eastern Baghdad just after 7 p.m., the official said. Four people died, and 21 were wounded.

If the secular left and the radical Islamists want to talk about "fundamentalism", then might I suggest that they begin with the events of the day, rather than by desperately grasping at examples of "Christian fundamentalism" that, on closer inspection, have nothing to do with Christianity. Christians are commanded *love their enemies* and *do not murder them.* A fundamentalist Christian obeys those commandments.

UPDATE: Jihad Watch reports that a Christian leader has been assassinated in Iraq, in front of his own daughter.

Does legalized abortion reduce crime rates?

July 13, 2009 | by Wintery Knight | Link | Original Link

One of the reasons given by pro-choice people for legalized abortion is that it reduces crime rates. But does it really reduce crime rates?

Let's take a look at a two-part series by economist John Lott, writing for Fox News.

Here is the first article.

Excerpt:

> Academic studies have found that legalized abortion, by encouraging premarital sex, increased the number of unplanned births, even outweighing the reduction in unplanned births due to abortion.
>
> In the United States from the early 1970s, when abortion was liberalized, through the late 1980s, there was a tremendous increase in the rate of out-of-wedlock births, rising from an average of 5 percent of all births from 1965 to 1969 to more than 16 percent two decades later (1985 to 1989).

Here is the second article.

Excerpt:

> What happened to all these children raised by single women? No matter how much they want their children, single parents tend to devote less attention to them than married couples do. Single parents are less likely than married parents to read to their children or take them on excursions, and more likely to feel angry at their children or to feel that they are burdensome. Children raised out of wedlock have more social and developmental problems than children of married couples by almost any measure — from grades to school expulsion to disease. Unsurprisingly, children from unmarried families are also more likely to become criminals.

This material is exposited more fully in Lott's book "Freedomnomics", which is one of my favorite books. I bought it for 3 of my friends as part of their Christmas present bundle, including Andrew and Jen, the smartest married couple in the world!

About the author

John R. Lott, Jr. is a Senior Research Scholar at the University of Maryland. Lott has held positions at the University of Chicago, Yale University, Stanford, UCLA, Wharton, and Rice and was the chief economist at the United States Sentencing Commission during 1988 and 1989. Lott has published over 100 articles in academic journals. He is the author of six books including: "More Guns, Less Crime: Understanding Crime and Gun Control Laws", "The Bias Against Guns", and most recently "Freedomnomics." Opinion pieces by Lott have appeared in such places as The Wall Street Journal, The New York Times, The Los Angeles Times, USA Today, and The Chicago Tribune. He has appeared on such

television programs as the ABC and NBC National Evening News broadcasts, The NewsHour with Jim Lehrer, and the Today Show. He received his Ph.D. in economics from UCLA in 1984.

Podcasts featuring Dr. Jennifer Roback Morse

July 13, 2009 | by Wintery Knight | Link | Original Link

Dr. J integrates fiscal conservatism with social conservatism

I have become increasingly impressed with Dr. Jennifer Roback Morse, so imagine my joy when I saw that she is being regularly featured on the Lutheran radio show "Issues, Etc", with Todd Wilken. Check out these short podcasts on your lunch break, I listened to them TWICE.

Is Marriage Worth It? (MP3 file, 10 minutes)

This is a very good primer on marriage, and whether narcissistic men and women have what it takes to be married. Dr. J also explains what the purpose of marriage is.

Are Fathers Necessary? (MP3 file, 21 minutes)

One of the best things about Dr. J is that she understands men and values men. She talks about same-sex marriage in this podcast, as well.

The Future of Marriage (Mp3 file, 10 minutes)

She explains how the secular left would like to be the ones raising your children, so they would love to break up the family unit. You can really see her libertarian economics streak coming out in this one.

I once e-mailed her to get her thoughts on no-fault divorce, and she *mailed me a hardcover book* featuring a book chapter where she argued against no-fault divorce. It was a great chapter because she understands men and defends us capably. She's brilliant and she's a stay-at-home mom! I just ordered her "Smart Sex" book last week. When you e-mail her, she takes time to talk with you back-and-forth.

My previous post on Dr. J featured a lecture on love and economic policy and a great paper on feminism that she presented to university students.

By the way, there was a pretty good fight on the blog about marriage and sex between me and theobromophile, a pro-life feminist. Leave a comment! The wonderful Andrew and

Jen, as well as Madeleine from MandM in New Zealand all left comments.

About the speaker

Dr. Jennifer Roback Morse, Senior Fellow in Economics at the Acton Institute and regular contributor to *National Review Online* and *The National Catholic Register*, received her Ph.D. in economics from the University of Rochester. Until recently, she was a Research Fellow at the Hoover Institution. She has been on the faculty of Yale University and George Mason University, and is the author of *Love and Economics: Why the Laissez-Faire Family doesn't work*.

Audio debate: Muslim and Christian converts debate their former religions

July 13, 2009 | by Wintery Knight | Link | Original Link

This is one heck of a good debate. I really liked the Christian guy, who is a former Muslim from Pakistan. He speaks as though he had a lot of experience debating this topic, and he is a medical doctor, too. I like it when people have the calm, experienced tone that comes from having had lots of debates and being *very* confident about what you believe. If only we Christians all sounded like Nabeel.

Description of the debate:

> Unbelievable? 11 Jul 2009 – Islamic & Christian converts debate – 11 July 2009
>
> Nabeel Qureshi converted to Christianity from Islam after being convinced that the weight of evidence was in favour of Christian faith.
> Yahya Seymour's story is the opposite – he became a Muslim after having a Christian upbringing.
>
> They discuss the issues in advance of debates coming up in London.
>
> For more information on the debates from Sun 12 Jul 09 to Sat 18 Jul 09.
> See http://www.thedebateinitiative.com or http://www.answeringmuslims.com

The MP3 file is here.

MUST-SEE: Steven Crowder's undercover expose of single-payer health care in Canada!

July 14, 2009 | by Wintery Knight | Link | Original Link

UPDATE: Welcome Canadian visitors from Blazing Cat Fur! Thanks for the link! I am going to tell you all straight – I have seen Canadian Football and it is twice as exciting as American Football. Please allow us to have CFL teams (again)!

Hilarious, and totally un-scripted, totally undercover!

How long must you wait for FREE HEALTH CARE in Canada?

You can leave a comment at his blog here. (H/T IMAO.us)

Hot Air summarizes the lessons of the video:

> The big lesson from Steven Crowder's undercover look at the single-payer health-care system in Canada? "Don't get sick on Sunday." Actually, we can probably narrow that to, "Don't get sick," because Steven demonstrates that the only thing reliably covered in CanadaCare is the bill.

What would Obamacare do to us?

Check out this assessment by Chapman university law professor Hugh Hewitt. (H/T The Heritage Foundation)

> Some of my law firm's clients and some executives in my broadcast audience are quietly preparing for the necessary analysis that will follow the passage of Obamacare by asking their personnel departments the obvious question: Will it make economic sense to discontinue health care coverage for my employees and instead push them into the government plan?
>
> These employers –manufacturers, builders, entrepeneuers of all sorts– cannot yet get an answer to this question because they don't have any specifics about costs from which they can make an informed decision.
>
> But they all know they will have to "do the math" if the "government option/public plan" makes it into law. They cannot not do so for they owe shareholders and investors an objective assessment of what will improve their bottom lines.
>
> If the "government option/public plan" costs $300 per employee per month and private sector insurance costs $350 per employee per month, the choice to push their workforce into the waiting arms of President Obama's new bureaucracy will make itself.

Under Obamacare, *your employer* will decide whether you are on the private or public option – by dumping everyone that costs them too much. That's Obama's public option – it's not *your* option.

Obamacare will run huge deficits

The latest report from the non-partisan Congressional Budget Office (CBO) is out. (H/T The Heritage Foundation)

Excerpt:

> For the past half-century, federal spending has averaged about 20 percent of GDP, federal taxes about 18 percent of GDP and the budget deficit 2 percent of GDP. The CBO's projection for 2020 — which assumes the economy has returned to "full employment" — puts spending at 26 percent of GDP, taxes at a bit less than 19 percent of GDP and a deficit above 7 percent of GDP. Future spending and deficit figures continue to grow.
>
> [T]he major causes of the budget blowout are well-known: an aging population and rapid increases in health spending. In 2000, Social Security, Medicare and Medicaid — the main programs providing income and health care for those 65 and over — totaled nearly 8 percent of GDP. In 2020, CBO projects that will reach almost 12 percent of GDP. But the deeper source of our predicament is a self-indulgent political culture that avoids a rigorous discussion of government's role.
>
> …Obama would make matters worse. He talks about controlling "entitlement" spending (mainly Social Security and Medicare) but hasn't done so. He's proposing just the opposite. His health-care proposal would increase federal spending. He says he will "pay for" the added outlays with tax increases or other spending cuts, but what people forget is that every penny of this "payment" could be used (and should be) to close the long-term deficit — not raise future spending and taxes.

As if we were not already spending too much!

UPDATE: Gateway Pundit reports that Obamacare will provide taxpayer funding for abortion just as polls show that the country is more pro-life than ever.

UPDATE: But there's hope! Obama's teleprompter has been smashed! Perhaps this will be an end of Obamacare now that the evil genius is no more.

An Iraqi columnist thanks America for supporting Democracy in Iraq

July 14, 2009 | by Wintery Knight | Link | Original Link

Let's win in Iraq

Let me be clear. I am pro-victory when it comes to defending America's interests abroad. America is the beacon of freedom in the world, and we need to use our power to do right. To whom much is given, much is expected.

Here is the article from the Weekly Standard. (H/T ECM)

Excerpt:

> **Thank You America – And Damn You, You Bastards**
> **By Jabr Al Jabouri**
> ***Al-Bayyna Al-Jadida* [Baghdad]**
> **July 1, 2009**
>
> America chose to save us from the most evil party, and the most despicable President in the universe [Saddam]. Meanwhile, the Arab powers stood firmly against the American project. They used all means to thwart them, but Allah's will had another say in this matter. America turned the Ba'athists into the world's laughing stock by showing them fleeing in their underwear on live television. Meanwhile, the Arab powers turned those cowards into national heroes on their satellite channels.
>
> America gave the lives of 4,000 of its people to Iraq's land to instill security and democracy, while the Arabs sent us their filthy mercenaries who mercilessly murdered, bombed, and slaughtered the Iraqi people.
>
> America came bearing democracy for Iraq, while the Arabs brought us the new religion of the Wahhabis and Salafists. This religion aims to destroy Iraq and return it to the days of minority rule.

And it goes on and on and on about all the things that America has done for Iraq.

This is a must-read, especially for the many Christians that I know personally who thought that 600 billion dollars was too much money to spend giving the gift of liberty to our neighbors in Iraq, while making the whole world safer at the same time. And I think we should be supporting democracy in Lebanon, Iran and Honduras as much as we can – certainly with diplomatic and economic measures.

Thank you, ECM, for sending me this fine article. America is a great country, and we do great things, and we have glory (reputation) for doing these great things with the people

who matter most – the people who love liberty, prosperity and security. The people who are grateful. The people who believe in democracy and human rights.

Can anyone prove God's existence? Is there any evidence?

July 14, 2009 | by Wintery Knight | Link | Original Link

The Pugnacious Irishman considers the general objection:

> No one can prove God's existence (or Jesus' existence, or that the Bible is God's word, etc, etc…just toss in any number of Christian staples). There is no evidence whatsoever. It's all belief and faith.

This is called hard agnosticism. Atheism is the claim "There is no God". Soft agnosticism is the claim "I don't know if there is a God". Hard agnosticism is the claim "No one can know whether there is a God or not".

Now take a moment and think about how you would respond in a general way, without plunging into the arguments and counter-arguments.

Rich begins by teaching us about the notion of *burden of proof:*

> It is important that when someone says that to you, that you *never* let them off the hook. It is just too easy to throw it out there without backing it up. It is a particularly convenient one liner for those who aren't really interested in God and for those who have not thought deeply about God. That's not to say that everyone who says that hasn't thought deeply about God, it's just that it's easy for folks like that to resort to it. Rather than launching into disproving the "no proof" belief, force your conversation partner to shoulder his responsibility: he made a claim, now he must back it up. No reason for you to launch into Kalam mode.

This actually happened to me when I was working for a software company in Chicago. We were waiting for a meeting room to empty. I was browsing a William Lane Craig debate transcript on one of the lab machines, when one of the engineers said, "Why do you read that stuff? No one can know whether God exists or not!" So I said, "Why do you think that?" And he said, "Because God is non-physical and that means that we can never have evidence of a non-physical entity". And we went from there, straight to the Kalam argument.

Rich documents FIVE responses here, and breaks them down. My favorites are the last two, but they are all useful, depending on the person who is asking.

By the way, here is the evidence for Christian theism and responses to objections, if evidence is really required. But the point of this post is that if anyone makes a claim to know that there is no proof that God exists, the first questions you need to ask before you go to the data is: what do you mean by "God"? what would count as proof for you? who have you read? what is wrong with the arguments that you've read? Etc.

Has the Episcopal church gone completely crazy?

July 14, 2009 | by Wintery Knight | Link | Original Link

Story from the Associate Press via the American Spectator. (H/T ECM)

Excerpt:

> The presiding bishop of the Episcopal Church called the evangelical notion that individuals can be right with God a "great Western heresy" that is behind many problems facing the church and the wider society.
>
> Describing a United States church in crisis, Presiding Bishop Katharine Jefferts Schori told delegates to the group's triennial meeting July 8 in Anaheim, Calif., that the overarching connection to problems facing Episcopalians has to do with "the great Western heresy — that we can be saved as individuals, that any of us alone can be in right relationship with God."
>
> "It's caricatured in some quarters by insisting that salvation depends on reciting a specific verbal formula about Jesus," Jefferts Schori, the first woman to be elected as a primate in the worldwide Anglican Communion three years ago, said. "That individualist focus is a form of idolatry, for it puts me and my words in the place that only God can occupy, at the center of existence, as the ground of being."
>
> …Jefferts Schori said "heretical and individualistic understanding" contributes to problems like neglect for the environment and the current worldwide economic recession.

I wonder if the Bishop has ever encountered this passage:

> 32"Whoever acknowledges me before men, I will also acknowledge him before my Father in heaven.
>
> 33But whoever disowns me before men, I will disown him before my Father in heaven.
>
> 34"Do not suppose that I have come to bring peace to the earth. I did not come to bring peace, but a sword.
>
> 35 For I have come to turn
> " 'a man against his father,
> a daughter against her mother,
> a daughter-in-law against her mother-in-law –
>
> 36a man's enemies will be the members of his own household.'
>
> 37"Anyone who loves his father or mother more than me is not worthy of me; anyone who loves his son or daughter more than me is not worthy of me;
>
> 38and anyone who does not take his cross and follow me is not worthy of me.

That statement is also in Luke. So it originates in Q, the source of Matthew and Luke, and it is therefore very, very early, and very, very reliable. And it's worse than that – you can find something similar in the earliest gospel, Mark. So it is pretty clear that what is required to be saved is the *individual* decision to *acknowledge Jesus* and *follow Jesus.*

Here's one more story from OneNewsNow about the Episcopalian church.

> Episcopalians are moving toward affirming an open role for homosexual clergy in their church despite pressure from fellow Anglicans not to do so.
>
> Episcopal bishops voted at a national meeting yesterday for a statement that says "God has called and may call" homosexual men and women to ministry. Delegates to the meeting already approved a nearly identical statement. This latest version is likely to be approved by Friday.
>
> Episcopalians caused an uproar in 2003 by consecrating the first openly homosexual bishop, Vicki Gene Robinson of New Hampshire. That decision has nearly split the world Anglican Communion, which includes Episcopalians.
>
> To calm tensions, Episcopal leaders three years ago had urged restraint by dioceses considering homosexual candidates for bishop. No openly homosexual bishops have been consecrated since then.

And don't forget my previous post about the Rev. Ragsdale, another Episcopalian, who thinks that abortion should be made into a sacrament. She is the new Dean of Episcopal Divinity School in Cambridge, Massachusetts.

Sarah Palin crushes cap-and-trade in the Washington Post

July 15, 2009 | by Wintery Knight | Link | Original Link

Sarah Palin's op-ed in the Washington Post is called "The 'Cap And Tax' Dead End". (H/T Watts Up With That, Gateway Pundit, Stop the ACLU)

Excerpt:

> American prosperity has always been driven by the steady supply of abundant, affordable energy. Particularly in Alaska, we understand the inherent link between energy and prosperity, energy and opportunity, and energy and security. Consequently, many of us in this huge, energy-rich state recognize that the president's cap-and-trade energy tax would adversely affect every aspect of the U.S. economy.
>
> There is no denying that as the world becomes more industrialized, we need to reform our energy policy and become less dependent on foreign energy sources. But the answer doesn't lie in making energy scarcer and more expensive! Those who understand the issue know we can meet our energy needs and environmental challenges without destroying America's economy.
>
> Job losses are so certain under this new cap-and-tax plan that it includes a provision accommodating newly unemployed workers from the resulting dried-up energy sector, to the tune of $4.2 billion over eight years. So much for creating jobs.
>
> In addition to immediately increasing unemployment in the energy sector, even more American jobs will be threatened by the rising cost of doing business under the cap-and-tax plan. For example, the cost of farming will certainly increase, driving down farm incomes while driving up grocery prices. The costs of manufacturing, warehousing and transportation will also increase.
>
> The ironic beauty in this plan? **Soon, even the most ardent liberal will understand supply-side economics.**
>
> …The Americans hit hardest will be those already struggling to make ends meet. As the president eloquently puts it, their electricity bills will "necessarily skyrocket." So much for not raising taxes on anyone making less than $250,000 a year.
>
> Even Warren Buffett, an ardent Obama supporter, admitted that under the cap-and-tax scheme, "poor people are going to pay a lot more for electricity."

Meh. It's merely excellent. Somewhat superlative.

Not nearly as good as Michele Bachmann could do, and Michele is conservative on vouchers *and* illegal immigration, *unlike Sarah*. See, Sarah writes about supply-side

economics once in a while, but Michele gives passionate speeches about supply-side economics every day:

- Michele makes an articulate, impassioned speech against gangster-government
- Michele tells government to butt out of the free market
- Michele talks about ANWR, the rule of law and ACORN
- Michele calls for audit of the Federal Reserve (from the Maritime Sentry)
- Michele makes passionate pro-life speech

And Michele likes Christian apologetics more than Sarah! Sarah probably doesn't even know who William Lane Craig is! Michele should be President, Sarah can be Secretary of Energy.

Ed Morrissey at Hot Air comments on Sarah's article:

> We need to make all of this clear. Cap-and-trade rations energy production, which means there will be *less of it* for a long time. Alternatives are not ready for the kind of mass production that would allow a complete replacement of energy, and probably won't be for decades, if ever in some cases (notably wind power, as GreenChoice showed and as T. Boone Pickens finally realized). That means a lower standard of living that will impact America regressively, with the lowest income earners getting hit the hardest. The drain on the economy from high energy prices means less jobs and higher retail prices for goods and services, again a regressive consequence of energy rationing.
>
> Obama and his Utopian allies promise that government will help close the gap by offering more services to the unemployed and the poor at the expense of the "rich". What will that do? It will further handicap the economy by keeping capital out of the markets. Even worse, it will vastly expand the dependent class in America who have to go on the dole to survive. And many of those ardent liberals will be pretty happy with that outcome, too.

We need to stop this thing. It's good that Sarah came out against it.

Does Obama plan to tax people making less than $250,000?

July 15, 2009 | by Wintery Knight | Link | Original Link

Keith Hennessey explains how Obamacare will result in higher taxes on the middle class.

Excerpt:

> As expected, the House bill would mandate that individuals and families have or buy health insurance.
>
> But what if they don't buy it?
>
> Then Section 401 kicks in. Any individual (or family) that does not have health insurance would have to pay a new tax, roughly equal to the smaller of 2.5% of your income or the cost of a health insurance plan.
>
> I assume the bill authors would respond, "But why wouldn't you want insurance? After all, we're subsidizing it for everyone up to 400% of the poverty line."
>
> That is true. But if you're a single person with income of $44,000 or higher, then you're above 400% of the poverty line. You would not be subsidized, but would face the punitive tax if you didn't get health insurance. This bill leaves an important gap between the subsidies and the cost of health insurance. CBO says that for about eight million people, that gap is too big to close, and they would get stuck paying higher taxes and still without health insurance.

He uses several different examples to show how Obama's plan would raise taxes on people making much less than 250,000 dollars a year. I know what you're thinking – "Wintery! Obama promised he wouldn't raise taxes on the middle class!" Well, he's going to do exactly what is consistent with his voting record. If only the left-wing media had told us his voting record, instead of talking incessantly about Sarah Palin's children.

I should note that Obama broke his tax pledge many times already.

> Americans for Tax Reform has been documenting Obama's string of broken tax promises. Obama first shattered his $250K promise only 16 days into the presidency when he enacted a 61 cent tax increase on cigarette packs, disproportionately hurting low-income Americans. Next, Obama aggressively supported the cap-and-trade tax that, if the bill passes the Senate, will increase energy costs for an average American family by $1,500. Now, in a recent interview with Obama's Senior Adviser David Axelrod, the administration is waffling about how taxes will be raised for health care reform. When asked if tax increases on families making less than $250,000 might pay for health care, Sen. Schumer, D-N.Y. said, "There are lots of things on the table now."

Next time, don't worry about Tina Fey's sketches, worry about the thousands of dollars that Obammunism will cost you in increased health care costs, increased electricity costs,

higher taxes, lost income, stock losses, interest on the national debt, etc. Katie Couric isn't going to give you all your savings back. Campbell Brown isn't going to give you your job back. *They're rich Democrats. They don't care about truth.*

UPDATE: Hot Air links to the story and adds this:

> As John Boehner points out, many of the so-called "rich" above $250K a year in earnings are small-business owners who simply file their business revenues as personal income. A 5.4% "surtax" — really just a hike in the upper tax bracket — will take more of their capital out of their businesses and reduce the opportunity for job growth.
>
> The Post notes that the "surtax" would apply to about 2.1 million Americans. The mandate for coverage will force almost *four times as many middle-class Americans* to pay higher taxes as a result of the ObamaCare plan in the House while preventing them from getting coverage. The House hasn't soaked the rich; they've declared war on the middle class and the uninsured.

Socialists against the middle class.

Can people twist the Bible to make it say anything they want?

July 15, 2009 | by Wintery Knight | Link | Original Link

The Pugnacious Irishman Rich is at it again!

Here's the challenge:

> "People twist the Bible all the time to make it say whatever they want."
>
> Ever heard that one? Have you ever been the one who said that? Perhaps you just finished giving your view on homosexual behavior. In the process, you cite a Bible verse or two, and the person you are conversing with responds with the above. Where to go from there?

Now, I don't like to use the Bible with people who don't accept its authority, unless I'm ready to argue for the reliability of the verses I want to use using the historical criteria for surfacing reliable passages. (Early, Multiply attested, Enemy-attested, Embarassing to the author, etc.)

But I think Rich is talking about people who are asking you what the Bible teaches.

He continues:

> Really, most of the time, that one liner is merely a dismissal of your case. You give a verse, explain the context, and give an argument for its meaning, and someone merely dismisses it with a "ah, people twist the Bible all the time." You've made a specific case, and somehow, just by making the general observation that people twist the Bible, your whole case is defeated. Really? No, not really.

Click through to see his response, with a sample conversation to illustrate. This one was new to me!

How objective are scientists about their research, given their political views?

July 15, 2009 | by Wintery Knight | Link | Original Link

Hot Air linked to this Pew Research poll about the beliefs and attitudes of researchers in the scientific fields.

Excerpt:

> More than half of the scientists surveyed (55%) say they are Democrats, compared with 35% of the public. Fully 52% of the scientists call themselves liberals; among the public, just 20% describe themselves as liberals. Many of the scientists surveyed mentioned in their open-ended comments that they were optimistic about the Obama administration's likely impact on science.
>
> For its part, the public does not perceive scientists as a particularly liberal group. When asked whether they think of scientists as liberal, conservative or neither in particular, nearly two-thirds (64%) choose the latter option. Just 20% say they think of scientists as politically liberal. However, a majority of scientists (56%) do see members of their profession as liberal.
>
> Most scientists had heard at least a little about claims that government scientists were not allowed to report research findings that conflicted with the Bush administration's point of view. And the vast majority (77%) says that these claims are true. By contrast, these claims barely registered with the public – more than half heard nothing at all about this issue. Only about a quarter of the public (28%) said they thought the claims were true.
>
> Both scientists and the public overwhelmingly say it is appropriate for scientists to become active in political debates about such issues as nuclear power or stem cell research. Virtually all scientists (97%) endorse their participation in debates about these issues, while 76% of the public agrees.

I think it helps to make the point I was making earlier about the fraudulent science used to support global warming and Darwinian evolution. Many scientists have an agenda. They get paid by the government. The bigger government is, the better they get paid. Therefore, many are Democrats. Scientists tend to be biased in favor of material entities and explanations. Morality is non-material. Scientists therefore tend to resent the idea that moral claims are knowledge. They prefer to have autonomy from non-material moral rules. Therefore, many are atheists.

There are some dissenters of course. But these are rare.

Science Daily: Co-habiting before marriage is a bad idea

July 15, 2009 | by Wintery Knight | Link | Original Link

Story from Science Daily. This is old news, but maybe it will be new news to some of my readers.

Excerpt:

> University of Denver (DU) researchers find that couples who live together before they are engaged have a higher chance of getting divorced than those who wait until they are married to live together, or at least wait until they are engaged. In addition, couples who lived together before engagement and then married, reported a lower satisfaction in their marriages.
>
> …"Cohabiting to test a relationship turns out to be associated with the most problems in relationships," Rhoades says. "Perhaps if a person is feeling a need to test the relationship, he or she already knows some important information about how a relationship may go over time."

This is why I love chastity. Chastity is like the fine-tuning argument – you can't lose the argument because you have all the evidence. Your opponent has unobservables hopes and dreams. And these moral rules like chastity are not just there to protect you from harm. Chastity allows you to relate to the opposite sex in ways you'd never dreamed of. And it works on people you aren't even attracted to, as well!

Isn't it interesting how disdainful we seem to have become of traditional wisdom in regards to sexual matters? As if civilization worked one way for thousands of years, and then all of a sudden the feminists tell us how human nature really works.

Check out this article from Focus on the Family.

Excerpt:

Researchers from Pennsylvania State University find "it has been consistently shown that, compared to spouses who did not cohabit, spouses who cohabit before marriage have higher rates of marital separation and divorce."[3] Sociologists at the University of Wisconsin-Madison report, "Recent national studies in Canada, Sweden, and the United States found that cohabitation increased, rather than decreased, the risk of marital dissolution."[4] This was also found to be true in the Netherlands.[5]

A leading researcher on cohabitation from the University of Victoria, British Columbia, reports:

> Contrary to conventional wisdom that living together before marriage will screen out poor matches and therefore improve subsequent marital stability, there is considerable empirical evidence demonstrating that premarital cohabitation is associated with lowered marital stability.[6]

Additional researchers found, “cohabitation is not related to marital happiness, but is related to lower levels of marital interaction, higher levels of marital disagreement and marital instability.”[7] They conclude, “On the basis of the analysis provided so far, we must reject that argument that cohabitation provides superior training for marriage or improves mate-selection.”[8]

Research conducted at Yale and Columbia University and published in American Sociological Review found:

> The overall association between premarital cohabitation and subsequent marital stability is striking. The dissolution rate of women who cohabit premaritally with their future spouse is, on average, nearly 80 percent higher than the rate of those who do not.

Other studies show that those who have any type of pre-marital cohabiting experience have a 50 to 100 percent greater likelihood of divorce than those who do not cohabit premaritally.[10] This data has led researchers to conclude that the enhanced chance of divorce after cohabitation “is beginning to take on the status of an empirical generalization.”[11]

Marriage is not for people who are “in love”. And having things in common is not the most important thing either. What you need are two people who are trained and experienced in making commitments to do arduous, long-running tasks. People who come into a marriage thinking it will solve all their problems are crazy. And children make it even more stressful!

UPDATE: Dr. Jennifer Roback Morse podcast on the subject is here. (11 minutes)

Understand the right way to reform health care… with short podcasts!

July 16, 2009 | by Wintery Knight | Link | Original Link

CBO says that the total cost of Obamacare is 1.3 trillion over 10 years
Source: The Heritage Foundation

The problem with health care today in the United States is that medical care and services cost too much. Now, everyone seems to think that the only solution to this problem is to go with a single-payer system like Canada or Cuba. Only one problem: there is another solution that no one is talking about: consumer-driven health care. And this is the only solution that actually works.

At lunch yesterday, I went to the Chinese buffet and started to read a new book on this issue by Regina Hertzlinger, a professor at Harvard University who specializes in health care policy. So now I understand it a little more. And I managed to round up a few podcasts that can explain her idea of consumer-driven health care to you, too. (I listed them in a sensible order)

Consumer-driven health care:

Health Care: Fostering Focus Factories
with Dr. Regina Hertzlinger
(8:46)

Choice, Competition Should Drive Health Care Reform
with Dr. Michael D. Tanner
(5:21)

The Republican Plan ("Patient Choice Act") is consumer-driven:

Obama's False Health Care Choice
with Rep. Paul Ryan
(10:39)

Ideas for Free-Market Health Care Reform
with Rep. Paul Ryan
(8:30)

Obamacare, Medicare, RomneyCare and CanadaCare are all garbage:

Competing with the Government
with Dr. Michael F. Cannon
(7:34)

Medicare: A Model for Reform?
with Dr. Michael D. Tanner
(4:34)

Lessons from Massachusetts Health Care Reform
with Dr. Michael D. Tanner
(4:18)

The Canadian Health Care Experience
with Sally C. Pipes
(7:45)

Puncturing the Myths of American Health Care
with Sally C. Pipes
(about 8 minutes)

Check out this article from the Wall Street Journal entitled "Universal Health Care Isn't Worth Our Freedom". (H/T Club For Growth)

This is the key insight that everyone must understand:

> Many Americans would willingly pay for insurance to protect them against the exorbitant cost of treating their own leukemia. But how many Americans would willingly pay for insurance to protect them from the expenses of treating their own depression?
>
> Everyone recognizes that the more fully we wish insurance companies to defray our out of pocket expenses for our car repairs, the higher the premium they will charge for the policy. Yet foregoing reimbursement for trivial or unnecessary health-care costs in return for a more suitable health-care policy is an option unavailable under the present system. Everyone with health insurance is compelled to protect himself from risks, such as alcoholism and erectile dysfunction, that he would willingly shoulder in exchange for a lower premium.

Liberty means choosing the right amount to pay for your own health care, based on your own lifestyle choices, and your own risk assessment. Anything less is tyranny.

Along those lines, people who are sexually promiscuous or who abuse drugs will be paying the same medical premiums as everyone else, under Obama's health care plan. Your lifestyle decisions are *irrelevant* to the amount you pay and the amount of coverage you get.

Excerpt:

> Under the terms of the health-care reform bill approved by the Senate Health, Education, Labor and Pensions Committee, the legal use of tobacco products is the only vice for which insurance companies will be able to charge their customers higher premiums.
>
> …In other words, a person could have been admitted to hospitals three times for heroin overdoses, or been pregnant five times out of wedlock, or been treated for venereal diseases at least once per year for the past five years, but none of these factors could be used to charge that person a higher insurance premium.

This is a massive transfer of wealth from clean–living, productive citizens to citizens who are not minimizing lifestyle risks and who are not productive. This is nothing but a massive incentive for people to stop working and stop being moral. What would be the point to restraining yourself? Someone else will pay for your mistakes anyway, right? And that's just what the compassionate, progressive secular-leftists want. To abolish income differentials and the privileges of moral living. So everyone will be the same, and no one will feel bad for being lazy and immoral.

And as if that wasn't bad enough…

Investors Business Daily is reporting this scary story.

Excerpt:

> It didn't take long to run into an "uh-oh" moment when reading the House's "health care for all Americans" bill. **Right there on Page 16 is a provision making individual private medical insurance illegal.**

As Ed Morrissey explains in this Hot Air article, the government has a track record running health care programs already, such as the Indian Health Service. This is a single-payer system run by the federal government. Click through to the article and find out how good of a job government does of running anything. People are dying. Government-run health care is an inefficient system that allows bureaucrats to decide how health care is rationed.

Books I am reading about health care

Right now, I've picked out 3 books on health care to help me learn about the issue.

Who Killed Health Care?: America's $2 Trillion Medical Problem – and the Consumer-Driven Cure
by Dr. Regina Herzlinger

The Cure: How Capitalism Can Save American Health Care

by David Gratzer, M.D.

The Top Ten Myths of American Health Care
by Sally C. Pipes

The latter two books are by Canadians intimately familiar with the Canadian single-payer system.

Evaluating Sotomayor's views on abortion and gun ownership

July 16, 2009 | by Wintery Knight | Link | Original Link

The article by Wayne Lapierre is from the Washington Times.

Excerpt:

> After the first day of confirmation hearings, gun owners have good reason to worry. Those of us who respect the Second Amendment are concerned about the case of Maloney v. Cuomo, which reviewed whether this freedom applies to all law-abiding Americans or only to residents of Washington. If it's incorporated, the Second Amendment prevents the states from disarming honest Americans. If it's not, the Second Amendment is meaningless outside of our nation's capital.
>
> Judge Sotomayor was on the U.S. 2nd Circuit panel that decided the Maloney case in a short, unsigned and clearly incorrect opinion. The fact that the Maloney panel misread precedent in order to avoid doing the 14th Amendment "incorporation" analysis required by the Supreme Court is troubling to say the least.
>
> Equally troubling is the fact that Judge Sotomayor said she wasn't even familiar with the Supreme Court's modern incorporation cases. There are few issues more important for a judge to understand than whether the fundamental guarantees in the Bill of Rights apply to all Americans. Our First Amendment right to free speech applies to all Americans. Our Fourth Amendment protection from illegal search and seizure applies to all Americans. It's hard to believe that a potential Supreme Court justice wouldn't be familiar with those cases.
>
> Despite that judicial amnesia, Judge Sotomayor co-authored an opinion — in January — holding that the Second Amendment does not apply to the states. So that leaves two options: Either she failed to follow the Supreme Court's direction in Heller that judges are required to analyze the modern incorporation cases or she actually did review those cases but came to an incorrect conclusion. Neither option gives gun owners much confidence in her view of the Second Amendment.

Issues, Etc. did a podcast with pro-lifer Charmaine Yoest. Sotomayor is apparently a radical pro-abortionist, as well.

Video from Fox News:

You can read more about Charmaine's challenge to Sotomayor in this Washington Post article.

Excerpt:

> Yoest is a calm, articulate, smart abortion opponent — the kind who gives abortion-rights supporters nightmares. Since virtually the moment Sotomayor's

> name surfaced as a possible Supreme Court candidate, AUL has been conducting vigorous opposition research. It has set up two Web sites, including Sotomayor411.com that compares Souter to Sotomayor on a variety of issues, including abortion, end-of-life issues and the rights of abortion demonstrators. Suffice to say that Sotomayor doesn't fare too well. And it has also has AskSotomayor.com, which lays out 10 questions that it says senators need to ask her.

I am so glad that we have someone intelligent and articulate to speak for us at Sotomayor's hearings. A lot of people are pro-life, and are not really informed about it. But Charmaine is going to go out there and make a solid case in the little time she has available!

Does the education system discriminate against boys?

July 16, 2009 | by Wintery Knight | Link | Original Link

Check out this article from MercatorNet, about the plight of boys stuck in the feminized public schools.

Excerpt:

> Men are now lagging women in every major category from lifestyle to health, from education to employment. For instance, on the health and lifestyle front, men are involved in twice as many fatal auto accidents as women. Good-bye to all those jokes about women drivers. Currently the US has 1.5 million men in the slammer, a 15 to 1 lead over the fairer sex. We guys are much more likely to be alcoholics and we are ahead in the obesity derby. No surprise, then, that on average women have a five-year lead in life span.
>
> For decades now, feminists have been decrying the salary deferential that men have enjoyed. Perhaps this is so for men in their 40s and 50s, but no longer for the 20-something crowd. The playing field is now level, with the advantage held by the women when it is time to tighten the corporate belt and lay-offs occur. As our recession/depression deepens, bosses are laying off young male employees at a greater rate than young women. This employment data corresponds to staggering statistics showing that across the country girls and young women are dramatically out-schooling their male counterparts. Last September 58 percent of the entering freshman class at the nation's colleges and universities was female.
>
> However, not only is there a large gap in favor of women's college attendance, but women go through college faster, with higher grades, more honors and fewer disciplinary setbacks. Currently, they are being admitted to elite graduate business and medical schools in greater numbers.

Other topics:

- men's apathy due to getting sex from women without having to prove themselves
- the lack of fathers (caused by no-fault divorce and welfare programs)
- the lack of male teachers in schools
- the lack of male role models in the feminized curriculum
- parents spending too much on video games and other distractions

This is a must-read for anyone who cares about men.

Court knew that man jailed for failure to pay child support was not the father

July 16, 2009 | by Wintery Knight | Link | Original Link

Story from the Atlanta Journal-Constution. (H/T ECM)

Excerpt:

> Frank Hatley has languished in a South Georgia jail for more than a year.
>
> The reason? He failed to reimburse the state for all the public assistance his "son" received over the past two decades.
>
> The problem? Hatley is not the biological father — and a special assistant state attorney general and a judge knew it but jailed Hatley anyway.
>
> Even after learning he was not the father, Hatley paid thousands of dollars the state said he owed for support. After losing his job and becoming homeless, he still made payments out of his unemployment benefits.
>
> Hatley's lawyer, Sarah Geraghty of the Southern Center for Human Rights in Atlanta, said two independent DNA tests — one nine years ago and one just a few days ago — prove he is not the biological father.
>
> "This is a case of excessive zeal to recover money trumping common sense," she said. "What possible legitimate reason can the state have to pursue Mr. Hatley for child support when he does not have any children?"
>
> It may be difficult for Hatley to get out from under the court order, said Atlanta family lawyer Randall Kessler, who is not associated with the case. "It's definitely unfair," Kessler said. "But at the same time, he's dealing with a valid court order."

This is yet another reason for Christian men to prefer chastity. Chastity is a higher calling for Christian men and feminism is so widespread that single men need to be very careful about discrimination, fraud and coercion by the marxist-feminist state. Men go to jail and/or commit suicide for failure to pay alimony, child support, etc. all the time. My advice: don't get involved until they fix the problem.

Why do Democrats cut the funding of missile defense programs?

July 16, 2009 | by Wintery Knight | Link | Original Link

Article from the Heritage Foundation.

Excerpt:

> President Obama, in his FY2010 defense budget, proposed a $1.2 billion cut to missile defense funding and halted development on our long-range interceptors in Alaska and California.
>
> …Rep. Trent Franks offered an amendment to restore the $1.2 billion cut from missile defense by President Obama. The Democrats argued that this cut was reasonable, but in the face of Iranian and North Korean activities, any significant cut to missile defense funding seems foolish. In the last two months, we have seen Iran test its long-range missile capabilities (under the guise of a space launch) and North Korea test a nuclear weapon and launch (unsuccessfully) a long-range Taepo-Dong II missile. The North Koreans now appear to be preparing to launch yet another Taepo-Dong II. In the face of all of these activities, the Democrat majority on the Armed Services Committee voted down the Franks amendment to restore missile defense funding by a vote of 36-26. This amendment was then voted on by the full House of Representatives and again defeated along largely party lines.
>
> There were a number of other amendments related to missile defense that we discussed, including Republican efforts to fund the European Site and the Airborne Laser, but they were all shot down by the Democrats. For the sake of our nation's security, we should be focused on shooting down enemy missiles, not on shooting down our own missile defense system. As North Korea and Iran push forward, every member of the House of Representatives has taken a stand on missile defense. Unfortunately, it seems that the position of the Democratic majority is clear: shoot down missile defense.

The Heritage Foundation post I cited is a guest post by Congressman Todd Akin of Missouri.

Joe Biden: spend more taxpayer money to keep US from bankruptcy

July 17, 2009 | by Wintery Knight | Link | Original Link

I am not making this up. (H/T IOwnTheWorld.com)

(24 seconds long)

Transcript:

> "Now, people when I say that look at me and say, 'What are you talking about, Joe? You're telling me we have to go spend money to keep from going bankrupt?'"
> "The answer is yes, that's what I'm telling you."

Elect "silver spoon" Democrats, and this is what you get.

National Debt

Budget Deficit

Sen. Jim Demint denounces the Democrats' new Hate Crimes amendment

July 17, 2009 | by Wintery Knight | Link | Original Link

UPDATE: NEW MUST-SEE Jim Demint video has been posted here on the the failed stimulus bills and Obamacare!

UPDATE: Welcome, visitors from the Corner (National Review)! Thanks for the link from Mark Steyn!

UPDATE: Welcome Canadian readers from Blazing Cat Fur! Guess what? The Democrats are trying to pass laws that will make us just like you!

Canadian readers, pay close attention, *the second half of the video is all about you*.

Here's the video of my favorite Senator Jim Demint: (11:44)

You can read about how Christians are persecuted in Canada here:

- **NEW!** The persecution of a Catholic Bishop (at Blazing Cat Fur)
- The persecution of Rev. Stephen Boissoin (at Ezra Levant)
- The persecution of Catholic Insight magazine (at Ezra Levant)
- The persecution of Christian businessman Scott Brockie (at The Interim)

But what about the right to free speech here, in the USA?

Why did some Christians vote (indirectly) for anti-Christian policies?

There are 3 themes on the Wintery Knight blog.

1. Christians must appeal to public knowledge when defending their faith
2. Social conservatives need to become fiscal conservatives
3. Fiscal conservatives need to become social conservatives

Regarding point #2. It has come to my attention that some well-meaning Christians, who are apparently socially and theologically conservative, nevertheless voted for Obama, because they are opposed to fiscal conservatism and small government.

Specifically, they don't believe in things like:

- lowering taxes
- decreasing government or union regulations
- shrinking the size of government
- preserving the rule of law
- protecting private property
- protecting the free market and free trade
- protecting liberty and personal responsibility

Here is a breakdown of which Christian denominations voted for Obama:

2008 voting broken by religious groups
(Click for full-sized image, courtesy of Pew Research)

For the record, I am an ethnic evangelical Protestant. You can read all about how I became a Christian and the list of arguments for and against Christian theism.

On this blog, I examine policies like cap-and-trade, socialized medicine and tariffs. I argue that these policies are bad for the poor. All it takes to understand the economics is a little bit of study. Christians need to study these issues so that they are not deceived by their emotions when it comes time to vote. Otherwise, we will not only hurt the poor, but we will also lose the freedoms we need to live our lives as Christians.

We should not be so envious of our neighbor's prosperity that we are willing to sell our religious liberty and free speech rights in order to punish their success. We should not be coveting our neighbor's goods. We should not be stealing from our neighbor, either. Instead, we should try to improve the nation's prosperity without involving the government. And we can start by working harder, saving more and spending less.

Further study

You might be interested in Jim Demint's book "Why We Whisper", which I bought but have not yet finished.

If you'd like to hear more from Jim Demint, he did a 51-minute Town Hall for the Heritage Foundation on the Sotomayor nomination.

For more about free speech in Canada, see these previous posts:

- Mark Steyn radio interview and previous Ezra Levant debate
- Ezra Levant and Mark Steyn on Milt Rosenberg's radio show
- Ezra Levant videos from the Michael Coren TV show, here.
- Evan Sayet's speeches on how progressives think

For two technical articles discussing property rights and the poor, take a look at these two articles from New Zealand philosopher Matt Flanagan.

- What About the Poor? Sustenance Rights Examined
- What About the Poor? More on Sustenance Rights

And here is an audio lecture by Jay Richards on the "**Myths Christians Believe about**

Wealth and Poverty“. His new book is called “**Money, Greed and God: Why Capitalism is the Solution and Not the Problem**“. To understand what capitalism is, you can **watch this lecture** about the book. Here is a **series of 4 sermons** by Wayne Grudem on the relationship between Christianity and economics?.(**a PDF outline is here**)

Is universal common ancestry based on established facts?

July 17, 2009 | by Wintery Knight | Link | Original Link

Casey Luskin wrote a wonderful article called "A Primer on the Tree of Life" that will help you to consider whether universal common ancestry is true.

Excerpt:

> Evolutionists often claim that universal common ancestry and the "tree of life" are established facts. One recent opinion article argued, "The evidence that all life, plants and animals, humans and fruit flies, evolved from a common ancestor by mutation and natural selection is beyond theory. It is a fact. Anyone who takes the time to read the evidence with an open mind will join scientists and the well-educated."[1] The take-home message is that if you doubt Darwin's tree of life, you're ignorant. No one wants to be ridiculed, so it's a lot easier to buy the rhetoric and "join scientists and the well-educated."
>
> But what is the evidence for their claim, and how much of it is based upon assumptions? The truth is that common ancestry is merely an assumption that governs interpretation of the data, not an undeniable conclusion, and whenever data contradicts expectations of common descent, evolutionists resort to a variety of different *ad hoc* rationalizations to save common descent from being falsified.

Here are two of the four evidences he looks at:

Molecular phylogenies

> …the cover story of the journal New Scientist… titled, "Why Darwin was wrong about the tree of life." …reported that "The problem was that different genes told contradictory evolutionary stories." The article observed that with the sequencing of the genes and proteins of various living organisms, the tree of life fell apart…

You get completely different molecular phylogenies depending on which gene or protein you analyze from the organism. If UCA were true, all the genes and proteins would have to give similar molecular phylogenies. Casey also addresses horizontal gene transfer.

Convergent evolution

> One data-point that might suggest common design rather than common descent is the gene "*pax-6*." *Pax-6* is one of those pesky instances where extreme genetic similarity popped up in a place totally unexpected and unpredicted by evolutionary biology. In short, scientists have discovered that organisms as diverse as jellyfish, arthropods, mollusks, and vertebrates all use *pax-6* to control development of their very distinct types of eyes. Because their eye-types are so different, it previously hadn't been thought that these organisms even shared a

> common ancestor with an eye.

Here, you have the same gene being used for the same function in different organisms that *do not share a common ancestor*.

Homologies and Morphological phylogenies

Casey goes on to look at the evidence from homologies and the disparities between molecular phylogenies and morphological phylogenies, (e.g. – Cytochrome B). Casey's article is worth looking at, especially if you have never considered the case against universal common ancestry.

Understanding American values, with Dennis Prager

July 17, 2009 | by Wintery Knight | Link | Original Link

A refresher course for all natural-born Americans, and Americans in spirit. (5 minutes)

If you've never heard of the conflict between liberty and equality, this is a must-see. Very important.

Inequality will exist as long as liberty exists. It unavoidably results from that very liberty itself.
–Alexander Hamilton

(H/T The Chicago Bench)

Some of the challenges facing men today

July 17, 2009 | by Wintery Knight | Link | Original Link

This is just a round-up of a few issues that that will be of interest to those who would like to learn more about the challenges facing men today. These articles are all from this week.

- Narcissism in young women (Wall Street Journal)
- Domestic violence rates similar for men and women (Inside Higher Education)
- Discrimination in admissions, scholarships and government-funding (The Register)
- Man jailed for failure to pay 2.5 million dollar divorce settlement (Pittsburg Post-Gazette)
- Children recant false sex-abuse charges after father spends 20 years in prison (Fox News)
- Men losing 78% of all jobs lost during the recession (Forbes)

And from earlier posts this week:

- Paternity fraud (Atlanta Journal-Constitution)
- Discrimination in the schools (MercatorNet)

And some oldies-but-goodies:

- Man forced to pay $500 a month in child support to ex-girlfriend (USA Today)
- Duke University Lacrosse players faced baseless rape charges (Fox News)
- Wife murders sleeping husband, gets 2 months in mental hospital (RightPundits)
- Daughter and mother sue father for grounding daughter, and wins (LifeSiteNews)

And the Independent Women's Forum's introduction to Title IX, which discriminates against male athletics on the university campus.

Friday night funny: high school, lawyers, CIA, Obama, knighthood

July 17, 2009 | by Wintery Knight | Link | Original Link

High school then and now

ECM sent me this comparison of high school in 1959 vs. 2009.

Scenario 1:
Jack goes quail hunting before school and then pulls into the school parking lot with his shotgun in his truck's gun rack.
1959 – Vice Principal comes over, looks at Jack's shotgun, goes to his car and gets his shotgun to show Jack.
2009 – School goes into lock down, FBI called, Jack hauled off to jail and never sees his truck or gun again. Counselors called in for traumatized students and teachers.

Scenario 2:
Johnny and Mark get into a fist fight after school.
1959 – Crowd gathers. Mark wins. Johnny and Mark shake hands and end up buddies.
2009 – Police called and SWAT team arrives — they arrest both Johnny and Mark. They are both charged them with assault and both expelled even though Johnny started it.

Scenario 3:
Jeffrey will not be still in class, he disrupts other students.
1959 – Jeffrey sent to the Principal's office and given a good paddling by the Principal. He then returns to class, sits still and does not disrupt class again.
2009 – Jeffrey is given huge doses of Ritalin He becomes a zombie. He is then tested for ADD. The school gets extra money from the state because Jeffrey has a disability.

Scenario 4:
Billy breaks a window in his neighbor's car and his Dad gives him a whipping with his belt.
1959 – Billy is more careful next time, grows up normal, goes to college and becomes a successful businessman.
2009 – Billy's dad is arrested for child abuse. Billy is removed to foster care and joins a gang. The state psychologist is told by Billy's sister that she remembers being abused herself and their dad goes to prison Billy's mom has an affair with the psychologist.

Scenario 5:
Mark gets a headache and takes some aspirin to school.
1959 – Mark shares his aspirin with the Principal out on the smoking dock.
2009 – The police are called and Mark is expelled from school for drug violations.. His car is then searched for drugs and weapons.

Scenario 6:
Pedro fails high school English.
1959 – Pedro goes to summer school, passes English and goes to college.
