> […]ATF whistleblowers first exposed the practice after U.S. Border Patrol Agent Brian Terry was killed in a December shootout with banditos near Nogales, Ariz., involving a pair of semi-automatic rifles that traced back to Operation Fast and Furious. Their revelations led to congressional hearings in which agents and Justice Department officials have been criticized for evasive and dishonest testimony.
>
> To date, the scandal has forced the replacement of ATF administrator Ken Melson; reassignment of the bureau's top Arizona agent, William Newell; and the resignation of Dennis Burke, former U.S. Attorney for Arizona.
>
> […]Ten of Arizona's 15 sheriffs joined in the call for an independent counsel probe. The sheriffs, including Democrats and Republicans, said they were motivated by public-safety concerns, not political partisanship.
>
> "I feel like we've been betrayed by our government," said Tom Sheahan, sheriff of Mohave County.
>
> "We're in a fight for our country, our constitution and for our very lives," added Larry Dever, sheriff of Cochise County. "Who really is responsible for helping to arm the people we are fighting every day on the border?"

My prediction? Holder resigns before the end of October. I would like to see Obama put on the stand to testify as well on this issue and on Solyndra. It would nice if Holder and Spinner were both in jail before election day 2012. Like in real jail cells.

Many professional women spend their 20s getting drunk and having “fun”

October 9, 2011 | by Wintery Knight | Link | Original Link

Dina sends me this depressing article from the UK Daily Mail. This is a must-read.

Excerpt:

> The street smells of urine and lager, police struggle to break up a fight outside the Walkabout bar and a paramedic bundles a comatose girl on to a wheelchair. But it’s a quiet night for 20-year-old Naomi Jenkins. She has ‘only’ drunk three shots of peach schnapps, cider and three shots of Jagermeister (during a drinking game called I Have Never) and still feels ‘a bit sober’. Her friend Hannah Freeman, 19, was punched in a fight and stumbles about swearing and searching for a bathroom.
>
> ‘We only do embarrassing things when we’re really drunk,’ Naomi says. ‘I kiss random men in the street and Hannah has had sex behind a chicken coop.’ She screams with laughter as Hannah lurches unsteadily in the stairwell of Charleston Bar and Grill on Caroline Street (known locally as Chip Alley) and unashamedly urinates in front of us.
>
> Amazingly, none of the 80-strong throng of passers-by seems to notice – or perhaps care. Hannah rearranges her minuscule dress, steps over her own urine, shouts ‘f*** off’ and the pair stumble back to Walkabout. It’s only midnight, after all.
>
> […]But as I found out on the streets of Cardiff after midnight, many of these women are – by day at least – well qualified pillars of the community. Among them I met teachers, nurses, occupational therapists, personnel professionals and full-time mothers, all determined to shake off responsibility and have fun in the only way they know how. By getting ‘smashed’.
>
> Every week, the ritual is the same: Groups of between four and six girls congregate to dress up and competitively drink bottles of cheap wine or sickly shots. Competition ramps up over who can wear the tiniest mini-dress, the highest heels or the reddest lipstick. Drinking carries on during the bus ride to Cardiff (many young women travel from the surrounding Valleys) and continues in bars between 9pm and 11pm, or until they feel bold enough to dance.
>
> Condom in purse and telephone number for a pre-booked 3am taxi in handbag, they stagger between nightclubs. The ritual continues long into the morning when, dulled by hangovers, they congregate for McDonald’s or fried breakfasts to giggle about the drunken ‘fun’.
>
> New figures show that alcohol misuse costs the nation £7.3 billion in crime and antisocial behaviour and that one woman in five drinks at levels hazardous to

> health (more than 14 units each week).
>
> I went looking for the answer to the real question: Why? In a series of raw but illuminating interviews, I discovered that beyond the superficial bravado, their nights of booze-fuelled excess make them anything but happy – but they still have no intention of changing. Naomi Jenkins is a classroom assistant from Carmarthen and is adamant that downing sickly Jagermeister shots (which she nicknames medicine) is 'a laugh'.
>
> I hear the same knee-jerk answer again and again. Human-resources administrator Becky Sherlock
> from Chepstow tells me: 'Tomorrow morning, I'll lift my head off the pillow and think, "Oh s***." But it's worth it.'
>
> 'A hangover is the sign of a good night,' says her friend Danielle Malson, a secondary-school teacher.
>
> What quickly becomes apparent is the ease with which these young women distinguish their responsible weekday personas from their 'fun' selves. Naomi easily switches from diligent teaching assistant to Saturday night party girl when she squeezes into a skintight minidress. She tells me: 'I wouldn't do this if it affected my work.'
>
> Occupational therapist Sally Baldwin, 24, added: 'If I bumped into any of my patients or their relatives, I'd hide. It doesn't give off the right image… But as long as it doesn't interfere with my work, I'll carry on.' By splitting their characters into two personas (professional and social), these young women appear confident that their professional reputations remain unblemished. In their own minds, at least.
>
> 'I just like knowing I haven't lost my mojo,' admits a 27-year-old full-time mother, dressed in a skimpy football kit and slumped in a shop doorway on St Mary Street. 'The world seems a better place when you're wearing beer goggles.'
>
> […]It is a sad testimony that obliteration of reality is the highlight of the week for many of these young women. For Alicia Howley, 20, and Lucy Griffiths, both shop assistants, the ritual of dressing up in tight minidresses and wearing lashings of make-up begins at 4.30pm, straight after their Saturday shifts at Matalan.
>
> Lucy says: 'After a few drinks, you feel like you can do anything. It's amazing. The only time I usually talk to new people is speaking to customers at work. Alcohol makes me loads more confident… Like the time I had a foursome.' They laugh.

Read the whole thing, as this is going on with women from late high school right through college, until they are age 35, when they suddenly want to have a baby. And that doesn't mean they want to get married first. They are happy to conclude from their careful search for Mr. Right during drunken "foursomes" that there are no good men. After all, they are already perfectly suitable for marriage as they are, so if Mr. Right doesn't come along,

then it's not the woman's fault. And it's nothing that a little IVF, day care and public school won't solve – all taxpayer-funded, of course.

This story makes me think about why men like me (chaste, and marriage minded) are in the situation that we are in today. I have been taking some flak from friends of both sexes about my reticence to try to get married. I think that people who are criticizing need to realize what is out there right now to choose from. This is what is normal for most women who go through college today. And even if I could find a girl who managed to stay chaste while getting herself mature and independent, the laws are being made by the majority of women, who are more like the ones in the article.

Even when people mouth the words "I'm a Christian" you have to understand that most people who claim to be Christians go through 15 years of church and learn nothing at all that is useful about Christianity. I understand that once women become aware of what men like me want, that they are able to do it and to see the reasons for doing it. But it's very difficult to convince women to be serious about things like economics and apologetics these days – many of them aren't being serious about preparing for marriage in the time that they should be doing that.

House passes bill to protect cement industry from job-killing EPA regulations

October 9, 2011 | by Wintery Knight | Link | Original Link

The EPA is considering regulations that would kill American jobs by the bushel.

Excerpt:

> According to [Sen. James] Inhofe, the administration's proposed CO2/greenhouse gas-emission regulations—due out in November—could chop $300 billion to $400 billion alone off the nation's gross domestic product (GDP) each year. Estimates from the Senate Energy and Public Works Committee's Republican staff estimates this regulation could cost in excess of the 2 million jobs that would have been lost as a result of Waxman-Markey Climate Change Bill.
>
> Other estimates suggest that the EPA's Utility MACT and Transport Rule could cost $184 billion and 1.4 million jobs. Statistics Inhofe provided suggest the rule could shutter hundreds of coal-fired power plants around the country—equaling as much as 20% of the nation's total energy output.
>
> […]"We are relying on coal for as much as 45% of our nation's energy," Inhofe said. "He's intentionally passed a rule that will shut down coal in America, and there are lots of jobs that either directly or indirectly rely on coal. It's going to make it a lot much more expensive."
>
> **These increased costs are underscored by a Bernstein Research report that found: "We expect the loss of this generation to translate into higher wholesale energy and capacity prices. … We estimate that this will raise the price of electricity during on-peak hours by $3 to $5 per MWh."**
>
> **The rule's impact hit closer to home for 120 workers at a Cincinnati-area coal-fired power plant when Duke Energy announced it would be closing the plant if the rule is approved in November.**
>
> **"The anticipated retirement date is contingent on potential changes to the implementation [of the] EPA's MACT rule and other environmental regulations," Duke Energy said in a statement released in July.**
>
> **And Texas-based Luminant followed suit last week, announcing it would be laying off 500 workers in anticipation of the implementation of the EPA's cross-state air pollution rule, set to take effect on Jan. 1, 2012.**
>
> […]The National Associations of Manufacturers estimates the Utility MACT and cross-state air pollution rules will cost its members $18 billion annually, and drive its members' electricity costs up by 11.5%. It also shares Inhofe's analysis that these regulations could cost 1.4 million jobs annually.

But there is some good news from the Energy and Commerce Committee.

Excerpt:

> The U.S. House of Representatives declared another victory today in its ongoing battle against destructive regulation with passage of H.R. 2681, the Cement Sector Regulatory Relief Act. The measure passed the full House with strong bipartisan support by a vote of 262 to 161.
>
> H.R. 2681, authored by Reps. John Sullivan (R-OK) and Mike Ross (D-AR), will protect the domestic cement manufacturing industry from costly new rules issued by the EPA, which currently threaten widespread plant closures and thousands of American jobs. This legislation provides a remedy to EPA's flawed cement MACT rules with a directive to EPA to propose achievable standards and timelines. This legislation will ensure public health and the environment is protected without sacrificing jobs.
>
> "President Obama likes to talk about the need to invest in our nation's infrastructure and this bipartisan legislation will remove regulatory barriers to growth in the construction and cement manufacturing industries," said Sullivan. "The bottom line is that if EPA's Cement MACT rules are not revised, thousands of jobs will be lost due to cement plant closures and higher construction costs. These rules threaten to shut down up to 20 percent of the nation's cement manufacturing plants in the next two years, sending thousands of jobs permanently overseas and driving up cement and construction costs across the country. Additionally, the Portland Cement Association estimates it will cost $3.4 billion – half of the industry's annual revenues – just to comply with EPA's current Cement MACT rule."

I was surprised that a Democrat supported this bill, but it's really important to protect American jobs.

What’s behind the explosion of sexual activity among college students?

October 9, 2011 | by Wintery Knight | Link | Original Link

Consider this article about the problem first, from the Wall Street Journal.

Excerpt:

> The two most serious ethical challenges college students face are binge drinking and the culture of hooking up.
>
> Alcohol-related accidents are the leading cause of death for young adults aged 17-24. Students who engage in binge drinking (about two in five) are 25 times more likely to do things like miss class, fall behind in school work, engage in unplanned sexual activity, and get in trouble with the law. They also cause trouble for other students, who are subjected to physical and sexual assault, suffer property damage and interrupted sleep, and end up babysitting problem drinkers.
>
> Hooking up is getting to be as common as drinking. Sociologist W. Bradford Wilcox, who heads the National Marriage Project at the University of Virginia, says that in various studies, 40%-64% of college students report doing it.
>
> **The effects are not all fun. Rates of depression reach 20% for young women who have had two or more sexual partners in the last year, almost double the rate for women who have had none. Sexually active young men do more poorly than abstainers in their academic work. And as we have always admonished our own children, sex on these terms is destructive of love and marriage.**
>
> Here is one simple step colleges can take to reduce both binge drinking and hooking up: Go back to single-sex residences.
>
> I know it’s countercultural. More than 90% of college housing is now co-ed. But Christopher Kaczor at Loyola Marymount points to a surprising number of studies showing that students in co-ed dorms (41.5%) report weekly binge drinking more than twice as often as students in single-sex housing (17.6%). Similarly, students in co-ed housing are more likely (55.7%) than students in single-sex dorms (36.8%) to have had a sexual partner in the last year—and more than twice as likely to have had three or more.

Now this is where things get interesting. The religious conservative people don’t like students drinking, hooking up, and getting depressed. Who could possibly be in favor of hurting women?

Well, consider this article in the College Fix.

Excerpt:

> Now John Banzhaf, a law professor at George Washington University, is suing CUA for discrimination.
>
> Banzhaf filed a complaint with the Washington D.C. Human Rights Office alleging that the university had violated D.C.'s Human Rights Act. CUA lawyers met with Banzhaf at the Human Rights Office on September 15 to defend the university's decision.
>
> Banzhaf, who has a history of using lawsuits to fight against what he sees as discrimination, compared the university's decision to separate students by sex to separating them by religion or race. He specifically linked the single-sex dorm policy to the "separate but equal" racial policy in place in the U.S. before civil rights movement.
>
> He also told CUA's student newspaper, The Tower, that the decision is "the same as saying that since Muslims and Jews don't get along we should force them to live apart."

What's behind the push to make women drink and hook-up with men? Feminism.

What feminism says, in practice, is that men have no special duties when compared to women. To say that men have anything special that they are responsible for is to be "sexist". Therefore, men and women have to be lumped together from kindergarten to college graduation so that they can be identical in every way. Anything less would be "discrimination".

Fast and Furious assault weapons seized from drug cartel enforcer's home

October 9, 2011 | by Wintery Knight | Link | Original Link

From the L.A. Times.

Excerpt:

> High-powered assault weapons illegally purchased under the ATF's Fast and Furious program in Phoenix ended up in a home belonging to the purported top Sinaloa cartel enforcer in Ciudad Juarez, Mexico, whose organization was terrorizing that city with the worst violence in the Mexican drug wars.
>
> In all, 100 assault weapons acquired under Fast and Furious were transported 350 miles from Phoenix to El Paso, making that West Texas city a central hub for gun traffickers. Forty of the weapons made it across the border and into the arsenal of Jose Antonio Torres Marrufo, a feared cartel leader in Ciudad Juarez, according to federal court records and trace documents from the Bureau of Alcohol, Tobacco, Firearms and Explosives.
>
> The smugglers' tactics — quickly moving the weapons far from ATF agents in southern Arizona, where it had been assumed they would circulate — vividly demonstrate that what had been viewed as a local problem was much larger. Six other Fast and Furious guns destined for El Paso were recovered in Columbus, N.M.
>
> "These Fast and Furious guns were going to Sinaloans, and they are killing everyone down there," said one knowledgeable U.S. government source, who asked for anonymity because of the ongoing investigations. "But that's only how many we know came through Texas. Hundreds more had to get through."
>
> Torres Marrufo, also known as "the Jaguar," has been identified by U.S. authorities as the enforcer for Sinaloa cartel chieftain Joaquin "Chapo" Guzman. The Fast and Furious weapons were found at one of Torres Marrufo's homes.

I want to see how the media tries to help the Obama administration out of this mess. Be sure and share these stories on Facebook, especially the ones from CBS News, the L.A. Times, etc.

Dodd-Frank causes Bank of America to cut 30,000 jobs and raise debit card fees

October 10, 2011 | by Wintery Knight | Link | Original Link

From the Wall Street Journal.

Excerpt:

> What is the cost of overregulation? Bank of America appears to have provided part of the answer by announcing yesterday that the nation's largest bank will cut 30,000 jobs between now and 2014. CEO Brian Moynihan said the bank's plan is to slash $5 billion in annual expenses from its consumer businesses.
>
> Mr. Moynihan didn't say this, but we will: These layoffs are part of the bill for the last two years of Washington's financial rule-writing. After loose monetary policy had combined with insane housing policy to create a financial crisis, the Democrats who ran Washington in 2009 and 2010 enacted myriad new rules that had nothing to do with easy money or housing.
>
> Take the amendment that Illinois Democrat and Senator Dick Durbin (with the help of 17 Senate Republicans) attached to last year's Dodd-Frank financial law. Mr. Durbin's amendment instructed the Federal Reserve to limit the amount of "swipe fees" that banks can charge merchants when customers use debit cards.
>
> How exactly does forcing banks to charge Wal-Mart less money for operating an electronic payment system prevent the next financial crisis? Readers may wait a long time for a satisfactory answer, but the cost of this Dodd-Frank directive is straightforward.
>
> The Fed dutifully ordered banks to cut their fees almost in half. Bank of America disclosed in its most recent quarterly report that this change will reduce the bank's debit-card revenues by $475 million in just the fourth quarter of this year. The new rules take effect on October 1, so BofA seems to have sensible timing as it begins to shed workers from a consumer business that has become suddenly less profitable by federal edict.
>
> Make that the *latest* federal edict. In 2009, when a comprehensive overhaul of financial regulation was still a gleam in Barney Frank's eye, President Obama signed the CARD Act into law. It limited the ability of banks to increase rates on delinquent borrowers and to charge fees on unprofitable customers. As Washington encouraged card issuers to be more selective in advancing credit and to demand higher rates when they do, interest rates on card customers predictably increased relative to other types of lending in the months after the law took effect.
>
> Restricting bank profits on a particular product may have obvious populist appeal, but politicians shouldn't be surprised if banks decide that such consumer

> credit operations aren't good businesses and can function with fewer employees. Add in the various federal programs aimed at extracting penalties for this or that mortgage-foreclosure error and it's understandable that a bank would have trouble forecasting growth to justify its current work force.

But that's not all. The Dodd-Frank regulation also caused Bank of America to raise fees on debit cards to $5 a month ($60 a year).

Excerpt:

> Throwing their weight around at the height of the banking crisis, House Financial Services Chairman Barney Frank of Massachusetts and Sen. Chris Dodd of Connecticut vowed to stick it to banks. They blamed them for the mess to cover up the fact that they forced banks to lend to favored constituencies who could not repay.
>
> The two Democrats pushed through the much-vaunted Wall Street Reform and Consumer Protection Act, which President Obama signed and touted as one of the signature accomplishments of his presidency.
>
> That act, which included a micromanaging amendment on fees, carried a $2.9 billion implementation cost for that alone over five years, according to the Government Accountability Office.
>
> It was nothing but the same old pandering to special interests. Named after Illinois Democratic Sen. Dick Durbin, the amendment limited fees that banks can collect from sellers when their customers make debit card purchases — cutting 44 cent fees to 21 cents.
>
> That little bomb is now why battered Bank of America has no choice but to impose a $5 monthly fee — $60 a year — to consumers to make up for lost revenue.
>
> The "economics of offering a debit card have changed with recent regulations," a bank spokeswoman told ABC News Friday.
>
> BofA says it stands to lose $2 billion from the arbitrary Durbin price-fixing amendment and now has no choice but to make up for the lost revenue some other way.
>
> Now that consumers will be stuck with that fee, they can thank Dodd, Frank and Obama for that special little spike in inflation tailored just for them.
>
> Other banks, by the way, might follow. And like banks, consumers may respond in a way that is logical to their interests, too.

If there is one person who is to blame for this recession, it's Barney Frank. Chris Dodd isn't far behind. Who elected these people, and do they understand economics? I think not.

Jennifer Roback Morse debates same-sex marriage at SMU

October 10, 2011 | by Wintery Knight | Link | Original Link

Description:

> Southern Methodist University hosts a debate between Dr J (invited by the Federalist Society) and Dallas attorney (invited by OutLaw) on the legal definition of marriage.

The MP3 file is here.

Here is my snarky summary. Just bear in mind that Dr. J's opponent is a lawyer, so I want to be clear that I am caricaturing and satirizing her speeches deliberately for humor, and these are not factual statements about what she said at all. So don't sue me.

I do think you should listen to her actual words to see what factual arguments she makes, and whether her reasoning about what marriage is is compatible with polygamy, incestuous marriage, and anything else involving loving, committed consenting adults. And it you like this debate, you can find other debates on the Ruth Institute podcast. Jennifer Roback Morse is the William Lane Craig of the marriage issue.

Dr. Morse opening speech

No-Fault divorce as a case study:
– studies were produced to show that as long as divorced parents were happy, the divorced children would be fine
– but that research was wrong, children do suffer from divorce
– when you change the understanding of marriage, you change the way that generations relate
– you have to wait for one or more generations to see the effects of the change

The essential public purpose of marriage:
– to attach mothers and fathers to their children and to one another
– marriage exists in virtually every known society
– societies need marriage in order to allow children to develop over a period of time
– human babies have a long period of dependency, and we need parents to sick around for the duration
– there are many private reasons to get married, but we are insterested in the public purpose
– marriage identifies two people who made the child as having responsibility for the child

Marriage and the law
– currently there is the presumption of paternity – the woman's husband is presumed to be the father
– the presumption of paternity is being changed to the presumption of the parent
– now, the other partner is presumed to be the other parent

– but if same-sex marriage were legal, the partner is never the child's biological parent
– so, if you redefine marriage, then you are necessarily re-defining parenthood as well
– the children of same-sex unions are not being treated equally
– the children of same-sex unions are not going to have the same access to their biological parents

Children:
– children have a right to know who their mother and father are
– in general, children need a mother and father when they are growing up
– we have lots of data from single parents, divorced parents, divorced/remarried parents to show it

Biological parents and the state:
– in countries that redefine marriage, the state determines who the parents are
– the state creates criteria independent of biology to decide who parents are
– this is too much power for the state to have.

Opponent's opening speech:

Marriage is about people having feelings of love, not the rights of children:
– marriage has no definition outside of what the state says it is
– there are lots of children being raised in same-sex households
– marriage is not necessarily about parenting, because old infertile people get married
– it doesn't matter what children need or want, so long as adults feel happy
– lots of liberal organizations say that same-sex parents are BETTER than married bio-parents
– a family can be anything that we decide it is
– marriage has no basis biologically, marriage is assigned by the state with a civil license

Boohoohoo:
– there are lots of rights and responsibilities that married couples have that same-sex couples don't
– for example bereavement leave, property inheritance, visitation rights, joint tax returns, etc.

Same-sex marriage is the same as multi-racial marriage:
– men and women are indistinguishable and interchangeable

Keep your morality off my selfishness:
– it's nobody else's business if children don't grow up with their mothers and fathers

Dr. Morse's rebuttal:

Rebuttal:
– your statistics on the number of children in same-sex households are false: here are the actual numbers
– interracial marriage IS marriage: it produces children and requires parents be attached to those children
– a better solution to same-sex couples with children is adoption, not redefining marriage

Opponent’s rebuttal:

You’re a meany!
– if you don’t like same-sex marriage, then you opposed desegregation
– if you don’t like same-sex marriage, then you opposed women getting the right to vote
– I believe in justice, equality and civil rights, you don’t
– Yay social justice! I’m on the right side of history!

Rick Santorum explains his support for “Don’t ask, don’t tell”

October 10, 2011 | by Wintery Knight | Link | Original Link

Republican Rick Santorum explains his support Don’t Ask, Don’t Tell on Fox News Sunday. Excerpt:

> Someone’s race is not a factor in his ability to serve in the military because it’s a passive trait, but homosexuality requires active behavior and that makes it a potential barrier to unit cohesion in the military, former Pennsylvania Sen. Rick Santorum said Sunday, distinguishing between an earlier argument against integration in the Armed Forces.
>
> Explaining his opposition to the repeal of don’t ask, don’t tell, the defunct military policy that prohibits gays from serving openly in the military, the 2012 Republican presidential candidate said the two situations are “very, very different.”
>
> “I mean, we are talking about people who are, you know, simply different because of the color of their skin, not because of activities that would cause problems for people living in those close quarters,” said Santorum, considered one of the most socially conservative candidates in the race.
>
> […]”It’s not the same. And I know people try to make it the same, but it is not. It is a behavioral issue, as opposed to a color of the skin issue, and that makes all the difference when it comes to serving in the military,” he added.
>
> Santorum said members of the military live in close proximity to one another, and by necessity must shower together in the barracks or out in the field.
>
> That makes some people uncomfortable, he said, and “it could hurt our ability to retain and recruit and to put the best fighting force in place.”
>
> “You’re talking about the ability for people to be able to have that unit cohesion, to be able to work together in a efficient fighting way,” he said.
>
> […]”I know the whole gay community is trying to make this the new Civil Rights Act. It’s not. It’s not the same. You are black by the color of your skin. You are not homosexual necessarily by — obviously by the color of your skin or anything — it’s by a variety of things.”

Rick Santorum may be the only conservative running in this primary who understands these social issues enough to tell the truth about them. We’ve looked at the studies and seen that he’s right about sexual orientation being co-related with a variety of factors, some genetic and some environmental. But that’s not the view of people in the mainstream media, nor in the culture at large. Many people don’t take the time to look at the studies, such as the identical twin studies, which show that there is no genetically

determined behavior called homosexuality – homosexuality is, at least in part, a choice. For those who haven't looked at the actual research, that may come as a surprise, though. I think that for contentious issues like gay rights and same-sex marriage, it's a good idea to hear both sides in a formal debate.

Video and transcript of Herman Cain's Value Voter Summit speech

October 11, 2011 | by Wintery Knight | Link | Original Link

Did you see Herman Cain's speech at the Value Voter Summit? (transcript linked)

Part 1:

Part 2:

Excerpt:

> And so the pursuit of happiness, just like my parents pursued their definition of happiness. Mom was a domestic worker. Dad was a barber, a janitor and a chauffeur. When Dad walked off of that small farm, Dad went to pursue his American dream with the only kind of equity he had — sweat equity. And he was able to achieve his American dream, he and my mother. And Dad wanted to give us a little bit better start in life, and they did. And Dad wanted to make sure that one day he could buy a whole house for the family.
>
> You see, growing up in Atlanta, most of the time we lived in what my brother and I called a half a house. It was a six-room house with three rooms on one side, three rooms on the other side. We lived in half of it. My brother and I, being typical kids, used to say: Dad, why do we live in a half a house? (Laughter.) Dad said: It's a duplex. (Laughter.) Because we didn't know that Dad was saving for his dream, which was to one day buy a whole house for the family; and he did. Dad knew that the pursuit of happiness meant working those three jobs.
>
> And Dad also knew that the pursuit of happiness meant the three things that they instilled in my brother and I if you want to achieve your American dream; and that is, your belief in God, belief in yourself and belief in the greatest country in the world, the United States of America. And we are exceptional!

And:

> A reporter asked me just yesterday: Well, aren't you angry — (laughter) — about how America has treated you?
>
> AUDIENCE MEMBER: (Laughs.)
>
> MR. CAIN: I said: Sir, you don't get it. (Laughter.) I have achieved all of my American dreams and then some — (cheers, applause) — because of the great nation United States of America. (Cheers, applause.) What's there to be angry about? Angry? (Applause continues.)
>
> America's — one of America's greatest strengths is its ability to change. We have weathered those changes. That's what makes this nation great.

And:

> Now Mr. Cain, what are you going to do about Iran?
>
> Well, here's what I'm going to do about Iran. I'm going to utilize a capability that we have that most people are unaware of. I learned about these capabilities when I served on an advisory board for the Strategic Air Command before they changed it to STRATCOM. We are the only nation in the world that has the ballistic missile detection capability at sea as well as on land — better than any other country in the world. We have the ability to upgrade those ballistic missile defense systems on all of our AEGIS warships, and we have the ability to double the number of AEGIS warships and strategically place them anywhere in the world to detect missiles fired from those locations toward a friend or toward us and knock it out of the sky before it reaches its apex.
>
> And so I would upgrade — make it a priority to upgrade all of our AEGIS surface-to-air ballistic missile defense capability on all of our warships all the way around — all the way around the world, make that a priority, and then say to Ahmadinejad: Make my day. (Extended cheers, applause.)

And:

> They want you to believe that we can't do this. Just like three months ago I was — the pundits, the political pundits said Herman Cain can't get the nomination, Herman Cain cannot win the presidency, because he doesn't have high name-ID, he doesn't have a kajillion dollars and he's never held public office.
>
> But let me tell you what the American people are saying. They don't care about a katrillion dollars! America wants to raise some Cain, not raise more money! (Cheers, applause.) That's what the voters are saying. (Cheers, applause.)

Read the whole thing! Especially for those people who don't think they need to know what an AEGIS-enabled warship is. Herman Cain knows, because he worked on missile ballistics for the Department of the Navy.

Believe it: the reliable Gallup poll has Cain down by 2

From Gallup:

Preferences for 2012 Republican Presidential Nomination

Based on Republicans and Republican-leaning independents

	Jul 20-24, 2011	Aug 17-21, 2011	Sep 15-18, 2011	Oct 3-7, 2011
Romney	23	17	24	20
Cain	4	4	5	18
Perry	18	29	31	15
Paul	10	13	13	8
Gingrich	6	4	5	7
Bachmann	13	10	5	5
Santorum	2	3	2	3

Cain trails liberal Romney by two points

Steve Ertelt from Life News notes some other recent polls.

Excerpt:

> The tidal wave of recent support for Republican presidential candidate Herman Cain is manifesting itself in two new polls showing the pro-life businessman now running competitively with pro-abortion President Barack Obama.
>
> The first poll, conducted by the firm Poll Position, shows Cain beating Obama in a potential head-to-head matchup by a 43.3 percent to 41.3 percent margin. In the results the firm found in its automated voice survey technology poll, Cain takes a whopping 24 percent of the African-American vote — a much higher percentage that actual Republican presidential candidates have received in elections past.
>
> […]Meanwhile, a new Rasmussen poll shows Cain has pulled within three points of Obama in its most recent national telephone survey of likely voters. The latest 2012 hypothetical matchup finds the president earning 42% support, while Cain picks up 39% of the vote. Seven percent (7%) prefer some other candidate, and 12% are undecided.
>
> "The latest results represent the best showing for Cain who appears to be experiencing a surge of support among Republican voters. Late last month, the former radio host trailed the president 39% to 34%. Obama held a seven-point lead a month earlier and led Cain by 18 points in March," Rasmussen notes.
>
> "Cain draws support from 70% of Republican voters, while Obama picks up the vote from 79% of Democrats. Voters not affiliated with either party are evenly divided between the candidates. Eighty-five percent (85%) of Tea Party voters support Cain, but 55% of non-members prefer Obama," Rasmussen continued.
>
> Cain likely would do better against Obama, but the Rasmussen poll shows some Republican voters are concerned about his "9-9-9" tax reform plan, as most of those polled agree that if it becomes law, Congress won't wait long to raise the tax rates higher. Fifty-six percent (56%) of GOP voters favor Cain's plan, but 66% of all voters think Congress would raise tax rates within five to 10 years of the plan's adoption.
>
> The businessman has acknowledged and addressed that concern, saying his plan would require a two-thirds vote in Congress to raise taxes.
>
> Rasmussen polls show Obama leads all of the current GOP hopefuls except former Massachusetts Governor Mitt Romney with whom he is essentially tied. New numbers on the Romney-Obama match-up will be released tomorrow, Rasmussen indicates.

If you want to know why he is surging, watch the speech, or read the transcript.

American Atheists: are they much different from Stalin and Mao Tse Tung?

October 11, 2011 | by Wintery Knight | Link | Original Link

I do want to make a distinction between ordinary individual atheists and militant atheists. This post is about militant atheists, the kind that organizes into groups and then exerts political power to try to trample the rights of religious people. This post is about that kind of atheist, not the ordinary kind that is honest and open to being convinced that God exists. If you are an atheist, and you don't have any thoughts about silencing religious people, or making religious people deny their convictions, or taking away their rights to speak freely or assemble, then this post isn't about you. But there is another group of atheists that does have these and other goals, and this post is an answer to them.

Consider this post on the American Atheists web site. (The PDF is saved here)

Excerpt:

> It should come as no surprise that the individuals who abide by fundamentalist Christian… doctrines would be the first to cry out that they are being persecuted when their dangerous, damaging and disingenuous beliefs come under attack. Most of these people lack the maturity and intelligence to act in a socially acceptable manner. Many of them are sociopaths and quite a good number of them are psychopaths. All of them are clearly delusional.
>
> The fact is that fundamentalist Christians… are not interested in coexisting or getting along. They have no desire for peace. They do not want to sit down with us in diplomatic efforts to iron out our differences and come to an agreement on developing an integrated society.
>
> They want us to die.
>
> Their interpretation of the Bible… are such that there is no other course of action but to kill the infidel, and if anyone believes otherwise they are only fooling themselves. It is not just in the best interests of atheists to be intolerant of fundamental Christianity and radical Islam, but it is also in the best interest of mainstream believers within these faiths, as well. Moderates and even Progressives who stand in support of extremists just because there is a claim to the same deity are not doing themselves any favors. Fundamental Christians make all Christians look bad…
>
> …the underbelly of fundamentalist Christianity… does not operate in the legal system. They don't respond to lawsuits, letters, amicus briefs or other grass-roots campaigns and they must, must, must be eradicated.

Wow, that's some pretty strong rhetoric. Has anyone actually ever tried to eradicate Christianity? Let's see.

The death toll of atheism: over 100 million in the last century

Here's a quick introduction (from Harvard University Press) to the body count for atheist regimes in the last century.

Excerpt:

> Already famous throughout Europe, this international bestseller plumbs recently opened archives in the former Soviet bloc to reveal the actual, practical accomplishments of Communism around the world: terror, torture, famine, mass deportations, and massacres. Astonishing in the sheer detail it amasses, the book is the first comprehensive attempt to catalogue and analyze the crimes of Communism over seventy years.
>
> "Revolutions, like trees, must be judged by their fruit," Ignazio Silone wrote, and this is the standard the authors apply to the Communist experience—in the China of "the Great Helmsman," Kim Il Sung's Korea, Vietnam under "Uncle Ho" and Cuba under Castro, Ethiopia under Mengistu, Angola under Neto, and Afghanistan under Najibullah. The authors, all distinguished scholars based in Europe, document Communist crimes against humanity, but also crimes against national and universal culture, from Stalin's destruction of hundreds of churches in Moscow to Ceausescu's leveling of the historic heart of Bucharest to the widescale devastation visited on Chinese culture by Mao's Red Guards.
>
> As the death toll mounts—as many as 25 million in the former Soviet Union, 65 million in China, 1.7 million in Cambodia, and on and on—the authors systematically show how and why, wherever the millenarian ideology of Communism was established, it quickly led to crime, terror, and repression. An extraordinary accounting, this book amply documents the unparalleled position and significance of Communism in the hierarchy of violence that is the history of the twentieth century.

It's important to understand that these communist regimes *were run by militant, organized atheists*. And atheism was at the center of their worldview, and their political involvement.

Here is a citation from **a communist web site**:

> In the body of his study Marx pointed out that: "The proofs of the existence of God are either mere hollow tautologies… all proofs of the existence of God are proofs of his non-existence." (Marx, The Difference Between the Democritean and Epicurean Philosophy of Nature, 1841, MECW 1.)
>
> …In 1841 Marx and Bauer planned to publish a radical philosophical periodical, Archives of Atheism. The views of some contemporaries give some indication of the scope of their project.
>
> Arnold Ruge wrote: "**Bruno Bauer, Karl Marx, Christiansen and Feuerbach are forming a new montagne and are making atheism their slogan. God,**

> **religion, immortality are cast down from their thrones and man is proclaimed God.**"
>
> And Georg Jung wrote to Ruge: "If Marx, Bruno Bauer and Feuerbach associate to found a theological-philosophical review, God would do well to surround himself with all the angels and indulge in self-pity, for these three will certainly drive him out of his heaven… **For Marx, at any rate, the Christian religion is one of the most immoral there is.**" (David McLellan, Marx before Marxism, 1970)
>
> **Flowing from his atheism, Marx opposed organised religion and the role of religion in politics.** A flavour of Marx's attitude can be gleaned from his journalism at the time.
>
> …in "The Leading Article" in No. 179 of the Kölnische Zeitung (1842), Marx accused the Prussian state of disseminating Christian dogma, criticised the police and the censor for protecting religion and insisted that no distinction should be made between religion as belief and the religious establishment. (MECW 1)

But this is ancient history right? Or is this still going on today?

Anti-Christian violence in atheist regimes

The problem hasn't gone away… it's still here wherever militant atheism is the state religion.

Here's an example of how Christians are treated by the atheist regime in North Korea. This is just one of these atheist dictators who is taking the anti-Christian rhetoric of Karl Marx seriously.

Excerpt:

> North Korea publicly executed a Christian woman last month for distributing the Bible, which is banned in the communist nation, South Korean activists said Friday.
>
> Ri Hyon Ok, 33, was also accused of spying for South Korea and the United States and organizing dissidents. She was executed in the northwestern city of Ryongchon near the border with China on June 16, according to a report from an alliance of several dozen anti-North Korea groups.
>
> Ri's parents, husband and three children were sent to a political prison camp in the northeastern city of Hoeryong the following day, the report said, citing unidentified documents it says were obtained from North Korea. It showed a copy of Ri's North Korean government-issued photo ID. It is virtually impossible to verify such reports about secretive North Korea, where the government tightly controls the lives of its citizens and does not allow dissent.
>
> On Thursday, an annual report from a state-run South Korean think tank on human rights in the North said that public executions, though dropping in number in recent years, were still carried out for crimes ranging from murder to circulating foreign movies.

> North Korea claims to guarantee freedom of religion for its 24 million people but in reality severely restricts religious observances. The cult of personality surrounding national founder Kim Il Sung and his son, current leader Kim Jong Il, is a virtual state religion.
>
> The government has authorized four state churches, one Catholic, two Protestant and one Russian Orthodox, but they cater to foreigners and ordinary North Koreans cannot attend. However, defectors and activists say more than 30,000 North Koreans are believed to practice Christianity secretly.
>
> The U.S. State Department reported last year that "genuine religious freedom does not exist" in North Korea.
>
> "North Korea appears to have judged that Christian forces could pose a threat to its regime," Do Hee-youn, a leading activist, told reporters, claiming public executions, arrest and detention of North Koreans are prevalent.

The BBC reports on some eradicating of Christianity in China.

Excerpt:

> Human rights groups have documented an increasing number of arrests of Chinese Christians since the beginning of 2004.
>
> According to the charity Christian Solidarity Worldwide, persecution is becoming more systematic and targeted at large-scale Christian gatherings.
>
> Since June the charity has documented three mass arrests of unregistered Christians. In each case more than 100 people were detained.
>
> Amnesty International has reported many cases of detained church leaders in recent years, especially in the provinces of Zhejiang, Jiangsu and Hebei.
>
> One of the most high-profile cases is that of Gong Shengliang, head of the South China Church, who was sentenced to death in 2001. His sentence was commuted to a prison term, but Amnesty has received reports that he has been severely tortured in jail.
>
> In August three Christians were sentenced to jail terms for passing information to foreign governments, and in July state media reported that a woman had been beaten to death after being arrested for handing out bibles.
>
> Peter Xu said that while he was in jail, he saw several people even being killed for their faith.
>
> "A believer was praying, so a jailer made other prisoners lift him up to the ceiling and drop him to the ground many times until he died," Mr Xu said.

So, judging from these examples, at least some atheists have taken the desire to "eradicate Christianity" and put it into practice.

Can atheism ground human rights and morality?

So does atheism rationally ground a prohibition on mass murder? Well think about what

atheism involves. Atheism is the view that there is no design to the universe. The universe is an accident. Matter is all there is. There is no way the universe ought to be, objectively – because there is no designer, objectively. And there is no way humans ought to act, objectively – because there is no moral lawgiver, objectively. Humans have no free will to make moral choices – we are just matter in motion, and that means that our behavior is fully determined by our genetic programming and sensory inputs. Moreover, there is no one we are accountable to after we die, so even if we had free will, there would be no reason to do good self-sacrificially, or to abstain from evil, self-sacrificially. When you die, that's the end, so there's no point in sacrificing your happiness for some arbitrary social conventions that vary by time and place. There is no reason to put anyone else's interests above our own unless it gives us pleasure or helps us to avoid pain or social disapproval.

On atheism, if you feel pleasure from hurting or killing others, and there's no one there strong enough to stop you, then there is nothing objectively wrong with hurting or killing others. Morality is just a convention on atheism – it varies by time and place. If the majority of people like slavery, then slavery becomes "moral". There is no transcendent source of morality or human rights, such as the right to life or the right to liberty, on atheism. I repeat: on atheism, morality is the same as traffic laws or clothing fashions – they just evolve as a result of biological evolution and social evolution. So atheist morality is just "do whatever makes you feel good, but don't get caught by those who might have different arbitrary preferences than you do".

Don't believe me? Consider a couple of prominent atheists:

William Provine says:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Michael Ruse says:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. **Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory.** (Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

Richard Dawkins says:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, **no design, no purpose, no evil and no good**, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

No ultimate foundation for ethics? Ethics is illusory? No evil and no good? Then why is this American Atheist article saying that some things are evil and that some things are good? It's not rational to make claims about what's evil and good on atheism, because on atheism, as Richard Dawkins tells us, there is no evil and no good.

When a Christian theist says slavery is wrong, he means it really is wrong. And he can make a rational argument for it based on the existence of a designer who has revealed that slavery is wrong – as Christian abolitionists like William Wilberforce argued when he single-handedly ended slavery in the UK. But when an atheist says slavery is wrong, he means 1) that the morality of slavery is a matter of opinion, and 2) that the two opinions "slavery is right" or "slavery is wrong" are both equally warranted depending on where and when each convention evolved, and 3) that he has a personal preference for one view over the other, in keeping with his social group. In one time and place, slavery is "wrong", and in another time and another place, slavery is "right". *Whatever has evolved in a culture at some time and in some place is right for that culture.* There is no rule, on atheism, to say that one society is better than any other. Whatever evolved, biologically and sociologically, is right, on atheism.

Are atheists at least scientifically literate?

It's also important to realize what we are dealing with in atheism.

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* The Big Bang has been confirmed by experimental evidence such as redshift measurements, light element abundances and the cosmic microwave background radiation. According to this peer-reviewed astrophysics journal article, the best explanation for the Big Bang event is a supernatural agent. This cosmology falsifies eternal models of the universe, which are *required* by atheism.

So you have an entire group of people who basically make a faith commitment to an unscientific cosmology, and then they go on to advocate the eradication of Christianity (and therefore, of the eradication of the followers of Christianity). They believe what they want to believe – *regardless* of logic and science. Now why is that? Let's consult a famous

non-theist to find out what's really going on.

Consider the famous agnostic Aldous Huxley:

> "I had motives for not wanting the world to have a meaning; consequently assumed that it had none, and was able without any difficulty to find satisfying reasons for this assumption. The philosopher who finds no meaning in the world is not concerned exclusively with a problem in metaphysics, he is also concerned to prove that there is no valid reason why he personally should not do as he wants to do, or why his friends should not seize political power and govern in the way that they find most advantageous to themselves… For myself, the philosophy of meaningless was essentially an instrument of liberation, sexual and political." — Aldous Huxley in *Ends and Means*, 1937

That's what's really going on here. They assume a reality that corresponds to their desires, and then they disregard any evidence that falsifies it – even scientific evidence.

What happens to atheists in debates?

Consider this debate with Christopher Hitchens and William Lane Craig:

If you watch the debate closely, you will find that although Christopher Hitchens is very aggressive, that he makes only one argument very briefly, in his very last speech. Instead, about 99% of his speeches he expresses his dislike for God and his preference that God would do things differently, so that it's more in line with Mr. Hitchens' preferences about the way the world ought to be.

The same thing happens in this debate with Sam Harris:

It's really not about truth – it's more like "Yuck! I don't like Christianity!". As we've seen, atheists don't really believe that morality is real at all, it has no existence outside people's opinions, on their view.

One final point, since it gets mentioned a lot: slavery. I find it particularly interesting when atheists complain about slavery. Slavery occurs when one group of people who have power de-humanize another group of people with less power based on some characteristic of that other group, so that they can exploit them or prevent them from interfering with their own pursuit of pleasure. Now consider the issue of abortion today. Conservative Christians oppose abortion, because we don't think that entire groups of people lose their right to life just because they are small or insufficiently developed. Atheists on the other hand tend to favor of abortion.

In the time of slavery, the most committed evangelical Christians like William Wilberforce were active in the abolition movement. Similarly, the most committed evangelical Christians today oppose abortion. Both issues are the same – a whole group of people are having their basic human rights removed by some other powerful group. Now abortion is much worse than slavery – 50 million unborn Americans have died since 1973. And generally, atheists do not oppose abortion today. This leads me to suspect that atheists would not have been opposed to slavery back in the time of slavery, certainly not in the way that William Wilberforce opposed it. In fact, here is good old Richard Dawkins

expressing his support for infanticide. Richard Dawkins recently made comments about wanting to destroy Christianity – even though he fled from an opportunity to debate William Lane Craig. It's not debate they want.

So what's my view of what to do with atheists? I advocate reasoning with atheists, using arguments and evidence. I also advocate treating them gently and respectfully and charitably. This is no surprise, since religious people are known to be more charitable than non-religious people.

Which politician received the most money from Wall Street in the last 20 years?

October 11, 2011 | by Wintery Knight | Link | Original Link

The Daily Caller explains how Barack Obama has received the most money from Wall Street bankers of all politicians in the last 20 years. (H/T Neil Simpson)

Excerpt: (with links removed)

> Despite his rhetorical attacks on Wall Street, a study by the Sunlight Foundation's Influence Project shows that President Barack Obama has received more money from Wall Street than any other politician over the past 20 years, including former President George W. Bush.
>
> In 2008, Wall Street's largesse accounted for 20 percent of Obama's total take, according to Reuters.
>
> When asked by The Daily Caller to comment about President Obama's credibility when it comes to criticizing Wall Street, the White House declined to reply.
>
> […]In fact, the Sunlight Foundation, a nonpartisan watchdog group that tracks lobbyist spending and influence in both parties, found that President Obama has received more money from Bank of America than any other candidate dating back to 1991.
>
> An examination of the numbers shows that Obama took in $421,242 in campaign contributions in 2008 from Bank of America's executives, PACs and employees, which exceeded its prior record contribution of $329,761 to President George W. Bush in 2004.
>
> According to the Center for Responsive Politics, Wall Street firms also contributed more to Obama's 2008 campaign than they gave to Republican nominee John McCain.
>
> "The securities and investment industry is Obama's second largest source of bundlers, after lawyers, at least 56 individuals have raised at least $8.9 million for his campaign," Massie Ritsch wrote in a Sept. 18, 2008 entry on the Center for Responsive Politics's OpenSecrets blog.
>
> By the end of Barack Obama's 2008 campaign, executives and others connected with Wall Street firms, such as Goldman Sachs, Bank of America, Citigroup, UBS AG, JPMorgan Chase, and Morgan Stanley, poured nearly $15.8 million into his coffers.
>
> Goldman Sachs contributed slightly over $1 million to Obama's 2008 presidential campaign, compared with a little over $394,600 to the 2004 Bush campaign. Citigroup gave $736,771 to Obama in 2008, compared with $320,820 to Bush in 2004. Executives and others connected with the Swiss bank UBS AG donated $539,424 to Obama's 2008 campaign, compared with $416,950 to Bush in

> 2004. And JP Morgan Chase gave Obama's campaign $808,799 in 2008, but did not show up among Bush's top donors in 2004, according to the Center for Responsive Politics.
>
> Obama's close relationship with JP Morgan Chase was highlighted earlier this year when he tapped Bill Daley, a former top executive with the bank, to replace Rahm Emanuel as his chief of staff.
>
> Wall Street's generosity to Obama didn't end with his 2008 campaign either. Wall Street donors contributed $4.8 million to underwrite Obama's inauguration, according to a Jan. 15, 2009 Reuters report.
>
> So far Wall Street has raised $7.2 million in the current electoral cycle for President Obama, according to the Center for Responsive Politics. Obama's 2012 Wall Street bundlers include people like Jon Corzine, former Goldman Sachs CEO and former New Jersey governor; Azita Raji, a former investment banker for JP Morgan; and Charles Myers, an executive with the investment bank Evercore Partners.

This ought to put to rest the myth that Wall Street is composed of greedy Republicans. But it will only work for people who care about the facts.

I blogged before about the Wall Street bailout that Obama pushed through – remember that? Do you think that maybe he was paying off the people that got him elected? Is that what "stimulus" spending really means? Is Solyndra just another example of "stimulus" spending to bail out the people who got him elected?

Useful idiot Jim Wallis accepts $150,000 more from leftist atheist George Soros

October 11, 2011 | by Wintery Knight | Link | Original Link

From World Magazine. (H/T Jay Richards)

Excerpt:

> Last year Jim Wallis encountered a barrage of criticism when WORLD reported that his religious left organization, Sojourners, took $325,000 from the world's most notorious billionaire, pro-abortion atheist George Soros (July 17 and Sept. 11, 2010). Now he's at it again: In an email note to me, Wallis confirmed that Soros' Open Society Foundation has just given Sojourners $150,000 more.
>
> The donation is more evidence that Wallis and Sojourners are on the left, even though the organization appeals to young evangelicals by claiming to be apolitical—in Wallis' summation, not left but "deep." Sojourners has paid its bills through contributions from co-religionists but also with $250,000 from The Tides Foundation, $200,000 from the Ford and Rockefeller Foundations, and additional sums from Barbra Streisand and others.
>
> For some contributors, Sojourners is a useful tool in reducing evangelical support for conservatives. Others have grander motives: Soros himself has stated, "The main obstacle to a stable and just world order is the United States."

I think all Christians should have a view of economics, because we need to understand how to be effective at helping the poor. It may sound like a good idea to raise the minimum wage, but economists understand that raising the minimum wage actually hurts the poor, especially the young. It never hurts to study and to understand the way the world works – in any area of knowledge. I think that Christians should know how Christianity relates to every area, from science to history to philosophy to ethics to marriage and family.

Who really won the Value Voter Summit straw poll? Cain and Santorum

October 12, 2011 | by Wintery Knight | Link | Original Link

CBS News explains who really won the straw poll at the Value Voter Summit.

Full text:

> Rep. Ron Paul scored a decisive victory Saturday in a mock presidential election at the Values Voter Summit, trouncing fellow Texan, Gov. Rick Perry, but an organizer of the straw poll suggested ballot-stuffing may have skewed the results.
>
> In a press conference following the announcement of the straw poll results at the annual Washington gathering of social conservatives, Family Research Council President Tony Perkins all but dismissed the results as irrelevant, citing 600 people who registered Saturday morning and, he said, “left after Ron Paul spoke.”
>
> A total of 1,983 ballots were cast. “You do the math,” Perkins said.
>
> A year ago in the same contest, Paul came in second-to-last. Speaking briefly with reporters before the straw poll results were announced, the Republican lawmaker said, “If I win, it wouldn’t be as important to the media than if I lose.”
>
> Paul has a history of scoring unlooked-for straw poll wins by packing the electorate with diehard supporters. But Perkins said it’s too early to take much away from Paul’s win. “Let me just take you back four years to this event, when we had a straw poll. Mitt Romney won that straw poll,” he said. “I think people are still in the process of deciding where they want to go.”
>
> Paul got 37 percent of the vote. The rest of the ballots showed how widely social conservatives support is splintered among the rest of the field.
>
> Two other conservative favorites, businessman Herman Cain and former Sen. Rick Santorum, took second and third place, respectively, with 23 percent for Cain and 16 percent for Santorum.
>
> Perry and Michele Bachmann won 8 percent apiece. Mitt Romney got 4 percent of the vote and Newt Gingrich, 3 percent.
>
> For Perry, who is struggling to regain momentum after some disappointing showings in debates and the polls, the results represent a disappointment. The Texas governor is counting on voters who share his socially conservative views to help power his candidacy into the top tier of Republicans. He didn’t get the ringing endorsement he might have wished out of the Values Voter Summit. Instead, the gathering put Perry in the midst of a controversywhen the Dallas pastor who introduced him Friday later told reporters that Romney’s Mormon faith is a “cult” and “not Christian.”

> Perkins said his organization did “everything to preserve the integrity of this straw poll,” including denying campaigns from buying blocks of tickets, “which they attempted to do this year.” But Santorum on Friday seemed dubious, and told National Journal that his success in the polls would depend “on how many people, how many campaigns, tried to buy a bunch of tickets and try to stack the poll, which unfortunately happens.”
>
> The victory for the longtime congressman and three-time presidential contender over his Republican rivals in the presidential contest was all the more surprising because Paul’s principled libertarianism sometimes puts him at odds with the views of social conservatives on issues such as gay marriage and drug laws.
>
> But in a speech hours before the straw poll results were announced, Paul argued that his staunch fiscal conservatism and dogmatic views on liberty were in tune with family values and the Bible.

A friend of mine “Neil” who attended the Value Voter Summit had these comments about what really happened:

> Because these folks did not stay for the entire Summit.Those of us who were there knew the difference. It’s like a big family, everyone is kind and talks to each other. We see each other in the hotel halls and we chat and ask where people are from. It’s a special group of people who donate to FRC, AFA, Heritage and are Evangelicals, Catholics and Orthodox and a few Jewish believers. We had lunch with each other, shared stories of frustrations with our churches and our elections and compared notes.
>
> The Ron Paulites, didn’t mix, didn’t go to any break out sessions, didn’t eat with us.
>
> So they did not share the same values, the same goals or the same relationship with FRC or AFA. They didn’t even listen to the rest of the speakers (all day Friday and the rest of the day Sat). They were not Values Voters or part of our family.
>
> The straw poll was supposed to reflect the VVS family. This is what we guys voted.

If you delete the 600 Ron Paul voters, you get this:

- Herman Cain 456 33%
- Rick Santorum 317 23%
- Rick Perry 159 11%
- Michele Bachmann 159 11%
- Ron Paul 134 10%
- Mitt Romney 79 6%
- Newt Gingrich 59 4%

Ron Paul thinks that protecting the unborn and protecting a child's right to a mother and father are "state issues". He is moderate on social issues – nothing like Rick Santorum and Michele Bachmann, for example. He doesn't have the history of activism on these issues because he thinks that they are not federal issues. Fair enough, but that's not socially conservative.

Herman Cain in first place in new South Carolina and Virginia polls

October 12, 2011 | by Wintery Knight | Link | Original Link

Presidential candidate Herman Cain

Here's the new Virginia poll, where Herman Cain is tied for first place.

Excerpt:

> Businessman Herman Cain has surged into the top tier of presidential candidates in Virginia, according to a new poll of the state, moving into a tie in the Republican nomination contest with former Massachusetts Gov. Mitt Romney.
>
> Texas Gov. Rick Perry has faded considerably.
>
> The Quinnipiac University Poll of Virginia released Tuesday shows Romney and Cain at 21 percent apiece among Republican voters, while Perry sits at 11 percent–less than half the support he registered in the same poll a month ago.
>
> Rep. Ron Paul (Texas) gets 9 percent, while Rep. Michelle Bachmann (Minn.) and former House speaker Newt Gingrich receive 7 percent apiece.
>
> […]"Herman Cain is moving up the ladder at breakneck speed," said Peter A. Brown, assistant director of the Quinnipiac University Polling institute, in a news release.

Virginia is a swing state… so this is impressive.

And a new poll in South Carolina, where Herman Cain leads Romney by 1 point.

Excerpt:

> Businessman Herman Cain has edged out former Massachusetts Gov. Mitt Romney in the first primary state of the South, according to a new poll released Tuesday.
>
> The conservative radio talk show host received 26% support in the Palmetto State poll, only one percentage point ahead of Romney and within the margin of

> error for the American Research Group survey, indicating the two are statistically tied.
>
> South Carolina is slated to go fourth in the nation's primary and caucus calendar, preceded by Iowa, New Hampshire, and Nevada.
>
> The longest-serving Texas Gov. Rick Perry placed third with 15% support, followed by former House Speaker Newt Gingrich at 8%, Texas Rep. Ron Paul at 7%, and Minnesota Rep. Michele Bachmann at 5%.
>
> […]When the survey is narrowed to Republican respondents who consider themselves likely primary voters, Cain and Romney are tied at 27% each.

I am hoping that Romney stalls out… as I've blogged before, Romney is liberal on everything from abortion, to gay rights, to gun control, to global warming to government-run health care. The man is really more of a moderate-to-liberal Democrat, ideologically, and we don't need that right now.

Is Mormonism a cult? Is Mormonism like Christianity? Are Mormons Christians?

October 12, 2011 | by Wintery Knight | Link | Original Link

I'm seeing a lot of ignorance in the mainstream media, including in the conservative media, and even from some Republican politicians. So it's time to set the record straight on what Mormons and Christians really believe.

Do Mormons and Christians have the same beliefs?

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end." ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed.

What do the best Christian theologians believe about the origin of the universe?

> "By what means did you make heaven and earth? What tool did you use for this vast work? You did not work as a human craftsman does, making one thing out of something else as his mind directs… Nor did you have in your hand any matter from which you could make heaven and earth, for where could you have obtained matter which you had not yet created, in order to use it as material for making something else? It must therefore be that you spoke and they were made. In your Word you created them." (Augustine, *Confessions* 11.5.7.)
>
> "As said above (Question 44, Article 2), we must consider not only the emanation of a particular being from a particular agent, but also the emanation of all being from the universal cause, which is God; and this emanation we designate by the name of creation. Now what proceeds by particular emanation, is not presupposed to that emanation; as when a man is generated, he was not before, but man is made from "not-man," and white from "not-white." Hence if the emanation of the whole universal being from the first principle be considered, it is impossible that any being should be presupposed before this emanation. For nothing is the same as no being. Therefore as the generation of a man is from the "not-being" which is "not-man," so creation, which is the emanation of all being, is from the "not-being" which is "nothing"." (Summa Theologica, part 1, question 45)
>
> "Let this, then, be maintained in the first place, that the world is not eternal, but was created by God." (John Calvin, Genesis)
>
> "We firmly believe and simply confess that there is only one true God … the Creator of all things visible and invisible, spiritual and corporeal; who from the very beginning of time by His omnipotent power created out of nothing both the spiritual beings and the corporeal." (The Fourth Lateran Council of 1215)

So who is right? Has the universe always existed or did it come into being out of nothing?

Breaking the tie

To break the tie, we must use the ordinary tools of investigation – logic, science, historical methods, and so on. Let's use science this time.

The Big Bang cosmology is the most widely accepted cosmology of the day. It is based on several lines of evidence, and is broadly compatible with Genesis. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before

> the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

Taking religion seriously

You can find other disagreements between Christianity and Mormonism, if you are not so busy putting on make-up like politicians and journalists are. For example, Christianity is monotheistic (one God) and Mormonism is polytheistic (many gods). That means Mormonism is more like Hinduism than it is like Christianity – Mormonism and Hinduism even agree on the eternally oscillating universe. You can read all about it, with citations from Mormon scholars, in this article, authored by Baylor University professor Francis J. Beckwith. Or you could take a look at the history of Mormonism, and see if the claims made in the religious texts of Mormonism are historical. Or you could take a look at the prophetic claims of the founder of Mormonism and see if they were accurate.

Here's an examination of the historical basis for the Mormon Scriptures, for example:

This is how responsible people evaluate religions to see whether they are all the same as the others, and, more importantly, *if one is true*. The point of religion is not to make people feel good, or to make them have a sense of community. The point of religion is to know how we got here, where we are going, and what we are supposed to be doing – *as matters of fact*.

As long as you don't assume, *before doing any research,* that all religions are the same, and that all of their claims are equally untestable, then you can actually investigate things and come to some conclusions. Investigating is good, but watching debates with different views that feature public, testable evidence is also a good idea. The important thing is that you are serious about *evaluating the testable claims of different religions*, and that you don't *assume* that choosing a religion is just like taste in clothes or taste in food, which varies by time and place and is really not making objective propositional claims about reality, instead of subjective claims about individual tastes and preferences. Just because you were born into a country that believed that the Earth was flat (or round) that wouldn't take away the obligation on you to test those views and go looking at other views using the tools of logic, science and historical analysis.

White House used Mitt Romney's Romneycare as a blueprint for Obamacare

October 12, 2011 | by Wintery Knight | Link | Original Link

MSNBC reports that Obamacare was designed using Romney's health care plan as a blueprint.

Excerpt:

> Newly obtained White House records provide fresh details on how senior Obama administration officials used Mitt Romney's landmark health-care law in Massachusetts as a model for the new federal law, including recruiting some of Romney's own health care advisers and experts to help craft the act now derided by Republicans as "Obamacare."
>
> The records, gleaned from White House visitor logs reviewed by NBC News, show that senior White House officials had a dozen meetings in 2009 with three health-care advisers and experts who helped shape the health care reform law signed by Romney in 2006, when the Republican presidential candidate was governor of Massachusetts. One of those meetings, on July 20, 2009, was in the Oval Office and presided over by President Barack Obama, the records show.
>
> "The White House wanted to lean a lot on what we'd done in Massachusetts," said Jon Gruber, an MIT economist who advised the Romney administration on health care and who attended five meetings at the Obama White House in 2009, including the meeting with the president. "They really wanted to know how we can take that same approach we used in Massachusetts and turn that into a national model."
>
> […]The White House visitor logs suggest that, if Obama officials didn't talk directly with Romney, senior presidential aides did consult with others — like Gruber — who played important roles in helping to craft and implement the Massachusetts law.
>
> In addition to Obama himself, the meetings attended by Gruber were presided over by the president's chief economic adviser, Lawrence Summers, then budget director Peter Orzag and Nancy-Ann DeParle, the president's chief adviser on health care, the records show. Gruber was also given a $380,000 contract by the Obama administration in 2009 to work with Congress on drafting a new federal law based on the Massachusetts law, records show.
>
> Another Romney administration adviser consulted by the White House was Jon Kingsdale, a health-care expert who was appointed in 2006 by one of Romney's Cabinet secretaries, Thomas Trimarco, to serve as executive director of the Commonwealth Health Insurance Connector Authority — the state agency charged with implementing the new Massachusetts health-care law.

Let’s have a quick re-cap of Romneycare, shall we?

The libertarian Cato Institute think tank explains why Obamacare and Romneycare are identical in many ways.

Excerpt:

> As part of his liberal phase when governor of Massachusetts — political principles have been ever-flexible for Romney — he orchestrated passage of legislation with eerie similarities to ObamaCare. Massachusetts mandates purchase of insurance, decides what benefits must be offered, and maintains a complex system of subsidies and penalties. Declared Boston Globe columnist Adrian Walker, the two programs are “not identical, but they’re certainly close kin.” MIT economist Jonathan Gruber, who advised both Gov. Romney and President Obama on health care, asserted: “Basically, it’s the same thing.”[…]Alas, even the former governor’s constitutional scruples are suspect. In 1994 he backed a federal mandate. His concern about the overweening federal government apparently was not so finely developed then.
>
> […]However, paying for more benefits for more people inevitably makes medicine more expensive. Costs for Commonwealth Care, the Massachusetts government’s subsidized insurance program alone are up a fifth over initial projections. Last year State Treasurer Timothy P. Cahill wrote: “The universal insurance coverage we adopted in 2006 was projected to cost taxpayers $88 million a year. However, since this program was adopted in 2006, our health-care costs have in total exceeded $4 billion. The cost of Massachusetts’ plan has blown a hole in the Commonwealth’s budget.”
>
> […]State finances have not collapsed only because RomneyCare spread the costs widely, forcing virtually everyone in and out of the state to share the pain. Cahill cited federal subsidies as keeping the state afloat financially. Indeed, a June study from the Beacon Hill Institute concluded that “The state has been able to shift the majority of the costs to the federal government.” The Institute pointed to higher costs of $8.6 billion since the law was implemented. Just $414 million was paid by Massachusetts. Medicaid (federal payments) covered $2.4 billion. Medicare took care of $1.4 billion.
>
> But even more costs, $4.3 billion, have been imposed on the private sector — employers, insurers, and residents. This estimate is in line with an earlier study by the Massachusetts Taxpayers Foundation, which figured that 60% of the new costs fell on individuals and businesses.
>
> As expenses have risen, so have premiums. Noted Kuttner, “because serious cost containment was not part of the original package, premium costs in the commonwealth have risen far faster than nationally — by 10.3%, the most recent year available.” Economists John F. Cogan, Glenn Hubbard, and Daniel Kessler figured that RomneyCare inflated premiums by 6% from 2006 to 2008. This at a time where the state-subsidized Commonwealth Care was displacing private

> insurance for many people, thereby reducing demand, which should have reduced cost pressures.
>
> Unfortunately, noted the Beacon Hill Institute, "private companies have no choice but to pass the higher costs onto the insured. Some of these costs fall in the double-digit range." That naturally displeased public officials, since it undercut their claim to have solved Massachusetts' health care problems.

And the Boston Herald notes that Romneycare caused the loss of 18,000 jobs. (H/T Michelle Malkin)

Excerpt:

> The Bay State's controversial 2006 universal health-care plan — also known as "Romneycare" — has cost Massachusetts more than 18,000 jobs, according to an exclusive blockbuster study that could provide ammo to GOP rivals of former Gov. Mitt Romney as he touts his job-creating chops on the campaign trail.
>
> "Mandating health insurance coverage and expanding the demand for health services without increasing supply drove up costs. Economics 101 tells us that," said Paul Bachman, research director at Suffolk University's Beacon Hill Institute, the conservative think tank that conducted the study. The Herald obtained an exclusive copy of the findings.
>
> "The 'shared sacrifice' needed to provide universal health care includes a net loss of jobs, which is attributable to the higher costs that the measure imposed," said David Tuerck, the institute's executive director.
>
> …Despite Romney's vaunted business acumen as a successful venture capitalist, Bachman said the former governor "was a little naive about what would become of the law."
>
> The Beacon Hill Institute study found that, on average, Romneycare:
>
> - cost the Bay State 18,313 jobs;
> - drove up total health insurance costs in Massachusetts by $4.311 billion;
> - slowed the growth of disposable income per person by $376; and
> - reduced investment in Massachusetts by $25.06 million.

And from the Heartland Institute, an article showing how Romneycare could actually lead to single-payer health care in Masachusetts.

Excerpt:

> The 2006 reform jeopardized the solvency of private health plans in the Bay State. Unfortunately, insurers' solvency is not something patients, physicians, and voters have reason to observe closely, so the political class suffers from perverse incentives once it starts micromanaging health insurance. As a result, higher costs have been passed on through higher per capita spending and premium growth.

> According to the state's 2010 annual report, today "per capita spending on health care in Massachusetts is 15 percent higher than the rest of the nation, even when accounting for wages and spending on medical research and education in Massachusetts." Indeed, Professor John F. Cogan of Stanford University has concluded the 2006 reform led to premium growth 6 percent higher in Massachusetts than in the rest of the United States between 2006 and 2008.
>
> **Because it was politically intolerable to allow premiums to rise in line with the costs of Romneycare, the state's insurance commissioner denied 235 of 276 rate increase requests in April 2010. For a short time, no new policies were offered, and plans suffered significant losses. The next month, Blue Cross Blue Shield of Massachusetts, the state's largest carrier, announced a $55 million provision for anticipated losses in the second quarter alone.**
>
> **Of the 12 largest carriers, five were already operating at a loss. At this point, even if the state allows Blue Cross Blue Shield of Massachusetts to increase rates in line with medical costs, my analysis concludes the carrier will become insolvent in the vicinity of 2017. Other carriers will soon follow.**

Clever campaign speeches and witty debate zingers *today* don't cancel out a liberal leftist record on policy *yesterday*.

Herman Cain leads liberal Mitt Romney by 4 in latest national NBC/WSJ poll

October 13, 2011 | by Wintery Knight | Link | Original Link

From MSNBC, the latest national poll shows Herman Cain leading Mitt Romney 27 to 23. Excerpt:

> Fueled by Tea Party supporters, conservatives and high-interest GOP primary voters, former Godfather's Pizza CEO Herman Cain now leads the race for the Republican presidential nomination, according to the latest NBC News/Wall Street Journal poll.
>
> And in yet another sign of how volatile the Republican race has been with less than three months until the first nominating contests, the onetime frontrunner, Texas Gov. Rick Perry, has plummeted to third place, dropping more than 20 percentage points since late August.
>
> "Cain is the leader … That's the story," said Democratic pollster Peter D. Hart, who conducted this survey with Republican pollster Bill McInturff.
>
> […]Cain checks in as the first choice of 27 percent of Republican voters in the poll, followed by former Massachusetts Gov. Mitt Romney at 23 percent and Perry at 16 percent. After those three, it's Texas Rep. Ron Paul at 11 percent, former House Speaker Newt Gingrich at 8 percent, Bachmann at 5 percent and former Utah Gov. Jon Huntsman at 3 percent.
>
> In the previous survey, conducted in late August, Perry led the field at 38 percent, Romney stood at 23 percent, while Cain was at only 5 percent.
>
> […]Cain's numbers are sky-high among Republican primary voters. Fifty-two percent view him favorably, versus just 6 percent who see him unfavorably. Among Tea Party supporters, his favorable/unfavorable score is 69 percent to 5 percent. And among Republicans who identify themselves as "very conservative," it's 72 percent to 2 percent.
>
> In follow-up interviews with respondents supporting Cain, they argue that he's not a politician, and that he seems real. "He has common-sense answers and is in touch with the heartbeat of America," said one respondent, a 46-year-old male from Florida.
>
> "Cain gives direct answers. He is succinct. He isn't a politician," answered another who's a 56-year-old male from Washington.
>
> "Cain presents himself as a real person. He speaks from the heart. He is plainspoken and down to Earth," added a third respondent, a 56-year-old female from Texas.

I would offer Mr. Cain the same advice that I offered Michele Bachmann – come up with

short n-point plans for social policies and foreign policy. Increasing the number of ships in the Navy would be good, as would restarting production of the F-22 Raptor and reducing troop deployments in Europe. And he needs a simple n-point border security plan, a health care policy plan and an education policy plan. No more than 6 points each.

House passes free trade deals with Colombia, South Korea and Panama

October 13, 2011 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> The biggest free-trade pacts since NAFTA were passed by the House Wednesday night, with the Senate likely to follow. As a result, America will reap 250,000 jobs and $13 billion in exports. Where are the celebrations?
>
> The strangest aspect of the passage of free trade treaties with Colombia, South Korea and Panama, with final votes taken after five long years, is the disconnect between the big economic gains expected for the U.S., and the reticence of congressional Democrats and the White House, both of which finally got something right on the economy.
>
> As we went to press, the pacts had been passed by the House, with the Senate expected to vote soon. With bipartisanship like that, lawmakers should be cheering loudly for a true "jobs bill" that costs nothing.
>
> Yet as a Democratic aide told Roll Call on Wednesday, "Republicans don't want to give the president a victory, Democrats are split and everyone is distracted."
>
> Excuse us, but this is some of the best economic news in three years. It deserves a victory dance.
>
> It's a fact these treaties will bring new orders for factories, save family farms, strengthen strategic alliances with countries well worth having as allies, and open up breathtaking new opportunities in fast-growing markets. It needs to be acknowledged.
>
> […]President Obama paid lip service to the treaties, but wasted nearly three years attaching protectionist amendments and dithering. It harmed the economy and never changed this fact: Free trade had to pass if there was to be a real recovery.

Economist Greg Mankiw of Harvard University lists free trade as the #2 top item that economists of all ideological stripes agree on. This is a no-brainer.

Passing the free trade deals is important because it would make up for other anti-business policies of the Obama administration.

Excerpt:

> Obama appointees at the National Labor Relations Board (NLRB) have not only blocked Boeing from making planes in South Carolina, but they have greased the speed of union elections, made decertification votes impossible, changed the requirement that a majority of workers vote for a union, and required almost

> every workplace in America to put posters up advising workers of their unionization rights.
>
> The Obama Administration claims to want to double exports and support free trade, but it took it nearly three years to send the pending trade agreements with Panama, Colombia and South Korea to Congress. Which means that in all this time American companies have been paying higher tariffs for exports.
>
> The Obama Administration has proposed 219 new rules affecting industries, each of which will cost at least $100 million to comply. While the Washington legal business is growing, every industry and business is affected, scared, and confused by the massive new proposals. Small businesses are especially overwhelmed and must hire lawyers to understand and comply with the massive amount of new regulation.
>
> The Obama crown-jewel "achievements" of the new health care and Dodd-Frank financial laws adversely affect almost every American business, totaled almost 3,000 pages of statutory language, and will result in huge costs on employers.

Let's hope the Senate passes these deals and Obama signs it. We need lower priced goods in a recession, and we need more markets to sell into. If this passes, it will be *the first pro-growth action taken by the administration in three years.*

Arizona abortions drop 30% after pro-life law takes effect

October 13, 2011 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> Showing pro-life legislation protecting women and unborn children has a tremendous impact in saving lives, new figures from Arizona show a new pro-life law has resulted in dropping abortions 30 percent.
>
> Last week, Cathi Herrod of the Center for Arizona Policy indicated the state released new abortion figures comparing the number of abortions in September 2011 with those done in September 2010.
>
> "In September of 2010, 1,053 abortions were performed in Arizona. This September, 729 abortions – that's 324 fewer abortions – a 30% decrease," Herrod explained. "That number is also down from 1,069 abortions in August of this year. Simply incredible."
>
> The news follows on the heels of an appeals court upholding a pro-life law that protects the health and safety of women and their unborn children by giving them information they don't normally receive. The Arizona Court of Appeals heard oral arguments in June in Planned Parenthood Arizona v. Horne, a case the abortion business filed which challenges key aspects of the 2009 Abortion Consent Act. The law is a pro-life measure Governor Jan Brewer signed which tells women of the risks associated with and alternatives to abortion. Planned Parenthood sued the state soon after its signing and a Superior Court judge blocked the law from taking effect while the case moves forward.
>
> The law makes it so Arizona will require a notarized parental signature before an abortion can be performed on a minor child, women will be provided with full and accurate information by a doctor in person at least 24 hours before an abortion, medical professionals cannot be forced to perform abortions if it contradicts their sincerely held religious or moral beliefs and non-doctors will not be permitted by law to perform surgical abortions.
>
> Responding to the decision, Planned Parenthood announced it will no longer do abortions at seven locations — including communities outside of Phoenix and Tucson rather than comply with the law.
>
> Herrod says the new law and its effects are responsible for the abortion decline.

What could possibly be wrong with providing women with more information about abortion before they have an abortion? Shouldn't they know what they are choosing before they choose? Even pro-choicers should support *more information*.

Christian men: give a Christian woman the gift of white roses

October 13, 2011 | by Wintery Knight | Link | Original Link

What do white roses mean?

I actually wrote this post last year, but lately, I noticed that it's been getting 35-50 page views per day. I think that's a signal to me to re-post it! (I've changed it slightly, since I was in love when I wrote it the first time, having just sent roses to a fatherless Christian woman, and with remarkably good results!)

I wrote this post to encourage Christian men to find faithful Christian women and support them with a gift of white roses. If you know a woman who is faithful but neglected, then white roses are the perfect gift. And in the rest of the post, I want to explain why.

I'll start with a couple of articles that explain the message I am trying to send a woman with white roses.

First, the obvious.

Excerpt:

> The meaning of shimmering white roses is not very hard to decipher if you go by their appearance. The color white has always been synonymous with purity and virtue. And so, sincerity, purity, and chastity are some of the obvious meanings of a white rose. When you need to convince that your affections are straight from the heart and are as pure as virgin snow, use a white rose. But there are more hidden meanings in a white rose than meets the eye.
>
> White has ever been a symbol of innocence, of a world unspoiled and

> untarnished. The meaning of a bunch of glowing white roses is innocence and spiritual love. The white rose glorifies a love that is unaware of the temptations of the flesh and resides only in the soul. As opposed to the red rose that speaks of passionate promises, the meaning of a white rose is in its simplicity and pristine purity.

That's the standard mainstream meaning of white roses. I normally give three of them, to symbolize the Trinity. (My banner is a pure black field with 3 narrow horizontal pure white stripes)

And now, the not-so-obvious.

How about this?

> It has also come to mean loyalty and faith, which can be strongly linked to purity. In true love, faithfulness and loyalty are implicit, despite distance or time. For these symbols, white roses are a perfect gift to a beloved who is far away, as they will display not only your love, but also your fidelity. White roses are also the perfect gift to send to a platonic friend, for a similar reason: constant, faithful love, mixed with the symbolism of innocence, is a wonderful way to show your love for a dear friend.
>
> […]At the same time, as the uses throughout history have shown, the white rose is also a symbol of strong resistance and the will to stand for one's beliefs at any cost. Giving a white rose as a gift is a very strong gift. It is not fleeting passion or romance, which is too often what the red rose conveys. The white rose is a strong and consistent love, which is pure, faithful and sacrificial. Not many flowers have such a powerful meaning to their name. And this meaning comes to the rose not only through folklore and stories, but through true histories of brave people fighting for their cause. The white rose is a beautiful flower, with beautiful symbolism, and a friend or lover should be proud to give this flower as a gift to those they love steadily and faithfully.

White roses also stand for humility, reverence, honor and secrecy.

Desert Rose by White Heart

I like this old song by the Christian band White Heart a lot.

Desert Rose Lyrics:

> Lost in a windswept land
> In a world of shifting sand
> A fragile flower stands apart
>
> There in that barren ground
> Feel like the only one
> Trying to serve Him with all your heart
>
> And you wonder, wonder
> Can you last much longer?

> This cloud you are under
> Will it cover you?
>
> Desert rose, desert rose
> Don’t you worry, don’t be lonely
> Heaven knows, Heaven knows
> In a dry and weary land a flower grows
> His desert rose, desert rose
>
> Sometimes holiness
> Can seem like emptiness
> When you feel the whole world’s laughing eyes
>
> If it’s a lonely day
> Know you’re on the Father’s way
> He will hear you when you cry
>
> And He will hold you, hold you
> Your Father will hold you
> He will love you, love you
> For the things you do
>
> Desert rose, desert rose
> Don’t you worry, don’t be lonely
> Heaven knows, Heaven knows
> In a dry and weary land a flower grows
> His desert rose, desert rose
>
> Desert rose, desert rose
> Don’t you worry, don’t be lonely
> Heaven knows, Heaven knows
> In a dry and weary land a flower grows
> His desert rose, desert rose
>
> Desert rose, don’t be lonely, don’t be lonely
> Desert rose, ooh, don’t you worry
> Desert rose, don’t you know He’ll be with you
> Heaven knows, Heaven knows
> He will call your tattered heart on
> Desert rose

For all the flak I give women on my blog, you have to understand that in private, I am a love machine. I find it very easy to spend 3-4 hours talking to women face-to-face, maybe over a board game, and saying things that really make them feel loved and special. I think in public, you want to be critical of women in general, and to hold them accountable so that they are solid theologically and morally. But when you find one who is really following the Lord, in spite of the pressure and disapproval she faces from her peers, then you have to consider giving her something to build her up. And when you give the roses, give them as if you are her brother or father. Expect nothing in return. As Christian men,

we really need to get used to the idea that it is our job to make authentic Christianity comfortable for women. God knows, it's hard for them to resist the culture without support. And that's our job. And it's something we need to do.

You don't have be attracted to her before you do it, either. Women have value *regardless* of whether you desire them or not. In any case, I can *guarantee* that you will feel about as good as a man can feel afterwards. It is a truly wonderful thing to act on behalf of Jesus and express platonic love for a Christian woman. We need to be conscious of the fact that *every* woman on the planet was made to know God in Christ. It is the man's responsibility to lead them, to protect them by telling them the truth and explaining moral standards, and to provide them with intellectual stimulation and emotional support. It's your job as a Christian man to put her hand in God's hand and hold them together. Choose a woman who is willing to follow your lead, regardless of whether she meets your needs. True love is self-sacrificial. When she is bad, hold her accountable. When she is good, give her praises and compliments. How you respond affects her relationship with the Lord. This is a man's work.

White roses: a hug without the touching

Note: This advice applies only to women who are conservative theologically and who reject moral relativism, postmodernism, universalism, radical feminism, political liberalism, etc. Be careful, and do not try to rescue people who are not already engaged, informed followers of Jesus Christ.

UPDATE: MBelina posted her thoughts about what it is like to get white roses in the comments:

> I recently had the priviledge not only of visiting the USA, but of meeting WK himself in person. He gave me 3 white roses on 2 occasions.

> How did it make me feel? Very blessed, appreciated, encouraged. I have a number of decent, Christian male friends. But this gesture stood out because of the thought that went into it and the meaning that stands behind these flowers. I took a whole lot of photos of the flowers he gave me. Whenever I see them, I smile.
>
> It also made me appreciate the sort of man that we have in WK in regard to how he treats women. Bad men take advantage of women, regular men don't take advantage of them, but good men appreciate them and build them up. WK is one of the good guys, one of the honorable guys. There is a nobility of character in his approach to women. I felt cared for as a Christian sister, not only with the flowers, but with the concern he has shown for my growth, and with the fantastic books he has sent me (and to others who frequent this blog) – the sort of books that improve my knowledge and my ability to live as a Christian in all spheres of life.
>
> This is my favourite line in this post:
> "It's your job as a Christian man to put her hand in God's hand and hold them together."
> I feel quite emotional (in a girly, but good way!) reading that line.
>
> Thank you, Sir Knight. [curtseys] :)

This is very encouraging.

Late night fun: Occupy Wall Street pick-up lines!

October 14, 2011 | by Wintery Knight | Link | Original Link

From Investors Business Daily, some Occupy Wall Street pick-up lines.

Excerpt:

> @jpodhoretz What time do you get off from not working?
>
> @mdrache Can I have my mom's debit card buy you a drink?
>
> @adamsbaldwin So, do you not work here?
>
> @derekahunter I don't know why I'm here either. We have so much in common!
>
> @DanaPerino I could get lost in your bloodshot, burned out eyes.
>
> @kiradavis422 I luv how u reject the fascistic American standard of beauty by refusing to shave, bathe or wear attractive clothing. Its hot.
>
> @derekahunter Your parent's basement or mine?
>
> @jimgeraghty I know a patch of sidewalk right in front of this great little Italian place.
>
> @chuck_dizzle I bet my degree is more worthless than yours.
>
> @a1776patriot My parents think I'm in class too!!!
>
> @informedblackmn Your eyes are like cesspools in the moonlight.
>
> @DonnaBonnell You remind me of a female Janeane Garafalo.
>
> @brandondarby Seeing you with that Molotov really gets me hot.
>
> @mattysprings Want to help me offset my carbon emissions?
>
> @Aslan444 I just got my Pell Grant & food stamps, let's party!
>
> @CDR My dad would hate you! Let's do it!!

See the latest additions over here.

Here's one: @JamesTaranto: What's your sign? I don't know how to read. **#OWSpickuplines**

Paul Ryan explains how raising taxes hurts job creation

October 14, 2011 | by Wintery Knight | Link | Original Link

Here’s Republican budget guru Paul Ryan, explaining WHY Republicans fight so hard against higher taxes on job creators.

I think more Republicans need to explain the basics of job creation to the people, and often.

Should the Occupy Wall Street protesters move their protest to Washington, D.C.?

October 14, 2011 | by Wintery Knight | Link | Original Link

From the Wall Street Journal.

Excerpt:

> Still, if anyone in the Occupy Wall Street movement wants an intellectually honest explanation for why they can't find a job, they might start by considering what happens to an economy when the White House decides to make pinatas out of the financial-services industry (roughly 6%, or $828 billion, of U.S. GDP), the energy industry (about 7.5% of GDP, or $1 trillion), and millionaires and billionaires (who paid 20.4% of all federal income taxes in 2009). And don't forget the Administration's rhetorical volleys against individual companies like Anthem Blue Cross, AIG and Bank of America, or against Chrysler's bondholders, or various other alleged malefactors of wealth.
>
> Now move from words to actions. Want a shovel-ready job? The Administration has spent three years sitting on the Keystone XL pipeline project that promises to create 13,000 union jobs and 118,000 "spin-off" jobs. A State Department environmental review says the project poses no threat to the environment, but the Administration's eco-friends are screaming lest it go ahead.
>
> Then there are the jobs the Administration and its allies in Congress are actively killing. In June, American Electric Power announced it would have to shutter five coal-fired power plants, at a cost of 600 jobs, in order to comply with new EPA rules. Those same rules may soon force the utility to shutter another 25 plants. Bank of America's decision last month to lay off 30,000 employees is a direct consequence of various Congressional edicts limiting how much the bank can charge merchants or how it can handle delinquent borrowers.
>
> These visible crags of the Obama jobs iceberg are nothing next to the damage done below the waterline by the D.C. regulations factory, which last year added 81,405 pages of new rules to the Federal Register, bringing the total cost to the U.S. economy of regulatory compliance to an estimated $1.7 trillion a year.
>
> Less easy to quantify, but no less harmful, are the long-term uncertainties employers face in trying to price in the costs of ObamaCare, Dodd-Frank, the potential expiration next year of the Bush tax cuts, the possible millionaire surcharge, the value of the dollar and so on. No wonder businesses are so reluctant to hire: When you don't know how steep the trail ahead of you is, it's usually better to travel light.

If you want to know who is really to blame for poverty, try looking at the Obama administration.

House passes bill to block taxpayer funds from being used for abortions

October 14, 2011 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> The House approved legislation, the Protect Life Act, to stop abortion funding in Obamacare. Senate Democrats are not expected to approve the bill and, pro-abortion President Barack Obama is expected to veto the measure if it reaches his desk.
>
> Members voted 251-172 for the pro-life legislation, with 236 Republicans and 15 Democrats supporting the bill and 170 Democrats and two Republicans voting against it. (See how your member voted here).
>
> **H.R. 358, Protect Life Act, makes it clear that no funds authorized or appropriated by the Patient Protection and Affordable Care Act (PPACA), including tax credits and cost-sharing reductions, may be used to pay for abortion or abortion coverage. It specifies that individual people or state or local governments must purchase a separate elective abortion rider or insurance coverage that includes elective abortion but only as long as that is done with private funds and not monies authorized by Obamacare.**
>
> […]The bill also specifies that insurance issuers may offer health plans that include elective abortion and may offer separate elective abortion riders, so long as they ensure PPACA funds are not used for premiums or administrative costs. The bill also clarifies that issuers who offer elective abortion coverage must also offer a qualified health benefits plan that is identical except that it does not cover elective abortion.
>
> The pro-life measure also ensures that state laws "protecting conscience rights, restricting or prohibiting abortion or coverage or funding of abortion, or establishing procedural requirements on abortion" are not abrogated by Obamacare. It also makes it so any state or local governments receiving funding under Obamacare may not subject any health care entity to discrimination or require any health plan to subject any entity to discrimination on the basis that it refuses to undergo abortion training, refuses to require abortion training, refuses to perform or pay for abortions, or refuses to provide abortion referrals.

The Democrats will block this bill in the Senate, or Obama will not sign it if it somehow gets through. And do you know why? Because the Democrats are committing to subsidizing baby-killing with taxpayer dollars. Pro-life taxpayer dollars.

Nancy Pelosi doesn't like the bill. She thinks that this bill will cause women to "die on the

floor”.

Excerpt:

> Former House Speaker Nancy Pelosi took her pro-abortion rhetoric to a new level, today saying Republicans “want women to die on the floor” in expressing her opposition to a bill stopping taxpayer funding of abortions in Obamacare.
>
> “For a moment, I want to get back to what was asked about the issue on the floor today that Mr. Hoyer address,” Pelosi said. “He made a point and I want to emphasize it. Under this bill, when the Republicans vote for this bill today, they will be voting to say that women can die on the floor and health care providers do not have to intervene if this bill is passed. It’s just appalling.”

This is the same woman ran up 5.34 trillion dollars of debt while she was Speaker of the House from 2007 to 2011. The Republicans want to stop spending taxpayer money on elective abortion to stop the national debt from growing, and this woman thinks that not spending that money would cause people to die on the floor. I wonder if we will ever get spending cut when people on the left use rhetoric like this to stop spending cuts.

I do think it is encouraging that nearly all Republicans voted for this bill. They truly are a pro-life party.

> Nancy Pelosi: Republicans Want Women To Die On The Floor

Paul Ryan and Art Laffer love Herman Cain's 9-9-9 plan

October 15, 2011 | by Wintery Knight | Link | Original Link

Two big endorsements for Herman Cain's 9-9-9 plan from two proven conservative supply-side economists.

Here's Paul Ryan's interview with the Daily Caller.

Excerpt:

> House Budget Committee chairman Paul Ryan said in an interview with The Daily Caller that he "loves" the idea of having "specific and credible" plans, like presidential candidate Herman Cain's signature "9-9-9″ proposal, in the national debate about tax policy.
>
> Ryan told The Daily Caller in an exclusive interview that Cain's plan is a good starting point for debate, and shows the GOP presidential campaign season has entered into a more advanced stage where ideas — not just personalities — have come to the forefront.
>
> "We need more bold ideas like this because it is specific and credible," Ryan said. "I'm more of a flat-tax kind of a guy."
>
> The budget chairman went on to say that ideas like Cain's plan could help shape the debate over tax reform moving into 2013.
>
> "It's great to see such bold ideas," Ryan told TheDC.
>
> […]"I consider Paul Ryan to be one of the brightest minds in Washington, D.C.," said Mark Block, Cain's chief of staff, "Mr. Cain looks forward to sitting down with Congressman Ryan.

Here's more about a possible VP nomination for Ryan.

Excerpt:

> House Budget Committee chairman Paul Ryan "loves" Herman Cain's 9-9-9 tax plan and sees the proposal as "specific and credible" – a major endorsement for a surging GOP presidential candidate.
>
> "We need more bold ideas like this because it is specific and credible," Ryan said in an interview with the Daily Caller. "I'm more of a flat-tax kind of a guy."
>
> Cain is returning the love. He said Wednesday that he sees Ryan as the type of person he would want as a Vice Presidential nominee were he to win the Republican primary, **the Hill reported.**
>
> "I'll give you a name, like representative Paul Ryan. I'm not saying he would be a V.P. pick. He might be. But that's the type of person that I would want in my cabinet. He is the type of person," said Cain on the Steve Gill Show.

> Ryan said hoped Cain's plan – which would replace the current code with a 9 percent tax on all personal income, corporate income and sales – would encourage legislators to consider tax reform in coming sessions, the Hill reported.
>
> Ryan says that Cain is thinking the right way, and that he believed that critiques of the plan would make it stronger.
>
> "It's great to see such bold ideas," Ryan said.

And here's Art Laffer talking to Human Events.
Excerpt:

> The famed economist told HUMAN EVENTS that the proposal was pro-growth and would create the proper conditions for America's economy to expand and thrive again.
>
> "Herman Cain's 9-9-9 plan would be a vast improvement over the current tax system and a boon to the U.S. economy," Laffer told HUMAN EVENTS in a statement. "The goal of supply-side tax reform is always a broadening of the tax base and lowering of marginal tax rates."
>
> Added Laffer: "Mr. Cain's plan is simple, transparent, neutral with respect to capital and labor, and savings and consumption, and also greatly decreases the hidden costs of tax compliance. There is no doubt that economic growth would surge upon implementation of 9-9-9."
>
> Laffer also said that "such a system provides the least avenues to avoid paying taxes, yet also maintains the strongest incentives for work effort, production, and investment."

Everyone is talking about Chris Christie's endorsement of Mitt Romney… but Christie is a RINO. I'm sure that Romney will get endorsements from John McCain, Susan Collins and Olympia Snowe, too. But Paul Ryan's endorsement is the endorsement that really matters.

Mitt Romney on abortion and stem cell research in his own words

October 15, 2011 | by Wintery Knight | Link | Original Link

What does Mitt Romney believe about abortion? He’s had the same view from 1994 to 2008, when he decided to run for President.

From the 1994 Massachusetts Senate debate between Mitt Romney and Edward Kennedy.

Here he is again in 2002 in his run for government of Massachusetts:

And again in May 2005, as governor of Massachusetts:

And on embryonic stem cell research in 2005:

If he says any different today, it’s not because he has a record to run on – his record has been pro-abortion since 1994.

Were the Crusades unprovoked attacks against peaceful Muslims?

October 16, 2011 | by Wintery Knight | Link | Original Link

Here's an article from a historian specialized in the history of the Crusades.

Excerpt:

> For starters, the Crusades to the East were in every way defensive wars. They were a direct response to Muslim aggression—an attempt to turn back or defend against Muslim conquests of Christian lands.
>
> Christians in the eleventh century were not paranoid fanatics. Muslims really were gunning for them. While Muslims can be peaceful, Islam was born in war and grew the same way. From the time of Mohammed, the means of Muslim expansion was always the sword. Muslim thought divides the world into two spheres, the Abode of Islam and the Abode of War. Christianity—and for that matter any other non-Muslim religion—has no abode. Christians and Jews can be tolerated within a Muslim state under Muslim rule. But, in traditional Islam, Christian and Jewish states must be destroyed and their lands conquered. When Mohammed was waging war against Mecca in the seventh century, Christianity was the dominant religion of power and wealth. As the faith of the Roman Empire, it spanned the entire Mediterranean, including the Middle East, where it was born. The Christian world, therefore, was a prime target for the earliest caliphs, and it would remain so for Muslim leaders for the next thousand years.
>
> With enormous energy, the warriors of Islam struck out against the Christians shortly after Mohammed's death. They were extremely successful. Palestine, Syria, and Egypt—once the most heavily Christian areas in the world—quickly succumbed. By the eighth century, Muslim armies had conquered all of Christian North Africa and Spain. In the eleventh century, the Seljuk Turks conquered Asia Minor (modern Turkey), which had been Christian since the time of St. Paul. The old Roman Empire, known to modern historians as the Byzantine Empire, was reduced to little more than Greece. In desperation, the emperor in Constantinople sent word to the Christians of western Europe asking them to aid their brothers and sisters in the East.
>
> That is what gave birth to the Crusades. They were not the brainchild of an ambitious pope or rapacious knights but a response to more than four centuries of conquests in which Muslims had already captured two-thirds of the old Christian world. At some point, Christianity as a faith and a culture had to defend itself or be subsumed by Islam. The Crusades were that defense.
>
> Pope Urban II called upon the knights of Christendom to push back the conquests of Islam at the Council of Clermont in 1095. The response was tremendous. Many thousands of warriors took the vow of the cross and prepared for war. Why did

> they do it? The answer to that question has been badly misunderstood. In the wake of the Enlightenment, it was usually asserted that Crusaders were merely lacklands and ne'er-do-wells who took advantage of an opportunity to rob and pillage in a faraway land. The Crusaders' expressed sentiments of piety, self-sacrifice, and love for God were obviously not to be taken seriously. They were only a front for darker designs.
>
> During the past two decades, computer-assisted charter studies have demolished that contrivance. Scholars have discovered that crusading knights were generally wealthy men with plenty of their own land in Europe. Nevertheless, they willingly gave up everything to undertake the holy mission. Crusading was not cheap. Even wealthy lords could easily impoverish themselves and their families by joining a Crusade. They did so not because they expected material wealth (which many of them had already) but because they hoped to store up treasure where rust and moth could not corrupt. They were keenly aware of their sinfulness and eager to undertake the hardships of the Crusade as a penitential act of charity and love. Europe is littered with thousands of medieval charters attesting to these sentiments, charters in which these men still speak to us today if we will listen. Of course, they were not opposed to capturing booty if it could be had. But the truth is that the Crusades were notoriously bad for plunder. A few people got rich, but the vast majority returned with nothing.

Since this question comes up in apologetics, and even William Lane Craig screws it up by calling the Crusades evil, I thought it might be a good idea for us to have some background so that we would be able to set the record straight if it's called into question. It's important to know this because a lot of people appeal to the Crusades to take shots at Christianity and introduce a kind of moral equivalence that excuses real wars of aggression and real terrorism.

The article also includes some of the real mistakes made by some of the Crusaders, so be ready to own up to those.

Iran, the Zetas drug cartel and our porous Southern border

October 16, 2011 | by Wintery Knight | Link | Original Link

Map of the Middle East

Here's an excellent assessment of the threat from the American Enterprise Institute.

Excerpt:

> The revelation that the Iranian Revolutionary Guards Corps and its Quds Force had plotted to kill Saudi Arabia's ambassador to the United States–by blowing him up as he dined at a Washington restaurant–is a stark reminder of the nature of the Tehran regime and its ambitions. But perhaps the most disturbing aspect of the story is that Iran's thugs are developing a strategic partnership with Mexico's most violent thugs: Los Zetas may only be the second-largest drug cartel in the Drug Enforcement Administration's rankings, but they're probably the most lethal. The gang is said to have formed around a platoon's worth of deserters from Mexico's special operations forces, and became the elite troops of another Mexican drug organization, the Gulf Cartel. The leader of that cartel got himself arrested, and the Zetas moved out on their own.
>
> […]The alliance with the Zetas is only the tip of the Iranian iceberg in Latin America. As Roger Noriega and Jose Cardenas have recently written, "Iran has made the Western Hemisphere a priority….The real game changer has been the alliance developed between Iran's Mahmoud Ahmedinejad and Venezuela's Hugo Chavez." In addition to the Quds Force, Iran often operates through Hezbollah, which has established networks in the Lebanese communities that have long-standing enclaves in the trading and port cities of South America. In addition to Chavez, Iran has established closer ties to the Bolivian government of Evo Morales's and Rafael Correa's regime in Ecuador.

> […]We underestimate the Quds-Zeta partnership at our peril. The distinction between law enforcement and warfare is increasingly blurred; the Mexican government claims it had a hand in exposing the plot and it was a DEA agent who foiled the attack. While the Obama administration was right to bring charges against the operatives who plotted to kill the Saudi ambassador, this is a response to symptoms, not the disease. The larger problem is the maturing anti-America coalition governments and extremely rich, powerful, and violent groups; thinking of these organizations simply as criminals obscures their political interests–in keeping governments like Mexico's or Colombia's weak, in securing sanctuary, in access to the "international commons," and the like. An appropriate response demands an integrated strategy. The biggest danger is not "militarizing" U.S. policy but in failing to address the fundamental security issues at stake.

The Obama administration's lack of concern about border security is very disturbing, but they don't dare to offend their open-borders constituency for a little thing like national security. Even so, the best defense might be a good offense – but is Obama willing to go on the offensive? Not so much. Instead, Obama seems to be resigned to letting Iran have nuclear weapons.

Excerpt:

> Khamenei probably approved a strike in Washington because he no longer fears American military might. Iran's advancing nuclear-weapons program has undoubtedly fortified his spine, as American presidents have called it "unacceptable" yet done nothing about it. And neither George W. Bush nor Barack Obama retaliated against Iran's murderous missions in Iraq and Afghanistan.
>
> President Obama has clearly shown he wants no part—or any Israeli part—in a preventive military strike against Iran's nuclear sites. And Mr. Obama has pulled almost all U.S. troops out of Iraq and clearly wants to do the same in Afghanistan. Many Americans may view that as a blessing, but it is also clearly a sign that Washington no longer has the desire to maintain hegemony in the Middle East.
>
> That's an invitation to someone like Khamenei to push further, to attack both America and Iran's most detested Middle Eastern rival, the virulently anti-Shiite Saudi Arabia. In the Islamic Republic's conspiracy-laden world, the Saudis are part of the anti-Iranian American Arab realm, which is currently trying to down Iran's close ally, Bashar al-Assad's Syria, and squash the Shiites of Bahrain. Blowing up the Saudi ambassador in Washington would be an appealing counterstroke against the two foreign forces that Khamenei detests most.
>
> The Obama administration will be tempted to respond against Iran with further unilateral and multilateral sanctions. More sanctions aren't a bad idea—targeted sanctions against the Revolutionary Guards and the sale of gasoline made from Iranian crude can hurt Tehran financially. But they will not scare it. The White

> House needs to respond militarily to this outrage. If we don’t, we are asking for it.

The longer Obama leaves this, the worse the eventual war in the Middle East is going to be. We should at the very least be pursuing aggressive covert operations against Syrian and Iranian targets. I hope everyone remembers the slap on the wrist that Obama is giving Iran now, so that when we get attacked more and more, with more dangerous weapons, the correct people get the blame.

Republicans introduce bill to let Warren Buffett pay more taxes

October 17, 2011 | by Wintery Knight | Link | Original Link

From Fox News, a plan to allow people who talk about wanting to pay more in taxes to do so.

Excerpt:

> President Obama's proposed "Buffett Rule"– which would force the wealthiest Americans to pay higher taxes to help cut the nation's deficits — has met its Republican match.
>
> Republican lawmakers have introduced their own "Buffett Rule" that would allow billionaire investors like Warren Buffett who say they're not paying enough taxes to voluntarily give more money to the federal government.
>
> Under the legislation, authored by Sen. John Thune of South Dakota and Rep. John Scalise of Louisiana, taxpayers can donate at least a $1 to the Treasury fund for deficit reduction when they file their federal income tax returns starting next year.
>
> "If individuals like Warren Buffett or President Obama are inclined to donate their own personal money toward paying down the federal government's debt, they ought to have that right to do so voluntarily," Thune said. "This bill would make it easier for those wealthy individuals who feel they are currently under-taxed to pay more to the U.S. Treasury above and beyond their current obligations, without raising taxes on America's job creators."

The first thing to note is that John Thune is a Biola University graduate. He defeated that leftist jackass Tom Daschle to become Senator in South Dakota.

The second thing to note is that Warren Buffett is a big fat hypocrite, since his company is involved in a massive dispute with the IRS over unpaid taxes.

Rasmussen poll: Cain beats Obama by two in hypothetical match-up

October 17, 2011 | by Wintery Knight | Link | Original Link

Presidential candidate Herman Cain
From Rasmussen Reports, a reliable pollster.

Excerpt:

> Whether Herman Cain's surge in the polls is temporary or has staying power, he's enjoying a big enough bounce to take a very slight lead over President Obama in a hypothetical 2012 matchup. At the moment, the Georgia businessman is the only Republican with a lead of any kind over Obama, although former Massachusetts Governor Mitt Romney has held a similar advantage several times and is currently trailing the president by just two points.
>
> The latest Rasmussen Reports national telephone survey of Likely U.S. Voters shows Cain attracting 43% support, while Obama earns 41%. Given such a matchup, eight percent (8%) prefer some other candidate, and another eight percent (8%) are undecided. (To see survey question wording, click here.)
>
> Cain is tied with Romney for the lead in the race for the GOP presidential nomination. Nobody else is even close at the moment.
>
> Last week, Cain trailed Obama by three. The week before, he was behind by five. "Cain now has the chance to make the case for why he should be the challenger to Mitt Romney," says Scott Rasmussen, president of Rasmussen Reports. "Many others have auditioned for the role and fallen flat, and it remains to be seen whether Cain's fate will be similar." Rasmussen interviewed Cain for the Rasmussen Report on radio show.

There is no reason why we should settle for a squishy moderate who is liberal on social issues when we can have Herman Cain and still win the election.

California public schools introduce gay indoctrination starting in kindergarten

October 17, 2011 | by Wintery Knight | Link | Original Link

From the liberal Los Angeles Times. (H/T Come Reason)

Excerpt:

> At Wonderland Avenue Elementary School in Laurel Canyon, there are lesson plans on diverse families — including those with two mommies or daddies — books on homosexual authors in the library and a principal who is openly gay.
>
> But even at this school, teachers and administrators are flummoxed about how to carry out a new law requiring California public schools to teach all students — from kindergartners to 12th graders — about lesbian, gay, bisexual and transgender Americans in history classes.
>
> "At this point, I wouldn't even know where to begin," Principal Don Wilson said.
>
> Educators across the state don't have much time to figure it out. In January, they're expected to begin teaching about LGBT Americans under California's landmark law, the first of its kind in the nation.

Notice how dissent from GLBT indoctrination is portrayed in the mainstream media:

> In 2005, L.A. Unified debuted the nation's first chapter in a high school health textbook on LGBT issues covering sexual orientation and gender identity, struggles over them and anti-LGBT bias. A section on misconceptions says sexual orientation is not a choice — a statement many religious conservatives disagree with.

Unfortunately for the leftist media, the peer-reviewed studies show that homosexuality is a choice – but that's not what young people are going to learn in California public schools. They'll learn what the GLBT lobby wants children to believe, instead.

And it's OK to deprive a child of a mother or father:

> On a recent morning, teacher Jane Raphael invited her two dozen kindergartners, first-graders and second-graders to sit in a circle and tell a story about their family. The students described a cross section of modern-day America: moms and dads and athletic siblings, crazy dogs, a cat named Lulu, a fish that died, divorced parents, a girl with two mommies.

You can bet that the public schools won't be teaching the children about gay crime horror stories like Joshua Brown or Frank Lombard. These stories are a thousand times more horrifying than Matthew Shepard, but no one has ever heard about those stories. No, that's not what the GLBT lobby wants children to learn about at all.

And that's the problem with public schools – they only tell children what the government

wants the special interest groups who get them elected want children to hear. The government wants to get re-elected, so they put public functions up for sale to the highest bidder. Special interest groups like the GLBT lobby promise them votes and campaign donations in exchange for telling children what they want the lobby wants them to believe. They only want to minimize the damage is to cut off the funding for government functions – perhaps by giving parents more control over education with voucher programs.

Even some Christian conservatives support this by voting to transfer money from private taxpayers into public schools. I once knew a Christian woman who told me that forcing her husband to pay more in taxes for public schools was a good idea, because public schools fed children free breakfasts so that all the children would be "equal". Although she denied it, what she was really voting for was the indoctrination of children with gay proganda using her family's money – money earned by her Christian husband. Apparently, she thought that the public schools needed her husband's money more than her family did. When pressed by me, she admitted that she held that view because it made her feel good – she had never thought about the consequences of her voting for her husband's ability to lead the family in a Christian direction.

Lenny has more to say about this decision by the California public schools.

Stephen C. Meyer explains the evidence for the Big Bang on John Ankerberg show

October 18, 2011 | by Wintery Knight | Link | Original Link

This is a short post, because I can't embed the video – so I'm just going to post the link to the Lightsource web site which has the video.

Here's a web page from Caltech that goes over 3 of the 6 evidences for the Big Bang.

Excerpt:

> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

The article explains all three evidences in detail. It is important to show atheists how the progress of science has dashed their hopes for an eternal, uncaused universe. One discovery – that could be reversed. Two discoveries – that's conclusive. Three – discoveries – that's an open and shut case. (And there are three more discoveries not mentioned in the article – the second law of thermodynamics, radioactive element abundances and the stellar lifecycle itself).

And, of course, William Lane Craig uses this scientific evidence in his kalam cosmological argument, which is described in a peer-reviewed paper from this Astrophysics journal.

Audio from William Lane Craig's debate with Stephen Law

October 18, 2011 | by Wintery Knight | Link | Original Link

UPDATE: The audio for the debate has been posted here at Apologetics 315.

Reactions from the first debate of the Reasonable Faith UK speaking tour, featuring Dr. William Lane Craig.

These are just cut and pasted by me from Facebook with names removed.

J:

> I cant believe Law didnt offer any objections to Theism other than the problem of evil.. The heckling was a bit disappointing, entertaining debate though. Law made some bad admissions in the after discussion which was quite funny :)

M:

> so i just got home from the debate between william lane craig and stephen law.
>
> was a very interesting debate, and law turned out to be one of the few atheists who had clearly carefully considered his debating strategy. Not once did he even attempt to argue for atheism, all he was ever trying to do was argue against "Craig's God" (which is what he said himself).
>
> wlc presented just three arguments this time, the kalam, the moral and the resurrection.
>
> law didn't respond at all to the kalam and literally just left it with "i don't know".
>
> law's opening speech was all on the evidential problem of evil without responding to any of Craig's arguments. Then in first rebuttals he completely ignored all the arguments again, only seeking to defend his evidential argument from evil. I have to say his strategy was interesting but I think it backfired, simply because atheism just came out to be utterly indefensible. The kalam was not challenged once, only the moral nature of the Creator of the cosmos. As WLC said numerous times, "it's a strange form of atheism that holds to the existence of an uncaused, immaterial, timeless, spaceless, powerful, transcendent and personal being who just isn't morally perfect"!
>
> atheism was definitely left in a bad state in this debate!
> wlc had some good responses to the evil God challenge

More M:

> it was quite an interesting debate. wlc presented just 3 arguments: kalam, moral & resurrection. then law spent his whole first speech on the evidential problem of evil, with his evil God challenge mixed in. In the whole first rebuttals again law COMPLETELY ignored wlc's 3 arguments, and didn't respond to them until the

> FINAL rebuttal!
>
> law didn't even argue for atheism. he didn't challenge the kalam once, and i mean not once! for me, he conceded that atheism was false (even though he doesn't believe that himself) and instead just tried to show that whoever this Creator is, we can't know whether he is good or evil. I thought he was really weak on the moral argument as well. I found that overall his tactics were to not specifically deny any of the premises of any of the arguments, instead he just kept repeating that craig hasn't proved ____(insert premise) to his satisfaction. But check it out for yourselves later in the week!

C:

> I give respect to Stephen Law, he seems like a nice guy who is very intelligent and took this debate seriously.
>
> The evidential problem of evil is tougher to fend off, but once again another Non-theist (as I think Law is an agnostic) tries his argument for personal preference.
>
> Law basically stated " I don't find God to be good under my standards of what I think is good, therefore I don't think he exists, but if he does exist he is an evil God"
>
> And was it me or did Law mix up what is "prescriptive" morality and "descriptive" morality when he spoke about ethical naturalism? It seems as if he had it backwards.
>
> Law gave me the impression he was either an agnostic or a closet Deist

Some selected Tweets as of Tuesday morning at 2 AM:

> reNewedAtheist Tom Samuel:
> i think it's safe to say that Law didn't do his homework. i even tweeted at him telling him to come prepared….
>
> UnbelievableJB Justin Brierley:
> Did Law defend atheism or agnosticism tonight? #RFTour one person left saying deism perfectly plausible on Law's arguments tonight

And most importantly:

> UnbelievableJB Justin Brierley:
> Complete Craig vs Law debate goes online as an early podcast tomorrow. premier.org.uk/craig #RFTour
>
> UnbelievableJB Justin Brierley:
> @BenMartinBass video will go online after tour is over but I'm putting the audio out as an early poddie tomorrow @RFupdates

You should follow @UnbelievableJB on Twitter for more updates. It's Justin Brierley's feed, and he is posting updates continously.

The thing you need to realize about the evidential/probabilistic argument from evil is that it has to be weighed along with other countervailing evidence in favor of God's existence. It is not a deductive argument. Craig presented three arguments in favor of the proposition, so Law *has to respond to those* in order to win the debate. Moreover, I am sure that he would not be able to answer the challenge of how he knows that any particular instance of evil is gratuitous. I hope Brian posts the debate audio soon.

Planned Parenthood loses fight for $397,000 in taxpayer-funding

October 18, 2011 | by Wintery Knight | Link | Original Link

Good news from Life News.

> The Planned Parenthood abortion business has lost its battle to keep a $397,000 taxpayer-funded contract in Memphis, Tennessee after pro-life advocates contacted members of the county commission requesting that the grant be given to someone else.
>
> Shelby County Health Department director Yvonne Madlock had announced in September that , after significant lobbying from pro-life advocates, Christ Community Health Services would receive the $397,000 contract with the county for family planning rather than Planned Parenthood. Then, in a 6-4 party-line vote, the Shelby County Commission decided to postpone its decision and allow Planned Parenthood more time to make its case that it should continue receiving the tax money.
>
> Now, the Shelby County Commission voted 9-4 on Monday to give Christ Community Health Services the family planning contract instead of renewing it with Planned Parenthood Greater Memphis Region. However, the Memphis Commercial newspaper reportsthat the abortion business has a pending bid protest with the county government.
>
> […]The money comes from the Title X family planning grants states are given by the federal government and Davidson County, the location of Nashville, made the decision earlier this year to move the recipient of its funding elsewhere from the Planned Parenthood abortion business. Because Shelby County was the lone holdout, pro-life advocates focused their efforts on persuading the county government to de-fund Planned Parenthood.

So, it sounds like things are not *quite settled yet.* But still – good news so far.

Those who complain about corporate greed may be greedy themselves

October 18, 2011 | by Wintery Knight | Link | Original Link

From the moderately leftist National Post.

Excerpt:

> But what about that 99%? What responsibility do they bear for the situation the world finds itself in? The answer is: plenty. Greed doesn't just live on Wall Street: it finds a home on Main Street too. And when people think it's perfectly OK to take out mortgages they can't afford, or rack up credit card debt to buy flat screen TVs, clothes and appliances, or draw on their home's equity to finance cars and vacations, well, as they say, you reap what you sow.
>
> […]But you only have to crack open the business pages, or watch a reality TV show like Gail Vaz-Oxlade's "Princesses" (about heavily indebted young women) to start questioning the moral purity of the 99%. Many of these people are the authors of their own misery: they consider credit to be cheap, if not free, money. The result is that even here in Canada, the ratio of household debt to personal income has hit a whopping 150%, up 78% in real terms in the past twenty years.
>
> I have no pity for those heavily indebted people, in part because I was once one of them. My love affair with credit started in university. While the limit on that first card was low – $1500 – it allowed a student with a part-time job to buy things she couldn't otherwise afford (and mostly didn't need). After getting married, I kept spending, even cashing in my meagre RRSP to help finance the wedding. Post-divorce, I racked up consumer debt, over $15,000 at its peak, at which point I took a harsh look at myself and said: enough. At the time, I was selling my condo: I took the proceeds, paid off the debt, invested the balance, and vowed to both save and pay monthly bills in full, promises I have kept ever since.
>
> Luckily, I got religion well before the meltdown of 2008. But many people didn't. And this makes them responsible not only for their own problems, but those of their neighbours.
>
> Sure, it's easy to blame the Wall Street CEOs for bundling rotten mortgages and contriving arcane debt instruments that weren't worth the paper they were written on. But someone took out those mortgages. Millions of people, actually, who bought more house than they could afford. Did someone hold a gun to their head? No. They were just as greedy as the 1%, only on a smaller scale.
>
> Governments are also just as guilty. In the U.S., Fannie Mae and Freddie Mac granted mortgages to people deemed disadvantaged – minorities, the poor – in the hopes of increasing home ownership. This spurred the private sector to

> compete and fuelled the infamous subprime mortgage market.

The Canadians have special tax-free savings accounts that encourage them to save money instead of spending it. That’s something that we should do – provide people with tax-free savings accounts. Give people the incentive to save their money instead of spending it.

Why do conservatives accuse Obama of engaging in "class warfare"?

October 19, 2011 | by Wintery Knight | Link | Original Link

From the left-leaning Politico. (H/T Dennis Prager)

Excerpt:

> Obama has characterized Republican votes against his jobs bill — which are predicated, at least in part, over concern that new, temporary spending financed by tax increases will not help the economy — as a rejection of the most wholesome of American workers.
>
> "They said no to more jobs for teachers, no to more jobs for cops and firefighters," Obama said during a speech Wednesday to the administration's Forum on American Latino Heritage, "no to more jobs for construction workers and veterans, no to tax cuts for small-business owners and middle-class Americans."
>
> But in these same remarks, Obama also subtly suggested something far worse — that his opponents are racially biased.
>
> "I ran for president for the same reason many people came to this country in the first place," he explained. "Because I believe America should be a place where you can always make it if you try, a place where every child, no matter what they look like [or] where they come from should have a chance to succeed. I still believe in that America. I believe we can be that America again."
>
> The clear suggestion is that someone has made this country a place where what a child looks like can hinder them — and Obama is the one who can erase the discrimination that has been permitted to return.
>
> First lady Michelle Obama made this point more explicitly at a Washington fundraiser the night before.
>
> "Will we be a country where opportunity is limited to just the few at the top?" the first lady asked. "Or will we give every child — every child — a chance to succeed, no matter where she's from, or what she looks like, or how much money her parents [have]? Who are we? That's what's at stake here."
>
> Her suggestion that "what's at stake here" in the 2012 race is whether a child will be judged by color is an outrage, implying that a Republican victory would result in discrimination.

Obama's rhetoric has become increasingly shrill. I find it very alarming that the President of the United States is somewhere to the left of celebrity blowhards like Michael Moore. How does he expect to negotiate with people in good faith when he is constantly impugning their motives and caricaturing their policies?

In other news, Herman Cain, who is black, leads by 8 points in the Iowa Caucuses. Wouldn't it be funny to see Barack Obama, who is only half-black, take on Herman Cain in a debate, and accuse him of racism? The rich, pampered Ivy-league ACORN trainer against the businessman with a Masters in Computer science from Purdue, whose mother was a cleaning woman, and whose father worked three jobs.

Is Herman Cain's 9-9-9 plan revenue neutral? Does it tax the poor more?

October 19, 2011 | by Wintery Knight | Link | Original Link

Presidential candidate Herman Cain

Consider this article by rock-star economist Arthur Laffer.

Excerpt:

> In the recent past, federal tax revenues from the personal and business income taxes, all payroll taxes, and the capital gains, gift and estate taxes have averaged $2.3 trillion, while gross domestic product has averaged about $14.5 trillion. The total revenue from these taxes as a share of gross domestic product averages around 16%. Sometimes it's a good deal higher, as in the boom of the late 1990s, and sometimes its lower, as in today's "Great Recession." But a number in the 16%-19% range is as good as you'll get under our current tax code.
>
> **By contrast, the three tax bases for Mr. Cain's 9-9-9 plan add up to about $33 trillion. But the plan exempts from *any* tax people below the poverty line. Using poverty tables, this exemption reduces each tax base by roughly $2.5 trillion. Thus, Mr. Cain's 9-9-9 tax base for his business tax is $9.5 trillion, for his income tax $7.7 trillion, and for his sales tax $8.3 trillion. And there you have it! Three federal taxes at 9% that would raise roughly $2.3 trillion and replace the current income tax, corporate tax, payroll tax (employer and employee), capital gains tax and estate tax.**
>
> **The whole purpose of a flat tax, à la 9-9-9, is to lower marginal tax rates and simplify the tax code. With lower marginal tax rates (and boy will marginal tax rates be lower with the 9-9-9 plan), both the demand for and the supply of labor and capital will increase. Output will soar, as will jobs. Tax revenues will also increase enormously—not because tax**

> **rates have increased, but because marginal tax rates have decreased.**
>
> By making the tax codes a lot simpler, we'd allow individuals and businesses to spend a lot less on maintaining tax records; filing taxes; hiring lawyers, accountants and tax-deferral experts; and lobbying Congress. As I wrote on this page earlier this year ("The 30-Cent Tax Premium," April 18), for every dollar of business and personal income taxes paid, some 30 cents in out-of-pocket expenses also were paid to comply with the tax code. Under 9-9-9, these expenses would plummet without a penny being lost to the U.S. Treasury. It's a win-win.

I have heard precious few conservative commentators reporting the facts on Herman Cain's plan, so it's nice to see Art Laffer looking at the details.

Here are three facts about Cain's plan:

- Fact #1: People below the poverty line are exempt from ALL the taxes.
- Fact #2: It is a *stupid* objection to say that the tax rate can be raised. *ALL* taxes can be raised, and Cain has already said that his plan would require a 2/3rds majority to raise the tax rates.
- Fact #3: This plan has nothing to do with state income taxes or state sales taxes or state corporate taxes – his plan only reforms federal taxes. State tax laws are outside of the jurisdiction of the President.

I was really disappointed to hear some of the people in Tuesday night's debate disparaging Herman Cain's plan, especially Michele Bachmann, who ought to know better because this is her strength. When people say that a tax is regressive, that means that it is not progressive. And a progressive tax is *communist.* It punishes success. What we want to have is a flat tax rate that doesn't punish success and broadens the tax base so that everyone pays something. What Cain's plan does is lower the punishment on job creators and workers, and raises the tax on consumers who spend money. And isn't that a good thing? Aren't we in this whole mess because we spend too much money? Maybe we should incentivize job creation and work instead of spending. Cain's plan would be the greatest boon to job creation that this company has ever seen – it's brilliant precisely because it eliminates the cost of having to comply with an onerous, complicated tax code. We are getting this wealth for free, and the only losers will be the IRS and the Washington lobbyists.

Canadian Supreme Court refuses to hear appeal on infanticide case

October 19, 2011 | by Wintery Knight | Link | Original Link

From Life Site News.

Excerpt:

> The Supreme Court of Canada declined last Thursday to hear an appeal in the case of a mother who smothered two of her children. The decision means that a Canadian mother can continue to plead to the lesser charge of "infanticide" rather than "murder" when she ends the life of her newborn child.
>
> The mother in the case, referred to as "L.B," was 15 years old when in 1998 she smothered her 6-week-old son Alexander. She smothered another one of her children, 10-week-old son Cameron, in 2002.
>
> […]In a statement to the police, L.B. testified that 6-week-old Alexander's crying made her "angry." When he would not stop crying, she placed him in his crib, covered him entirely with blankets and a plastic cover, left the room, and began listening to music. She admitted that she was "very confused" but insisted that she "wanted to help Alexander feel better."
>
> L.B. also testified to police that on the day she killed her 10-week-old son Cameron, she was "very upset" and feared that she would do her child harm. Police heard how L.B. "wanted Cameron to die," since she believed it was "the right thing to do." As Cameron slowly suffocated, she told her son that he was "going to a better place."

Here's the prosecutor:

> Jennifer Woollcombe, acting for the Crown, appealed Justice Herold's 2008 decision, arguing that L.B's "infanticide defence" was based on antiquated laws that were created to give juries an alternative to the death penalty for mentally unstable mothers who killed their children. The Crown argued that the "infanticide defence" constitutes an "unacceptable devaluation of the worth of a newborn child."
>
> "The trial judge found that these murders were planned and deliberate. There is no principled reason for acquitting her of murder. She made a choice to kill while her husband was at home, called an ex-boyfriend rather than 911 after killing him, maintained a facade that the babies died of SIDS, and accepted and sought out sympathy and attention."
>
> "The respondent intentionally killed two babies," said the Crown brief during the mother's trial, as reported in the Globe and Mail.

Recall the horrifying story about the recent slap-on-the-wrist handed down to the

Edmonton woman who strangled her own baby. What is wrong with Canada on the life issue?

Walter Williams on CEO salaries and celebrity salaries

October 19, 2011 | by Wintery Knight | Link | Original Link

Walter Williams
From CNS News.

Excerpt:

> It turns out that the top 10 CEOs have an average salary of $43 million, which pales in comparison with America's top 10 celebrities, who earn an average salary of $100 million.
>
> When you recognize that celebrities earn salaries that are some multiples of CEO salaries, you have to ask: Why is it that rich CEOs are demonized and not celebrities? A clue might be found if you asked: Who's doing the demonizing?
>
> It turns out that the demonizing is led by politicians and leftists with the help of the news media, and like sheep, the public often goes along. Why demonize CEOs? My colleague Dr. Thomas Sowell explained it in his brand-new book, "The Thomas Sowell Reader." One of his readings, titled "Ivan and Boris – and Us," starts off with a fable of two poor Russian peasants.
>
> Ivan finds a magic lamp and rubs it, and the jinni grants him one wish. As it turns out, Boris has a goat, but Ivan doesn't. Ivan's wish is for Boris' goat to die. That vision reflects the feelings of too many Americans. If all CEOs worked for nothing, it would mean absolutely little or nothing to the average American's bottom line.
>
> For politicians, it's another story: Demonize people whose power you want to usurp. That's the typical way totalitarians gain power. They give the masses someone to hate. In 18th-century France, it was Maximilien Robespierre's promoting hatred of the aristocracy that was the key to his acquiring more dictatorial power than the aristocracy had ever had.
>
> In the 20th century, the communists gained power by promoting public hatred of

> the czars and capitalists. In Germany, Adolf Hitler gained power by promoting hatred of Jews and Bolsheviks. In each case, the power gained led to greater misery and bloodshed than anything the old regime could have done.
>
> Let me be clear: I'm not equating America's liberals with Robespierre, Josef Stalin and Hitler. I am saying that promoting jealousy, fear and hate is an effective strategy for politicians and their liberal followers to control and micromanage businesses.

Tom sent me this article that shows that raising taxes on the wealthy doesn't even produce more revenue.

Excerpt:

> All this nostalgia about the good old days of 70% tax rates makes it sound as though only the highest incomes would face higher tax rates. In reality, there were a dozen tax rates between 48% and 70% during the 1970s… the individual income tax actually brought in less revenue when the highest tax rate was 70% to 91% than it did when the highest tax rate was 28%.
>
> […]President John F. Kennedy's across-the-board tax cuts reduced the lowest and highest tax rates to 14% and 70% respectively after 1964, yet revenues (after excluding the 5%-10% surtaxes of 1969-70) rose to 8% of GDP. President Reagan's across-the-board tax cuts further reduced the lowest and highest tax rates to 11% and 50%, yet revenues rose again to 8.3% of GDP. The 1986 tax reform slashed the top tax rate to 28%, yet revenues dipped trivially to 8.1% of GDP.

Why would a Christian care how much money other people have at all? If you see someone who is poor, help them. If you see someone who needs a gift, give them a gift. The Bible teaches individual charity – you choose who to give your money to and how much to give, after you've paid your taxes to Caesar. I think it's time that we took the Bible seriously on money… there are an awful lot of people sinning by breaking people into groups based on how much money they have – or what the color of their skin is. You do the best you can with what you can earn, and stop being concerned about taking money from people who have more than you do. The purpose of life is not to make everyone happy by making the secular government allocate everyone an equal amount of stuff – how unBiblical.

Joe Biden: Pass Obama's stimulus bill or somebody is going to get raped

October 20, 2011 | by Wintery Knight | Link | Original Link

Is stimulus spending reducing unemployment?

UPDATE: Welcome, visitors from Doug Ross @ Journal!

The title of this post is just my snarky paraphrase of what he said, he didn't say exactly that.

Human Events covers the story, here are the videos:

Here's the text:

> It was on Tuesday during a speech at the University of Pennsylvania where Biden initially argued that another round of government spending was needed to prevent sexual assaults. "It's not temporary [administration's proposed stimulus] when that 911 call comes in and a woman's being raped, if a cop shows up in time to prevent the rape. It's not temporary to that woman." Then in the same speech he wished Republicans were themselves rape victims. "I wish they had some notion of what it was like to be on the other side of a gun, or [to have] a 200-pound man standing over you, telling you to submit."

And here's how he responded to this Human Events reporter:

Here's the text:

> Vice President Joe Biden now says he didn't make a reference to rape, and got testy with HUMAN EVENTS when we asked if he would like to retract his comments that the number of sexual assaults would increase if Republicans don't sign on to Barack Obama's latest "jobs" proposal.
>
> "I didn't use, no no no…Let's get it straight, guy. Don't screw around with me," Biden lashed out at HUMAN EVENTS. Then Biden confirmed that he indeed did talk about rape in terms of the President's spending measure. "Murder will continue to rise, rape will continue to rise, all crimes will continue to rise," if the Democrats agenda isn't passed, he added.

> […]The exchange between the vice president and HUMAN EVENTS was taken on Wednesday after Biden gave a speech calling for yet another government stimulus program. This one is union-backed, and aimed at getting teachers and public-sector employees back to work.

I'm wondering if these provocative comments by Vice President Joe Biden are some sort of threat. Because I'm familiar with union thuggery, so this would not be a stretch at all. Obama's advocated violence before, too.

This isn't the first time that Joe Biden has committed a gaffe.

Excerpt:

> According to multiple sources, as reported by the liberal *Politico*, Representative Mike Doyle (D-PA) was delivering a spittle-flecked rant about Republicans, and the Vice President of the United States decided to chime in:
>
> "We have negotiated with terrorists," an angry Doyle said, according to sources in the room. "This small group of terrorists have made it impossible to spend any money."
>
> Biden, driven by his Democratic allies' misgivings about the debt-limit deal, responded: "They have acted like terrorists."

How do you negotiate with someone like that?

Herman Cain leads in Ohio, Hawaii, Iowa, North Carolina, Nebraska, West Virginia

October 20, 2011 | by Wintery Knight | Link | Original Link

The Cain Mutiny
From the Democrat Public Policy Polling firm.

Excerpt:

> Herman Cain's poll momentum is continuing for at least another week. PPP surveys conducted over the weekend in Ohio and Hawaii find him with a large lead in both states. That now makes 7 consecutive polls over the last 3 weeks- a national one and state polls in Ohio, Hawaii, Iowa, North Carolina, Nebraska, and West Virginia- that have found Cain leading the way.
>
> […]Tea Party voters continue to be the primary driver of Cain's momentum. In Ohio he gets 46% of their support to 15% for Gingrich and 11% for Bachmann with Romney finishing all the way back in 4th place at 9%. It's a similar story in Hawaii- there Cain and Romney actually tie at 30% each among non-Tea Party Republicans. But with the Tea Pary crowd Cain gets a whooping 52% to 12% for Bachmann and 9% for Romney. These numbers represent a recurring theme in our polls- Romney doesn't necessarily need to win Tea Pary voters but he sure needs to not lose them by 40 points if he hopes to win the nomination.
>
> […]The big loser in these polls is Rick Perry. The low numbers of Republicans planning to vote for him is a concern but his even bigger issue is that GOP voters are now saying that they just flat out don't like him. In Ohio his favorability is 40/42 with the primary electorate and in Hawaii it's 36/40. His problem isn't that Republican voters just like someone else better than him- it's that at this point they don't even like him at all. He has some serious image rehabilitation to do to get back in this race.
>
> […]In addition to Cain the other candidate continuing to show some surprising

> momentum in Newt Gingrich. He gets a solo third in Ohio and a tie for third in Hawaii, and the numbers in the Buckeye State show the improvement in his image over the last 5 months. When PPP last tested his favorability in May he was at 42/34 with primary voters. Now that's improved to 56/32 and the only Republican with a better net favorability is Cain.

Results:

Poll	Cain's lead (%)	Second place (%)
National	30	Romney 22
Ohio	34	Romney 19
Hawaii	36	Romney 24
Iowa	30	Romney 22
North Carolina	27	Romney/Gingrich 17
Nebraska	30	Gingrich 16
West Virginia	24	Gingrich 18

I wonder when the liberal Mitt Romney will be dropping out of the race? Perhaps he can go work for Obama, since he seems to agree so much with him.

What conditions support the minimum requirements for complex life?

October 20, 2011 | by Wintery Knight | Link | Original Link

The Circumstellar Habitable Zone (CHZ)

What do you need in order to have a planet that supports complex life? First, you need liquid water at the surface of the planet. But there is only a narrow range of temperatures that can support liquid water. It turns out that the size of the star that your planet orbits around has a lot to do with whether you get liquid water or not. A heavy, metal-rich star allows you to have a habitable planet far enough from the star so the planet can support liquid water on the planet's surface while still being able to spin on its axis. The zone where a planet can have liquid water at the surface is called the circumstellar habitable zone (CHZ). A metal-rich star like our Sun is very massive, which moves the habitable zone out further away from the star. If our star were smaller, we would have to orbit much closer to the star in order to have liquid water at the surface. Unfortunately, if you go too close to the star, then your planet becomes tidally locked, like the moon is tidally locked to Earth. Tidally locked planets are inhospitable to life.

Circumstellar Habitable Zone

Here, watch a clip from The Privileged Planet: (Clip 4 of 12, full playlist here)

But there's more.

The Galactic Habitable Zone (GHZ)

So, where do you get the heavy elements you need for your heavy metal-rich star?

You have to get the heavy elements for your star from supernova explosions – explosions that occur when certain types of stars die. That's where heavy elements come from. But you can't be TOO CLOSE to the dying stars, because you will get hit by nasty radiation and explosions. So to get the heavy elements from the dying stars, your solar system needs to be in the galactic habitable zone (GHZ) – the zone where you can pickup the heavy elements you need but not get hit by radiation and explosions. The GHZ lies

between the spiral arms of a spiral galaxy. Not only do you have to be in between the arms of the spiral galaxy, but you also cannot be too close to the center of the galaxy. The center of the galaxy is too dense and you will get hit with massive radiation that will break down your life chemistry. But you also can't be too far from the center, because you won't get enough heavy elements because there are fewer dying stars the further out you go. You need to be in between the spiral arms, a medium distance from the center of the galaxy.

Like this:

Galactic Habitable Zone and Solar Habitable Zone

Here, watch a clip from The Privileged Planet: (Clip 10 of 12, full playlist here)

The GHZ is based on a discovery made by astronomer Guillermo Gonzalez, which made the front cover of Scientific American in 2001. That's right, the cover of Scientific American. I actually stole the image above of the GHZ and CHZ (aka solar habitable zone) from his Scientific American article (linked above).

These are just a few of the things you need in order to get a planet that supports life.

Here are a few of the more well-known ones:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.

- planetary neighbors must have non-eccentric orbits

By the way, you can watch a lecture with Guillermo Gonzalez explaining his ideas further. This lecture was delivered at UC Davis in 2007. That link has a link to the playlist of the lecture, a bio of the speaker, and a summary of all the topics he discussed in the lecture. An excellent place to learn the requirements for a suitable habitat for life.

Obama raised more money from rich bankers than any Republican candidate

October 20, 2011 | by Wintery Knight | Link | Original Link

From the liberal Washington Post.

Excerpt:

> Despite frosty relations with the titans of Wall Street, President Obama has still managed to raise far more money this year from the financial and banking sector than Mitt Romney or any other Republican presidential candidate, according to new fundraising data.
>
> Obama's key advantage over the GOP field is the ability to collect bigger checks because he raises money for both his own campaign committee and for the Democratic National Committee, which will aid in his reelection effort.
>
> As a result, Obama has brought in more money from employees of banks, hedge funds and other financial service companies than all the other GOP candidates combined, according to a Washington Post analysis of contribution data. The numbers show that Obama retains a persistent reservoir of support among Democratic financiers who have backed him since he was an underdog presidential candidate four years ago.
>
> […]One top banking executive who raises money for Obama and who requested anonymity to discuss fundraising efforts said reports of disaffection with the president "are exaggerated and overblown." He said a strong contingent of financiers in New York, Chicago and California remain supportive of Obama and his economic policies, even as some have turned on him.

The Daily Caller explains how Barack Obama has received the most money from Wall Street bankers of all politicians in the last 20 years. (H/T Neil Simpson)

Excerpt: (with links removed)

> In fact, the Sunlight Foundation, a nonpartisan watchdog group that tracks lobbyist spending and influence in both parties, found that President Obama has received more money from Bank of America than any other candidate dating back to 1991.An examination of the numbers shows that Obama took in $421,242 in campaign contributions in 2008 from Bank of America's executives, PACs and employees, which exceeded its prior record contribution of $329,761 to President George W. Bush in 2004.
>
> According to the Center for Responsive Politics, Wall Street firms also contributed more to Obama's 2008 campaign than they gave to Republican nominee John McCain.
>
> "The securities and investment industry is Obama's second largest source of

> bundlers, after lawyers, at least 56 individuals have raised at least $8.9 million for his campaign," Massie Ritsch wrote in a Sept. 18, 2008 entry on the Center for Responsive Politics's OpenSecrets blog.
>
> By the end of Barack Obama's 2008 campaign, executives and others connected with Wall Street firms, such as Goldman Sachs, Bank of America, Citigroup, UBS AG, JPMorgan Chase, and Morgan Stanley, poured nearly $15.8 million into his coffers.
>
> […]Wall Street's generosity to Obama didn't end with his 2008 campaign either. Wall Street donors contributed $4.8 million to underwrite Obama's inauguration, according to a Jan. 15, 2009 Reuters report.So far Wall Street has raised $7.2 million in the current electoral cycle for President Obama, according to the Center for Responsive Politics. Obama's 2012 Wall Street bundlers include people like Jon Corzine, former Goldman Sachs CEO and former New Jersey governor; Azita Raji, a former investment banker for JP Morgan; and Charles Myers, an executive with the investment bank Evercore Partners.

It should be no surprise to anyone that Barack Obama *voted for* the $700 billion Wall Street bailout in 2008. He also supported extending the bailout powers of the federal government in 2010. Those are the facts.

Obama gives $529 million loan to firm that outsources manufacturing to Finland

October 21, 2011 | by Wintery Knight | Link | Original Link

From ABC News. (H/T Doug Ross Journal)

Excerpt:

> With the approval of the Obama administration, an electric car company that received a $529 million federal government loan guarantee is assembling its first line of cars in Finland, saying it could not find a facility in the United States capable of doing the work.
>
> Vice President Joseph Biden heralded the Energy Department's $529 million loan to the start-up electric car company called Fisker as a bright new path to thousands of American manufacturing jobs. But two years after the loan was announced, the job of assembling the flashy electric Fisker Karma sports car has been outsourced to Finland.
>
> […]**The loan to Fisker is part of a $1 billion bet the Energy Department has made in two politically connected California-based electric carmakers producing sporty — and pricey — cutting-edge autos. Fisker Automotive, backed by a powerhouse venture capital firm whose partners include former Vice President Al Gore, predicts it will eventually be churning out tens of thousands of electric sports sedans at the shuttered GM factory it bought in Delaware. And Tesla Motors, whose prime backers include PayPal mogul Elon Musk and Google co-founders Larry Page and Sergey Brin, says it will do the same in a massive facility tooling up in Silicon Valley.**
>
> **An investigation by ABC News and the Center for Public Integrity's iWatch News that will air on "Good Morning America" found that the DOE's bet carries risks for taxpayers, has raised concern among industry observers and government auditors, and adds to questions about the way billions of dollars in loans for smart cars and green energy companies have been awarded. Fisker is more than a year behind rolling out its $97,000 luxury vehicle bankrolled in part with DOE money. While more are promised soon, just 40 of its Karma cars (below) have been manufactured and only two delivered to customers' driveways, including one to movie star Leonardo DiCaprio.** Tesla's SEC filings reveal the start-up has lost money every quarter. And while its federal funding is intended to help it mass produce a new $57,400 Model S sedan, the company has no experience in a project so vast.

Doug Ross' post linked to a description of the car's features:

> Yikes. The EPA has finally released its official fuel economy rating for the Fisker Karma, and it's not high: just 52 MPGe, an all-electric range of 32 miles and 20 miles per gallon on gasoline when the battery runs dry. This is well below the numbers that Fisker reps were bandying about in past years: 67.2 mpge and an all-electric range of 50 miles.

The Wall Street Journal explains who stands to gain from these taxpayer-funded loans. Excerpt:

> A tiny car company backed by former Vice President Al Gore has just gotten a $529 million U.S. government loan to help build a hybrid sports car in Finland that will sell for about $89,000.
>
> The award this week to California startup Fisker Automotive Inc. follows a $465 million government loan to Tesla Motors Inc., purveyors of a $109,000 British-built electric Roadster. Tesla is a California startup focusing on all-electric vehicles, with a number of celebrity endorsements that is backed by investors that have contributed to Democratic campaigns.
>
> […]Kalee Kreider, a spokeswoman for Mr. Gore, confirmed that the former vice president backs Fisker and purchased a Karma. "He believes that a global shift of the automobile fleet toward electric vehicles, accompanying a shift toward renewable-energy generation, represents an important part of a sensible strategy for solving the climate crisis," she said in a statement.
>
> **Fisker's top investors include Kleiner Perkins Caufield & Byers, a veteran Silicon Valley venture-capital firm of which Gore is a partner. Employees of KPCB have donated more than $2.2 million to political campaigns, mostly for Democrats, including President Barack Obama and Hillary Clinton, according to the Center for Responsive Politics, a nonpartisan group that tracks campaign contributions.**
>
> Officials at Kleiner Perkins didn't return requests for comment.

We have been in a massive economic downturn that started when Nancy Pelosi took the gavel from John Boehner in January of 2007. And this is what the Democrats have been doing?

Richard Dawkins responds to Craig's debate challenge in a UK Guardian editorial

October 21, 2011 | by Wintery Knight | Link | Original Link

Atheist Richard Dawkins explained why he wouldn't debate Craig in this UK Guardian column. This is his latest excuse for not debating Craig, (see the full list of excuses here). I guess this is Dawkins' way of striking at Craig without giving Craig a chance to respond. If he wanted to hear a response, he would have attended the debate at Oxford, and put his arguments on the table to be answered.

Defeating the column

His entire column is easily dispatched using Dawkins' own words against him, because he contradicts himself.

Dawkins has previously written this:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

Meanwhile, in his column, Dawkins claimed that God's command to destroy the Canaanites was an instance of evil:

> Most churchmen these days wisely disown the horrific genocides ordered by the God of the Old Testament. Anyone who criticises the divine bloodlust is loudly accused of unfairly ignoring the historical context, and of naive literalism towards what was never more than metaphor or myth. You would search far to find a modern preacher willing to defend God's commandment, in Deuteronomy 20: 13-15, to kill all the men in a conquered city and to seize the women, children and livestock as plunder.

So, in one statement, there's no good or evil, and in the next statement, there's evil. That's a contradiction, and it undermines his entire column, Q.E.D. You can't claim that

there is no standard of good and evil in one breath, and then make judgments of good and evil in the next. It's self-refuting. Dawkins didn't even try to respond to any of Craig's standard arguments for God's existence in the editorial, he just went off on a tangent about a few Bible verses that, even if true, might only defeat Judaism and Christianity in particular, but not the existence of God in general. And the debate "Does God Exist?" is about the latter.

Responding to the argument

If we ignore Dawkins' first statement denying that morality is real, and just respond to the verses he is complaining about, then we can look at this response online by William Lane Craig, or we can watch a lecture in two parts featuring Christian philosopher Paul Copan (part 1, part 2). So, a response to this objection is not hard to find. We have entire books written to answer this challenge – to say nothing of academic papers.

It's troubling to me that Dawkins would not reference any responses to his argument in his editorial, since they clearly exist, and can easily be found just by searching the world wide web. Dawkins' failure to interact with his critics is not surprising, though, given the fact that he didn't reference any opposing scholars in his latest book. Moreover, Dawkins has cited a professor of German language as an authority on the historical Jesus and suggested that unobservable aliens could explain the origin of life. These are not actions of a genuine scholar, and the refusal to debate William Lane Craig in public is part of that same pattern.

But the main point to realize is that Richard Dawkins refuses to debate William Lane Craig, and that means that nothing Richard Dawkins says can be taken seriously. He isn't willing to take the stage with an opponent and defend his views. He prefers to take pot shots at peripheral matters, (disputing particular Bible passages has *nothing whatsoever* to do with the question of whether a Creator of the universe exists or not), from the safety of the UK Guardian's editorial page. I cited responses to the passages from Craig and Copan above, but Craig could even just reject the passages as mistaken and Dawkins' argument would be neutralized – the debate is about the existence of God – the bare philosopher's God who creates and designs the universe. The debate is not about the Christian God in particular, or even about the inerrancy of the Bible. Evidence against inerrancy is not evidence against a Creator and Designer of the universe.

Finally, it's important to note that Richard Dawkins has peculiar views on morality himself. Not only does he support abortion, which resulted in the death of over 50 million unborn babies since 1973 in the United States *alone*, but he actually has no problem with infanticide.

(H/T Anglican Samizdat)

That's why it's important to make these arguments in a debate – instead of preaching them in an editorial to the UK Guardian choir. Theists do have responses to these and other objections, and it would be nice to be able to give those responses in public. If truth is the goal, then hearing both sides is the best way to reach the goal. It's part of the scientific method that we should be open to being disproved by the evidence.

About William Lane Craig

William Lane Craig is currently conducting a debating and speaking tour of the UK, with stops at Oxford, Cambridge, London and points in between.

Let's review William Lane Craig's qualifications:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

Here are some of Craig's recent publications: (it's a little out of date, now)

From 2007:

- Ed. with Quentin Smith. *Einstein, Relativity, and Absolute Simultaneity*. Routledge Studies in Contemporary Philosophy. London: Routledge, 2007, 302 pp.
- "Theistic Critiques of Atheism." In *The Cambridge Companion to Atheism*, pp. 69-85. Ed. M. Martin. Cambridge Companions to Philosophy. Cambridge University Press, 2007.
- "The Metaphysics of Special Relativity: Three Views." In *Einstein, Relativity, and Absolute Simultaneity*, pp. 11-49. Ed. Wm. L. Craig and Quentin Smith. Routledge Studies in Contemporary Philosophy. London: Routledge, 2007.
- "Creation and Divine Action." In *The Routledge Companion to Philosophy of Religion,* pp. 318-28. Ed. Chad Meister and Paul Copan. London: Routledge, 2007.

From 2008:

- *God and Ethics: A Contemporary Debate*. With Paul Kurtz. Ed. Nathan King and Robert Garcia. With responses by Louise Antony, Walter Sinnott-Armstrong, John

Hare, Donald Hubin, Stephen Layman, Mark Murphy, and Richard Swinburne. Lanham, Md.: Rowman & Littlefield, 2008.
- "Time, Eternity, and Eschatology." In *The Oxford Handbook on Eschatology*, pp. 596-613. Ed. J. Walls. Oxford: Oxford University Press, 2008.

From 2009:

- Ed. with J. P. Moreland. *Blackwell Companion to Natural Theology*. Oxford: Blackwell.
- "The *Kalam* Cosmological Argument." With James Sinclair. In *Blackwell Companion to Natural Theology*. Ed. Wm. L. Craig and J. P. Moreland. Oxford: Blackwell.
- "In Defense of Theistic Arguments." In *The Future of Atheism: Alister McGrath and Daniel Dennett in Dialogue*. Ed. Robert Stewart. Philadelphia: Fortress Press.

Forthcoming:

- "The Cosmological Argument." In *Philosophy of Religion: Classic and Contemporary Issues*. Ed. Paul Copan and Chad Meister. Cambridge: Blackwell.
- "Cosmological Argument"; "Middle Knowledge." In *The Cambridge Dictionary of Christian Theology*. Ed. G. Fergusson *et al*. Cambridge: Cambridge University Press.
- "Divine Eternity." In *Oxford Handbook of Philosophical Theology*. Ed. Thomas Flint and Michael Rea. Oxford: Oxford University Press.

He seems eminently qualified to debate the existence of God, doesn't he? And he's done it dozens of times, against the top atheist scholars.

What is Richard Dawkins is afraid of?

Here's an example of William Lane Craig debating the famous atheist Christopher Hitchens, arguably the top popular atheist in the world today.

Here's a review of that debate from Common Sense Atheism, a popular and respected atheist web site.

Excerpt:

> I just returned from the debate between William Lane Craig and Christopher Hitchens at Biola University. It was a bigger deal than I realized. Over 3,000 people were there, and groups from dozens of countries – including Sri Lanka, apparently – had purchased a live feed.
>
> […]The debate went exactly as I expected. Craig was flawless and unstoppable. Hitchens was rambling and incoherent, with the occasional rhetorical jab. Frankly, Craig spanked Hitchens like a foolish child. Perhaps Hitchens realized how bad things were for him after Craig's opening speech, as even Hitchens' rhetorical flourishes were not as confident as usual. Hitchens wasted his cross-examination time with questions like, "If a baby was born in Palestine, would you rather it be a Muslim baby or an atheist baby?" He did not even bother to give his concluding remarks, ceding the time instead to Q&A.

The atheist web site “Debunking Christianity” called it a “landslide” victory for Craig. And I want to suggest that this outcome is exactly what Richard Dawkins was afraid of.

Craig has also debated other prominent atheists like Sam Harris, Daniel Dennett, Bart Ehrman, Peter Atkins, Victor Stenger, and so on. And many of these can be seen *for free* on Youtube.

What William Lane Craig offers in his debates is a set of deductive arguments that are logically valid, and supported by 1) the latest scientific evidence (which he has published in peer-reviewed scientific journals), and 2) the consensus of academic historians of all persuasions, using *standard* historical methods. Dawkins should have no trouble debating empirical arguments from science and history, if his beliefs were testable against objective evidence. The debate is about scientific and historical evidence, and we can investigate that evidence.

Finally, I want to note that Craig is not the only person who Dawkins refuses to debate. He was challenged to debate Stephen C. Meyer, whose Ph.D is from Cambridge, and again declined to have his ideas debated in a public forum. Meyer’s book was as a Times Literary Supplement Best Book of 2009 – and it was nominated by the respected atheist philosopher Thomas Nagel.

Mitt Romney on global warming, climate change, environmental regulations

October 21, 2011 | by Wintery Knight | Link | Original Link

An alarming article from the Washington Examiner about Mitt Romney's environmental regulations on business.

Excerpt:

> Make no mistake, if Mitt Romney secures the nomination, the Tea Party almost assuredly suffers a mortal wound. As Newt Gingrich just said, while Romney is an exceptionally nice person and a very hard worker, he is also a Rockefeller Republican.
>
> As their standard bearer going into battle with Barack Obama next fall, do Republican primary voters really want the person who drew up the blueprint for Obama-care?
>
> Worse, do Republican primary voters really want the person who the out-of-control job and freedom killing Obama EPA looked to for some of its most draconian ideas?
>
> As reported in the conservative blogs Moonbattery and HOTAIR; "the Romney administration in 2005 essentially did what Barack Obama's EPA wants to do now. He imposed CO2 emission caps — the "toughest in the nation" — in an effort to curtail traditional energy production.
>
> "Not only did Romney impose these costly new regulations, he then imposed price caps to keep power companies from passing the cost along to the consumer. As we have seen in Romney-Care, regulation and price controls eventually drive businesses into bankruptcy or relocation."
>
> More chilling than that bit of socialist nanny-state big government interference is who Romney looked to for advice regarding the plan. As reported by these two conservative sites, it was none other than Obama's Chief "science" adviser, John Holdren.
>
> Are you kidding me? Is *anyone* in the GOP paying attention to what is going on here? Is the Republican establishment so desperate to hold on to its power that it will continually look the other way as a chameleon-like candidate not only dreams up the ideas used by far-left Obama White House, but praises one of the people most reviled by the conservative movement?
>
> With regard to this subject, then-Gov. Romney's office trumpeted its energy and job-killing plan by saying in part: "Today's regulations will achieve our aggressive environmental goals and provide incentives to push technological development," said Stephen Pritchard, Secretary of Environmental Affairs.
>
> "In the development of greenhouse gas policy, Romney Administration officials

> have elicited input from environmental and economic policy experts.
>
> "These include John Holdren,professor of environmental policy at Harvard University and chair of the NationalCommission on Energy Policy and Billy Pizer, an economist at Resources for the Future, anenvironmental policy think-tank based in Washington D.C"
>
> Again, is *anyone* paying attention to these surreal, anything but conservative, facts?
>
> Governor Romney's office then closed the memo by proudly stating:
>
> "Implementing these regulations represents the latest in a series of initiatives that theRomney administration has undertaken to address air pollution.
>
> "In 2004, Governor Romney announced the Massachusetts Climate Protection Plan, which laid out acoordinated statewide response to reduce greenhouse gas emissions and protect the climate."
>
> You can't make this up. Something that sounds as if it was drafted in the bowels of the Obama EPA was actually part of a memo released with great fan-fare by Governor Romney on December 7, 2005.

Do you remember who John Holdren is? Let me help.

Excerpt:

> President Obama's "science czar," John Holdren, once floated the idea of forced abortions, "compulsory sterilization," and the creation of a "Planetary Regime" that would oversee human population levels and control all natural resources as a means of protecting the planet — controversial ideas his critics say should have been brought up in his Senate confirmation hearings.
>
> […]…many of Holdren's radical ideas on population control were not brought up at his confirmation hearings; it appears that the senators who scrutinized him had no knowledge of the contents of a textbook he co-authored in 1977, "Ecoscience: Population, Resources, Environment," a copy of which was obtained by FOXNews.com.The 1,000-page course book, which was co-written with environmental activists Paul and Anne Ehrlich, discusses and in one passage seems to advocate totalitarian measures to curb population growth, which it says could cause an environmental catastrophe.
>
> The three authors summarize their guiding principle in a single sentence: "To provide a high quality of life for all, there must be fewer people."
>
> As first reported by FrontPage Magazine, Holdren and his co-authors spend a portion of the book discussing possible government programs that could be used to lower birth rates.
>
> Those plans include forcing single women to abort their babies or put them up for adoption; implanting sterilizing capsules in people when they reach puberty; and spiking water reserves and staple foods with a chemical that would make people

> sterile.
>
> To help achieve those goals, they formulate a “world government scheme” they call the Planetary Regime, which would administer the world’s resources and human growth, and they discuss the development of an “armed international organization, a global analogue of a police force” to which nations would surrender part of their sovereignty.

Is that what Mitt Romney believes, too? It would be consistent with his other liberal views.

Ohio Issue 2: Should voters vote yes or vote no on Ohio State Issue 2?

October 22, 2011 | by Wintery Knight | Link | Original Link

In the 2010 mid-term elections, Republican John Kasich won the governorship and promised to balance the state's budget by reining in the state's spending on salaries and benefits for public sector union employees. To accomplish this, the Ohio legislature pass Senate Bill 5. However, an effort is on the ballot to repeal the law, and Ohio voters will get a chance to keep or scrap the law on Tuesday, November 8th, 2011.

Here's what Ohio's Issue 2 is all about:

> Issue 2 makes some very fair and common sense requests of our government employees to give local communities the flexibility they need to get taxes and spending under control, while providing the essential services that we rely on.
>
> - It allows an employee's job performance to be considered when determining compensation, rather than just awarding automatic pay increases based only on an employee's length of service.
> - It asks that government employees pay at least 15 percent of the cost of their health insurance premium. That's less than half of what private sector workers are currently paying.
> - It requires that government health care benefits apply equally to all government employees, whether they work in management or non-management positions. No special favors.
> - It asks our government employees to pay their own share of a generous pension contribution, rather than forcing taxpayers to pay both the employee and employer shares.
> - It keeps union bosses from protecting bad teachers and stops the outdated practice of laying off good teachers first just because they haven't served long enough.
> - Finally, it preserves collective bargaining for government employees, but it also returns some basic control of our schools and services to the taxpayers who fund them, not the union bosses who thrive on their mismanagement.
>
> Even under the reforms of State Issue 2, Ohio's government employees will still receive better pay, better health care and better retirement benefits, on average, than the vast majority of Ohioans who work in the private sector.

There are a number of myths going around about Issue 2, and it's important to set the record straight, so I'll do that below.

Ohio Average Pay: Public Unions vs. Private

Myths and truths about Ohio State Issue 2

Here's a common myth:

> State Issue 2 would "cut salaries and benefits."

The truth:

> Issue 2 would not cut salaries or benefits for any government employee. Employees would simply be asked to pay a modest share of their benefits, just like employees in the private sector do. For health care coverage, they would pay at least 15% of their overall plan. (Many local government employees currently pay less than 9% of their health care premium, while the average private sector worker pays upwards of 30%.) In addition, employees would be required to pay their personal share of a retirement plan (only 10%), rather than asking taxpayers to pay that share. That's not too much to ask at a time when many private sector workers get no retirement benefit at all. Finally, Issue 2 requires that benefits apply equally to all public employees, so no one gets special treatment.

And another common myth:

> State Issue 2 will eliminate government employee pensions.

The truth:

> Government employees will still get a very generous pension benefit – an annual payment that averages their three highest annual salaries. That's a pretty nice

> deal, when many private sector workers get no retirement benefit at all. State Issue 2 only ends a practice where some government union contracts require taxpayers to pick up the tab for BOTH the employer AND employee shares of a required pension contribution. In this economy, it's simply not right to ask struggling taxpayers to foot the bill so government employees can get a free retirement. Issue 2 simply says government employees should pay their required share (10 percent) and taxpayers will contribute the employer share (14 percent).

Another myth:

> State Issue 2 will cut teacher salaries.

The truth:

> That's one of the scare tactics government unions are using to turn people against these reforms. Nothing in Issue 2 determines salary levels. It only ends the practice of handing out automatic pay raises, or "step" increases, and longevity pay – or bonuses just for holding the job for a certain period of time. Issue 2 also asks that performance be added as a factor in teacher compensation, a goal President Barack Obama set out in his national education policy in 2009.

And another myth:

> State Issue 2 will cost jobs

The truth:

> Just the opposite is true. Ohio's state and local tax burden ranks among the top third in the nation. As a result, companies large and small have left our state in pursuit of better tax incentives elsewhere, taking hundreds of thousands of jobs with them. If Ohio hopes to compete for new job growth, we have to make our state a more affordable place to live, work and do business. That starts with getting the cost of government under control so we can direct more of our limited resources into economic development, community revitalization and better schools.

More myths are corrected on this page.

Newspaper endorsements

So far, Issue 2 has been endorsed by several Ohio newspapers, including the biggest ones.

The Cleveland Plain Dealer:

> *The fiscal picture of local governments and school districts, especially, will improve as they are able to right-size their work forces and their expenditures on services. That will happen over time, not overnight, as new contracts are*

> *established.*
>
> ***Repeal SB 5, though, and it's going to be awfully hard for local governments to manage their payrolls without resorting to larger-scale layoffs than would otherwise be necessary. And local governments will continue to be hamstrung by anti-merit seniority rules that lead to worker complacency and protect dead weight and time-servers.***

Voting YES on Issue 2 will prevent layoffs by keeping public sector wages and benefits in line with what the private sector can afford to pay.

The Columbus Dispatch:

> *Despite the insistence of opponents, the effort to reform Ohio's out-of-balance collective-bargaining law is not an expression of disrespect for or dissatisfaction with Ohio teachers, police officers, firefighters and other government employees. It is a much-needed attempt to restore control over public spending to the public officials elected to exercise that control.*
>
> *It does not assert that public employees are worth less than the compensation they're receiving, only that the compensation has grown faster than the public's ability to pay for it.*
>
> *[…]**With more ability to control the escalation of salary and benefit costs, governments won't be forced as often to impose layoffs, and might be able to afford to keep even more police and firefighters on the streets.***

Again, no one is saying that public sector workers don't matter – the question is whether we can afford to give them better wages and benefits than the private sector workers who are their customers and their employers. Public sector workers work for the public, and the public can only afford to pay so much.

Conclusion

Government employees are paid 43% more than private sector employees, in salary and benefits:

I think that people who care about the long-term prosperity of Ohio should vote "YES" on Issue 2 to make public and private salaries and benefits MORE EQUAL. Ohio is facing enormous economic pressure from the global recession, and everyone has to make sacrifices. Now is not the time for public sector workers to insist on higher wages and benefits, especially when the private sector workers who pay their salaries don't make as much money, nor do they get the pensions, nor do they get the better job security. Ohio voters can certainly go back and renegotiate union salaries and benefits when Ohio is out of the recession.

Is Herman Cain pro-life? What are Cain's views on abortion and Planned Parenthood?

October 22, 2011 | by Wintery Knight | Link | Original Link

(Video: Herman Cain's speech at the 2011 National Right to Life Convention)

Let's do analysis this in two parts: 1) what Cain says, and 2) what Cain does.

Life News explains what Cain said about abortion to Piers Morgan that confused people about his pro-life position.

> As LifeNews.com reported, Cain gave an interview to CNN in which he used typical "pro-choice" language about government not making abortion decisions for women that applied, depending on the listener, to either abortions in the case of rape and incest or abortion policy in general. Either way, pro-life advocates have been disappointed today following the comments and they have called on Cain to clarify the comments — which he did in a short message on twitter later in the day saying he is "100% pro-life."
> The statement reads:
> So, basically, Cain was saying that the lay of the land should be that abortion is illegal, and then women will have to get together with their families and decide whether they want to break the law or not, and that it was not Herman Cain's job to be in that discussion. His job would come after in prosecuting the doctors who perform abortions, because he thinks that life begins at conception and the laws should reflect that commitment to protect the unborn.
>
> Yesterday in an interview with Piers Morgan on CNN, I was asked questions about abortion policy and the role of the President.
>
> I understood the thrust of the question to ask whether that I, as president, would simply "order" people to not seek an abortion. My answer was focused on the role of the President. The President has no constitutional authority to order any such action by anyone. That was the point I was trying to convey.
> As to my political policy view on abortion, I am 100% pro-life. End of story.
> I will appoint judges who understand the original intent of the Constitution. Judges who are committed to the rule of law know that the Constitution contains no right to take the life of unborn children.
> I will oppose government funding of abortion. I will veto any legislation that contains funds for Planned Parenthood. I will do everything that a President can do, consistent with his constitutional role, to advance the culture of life.

Here are Cain's exact comments:

> "Whats your view of abortion?" Morgan asks Cain in the interview.
>
> "I believe that life begins at conception and abortion under no circumstances. And here's why," Cain said before Morgan interrupted him and asked, "No

> circumstances?" to which the presidential candidate replied, "No circumstances."
>
> Morgan told Cain that that sets him apart from many other Republican candidates who are pro-life but also believe in exceptions such as rape or incest or the life of the mother. He continued by asking Cain if he would want his daughter or granddaughter, if raped, to keep the baby — which Cain said "was mixing two things."
>
> "It's not the government's role, or anybody else's role to make that decision," Cain responded. "Secondly, if you look at the statistical incidence, you're not talking about that big a number. So what I'm saying is, it ultimately gets down to a choice that that family or that mother has to make. Not me as president. Not some politician, not a bureaucrat. It gets down to that family, and whatever they decide, they decide. I shouldn't have to tell them what decision to make for such a sensitive issue."
>
> Morgan told Cain that his views on the question of abortion are important because he may very well become president someday and turn into public policy.
>
> "Not they don't," Cain said of his views becoming law. "I can have an opinion on an issue without it being a directive on the nation. The government shouldn't be trying to tell people everything to do, especially when it comes to a social decision that they need to make."
>
> Cain finished by saying he agreed with Morgan that his view is a departure from the political norm.

Cain's view is that the government should prohibit abortion, and then you should be left free to decide whether to comply with the law.

Cain's position reminds me of a famous story about the British in India, who were opposed to the Hindu practice of suttee/sati which involves burning widows on the funeral pyre of their husbands. Sir Charles Napier responded to the Hindu custom as follows:

"Be it so. This burning of widows is your custom; prepare the funeral pile. But my nation has also a custom. When men burn women alive we hang them, and confiscate all their property. My carpenters shall therefore erect gibbets on which to hang all concerned when the widow is consumed. Let us all act according to national customs."

(Napier, William. (1851) *History Of General Sir Charles Napier's Administration Of Scinde*, p.35)

That's exactly what Cain's position was, although I think that he would enforce the prohibition on abortion by fining or jailing the doctor who performed the abortion, and eventually the practice would stop, because there would be no money in it. Abortion is all about the money. When you take away the money, people stop providing abortions.

Cain's pro-life record

What has Cain done for the pro-life cause with his own money? Life News explains.

Excerpt:

> With the balance of power in Congress hanging in the air, a leading African American businessman says black voters in the United States should put their historical pro-life values above political party. That means voting for pro-life candidates rather than supporting Democratic candidates across the board.
>
> Herman Cain is best known as the former chairman and CEO of Godfather's Pizza. He is a political commentator and was a candidate for the U.S. Senate.
>
> "More and more African Americans are pro-life," Cain said in a statement LifeNews.com obtained. "Our message to African Americans is simple — it's time you vote for candidates who support our values."
>
> Cain will underscore that message with a $1 million advertising campaign in key states and congressional districts targeting black radio programs and urban radio stations young African Americans enjoy. Some of the ads focus on abortion.

But there's more to his pro-life record than just giving up a million dollars of his own money. He is a pro-life activist.

What has Cain done with pro-life groups? Life News explains.

Excerpt:

> The National Right to Life Committee is today vouching for Republican presidential candidate Herman Cain's bona fides, saying the businessman who is considered by many to be the current GOP frontrunner is pro-life.
>
> NRLC's comments come after a 48-hour period during which Cain has confused pro-life voters where he stands — by first using seemingly pro-abortion language saying government should have no involvement before finally clarifying he is pro-life and saying he wants abortions illegal.
>
> "Herman Cain's pro-life," David O'Steen, executive director of the National Right to Life Committee, told National Review. "He addressed our convention last June. We are quite confident in his pro-life position. When he ran in the primary for senate some years back … he ran as a pro-life candidate then in Georgia. We've known of him for a number of years, and he's always taken a pro-life position."
>
> At that event, Cain, the former businessman and candidate, said the "Founding fathers got it right" including the right to life from conception.
>
> "Don't infringe on the rights of somebody else and that includes the unborn," Cain said of what the Constitution requires.
>
> Cain spent most of his time talking about the moral crisis and lack of God in the cultural conversations in America, saying, "We've got a moral crisis in this nation. One of the reasons we have this moral crisis today is because too many people are trying to take God out of our culture, little by little."
>
> "Those that believe taking the life of the unborn is a choice has gotten away from the Godly principles," he said. "The way we're going to protect the unborn in this

> nation is to work on the right problem, get God back in our culture."
>
> Cain said pro-life advocates must change hearts and then minds will follow and he urged pro-life advocates to do more to promote the work of pregnancy centers.
>
> "Let young women know about alternatives to these so-called Planned Parenthood facilities. We have to inform and educate people and let them know about resources like the one in Dallas Texas where I visited called the Source for Women. When young women show up there, the first option isn't getting an abortion, the first option is counseling to show these young ladies the alternatives to abortion," he said.

Herman Cain's opposition to Planned Parenthood is quite strong. Life News explains. Excerpt:

> During a presentation before a set of conservative bloggers in the nation's capital today, likely Republican presidential candidate Herman Cain, a pro-life businessman, bashed the Planned Parenthood abortion business — which went after him in return.
>
> Cain said he supports revoking the federal taxpayer funding for the abortion business: "I support de-funding Planned Parenthood. "Tactically how [Congress] does it…I can't tell you."
>
> The African-American then went further and talked about the racial overtones behind the founding of the abortion business by Margaret Sanger.
>
> "You probably don't hear a lot of people talking about this," Cain said. "When Margaret Sanger – check my history – started Planned Parenthood, the objective was to put these centers in primarily black communities so they could help kill black babies before they came into the world."
>
> "It's planned genocide. It's carrying out its original mission," he said. "I've talked to young girls who go in there, and they don't talk about how you plan parenthood. They don't talk about adoption as an option. They don't say, 'Well, bring your parents in so we can sit down and talk with you, and counsel with you before you make this decision.'"
>
> […]In January, Cain also went after Planned Parenthood.
>
> He told American Family Radio's "Focal Point" program that he is pro-life and opposes the agenda of Planned Parenthood, the nation's biggest abortion business.
>
> "I absolutely would defund Planned Parenthood — not because I don't believe in planning parenthood, [but because] Planned Parenthood as an organization is an absolute farce on the American people," he said.
>
> Cain, who is African-American, accused the abortion business of engaging in a racist agenda.

> “People who know the history of Margaret Sanger, who started Planned Parenthood, they know that the intention was not to help young women who get pregnant to plan their parenthood. No — it was a sham to be able to kill black babies,” he added.
>
> Cain also talked about his pro-life views in general and alluded to judicial appointments.
>
> “I believe that life begins at conception, period. And that means that I will have to see enough evidence that someone I would appoint shares that same view. I believe that the current Supreme Court is leaning too much to the liberal side,” he said. “I’m a Christian, I’ve been a Christian all my life. I’ve been a believer in the Bible since I was 10 years old. I’m very active in my church, and there is no way I would compromise my religious beliefs about the sanctity of life. And so it starts with, will they have demonstrated in their career, in some of their other rulings, if they come from the federal judge bench, whether or not they also share that.”
>
> “Because I believe that the principles that our Founding Fathers cherished, when they founded this country, and wrote the Declaration of Independence which inspired the Constitution, they were based upon biblical principles. I want to get back to those principles as president, if I run and get elected — not rewrite those documents,” he added.

I do think that Cain needs to be challenged now rather than later to clarify his views and to increase his knowledge. He has a year to do it before the election. Right now he is leading Romney in the national polls, and that’s good, because Mitt Romney’s record has been pro-abortion since 1994 and Mitt Romney refused to sign a pro-life pledge. So, if we have to pick a nominee in 2012, we have to pick Herman Cain over Mitt Romney. But Cain needs to improve his thinking and speaking on pro-life issues to prevent gaffes from occurring that make people think that he isn’t pro-life. His previous words were pro-life, his allies are pro-life, and more importantly, his previous record has been pro-life – right up to use a million dollars to support pro-life causes.

Atheist philosopher: Dawkins refusal to debate is cynical and anti-intellectual

October 22, 2011 | by Wintery Knight | Link | Original Link

This article by atheist Daniel Came about Richard Dawkins' refusal to debate William Lane Craig was published today in the UK Guardian. (H/T Mary)

Excerpt:

> In his latest undignified rant, Dawkins claims that it is because Craig is "an apologist for genocide" that he won't share a platform with him. Dawkins is referring to Craig's defence of God's commandment in Deuteronomy 20: 15-17 to wipe out the Canannites. Here is Craig's offending passage:
>
> > "[If] God's grace is extended to those who die in infancy or as small children, the death of [the Canannite] children was actually their salvation. We are so wedded to an earthly, naturalistic perspective that we forget that those who die are happy to quit this earth for heaven's incomparable joy. Therefore, God does these children no wrong in taking their lives."
>
> I am disinclined to defend the God of the Old Testament's infanticide policy. But as a matter of logic, Craig is probably right: if an infinite good is made possible by a finite evil, then it might reasonably be said that that evil has been offset. However, I doubt whether Craig would be guided by logic himself in this regard and conduct infanticide. I doubt, that is, that he would wish it to be adopted as a general moral principle that we should massacre children because they will receive immediate salvation.
>
> But whatever you make of Craig's view on this issue, it is irrelevant to the question of whether or not God exists. Hence it is quite obvious that Dawkins is opportunistically using these remarks as a smokescreen to hide the real reasons for his refusal to debate with Craig – which has a history that long predates Craig's comments on the Canaanites.

There is a lot more in the article that is worth reading, including a quick review of Dawkin's "The God Delusion" that echoes Craig's own comments. I don't mind that atheists think atheism is true, and that theism is irrational. That's their view, and they are entitled to hold it and speak it and teach it. But I think that Came is right to say that they should also be willing to defend it in public. Dawkins is clearly not willing to defend his views, and that tells me that he has no reasons to believe them.

Please read my earlier post about Dawkins' editorial in the UK Guardian. It contains a response to Dawkins' attack on Craig, an analysis of Craig's qualifications, an assessment of Dawkins' ability to debate, and a previous debate between Craig and prominent atheist

Christopher Hitchens.

Justin Brierley interviews William Lane Craig on the apologetics project

October 23, 2011 | by Wintery Knight | Link | Original Link

Justin Brierley has posted an interview with William Lane Craig in the UK magazine "Christianity". (H/T Mary)

Here's the introduction:

> Type 'William Lane Craig' into Google and you find some surprisingly varied views. For example, you'll find Rick Warren tweeting about his 'friend' for whom he has written a recent foreword, and other Christian leaders praising an academic who combines intellect with humility. On the other hand, you may come across Richard Dawkins labelling him a 'ponderous buffoon' along with other commentators on his atheist website who describe Craig in even more colourful terms.
>
> So what is it about one American philosophy professor that inspires such divergent views? Craig is arguably the best known defender of the intellectual case for Christianity in the world today. As a philosopher, his work is published in academic journals and books. As a popular apologist for the existence of God, his high-profile debates with leading atheists have been viewed by hundreds of thousands around the world. His style is polished, systematic and devastatingly thorough.
>
> To his fans he is the commander-in-chief of a resistance movement against the populist New Atheism – the man who can floor Goliaths such as Christopher Hitchens and Sam Harris. To his detractors, he is a wordsmith and a showman – a professional debater who, to quote Richard Dawkins, 'brandishes impressive-sounding syllogisms from Logic 101 to bamboozle his faithhead audience'.
>
> To me, he comes across as sincere, humble and somewhat bemused by the opinions that are expressed about him online. Is he affected by the words that some atheists write about him? Laughing, he responds: 'It doesn't get to me because I don't read it. I am in blissful ignorance of what these folks are saying about me.'
>
> So why is Richard Dawkins even bothering to comment on William Lane Craig? It is because he has refused multiple invitations to debate Craig when he comes to the UK this October. They met once briefly in a panel debate in Mexico in 2010, an encounter that led to those online comments. Craig's supporters (and many of his opponents) would like to see a more substantive one-on-one debate, but Dawkins has resolutely refused to face the philosopher again.
>
> To Craig, it is a confirmation that 'New Atheism' is more bluster than substance. 'I would describe it as a pop culture movement, rather than a serious intellectual

> one. But as pop culture I do take it very seriously. They have the momentum, and it's very important that we as Christians expose it for the superficiality that it is.'

Here's are a few of the questions he answers:

You've debated leading atheists all over the world. What is your ultimate hope in participating in these events?

Well, one hope is to help to reshape Western culture, which has become deeply secularised, so that Christianity becomes an intellectual option again. I hope especially to reach out to British students seeking for truth and to show that making a commitment to Christ is not a delusion, but perfectly in step with the dictates of reason.

Is this a biblical approach to evangelism?

I think so, especially in Acts. Paul would argue from the scriptures with his Jewish brethren that Jesus was the Messiah. When dealing with a Gentile audience he would present reasons from nature and conscience, moral and cosmological arguments, and appeal to the eyewitness testimony of Jesus' resurrection. Paul would do things like rent the Hall of Tyrannus and hold daily lectures there to argue and discuss with anybody who wanted to come. So I see myself as very much following the model of Paul.

Are local churches failing young people by not preparing them for the tough questions they run into at university?

I think we are failing them. If we simply read our children Bible stories and give them entertainment and emotional worship experiences, then we are leaving them unprepared for the tremendous intellectual challenges that they will encounter in secondary school and university. I think it is vital that from an early age Christian parents teach their children to think 'Christianly' about the world, and to articulate and defend what we as Christians believe.

Do you see people becoming Christians through your ministry?

We really do. It happens when I speak on a university campus… people will register commitments through comment cards at the meetings, and there are also the wonderful emails that we receive weekly from people all around the world saying 'Thank you, thank you, thank you, this has transformed my life.' Added to that is the effect that this has had in the lives of people who are Christian believers. Once they become confident that this is really the truth, it has an energising effect on them that makes them want to share the gospel. It gives them a zeal for God and a desire to read his word and know him.

I really recommend you read the whole thing. I hope that we are making more scholars like Craig, because Christian scholarship is the best defense to the secularism that threatens to suffocate Christianity once and for all. I really do think that the church has to get serious about motivating and funding scholars like Craig, and not just in the area of philosophy, but in all the areas that are relevant to the task of apologetics. I think that young Christians should choose to study areas that are relevant to the task of apologetics, especially, science, history and philosophy. That's where the action is.

About William Lane Craig

William Lane Craig is currently conducting a debating and speaking tour of the UK, with stops at Oxford, Cambridge, London and points in between.

Let's review William Lane Craig's qualifications:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

Here are some of Craig's recent publications: (it's a little out of date, now)

From 2007:

- Ed. with Quentin Smith. *Einstein, Relativity, and Absolute Simultaneity*. Routledge Studies in Contemporary Philosophy. London: Routledge, 2007, 302 pp.
- "Theistic Critiques of Atheism." In *The Cambridge Companion to Atheism*, pp. 69-85. Ed. M. Martin. Cambridge Companions to Philosophy. Cambridge University Press, 2007.
- "The Metaphysics of Special Relativity: Three Views." In *Einstein, Relativity, and Absolute Simultaneity*, pp. 11-49. Ed. Wm. L. Craig and Quentin Smith. Routledge Studies in Contemporary Philosophy. London: Routledge, 2007.
- "Creation and Divine Action." In *The Routledge Companion to Philosophy of Religion,* pp. 318-28. Ed. Chad Meister and Paul Copan. London: Routledge, 2007.

From 2008:

- *God and Ethics: A Contemporary Debate*. With Paul Kurtz. Ed. Nathan King and Robert Garcia. With responses by Louise Antony, Walter Sinnott-Armstrong, John Hare, Donald Hubin, Stephen Layman, Mark Murphy, and Richard Swinburne.

Lanham, Md.: Rowman & Littlefield, 2008.
- "Time, Eternity, and Eschatology." In *The Oxford Handbook on Eschatology*, pp. 596-613. Ed. J. Walls. Oxford: Oxford University Press, 2008.

From 2009:

- Ed. with J. P. Moreland. *Blackwell Companion to Natural Theology*. Oxford: Blackwell.
- "The *Kalam* Cosmological Argument." With James Sinclair. In *Blackwell Companion to Natural Theology*. Ed. Wm. L. Craig and J. P. Moreland. Oxford: Blackwell.
- "In Defense of Theistic Arguments." In *The Future of Atheism: Alister McGrath and Daniel Dennett in Dialogue*. Ed. Robert Stewart. Philadelphia: Fortress Press.

Forthcoming:

- "The Cosmological Argument." In *Philosophy of Religion: Classic and Contemporary Issues*. Ed. Paul Copan and Chad Meister. Cambridge: Blackwell.
- "Cosmological Argument"; "Middle Knowledge." In *The Cambridge Dictionary of Christian Theology*. Ed. G. Fergusson *et al*. Cambridge: Cambridge University Press.
- "Divine Eternity." In *Oxford Handbook of Philosophical Theology*. Ed. Thomas Flint and Michael Rea. Oxford: Oxford University Press.

Craig has debated dozens of times against the top atheist scholars. If you have never taken in any of his debates, take a look at his debate against Christopher Hitchens on Youtube.

UK Independent joins UK Guardian in call for Dawkins to debate Craig

October 23, 2011 | by Wintery Knight | Link | Original Link

A call for Richard Dawkins to debate William Lane Craig, from the other major secular-left UK newspaper. (H/T Michael & Czar Berstein)

Excerpt:

> William Lane Craig is a formidable debater. He has done battle with celebrity academic atheists including Lawrence Krauss, Lewis Wolpert, Peter Atkins, and Sam Harris. Not long after his exchange with the philosopher Anthony Flew, perhaps the leading atheist thinker of the late 20th century, Flew converted, if not to Christianity, to deism. Harris described Craig as "the one Christian apologist who has put the fear of God into many of my fellow atheists".
>
> Christopher Hitchens said: "I can tell you that my brothers and sisters in the unbelieving community take him very seriously. He's thought of as a very tough guy: very rigorous, very scholarly, very formidable." After a debate in which the two locked horns, one US atheist website pronounced: "Craig was flawless and unstoppable. Hitchens was rambling and incoherent, with the occasional rhetorical jab. Frankly, Craig spanked Hitchens like a foolish child."
>
> William Lane Craig is the Professor of Philosophy at Talbot School of Theology in California. He is a conservative evangelical, but he is smart, with a doctorate in philosophy from Birmingham and one in theology from Munich. He has developed such a reputation that when he began a 10-day speaking tour of Britain on Monday he drew an audience of 1,700 at the cavernous Central Hall in Westminster.
>
> The titles of his UK lectures give a clue to his breadth: "Does God Exist?", "Can We be Good without God?", "The Origins of the Universe – Has Stephen Hawking Eliminated God?", "The Historicity of Jesus's Resurrection". He is unafraid to range across ontological theology and moral philosophy and talks with ease about new developments in cosmology, mathematics and physics. He has a ready command of easy analogy and can be funny. He is a million miles away from the evangelical rhetoric that amuses and bemuses our secularist and modernist establishment. Proof, he says, is not about scientific or mathematical certainty; it is about a cogent and logical argument which is more plausible than what opponents argue.
>
> This is not the style of the Dawkinsites' preferred adversaries. Their debating techniques tend to be catalogues of religion's historical atrocities, coupled with psychological sideswipes about the Tooth Fairy and Father Christmas. Dawkins in the past has been notable for seeking out extreme oddball fundamentalists. He and his followers routinely erect a straw man – defining religion in ways

> unrecognisable to many mainstream believers – and then knock their caricature to the ground. But Craig is an opponent of a different calibre who focuses ruthlessly on failures of internal logic in his rivals' arguments.
>
> What is striking to the outsider is the ad hominem abuse that has been hurled his way. Dawkins has blogged of his "almost visceral loathing" of Craig's "odiously unctuous, smug and self-satisfied tone of voice". Craig, he says, is a "deeply unimpressive… ponderous buffoon" who uses "chopped logic" for "bamboozling his faith-head audience". On Dawkins's website his supporters have called Craig a "debased freak" and "snakeoil salesman".

The writer of this article not so much sympathetic with Craig as he is disappointed with Dawkins for not being willing to debate and defeat Craig. I think that most of the atheists on the Richards Dawkins site have never heard Craig's arguments, otherwise, they would be pointing out the flaws in them and linking to evidence. When someone dodges what I am saying and instead insults me personally, I think it's fair to assume that they don't have a case against me based on substance. If they had substance, they would argue substance.

The UK Guardian article denouncing Dawkins for cowardice is here. The conservative UK Telegraph explicitly called Dawkins a fool or a coward for not debating Craig. But I don't think it's going to happen, because Dawkins is a coward. That's just what he is. And I think he isn't even intelligent enough to lose as badly as Hitchens did – it would be a much worse defeat for atheism. The man has never expressed any substantial arguments for atheism in any of his books – it was always just bile. And I never saw William Lane Craig's publications or those of any other major Christian thinker referenced in the footnotes of his books – he is oblivious to the arguments on the other side.

My response to Dawkins' refusal to debate Craig is here. In it, I go over Craig's qualifications, Dawkins' reason for not debating him, and link to Craig's debate with Christopher Hitchens.

Audio, summary and review of William Lane Craig vs. Stephen Law debate

October 24, 2011 | by Wintery Knight | Link | Original Link

You can also download the audio at Apologetics 315.

Scorecard:

Craig's case:

- The origin of the universe: Law had no response.
- The moral argument: Law denied that there are objective moral values.
- The resurrection argument: Law told a story about a UFO sighting.

Law's case:

- The evidential argument from evil: Law later denied that evil existed, thus undermining his entire argument. Christian theists DON'T consider it evil when people suffer, if that suffering is necessary in order to get people to know God. We don't agree with Law's definition of evil that "people suffering" is automatically evil – because there can be a morally sufficient reason why that suffering is allowed by God to happen, since his goal is not our happiness but for us to know him. Law was not able to show how we know that God doesn't have a morally sufficient reason to permit the evils we do see. And he has to prove that in order to assert (in his premise 1) that gratuitous evil exists. How does he know that? How does he know that some specific instance of evil is pointless for the purpose of improve the knowledge of God overall? The one good thing that Law did was to press Craig to defend his premise that if God doesn't exist, then objective moral values also don't exist. Craig did talk about how if there is no God, then morality is just a herd morality that evolves by accident, though.

Final score: 3 to 0 for Craig. Law was better than Craig's average opponent though, for all the snarky things I might say about him, below.

Below is the snarky summary of the debate. I sometimes paraphrase entire sentences and insert commentary in order to explain what's going on without the spin.

William Lane Craig opening speech:

Two contentions:

C1) There are good reasons to think that God exists.
C2) There are no good reasons to think that God does not exist.

Arguments for the existence of God.

A1) The origin of the universe

1. Whatever begins to exist requires a cause.

2. The universe began to exist.
3. Therefore, the universe requires a cause.

The beginning of the universe is confirmed by philosophy and science.

An actual infinite number of past events is impossible. The concept of an actual infinite is mathematically unintelligible for the operations of subtraction and division.

Cosmologists have now proven that any universe that is now in a state of expansion must have begun to exist, independent of any physical description of the model. Even speculative alternatives to the current Big Bang model require a beginning at some point.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The moral argument.

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a “herd morality” that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional.

Dr. Law affirms objective morality in his written work (but can he ground it on atheism?).

In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God’s existence by pointing to the “evil” in the world, they must assume objective moral values, and a God who grounds those objective moral values, in order to make the charge. Therefore, it is impossible to complain about the evil in the world without assuming the existence of God.

A3) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum; the empty tomb, the post-mortem appearances of Jesus, the early belief in the resurrection of Jesus.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

Craig’s opponent thinks that Jesus never existed, a position that virtually no historian holds.

Stephen Law’s opening statement:

A1) The evidential argument from evil

1. Gratuitous evil exists.
2. God would be able to remove evil, would know about the evil, and would want to remove gratuitous evil.
3. It is implausible that God exists.

There are moral evil actions committed by agents
There are natural evils like earthquake.

Animals suffer. e.g. – from being eaten by other animals.
Humans suffer, e.g. – from disease.

Craig's cosmological argument does prove that a Creator exists, but the evidential argument from evil proves that this Creator is not good.

If the Creator really were good, then we would all be spared from all suffering, both physical and mental, because God has no morally sufficient reason for allowing anyone to suffer. God, if he existed, would prevent humans from committing moral evil by removing our free will. God would also prevent us from having any unhappy feelings caused by natural evil.

A2) Theodicies offered by Christians fail

Freedom Will Theodicy: An evil God might like to allow humans to have free will.

Laws of Nature: An evil God might like to have laws of nature to allow predictable consequences.

Afterlife compensation: An evil God might like an evil afterlife to make us suffer more.

Craig's first rebuttal:

RA1) Law's evidential argument from evil fails

The mere presence of evil is not a problem if God has morally sufficient reasons for permitting instances of evil. Since Dr. Law is making the claim that God would not allow the evil, then he has to bear the burden of proof for showing that there is no morally sufficient reason for God to permit evil and sufering.

The purpose of life on the Christian view is not merely to have happy feelings. The purpose of life on the Christian view is coming to know God and having a relationship with him. Many evils that are not good for giving us happy feelings may be good for getting us to think seriously about whether God is there and what to do to have a relationship with him.

Theists don't infer the goodness of God because they survey the universe and find lots of good things. They infer the goodness of God based on the mere fact that they are aware of an objective moral standard of good and evil, and inalienable human rights, and they identify God as the source of that standard of Good and evil. Those things cannot exist unless there is a God to ground an objective standard of right and wrong. Since the source of the standard is God's own unchanging nature, he cannot act in a way that is evil.

Moral evil actually proves the existence of God. If Dr. Law claims that there is moral evil, then he has to have an objective moral standard that allows the distinction between good and evil. The only way to make an objective distinction between good and evil is if there is a Design for the universe that determines what is good and evil. And a design for the universe requires a Designer of the universe.

With respect to animal suffering, any ecosystem require predators in order to control population. For example, in Canada, Canadians have had to reintroduce wolves into the ecosystem in order to cull the populations of caribou, which was de-stabilizing the ecosystem. Since humans depend on the existence of these animals, God has to allow these predators in order to balance the ecosystem.

Animals do not suffer pain the same way as humans do, research shows that although they suffer pain, they are not aware of that suffering in the way that humans are. Once you understand the biology of animals, you understand that they do not experience pain the same way as humans.

Law's first rebuttal:

Craig thinks that you need an objective standard in order to judge things as objectively good or evil. But that's false. I can use my subjective opinions to claim that some things are objective evil. If God doesn't do what I like (prevent moral and natural evil), then he isn't objectively good. I don't need to buy into the notion of objective good and evil in order to say that something is good or evil. I can say that something is good or evil while denying the existence of objective good and evil. (IMPORTANT NOTE: DR. LAW HAS AT THIS POINT RETRACTED HIS SUPPORT FOR OBJECTIVE MORAL VALUES, WHICH MAKES IT IMPOSSIBLE TO EMPLOY THE EVIDENTIAL ARGUMENT FROM EVIL)

Dr. Craig says that I think that people determine the goodness or evilness of God by counting good things and evil things. But that's false. My argument is that people determine the goodness or evilness of God by counting good things and evil things. It's completely different!The presence of good things undermines the existence of evil God, and the existence of evil things undermines the existence of good God.

Craig's second rebuttal:

Dr. Law has not yet responded to any of the 3 arguments for God's existence.

A1) No response to the argument from the origin of the universe. How can you admit to a Creator of the universe and still be an atheist? His argument from evil doesn't refute a supernatural cause of the universe.

A2) Dr. Law is now denying that objective moral values exist, contrary to his written work. This means that he is not able to use the terms "good" and "evil" intelligibly. He is merely expressing his subjective opinions, and therefore he cannot press the evidential argument from evil, because there is no such thing as evil, objectively speaking, on his view. It's just his personal preference.

A3) No response to the argument concerning the resurrection.

RA1) He has to show that God doesn't have morally sufficient reasons for permitting the

evils we see. He admits that he can't.

He says that the world is morally ambiguous and you can't infer the goodness of God by counting the amount of evil and good in the world, just like you can't infer the evilness of God by counting the amount of evil and good in the world. And that's correct, and theists don't infer God's goodness by counting good and evil instances. The point is that if you can't infer God's goodness or evilness by counting instances of good or evil, then you can't infer that God isn't good, because you don't know whether God has a morally sufficient reason for permitting the evils that we see. And it's the atheist's burden of proof to show that God DOESN'T have a morally sufficient reason, and Dr. Law is unable to do that.

Dr. Law says that you don't need to have a standard of good and evil to press the problem of pain and suffering. But if you deny that there is any good or evil independent of pain and suffering, then you can't impugn God's goodness because you don't have a standard in place to say that gratuitous pain and suffering is evil.

Any event that occurs in history can have effects far into the future or in another country. Physicists understand that small effects can trigger results that cannot be foreseen. And what this means is that humans are simply not in a position to know whether God has a moral sufficient reason for permitting specific instances of evil.

Finally, the purpose of life on the Christian view is not to have happy feelings and be free from suffering. God's purpose for us is to know him and to be rightly related to him. Many instances of evil may be pointless for making people feel good, but may be effective for drawing people towards God.

Law's second rebuttal:

RA2) The vast majority of philosophers reject the moral argument, for example Richard Swinburne. (No reasoning for the denial is explained, just the denial of the argument's effectiveness by citing Richard Swinburne as an authority). This is a fallacy of arguing from an authority.

Dr. Craig has to prove that no atheistic account of morality can be given. He has disprove them all, even the ones that no one has thought of yet. It's not my job, AS THE ATHEIST, to prove that I can give an account of objective truth of moral claims can be given ON ATHEISM. I don't have to do anything except stand here and speculate about some possible account of morality on atheism and I win.

The existence of objective moral values is not obvious to me. I.e. – I don't see anything objectively wrong with torturing babies for fun, it's a matter of opinion. I also don't see anything evil about those things that I said were evil in my first speech. I was just kidding, people, can't you take a joke? It just seems to some people like Dr. Craig that there are objective moral values, but actually there aren't. Dr. Craig merely wants to believe that evil is real, but actually it isn't. Except when I want to argue that it is in in my evidential argument FROM EVIL.

RA3) Although the majority of ancient historians accept the historicity of the empty tomb because of the early sources, multiple attestation, enemy attestation etc., the tomb was

not empty because of this story I'm going to tell about a UFO.

Although virtually all ancient historians accept the post-mortem appearances because of the early sources, multiple attestation, etc., the post-mortem appearances did not occur because of this story I'm going to tell about a UFO.

Although virtually all ancient historians accept the early belief that Jesus was bodily resurrected because of the early sources, multiple attestation, etc., the early belief that Jesus was bodily resurrected did not occur because of this story I'm going to tell about a UFO.

Craig's final rebuttal:

A1) Dr. Law accepts that the universe was created by an eternal, non-material, uncaused being. What a strange sort of atheist, who admits that there exists a supernatural Creator of the universe.

A2) Dr. Law employed the fallacy of arguing from authority. But Dr. Craig can cite a much longer list of atheists who agree that if God does not exist, then objective moral values do not exist, e.g. – Nietzche, Russell, Sartre, Mackie, etc. Consistent atheists understand that if there is no God, there is no design for how the universe ought to be (natural evil), or how we ought to be (moral evil).

A3) We have to be careful when inferring a supernatural explanation and use objective criteria. All natural explanations fail to explain the full set of minimal facts that virtually all historians accept. In addition, the resurrection takes place within a religio-historical context where one might expect God to intervene if what Jesus was saying was true.

RA1) You can't disprove God's goodness by appealing to instances of evil, nor can you disprove God's evilness by appealing to instances of good. This is because humans are not in a position to assess the ripple effects of permitting any instance of evil (good). It is therefore possible and inscrutable as to whether God has a morally sufficient reason for permitting any and all instances of apparent evil (good).

Dr. Law's final rebuttal:

A2) There is a lot of pain and suffering in the history of the world. This is a challenge to God's goodness because God's purpose for us is to make us happy, and not at all for us to know him or for us to be related to him, as the Bible says.

Here's my argument. Craig thinks that you can determine God's goodness by counting instances of good and evil in the world, although he explicitly denies that. And I've actually done the counting and found that you can't determine God's goodness because there's too much gratuitous evil. Never mind what Craig said about the ripple effect through time and space, or about chaos theory, or about morally sufficient reasons. These instances of gratuitous evil I'm telling you about have no morally sufficient reasons, in any time or in any place. Trust me, I looked everywhere and in the future, using my time machine.

Now, in my argument, when I said the word evil, I don't really mean evil, because to use an objective standard of good and evil, I would have to have a moral lawgiver to ground

that objective standard. So when I say moral and natural evil, I don't mean moral and natural evil, I actually mean things that I don't personally like. So I'm going to change my argument's name to the Evidential Argument From Things That I Find Yucky.

Dr. Craig provided no justification for his premise that "if there is no God, there there are no objective moral values". And it's not my job to produce an atheistic theory about how objective moral values could exist, especially since my argument from evil relies on objective moral values.

A3) UFOs.

Merril Lynch analyst: U.S. credit rating likely to be downgraded again

October 24, 2011 | by Wintery Knight | Link | Original Link

From Reuters. (H/T Reason to Stand)

Excerpt:

> The United States will likely suffer the loss of its triple-A credit rating from another major rating agency by the end of this year due to concerns over the deficit, Bank of America Merrill Lynch forecasts.
>
> The trigger would be a likely failure by Congress to agree on a credible long-term plan to cut the U.S. deficit, the bank said in a research note published on Friday.
>
> A second downgrade — either from Moody's or Fitch — would follow Standard & Poor's downgrade in August on concerns about the government's budget deficit and rising debt burden. A second loss of the country's top credit rating would be an additional blow to the sluggish U.S. economy, Merrill said.
>
> "The credit rating agencies have strongly suggested that further rating cuts are likely if Congress does not come up with a credible long-run plan" to cut the deficit, Merrill's North American economist, Ethan Harris, wrote in the report.
>
> "Hence, we expect at least one credit downgrade in late November or early December when the super committee crashes," he added.
>
> The bipartisan congressional committee formed to address the deficit — known as the "super committee" — needs to break an impasse between Republicans and Democrats in order to reach a deal to reduce the U.S. deficit by at least $1.2 trillion by November 23.
>
> If a majority of the 12-member committee fails to agree on a plan, $1.2 trillion in automatic spending cuts will be triggered, beginning in 2013.

What I am hearing from my sources is that the debt super-committee is not doing well at all on deciding on the cuts that everyone agreed were needed to raise the debt ceiling. I really do not feel good about the defense cuts, given what I am hearing about new Russian and Chinese 4th generation fighters. This is going to put a lot of pressure on our military if things go badly in Afghanistan and Iraq.

One day of substitute teaching qualifies union lobbyists for teacher pensions

October 24, 2011 | by Wintery Knight | Link | Original Link

From the Chicago Tribune. (H/T Marathon Pundit)

Excerpt:

> Two lobbyists with no prior teaching experience were allowed to count their years as union employees toward a state teacher pension once they served a single day of subbing in 2007, a Tribune/WGN-TV investigation has found.
>
> Steven Preckwinkle, the political director for the Illinois Federation of Teachers, and fellow union lobbyist David Piccioli were the only people who took advantage of a small window opened by lawmakers a few months earlier.
>
> The legislation enabled union officials to get into the state teachers pension fund and count their previous years as union employees after quickly obtaining teaching certificates and working in a classroom. They just had to do it before the bill was signed into law.
>
> Preckwinkle's one day of subbing qualified him to become a participant in the state teachers pension fund, allowing him to pick up 16 years of previous union work and nearly five more years since he joined. He's 59, and at age 60 he'll be eligible for a state pension based on the four-highest consecutive years of his last 10 years of work.
>
> His paycheck fluctuates as a union lobbyist, but pension records show his earnings in the last school year were at least $245,000. Based on his salary history so far, he could earn a pension of about $108,000 a year, more than double what the average teacher receives.
>
> […]Over the course of their lifetimes, both men stand to receive more than a million dollars each from a state pension fund that has less than half of the assets it needs to cover promises made to tens of thousands of public school teachers. With billions of dollars in unfunded liabilities, the Illinois Teachers' Retirement System, which serves public school teachers outside of Chicago, is one of several pension plans that are in debt as state government reels in a fiscal crisis.

This is why we need to rein these unions. Not only do they not provide quality educations for poor students in the inner city, but they are corrupt and wasteful.

If you missed my post on Ohio State Issue 2, then you should read it here.

Christian demoted for expressing disagreement with same-sex marriage

October 24, 2011 | by Wintery Knight | Link | Original Link

From the UK Daily Mail, worrying news about the state of free speech in the UK. (H/T Dina)

Excerpt:

> Mr Smith has worked for 18 years for Trafford Council and Trafford Housing Trust, which manages more than 9,000 homes in Sale, Greater Manchester.
>
> But he now finds his career in tatters over a comment he wrote on his personal Facebook page one Sunday morning in response to a BBC story headlined 'Gay church "marriages" get go-ahead'. The story referred to Government plans to lift the ban on homosexual couples holding civil partnerships in churches and other religious settings.
>
> Mr Smith, whose Facebook profile identified him as working for the Trust as a housing manager, commented: 'An equality too far.'
>
> A few hours later, one of his Facebook friends, a work colleague whose identity is not known to The Mail on Sunday, posted: 'Does this mean you don't approve?'
>
> The following evening after work, Mr Smith, who attends an evangelical church in Bolton, responded: 'No, not really. I don't understand why people who have no faith and don't believe in Christ would want to get hitched in church.
>
> […]Mr Smith was disciplined after a second colleague complained to the Trust's 'equality and diversity lead', Helen Malone.
>
> A few days later, Mr Smith was summoned from his home to a meeting at the Trust's headquarters in Sale, where he was told he was being suspended while the complaint was investigated.
>
> He was warned that even though his Facebook page could be viewed only by registered friends, rather than by the general public, those readers included colleagues who had taken issue with his comments.
>
> A shocked Mr Smith, who managed a team looking after local housing issues, immediately removed the reference to where he worked from the page.
>
> The following month he was called to a disciplinary meeting before Mike Corfield, the Trust's Assistant Director, Customers. Although Mr Smith was allowed to put his case, insiders described the meeting as 'tense and fraught'.
>
> According to legal documents lodged at Manchester County Court, Debbie Gorman, a 'neighbourhood manager' also at the meeting, said Mr Smith's comment could cause offence.
>
> She said she had interpreted it as saying 'gay people are not as equal as people

> who are not gay' and that the comment could be viewed as homophobic.
>
> Mr Corfield said it was not the comment but its potential misinterpretation that was at issue, but still ruled that Mr Smith had committed a serious breach of discipline for which he could be dismissed.
>
> But because of his loyal service, Mr Smith was instead demoted to money support adviser, handling rent collection. His pay was reduced to £21,396, phased in over a year, and he was given a final written warning.
>
> Mr Smith has been advised he cannot speak to the press, but his solicitor Tom Ellis, of Aughton Ainsworth in Manchester, said: 'Adrian was shocked and distressed to have been disciplined in this way. He never expected this to happen – it came completely out of the blue.

When people on the secular left talk about tolerance, equality and diversity, this is what they mean. You can't even make a comment on your on personal Facebook page without being censored by state for thought crime.

The fact is that gay rights and religious liberty are on a legal collision course. (H/T Ruth Blog)

Excerpt:

> When the relationships of "gay people" need societal validation, some of them, at least, have made it clear that it's not all that wrong to stop dissenters from living according to their beliefs.
>
> "There can be a conflict between religious liberty and sexual liberty, but in almost all cases, the sexual liberty should win because that's the only way that the dignity of gay people can be affirmed in any realistic manner," said sexual activist and former ACLU attorney Chai Feldblum before President Obama appointed her to the Equal Employment Opportunity Commission, where she now has power to try to enforce that view. "I'm having a hard time coming up with any case in which religious liberty should win," she said.
>
> Indeed, isn't this the reason that the religious liberty exemptions in the New York marriage redefinition bill don't include conscience exceptions for individuals or businesses? The idea is that everyone must accept the newly imposed values and live accordingly. A wedding photographer who can't in good conscience use her artistic expression to make a same-sex ceremony look good as part of her creative work will be regarded no differently than the racist behind the lunch counter who doesn't want to serve blacks. As Feldblum explained in *The Brooklyn Law Review*:
>
>> Just as we do not tolerate private racial beliefs that adversely affect African-Americans in the commercial arena, even if such beliefs are based on religious views, we should similarly not tolerate private beliefs about sexual orientation and gender identity that adversely affect LGBT

> people.

And if you're a New York clerk who has a problem of conscience with issuing marriage licenses to same-sex couples, Gov. Andrew Cuomo says you need to give up your job, despite New York law that states otherwise. After all, as one Albany law professor who apparently doesn't bat an eye about putting this on par with racism says, "There is just not a good legal argument that you have the right to discriminate."

So if you've been on the fence about protecting marriage—wondering how someone else's same-sex "marriage" will affect your marriage—now you've got a good bit of the answer: if you're part of the 62 percent of Americans who believe marriage should be defined only as the union of a man and a woman, prepare to be regarded as the Ku Klux Klan member next door—and for your children to be taught the same perspective at your local government-run school. As a post titled "Can We Please Just Start Admitting That We *Do* Actually Want To Indoctrinate Kids?" on the Queerty website put it:

> They accuse us of exploiting children and in response we say, "NOOO! We're not gonna make kids learn about homosexuality, we swear! It's not like we're trying to recruit your children or anything." But let's face it—that's a lie. We want educators to teach future generations of children to accept queer sexuality. In fact, our very future depends on it.

The message is frequently that recognition for same-sex unions will have no effect on those who disagree with them, but the evidence clearly says otherwise. As Princeton politics professor Robert P. George notes, "once one buys into ideology of sexual liberalism, the reality that has traditionally been denominated as 'marriage' loses all intelligibility . . . one will come to regard one's allegiance to sexual liberalism as a mark of urbanity and sophistication, and will likely find oneself looking down on those 'ignorant,' 'intolerant,' 'bigoted' people—those hicks and rubes—who refuse to get 'on the right side of history.'"

And let this be a lesson to all of you who don't have aliases, and who do have your colleagues who can see your comments on sites like Facebook. Don't be surprised when things like this happen to you.

Obama’s decision to retreat in Iraq is a disaster for American foreign policy

October 25, 2011 | by Wintery Knight | Link | Original Link

Let’s see what everyone thinks about Obama’s decision withdraw 40,000 troops from Iraq, effectively handing control of much of the Middle East to Iran.

Disregards the advice of his own generals

From the Wall Street Journal.

Excerpt:

> No doubt this will be politically popular—at least in the short-term. Mr. Obama can say he honored a campaign pledge, Congress will move to spend the money on domestic programs, and a war-weary American public will be relieved to carry fewer overseas burdens. Or at least Americans will feel such relief as long as this total withdrawal doesn’t cost the hard-fought political and strategic gains that our intervention has won.
>
> There are serious risks in this complete withdrawal. Iraq has made great progress in providing its own security, with some 600,000 Iraqi troops gradually taking the handoff from U.S. forces. But the Iraqis still lack vital military assets in intelligence and logistics, not to mention naval and air power. Mr. Obama said the U.S. will continue to discuss “how we might help Iraq train and equip its forces,” but this is no substitute for a more robust, long-term presence of the kind we retain in South Korea and Japan 60 years after the end of the Korean War.
>
> The U.S. commander in Iraq, General Lloyd Austin, had requested between 15,000 and 18,000 troops, before reducing it to 10,000 under pressure. Such a U.S. presence would reassure Iraq and its neighbors of our continuing commitment to the region. It would help play the role of honest broker among Iraq’s ethnic factions as it continues to build a more durable political system.
>
> And above all it would reduce Iran’s ability to meddle in Iraq, building local militias on the Hezbollah model with a goal of making its neighbor a Shiite vassal state. Iran’s Quds force—the same outfit that wanted to assassinate a Saudi ambassador on U.S. soil—is the biggest winner from Mr. Obama’s pullout.

Bungled negotiations

From Foreign Policy magazine. (H/T The Washington Post)

Excerpt:

> “Iraq is not a normal country, the security environment is not normal, the embassy is not a normal embassy,” said **Marisa Cochrane Sullivan**, managing director at the Institute for the Study of War, who traveled to Iraq this summer

> and has been sounding the alarm about what she saw as the mishandling of the negotiations ever since.
>
> For more evidence that the administration actually wanted to extend the troop presence in Iraq, despite today's words by Obama and McDonough, one only has to look at the statements of Defense Secretary **Leon Panetta**.
>
> In July, Panetta urged Iraqi leaders to, "Dammit, make a decision" about the U.S. troop extension. In August, he told reporters that, "My view is that they finally did say, 'Yes.'" On Oct. 17, he was still pushing for the extension and said, "At the present time I'm not discouraged because we're still in negotiations with the Iraqis."
>
> Sullivan was one of 40 conservative foreign policy professionals who wrote to Obama in September to warn that even a residual force of 4,000 troops would "leave the country more vulnerable to internal and external threats, thus imperiling the hard-fought gains in security and governance made in recent years at significant cost to the United States."
>
> She said that the administration's negotiating strategy was flawed for a number of reasons: it failed to take into account Iraqi politics, failed to reach out to a broad enough group of Iraqi political leaders, and sent contradictory messages on the troop extension throughout the process.
>
> "From the beginning, the talks unfolded in a way where they largely driven by domestic political concerns, both in Washington and Baghdad. Both sides let politics drive the process, rather than security concerns," said Sullivan.

Emboldens Syria and their puppet-master, Iran

From National Review.

Excerpt:

> The announcement of our total withdrawal comes just weeks after the revelation of an Iranian plot to execute the Saudi ambassador to the U.S. on our soil. It comes as Iran's key Arab ally, the Assad regime in Syria, is rocked by a revolt. Just as Tehran's dangerousness is put in stark relief and as events in Syria threaten to deal it a strategic setback, it gets this windfall.
>
> […][Obama's] commanders on the ground wanted to keep more than 20,000 troops in Iraq (the administration had bid this number down to several thousand, perhaps convincing Iraqi political players that cutting a painful deal on immunity wouldn't have enough of a corresponding upside). Such a force would have enhanced our political leverage in Baghdad, checked Iran's already considerable influence, ensured against a return of al-Qaeda, and helped keep a lid on Arab–Kurdish tensions in the north. Now, we'll simply have to hope for the best. Deputy National Security Advisor Dennis McDonough said Iraq is "secure, stable, and self-reliant." It is none of these things. Its government is still inchoate and it is not capable of defending itself from Iran in the air or on the ground.

> Our pullout is a bonanza for Tehran. Its militias were already active in Iraq. Now, it can use Iraq for bases for its proxy forces to spread its tentacles in the rest of the Persian Gulf. Independent ayotollahs in Iraq will have an incentive to keep their heads down. Political decisions of the Iranian-influenced Shiite bloc running the country are sure to begin to tilt more and more Iran's way. Our diplomatic leverage will diminish, even as maintain our largest embassy in the world in Baghdad. The Iranians will crow in Iraq and throughout the region that they were right that the Americans would eventually leave.
>
> We expended a great deal of blood and treasure to topple Saddam Hussein, and then to establish enough order so that George W. Bush's successor would only have to consolidate our gains. President Obama is careless enough to risk throwing it all away, and shameless enough to call it success.

For those who are not aware of the looming storm in the Middle East, you should read in full this article from the Washington Times. It is authored by Frank Gaffney, the President of the Center for Security Policy. He covers several troubling data points in Libya, Egypt, Afghanistan, Iraq, China, Russia and Mexico. As if that were not bad enough, it looks as if the debt limit super-committee is now deadlocked in negotiations, which will trigger automatic cuts to our defense budget, at the worst possible moment.

Economists: Jobs outlook the worst since January 2010

October 25, 2011 | by Wintery Knight | Link | Original Link

Unemployment Rate (Not seasonally adusted)
From Bloomberg Businessweek.

Excerpt:

> U.S. companies' hiring plans reflect the worst employment outlook since January 2010 as demand slows in the world's largest economy, a private survey showed.
>
> Fewer companies project payrolls to rise in the next six months compared with a July survey, while more plan to cut workers, the National Association for Business Economics said today in Washington. The share of firms planning to raise prices was the smallest in almost two years.
>
> Businesses are concerned about the European debt crisis, with 30 percent of participants anticipating it will cause a decline in sales through early 2012, the survey showed. While companies said they expect the U.S. will keep expanding, they trimmed projections for the pace of growth and pared capital spending plans, helping explain why the recovery has failed to gain momentum.
>
> "Expectations are muted," Shawn DuBravac, chief economist at the Consumer Electronics Association in Arlington, Virginia, who analyzed the results, said in a statement. The latest survey's "respondents remain cautiously confident."
>
> Within the employment outlook, 29 percent of companies said they would increase hiring, down from 43 percent in July, while 59 percent reported they plan no change in staff, a 10-point jump.
>
> […]The dimming outlook for employment and investment stems from the slowdown in growth. Eighty-five percent of companies surveyed said that the economy may expand 2 percent or less in the period ending this quarter compared with the final three months of 2010. In the prior survey, just one of every five economists polled predicted growth would be that slow.
>
> The debt crisis in Europe already is hurting U.S. firms and is likely to continue,

> according to a special question in the latest survey, conducted between Sept. 20 and Oct. 5. Twenty percent of participants reported developments in Europe have led to as much as a 10 percent drop in sales so far this year.

This is not a surprise. Aside from signing the three free trade deals with Colombia, Panama and South Korea, the Obama administration has done *everything wrong* with respect to stimulating economic growth – the necessary precursor for private sector job creation.

BBC London radio interviews William Lane Craig

October 25, 2011 | by Wintery Knight | Link | Original Link

Brian Auten from Apologetics 315 tweeted this interview. It was uploaded by the always excellent BirdieUpon.

Dr. Craig did a GREAT job on that interview, sounding very clear and intelligent. The host was laughing with him.

And while you're having fun with that, read this:

> Here at the Unofficial W. L. Craig Public Relations Office LLC we have uncovered news which is very concerning to us. We uncovered information that Dr. Richard Dawkins likes to top pumpkin flavored ice cream with sautéed portobello mushroom, Top Ramen noodles, eggs, and grated pickles. Apparently, Dr. Dawkins thinks the obtaining of this state of affairs results in a *good* tasting ice cream. He has even defended his right to make and eat said ice cream concoction.
>
> We find this a *disgusting* view to hold, and we are shocked, revolted, and horrified that a person who claims to be a descent human being would engage in such ice cream apologetics. We understand that Dr. Craig has claimed in many of his books that matters of taste are not objective matters of fact that obtain in the universe. We understand that Dr. Craig has claimed that in this universe there is no objective fact of the matter regarding whether Dr. Dawkins's tastes in ice cream are any *better* or more *correct* than Dr. Craig's—who happens to like, through God's instantiation of certain circumstances, peanut butter and chocolate ice cream. However, this is quite beside the point. For we are completely abominated, bothered, disenchanted, displeased, disturbed, grossed out, insulted, irked, nauseated, offended, outraged, palled, piqued, put off, repulsed, revolted, shocked, sickened, unhinged and upset by Dr. Dawkins's subjective tastes in ice cream. Dr. Craig doesn't care if this has *absolutely nothing* to do with whether Dr. Dawkins's argument that the design argument implies that God must have had a designer is a good argument or not. Dr. Craig doesn't care that this has absolutely nothing to do with the soundness of the Kalam cosmological argument. Those concerns are petty when placed next to Dr. Dawkins's disgusting tastes in ice cream. His statements on ice cream are so yucky as to nullify discussion about whether belief in God *as such* is a mind virus.
>
> In light of these most heinous facts, we cannot, and will not, debate such a scurrilous individual as Dr. Richard Dawkins. We ask, would you shake hands with a man who could eat something like that? Would you share a platform with him (imagine if he passed gas)? Dr. Craig wouldn't, and he won't. Even if he were not engaged to be in London on the day in question, he would be proud to leave that chair in Oxford eloquently empty and head to the nearest ice cream shop.

> And if any of Dr. Craig's colleagues find themselves browbeaten or inveigled into a debate with this deplorable apologist for mushroom, noodle, egg, and pickle topped pumpkin ice cream, our advice to them would be to stand up, read aloud Dawkins's recipe as quoted above (maybe even show the picture), then walk out and leave him talking not just to an empty chair but, one would hope, to a rapidly emptying hall as well, as we all make our way to Cold Stone Creamery for a proper ice cream.

I found it here on the Analytic Theology blog. So what was the point of that? The point of that is that Richard Dawkins is complaining at Dr. Craig for being evil and immoral, but he doesn't have any way to make distinctions between good and evil *in his own worldview.*

Look at what Dawkins says:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

So what was that whole "I'm not going to debate you because you're evil and so is genocide" thing? It makes no sense. But he says it anyway, because that's how atheists like Dawkins are. They don't have any way to ground morality on their own view, and then they complain about God and Christians failing to act morally. It's ridiculous.

Brian Auten interviews former Muslim apologist Nabeel Qureshi

October 25, 2011 | by Wintery Knight | Link | Original Link

Interview with Nabeel Qureshi

Here is Brian Auten's interview with former Muslim Nabeel Qureshi.

You can download the MP3 file at the link above.

Details:

> Today's interview is with Nabeel Qureshi, former Muslim and now Christian defender. He is director of Creed 2:6 ministries found at www.creed26.com. He talks about Creed2:6, his journey from Islam to Christianity, his interactions with the Muslim community and Muslim apologists, his response to critics of his conversion, the occurrence of visions and dreams from God to Muslims, the greatest challenges to sharing the Gospel with Muslims, the social consequences for leaving Islam, cultural vs. religious opposition, common errors to avoid, key factors to focus on, recommended resources on Islam, his personal message to those in Islam, and more. His full testimony is here. Video testimony here.

You might remember Nabeel because of his run-ins with the Dearborn police.

New Herman Cain campaign ad features his chief of staff smoking a cigarette

October 26, 2011 | by Wintery Knight | Link | Original Link

I *love* the ad. ESPECIALLY the cigarette. And, of course, the ad has gone viral. Duh. That was the whole point of Mark Block smoking the cigarette. It grabs your attention.

CBS News reports on the latest poll. (H/T The Other McCain)

Excerpt:

> Businessman Herman Cain is now atop the field of Republican White House hopefuls, squeaking past former Massachusetts Gov. Mitt Romney in the latest CBS News/New York Times poll.
>
> Cain garnered 25 percent support of Republican primary voters in the poll released on Tuesday, compared to Romney's 21 percent.

Stacy McCain notes that this poll was taken during October 19-24, entirely *after* the Las Vegas debate.

This lead will only go up, now that Cain has 100% of the Marlboro Man vote because of this cigarette campaign ad. I love listening to the cigarette ads on old time radio shows, and this ad reminds me of those days before political correctness. There are so many immoral things that people minimize, but they fuss about things like smoking bans and recycling. I think we should let people smoke in bars if they want to. And not force people to wear seat belts. I think that ad is going to resonate with mainstream America.

McCain writes:

> The big news? This poll was taken Oct. 19-24, entirely *after* last week's Vegas debate (Perry's best performance to date) and covers the period during which the abortion controversy was supposedly (if you believe Karl Rove) destroying the viability of the Cain campaign.

You can read my response to the Herman Cain pro-life controversy here. It's being blown out of proportion by several RINOs like Mike Huckabee, who is not by any stretch of the imagination a conservative, and isn't even 100% pro-life.

Excerpt:

> Republican presidential candidate Mike Huckabee last year accepted $52,000 in speaking fees from a biotech giant that wants to research human embryonic stem cells, a non-profit working to expand access to the morning-after pill and a group pushing to study whether tightening gun control laws will reduce violence.

You know how I pick on Romney for being liberal? Huckabee is more of a RINO than Romney.

UPDATE: Here’s the song used in the campaign ad:

With lyrics. And they are *good* lyrics.

Canada’s state run broadcaster fights back against probe of finances

October 26, 2011 | by Wintery Knight | Link | Original Link

From the Toronto Sun. (H/T Andrew)

Excerpt:

> The CBC — the mega-corporation that is demanding yet another $1.1-billion bailout from taxpayers this year, just like it demanded a $1.1-billion bailout from us last year — is panicking.
>
> For weeks it’s been sweating about a parliamentary investigation into its bad behaviour, including its violation of the Access to Information law. That’s an important law to allow taxpayers to scrutinize how government agencies spend our money.
>
> The non-partisan information commissioner has given the CBC a grade of “F” for its secrecy — but it still violates her order for it to disclose the truth. It’s spending millions in legal expenses to hide how it’s spending billions in other expenses.
>
> This bad behaviour was coming to a head last week when Parliament was going to turn over some rocks and see what was going to go scurrying.
>
> And so it panicked.
>
> On the eve of the Parliamentary inquiry, it used part of its $1.1 billion — money that is supposed to go to journalism — to launch a crazy, personal attack on the president of Quebecor and QMI Agency, Pierre Karl Peladeau, one of Canada’s most successful private-sector media entrepreneurs.
>
> Unlike the CBC, Peladeau built his company honestly and with his own efforts. He took a newspaper company started by his father, Pierre Peladeau, and turned it into Quebec’s most successful media company, Quebecor — and then joined with English-Canada’s biggest newspaper company, Sun Media Corp. And then he built the Sun News Network.
>
> All without a billion-dollar-a-year bailout.
>
> And so last week, the night before Peladeau’s testimony to Parliament, the CBC freaked out.
>
> In an unprecedented move, it issued what can only be called an attack ad against Peladeau. It wasn’t a news story. It was a false and defamatory attack on our company, as vengeance for our questions about how the CBC spends taxpayer money.
>
> If any other government department had done something like this, whoever responsible would be fired immediately. It wasn’t just unprofessional. It wasn’t just outside of its mandate of what it is given its government money for. It was

> an attempt to destroy a private-sector competitor.

Why is this interesting? Because it shows what happens when the government oversteps its bounds and starts to compete with the private sector in areas that are totally unrelated to its enumerated powers and specific responsibilities. Not only will you find corruption in nationalized corporations, but massive waste as well. Private sector companies face competitive pressures that government monopolies do not face. That forces them to root out corruption and waste, because there is always the firm next door looking to serve the customer better – with higher quality and at a lower cost.

We need to be very careful about handing money to people in government who simply don't care as much about the needs of their customers. Do you think that the CBC could ever favor tax cuts or spending cuts or even more choices for taxpayers? Of course not. They have to tell people whatever causes them to vote for bigger government, because that's where their money comes from.

If God wanted us to believe in him, why doesn't he give us more evidence?

October 26, 2011 | by Wintery Knight | Link | Original Link

Have you ever heard someone say that if God existed, he would give us more evidence? This is called the "hiddenness of God" argument. It's also known as the argument from "rational non-belief".

Basically the argument is something like this:

1. God is all powerful
2. God is all loving
3. God wants all people to know about him
4. Some people don't know about him
5. Therefore, there is no God.

You may hear have heard this argument before, when talking to atheists, as in William Lane Craig's debate with Theodore Drange, (audio, video).

Basically, the atheist is saying that he's looked for God real hard and that if God were there, he should have found him by now. After all, God can do anything he wants that's logically possible, and he wants us to know that he exists. To defeat the argument we need to find a possible explanation of why God would want to remain hidden when our eternal destination depends on our knowledge of his existence.

What reason could God have for remaining hidden?

Dr. Michael Murray, a brilliant professor of philosophy at Franklin & Marshall College, has found a reason for God to remain hidden.

His paper on divine hiddenness is here:
"Coercion and the Hiddenness of God", American Philosophical Quarterly, Vol 30, 1993.

He argues that if God reveals himself too much to people, he takes away our freedom to make morally-significant decisions, including responding to his self-revelation to us. Murray argues that God stays somewhat hidden, so that he gives people space to either 1) respond to God, or 2) avoid God so we can keep our autonomy from him. God places a higher value on people having the free will to respond to him, and if he shows too much of himself he takes away their free choice to respond to him, because once he is too overt about his existence, people will just feel obligated to belief in him in order to avoid being punished.

But believing in God just to avoid punishment is NOT what God wants for us. If it is too obvious to us that God exists and that he really will judge us, then people will respond to him and behave morally out of self-preservation. But God wants us to respond to him out of interest *in him*, just like we might try to get to know someone we admire. God has to dial down the immediacy of the threat of judgment, and the probability that the threat is

actual. That leaves it up to us to respond to God's veiled revelation of himself to us, in nature and in Scripture.

(Note: I think that we don't seek God on our own, and that he must take the initiative to reach out to us and draw us to him. But I do think that we are free to resist his revelation, at which point God stops himself short of coercing our will. We are therefore responsible for our own fate).

The atheist's argument is a logical/deductive argument. It aims to show that there is a contradiction between God's will for us and his hiding from us. In order to derive a contradiction, God MUST NOT have any possible reason to remain hidden. If he has a reason for remaining hidden that is consistent with his goodness, then the argument will not go through.

When Murray offers a possible reason for God to remain hidden in order to allow people to freely respond to him, then the argument is defeated. God wants people to respond to him freely so that there is a genuine love relationship – not coercion by overt threat of damnation. To rescue the argument, the atheist has to be able to prove that God could provide *more* evidence of his existence without interfering with the free choice of his creatures to reject him.

People choose to separate themselves from God for many reasons. Maybe they are professors in academia and didn't want to be thought of as weird by their colleagues. Maybe they didn't want to be burdened with traditional morality when tempted by some sin, especially sexual sin. Maybe their fundamentalist parents ordered them around too much without providing any reasons. Maybe the brittle fundamentalist beliefs of their childhood were exploded by evidence for micro-evolution or New Testament manuscript variants. Maybe they wanted something really bad, that God did not give them. How could a good God allow them to suffer like that?

The point is that there a lot of people who don't want to know God, and God chooses not to violate their freedom by forcing himself on them. God wants a relationship – he wants you to respond to him. (See Matthew 7:7-8) For those people who don't want to know him, he allows them to speculate about unobservable entities like the multiverse. He allows them to think that all religions are the same and that there is nothing special about Christianity. He allows them to believe that God has no plan for those who never hear about Jesus. He allows them to be so disappointed because of some instance of suffering that they reject him. God doesn't force people to love him.

More of Michael Murray's work

Murray has defended the argument in works published by prestigious academic presses such as Cambridge University Press, (ISBN: 0521006104, 2001) and Routledge (ISBN: 0415380383, 2007). The book chapter from the Cambridge book is here. The book chapter from the Routledge book is here.

Michael Murray's papers are really fun to read, because he uses hilarious examples. (But I disagree with his view that God's work of introducing biological information in living creatures has to be front-loaded).

Here’s more terrific stuff from Dr. Murray:

- “Who’s Afraid of Religion?“, Inaugural Lecture delivered March 30, 2006. Franklin and Marshall College.
- “Seek and You Will Find“, in God and the Philosophers. Thomas Morris, editor. Oxford: Oxford University Press. 1994.

Is there any evidence of God’s existence?

Yes, just watch this lecture by Dr. William Lane Craig. It contains 5 reasons why God exists and 3 reasons why it matters.

Ten resources to help you defend the historicity of Jesus' resurrection

October 26, 2011 | by Wintery Knight | Link | Original Link

First, let's briefly talk about whether the Bible supports talking about the resurrection with non-Christians.

There are lots and lots of Christians in the world, but almost none of them are comfortable talking about the resurrection with non-Christians, in a way that doesn't use crazy Christianese language and doesn't assume that the Bible is inerrant. But I think that this situation is wrong for three reasons.

First, Jesus says that his resurrection is a sign so that peope will believe in his other theological claims.

Matthew 12:38-40:

[38]Then some of the Pharisees and teachers of the law said to him, "Teacher, we want to see a miraculous sign from you."

[39]He answered, "A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah.

[40]For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth.

Second, Paul says that if the resurrection didn't happen then we are all wasting our time with Christianity.

1 Corinthians 15:13-19:

[13]If there is no resurrection of the dead, then not even Christ has been raised.

[14]And if Christ has not been raised, our preaching is useless and so is your faith.

[15]More than that, we are then found to be false witnesses about God, for we have testified about God that he raised Christ from the dead. But he did not raise him if in fact the dead are not raised.

[16]For if the dead are not raised, then Christ has not been raised either.

[17]And if Christ has not been raised, your faith is futile; you are still in your sins.

[18]Then those also who have fallen asleep in Christ are lost.

[19]If only for this life we have hope in Christ, we are to be pitied more than all men.

And third, Peter uses the resurrection as evidence in his evangelistic efforts.

Acts 2:22-24, 29-33, 36:

[22]"Men of Israel, listen to this: Jesus of Nazareth was a man accredited by God to you by miracles, wonders and signs, which God did among you through him, as you yourselves know.

[23]This man was handed over to you by God's set purpose and foreknowledge; and you,

with the help of wicked men, put him to death by nailing him to the cross.

[24]But God raised him from the dead, freeing him from the agony of death, because it was impossible for death to keep its hold on him.

[29]"Brothers, I can tell you confidently that the patriarch David died and was buried, and his tomb is here to this day.

[30]But he was a prophet and knew that God had promised him on oath that he would place one of his descendants on his throne.

[31]Seeing what was ahead, he spoke of the resurrection of the Christ, that he was not abandoned to the grave, nor did his body see decay.

[32]God has raised this Jesus to life, and we are all witnesses of the fact.

[33]Exalted to the right hand of God, he has received from the Father the promised Holy Spirit and has poured out what you now see and hear.

[36]"Therefore let all Israel be assured of this: God has made this Jesus, whom you crucified, both Lord and Christ."

So, how can you do what Jesus, Paul and Peter do with your non-Christian friends?

You can do it, too – and you must

It's true that non-Christians don't like to hear that they will go to Hell unless they have a relationship with Jesus. And do you know why they think that? Because they think that sin and Hell are just your personal opinions. Not-very-nice opinions. Opinions that they can ignore because it's just your personal preference that you were raised in. They think that religion is like Santa Claus and the Tooth Fairy – myths designed to make people feel good about themselves.

Just think for a minute what they must think of your blind-faith pronouncement that they are going to Hell unless they "believe in Jesus" (whatever that means to a non-Christian). How would you like to hear someone tell *you* that *you* are going to Hell for not liking vanilla ice cream? You'd think they were crazy! And that's what non-Christians think of you, unless… Unless what? Unless you present publicly testable arguments and evidence to show them *why* they should consider the claims of Jesus.

No one complains that it is "mean and divisive" if their doctor diagonoses them with cancer. Because a challenging diagnosis is not the doctor's personal opinion – it's true objectively. You need to make your presentation of the gospel *exactly like* a doctor's diagnosis. Am I making sense here?If you are telling them the truth and you can show them publicly testable reasons and evidence, what sense does it make for them to be offended? They might as well be offended by their credit card statement or their speeding ticket.

I have Jewish friends, Hindu friends, Muslim friends, atheist friends, etc. Telling people the truth with publicly testable arguments and evidence that they can assess for themselves works. What doesn't work is denying the reality of sin and Hell and then trying to be nice to non-Christians who are going to Hell so that they will like you. *That's not Biblical.* That's just reinventing Christianity based on your own emotional need to be happy and to

be liked by others and to feel good about yourself.

Some things to help you talk about the resurrection

The main thing to remember about talking about the resurrection in public with non-Christians is that *you can't assume that the Bible is true.* Serious Christians get around this by using standard historical criteria to filter out the passages of the Bible that are most likely to be historical. A passage could be as small as 1 verse or it could be several verses. Some of the criteria would be things like: 1) how early after the events was the passage written? 2) in how many places does it appear? 3) Are the places where it appears independent from one another (e.g. – Mark and Paul), 4) does it embarass the author in some way? Using these criteria, historians can extract a bare minimum set of facts about Jesus.

Once you establish these minimal facts, you argue that the best explanation of the facts is that God raised Jesus from the dead. Your opponent either has to disprove one of your minimal facts, or he has to propose an alternative explanation of those minimal facts that explains the data better.

Usually, the only point of disagreement is whether the tomb was empty. Most atheists will give you the crucifixion, the burial, the post-mortem appearances, and the early belief in the bodily resurrection of Jesus in the early church.

The top 10 links to get you started

So with that out of the way, here are the top 10 links to help you along with your learning.

1. How every Christian can learn to explain the resurrection of Jesus to others
2. The earliest source for the minimal facts about the resurrection
3. The earliest sources for the empty tomb narrative
4. Who were the first witnesses to the empty tomb?
5. Did the divinity of Jesus emerge slowly after many years of embellishments?
6. What about all those other books that the Church left out the Bible?
7. Assessing Bart Ehrman's case against the resurrection of Jesus
8. William Lane Craig debates radical skeptics on the resurrection of Jesus
9. Did Christianity copy from Buddhism, Mithraism or the myth of Osiris?
10. Quick overview of N.T. Wright's case for the resurrection

Debates are a fun way to learn

Two debates where you can see this play out:

- Mike Licona and Bart Ehrman
- William Lane Craig and Bart Ehrman (transcript here)

Or you can listen to my favorite debate on the resurrection.

- James Crossley and William Lane Craig

Obama administration may miss deadline on Keystone pipeline approval

October 26, 2011 | by Wintery Knight | Link | Original Link

Actress Daryl Hannah demands higher unemployment
From liberal Reuters.

Excerpt:

> The State Department may miss a year-end target to approve TransCanada Corp's Canada-to-Texas Keystone oil sands pipeline, a U.S. official told Reuters on Tuesday, risking a further delay to the most important new crude oil conduit in decades.
>
> The official, who spoke on condition of anonymity, said the State Department still hoped to make a decision by the end of this year, which has been its target, but that its highest priority was to carry out a thorough, rigorous review. The decision has already been pushed back once.
>
> A further delay would not only be a blow to TransCanada, it could also prolong a massive gap between U.S. and global oil prices because oil traders are counting on Keystone's 700,000 barrel-per-day capacity to relieve a build-up of crude in the Midwest, which doesn't have enough pipelines to ship growing Canadian output to Gulf Coast refineries for use around the United States.
>
> The ruling, which falls to the State Department because the line crosses national borders, is forcing President Barack Obama into a decision that effectively pits environmental safety against job creation and energy security.

The Independent Women's Forum comments:

> [B]usinesses actually want to do something with the oil that would be transferred on the pipeline, and the delay in moving the oil through the refining process and to market will impact those businesses, the energy supply, and ultimately energy

> prices and the broader economy.
>
> Reuters describes the Administration's dilemma in ruling on the Keystone pipeline as pitting "environmental safety against job creation and energy security." That may be how some environmental extremists are trying to frame it, but it's really a false choice. As I wrote before, Canada's oil sands are going to be developed one way or another. The State Department's decision is whether the U.S.—with our many environmental regulations—will being doing the job or if Canada will find another, much less environmentally-friendly, partner.

Barack Obama is blocking job creation in order to appease his environmentalist constituents.

Unemployed college graduate ran up $90,000 of debt while studying English

October 27, 2011 | by Wintery Knight | Link | Original Link

Occupy Wall Street		TEA Party
40	Days of Protest	989
2,511	Arrests	0
4	Rapes	0
$2,400,000	Cost	$0

as of October 26, 2011

Occupy Wall Street vs Tea Party
And do you think he is out looking for jobs with his English degree? NO!

The L.A. Times explains. (H/T Dennis Prager)

Excerpt:

> For almost a week, Nate Grant has sat cross-legged on a wall at the Occupy Wall Street encampment, holding a cardboard sign that bears his scrawled grievance: "Students Ought Not Be a Means of Profit."
>
> […]It doesn't take long before any conversation in the strikingly youthful crowd in Lower Manhattan turns to the loans many of the twenty-somethings have racked up. It's not a central theme, like corporate greed and unemployment, but rather a subtext to all the chanting and marching.
>
> Grant left Ithaca College in upstate New York in May with a degree in English and $90,000 in private and federal loans.
>
> An honor student in high school, he could have had a "free ride" if he had gone to a public university in his home state. But he loaded up on student loans so he could enroll in Ithaca's communications program to study film directing. Within a year, Grant became disenchanted with the program and switched his major.
>
> Unable to find a good job that pays a decent wage using his degree, Grant decided this summer to join the military, hoping to take advantage of a student loan repayment program that could shave $60,000 off his debt.
>
> "I just felt I had to do something to get this monkey off my back," he said.
>
> Since graduation Grant has been living with his parents in Little Egg Harbor, N.J., and doing odd jobs.

Oh, I hope this turnip doesn't join the military. Although it would be good for him to get yelled at. It might help him to get his head out of his ass.

The entire student loan system should be *privatized* so that students who want to study

subjects that are highly politicized cannot pay for it with anyone else's money.

The use of taxpayer funds for college education has to be changed BEFORE the students can run up tens of thousands in debt. Loans should only be granted by corporations to students who are studying math, science, technology and engineering. It's so easy for the government to hand out taxpayer money for degrees that are more about indoctrination than they are about producing a return on the investment. But it would be a lot less likely to happen if the person doing the lending actually expected to *get the money back*. We need to grow up as a society. There is no free lunch, somebody has to pay.

UPDATE: My bad, it looks as if some of the Occupy Wall Street protesters are being paid after all. Maybe he is one.

Excerpt:

> The former New York office for ACORN, the disbanded community activist group, is playing a key role in the self-proclaimed "leaderless" Occupy Wall Street movement, organizing "guerrilla" protest events and hiring door-to-door canvassers to collect money under the banner of various causes while spending it on protest-related activities, sources tell FoxNews.com.
>
> The former director of New York ACORN, Jon Kest, and his top aides are now busy working at protest events for New York Communities for Change (NYCC). That organization was created in late 2009 when some ACORN offices disbanded and reorganized under new names after undercover video exposes prompted Congress to cut off federal funds.
>
> NYCC's connection to ACORN isn't a tenuous one: It works from the former ACORN offices in Brooklyn, uses old ACORN office stationery, employs much of the old ACORN staff and, according to several sources, engages in some of the old organization's controversial techniques to raise money, interest and awareness for the protests.
>
> **Sources said NYCC has hired about 100 former ACORN-affiliated staff members from other cities – paying some of them $100 a day – to attend and support Occupy Wall Street. Dozens of New York homeless people recruited from shelters are also being paid to support the protests, at the rate of $10 an hour, the sources said.**
>
> At least some of those hired are being used as door-to-door canvassers to collect money that's used to support the protests.
>
> Sources said cash donations collected by NYCC on behalf of some unions and various causes are being pooled and spent on Occupy Wall Street. The money is used to buy supplies, pay staff and cover travel expenses for the ex-ACORN members brought to New York for the protests.
>
> In one such case, sources said, NYCC staff members collected cash donations for what they were told was a United Federation of Teachers fundraising drive, but the money was diverted to the protests.

> Sources who participated in the teachers union campaign said NYCC supervisors gave them the addresses of union members and told them to go knock on their doors and ask for contributions—and did not mention that the money would go toward Occupy Wall Street expenses. One source said the campaign raked in about $5,000.

I should have known that this was not so much grass roots as astroturf.

Video review of the 2011 William Lane Craig vs Peter Atkins debate

October 27, 2011 | by Wintery Knight | Link | Original Link

From someone who attended the debate, a review:

So, just who is this Peter Atkins, and why is he a good spokesman for atheism?

From his Wikipedia bio.

Peter William Atkins (born August 10, 1940) is an English chemist and a fellow and professor of chemistry at Lincoln College of the University of Oxford. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, 8th ed. (with Julio de Paula of Haverford College), *Inorganic Chemistry*, and *Molecular Quantum Mechanics*, 4th ed. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.

[…]He was the first Senior Member for the Oxford Secular Society and an Honorary Associate of the National Secular Society. He is also a member of the Advisory Board of The Reason Project, a US-based charitable foundation devoted to spreading scientific knowledge and secular values in society. The organisation is led by fellow atheist and author Sam Harris.

While we wait for Brian Auten or Justin Brierley to post the audio of the *second* debate, why not watch the first Craig/Atkins debate?

The first Craig vs. Atkins debate

Here's a clip from the first debate:

You can watch the whole debate here, posted by ChristianJR4. Moderated by William F. Buckley! If you watched the audience closely, you'll see Michael Behe, Ravi Zacharias and Henry F. Schaefer III. All-star crowd!

Budget guru Paul Ryan discusses the economy at the Heritage Foundation

October 27, 2011 | by Wintery Knight | Link | Original Link

My favorite GOP ideas-man speaking at my favorite think tank. Here's the full transcript courtesy of National Review.

Excerpt:

> The Treasury Department's latest study on income mobility in America found that during the ten-year period starting in 1996, roughly half of the taxpayers who started in the bottom 20 percent had moved up to a higher income group by 2005.Meanwhile, half of all taxpayers ended up in a different income group at the end of ten years. Many moved up, and some moved down, but economic growth resulted in rising incomes for most people over this period.
>
> Another recent survey of over 500 successful entrepreneurs found that 93 percent came from middle-class or lower-class backgrounds. The majority were the first in their families to launch a business.
>
> Their stories are the American story: Millions of immigrants fled from the closed societies of the Old World to the security of equal rights in this land of upward mobility.
>
> Telling Americans they are stuck in their current station in life, that they are victims of circumstances beyond their control, and that government's role is to help them cope with it – well, that's not who we are. That's not what we do.
>
> Our Founding Fathers rejected this mentality. In societies marked by class structure, an elite class made up of rich and powerful patrons supplies the needs of a large client underclass that toils, but cannot own. The unfairness of closed societies is the kindling for class warfare, where the interests of "capital" and "labor" are perpetually in conflict. What one class wins, the other loses.
>
> The legacy of this tradition can still be seen in Europe today: Top-heavy welfare states have replaced the traditional aristocracies, and masses of the long-term unemployed are locked into the new lower class.
>
> The United States was destined to break out of this bleak history. Our future would not be staked on traditional class structures, but on civic solidarity. Gone would be the struggle of class against class.
>
> Instead, Americans would work, compete, and co-operate in an open market, climb the ladder of opportunity, and keep the fruits of their efforts.
>
> Self-government and the rule of law would secure our equal, God-given rights. Our political and economic systems – rooted in freedom and responsibility – would reward, and thus cultivate, traditional virtues.
>
> Given that the President's policies have moved us closer to the European model,

> I suppose we shouldn't be surprised that his class-based rhetoric has followed suit.
>
> We shouldn't be surprised… but we have every right to be disappointed. Instead of appealing to the hope and optimism that were hallmarks of his first campaign, he has launched his second campaign by preying on the emotions of fear, envy, and resentment.
>
> This has the potential to be just as damaging as his misguided policies. Sowing social unrest and class resentment makes America weaker, not stronger. Pitting one group against another only distracts us from the true sources of inequity in this country – corporate welfare that enriches the powerful, and empty promises that betray the powerless.
>
> Ironically, equality of outcome is a form of inequality – one that is based on political influence and bureaucratic favoritism.
>
> That's the real class warfare that threatens us: A class of bureaucrats and connected crony capitalists trying to rise above the rest of us, call the shots, rig the rules, and preserve their place atop society. And their gains will come at the expense of working Americans, entrepreneurs, and that small businesswoman who has the gall to take on the corporate chieftain.
>
> It's disappointing that this President's actions have exacerbated this form of class warfare in so many ways:
>
> While the EPA is busy punishing commercially competitive sources of energy, a class of bureaucrats at the Department of Energy has been acting like the world's worst venture capital fund, spending recklessly on politically favored alternatives. While the unemployment rate remains stuck above 9 percent, a class of bureaucrats at the National Labor Relations Board is threatening hundreds of jobs by suing an American employer for politically motivated reasons. And while millions of Americans are left wondering whether their employers will drop their health insurance because of the new health care law, a class of bureaucrats at HHS has handed out over 1,400 waivers to those firms and unions with the political connections to lobby for them.
>
> These actions starkly highlight the difference between the two parties that lies at the heart of the matter: Whether we are a nation that still believes in equality of opportunity, or whether we are moving away from that, and towards an insistence on equality of outcome.
>
> If you believe in the former, you follow the American Idea that justice is done when we level the playing field at the starting line, and rewards are proportionate to merit and effort.
>
> If you believe in the latter kind of equality, you think most differences in wealth and rewards are matters of luck or exploitation, and that few really deserve what they have.

> That’s the moral basis of class warfare – a false morality that confuses fairness with redistribution, and promotes class envy instead of social mobility.

When you think of talented Republicans who will one day be President, you think of people like Paul Ryan, Marco Rubio, Bobby Jindal, Ted Cruz and Josh Mandel. It’s to take a look at these guys before they become famous. Paul Ryan is the best we have on the budget – he is universally respected. And, he is also 100% pro-life and 100% solid on foreign policy. You don’t have to pick and choose with Paul Ryan – *you get everything*. All of the above.

Does the progress of science lead to theism or atheism?

October 27, 2011 | by Wintery Knight | Link | Original Link

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor. Here's a bio from his faculty page at Baylor University:

> Walter Bradley (B.S., Ph.D. University of Texas at Austin) is Distinguished Professor of Engineering at Baylor. He comes to Baylor from Texas A&M University where he helped develop a nationally recognized program in polymeric composite materials. At Texas A&M, he served as director of the Polymer Technology Center for 10 years and as Department Head of Mechanical Engineering, a department of 67 professors that was ranked as high as 12th nationally during his tenure. Bradley has authored over 150 refereed research publications including book chapters, articles in archival journals such as the Journal of Material Science, Journal of Reinforced Plastics and Composites, Mechanics of Time-Dependent Materials, Journal of Composites Technology and Research, Composite Science and Technology, Journal of Metals, Polymer Engineering and Science, and Journal of Materials Science, and refereed conference proceedings.
>
> Dr. Bradley has secured over $5.0 million in research funding from NSF grants (15 yrs.), AFOSR (10 years), NASA grants (10 years), and DOE (3 years). He has also received research grants or contracts from many Fortune 500 companies, including Alcoa, Dow Chemical, DuPont, 3M, Shell, Exxon, Boeing, and Phillips.
>
> He co-authored The Mystery of Life Origin: Reassessing Current Theories and has written 10 book chapters dealing with various faith science issues, a topic on which he speaks widely.
>
> He has received 5 research awards at Texas A&M University and 1 national research award. He has also received two teaching awards. He is an Elected Fellow of the American Society for Materials and the American Scientific Affiliation (ASA), the largest organization of Christians in Science and Technology in the world. He is President elect of the ASA and will serve his term in 2008.

You can read more about his recent research on how to use coconuts to make car parts in

this article from Science Daily.

Below, I analyze a lecture I chose from the hundreds of public lectures he has given all over the world on the integration of Christian faith with other public, testable areas of knowledge. In this lecture, entitled “Is There Scientific Evidence for an Intelligent Designer?”, Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

The MP3 file is here.

Evidence #1: The design of the universe

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.

- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – "carbon-based life), but the bonds are not so tight that they can't be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet must sufficient mass in order to retain an atmosphere, etc.

The best current atheist response to this is to speculate that there may be an infinite number of unobservable and untestable universes.

Evidence #2: <u>The origin of the universe</u>

1. The progress of science has shown that the entire physical universe came into being out of nothing (= "the big bang"). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not

eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.
- And there were other discoveries as well, mentioned in the lecture.

The best atheistic response to this is to speculate that there is an unobservable and untestable hyper-universe outside our own.

Evidence #3: The origin of life

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current atheistic response to this is to speculate that unobservable and untestable aliens seeded the earth with life.

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

Conclusion

In all three areas, scientists expected that the data would be consistent with atheism. First, scientists expected that life could exist even if the physical constants and ratios were altered. The progress of science said *NO*. Second, scientists expected that the universe would be eternal. The progress of science said *NO.* Third, scientists expected that the origin of life would be simple. The progress of science said *NO.* I think we all need to try to align our beliefs with the progress of science.

Dennis Prager: are evangelicals or secular leftists more irrational?

October 27, 2011 | by Wintery Knight | Link | Original Link

His column on National Review is the second most popular at the time I write this (Wednesday night).

Excerpt:

> And as regards same-sex marriage, why is the normative Christian and Jewish belief that marriage should be between a man and a woman anti-science and anti-intellectual? What we have here is the usual left-wing tactic of smearing opponents. If you disagree with race-based affirmative action, you are a racist; disagree with the ever-expanding welfare state, you lack compassion; disagree with redefining marriage in the most radical way ever attempted in history, and you are a hater. No wonder the Left developed the foolish and destructive self-esteem movement — no one has anywhere near the self-esteem leftists have. They are certain that they are better human beings in every way than those who have the temerity to oppose them.
>
> This Jew will take the evangelicals' values and the evangelicals' America over those of left-wing intellectuals any day of the year. If evangelicals come with some views I find irrational it is a tiny price to pay compared to the price humanity has paid for the Left's consistently broken moral compass — about America; about Communism and Islamism; about the superiority of peace studies over waging war against evil; about America's role in the world; about Israel; about the welfare state; about Fidel Castro, Hugo Chavez, and all the other left-wing dictators the Left has celebrated; about the belief that men and women are basically the same; about the greater worth of any animal than of the unborn human; and about nearly every other major moral issue.
>
> If these professors typify the views of Eastern Nazarene College, which is officially listed as a Christian university, it is reason for despair. Once left-wing values enter the evangelical bloodstream, there is almost no hope for America.

I've been noticing that a lot of the New Atheists who complain the loudest about the violent wars in the Old Testament are the same ones who line up to defend abortion – a practice that has killed over 50 million unborn children since 1973, in America alone. Not all atheists are pro-abortion, but I think they are more likely to be pro-abortion than evangelicals and conservative Jews.

It reminds me of this Wall Street Journal article from a while back, entitled "Look Who's Irrational Now".

Excerpt:

> The reality is that the New Atheist campaign, by discouraging religion, won't

> create a new group of intelligent, skeptical, enlightened beings. Far from it: It might actually encourage new levels of mass superstition. And that's not a conclusion to take on faith — it's what the empirical data tell us.
>
> "What Americans Really Believe," a comprehensive new study released by Baylor University yesterday, shows that traditional Christian religion greatly decreases belief in everything from the efficacy of palm readers to the usefulness of astrology. It also shows that the irreligious and the members of more liberal Protestant denominations, far from being resistant to superstition, tend to be much more likely to believe in the paranormal and in pseudoscience than evangelical Christians.
>
> The Gallup Organization, under contract to Baylor's Institute for Studies of Religion, asked American adults a series of questions to gauge credulity. Do dreams foretell the future? Did ancient advanced civilizations such as Atlantis exist? Can places be haunted? Is it possible to communicate with the dead? Will creatures like Bigfoot and the Loch Ness Monster someday be discovered by science?
>
> The answers were added up to create an index of belief in occult and the paranormal. While 31% of people who never worship expressed strong belief in these things, only 8% of people who attend a house of worship more than once a week did.
>
> Even among Christians, there were disparities. While 36% of those belonging to the United Church of Christ, Sen. Barack Obama's former denomination, expressed strong beliefs in the paranormal, only 14% of those belonging to the Assemblies of God, Sarah Palin's former denomination, did. In fact, the more traditional and evangelical the respondent, the less likely he was to believe in, for instance, the possibility of communicating with people who are dead.
>
> This is not a new finding. In his 1983 book "The Whys of a Philosophical Scrivener," skeptic and science writer Martin Gardner cited the decline of traditional religious belief among the better educated as one of the causes for an increase in pseudoscience, cults and superstition. He referenced a 1980 study published in the magazine Skeptical Inquirer that showed irreligious college students to be by far the most likely to embrace paranormal beliefs, while born-again Christian college students were the least likely.
>
> Surprisingly, while increased church attendance and membership in a conservative denomination has a powerful negative effect on paranormal beliefs, higher education doesn't. Two years ago two professors published another study in Skeptical Inquirer showing that, while less than one-quarter of college freshmen surveyed expressed a general belief in such superstitions as ghosts, psychic healing, haunted houses, demonic possession, clairvoyance and witches, the figure jumped to 31% of college seniors and 34% of graduate students.

And naturally, studies show that religious people are both more generous and more likely

to stay married than their secular counterparts. It’s not a cause and effect relationship, but the probabilities are suggestive. More probable than not, as Dr. Craig says.

Wife-sharing: the consequences of sex-selection abortions in India

October 28, 2011 | by Wintery Knight | Link | Original Link

Map of India

From Reuters India, disturbing news.

Excerpt:

> When Munni arrived in this fertile, sugarcane-growing region of north India as a young bride years ago, little did she imagine she would be forced into having sex and bearing children with her husband's two brothers who had failed to find wives.
>
> "My husband and his parents said I had to share myself with his brothers," said the woman in her mid-40s, dressed in a yellow sari, sitting in a village community centre in Baghpat district in Uttar Pradesh.
>
> "They took me whenever they wanted — day or night. When I resisted, they beat me with anything at hand," said Munni, who had managed to leave her home after three months only on the pretext of visiting a doctor.
>
> "Sometimes they threw me out and made me sleep outside or they poured kerosene over me and burned me."
>
> […]Social workers say decades of aborting female babies in a deeply patriarchal culture has led to a decline in the population of women in some parts of India, like Baghpat, and in turn has resulted in rising incidents of rape, human

> trafficking and the emergence of “wife-sharing” amongst brothers.
>
> Aid workers say the practice of female foeticide has flourished among several communities across the country because of a traditional preference for sons, who are seen as old-age security.
>
> “We are already seeing the terrible impacts of falling numbers of females in some communities,” says Bhagyashri Dengle, executive director of children’s charity Plan India.
>
> “We have to take this as a warning sign and we have to do something about it or we’ll have a situation where women will constantly be at risk of kidnap, rape and much, much worse.”
>
> […]According to India’s 2011 census, there are only 858 women to every 1,000 men in Baghpat district, compared to the national sex ratio of 940.
>
> Child sex ratios in Baghpat are even more skewed and on the decline with 837 girls in 2011 compared to 850 in 2001 — a trend mirrored across districts in states such as Haryana, Punjab, Rajasthan and Gujarat.
>
> “In every village, there are at least five or six bachelors who can’t find a wife. In some, there are up to three or four unmarried men in one family. It’s a serious problem,” says Shri Chand, 75, a retired police constable.

The majority of the East Indians I know support abortion, which implies support for sex-selection abortions.

But there’s more to the problem than just abortion… I think there’s a problem of missing romantic love. In the Western, we are more influenced by the Judeo-Christian values. In the Judeo-Christian ethic, there is a *strong* tradition of men falling in love and then taking the lead to woo a women and then providing for her. Obviously, a man would be stupid to marry a woman who didn’t want to work hard or help him, but I don’t think there is anything in the tradition about dowries and such.

Take a look at the clip below from King Lear, where the King disowns his virtuous daughter Cordelia for refusing to flatter him in front of his guests. She is being courted by the King of France and the Duke of Burgundy, and now she has no dowry. What are France and Burgundy going to do? Let’s see.

Quote:

- **King of France.** Is it but this- a tardiness in nature
  Which often leaves the history unspoke
  That it intends to do? My Lord of Burgundy,
  What say you to the lady? Love’s not love
  When it is mingled with regards that stands
  Aloof from th’ entire point. Will you have her?
  She is herself a dowry.

- **Duke of Burgundy.** Royal Lear,

Give but that portion which yourself propos'd,
And here I take Cordelia by the hand,
Duchess of Burgundy.

- **Lear.** Nothing! I have sworn; I am firm.
- **Duke of Burgundy.** I am sorry then you have so lost a father
  That you must lose a husband.
- **Cordelia.** Peace be with Burgundy!
  Since that respects of fortune are his love,
  I shall not be his wife.
- **King of France.** Fairest Cordelia, that art most rich, being poor;
  Most choice, forsaken; and most lov'd, despis'd!
  Thee and thy virtues here I seize upon.
  Be it lawful I take up what's cast away.
  Gods, gods! 'tis strange that from their cold'st neglect
  My love should kindle to inflam'd respect.
  Thy dow'rless daughter, King, thrown to my chance,
  Is queen of us, of ours, and our fair France.
  Not all the dukes in wat'rish Burgundy
  Can buy this unpriz'd precious maid of me.
  Bid them farewell, Cordelia, though unkind.
  Thou losest here, a better where to find.

And the whole story shows the consequences of the King's stupidity. So Shakespeare is telling us that Lear is a fool, and France has wisdom.

In the West, we believe in love and romance. That doesn't mean we don't believe in prudence, chastity, self-control and wisdom when courting, because crazy love is frowned upon in Shakespeare (Romeo and Juliet), Dickens (Great Expectations), and Austen (Sense and Sensibility). Not to mention Samson and Delilah in the Bible. It just means that we think that women have value even if all they have is goodness and wisdom. I could go on about what Western literature says about how men and women should get along, but it's nothing like what goes on in India. Now, if you can marry a rich version of Cordelia, then I do recommend doing that. Especially if it's a self-made fortune.

Audio, summary and review of the Wiliam Lane Craig vs Peter Millican debate

October 28, 2011 | by Wintery Knight | Link | Original Link

The audio of the debate can be downloaded from Apologetics 315.

Description:

> Christian philosopher William Lane Craig debates atheist Peter Millican on the topic: *Does God Exist?*The debate was organised by the Philosophy Society at Birmingham University on October 21, 2011 for the Reasonable Faith tour. The Tour was co sponsored by UCCF, Damaris and Premier Christian Radio (audio via their Unbelievable podcast). Want to hear every audio debate by William Lane Craig? Check out the audio debate feed here.
>
> Full Debate MP3 Audio here. *(2hr 23min)*

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. The debate audio has 32 minutes of Q&A.

And if you like my summary, check out another summary by J.W. Wartick.

Dr. Craig's opening speech:

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It’s not just that the settings are unlikely, it’s that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a “herd morality” that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved “herd morality”. However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a

God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

Dr. Millican's opening speech:

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

Dr. Craig's first rebuttal:

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the

universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

Dr. Millican's first rebuttal:

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in

the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

Dr. Craig's second rebuttal:

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

Dr. Millican's second rebuttal:

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

Dr. Craig's final rebuttal:

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the

resurrection on philosophical grounds, not historical grounds.

Dr. Millican's final rebuttal:

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3 minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

Should women think more carefully about age and fertility?

October 28, 2011 | by Wintery Knight | Link | Original Link

Here is an excellent, controversial, interesting post from Robert Stacy McCain. He critiques a feminist who has postponed becoming a mother, and she is now age 33.

Excerpt:

> It is one of the bitter ironies of the Contraceptive Culture: Many women spend years scrupulously using birth control — making what they have been told was the only safe, responsible decision — only to discover that when they decide they are finally ready for motherhood, they can't become pregnant. Unknown to them, their fallopian tubes were so badly scarred by some long-forgotten infection during their youth that, for many years, they have been as sterile as if they had undergone tubal ligation surgery.
>
> > "Chlamydia . . . can go undetected for years and can cause permanent sterility. The top four [sexually transmitted infections] that affect fertility are Chlamydia, Gonorrhea, Syphilis, and HPV. PID (pelvic inflammatory disease), caused by STI's will cause more than 100,000 women in the U.S. to experience infertility annually."
> > – **American Fertility Association**, "Infertility Prevention Handbook"
>
> The genuinely important thing to realize is that the ways we think about sex, romance, marriage and parenthood are shaped by our culture and society. And the dominant ideas associated with the Contraceptive Culture have become so deeply entrenched in our society that most people (especially most young people) are incapable of understanding how profoundly *unnatural* these ideas are.
>
> Postponing marriage until you are 30, and then imagining that you have plenty of time to wait around deciding when you want to become a mother, is not a natural way of thinking. To a greater extent than Rachel Birnbaum or her young readers may understand, this way of thinking is an artifact — or perhaps we might call it a side-effect — of the Contraceptive Culture, which fosters the belief that the procreative process is infinitely subject to human control. Yet while it is true that childbirth can always be prevented, by contraception or abortion, the logical obverse is not equally true: Pregnancy and childbirth cannot be magically conjured up in compliance to human will.
>
> Ideas have consequences, and the ideas of the Contraceptive Culture result not merely in attitudes, but in lifetyles reflecting those attitudes. How many thousands of Rachel Birnbaums are out there, living their 20s and early 30s with the idea that they want to become mothers *eventually*, but not now? And how

> many of these women are destined to discover that, when they finally decide they are ready for motherhood, the decision has already been made for them by their own bodies, and that the decision is an irrevocable ”no”?
>
> Whenever I write about subjects like this, it provokes strong reactions, many of them from people who accuse me of judgmentalism, or of trying to “tell women what to do.” Such responses – and they are often quite vehement — indicate how firmly rooted the ideas of the Contraceptive Culture have become. People simply are not used to hearing these ideas examined in a critical way and, having become accustomed to thinking and living in accordance with such ideas, feel that any criticism of the ideas is a personal judgment, a moral condemnation of their lives and beliefs.

I like Mr. McCain’s blog because, like me, he isn’t afraid to take on these cultural issues, and to attack feminism. And yet his blog is enormously popular. On so many blogs that are popular, the authors just find news stories and make these short comments about the news. But with McCain’s blog, you get long form essays that don’t shy away from controversy. Like it or not, it’s worth reading. And I couldn’t agree more with him about this essay – it never hurts to think ahead and take into account these limitations.

Friday is Spy-Day! Watch four episodes of my favorite TV show

October 28, 2011 | by Wintery Knight | Link | Original Link

My favorite espionage TV show is “Danger Man” with Patrick McGoohan, which later morphed into “Secret Agent”. The show takes place during the 1960s, right at the height of the Cold War.

The actor, Patrick McGoohan, refused to perform romantic scenes on camera because of his religious beliefs. He turned down the roles of James Bond and Simon Templar because of these moral concerns (see below). And that dedication to moral excellence shines through in every frame of “Danger Man”.

Here’s a description of Patrick McGoohan.

Excerpt:

> Main character John Drake worked for NATO as a special security agent and was free to travel the world working on special problems for free world governments. The story lines set an early precedent for non-violence, preferring to have Drake use his wits and his fists rather than a gun. McGoohan influenced the program from the start.
>
> The themes of morality and individuality fit in with his personal philosophy as well as his vision of what the character John Drake was supposed to be.
>
> As both a moral and opinionated man, McGoohan held strong views and was forceful about seeing that they were carried out. He had insisted at the very first meeting on the script for the first episode that the bedroom scene be cut out. In fact, he stipulated that romantic involvements would have to be eliminated if he were to play the role, and consequently none appeared in either this series or the ‘Secret Agent’ series that followed.

> […]It should come as no surprise that when McGoohan was offered the role as the first James Bond, he turned it down – several times – as being incompatible with the type of role he wanted to play. He says it was a decision he has never regretted.

> […]As an actor, McGoohan had now carved out a voice all his own…. John Drake was a loner, an individual, and a moral character.

From the UK Telegraph:

> [H]e was offered the roles of James Bond and Simon Templar (The Saint). He turned both down.
>
> He once recalled: “When we started Danger Man the producer wanted me to carry a gun and to have an affair with a different girl each week. I refused. I am

> not against romance on television, but sex is the antithesis of romance. Television is a gargantuan master that all sorts of people watch at all sorts of time, and it has a moral obligation towards its audience."

Here are four of my favorite episodes.

Episode 1 of 4: "Time to Kill"

Drake is tasked with eliminating an East German assassin.

Episode 2 of 4: "The Key"

Drake is sent to Vienna to find out who is leaking secrets from the American Embassy.

Episode 3 of 4: "Colonel Rodriguez"

Drake travels to the Carribean to free a journalist who has been arrested for espionage.

Episode 4 of 4: "The Trap"

Drake travels to Venice to investigate the disappearance of a cipher clerk.

Danger Poll

If you watch ALL FOUR episodes, you can vote in the poll:

Happy Friday!

Melanie Phillips explains how feminism impacted the nursing profession

October 29, 2011 | by Wintery Knight | Link | Original Link

Dina sent me this article by Melanie Phillips from the UK Daily Mail.

Excerpt:

> Last week, a devastating report detailing what can only be described as the widespread collapse of the ethic of nursing was produced by the Care Quality Commission.
>
> This revealed that more than half of all hospitals in England do not meet standards for the dignity and nutrition of elderly people. One in five hospitals were found to be failing the elderly so badly that they were breaking the law.
>
> In hospitals where essential standards were not met, inspectors found that patients' call bells had been placed out of reach or were not responded to quickly enough, or staff were talking to patients in a condescending or dismissive way.
>
> In one hospital, inspectors witnessed a patient being made to go to the lavatory in full view of the rest of the ward. In another, doctors had to prescribe water to make sure that patients did not become dehydrated.
>
> These horrifying revelations do not signify merely incompetence nor — that perennial excuse — the effect of 'the cuts'.
>
> No, they illustrate instead something infinitely grimmer: the replacement of altruism by indifference, and compassion by cruelty.
>
> […]Nursing was effectively created by that 19th-century feminist pioneer, Florence Nightingale. To her, nursing was in essence a moral act. In her book Notes On Nursing, published in 1860, she wrote that 'the greater part of nursing consists in preserving cleanliness'.
>
> That wasn't just because hygiene was essential for recovery and health. It was because keeping both hospital and patients clean meant the nurse needed to be motivated by the most high-minded concern for the care and dignity of the patient.
>
> Accordingly, lowly functions such as washing, dressing and administering bedpans were functions that were invested with the highest possible significance.
>
> […][D]uring the Eighties, nursing underwent a revolution. Under the influence of feminist thinking, its leaders decided that 'caring' was demeaning because it meant that nurses — who were overwhelmingly women — were treated like skivvies by doctors, who were mostly men.
>
> To achieve equality, therefore, nursing had to gain the same status as medicine. This directly contradicted an explicit warning given by Florence Nightingale that

> nurses should steer clear of the ‘jargon’ about the ‘rights’ of women ‘which urges women to do all that men do, including the medical and other professions, merely because men do it, and without regard to whether this is the best that women can do’.
>
> That prescient warning has been ignored by the modern nursing establishment. To achieve professional equality with doctors, nurse training was taken away from the hospitals and turned into an academic university subject.
>
> Since caring for patients was demeaning to women, it could no longer be the cardinal principle of nursing. Instead, the primary goal became to realise the potential of the nurse to achieve equality with men. (The great irony is that more women than men are now training to be doctors in British medical schools, thus making this ideology out of date.)
>
> In an important book on the nursing profession, Ann Bradshaw, a specialist in palliative care, described how this agenda removed caring, kindness, compassion and dedication from nurse training.
>
> Student nurses now studied sociology, politics, psychology, microbiology and management, and were assessed for their communication, management and analytical skills. ‘Specific clinical nursing skills were not mentioned,’ she wrote.
>
> In short, nursing ditched its core vocation to care. Bedbaths and feeding those who are helpless are tasks vital to the care of patients — but are now considered beneath the dignity of too many nurses.
>
> Dame Joan Bakewell, the former government-appointed Voice of Older People, has suggested nurses be given ‘empathy training’. But, of course, you can’t train people in compassion.
>
> Dame Joan was much nearer the mark when she observed that the decline in kindness and sympathy was linked to the decline in religious observance. In other words, the crisis in nursing is part of a far broader and deeper spiritual malaise.
>
> Duty to others and respect for the innate humanity of every person have been eroded by the ‘me society’ of ruthless, self-centred individualism.

This is something I have often thought about… what it would be like to go to a hospital filled with non-Christians who had no rational basis for morality and virtue. Especially in a single-payer system, where you couldn’t withhold payment if care was not of a good enough quality. When you put together secularism (removes the rational basis for acts of self-sactifice and the dignity of the individual) together with socialism (where the individual pays mandatory taxes and must seek products and services from a politicized, unionized government monopoly) then it becomes a scary situation indeed.

Feminism affects nurses in other ways, too

I think I’ll just paste some more about these British nurses here, from Theodore Dalrymple’s book “Life at the Bottom” – even though it’s a little off topic.

All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.

This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious young egotist to whom I would give a wide berth in the broadest daylight.

Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.

This failure of recognition is almost universal among my violently abused women patients, but its function for them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.

Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.

At first, of course, my female patients deny that the violence of their men was

> foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how*they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

You see, feminism also has the effects of telling women that there are no special roles that men are meant to perform, like provider, protector, moral leaders, spiritual leader. And when more and more women grow up in fatherless homes where money comes in from the government, and morality and spirituality are taught in public schools, it becomes harder and harder for women to have the wisdom to choose good men. Instead, they end up choosing men who are attractive and entertaining, using the 180-second rule.

You can read the entire Dalrymple book on moral relativism online. I posted links to the full text of Theodore Dalrymple's "Life at the Bottom".

Newt Gingrich on the issues: what are his political views?

October 29, 2011 | by Wintery Knight | Link | Original Link

Newt Gingrich on health care

From the Wall Street Journal. (H/T Reason to Stand)

Excerpt:

> White House hopeful Newt Gingrich called the House Republican plan for Medicare "right-wing social engineering," injecting a discordant GOP voice into the party's efforts to reshape both entitlements and the broader budget debate.
>
> In the same interview on Sunday, Mr. Gingrich backed a requirement that all Americans buy health insurance, complicating a Republican line of attack on President Barack Obama's health law.
>
> The former House speaker's decision to stick with his previous support for an individual mandate comes days after former Massachusetts Gov. Mitt Romney defended the health revamp he championed as governor, which includes a mandate.
>
> The moves suggest the Republican primary contest, which will include both men, could feature a robust debate on health care, with GOP candidates challenging the Democratic law while defending their own variations.

Newt Gingrich opposes Paul Ryan's reforms

Consider this article from National Review.

Excerpt:

> Newt Gingrich's appearance on "Meet the Press" today could leave some wondering which party's nomination he is running for. The former speaker had some harsh words for Paul Ryan's (and by extension, nearly every House Republican's) plan to reform Medicare, calling it "radical."
>
> "I don't think right-wing social engineering is any more desirable than left-wing social engineering," he said when asked about Ryan's plan to transition to a "premium support" model for Medicare. "I don't think imposing radical change from the right or the left is a very good way for a free society to operate."
>
> As far as an alternative, Gingrich trotted out the same appeal employed by Obama/Reid/Pelosi — for a "national conversation" on how to "improve" Medicare, and promised to eliminate 'waste, fraud and abuse,' etc.

Newt Gingrich on Hillary Clinton

More from the leftist New York Times.

Excerpt:

> For Ms. Clinton, standing side by side with her husband's onetime nemesis gives her the chance to burnish her credentials among the moderates she has been courting during her time in the Senate.
>
> But in comments this week, she portrayed the rapprochement as one born of shared policy interests, not calculated politics.
>
> "I know it's a bit of an odd-fellow, or odd-woman, mix," she said. "But the speaker and I have been talking about health care and national security now for several years, and I find that he and I have a lot in common in the way we see the problem."
>
> For his part, Mr. Gingrich, who helped lead the impeachment fight against President Bill Clinton, called Mrs. Clinton "very practical" and "very smart and very hard working," adding, "I have been very struck working with her."

Newt Gingrich on global warming

Newt Gingrich on foreign policy

Newt Gingrich endorsed a pro-abortion, pro-same-marriage candidate

Remember when Newt Gingrich endorsed the RINO Dede Scozzafava in New York?

Excerpt:

> In a major coup for her campaign, Republican Dede Scozzafava today will pick up the endorsement of Newt Gingrich, one of the nation's leading conservative figures and the architect of the "Republican Revolution" in the mid-1990s.
>
> "The special election for the 23rd Congressional District is an important test leading up to the mid-term 2010 elections," Gingrich said in a statement to supporters. "Our best chance to put responsible and principled leaders in Washington starts here, with Dede Scozzafava."
>
> The endorsement is important for Scozzafava, a social moderate, as she attempts to hold onto a conservative base eroded by Doug Hoffman, the Conservative Party candidate in the thee-way 23rd District race.
>
> […]Hoffman has mounted a late surge in the special election with endorsements by prominent conservatives that include former Republican Sen. Fred Thompson; Campaign for Working Families founder Gary Bauer; and the conservative Club for Growth in Washington, D.C.
>
> Scozzafava's candidacy is also reported to have triggered a deep divide among House Republicans, with some of the most conservative members refusing to support her campaign.
>
> But Gingrich, who served as Speaker of the House from 1995 to 1999, wants to unite the party. He sees Scozzafava and the Upstate special election – the only House race in the nation this fall — as the best hope for Republicans to start a comeback and regain control of Congress.
>
> Gingrich is apparently willing to overlook Scozzafava's support for same-sex

> marriage and abortion rights.

The conservative Club for Growth lists some of his fiscal blunders.

Excerpt:

> The second large error in Gingrich's entitlement record was equally troubling: the former Speaker played a high profile advocacy role on behalf of President George W. Bush's Medicare prescription drug benefit bill in 2003. Gingrich penned several op-eds supporting the general thrust and specific provisions of the bill, urging House Republicans to pass what was billed at the time to be a $400 billion expansion of the federal government.
>
> […]In the 2009 special election for Congress in New York's 23rd district, Gingrich was outspoken in his support of liberal Republican nominee Dede Scozzafava, up to the moment she finally quit the race after center-right voters rallied behind Conservative Party nominee Doug Hoffman. **Long after most prominent conservatives had endorsed Hoffman, Gingrich held firm in his advocacy for a liberal candidate who supported Obama's stimulus plan and the pro-union "card check" proposal, among other bad positions.**
>
> In 2010, Gingrich openly campaigned for embattled U.S. Senator Robert Bennett in Utah, whom Gingrich's wrongly called "a true-blue conservative." In 2008, Gingrich aggressively supported and campaigned for liberal Congressman Wayne Gilchrist (R-MD) when he faced a conservative challenge from now-Congressman Andy Harris. In 2006, same thing, when Gingrich backed liberal Congressman Joe Schwarz (R-MI) when he was challenged by conservative now-Congressman Tim Walberg.
>
> Unfortunately, the problems in Speaker Gingrich's record are frequent enough and serious enough to give pause. On two of the most important recent issues that confronted limited government conservatives (creating the new budget busting Medicare drug entitlement, and the Wall Street bailout), Gingrich was on the wrong side. His advocacy of an individual health care mandate is problematic. His penchant for tinkering with rewards for favored industries and outcomes shows a troubling willingness to use federal power to coerce taxpayers into his preferred direction. And his occasional hostility toward conservatives who do not share his desire to support liberal Republicans or to compromise on matters of principle is worrisome.

Maybe he is actually running to win the Democrat nomination this time.

Muslim Conservative MP says that Christians should be proud of their faith

October 30, 2011 | by Wintery Knight | Link | Original Link

Conservative MP Sayeeda Warsi
From the UK Telegraph.

Excerpt:

> First, it is a mistake to assume that you compromise your identity the more you try to understand others. The stronger your understanding of your neighbour, the stronger your own religious identity becomes. For many years, I have been saying that the stronger we are as a Christian nation, the more understanding we will be of other faiths. That is why, a year ago, I went to a bishops' conference and said that this Government would "do God". It is why the Pope's visit was so important for our country. And it is why I am proud that this year, for the first time, the Prime Minister held an Easter reception in Downing Street.

> **We need to create a country in which people can be unashamedly proud of their faith – where they don't feel that they have to leave religion at the door. That means being proud of Christianity, not downgrading it. It means encouraging people to say that their faith inspires what they do. It means supporting religious charities in delivering public services in schools, hospices and rehabilitation.**
>
> […]We also need to take the lead internationally. That means pressing other governments to safeguard religious minorities – be it the Copts in Egypt or Christians and other minorities in Pakistan. It means raising problems of persecution at the highest level, as the Archbishop of Canterbury recently did in Zimbabwe. Above all, it means all of us – as communities and individuals, believers and non-believers – taking inspiration from Shahbaz and Paul Bhatti,

> and giving all minorities in every country the courage and freedom to believe and worship in peace.

And here's another Conservative MP.

Conservative MP Priti Patel

Here's an article from IB Times about Hindu Conservative MP, Priti Patel.

Excerpt:

> Priti Patel is one of the most fascinating (and controversial) politicians in contemporary Britain. The 39-year-old Conservative MP is not only blessed with stunning good looks, but she is also of Asian Indian descent – somewhat of a rarity among Tory lawmakers.
>
> **Moreover, Patel (whose Indian Gujarati parents fled Idi Amin's Uganda for Britain in the early 1970s) has hewed to a hard-right line on many political issues, including the death penalty, illegal immigration, labor unions and the UK's integration with Europe.**
>
> **Regarding the death penalty, Patel recently told a television news affairs program: "I would actually support the re-introduction of capital punishment to serve as a deterrent. I have no issue on having a debate — I think far too many politicians do run away from debating issues like this."**
>
> She is frequently described in the British press as a "rising star" in the Conservative Party and some believe she might one day become the first Asian Prime Minister of the U.K.
>
> Indeed, Patel might even be considered a "British" version of Nikki Haley, the very telegenic young governor of South Carolina in the U.S., who is not only of Indian Sikh descent, but also a darling of the right-wing Tea Party and hailed as a potential future Vice President or even Presidential candidate.

I like to beat up on the UK, but they do have some MPs who take bold conservative

positions on certain issues. I like Iain Duncan-Smith the best, for example.

In other news, I noticed that the Indian-American governor of Louisiana Bobby Jindal recently won re-election with 66% of the vote. He has a 63% approval rating. He is a Republican, of course – just like the Indian-American governor of South Carolina, Nikki Haley.

Book review of “The Cell’s Design” by Fazale Rana

October 30, 2011 | by Wintery Knight | Link | Original Link

J.W. Wartick reviews “The Cell’s Design” by biochemist Fazale Rana.

Excerpt:

> The first line of evidence comes from the machines in the cell. Again, Rana’s approach is analogical, rather than negative. The machine-like nature of the flagellum, along with other motor-like cellular functions presents an argument: “Organisms display design. Therefore, organisms are the product of a creator” (86).
>
> The case doesn’t rest merely upon molecular machines. Rather, that is but one of the many lines of evidence. Rana draws out the implications of several “chicken-and-egg” paradoxes. These include the “mutual interdependence of DNA and proteins” (99), the origin of proteins themselves (100ff), and more (105ff). These systems present a kind of “irreducible complexity in which the system depends on the system to exist” (108).
>
> Other elements of design are present in the cell as well. Aquaporins intricate and detailed workings illustrate the design that is present in the system (111ff). Other detailed, intricate designs (such as collagen, mRNA, and the breakdown of proteins) hint at the need for a designer. But the reasoning is not only supported by the details, it is also bolstered by the structural composition of the cell (126ff). The analogy of cells to machines is strengthened further by the quality control systems within the cell (198ff). Again, the reasoning is analogical–these things are designed, therefore they need a designer.
>
> “Information can’t be separated from the activity of an intelligent agent” (142). The numerous examples of information in the cell lead to the inference of an agent. But it is not only the information’s presence that hints at a designer. Here Rana’s case really builds on and develops the work of other ID theorists. The information alone could be enough to infer an agent, but one must also account for the fact that cellular information follows rules like syntax, semantics, and pragmatics (144ff). It is not merely information, it is the use of that information and the rules governing that use that strengthen the case for an agent behind the information.

It never hurts to know a lot about cosmology and biochemistry, those seem to be the best areas for offensive science apologetics.

I have this book and a later book by Rana called “Creating Life in the Lab” sitting on my ironing board (which is where I put all my to-read books) . Maybe it’s time for me to start reading those and posting book reviews.

Brian Auten of Apologetics 315 interviews historian Craig Evans

October 31, 2011 | by Wintery Knight | Link | Original Link

Interview with Craig Evans

I'm not sure how I missed this, but this interview is definitely in the top 5 that Brian has done.

Description:

> Today's interview is with Biblical scholar Professor Craig Evans. He talks about his background and how he got into this area of scholarship (Jesus, the Gospels and Biblical manuscripts), what impresses him most about the Bible, handling manuscripts, the quest for the historical Jesus (and its overall timeline), the scholarly opinion on the "Jesus never existed" claim, the consensus of scholarship (and why scholarship is important), the contemporary distortion of Jesus, the demonstrable flaws in the thinking of particular scholars, evaluating presuppositions, a case for the reliability of the Gospels, the contrasting view of the "other" gospels, how to investigate the miracle claims within the Gospels, responding to the "failed apocalyptic prophet" objection, the faults in Bart Ehrman's reasoning, advice for those taking their Biblical studies seriously, the do's and don'ts of arguing for Bible reliability, and more.

> Find Craig Evans' website here. His author page here. See also *Fabricating Jesus*.

You can grab the MP3 file here. It's 73 minutes! But worth the time.

Berkeley warmist Richard Muller accused of “hiding the decline” by team member

October 31, 2011 | by Wintery Knight | Link | Original Link

From UK Daily Mail.

Excerpt:

> It was hailed as the scientific study that ended the global warming debate once and for all – the research that, in the words of its director, ‘proved you should not be a sceptic, at least not any longer’.
>
> Professor Richard Muller, of Berkeley University in California, and his colleagues from the Berkeley Earth Surface Temperatures project team (BEST) claimed to have shown that the planet has warmed by almost a degree centigrade since 1950 and is warming continually.
>
> Published last week ahead of a major United Nations climate summit in Durban, South Africa, next month, their work was cited around the world as irrefutable evidence that only the most stringent measures to reduce carbon dioxide emissions can save civilisation as we know it.
>
> But today The Mail on Sunday can reveal that a leading member of Prof Muller’s team has accused him of trying to mislead the public by hiding the fact that BEST’s research shows global warming has stopped.
>
> Prof Judith Curry, who chairs the Department of Earth and Atmospheric Sciences at America’s prestigious Georgia Institute of Technology, said that Prof Muller’s claim that he has proven global warming sceptics wrong was also a ‘huge mistake’, with no scientific basis.
>
> Prof Curry is a distinguished climate researcher with more than 30 years experience and the second named co-author of the BEST project’s four research papers.
>
> Her comments, in an exclusive interview with The Mail on Sunday, seem certain to ignite a furious academic row. She said this affair had to be compared to the notorious ‘Climategate’ scandal two years ago.
>
> Like the scientists exposed then by leaked emails from East Anglia University’s Climatic Research Unit, her colleagues from the BEST project seem to be trying to ‘hide the decline’ in rates of global warming.
>
> In fact, Prof Curry said, the project’s research data show there has been no increase in world temperatures since the end of the Nineties – a fact confirmed by a new analysis that The Mail on Sunday has obtained.
>
> ‘There is no scientific basis for saying that warming hasn’t stopped,’ she said. ‘To say that there is detracts from the credibility of the data, which is very

> unfortunate.'
>
> […]Prof Muller also wrote an article for the Wall Street Journal. It was here, under the headline 'The case against global warming scepticism', that he proclaimed 'there were good reasons for doubt until now'.
>
> This, too, went around the world, with The Economist, among many others, stating there was now 'little room for doubt'.
>
> Such claims left Prof Curry horrified.
>
> 'Of course this isn't the end of scepticism,' she said. 'To say that is the biggest mistake he [Prof Muller] has made. When I saw he was saying that I just thought, "Oh my God".'
>
> In fact, she added, in the wake of the unexpected global warming standstill, many climate scientists who had previously rejected sceptics' arguments were now taking them much more seriously.
>
> They were finally addressing questions such as the influence of clouds, natural temperature cycles and solar radiation – as they should have done, she said, a long time ago.
>
> […][Guelph University professor]Prof McKittrick added: 'The fact is that many of the people who are in a position to provide informed criticism of this work are currently bound by confidentiality agreements.
>
> 'For the Berkeley team to have chosen this particular moment to launch a major international publicity blitz is a highly unethical sabotage of the peer review process.'
>
> In Prof Curry's view, two of the papers were not ready to be published, in part because they did not properly address the arguments of climate sceptics.
>
> As for the graph disseminated to the media, she said: 'This is "hide the decline" stuff. Our data show the pause, just as the other sets of data do. Muller is hiding the decline.
>
> 'To say this is the end of scepticism is misleading, as is the statement that warming hasn't paused. It is also misleading to say, as he has, that the issue of heat islands has been settled.'

Should I be surprised that the Wall Street Journal, the Washington Post, the Huffington Post, etc. would publish alarmist propaganda before doing their homework? Every single one of them trumpets the fact that this man is a "global warming skeptic". The truth is, of course, that he is nothing of the kind.

The San Francisco Chronicle explains. (H/T Junk Science)

Excerpt:

> Although **Muller estimates 2 in 3 odds that humans are causing global warming**, "the fact that the original conclusion of Mann et al. is 'plausible' is damning with faint praise," he said. "Theories are plausible; discoveries are

> supposed to be proven."

Can these mainstream media journalists check anything before swallowing hoaxes hook, line and sinker?

Mitt Romney flip-flop videos: flat tax, abortion, health care, public sector unions, global warming

October 31, 2011 | by Wintery Knight | Link | Original Link

Most of the other Republican candidates are supporting flat taxes. But what does Mitt Romney support?

Human Events explains.

Excerpt:

> In a full page Boston Globe advertisement in 1996, Romney attacked Steve Forbes' flat tax proposal as being unfair and a "tax cut for fat cats!"
>
> In the ad, he took an entirely populist theme saying among other things that the Forbes flat tax will drop taxes on the super-rich while stiffing the middle class.
>
> The ad said, "0% Forbes tax on Kennedy's, Rockefellers, and Forbes down and gone," and on the other side said, "Forbes tax on you up and up!"

The Club for Growth noted Romney's opposition to the flat tax in it's white paper:

> His strident opposition to the flat tax is most curious and difficult to explain since Romney wasn't a political candidate at the time. In 1996, he ran a series of newspaper ads in Boston, New Hampshire, and Iowa denouncing the 17% flat tax proposed by then presidential candidate Steve Forbes as a "tax cut for fat cats." In 2007, Romney continued to oppose the flat tax with harsh language, calling the tax "unfair."

That's Romney's actual view on tax reform. Whatever he says during an election campaign cannot be believed, because the man will say anything to get elected. Don't believe me? Watch the videos below.

This short video shows a few of Romney's biggest flip flops.

Note: I don't support John Huntsman, but that's a good look at Romney's flip-flops.

Another one on global warming:

Another one on health care:

And another one on public sector unions:

Why is this man getting 20% of the vote in the Republican primary? He is not a serious candidate. Stop judging on appearances and make a right judgment.

Read more about Mitt Romney's horrible policies in Massachusetts in this post.

Nancy Pelosi: 1800 waivers for Obamacare were given to small firms – like McDonald's

October 31, 2011 | by Wintery Knight | Link | Original Link

From Guy Benson at TownHall. Nancy Pelosi thinks that the waivers for Obamacare were only given to small companies… some of them very, very, small companies.

Excerpt:

> The spin:
>
> *[Nancy Pelosi speaking]: "They're small. I couldn't speak to all 1,800 of them, but some of the lists that I have seen have been **very, very small companies**. They will not have a big impact on the economy of our country."*
>
> Flashback I:
>
> Nearly a million workers won't get a consumer protection in the U.S. health reform law meant to cap insurance costs because the government exempted their employers. Thirty companies and organizations, **including McDonald's and Jack in the Box**, won't be required to raise the minimum annual benefit included in low-cost health plans, which are often used to cover part-time or low-wage employees.
>
> Flashback II:
> Of the 204 new Obamacare waivers President Barack Obama's administration approved in April, 38 are for fancy eateries, hip nightclubs and decadent hotels in House Minority Leader Nancy Pelosi's Northern California district.

And more:

> **UPDATE** – Obama: *Bring back Speaker Pelosi!*

> President Obama on Saturday said Rep. Nancy Pelosi (D-Calif.) was a great House Speaker and that she will get that job back after the 2012 elections. "I am biased, but **I think Nancy was one of the best Speakers of the House this country ever had**," Obama said after Pelosi had introduced him at the National Italian American Foundation gala. "She was no doubt the best Italian American Speaker of the House we ever had. And **I believe that she will be the best Speaker of the House again in 2013**."

The Weekly Standard notes that over half of the Obamacare waivers were given to big unions – the same big unions that spent millions to get Obama elected.

Excerpt:

> Not surprisingly, it helps to be a Democratic ally when seeking a waiver. The Republican Policy Committee reports that over half of the workers that have been

> exempted so far belong to unions:
>
> The plans newly approved for waivers cover more than 160,000 people, bringing to nearly 3.1 million the number of individuals in plans exempted from the health law's requirements. Of the participants receiving waivers, more than half – over 1.55 million – are in union plans, raising questions of why such a disproportionate share of union members are receiving waivers from the law's requirements. The percentage of participants receiving waivers that come from unions also continues to rise – the number was 48% in April, and 45% in March.
>
> Unions already received a generous concession in the health care bill. Their generous "cadilac" insurance plans were exempted from being taxed until 2018, adding about $120 billion to the bill's cost over ten years.

This is the woman who treated the national debt like her own personal credit card and rang up 5.34 trillion in purchases over the four years that she was Speaker of the House.

Theologian R.C. Sproul interviews Stephen C. Meyer

November 1, 2011 | by Wintery Knight | Link | Original Link

Five clips featuring one my of all round favorite Christian scholars – in the top 3 for sure.

A closer look at Herman Cain's business experience

November 1, 2011 | by Wintery Knight | Link | Original Link

From the liberal Minneapolis Star Tribune. (H/T Powerline Blog)

Excerpt:

> Herman Cain, the Republican presidential hopeful, says he can turn around the country just as he did Godfather's Pizza 25 years ago.
>
> Business success has never guaranteed political success. But Cain demonstrated during a tour with Pillsbury Co. in the 1980s that he is a successful, charismatic leader. With flair and hard work, he turned around Pillsbury's struggling Philadelphia Burger King region and revived a near-dead Godfather's Pizza.
>
> "My career spans 38 years and I've worked for 26 different managers," said Frank Taylor, a recently retired Burger King financial executive whom Cain hired as his regional controller in 1983. "Herman was far and away the best I've worked for in terms of getting a team together, sharing a vision and accomplishing the goals. And nothing diverted him."
>
> Cain also shared the wealth. When Burger King distributed $50,000 apiece to the regional vice presidents as reward for good performance in 1985, most of the regional bosses spent it on a trip to a posh resort for themselves and other managers and spouses. The enlisted troops got a dinner. Cain took everybody in his office, including administrative staff, on the same three-day reward cruise, Taylor recalled.
>
> Cain, 65, the son of a domestic worker and a chauffeur, earned degrees in math and computer science and worked in computer systems and business analysis during 10 years in the Navy and at Coca-Cola. He moved to Pillsbury as a business analyst in 1977. He managed the move of Pillsbury into its new downtown Minneapolis headquarters in 1982. And, in 1983, Cain got a shot in field management at Pillsbury's restaurant division.
>
> The Philadelphia region of Burger King ranked near the bottom among Burger King's 12 groups. Cain brought analytical strengths and energy. He fired and hired. He praised and exhorted the survivors. He turned the region into a top performer within two years.
>
> "I worked with him fairly closely at Burger King," recalled George Mileusnic, a former Pillsbury executive, now a Twin Cities consultant. "He was good strategically and good with people, including working long hours in Burger King stores to get that bottom-up experience. He had about 500 stores in that Philadelphia region and he did a great job."

Herman Cain leads Romney by 1 point in the latest Iowa poll and leads Perry by 1 point in the latest Texas poll.

Another green energy firm goes bankrupt after getting $43 million loan from taxpayers

November 1, 2011 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> An energy company that received a $43 million loan guarantee through the same federal program that backed Solyndra has followed the path of the failed solar firm and filed for bankruptcy.
>
> Beacon Power Corporation filed for Chapter 11 bankruptcy on Sunday in U.S. Bankruptcy Court in Delaware. The company, which develops energy storage systems based on what are known as "flywheels," had received the federal guarantee for a 20-megawatt energy storage plant in Stephentown, N.Y., back in August 2010.
>
> […]The Massachusetts-based company also received $29 million in grants from the Energy Department and the state of Pennsylvania through separate programs for a plant in Hazle Township, Pa.
>
> Beacon Power Corporation has not responded to a request for comment from FoxNews.com.
>
> […]Sen. Jeff Sessions, R-Ala., ranking member of the Senate Banking Committee, called the revelation of the bankruptcy another example of "the reckless abuse of taxpayers' dollars in the pursuit of green jobs." He also suggested that crony capitalism had a hand in the decision to give Beacon a loan.
>
> One of the most controversial aspects of the Solyndra case — aside from the sheer size of the $535 million guarantee — was a decision earlier this year to prioritize private investors over taxpayers in case of bankruptcy. Republicans have accused the administration of giving precedence to investors in the companies who are also Obama backers.
>
> "As with Solyndra, the head of Beacon Power appears to have been a supporter of President Obama's," Sessions said in a statement.
>
> "Increasingly, we are moving away from our capitalist heritage and towards a system where most Americans play by the rules while some are able to rig the game in their favor. The real divide is not split along income lines, but between the politically-connected and those—whether businesses or individuals—who just want the freedom to earn a living."
>
> […]Campaign finance records show top Beacon officials contributing to Democratic candidates. Capp apparently was an Obama supporter, giving at least $500 to the Obama campaign in 2008. He also donated to Rep. Niki Tsongas, D-Mass.

> Beacon employee Matthew Polimeno has donated $750 since 2008 to Tsongas' campaign and another $250 to the failed campaign of Massachusetts Democratic Senate candidate Martha Coakley. CFO James Spiezio also donated $250 to the Coakley campaign in 2009.

Marsha Blackburn is also involved in investigating the $535 million loan to Solyndra.

Solyndra is another Democrat-connected company that went bankrupt after getting taxpayer dollars from the Obama administration.

Women and apologetics: heads for men and hearts for women?

November 1, 2011 | by Wintery Knight | Link | Original Link

Here's an interesting essay about women and apologetics posted by Mary from South Africa.

Here's her thesis:

> If you like to potter around apologetics blogs on the internet (my guess, if you're reading this, is that you do), or if you attend apologetics events, you'll notice that the ratio of men to women is skewed somewhat towards there being a lot more men involved in such things than women.
>
> Now before anyone thinks this is going to be a feminist diatribe about glass ceilings and male domination, hear me out. I have no problem with there being plenty of men in apologetics. I want every Christian I can get to take an interest in apologetics – male or female. Moreover, I'm a pretty traditional Christian woman who believes in male leadership in the home and church, so a radical feminist agenda is most definitely not my aim. My aim is not to discourage men from taking part in apologetics, or to advocate for any artificially imposed gender balance, but to encourage more women to get involved in apologetics.
>
> To do that, we need to consider why this imbalance exists to the degree that it does.

And here's a sample:

> It may well be that there will still be fewer women taking part in debates because of women's avoidance of emotionally upsetting situations. However, if a woman feels she can deal with such situations, all strength to her! Particularly when radical feminism lashes out at the Christian worldview as it applies to women there is a real opportunity for women to demonstrate that they can be strong in the way God intended without having to compromise their commitment to Christ or His plan for women.
>
> Organized debates are also not the only platform to exercise apologetics. We're not all able to be William Lane Craig, but we are all able to "(a)lways be prepared to give an answer to everyone who asks [us] to give the reason for the hope that [we] have" (1 Peter 3:15). Moreover, Peter goes on to make clear that this should be done "with gentleness and respect, keeping a clear conscience, so that those who speak maliciously against [our] good behaviour in Christ may be ashamed of their slander". This is quite the opposite of cold and being hard. Yes, it is always a challenge (for men and for women) to be gentle and respectful while being uncompromising on the truth. But it's certainly not a cold, unfeminine way to do things.

> In fact, women's greater tendency to connect with and express their emotions may actually help them to keep Peter's suggested manner of apologetic practice in mind. It may also help them to strike up one-to-one connections with others which lead very naturally to discussions in which apologetics are useful in presenting the Christian faith.
>
> Within the family too, every Christian wife and mother can play a vital role by using apologetics to encourage and support her husband and to instruct and bring up her children with a good, solid basis for Christian faith. We are so much stronger in a team than on our own and marriage is the best human team, designed by God, for navigating the world together for Him. One's children too will be faced with a variety of arguments as to why they shouldn't follow the faith of their parents. Thankfully there are good, logical reasons why they can make the Christian faith their own. It is an important parental responsibility to convey these reasons to one's children and to help them grapple with the questions that will arise as they grow up. While this is important for both men and women to do, women usually spend more time with their children than men do, and they need to be prepared for the particular opportunities that this presents. Women have immense power as mothers to affect future generations. William Ross Wallace was right when he said that "the hand that rocks the cradle rules the world." Mothers and those who would be mothers need to equip themselves so that they may equip their children for godly influence in all spheres of life, not least of all in Christian apologetics.

It's nice when women look forward to practicing apologetics in their roles of wife and mother. I think if women were more forward thinking, then they would not only see the value of learning apologetics for themselves, but they would also expect men to know apologetics.

I think I remember something about Mary… this other post on the prosperity gospel posted at Far Above Rubies was written by a "Mysterious M" from South Africa. Could it be the same person?

Ron Paul on the issues: Ron Paul's positions on abortion and gay marriage

November 2, 2011 | by Wintery Knight | Link | Original Link

Ron Paul on gay marriage

Let's look in this article from the Advocate to find out Ron Paul's views on same-sex marriage.

Excerpt:

> Paul was asked whether his libertarian views on such controversial issues — mainly his belief that personal liberties should not be encroached upon by the federal government — could help him attract socially conservative voters. Paul said he believes that states should have the right to legalize gay marriage, marijuana, and prostitution if they choose to do so.
>
> "If you do not protect liberty across the board, it's a First Amendment–type issue," he said. "We don't have a First Amendment so we can talk about the weather. We have the First Amendment so we can say very controversial things. So, for people to say that, 'Yes, we have our religious beliefs protected, but people who want to follow something else, or a controversial religion — you can't do this' … if you have the inconsistency, then you're really not defending liberty. But there are strict rules on freedom of choice of this sort, because you can't hurt other people, you can't defame other people, but yes, you have a right to do things that are very controversial. If not, you're going to end up with a government that can tell you what to eat or drink or whatever."
>
> Gay conservative group GOProud released a statement in support of Paul and the other politicians seeking the party's nomination.
>
> "[We] thank Congressman Ron Paul for rightly making the case that marriage and family laws should be decided at the state level, not by the politicians in Washington," the organization said Friday.

That's Ron Paul's view of marriage.

Ron Paul on abortion

Here's what Ron Paul wrote about abortion.

Excerpt:

> As the Senate prepares to vote on the confirmation of Supreme Court nominee Samuel Alito this week, our nation once again finds itself bitterly divided over the issue of abortion. It's a sad spectacle, especially considering that our founders never intended for social policy to be decided at the federal level, and certainly not by federal courts. It's equally sad to consider that huge numbers of Americans believe their freedoms hinge on any one individual, Supreme Court

> justice or not.
>
> Roe v. Wade was wrongly decided, but not because the Supreme Court presumed to legalize abortion rather than ban it. Roe was wrongly decided because abortion simply is not a constitutional issue. There is not a word in the text of that document, nor in any of its amendments, that conceivably addresses abortion. There is no serious argument based on the text of the Constitution itself that a federal "right to abortion" exists. The federalization of abortion law is based not on constitutional principles, but rather on a social and political construct created out of thin air by the Roe court.
>
> Under the 9th and 10th amendments, all authority over matters not specifically addressed in the Constitution remains with state legislatures. Therefore the federal government has no authority whatsoever to involve itself in the abortion issue. So while Roe v. Wade is invalid, a federal law banning abortion across all 50 states would be equally invalid.

What states would legalize abortion if Ron Paul allowed states to decide whether abortion should be legal?

Here's the map:

Which states would Ron Paul allow to legalize abortion?
That's Ron Paul's view of abortion.

You can read more about Ron Paul's troubling views on social issues on Caffeinated Thoughts.

But there's more. Here's Ron Paul's view of the Middle East. He is indifferent to Iran having nuclear weapons. Especially troubling, given the recent terrorist attack on American soil, which implicated the elite Iranian Quds Force.

UPDATE: A commenter adds:

> It’s more accurate to say that these are Paul’s views on how states should go about answering these issues. His personal views on these issues are quite clear, that he ascribes to the natural view of marriage and abhors abortion. However he advocates relegating these issues to individual states because of his overriding commitment to a limited federal government and because he believes the constitution does not enumerate such decisions to the federal government for it to answer such questions for all states in the union.

This is true. But if the man becomes President, a lot of unborn babies will still be killed in states that he allows to legalize abortion, and a lot of children will still grow up without a mother or a father, in states that he allows to redefine marriage. So despite his personal views, the net effect of electing him will be that abortion is permitted in some states, and same-sex marriage, too. So clearly, Ron Paul is not as pro-life or as pro-marriage as other candidates like Michele Bachmann or Rick Santorum.

Republicans want Obama to cancel Fannie Mae and Freddie Mac bonuses

November 2, 2011 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> A Republican senator is calling on President Obama to cancel the $12.8 million in bonuses that were approved for 10 executives at the government-seized mortgage giants Fannie Mae and Freddie Mac that received a $170 billion taxpayer-funded bailout.
>
> "I am calling on the president of the United States to cancel those bonuses and explain to the American people, the taxpayers who bailed out Freddie and Fannie, why he continues to reward failure," Sen. John Barrasso, R-Wyo., said at a news conference Tuesday.
>
> The two housing giants have received about $141 billion in taxpayer funds since the government took them over in 2008 during the financial crisis.
>
> Politico first reported the $6.46 million in bonuses for the top five officers at Freddie Mac — including $2.3 million for CEO Charles E. Haldeman Jr., who is stepping down next year — and $6.33 million for Fannie Mae officials, including $2.37 million for CEO Michael Williams, for meeting modest goals.
>
> A second bonus installment for Freddie executives in 2010 has yet to be reported to the Securities and Exchange Commission, Politico reported.

So where will these million dollar bonuses come from?

Fannie and Freddie Bailout Chart

They come from taxpayers. Obama's millionaires and billionaires get the bailouts, you get the bill.

In case you are looking for a good summary of the subprime mortgage crisis, read this recent article from Investors Business Daily.

Dennis Prager offers the best concise analysis of the effects of feminism ever

November 2, 2011 | by Wintery Knight | Link | Original Link

Dennis Prager has summarized many of my viewpoints on this blog in a tiny, tiny little article. He calls it "Four Legacies of Feminism".

Read the whole glorious thing and bask in its wisdom!

Full text:

> As we approach the 50th anniversary of the publication of Betty Friedan's feminist magnum opus, *The Feminine Mystique*, we can have a perspective on feminism that was largely unavailable heretofore.
>
> And that perspective doesn't make feminism look good. Yes, women have more opportunities to achieve career success; they are now members of most Jewish and Christian clergy; women's college sports teams are given huge amounts of money; and there are far more women in political positions of power. But the prices paid for these changes — four in particular — have been great, and outweigh the gains *for women*, let alone for men and for society.
>
> 1) The first was the feminist message to young women to have sex just as men do. There is no reason for them to lead a different sexual life than men, they were told. Just as men can have sex with any woman solely for the sake of physical pleasure, so, too, women ought to enjoy sex with any man just for the fun of it. The notion that the nature of women is to hope for at least the possibility of a long-term commitment from a man they sleep with has been dismissed as sexist nonsense.
>
> As a result, vast numbers of young American women had, and continue to have, what are called "hookups"; and for some of them it is quite possible that no psychological or emotional price has been paid. But the majority of women who are promiscuous do pay prices. One is depression. *New York Times* columnist Ross Douthat recently summarized an academic study on the subject: "A young woman's likelihood of depression rose steadily as her number of partners climbed and the present stability of her sex life diminished."
>
> Long before this study, I had learned from women callers to my radio show (an hour each week — the "Male-Female Hour" — is devoted to very honest discussion of sexual and other man-woman issues) that not only did female promiscuity coincide with depression, it also often had lasting effects on women's ability to enjoy sex. Many married women told me that in order to have a normal sexual relationship with their husband, they had to work through the negative aftereffects of early promiscuity — not trusting men, feeling used, seeing sex as unrelated to love, and disdaining their husband's sexual overtures. And many

> said they still couldn't have a normal sex life with their husband.
>
> 2) The second awful legacy of feminism has been the belief among women that they could and should postpone marriage until they developed their careers. Only then should they seriously consider looking for a husband. Thus, the decade or more during which women have the best chance to attract men is spent being preoccupied with developing a career. Again, I cite woman callers to my radio show over the past 20 years who have sadly looked back at what they now, at age 40, regard as 20 wasted years. Sure, these frequently bright and talented women have a fine career. But most women are not programmed to prefer a great career to a great man and a family. They feel they were sold a bill of goods at college and by the media. And they were. It turns out that most women without a man do worse in life than fish without bicycles.
>
> 3) The third sad feminist legacy is that so many women — and men — have bought the notion that women should work outside the home that for the first time in American history, and perhaps world history, vast numbers of children are not primarily raised by their mothers or even by an extended family member. Instead they are raised for a significant part of their childhood by nannies and by workers at daycare centers. Whatever feminists may say about their only advocating choices, everyone knows the truth: Feminism regards work outside the home as more elevating, honorable, and personally productive than full-time mothering and making a home.
>
> 4) And the fourth awful legacy of feminism has been the demasculinization of men. For all of higher civilization's recorded history, becoming a man was defined overwhelmingly as taking responsibility for a family. That notion — indeed the notion of masculinity itself — is regarded by feminism as the worst of sins: patriarchy.
>
> Men need a role, or they become, as the title of George Gilder's classic book on single men describes them: *Naked Nomads*. In little more than a generation, feminism has obliterated roles. If you wonder why so many men choose not to get married, the answer lies in large part in the contemporary devaluation of the husband and of the father — of men as men, in other words. Most men want to be honored in some way — as a husband, a father, a provider, as an accomplished something; they don't want merely to be "equal partners" with a wife.
>
> In sum, thanks to feminism, very many women slept with too many men for their own happiness; postponed marriage too long to find the right man to marry; are having hired hands do much of the raising of their children; and find they are dating boy-men because manly men are so rare.
>
> Feminism exemplifies the truth of the saying, "Be careful what you wish for — you may get it."

I wish I could add something to this, but I can't because every time I think of something

to add, he says it in the next sentence.

If you like this short essay, then this medium essay arguing against feminism authored by Barbara Kay would be nice follow-up.

It might be worth forwarding these articles along to your friends. And I highly recommend books on male-female relationships and roles by George Gilder, especially "Men and Marriage".

We can’t wait: the do-nothing Democrat Senate is blocking 15 bipartisan jobs bills

November 3, 2011 | by Wintery Knight | Link | Original Link

Have you heard about “The Forgotten 15“? Here’s a news article by the Washington Times that explains it.

Excerpt:

> Last week, the House passed a strongly bipartisan bill which would prevent a job-killing 3 percent withholding tax on all government contractors from going into effect. Even though the White House supports the measure, Mr. Reid, a Nevada Democrat, has chosen instead to bring another “small bite” from the president’s failed American Jobs Act to the floor. He wants to hike taxes on business owners so he can blow $60 billion in more stimulus for bike paths, choo-choo trains and bus stops.
>
> Mr. Reid can’t even round up all the Democrats behind his partisan plan, but he continues to drag his feet on items that could pass because the last thing he wants to do is adopt legislation that gives the GOP the chance to take some credit with the public.
>
> The Senate has not been this inactive in at least a quarter-century. As of Tuesday, the Senate had held 194 votes for the year, 54 fewer than at this time last year.
>
> The intransigence has real-world implications. In March, the House passed a strongly bipartisan bill which would have stopped a court order from imposing duplicate and expensive regulations on farmers and ranchers. The Senate never brought the bill up for a vote, and on Monday a key deadline passed, allowing new regulations on pesticide applications to go into effect. That’s bad for jobs.
>
> House Republican leaders want the public to know that they aren’t to blame for the stalemate on Capitol Hill. Speaker John A. Boehner produced a card listing the “forgotten 15” jobs bills that have passed the House but not the Senate. The Ohio Republican gave the card to members, telling them to carry it with them, hold it up at events at home, and flash it during interviews to remind Americans that Republicans are doing everything they can to address the employment situation.
>
> The Democratic strategy is to set up Republicans as a foil for their 2012 re-election bids. Even though the congressional approval rating is down in the single-digits, Mr. Reid wants to draw a distinction between his party and the GOP by only bringing up bills that Republicans will oppose so his caucus can send out accusatory press releases.
>
> The messaging is carefully crafted to fit with Mr. Obama’s latest campaign trail

> slogans about how “we can’t wait” for Congress to act. He showed his true motives on Tuesday when the president invited congressional Democrats to the White House to ostensibly talk about the jobs agenda. He has no plans to invite Republicans over to chat.

You can print a PDF of the The Forgotten 15 card right here.

Remember, Democrats are great at spending money – not so good at creating jobs.

Projected vs Actual Unemployment With Stimulus 2011

Back in 2007, when the Republicans controlled the House and Senate, the unemployment rate was near 4%. FOUR PERCENT. And we had a deficit of $160 billion – NOT 1.6 TRILLION.

Let’s take a closer look at the Forgotten 15 from an article on John Boehner’s web site.

Excerpt:

> Campaigning for another failed stimulus and more job destroying taxes, President Obama has repeatedly—and falsely—asserted that “Congress isn’t willing to move” legislation to facilitate job growth. While the president plays politics, House Republicans have been working and approving legislation to promote economic growth and job creation. The House has approved more than 15 bills that, if enacted, would immediately help to grow the economy without more failed stimulus spending. These bills are currently stalled in the Democrat-controlled Senate and the president has not encouraged the Senate to act.

Here is a sample:

> **4) H.R. 1230—Restarting American Offshore Leasing Now Act**: H.R. 1230 would require the Department of the Interior (DOI) to auction offshore oil and gas leases in the Central and Western Gulf of Mexico, as well as in an area off the coast of Virginia. The bill would help to reduce energy prices and promote job creation by expediting offshore oil and natural gas exploration in the Gulf of

Mexico and the Virginia coast.

6) H.R. 1231—Reversing President Obama's Offshore Moratorium Act: H.R. 1231 would require that each five-year offshore oil and gas leasing program offer leasing in the areas with the most prospective oil and gas resources, and would establish a domestic oil and natural gas production goal. The bill would essentially lift the President's ban on new offshore drilling by requiring the Administration to move forward on American energy production in areas estimated to contain the most oil and natural gas resources.

7) H.R. 2021—The Jobs and Energy Permitting Act of 2011: H.R. 2021 would eliminate needless permitting delays that have stalled important energy production opportunities off the coast of Alaska. The bill would also eliminate the permitting back-and-forth that occurs between the EPA and its Environmental Appeals Board. Rather than having exploration air permits repeatedly approved and rescinded by the agency and its review board, the EPA will be required to take final action – granting or denying a permit—within six months.

10) H.R. 1938— North American-Made Energy Security Act: H.R. 1938 would direct the President, acting through the Secretary of Energy, to coordinate with all federal agencies responsible for an aspect of the President's National Interest Determination and Presidential Permit decision regarding construction and operation of Keystone XL, to ensure that all necessary actions are taken on an expedited schedule. The bill would promote job creation and energy security by ending the needless delay of the construction and operation of the Keystone XL pipeline.

11) H.R. 2587—Protecting Jobs From Government Interference Act: H.R. 2587 would prohibit the National Labor Relations Board (NRLB) from ordering any employer to close, relocate, or transfer employment under any circumstance.

16) H.R. 2433—Veterans Opportunity to Work Act: H.R. 2433 would create or modify programs that provide employment and training services to veterans and service members separating from active duty. The bill would also make changes to programs that offer home loan guarantees, ambulance services, and pension payments to qualifying individuals. Among other things, the bill would provide up to 12 months of Veterans Retraining Assistance to no more than 100,000 unemployed veterans that enter education or training programs at community colleges or technical schools to prepare them for employment in an occupational field that is determined by Department of Labor to have significant employment opportunities.

17) H.R. 674—To amend the Internal Revenue Code of 1986 to repeal the imposition of 3 percent withholding on certain payments made to vendors by government entities: H.R. 674 would permanently repeal the imposition of 3 percent withholding on certain payments made to vendors by government entities. Currently, the imposition of the 3 percent withholding is set

> to take effect on January 1, 2013. If the 3 percent withholding tax were implemented as scheduled, government entities would be required to withhold 3 percent of payments to persons providing property or services to the government. For example, on an invoice for $20,000 the government would pay the business $19,400 and withhold $600 as a preemptive tax. These added costs would almost certainly translate into fewer private-sector jobs and higher costs for the government and taxpayers.

They are actually up to 17 jobs bills now.

And finally, I have to post this funny John Boehner clip:

We need more of that Mr. Boehner. I think that was a good opportunity to say “freaking” as well. Because he should be pissed off with this Solyndra-bailout President.

New study: total compensation of public school teachers is 52% greater than fair market value

November 3, 2011 | by Wintery Knight | Link | Original Link

Whenever advocates of greater spending on education try to argue that teachers are not paid enough, they always compare teachers to other workers to other workers in terms of years spent in college. On that view, a software engineer with 6 years of college (B.S. and M.S. in computer science) is the same as an English teacher with 6 years of "Education college" (B.Ed and M.Ed in education). But is the ability to write code to perform real-time commercial transactions in a distributed database environment really deserving of the same total compensation as teaching 6-year olds how to read Dr. Seuss books? Is the supply of each skill set the same? Is the demand for each skill set the same? What should the price of each kind of labor be?

Let's see what this new study from the American Enterprise Institute says.

Excerpt:

> The teaching profession is crucial to America's society and economy, but public-school teachers should receive compensation that is neither higher nor lower than market rates. Do teachers currently receive the proper level of compensation? Standard analytical approaches to this question compare teacher salaries to the salaries of similarly educated and experienced private-sector workers, and then add the value of employer contributions toward fringe benefits. These simple comparisons would indicate that public-school teachers are undercompensated. However, comparing teachers to non-teachers presents special challenges not accounted for in the existing literature.
>
> First, formal educational attainment, such as a degree acquired or years of education completed, is not a good proxy for the earnings potential of school teachers. Public-school teachers earn less in wages on average than non-teachers with the same level of education, but teacher skills generally lag behind those of other workers with similar "paper" qualifications.

Here's what the study shows:

- The wage gap between teachers and non-teachers disappears when both groups are matched on an objective measure of cognitive ability rather than on years of education.
- Public-school teachers earn higher wages than private- school teachers, even when the comparison is limited to secular schools with standard curriculums.
- Workers who switch from non-teaching jobs to teaching jobs receive a wage increase of roughly 9 percent. Teachers who change to non-teaching jobs, on the other hand, see their wages decrease by roughly 3 percent. This is the opposite of what one would expect if teachers were underpaid.

- Pension programs for public-school teachers are significantly more generous than the typical private sector retirement plan, but this generosity is hidden by public-sector accounting practices that allow lower employer contributions than a private-sector plan promising the same retirement benefits.
- Most teachers accrue generous retiree health benefits as they work, but retiree health care is excluded from Bureau of Labor Statistics benefits data and thus frequently overlooked. While rarely offered in the private sector, retiree health coverage for teachers is worth roughly an additional 10 percent of wages.
- Job security for teachers is considerably greater than in comparable professions. Using a model to calculate the welfare value of job security, we find that job security for typical teachers is worth about an extra 1 percent of wages, rising to 8.6 percent when considering that extra job security protects a premium paid in terms of salaries and benefits.

And they conclude:

> We conclude that public-school teacher salaries are comparable to those paid to similarly skilled private sector workers, but that more generous fringe benefits for public-school teachers, including greater job security, make total compensation 52 percent greater than fair market levels, equivalent to more than $120 billion overcharged to taxpayers each year.

Well, maybe teachers are overpaid – but that would be OK if they were somehow super intelligent and productive.

Are teachers intelligent?

CBS Moneywatch explains what the research shows about teachers.

Excerpt:

> Research over the years has indicated that education majors, who enter college with the lowest average SAT scores, leave with the highest grades. Some of academic evidence documenting easy A's for future teachers goes back more than 50 years!
>
> The latest damning report on the ease of majoring in education comes from research at the University of Missouri, my alma mater. The study, conducted by economist **Cory Koedel** shows that **education majors** receive "substantially higher" grades than students in every other department.
>
> Koedel examined the grades earned by undergraduates during the 2007-2008 school year at three large state universities that include sizable education programs — University of Missouri, Miami (OH) University and Indiana University. The researcher compared the grades earned by education majors with the grades earned by students in 12 other majors including biology, economics, English, history, philosophy, mathematics, chemistry, psychology and sociology.
>
> Education majors enjoyed grade point averages that were .5 to .8 grade points

> higher than students in the other college majors. At the University of Missouri, for instance, the average education major has a 3.80 GPA versus 2.99 GPA (science, math, econ majors), 3.12 GPA (social science majors) and 3.16 GPA (humanities majors).

So it is easy for teachers with lower SAT scores to get much higher grades than other applicants to non-teaching programs with much higher SAT scores. It doesn't sound like the smartest people go to teachers college. Nor does it sound as if they learn anything very challenging when they are there.

Are teachers doing a good job of teaching useful skills?

CNN sheds some light on how well teachers perform.

Excerpt:

> Last week, the College Board dealt parents, teachers and the education world a serious blow. According to its latest test results, "SAT reading scores for the high school class of 2011 were the lowest on record, and combined reading and math scores fell to their lowest point since 1995."
>
> The reading scores, which stand at 497, are noticeably lower than just six years ago, when they stood at 508. And it's just the second time in the last 20 years that reading scores have dropped so precipitously in a single year.
>
> […]The 2011 budget for the Department of Education is estimated to top $70 billion, while overall spending on public elementary and secondary education is about $600 billion a year. By comparison, in 1972, before the Department of Education even existed, SAT critical reading scores for college-bound seniors were above 525, more than 20 points higher than they are today, while today's math scores are only slightly better than in 1972.

So, not only are these highly-paid teachers less intelligent (on average) than other college applicants, but they also fail to educate our children properly. And we are forced to pay them, through taxes, regardless of how they perform. Our children who are suffering from this failed monopoly.

Do teacher unions improve teacher quality?

And do you know who protects bad teachers from being fired, and prevents good teachers from being paid more?

This is why we need to abolish the federal Department of Education and teacher unions. Why are we paying these people ridiculous salaries and benefits to fail our children?

Can atheists know whether God has a reason for allowing pain and suffering?

November 3, 2011 | by Wintery Knight | Link | Original Link

This tiny little thing is a No-See-Um

Have you heard about the terrible noseeums? Then read on, for Steven Cowan will tell you about them.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude. Consider the recent Tsunami in the Indian Ocean that took the lives of almost 200,000 people. Consider as well the infamous Nazi Holocaust in which millions of Jews and others were mercilessly slaughtered. Moreover, we can watch the evening news on almost any day and hear of people in our neighborhoods being robbed, beaten, and murdered. How and why could God allow such things?

Excerpt:

> However, perhaps God's existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God's existence is inconsistent with pointless or gratuitous evil. By "pointless evil," Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe's argument may be simply stated as follows:

> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the "noseeum inference." Like the pesty little bugs that some readers may be familiar with, a "noseeum" is something that you cannot see—it is a "no-see-um." And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I "no-see-um" a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in concluding that there was no such planet.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous. Humans just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a

noseeum. Just because we don't see it doesn't mean it isn't there, and the burden of proof is on the person who says there is NO morally sufficient reason. They're making the claim, they have to shoulder the burden of proof.

By the way, I HAVE the PDF of the William Alston paper. But I can't post it publicly because it's copyrighted.

However, here is a summary of his argument: (it's unnecessarily wordy – this is not Thomas Sowell or Theodore Dalrymple writing this)

> The recent outpouring of literature on the problem of evil has materially advanced the subject in several ways. In particular, a clear distinction has been made between the "logical" argument against the existence of God ("atheological argument") from evil, which attempts to show that evil is logically incompatible with the existence of God, and the "inductive" ("empirical", "probabilistic") argument, which contents itself with the claim that evil constitutes (sufficient) empirical evidence against the existence of God. It is now acknowledged on (almost) all sides that the logical argument is bankrupt, but the inductive argument is still very much alive and kicking.
>
> In this paper I will be concerned with the inductive argument. More specifically, I shall be contributing to a certain criticism of that argument, one based on a low estimate of human cognitive capacities in a certain application. To indicate the point at which this criticism engages the argument, I shall use one of the most careful and perspicuous formulations of the argument in a recent essay by William Rowe (1979).
>
> 1. There exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse. ,
> 2. An omniscient, wholly good being would prevent the occurrence of any intense suffering it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse.
> 3. There does not exist an omnipotent, omniscient, wholly good being (p. 336).
>
> Let's use the term 'gratuitous suffering' for any case of intense suffering, E, that satisfies premise 1, that is, which is such that an omnipotent, omniscient being could have prevented it without thereby losing some greater good or permitting some evil equally bad or worse.'
>
> […]The criticism I shall be supporting attacks the claim that we are rationally justified in accepting 1, and it does so on the grounds that our epistemic situation is such that we are unable to make a sufficiently well grounded determination that 1 is the case. I will call this, faute de mieux, the agnostic thesis, or simply agnosticism. The criticism claims that the magnitude or complexity of the question is such that our powers, access to data, and so on are radically insufficient to provide sufficient warrant for accepting 1.And if that is so, the

> inductive argument collapses.

What the atheist has to show is that God could have prevented some instance of evil that appears to be pointless without losing any overall goodness. I.e. – suppose someone gets sick and has to stay home instead of going to a party. The person is suffering, but how do we know that God isn't justified in allowing this suffering? What if, by allowing this suffering, God protects the person from being killed by a drunk driver? If the atheist says that there cannot be ANY moral justification for allowing the suffering, he has to be able to know what would happen in the future to know that nothing good would never come out of it. That's the burden of proof on the atheist, and Alston claims that the atheist is not in a position to know that.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very difficult thing for an atheist to show, given our human cognitive limitations.

But as I said before, atheist confuse the purpose of life. They think that the purpose of life is to have happy feelings, and they wonder "how could allowing me to suffer create MORE happy feelings?" And that's where the problem arises. They can't accept the idea that God has a right to form their character, to put them through certain experiences, and to place humans in times and places where he can orchestrate a world that meets his needs, not our needs.

You can hear William Lane Craig use the noseeum inference in his debate with Walter Sinnott-Armstrong on the problems of evil and suffering. (MP3)

I also found this opening speech from a debate that Steven Cowan did on the problem of evil, which may also be useful to you.

The *best* place to learn about no-see-ums is in this amazing, perfect lecture by Biola University professor Doug Geivett.

China continues to sell advanced anti-ship cruise missiles to Iran

November 3, 2011 | by Wintery Knight | Link | Original Link

Firing a Chinese-manufactured C-802 anti-ship cruise missile

The Washington Times reports.

Excerpt:

> China is continuing to provide advanced missiles and other conventional arms to Iran and may be doing so in violation of U.N. sanctions against the Tehran regime, according to a draft report by the congressional U.S.-China Commission. "China continues to provide Iran with what could be considered advanced conventional weapons," the report of the U.S.-China Economic and Security Review Commission says. According to the report, which will be made public Nov. 16, China sold $312 million worth of arms to Iran, second only to Russia, after Congress passed the Iran Freedom Support Act in 2006 that allows the U.S. government to sanction foreign companies that provide advanced arms to Iran. The report also noted that, after Russia began cutting back arms transfers to Iran in 2008, China became the largest arms supplier to the Iranian military. Most of the weapons transfers involved sales of Chinese anti-ship cruise missiles, including C-802 missiles that China promised the United States in 1997 would not be exported to Iran. China also built an entire missile plant in Iran last year to produce the Nasr-1 anti-ship cruise missile.

The Nasr-1 has a range of 19 miles. The C-802 has a range of 75 miles. That means that the C-802 has about the same range as a Harpoon SSM. Not good. I am not worried about the Nasr-1, but the C-802 is a problem. These weapons could be used by terrorists to attack allied naval vessels. In fact, the New York Times reported that Hezbollah, a terrorist group linked to Iran, used the C-802 missile to sink an Israeli Saar 5 corvette back in 2006.

Excerpt:

> The power and sophistication of the missile and rocket arsenal that Hezbollah has used in recent days has caught the United States and Israel off guard, and officials in both countries are just now learning the extent to which the militant group has succeeded in getting weapons from Iran and Syria.
>
> While the Bush administration has stated that cracking down on weapons proliferation is one of its top priorities, the arming of Hezbollah shows the blind spots of American and other Western intelligence services in assessing the threat, officials from across those governments said.
>
> American and Israeli officials said the successful attack last Friday on an Israeli naval vessel was the strongest evidence to date of direct support by Iran to Hezbollah. The attack was carried out with a sophisticated antiship cruise missile, the C-802, an Iranian-made variant of the Chinese Silkworm, an American intelligence official said.
>
> At the same time, American and Israeli officials cautioned that they had found no evidence that Iranian operatives working in Lebanon launched the antiship missile themselves.
>
> But neither Jerusalem nor Washington had any idea that Hezbollah had such a missile in its arsenal, the officials said, adding that the Israeli ship had not even activated its missile defense system because intelligence assessments had not identified a threat from such a radar-guided cruise missile.
>
> […]Officials said it was likely that Iran trained Hezbollah fighters on how to successfully fire and guide the missiles, and that members of Iran's Al Quds force — the faction of the Revolutionary Guards that trains foreign forces — would not necessarily have to be on the scene to launch the C-802.
>
> At the same time, some experts said Iran was not likely to deploy such a sophisticated weapon without also sending Revolutionary Guard crews with the expertise to fire the missile.

Note that this is the same Quds force that likely trained Iraqi terrorists in the use of IEDs and is suspected of being involved with the recent attack on the Saudi ambassador on American soil. I have no idea why we were dicking around in Libya and Egypt when we have major problems with Iran, and, by extension, Syria and Lebanon.

Meanwhile, the Obama administration sends $47 million a year to China for foreign aid.

Democrats hire Soros-backed pro-abortion activist to do outreach to Christians

November 4, 2011 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> The Democratic National Committee (DNC) has hired a prominent pro-abortion activist to lead the religious outreach program as it prepares to support the re-election campaign of pro-abortion President Barack Obama.
>
> The Demcoratic Party has hried Rev. Dr. Derrick Harkins, the senior pastor of the prestigious Nineteenth Street Baptist Church, one of the largest historic black congregations in Washington, DC. In addition to serving on the board of the National Association of Evangelicals (NAE), Harkins serves on an advisory board for the pro-abortion Religious Coalition for Reproductive Choice.
>
> He also serves on the board of the liberal advocacy group Faith and Public Life, funded by leftist philanthropies like George Soros and the Tides Foundation, both of which support abortion.
>
> In 2009, Harkins argued that Obamacare is morally imperative even though pro-life groups virtually unanimously opposed it (except for one, Democrats for Life of America) because of concerns related to taxpayer funding of abortions, rationing issues, and lack of conscience protections for pro-life medical workers.
>
> […]Family Research Council Action president Tony Perkins says he doesn't think the new director will have any luck reaching pro-life advocates who are upset that Obama has repeatedly promoted abortion, forced them to pay for abortions or funding pro-abortion organizations in multiple circumstances, or cozied up with leaders of pro-abortion groups like NARAL and Planned Parenthood.
>
> "A Barna Research Survey conducted earlier this year shows that President Obama has a 6 percent favorability rating among evangelicals. A more recent Quinnipiac survey reports that the President has a 39 percent favorability rating among Catholics," Perkins said. "The DNC and the President may hope this effort will reverse his falling poll numbers among religious voters, but I predict that as the fruit of this administration is examined by Christian voters, the President will find little support."
>
> "The President's policies that promote abortion also undermine family formation," Perkins added.
>
> "Abortion does this by contributing to infant mortality, victimizing women, and encouraging the abdication of responsibility by men. He has issued executive orders to fund foreign abortion organizations and use tax dollars for experimentation on human embryos. He is even opposed to commonsense

> parental notification laws. These laws reaffirm the unique role that a mother and father have in the life of a child," the FRC leader continued.
>
> Perkins said real religious outreach from the Obama campaign would require him to defend human life at its earliest stages.
>
> The FRC leader also said his organization would join others in making sure voters understand the depths to which Obama has gone to promote abortion and abortion funding.

Obama is not just pro-choice – he promotes abortion and wants pro-life taxpayers to subsidize it. He wants pro-life doctors and nurses to be *forced* to perform abortions, under the threat of being fired from their jobs. No authentic Christian can vote for this man in good conscience.

Induced abortions, drinking and use of contraceptives all increase breast cancer risk

November 4, 2011 | by Wintery Knight | Link | Original Link

Here's the latest study from the Journal of the American Medical Association (JAMA), showing that excessive consumption of alcohol is a rish factor for breast cancer.

Excerpt:

> Consumption of 3 to 6 alcoholic drinks per week is associated with a small increase in the risk of breast cancer, and consumption in both earlier and later adult life is also associated with an increased risk, according to a study in the November 2 issue of JAMA.
>
> "In many studies, higher consumption of alcohol has been associated with an increased risk of breast cancer. However, the effect of low levels of drinking as is common in the United States has not been well quantified," according to background information in the article. "In addition, the role of drinking patterns (i.e., frequency of drinking and 'binge' drinking) and consumption at different times of adult life are not well understood."
>
> Wendy Y. Chen, M.D., M.P.H., of Brigham and Women's Hospital and Harvard Medical School, Boston, and colleagues examined the association of breast cancer with alcohol consumption during adult life, including quantity, frequency, and age at consumption. The study included 105,986 women enrolled in the Nurses' Health Study who were followed up from 1980 until 2008 with an early adult alcohol assessment and 8 updated alcohol assessments. The primary outcome the researchers measured was the risk of developing invasive breast cancer.
>
> During the follow-up period, there were 7,690 cases of invasive breast cancer diagnosed among the study participants. Analyses of data indicated that a low level of alcohol consumption (5.0 to 9.9 grams per day, equivalent to 3-6 glasses of wine per week) was modestly but statistically significantly associated with a 15 percent increased risk of breast cancer. In addition, women who consumed at least 30 grams of alcohol daily on average (at least 2 drinks per day) had a 51 percent increased risk of breast cancer compared with women who never consumed alcohol.
>
> The researchers also found that when examined separately, alcohol consumption levels at ages 18 to 40 years and after age 40 years were both strongly associated with breast cancer risk. The association with drinking in early adult life still persisted even after controlling for alcohol intake after age 40 years.
>
> Binge drinking, but not frequency of drinking, was also associated with breast cancer risk after controlling for cumulative alcohol intake.

Now let’s take a look at some other factors that raise the risk of breast cancer.

Abortion and breast cancer

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and **multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

But wait, there’s more.

Birth control pills

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a

> risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

Why are these risk factors so prevalent today?

Now let's put it all together by looking at this New York Times article by Nancy Bauer.

Excerpt:

> If there's anything that feminism has bequeathed to young women of means, it's that power is their birthright. Visit an American college campus on a Monday morning and you'll find any number of amazingly ambitious and talented young women wielding their brain power, determined not to let anything — including a relationship with some needy, dependent man — get in their way. **Come back on a party night, and you'll find many of these same girls (they stopped calling themselves "women" years ago) wielding their sexual power, dressed as provocatively as they dare, matching the guys drink for drink — and then hook-up for hook-up.**

The article was written by:

> *Nancy Bauer is associate professor and chair of philosophy at Tufts University. She is the author of "Simone de Beauvoir, Philosophy, and Feminism," and is currently completing a new book, "How to Do Things With Pornography."*

Her comments cause me to ask some questions. Where did women *ever* get the idea that they had to drink as much as men drink? Where did women *ever* get the idea that using contraceptives to enable hook-up sex was healthy and normal? Where did women *ever* get the idea that aborting their own unborn children was healthy and normal? Is there one unifying worldview that stipulates all of these beliefs? Why has this worldview become so popular that so many young women who now believe in it, rather than believing in traditional Judeo-Christian values?

Who is paying for all of this increased health care spending?

The total cost for breast cancer treatment, which raises medical insurance premiums (private health care) or taxes (single-payer health care), has been estimated to be

between $1.8 billion and $3.8 billion dollars. In addition, the government spends billions of dollars each year on breast cancer research. All of this spending is costing taxpayers a lot of money, as people demand more and more government funding of breast cancer research and breast cancer treatment (with either private or single-payer health care).

Is the news media's treatment of Herman Cain an example of media bias?

November 4, 2011 | by Wintery Knight | Link | Original Link

Stories on the ABC, CBS and NBC morning and evening news programs in the first 3 days after each scandal first broke.

What is the simplest explanation for these differences?
From Newsbusters.

Excerpt:

> Over a period of just three and a half days, NBC, CBS and ABC have developed an insatiable hunger for the Herman Cain sexual harassment story, devoting an incredible 50 stories to the allegations since Monday morning. In contrast, over a similar period these networks mostly ignored far more substantial and serious scandals relating to Bill Clinton.
>
> […]In comparison, over a similar three-day period these same programs were far less interested in charges against Democrat Bill Clinton. After Paula Jones held a public press conference in February of 1994, there was only one report on her allegations.
>
> Following Kathleen Willey's July 1997 claims of being groped by the President, there were a mere three reports. For Juanita Broaddrick, who came forward in February of 1999 to say Clinton raped her, only three stories followed charges appearing in the Wall Street Journal.
>
> It should also be pointed out that all these women offered their names. They weren't anonymous. Additionally, the accusations of assault and rape go far beyond what's being mentioned with the Cain scandal.

Cain has a new ad out that calls the media out for media bias:

The news media doesn't want Cain to be President. Why not? What is the most obvious reason for this egregious case of media bias?

Understanding sexual harassment laws and incentives

ECM sent me this interesting article by a trial lawyer who specializes in these lawsuits.

Excerpt:

> When you consider that, more than a decade ago, Herman Cain settled some unspecified sexual-harassment claims, you also need to consider that the only things you need to file a lawsuit are the filing fee and a printer. Facts are optional.
>
> Maybe Cain did harass some employees. But the dirty little secret among lawyers that defend business people from lawsuits — and among those lawyers who bring them — is that an enormous percentage of such claims are frivolous, if not flat-out lies.
>
> Concepts like "truth" and "justice" have little meaning in the world of big-money litigation. Thanks to ravenous plaintiffs' lawyers empowered by the politicians they buy with campaign contributions, every business person is in the crosshairs.
>
> […]Lawsuits are so expensive to defend that it makes good business sense to settle even the most frivolous cases. And businesses do.
>
> TV and movies would have you believe that most lawsuits end up with a jury hearing the evidence and rendering a verdict. That almost never happens. Close to 97 percent of civil cases never see a courtroom. The vast majority settle, with the business paying good money to end the nightmare — money that could have gone to hiring struggling young people, buying new equipment or expanding.
>
> And, as Herman Cain has learned, you never really can buy your peace. The accusers apparently signed nondisclosure agreements so that Cain and his company could put the accusations behind them. A lot of good that did. Whether it was the accusers or others who revealed the claims, the effort to buy peace now looks like wasted money.
>
> In the world of sexual-harassment law, the accusations are bad enough. You're guilty until proven innocent. The law is skewed toward the plaintiffs — it's hard to get even the silliest charges tossed out, and even then it often costs upward of six figures to do so.
>
> Businesses almost never collect their legal fees back after defeating frivolous claims, but a winning plaintiff usually does. And when the lawyer is working on a contingency, taking 40 percent or more of the haul and fronting the costs of the suit, there's little incentive not to march down to the courthouse and file even the flimsiest case.

I've written before about the epidemic of false rape accusations – a recent Purdue University study has shown that 40-50% of rape accusations are false. Not unproven, but false – just like with the Duke University lacrosse team and the stripper. That post I linked to is filled with news stories of women recanting false rape charges. The same thing happens in divorces when women want to get custody of the children and the child support dollars. The easiest thing in the world to do is to make a false charge of child abuse – it never even goes to trial.

Excerpt:

> A mother who consults a divorce attorney will be advised that her best chance of gaining custody is simply to take the children and all their effects and leave without warning. If she has no place to go, she will be told that by accusing the father of sexual or physical abuse, however vaguely (often simply stating that she is "in fear"), she can easily obtain a restraining order immediately forcing him out of the family home. She will also learn that even if her claims are false, there are no legal consequences she will face for making them; her trumped-up accusations cannot even be used against her in a custody decision. In fact, they work so strongly in her favor that failure to advise a female client of these options may constitute legal malpractice.
>
> Far from being punished for child-snatching and false accusations, then, she is almost certain to be rewarded. Mothers who abduct children and keep them from their fathers, with or without abuse charges, are routinely given immediate "temporary" custody. But it is almost never "temporary." Once a mother has custody, it cannot be changed without a lengthy (and, for the lawyers involved, lucrative) court battle. The sooner and the longer she can establish herself as the sole caretaker, the more difficult and costly it is to dislodge her. Further, the more she cuts the children off and alienates them from the father, slings false charges, delays the proceedings, and obstructs his efforts to see his children, the better her chance for obtaining sole custody. She can then claim child support and perhaps her own legal fees from the father.

We can't fly off the handle based on anonymous charges. We have to wait for the evidence. There are lot of people who want Cain to lose, and those people will say anything. And they don't have to prove any of it to hurt him in the polls.

What do studies tell us about mainstream media bias?

Now let's take a look at media bias in general.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for

> one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican

> contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

And more from a study done by the radically leftist MSNBC.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

And here's a bit from that same article about The New Yorker:

> The last bulwark against bias's slipping into The New Yorker is the copy department, whose chief editor, Ann Goldstein, gave $500 in October to MoveOn.org, which campaigns for Democrats and against President Bush. "That's just me as a private citizen," she said. As for whether donations are allowed, Goldstein said she hadn't considered it. "I've never thought of myself as working for a news organization."

Those are the facts.

So what?

Now consider this column from Brent Bozell, which explains the difference media bias makes to political intelligence.

Excerpt:

> The Republican presidential contest is picking up steam. Obama is consistently polling under 50 percent. This one's a toss-up, and in the thick of it is the Fox News Channel. It's not just their role in hosting and vetting the candidates. It's their role as the chief villain in the eyes of liberal Democrats struggling to push their version of the "truth" about Obama.
>
> Jon Stewart rhetorically asked Chris Wallace about Fox on "Fox News Sunday, because he thought he knew the answer: "Who are the most consistently misinformed media viewers? The most consistently misinformed? Fox, Fox viewers, consistently, every poll."
>
> In the real world – outside Stewart's smug bubble – this is garbage. A 2008 survey by the Pew Research Center asked media consumers three questions: which party was in control of Congress (Democrats), who was the secretary of state (Condi Rice) and who was the prime minister of Britain (Gordon Brown).
>
> Let's document how the viewers of "Hannity &Colmes" were better informed than Stewart's "Daily Show" gigglers on basic political facts. Hannity viewers beat Stewart's on the Democratic majority (84 percent to 65 percent correct answers), Condi Rice (a dramatic 73 percent to 48 percent gap) and Gordon Brown (49 percent to 36). Overall, as a percentage getting all three questions right, Hannity won 42-30.

Just keep that in mind when you are watching the mainstream media news shows. A very good site to bookmark and read is Newsbusters, which documents mainstream media bias daily. I even have an RSS feed of their latest stories on the front page on this blog.

UPDATE: New York Times cites abortion advocates as neutral sources.

What you need to know: videos about the Borde-Guth-Vilenkin theorem (BGV theorem)

November 4, 2011 | by Wintery Knight | Link | Original Link

Did you all read my summary of the excellent debate between William Lane Craig and Peter Millican? That was probably the best debate I have seen in since 2005. Millican knew all about Craig's argument from the Big Bang cosmology and he proposed a dozen challenges to Craig's premises. But Craig was able to establish the beginning of the universe by appealing to something called the Borde-Guth-Vilenkin theorem. This theorem is new – but it is worth learning about.

First, let's review Craig's cosmological argument:

> A1) The origin of the universe
>
> 1. The universe began to exist.
> 2. If the universe began to exist, then the universe has a transcendent cause.
> 3. The universe has a transcendent cause.
>
> The origin of the universe is confirmed by philosophical arguments and scientific evidence.
>
> There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.
>
> The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.
>
> Even speculative alternative cosmologies do not escape the need for a beginning.
>
> The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

So he appealed to the Bord-Guth-Vilenkin theorem right from the start in order to guarantee a space-time boundary in the past – i.e., a beginning of the universe, which is his premise 1.

Ok, now let's take a look at the videos.

The Borde-Guth-Vilenkin theorem, explained

Part 1:

Part 2:

Millican tried to argue that there was a way to get a beginning in an eternal universe if the universe was contracting. I'm guessing he means that the new universe would begin to exist within some outside hyper-universe.

But Craig had a response:

Further study

If you would like to read a nice LONG article about Craig's cosmological argument, just check this post I wrote a while back. And it even contains a nice peer-reviewed paper that Craig wrote for an Astrophysics journal – and the abstract is *online* on Springer! Now put your Evil Hat on and think with me – think of the fun you could have by sending that paper to all your atheist friends. Send them the abstract on Springer, and send them the full text of the article. Then send them the link to my summary of the Craig-Millican debate which has the audio. If that doesn't rehabiliate God's reputation and honor in their eyes, then nothing will. At the very least, they should be ready to accept that atheism is not as well supported by science, which is exactly the way that God intended things to be.

What does the Bible say in Psalm 19:1-6:

1 The heavens declare the glory of God;
the skies proclaim the work of his hands.
2 Day after day they pour forth speech;
night after night they reveal knowledge.
3 They have no speech, they use no words;
no sound is heard from them.
4 Yet their voice[b] goes out into all the earth,
their words to the ends of the world.
In the heavens God has pitched a tent for the sun.
5 It is like a bridegroom coming out of his chamber,
like a champion rejoicing to run his course.
6 It rises at one end of the heavens
and makes its circuit to the other;
nothing is deprived of its warmth.

And in Romans 1:20:

20 For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that people are without excuse.

And in Hebrews 11:3:

3 By faith we understand that the universe was formed at God's command, so that what is seen was not made out of what was visible.

Indeed. And it's our job to make his glory know to the unbeliever – using good science.

Mitt Romney's political views on gay marriage, abortion and global warming

November 5, 2011 | by Wintery Knight | Link | Original Link

ECM sent me this article about Mitt Romney's political views from the Washington Post.

Excerpt:

> Mitt Romney was firm and direct with the abortion rights advocates sitting in his office nine years ago, assuring the group that if elected Massachusetts governor, he would protect the state's abortion laws.
>
> Then, as the meeting drew to a close, the businessman offered an intriguing suggestion — that he would rise to national prominence in the Republican Party as a victor in a liberal state and could use his influence to soften the GOP's hard-line opposition to abortion.
>
> He would be a "good voice in the party" for their cause, and his moderation on the issue would be "widely written about," he said, according to detailed notes taken by an officer of the group, NARAL Pro-Choice Massachusetts.
>
> "You need someone like me in Washington," several participants recalled Romney saying that day in September 2002, an apparent reference to his future ambitions.
>
> Romney made similar assurances to activists for gay rights and the environment, according to people familiar with the discussions, both as a candidate for governor and then in the early days of his term.
>
> […]Melissa Kogut, the NARAL group's executive director in 2002, recalled Wednesday that as she and other participants in the meeting began to pack their belongings to leave after the 45-minute session, Romney became "emphatic that the Republican Party was not doing themselves a service by being so vehemently anti-choice."
>
> The abortion rights supporters came away from the meeting pleasantly surprised. Romney declined to label himself "pro-choice" but said he eschewed all labels, including "pro-life." He told the group that he would "protect and preserve a woman's right to choose under Massachusetts law" and that he thought any move to overturn the landmark *Roe v. Wade* decision would be a "serious mistake for our country."
>
> "We felt good about the interview. He seemed genuine," said Nicole Roos, the NARAL official who took the notes and shared them with a reporter.

Same-sex marriage:

> Romney's approach to reassuring the left was first evident in 1994, when he tried to unseat Sen. Edward M. Kennedy (D) by offering himself as an unconventional

> Republican in the mold of the popular and socially liberal Gov. William Weld.
>
> In a widely publicized letter to the Log Cabin Republicans, a gay group, he touted himself as a stronger advocate on gay rights issues than the liberal lion himself.
>
> In an Aug. 25, 1994, interview with Bay Windows, a gay newspaper in Boston, he offered this pitch, according to excerpts published on the paper's Web site: "There's something to be said for having a Republican who supports civil rights in this broader context, including sexual orientation. When Ted Kennedy speaks on gay rights, he's seen as an extremist. When Mitt Romney speaks on gay rights he's seen as a centrist and a moderate.
>
> "It's a little like if Eugene McCarthy was arguing in favor of recognizing China, people would have called him a nut. But when Richard Nixon does it, it becomes reasonable. When Ted says it, it's extreme; when I say it, it's mainstream."
>
> In his campaign for governor eight years later, he publicly opposed gay marriage. But he again courted Log Cabin Republicans, meeting with them at a gay bar in Boston and sitting for another interview with Bay Windows, leaving some in the community with a vaguer impression of his stance.
>
> In that interview, he called himself the "token Republican" who could use the power of his office to push lawmakers toward supporting certain domestic-partner benefits. He singled out the speaker of the state House at the time, who opposed legislation on that issue.
>
> "I will support and endorse efforts to provide those domestic partnership benefits to gay and lesbian couples," Romney said.
>
> One participant in the Log Cabin session said Romney simply seemed opposed to the word "marriage" being used for same-sex couples.
>
> "I certainly inferred from that that he didn't have a problem with me as long as I called it something other than the M-word," said Boston businessman Richard Babson.
>
> Another participant, who spoke on the condition of anonymity, said that Romney "left the impression of being friendly to the concept of some sort of same-sex union and not being vehemently opposed to gay marriage."

Global warming:

> On the environment, Romney seemed interested in carving out an agenda largely in line with the state's most fervent activists on the left.
>
> After he took office in 2003, some state employees and activists were nervous about how the new governor would approach the climate-change issue. Massachusetts had already reached an agreement with other Northeastern states and some Canadian provinces on a plan to limit greenhouse gas emissions.
>
> Romney surprised them by taking a hands-on approach, personally helping craft a "Massachusetts Climate Protection Plan" that he unveiled in 2004.

> He reorganized the state government to create the Office of Commonwealth Development — with the former president of the liberal Conservation Law Foundation, Douglas Foy, as its head — to better coordinate climate work and sustainable-growth activities among different agencies.
>
> As he worked on the plan, according to people familiar with the process, he even overruled some objections by his chief of staff, who criticized the plan as potentially too left-leaning.
>
> Romney backed incentives for buying efficient vehicles, tougher vehicle emissions rules and mandatory cuts in emissions linked to global warming.
>
> The plan not only called for reducing the state's overall greenhouse gas emissions to 1990 levels by 2010 and cutting them another 10 percent by 2020, but it said that "to eliminate any dangerous threat to the climate . . . current science suggests this will require reductions as much as 75-85 percent below current levels."
>
> […]Beyond the state climate plan, Romney repeatedly pushed to promote clean energy and cut the use of fossil fuels.
>
> In March 2003 he pledged to buy up to $100 million worth of electricity from renewable sources. That month, he declared, "the global warming debate is now pretty much over."

That's his record as governor. Why should we listen to his speeches now when we have his record as governor to tell us what the man really believes?

I previously posted videos of Mitt Romney explaining his views on abortion, gun control, gay rights, socialized medicine, stem cell research, etc.

Top ten foreign policy and national security issues for 2012

November 5, 2011 | by Wintery Knight | Link | Original Link

Map of Asia

From the American Enterprise Institute.

Here's the list:

1. Iran, and the American retreat from Iraq
2. Dealing with Islam and China in South Asia
3. America's strategy for Pakistan
4. Defense spending priorities
5. American support for Israel
6. The Islamization of Turkey
7. Collapse of the European economies
8. Demographic crisis in Europe
9. Demographic crisis in Russia
10. Strategy for the Middle East

They have one article linked for each topic, so I chose the Islamization of Turkey.

Full text:

> Turkey was a key American ally throughout the Cold War. As one of only two NATO countries to share a border with the Soviet Union, Turkey proved pivotal not only to the defense of Europe but also for American interests in Asia. The Turkish army fought alongside U.S. troops in Korea. Americans embraced Turkey not only for its strategic role, but also for its values. The Turkish government was

> decidedly Western-leaning. Turkey may have been majority Muslim, but most Turks saw their future tied more to the West than the Middle East.
>
> Over the past nine years, however, Turkey has changed. No longer can Turkey be called a democracy. The Pew Global Attitudes Project now ranks Turkey as the most anti-American country it surveys. Reporters Without Frontiers ranks Turkish press freedom below even Zimbabwe and Venezuela. Turkey has imprisoned more journalists than even China and Iran. As Prime Minister Recep Tayyip Erdoğan has sought to Islamize society, Turkish women have lost both their equality and safety: The murder rate of women has increased 1,400 percent since Erdoğan's Justice and Development Party took power.
>
> Erdoğan has reoriented Turkey's foreign policy as well. Turkey now not only embraces the Arab world, but it allies itself with its more radical factions: Turkey endorses Hamas, Hezbollah, Sudan's genocidal dictator Omar al-Bashir, and the Islamic Republic of Iran. Whereas a decade ago, the alliance between Turkey and Israel stabilized the Eastern Mediterranean, today diplomats worry that Turkey's antagonism toward both Israel and Cyprus could lead to military conflict in the region. In September 2010, Turkey raised eyebrows at the Pentagon when it held secret war games with the Chinese air force without first alerting Washington. Because Turkey increasingly is the obstacle to NATO consensus, its future in the defensive alliance may now be open to question.
>
> Any new president will be faced with serious decisions regarding Turkey. Should Turkey remain in NATO? If so, should the United States share its next generation F-35 Joint Strike Fighters, Predators, and AWACS aircraft with Turkey? Lastly, if Erdoğan fulfills his promise to use the Turkish navy to challenge Israel's blockade of Gaza, leading to a fight between two traditional American allies, on whose side will the White House be, and what actions would the new president take?

This is a primer, so the articles are fairly short. Just enough to give you background information on the hot spots that the next President will have to deal with. Can you think of any issues they left out? I think that we should also be concerned with the drug cartels in Mexico, the continuous sabre-rattling from Venezuela, threats to our Asian allies from China, and whether we still need to have so many troops in Europe and South Korea.

It's good for Christians to have some awareness of national security and foreign policy issues. It only takes an hour to read a few articles and to have some understanding of the issues we are facing, so that we can discuss them with others and vote properly. There's going to be a foreign policy debate for the GOP primary on November 22, 2011, so it would be good for us to study up so we can understand what they are talking about.

Evidence for the soul from science in the book “The Spiritual Brain”

November 6, 2011 | by Wintery Knight | Link | Original Link

I found a great book review of “The Spiritual Brain” on the Poached Egg – an excellent place for Christian apologists to find things to read. The book review is hosted at Probe Ministries and is authored by Heather Zeiger. The book talks about evidence from neuroscience showing that the mind cannot be reduced to merely physical processes.

Excerpt:

> We have shown, however, how the evidence from neuroscience doesn’t seem to fit the materialistic worldview. As we will see, some experiments reported in *The Spiritual Brain* cannot be explained from this worldview. What we will find is that they fit nicely within a Christian worldview.
>
> The first example is obsessive compulsive disorder therapy. Obsessive compulsive disorder, or OCD, occurs when a person has distressing or unwanted thoughts that dominate their thinking, and these obsessions trigger an urge to do some kind of ritual behavior, also known as a compulsion. The interesting thing about OCD is that the person knows that the obsession is irrational and the ritual won’t really fix it, but their feelings tell them otherwise. Scientific studies have shown that the brain is actually misfiring. The part of the brain that tells a person, “There’s a problem, do something to fix it,” is firing at the wrong times. OCD is a clear case of a healthy mind and a malfunctioning brain.
>
> A materialistic worldview would say that the only way to treat OCD is by *physically* fixing the bad neurons. However, the treatment that actually works involves the patients *mentally* fixing the bad neurons. Patients learn to take control of their OCD by recognizing when their brain is misfiring, and try to starve the urges to do the ritual. After treatment, brain scans show that the brain of an OCD patient is starting to fix itself. The patient is changing his physical brain with his mind!
>
> Similar kinds of therapies have been applied to depression and phobias.In both cases, *The Spiritual Brain* reports instances where a patient’s brain chemistry was directly affected by their mind.
>
> Another phenomenon that can’t be explained from a materialist’s worldview is the placebo effect. The patient is given a medicine that they are told will help them, but in actuality they are given a sugar pill. Interestingly, the patient’s belief that the sugar pill will help them has caused measurable, observable relief from symptoms. Many doctors say that a patient’s attitude oftentimes can help or hinder real medicines or therapies from working.
>
> The ability of the mind to change the brain’s chemistry does not fit within a

> materialistic worldview. But as Christians we know that our minds are very real and can have a very real effect on our physical bodies.

You can read more about the OCD research here. The scientist is Jeffrey M. Schwartz. He has also published work on this in peer-reviewed journals.

I liked "The Spiritual Brain" so much that I gave away copies to my co-workers a few years back. When I am talking to people about the mind and the brain, I like to augment the philosophical arguments (free will, intentionality, identity over time, etc.) with arguments from neuroscience, and even corroborative near death experiences. You can make a pretty good case for the soul if you pull together evidence from lots of disciplines.

By the way, if you like this topic, and want a resource to show your friends, be sure and get a hold of the debate on mind vs. brain between Jeffrey M. Schwartz and Michael Shermer.

UPDATE: I just received word from a commenter (below) that Dr. Beauregard has a new book coming out next year. Good news!

What is issue 2? Should you vote no on Ohio issue 2?

November 6, 2011 | by Wintery Knight | Link | Original Link

In the 2010 mid-term elections, Republican John Kasich won the governorship and promised to balance the state's budget by reining in the state's spending on salaries and benefits for public sector union employees. To accomplish this, the Ohio legislature pass Senate Bill 5. However, an effort is on the ballot to repeal the law, and Ohio voters will get a chance to keep or scrap the law on Tuesday, November 8th, 2011.

Here's what Ohio's State Issue 2 is all about:

> Issue 2 makes some very fair and common sense requests of our government employees to give local communities the flexibility they need to get taxes and spending under control, while providing the essential services that we rely on.
>
> - It allows an employee's job performance to be considered when determining compensation, rather than just awarding automatic pay increases based only on an employee's length of service.
> - It asks that government employees pay at least 15 percent of the cost of their health insurance premium. That's less than half of what private sector workers are currently paying.
> - It requires that government health care benefits apply equally to all government employees, whether they work in management or non-management positions. No special favors.
> - It asks our government employees to pay their own share of a generous pension contribution, rather than forcing taxpayers to pay both the employee and employer shares.
> - It keeps union bosses from protecting bad teachers and stops the outdated practice of laying off good teachers first just because they haven't served long enough.
> - Finally, it preserves collective bargaining for government employees, but it also returns some basic control of our schools and services to the taxpayers who fund them, not the union bosses who thrive on their mismanagement.
>
> Even under the reforms of State Issue 2, Ohio's government employees will still receive better pay, better health care and better retirement benefits, on average, than the vast majority of Ohioans who work in the private sector.

There are a number of myths going around about Issue 2, and it's important to set the record straight, so I'll do that below.

Ohio Average Pay: Public Unions vs. Private

Myths and truths about Ohio State Issue 2

Here's a common myth:

> State Issue 2 would "cut salaries and benefits."

The truth:

> Issue 2 would not cut salaries or benefits for any government employee. Employees would simply be asked to pay a modest share of their benefits, just like employees in the private sector do. For health care coverage, they would pay at least 15% of their overall plan. (Many local government employees currently pay less than 9% of their health care premium, while the average private sector worker pays upwards of 30%.) In addition, employees would be required to pay their personal share of a retirement plan (only 10%), rather than asking taxpayers to pay that share. That's not too much to ask at a time when many private sector workers get no retirement benefit at all. Finally, Issue 2 requires that benefits apply equally to all public employees, so no one gets special treatment.

And another common myth:

> State Issue 2 will eliminate government employee pensions.

The truth:

> Government employees will still get a very generous pension benefit – an annual payment that averages their three highest annual salaries. That's a pretty nice

> deal, when many private sector workers get no retirement benefit at all. State Issue 2 only ends a practice where some government union contracts require taxpayers to pick up the tab for BOTH the employer AND employee shares of a required pension contribution. In this economy, it's simply not right to ask struggling taxpayers to foot the bill so government employees can get a free retirement. Issue 2 simply says government employees should pay their required share (10 percent) and taxpayers will contribute the employer share (14 percent).

Another myth:

> State Issue 2 will cut teacher salaries.

The truth:

> That's one of the scare tactics government unions are using to turn people against these reforms. Nothing in Issue 2 determines salary levels. It only ends the practice of handing out automatic pay raises, or "step" increases, and longevity pay – or bonuses just for holding the job for a certain period of time. Issue 2 also asks that performance be added as a factor in teacher compensation, a goal President Barack Obama set out in his national education policy in 2009.

And another myth:

> State Issue 2 will cost jobs

The truth:

> Just the opposite is true. Ohio's state and local tax burden ranks among the top third in the nation. As a result, companies large and small have left our state in pursuit of better tax incentives elsewhere, taking hundreds of thousands of jobs with them. If Ohio hopes to compete for new job growth, we have to make our state a more affordable place to live, work and do business. That starts with getting the cost of government under control so we can direct more of our limited resources into economic development, community revitalization and better schools.

More myths about Ohio State Issue 2 are corrected on this page.

Newspaper endorsements

So far, Issue 2 has been endorsed by several Ohio newspapers, including the biggest ones.

The Cleveland Plain Dealer:

> *The fiscal picture of local governments and school districts, especially, will improve as they are able to right-size their work forces and their expenditures on services. That will happen over time, not overnight, as new contracts are*

> *established.*
>
> ***Repeal SB 5, though, and it's going to be awfully hard for local governments to manage their payrolls without resorting to larger-scale layoffs than would otherwise be necessary. And local governments will continue to be hamstrung by anti-merit seniority rules that lead to worker complacency and protect dead weight and time-servers.***

Voting YES on Issue 2 will prevent layoffs by keeping public sector wages and benefits in line with what the private sector can afford to pay.

The Columbus Dispatch:

> *Despite the insistence of opponents, the effort to reform Ohio's out-of-balance collective-bargaining law is not an expression of disrespect for or dissatisfaction with Ohio teachers, police officers, firefighters and other government employees. It is a much-needed attempt to restore control over public spending to the public officials elected to exercise that control.*
>
> *It does not assert that public employees are worth less than the compensation they're receiving, only that the compensation has grown faster than the public's ability to pay for it.*
>
> *[…]**With more ability to control the escalation of salary and benefit costs, governments won't be forced as often to impose layoffs, and might be able to afford to keep even more police and firefighters on the streets.***

Again, no one is saying that public sector workers don't matter – the question is whether we can afford to give them better wages and benefits than the private sector workers who are their customers and their employers. Public sector workers work for the public, and the public can only afford to pay so much.

Conclusion

Government employees are paid 43% more than private sector employees, in salary and benefits:

I think that people who care about the long-term prosperity of Ohio should vote "YES" on Issue 2 to make public and private salaries and benefits MORE EQUAL. Ohio is facing enormous economic pressure from the global recession, and everyone has to make sacrifices. Now is not the time for public sector workers to insist on higher wages and benefits, especially when the private sector workers who pay their salaries don't make as much money, nor do they get the pensions, nor do they get the better job security. Ohio voters can certainly go back and renegotiate union salaries and benefits when Ohio is out of the recession.

Click here to learn more about Ohio State Issue 2.

Does the United Way give money to abortion-provider Planned Parenthood?

November 6, 2011 | by Wintery Knight | Link | Original Link

From Life News, a story showing how the United Way charity gave money to Planned Parenthood.

Excerpt:

> Each fall, United Way focuses on fundraising campaigns. Most people encounter these requests for giving through their workplace. The United Way encourages individuals to donate to a variety of local charitable organizations or to the United Way itself. Each local United Way determines whom they will support through their grant programs and their lists of charitable organizations in the area. While most United Way organizations claim they do not fund programs for abortion services, in truth, some do support Planned Parenthood or other abortion-advocate agencies.
>
> […]Any finances being donated to Planned Parenthood (even if not specifically for abortion services) will free up more of their money to be used toward abortion services.
>
> Some area United Ways, like New York City and Atlanta, provide grants to Planned Parenthood. The Dallas, Houston, and Austin United Ways do not give money directly to Planned Parenthood. However, Austin and Houston Planned Parenthoods do encourage donors to give money through the United Way's workplace campaign. Many of the local United Ways also send volunteers to Planned Parenthood.
>
> Nationally, the main United Way website (www.LiveUnited.org) also directs volunteers toward Planned Parenthood. Again, not every state or city agency promotes Planned Parenthood, but several do. One is too many.

If you are pro-life, you should not help the United Way in any way. They give money to people who perform abortions – even after those same groups got $363 million dollars in taxpayer subsidies, and paid their President Cecile Richards nearly $400,000 dollars. Planned Parenthood made a profit of $63 million in the most recent year for which records are available. There are plenty of other places to give your money to, like

Bobby Jindal cuts Louisiana budget by 25%… and gets re-elected in landslide?

November 6, 2011 | by Wintery Knight | Link | Original Link

Gov. Bobby Jindal
From the Philadelphia Inquirer.

Excerpt:

> One gubernatorial election ended early this fall, when Louisiana Gov. Bobby Jindal won the state's blanket primary Oct. 22. Under Louisiana's system, all candidates of all parties are listed on the ballot, and if no one gets 50 percent, the top two finishers go to a runoff. Jindal blew past the threshold with 66 percent.
>
> Jindal's reelection was unusual in several respects. The only previous time the state has not had a runoff was his election in 2007. He is only the fourth Republican governor in the last 125 years in Louisiana, and one of those four switched over from the Democrats in office. Jindal's best-known challenger this year was a schoolteacher, who raised less than 1 percent of the incumbent's campaign treasury. The Democratic State Central Committee declined to endorse any candidate running on its party label.
>
> But perhaps most unbelievable is that Jindal faced no serious competition after cutting state spending more than 25 percent. In January 2008, the state had a budget of $34.3 billion. This summer, Jindal signed into law a budget spending $25 billion. As governors from Harrisburg to Trenton to Columbus to Madison

have learned, cutting a state's budget is difficult enough; doing so without a significant backlash seems a politically impossible task.

A key part of Jindal's story is recognizing that he took the helm of a state that had hit bottom: Decades of mismanagement and corruption had taken their toll even before Hurricane Katrina wreaked such devastation and exposed such colossal unresponsiveness in state government. The state, recognizing the bitter fruit of its traditions of colorful corruption, was ready to take a chance on a then-37-year-old Indian American congressman who speaks roughly 100 words per minute. The state was willing to try a new approach to governing; how much worse could it be?

Privatization played a big role in Jindal's reinvention of state government, with private contractors taking over state-run operations for a lesser cost. The companies often hired the state workers who would often be the centerpiece of opponents' criticism.

His administration privatized the state's Office of Risk Management. Then the state's Division of Administration privatized claims management and loss prevention in the self-insurance program, saving $20 million over five years. The Department of Health and Hospitals privatized six inpatient, residential-treatment programs around the state, saving $2.5 million. Separately, patients were moved from state-operated institutions that cost $600 or more per patient per day to community-based services and private group homes that average $191 per day, saving an additional $23.8 million.

Consolidation was another key element: The state's Department of Revenue shrank from eight offices statewide to three. The Department of Children and Family Services consolidated its offices from 157 to 90, saving a total of $2.7 million.

But some of Jindal's cuts are the old-fashioned kind. The state sold 1,300 vehicles from its fleet of automobiles. Louisiana's Transportation Department shut down a ferry that was used by only 7,200 drivers per year, saving the state roughly three-quarters of a million dollars.

In fiscal 2011, Louisiana eliminated more than 3,500 full-time government positions. Add the 6,363 previous reductions during Jindal's term, and that means a total of almost 9,900 full-time positions reduced since he took the oath, a savings of almost $600 million. Louisiana now has the lowest level of full-time state government employees in almost 20 years.

"You change people's expectations and you make structural changes," Jindal said, while racing around the state about three weeks before the election. "The most important is this cultural change, to say government is not the answer to everything. In a weird way, I want the office of governor to be less important than it is. What I mean by that is, there was an old joke that kids in Louisiana don't grow up wanting to be president; they grow up wanting to be governor. You

> should want them to want to business leaders or doctors or teachers."
>
> Some cuts were more noticeable to the public, but Louisianans found shorter hours and workweeks at state facilities more palatable than complete shutdowns or higher taxes: Historic sites are now open five days a week instead of seven, pools at a half dozen state parks were closed on Mondays and Tuesdays this summer, and entrance stations at all state parks had shorter hours. Finally, 54,000 rank-and-file state workers are going without a raise for the second consecutive year.
>
> Jindal's first term was marked by several high-profile crises he successfully managed – Hurricane Gustav and the response to the BP oil spill, along with the Obama administration's six-month moratorium on all drilling in the Gulf of Mexico – but the state's economy has generally chugged along: Louisiana's unemployment rate is 7.1 percent, two percentage points lower than the national average, and a comparably booming economy makes cuts in state spending much easier to take.
>
> **"If you have a good-paying job with benefits, you wouldn't need the state to do so many things for you," Jindal says. "You become less dependent, and that diminishes the role of the state and so you need fewer state employees, and it's a virtuous cycle. You can lower taxes and lower government spending."**

Louisiana is a swing state. If Bobby Jindal can cut government spending in a swing state and get re-elected with 66% of the vote, then we do have hope that the American people will do the right thing. Maybe we just need to hit bottom with Obama so that we realize that competence does matter after all. We have a deep, deep bullpen for future elections. Governors like Scott Walker (Wisconsin), Rick Scott (Florida) and John Kasich (Ohio)would be excellent presidential candidates. And of course we have Marco Rubio and soon-to-be senators Josh Mandel and Ted Cruz waiting in the wings.

John Kasich signs pro-life parental consent bill

November 7, 2011 | by Wintery Knight | Link | Original Link

Gov. John Kasich

John Kasich, Republican governor of Ohio has signed another pro-life bill into law.

Excerpt:

> Governor John Kasich of Ohio has signed into law a bill meant to strengthen the parental consent law in place that prohibits teens from getting an abortion without their parents' consent is moving along in the legislative process.
>
> House Bill 63 and Senate Bill 8 would revise Ohio's current judicial bypass provision in the parental consent on abortion law. This bill will strengthen current law by requiring a "clear and convincing evidence" standard, require judges to specifically inquire about the minor's understanding of the possible physical and emotional complications of an abortion, and require judges to question how much the minor has been prepped to respond to such questions.
>
> […]"We thank Governor Kasich, Senate President Tom Niehaus, and Speaker Bill Batchelder who continue to advance life-saving policies," said Mike Gonidakis, Executive Director of Ohio Right to Life. "H.B. 63 strengthens parents' ability to care for their children and prevents lawyers and others from taking mom and dad's place when their child needs them most."
>
> […]In July, Kasich signed into law a bill to ban late-term abortions in Ohio — something Gonidakis applauded.
>
> "2011 has been a banner year for significant and responsible pro-life legislation. Ohio is witnessing the blessings of having the most pro-life Governor and General Assembly in our state's history working together to save lives," said Gonidakis.

This is good news for pro-lifers voters in Ohio. Ohio voters were careful to choose a pro-

life candidate for governor, and now they are reaping the rewards for all of their hard work. The important thing is to choose the right candidate – someone who means business on social issues.

Video and summary of the Cain-Gingrich Lincoln-Douglas-style debate in Texas

November 7, 2011 | by Wintery Knight | Link | Original Link

Here's the video of the debate.

And some reactions below.

Jeff G. from Protein Wisdom:

> First, let me say that I very much liked the format — and my wife, whom I made watch it with me (SEXUAL HARASSMENT!) said after that she learned a whole lot more than she thought she would. The format was far more useful for vetting a potential President than is the soundbite format the mainstream media prefers — the end result of the latter being that an activist press gets to shape both the debate and the field by way of their "moderation" and their control over the length and breadth of answers, and as a result, it has become more important for a candidate to learn 30-second canned answers and fend off gotcha questions than it is that he or she can offer and then defend ideas that require more time to explain.
>
> […]What most impressed me — and perhaps this is merely because it is something I've been writing on for years — was that the entire debate exposed a truly conservative / classical liberal governing strategy *for the long term*: solutions offered were not only practical, from the standpoint of economics and fiscal sanity, but *as importantly* they outlined in broad strokes a plan to change the political and civil culture, creating in the aggregate a paradigm shift away from statism and back toward individual ownership and autonomy, self-reliance, and limited government as an inevitable result of the rebirth of personal responsibility and economic accountability.
>
> That is is to say, what Gingrich and Cain both posited repeatedly last evening were solutions that empowered the individual to make choices, to see clearly the flow of money for services and goods, and to feel the effects of big government by allowing them to recognize how the government's centralized administration of programs through the bureaucracies is a poorly-run, wasteful, and largely unaccountable middle stage that, in addition to being ineffectual, is also completely unnecessary.
>
> […]So while others take away from last night's debate yet another supposed gotcha moment — which of course plays into old paradigms and explains why election cycle after election cycle we in the GOP nominate polished career politicians whose most impressive attributes are that they can remain largely gaffe free and can effectively pander — what I took away is that, finally, we are seeing what conservatism means and how it can and should be applied to thinking through problems to their solutions, and how its reintroduction into the

> culture can, as a function of sheer momentum, turn back the tide of statism that threatens to turn the US into a post-Constitutional soft tyranny.
>
> I don't care how much a particular candidate has memorized to meet the demands of a thirty-second answer to a loaded question from Anderson Cooper or Chris Wallace; we give the media far too much power by allowing them to shape our political culture. Instead, I want to see a set of core convictions — adherence to the Declaration and Constitution and the unalienable rights of the individual — and an overarching strategy for its implementation.
>
> Last night, I was greatly pleased with what I saw.

And John Hayward from Human Events:

> As it turned out, Cain and Gingrich had substantially fewer disagreements than Lincoln and Douglas did. In fact, they had only minor differences of opinion on how to go about implementing their reforms. Both were firmly in agreement on the importance of block-granting Medicaid funds to the states, abolishing ObamaCare in favor of market-based health care reforms, and providing a way for younger workers to opt out of Social Security and into privately owned accounts. Cain, of course, believes Social Security privatization will require his 999 Plan as a runway in order to achieve takeoff, as the 999 Plan does away with payroll taxes.
>
> Neither candidate began a response with an express or implied cry of "You're wrong!" or engage in the sort of verbal frenzy that ends with heated accusations about the sinister forces providing Mitt Romney with lawn care services. These two were so collegial that I couldn't help thinking they'd look great on a ticket together. Cain had the most riotously funny line of the evening when, given an opportunity to ask a single question of his opponent, he thought for a moment and inquired: "If you were Vice President of the United States, what would you want the President to assign you to do first?"
>
> […]The most strongly emphasized Big Idea from Gingrich tonight was the fallacy of allowing Big Government to measure its own performance, and predict the future costs and benefits of tax and spending policies, when its predictions of cost and benefit have never come anywhere near reality. (Cain buttressed this point by relating the amazing history of Medicare, originally sold to the public with a price tag of $6 billion, and projected to cost no more than $12 billion by 1990. The actual cost of the program in 1990 was $109 billion.)
>
> […]Another major point from Gingrich was the absurdity of money-for-nothing welfare-state programs. "Nobody should get something for nothing unless they have a very severe disability," he declared. "If you're an able-bodied person, and you're getting something for nothing, we're pretty stupid for giving it to you." Among the tough-love proposals he suggested was attaching a mandatory training requirement to unemployment benefits. As he noted with both acid and

> accuracy, people could be earning college degrees in the time they've been sitting around and waiting for Barack Obama to create jobs.
>
> […]Cain strongly believes in the importance of moving Americans from "entitlement to empowerment." Block granting both money *and* responsibility for programs like Medicaid to the states is part of this strategy, as is the creation of a private account option for Social Security recipients. "People spend other people's money recklessly than they spend their own," he observed, brilliantly condensing much of the Obama disaster into a single sentence.
>
> Looking back on his transition from private-sector business success into the politics, Cain made the interesting observation that it's "dangerous" for businessmen to stay out of public debates, confident they can mitigate the damage from legislation with good lobbyists somewhere down the line. When the government becomes as large and intrusive as ours has, politics must be practiced defensively. It's really not possible for a high-level businessman to declare himself uninterested in the affairs of government, because the government is most certainly interested in *him.*

I would like to see MORE debates like this – something more like what William Lane Craig does where people get 20 minutes for an opening speech. Cain and Gingrich both seem to have a dislike of the media, and that's a good thing. I don't like Gingrich as the nominee for president, because of his habit of trying to appear as a centrist by dealing with people like Nancy Pelosi. But I would be supportive of a Cain/Gingrich ticket. Heck, I've read Newt's "Winning the Future" a half-dozen times. He's a smart guy – he just needs to be in a supporting role.

Some arguments for substance dualism, and one objection

November 7, 2011 | by Wintery Knight | Link | Original Link

Philosophy of mind is not something I've studied very much, but I do know about the different views like physicalism, epiphenomenalism, property dualism and substance dualism. I also know some of the basic arguments for and against each view.

In this post, I just wanted to show people a little bit about how you argue for substance dualism, using philosophical and scientific arguments. I find this topic to be really really dry, and I can barely stay awake when J.P. Moreland talks about it in lectures. But I hope a little bit of exposure won't put you all to sleep.

Philosophical arguments

Let's start with this old paper by John Depoe.

He writes about the persistent identity argument:

> Another argument supporting substance dualism is that one maintains personal identity through change. Even though one is continuously going through physical changes and experiencing different mental states, a person continues to be the same person. If persons were identical with their physical parts or mental states, they would cease to be the same persons as these changes occurred. Therefore, it is necessary to postulate an immaterial, substantial self that endures through change.
>
> Suppose that someone believes that people do not maintain identity through change and concludes that the previous argument for substance dualism fails. This denial of personal identity through change, I contend, presents untenable difficulties. First, there is one's own awareness of being the same person through change. Moreover, if one is not literally the same person through these changes, how can a person maintain long-term goals and desires?

If you are your body, and your body is always changing, then you aren't the same person now as 5 minutes ago.

There are more arguments for substance dualism here, from J.P. Moreland.

Experimental evidence

Doug Groothuis talks about some experimental evidence in this paper.

Excerpt:

> Dr. Wilder Penfield was known for his ground-breaking work with epilepsy. His work involved stimulating brain tissue in conscious patients in order to find the causes of epilepsy. During these sessions Penfield found that the prodding of certain areas of the brain triggered vivid memories of past events. The patients reported remembering clearly such things as the taste of coffee. One patient,

while on an operating table in Montreal, Canada, remembered laughing with cousins on a farm in South Africa. What amazed Penfield was that his patients, who were not under anesthetic, were simultaneously conscious of the re-experienced memories and of being prodded by an electrode in an operating room. Penfield called this a “double consciousness” wherein a memory was stimulated physically but was attended to and recognized as a memory by a conscious patient. Penfield likened this to the patient watching a television program while remaining aware that it wasn’t now happening.

Penfield repeated these results on hundreds of epileptic patients and concluded that a separable mind was able to track what the brain was doing as a result of the artificial stimulation. One’s mind in a sense could transcend the operations of the brain, monitoring memories without actually placing oneself in the situation remembered. Penfield noted that “The mind of the patient was as independent of the reflex action as was the mind of the surgeon who listened and strove to understand. Thus, my argument favours independence of mind-action.” Penfield also stated that if we liken the brain to a computer, it is not that we are a computer, but that we *have* a computer.

Penfield, who began his research as a materialist, switched to dualism after extensive research with epileptic patients. He said, “Something else finds its dwelling place between the sensory complex and the motor mechanism. . . . There is a switchboard operator as well as a switchboard.”

Although nonepileptic patients do not respond similarly to brain stimulation, other researchers, such as Sir John Eccles, a neurobiologist, have similarly concluded that the brain alone cannot account for a many phenomena. Eccles’ hypothesis is that the self-conscious mind is an independent entity that is actively engaged in reading from the multitude of active centres in the modules of the liaison areas of the dominant cerebral hemisphere. The self-conscious mind selects from these centres in accord with its attention and its interests and integrates its selection to give unity of conscious experience from moment to moment.

Thus, Eccles’ conclusions agree with Penfield’s, and his areas of research extend farther than that of epileptic patients. Eccles deems the “monist materialist” hope for an eventual physical explanation for mental events as wrongheaded in principle because mental events are not “simply derivative of aspects of nerve endings. There is no evidence for this whatever.” Further, Eccles argues that his “strong dualist-interactionist hypothesis . . . has the recommendation of its great explanatory power. It gives in principle at least explanations of the whole range of problems relating to brain-mind interaction.”Eccles notes that it has been impossible to develop a materialist explanation of “how a diversity of brain events come to be synthesized so that there is a unified conscious experience of a global or gestalt character.” Given this impasse, Eccles proposed that “the self-conscious mind” serve to integrate the apparently disparate brain processes into

> a unified consciousness.

I think that Alvin Plantinga, Keith Yandell, J.P. Moreland, William Lane Craig, Stephen Davis, John Depoe, Douglas Groothuis and Charles Taliaferro all defend substance dualism. I'm a substance dualist, myself.

What's the objection to substance dualism?

The big objection to substance-dualism is the problem of how you get the non-physical substance to interact with the physical substance. It's like how people put forward the grounding objection when talking about middle knowledge and where God's knowledge of counterfactuals of creaturely freedom comes from. I wonder if anyone can post a comment for me to point me to a resource on answering the interaction problem in the comments.

UPDATE: One of my elite special forces ninja commenters writes:

> Here's Ed Feser on the Interaction Problem:
>
> http://edwardfeser.blogspot.com/2008/10/interaction-problem.html
>
> and
>
> http://edwardfeser.blogspot.com/2009/04/interaction-problem-part-ii.html
>
> The thrust of his argument is that, if the soul is the extension of the body's "form" without matter, then it interacts with the more material parts of us in the same way that forms in general interact with matter- this approach involves rethinking our metaphysical understanding of matter, rather than coming up with a clever idea of the soul, and it does get rather involved in Thomistic metaphysics, but I think it's pretty interesting.

Obamacare contains billions of dollars in pork for Obama's union allies

November 7, 2011 | by Wintery Knight | Link | Original Link

From Investors Business Daily. (H/T Jan)

Excerpt:

> According to a new Government Accountability Office report, the federal government has so far handed out $2.7 billion out of a $5 billion program squirreled away in ObamaCare.
>
> The Early Retiree Reinsurance Program is advertized as a way to "stabilize the availability of employer-sponsored coverage for early retirees," according to a Health and Human Services memo.
>
> The argument goes that companies are increasingly dropping retiree health benefits, leaving those who retire before becoming eligible for Medicare in a jam — either they face exorbitant rates for insurance or expose themselves to potentially catastrophic health costs.
>
> […]According to figures obtained by IBD, 10 of the top 12 recipients are either unions or public employee groups. In fact, the biggest single recipient was the UAW Retiree Medical Benefits Trust, which alone grabbed more than 8% of all the funds handed out so far. Other union beneficiaries include the United Food and Commercial Workers, the United Mine Workers and the Teamsters.
>
> Meanwhile, almost half of the money doled out has gone to state and local governments, the GAO found.
>
> […]The problem is that these groups are the least likely to drop their retiree health benefits, calling the lie to the Obama administration's whole "stabilizing" excuse.
>
> In fact, over the past 10 years, the share of state and local governments offering retiree benefits increased — climbing to 83% from 80% in 2001, according to an annual Kaiser Family Foundation health benefits survey.
>
> That's at a time when private companies have been dropping retiree health plans to cut costs, with the share of large firms offering such benefits falling to 26% this year from 37% in 2001, the Kaiser survey shows.
>
> So this ObamaCare money is really being used mainly to pay off unions and governments that would have provided these benefits anyway.
>
> While the law forbids employers from using the funds for anything other than retiree health costs, money is fungible, freeing up union and government resources for other uses like, say, helping Obama get re-elected.

And what will the unions do with that money? IBD explains.

Excerpt:

> United Steelworkers President Leo Gerard, speaking on radio host Ed Schultz's show last Monday, declared, "What we need is more militancy." Asked to clarify, Gerard said: "I think we've got to start a resistance movement. If Wall Street Occupation doesn't get the message, I think we've got to start blocking bridges and doing that kind of stuff."
>
> The Canadian union leader then denounced Americans' 2008 election of Tea Party representatives to the House as "nut jobs," and called for more force and illegality: "We ought to be doing more than occupying parks. We ought to start occupying bridges. We ought to start occupying the banks' places themselves."
>
> […]Two months ago another White House ally, Teamsters chief Jimmy Hoffa, openly called for his members to "take these sons of bitches out" in Congress, as Obama stood silently at his side. "They got a war with us and there's only going to be one winner," he growled.
>
> Hoffa's Teamsters, it should be noted, have the most violent record of all labor unions, clocking in 454 incidents of violence since 1991, according to the National Institute for Labor Relations Research in Washington.
>
> Then there's the SEIU-linked Acorn, which has made OWS its latest cause. The Obama-tied group had supposedly disbanded, but now operates as New York Communities for Change (NYCC), using the strong-arm political tactics of community organizer Saul Alinsky.
>
> Since it was discovered that NYCC was a prime funder and director of the Occupy movement, Fox News reports that the group has been shredding documents, firing staff, offering up alibis and surveilling Fox News personnel.
>
> One starts to wonder: Is Occupy Wall Street a grass-roots movement, or a corrupt, violent organization whose real center is the Obama administration itself? One thing's for sure: It isn't interested in democracy.

You can see the full list of Occupy Wall Street crimes here – it's up to 167 crimes right now, including rape. The unions are heavily involved in the Occupy Wall Street protests.

I'm concerned that the government is getting too closely involved with groups of people who are not peaceful and law-abiding.

IAEA report expected to show that Iran now has the ability to build a nuclear bomb

November 8, 2011 | by Wintery Knight | Link | Original Link

Map of the Middle East
From Fox News.

> Pakistan, North Korea and a former weapons scientist from the Soviet Union reportedly all helped Iran with its nuclear weapons quest, according to an impending U.N. nuclear watchdog report expected to show the Islamic regime has mastered the science of building a bomb.

> The International Atomic Energy Agency's report due out this week will lay out findings collected over years of intelligence gathering. It is expected to reinforce concerns that Iran didn't actually abandon its weapons-related research in 2003, as indicated by a 2007 National Intelligence Estimate given to then-President George W. Bush.

> U.S. intelligence agencies reported in 2007 that they believed Tehran halted its experiments in response to international and domestic pressures. But an ongoing investigation by the Fox News Specials Unit concludes that more than 600 entities were working inside Iran to support its program, and at least 40 sites where the work is taking place are suspected to exist across the country.
>
> For British, French and American investigators, one of the most concerning sites is the Qom uranium enrichment construction site, hidden deep in the mountains. The latest intelligence shows that security walls have doubled around the site. Its scale cannot be explained by any known civilian nuclear energy use.
>
> David Albright, a former IAEA official and president of the Washington-based Institute for Science and International Security who reviewed the intelligence

> files, told The Washington Post that Iran's nuclear weapons program "never really stopped" and also concluded that Iran "has sufficient information to design and produce a workable implosion nuclear device."
>
> Western diplomats and nuclear experts briefed on the findings in the IAEA report also told the Post that foreign scientists offered assistance in overcoming key technical hurdles.
>
> The documents reportedly show that a former Soviet weapons scientist named Vyacheslav Danilenko allegedly tutored Iranians for several years on building high-precision detonators needed to trigger a nuclear chain reaction. The Post reported that Pakistani and North Korean officials also gave to Iran mathematical formulas and codes as well as a so-called neutron initiator, which shoots a stream of atomic particles into the weapon's fissile core at the start of the chain reaction.

There are two things to point out about this story. The first thing is that it was a strategic disaster for us to back out of Iraq, because that's where we need to be to be able to gather intelligence, mount covert ops, run interdiction on attempts to transfer WMDs to Syria, etc. We really need to be in theater in order to deal with Iran, Syria and groups like Hezbollah, Iran's Quds force and Muqtada Al Sadr's Mahdi Army.

Unfortunately, I think that David Axelrod is running our national security now, which is why Obama pulled out forces out of Iraq.

Excerpt:

> Three years, two abject failures. The first was the administration's inability, at the height of American post-surge power, to broker a centrist nationalist coalition governed by the major blocs — one predominantly Shiite (Maliki's), one predominantly Sunni (Ayad Allawi's), one Kurdish — that among them won a large majority (69 percent) of seats in the 2010 election.
>
> Vice President Biden was given the job. He failed utterly. The government ended up effectively being run by a narrow sectarian coalition where the balance of power is held by the relatively small (12 percent) Iranian-client Sadr faction.
>
> The second failure was the SOFA [Status of Forces Agreement] itself. U.S. commanders recommended nearly 20,000 troops, considerably fewer than our 28,500 in Korea, 40,000 in Japan and 54,000 in Germany. The president rejected those proposals, choosing instead a level of 3,000 to 5,000 troops.
>
> A deployment so risibly small would have to expend all its energies simply protecting itself — the fate of our tragic, missionless 1982 Lebanon deployment — with no real capability to train the Iraqis, build their U.S.-equipped air force, mediate ethnic disputes (as we have successfully done, for example, between local Arabs and Kurds), operate surveillance and special-ops bases, and establish the kind of close military-to-military relations that undergird our strongest alliances.

> The Obama proposal was an unmistakable signal of unseriousness. It became clear that he simply wanted out, leaving any Iraqi foolish enough to maintain a pro-American orientation exposed to Iranian influence, now unopposed and potentially lethal. Message received. Just this past week, Massoud Barzani, leader of the Kurds — for two decades the staunchest of U.S. allies — visited Tehran to bend a knee to both President Mahmoud Ahmadinejad and Ayatollah Ali Khamenei.

The second thing to point out is the question of what we should be doing to restrain Iran's nuclear ambitions. Click here for a run-down of some of our options. There are a lot of things we could do short of all-out war, but that would require that we had a statesman in the White House – someone who takes foreign policy seriously and treats it as more than a political issue.

A previous post I wrote showed how arms that China sells to Iran make their way to Hezbollah to be used against Israeli assets. That's what we can expect will happen with nuclear weapons that Iran develops. Are we willing to accept that? There is also the matter of the Mexican drug cartels, the Quds force, Hugo Chavez in Venezuela and our porous border with Mexico. Are we willing to risk that?

We need to take the gloves off our national security agencies, especially the CIA, and do what has to be done.

FARC terrorist leader Alfonso Cano killed by Colombian armed forces

November 8, 2011 | by Wintery Knight | Link | Original Link

Map of South America
From the Heritage Foundation.

Excerpt:

> The armed forces of Colombia have scored a major battlefield victory. They finally hunted down, confronted, and killed the leader of the narco-terrorist Revolutionary Armed Forces of Colombia (FARC), Guillermo Leon Saenz, widely known by his alias Alfonso Cano.
>
> A guerrilla for decades, Cano assumed the top leadership of the FARC following the natural death of founder Manuel Marulanda (2008) and the elimination of senior figures Raul Reyes (2008) and Jorge Briceno (aka Mono Jojoy, 2010).
>
> Seen by some as a modern-day version of the "good revolutionary," Cano—a life-long advocate of armed violence and terrorism—fell in combat with the Colombian armed forces as they rappelled their way into his secret jungle hideout. Cano was also indicted in a U.S. court for drug trafficking along with dozens of other FARC leaders and had a $5 million price on his head.

FARC is a Marxist terrorist group.

The Economist reports that the Colombian economy is also doing well.

Excerpt:

> WHEN the figures are finally tallied, Colombia may prove to have weathered the world recession better than any other of the larger Latin American countries. After a slight contraction at the end of 2008, the economy has been growing modestly this year. This resilience stems from continued foreign investment, an increase in government spending on public works and easier money: since December the central bank has cut interest rates by six percentage points, to 4%, a steeper drop than anywhere in the region outside Chile.
>
> […]President Álvaro Uribe's security policies have helped to restore confidence. Investment soared, from 15% of GDP in 2002 to 26% last year, says Mr Zuluaga. Private business has retooled. After many delays, the government has issued licences to expand several ports; this month it hopes to award a contract for the first of four big road schemes, costing a total of $7.5 billion over four years. It hopes for investment of up to $50 billion in mining and oil over the next decade.

And liberal MSNBC has more on the booming Colombian economy.

Excerpt:

> …Colombia's revival is benefiting U.S. economic and political rivals as much as or more than the U.S. itself.
>
> The long delay in signing the treaty allowed Latin America's fourth-largest economy to strengthen ties with China. It also damaged U.S. credibility in the region, says Eric Farnsworth, vice-president of the Council of the Americas in Washington. "The delay in passing this called into question the United States' reliability as a partner," Farnsworth says. "There's a strategic component to this. It's not just about economics and trade."
>
> […]As talks between the U.S. and Colombia dragged on, Colombia and China forged plans for a rail link between the Pacific and Caribbean that could draw freight away from the Panama Canal. Colombian President Juan Manuel Santos aims for a trade deal with South Korea. To tighten his connections to high-growth Asia, he's also seeking membership in the Asia-Pacific Economic Cooperation group. "While Washington was debating whether the accord with Colombia was opportune, we advanced in our foreign policy strategy," says Trade Minister Sergio Diaz-Granados.
>
> Santos has cooperated more with his South American neighbors, organizing a meeting of finance ministers to discuss ways to protect their currencies and economies from the debt crisis in the U.S. and Europe. He supports a stock trading platform with Colombia, Chile, and Peru and wants to bring Mexico and Panama on board. Exports to Brazil have surged tenfold. While the U.S. remains Colombia's biggest export market, with $16.8 billion in 2010 sales, up 30 percent from a year earlier, sales to China more than doubled last year, to $1.2 billion. Sales to the European Union are also rising, to $5.4 billion this year through August, more than in all of 2010. An EU trade accord could come next year.

> The government has reduced cocaine cultivation 37 percent and halved the number of insurgents to about 8,000. Improved security has spurred enough growth to win an investment-grade credit rating from Standard & Poor's as well as investment from billionaires. Colombia's victories over the guerrillas opened up swathes of countryside to exploration for oil, gold, and coal. Mexican billionaire Carlos Slim's push into crude has helped fuel foreign investment that the government says may reach a record $12 billion this year. The economy grew 5.2 percent in the second quarter.
>
> The U.S. faces more competition from Colombia's neighbors and Canada. In 2010, U.S. agricultural exports to Colombia fell more than 50 percent from 2008, to $827 million, as Argentina's more than doubled, to $1 billion, according to a report by Senator Richard Lugar's staff. Diaz-Granados attributes the U.S. setback to the delay in the free-trade agreement.
>
> An August accord reduces or ends Colombian tariffs on Canadian wheat, paper, and machinery. Bank of Nova Scotia, Canada's third-largest lender, agreed in October to buy 51 percent of Banco Colpatria Red Multibanca Colpatria for about $1 billion—Scotiabank's largest international takeover. "This is not the Colombia of old," says Brian J. Porter, group head of international banking for Scotiabank. "The more we looked at Colombia, the more excited we got about the economic potential."

We really should have signed that trade deal 3 years ago – it would have helped out economy a lot. But unions got Obama elected, and the unions decided that the trade deal needed to be held up for 3 years. And that's one of the reasons why we've had over 9% unemployment. Our economic policy is being set by unions, not by economists. But in Colombia, economic policy is set by economists, not unions.

Brian Auten interviews Dr. Angus Menuge on philosophy of mind

November 8, 2011 | by Wintery Knight | Link | Original Link

Click here for the interview. It's up at Apologetics 315!

Details:

> Today's interview is with Dr. Angus Menuge, Professor of Philosophy at Concordia University, and author of *Agents Under Fire: Materialism and the Rationality of Science*. He talks about his background and work, the philosophy of mind, what reason (or reasoning) is, what materialism is as a worldview, things excluded from a materialistic worldview, methodological naturalism and materialism, accounting for free will, materialistic accounts of reason, the epistemological argument from reason, the ontological argument from reason, finding the best explanation for reason, problems with methodological naturalism, implications of materialism, practical application of the argument from reason, advice for apologists, the International Academy of Apologetics, and more.

If what Dr. Menuge says in this interview is true, and I think it is, then a person who believes in materialism can neither ground free will nor rationality! So atheism wouldn't really be freethought so much as it would be… un-free… non-thought.

In case people don't want to listen to the podcast, then I've got some things for you to read below.

The ontological argument from reason

Dr. Menuge presented a paper at the real Evangelical Philosophical Society conference for students and professors of philosophy, and you can download the paper here in Word format. (here's a PDF version I made)

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because

> reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is helpful for those of you looking for some good discussion of one of the issues in the area of philosophy of mind.

You may also be interested in Alvin Plantinga's epistemological argument from reason, which is related to this argument. It shows that even to have the ability to think, you have to have a certain anthropology and you have to have mental faculties that are designed for reason, not survival.

Methodological naturalism

Dr. Menuge also wrote an article entitled "Is methodological materialism good for science?".

Intro:

> Should science by governed by methodological materialism? That is, should scientists assume that only undirected causes can figure in their theories and explanations? If the answer to these questions is yes, then there can be no such thing as teleological science or intelligent design. But is methodological materialism a defensible approach to science, or might it prevent scientists from discovering important truths about the natural world? In my contribution to The Waning of Materialism (Oxford University Press, 2010), edited by Robert Koons and George Bealer, I consider twelve of the most common arguments in favor of methodological materialism and show that none of them is convincing.
>
> Of these arguments, perhaps the most prevalent is the "God of the gaps" charge, according to which invoking something other than a material cause is an argument from ignorance which, like a bad script writer, cites a *deus ex machina* to save our account from difficulty. Not only materialists, but also many Christian thinkers, like Francis Collins, worry that appeal to intelligent design commits the God of the gaps fallacy.
>
> As I argue, however, not only is an inference to an intelligent cause not the same as an inference to the supernatural, it is a mistake to assume that all gap arguments are bad, or that only theists make them. If a gap argument is based solely on ignorance of what might explain some phenomenon, then indeed it is a bad argument. But there are many good gap arguments which are made both by scientific materialists and proponents of intelligent design.

So how do you make an argument like that?

> As Stephen Meyer has argued in his *Signature in the Cell*, intelligent design argues in just the same way, claiming not merely that the material categories of chance and necessity (singly or in combination) are unable to explain the complex specified information in DNA, but also that in our experience, intelligent agents are the only known causes of such information. The argument is based on what we know about causal powers, not on what we do not know about them.
>
> Since the inference is based on known causal powers, we learn that the cause is intelligent, but only further assumptions or data can tell us whether that intelligence is immanent in nature or supernatural. It is a serious mistake to confuse intelligent design with theistic science, and the argument that since some proponents of design believe that the designer is God, that is what they are claiming can be inferred from the data, is a sophomoric intensional fallacy.

If you think this is interesting, then do have a listen to the podcast. Dr. Menuge is not an ordinary academic – he is very direct. He calls materialism “a catastrophe” in the podcast! Not a shrinking violet.

Irony: the young men who voted for Obama now suffer from record unemployment

November 8, 2011 | by Wintery Knight | Link | Original Link

This article from the Wall Street Journal explain why men are in decline. (H/T Mary, Tom)

Excerpt:

> Few groups were hit harder by the recession than young men… The unemployment rate for males between 25 and 34 years old with high-school diplomas is 14.4%—up from 6.1% before the downturn four years ago and far above today's 9% national rate. The picture is even more bleak for slightly younger men: 22.4% for high-school graduates 20 to 24 years old. That's up from 10.4% four years ago.
>
> […]The share of men age 25-34 living with their parents jumped to 18.6% this year, up from 14.2% four years ago and the highest level since at least 1960, according to the Census Bureau.

Suzanne Venker comments on the consequences of this data for women for National Review.

Full text:

> New data from the U.S. Census Bureau shows the percentage of men between the ages of 25 and 34 living at home rose from 14 percent in 2005 to 19 percent in 2011. Women, on the other hand, are doing just fine. Not only do they dominate today's college campuses, they have little trouble staying away from mom and dad's place. That's because women are flourishing in the workforce while men are not. Writers and pundits blame this phenomenon on the economy, but the trend reflects a much larger sociological problem. America is in the midst of a sea change: Never before has it been more difficult for men and women to find their way to one another, settle in for the long haul, and build strong families together.
>
> To read about it, you'd think the entire mess is out of our hands. You'd think the circumstances involving the roles of men and women in society have happened to us, rather than the other way around. The truth is that we created this new world — and while we may not be able to undo it, we can certainly stop the freight train from running off the tracks.
>
> Hardly a day goes by that we aren't made aware of this heartbreaking reality. It is so acute we now have not one but six new television series dedicated to men's social demotion. In these programs, husbands are made to look like fools — while the wives wield a power so ugly it's no wonder marriage has become so elusive. The modern generation has been sold a bill of goods about human nature, and the result is that men now have no idea how to be men. Why? Because women

> won't let them.
>
> There is a large and powerful group of women who see this shift in gender roles as a good thing. Hanna Rosin's provocative piece in *The Atlantic*, called "The End of Men," and Kate Bolick's new piece "All the Single Ladies" (which may now become a TV series) make light of the demise of masculinity and the role men once played in society. They represent the kind of movers and shakers who help lead the feminist fight. Pointing to the latest statistics about men, they'd be likely to respond, "See how hopeless men are? Everything we've been saying about men all these years has proven to be true."
>
> But the laugh will be on them — if not for their own families, then for their children's. The feminist policies that were put in place to help women flourish outside the home have suffocated men's opportunities for economic self-sufficiency. In short, men's desire to be good workers and family providers has been undermined. This is more than unfortunate; it is a loss of catastrophic proportions, for it is men's consistent, full-time, year-round work that women depend on in order to live that ever-coveted "balanced life." What too many women don't understand (because they've been unduly influenced by feminist groupthink) is that male nature is ultimately beneficial to them, for women continue to put family — not career — at the center of their lives and are thus dependent on men to pick up the slack at the office.
>
> It is a dangerous thing to create a society of frustrated young men. Feminists have no idea what a can of worms they've created — and what it's about to do to our nation.

I think if we want men to marry, not only do we have to ask why the recession is affecting men disproportionately, but why the education system isn't working for boys. We need to ask whether men learn better from female teachers or male teachers. We need to ask whether boys learn better in all-boys schools or in co-ed schools. We need to ask whether the promotion of sex education and contraception, which produces freely available sex, is the best way to encourage young men to prove themselves to women by trying hard to fit the traditional roles of protector, provider and moral/spiritual leader. We need to ask whether the denial of male-female differences encourages men to take on traditional male roles, and whether women are encouraged to prefer men who take on those roles. We need to ask whether our energy and economic policies favor job creation in areas dominated by men. We need to ask whether stimulus programs should be slanted towards industries dominated by women. We need to ask whether affirmative action for women in education and at work helps men to be able to provide for a family. We need to ask whether men are well-served by no-fault divorce laws and biased domestic violence laws that promote false charges – especially during custody hearings. And lastly, we need to ask whether church serves men when it accepts or rejects postmodernism, anti-intellectualism and moral relativism.

But can't we just tell men to "Man Up"?

The answer to the discincentives facing marriage-minded men is not a lazy, ignorant pronouncement for men to “Man Up”. That doesn’t solve any of the problems that cause men not to marry.

I think the desire of certain people to remove every incentive and capacity for men to perform as husbands and fathers – and then to nevertheless *demand* they marry and take on the traditional roles of men *anyway* without incentives or capacities – is the height of narcissism. Men are people too – we are not inanimate objects. We are not sperm donors and wallets. And if society decides to go in a direction where the traditional roles of men are replaced with government social programs funded by high taxes and deficit spending, then marriage will die in this society.

Cain accuser Sharon Bialek has been sued a half dozen times and filed for bankruptcy twice

November 9, 2011 | by Wintery Knight | Link | Original Link

Photo of Sharon Bialek

See this link? It will take you to Robert McCain's post on the Cain press conference. McCain has been following Cain before his campaign even started. He knows everything about Cain's campaign. He has links to a half-dozen news sources with reactions in his post.

McCain writes:

> It is too early to analyze or evaluate the long-term impact. The immediate reaction toward Cain's press conference has been generally positive. If he didn't "hit a home run," as they say, he at least got a solid stand-up double. And his vow that he will continue the campaign, without regard to his accusers or their accusations, is perhaps the most important thing he said during the press conference.

Here's the press conference:

Part 1 of 3:

Part 2 of 3:

Part 3 of 3:

Sharon Bialek's background

Here's a press release from the Cain campaign talking about the Sharon Bialek's background.

Excerpt:

> In the courts, Ms. Bialek has had a lengthy record in the Cook County Court system over various civil lawsuits. The following cases on file in Cook County are:
>
> - 2000-M1-707461 Defendant against Broadcare Management
> - 2000-M1-714398 Defendant in lawsuit against Broadcare Management
> - 2000-M1-701522 Defendant in lawsuit against Broadcare Management
> - 2005-M1-111072 Defendant in lawsuit against Mr. Mark Beatovic.
> - 2007-M1-189176 Defendant in lawsuit against Midland Funding.
> - 2009-M1-158826 Defendant in lawsuit against Illinois Lending.
>
> **Ms. Bialek was also sued in 1999 over a paternity matter according to ABC 7 Chicago (WLS-TV). Source: WLS-TV, November 7, 2011.**
>
> In personal finances, PACER (Federal Court) records show that Ms. Bialek has filed for bankruptcy in the Northern District of Illinois bankruptcy court in 1991 and 2001. The respective case numbers according to the PACER system are 1:01-bk-22664 and 1:91-bk-23273.
>
> Ms. Bialek has worked for nine employers over the last seventeen years. Source: WLS-TV, November 7, 2011

More from the Chicago Tribune.

Excerpt:

> Records show she twice has filed for personal bankruptcy, first in 1991 and then again in 2001. In the latter case, she claimed $5,700 in assets and more than $36,000 in liabilities. Among the creditors seeking payment was a management firm demanding back rent of $4,500, four credit card companies and a lawyer asking for his legal fees.
>
> After the case was discharged, she accused a former boyfriend of harassing her for repayment of a loan, court records in the bankruptcy case show. Bialek borrowed $4,500 from William Concha, though Concha now believes she had no intention of paying him back, according to his brother, Mario.
>
> Reached Monday night in Spain, William Concha declined comment.
>
> At least two liens have been filed against Bialek, according to records from the Cook County recorder of deeds.
>
> The IRS filed a tax lien against her in 2009 for nearly $5,200. In August, the Illinois Department of Revenue claimed Bialek owed the state more than $4,300, including penalties and interest, relating to income taxes from 2004, according to county records.
>
> Court records also show creditors took legal action against her during the past decade, including at least one lawsuit filed in Cook County.

It's not surprising to me that a woman like this would make such accusations – she is getting a lot of attention, and possibly is being paid off by another candidate. There might even be a nice book deal for her.

Consider a parallel case, featuring Mariah Yeater's paternity suit against Justin Bieber.

Excerpt:

> The 20-year-old woman who claims teen idol Justin Bieber is the father of her child originally told her ex-boyfriend that he — and not Bieber — was the baby-daddy, the New York Post reported Friday.
>
> "She came back here from California telling me she was pregnant with my child and I said this is impossible, you've been in California two months and back here for only a week," said Las Vegas resident John Terranova, 19, about his ex-girlfriend Mariah Yeater, 20, who has sued Bieber for support for the son she later bore.
>
> "After I told her that's not my kid, you've only been here for a week, then she told me, 'No, I got pregnant before I left by you," Terranova told The Post. "But it didn't make sense because she had a doctor's note saying she wasn't pregnant enough for that to be possible. It didn't add up."
>
> Terranova said he had dated Yeater for nearly four years after meeting her at a Las Vegas high school that caters to students who had been thrown out of other schools. He said he broke up with her after he learned she had cheated on him.

> Terranova scoffed at Yeater's claim that it was the then-16-year-old Bieber who impregnated her in October 2010 during a 30-second sex session after the singer performed in Los Angeles.
>
> "I know it's not Justin Bieber," Terranova said. "She just wants money. It's a scam."
>
> His girlfriend Lacy Jensen, who herself is pregnant now, agreed.
>
> "Poor kid. He's worked so hard for his career and to deal with this. She just wants to get her name out there," said Jensen.
>
> "She's a gold digger and just wants someone to take care of her," Jensen said. "She was a really big party animal who got around a lot. She was a big slut. She's scandalous."
>
> Yeater was arrested for battery last December for allegedly slapping Terranova in a jealous rage after she returned from her sojourn in California to find him dating a new girlfriend, Jensen.

I see no reason to think that this Bialek's claims have any more validity than Yeater's claims. It seems plausible to me that both women are making false claims for the same reason – they want fame and money.

Do women ever make false claims about sexual matters? Its more common than you might think. Studies show that false allegations are made about 20-40% of the time, depending on the study. These sorts of false accusations are usually made in order to 1) get attention or money, by trying to appear as an innocent victim, 2) in order to get an alibi for something the woman has done wrong (see below), or 3) to get revenge on someone who has mistreated the woman, as with the Duke lacrosse scandal.

Consider this case of a Hofstra student Danmell Ndonye who invented a false rape accusation.

Excerpt:

> The Hofstra freshman who had a raunchy restroom romp and then cried rape made up the twisted tale because she didn't want her schoolmates — particularly her new boyfriend — to think she was easy, the beau told The Post yesterday.
>
> "I think she needs a psychologist. She probably felt like, 'They'll think I'm a slut,' " her boyfriend, who asked not to be identified, told The Post.
>
> Danmell Ndonye, 18, who had accused five men of gang rape, admitted the truth only when prosecutors confronted her after learning of a cellphone video that captured the whole sordid episode and showed she had willingly participated, officials said.
>
> She created her outlandish tale when her boyfriend, a Hofstra student who's been dating her since the semester began a few weeks ago, demanded to know where she had disappeared after a wild frat party early Sunday.
>
> The two had been dancing together at the Alpha Kappa Alpha mixer at the

> school's on-campus club, Hofstra USA, but got separated when a fight broke out.
>
> The boyfriend said he called her repeatedly, but she didn't answer her cellphone, so he went to her seventh-floor dorm room at Estabrook Hall. Moments later she appeared.
>
> "As I was about to leave, she comes up and she has no shoes on, she is holding them in her hands. She looked like she just finished hot sex," he said. "I said, 'Where were you? What were you doing?' She told me, 'Nothing.' I said, 'What do you mean, nothing?' "
>
> Ndonye then dropped a bombshell.
>
> "I said, 'Don't lie to me, what's going on?' And she said, 'Oh, I just got raped,' " he said.
>
> "It didn't seem real to me. She was calm," he continued. "Then she started crying and saying, 'I was raped.' She lied to me. I think she was embarrassed. I said to her, 'You have to call public safety.' She hesitated. It seemed like she didn't want to."
>
> She then tried to backpedal.
>
> "Oh, you know, no, it's OK," she told him, but he was incredulous.
>
> "How could it be OK that you just got raped?" the boyfriend said.
>
> So she relented — and a four-day nightmare began for four innocent men: Stalin Felipe, 19, his stepbrother, Kevin Taveras, 20, Jesus Ortiz, 19, and 21-year-old Rondell Bedward, a Hofstra senior who had invited the others to the party.
>
> Cops also hunted for a fifth man, who has not been publicly identified.

False allegations of abuse are *routinely used* in divorce custody hearings. They virtually never go to trial.

In the absence of ANY evidence, why think that these anonymous charges against a black conservative who is leading in national polls are anything but *greed and attention-whoring*? Surely, we need to see some charges laid against Cain that where brought forward in a real criminal trial, so we can see the evidence. Otherwise, it just seems to me like another case of false paternity claims and false sexual allegations. We need to see real criminal charges, with real evidence and real witnesses from a real trial, before we can draw any conclusions.

My previous post analyzed the media bias evident in how this story is being covered.

Video: William Lane Craig debates Richard Dawkins at the Sheldonian Theater in Oxford

November 9, 2011 | by Wintery Knight | Link | Original Link

Well, I guess everyone knows that Richard Dawkins refused to show up and defend his published work… so instead, William Lane Craig lectured to the empty chair where Richard Dawkins was supposed to sit.

Description:

> Richard Dawkins was invited by the Oxford student Christian Union to defend his book The God Delusion in public debate with William Lane Craig. The invitation remained open until the last minute. However, Dawkins refused the challenge and his chair remained empty. Craig then gave a lecture to a capacity audience on the weaknesses of the central arguments of the book and responded to a panel of academics. The event, which was chaired by atheist Prof. Peter Millican, was part of The Reasonable Faith Tour 2011 sponsored by UCCF, Damaris & Premier Christian Radio.

I summarized the debate between William Lane Craig and Peter Millican here. If you missed this debate, please click the link to watch it, or at least read my summary.

BONUS: Click here for a picture of the empty chair that Richard Dawkins refused to fill.

Eric Holder testifies on Fast and Furious gun smuggling to Mexican drug cartels

November 9, 2011 | by Wintery Knight | Link | Original Link

From Human Events.

Excerpt:

> In a hearing before the Senate Judiciary Committee, Republicans questioned Attorney General Eric Holder about the smuggling of weapons to Mexican gun cartels through Operation Fast and Furious, when he knew about its existence and what he did about it when he learned of it.
>
> Republicans pushed Holder on why it took him nine months to respond to memos sent to the Department of Justice.
>
> "I am eager to hear whether the Attorney General thinks that is acceptable and what he intends to do about it," said Ranking Member Chuck Grassley (R.-Iowa).
>
> While the Fast and Furious gun smuggling scandal was at the top of everyone's mind, and what conservatives specifically wanted to hear about, only a few Republican senators grilled him on it. Democrats on the committee tried to talk about nearly everything else, including treatment of Muslims by the Department of Justice, bath salt regulations, and anti-bullying measures.
>
> The Republicans that did come out swinging on Fast and Furious got Holder to give stammering and often inconsistent testimony.
>
> […]Cornyn also had the most intense exchanges with Holder during the entire hearing, asking about the murder of Border Patrol Agent Brian Terry and whether or not Holder would like to apologize to the family.
>
> "It pains me whenever there is the death of a law enforcement official, especially under the circumstances. It is not fair, however, to assume that the mistakes that happened in Fast and Furious directly led to the death of Agent Terry," Holder said.
>
> Cornyn also asked whether or not anyone in the Department of Justice has been made accountable for the errors that have been made.
>
> "Can you name me one person who's been held accountable for this Fast and Furious Operation? Just one in the Department of Justice?" Cornyn said.
>
> Holder responded: "Well we have made a number of changes with regard to personnel both in the Phoenix U.S. Attorney's Office, also at the ATF Headquarters here. I will certainly await the report that comes out of the Inspector General. And I will assure you and the American people that people will be held accountable for any mistakes that were made in connection with Fast and Furious."

Wow… I think the Republicans might be a bit angry about how that Border Patrol agent got murdered because of this gun-smuggling operation, which was administered by the Department of Justice. I think Eric Holder knows more than he is admitting to, based on his evasive, politicized answers.

132 economists prefer the Republican job creation strategy

November 9, 2011 | by Wintery Knight | Link | Original Link

From John Boehner's web site.

Excerpt:

House Speaker John Boehner (R-OH) today released a list of 132 American economists who believe the job creation strategy used in the House GOP Plan for America's Job Creators will do more to boost private-sector job growth in America in both the near-term and long-term than the "stimulus" spending approach favored by President Obama.

"This list underscores the need for immediate action on the now-22 bipartisan jobs bills passed by the Republican-led House that are awaiting a vote in the Democratic-controlled Senate," Boehner said. *"All 22 of these bills passed the House with bipartisan support, but to date have not been brought to a vote by Senate Democrats. To help support job creation in both the short-term and long-term, we need bipartisan action to halt unnecessary government regulations and fix the tax code to help private-sector job creators. Our plan does that. The Senate needs to pass these 22 bills and send them to the president's desk."*

Last month, Boehner asked a group of economists across the nation: which do you believe is more likely to provide a boost for private-sector job growth in America in both the near- and long-term: a plan focused on billions of dollars in additional "stimulus" spending by government – or a plan focused on halting excessive government regulations and fixing the tax code to help private-sector job creators? A total of 132 economists indicated they clearly favor the latter strategy. The list of 132 economists includes experts from Stanford University's Hoover Institution, Carnegie Mellon University, and Harvard University; economists from the American Enterprise Institute (AEI), the Manhattan Institute, and the American Action Forum; and many others.

On Friday, in response to the U.S. Department of Labor's announcement that October 2011 marked the 33rd consecutive month in which the national unemployment rate exceeded eight percent, Boehner asked President Obama to prod the Democratic-controlled Senate for action on the stalled jobs bills. Boehner and other Republicans have called for President Obama to be more engaged in the legislative process this fall and less focused on his re-election campaign.

"I urge the president to call on Senate Democrats to bring these common-sense jobs bills to a vote," Boehner said. *"As long as these bipartisan jobs bills are stalled in the Senate, it is unacceptable for the White House to be anything less than 100 percent engaged in the legislative process."*

Here's the plan:

Empower Small Business Owners and Reduce Regulatory Burdens:

- Require congressional review and approval of any government regulations that have a significant impact on the economy or burden small businesses.
- Audit existing and pending regulations to identify and address those that hinder economic growth.

Fix the Tax Code to Help Job Creators:

- Increase American competitiveness to spur investment and create more American jobs by streamlining the tax code and lowering the tax rate for businesses and individuals including small business owners to no more than 25%.
- Reform the tax code to allow American businesses to bring back their overseas profits without having to pay a tax penalty so they can invest in our economy and create American jobs.

Increase Competitiveness for American Manufacturers:

- Pass the three pending free trade agreements with Colombia, Panama, and South Korea to create up to 250,000 jobs.
- Continue to open new markets to American made products. Encourage Entrepreneurship and Growth:
- Modernize our patent system to protect our nation's innovators, discourage frivolous lawsuits, and expedite patent reviews.
- Re-Authorize and improve federal programs and approval processes to streamline development of new products.
- Remove barriers to building a first class workforce so that the United States can compete in the global marketplace and lead the way in technological development and growth.

Maximize Domestic Energy Production to Ensure an Energy Policy for the 21st Century:

- Promote lower energy prices through increased domestic production.
- Encourage all forms of energy production.
- Pay Down America's Unsustainable Debt Burden and Start Living Within our Means:
- Build upon the House Republicans' Budget by enacting significant spending cuts.

And they already passed about 20 bills through the House with bipartisan support.

The American Enterprise Institute explains the top 5 myths about overpopulation

November 9, 2011 | by Wintery Knight | Link | Original Link

The American Enterprise Institute lists 5 big myths about overpopulation.

They are:

1. The world is overpopulated.
2. Rapid population growth keeps poor countries poor.
3. For all its ethical problems, China's one-child policy boosts its economy.
4. If your population declines, your economy does, too.
5. The world will have 10 billion people by 2100.

Number 2 is the one I liked best:

> In 1960, South Korea and Taiwan were poor countries with fast-growing populations. Over the two decades that followed, South Korea's population surged by about 50 percent, and Taiwan's by about 65 percent. Yet, income increased in both places, too: Between 1960 and 1980, per capita economic growth averaged 6.2 percent in South Korea and 7 percent in Taiwan.
>
> Clearly, rapid population growth did not preclude an economic boom in those two Asian "tigers" — and their experience underscores that of the world as a whole. Between 1900 and 2000, as the planet's population was exploding, per capita income grew faster than ever before, rising nearly fivefold, by the reckoning of economic historian Angus Maddison . And for much of the last century, the countries with faster economic growth tended to be the ones where population was growing most rapidly, too.
>
> Today, the fastest population growth is found in so-called failed states, where poverty is worst. But it's not clear that population growth is their central problem: With physical security, better policies and greater investments in health and education, there is no reason that fragile states could not enjoy sustained improvements in income.

This is a good post to read and store away, because what I've found is that fears of overpopulation is underneath many of policies pushed by the left, from abortion, to government regulation of production, to government regulation of consumption. I'm not entirely sure why this fear exists, but I know it's there for many secular leftists. It's not rational, it's not supported by evidence, but it's there and it animates much of their political agenda.

Cain accuser Karen Kraushaar filed a sexual harassment claim at her next job, too

November 10, 2011 | by Wintery Knight | Link | Original Link

Photo of Karen Kraushaar
From the left-leaning Associated Press.

Excerpt:

> A woman who settled a sexual harassment complaint against GOP presidential candidate Herman Cain in 1999 complained three years later at her next job about unfair treatment, saying she should be allowed to work from home after a serious car accident and accusing a manager of circulating a sexually charged email, The Associated Press has learned.
>
> Karen Kraushaar, 55, filed the complaint while working as a spokeswoman at the Immigration and Naturalization Service in the Justice Department in late 2002 or early 2003, with the assistance of her lawyer, Joel Bennett, who also handled her earlier sexual harassment complaint against Cain in 1999. Three former supervisors familiar with Kraushaar's complaint, which did not include a claim of sexual harassment, described it for the AP under condition of anonymity because the matter was handled internally by the agency and was not public.
>
> To settle the complaint at the immigration service, Kraushaar initially demanded thousands of dollars in payment, a reinstatement of leave she used after the accident earlier in 2002, promotion on the federal pay scale and a one-year fellowship to Harvard's Kennedy School of Government, according to a former supervisor familiar with the complaint. The promotion itself would have increased her annual salary between $12,000 and $16,000, according to salary tables in 2002 from the U.S. Office of Personnel Management.
>
> […]Kraushaar's complaint was based on supervisors denying her request to work full time from home after a serious car accident in 2002, three former supervisors said. Two of them said Kraushaar also was denied previous requests to work from home before the car accident.

> The complaint also cited as objectionable an email that a manager had circulated comparing computers to women and men, a former supervisor said. The complaint claimed that the email, based on humor widely circulated on the Internet, was sexually explicit, according to the supervisor, who did not have a copy of the email. The joke circulated online lists reasons men and women were like computers, including that men were like computers because "in order to get their attention, you have to turn them on." Women were like computers because "even your smallest mistakes are stored in long-term memory for later retrieval."
>
> […]Cain said he remembered gesturing to Kraushaar and noting that she was the same height as Cain's wife, about chin-high to Cain. The Georgia businessman said Kraushaar did not react noticeably, but he said the restaurant association lawyer later told him that was the most serious claim that Kraushaar had made against him, "the one she was most upset about."
>
> […]The New York Times reported previously that Kraushaar received $45,000 in the settlement with the restaurant association.

This is the woman who the liberal news networks are using to impugn the character of Herman Cain.

Cain's only other named accuser, Sharon Bialek

There are reports that she was fired from the NRA *for making a false allegation of sexual harassment*. If that is true, then her allegations against Cain are really in doubt. (H/T Pat Dollard)

Excerpt:

> "She was fired from her job, and her boyfriend suggested she contact Cain in hopes he could help her find employment.".
>
> **In this particular incident she was fired for falsely accusing her boss of sexual harassment**, a charge denied by co-workers, as well as being pretty much a pain in the ass to work with.
>
> "**I remember her as a time-waster, and rabble-rouser. If she didn't get her way she cried about sexual harassment**". A former co-worker, a female no less, emailed me. "She was trouble with a capital "T". The fact that she waited 13 years and never said a word not even during Cain's earlier forays into politics. She only now magically appears because Cain is leading in some polls and proving a threat to Barack Obama?

Here's a press release from the Cain campaign talking about the Sharon Bialek's background.

Excerpt:

> In the courts, Ms. Bialek has had a lengthy record in the Cook County Court system over various civil lawsuits. The following cases on file in Cook County are:

> - 2000-M1-707461 Defendant against Broadcare Management
> - 2000-M1-714398 Defendant in lawsuit against Broadcare Management
> - 2000-M1-701522 Defendant in lawsuit against Broadcare Management
> - 2005-M1-111072 Defendant in lawsuit against Mr. Mark Beatovic.
> - 2007-M1-189176 Defendant in lawsuit against Midland Funding.
> - 2009-M1-158826 Defendant in lawsuit against Illinois Lending.
>
> **Ms. Bialek was also sued in 1999 over a paternity matter according to ABC 7 Chicago (WLS-TV). Source: WLS-TV, November 7, 2011.**
>
> In personal finances, PACER (Federal Court) records show that Ms. Bialek has filed for bankruptcy in the Northern District of Illinois bankruptcy court in 1991 and 2001. The respective case numbers according to the PACER system are 1:01-bk-22664 and 1:91-bk-23273.
>
> Ms. Bialek has worked for nine employers over the last seventeen years. Source: WLS-TV, November 7, 2011

More from the Chicago Tribune.

Excerpt:

> Records show she twice has filed for personal bankruptcy, first in 1991 and then again in 2001. In the latter case, she claimed $5,700 in assets and more than $36,000 in liabilities. Among the creditors seeking payment was a management firm demanding back rent of $4,500, four credit card companies and a lawyer asking for his legal fees.
>
> After the case was discharged, she accused a former boyfriend of harassing her for repayment of a loan, court records in the bankruptcy case show. Bialek borrowed $4,500 from William Concha, though Concha now believes she had no intention of paying him back, according to his brother, Mario.
>
> Reached Monday night in Spain, William Concha declined comment.
>
> At least two liens have been filed against Bialek, according to records from the Cook County recorder of deeds.
>
> The IRS filed a tax lien against her in 2009 for nearly $5,200. In August, the Illinois Department of Revenue claimed Bialek owed the state more than $4,300, including penalties and interest, relating to income taxes from 2004, according to county records.
>
> Court records also show creditors took legal action against her during the past decade, including at least one lawsuit filed in Cook County.

In my previous post, I explained how false accusations are *regularly made* by a significant minority of women in certain cases, such as in divorce trials when custody (and the child support payments that go with custody) are in play. Not all women do this, but ones who have a certain profile are more prone to do it than others.

E-mails reveal that Obama fundraiser discussed Solyndra loan with White House

November 10, 2011 | by Wintery Knight | Link | Original Link

FBI agents remove evidence from Solyndra Headquarters

From the leftist Washington Post.

Excerpt:

> A major donor to President Barack Obama discussed with White House officials a solar energy company that received a half-billion dollar federal loan and later went bankrupt, newly released emails show.
>
> The emails released by a House committee appear to contradict repeated assurances by the Obama administration that the donor, George Kaiser, never talked about Solyndra Inc. with the White House.
>
> Solyndra's name came up at a White House meeting with Kaiser last year at a time when the California company was seeking a second federal loan, after it had already received a $528 million loan in 2009, the emails show.
>
> The second loan was not approved. Instead, an investment venture controlled by Kaiser made a private loan that resulted in the firm and other investors moving ahead of taxpayers in line for repayment in case of a default by Solyndra.
>
> Solyndra, the first renewable energy company to receive a federal loan under the 2009 stimulus law, declared bankruptcy in September and laid off its 1,100 workers, leaving taxpayers on the hook for more than a half-billion dollars.
>
> The company's implosion and revelations that administration officials rushed to complete the loan in time for a September 2009 groundbreaking have become an embarrassment for Obama and a rallying cry for GOP critics of his green energy program.
>
> Kaiser, an Oklahoma billionaire, was a "bundler" for Obama's 2008 campaign,

> raising between $50,000 and $100,000 for the president, records show. He also was a frequent White House visitor in 2009 and 2010. White House officials for months have denied that Kaiser talked about Solyndra during those visits. One the nation's richest men, Kaiser owns an oil company and other energy interests and is chief donor to the George Kaiser Family Foundation, which invests in early childhood education and community health.
>
> In one email released Wednesday by the House Energy and Commerce Committee, Kaiser said that when he and a foundation official visited the White House last year, officials showed "thorough knowledge of the Solyndra story, suggesting it was one their prime poster children" for renewable energy.
>
> In another email, a Kaiser associate appears confident that Energy Secretary Steven Chu would approve a second loan for Solyndra.
>
> "It appears things are headed in the right direction and Chu is apparently staying involved in Solyndra's application and continues to talk up the company as a success story," Steve Mitchell, managing director of Kaiser's venture-capital firm, Argonaut Private Equity, wrote in a March 5, 2010, e-mail. Mitchell also served on Solyndra's board of directors.

It's very important for voters to understand what the Obama administration means when it talks about "jobs bills", "shovel-ready projects", "infrastructure development" and "economic stimulus". What they mean by those words is giving taxpayer money to their campaign fundraisers. And that's why the unemployment rate has been over 9% for the last three years, and we are running 1.3 trillion dollar deficits.

Do you know what Republicans would do if they were in office? They would let you keep more of the money you earn, and to hell with corruption. That's what a tax cut is – more money for you, and less money for politicians. Think about it. The smaller the government, the less opportunity there is for this sort of greed and corruption.

Frank Turek interviews William Lane Craig about Christian apologetics and debate

November 10, 2011 | by Wintery Knight | Link | Original Link

This interview is getting good reviews on Facebook. I would say it is a must-see, because it will change your view of what we should be emphasizing as Christians. Please watch the lecture and then mail this post to all of your friends – we need to be challenged by this man William Lane Craig.

(H/T BirdieUpon)

This interview occured after William Lane Craig's debate tour of the UK, and they talk a lot about it. I think the lesson for us is that apologetics is the best evangelistic tool that Christians have, and people really do show up by the thousands to see these debates. Maybe we should do more of them? And maybe we should be encouraging young people to follow Craig's path and become solid philosophers and debaters? And are we going to take seriously the duty to sponsor events like this? We have to ask ourselves these tough questions, and be practical and effective about defending God's honor when it's called into question. Having a relationship with God *is not* just about us getting what we want. There are things that *we* need to be doing to hold up our end of the relationship. Hard things. Self-sacrificial things. Things that we may not like at all. Things that work.

In Intellectual Neutral

Here's an article that I think might be appropriate for this interview.

Excerpt:

You may see, perhaps for the first time in your life, that here is a need in your life and as a result resolve to become intellectually engaged as a Christian. This is a momentous decision. It is a step that is desperately needed in the lives of millions of American Christians today. No one has issued the challenge to become intellectually engaged more forcefully than did Charles Malik, in his inaugural address at the dedication of the Billy Graham Center on this campus. He emphasized that we as Christians face two tasks in our evangelism: saving the soul and saving the mind, that is to say, not only converting people spiritually, but converting them intellectually as well. And the Church, he said, is lagging dangerously behind with regard to this second task. Listen to what he says:

> I must be frank with you: the greatest danger confronting American evangelical Christianity is the danger of anti-intellectualism. The mind in its greatest and deepest reaches is not cared for enough. But intellectual nurture cannot take place apart from profound immersion for a period of years in the history of thought and the spirit. People who are in a hurry to get out of the university and start earning money or serving the church or preaching the gospel have no idea of the infinite value of spending years of leisure conversing with the greatest minds and souls of the past, ripening and sharpening and enlarging their powers

> of thinking. The result is that the arena of creative thinking is vacated and abdicated to the enemy. Who among evangelicals can stand up to the great secular scholars on their own terms of scholarship? Who among evangelical scholars is quoted as a normative source by the greatest secular authorities on history or philosophy or psychology or sociology or politics? Does the evangelical mode of thinking have the slightest chance of becoming the dominant mode in the great universities of Europe and America that stamp our entire civilization with their spirit and ideas? For the sake of greater effectiveness in witnessing to Jesus Christ, as well as for their own sakes, evangelicals cannot afford to keep on living on the periphery of responsible intellectual existence.

These words hit like a hammer. Evangelicals really have been living on the periphery of responsible intellectual existence. The average Christian doesn't realize that there is an intellectual war going on in the universities and the professional journals and the scholarly societies. Christianity is being attacked from all sides as irrational or bigoted, and millions of students, our future generation of leaders, have absorbed this viewpoint.

This is a war which we cannot afford to lose. As J. Gresham Machen warned in his article, "Christianity and Culture" in the *Princeton Theological Review* of 1913, on the even of the Fundamentalist Controversy, if we lose this intellectual war, then our evangelism will be immeasurably more difficult in the next generation. He wrote,

> False ideas are the greatest obstacles to the reception of the gospel. We may preach with all the fervor of a reformer and yet succeed only in winning a straggler here and there, if we permit the whole collective thought of the nation to be controlled by ideas which prevent Christianity from being regarded as anything more than a harmless delusion. Under such circumstances, what God desires us to do is to destroy the obstacle at its root.

You can get the video and audio from a later version of this talk from Apologetics 315. I was present in the Wheaton College chapel when he gave the talk I excerpted above. It was moving.

We need a three part approach. We need to be intellectually engaged ourselves. We need to be intentional about marrying well and raising up young people who are intellectually engaged. And we need to study hard subjects so we can be good earners, and support the right kinds of operations. We can't just do whatever makes us feel good, willy-nilly, and then hope that things will work out – we have to work at this.

Jon Huntsman’s anti-Romney ads are awesome

November 10, 2011 | by Wintery Knight | Link | Original Link

Check out these ads by Jon Huntsman.

Backflip:

Weather Vane:

Scared Mittless:

Mitt Romney is the most liberal candidate running in the primary – there are even more videos showing that the man is liberal on abortion, gay rights, global warming, gun control, government-controlled health care, and so on. He is a moderate Democrat – he has no record as a conservative. If elected, he would govern about 80% as liberal Barack Obama governs now. He is to the left of John McCain, in my view.

Obama pleases environmental lobby by killing 20,000-job Keystone XL pipeline

November 11, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record			
	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011
From the Daily Caller.

Excerpt:

> Roughly 20,000 oil industry construction jobs are being thrown under Obama's 2012 campaign bus, largely because the president needs to pump up his sagging support among the environmentalists.
>
> The pitch came Thursday when President Barack Obama put his leadership behind a State Department plan to study alternative routes for the pipeline, which is intended to bring oil from Alberta in Canada to oil refineries along the Gulf Coast.
>
> "We should take the time to ensure that all questions are properly addressed and all the potential impacts are properly understood," said Obama's afternoon statement.
>
> The construction jobs, and the revenue from operating the Keystone XL pipeline, may now go to Canadian workers.
>
> That's because Canadian government officials are already planning to help build a competing pipeline from Alberta's oil fields to new West Coast ports near Vancouver. The likely destination point is the port of Kitimat in British Columbia.

> The U.S. Department of State will begun studying an alternative route for the Keystone pipeline, even though an earlier department study had concluded the proposed route is the best of several alternatives. The new study will delay any final approval until after the 2012 election, allowing Obama to boost his support among environmentalist groups, activists and voters.
>
> But the delay may kill the U.S. segment of any pipeline, because the decision increases the environmentalist movement's clout during any future round of approval disputes, and also spurs the development of a pipeline through Canada.
>
> The job-killing decision was panned by GOP legislators and business groups.
>
> "More than 20,000 new American jobs have just been sacrificed in the name of political expediency," said a statement from Ohio Rep. John Boehner, the Speaker of the House of Representatives.
>
> "This is clearly a political decision and everyone knows it… Politics has trumped jobs in this decision and we can only wonder if the Administration's delay will cause Canada to turn their pipeline west and ship their energy and American jobs elsewhere," said statement from the U.S. Chamber of Commerce.
>
> But the decision helps the Democratic-allied green-energy industry, which is now reliant on government subsidies to compete against the oil energy industry.
>
> The oil that would be pumped through the Keystone XL pipeline would make gas cheaper for drivers, and worsen the competitiveness of the green-tech companies.
>
> The stock value of green-energy companies, and their supply of commercial investment, has already dropped in the last several months because investment analysts believe an Obama loss in 2012 will prompt GOP legislators to cut federal subsidies.
>
> Before his 2008 election, Obama predicted he would raise oil-energy prices to spur the green-energy industry.

The Wall Street Journal explains more.

Excerpt:

> In April 2010 and again this August, State produced multivolume environmental impact statements that concluded the pipeline would have "no significant impacts" on the environment. That should have ended the matter.
>
> But the President's environmentalist friends have decided to make Keystone a test of his green virtue. "We'll see if [Mr. Obama] is an oil guy or a people guy," eco-agitator Bill McKibben recently warned at an Occupy Wall Street event, and the Sierra Club has threatened that it won't "mobilize the environmental base" in 2012 if he approves the project. Various Hollywood worthies have marched in front of the White House in protest.
>
> […]We're guessing this decision to abdicate was really made by President

> Plouffe, as in David Plouffe, the White House political aide who seems to be running most of the executive branch these days. The Keystone cop-out couldn't be a clearer expression that this Administration puts its anticarbon obsessions—and Big Green campaign donors—above job creation and blue-collar construction workers. He's President of the 1%.

This reminds me of the way that Obama hurt the economy by delaying three free trade deals for three years, in order to appease his union supporters.

When Obama tries to create jobs, he ends up doing thinks like giving $535 million taxpayer dollars to Solyndra – to repay his Democrat fundraisers. And then they go bankrupt, because green energy is a hoax. The right way to create jobs is by letting businesses keep the money they earn, and keeping government out of their operations. Unfortunately, Obama doesn't like it when people earn money by selling services and products, and he thinks that government needs to regulate businesses. So, we are stuck with high unemployment.

Christianity and the doctrines of exclusivism, inclusivism and pluralism

November 11, 2011 | by Wintery Knight | Link | Original Link

Are you familiar with the differences between *exclusivism, inclusivism* and *pluralism?* This article from Leadership University explains all three of them.

Here's exclusivism:

> The following is a succinct explanation of the central characters and ideas behind each position. The exclusivist position has been the dominant position of the church as a whole through much of its history until the Enlightenment. Major representatives include Karl Barth, Emil Brunner, Hendrick Kraemer, D.A. Carson, William Lane Craig, and R. Douglas Geivett.
>
> Key to this position is the understanding of God's general and special revelations. God is manifested through creation (general revelation), but Man has responded by freely going against this revelation and, thus, stands guilty before a holy God. However, God has demonstrated a reconciliatory mercy through His word and deed, fulfilled completely in Jesus Christ. The historical person of Jesus, then, is the unique, final, decisive, and normative self-revelation of God to Man (special revelation). Exclusivists believe that Jesus Christ is the sole criterion by which all religions, including Christianity, should be understood and evaluated. Calvin Shenk explains:
>
> > Christ did not come just to make a contribution to the religious storehouse of knowledge. The revelation which he brought is the ultimate standard. Since in Christ alone is salvation and truth, many religious paths do not adequately reflect the way of God and do not lead to truth and life. Jesus is not, therefore, just the greatest lord among other lords. There is no other lord besides him.
>
> Specific texts often employed by exclusivists include Acts 4:12; John 14:6; 1 Corinthians 3:11; and 1 Timothy 2:5-6.

And inclusivism:

> Inclusivism is a blanket term to characterize a sort of "middle way" between exclusivism and pluralism. Most prominent within mainline Protestantism and post-Vatican II Catholicism, its notable proponents (in one formor another) include Karl Rahner, Raimundo Panikkar and Stanley Samartha, and Hans Kung. Evangelical theologians such as Clark Pinnock, Norman Anderson, and John Sanders have also identified themselves with this position. Herein, the agnosticism associated with the latter option above is replaced with outright optimism. Christian salvation is not confined to the historical or geographic

> extent special revelation has spread, rather it must be available to all cultures, irrespective of age or geography.Salvation is still posited wholly in Christ and his salvific work. Specific knowledge of this work, however, is not necessary for the effect (i.e., salvation) to apply to those within a different religious culture who have responded to the general revelation available. Once again, Shenk explains:
>
> > Inclusivists want to avoid monopolizing the gospel of redemption. They acknowledge the possibility of salvation outside of Christian faith or outside the walls of the visible church, but the agent of such salvation is Christ, and the revelation in Jesus is definitive and normative for assessing that salvation. Jesus Christ is believed to be the center, and other ways are evaluated by how they relate to him. Other religions are not just a preparation for Christ, but Christ is actually present in them.
>
> The fundamental differences between exclusivism and inclusivism… are the nature and the content of "saving faith." The former emphasizes explicit faith while the latter points to an implicit faith.

And pluralism:

> Finally, there is the pluralist position. This is undoubtedly the most difficult of the three to define in any general sense. The spectrum of pluralistic thought is as wide as it is long. The focusof this particular study will examine the contributions of its key figures: Paul Knitter, John Hick, and Wilfred Cantwell Smith. Just as in the previous positions, the interpretative range within just these three individuals varies. It is fitting, however, to focus primarily on them since they are the most vocal and influential figures espousing pluralism today.
>
> Hick and Knitter argue the case for pluralism on the following grounds: (1) ethically, it is the only way to promote justice in an intolerant world; (2) in terms of the "ineffability of religious experience," so no religion can claim an absolutist stance; and (3) through the understanding that historical and cultural contexts must be the filter for any absolute religious claim. Hick has argued that all world religions attempt to relate to the unknowable Ultimate Reality (or, the Real), but because of their various cultural and historical contexts these attempts are all naturally different. Hence the various conceptions of the Real and the salvation(s) sought. The common soteriological goal, toward which all religions strive, though, is rooted in the desire to transcend self-centeredness and, in turn, encounter a new (unexplainable) experience with the Real. But, he emphatically emphasizes the fact that there is "no public evidence that any one religion is soteriologically unique or superior to others and thus has closer access to Ultimate Reality."
>
> Therefore, with pluralism, Christ is no more definitive or normative than any religious figure or concept. Or, as Andrew Kirk explains, "Rather than confessing that Jesus Christ is the one Lord over all, this view asserts that the one Lord who

> has manifested himself in other names is also known as Jesus." By "crossing the Rubicon," as Hick and Knitter illustrate, Christians are encouraged to abandon any claim of Christian uniqueness and the possibility of absolute revelation, accepting the fact that the Christian faith is one among many options.

Now maybe you didn't know this, but Roman Catholics seem to have taken a turn away from exclusivism and towards inclusivism in the last century.

So, I thought I would post a rebuttal to the Roman Catholic embrace of inclusivism from one of my favorite Christian apologists, Greg Koukl.

Excerpt:

> There are some issues of Christianity that are intra-Nicene, intramural discussions between believers, in which I think a charitable person can easily see how another Christian can hold a different view because there are things that are difficult to understand in Scripture. For instance, though I'm Reformed in my soteriology, my understanding of salvation–I'm a Calvinist–I am sympathetic to an Arminian perspective because I can see how they, in lines of reasoning from the New Testament and verses themselves from the New Testament, can come to their view. So, though I would disagree, and I think they're mistaken, I understand how they can see it.But there are other positions that I cannot understand because there is no New Testament evidence in favor of it, and, to the contrary, almost to a word, as the New Testament touches the issue, it says quite the opposite.
>
> Earlier this week, I was honored, flattered, and, frankly, humbled to have a very unique opportunity on Monday to address an audience of about 150 Jewish people that were in the midst of Jewish High Holy Day services–morning services, evening services–at kind of a pause time in the afternoon, in which my host and I and another guest had a discussion about Jews and Christians. The three of us were on the panel: my host, Dennis Prager, a man I have a tremendous admiration and affection for, and Greg Coiro, a Roman Catholic priest and a professional friend. I've known both of these men over 20 years and have been in many discussions, both in private and public on the air with Dennis and Greg Coiro.
>
> It was in this opportunity that, in a sense, the ancient quarrel of sorts, theologically, was revisited, that I've had in the past many years ago when we were talking about this in interfaith dialogues. This difference of opinion is a historically new development in Roman Catholicism that stunned me when I first encountered it in the early days of being on Religion on the Line in the late eighties, a radio panel Dennis Prager hosted for many years. The priests on the panel uniformly held the conviction, informed by Vatican II, that Jews don't have to believe in Jesus in order to receive the benefits of Jesus' salvation. This is a view called "inclusivism." It's not the same as pluralism, but in my view, it seems to have the same impact: "Yes, Jesus is necessary for salvation, but you don't

> have to believe in Jesus to benefit from Jesus."
>
> Now, at this afternoon panel recently, the very first question that came up was whether trust in Jesus is necessary for salvation. "Greg, do you believe that? Do Protestants believe that?" I answered, "Yes, I believe that. And no, not all Protestants believe that. But let me try to explain it to you in a way that doesn't sound so stark. Let me try to give it some perspective." I explained that it wasn't as if God was up there looking down at a bunch of religious clubs and prefers some over others. He used to prefer the Jewish club and now He prefers the Christian club. It may sound that way to many when this doctrine of Christianity is put forward: Jesus is the only way of salvation; you must believe in Jesus in order to benefit from what Jesus did.

Talk about Daniel in the lions' den. Anyway, click through and read the whole article to get an idea of how to make your stand for exclusivism in difficult places.

For a general article defending the Christian doctrine of exclusivism, check out this article by William Lane Craig. One of my favorites, from way way back to when I was an undergraduate.

And, if you would like to listen to a debate on pluralism, then here is a debate featuring pluralist John Hick.

EEG device detects consciousness in persons in persistent vegetative state

November 11, 2011 | by Wintery Knight | Link | Original Link

Here's an interesting article from the New Scientist.

Excerpt:

> Signs of consciousness have been detected in three people previously thought to be in a vegetative state, with the help of a cheap, portable device that can be used at the bedside.
>
> "There's a man here who technically meets all the internationally agreed criteria for being in a vegetative state, yet he can generate 200 responses [to direct commands] with his brain," says Adrian Owen of the University of Western Ontario. "Clearly this guy is not in a true vegetative state. He's probably as conscious as you or I are."
>
> [Owen's team] devised a test that uses the relatively inexpensive and widely available electroencephalogram (EEG).
>
> An EEG uses electrodes attached to the scalp to record electrical activity in the brain.
>
> Owen and his team used an EEG on 16 people thought to be in a PVS and compared the results with 12 healthy controls while they were asked to imagine performing a series of tasks.
>
> Each person was asked to imagine at least four separate actions – either clenching their right fist or wiggling their toes.
>
> In three of the people with PVS, brain regions known to be associated with those tasks lit up with activity, despite physical unresponsiveness. This suggested to the researchers that the subjects were carrying out a complex set of cognitive functions including hearing the command, understanding language, sustaining attention and tapping into working memory.
>
> "It isn't the case that just because somebody doesn't respond they're not conscious," Owen says. "There's a growing body of data now demonstrating that many of these patients aren't what they appear."

The rest of the article talks about how the scientists are planning to use their new technique to communicate with patients by asking them to think of specific things which will mean "yes" or "no". The long-term goal is to get the patients to be able to communicate, perhaps even allow them to move a mouse pointer by triggering reactions in their brains by using their thoughts.

I think this research dovetails nicely with the OCD research I mentioned before. Maybe now would be a good time to talk more about that research.

William Dembski discusses the OCD research of Jeffrey Schwartz.

Excerpt:

> Schwartz provides a nonmaterialist interpretation of neuroscience and argues that this interpretation is more compelling than the standard materialist interpretation. He arrived at this position as a psychiatrist specializing in the treatment of obsessive-compulsive disorder (OCD). OCD sufferers recognize obsessive-compulsive thoughts and urges as separate from their intrinsic selves. For instance, after a few washings, the compulsive hand-washer realizes that his hands are clean and yet feels driven to keep washing them. It was reflection on this difference between the obvious truth (the hands are clean) and the irrational doubts (they might still be dirty) that prompted Schwartz to reassess the philosophical underpinnings of neuroscience.
>
> From brain scans, Schwartz found that certain regions in the brain of OCD patients (the caudate nucleus in particular) exhibited abnormal patterns of activity. By itself this finding is consistent with a materialist view of mind (if, as materialism requires, the brain enables the mind, then abnormal patterns of brain activity are likely to be correlated with dysfunctional mental states). Nonetheless, having found abnormal patterns of brain activity, Schwartz then had OCD patients engage in intensive mental effort through what he called relabeling, reattributing, refocusing, and revaluing (the 4 Rs). In the case of compulsive hand-washing, this involved a patient acknowledging that his hands were in fact clean (relabeling); attributing anxieties and doubts about his hands being dirty to a misfunctioning brain (reattributing); directing his thoughts and actions away from handwashing and toward productive ends (refocusing); and, lastly, understanding at a deep level the senselessness of OCD messages (revaluing).
>
> **Schwartz documents not only that patients who undertook this therapy experienced considerable relief from OCD symptoms, but also that their brain scans indicated a lasting realignment of brain-activity patterns. Thus, without any intervention directly affecting their brains, OCD patients were able to reorganize their brains by intentionally modifying their thoughts and behaviors. The important point for Schwartz here is not simply that modified thoughts and behaviors permanently altered patterns of brain activity, but that such modifications resulted from, as he calls it, “mindful attention”-conscious and purposive thoughts or actions in which the agent adopts the stance of a detached observer.**

It turns out that people can freely choose to exert “mental effort” in order to change what their brains are doing.

By the way, if you like this topic, and want a resource to show your friends, be sure and get a hold of the debate on mind vs. brain between Jeffrey M. Schwartz and Michael

Shermer.

Jennifer Roback Morse lectures on sexual liberation and social justice

November 11, 2011 | by Wintery Knight | Link | Original Link

My *favorite* marriage scholar.

Topics:

- what is sexual liberation?
- what effects has it had on the poor?
- can government be neutral about morality?

I am a man who admires passionate women, and she really impresses me. She makes social issues seem as interesting as national security and counter-terrrorism. Not only does she know what she is talking about, but she is soooooo passionate about it.

Here is some research from the Heritage Foundation to back up some of her claims.

This lecture makes me think of books by Theodore Dalrymple. Are all my readers aware of Theodore Dalrymple? Here's a free book (his first) online – chapter by chapter. If you need something GRRRREAT to read on Friday night, this will knock your socks off. Just read a little, and you won't be able to put it down.

Obama gave $443 million no-bid contract to drug firm run by Democrat fundraiser

November 12, 2011 | by Wintery Knight | Link | Original Link

From the radically leftist Los Angeles Times.

Excerpt:

> Over the last year, the Obama administration has aggressively pushed a $433-million plan to buy an experimental smallpox drug, despite uncertainty over whether it is needed or will work.
>
> Senior officials have taken unusual steps to secure the contract for New York-based Siga Technologies Inc., whose controlling shareholder is billionaire Ronald O. Perelman, one of the world's richest men and a longtime Democratic Party donor.
>
> When Siga complained that contracting specialists at the Department of Health and Human Services were resisting the company's financial demands, senior officials replaced the government's lead negotiator for the deal, interviews and documents show.
>
> When Siga was in danger of losing its grip on the contract a year ago, the officials blocked other firms from competing.
>
> Siga was awarded the final contract in May through a "sole-source" procurement in which it was the only company asked to submit a proposal. The contract calls for Siga to deliver 1.7 million doses of the drug for the nation's biodefense stockpile. The price of approximately $255 per dose is well above what the government's specialists had earlier said was reasonable, according to internal documents and interviews.
>
> […]Dr. Thomas M. Mack, an epidemiologist at USC's Keck School of Medicine, battled smallpox outbreaks in Pakistan and has advised the Food and Drug Administration on the virus. He called the plan to stockpile Siga's drug "a waste of time and a waste of money."

Yet another Solyndra to add to the pile of Solyndras. It turns out that Obama actually does like millionaires and billionaires – enough to give them millions of taxpayer dollars from the middle class.

What should you study to prepare yourself for a career?

November 12, 2011 | by Wintery Knight | Link | Original Link

Here's an interesting post from the Chapman Kids blog. The father is a software engineer like me, and he's serious and intentional about how he is leading his children.

In a recent post, he talks about one of the adventures that the two kids are having with a community college professor of English writing. The post is entitled "Continued conversation with the kid's commie teacher".

He writes:

> As many already know, Kelly and Christian take a "writing" class at the community college where the dear leader of the class lectures on the evils of all things Christian, the beauty of communism and atheism, and the righteousness of drug legalization and abortion. Today's topic was Christianity.
>
> […]At the point when he made the claim that Adam and Eve could not have existed because of the scientific evidence for evolution, Christian raised his hand and said, "There is just as much scientific evidence against macroevolution as there is for it."
>
> "You don't believe in evolution!" exclaimed the professor incredulously with a look of disdain and horror.
>
> "We DO believe in microevolution. It is grossly arrogant for you NOT to question your own beliefs when it comes to evolution" said Kelly. "That is what you are demanding from us."
>
> The professor said, "Evolution is established scientific fact" and used several of the standard canards (fossil record, etc.) to establish his point.
>
> Then they were off to the races. Fortunately, during homeschool, Christian and Kelly had read books like The Victory of Reason: How Christianity Led to Freedom, Capitalism, and Western Success by Rodney Stark, Understanding Intelligent Design: Everything You Need to Know in Plain Language by William Dembski and Sean McDowell, Tactics: A Game Plan for Discussing Your Christian Convictions by Greg Koukl, and Intellectuals by Paul Johnson. The professor was armed with shibboleths about the truth of macroevolution and quotes from John Shelby Spong about the virgin birth. John Shelby Spong!?!! You have to be WILDLY out of touch with both current scholarship and reality if you quote John Shelby Spong about virtually anything. He quotes the likes of losers like Noam Chomsky and Bertrand Russell, too.

I tweeted Kelly a link to the William Lane Craig vs John Shelby Spong. Here is part 1 and part 2 of that debate on Youtube. It's worth watching if you haven't seen it before.

Mr. Chapman continues his post:

> It is frustrating. Here is a *writing* a professor who fervently believes he is making students question their beliefs through these profoundly silly arguments. The subject matter is objectionable, but this guy's incompetence is even more objectionable. He does not appear to understand the difference between scientific method and historic method (very important in discussion of the resurrection). Neither does he understand that it is impossible to argue for the primacy of scientific method without consideration of its philosophical underpinings. I guess I should be grateful he is incompetent with respect to his arguments–he does nothing to get the kids to question their faith or worldview. Still, a lot of taxpayer money is wasted on professors like this throughout the land.

Well, the kids have to learn how to write, but I think it is important to note English classes are especially politicized. There is an awful lot of ideology in English classes, because that's the easiest place for people who want to teach to go if they want to avoid being corrected by real life. In English, and other similar areas, it's easier for a teacher to go on and on about their ideas without have to test them against the real world. It's the easiest subject for teachers to force students to agree with your ideology without allowing them to be able to bring in facts to disagree. Basically, a secular lefty teacher can always find literature (usually modern literature, blech!) that casts Christians as brutes, Christian moral standards as outdated and harmful, and non-Christian behavior as praiseworthy. Because literature is necessarily made-up – it's just opinion.

Even someone like me who gets courting and chivalry guidance from Shakespeare and Austen is cautious about taking courses in literature. Plus, you can can get into a lot of trouble for disagreeing with the teacher. I took English electives during my undergraduate degree and they do grade you on your viewpoint, something which is much harder for them to do in math, science, physics, chemistry, etc.

Another post from Mr. Chapman discusses how children should study STEM (science, technology, engineering and math) topics, even if those children intend to work in a non-STEM field.

He writes:

> I found a great article in the Wall Street Journal this morning titled Generation Jobless: Students Pick Easier Majors Despite Less Pay. It had some startling statistics:
>
> Workers who majored in psychology have median earnings that are $38,000 below those of computer engineering majors, according to an analysis of U.S. Census data by Georgetown University.
>
> Wow. The article tells a story about a student who switched from Electrical and Computer Engineering because her team stayed up past midnight in a lab to write a soda machine program. They could not get it to work, so to keep from

> getting a bad grade, she withdrew from the course. Then she switched from engineering to a double major in psychology and policy management. Her grades went from B's and C's to A's. She said her high school did not prepare her for the rigor of an engineering degree.
>
> So the upshot is that she is willing to work in a low-paying career *for the rest of her life* because she was unwilling to do what was necessary to pass a few hard classes. I have had this discussion with people before. If you cannot handle a specifc course, you can do a TON of things to make it happen. You can get a tutor. You can take the class two or even three times if needed. You can take a more remedial course, then try the tough one again. Is it worth it to go to school for a year or two more to do something you like and that pays well for the next forty or fifty year? It seems like a no brainer.
>
> The crazy part is that even for those who want to do less technical jobs, it is best to prepare for that non-technical job with a hard degree.
>
> Research has shown that graduating with these majors provides a good foundation not just for so-called STEM jobs, or those in the science, technology, engineering, and math fields, but a whole range of industries where earnings expectations are high. Business, finance and consulting firms, as well as most health-care professions, are keen to hire those who bring quantitative skills and can help them stay competitive.
>
> We joked about this quite a bit, but I wanted to get it into the kids head that, if they went to college (not necessarily a given–preparation for many careers–pilot, electrician, writer, and small business owner are monumentally better served through some type of preparation other than college), they could study their passion, but they needed to start with a rigorous degree. We defined rigorous as anything that involves hard math. The use of hard math and statistics is creating new breakthroughs in a lot of fields right now: medicine, agriculture, sociology, etc., etc. etc.

I agree with Mr. Chapman. And I think that he is definitely going to raise successful, influential Christians, because he and the children are well prepared and engaged. He has a great relationship with his kids. They are definitely more advanced than I was when I was their age. It's encouraging to me to see a Christian Dad who is focused and purposeful about having solid relationships with his kids, and preparing them for the dangerous world they are entering as adults. I think it's important to admire the people who are getting it right (the parents and the kids together) and learn from their successes. I like that he is still involved with what his children are learning even after they are finished with high school.

I really do think that engineers make the best husbands and fathers. Engineers learn how to gather requirements, evaluate alternative solutions, and then implement. Engineers care about designing to support expandability, maintenance, security and unexpected emergencies. They are easy to argue with, because they believe in logic and evidence.

They are pragmatic – they make decisions based on what works, not what sounds good or feels good. Good engineers also have training in project management, budgeting, leadership and resource management, too. The best engineers are the entrepreneurs, who understand business, economics, business law and politics. It really is an ideal skill set for marriage and parenting. Engineers try to build things, and those building skills can be re-used to build a family.

Gay Penn State coach Jerry Sandusky charged with sexually assaulting boys

November 13, 2011 | by Wintery Knight | Link | Original Link

Warning: this post contains very graphic subject matter. Reader discretion is advised. Do not read this if you are under the age of 18.

Associated Press reports on the homosexual Penn State coach who sexually abused boys.

Excerpt:

> An explosive sex abuse scandal and allegations of a cover-up rocked Happy Valley after former Penn State defensive coordinator Jerry Sandusky, once considered Joe Paterno's heir apparent, was charged with sexually assaulting eight boys over 15 years. Among the allegations was that a graduate assistant saw Sandusky assault a boy in the shower at the team's practice center in 2002.
>
> […]Sandusky, 67, was arrested Saturday and released on $100,000 bail after being arraigned on 40 criminal counts. Curley, 57, and Schultz, 62, were expected to turn themselves in on Monday in Harrisburg.
>
> The allegations against Sandusky, who started The Second Mile in 1977, range from sexual advances to touching to oral and anal sex. The young men testified before a state grand jury that they were in their early teens when some of the abuse occurred; there is evidence even younger children may have been victimized. Sandusky's attorney Joe Amendola said his client has been aware of the accusations for about three years and has maintained his innocence.
>
> […]A preliminary hearing scheduled for Wednesday would likely be delayed, Amendola said. Sandusky is charged with multiple counts of involuntary deviate sexual intercourse, corruption of minors, endangering the welfare of a child, indecent assault and unlawful contact with a minor, as well as single counts of aggravated indecent assault and attempted indecent assault.
>
> […]The grand jury said eight boys were targets of sexual advances or assaults by Sandusky. None was named, and in at least one case, the jury said the child's identity remains unknown to authorities.
>
> One accuser, now 27, testified that Sandusky initiated contact with a "soap battle" in the shower that led to multiple instances of involuntary sexual intercourse and indecent assault at Sandusky's hands, the grand jury report said.
>
> He said he traveled to charity functions and Penn State games with Sandusky, even being listed as a member of the Sandusky family party for the 1998 Outback Bowl and 1999 Alamo Bowl. But when the boy resisted his advances, Sandusky threatened to send him home from the Alamo Bowl, the report said.
>
> Sandusky also gave him clothes, shoes, a snowboard, golf clubs, hockey gear and football jerseys, and even guaranteed that he could walk on to the football team,

> the grand jury said, and the boy also appeared with Sandusky in a photo in Sports Illustrated. He testified that Sandusky once gave him $50 to buy marijuana, drove him to purchase it and then drove him home as the boy smoked the drug.
>
> The first case to come to light was a boy who met Sandusky when he was 11 or 12, the grand jury said. The boy received expensive gifts and trips to sports events from Sandusky, and physical contact began during his overnight stays at Sandusky's home, jurors said. Eventually, the boy's mother reported the allegations of sexual assault to his high school, and Sandusky was banned from the child's school district in Clinton County in 2009. That triggered the state investigation that culminated in charges Saturday.
>
> But the report also alleges much earlier instances of abuse and details failed efforts to stop it by some who became aware of what was happening.
>
> Another child, known only as a boy about 11 to 13, was seen by a janitor pinned against a wall while Sandusky performed oral sex on him in fall 2000, the grand jury said.
>
> And in 2002, Kelly said, a graduate assistant saw Sandusky sexually assault a naked boy, estimated to be about 10 years old, in a team locker room shower. The grad student and his father reported what he saw to Paterno, who immediately told Curley, prosecutors said.

This reminds me of the case where a gay Duke University official adopted a black 5-year old child and then offered him to other gay men for sex on the internet, in exchange for money.

Excerpt:

> Frank Lombard is an associate director at Duke University's Global Health Institute and a homosexual who was charged last week with the molestation of his adopted 5-year-old black son and actively trying to sell him for sex on the internet.
>
> The 40 words above are 40 more than the Main Stream Media has said on this horrible story.
>
> In nearly a week since Lombard was arrested, not one national broadcast or cable television news show has picked up the story. Compare this to the weeks on end of sensational coverage of the white male lacrosse players of the same university charged with rape several years ago.
>
> At the time of this post not one television show has reported the story and only 17 newspapers in the United States featured it – a majority of which are only small local newspapers.
>
> And most of these articles cited the American Press' report on the events, which was as follows:

> **AP)** WASHINGTON – A Duke University official has been arrested and charged with offering his adopted 5-year-old son for sex.
>
> Frank Lombard, the school's associate director of the Center for Health Policy, was arrested after an Internet sting, according to the FBI's Washington field office and the city's police department.
>
> According to an affidavit by District of Columbia Police Det. Timothy Palchak, an unnamed informant facing charges in his own child sex case led authorities to Lombard.
>
> Authorities said that Lombard tried to persuade a person -who he did not know was a police officer -to travel to North Carolina to have sex with Lombard's child.
>
> The detective's affidavit charges Lombard identified himself online as "perv dad for fun," and says that in an online chat with the detective, Lombard said he had sexually molested his son, whom he adopted as an infant.
>
> The court papers say Lombard also invited the undercover detective to North Carolina to have sex with the young boy, and even suggested which hotel he should use."
>
> In response to the AP report, which most of the newspapers used almost verbatim, Mike Adams of Townhall made the observation that "The Associate Press (AP) did not mention the fact that the five-year old offered up for molestation was black. Bringing that fact to light might be damaging to the political coalition that exists between blacks and gays. Nor did the AP mention that the adopted child is being raised by a homosexual couple. Bringing that fact to light might harm the gay adoption movement."
>
> With this shocking lack of coverage of an even more shocking story, many are asking why this did not make the front pages and top headlines like the Duke lacrosse team scandal did. Thomas Lifson of American Thinker posited that "identity politics … apparently trumps all sense of outrage."

And here's another similar story, this time from Scotland where the head of a gay youth organization was running a child sex ring.

Excerpt:

> Eight men in a Scottish paedophile ring have been found guilty of a series of "horrific" sex offences against children and babies.
>
> […]Two of the men – convicted sex offender Neil Strachan and gay rights campaigner James Rennie – were convicted of sex attacks on children.
>
> Strachan, 41, and Rennie, 38, both from Edinburgh, were also found guilty of conspiring to abuse youngsters, as were three other members of the gang.
>
> […]The jury found Rennie, the former chief of LGBT Youth Scotland, an organisation dedicated to helping young gay people, guilty of molesting a young boy over more than four years.

> The child was just three months old when the abuse began.

Those are the facts. I have no comments on them, and I will be strict about filtering comments to this post because of Obama’s law governing speech on controversial issues.

Obama fundraisers got 80% of green energy loans ($16.4 billion)

November 13, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record			
	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011

From the Daily Beast, an article that explains how Obama rewarded many of his campaign fundraisers with green energy loans backed by taxpayer dollars.

Excerpt:

> It would take an entire book to analyze every single grant and government-backed loan doled out since Barack Obama became president. But an examination of grants and guaranteed loans offered by just one stimulus program run by the Department of Energy, for alternative-energy projects, is stunning. The so-called 1705 Loan Guarantee Program and the 1603 Grant Program channeled billions of dollars to all sorts of energy companies. The grants were earmarked for alternative-fuel and green-power projects, so it would not be a surprise to learn that those industries were led by liberals. Furthermore, these were highly competitive grant and loan programs—not usually a hallmark of cronyism. Often fewer than 10 percent of applicants were deemed worthy.

> Nevertheless, a large proportion of the winners were companies with Obama-campaign connections. Indeed, at least 10 members of Obama's finance committee and more than a dozen of his campaign bundlers were big winners in getting your money. At the same time, several politicians who supported Obama managed to strike gold by launching alternative-energy companies and obtaining

> grants. How much did they get? **According to the Department of Energy's own numbers … a lot. In the 1705 government-backed-loan program, for example, $16.4 billion of the $20.5 billion in loans granted as of Sept. 15 went to companies either run by or primarily owned by Obama financial backers—individuals who were bundlers, members of Obama's National Finance Committee, or large donors to the Democratic Party. The grant and guaranteed-loan recipients were early backers of Obama before he ran for president, people who continued to give to his campaigns and exclusively to the Democratic Party in the years leading up to 2008. Their political largesse is probably the best investment they ever made in alternative energy. It brought them returns many times over.**

Think of it as a welfare program paid by the middle class to enrich the secular leftist millionaires and billionaires. Taxing the poor to pay for the rich. That's what the Democrats mean by stimulus spending. And that's why we have been running trillion-dollar deficits for 3 years with an unemployment rate of 9% or more. They got elected in order to enrich themselves, because they are motivated by greed.

How to pick a husband who will love you for a lifetime

November 14, 2011 | by Wintery Knight | Link | Original Link

One of my female Facebook friends was concerned about the way that some men seem to be able to cheat on their wives so easily, and she asked me for a piece of advice on how to avoid being the victim of adultery.

My advice for her was to choose a man who is interested in her for the right reasons – reasons that go beyond 1) her appearance and 2) her ability to be fun. The first thing to know is that a good man understands the value of women beyond superficial things. And the second thing is that a woman has to understand what men need from women in their roles as wives and mothers and then 1) take steps to prepare for those roles, and 2) be willing to improve in their abilities to perform those roles.

Choose a man who wants a woman for the right reasons

Let's talk about the first point – finding a man who needs a woman for more than beauty and entertainment. Think of going for a job interview. Let's say that a woman was interviewed by a man for a job as a combination of 1) housekeeper, 2) therapist, 3) investment manager, and 4) teacher. There's more that wives do than that, but let's leave it at those 4. Now, suppose that the man hires that woman and she is able to perform all 4 of those duties well – so well that the man really really appreciates her. Does it matter if she gets a little older? Of course not! That just means that she is even better now than she was when she started, and her value has gone up! So if the job is based on the right criteria, getting older actually makes the woman a better employee.

But what if the job description is 1) look sexy, 2) go out to nightclubs, 3) play ice hockey, 4) go parachuting. Well, now we have a problem… because getting older usually means that those things are less likely to happen well – or happen at all. And what happens with workers that don't perform? They get unappreciated and their work gets handed off to someone else who can do the job. The thing to realize here is that there is nothing wrong with a woman who is rejected because she isn't sexy or fun. The problem is with the man – with his wrong desires. A man who wants sexy looks isn't really a candidate for marriage – marriage isn't for people who want recreational sex and thrills. Marriage is for life-long love and parenting.

So the first thing that a woman needs to do is to *choose a man who needs her to perform tasks that she can still perform when she is older*. It's even better if you choose a man who values you for things that you can do even better as you get older.

How to do it

So how are we going to find a man who has a requirement for a woman who will get better and better at over time?

1. How does he treat his previous girlfriends?

It’s a good idea to interview his previous girlfriends and ask them what it was like for them with this guy. Can those ex-girlfriends explain his long-term plan? Where did the ex-GF fit into that plan? What did he do to prepare her to fit into his plan? How much emphasis did he place on appearance and entertainment as opposed to talking about finances, parenting, education and moral values? What kinds of activities did he choose – fun things (ballroom dancing and yoga) or things that would prepare the couple for marriage (talking to the woman’s father)? What did he talk about – silly stuff like sports and beer, or apologetics and public policy? How did he lead on moral issues – did he just assert his view, or did he try to persuade? How was he on spiritual questions – had he thought about his religion or was it just what he grew up with? How did he evaluate ex-GF for his plan? How did he lead – did he just give her orders or did he try to persuade her? How did he try to explain to her what men are like and what men need from women, practically and emotionally? What was his plan for having children? How did a woman fit into that plan to have children? What was the goal for having children at all?

If we are specifically worried about not getting cheated on, then the only way to judge that IS by having each of his previous girlfriends come forward and tell you that he was opposed to sex outside of marriage. I think absolute chastity is required, because what it says to you is 1) the man can control himself, 2) the man wants to retain his judgment during courting, 3) the man does not think that relationships are for recreation but for commitment, 4) the man is child-focused – he thinks that marriage is the safest place for raising babies. If a man does not believe that the place for sex is in a marriage, then he is basically going to have affairs whenever he thinks he can get away with it. Either he knows what sex is for, or he doesn’t. Either he is serious about having a stable, loving marriage, or he isn’t. Either he has a purpose for women that is not just for recreation, or he doesn’t. Either he can control himself or he can’t.

2. What decisions has he made to prepare for marriage?

The best thing to do here is to make a list of the roles that men play in marriage and just ask the man point blank – what have you done to prepare for these roles? The roles are 1) provider, 2) protector and 3) moral/spiritual leader.

For 1) just ask him what he studied in school, what his resume looks like, and what his balance sheet looks like. Don’t ask him about the future – ask him about the past. A man can make up any lies about the future he wants. Remember: only money he earned counts as “provider” evidence. Beware of men who take out loans or spend a lot. Beware of men who study political science or psychology. Beware of men who drive their parents’ cars or live in their parents’ homes. Beware of men with expensive addictions to alcohol or cigarettes. Beware of men who spend a lot of money trying to appear trendy and macho.

For 2) we care more about ideas than physical brawn or weapons training. A man is far more likely to have to go to bat for his family armed with his mind than with his fists or weapons in this day and age. And that means understanding logic and evidence and having studied issues like economics, education, science and so on. It’s easy enough to

spring secular leftist friends on him and see if he can handle debating them.

For 3) we are looking for a man who holds to Biblical values, whether they are popular or not. A man who can lead morally should be able to argue for Bible-based moral values using secular arguments and public evidence – preferably peer-reviewed. He needs to have a record of being to be persuasive on moral issues with non-Christians. It's not enough to express opinions. He has to accept the Bible's teaching on moral issues and then be able to be convincing to people who don't accept the Bible. That's the requirement.

The example I like to use is that he needs to be able to explain why premarital sex is morally wrong by showing the evidence that it reduces the stability and quality of the marriage, and this is unacceptable because his goals for the marriage require that the children be developed in a stable, loving marriage. Don't listen to his opinions – demand the evidence. Why does morality matter to him? How do we know he is telling the truth? For spiritual leadership, it's the same thing. He needs to be convincing – not just give his opinion. He needs to explain the alternative views and then refute the false ones and prove the true ones. He needs to appeal to logic and observable, testable evidence. Church attendance is not a good way to test a man for being a spiritual leader, since you learn almost nothing of value in most churches.

I think this is important because today there is a lot of pressure from people to just be nice – to back away from unpopular moral values and from exclusive theological statements. If a man cannot defend his views using public, testable evidence, then he is not safe to marry. A man who can only state his opinions and say "the Bible says" is not reliable. To make the right choices, he needs to know why. He needs to not be twisting what the Bible says just because he wants people to like him.

3. Fathers know best

It is very, very important to get to know that man's father before you marry him. Make sure his parents are still married, then sit down and talk to the father to find out how he treats his wife. It's also a good idea to just talk about the man's character with the father. He will be able to think of anecdotes to show what the man is really like. Test the man's father for his ability to provide, his ability to protect, and his ability to lead on moral and spiritual issues.

But most important of all is to let your father (the woman's father) have all the time in the world to ask the man questions, to see his resume, financial statements, and letters of reference from past girlfriends (and past girlfriend's fathers). The father of a woman is the one who cares the most about her – he is her protector. So he has to be given complete carte blanche to perform investigations and interviews. In my experience, the mothers of young women are not as reliable as the fathers.

4. Make him work for it

The man's job during courting is to evaluate the woman by asking her difficult questions. But the woman also has a job – her job is to make the man prove that he is worthy by making him invest in her life. That means giving him plenty of tasks to do – tasks related

to his roles. Not stupid things like being a good dancer, but important things like scheduling time with her to talk and listen about specific topics related to the relationship. And he has to do work, like solving her problems and performing tasks for her, and bringing her gifts. A man should keep a woman supplied with books and build her up so that she has confidence and strength to put forward her views convincingly.

He also needs to understand the role of emotions and do what it takes to keep her spirits up – frequent flowers, notes, poems, essays, etc. A man should know how to make a bad woman into a good woman – so that he can compliment her when he is finished building her up. That's what men do. That could involve careful use of praise and blame to point in the right direction, or it might involve correcting her false beliefs and confirming her true beliefs with evidence. Men are supposed to make women more moral and more effective – that way the man has someone he can trust and rely on to turn to for care and help.

A woman has to make sure that the man has the habit of making commitments and following through on them when things get hard. A woman should look for evidence of long-term friendships, long-term ownership of pets or property, long-term stability in career or housing. No quitting or dropping out.

Conclusion

I hope that those ideas will at least provide some food for thought. The main point I want to make is that there are some men who are capable of love and marriage and some who aren't. A woman cannot pick a man who is handsome and fun and penniless and non-judgmental and then nag him into making more money, being interested in religion, being able to set moral boundaries for kids, being faithful, etc. The only sure way to get a man to love you for life is to choose a man for that specific purpose, and for no other purpose.

Why did Nancy Pelosi not allow a vote on the Credit Card Fair Fee Act?

November 14, 2011 | by Wintery Knight | Link | Original Link

The San Francisco Chronicle reports on a suspicious stock deal involving Nancy Pelosi.

Excerpt:

> House Minority Leader Nancy Pelosi is the subject of a report on the stock investments of members of Congress that is to air Sunday on CBS' "60 Minutes."
>
> […]Kroft asked Pelosi why she and her investor husband, Paul Pelosi, bought an initial public offering of stock in Visa, the San Francisco-based credit card company, in March of 2008.
>
> The same month, former House Judiciary Committee Chairman John Conyers, D-Mich., introduced the Credit Card Fair Fee Act, which would have given merchants the power to negotiate lower fees with credit card companies. The bill, hostile to the credit card industry, was passed by the committee but never brought to the floor. Pelosi was speaker at the time, and controlled which legislation came to a vote.
>
> The Pelosis bought the Visa stock in three transactions totaling $1 million to $5 million, according to financial disclosure reports. The first was the IPO, followed by two other purchases of the stock at higher prices, Pelosi said.

It certainly seems suspicious to me. She owns millions of dollars of stock in a credit card company, and then proposed legislation to regulate that industry is not allowed a vote on the floor of the House.

CIA Director Leon Panetta confirms that waterboarding led to Osama Bin Laden

November 14, 2011 | by Wintery Knight | Link | Original Link

CIA Director Leon Panetta confirms that waterboarding / enhanced interrogation techniques led to Osama Bin Laden, in this MSNBC interview by Brian Williams.

Excerpt:

> **Brian Williams:** I'd like to ask you about the sourcing on the intel that ultimately led to this successful attack. Can you confirm that it was as a result of waterboarding that we learned what we needed to learn to go after Bin Laden?
>
> **Leon Panetta:** You know, Brian, in the intelligence business you work from a lot of sources of information, and that was true here. We had a multiple series of sources that provided information with regards to this situation. Clearly, some of it came from detainees and the interrogation of detainees, but we also had information from other sources as well. So it's a little difficult to say it was due just to one source of information that we got.
>
> **Williams:** Turned around the other way, are you denying that waterboarding was in part among the tactics used to extract the intelligence that led to this successful mission?
>
> **Panetta:** No, I think some of the detainees clearly were — you know, they used these enhanced interrogation techniques against some of these detainees. But I'm also saying that the debate about whether we would have gotten the same information through other approaches I think is always going to be an open question.
>
> **Williams:** So, final point, one final time: enhanced interrogation techniques, which has always been kind of a handy euphemism in these post-9/11 years, that includes waterboarding.
>
> **Panetta:** That's correct.

This is the waterboarding that Obama opposed. Obama opposed enhanced interrogations. Obama opposed military tribunals. Obama opposed CIA prisons. Obama opposed Guantanamo Bay. Obama opposes counter-terrorism in general.

And don't forget how waterboarding prevented a similar 9/11-style attack on Los Angeles.

Excerpt:

> The Central Intelligence Agency told CNSNews.com today that it stands by the assertion made in a May 30, 2005 Justice Department memo that the use of "enhanced techniques" of interrogation on al Qaeda leader Khalid Sheik Mohammed (KSM) — including the use of waterboarding — caused KSM to reveal information that allowed the U.S. government to thwart a planned attack on Los

> Angeles.
>
> Before he was waterboarded, when KSM was asked about planned attacks on the United States, he ominously told his CIA interrogators, “Soon, you will know.”
>
> According to the previously classified May 30, 2005 Justice Department memo that was released by President Barack Obama last week, the thwarted attack — which KSM called the “Second Wave”– planned “ ‘to use East Asian operatives to crash a hijacked airliner into’ a building in Los Angeles.”
>
> KSM was the mastermind of the first “hijacked-airliner” attacks on the United States, which struck the World Trade Center in New York and the Pentagon in Northern Virginia on Sept. 11, 2001.
>
> After KSM was captured by the United States, he was not initially cooperative with CIA interrogators. Nor was another top al Qaeda leader named Zubaydah. KSM, Zubaydah, and a third terrorist named Nashiri were the only three persons ever subjected to waterboarding by the CIA.

Waterboarding works. It is not torture. We waterboard all our our naval aviators as part of their SERE training.

But do you know what is torture? Partial-birth abortion. We don’t partial-birth abort our naval aviators as part of their SERE training – yet the same people who oppose waterboarding support partial-birth abortion.

Hospital told nurses: assist in abortions or lose your job

November 15, 2011 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> A dozen nurses have filed a lawsuit against their employer, the University of Medicine and Dentistry of New Jersey, which told them they had to either assist in abortions or risk losing their jobs.
>
> The Alliance Defense Fund filed a lawsuit on behalf of 12 nurses in New Jersey who work for a hospital receiving federal health funds who were told they needed to assist abortions or be terminated from their employment. The mandate violates several federal conscience laws and state law, ADF senior legal counsel Matt Bowman tells LifeNews.
>
> "Pro-life nurses shouldn't be forced to assist in abortions against their beliefs," Bowman told LifeNews. "No less than 12 nurses have encountered threats to their jobs at this hospital ever since a policy change required them to participate in the abortions regardless of their religious objections. That is flatly illegal."
>
> According to a copy of the complaint ADF sent LifeNews, the University of Medicine and Dentistry of New Jersey was "demanding that the Nurses must assist abortions in violation of their religious objections or they will be terminated. Defendants have illegally coerced some of the Nurses to train to assist abortions already, and Defendants are presently scheduling the others to do so."

Keep in mind, though, that the Obama administration is opposed to these conscience protections for pro-life doctors and nurses. Democrats believe that Christians should act like non-Christians in public. They think that it is ok to force their views on Christians, using the power of the law and the courts.

Democrat introduces bill to defund adoption agencies that favor married couples

November 15, 2011 | by Wintery Knight | Link | Original Link

From the Washington Times.

Excerpt:

> For the first time in Senate history, a bill has been introduced to encourage agencies not to discriminate against lesbian, gay, bisexual and transgender couples seeking to adopt.
>
> "As more and more LGBT couples are getting married and starting families, we have a great opportunity to place children without a family into happy homes," said Sen. Kirsten E. Gillibrand, New York Democrat and lead sponsor of the Every Child Deserves a Family Act, Monday at the Huffington Post.
>
> The past year has seen many moves toward gay equality, and "the momentum is there to build on our progress," she said, noting the repeal of "don't ask, don't tell," passage of gay marriage in New York and the "unprecedented assault" on the Defense of Marriage Act (DOMA) in the U.S. Senate and in the courts.
>
> Ms. Gillibrand's bill would deny federal funding to any entity that considers sexual orientation, gender identity or marital status when contemplating prospective foster or adoptive families. A companion bill already has been introduced in the House by Rep. Fortney Pete Stark, California Democrat.
>
> […]In recent years, many religious organizations have protested when governments have begun insisting that unmarried couples be considered as foster and adoptive parents. Notably, Catholic agencies have withdrawn from child-placement services.
>
> Still, many such adoptions occur. The Evan B. Donaldson Adoption Institute recently issued a report that said about 65,000 adopted children and 14,000 foster children live in homes headed by non-heterosexuals.
>
> Part of the reason child-welfare and health associations support gay adoption is because advocates say research indicates that children raised in gay homes do as well as, or even better than, children raised by heterosexual couples.
>
> However, a new in-depth review of 59 studies on gay parenting has concluded that such "strong assertions" about gay parenting are "not empirically warranted."
>
> Most of the 59 gay-parenting studies involve children of high-income white lesbian mothers or tended to use very small samples; studied children but not teens; and either had no comparison families or compared lesbian-led homes with single-mother-led homes, wrote Louisiana State University family science professor Loren Marks.

> These and other weaknesses cannot support broad statements that there are “no significant differences” between being raised in same-sex versus mother-father homes, wrote Mr. Marks, whose analysis was included in the Oct. 15 briefs filed by the House of Representatives in its defense of DOMA in Pedersen v. Office of Personnel Management.

The basic intuition behind this initiative is that children either do not need a mother or they do not need a father. Is that really true? I know for sure that children have a host of behavioral problems if they grow up without fathers, for example. I would expect that problems would also occur for children raised without mothers.

Is it OK for Christians to make moral judgments?

November 15, 2011 | by Wintery Knight | Link | Original Link

I found this short article by Paul Copan. I've gotten some flak from liberal Christian women for my disagreement with certain liberal causes, so I thought I would link to this article to defend myself.

Excerpt:

> It's been said that the most frequently quoted Bible verse is no longer John 3:16 but Matthew 7:1: "Do not judge, or you too will be judged." We cannot glibly quote this, though, without understanding what Jesus meant. When Jesus condemned judging, he wasn't at all implying we should never make judgments about anyone. After all, a few verses later, Jesus himself calls certain people "pigs" and "dogs" (Matt. 7:6) and "wolves in sheep's clothing" (7:15)! Any act of church discipline (1 Cor. 5:5) and rebuking false prophets (1 John 4:1) requires judgment. What Jesus condemns is a critical and judgmental spirit, an unholy sense of moral superiority. Jesus commanded us to examine ourselves first for the problems we so easily see in others. Only then can we help remove the speck in another's eye—which, incidentally, assumes that a problem exists and must be confronted.[1] But let's take a closer look at this charge that Christians are judgmental when we speak out on moral issues.

He then goes on to make some points:

- If judging is wrong, then no one can judge you for being judgmental
- In other places, Jesus urges people to make a right judgment
- Is it possible to have convictions yet still treat people with respect?
- Are inclusivists and pluralists (e.g. – Hindus) tolerant of exclusivists?
- What is tolerance, and how does it relate to truth?
- Comparison of "equality of persons" with "equality of viewpoints"
- Are moral standards variable by time and place, or fixed?
- Are moral standards merely descriptive, or also prescriptive?
- Should atheists be moral? What reason do they have to be moral?
- Can non-illusory morality exist in an atheistic universe?
- Can there be real morality if there is no design in the universe?

And he also talks about what else the Bible says about judging.

It's a good article. Moral judgments are necessary for us to warn ourselves and others about the harm that may occur if we cross boundaries.

Thomas Sowell explains the historical effects of tax cuts

November 15, 2011 | by Wintery Knight | Link | Original Link

Thomas Sowell

Here's part 1 of 3.

Excerpt:

> The actual results of the cuts in tax rates in the 1920s were very similar to the results of later tax-rate cuts during the Kennedy, Reagan and George. W. Bush administrations — namely, rising output, rising employment to produce that output, rising incomes as a result and rising tax revenues for the government because of the rising incomes, though the tax rates had been lowered.
>
> Another consequence was that people in higher-income brackets paid not only a larger total amount of taxes, but a higher percentage of all taxes, after what were called "tax cuts for the rich." It was not simply that their incomes rose, but that this was not taxable income, since the lower tax rates made it profitable to get higher returns outside of tax shelters.
>
> The facts are unmistakably plain, for those who bother to check the facts. In 1921, when the tax rate on people making over $100,000 a year was 73%, the federal government collected a little over $700 million in income taxes, of which 30% was paid by those making over $100,000.
>
> […]By 1929, after a series of tax-rate reductions had cut the tax rate to 24% on those making over $100,000, the federal government collected more than a billion dollars in income taxes, of which 65% was collected from those making over $100,000.
>
> There is nothing mysterious about this. Under the sharply rising tax rates during the Wilson administration, fewer and fewer people reported high taxable incomes, whether by putting their money into tax-exempt securities or by any of the other ways of rearranging their financial affairs to minimize their tax liability.

> Under Wilson's escalating income-tax rates to pay for the high costs of the First World War, the number of people reporting taxable incomes of more than $300,000 — a huge sum in the money of that era — declined from well over a thousand in 1916 to fewer than three hundred in 1921. The total amount of taxable income earned by people making over $300,000 declined by more than four-fifths in those years.
>
> Secretary Mellon estimated in 1923 that the money invested in tax-exempt securities had tripled in a decade, and was now almost three times the size of the federal government's annual budget and nearly half as large as the national debt. "The man of large income has tended more and more to invest his capital in such a way that the tax collector cannot touch it," he pointed out.
>
> Getting that money moved out of tax shelters was the whole point of Mellon's tax-cutting proposals. He also said: "It is incredible that a system of taxation which permits a man with an income of $1,000,000 a year to pay not one cent to the support of his government should remain unaltered."

Here's part 2 of 3.

Excerpt:

> Empirical evidence on what happened to the economy in the wake of those tax cuts in four different administrations over a span of more than 80 years has also been largely ignored by those opposed to what they call "tax cuts for the rich."
>
> Confusion between reducing tax rates on individuals and reducing tax revenues received by the government has run through much of these discussions over these years.
>
> Famed historian Arthur M. Schlesinger Jr., for example, said that although Andrew Mellon, secretary of the treasury from 1921 to 1932, advocated balancing the budget and paying off the national debt, he "inconsistently" sought "reduction in tax rates."
>
> Nor was Schlesinger the only highly regarded historian to perpetuate economic confusion between tax rates and tax revenues. Today, widely used textbooks by various well-known historians have continued to misstate what was advocated in the 1920s and what the actual consequences were.
>
> According to the textbook "These United States" by Irwin Unger, Mellon, "a rich Pittsburgh industrialist," persuaded Congress to "reduce income tax rates at the upper-income levels while leaving those at the bottom untouched."
>
> Thus "Mellon won further victories for his drive to shift more of the tax burden from the high-income earners to the middle and wage-earning classes."
>
> But hard data show that, in fact, both the amount and the proportion of taxes paid by those whose net income was no higher than $25,000 went down between 1921 and 1929, while both the amount and the proportion of taxes paid by those whose net incomes were between $50,000 and $100,000 went up — and the

> amount and proportion of taxes paid by those whose net incomes were over $100,000 went up even more sharply.

And here's part 3 of 3.

Excerpt:

> President Kennedy, like Andrew Mellon decades earlier, pointed out that "efforts to avoid tax liabilities" make "certain types of less-productive activity more profitable than other more valuable undertakings" and "this inhibits our growth and efficiency." Therefore the "purpose of cutting taxes" is "to achieve a more prosperous, expanding economy."
>
> "Total output and economic growth" were italicized words in the text of Kennedy's address to Congress in January 1963, urging cuts in tax rates. Much the same theme was repeated yet again in President Reagan's February 1981 address to a joint session of Congress, pointing out that "this is not merely a shift of wealth between different sets of taxpayers."
>
> Instead, basing himself on a "solid body of economic experts," he expected that "real production in goods and services will grow."
>
> Even when empirical evidence substantiates the arguments made for cuts in tax rates, such facts are not treated as evidence relevant to testing a disputed hypothesis, but as isolated curiosities. Thus, when tax revenues rose in the wake of the tax-rate cuts made during the George W. Bush administration, the New York Times reported:
>
> "An unexpectedly steep rise in tax revenues from corporations and the wealthy is driving down the projected budget deficit this year."
>
> Expectations, of course, are in the eye of the beholder. However surprising these facts may have been to the New York Times, they are exactly what proponents of reducing high tax rates have been expecting, not only from these particular tax rate cuts, but from similar reductions in high tax rates at various times going back more than three-quarters of a century.

It's Thomas Sowell – the official economist of the Tea Party.

Obama urged Solyndra to delay layoff announcements until after 2010 elections

November 16, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record			
	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011
From the left-wing Washington Post. (H/T PJ Media)

Excerpt:

> The Obama administration urged officers of the struggling solar company Solyndra to postpone announcing planned layoffs until after the November 2010 midterm elections, newly released e-mails show.
>
> Solyndra, the now-shuttered California company, had been a poster child of President Obama's initiative to invest in clean energies and received the administration's first energy loan of $535 million. But a year ago, in October 2010, the solar panel manufacturer was quickly running out of money and had warned the Energy Department it would need emergency cash to avoid having to shut down.
>
> The new e-mails about the layoff announcement were released Tuesday morning as part of a House Energy and Commerce committee memo, provided in advance of Energy Secretary Steven Chu's scheduled testimony before the investigative committee Thursday.
>
> Solyndra's chief executive warned the Energy Department on Oct. 25, 2010, that he intended to announce worker layoffs Oct. 28. He said he was spurred by numerous calls from reporters and potential investors about rumors the firm was

> in financial trouble and was planning to lay off workers and close one of its two plants.
>
> But in an Oct. 30, 2010, e-mail, advisers to Solyndra's primary investor, Argonaut Equity, explain that the Energy Department had strongly urged the company to put off the layoff announcement until Nov. 3. The midterm elections were held Nov. 2, and led to Republicans taking control of the U.S. House of Representatives.

PJ Media notes:

> It's worth waybacking a bit to see how things were going inside Solyndra. To many on the staff, the place never seemed like it was being run as a serious business. It had spectacular facilities, a lavish conference room, and inventory piled up with no plan to ever sell it. There was no market for its product. One worker says that after the DoE loan came in, the company just went on a "sloppy" spending spree. Around that same time, Solyndra was telling Congress that its financial future was bright, even while in the background it was desperately scrambling for more money to keep going.
>
> And it's against that backdrop that we find the Obama Dept. of Energy pressuring Solyndra, a company that seems to have gotten its massive federal loan chiefly because billionaire George Kaiser donates massively to Democrats and Obama, to politicize its layoffs. Half a billion taxpayer dollars, up in smoke. But you can rest assured that Kaiser's personal fortune remains untouched and Obama's campaign coffers are stuffed to bursting.

The only losers are the taxpayers – the ones Obama claims to be protecting from "millionaires and billionaires".

Dennis Prager: Does a full-time homemaker swap her mind for a mop?

November 16, 2011 | by Wintery Knight | Link | Original Link

On National Review, Dennis Prager argues that going to work full-time is not as intellectually fulfilling as being a stay-at-home mother – if it's done right.

Excerpt:

> I seek to refute the idea that full-time home making is intellectually vapid and a waste of a college education.
>
> Let me first state that I have no argument with those mothers who need or even just wish to work outside the home. My argument is with those who believe that staying at home is necessarily mind-numbing.
>
> Nor do I wish to romanticize child rearing. As a rule, little children don't contribute much to the intellectual life of a parent (although older children who are intellectually curious can spur a parent to seek answers to challenging questions they may not have considered before). Any intellectually alive woman who is a full-time mother must therefore find intellectual stimulation elsewhere.
>
> The point is that she can find such stimulation without leaving her house. Furthermore, the intellectual input she can find is likely to be greater than most women (or men) find working outside the home. There is a reason that about half the audience of my national radio show is female — they listen to talk radio for hours a day and broaden their knowledge considerably. To the Left, the notion that talk radio enhances intellectual development is akin to fish needing bicycles. But that is because the Left's greatest achievement is demonizing the Right, and because they never actually listen to the best of us.
>
> I am syndicated by the Salem Radio Network. My colleagues are Bill Bennett, Mike Gallagher, Michael Medved, and Hugh Hewitt. Two of us attended Harvard, one Yale, and one Columbia; one of us taught at Harvard, another at the City University of New York, and a third teaches constitutional law at a law school. In addition to reviewing the news and discussing our own views, we all routinely interview authors and experts — left and right — in almost every field. The woman who listens to us regularly will know more about economics, politics, current events, world affairs, American history, and religion than the great majority of men and women who work full-time outside of the home.
>
> Lest the latter seem a self-serving suggestion, there are many other opportunities for full-time homemakers to broaden their intellectual horizons: recorded books and a few television networks, for example. And if a woman can get help from grandparents, neighbors, older children, or a baby sitter, there are also myriad opportunities for study outside the house — such as community-

> college classes, book clubs, etc. — and for volunteer work in intellectually more stimulating areas than most paid work.
>
> **Let me give an example of the woman I know best, my wife. She is a non-practicing lawyer with a particular interest in, and knowledge of, taxation and the economy. She decided to stay home to be a full-time mother to her two boys (one of whom is autistic) and her two nieces (who lost their mother, my wife's sister, to cancer when they were very young). Between talk radio, History Channel documentaries, *BookTV* on C-SPAN2, recorded lectures from The Teaching Company/The Great Courses, and constant reading, she has led a first class intellectual life while shuttling kids, folding laundry, and making family dinners.**

I guess by now everyone knows my view on this. I expect a good wife to have a college degree, and preferably a graduate degree, and then a couple of years experience before the children start to arrive. At that point, her job becomes the most important job in the world: making sure that the children that the husband entrusts her with are able to have *more* of an impact for Christian than either the wife or the husband. That is one of the major reasons why Christians get married in the first place, in my view.

The husband's job is to go to work and do mindless, useless drudgery in exchange for money. This is *the more self-sacrificial role in marriage.* He does this so that he can afford to keep a professional teacher in the house to bond with the young children, make sure that they learn empathy and relational skills, and then go on to get bachelor and graduate degrees and influential jobs. She has to plan all of this out and then navigate their path to success – which means she has to know how to follow the path, and how to neutralize any obstacles that may appear. The woman's role in the home is a massive undertaking, and more significant (ultimately) than the man's role outside the home.

It's very important for a woman to choose a man to marry who has this vision for what a woman does in the home. He has to have set the pattern in courtship that it is his responsibility to help her to know as much as possible about all kinds of different subjects. She has to study more than the man, and then impart the knowledge the children. The man only has to have an overall big picture, but the woman has to know the details. In order for the woman to get the details of math, science, foreign policy, economics, etc., she needs to have a constant feed of intellectually challenging materials, and quiet time for study. And it's the man's job to provide these materials and that time, so that she can produce influential children.

Please note that I do not endorse any of the other hosts on the Salem Radio Network. In particular, Medved, Bennett and Hewitt are center-left and support Mitt Romney, with all that that entails.

Does the Christian life involve taking the initiative and executing plans?

November 16, 2011 | by Wintery Knight | Link | Original Link

Does God expect us to make plans and achieve goals?

I've noticed a disturbing view that many Christians seem to absorb who grow up in the church. Basically, the church view says that life is so unpredictable and unknowable that it's pointless for Christians to make plans to achieve goals. In fact, the only thing that Christians can do, on this view, is to wait for God to provide whatever he's going to provide, without the person having to know or do anything that they don't feel like knowing or doing. On this view, it's best not to know too much about how the world really works, because what God wants from us is not to produce a return on our talents, but for us to just muddle through on our prayers, intuitions and feelings.

Well, which view is right? Greg Koukl of Stand to Reason has an opinion on this question.

Excerpt:

> In Matthew Jesus talks about prayer and says, "Ask and it shall be given to you." But Jesus didn't stop there. He went on to say, "Ask and it shall be given to you. Seek and you shall find. Knock and the door will be opened." So it's not just asking, there's seeking and knocking as well. In the same passage Jesus gives us this famous promise. He tells us not to worry about food and clothing because food and clothing will be provided by Him. He says, Look at the lilies of the field, they don't toil or weave. Look at the birds in the field, they don't plant and harvest. The Father takes care of them. He'll take care of you as well.
>
> Now, are we going to read that verse and conclude that God doesn't expect us to weave or till the soil? Paul says in 2 Thessalonians 3, "Anyone who does not work ought not eat." It seems to me we could say to Paul, "Why should we work? Jesus has promised to take care of us." We all understand that in a verse like there is a corporate effort. God has promised to take care of us, but we have to couple that command with other commands that God has given us to toil and weave, as well.

> To work, as well. And, I would say, to try and find ways to get pregnant that are morally acceptable. The same thing with dating and getting married. We have the liberty to find a mate, and I don't see in any way, shape or form that that's not trusting God.
>
> Now, in any of these things there may be a sense of franticness in getting a job, or getting pregnant, or getting a mate that represents an attitude that's wrong. It can be taken to extremes, but then our Christian ethic would inform our attitudes. The very act of taking the initiative in itself is not unbiblical.
>
> In fact, the way I would put it is that it's 100% God and 100% man. What does that mean? It means that God, even though He is in control and we must look to Him, still delegates a portion of active responsibility to us so that He can see to it that we're fed and clothed, but it's our responsibility to go out and look. You can do the act of looking with confidence that God will provide. I think that that obtains in all of these other circumstances, as well.
>
> So there's is not this sharp dichotomy between God working and our working. They go hand in hand. If God expects our initiative in the area of food and clothing, though He has promised to provide, by what standard do we disqualify taking initiative in the ares of reproductive technology and dating? It appears that He's in control here, too.

I think that there are three places where the fatalistic view is most likely to creep up. Those are: 1) romantic relationships, 2) parenting and 3) money management. I think people really want to be free to do whatever "feels good" in those areas. Praying about these matters is a way of stealing God's blessing for a decision that we are making based on feelings, because we don't want to be bothered to take the initiative and do what we have reasons to believe will work. We don't want to have to put in the work to study something and then bind our will to what our investigation shows is the most prudent course – even if it's more difficult.

Some things aren't going to work whether we pray about them or not, because of the way the world works. For example, buying lottery tickets instead of stocks as our retirement plan or marrying the buxom blonde stripper. Praying about a bad idea isn't going to make it work, because our feelings don't change the universe in any way. The universe is the way it is. My advice is to set specific goals, find out how the world really works, and then make informed decisions to achieve those goals. At the very least, don't think that praying about something morally wrong gives you permission to do it.

I really recommend that people consider reading "Decision Making and the Will of God". And, if you are male and you like fiction, then read "Rifleman Dodd". In case you missed my previous post on decision making and the will of God, you should definitely click through and read it.

Social conservative hero James Dobson endorses Ted Cruz

November 16, 2011 | by Wintery Knight | Link | Original Link

Republican Senate candidate Ted Cruz

Remember how I was freaking out about Marco Rubio from the day he announced his candidacy for the Florida Senate seat? Well, I think that Ted Cruz is another Marco Rubio. He may even *eclipse* Marco Rubio.

And James Dobson likes him, too.

Excerpt:

> Today, we are excited to announce that national pro-life, family values leader Dr. James Dobson is endorsing our Senate campaign.
>
> In his endorsement announcement, Dr. Dobson said: "**I'm pleased to endorse Ted Cruz for U.S. Senate because he's exactly the kind of candidate we need to turn this country around**. Religious freedom is under assault every day. We need leaders with the courage to stand strong for conservative values in this battle. Ted Cruz is such a leader—one who will not only vote his convictions in the Senate, but will also lead the fight to defend life, traditional marriage, and religious liberty."
>
> Dr. Dobson added: "Ted Cruz stands out among conservative leaders across the country today. **He has a consistent record of standing up for faith, family, and freedom, and winning values battles on a national level**….I urge all Texans who love life, family, faith, and freedom to not only vote for Ted Cruz, but to work hard for his campaign."

Here's an interview with Ted Cruz from non other than Robert Stacy McCain!

About Ted Cruz

George Will thinks that Republican candidate Ted Cruz is the man to replace Kay Bailey Hutchison in Texas.

Excerpt:

> For a conservative Texan seeking national office, it could hardly get better than this: In a recent 48-hour span, Ted Cruz, a candidate for next year's Republican Senate nomination for the seat being vacated by Republican Kay Bailey Hutchison, was endorsed by the Club for Growth PAC, FreedomWorks PAC, talk-radio host Mark Levin and Erick Erickson of RedState.com.
>
> For conservatives seeking reinforcements for Washington's too-limited number of limited-government constitutionalists, it can hardly get better than this: Before he earned a Harvard law degree magna cum laude (and helped found the Harvard Latino Law Review) and clerked for Chief Justice William Rehnquist, Cruz's senior thesis at Princeton — his thesis adviser was professor Robert George, one of contemporary conservatism's intellectual pinups — was on the Constitution's Ninth and 10th amendments. Then as now, Cruz argued that these amendments, properly construed, would buttress the principle that powers not enumerated are not possessed by the federal government.

Robbie George??? Robbie George??? Holy snouts! That guy is one of the top academic pro-lifers. *Every* Christian apologist knows about Robbie George. It's the law! Well, it isn't. But it should be!

I continue:

> At age 14, Cruz's father fought with rebels (including Fidel Castro) against Cuba's dictator, Fulgencio Batista. Captured and tortured, at 18 he escaped to America with $100 sewn in his underwear. He graduated from the University of Texas and met his wife — like him, a mathematician — with whom he founded a small business processing seismic data for the oil industry.
>
> By the time Ted Cruz was 13, he was winning speech contests sponsored by a Houston free-enterprise group that gave contestants assigned readings by Frederic Bastiat, Friedrich Hayek and Ludwig von Mises. In his early teens he traveled around Texas and out of state giving speeches. At Princeton, he finished first in the 1992 U.S. National Debate Championship and North American Debate Championship.
>
> As Texas's solicitor general from 2003 to 2008, Cruz submitted 70 briefs to the U.S. Supreme Court, and he has, so far, argued nine cases there. He favors school choice and personal investment accounts for a portion of individuals' Social Security taxes. He supports the latter idea with a bow to the late Daniel Patrick Moynihan, who said such accounts enable the doorman to build wealth the way the people in the penthouse do.

> Regarding immigration, Cruz, 40, demands secure borders and opposes amnesty for illegal immigrants but echoes Ronald Reagan's praise of legal immigrants as "Americans by choice," people who are "crazy enough" to risk everything in the fundamentally entrepreneurial act of immigrating.

Ted Cruz has Republican life experiences: legal immigrant, fought communism, studied something that required actual work, founded a small business, etc. This is the prototypical Republican!

You can find out more about him on his positions page. I was interested in his stance on social issues, in particular.

Excerpt:

> **Ted Cruz has fought to protect innocent human life. He played a leading role in several important cases, including defense of the partial-birth abortion ban, parental consent laws, and prohibiting state funds from going to abortion. These cases have all been part of the ongoing effort to ensure that every child in America receives the protection and respect he or she deserves.**
>
> - Authored an amicus brief for 13 states, successfully defending the federal Partial Birth Abortion Ban Act. The ban was upheld 5-4 before the U.S. Supreme Court;
> - Authored an amicus brief for 18 states, successfully defending the New Hampshire parental notification law. The law was upheld 9-0 before the U.S. Supreme Court [note: this brief was awarded the Best Brief Award from the National Association of Attorneys General for U.S. Supreme Court briefs written in 2005-06];
> - Successfully defended Texas's Rider 8, which prohibits state funds for groups that provide abortions, winning unanimously before the Fifth Circuit court of appeals.
>
> **Ted Cruz has worked hard in defense of traditional marriage, including his intervention in a case protecting Texas marriage laws. In addition, he has fought on the federal level to defend marriage between one man and one woman as the fundamental building block of society.**
>
> - When a Beaumont state court granted a divorce to two homosexual men who had gotten a civil union in Vermont, Cruz, under the leadership of Attorney General Greg Abbott, intervened in defense of the marriage laws of the State of Texas, which successfully led to the court judgment being vacated;
> - Worked with Attorney General Abbott to send a letter to Congress in support of the federal Defense of Marriage Act.

He has lots of nice actions related to lots of conservative policies on that page. What a resume! Energy production, voter fraud prevention, border security, legal firearm ownership – you name it, this guy has been fighting for conservative principles. Like Michele Bachmann, (and unlike RINO Mitt Romney), he has actually tried to do pro-life and pro-marriage things. We don't just have to take his word for it, he has the actions to prove his words. Just look at the list of issues on his page!

Seven of the ten richest congressman are Democrats

November 17, 2011 | by Wintery Knight | Link | Original Link

From the PJ Tatler. (H/T ECM and The Conscience of Young Conservative)

Excerpt:

> Yes America, there is a wealth gap. Seven of the top ten wealthiest members in Congress are Democrats.
>
> The results are based on **a new study** released today by the non-partisan Center for Responsive Politics. The Center did an analysis of the financial statements filed by members of Congress for 2010 income and net worth.
>
> This revelation of extreme wealth by Democratic politicians is completely contrary to the public image of the Democratic Party. President Obama has castigated "millionaires and billionaires," suggesting they are evil people, largely Republican or conservative. The issue of the Democratic Party as the millionaire party has not yet made it into the mainstream media. But the facts are indisputable. Democratic members of Congress tend to be wealthier than their Republican counterparts.
>
> **According to the Center, 36 Senate Democrats and 30 Senate Republicans reported an average net worth in excess of $1 million in 2010. The median estimated net worth among members of the Senate Democrats was $2.58 million. Senate Republican median net worth was $2.43 million.**
>
> **And, the wealthy Democrats tend to inherit their money. Republicans tend to earn it.**
>
> Senators John Kerry (D-MA), Jay Rockefeller (D-WV) and House Minority Leader Nancy Pelosi (D-CA) all came by their fortunes through marriage or inheritance. Senator Kerry, who was born into wealth, has listed his net worth as high as $281 million, while his wife Teresa is estimated to be worth $1 billion. Ms. Heinz did not earn her wealth either. She inherited the money from her husband Senator John Heinz, who died in an airplane crash.
>
> Senator Rockefeller, representing dirt poor West Virginia, inherited his fortune from his family. He is reported to be worth $136 million.
>
> While the economy continued to tank in 2010, Rep. Pelosi reported her own wealth **to grow by 62%**. Pelosi's husband, Paul, is a financier. They own a multi-million dollar vineyard and a number of million dollar homes. They have a net worth of $196 million.
>
> […]Among those who actually got their money by earning it, Republicans were in the slight majority. Rep. Darrell Issa (R-CA), a self-made millionaire earned his wealth by creating the Viper car security system. He is estimated to be worth

> more than $700 million. Sen. Jim Risch (R-Idaho) started as a rancher and attorney. His wealth is cited as $88 million.
>
> Rep. Vernon Buchanan (R-FL), one of only three Republicans to make the top ten earned his money through real estate and car dealerships. He is estimated to be worth over $323 million.
>
> Much has been made about Senator Bob Corker (R-TN) being the wealthiest Republican in the U.S. Senate. But he is ranked only number 14 because there are so many wealthier Democrats ahead of him. He doesn't make the Top Ten. He worked as a construction superintendent. Then started his own company. Today he is worth $107 million.
>
> […]**The issue of politics and money has been a complicated one. President Barack Obama brought in far more money from Wall Street in his 2008 campaign than his Republican opponent Sen. John McCain (R-AZ). Obama raked in $1 million from Goldman Sachs employees that year. While his numbers are lower this year, the President has attracted $15.2 million from the financial services industry that he attacks so frequently.**
>
> **Many Democrats run institutions on Wall Street. Jamie Dimon, the CEO of J.P. Morgan has been a long-time Democratic supporter. So too has Goldman Sachs Chairman and Chief Executive Officer Lloyd C. Blankfein.**

Who are the real millionaires and billionaires?

Obama administration gives Democrat-connected BrightSource Energy $1.4 billion loan

November 17, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record

	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011

Big Government explains the latest example of the Obama administration handing out billions of taxpayer dollars to their cronies in the green energy racket.

Excerpt:

> President John F. Kennedy's nephew, Robert Kennedy, Jr., netted a $1.4 billion bailout for his company, BrightSource, through a loan guarantee issued by a former employee-turned Department of Energy official.
>
> […]The details of how BrightSource managed to land its ten-figure taxpayer bailout have yet to emerge fully. However, one clue might be found in the person of Sanjay Wagle.
>
> Wagle was one of the principals in Kennedy's firm who raised money for Barack Obama's 2008 presidential campaign. When Obama won the White House, Wagle was installed at the Department of Energy (DOE), advising on energy grants.
>
> From an objective vantage point, investing taxpayer monies in BrightSource was a risky proposition at the time. In 2010, BrightSource, whose largest shareholder is Kennedy's VantagePoint Partners, was up to its eyes in $1.8 billion of debt obligations and had lost $71.6 million on its paltry $13.5 million of revenue.
>
> Even before BrightSource rattled its tin cup in front of Obama's DOE, the company made it known publicly that its survival hinged on successfully

> completing the Ivanpah Solar Electrical System, which would become the largest solar plant in the world, on federal lands in California.
>
> In its Securities and Exchange Commission filings, BrightSource further underscored the risky nature of the Ivanpah venture and, more broadly, the company's viability:
>
> Our future success depends on our ability to construct Ivanpah, our first utility-scale solar thermal power project, in a cost-effective and timely manner… Our ability to complete Ivanpah and the planning, development and construction of all three phases are subject to significant risk and uncertainty.
>
> Ironically, in 2008, Kennedy wrote a CNN article praising Obama as reminiscent of his famous father and uncle. The article, titled "Obama's Energy Plan Would Create a Green Gold Rush," proved prophetic. However, the "green gold rush" came in the form of $1.4 billion of taxpayers' money flowing into the pet projects of rich venture capital investors like Kennedy, not average citizens.
>
> What's more, BrightSource touted the Ivanpah project as a green jobs creator. Yet as its own website reveals, the thermal solar plant will only create 1,400 jobs at its peak construction and 650 jobs annually thereafter. Even using the peak estimate of 1,400 jobs, that works out to a cost to taxpayers of $1 million per job created.

These revelations and more are described in the forthcoming book "Throw Them All Out" by Peter Schweizer. This could be a game-breaker.

George Will on the secular left's opposition to freedom of association

November 17, 2011 | by Wintery Knight | Link | Original Link

From the liberal Washington Post.

Excerpt:

> Illustrating an intellectual confusion common on campuses, Vanderbilt University says: To ensure "diversity of thought and opinion" we require certain student groups, including five religious ones, to conform to the university's policy that forbids the groups from protecting their characteristics that contribute to diversity.
>
> Last year, after a Christian fraternity allegedly expelled a gay undergraduate because of his sexual practices, Vanderbilt redoubled its efforts to make the more than 300 student organizations comply with its "long-standing nondiscrimination policy." That policy, says a university official, does not allow the Christian Legal Society "to preclude someone from a leadership position based on religious belief." So an organization formed to express religious beliefs, including the belief that homosexual activity is biblically forbidden, is itself effectively forbidden. There is much pertinent history.
>
> […][I]n 2010 the [Supreme] court held, 5 to 4, that a public law school in California did not abridge First Amendment rights when it denied the privileges associated with official recognition to just one student group — the Christian Legal Society chapter, because it limited voting membership and leadership positions to Christians who disavow "sexual conduct outside of marriage between a man and a woman." Dissenting, Justice Samuel Alito said the court was embracing the principle that the right of expressive association is unprotected if the association departs from officially sanctioned orthodoxy.
>
> In wiser moments, the court has held that "this freedom to gather in association . . . necessarily presupposes the freedom to identify the people who constitute the association and to limit the association to those people only." In 1984, William Brennan, the court's leading liberal of the last half-century, said:
>
> "There can be no clearer example of an intrusion into the internal structure or affairs of an association than a regulation that forces the group to accept members it does not desire. Such a regulation may impair the ability of the original members to express only those views that brought them together. Freedom of association therefore plainly presupposes a freedom not to associate."
>
> As professor Michael McConnell of Stanford Law School says, "Not everything the government chooses to call discrimination is invidious; some of it is

> constitutionally protected First Amendment activity." Whereas it is wrong for government to prefer one religion over another, when private persons and religious groups do so, this is the constitutionally protected free exercise of religion. So, McConnell says, "Preventing private groups from discriminating on the basis of shared beliefs is not only not a compelling governmental interest; it is not even a legitimate governmental interest."
>
> Here, however, is how progressivism limits freedom by abolishing the public-private distinction: First, a human right — to, say, engage in homosexual practices — is deemed so personal that government should have no jurisdiction over it. Next, this right breeds another right, to the support or approval of others. Finally, those who disapprove of it must be coerced.
>
> Sound familiar? It should. First, abortion should be an individual's choice. Then, abortion should be subsidized by government. Next, pro-life pharmacists who object to prescribing abortifacients should lose their licenses. Thus do rights shrink to privileges reserved for those with government-approved opinions.
>
> The question, at Vanderbilt and elsewhere, should not be whether a particular viewpoint is right but whether an expressive association has a right to espouse it. Unfortunately, in the name of tolerance, what is tolerable is being defined ever more narrowly.
>
> Although Vanderbilt is a private institution, its policy is congruent with "progressive" public policy, under which society shall be made to progress up from a multiplicity of viewpoints to a government-supervised harmony. Vanderbilt's policy, formulated in the name of enlarging rights, is another skirmish in the progressives' struggle to deny more and more social entities the right to deviate from government-promoted homogeneity of belief. Such compulsory conformity is, of course, enforced in the name of diversity.

I'm surprised by George Will. I always thought he was a moderate. But since I started writing this blog, I've been happy to see that he is a lot more conservative than people like Charles Krauthammer, Michael Barone, and other well-known moderate conservatives. I don't require that he agree with me – I just want him to understand my views. And he does.

My Experience

When I've spent time talking to secular leftists in my office, they seem to have a horror of disagreements. They are desperate to make sure that everyone believes the same thing on every issue. The conversations typically proceed as follows:

1. They express their view on some subject and imply that it is the only intelligent view, since they learned it from their college professors. (Evolution is a fact)
2. I produce peer-reviewed experimental data that falsifies their view. (The synthesis of functional proteins by unintelligent forces is impossible)
3. They try desperately to find some area that we agree on that is unrelated to my

evidence. (But you agree that the Earth is older than 6,000 years, right?)

This is what the left means by diversity of opinion. Everyone has to agree, even if no one can prove that what is agreed to is actually true. They believe that rent controls doesn't result in a shortage of affordable apartments, even though this is not what has been observed. They believe it because it sounds nice, and it makes people think that they are nice people. And they get very confused and flustered if you try to prove them wrong with evidence.

Answering the question “Who Designed the Designer?”

November 17, 2011 | by Wintery Knight | Link | Original Link

From Jay Richards.

The Privileged Planet

Jay Richards is famous for his work on Christianity and economics, but he is also very good at origins issues, having co-authored the famous book “The Privileged Planet”. The thesis of the book is that there is a correlation between the conditions needed for habitability and the conditions needed for “measurability”. For example, you can ask the question “where is the best place in the universe to observe a solar eclipse?” The answer is “The same place that is also best for complex life to exist”.

Here’s an introduction.

Excerpt:

> The fact that our atmosphere is clear; that our moon is just the right size and distance from Earth, and that its gravity stabilizes Earth’s rotation; that our position in our galaxy is just so; that our sun is its precise mass and composition — all of these facts and many more not only are necessary for Earth’s habitability but also have been surprisingly crucial to the discovery and measurement of the universe by scientists. Mankind is unusually well positioned to decipher the cosmos. Were we merely lucky in this regard? Scrutinize the universe with the best tools of modern science and you’ll find that a place with the proper conditions for intelligent life will also afford its inhabitants an exceptionally clear view of the universe. Such so-called habitable zones are rare in the universe, and even these may be devoid of life. But if there is another civilization out there, it will also enjoy a clear vantage point for searching the cosmos, and maybe even for finding us.
>
> To put it both more technically and more generally, “measurability” seems to correlate with “habitability.” Is this correlation simply a strange coincidence? And even if it has some explanation, is it significant?

Or you can watch an hour-long DVD on Youtube:

You can find more articles by Jay Richards on the Privileged Planet web site.

Why do Christians leave the faith? The surprising importance of apologetics

November 18, 2011 | by Wintery Knight | Link | Original Link

From Black, White and Gray.

Excerpt:

> Several colleagues and I recently finished a study of why Christians leave the faith, and we were surprised at what made a difference as well what didn't seem to matter. In the next few weeks, I'll be reviewing our findings in a series of posts.
>
> To start with, let me tell you how we conducted our study. We were interested in how people who left the faith—let's call them deconverts—explained their actions; i.e., why did they think they left the faith. In order to do this, we found a website on-line in which former Christians post their "testimonials" about their religious history. We chose 50 of these testimonials and read, reread, and reread again each one and then we discussed them as a group. Our goal was to find themes in these deconversion narratives, and several themes did emerge.
>
> […]All told, we found four general explanations offered by these 50 people as to why they left Christianity.
>
> The first explanation regards intellectual and theological concerns about the faith. A full two-thirds of the testimony writers emphasized these concerns and some wrote about little else.
>
> Some of the intellectual concerns were issues that would be faced by members of any religion, not just Christianity. For example, what is the relationship between religion and science? Does believing in one negate the other? What is the role of logic versus faith?
>
> One man, who was a fundamentalist Christian in young adulthood, defined faith and reason as mutually contradictory, and he described his departure from Christianity as a victory of reason. He wrote: "for most of us, the battle was entirely within ourselves. It was a pitched battle between our faith and our reason, and eventually our reason just refused to be suppressed any longer, no matter what the potential consequences."
>
> Many other writers, though, focused on theological issues specific to Christianity. One of the issues that arose with the existence of hell and how that could be reconciled with the Christian image of a loving God. Basically, how could a loving God throw his children into hell for eternity?
>
> A man raised as a Baptist expressed what he viewed as a contradiction between love and hell: "Would a loving father really not allow some people to have a chance and send them to hell for eternity? I don't think so!"

> One woman, who loved her grandparents, now deceased, wondered how God could condemn them for not having believed in Him. She exclaimed: “what the hell kind of jerk was God if he’d condemn people like my grandparents?”
>
> A related theological issue regarded human suffering here on Earth. If God is powerful and loving, why is there suffering? One writer likened God’s allowance of suffering to a negligent police officer. ““What if a police officer sat and watched silently as a child was murdered even though he had the power to stop it?”
>
> Other writers attributed to God a more active role in human suffering, often pointing to His actions in the Old Testament. A former Methodist wrote of his doubts about God starting early in his life when he learned about Noah’s Ark. “The turning argument for me was actually a story that is in children’s Sunday school books – Noah’s Ark. I started to really think about the fact that God pretty much killed the ENTIRE planet.” Similarly, a former Pentecostal described God’s actions in the Old Testament as “atrocity after atrocity.”
>
> The final frequently-expressed concern regarded the Bible and its reliability. Is it accurate? Is it believable? A former Catholic dismissed the Bible altogether. She wrote: “Science has all but proven that the Old Testament could not have happened. It is also fast proving that the New Testament is nothing but fiction.”

My friend ECM had a different take on it, commenting on Facebook:

> I’m going to go out on a limb and state that most people simply don’t care.
>
> You can refute arguments/do apologetics all day long to the run-of-the-mill village atheist, but that’s not going to do you much good in reaching the average non-believer since they’re generally apathetic about the whole project–God, etc., simply has no impact on their daily lives.
>
> What I think would help is if *actual* Christians walked the walk a bit–I think this is, really, the crux of your problem. Too many of you say you believe in God and are Christians, but how many actually abide by the general strictures of the faith?
>
> This has a rather disconcerting effect on non-believers and it makes people like me, who are at least open to the idea*, more wary because how can I very well take you seriously if you’re not actually practicing it? It smacks of “do as I say, not as I do.” (It also gives the media et al a hammer w/ which to beat Christians over the head with ad nauseaum, causing massive damage to credibility.)
>
> (It doesn’t give me an pleasure in saying any of this, but there it is from someone that’s at least open to the concept.)
>
> (And please! Please let’s not turn this into a thread on apologetics aimed at ‘showing me the light’–I know all the arguments and have gone over them a thousand times w/ the Knight via email, chat, etc., so I’m well-versed on all it.)
>
> *I would classify myself as a small ‘d’ deist.

> I should clarify: when I say “average non-believer” I am also referring to, in far too many (most?) cases, those that actually profess a belief in God and identify as Christian.

And my friend Dina wrote this:

> Apologetics should be more than winning debates with athiests. Today, defending the faith ought to be more concerned with ridding the church of the crowd pleasing rot that has infiltrated it over the last century. The problem is exactly what Eriku and lots of us see in professing Christians. Sadly, many many people who profess to be Christians are no different from the world, so the world views us all as either hypocrites or liars. Times may change, society may change but God and the bible does not. The bible is the only rule to direct us and while philosophy has much to offer, if it backs up the bible do we need it in the first place? If it goes against the bible, then its worthless man made opinions. The problems with Christianity started in the church, and the solution will have to start in the church as well. He did it before and He will do it again.

I replied and said that stronger, more consistent Christians are important, but I think apologetics is needed in order to build them up – because, as I’ve written before – people only act Christianly when they have reasons to believe that Christianity is objectively true.

Obama-connected General Electric paid no taxes on $14 billion profit

November 18, 2011 | by Wintery Knight | Link | Original Link

From the Weekly Standard, a possible explanation of why GE CEO Jeffrey Immelt is tightly linked to Barack Obama.

Excerpt:

> General Electric, one of the largest corporations in America, filed a whopping 57,000-page federal tax return earlier this year but didn't pay taxes on $14 billion in profits. The return, which was filed electronically, would have been 19 feet high if printed out and stacked.
>
> The fact that GE paid no taxes in 2010 was widely reported earlier this year, but the size of its tax return first came to light when House budget committee chairman Paul Ryan (R, Wisc.) made the case for corporate tax reform at a recent townhall meeting. "GE was able to utilize all of these various loopholes, all of these various deductions–it's legal," Ryan said. Nine billion dollars of GE's profits came overseas, outside the jurisdiction of U.S. tax law. GE wasn't taxed on $5 billion in U.S. profits because it utilized numerous deductions and tax credits, including tax breaks for investments in low-income housing, green energy, research and development, as well as depreciation of property.
>
> "I asked the GE tax officer, 'How long was your tax form?'" Ryan said. "He said, 'Well, we file electronically, we don't measure in pages.'" Ryan asked for an estimate, which came back at a stunning 57,000 pages. When Ryan relayed the story at the townhall meeting in Janesville, there were audible gasps from the crowd.

Meanwhile, Obama's General Motors bailout is going to cost taxpayers *at least $23.6 billion dollars*.

Excerpt:

> The Treasury Department dramatically boosted its estimate of losses from its $85 billion auto industry bailout by more than $9 billion in the face of General Motors Co.'s steep stock decline.
>
> In its monthly report to Congress, the Treasury Department now says it expects to lose $23.6 billion, up from its previous estimate of $14.33 billion.
>
> The Treasury now pegs the cost of the bailout of GM, Chrysler Group LLC and the auto finance companies at $79.6 billion. It no longer includes $5 billion it set aside to guarantee payments to auto suppliers in 2009.

Obama's millionaires and billionaires get another bailout and taxpayers get the bill.

Did Jesus come back to life? Two scholars debate the evidence

November 18, 2011 | by Wintery Knight | Link | Original Link

Christians believe that God caused Jesus to live again after he had been killed because that's the best explanation of the historical evidence. And they are even able to debate about the historical evidence with other scholars in universities and colleges, as we can see below.

Here's an example of a debate on the resurrection of Jesus:

The MP3 file can be obtained from Apologetics 315.

SUMMARY

William Lane Craig's opening speech

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is

missing
- The empty tomb was discovered by women
    - the testimony of women of women was not normally allowed in courts of law
    - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

James Crossley's opening speech

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

William Lane Craig's first rebuttal

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history

- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

James Crossley's first rebuttal

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

William Lane Craig's second rebuttal

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

James Crossley's second rebuttal

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates

invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and

resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

William Lane Craig's conclusion

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

James Crossley's conclusion

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should

prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

How did the Reagan tax cuts and Bush tax cuts affect unemployment?

November 18, 2011 | by Wintery Knight | Link | Original Link

Consider this article by the Cato Institute, a libertarian think tank, which discusses how the Reagan tax cuts affected the unemployment rate.

Excerpt:

> In 1980, President Carter and his supporters in the Congress and news media asked, "how can we afford" presidential candidate Ronald Reagan's proposed tax cuts?
>
> Mr. Reagan's critics claimed the tax cuts would lead to more inflation and higher interest rates, while Mr. Reagan said tax cuts would lead to more economic growth and higher living standards. What happened? Inflation fell from 12.5 percent in 1980 to 3.9 percent in 1984, interest rates fell, and economic growth went from minus 0.2 percent in 1980 to plus 7.3 percent in 1984, and Mr. Reagan was re-elected in a landslide.
>
> […]Despite the fact that federal revenues have varied little (as a percentage of GDP) over the last 40 years, there has been an enormous variation in top tax rates. When Ronald Reagan took office, the top individual tax rate was 70 percent and by 1986 it was down to only 28 percent. All Americans received at least a 30 percent tax rate cut; yet federal tax revenues as a percent of GDP were almost unchanged during the Reagan presidency (from 18.9 percent in 1980 to 18.1 percent in 1988).
>
> What did change, however, was the rate of economic growth, which was more than 50 percent higher for the seven years after the Reagan tax cuts compared with the previous seven years. This increase in economic growth, plus some reductions in tax credits and deductions, almost entirely offset the effect of the rate reductions. Rapid economic growth, unlike government spending programs, proved to be the most effective way to reduce unemployment and poverty, and create opportunity for the disadvantaged.

The conservative Heritage Foundation describes the effects of the Bush tax cuts. (H/T The Lonely Conservative)

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made

> the earlier tax relief effective immediately. Congress also lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

Those are the facts. That's not what you hear in the media, but they are the facts.

Obama administration blocks oil production in Ohio: 200,000 jobs lost

November 19, 2011 | by Wintery Knight | Link | Original Link

Cost of renewable wind and solar energy

The Heritage Foundation explains Obama's latest effort to appease the environmentalist cult.

Excerpt:

> First, it was 20,000 jobs the Obama Administration delayed by punting a decision to approve the Keystone XL pipeline, which would bring 700,000 barrels of oil per day from Canada into the United States. Multiply that number by 10 and you have the amount of jobs the President is putting on hold by delaying a mineral lease sale in Ohio's Wayne National Forest for oil and gas drilling. This decision kills jobs and denies Americans access to affordable energy.
>
> *The Washington Examiner* reports that Wayne National Forest already has 1,300 oil and gas wells in operation, but access to Utica's shale gas reserves would require hydraulic fracturing. The United States Department of Agriculture announced a six-month delay in the leasing of 3,000 acres in the forest to study the environmental effects of hydraulic fracturing. This decision not only delays access to the jobs and energy that Americans need now, but it blocks an important revenue source for federal and state governments. The Ohio Oil and Gas Energy Education Program estimated that:
>
> Natural gas and crude oil industry could help create and support more than 200,000 Ohio-based jobs from the leasing, royalties, exploration, drilling, production and pipeline construction activities for the Utica shale reserve. The

> state could experience an overall wage and personal-income boost of $12 billion by 2015 from industry spending.
>
> The study also projects royalty payments to landowners, schools, businesses and communities could increase to as much as $1.6 billion by 2015—a number that exceeds the total amount of royalties distributed by Ohio's natural gas and crude oil industry in the last decade. Total tax revenue from oil and gas exploration and development in the Utica shale formation from 2011 until 2015, including severance, commercial activity, ad valorem (property), federal, state and local taxes, is projected to be approximately $479 billion. Industry expenditures related to Utica shale development could generate approximately $12.3 billion in gross state product and result in a statewide output or sales of more than $23 billion.
>
> Hydraulic fracturing, known as "fracking," is a long-proven process by which producers inject a fluid (composed of 99 percent water) and sand into wells to free oil and gas trapped in rock formations. Used in over 1 million wells in the United States over more than six decades, fracking has been successfully used to retrieve over 7 billion barrels of oil and over 600 trillion cubic feet of natural gas.
>
> Spencer Hunt of the *Columbus Dispatch* reports that "Tom Stewart, vice president of the Ohio Oil and Gas Association, said shale well drilling would be less harmful to the forest than conventional drilling because as many as six shale wells can be drilled on a single pad."
>
> Fracking is subject to both federal and state regulations, and there have been no instances of contamination to drinking water. Groundwater aquifers sit thousands of feet above where fracking takes place, and studies by the Environmental Protection Agency, the Ground Water Protection Council, and other agencies have found no evidence of groundwater contamination. Where there have been unwanted environmental outcomes—such as gas migration—they were the result of poor well construction or problems with the concrete and steel casings around the well bore. Those instances have been rare, and they were not a result of the fracking process itself.
>
> Hydraulic fracturing will be a critical process in developing energy supplies in the future. The National Petroleum Council estimates that fracking will allow 60–80 percent of all domestically drilled wells in the next 10 years to remain viable.
>
> You can study the effects of hydraulic fracturing for six more months, but the facts are going to remain the same. Fracking is a long-proven process that can help access our nation's abundant oil and gas reserves. Delaying lease sales is delaying the creation of much-needed jobs.

So let me get this straight. If Obama isn't handing out $535 million of taxpayer dollars to Solyndra and $1.4 billion of taxpayer dollars to BruightSource, then he's busy blocking oil drilling in the Gulf and blocking oil drilling in Ohio and blocking the construction of the Keystone XL pipeline. It's no wonder we have a 9% unemployment rate – this man

doesn't want to create jobs. He wants to reward the people who got him elected by handing out millions and billions of taxpayer dollars to millionaires and billionaires – in effect, transferring wealth from the middle class to rich Democrat fundraisers. I find it very surprising that labor unions back this man in elections. What sense does that make?

Global warming alarmism is nothing but a religion. Why do we have to have so much religion in politics? I understand if environmentalists want to practice their religion in their own homes and in the churches, but why do we have to give them taxpayer money for their environmentalist devotions? And why to we have to put our economy on hold just so that we are compliant with their religious beliefs? Why did we elect a President for believes in forcing a religious ideology onto the rest of us? Why do we have to have our freedom and prosperity – our right to produce goods and our right to purchase goods – limited by a religious ideology?

Saturday night fun: Mark Driscoll on teenage vampire novels and cougars

November 19, 2011 | by Wintery Knight | Link | Original Link

This is pretty funny. Now I don't agree with EVERYTHING Mark Driscoll says, so don't beat me up!

"'If he loves you, he'll never bite you' – that's what it should say!"

I still think that Wayne Grudem is the best though, while Driscoll is just more fun. To me, a good pastor is a pastor who can navigate the Bible, spot the overarching themes, and then make plans that respect the Bible, given the realities we face in the world today. A good pastor knows the Bible, but he also knows how the world works, so that he can apply the Bible and make things happen. You need both. And when you find a pastor who can do both, then you go to church and you like it.

And I'm not a Calvinist, I just know what a good pastor looks like – they are the ones that use real evidence to make their points, and for application. Pastors ought to be the smartest people in the world. That's what they should aspire to. They ought to be able to inspire their flock to make good decisions and plans that really will please God. Plans that work.

The New York Times on Christian marriage guru Gary Chapman

November 20, 2011 | by Wintery Knight | Link | Original Link

From the liberal New York Times.

Excerpt:

> "As a senior in high school, I had a strong sense that God wanted me in some kind of ministry," he told me. "There were only two things I knew in a Christian framework that I could do. One would be the pastor of a church, the other would be a missionary. I didn't particularly like snakes, so I decided I should probably be a pastor."
>
> As a young pastor in Winston-Salem, N.C., he began offering classes on marriage and family, and was stunned by the number of couples who asked if they could stop by his office to chat. "I had the personality that listens and empathizes," he said.
>
> But he also had the personality that sought out patterns of miscommunication. Combing through dozen of years of notes, he identified different ways that individuals express love. As he explained to the audience near Nashville: "Adults all have a love tank. If you feel loved by your spouse, the whole world is right. If the love tank is empty, the whole world can begin to look dark."
>
> The problem: individuals fill their tanks in different ways.
>
> To illustrate, he told the crowd a story of a couple on the verge of divorce who came to see him. The man was dumbfounded. He cooked dinner every night for his wife; afterward he washed the dishes and took out the trash. "I don't know what else do to," the man said. "But she still tells me she doesn't feel loved."
>
> The woman agreed. "He does all those things," she said. Then she burst into tears. "But Dr. Chapman, we never talk. We haven't talked in 30 years."
>
> In Dr. Chapman's analysis, each one spoke a different love language: he liked to perform acts of service for his wife, while she was seeking quality time from him.
>
> "Each of us has a primary love language," Dr. Chapman said, and often secondary or tertiary ones. To help identify your language, he recommended focusing on the way you most frequently express love. What you give is often what you crave. Challenges in relationships arise because people tend to be attracted to their opposites, he said. "In a marriage, almost never do a husband and wife have the same language. The key is we have to learn to speak the language of the other person."
>
> He eventually labeled these different ways of expressing love "the five love languages": words of affirmation; gifts; acts of service; quality time; and physical touch.

> He outlined his ideas, along with some homespun wisdom and a sprinkling of homily, in the book, “The Five Love Languages: How to Express Heartfelt Commitment to Your Mate,” published in 1992 by Moody, a division of the Bible Institute. It sold 8,500 copies the first year, quadrupling the publisher’s expectation. The following year it sold 17,000; two years later, 137,000.
>
> In a feat of endurance that would make New York publishers swoon, every year (except one) for the last 19 years, the book has outsold its haul for the previous year, putting total sales in North America at that 7.2 million figure; the book has also been translated into 40 languages.
>
> Even more striking, those numbers were achieved without Oprah and without an appearance on a broadcast network. (Though in a rare bit of publicity, Elisabeth Hasselbeck held up the book on “The View” earlier this year and credited it with saving her marriage.)

I really recommend Gary Chapman’s book “The Five Love Languages“. My love language is words of affirmation. I like Gary Chapman because he is an evangelical Christian having an influence on the culture by defending marriage. It’s important for people to be thoughtful about marriage, and not to be swept along by emotions. To think about how the other person is and to be ready to treat them as a different person with different needs. It’s good to look at other people and to think “what’s my responsibility to you?”. When you make a commitment to love someone else for life, you have to think about actually achieving that goal, and that means knowing what counts as love to them.

Are churches preparing women to choose real men for husbands?

November 20, 2011 | by Wintery Knight | Link | Original Link

First, I want every one to take a look at this verse on providing for a family in context: (1 Tim 5:3-8)

3 Give proper recognition to those widows who are really in need.

4 But if a widow has children or grandchildren, these should learn first of all to put their religion into practice by caring for their own family and so repaying their parents and grandparents, for this is pleasing to God.

5 The widow who is really in need and left all alone puts her hope in God and continues night and day to pray and to ask God for help.

6 But the widow who lives for pleasure is dead even while she lives.

7 Give the people these instructions, so that no one may be open to blame.

8 Anyone who does not provide for their relatives, and especially for their own household, has denied the faith and is worse than an unbeliever.

And these verses on charity in evangelism: (Phil 4:10-19)

10 I rejoiced greatly in the Lord that at last you renewed your concern for me. Indeed, you were concerned, but you had no opportunity to show it.

11 I am not saying this because I am in need, for I have learned to be content whatever the circumstances.

12 I know what it is to be in need, and I know what it is to have plenty. I have learned the secret of being content in any and every situation, whether well fed or hungry, whether living in plenty or in want.

13 I can do all this through him who gives me strength.

14 Yet it was good of you to share in my troubles.

15 Moreover, as you Philippians know, in the early days of your acquaintance with the gospel, when I set out from Macedonia, not one church shared with me in the matter of giving and receiving, except you only;

16 for even when I was in Thessalonica, you sent me aid more than once when I was in need.

17 Not that I desire your gifts; what I desire is that more be credited to your account.

18 I have received full payment and have more than enough. I am amply supplied, now that I have received from Epaphroditus the gifts you sent. They are a fragrant offering, an acceptable sacrifice, pleasing to God.

19 And my God will meet all your needs according to the riches of his glory in Christ Jesus.

Now I want to talk about a very disturbing trend that I see in the church. I see a lot of women who are not prepared to choose men who are going to fill this provider role. Men have a role, straight from the Bible, to provide for their wife and children, and to donate to support evangelistic efforts. And providing is not predicated on how a man makes a woman feel. Providing is based on the things such as:

- working for money before you are legally able to work for money
- working summer jobs during high school and college
- working during college or doing college degrees while working full-time
- doing consulting work or running your own business from home in the evenings
- studying science, technology, engineering and math (no exceptions!)
- not drinking alcohol or smoking cigarettes – no addictions of any kind
- not spending money on hair, tattoos, clothes, shoes or flashy junk
- own your own car, and keep it well-maintained
- own your own pet, and keep it healthy and well-trained
- pay your rent or mortgage payments on time
- carry no debt, borrow no money
- avoid depending on government welfare or student loans
- not taking sick days, not getting sick at all
- purchasing resources for others, especially things like apologetics books, to build them up
- giving charity to solid Christian speakers and funding apologetics events (William Lane Craig debates)
- making investments in stocks or real estate
- maxing out 401K contributions and Roth IRAs
- taking women out on dates, driving them in the man's own car, and paying for everything
- spending money to help the pro-life and pro-marriage causes (Morse, Klusendorf)

And I think you have to give bonus marks for getting up early, although I can't do that. I know someone who does, though – the hardest working software engineer I know.

Women should not prefer young men who are studying political science, psychology, English, education, grievance studies, and other non-quantitative subjects which do not equip a man to provide enough salary and savings to run a Christian life plan (homeschooling or private Christian schools or both). What ends up happening is that there is a lot of fighting over money, especially with women who don't have savings of their own before marrying. Without money, the children will likely get pushed into public school and they influenced by secularism and leftism.

What to do? Pick a man with a proven record of taking his responsibilities to study and earn seriously.

Here are some of the top earning careers:

Best Undergrad College Degrees By Salary – Full List

	STARTING MEDIAN PAY	MID-CAREER MEDIAN PAY
Petroleum Engineering	$97,900	$155,000
Chemical Engineering	$64,500	$109,000
Electrical Engineering (EE)	$61,300	$103,000
Materials Science & Engineering	$60,400	$103,000
Aerospace Engineering	$60,700	$102,000
Computer Engineering (CE)	$61,800	$101,000
Physics	$49,800	$101,000
Applied Mathematics	$52,600	$98,600
Computer Science (CS)	$56,600	$97,900
Nuclear Engineering	$65,100	$97,800
Biomedical Engineering (BME)	$53,800	$97,800
Economics	$47,300	$94,700
Mechanical Engineering (ME)	$58,400	$94,500
Statistics	$49,000	$93,800
Industrial Engineering (IE)	$57,400	$93,100
Civil Engineering (CE)	$53,100	$90,200
Mathematics	$47,000	$89,900
Environmental Engineering	$51,700	$88,600
Management Information Systems (MIS)	$51,000	$88,200
Software Engineering	$54,900	$87,800

I think that marrying someone who is not in one of these careers makes no sense at all, especially in light of a global recession.

And just to be clear, this is an area I struggle in myself. I am great at working for money, and saving it and investing it. But I say a lot of controversial things and a lawsuit would not be good for my fortune. I should be spending more time on evenings and weekends keeping my skills up, and that's what I'm going to be doing on my vacation. But I think the standard stands regardless of my own abilities to meet it. It is the standard.

Money is an important part of the Christian life. The Bible says that if a man does not work, neither shall he eat. We have a tradition on what men are supposed to do in Christianity. Men are supposed to take care of business, and women are supposed to prefer men with *proven records* of taking care of business. Being handsome and fun is *nowhere in the Bible* as a qualification for men to be good husbands and fathers. But earning money and providing for others in the community is a non-negotiable requirement. It's as required as the obligation to not marry a non-Christian man.

Women who are serious about Christianity will prefer men who meet the specifications laid out in the Bible. And this has to have been demonstrated over the course of *years* – a pattern of studying hard things, working multiple jobs, spending little, saving much and supporting family and evangelism. To me, a woman who prefers a man who has no record of providing is a woman who has been influenced by feminism. She rejects the

traditional roles of men and insists on a man who is *has no authority to lead because he does not have the provider role*. That's what's really going on here. Men who earn have authority to lead and hold a woman accountable when she misbehaves, and some women hate being led and being held accountable. (By being held accountable I mean disagreeing with the woman, canceling optional goodies, etc.)

I think we have a major problem in this society, and in the church, where we think that women are above criticism. We think that anything they feel like doing is a good idea. We think that their complete lack of rational thought and lack of planning in relationships is somehow "romantic". We think that women who embrace spontaneity and ignorance of statistical data are "free spirits". Is it any wonder that the out-of-wedlock birth rate is 42%, the divorce rate for first time marriages is 45%, and women are shacking up with unqualified men instead of getting married?

This is all – *all* – caused by the fact that women have no idea what men are for, and they deliberately prefer non-judgmental, non-theologically-exclusive, non-rational, tolerant, intuitive, wusses instead of men who give them hard books to read and who hold them accountable when they misbehave. Women today think it is a *bad thing* when a man holds her accountable when she disrespects him in public, but think it is a good thing to date a man who asks his parents to borrow the car keys before taking her out. Huh? I had a current year car with only 7500 miles on it at age 17 – because I was working two jobs in high school, and part-time IT/desktop publishing in my own business on the side.

Women who are interested in testing a man's abilities can use my checklist for finding authentic Christian women. Those questions work on men too.

Conservatives defeat socialists by a landslide in Spain election

November 21, 2011 | by Wintery Knight | Link | Original Link

Political Map of Europe

The UK Telegraph explains.

Excerpt:

> With almost 98 per cent of the vote counted the Popular Party won 186 seats in the 350 seat congress garnering a strong mandate to push through further austerity measures in an attempt to turn around an economy that risks being engulfed by the sovereign debt crisis.

> […]The socialists suffered their biggest defeat since Spain became a democracy more than 30 years ago, punished by an electorate for their perceived bungling of the economic crisis that has left 5 million unemployed.
>
> […]Alfredo Perez Rubalcaba, 60, the prime ministerial candidate who took the helm of the PSOE when Jose Luis Rodriguez Zapatero said he would not seek a third term, conceded defeat after the party won just 110 seats down from 169 in 2008.
>
> "The Socialist Party did not have a good result. We clearly lost the elections," he told party faithful in Madrid.
>
> The conservatives won roughly 44 per cent of the votes and the Socialists took 29 per cent, according to official election results.

The Wall Street Journal analyzes the election result.

Excerpt:

> Formerly a solid growth engine for the region's economy, Spain today is grappling with a burst housing bubble, a 21% unemployment rate and borrowing costs near levels that triggered the international bailouts of several fiscally frail euro-zone peers.
>
> Analysts said the election of Mariano Rajoy, the conservative leader who has committed to austerity and economic overhauls, could help improve investor sentiment toward Spain, but won't fundamentally change perceptions that Spain and other peripheral nations are risky investments. For that, they said, European Union institutions will have to extend more support, possibly by converting the European Central Bank into a lender of last resort.
>
> […]The groundswell of support for Mr. Rajoy is chiefly the result of a deep economic crisis that has forced Socialist Prime Minister José Luis Rodríguez Zapatero to make unpopular budget cuts and economic overhauls. Earlier this year, Mr. Zapatero said he wouldn't seek re-election and his party chose the veteran Mr. Pérez Rubalcaba to succeed him.
>
> Analysts said the fact that change in Spain was coming via the ballot box was another sign of a better track record on governance, which has helped to keep Spanish borrowing costs below those of its fiscally frail peers.
>
> Although Mr. Zapatero lacked a parliamentary majority, he was able to deliver all the measures he promised last year, including a public-sector wage cut, a pension freeze and a labor-market overhaul.
>
> As a result, a clear victory for Mr. Rajoy, who has promised to take overhauls much further than his Socialist rivals, is widely expected to shore up confidence in the Spanish economy inside and outside the country.
>
> Many recall the Popular Party-led governments of José María Aznar of 1996-2004 for their far-reaching moves that helped set the stage for a lengthy economic boom. Mr. Rajoy headed various ministries during that time.
>
> At a polling station in Madrid's Chamberí district, 18-year-old engineering student Diego Cubero said he had voted for the first time and chosen the Popular Party.

This is the end of a huge mistake made by the Spanish people in 2004 when they elected the socialists. Never, ever, ever elect socialists unless you want your economy to end up like Greece. That's what socialists do to economies.

Has Obama's buddy Jon Corzine misplaced $1.2 billion of customer funds?

November 21, 2011 | by Wintery Knight | Link | Original Link

From the Washington Times.

Excerpt:

> The facts are that on Oct. 25, Jon Corzine, a former New Jersey governor, stated he was confident that MF Global would successfully manage its $6.3 billion exposure to European debt (Spain, Portugal, Belgium and Italy). Yet a week after a failed attempt to sell the company, MF Global filed for Chapter 11 bankruptcy on Oct. 31.
>
> Now let's discuss the failure of management at MF Global. Mr. Corzine who is considered by many one of the smartest fixed-income minds in the business took immeasurable risk with the capital of his firm. It was revealed that the company was leveraged 40-1. In summary, the company only had 2.5 percent equity invested against risk positions. Note: Even in the height of the subprime crisis a 40-1 leverage would have been considered extremely risky, where small movements in underlying positions could represent deleterious outcomes for investors.
>
> Did the great Jon Corzine not learn from the greatest financial meltdown seen in the U.S. economy? The answer is simple, here is another example to the entrusted "gambling with other people's money." The irony of this is that in the August 2011 bond deal there is a key clause that states if Mr. Corzine departs as MF Global's full-time chief executive officer prior to July 1, 2013, because of an appointment to a federal position by the president and confirmation of that appointment by the U.S. Senate, investors would get an additional 1 percent coupon on their existing 6.250 percent bonds. I beg to differ in that the "clause" should have said if Mr. Corzine decides to increase the risk-taking at MF Global similar to previous risk positions at Goldman Sachs, investors should be redeemed their money at 100 cents on the dollar. **We will find out more but another concern, there is approximately $600 million of unaccounted for customer funds.**

UPDATE: The figure is now $1.2 billion.

Excerpt:

> The court-appointed trustee overseeing MF Global's bankruptcy says up to $1.2 billion is missing from customer accounts, double what the firm had reported to regulators last month.

Obama is the Solyndra president. He's been raiding the public coffers to reward his

billionaire campaign fundraisers from day 1 with from his “stimulus” funding – running 1.3 trillion deficits to pay off all the people who got him elected. The young people who will have to pay off this debt still keep voting for him like lemmings – they have no idea about his connections to rich Wall Street bankers. They buy the rhetoric. And the Obama-media has no interest of informing anyone about his connections to dodgy people and organizations.

Look for Corzine to get a presidential pardon in 2012, when Obama leaves office.

Conservative MP introduces bill to abolish Section 13 speech code

November 21, 2011 | by Wintery Knight | Link | Original Link

Here is the description for that video, posted by SDAMatt: (Note: Tory = Conservative)

> Tory backbencher Brian Storseth wants to eliminate Section 13 of the Canadian Human Rights Act (CHRA). That is the provision in federal law that gives the Canadian Human Rights Commission authority to hear complaints of hate speech on the Internet. We wish Mr. Storseth, the MP from Westlock-St. Paul in Alberta, well in this campaign. Section 13 is a particularly pernicious infringement on free speech. Originally added to the CHRA in 2001 as a protection for vulnerable groups against racist or violence-promoting websites, the clause has more often been used by minority activists (or those purporting to act on behalf of minorities) to silence those who do not share their opinions.
>
> The biggest problem with Sec. 13 is that its provisions make it far too easy for commissioners to find an alleged offender guilty. Unlike in a court of law – where the presumption of innocence, rules of evidence and bans on hearsay testimony protect defendants from wrongful prosecution – at a human rights tribunal complainants may remain anonymous and complaints may be filed by third parties with no direct interest in the case at hand. (Some folks even make a profitable hobby out of launching these complaints.) Hearsay evidence is perfectly acceptable, the onus to prove one's innocence often falls on the accused, and tax dollars pay for the plaintiff's lawyers while the accused is on his or her own to fund a defence.
>
> A further flaw in Sec. 13 is that neither the truth nor the lack of intent to harm is permitted as a defence. It does not matter whether the offending Internet message was truthful or if adjudicators find it "likely to expose an identifiable group to hatred or contempt" (the standard employed under criminal law) – the owner of the website on which it appears and the person who posted it are guilty anyway.
>
> In 2007, Sec. 13 was used against writer Mark Steyn for material he wrote in Maclean's magazine that four Muslim students claimed had offended them. That same year, a similar provision in Alberta provincial human rights law was used to prosecute Ezra Levant for publishing the infamous Danish cartoons of the Prophet Muhammad in the now-defunct Western Standard magazine. In both cases, the clear intent of the complainants was to limit legitimate debate about religious extremism.
>
> Fears that getting rid of Sec. 13 will lead to a flood of vicious anti-Semitism and the like are unfounded. Sections 318 through 320 of the Criminal Code already prohibit "hate propaganda" – including "any writing, sign or visible

> representation that advocates or promotes genocide." And it has been used several times to prosecute true hatemongers, James Keegstra, most famously. Nothing in Mr. Storseth's proposal would affect those laws.

The Conservatives have a majority in the House of Commons and the Senate, and they have Prime Minister Stephen Harper there to sign the bill. They need to do this right away, and then ban political contributions by large corporations and public sector unions.

But wait! There's more! (H/T Andrew)

Excerpt:

> The Supreme Court of Canada recently laid the smack down on Human Rights Tribunals across the country. In a recent decision, *B.C. Workers' Compensation Board v. Figliola*, a five-judge majority dramatically reduced the discretion of human rights tribunals to rehear discrimination complaints already decided by other administrative bodies such as workers' compensation boards.
>
> According to lawyer Peter Gall, who is also representing Dr. Brian Day in a health care related case that the Canadian Constitution Foundation is also assisting in, "the practice of workers taking a second kick at the can in front of human rights tribunals after their discrimination complaints had already been dismissed by a labour board or other administrative decision-maker 'was happening often enough that it was a real problem'".
> This Supreme Court decision applies to all human rights tribunals across Canada and is very important to the business community of British Columbia and Canada because it provides for finality and prevents "forum shopping" and the issue of multiple proceedings.

I know that there are a lot of conservative voters who are disillusioned with the Canadian Tories over the abortion issue and the free speech issue. The Conservatives need to get something done on these issues, immediately.

JPL employee who was fired for loaning ID DVDs will get jury trial

November 22, 2011 | by Wintery Knight | Link | Original Link

From Evolution News. (H/T Uncommon Descent)

Excerpt:

> A Los Angeles County Superior Court judge ruled Friday that a jury will decide whether NASA's Jet Propulsion Lab (JPL) unlawfully discriminated against a former employee for discussing the scientific theory of intelligent design (ID) at work.
>
> David Coppedge, a 14-year JPL veteran and team lead computer administrator on the Cassini Mission to Saturn, was demoted for lending ID-related DVDs to coworkers, behavior that one JPL complainant called "harassment," and another branded "pushing religion." After he filed suit to vindicate his free expression rights, JPL terminated Coppedge.
>
> Evidence shows that JPL demoted and terminated Coppedge because he expressed a pro-ID scientific viewpoint disliked at JPL and labeled "religion" by JPL decision-makers.
>
> "The court's ruling allows a jury to vindicate David Coppedge's rights," said Joshua Youngkin, a legal affairs policy analyst with Discovery Institute. "California law forbids employers who view an employee's expression as religion to punish or diminish the employee on that basis."
>
> "Although ID is not religion, it can't be singled out by JPL or other employers in this way," added Youngkin.
>
> In its ruling, the court found there "are triable issues of fact as to whether Plaintiff's demotion, written warning, negative performance evaluations, and ultimate termination were adverse employment actions" that involved discrimination.
>
> Coppedge is represented by William J. Becker Jr. of the Becker Law Firm, who was supported in the case by Alliance Defense Fund.

So on the one hand, you have Richard Dawkins ducking out of debates, and on the other hand, you have taxpayer-funded government employees firing people who offering to lend someone a DVD that questions the religion of naturalism – a religion that is flatly contradicted by the Big Bang, by the way.

Law schools are not preparing law students to practice law

November 22, 2011 | by Wintery Knight | Link | Original Link

The New York Times explains why law school may not be worth the money.

Excerpt:

> The lesson today — the ins and outs of closing a deal — seems lifted from Corporate Lawyering 101.
>
> "How do you get a merger done?" asks Scott B. Connolly, an attorney.
>
> There is silence from three well-dressed people in their early 20s, sitting at a conference table in a downtown building here last month.
>
> "What steps would you need to take to accomplish a merger?" Mr. Connolly prods.
>
> After a pause, a participant gives it a shot: "You buy all the stock of one company. Is that what you need?"
>
> "That's a stock acquisition," Mr. Connolly says. "The question is, when you close a merger, how does that deal get done?"
>
> The answer — draft a certificate of merger and file it with the secretary of state — is part of a crash course in legal training. But the three people taking notes are not students. They are associates at a law firm called Drinker Biddle & Reath, hired to handle corporate transactions. And they have each spent three years and as much as $150,000 for a legal degree.
>
> What they did not get, for all that time and money, was much practical training. Law schools have long emphasized the theoretical over the useful, with classes that are often overstuffed with antiquated distinctions, like the variety of property law in post-feudal England. Professors are rewarded for chin-stroking scholarship, like law review articles with titles like "A Future Foretold: Neo-Aristotelian Praise of Postmodern Legal Theory."
>
> So, for decades, clients have essentially underwritten the training of new lawyers, paying as much as $300 an hour for the time of associates learning on the job. But the downturn in the economy, and long-running efforts to rethink legal fees, have prompted more and more of those clients to send a simple message to law firms: Teach new hires on your own dime.
>
> "The fundamental issue is that law schools are producing people who are not capable of being counselors," says Jeffrey W. Carr, the general counsel of FMC Technologies, a Houston company that makes oil drilling equipment. "They are lawyers in the sense that they have law degrees, but they aren't ready to be a provider of services."

> […]Consider, for instance, Contracts, a first-year staple. It is one of many that originated in the Langdell era and endures today. In it, students will typically encounter such classics as Hadley v. Baxendale, an 1854 dispute about financial damages caused by the late delivery of a crankshaft to a British miller.
>
> Here is what students will rarely encounter in Contracts: actual contracts, the sort that lawyers need to draft and file. Likewise, Criminal Procedure class is normally filled with case studies about common law crimes — like murder and theft — but hardly mentions plea bargaining, even though a vast majority of criminal cases are resolved by that method.
>
> […]"We should be teaching what is really going on in the legal system," says Edward L. Rubin, a professor and former dean at the Vanderbilt Law School, "not what was going on in the 1870s, when much of the legal curriculum was put in place."

This is one of the reasons why I give the advice I do about studying STEM (science, technology, engineering and math). Universities are politicized. They are run by people who want to push a secular leftist ideology. For such people, the more isolated you can be from feedback from the real world, the better. And that is why it is often (but not always) useless to study anything that isn't STEM. If you're going to the university at all, study STEM areas. That is, if your goal is to actually make money so you can support a family.

So you have two choices, in my view. Trade school/apprenticeship right out of high school. Or study STEM areas in university. That's it.

A friend of mine who is a software engineer was thinking of doing an MBA a while back, and then decided on a Masters in securities and investing. I think that's the right way to go. Stay as far away from anything that can be politicized as possible. Don't give people who are embarked on perpetual adolescence any of your money (than they already get through taxpayer-funded research subsidies).

Real greed is when adults force children to give them a bailout from debt

November 22, 2011 | by Wintery Knight | Link | Original Link

This is a must-read by Mark Steyn.

Excerpt:

> While President Obama was making his latest pitch for a brand new, even more unsustainable entitlement at the health care "summit," thousands of Greeks took to the streets to riot. An enterprising cable network might have shown the two scenes on a continuous split screen – because they're part of the same story. It's just that Greece is a little further along in the plot: They're at the point where the canoe is about to plunge over the falls. America is further upstream and can still pull for shore, but has decided instead that what it needs to do is catch up with the Greek canoe. Chapter One (the introduction of unsustainable entitlements) leads eventually to Chapter 20 (total societal collapse): The Greeks are at Chapter 17 or 18.
>
> What's happening in the developed world today isn't so very hard to understand: The 20th century Bismarckian welfare state has run out of people to stick it to. In America, the feckless insatiable boobs in Washington, Sacramento, Albany and elsewhere are screwing over our kids and grandkids. In Europe, they've reached the next stage in social democratic evolution: There are no kids or grandkids to screw over. The United States has a fertility rate of around 2.1, or just over two kids per couple. Greece has a fertility rate of about 1.3: 10 grandparents have six kids have four grandkids – i.e., the family tree is upside down. Demographers call 1.3 "lowest-low" fertility – the point from which no society has ever recovered. And compared to Spain and Italy, Greece has the least worst fertility rate in Mediterranean Europe.
>
> So you can't borrow against the future because, in the most basic sense, you don't have one. Greeks in the public sector retire at 58, which sounds great. But, when 10 grandparents have four grandchildren, who pays for you to spend the last third of your adult life loafing around?
>
> By the way, you don't have to go to Greece to experience Greek-style retirement: The Athenian "public service" of California has been metaphorically face-down in the ouzo for a generation. Still, America as a whole is not yet Greece. A couple of years ago, when I wrote my book "America Alone," I put the Social Security debate in a bit of perspective: On 2005 figures, projected public pensions liabilities were expected to rise by 2040 to about 6.8 percent of GDP. In Greece, the figure was 25 percent. In other words, head for the hills, Armageddon, outta here, The End. Since then, the situation has worsened in both countries. And really the comparison is academic: Whereas America still has a choice, Greece

> isn't going to have a 2040 – not without a massive shot of Reality Juice.
>
> Is that likely to happen? At such moments, I like to modify Gerald Ford. When seeking to ingratiate himself with conservative audiences, President Ford liked to say: "A government big enough to give you everything you want is big enough to take away everything you have." Which is true enough. But there's an intermediate stage: A government big enough to give you everything you want isn't big enough to get you to give any of it back. That's the point Greece is at. Its socialist government has been forced into supporting a package of austerity measures. The Greek people's response is: Nuts to that. Public sector workers have succeeded in redefining time itself: Every year, they receive 14 monthly payments. You do the math. And for about seven months' work – for many of them the workday ends at 2:30 p.m. When they retire, they get 14 monthly pension payments. In other words: Economic reality is not my problem. I want my benefits. And, if it bankrupts the entire state a generation from now, who cares as long as they keep the checks coming until I croak?
>
> We hard-hearted, small-government guys are often damned as selfish types who care nothing for the general welfare. But, as the Greek protests make plain, nothing makes an individual more selfish than the socially equitable communitarianism of big government. Once a chap's enjoying the fruits of government health care, government-paid vacation, government-funded early retirement, and all the rest, he couldn't give a hoot about the general societal interest. He's got his, and to hell with everyone else. People's sense of entitlement endures long after the entitlement has ceased to make sense.
>
> The perfect spokesman for the entitlement mentality is the deputy prime minister of Greece. The European Union has concluded that the Greek government's austerity measures are insufficient and, as a condition of bailout, has demanded something more robust. Greece is no longer a sovereign state: It's General Motors, and the EU is Washington, and the Greek electorate is happy to play the part of the United Auto Workers – everything's on the table except anything that would actually make a difference. In practice, because Spain, Portugal, Italy and Ireland are also on the brink of the abyss, a "European" bailout will be paid for by Germany. So the aforementioned Greek deputy prime minister, Theodoros Pangalos, has denounced the conditions of the EU deal on the grounds that the Germans stole all the bullion from the Bank of Greece during the Second World War. Welfare always breeds contempt, in nations as much as inner-city housing projects. How dare you tell us how to live! Just give us your money and push off.

This is the real character of people who avoid having to care about producing goods and services to please customers – people who join public sector unions and work for the government. They elect candidates who will provide them with a standard of living much higher than what they can produce by their own efforts, and pass the bill down to real

workers in the private sector, or worse, workers who are not even born. It’s a shame. It’s a shame that parasites should enslave children who are not yet born so that they can have a standard of living they haven’t paid for. And it’s laughable that they impugn the character of productive private sector workers and business owners by talking about “Greed”. The parasites in the public sector unions are the greedy ones. What could be more greedy than intergenerational theft?

Intelligent design theorist Stephen C. Meyer debates evolutionist Keith Fox

November 22, 2011 | by Wintery Knight | Link | Original Link

From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His most recent book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

The MP3 file is here.

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life

- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation
- you evaluate all explanations, non-intelligent causes and intelligent causes
- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are

justified in taking the explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance

- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature
- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a “scribe-of-the-gaps” argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA “information”
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it’s really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information
Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that's the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

You may also be interested in Keith Fox's previous debate with Michael Behe. I think Fox did better in this one than in that one, so I didn't make fun of him as much. Find more posts on Stephen C. Meyer by me here.

Michele Bachmann wins foreign policy debate, Santorum second

November 23, 2011 | by Wintery Knight | Link | Original Link

Here's a summary from the highly-biased pro-Romney Jennifer Rubin of the Washington Post.

Excerpt:

> The foreign policy debate Tuesday night was a surprise on many counts. It was lively and serious, which many debates haven't been. Rep. Michele Bachmann (R-Minn.) exceeded expectations. Rick Santorum showed personal restraint (not complaining about the lack of attention) and displaying his depth of knowledge.
>
> [Bashes Gingrich for a while]
>
> […]At the other extreme was Bachmann who was poised, informed and knowledgable throughout. She made clear that Obama's lack of leadership is responsible for Iran's progress on a nuclear weapon. She defended aid to Pakistan which is in our national security interest. She made an excellent point about sending our dollars to China, which in effect builds up its military at the expense of ours. She pivoted on an energy question to chide Obama for delaying on the Keystone pipeline. If she performs this well in future debates, look for her to make progress reclaiming support in Iowa.
>
> [Praises Romney for a while]
>
> […]Santorum also had a strong night. He turned the conversation on the "war on terror" to a discussion of jihadism. He defended foreign aid (a smart, but not popular position). On the immigration issue he wove in his support for an economic plan focused on reviving American manufacturing. And he got Romney to agree in the closing round that we have an acute national security problem in this hemisphere. He was calmer and more presidential than he has been in past debates.

However, Gingrich definitely got stung by his support for amnesty. He may be smart, but he's quite moderate on many issues. Not as liberal as Romney, though.

I think it's time that the Republican party give Michele Bachmann another look. And I think Santorum is a solid on social and foreign policy issues. He's just moderate on fiscal issues.

Has Obama succeeded in spreading the wealth around?

November 23, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record			
	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011
From Investors Business Daily.

Excerpt:

> According to an IBD review of various economic data, while corporations and Wall Street investors have made significant gains under Obama's economic leadership, average Americans have seen their fortunes steadily decline.
>
> Since the start of the Obama administration, corporate profits have climbed 68% (about 59% after inflation), and are now 19% above their pre-recession peak, according to the latest Commerce Department data out Tuesday morning.
>
> Meanwhile, companies are sitting on a pile of cash that's grown 38% from Q1 2009 to Q2 2011, according to the Federal Reserve's quarterly "Flow of Funds" report.
>
> And since Obama's inauguration, the Dow Jones Industrial Average has climbed 45%.
>
> However, these solid gains haven't translated into prosperity down the economic ladder.
>
> Since Obama took office, median weekly earnings have dropped almost 5% after inflation, according to the Bureau of Labor Statistics. Home prices are below their

> January 2009 levels; unemployment is higher, as is the inflation rate. Gas prices alone have more than doubled since January 2009.
>
> […]Household income: Since the recovery started, household income has fallen 6.7%, according to a study by former Census Bureau officials. That's a bigger decline than during the 18-month recession, when income fell 3.2%.
>
> Jobs: Despite job growth since the recession ended, there are still 1.4 million fewer private sector jobs today than when Obama was sworn in, according to the Bureau of Labor Statistics. And the pace of growth — 1.6 million new jobs over the past two years — is far below what's needed just to keep up with growth in the labor force.
>
> Income inequality: After remaining essentially flat under President Bush, the gap between rich and poor has climbed in each of Obama's first two years, according to the Census Bureau.
>
> Consumer confidence: The Consumer Confidence Index dropped to 39.8 in October, down almost 10 points from when the recession ended, and almost right where it stood when Obama took office.
>
> Misery Index: This index, which combines the unemployment rate with the inflation rate and is meant as a proxy of middle class pain, is 60% higher than when Obama took office, and it's at a level not seen since mid-1983.
>
> Home prices: The median price for existing home sales has dropped 4.6% since January 2009, according to monthly National Association of Realtors data. And the number of underwater mortgages is up, according to Core Logic.
>
> Union membership: The share of private sector workers who belong to a union fell to 6.9% in 2010, compared with 7.6% the year before Obama took office, according to the Bureau of Labor Statistics.

The article explains why Obama's rhetoric differs from reality – it turns out that the very policies he enacted created the poverty he claims he was going to reduce. Because he's not an economist. He's trying to do things that sound good so that people will like him. But those things *don't work*.

Why do Christians leave the faith? Dashed expectations of a “nice” God

November 23, 2011 | by Wintery Knight | Link | Original Link

Part 2 of a brilliant series by Bradley Wright. This time he explains how people leave Christianity because they expect God to meet their needs and he doesn’t.

Excerpt:

> In a study of religious deconversion, we analyzed 50 on-line testimonies posted by former Christians, and in these testimonies we found four general explanations for deconversion. The first explanation, which I wrote about last week, regarded intellectual and theological concerns about the Christian faith. The second, which I elaborate here, regards a failed relationship with God. Almost half (22 of 50) of the writers expressed sentiments that in some way God had failed them by His not doing what they thought He should.
>
> God’s perceived failure took various forms, most of which fall under the general heading of “unanswered prayers.”
>
> One way that people felt that God had failed them happened when He did not respond to requests for help during difficult times. A young man raised in a Baptist church epitomized this feeling of failure when he wrote about God not answering his prayers about family difficulties. He wrote: “The first time I questioned the faith was when my grandmother shriveled up in front of me for 6 month’s due to cancer. I was 13 & my mother & father [were] getting a divorce. My father told me I should have been aborted. I prayed to God but nothing fails like prayers.”

So you can see here where people have this expectation that it is God’s job to give them good health. But is that anywhere in the Bible? Is it God’s job to make us healthy so that we can have a happy life, even if we are busy spending that happy life ignoring him and not knowing his character. When you ask a serious Christian what it is like to be a Christian, we will tell you that what God is about is NOT making us healthy or happy, but instead giving us time and peace to study him, to make plans to serve him, to execute those plans, and to have (sometimes unhappy) experiences that cause our sympathies to change as we feel what God feels. In short, life is about getting closer to him, and suffering and sickness is one of the tools God uses in order to get us to know him as he is and to participate in the relationship.

> Likewise, a woman raised in a Methodist household described her step-father as “cruel and abusive” to her, and she could not understand why “if God loves me, why won’t he protect me instead of letting this happen to me?”

I think the reason why God allows suffering like this is to create people who take his rules

about sexual morality seriously. When I was growing up I had front-row seats to the divorces of many of my friends. I remember vividly talking to children who cried to me about how they felt when their mothers invited new men into the house after the divorce. Pain and suffering like this is a reminder to us that the moral law is real, that God expects us to follow it in order to prevent harm. One of the reasons why I am chaste is because I listen to the stories of men whose girlfriends aborted their babies, the stories of women who cohabitated and then were betrayed, the stories of the children of divorces. And from this I learn that morality is real and it matters.

> In a variation of this theme, some deconverts lamented God's inactivity amidst spiritual difficulties. A man in his forties, a former elder at a charismatic church, wrote: "In my own life, no matter how much I submitted to 'God' and prayed in faith, 'sin' never seemed to leave me. Well, what's the point of being 'saved' if you aren't delivered from 'sin'?"

This is why accurate theology matters. No serious Christian thinks that you stop sinning after you become a Christian, and no serious Christian thinks that prayer alone is a solution to sin. To stop sinning, you need to engage more than the spirit, you need to engage the mind. Most people want to spiritualize things because prayer is easier than study. But if you want to stop sinning, the best way is a combination of prayer and study. If you want to stop premarital sex, study how premarital sex affects STD infection, risk of divorce, future marital stability, oxytocin, quality of marriage, and so on. Study the risks of divorce. That's how you stop sinning. Some people want to dumb Christianity down to the level of superstition then they complain that it doesn't work. But Christianity is better when you learn more and work harder.

> A former Southern Baptist described the various good things that God failed to give him: "God promises me a lot in the bible and he's not come through. Ask and it shall be given. Follow me and I will bless you. I promise you life and promise abundance. Man should not be alone. I have a plan for you. Give tithe and I will reward you. All broken promises. This god lacks clarification. This god lacks faith in me. He wants my faith. I want his too."

Do you know what I expect from God after reading the Bible? I expect what Jesus got: pain and suffering during obedience. What kind of simpleton reads the Bible and thinks that it is about getting goodies from God? That is NOWHERE in the Bible. It's projecting Santa Claus onto God and that isn't going to work – God has other plans for us, and those plans involve work and pain. People become Christians because they want to be like Jesus, and they understand that Jesus was not having fun. He was doing a job, and he wasn't happy or appreciated.

> Other writers took a different approach to God's failures. They too sought God's help, but when they did not receive it, they simply concluded that God did not exist. A former member of an Assemblies of God church explicitly linked unanswered prayers and the existence of God: "How many humble and totally

> selfless prayers offered up to and ignored by the imaginary skydaddy does it take for the average person to finally throw in the towel and say [God doesn't exist]!!!!" His answer: "Too damn many."

It's so strange to me that people think that the best way to see God interfere is to pray. The way I see God working in my life is when I go home and listen to some debate about the problem of evil, and then the next day some atheist asks me out to lunch to talk about why God allows evil. Maybe instead of doing easy things, we should actually invest in our relationship with God and then see if he responds by giving us work to do. Maybe a relationship with God is about serving him, and the joy is about seeing him reward those efforts by working with us and through us. Maybe God has more for us than just entertainment.

> Still others sought a tangible sign of God's presence. A former Pentecostal exclaimed: "There were many nights while in bed I would ask God to show me the truth, or give me some type of sign to show that he or she existed. These prayers would never be answered. So I would just go on with my life having doubts." Likewise, a former Baptist missionary wrote: "I've begged God to show himself to me and put an end to my inner torture. So far it hasn't happened and the only thing I know for sure is that I have unanswered questions."

I think this paragraph is interesting, since I consider attending church, praying and singing hymns to be useless when compared with practical and difficult things like chastity, apologetics, charity, studying hard things, getting a good job, committing to caring for others who have special needs, etc. If you want to feel the presence of God, then do the right thing and take the punishment for doing it. That's what Christianity is really about. When William Dembski was drummed out of Baylor University for opposing the presupposition of naturalism in the sciences, he experienced God more than all snake-handling, tongue speaking Pentecostals in the history of the universe. Similarly for Michele Bachmann's decision to take in 23 foster children into her home. Christianity is a serious religion, and it is not accessible to superstitious people who reduce it to singing and praying alone. Christianity is about serious people doing serious things. Even reading the Bible is not enough – you need to study the Bible.

The example of Dan Barker

I've actually written about this before in the context of Dan Barker, a charismatic fundamentalist praise hymn singer and writer who expected God to validate all of his irresponsible ministry decisions. Eventually, he fell away from the church because he had this ludicrous Santa Claus caricature of God that didn't match reality. Dan Barker is the complete opposite of everything I consider a manly Christian to be. He is the polar opposite of what I recommend to men when I recommend that they study math, science, engineering and technology, avoid music, singing and dancing, and prefer apologetics and conservative politics over speaking in tongues and apocalyptic fiction. This man, when he was a "Christian", was the complete opposite of the WK Christian man model. However, he is more welcome in most churches than I am, because most Christians reject

my views.

I think that Christians should protect themselves from that by being aware of how emotional experiences and praise hymns warp your view of God. God is a person, and he has a goal for you – to know him. To achieve that goal, it may not be effective to just give you everything you want. It may be the case that God has to allow you to experience some suffering, to increase your character and to bring your goals in line with his character. Children have to grow up, and shielding them from pain and responsibility doesn't allow them to grow up.

In my own case, I have my own disappointment with God, revolving around my chastity while waiting for marriage. But does that cause me to reject God? Hell, no. I just assume that he has something else he wants me to do instead of being married, and I am OK with that. It's part of this relationship that God's goals are important to me. I have to participate and hold up my end of the relationship. When it comes to God's purposes in the world, my happiness and comfort are expendable. That is an appropriate response, I think, to Jesus' own self-sacrificial behavior on the cross. I was born obligated to him, and I am OK with that. It does not bother me.

By the way, I wrote about Part 1 in the series, which was about how the #1 cause of apostasy is lack of apologetics.

UPDATE: Commenter Mbelina adds this much-needed and valid correction:

> You make some very good points.
>
> However, I think you're a bit too dismissive of people's very real pain. Imagine being told by your parent that you should have been aborted. That would mess anyone up. It's not just expecting to get what you want (I have no sympathy for that). It's people struggling intellectually and emotionally with the problem of evil in a very real way.
>
> Moreover, I think you need to realize that a lot of people who believe these rubbish things and have expectations based on a warped reading of scripture got that from a church where they respected the pastor as someone who "knows". There's a lot of bad theology coming from many pulpits and when things don't go well it doesn't stand up to the test of reality. I think churches need to be held accountable for verse-byte culture, trite "answers", and platitudes. People need REAL Christianity, not the prosperity gospel or "seeker sensitive" hogwash.

And she is 100% correct of course.

What I came to realize is that whenever a person was mistreating me like this, that they also were mistreating God. He wasn't the cause of this evil, and he has to let people be free to be evil. It was this that allowed me to make the move from being a victim to being sympathetic with God and then finally being a servant of God. God is at least as upset with evil that happens to me as I am. In fact, that is the message of the cross. Sin was so hated by God the Father that he literally had to send his own Son to atone for it on the cross. One you understand that, then you don't think of human evil as something that

happens to “me” but as something that happens to “we”. And then you feel a lot less like a victim.

Seven ways for the church to get started with Christian apologetics

November 23, 2011 | by Wintery Knight | Link | Original Link

From Apologetics 315.

Summary:

> Looking to get apologetics into your church? (There's a podcast about that.) To get started sometimes all it takes is an idea and the vision to make something happen, even if it is small. In Jonathan Morrow's book *Think Christianly* (interview here) he lists 21 ways for your church to engage at the intersection of faith and culture. Are you ready to look at just seven of them and think about how you might be able to incorporate them into your own church?

Here are the first two to wet your whistle:

1. Briefly mention current events relevant to faith and culture and include a reference to an article or blog for further exploration.
2. Sponsor a debate on the existence of God. Consider partnering with another church to sponsor a live event, or you can show a recent one on a DVD. This will provide opportunities for conversations to occur.

I left this comment on the post:

> I like #1! Wooohooo! I have long trumpeted the value of linking what goes on in church with the real world. Not just apologetics and evidence, but current events.
>
> Here is a story showing how linking math to current events interests young people in math.
>
> Link:
> http://www.buffalo.edu/news/11562
>
> Quote:
> "When families chat about societal issues, they often create simple mathematical models of the events," says Ming Ming Chiu, a professor of learning and instruction at UB's Graduate School of Education with extensive experience studying how children from different cultures and countries learn. "Unlike casual chats, these chats about societal issues can both show the real-life value of mathematics to motivate students and improve their number sense."
>
> The findings, published in the current issue of Social Forces, an international journal of sociology, was the first international study on how conversations among family members affect students' mathematical aptitude and performance in school. Chiu's findings were based on data from the Organization for Economic Cooperation and Development; its Program for International Student Assessment

> collected almost 110,000 science test scores and questionnaires from 15-year-olds from 41 countries, including 3,846 from the U.S.
> —-
>
> If it works for math, it should work for Christianity, too. I think so.
>
> That’s one of the reasons why I cover current events relevant to Christianity.

I think that sponsoring Brian Auten would also be a good way to have an impact. He does great work posting all those debates, apologist interviews, lectures and book reviews. I’m sure that he could use the support!

Full video of the CNN Republican primary debate on foreign policy

November 24, 2011 | by Wintery Knight | Link | Original Link

The video is here:

I highly recommend this debate.

What is an EMP attack and what does it mean to our national security?

November 24, 2011 | by Wintery Knight | Link | Original Link

From the Heritage Foundation.

Excerpt:

> [Tuesday] night at The Republican National Security Debate, hosted on CNN by The Heritage Foundation and the American Enterprise Institute, an electromagnetic pulse attack (EMP) was mentioned as one of the most important national security issues that is not discussed often. This is true. Despite the gravity of the threat, the United States remains unprotected from the effects of an EMP.
>
> An EMP is a high-intensity burst of electromagnetic energy caused by a rapid acceleration of charged particles. The EMP would disrupt all electronic devices within its zone of impact. It would burn circuits and immobilize electronic components and systems. It addition, the EMP would flow through electricity transmission lines and would damage distribution centers and power lines.
>
> Detonating a singular nuclear weapon at a high altitude can create an EMP large enough to envelop the entire continental United States. The nuclear weapon could be delivered by a long-range ballistic missile from Iran, China, Russia, or North Korea. Even a short-range nuclear-tipped missile launched off of the U.S. shore could cause a devastating EMP effect.
>
> […]The effects of an EMP on today's society would be even more devastating. According to Heritage's James Carafano, "communications would collapse, transportation would halt, and electrical power would simply be nonexistent. Not even a global humanitarian effort would be enough to keep hundreds of millions of Americans from death by starvation, exposure, or lack of medicine."
>
> There are some simple steps that can be taken to prevent against the crippling effects of an EMP attack. First, the U.S. needs to build and adequately fund a robust missile defense system composed of *Aegis* ballistic missile capable ships, and *Aegis Ashore*, the land-based ballistic missile component. Second, both the public and private sectors should harden vital infrastructure to make it more resilient and resistant to the EMP—to hedge against an attack or prepare for a solar flare. Third, the U.S. should develop a national plan to respond to EMP emergencies. This would involve educating federal, state, and local officials along with the public about the risks and response options.

In case you missed the debate, you can watch the whole thing here: (and you should – it was awesome)

For the record, the consensus in the Republican debate was that there were “under-the-radar” threats, in addition to threats from Iran, Pakistan, North Korea, China, etc. These were: 1) Cyber attacks like the recent attacks that originated in China, 2) EMP attacks such as I described above and 3) terrorist attacks coordinated with actors in Latin America and South America that exploit our porous southern border.

Study finds that attitude of gratitude has many health benefits

November 24, 2011 | by Wintery Knight | Link | Original Link

From the Harvard Mental Health Newsletter.

Excerpt:

> Two psychologists, Dr. Robert A. Emmons of the University of California, Davis, and Dr. Michael E. McCullough of the University of Miami, have done much of the research on gratitude. In one study, they asked all participants to write a few sentences each week, focusing on particular topics.
>
> One group wrote about things they were grateful for that had occurred during the week. A second group wrote about daily irritations or things that had displeased them, and the third wrote about events that had affected them (with no emphasis on them being positive or negative). After 10 weeks, those who wrote about gratitude were more optimistic and felt better about their lives. Surprisingly, they also exercised more and had fewer visits to physicians than those who focused on sources of aggravation.
>
> Another leading researcher in this field, Dr. Martin E. P. Seligman, a psychologist at the University of Pennsylvania, tested the impact of various positive psychology interventions on 411 people, each compared with a control assignment of writing about early memories. When their week's assignment was to write and personally deliver a letter of gratitude to someone who had never been properly thanked for his or her kindness, participants immediately exhibited a huge increase in happiness scores. This impact was greater than that from any other intervention, with benefits lasting for a month.
>
> Of course, studies such as this one cannot prove cause and effect. But most of the studies published on this topic support an association between gratitude and an individual's well-being.
>
> Other studies have looked at how gratitude can improve relationships. For example, a study of couples found that individuals who took time to express gratitude for their partner not only felt more positive toward the other person but also felt more comfortable expressing concerns about their relationship.
>
> Managers who remember to say "thank you" to people who work for them may find that those employees feel motivated to work harder. Researchers at the Wharton School at the University of Pennsylvania randomly divided university fund-raisers into two groups. One group made phone calls to solicit alumni donations in the same way they always had. The second group — assigned to work on a different day — received a pep talk from the director of annual giving, who told the fund-raisers she was grateful for their efforts. During the following

> week, the university employees who heard her message of gratitude made 50% more fund-raising calls than those who did not.

My editor Mary writes: *There is a health bonus to thankfulness but health isn't why we should be thankful. We should be thankful because we are the recipients of many good things and it is appropriate under such circumstances to express gratitude. It is also the overflow of a heart made happy by the generosity of another.*

To help us be thankful, here is a famous Thanksgiving day proclamation.

Here it is:

> PRESIDENTIAL THANKSGIVING PROCLAMATIONS
>
> 1789-1815 : George Washington, John Adams, James Madison
>
> THANKSGIVING DAY 1789
>
> BY THE PRESIDENT OF THE UNITED STATES OF AMERICA – A PROCLAMATION
>
> Whereas it is the duty of all Nations to acknowledge the providence of almighty God, to obey his will, to be grateful for his benefits, and humbly to implore his protection and favor – and Whereas both Houses of Congress have by their joint Committee requested me "to recommend to the People of the United States a day of public thanksgiving and prayer to be observed by acknowledging with grateful hearts the many signal favors of Almighty God, especially by affording them an opportunity peaceably to establish a form of government for their safety and happiness."
>
> Now therefore I do recommend and assign Thursday the 26th day of November next to be devoted by the People of these States to the service of that great and glorious Being, who is the beneficent Author of all the good that was, that is, or that will be – That we may then all unite in rendering unto him our sincere and humble thanks – for his kind care and protection of the People of this country previous to their becoming a Nation – for the signal and manifold mercies, and the favorable interpositions of his providence, which we experienced in the course and conclusion of the late war –for the great degree of tranquillity, union, and plenty, which we have since enjoyed – for the peaceable and rational manner in which we have been enabled to establish constitutions of government for our safety and happiness, and particularly the national One now lately instituted, for the civil and religious liberty with which we are blessed, and the means we have of acquiring and diffusing useful knowledge; and in general for all the great and various favors which he hath been pleased to confer upon us.
>
> And also that we may then unite in most humbly offering our prayers and supplications to the great Lord and Ruler of Nations and beseech him to pardon our national and other transgressions – to enable us all, whether in public or private stations, to perform our several and relative duties properly and punctually – to render our national government a blessing to all the People, by constantly being a government of wise, just, and constitutional laws, discreetly

> and faithfully executed and obeyed – to protect and guide all Sovereigns and Nations (especially such as have shewn kindness unto us) and to bless them with good government, peace, and concord – To promote the knowledge and practice of true religion and virtue, and the increase of science among them and Us – and generally to grant unto all mankind such a degree of temporal prosperity as he alone knows to be best.
>
> Given under my hand at the City of New York the third day of October in the year of our Lord 1789.
>
> (signed) G. Washington

That’s from George Washington.

Happy Thanksgiving Day!

Should people of faith have a right to disagree with homosexuality?

November 24, 2011 | by Wintery Knight | Link | Original Link

From Ari, a post pleading for people of faith to defend their right to civil disagreement with others on moral questions.

Excerpt:

> In Canada, citizens have been much more successful in getting the government to correct the thoughts of political heretics. Moslem extremists and gay activists seem to be particularly keen in the use of the Canadian Human Rights Tribunals to cleanse Canada from impious speech, thought and action.
>
> Ezra Levant, for instance, is one of my main inspirations for Bias Incident: The World's Most Politically Incorrect Novel. He was hauled before the tribunal for, among other things, republishing the now infamous Danish mohommad cartoons. Pastor Stephen Boisson was fined and forbidden from preaching about the topic of homosexuality by the commission because his views on the subject offended gay activists. (Is my mind playing tricks on me, or am I beginning to notice a pattern here?)
>
> Although homosexual conduct is forbidden by my faith, just as it is forbidden for Christians, I have never heard a rabbi mention the topic in all my years as a congregant. I'm glad of this, because the unequivocal nature of the authentic Jewish teaching about this subject would make for a boring sermon. Better to hear from the pulpit words of inspiration or discussion of issues that are made more interesting by there being some sort of gray area.
>
> There are people who are offended by my opinion. They are offended by my right and the right of my religious teachers to express that opinion, even if they almost always decline that right. They are offended even though homosexual conduct is one of many, many acts that are forbidden by my religion and even though homosexual conduct occupies no special place among the things forbidden by my beloved faith.
>
> I have little doubt that the persecution of Stephen Boisson has had a chilling effect on the speech of Canadian clergy. This has to change. Religious people must act if they are not to lose their rights one piece at a time. They must defy the "enlightened" and "tolerant" forces that would oppose them.
>
> The defiance doesn't have to be hateful. It doesn't have to be over-the-top. The simple, defiant declaration to conclude every sermon in the manner of Cato the Elder will suffice. "Furthermore, I feel it my duty to call your attention to Leviticus 18:22 and Leviticus 20:13," should be all that is necessary to stand up for free speech and to defy the bullies who would use the government to correct

> the thinking of its citizenry.
>
> If enough clergy were to do so, it would be all the harder for Canada to trample on the rights of its citizens.

My secular case against same-sex marriage is here, which shows that you don't need to be religious in order to oppose same-sex marriage.

New video by Yale scientist Alex Tsiaras shows fetal development

November 25, 2011 | by Wintery Knight | Link | Original Link

Mbelina sent me this amazing video, which shows how babies develop from the earliest stages.

This article from Life Site News explains more.

Excerpt:

> Alexander Tsiaras, Chief of Scientific Visualization in the department of Medicine at Yale University, employs new kinds of visualization technologies to view the human body.

> What he has discovered, he says, "just made you marvel."
>
> Using micro-magnetic resonance imaging, Tsiaras tracked the development of the baby from conception to birth.
>
> Tsiaras claims that the developing human body is "so perfectly organized a structure that it was hard not to attribute divinity to it."
>
> "When you actually start working on this data, its pretty spectacular," he said at a conference affiliated with TED (Technology, Entertainment, Design).
>
> In the video viewers see the moment when the egg is inseminated. The baby's first cellular division takes place within 24 hours and divides anew every 12 to 15 hours.
>
> At four weeks, the baby's cells are now developing at one million cells per second.
>
> After 25 days, one can see the heart chamber developing. Within 32 days, arms and legs. At 52 days, the baby's retina, nose, and fingers have developed.
>
> Tsiaras calls the entire process — beginning with two simple cells and resulting in what he says is the "magic of you and me" — an "unbelievable machinery."
>
> "The magic of the mechanisms inside each genetic structure saying exactly where that nerve cell should go — the complexities of these — the mathematical models on how these things are indeed done are beyond human comprehension, even though I am a mathematician."
>
> "It's a mystery, it's magic, it's divinity," says Tsiaras, adding that the complexity of building the human organism within a single system is "beyond any existing mathematics today."

It's important to know what unborn babies look like, especially when having discussions about abortion.

The problem of anti-intellectualism in the church and some solutions

November 25, 2011 | by Wintery Knight | Link | Original Link

I found this article from a talented Christian blogger named Eric Chabot while perusing Brian Auten's latest weekly apologetics bonus links. You might want to bookmark his blog if you haven't already. His topic this time is how to remedy the anti-intellectual climate that exists in the church.

Introduction:

> Over the years I have had the opportunity to teach apologetics. Apologetics is the branch of Christian theology that offers reasons for the truthfulness of the Christian position/worldview. Most of the classes I have taught are about 8 weeks long. After the first class I can guarantee that the hands will go up. Several students lament that their local congregation has zero interest in apologetics. When we start to discuss the reasons for problem, one issue that always surfaces is that there is little emphasis on the discipleship of the mind. It is apparant that many in the Church have been taught to that it is more spiritual to be simple-minded. In other words, don't think so hard. God is only pleased by simple faith.

That's tough talk.

And here's an excerpt I really liked:

> It could not be more evident to me that one of the reasons that Christians are discipled into anti-intellectualism is because of poor exegesis.
>
> Let's look at some of the Scriptures that can be misunderstood as speaking against anti-intellectualism:
>
> […]2. Colossians 2:8: "See to it that no one takes you captive through philosophy and empty deception, according to the tradition of men, according to the elementary principles of the world, rather than according to Christ." Some have concluded from this passage that Paul is commanding people to avoid secular studies or philosophy. If we look at this passage in context, Paul was dealing with a proto-Gnostic philosophy that was threatening the Colossian church. If Paul had not had a vast understanding of philosophy, he could not have addressed the problem in the Colossian church. It is important to note that Paul quoted pagan philosophers in Acts 17:28.

Some people in the church make a big fuss over this passage, insisting that all thinking is to be discouraged. I find that sort of evasiveness very self-serving since the passage is clearly a warning against *bad* philosophy. One wonders if the people who take this passage as a justification for lazy emotionalism would pass on all food if I told them not to eat the *spoiled* food. One of the best ways to distinguished good philosophy from bad

philosophy is to study philosophy.

More:

> 4. Matthew 18:3-5: “I tell you the truth, unless you change and become like little children, you will never enter the kingdom of heaven. Therefore, whoever humbles himself like this child is the greatest in the kingdom of heaven. And whoever welcomes a little child like this in my name welcomes me.”
>
> In interpreting this passage, it is important to note that Jesus challenged his followers to be like children morally, not intellectually. Christians are called to exhibit childlikeness in being sensitive to evil and sin, in being humble and contrite in spirit. Jesus contrasts the need for humility with tough-mindness in Matt. 10:16, when He says, ” Behold, I send you out as sheep in the midst of wolves; so be shrewd as serpents and innocent as doves.” (3)

Read the whole thing, send it to your pastor.

By the way, if you would like to read my post on this topic, which I think is *really* worth reading as well, then just click here. Send that to your pastor, too.

Leftist ABA rates record number of Obama judicial appointees “not qualified”

November 25, 2011 | by Wintery Knight | Link | Original Link

From Judicial Watch.

Excerpt:

> President Obama’s quest to transform federal courts by appointing unqualified leftist ideologues is worse than previously imagined, according to a mainstream newspaper that reports the notoriously liberal American Bar Association (ABA) has rejected a “significant number” of potential judicial nominees, most of them minorities and women.
>
> This is hardly earth-shattering news considering Obama’s judicial appointments so far. However, the ABA rebuff sheds light into the magnitude of the president’s crusade to stockpile the federal court system, where judges get lifetime appointments, with like-minded activists. In fact, Obama has made it an official policy to “diversify” the federal bench when it comes to gender, race and even life experiences.
>
> But the White House has agreed not to nominate any candidates deemed unqualified by the ABA, the 400,000-member trade association that provides law school accreditation. Though it claims to be an impartial group of lawyers, the ABA usually takes liberal positions on divisive issues and Democratic/liberal nominees are more likely to receive the group’s highest rating of “well qualified” compared to their Republican/conservative counterparts. This has been documented in various studies, including a recent one conducted by political science departments at three Georgia universities.
>
> With this in mind, one can only imagine how deficient Obama’s rejected candidates really are. Their identities and negative ABA ratings have not been made public, but inside sources tell the paper that broke the story this week that nearly all of the prospects were women or members of a minority group. Nine are reportedly women—five white, two black and two Hispanic—and of the five men one his white, two are black and two are Hispanic.
>
> The number of Obama hopefuls stamped “not qualified” already exceeds the total opposed by the ABA during the eight-year administrations of Bill Clinton and George W. Bush, the story points out. That means Obama’s rejection rate is more than triple what it was under either of those previous administrations.

I don’t know for sure, but I expect that the nominees would be people like Obama’s friends: the racist Jeremiah Wright, domestic terrorist Bernadine Dohrn and Marxist Bertha Lewis.

I posted this to highlight another way that electing an unqualified leftist harms the

country. It’s no wonder that companies are shipping jobs overseas – what company would want to run afoul of a judge whose only judicial qualification is being a member of politicized left-wing hate groups?

Should this ad opposing gay activism in Ontario schools be censored?

November 26, 2011 | by Wintery Knight | Link | Original Link

Here's the ad, from the Institute for Canadian Values.

Brian Lilley, a journalist with Sun News, explains why he opposes censorship of the ad.

Excerpt:

> Michael Erickson, a high school teacher in Toronto and a candidate for the New Democrats in the last federal election has petitioned the board of directors of our parent company Quebecor, the Canadian Broadcaster Standards Council and the Advertising Standards Council over our decision to air an ad that he doesn't like.
>
> The ad, from the Institute for Canadian Values, is against the introduction of the McGuinty government's graphic sex-ed curriculum.
>
> […]Erickson's complaint and his online petition, claim that "This ad promotes intolerance against people who might stand out from traditional male or female gender roles."
>
> I'd disagree with that and I have several times. The ad highlights what was in McGuinty's proposed curriculum and what has been found in existing guides for teachers at the elementary school level.
>
> Is teaching about transgendered issues, gender identity and gender fluidity in grade three a good idea?

Dalton McGuinty thinks that it is a good idea. He is the Liberal premier, and most people in Ontario supported him in the last election, because he loves to spend money buying votes with social programs.

Here's more about the proposed curriculum of the the Liberal party of Ontario.

Excerpt:

> The new curriculum, replacing a previous version from 1998, aligns with the Ministry's campaign to p romote "equity and inclusive education" in Ontario's schools, which includes the advancement of homosexualism and transgenderism. A notable aspect of the curriculum's revision is the attempt to instil a sense that homosexuality and transgenderism are normal.
>
> Under the curriculum, students begin to explore "sexual orientation" and "gender identity" in grade 3, as part of an expectation to appreciate "invisible differences" in others. In grade 5, a student is expected to recognize that "things I cannot control include … personal characteristics such as … my gender identity [and] sexual orientation."
>
> In addition to learning about masturbation in grade 6, the curriculum suggest

> that students can better understand “sexual orientation” by “reading books that describe various types of families and relationships,” including those involving two “mothers” or “fathers.” In grades 7 and 8, “preventing pregnancy and disease,”“gender identity,” and “sexual orientation” become “key topics.”
>
> Grade 7s are expected to be taught about “using condoms consistently if and when a person becomes sexually active.” In grade 8, the use of contraception is a key component of the curriculum, and students are expected to “demonstrate an understanding of gender identity (e.g., male, female, two-spirited, transgendered, transsexual, intersex) and sexual orientation (e.g., heterosexual, gay, lesbian, bisexual).”

More:

> In February, homosexual Liberal MPP Glen Murray, who serves as Minister of Research and Innovation, praised the new revision of the curriculum and said it will be coming soon.
>
> Dubbing opponents of the graphic sex ed program “rightwing reactionary homophobes,” he told Xtra that the main issues that offended parents are already being covered under the current version of the curriculum from 1998.
>
> “I have to tell you, many of the things that offended people are already in the curriculum. We talk about all kinds of families and human sexuality in our elementary schools,” he said.

I am not sure why Dalton McGuinty, the Liberal premier of Ontario, wants to force the gay agenda onto young, impressionable children. But that’s what liberals and leftists believe. Recall that the Liberal party is the socialist party of Canada, and the NDP are the communist party. Is it really surprising that political parties on the secular left are anti-family values? When you vote for left-wing parties, this is what you get.

UPDATE: More here from Brian Lilley. (H/T Blazing Cat Fur)

The video above was posted by SDAMatt and he notes that the Erickson person is gay. What a surprise!

Which companies discriminate against supporters of traditional marriage?

November 26, 2011 | by Wintery Knight | Link | Original Link

Here's a video in which Frank Turek explains how he was firfed by Cisco and Bank of America for supporting traditional marriage.

This video got me thinking – which companies would support firing people who support traditional marriage?

The Human Rights Campaign

You may have seen a logo on car bumpers that feature a yellow equal sign on a purple background. That logo is the logo of the Human Rights Campaign, which opposes traditional marriage and believes that children do not deserve to grow up with their biological mother or biological father. They also believe in firing people who support traditional marriage, as we shall see below.

Here is an example of what the Human Rights Campaign does to people who support traditional marriage.

Story from the magazine Down East.

Excerpt:

> Larry Grard admits he had "a lapse in judgment." But Grard – who's been a reporter for thirty-five years, the last eighteen of them at the *Morning Sentinel* in Waterville – says the e-mail he sent from his personal account to a national gay rights group shouldn't have been grounds for his dismissal.
>
> Grard was fired by Bill Thompson, editor of the *Sentinel* and its sister paper the *Kennebec Journal* in Augusta, shortly after the Nov. 3 election in which Maine voters repealed a same-sex marriage law approved by the Legislature. Grard said he arrived at work the morning after the vote to find an e-mailed press release from the Human Rights Campaign in Washington, D.C., that blamed the outcome of the balloting on hatred of gays.
>
> Grard, who said he'd gotten no sleep the night before, used his own e-mail to send a response. "They said the Yes-on-1 people were haters. I'm a Christian. I take offense at that," he said. "I e-mailed them back and said basically, 'We're not the ones doing the hating. You're the ones doing the hating.'
>
> "I sent the same message in his face he sent in mine."
>
> Grard thought his response was anonymous, but it turned out to be anything but. One week later, he was summoned to Thompson's office. He was told that Trevor Thomas, deputy communications director of the Human Rights Campaign, had Googled his name, discovered he was a reporter, and was demanding Grard be fired. According to Grard, Thompson said, "There's no wiggle room."

> He was immediately dismissed.
>
> […]The week after Grard was fired, he said, his wife, Lisa, who wrote a biweekly food column for the *Sentinel* as a freelancer, received an e-mail informing her that her work would no longer be needed.

That's what the Human Rights Campaign does.

Companies that support the Human Rights Campaign

I found a list of companies on the Human Rights Campaign web site that are also strongly oppose traditional marriage. Presumably, these are the companies that would fire people who support a child's right to grow up with a mother and a father.

Platinum Partners:

- American Airlines
- Citi
- Microsoft
- Nationwide Insurance
- VPI Pet Insurance

Gold Partners:

- **Bank of America**
- Deloitte
- Ernst & Young LLP
- Lexus
- Mitchell Gold + Bob Williams
- Prudential

Silver Partners:

- Beaulieu Vineyard
- BP
- Caesars Entertainment
- Chevron
- Google
- MGM Mirage
- Nike

Bronze Partners:

- Chase
- Cox Enterprises
- Cunard
- Dell
- Goldman Sachs

- IBM
- Macy’s Inc.
- MetLife
- Morgan Stanley
- Orbitz
- Paul Hastings
- PwC
- Replacements, Ltd.
- Shell
- Starbucks
- TD Bank
- Tylenol PM

And you can find the full listing of companies that promote discrimination against traditional marriage on the Human Rights Campaign web site. I notice that they have about 1 million people who like them on Facebook and 85 thousand Twitter followers. Comments to this post will be strictly moderated in light of Obama’s signing of the hate crimes bill which prohibits free speech on controversial issues.

Liberal media silent as ESCR pioneer Geron halts ESCR research

November 27, 2011 | by Wintery Knight | Link | Original Link

Here's the story from CBS News.

Excerpt:

> The company doing the first government-approved test of embryonic stem cell therapy is discontinuing further stem cell work, a move with stark implications for a field offering hope of future medicines for conditions with inadequate or no current treatments.
>
> Geron Corp., a pioneer in stem cell research that has been testing a spinal cord injury treatment, said late Monday that it's halting development of its stem cell programs to conserve funds. It is seeking partners to take on the programs' assets and is laying off much of its staff.
>
> […]The company is eliminating 66 full-time jobs, or 38 percent of its staff, a process that will bring about $8 million in costs— about $5 million in the current quarter and about $3 million in the first half of 2012.

Now consider this article in the Weekly Standard by Wesley J. Smith. (H/T ECM)

Excerpt:

> For years, the media touted the promise of embryonic stem cells. Year after year, Geron Corporation announced that its embryonic stem cell treatment for acute spinal cord injury would receive FDA approval "next year" for human testing. And year after year, the media dutifully informed readers and viewers that cures were imminent. When the FDA finally did approve a tiny human trial for 10 patients in January 2009, the news exploded around the world. This was it: The era of embryonic stem cell therapy had arrived!
>
> Not exactly. Last week, Geron issued a terse statement announcing it was not only canceling the study, but abandoning the embryonic stem cell field altogether for financial reasons.
>
> You would think Geron's failure would be very big news. Instead, it turns out that the mainstream media pay attention only when embryonic stem cell research seems to be succeeding—so far, almost exclusively in animal studies. When, as here, it crashes and burns, it is scarcely news at all.
>
> [M]ost of the same news outlets that gave Geron star treatment when it was heralding supposed breakthroughs provided only muted coverage of the company's retreat into producing anti-cancer drugs.
>
> The *Los Angeles Times* may be the most egregious offender. A chronic booster of Geron's embryonic stem cell research, it reported the FDA's approval of a human

> trial on January 24, 2009, in a story that began, “Ushering in a new era in medicine . . . ” The paper stayed on the story. In October 2010, it reported that the first patient had received an injection, then a few days later it ran a feature about the study under the headline “Hope for Spinal Cord Patients.” During the same period, however, the paper did not report the encouraging results of early human trials of treatments for spinal cord injury developed using adult stem cells.
>
> Then last May, the *Times* celebrated the California Institute of Regenerative Medicine’s $25 million loan to support Geron’s study, noting that the company’s stem cell product had performed as hoped in rat -studies. Yet the day after Geron’s embryonic stem cell research unit was laid off, the *Times* couldn’t find the space to print the story, though the following day a blog entry ran on the *Times* website.

The vast majority (all?) of medical successes with stem cell research have come from ethical adult stem-cell research. Adult stem cell research does not kill unborn children. And that’s why it doesn’t draw funding from pro-abortion politicians or get positive coverage by pro-abortion media outlets. The politics is driving the science – just like with global warming research and alternative energy funding.

Bank run in socialist Europe begins

November 27, 2011 | by Wintery Knight | Link | Original Link

Europe: Annual Budget Deficit as % of GDP
From CNBC.

Excerpt:

> **Money-market funds** in the United States have quite dramatically slammed shut their lending windows to European banks. According to the Economist, Fitch estimates U.S. money market funds have withdrawn 42 percent of their money from European banks in general.
>
> And for France that number is even higher — 69 percent. European money-market funds are also getting in on the act.
>
> Bond issuance by banks has seized up because buyers have gone on strike.
>
> From the Economist's **Free Exchange Blog**:
>
> In the third quarter bonds issues by European banks only reached 15 percent of the amount they raised over the same period in the past two years, reckon analysts at Citi Group. It is unlikely that European banks have sold many more bonds since.
>
> Corporate depositors are also pulling their cash.
>
> **Free Exchange**:
>
> "We are starting to witness signs that corporates are withdrawing deposits from banks in Spain, Italy, France and Belgium," an analyst at Citi Group wrote in a recent report. "This is a worrying development."
>
> And there are troubling signs that banks are even running out of collateral to back their borrowings from the **European Central Bank** .
>
> So far the liquidity of the European Central Bank (ECB) has kept the system alive.

> Only one large European bank, Dexia, has collapsed because of a funding shortage. Yet what happens if banks run out of collateral to borrow against?

And from the leftist New York Times.

Excerpt:

> The flight from European sovereign debt and banks has spanned the globe. European institutions like the Royal Bank of Scotland and pension funds in the Netherlands have been heavy sellers in recent days. And earlier this month, Kokusai Asset Management in Japan unloaded nearly $1 billion in Italian debt.
>
> At the same time, American institutions are pulling back on loans to even the sturdiest banks in Europe. When a $300 million certificate of deposit held by Vanguard's $114 billion Prime Money Market Fund from Rabobank in the Netherlands came due on Nov. 9, Vanguard decided to let the loan expire and move the money out of Europe. Rabobank enjoys a AAA-credit rating and is considered one of the strongest banks in the world.
>
> American money market funds, long a key supplier of dollars to European banks through short-term loans, have also become nervous. Fund managers have cut their holdings of notes issued by euro zone banks by $261 billion from around its peak in May, a 54 percent drop, according to JPMorgan Chase research.

This is really disturbing. I wonder if any of my economics-minded commenters can explain to me what happens when there is a run on banks. I am guessing that there will be some rioting over benefits as austerity measures are imposed, and interest rates will go up.

Climategate 2.0: Leaked e-mails show scientists intended to deceive public

November 28, 2011 | by Wintery Knight | Link | Original Link

The UK Telegraph's James Delingpole writes in the Wall Street Journal.

Excerpt:

> Last week, 5,000 files of private email correspondence among several of the world's top climate scientists were anonymously leaked onto the Internet. Like the first "climategate" leak of 2009, the latest release shows top scientists in the field fudging data, conspiring to bully and silence opponents, and displaying far less certainty about the reliability of anthropogenic global warming theory in private than they ever admit in public.
>
> The scientists include men like Michael Mann of Penn State University and Phil Jones of the University of East Anglia, both of whose reports inform what President Obama has called "the gold standard" of international climate science, the Intergovernmental Panel on Climate Change (IPCC).
>
> […][A]t least one scientist involved—Mr. Mann—has confirmed that the emails are genuine, as were the first batch released two years ago.
>
> […]Consider an email written by Mr. Mann in August 2007. "I have been talking w/ folks in the states about finding an investigative journalist to investigate and expose McIntyre, and his thus far unexplored connections with fossil fuel interests. Perhaps the same needs to be done w/ this Keenan guy." Doug Keenan is a skeptic and gadfly of the climate-change establishment. Steve McIntyre is the tenacious Canadian ex-mining engineer whose dogged research helped expose flaws in Mr. Mann's "hockey stick" graph of global temperatures.
>
> One can understand Mr. Mann's irritation. His hockey stick, which purported to demonstrate the link between man-made carbon emissions and catastrophic global warming, was the central pillar of the IPCC's 2001 Third Assessment Report, and it brought him near-legendary status in his community. Naturally he wanted to put Mr. McIntyre in his place.
>
> The sensible way to do so is to prove Mr. McIntyre wrong using facts and evidence and improved data. Instead the email reveals Mr. Mann casting about for a way to smear him. If the case for man-made global warming is really as strong as the so-called consensus claims it is, why do the climategate emails show scientists attempting to stamp out dissenting points of view? Why must they manipulate data, such as Mr. Jones's infamous effort (revealed in the first batch of climategate emails) to "hide the decline," deliberately concealing an inconvenient divergence, post-1960, between real-world, observed temperature data and scientists' preferred proxies derived from analyzing tree rings?

What I can't believe is that we've spent billions of dollars funding myths. They lied because they were being paid by the government to lie. The government wanted a crisis that would require more government control over businesses and consumers. And the scientists found that evidence in their "research", because that's what the government was paying them to do.

Can naturalism account for the origin of the 20 amino acids in living systems?

November 28, 2011 | by Wintery Knight | Link | Original Link

The origin of life

There are two problems related to the origin of the first living cell, on atheism:

1. The problem of getting the building blocks needed to create life – i.e. the amino acids
2. The problem of creating the functional sequences of amino acids and proteins that can support the minimal operations of a simple living cell

Normally, I concede the first problem and grant the atheist all the building blocks he needs. This is because step 2 is impossible. There is no way, on atheism, to form the sequences of amino acids that will fold up into proteins, and then to form the sequences of proteins that can be used to form everything else in the cell, including the DNA itself. But that's tomorrow's topic.

Today, let's take a look at the problems with step 1.

The problem of getting the building blocks of life

Now you may have heard that some scientists managed to spark some gasses to generate most of the 20 amino acids found in living systems. These experiments are called the "Miller-Urey" experiments.

The IDEA center has a nice summary of origin-of-life research that explains a few of the main problems with step 1.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere,[11, 12] however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing).[15, 16] The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.[11]

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days[20] (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments[19]).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – O_3) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).[20, 21, 22] This radiation could destroy methane within a few tens of years,[23] and atmospheric ammonia within 30,000 years.[15]

And there were three other problems too:

> At best the processes would likely create a dilute "thin soup,"[24] destroyed by meteorite impacts every 10 million years.[20, 25] This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only "left-handed" ("L") amino acids and "right-handed" ("R)" genetic molecules. This is called "chirality," and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce "racemic" mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming.

Usually when you hear the origin of life debated, they sort of skirt about the problem of where the amino acids come from, but there is no reason not to make that an issue. The naturalist has to explain how the first living cell could come about *naturalistically.*

Further study

One of my favorite resources on the origin of life is this interview from the University of California with former atheist and origin of life researcher Dean Kenyon. Kenyon, a professor of Biology at San Francisco State University, wrote the textbook on "chemical evolution", which is the view that chemicals can arrange themselves in order to create the first living cell, without intervention.

This interview from the University of California with another origin of life researcher, Charles Thaxton, is also one of my favorites.

You'll need Quicktime to see the videos, or buy the videos from ARN. (Kenyon, Thaxton) I have both of them – they rock!

Do men commit domestic violence and child abuse more than women?

November 28, 2011 | by Wintery Knight | Link | Original Link

Before we look at the statistics, here's a news story about the issue.

Excerpt:

> Police say a man was struck and killed by his girlfriend after a heated argument in the Grays Ferry section of Philadelphia.
>
> At approximately 1:52 a.m., police received a call concerning the incident at Morris and Ringgold streets.
>
> Upon arrival, officers observed the male victim, identified as 28-year-old Tyrone Taylor, lying against the wall with a woman standing next him.
>
> The woman, 30-year-old Keisha Jones, identified herself as Taylor's girlfriend and stated to the officers that she struck him with the vehicle.
>
> Medics were called to the scene and pronounced Taylor, who was pinned against a home, dead.
>
> Police say Taylor and Jones were involved in a verbal altercation which continued inside the vehicle.
>
> Taylor was driving the vehicle at the time of the altercation; he then stopped and exited the vehicle at 2400 Morris Street.
>
> After Taylor exited the vehicle, Jones told police she jumped in the driver's seat and struck him.
>
> The investigation continues and charges are pending.

Now let's see the numbers.

What do the government studies say?

First of all, let's see what's happening with domestic violence rates in the UK.

Excerpt:

> Data from Home Office statistical bulletins and the British Crime Survey show that men made up about 40% of domestic violence victims each year between 2004-05 and 2008-09, the last year for which figures are available. In 2006-07 men made up 43.4% of all those who had suffered partner abuse in the previous year, which rose to 45.5% in 2007-08 but fell to 37.7% in 2008-09.
>
> Similar or slightly larger numbers of men were subjected to severe force in an incident with their partner, according to the same documents. The figure stood at 48.6% in 2006-07, 48.3% the next year and 37.5% in 2008-09, Home Office statistics show.
>
> The 2008-09 bulletin states: "More than one in four women (28%) and around

> one in six men (16%) had experienced domestic abuse since the age of 16. These figures are equivalent to an estimated 4.5 million female victims of domestic abuse and 2.6 million male victims."
>
> In addition, "6% of women and 4% of men reported having experienced domestic abuse in the past year, equivalent to an estimated one million female victims of domestic abuse and 600,000 male victims".

And you see similar results in Canada.

Canada numbers:

> An estimated 7% of women and 6% of men in a current or previous spousal relationship encountered spousal violence during the five years up to and including 2004, according to a comprehensive new report on family violence.

So it's pretty even. Women are about as likely to commit violence as men are. And in lesbian relationships, the rate of domestic violence is extremely high, from 17% to 45%, depending on the study. I think in general, women are more violent when there is no man present, because they have more difficulty restraining their emotions and resolving disagreements with rational arguments instead of fist, feet and weapons.

You also see higher rates of violence by mothers against their own children, than with fathers. Mothers are more than twice as likely to abuse children as fathers. Biological fathers are programmed to protect children – it's the stepfathers and live-in boyfriends who harm children.

So it's not clear to me at all that men are the only ones who engage in violence and abuse. And we haven't even talked about verbal abuse. I would imagine that women have a huge edge in that department.

A recent study

And things are not getting better. Consider this recent study on domestic violence. It surveyed 2,500 students at the University of Florida.

Excerpt:

> Women are more likely than men to stalk, attack and psychologically abuse their partners, according to a University of Florida study that finds college women have a new view of the dating scene.
>
> "We're seeing women in relationships acting differently nowadays than we have in the past," said Angela Gover, a UF criminologist who led the research. "The nature of criminality has been changing for females, and this change is reflected in intimate relationships as well."
>
> In a survey of 2,500 students at UF and the University of South Carolina between August and December 2005, more than a quarter (29 percent) reported physically assaulting their dates and 22 percent reported being the victims of attacks during the past year. Thirty-two percent of women reported being the perpetrators of this violence, compared with 24 percent of men. The students

> took selected liberal arts and sciences courses. Forty percent were men and 60 percent were women, reflecting the gender composition of these classes.
>
> In a separate survey of 1,490 UF students, one quarter (25 percent) said they had been stalked during the past year and 7 percent reported engaging in stalking, of whom a majority (58 percent) were female.

Strangely enough, though, there is no Violence Against Men Act – just a Violence Against Women Act. And virtually no government funding goes to men's shelters – it's all for women. How can that be? And what incentives does this inequality create for men to either marry or not marry? When you put that together with the leniency shown to women who commit violence, it really starts to push marriage-minded men away from marriage.

Excerpt:

> The Federal criminal sentencing guidelines struck down by the U.S. Supreme Court in 2005 required that males and females who commit the same crime and have the same prior criminal record be sentenced equally. Using data obtained from the United States Sentencing Commission's records, we examine whether there exists any gender-based bias in criminal sentencing decisions. We treat months in prison as a censored variable in order to account for the frequent outcome of no prison time. Additionally, we control for the self-selection of the defendant into guilty pleas through use of an endogenous switching regression model. A new decomposition methodology is employed. Our results indicate that women receive more lenient sentences even after controlling for circumstances such as the severity of the offense and past criminal history.

Finally, I want to point out that the out-of-wedlock birth rate is increasing, and that means more children raised without fathers. But children raised in fatherless homes are more likely to be violent. I expect the rate of violence among women to increase as more of them are raised without fathers. Fathers restrain the emotions of their wives and daughters – they act as a stabilizing influence. Even boys raised without fathers are more likely to be violent and to have run-ins with the police. You can't replace a father with a welfare check from the government.

Canada’s economic boom: low tariffs, low corporate tax and more oil drilling

November 29, 2011 | by Wintery Knight | Link | Original Link

Prime Minister Stephen Harper
From Canoe.

Excerpt:

> Finance Minister Jim Flaherty announced Sunday the government will scrap 70 tariff items to save Canadian businesses about $32 million a year.
>
> “This builds on our government’s commitment in Budget 2010 to make Canada a tariff-free zone for industrial manufacturers,” Flaherty said in a statement. “By lowering costs for these businesses, we are enhancing their ability to compete in domestic and foreign markets and helping them invest and create jobs here at home.”
>
> Various sectors — including food processing, apparel, electrical equipment and furniture — will benefit from the move.
>
> The Conservatives had previously eliminated the duty on imported machinery and equipment in an attempt to make Canada a tariff-free zone for industrial manufacturers by 2015.
>
> **The Tories say that since 2009 they have eliminated more than 1,800 tariff items and have provided more than $435 million in annual tariff relief to Canadian businesses.**

According to the leftist CTV news, Canada also has lower corporate taxes.

Excerpt:

> **The study released Wednesday by KPMG International found Canada's corporate tax rate has dropped by more than 16 per cent over the last 11 years.**
>
> Canadian companies are actually paying less than their American counterparts.
>
> On average, Canadian companies pay 28 per cent of their income in federal and provincial tax, well below the 40 per cent paid by American companies.
>
> But Canada's corporate tax rate is higher than Europe's 20 per cent and the OECD average of 26 per cent.
>
> Canadian corporate taxes fell three per cent in 2011, from 31 per cent in 2010.
>
> "Canada's corporate tax rate falls around the middle of the pack among the OECD countries," said Elio Luongo, KPMG's Canadian Managing Partner for Tax.
>
> **"But Canada's general corporate tax rate is anticipated to continue to fall in 2012, when the federal tax rate will be 15 per cent, versus 16.5 per cent in 2011."**

I've written before about how Democrats oppose the job creation that would occur if the United States developed energy in Alaska, the Gulf of Mexico and the Ohio shale. Additionally, Obama has also opposed building the Keystone XL pipeline, which would have created 20,000 jobs paid for by a Canadian company. But Canada has no problems with developing their own energy resources, because their government operates independently of the environmentalist left.

Excerpt:

> As world leaders gather in South Africa to discuss climate change this week and next, Canada's environment minister says he plans to defend Alberta's oilsands and is willing to argue they are an "ethical" and reliable energy source.
>
> **Heading into the 17th Conference of the Parties meeting, Environment Minister Peter Kent says he will not sign on to any deals that mandate some countries reduce greenhouse gas emissions while others don't — as his government argues was the case under the Kyoto Protocol.** He is also unequivocal in his defence of northern Alberta's bitumen production, a position he expects will be supported by Alberta Environment Minister Diana McQueen when she joins him at the end of the week.
>
> "We still need to — and the industry needs to and our provincial partners need to — be aggressive in ensuring international friends and neighbours and customers recognize Alberta's heavy oil is no different from heavy oil produced in any number of other countries which don't receive nearly the negative attention or criticism," he says. "It is a legitimate resource."
>
> Kent has made headlines in the last year by arguing that Alberta's oil is "ethical."
>
> "We talk about this on quite a regular basis," Kent says. "I think it's important we correct where we find … misunderstanding, misinformation or deliberate

> ignorance to demonize, to criticize and to attempt … to create a boycott."
>
> In January, on his second day as environment minister, Kent referred to Alberta's oilsands product as "ethical oil" during an interview with a newspaper reporter.
>
> Reports immediately linked Kent's comments to the title of conservative activist Ezra Levant's recent book, *Ethical Oil: The Case for Canada's Oil Sands*.
>
> The book essentially compares Canada's human rights record to those of other oil-producing countries, and argues Canada's "ethical oil" is preferable to "conflict oil" produced in countries with poor human rights records, such as Sudan, Venezuela, Saudi Arabia or Iran. The argument removes environmental issues, such as greenhouse gas emissions, from the equation, though Levant notes Alberta's data on environmental issues is more transparent than information shared by other countries.

So in total I've presented three reasons why the Canadian economy is booming, while the American economy is stuck in neutral. Obama opposes free trade, lower corporate taxes and domestic energy production. When you elect a socialist lawyer, you get a Greece/Spain economy. When you elect a capitalist economist, you get Canada's booming economy, and consequently, a lower unemployment rate. Recall that our recession began exactly when we elected Nancy Pelosi to the House leadership and Harry Reid to the Senate leadership in 2007. Democrats wreck economies. There is no reason why America cannot be more prosperous than Canada, but we have to not elect an abject buffoons as our leaders.

Are evangelical Christians less interested in religious liberty than Catholics?

November 29, 2011 | by Wintery Knight | Link | Original Link

From First Things.

Excerpt:

> The U.S. Conference of Catholic Bishops has responded vigorously to the restrictive and unworkable "conscience regulations" being imposed on health care providers by the Obama Administration's Health and Human Services (HHS) Department. The Catholic Archdiocese for Military Service has said "no" to allowing priests in the Armed Forces perform homosexual "weddings," now that the historic prohibition on homosexuals in the military has been lifted. And most recently, eighteen Catholic colleges and universities banded together and, through the Alliance Defense Fund, submitted comments to HHS citing a violation of religious freedom regarding the interim final rules on preventative services.
>
> We applaud the efforts of America's Catholic leadership in defense of religious liberty. But we do so with a certain measure of consternation. As Evangelical Protestants, we wonder: Why is organized Evangelicalism so silent?
>
> Where is the National Association of Evangelicals?
>
> Where is the (Evangelical) Council for Christian Colleges and Universities?
>
> Where are the editorials and feature articles in Evangelical publications?
>
> At a time when our religious liberty is being eroded by an Administration that insists on forcing its anti-Christian policies on American public life, why are so many of our leaders shuffling their feet and staring at the ground?
>
> […]Every Christian school in the nation that offers insurance to its employees or students will be affected by the 2010 health care law—as schools like the University of Dallas, Franciscan University of Steubenville, and Ave Maria University immediately recognized. While Evangelicalism does not have specific teachings on contraception in the way that the Catholic Church does, no Christian organization in the United States should be comfortable with the requirement that insurance must cover abortions. Since that is the intention of the Obama administration, why are Evangelical Protestant colleges and universities, and Evangelical leaders generally, not speaking out? Why are they not joining with Catholic leaders and institutions in opposition to these anti-religious liberty measures?

I try to talk about these issues on my blog, but I agree that evangelicals are disengaged. Evangelicals are the most conservative voters, but we have to do more than vote Republican. We have to think about these issues between elections. We have to vote in primaries. We have to knock on doors. We have to write blog posts and editorials. We

have to get advanced degrees. We have to get involved in the debate. It’s not enough to have the right opinion, we have to be convincing.

A closer look at Obama's three-point plan to create American jobs

November 29, 2011 | by Wintery Knight | Link | Original Link

Democrats take over the House and Senate in January 2007
The Heritage Foundation outlines three of Obama's job creation plans.

Excerpt:

> This week, President Obama is again set to make a pitch for his latest plan to stimulate the economy, but meanwhile he is turning his back on projects that would put tens or even hundreds of thousands of Americans to work. And he's doing it all to appease his left-wing, environmentalist base at the expense of domestic energy production.
>
> Heritage's Rob Bluey reported last week on a new finding by a New Orleans-based group that the Obama administration is approving just 35 percent of the oil drilling plans for the Gulf of Mexico so far this year. It is also taking an average of 115 days — nearly four months — to secure approval from the Bureau of Ocean Energy Management, Regulation and Enforcement. Those numbers are a sharp drop from previous years, well below the historical average 73.4 percent approval rate and 61 days it takes to approve plans. And for plans that require drilling activity, the numbers are even worse with an average approval time of 222 days.
>
> That's bad news for job creation. One deepwater rig alone can create 700 jobs locally. But slowing down oil drilling in the Gulf isn't the only way the President is blocking jobs. Earlier this month, the Obama Administration announced it would delay the construction of the $7 billion Keystone XL pipeline that would bring in more than 700,000 barrels of oil per day from Alberta, Canada, to the Texas Gulf coast–and could have produced upwards of 20,000 jobs. Heritage's Nicolas Loris explains the impact:

> What this delay really means is that President Obama is putting off an important election year decision in which two of his largest supporters–labor unions and environmentalists–are split on the issue. This tactic allows the decision to be delayed until after the 2012 elections.
>
> More importantly, this means a delay in access to easy imports from our northern neighbor, the creation of thousands of jobs, and the generation of revenue for the states where the pipeline passes. Montana, South Dakota, Kansas, Oklahoma, Nebraska, and Texas are collectively projected to collect $5.2 billion in property tax revenue as a result of building the pipeline.
>
> As if that weren't enough, the White House made another decision blocking energy-related jobs in the United States. In mid-November, the Obama Administration delayed a mineral lease sale in Ohio's Wayne National Forest for oil and gas drilling. Apart for providing Americans access to affordable energy, the project could have had a tremendous impact in the state, including the creation of an estimated 200,000 jobs, an overall wage and personal-income boost of $12 billion by 2015, and a billion-dollar boon to Ohio landowners, schools, businesses, and communities.

So Obama has three plans to create more American jobs:

1. Block drilling in the Gulf of Mexico
2. Block the construction of the Keystone XL pipeline
3. Block drilling for oil and gas in Ohio

I don't think Obama's three job creation plans are working.

Maybe he just just do the opposite: 1) more drilling in the Gulf, 2) build the Keystone XL pipeline, and 3) allow development of the Ohio oil shale. And while he's at it, 4) drill for oil in Alaska. That would create real jobs.

Is Luke 10:13 more of problem for Calvinists or Molinists?

November 29, 2011 | by Wintery Knight | Link | Original Link

Calvinism is the view that God decides whether you go to Heaven or Hell and nothing that you do affects where you end up. If God wants to save you, then he will, and you can't resist it. If God wants to damn you, then he will, and you can't resist that. God saves some people and not others, but not based on anything that the people themselves do. God does not want everyone to be saved.

Molinism is the view that God draws people to him, and they can resist his drawing, just like in any ordinary love relationship where the beloved is not drawn against his or her will. On Molinism, God also places people in the best time and place for them to respond to him, depending on what evidence they need. He can do this because he knows how people respond in any set of circumstances. If people go to Hell, then the people are responsible, on Molinism. But God wants everyone to be saved, but not against their will. God actualizes a world in which he is sovereign over everything that happens, and gets the outcome that he wants, but without violating free will.

So here's a verse that I think is troubling to both sides, Luke 10:13:

[13] "Woe to you, Chorazin! Woe to you, Bethsaida! For if the miracles that were performed in you had been performed in Tyre and Sidon, they would have repented long ago, sitting in sackcloth and ashes.

This verse is a problem for Molinists, because if the people in these cities *would have* repented if they got better miracles, then why didn't they get the better miracles they needed? If God loves them, then why didn't he give them better miracles?

And this verse is a problem for Calvinists, because it shows that people do have free will to respond to evidence that God allows them to see. Why would evidence matter on Calvinism, since God can just flip the person's switch (or not). If God wanted those people to repent, he could just do it without having to care about evidence, since he is the one who decides whether they believe in him or not, totally apart from their free will.

Richard Epstein explains why economic inequality is required in order to promote innovation

November 30, 2011 | by Wintery Knight | Link | Original Link

My friend Matt, who blogs at The Conscience of a Young Conservative, posted this on Facebook.

Epstein explains how the profit motive creates economic value that raises the standard of living of all people, who are able to exchange their money for valuable products and services that they did not create. He explains how wealth redistribution is wasteful and harmful to economic growth.

(Found here)

Now let's look at some myths that Christians believe about economics.

We need to understand basic economics

Christian philosopher Jay Richards explains basic economics.

Excerpt:

> **THE ZERO-SUM GAME MYTH.**
>
> There are three kinds of games: win-lose, lose-lose, and win-win. Win-lose games, like basketball, are sometimes called "zero-sum games." When the Celtics and the Bulls compete, if the Celtics are up, then the Bulls are down, and vice versa. The scales balance. It's a zero-sum.
>
> Besides lose-lose games, which most of us avoid, there are positive-sum, or win-win, games. In these games, some players may end up better off than others, but everyone ends up at least the same if not better off than they were at the beginning.
>
> Millions of people think that the free trade in capitalism is a dog-eat-dog competition, where winners always create losers. This is the zero-sum game myth, which leads many to think that the government should somehow redistribute wealth. While some competition is a part of *any* economy, of course, an exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game. When I pay my barber $18 for a haircut, I value the haircut more than the $18. My barber values the $18 more than the time and effort it took her to cut my hair. We're both better off. Win-win.
>
> **THE MATERIALIST MYTH.**
>
> A similar myth leads people to think of the economy as some fixed amount of material stuff—money in safes or gold bars in a vault. Since two firms competing for one customer can't both get the customer's money, we might think the whole economy looks that way: wealth itself isn't created, it's merely transferred from one party to another.

> A common image of this "Materialist Myth" is a pie. If one person gets too big a slice, someone else will get just a sliver. To serve it fairly, you have to slice equal pieces.
>
> This isn't how a free economy works, however. Over the long run, the total amount of wealth in free economies *grows*. We can create wealth that wasn't there before. The "pie" doesn't stay the same size. Under capitalism, someone can get wealthy not merely by having someone else's wealth transferred to his account, but by creating new wealth, not only for himself, but for others as well.
>
> **THE GREED MYTH.**
>
> Friends and foes of capitalism often claim that it is based on greed. Writer Ayn Rand even claimed that selfishness is a virtue (see the accompanying feature article). But greed is one of the seven deadly sins. If capitalism is based on it, then Christians can't be capitalists.
>
> In truth, Adam Smith and other capitalist thinkers did not believe this "Greed Myth." Rather, Smith argued that capitalism, unlike static economies, channels even greedy motives into socially beneficial outcomes. "In spite of their natural selfishness and rapacity," Smith wrote, business people "are led by an invisible hand…and thus without intending it, without knowing it, advance the interest of the society."[3]
>
> Rather than inspire miserliness, capitalism encourages enterprise. Entrepreneurs, including greedy ones, succeed by delaying their own gratification, by investing their wealth in creative but risky ventures that may or may not pan out. Before they ever profit, they must first create.
>
> In a fallen world, we should want an economic system that not only channels greed into productive purposes, but unleashes human ingenuity, creativity, and willingness to risk as well.

I think Christians who don't understand economics really need to make the effort to understand the basics. I recommend Robert Murphy's "The Politically Incorrect Guide to Capitalism" and Thomas Sowell's "Basic Economics". If you want to see how economics works together with Christianity, then you also want Jay Richards "Money, Greed and God" and Wayne Grudem's "Politics According to the Bible".

Cain accuser Ginger White was found guilty of libeling former business partner

November 30, 2011 | by Wintery Knight | Link | Original Link

Herman Cain Accuser Ginger White - Another Nutcase

From ABC News. (H/T Richard M.)

Excerpt:

> The female bodybuilder who once ran a bicycle business with latest Herman Cain accuser Ginger White says the Atlanta woman never mentioned the Republican presidential candidate, who she says was her lover for 13 years.
>
> "His name has never come up," said Kimberly Vay, who told ABC News that she and White were former business partners.
>
> But Vay, who filed and won a libel lawsuit against White, refused to comment directly when asked whether she considers White's accusations about Cain credible. "When you see the details of my lawsuit," said Vay, "they will speak for themselves." She then referred ABC News to her attorney.
>
> According to Vay's suit, which was filed in June 2011, White and Vay were partners in a fitness coaching business called No Limit Cycling, and held spinning classes inside the Martin Luther King Recreation Center, which is owned by the City of Atlanta. In November 2010, claimed Vay, White asked to end their partnership, with White continuing to operate No Limit Cycling, and Vay agreed.
>
> On December 9, according to the complaint, White sent a "defamatory" note to a master email list of the company's clients and to city officials. The email said that White's business had "come tumbling down [on] the day I invited Kim Vay into my life and my business" and that Vay had turned her "dream" into a "nightmare." According to the complaint, the email alleged that Vay, a competitive bodybuilder, injected veterinary drugs into her system prior to

> contests," and also said that Vay preferred to date black men but had made derogatory comments about black women's hair.
>
> Vay's complaint termed the allegation about drug use "false, malicious, defamatory" and "reckless," and therefore libelous.
>
> Both women retained attorneys, according to Vay's account, and reached an out-of-court settlement in April 2011. In June, Vay filed suit, claiming that White had failed to live up to the settlement and that she was entitled to sue for libel. Vay's attorney Kurt Martin told ABC News that White had failed to honor the financial agreement that had settled the case.

Here's a bit more about Ginger White from the NY Daily News.

Excerpt:

> The Atlanta woman who says she was Herman Cain's mistress for 13 years is a down-on-her-luck single mom who once sued a former employer for sexual harassment.
>
> Ginger White surfaced in bombshell fashion on Monday, telling an Atlanta TV station that she's "not proud" of what she described as long-running sexual shenanigans with the married GOP White House contender.
>
> "I didn't want to come out this way," she said in an interview with Atlanta's FOX affiliate WAGA-TV that put Cain on the defensive even before it was aired.
>
> White described herself in the interview as a jobless former businesswoman. She is middle-aged, has two children and was evicted from her Atlanta home earlier this month, according to a background check done by the TV station.
>
> WAGA reporters also found records showing she has been hit with several eviction notices in DeKalb County, Ga., over the past six years.
>
> She filed for bankruptcy 23 years ago, the station reported. In 2001, she also filed a sexual harassment suit, which was later settled, according to the station.
>
> Her former business partner, Kimberly Vay, once sued her and accused her of stalking, the station reported.
>
> Vay, who did not respond to calls for comment Monday, also sought an order of protection against White, charging that she was bombarded with emails and texts "threatening [a\] lawsuit" and defaming her character.
>
> A judge ruled in favor of Vay in a libel suit she had filed against White, the station reported.

It's not surprising to me that a woman like this would make such accusations – she is getting a lot of attention, and possibly is being paid off by another candidate. There might even be a nice book deal for her.

Consider a parallel case, featuring Mariah Yeater's paternity suit against Justin Bieber.

Excerpt:

> The 20-year-old woman who claims teen idol Justin Bieber is the father of her child originally told her ex-boyfriend that he — and not Bieber — was the baby-daddy, the New York Post reported Friday.
>
> "She came back here from California telling me she was pregnant with my child and I said this is impossible, you've been in California two months and back here for only a week," said Las Vegas resident John Terranova, 19, about his ex-girlfriend Mariah Yeater, 20, who has sued Bieber for support for the son she later bore.
>
> "After I told her that's not my kid, you've only been here for a week, then she told me, 'No, I got pregnant before I left by you," Terranova told The Post. "But it didn't make sense because she had a doctor's note saying she wasn't pregnant enough for that to be possible. It didn't add up."
>
> Terranova said he had dated Yeater for nearly four years after meeting her at a Las Vegas high school that caters to students who had been thrown out of other schools. He said he broke up with her after he learned she had cheated on him.
>
> Terranova scoffed at Yeater's claim that it was the then-16-year-old Bieber who impregnated her in October 2010 during a 30-second sex session after the singer performed in Los Angeles.
>
> "I know it's not Justin Bieber," Terranova said. "She just wants money. It's a scam."
>
> His girlfriend Lacy Jensen, who herself is pregnant now, agreed.
>
> "Poor kid. He's worked so hard for his career and to deal with this. She just wants to get her name out there," said Jensen.
>
> "She's a gold digger and just wants someone to take care of her," Jensen said. "She was a really big party animal who got around a lot. She was a big slut. She's scandalous."
>
> Yeater was arrested for battery last December for allegedly slapping Terranova in a jealous rage after she returned from her sojourn in California to find him dating a new girlfriend, Jensen.

I see no reason to think that White's claims have any more validity than Yeater's claims. It seems plausible to me that both women are making false claims for the same reason – they want fame and money.

Do women ever make false claims about sexual matters? Its more common than you might think. Studies show that false allegations are made about 20-40% of the time, depending on the study. These sorts of false accusations are usually made in order to 1) get attention or money, by trying to appear as an innocent victim, 2) in order to get an alibi for something the woman has done wrong (see below), or 3) to get revenge on someone who has mistreated the woman, as with the Duke lacrosse scandal.

Consider this case of a Hofstra student Danmell Ndonye who invented a false rape

accusation.

Excerpt:

> The Hofstra freshman who had a raunchy restroom romp and then cried rape made up the twisted tale because she didn't want her schoolmates — particularly her new boyfriend — to think she was easy, the beau told The Post yesterday.
>
> "I think she needs a psychologist. She probably felt like, 'They'll think I'm a slut,' " her boyfriend, who asked not to be identified, told The Post.
>
> Danmell Ndonye, 18, who had accused five men of gang rape, admitted the truth only when prosecutors confronted her after learning of a cellphone video that captured the whole sordid episode and showed she had willingly participated, officials said.
>
> She created her outlandish tale when her boyfriend, a Hofstra student who's been dating her since the semester began a few weeks ago, demanded to know where she had disappeared after a wild frat party early Sunday.
>
> The two had been dancing together at the Alpha Kappa Alpha mixer at the school's on-campus club, Hofstra USA, but got separated when a fight broke out.
>
> The boyfriend said he called her repeatedly, but she didn't answer her cellphone, so he went to her seventh-floor dorm room at Estabrook Hall. Moments later she appeared.
>
> "As I was about to leave, she comes up and she has no shoes on, she is holding them in her hands. She looked like she just finished hot sex," he said. "I said, 'Where were you? What were you doing?' She told me, 'Nothing.' I said, 'What do you mean, nothing?' "
>
> Ndonye then dropped a bombshell.
>
> "I said, 'Don't lie to me, what's going on?' And she said, 'Oh, I just got raped,' " he said.
>
> "It didn't seem real to me. She was calm," he continued. "Then she started crying and saying, 'I was raped.' She lied to me. I think she was embarrassed. I said to her, 'You have to call public safety.' She hesitated. It seemed like she didn't want to."
>
> She then tried to backpedal.
>
> "Oh, you know, no, it's OK," she told him, but he was incredulous.
>
> "How could it be OK that you just got raped?" the boyfriend said.
>
> So she relented — and a four-day nightmare began for four innocent men: Stalin Felipe, 19, his stepbrother, Kevin Taveras, 20, Jesus Ortiz, 19, and 21-year-old Rondell Bedward, a Hofstra senior who had invited the others to the party.
>
> Cops also hunted for a fifth man, who has not been publicly identified.

False allegations of abuse are *routinely used* in divorce custody hearings. They virtually

never go to trial.

In the absence of ANY evidence, why think that these anonymous charges against a black conservative who is leading in national polls are anything but *greed and attention-whoring*? Surely, we need to see some charges laid against Cain that where brought forward in a real criminal trial, so we can see the evidence. Otherwise, it just seems to me like another case of false paternity claims and false sexual allegations. We need to see real criminal charges, with real evidence and real witnesses from a real trial, before we can draw any conclusions.

My previous post analyzed the media bias evident in how this story is being covered.

Trent Franks introduces bill to ban sex-selection and race-selection abortions

November 30, 2011 | by Wintery Knight | Link | Original Link

Scheming unborn baby is pleased with incremental pro-life laws

Life News news reports on the new Prenatal Nondiscrimination Act "PRENDA" bill.

Excerpt:

> A U.S. congressman has reintroduced legislation that would ban sex-selection or race-based abortions. Congressman Trent Franks, an Arizona Republican who is a member of the House Judiciary Committee, has brought back the Prenatal Nondiscrimination Act.
>
> The measure would prohibit knowingly performing or financing sex-selection or race-based abortions.
>
> […]"[T]he Prenatal Nondiscrimination Act, or "PRENDA," … restricts sex-selection abortion and race-selection abortion, and the coercion of a woman to obtain either. The woman seeking an abortion is exempted from prosecution, while abortion providers are held to account," wrote Franks in a letter to colleagues on Monday.
>
> "Sex-selection abortion is happening in the United States. A study published in the April 2008 Journal of the National Academy of Sciences shows through U.S. Census data that certain segments of the U.S. population – particularly those coming from countries that practice sex-selection abortion – have unnaturally skewed sex-ratios at birth caused by sex-selection 'most likely at the prenatal

> stages,'" Franks added.
>
> Franks also noted that abortion centers are disproportionately placed in African-American communities and he pointed out that Planned Parenthood has come under fire for accepting donations from people claiming to want the abortion business to target blacks.
>
> "Following the unearthing of the nation-wide race-targeted abortion donations, civil rights activists and African-American pastors from across the country protested government acquiescence in race-targeted abortion and the government funding of clinics that they believe are purposefully placed in the inner city and targeted to minority women," he said.
>
> A few years ago, a national study showed the possibility that the practice of sex-selection abortions has made its way from Asia to the United States. Researchers Douglas Almond and Lena Edlund of the National Academy of Sciences say their analysis of the 2000 Census shows the odds prematurely increasing for Asian-American families from China, Korea and India to have a boy if they already have a girl child.
>
> The data "suggest that in a sub-population with a traditional son preference, the technologies are being used to generate male births when preceding births are female," they wrote in the paper.
>
> **Meanwhile, a 2006 poll showed a majority of Americans would likely support the bill. A 2006 Zogby International poll shows that 86% of the American public desires a law to ban sex selection abortion. The poll surveyed a whopping 30,117 respondents in 48 states.**

Democrats favor abortion through all 9 months of pregnancy – for any reason, or no reason. Therefore, Democrats favor killing a baby *because* it is a girl, and killing a baby *because* it is black. That's what it means to be for abortion.

A look at how a former skeptic changed his mind about God's existence

November 30, 2011 | by Wintery Knight | Link | Original Link

Reformed Seth sent me this post from the ultimate object blog.

Excerpt:

> "There has been some confusion and more than a few requests for explanation about what is going on with my core beliefs. Some time last week, I realized that I could no longer call myself a skeptic. After fifteen years away from Christianity, most of which was spent as an atheist with an active, busy intent on destroying the faith, I returned to a church (with a real intention of going for worship) last Sunday. Although I know I may struggle with doubt for the rest of my life, my life as an atheist is over.
>
> **The primary motivator in my change of heart from a Christ-hater to a card-carrying Disciples of Christ member was apologetic arguments for God's existence. Those interested in these arguments may pursue them in the comments section, but I don't want to muddle this explanation up with formal philosophical proofs. Briefly, I grew tired of the lack of explanation for: the existence of the universe, moral values and duties, objective human worth, consciousness and will, and many other topics. The only valid foundation for many of those ideas is a personal, immaterial, unchanging and unchangeable entity.** As I fought so desperately to come up with refutations of these arguments – even going out of my way to personally meet many of their originators, defenders, and opponents – I realized that I could not answer them no matter how many long nights I spent hitting the books. The months of study rolled on to years, and eventually I found an increasing comfort around my God-believing enemies and a growing discontent and even anger at my atheist friends' inability to kill off these fleas in debate and in writing, an anger that gave birth to my first feeling of separateness from skepticism after reading comments related to a definitively refuted version of the Christ Myth theory, the idea that Jesus Christ never even existed as a person at all. Line after line after line of people hating Christianity and laughing at its "lie," when solid scholarship refuting their idea was ignored completely. It showed that the motive of bashing and hating Christianity for some skeptics wasn't based in reason and "free thinking" at all, although it would be unfair to lump many of my more intellectually rigorous and mentally cool skeptic friends in this way.
>
> As time went on, I reverted the path I traced after giving up Christianity so long ago: I went from atheist to agnostic to … gulp … *leaning* in the direction of God, to finally accepting that he very well could exist, and then to coming out

> and admitting (quietly) He did exist. After considering Deism (the belief in a God who abandons His creation), Islam, Hinduism (yes, Krishna, don't laugh), Baha'i, and even Jainism briefly, **I have decided to select Christianity due to its superior model for human evil and its reconciliation, coupled with the belief that God interacted with man directly and face-to-face and had *the* crucial role in this reconciliation.** This, of course, doesn't prove that Christianity is absolutely true (although I can prove that God exists), but rather reflects my recognition that Christianity is exactly what I would expect to be the case given that God exists.

I feel guilty when I read posts like that… I think to myself "you shouldn't be so mean to people who disagree with you, maybe they are like this guy – honestly thinking things through and willing to change their minds". Sigh. I feel so guilty right now.

I really like what he had to say about reconciliation, though. I feel the pressure to reconcile people to God through Christ's offer of forgiveness – that's why I work so hard on apologetics, and to have money to buy people things they need for their studying. To really get people to be reconciled, you have to be convincing. You have to be persuasive. And you can't do that without having studied the arguments and the evidence.

I also agree with him about the reconciliation. The resurrection is a good argument, but it's inductive – it's the best explanation based on the historical bedrock that we have. But what clinches the case for Christianity in the end is Christ descending from his glory to suffer with us – and *for* us, too.

In case any of you haven't read my testimony, it's right here.

Seth also found evidence that this guy really was a skeptic before. (That link goes to John Loftus' "Debunking Christianity" web site)

How to easily develop your knowledge of the way the world works

December 1, 2011 | by Wintery Knight | Link | Original Link

If you're not reading IBD editorials every day, you are missing out. I agree with them on practically everything they write. I try to stay in touch with what's happening in the world, with respect to economics and foreign policy, and Investors Business Daily is indispensable. (And sometimes, they even cover social issues like school choice, affirmative action and stem cell research). It's not just the news that I want, it's the analysis. They fit every data point into an argument – and that makes the world a very interesting place.

Here are four sample articles.

Did the latest European bailout fix anything?

Excerpt:

> Led by the Fed, top central banks added dollars to the global financial system on Wednesday as Europe's crisis deepened. We hate to rain on anyone's parade, but this won't solve the EU's problems.
>
> The central banks' bold action, though met with wild enthusiasm by financial markets, amounts to little more than a multibillion dollar Band-Aid on a deep, dangerous wound.
>
> […]But even as they juggle and sell off their portfolios of bad loans, major banks in Europe, the U.S. and Asia are being forced to raise capital to meet new international banking standards. The result: a credit crunch.
>
> In short, the global financial system is near collapse, and the central banks are madly pumping dollars into it to keep the collapse from happening.
>
> It's an emergency, we get it. But while such actions might help in the short run, they won't in the long run.
>
> The EU faces the same problems today as it did yesterday, and no amount of central bank money-printing changes that.
>
> Namely, its 17 members, used to an ever-expanding welfare state and leisure-class lifestyle, can't sustain that way of life with their chronically weak economies and aging, low-productivity workforces.
>
> Contrary to recent actions, the EU's problems aren't short-term and financial, but long-term and fiscal.

The same kind of problems that we are having USA, as we have moved from 160 billion dollar deficits under Bush in 2007 to approximately 1.4 trillion dollar deficits in ever year that Obama has been President. Maybe we can learn some lessons from the mistakes that others have made and are making instead of making those mistakes again

ourselves?

If global warming is real, where are all the hurricanes?

Excerpt:

> Sunday will be the 2,232nd consecutive day that the U.S. has gone without being hit by a major hurricane. This is a big enough deal to be covered by the mainstream media. But of course it won't be.
>
> On Dec. 4, a new record will be set for the number of days between landfalls of category 3 or stronger storms. The previous streak, according to Roger Pielke Jr., began on Sept. 8, 1900, and ended on Oct. 19, 1906, when the Great Galveston Hurricane hit.
>
> The record won't be broken by just a day or even a week. Pielke, a professor of environmental studies at University of Colorado, says it will be crushed.
>
> "Since there won't be any intense hurricanes before next summer, the record will be shattered, with the days between intense hurricane landfalls likely to exceed 2,500 days," he writes in his blog.
>
> Why is this significant? Because the global warming alarmists have been telling us that man's carbon dioxide emissions would bring bigger storms.
>
> […]The mainstream media has happily trafficked this nonsense, but it's not likely to mention Pielke's point even though it would be appropriate in stories covering our very mild hurricane season, which ended Wednesday.
>
> Why won't they do it? Because it's inconsistent with their narrative. It's like the latest batch of Climategate emails, which show again a group of scientists manipulating the process for political gain. News that contradicts the alarmists' tale simply isn't news to the media.

If you think that global warming alarmism has no effect on you, then you need to realize that it is being used to justify all kinds of job-killing regulations. If you want to know why companies ship jobs overseas and expand their operations outside the United States, then look no further than the EPA.

Is existing U.S. oil drilling in the EPA's crosshairs?

Excerpt:

> The latest salvo in the administration's war on energy may be new rules and permits to regulate a process to get oil and gas from porous rock, sacrificing jobs and economic growth while under review.
>
> There are a few areas of the U.S. that are booming. Two of these are in North Dakota and Pennsylvania, states that sit atop two massive shale rock formations, the Bakken and the Marcellus.
>
> Extraction of oil and natural gas from these formations have created jobs and economic growth in the midst of a stagnant and parched economy.

> […]Yet the Environmental Protection Agency, bowing to environmentalists' pressure and faithful to the administration mantra that fossil fuels are harmful and obsolete, is preparing to nip this economic boom in the bud by regulating it to death.
>
> […]Pennsylvania's Department of Labor and Industry estimates fracking in the Marcellus created 72,000 jobs between the fourth quarter of 2009 and the first quarter of 2011. Drilling in the Bakken formation along the North Dakota-Montana border helps explain North Dakota's unemployment rate of 3.2%, the nation's lowest.
>
> The Gulf Coast energy industry has never fully recovered from a similar moratorium and a new glacial permitting process.
>
> Similarly, the job-creating Keystone XL pipeline project to bring Canadian tar sands oil to American refineries is stalled on environmental grounds.

It's not enought that Obama blocks the creation of hundreds of thousands of *new* energy sector jobs – and wastes money on alternative energy companies connected to his campaign fundraisers – but now he might be going after *existing* energy production jobs, too.

Should we continue to send our "ally" Pakistan foreign aid?

Excerpt:

> In what's become a common occurrence, the Pakistani military — in an unprovoked attack — fired on coalition troops based across the border in Afghanistan. We responded by hitting two Pakistani border posts. The airstrikes killed two dozen Pakistani soldiers, sparking anti-American riots and threats of reprisal by Islamabad.
>
> […]So why still coddle Pakistan, diplomatically? Several reasons, not the least of which is Pakistan's arsenal of nuclear weapons and cold war with India. But it's mainly because we need its permission to transport military supplies across its border into landlocked Afghanistan, the terror swamp believed most worthy of draining.
>
> More than 40% of the fuel, food, ammunition, equipment and other supplies sent to U.S. forces in Afghanistan are shipped via Pakistani ports and roads. Islamabad also gives us access to airspace — including landing rights at three air bases, where we launch the Predator drone aircraft targeting Pakistani-based terrorist camps in lieu of U.S. boots on the ground.
>
> Islamabad could easily deny us those landing rights and cut off supply routes at any time, hamstringing our Afghan operations. Sure enough: Islamabad did exactly that over the weekend. After the coalition air strike that killed 24 of its troops, Pakistan blocked two coalition supply routes running through Pakistan. It also gave the U.S. two weeks to vacate the Shamsi air base in Balochistan, which has been used for drone sorties.

> These moves make reducing our dependence on Pakistan all the more critical.
>
> The Pentagon should hike supplies coming into Afghanistan from the north through Central Asia. To fund the added expense, it could use the billions in aid Pakistan is secretly using against us by funding and arming Afghan insurgents. It could also use a chunk of U.S. aid dollars to build larger fuel-storage facilities on the ground in Afghanistan, so that military operations can withstand major disruptions to supplies.

So there you have it – four great articles on the European crisis, global warming science, the employment situation at home, and foreign policy. And you get this analysis for free every day with Investors Business Daily. You can check out their editorials at this link, and bookmark it. Even if you don't read the Heritage Foundation's blog "The Foundry" and the American Enterprise Institute blog "The American", you can still stay *well* informed by reading IBD every day. If you are interested in raw news without the analysis, then read CNS News.

It's very important for Christians to understand that we have to be seen by others as aware and informed on other topics in order to be seen as aware and informed on religious issues. Part of that involves studying apologetics and being familiar with opposing arguments and evidence. Part of it is being informed about social issues like abortion, marriage and education. But part of it is just being a well-informed person in general. When topics like politics and economics and national security come up, our goal should not be to take whatever position is popular, or whatever position will make us look "nice". We should have our own position, and we should be informed enough about the world to participate in – and even to dominate – conversations on those topics. We have to be the people who know how the world works.

Obama administration tries to cover up Border Patrol agent's murder

December 1, 2011 | by Wintery Knight | Link | Original Link

From Judicial Watch.

Excerpt:

> The Obama Administration has abruptly sealed court records containing alarming details of how Mexican drug smugglers murdered a U.S. Border patrol agent with a gun connected to a failed federal experiment that allowed firearms to be smuggled into Mexico.
>
> This means information will now be kept from the public as well as the media. Could this be a cover-up on the part of the "most transparent" administration in history? After all, the rifle used to kill the federal agent (Brian Terry) last December in Arizona's Peck Canyon was part of the now infamous Operation Fast and Furious. Conducted by the Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), the disastrous scheme allowed guns to be smuggled into Mexico so they could eventually be traced to drug cartels.
>
> Instead, federal law enforcement officers lost track of more than 1,000 guns which have been used in numerous crimes. In Terry's case, five illegal immigrants armed with at least two semi-automatic assault rifles were hunting for U.S. Border Patrol agents near a desert watering hole just north of the Arizona-Mexico border when a firefight erupted and Terry got hit.
>
> We know this only because Washington D.C.'s conservative newspaper , the Washington Times, got ahold of the court documents before the government suddenly made them off limits. The now-sealed federal grand jury indictment tells the frightening story of how Terry was gunned down by Mexican drug smugglers patrolling the rugged desert with the intent to "intentionally and forcibly assault" Border Patrol agents.
>
> You can see why the administration wants to keep this information from the public and the media, considering the smugglers were essentially armed by the U.S. government. Truth is, no one will know the reason for the confiscation of public court records in this case because the judge's decision to seal it was also sealed, according to the news story. That means the public or media won't have access to any new or old evidence, filings, rulings or arguments.

My Dad sent me this article about how the people responsible for the Fast and Furious gun smuggling to Mexican drug cartels are being promoted – while the whistleblowers are being punished.

Excerpt:

> Here's what has happened to the managers of the [gun smuggling] operation:
>
> — Acting ATF Chief Ken Melson, who oversaw the operation, is now an adviser in the Office of Legal Affairs. He remains in ATF's Washington, D.C., headquarters.
>
> — Acting Deputy Director Billy Hoover, who knew his agency was walking guns and demanded an "exit strategy" just five months into the program, is now the special agent in charge of the D.C. office. He, too, did not have to relocate.
>
> — Deputy Director for Field Operations William McMahon received detailed briefings about the illegal operation and later admitted he shares "responsibility for mistakes that were made." Yet, he also stays in D.C., ironically as the No. 2 man at the ATF's Office of Internal Affairs.
>
> — Special Agent in Charge of Phoenix Bill Newell, the man most responsible for directly overseeing Fast and Furious, was promoted to the Office of Management in Washington.
>
> — Phoenix Deputy Chief George Gillette was also promoted to Washington as ATF's liaison to the U.S. Marshal's Service.
>
> — Group Supervisor David Voth managed Fast and Furious on a day-to-day basis and repeatedly stopped field agents from interdicting weapons headed to the border, according to congressional testimony. ATF boosted Voth to chief of the ATF Tobacco Division, where he now supervises more employees in Washington than he ever did in Phoenix.

But what about the whistleblowers?

> Case in point, he said, is field agent John Dodson. Dodson uprooted his family from Virginia in 2010 to join a new elite anti-gun trafficking group in Phoenix, known as Group 7. Dodson quickly witnessed what was wrong and loudly voiced his objections to Voth and Newell.
>
> Management reassigned Dodson to weekend duty and the wire room, a relatively boring job monitoring telephone traffic and subordinate to junior agents. Soon thereafter, Dodson was temporarily assigned to another group for an additional menial assignment, until ultimately sent to an FBI Task Force, completely away from the ATF, even turning off his ATF building access pass.
>
> Dodson continued to challenge Voth, saying the operation was killing people in Mexico and suggested it was only a matter of time before a "border agent or sheriff's deputy" would be killed by one of the guns they let go.
>
> "If you're going to make an omelet, you've got to scramble some eggs," Voth replied, according to a congressional report.
>
> Voth moved Dodson out of Group 7 shortly before Border Patrol Agent Brian Terry was shot by weapons traced to Fast and Furious. Newell, Gillette and Voth began to cover up their tracks. According to an e-mail 24 hours after Terry was shot, Voth wrote:

> "We are charging Avila (Jaime Avila bought the alleged murder weapons) with a stand-alone June 2010 firearms purchase. This way we do not divulge our current case (Fast and Furious) or the Border Patrol shooting case."
>
> "Great job," Newell replied.
>
> Dodson first complained internally to the ATF Office of Chief Counsel and Ethics Section, OIG, Office of Special Counsel, and Office of Professional Responsibility. They were unresponsive. Dodson was then contacted by congressional investigators, who began their own investigation.
>
> Because of Dodson, the Terry family hopes to hear the truth about what happened to their son and the American public learned that senior Obama administration officials did nothing to stop guns from reaching an insurgency south of the border.
>
> And what did Dodson get for telling the truth? In Phoenix he was isolated, marginalized and referred to as a "nut job," "wing-nut" and "disgruntled," according to sources.
>
> In Washington, ATF command ordered that "Contact with Dodson was detrimental to any ATF career."

Could this be the issue that sinks Obama in the 2012 election? Or will it be his subsidies for alternative energy companies connected to his Democrat fundraisers? Or will it be his job-destroying stimulus and regulation bills?

Will Obama force Catholics to buy insurance that covers abortions?

December 1, 2011 | by Wintery Knight | Link | Original Link

Which religions supported Obama most in 2008?
From CNS News.

Excerpt:

> President Barack Obama has not yet decided whether to go forward with a proposed regulation under the health care law he signed last year that would force Catholic individuals and instutions to act against the teachings of the Catholic church.
>
> In August, Health and Human Service Secretary Kathleen Sebelius proposed a regulation–that would take affect next fall–that would require all health care plans to cover sterilizations and all FDA-approved contraceptives, including abortifacients. The proposed regulation includes a very narrow religious exemption that does not cover individual Catholics, or Catholic universities, hospitals or charitable institutions.
>
> The U.S. Conference of Catholic Bishops have called the regulation an “unprecedented attack on religious liberty” and have called on American Catholics to contact HHS and demand that the regulation be rescinded.
>
> […]Because of Obamacare’s mandate that all individuals must buy health insurance, the “preventive services” regulation would mean individual American Catholics would be forced to buy health insurance that pays for sterilizations,

> contraceptives and abortions–all of which violate Catholic moral teachings.
>
> Many major Catholic institutions and Catholic business owners would be forced to choose between dropping health insurance coverage for their employees and students or violating their religious beliefs.
>
> “Indeed, such nationwide government coercion of religious people and groups to sell, broker, or purchase ‘services’ to which they have a moral or religious objection represents an unprecedented attack on religious liberty,” the bishops said in commentary on the proposed regulation they submitted to HHS.

As an evangelical Protestant, I get so confused when I see many people who label themselves as “Catholic” voting to equate abortion with health care.

Insurance is about sharing costs. Why should people who choose not to have sex outside of marriage (like me) be *compelled* to pay the bills of people who freely choose to engage in risky, recreational sex? When you subsidize something, you get more of it. So why should pro-lifers be forced subsidize something that we don’t want more of? Why should pro-lifers want to make it less costly for people to engage in behaviors that result in the killing of an innocent child?

Can a Christian date a non-Christian? Can a Christian marry a non-Christian?

December 1, 2011 | by Wintery Knight | Link | Original Link

I think that the best way to answer the question, "should I marry a non-Christian?", is to ask whether it makes any difference if your spouse is on board with your plans for your ministry and with your marriage. So let's take a look at a case where someone chose a Christian wife, and we'll see how much that affected his ministry and his marriage.

I want to draw your attention to a talk on "Vision in Life" given by William Lane Craig. Bill is the ablest defender of the Christian faith operating today, having defeated all of the best known atheists in formal academic debates, in front of *thousands* of university students. This list includes people like Christopher Hitchens and Victor Stenger. The Hitchens debate took place in an auditorium filled with 5000 students, and many thousands more were watching at churches all over the world. No one has done more to defend Christianity on university campuses. So how did Bill do it? Well, he owes a lot of his success to his amazing wife Jan, as we shall see below.

The MP3 file is here. (32 minutes)

This was Bill's chapel address to Biola University students, and he is introduced by his son, John, a Biola grad.

In the talk, it becomes clear that Bill's wife Jan plays an *enormous* role in his success. Indeed, you will see that if it were not for her, he never would have gotten *either* of his doctorates, or even his second Masters degree. Why was she so supportive of his plans? Because she had the same broad goal of evangelism through scholarship. Let's see how she encouraged him.

Here is a quotation that occurs about 11 minutes into the talk, as Bill describes the completion of his Bachelor's degree at Wheaton:

> And it was at Wheaton that my vision began to focus on presenting the gospel in the context of giving an intellectual defense of the faith, to appeal not only to the heart but also to the head, as well. And so I determined that I would go on to seminary for further training.
>
> But, my senior year, in chapel, we heard a speaker who challenged us, before going on to further education, to take a couple of years out, and to wring out the sponge, so to speak, that had been soaking up all that knowledge, and to work with university students while we were still about the same age.
>
> And so I joined the staff of Campus Crusade for Christ for 2 years, and was assigned to Northern Illinois University. And that was where I met my wife Jan. She was a graduate of the University of North Dakota where she had come to faith in Christ. And she had a similar vision for her life of evangelism and discipleship.

> And as we worked at NIU together, she with gals and I with the guys, leading students to Christ and discipling them to walk with the Lord, we fell in love. And we decided that we would be more effective if we joined forces and became a team.

It is at this point in the talk where Bill begins to explain just how Jan molded him into the lean, mean debating machine that travels the world striking terror into the hearts of atheists.

Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

In an article on his web site, he talks about how Jan encouraged him to do his first PhD:

> As graduation from Trinity neared, Jan and I were sitting one evening at the supper table in our little campus apartment, talking about what to do after graduation. Neither of us had any clear leading or inclination of what we should do next.
>
> So Jan said to me, "Well, if money were no object, what would you really like to do next?"
>
> I replied, "If money were no object, what I'd really like to do is go to England and do a doctorate under John Hick."
>
> "Who's he?" she asked.
>
> "Oh, he's this famous British philosopher who's written extensively on arguments for the existence of God," I explained. "If I could study with him, I could develop a cosmological argument for God's existence."
>
> But it hardly seemed a realistic idea.
>
> The next evening at supper Jan handed me a slip of paper with John Hick's address on it. "I went to the library today and found out that he's at the

> University of Birmingham in England," she said. "Why don't you write him a letter and ask him if you can do a doctoral thesis under him on the cosmological argument?"
>
> What a woman! So I did, and to our amazement and delight Professor Hick wrote back saying he'd be very pleased to supervise my doctoral work on that subject. So it was an open door!

And in the same article, he explains how Jan encouraged him to get his second Ph.D:

> As Jan and I neared the completion of my doctoral studies in Birmingham, our future path was again unclear to us. I had sent out a number of applications for teaching positions in philosophy at American universities but had received no bites. We didn't know what to do.
>
> I remember it like yesterday. We were sitting at the supper table in our little house outside Birmingham, and Jan suddenly said to me, "Well, if money were no object, what would you really *like* to do next?"
>
> I laughed because I remembered how the Lord had used her question to guide us in the past. I had no trouble answering the question. "If money were no object, what I'd really like to do is go to Germany and study under Wolfhart Pannenberg."
>
> "Who's he?"
>
> "Oh, he's this famous German theologian who's defended the resurrection of Christ historically," I explained. "If I could study with him, I could develop a historical apologetic for the resurrection of Jesus."
>
> Our conversation drifted to other subjects, but Jan later told me that my remark had just lit a fire under her. The next day while I was at the university, she slipped away to the library and began to research grants-in-aid for study at German universities. Most of the leads proved to be defunct or otherwise inapplicable to our situation. But there were two grants she found that were possibilities. You can imagine how surprised I was when she sprung them on me!

Both of these Ph.D experiences are also described in the talk. And the talk concludes as follows:

> I am so thankful to be married to a woman who is tremendously resourceful, tremendously talented and energetic, who could have pursued an independent career in any number of areas, but instead, she has chose to wed her aspirations to mine, and to make it her goal to make me the most effective person I can be, for Christ. And she has been like my right arm in ministry over these many years. And it is a tremendous privilege to be a team with a person like that.
>
> And you young men, I would encourage you, if you marry, to find a gal who shares your vision, not some independent vision, but who is interested in aligning herself with you, and pursuing together a common vision and goal that will draw

> you [together], so that you will avoid the growing separateness that so often creeps into marriages.

And now you know the rest of Bill's story. *The person you marry will have an enormous influence on the impact you will have for Christ and his Kingdom.* It is up to you to decide whether that influence is going to be positive or negative, by deciding if you will marry, and if you do marry, by deciding whom you will marry. If you marry a non-Christian, you cannot expect to achieve the same things for God as you can with someone who accepts your core convictions and is willing to sacrifice their happiness so that God can be made happier.

You may also be interested in this talk given by William Lane Craig, entitled "Healthy Relationships" (National Faculty Leadership Conf. 2008) (audio here)

Conclusion

The level of influence of a significant other in a non-platonic relationship greatly impacts your ability to achieve the vocational task that the Lord has set for you. My recommendation is to avoid engaging in *any* romantic relationship in which self-sacrificial service to the Lord is not the main focus.

Since I am male, I decided to prepare a set of questions that a man can use to test a woman to see if she is a marriage-ready Christian. You can use those, if you like.

Islamic extremists dominate Egypt's parliamentary elections

December 2, 2011 | by Wintery Knight | Link | Original Link

Map of the Middle East
From the Wall Street Journal.

Excerpt:

> Unofficial initial results from the first two days of Egypt's parliamentary elections pointed to a dominant showing for Islamist candidates, fulfilling most analysts' expectations that conservative religious politicians could have the upper hand in next year's drafting of a new Egyptian constitution.
>
> Initial tallies put the powerful Muslim Brotherhood's political arm, the Freedom and Justice Party, or FJP, in a leading position, followed by the Nour Party, which represents the ultraconservative Salafi school of Islam, FJP said.
>
> An FJP official said the party's vote-counting observers expect the group to win as much as 50% of the vote. A Nour Party spokesman said the early returns point to a Salafi capture of about 10% to 15% of seats in the incoming Parliament.
>
> The Egyptian Bloc, a list of liberal parties dominated by the left-leaning Social Democrat Party and the pro-market Free Egyptians Party, appeared to be in third place. Official early results are expected to be announced on Thursday, the High Elections Commission said.
>
> The results are far from final—a second and third round of elections covering two-thirds of Egypt's 27 governorates are scheduled to take place in December

> and January. Individual candidate races that didn't secure at least 51% will face runoffs beginning next week.
>
> But the early results indicate that Egypt—the largest Arab country and under former President Hosni Mubarak one of the region's staunchest defenders of secular governance—is set to pivot toward political Islam. The next voting rounds include mostly smaller Egyptian cities and villages, where Islamist rule is popular.
>
> Such an outcome would surprise few Egyptians or political observers. Egypt's deeply religious population grated under the ousted regime's secular policies, and Tunisia and Morocco have recently awarded pluralities to moderate Islamist parties.
>
> […]Both Salafi and Brotherhood representatives said it was too early to say whether the two groups would form a coalition in Parliament—an alliance that would give Islamists a powerful majority.

This is what Obama bought us by taking his eye off the ball in Iraq, Afghanistan, Syria, Pakistan and Iran. We had no business firing a shot in Libya and Egypt. There was no strategic reason for us to be there.

Mitt Romney gaffe: Romney fails miserably in interview with Bret Baier

December 2, 2011 | by Wintery Knight | Link | Original Link

So everyone knows I don't have a TV and that the only thing on TV that I think is worth watching is Bret Baier on Fox News' Special Report. Let's see why, below.

Here's Bret Baier interviewing Mitt Romney:

The full transcript is here.

Excerpt:

> BAIER: Like the "Union Leader," your critics charge that you make decisions based on political expediency and not core conviction. You have been on the both sides of some issues, and there's videotape of you going back years, speaking about different issues, climate change, abortion, immigration, gay rights.
>
> How can voters trust what they hear from you today is what you will believe if you win the White House?
>
> ROMNEY: Well, Bret, your list is just not accurate. So, one, we're going to have to be better informed about my views on issues. My view is, you can look at what I've written in my book. You can look at a person who has devoted his life to his family, to his faith, to his country, and I'm running for president because of the things I believe I think I can do to help this country.
>
> And I know in politics there are going to be those who try in every way they can to tear down one another, but the real question is, does Barack Obama have the capacity to lead this country out of a very difficult economic setting? And the answer is no. He's proven he doesn't. And I do.
>
> That's my experience. That's what I know how to do. The American people want someone who knows how to lead, who believes in the free economy, and understands the principals it takes to get America strong, economically, militarily, and culturally.
>
> BAIER: But I'm sure you've seen these ads, using videotape of you in previous years, speaking on various issues.
>
> ROMNEY: Uh-huh.
>
> BAIER: And it seems like it's in direct contrast to positions you take now.
>
> ROMNEY: Well, I'm glad that the Democratic ads are breaking through and you got —
>
> BAIER: Jon Huntsman has a couple ads that do the exact same thing.

So Romney is saying to Republican voters "never mind what I am saying in my own words

in those videos, just read my book instead".

It's easy to find videos of Mitt Romney speaking in his own words endorsing abortion, embryonic stem cell research, gay rights, gun control, man-made global warming, amnesty, and pretty much every position that Obama holds. His Romneycare health care plan is quite similar to Obamacare, and has created enormous budget deficits in Massachussetts.

Anyway, Bret's questions seem fair to me, but it turns out that Romney was offended by them:

CNS News reports.

Excerpt:

> Former Massachusetts Gov. Mitt Romney, who is now seeking the Republican presidential nomination, complained to Fox News Special Report anchor Bret Baier after an interview on Tuesday that Baier's questioning had been "overly aggressive" and "uncalled for," according to Baier.
>
> "He was irritated by the interview after we were done," Baier said of Romney when he appeared on Fox News's "O'Reilly Factor" on Wednesday to discuss the interview.
>
> O'Reilly asked Baier: "How do you know he was irritated? Did he slap you? Or what did he do?"
>
> Well, he just made it clear at the end of the interview," said Baier.
>
> "Tell me how he made it clear?" asked O'Reilly. "What it is–did he say something to you?
>
> **"He said he thought it was overly aggressive," said Baier.**
>
> **"He did, he said that to you?" said O'Reilly. "He said it was overly aggressive?"**
>
> **"He did," affirmed Baier.**
>
> **"And as we were walking in the walk and talk and then after he finished he went to his holding room and then came back and said he didn't like the interview and thought it was uncalled for," said Baier.**

Is this thin-skinned RINO the person we want in the Oval office in 2012? Why elect a clone of Obama?

You can see some of the videos featuring Mitt Romney in this post and this post.

Republicans introduce bill to build Keystone XL pipeline and create 20,000 jobs

December 2, 2011 | by Wintery Knight | Link | Original Link

CNS News reports on the activities of the grown-up party.

Excerpt:

> Senate Republicans have introduced legislation that would direct the State Department to issue permits to begin construction of the 1,700-mile Keystone XL crude oil pipeline from Canada to U.S. refineries – a project they say will create 20,000 jobs, increase domestic energy security and generate revenue.
>
> "Jobs will be created right away and billions of dollars in investment will be unleashed through legislation introduced to permit the $7 billion Keystone XL pipeline, the largest infrastructure project ready in the United States, to commence construction," Sen. Dick Lugar (R-Ind.) told a press conference on Wednesday.
>
> Lugar, ranking member of the Senate Foreign Relations Committee, is lead sponsor of the new North American Energy Security Act.
>
> In a jab to President Obama's promotion of creating jobs through new or improved infrastructure and "shovel-ready" projects, the GOP senators said the pipeline qualifies as both. Obama's decision to delay the approval process until after the 2012 election is putting politics above job creation, they charged.
>
> "There is absolutely no reason to delay a permit decision on the Keystone pipeline – and the jobs that come with it – for another year in a blatant attempt to appease the president's political base," Majority Leader Mitch McConnell (R-Ky.) said at the conference.
>
> […]The lawmakers said the pipeline could reduce the nation's dependence on foreign oil by bringing as much as 700,000 barrels of oil a day into the country from Canada.
>
> Aside from jobs directly created in construction and pipeline operation, the private sector project is expected also to boost economic growth for the more than 1,400 U.S. companies that sell products and services for oil sands production and transport.

We need jobs, so let's hope this bill passes.

Josh Mandel wants to create jobs in Ohio with more oil drilling

December 2, 2011 | by Wintery Knight | Link | Original Link

Josh Mandel is pushing for energy development and more jobs in Ohio.

Excerpt:

> Ohio Treasurer Josh Mandel, a candidate for the U.S. Senate, was in Tuscarawas County this week touting the potential benefits the oil and gas industry could bring to Ohio, including the possibility of 200,000 additional jobs.
>
> Mandel is stepping into the debate over whether Ohio's federal lands should be used for oil and gas exploration.
>
> "I believe responsible exploration for oil and gas will be a win-win-win for families and senior citizens in Tuscarawas County," Mandel told The Times-Reporter during a telephone interview Monday, hours before he held a meet-and-greet in Bolivar.
>
> "It will create jobs, bring down utility bills, and it will contribute to the national security of our country. With more energy produced here in America, we will be safer as a nation."
>
> Mandel, a Republican from Lyndhurst, near Cleveland, is running for the seat in the Senate held by Sen. Sherrod Brown, D-Avon.
>
> […]The oil and gas boom in eastern Ohio will benefit not only the men and women working on the rigs, but also construction workers, truck drivers and service industry employees, Mandel contends. He said it will help waiters and waitresses, who will serve more customers, owners of hotels and motels and people who own businesses up and down the supplier's chain.
>
> But Mandel says he does see a threat to the industry.
>
> "There are bureaucrats in Washington and in the state who are trying to block responsible oil and gas exploration," Mandel said. "I will do everything in my power to combat the Washington bureaucrats who are trying to block new jobs and affordable energy in Ohio."
>
> […]Mandel served two terms in the Ohio House of Representatives before ousting incumbent state Treasurer Kevin Boyce in 2010. He is a Marine Corps veteran who served two tours of duty in Anbar Province, Iraq.

Josh has a stellar record to run on.

Excerpt:

> Amidst this week's news of of Fitch downgrading the United States' outlook from stable to negative, Ohio Treasurer Josh Mandel has announced that Fitch has

> given *the highest* possible short term rating of F1+ for Ohio's general obligation (GO) bonds. Fitch credited Treasurer Mandel's conservative investment strategy and cautious management of our tax dollars as key factors in making their rating determination:
>
> *"The rating reflects the strength of the state's general obligation credit, the ample liquidity provided by investments in the state treasurer's liquidity account, and the procedures in place to insure timely payment of optional tenders of bonds that have not been remarketed."*
>
> They also noted:
>
> *"The investment profile is conservative as the fund is invested in U.S. Treasury and agency securities, highly rated commercial paper, and money market funds."*
>
> Amidst a struggling economy and sluggish national growth, Fitch spoke of notable increases in the state treasurer's liquidity account, as well as the state's bolstering of its rainy day fund.
>
> Fitch also noted Ohio's improved budget stabilization fund balance in their rating. Ohio's budget stabilization fund reached a low point in 2009 under previous administrations when the fund had been depleted down to just $0.89. In July, Ohio's AA+ credit rating outlook was raised by Standard & Poor's from "negative" to "stable," in part because of conservative management of debt in the Treasurer's office.
>
> Since being elected, Treasurer Mandel has focused on reining in state budget costs by streamlining operations, eliminating waste, and serving as a steadfast fiscal watchdog for Ohio taxpayers' hard-earned money.
>
> The Republican-led General Assembly and Governor Kasich tackled Ohio's $8 billion budget shortfall and spending imbalances head on, thus improving our state's credit ratings.

Josh is going to be running for the Senate seat current occupied by left-wing radical Sherrod Brown in 2012.

William Lane Craig presents the moral argument to his Sunday school class

December 2, 2011 | by Wintery Knight | Link | Original Link

This is great. He is presenting this argument to ordinary people, so everyone can understand it.

The lecture is in four parts.

Part 1 of 4: (28 minutes)

Part 2 of 4: (43 minutes)

Part 3 of 4: (29 minutes)

Part 4 of 4: (32 minutes)

Outline:

> MORAL ARGUMENT
>
> 1. IF GOD DOES NOT EXIST, OBJECTIVE MORAL VALUES DO NOT EXIST.
>
> 1.1 “Objective” defined.
> 1.2 Objective human value on naturalism.
> 1.3 Atheistic Moral Realism.
>
> 1.31 Unintelligibility of Atheistic Moral Realism
> 1.32 Lack of Moral Obligation on Atheistic Moral Realism
> 1.33 Improbability of Atheistic Moral Realism
>
> 2. OBJECTIVE MORAL VALUES DO EXIST.
>
> 2.1 Moral values and physical objects.
> 2.2 Illustrations.
>
> 3. THEREFORE, GOD EXISTS.
> 3.1 Euthyphro Objection
> 3.2 Why God as the foundation?

The playlist is here, if you want to mail it to someone.

Happy Friday!

Michael Medved: is he a conservative radio talk show host?

December 3, 2011 | by Wintery Knight | Link | Original Link

Michael Medved is a strong supporter of Mitt Romney. Let's look at Romney's views.

Here is Mitt Romney on abortion:

And more:

Mitt Romney on immigration:

Mitt Romney on global warming:

Here is Mitt Romney on gun control:

Here is Mitt Romney on embryonic stem cell research:

Here is Mitt Romney on the flat tax:

So long as Michael Medved endorses Romney, then Michael Medved is not a conservative in any sense of the word.

Marriage researcher Brad Wilcox's lecture on marriage and society

December 4, 2011 | by Wintery Knight | Link | Original Link

There are two parts. The lecture and then the Q&A.

Let's learn a bit about Brad first:

> W. Bradford Wilcox is Director of the National Marriage Project at the University of Virginia, Associate Professor of Sociology at the University of Virginia, and a member of the James Madison Society at Princeton University.
>
> He earned his undergraduate degree at the University of Virginia and his Ph.D. at Princeton University. Prior to coming to the University of Virginia, he held research fellowships at Princeton University, Yale University and the Brookings Institution.
>
> Mr. Wilcox's research focuses on marriage, parenthood, and cohabitation, and on the ways that gender, religion, and children influence the quality and stability of American marriages and family life. He has published articles on marriage, cohabitation, parenting, and fatherhood in *The American Sociological Review, Social Forces, The Journal of Marriage and Family* and *The Journal for the Scientific Study of Religion*. His first book, *Soft Patriarchs, New Men: How Christianity Shapes Fathers and Husbands* (Chicago, 2004), examines the ways in which the religious beliefs and practices of American Protestant men influence their approach to parenting, household labor, and marriage. With Nicholas Wolfinger, Wilcox is now writing a book titled, *Soul Mates: Religion, Sex, Children, & Marriage among African Americans and Latinos*, for Oxford University Press. With Eric Kaufmann, Wilcox is finishing a book on the causes and consequences of low fertility in the West.

The MP3 file for the lecture is here.

The MP3 file for the Q&A is here.

This lecture covers marriage, cohabitation, single parenthood and divorce.

James Dobson lists ten potential sources of depression for wives

December 4, 2011 | by Wintery Knight | Link | Original Link

I've been reading this interesting book by James Dobson, entitled "What Wives Wish Their Husbands Knew About Women". In the book he asks the reader to rank the 10 common sources of depression for wives in order:

- low self-esteem
- fatigue and time pressure
- loneliness, isolation, and boredom
- absence of romantic love in marriage
- financial difficulties
- sexual problems in marriage
- menstrual and physiological problems
- problems with the children
- aging
- in-law problems

He has surveyed a whole bunch of Christian and the order above is the order that they gave him from most severe to least severe.

There is room in the book for ranking these and my ranking was like his, pretty much, except that I had two things reversed. I had the financial difficulties and in-law problems reversed, because I have this idea that women are really bad with money and that they care more about relationships. I also had aging and sexual problems reversed because I don't think that sex is very important to women, and they are sort of unaware of how much of a problem it is for men. However, I think they are terribly concerned about aging.

Note: Commenter Maureen points out to me that women are better than men with money these days. I can't go against this evidence showing that she is right.

So I thought I would post this to see if anyone else has any thoughts about this list. Does it seem right to you?

I noticed in this article that more and more women are suffering from depression, so it's important to know why they do that.

Excerpt:

> One in four women aged between 45 and 64 now experience some form of mental disorder – an increase of 20 per cent in the last 15 years.

> This decline in mental health is greater than any other age or gender group, according to the research.
>
> The study also found that women in general suffer more mental problems – or

> talk about it more -with 21.5 per cent complaining of stress or depression compared to 13.6 per cent of men.
>
> Mental health charity Mind said women in their 40s and 50s were becoming increasingly affected by trying to manage the responsibilities of family, home and work.

> The figures emerged as the independent psychiatric Capio Nightingale Hospital reported a 20 per cent rise in enquiries relating to depression since the start of the year, many related to financial pressures.
>
> The NHS Information Centre report, entitled the Adult Psychiatric Morbidity Survey 2007, was carried out by the National Centre for Social Research and the University of Leicester and questioned 7,461 adults.
>
> It followed on from two similar NHS studies carried out in England in 1993 and 2000.
>
> The report concluded that the number of 45 to 64 year old women with a common mental disorder rose from 20.5 per cent in 1993 to 25.2 per cent in 2007.
>
> The survey also found that the number of women aged between 16 and 74 who reported thinking suicidal thoughts in the previous year rose from 4.2 per cent in 2000 to 5.5 per cent in 2007.
>
> Dr Peter Byrne, director of public education at the Royal College of Psychiatrists, said the role of woman had changed significantly in the last 15 years.
>
> “This particular age group was probably reared by their stay-at-home mothers and they are almost certainly now working mothers, who face the financial pressure of being part of a two income family,” he said.

It’s also important to pick a woman who can be made happy by things that the man can do. I think the wise man has to be careful to choose a woman whose interests are not based on her emotions but on a plan with outward-facing goals. Someone who likes to work at projects and get things done, rather than be dominated by her feelings. Someone who tries to control her feelings when she sees that they are not rooted in reality.

I think it’s a better situation for a man where he is in a relationship with a woman where he can do things in the world and that will drive her emotions. The situation to avoid is where a woman’s emotions are not rooted in anything in the real world and she in’t impressed by what a man does that accomplishes tasks to achieve specific goals that she is passionate about. You want to avoid a woman who is concerns about Betty Friedan’s “the problem that has no name” and one who is impressed with the apologetics course that you are teaching at the church.

You don’t want a woman who says “I’m depressed and since I don’t care about anything except my feelings and victimhood, nothing you can do for me impresses me”. You want a woman who says “I’m depressed but if you do things in the real world that help to

achieve goals that I care about, then I'll feel better". This is something that has to be tested for in the courtship. At the very least, women ought to know how to identify when they are being tricked by their emotions. They have to be able to talk it out and see that there is nothing specific that is bothering them, and then realize that their feelings are playing tricks on them.

New study : Earth’s climate is not as sensitive to carbon dioxide as IPCC claims

December 5, 2011 | by Wintery Knight | Link | Original Link

ECM sent me this article from the Economist concerning some recent research that was published in the prestigious peer-reviewed journal *Science*.

Excerpt:

> Climate science is famously complicated, but one useful number to keep in mind is “climate sensitivity”. This measures the amount of warming that can eventually be expected to follow a doubling in the atmospheric concentration of carbon dioxide. The Intergovernmental Panel on Climate Change, in its most recent summary of the science behind its predictions, published in 2007, estimated that, in present conditions, a doubling of CO2 would cause warming of about 3°C, with uncertainty of about a degree and a half in either direction.
>
> […]But a paper published in this week’s *Science*, by Andreas Schmittner of Oregon State University, suggests it is not. In Dr Schmittner’s analysis, the climate is less sensitive to carbon dioxide than was feared.
>
> Existing studies of climate sensitivity mostly rely on data gathered from weather stations, which go back to roughly 1850. Dr Schmittner takes a different approach. His data come from the peak of the most recent ice age, between 19,000 and 23,000 years ago. His group is not the first to use such data (ice cores, fossils, marine sediments and the like) to probe the climate’s sensitivity to carbon dioxide. But their paper is the most thorough. Previous attempts had considered only small regions of the globe. He has compiled enough information to make a credible stab at recreating the climate of the entire planet.
>
> […]The group’s most likely figure for climate sensitivity is 2.3°C, which is more than half a degree lower than the consensus figure, with a 66% probability that it lies between 1.7° and 2.6°C. More importantly, these results suggest an upper limit for climate sensitivity of around 3.2°C.

I think that it is a good thing for the reputation of scientists that articles like this can be published at all. I have lost a lot of confidence in government-funded science lately, especially when the conclusion of the government-funded research supports the need for more government and high taxes.

In case you missed my recent post on the newly-release Climategate e-mails, then you should read that to see how biased climate scientists can be.

Here are the latest surface temperature measurements.

Evaluating common criticisms of American health care

December 5, 2011 | by Wintery Knight | Link | Original Link

Here is a must-read article from my friend Matt Palumbo at the American Thinker. It's extremely high quality. (I removed the links in my excerpt – but he linked all the sources in his post)

Excerpt:

> The oft-cited "46 million uninsured" is breathtakingly easy to break down to size. Keep in mind that there is overlap in the following statistics, as many people listed in them belong to multiple categories. Around 10 million of the uninsured aren't even citizens. Another 8 million are aged 18-24, which is the group least prone to medical problems. The average salary of a person in this age group is $31,790, so affording health care would not be a problem. Seventeen million of the uninsured make over $50,000 a year, and within that group, 8 million make over $75,000. These people are usually referred to as the "voluntarily uninsured." Another large group of these 46 million are uninsured in name only, as they are eligible for government programs that they haven't signed up for. Estimates on how large this group is vary, the range being from 5.4 million as estimated by the Kaiser Family Foundation to as large as one third of all the uninsured, as estimated by BlueCross BlueShield. The number of people without care because they cannot afford it is around 6 million — still a large number, but a fraction of 46 million, and no reason to restructure the entire health care system.
>
> Then comes the issue of lifespan. Of all attempts to discredit the American system, lifespan has been the worst. Although lifespan gives a good indicator of a nation's health at a glance, it does have its problems under analysis. We get a strange paradox when examining two statistics: life expectancy and cancer survival rates. Estimates vary on how we rank exactly; the World Fact Book showing that we rank as poorly as 50th worldwide. Even the best estimates in our favor place us far behind most developed nations. Despite this, the United States excels at cancer survival. Of the 16 most common cancers, the United States has the highest survival rate for 13 of them. Overall, the five-year cancer survival rate for men in the States is 66.3%, and 47.3% in Europe. Women have an advantage too, with a survival rate of 62.9% in the States, and 55.8% in Europe. So that said, how is it that our system takes better care of us, and doesn't grant added lifespan to boot? Quite simply, the lifespan measurement commonly cited doesn't factor in many variables which shorten lifespan, many of which medical care cannot prevent. Among these factors are murders, suicides, obesity, and accidents.

He looks at the uninsured number, the infant mortality rate, and other interesting things in the article, showing how the statistics that impugn the US health care system have been misused. There are some good articles linked, like this post from Commentary magazine by Scott Atlas, entitled “The Worst Study Ever?”. Atlas is the same guy who listed out how the US health care system compares to others, which I blogged about before.

You can check out Matt’s blog “The Conscience of a Young Conservative“. Not sure how scalable that blog name is. Because of the “young” part, not because of the conscience or conservative part.

These are from Justin Bierley, who hosts the Unbelievable radio show in the UK.

Did the early Christians believe in an eternal hell or annihilationism?

December 6, 2011 | by Wintery Knight | Link | Original Link

From Please Convince Me. (H/T The Poached Egg)

Introduction:

> As we seek to understand what the Bible teaches about Hell, it may be helpful to understand what the earliest believers believed and taught. The teachings of the early believers have been preserved for us in the writings of the earliest church leaders (known as the Early Church Fathers). While their writings are not canonical (they are not on par with the words of the Bible), they do help us to see what those closest to the apostles first understood as Biblical Truth.
>
> As we assemble the teachings of these first church leaders, several patterns emerge related to the nature of Hell. The Early Church Fathers, with very few exceptions, agree with the teaching of the Bible in the way they describe Hell:

> *1. Hell is a place of judgment for those who have rejected God and denied Jesus as their Savior*
> *2. Hell is a place of separation from God*
> *3. Hell is a place of torment in which the rebellious are in anguish and pain*
> *4. Hell is a place where the rebellious are tormented forever and are CONSCIOUS of this torment for all eternity (In fact, the eternal duration of their torment is often compared to the eternal duration of the reward of the saved)*

> At the same time, the earliest Church Fathers are ambiguous on those areas where the Bible is ALSO ambiguous.

> *1. The exact nature of the torment of the rebellious is unknown*
> *2. The manner in which the rebellious are kept alive in spite of 'deathly' anguish is also un-described*

> The Early Church Fathers simply reflected the clearest teachings of the Bible related to the nature of Hell. They believed that Hell was a place of eternal conscious torment, reflecting the clearest teaching of the scriptures (more on that HERE).

Excerpt:

> From Ignatius of Antioch (110AD)
>
> Ignatius was a student of the Apostle John, and succeeded the Apostle Peter as the Bishop of Antioch. He wrote a number of important letters to believers in churches in the area:
>
> Corrupters of families will not inherit the kingdom of God. And if they who do

these things according to the flesh suffer death. how much more if a man corrupt by evil reaching the faith of God. for the sake of which Jesus Christ was crucified? A man become so foul will depart into unquenchable fire: and so will anyone who listens to him. (Letter to the Ephesians 16:1-2)

From Clement of Rome (150AD)

Clement was Bishop of Rome from 88 to 98AD, and his teaching reflects the early traditions of the Church. “Second Clement” reportedly a recorded sermon, and Clement discusses the nature of Hell:

If we do the will of Christ, we shall obtain rest; but if not, if we neglect his commandments, nothing will rescue us from eternal punishment (“Second Clement” 5:5)

But when they see how those who have sinned and who have denied Jesus by their words or by their deeds are punished with terrible torture in unquenchable fire, the righteous, who have done good, and who have endured tortures and have hated the luxuries of life, will give glory to their God saying, ‘There shall be hope for him that has served God with all his heart!’ (“Second Clement” 17:7)

From Irenaeus (189AD)

Irenaeus was bishop of Lugdunum in Gaul (now Lyon, France) at the end of the second century. He was a disciple of Polycarp and a notable early apologist for the faith. He wrote several volumes defending the faith against Gnosticism and other early heresies of the Church, and he often compared eternal punishment to eternal reward, drawing the conclusion that one endured as long as the other:

…Christ Jesus, our Lord, and God, and Saviour, and King, according to the will of the invisible Father, ‘every knee should bow, of things in heaven,, and things in earth, and things under the earth, and that every tongue should confess’ to Him, and that He should execute just judgment towards all; that He may send ‘spiritual wickednesses,’ and the angels who transgressed and became apostates, together with the ungodly, and unrighteous, and wicked, and profane among men, into everlasting fire; but may, in the exercise of His grace, confer immortality on the righteous, and holy, and those who have kept His commandments, and have persevered in His love, some from the beginning of their Christian course, and others from the date of their repentance, and may surround them with everlasting glory. (“Against Heresies” 1:10:10)

The penalty increases for those who do not believe the Word of God and despise his coming. . . . [I]t is not merely temporal, but eternal. To whomsoever the Lord shall say, ‘Depart from me, accursed ones, into the everlasting fire,’ they will be damned forever (“Against Heresies” 4:28:2)

From Clement of Alexandria (195AD)

Titus Flavius Clemens was the first significant and recorded Christian from the church of Alexandria, Egypt. His parents were Greek and he was raised with a

> solid, formal Greek education. While he had a tendency to blend Greek and Christian philosophies, his view on the issue of Hell was derived from the scriptures:
>
> All souls are immortal, even those of the wicked. Yet, it would be better for them if they were not deathless. For they are punished with the endless vengeance of quenchless fire. Since they do not die, it is impossible for them to have an end put to their misery. (from a post-Nicene manuscript fragment)
>
> From Tertullian (197AD)
>
> Quintus Septimius Florens Tertullianus was a Romanized African citizen who was born in Carthage (now Tunisia). He became a Christian and was a powerful and influential apologist for the faith, writing prolifically in defense of the doctrines of orthodoxy:
>
> These have further set before us the proofs He has given of His majesty in judgments by floods and fires, the rules appointed by Him for securing His favor, as well as the retribution in store for the ignoring, forsaking and keeping them, as being about at the end of all to adjudge His worshippers to everlasting life, and the wicked to the doom of fire at once without ending and without break, raising up again all the dead from the beginning, reforming and renewing them with the object of awarding either recompense. (“Apology” 18:3)
>
> Then will the entire race of men be restored to receive its just deserts according to what it has merited in this period of good and evil, and thereafter to have these paid out in an immeasurable and unending eternity. Then there will be neither death again nor resurrection again, but we shall be always the same as we are now, without changing. The worshipers of God shall always be with God, clothed in the proper substance of eternity. But the godless and those who have not turned wholly to God will be punished in fire equally unending, and they shall have from the very nature of this fire, divine as it were, a supply of incorruptibility (“Apology” 44:12–13)
>
> Therefore after this there is neither death nor repeated resurrections, but we shall be the same that we are now, and still unchanged–the servants of God, ever with God, clothed upon with the proper substance of eternity; but the profane, and all who are not true worshippers of God, in like manner shall be consigned to the punishment of everlasting fire–that fire which, from its very nature indeed, directly ministers to their incorruptibility. (“Apology” 48:12)

Just to be clear, I am one of those Christians who holds to the traditional doctrine of hell. Eternal, conscious punishment for eternity. I think most, if not all, people who object to the traditional doctrine of hell do it for one reason only – because they don’t want to appear to be mean, so that non-Christians will like them. Well, I don’t think there is any wiggle room here – conscious, eternal torment is what the Bible teaches, and what the earliest Christians believed.

Having said that, if someone has a *historical* case to make, then I’d like to see how they

interpret the Bible and where the line of tradition is for their view. There is always room for scholars to make a case against the traditional view, but that case has to be on the merits. But I think for the vast majority of people who reject the traditional notion of hell, they are just asserting their emotions and intuitions over the Bible and the traditional interpretations of the early church. I don't think that wanting to feel "nicer" than others, or wanting to be liked by others, is a good rationale for overruling the text and the traditional interpretations.

Should Christians give money to help the poor or to apologists and scholars?

December 6, 2011 | by Wintery Knight | Link | Original Link

Here's a post from Triablogue, the Internet lair of the most fearsome Calvinist bloggers! Excerpt:

> As you make donations over this Christmas season, are you including apologetics ministries in your giving? People will donate many millions of dollars to helping the poor, finding cures for diseases, and other such causes. Governments, universities, and other segments of society will also invest large amounts of money in such things. On an average day, you might hear a few advertisements for charities on the radio, see a few more on television, see a couple others in a magazine, and get an email about one from your employer. Part of the money you earn by going to work will go to government programs intended to do things like providing food and shelter for the poor, in this country and around the world. These efforts involve a tremendous number of organizations and individuals and a tremendous amount of time and money, among other resources. But you'll rarely be encouraged to give a single penny to any apologetic work.
>
> One of the excuses sometimes cited to justify Christian neglect of apologetics is that God doesn't need apologetics in order to work in people's lives. He doesn't need to use something like a philosophical, historical, or scientific argument.
>
> Let's apply that same reasoning to other areas of life. God doesn't need our prayers. Let's stop praying. Or just let a tiny minority of the church do it occasionally. God also doesn't need Bible translators and publishers, and He doesn't need to have you read the Bible. He can just implant the information directly into your heart. He also doesn't need parents. Or pastors. He's omnipotent. He can accomplish things without using us. Let's not just neglect apologetics. Let's neglect these other things, too, and see what happens.
>
> I'm convinced that one of the most significant weaknesses of the modern church is a neglect of apologetics. And we're living in an information age, when apologetics is even more important than it was previously. What if God sometimes allows us to suffer the normal consequences of our intellectual carelessness? What if, instead of constantly supernaturally intervening in order to make up for our neglect, He sometimes lets us suffer the natural consequences of our bad choices?
>
> Ideas have consequences, and persuading people to hold one belief rather than another can have major significance. It's something that can "greatly help" (Acts 18:27-28). If you give money to alleviate something like poverty or a disease, then why not give money to uproot *ideas* that produce those symptoms? We're often focused more on shallow solutions than ones that are deeper and more

> lasting. We give money in response to poverty, a tsunami, or the spread of a disease, but we give much less, if anything, in response to the false ideas that surround us. Instead of feeling guilty for giving money to an apologetics ministry rather than something like a ministry that helps the poor, we ought to feel guilty for giving such a low percentage of our donations to apologetic work. If you give all of your donations to non-apologetic causes and none to apologetics, the world will applaud you. But we should be judging things by a different standard.

That's a perfect post, and I left some of it out. The Triabloguers also give a list of charities that they support, and I support those too.

But here are the ones I personally like best: (in alphabetical order)

- Brian Auten (Apologetics 315)
- Scott Klusendorf (Life Training Institute)
- Michael Licona (Risen Jesus)
- Frank Turek (Cross Examined)
- Jim Wallace (Please Convince Me)

Jim Wallace is a bit of a neat case, because as far as I can tell, he doesn't accept donations. But I list him here anyway, because I respect him highly.

And by the way, if you know any Christian scholars who are busy getting their undergraduate and graduate degrees, why not fire them a book or two? I have five good friends on Facebook who are working hard on their degrees, and it's a good thing for us to take an interest in their progress.

UPDATE: Justin Brierley, the force behind the recent Reasonable Faith UK Speaking Tour, writes this in the comments:

> Well since we're in a generous mood… follow the link below to contribute towards funding the production of the videos from the UK Reasonable Faith Tour!
>
> http://www.bethinking.org/what-is-apologetics/introductory/helping-fund-the-reasonable-faith-tour.htm

Not a bad idea. Getting the recordings of those debates out there is good work, and deserves funding.

How do donor-conceived children cope with not knowing their biological fathers?

December 7, 2011 | by Wintery Knight | Link | Original Link

Mary sends me this article from Life Site News. This is a must-read.

Excerpt:

> There are only four things Alana Stewart knows about her father: he has blonde hair, blue eyes, a college degree, and his assigned number at the sperm bank where he sold half of Alana's genetic code is 81.
>
> She is one of an estimated 30,000 – 60,000 children conceived each year in the United States through sperm donation. A former egg donor herself, Alana is now a vocal critic of the practice, which she calls "the violent act of buying and selling a child."
>
> […]Many of the children conceived through sperm donation are now adults, and some of them are speaking out against the practice that brought them into existence.
>
> Their stories are revealing that the experience of being a donor conceived child is not what many proponents of the technology expected it would be. Such children were supposed to think of the man married to their mother as their father, and of their biological father as just the man who masturbated at a sperm bank and walked away with a $75 check. But according to Alana, it's not that simple.
>
> "The biological parent's absence is impossible to ignore because their presence is impossible to ignore – when you're living in a version of their body and thinking in a version of their brain," she told LifeSiteNews. "I do very much feel separated from not only my father, but my entire paternal relatives."

And more:

> My Daddy's Name is Donor, a report released last year by the Commission on Parenthood's Future, surveyed young adults conceived through sperm donation and compared their responses to those of peers raised by adopted parents and biological parents.
>
> The study found that 43% of donor offspring compared to 15% of adopted children and 6% who were raised by biological parents agreed with the statement: "I feel confused about who is a member of my family and who is not."
>
> Moreover, 48% of donor offspring compared to only 19% of adopted children agreed: "When I see friends with their biological fathers and mothers, it makes me feel sad."
>
> Strikingly, the report also found indications of a correlation between sperm donor conception and marriage failure.

> 27% of donor children parents are divorced compared to only 14% of parents of adopted children. The number of donor child marriages that fail is only slightly higher than the failure rate of a marriage with biological children – 25%. As the study points out, however, the comparison with adoptive parents is more significant because most couples do not consider fertility technology or adoption until later in life, when marriages tend to be more stable.
>
> For Stewart, the finding is consistent with her own experience. "Mothers can say things like, 'Well it's not your kid anyways.' The father is left constantly insecure about his place and role in the family," she said.
>
> She added that turning to sperm or egg donation to conceive a child can be evidence of a "materialistic" attitude on the part of the couple.
>
> "They are people that find it difficult to accept not having something and often put their own needs before others (i.e. their need to have a child before their child's need to have its father/mother), and these personalities often fail in marriage."

This is why Christians fight so hard against challenges to the parent-child bond. We oppose depriving children of a relationship with both of their biological parents. We do not want them to feel pain because of the selfishness of adults. When you make marriage fragile with no-fault divorce, or equate traditional marriage to same-sex marriage, you are weakening the standard of every child being born into a stable family where both biological parents are present, and committed to the child over the long-term. That's the gold standard. And that's what we should be celebrating and affirming as a society. Sometimes, you can cause harm to the little ones by trying to make the grown-ups feel better about breaking the standard. We have to err on the side of the children.

Gendercide: Planned Parenthood and NARAL oppose ban on sex-selection abortions

December 7, 2011 | by Wintery Knight | Link | Original Link

Letitia, who blogs at Talitha, Koum, notified me about this article in Life News.

Excerpt:

> As members of Congress hold a hearing today on legislation that would ban sex-selection abortions and abortions done if the unborn child is of a specific race, leading pro-abortion advocacy groups are strongly opposed to it.
>
> Their opposition could explain why organizations like Planned Parenthood, NARAL and the ACLU almost never speak out against the horrible human rights abuses associated with the one-child policy in China – ranging from sex-selection abortions, to forced abortions, to coercive sterilizations and infanticides.
>
> […]Planned Parenthood, NARAL, ACLU and a total of 30 pro-abortion groups banded together for a letter opposing the legislation, the Prenatal Nondiscrimination Act.
>
> The claim the bill, sponsored by pro-life Rep. Trent Franks, an Arizona Republican, is "simply more of the same from the anti-choice extremists choice extremists in the House" and they urged a no vote on it.
>
> "[T]he bill will effectively exacerbate already existing disparities by limiting some women's access to comprehensive reproductive health care and penalizing health care providers," they allege.
>
> They claim: "Instead of addressing health disparities and ensuring accessible and culturally competent medical care for all women, the Prenatal Nondiscrimination Act will further isolate and stigmatize some women — particularly those in the Asian American and Pacific Islander and African American communities — from exercising their fundamental human right to make and implement decisions about their reproductive lives."
>
> Nancy Northup, President of Center for Reproductive Rights talked about her group's opposition to the bill with Fox News and said it is an "anti-choice" measure that she claims is a "trumped up bill for a trumped up problem," and a "ridiculous waste of congressional resources at a time when the U.S. economy is faltering."
>
> "This bill is a cynical and offensive attempt to evoke race and sex discrimination when actually it's about taking women's rights away," she said.

Got that? If you want to kill a baby simply because it's a girl, and you wanted a boy, then Planned Parenthood and NARAL are all in favor of that. They support sex-selection abortions. They don't just permit it, they lobby in favor of it. That's how "pro-woman"

they are.

Here's an article from the Economist that explains how gendercide is happening in India and China.

Excerpt:

> In January 2010 the Chinese Academy of Social Sciences (CASS) showed what can happen to a country when girl babies don't count. Within ten years, the academy said, one in five young men would be unable to find a bride because of the dearth of young women—a figure unprecedented in a country at peace.
>
> The number is based on the sexual discrepancy among people aged 19 and below. According to CASS, China in 2020 will have 30m-40m more men of this age than young women. For comparison, there are 23m boys below the age of 20 in Germany, France and Britain combined and around 40m American boys and young men. So within ten years, China faces the prospect of having the equivalent of the whole young male population of America, or almost twice that of Europe's three largest countries, with little prospect of marriage, untethered to a home of their own and without the stake in society that marriage and children provide.
>
> Gendercide—to borrow the title of a 1985 book by Mary Anne Warren—is often seen as an unintended consequence of China's one-child policy, or as a product of poverty or ignorance. But that cannot be the whole story. The surplus of bachelors—called in China *guanggun*, or "bare branches"— seems to have accelerated between 1990 and 2005, in ways not obviously linked to the one-child policy, which was introduced in 1979. And, as is becoming clear, the war against baby girls is not confined to China.
>
> Parts of India have sex ratios as skewed as anything in its northern neighbour. Other East Asian countries—South Korea, Singapore and Taiwan—have peculiarly high numbers of male births. So, since the collapse of the Soviet Union, have former communist countries in the Caucasus and the western Balkans. Even subsets of America's population are following suit, though not the population as a whole.
>
> The real cause, argues Nick Eberstadt, a demographer at the American Enterprise Institute, a think-tank in Washington, DC, is not any country's particular policy but "the fateful collision between overweening son preference, the use of rapidly spreading prenatal sex-determination technology and declining fertility." These are global trends. And the selective destruction of baby girls is global, too.
>
> Boys are slightly more likely to die in infancy than girls. To compensate, more boys are born than girls so there will be equal numbers of young men and women at puberty. In all societies that record births, between 103 and 106 boys are normally born for every 100 girls. The ratio has been so stable over time that

> it appears to be the natural order of things.
>
> That order has changed fundamentally in the past 25 years. In China the sex ratio for the generation born between 1985 and 1989 was 108, already just outside the natural range. For the generation born in 2000-04, it was 124 (ie, 124 boys were born in those years for every 100 girls). According to CASS the ratio today is 123 boys per 100 girls. These rates are biologically impossible without human intervention.

Letitia has written a post about the prevalence of sex-selection abortions in the Asian community. Go here to read that. And Letitia also writes about the legalization of sex-selection abortions in Sweden here.

You can learn more about the Republican bill to end sex-selection and race-selection abortions.

Women in business report that regulatory uncertainty hurts job growth

December 7, 2011 | by Wintery Knight | Link | Original Link

The Independent Women's Forum explains what happened at a panel discussion of women CEOs.

Excerpt:

> Rep. Cathy McMorris-Rodgers hosted a panel discussion on Capitol Hill today that focused on the economy and job creation. All of the panelists were CEOs. All of them were women.
>
> In their opening remarks, one word was mentioned by every panelist: uncertainty.
>
> Another word, that went hand-in-hand with the uncertainty that America's job creators are facing was "regulations." This word was also mentioned by every panelist.
>
> Sandra Parrillo, President & CEO of Providence Mutual Fire Insurance, said that, as a property and casuality insurance company, they are very familiar with risk. This year has been unprecedented in the amount of claims they've paid out due to an usually high number of natural disasters. But Parrillo said her company faces enough uncertainty from nature; they don't need uncertainty coming from Washington, DC, where hundreds of new rules are being written – often to solve problems that don't really exist.
>
> Lisa Hook, President & CEO, Neustar, Inc., said, "The outcome of the budget is less important to us than that there is a budget." Her company is traded on the stock market, and she says that the uncertainty fueling the ups and downs of the market, often driven by headlines from D.C., affects her business and her borrowing costs.
>
> Several of the panelists derided Congress for failing to pass a budget for FY 2011. They want to know that Congress is working to get its fiscal house in order. They want to know what to expect from the executive branch as well, rather than having to readjust their budgets to deal with costly new regulations as soon as they are written.
>
> Alison Brown, President & CEO, NAVSYS Corporation, went on to explain how difficult it is for small businesses to find access to working capital. She said, "I have had to become my own bank." Her company isn't publicly traded, and she pointed to Dodd-Frank and Sarbanes-Oxley as two laws that have wrestled working capital from the hands of small business.
>
> Catherine Heigel, President of Duke Energy South Carolina, echoed the sentiments of the other panelists. She also pointed out Duke Energy would like

> to repatriate their foreign earnings, but without reform, they would face an effective tax rate of over 50 percent. All of the panelists agreed that certainty (that often comes from having more cash available) could be restored to the American economy with regulatory reform, tax reform, and health care reform. They pointed to these three areas as the areas that currently are most burdensome to businesses.
>
> In many ways the panel today was depressing. All of the CEOs recognized that we are in a tough time, and all of them expressed disappointment that they could not expand and add more jobs in the current business climate.

There is a problem on the left where they have this idea that they can seize profits, control businesses, impose politically correct agendas, and engage in judicial activism and businesses will just keep hiring, producing and so on. It’s the ultimate narcissism. Bureaucrats are so busy spending other people’s money and making speeches about how generous they are that they completely forget who is paying the bill.

Should Christians support social justice? Is wealth redistribution good for the poor?

December 7, 2011 | by Wintery Knight | Link | Original Link

Discovery Institute fellow Jonathan Witt pens this article in the American Spectator on the Gospel, business and social justice.

Excerpt:

> The third term, *social justice*, is unlike the other two in its having a justifiable raison d'être. It stretches back to 19th century Catholic social thought and was used in the context of nuanced explorations of law, ethics, and justice. Unfortunately, this nuance and precision usually falls away in popular usage, and the term has been co-opted by the left to imply that ordinary justice is a mere tool of the ruling elite, with the real deal being "social justice."
>
> This impoverished meaning needs to be addressed. If a society extends justice to the rich and well-connected but allows the poor to be bullied and swindled by corrupt players inside and outside of the government, the problem isn't unsocial justice but a lack of justice. If the poor in many developing nations can't get access to credit or the courts because they can't register their businesses, and they can't register their businesses because they don't have the bribe money and connections to navigate a byzantine regulatory maze, the problem is injustice, plain and simple. Such a society doesn't need a social brand of justice any more than a poor neighborhood without stores needs a *social grocery store*. The neighborhood needs an ordinary grocery store, and the unjust society needs basic justice. Grocery stores and justice are already intrinsically social.
>
> More than accurate semantics is at stake here. Often the popular call for "social justice" boils down to an ill-conceived call for coercive wealth transfers — for instance, getting rich countries to transfer more of their tax revenues to the governments of poor countries as foreign aid. It'd be nice if this approach actually helped the poor, since we've been using it for the past 60 years. Unfortunately, the statistical and narrative testimony on this strategy hovers between mixed and scandalous.
>
> The reasons for this are complex but not so complex as to excuse the status quo. Much of the aid money gets quietly funneled into the pockets of corrupt politicians. In other cases the aid money reaches its intended target but, since the aid money is fungible, it still supports bad actors. It does so by freeing a regime of the political necessity of paying for the schools, road projects and emergency relief already covered by the foreign assistance. This, in turn, allows the regimes to spend more of their tax revenues for enhancing their own wealth and power.
>
> Worse, the small fraction of aid money that actually reaches its intended

> destination often puts indigenous producers out of business, since it's difficult to compete against free goods from abroad. Haiti's rice farmers, for instance, once exported rice, but today their livelihoods have been all but wiped out by subsidized U.S. rice dumped on the country as foreign aid.
>
> Add to all of this international "social justice" the devastating cultural effects of America's welfare state. The neighborhoods flooded with 50 years of this domestic "social justice" now face far higher levels of criminal injustice and anti-social behavior than before the justice arrived.
>
> Much of the problem stems from welfare's effect on the institution of the family. The percentage of children being raised by both of their biological parents in America's poorest neighborhoods used to be low and fairly comparable to what was found in middle and upper class neighborhoods, but the Great Society programs of the 1960s changed that.
>
> As George Gilder put it in *Wealth and Poverty*, the underclass husband and father was "cuckolded by the compassionate state," a violation which has incited "that very combination of resignation and rage, escapism and violence, short horizons and promiscuous sexuality that characterizes everywhere the life of the poor."
>
> Yale University sociologist Elijah Anderson put it almost as bluntly in a 1989 journal article: "It has become increasingly socially acceptable for a young woman to have children out of wedlock — significantly, with the help of a regular welfare check."
>
> The plain testimony of history is that the left's strategy for saving the poor has been a tragic failure. It has stifled development in poor countries, bred a fatherless underclass in the United States, and all but bankrupted the European Union. Cloaking all of this in the guise of "social justice" serves only to perpetuate the tragedy.

It turns out that the very people who cry the loudest about wanting to help the poor – by redistributing wealth from those who produce to those who don't – are the ones who incentivize people to make decisions that will make them poorer and expose them to more violence. Sure, there is a certain amount of uncertainty in life, but when you reward failure and punish success, you get more takers and fewer makers. The alternative to taxation and redistribution is to leave wealth in the hands of the individuals and businesses and trust them to make the decision about sharing. When businesses pay less in taxes, they expand – and more people start up new businesses, because they are attracted by the chance to make higher profits. Although letting individuals and business keep their own money is frowned on by the secular left, that's because they themselves project their tendency not to give to charity and create jobs onto everyone else. They don't understand charity and entrepreneurialism, that's why they take money away from people who work and who create wealth.

I do want to say one other thing. I find it troubling when Christians present themselves to me as being social conservative, and fiscally liberal. There is no such thing as a social

conservative and a fiscal liberal. If a person demands that the state provide cheese sandwiches to the children of single mothers in public schools, then it creates more of an incentive to become a single mother, and less of an incentive to marry. That redistribution *lowers* the cost of single motherhood and *raises* the cost of marriage. It has been shown that single motherhood is the leading cause of child poverty – so why would we put into place incentives that encourage people to not make good decisions about sex? Why subsidize people who refuse to exercise self-control in sexual matters? Why make it encourage people to inflict fatherlessness on their own innocent children? Marriage is correlated with increased safety for women and children. Lowering the moral standards and paying people to make mistakes *isn't good for them*. And it's *not good for their children*.

The more you tax those who produce, the fewer of them you get. And the more you subsidize those who collect, the more of them you get. When men see themselves as slaves of the state – working only to be plundered – they stop working and they stop marrying. Why would a man work to feed the children of someone who could not even bother to get married before having babies? Why would a man get married knowing that half of what he earns will go to the state? Let families keep more of their own money, so that families are empowered – and not government. Let families keep their own money so they decide how to spend it, instead of depending on government. Let single mothers have to face the cost of their decisions. Let them ask charities for help, not the government. When people have to ask their neighbors for help, they know that they have done wrong, and that the money they get came from someone who worked for it. That is not there when government taxes and writes them a no-guilt check. Then it's an entitlement, and they don't learn their lesson.

Instead, let individuals and businesses make the decision to help those who *they think* are truly willing to try to improve their lot in life. Those are the ones who need support. When you leave wealth distribution to the government, no one is there to make those moral judgments. And it's worse than that. When government takes over industries like health care, they are often supported by naive pro-lifers who think that wealth redistribution is compassion. But a secular government has no interest in women who stay home to raise their children – they want women to get out into the work force and pay income taxes. A single-payer health care system is *always* going to be pro-abortion for that reason. And any pro-lifer who votes "with their heart" for single-payer health care is a fool. They are, in effect, pro-abortion. Think before you vote.

Obama says that limited government and capitalism have never worked

December 8, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record			
	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011

Investors Business Daily explains the latest speech on economics from the man who has *doubled* Bush's 2007 unemployment rate, and increased Bush's 2007 budget deficits *tenfold*.

Excerpt:

> One thing is certainly true about President Obama — no matter how many times people point out the falsehoods in his speeches, he just keeps making them. Case in point: his latest "economic fairness" address.
>
> In that speech Tuesday, Obama once again tried to build a case for his liberal, big-spending, tax-hiking, regulatory agenda. But as with so many of his past appeals, Obama's argument rests on a pile of untruths. Among the most glaring:
>
> • Tax cuts and deregulation have "never worked" to grow the economy. There's so much evidence to disprove this claim, it's hard to know where to start. But let's begin with the fact that countries with greater economic freedom — lower taxes, less government, sound money, free trade — consistently produce greater overall prosperity.
>
> Here at home, President Reagan's program of lower taxes and deregulation led to an historic two-decade economic boom. Plus, states with lower taxes and less

> regulation do better than those that follow Obama's prescription.
>
> Obama also claimed the economic booms in the '50s and '60s somehow support his argument. This is utter nonsense. Taxes at the time averaged just 17% of the economy. And there was no Medicare, no Medicaid, no Departments of Transportation, Energy or Education, and no EPA. Had Obama been around then, he would have decried it all as un-American.
>
> • Bush's tax cuts on the rich only managed to produced "massive deficits" and the "slowest job growth in half a century." Budget data make clear that Obama's spending hikes, not Bush's tax cuts, produced today's massive deficits.
>
> And Obama only gets his "slowest job growth" number by including huge job losses during his own term in office. Also, monthly pre-recession job growth under Bush was about 40% higher than post-recession growth has been under Obama.
>
> • During the Bush years, "we had weak regulation, we had little oversight." This is patently false. Regulatory staffing climbed 42% under Bush, and regulatory spending shot up 50%, according to a Washington University in St. Louis/George Washington University study. And the number of Federal Register pages — a proxy for regulatory activity — was far higher under Bush than any previous president.
>
> • The "wealthiest Americans are paying the lowest taxes in over half a century." Fact: the federal income tax code is now more progressive than it was in 1979, according to the Congressional Budget Office. IRS data show the richest 1% paid almost 40% of federal income taxes in 2009, up from 18% back in 1980.
>
> • We can keep tax breaks for the rich in place, or make needed investments, "but we can't do both." Not true. Repealing the Bush tax cuts on the "rich" would raise only about $70 billion a year, a tiny fraction of projected deficits. With or without the Bush tax cuts, the country can't afford Obama's agenda.

The Heritage Foundation describes the effects of the Bush tax cuts.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax

> revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

If, in the 2012 election, half the country decides to vote for the person who gives the best speeches and who is cheered on the Comedy Channel, then we are going to have four more years of 9% unemployment and 1.4 trillion dollar deficits. Barack Obama knows nothing whatsoever about economics.

UPDATE: Obama says that small business owners didn't build their own businesses

New study: the early Earth's atmosphere contained oxygen

December 8, 2011 | by Wintery Knight | Link | Original Link

Here's a new paper published in the prestigious peer-reviewed science journal *Nature*, entitled "The oxidation state of Hadean magmas and implications for early Earth's atmosphere".

Evolution News explains what the paper is about.

Excerpt:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Miller and Urey conducted experiments to show that under certain atmospheric conditions and with the right kind of electrical charge, several amino acids could form from inorganic compounds such as methane, ammonia, and water. Several experiments have been done using various inorganic starting materials, all yielding a few amino acids; however, one key aspect of all of these experiments was the lack of oxygen.
>
> If the atmosphere has oxygen (or other oxidants) in it, then it is an oxidizing atmosphere. If the atmosphere lacks oxygen, then it is either inert or a reducing atmosphere. Think of a metal that has been left outside, maybe a piece of iron. That metal will eventually rust. Rusting is the result of the metal being oxidized. With organic reactions, such as the ones that produce amino acids, it is very important that no oxygen be present, or it will quench the reaction. Scientists, therefore, concluded that the early Earth must have been a reducing environment when life first formed (or the building blocks of life first formed) because that was the best environment for producing amino acids. The atmosphere eventually accumulated oxygen, but life did not form in an oxidative environment.
>
> The problem with this hypothesis is that it is based on the assumption that organic life must have formed from inorganic materials. That is why the early Earth must have been a reducing atmosphere. Research has been accumulating for more than thirty years, however, suggesting that the early Earth likely did have oxygen present.
>
> […]This brings us back to that *Nature* letter, which offers another reason to question the reducing environment of the early Earth. The authors looked at the

> cerium oxidation levels within zircon. Zircon is a hard rock that forms from the solidification of magma. Several studies have been done with zircon because of its age and durability. (See here for a report on using zircon to determine when oceans and land were present on Earth.) Cerium (Ce) is an element that can be found in early Earth zircon. The ratio of cerium's +3 and +4 oxidation states indicates the environmental conditions at the time the cerium was trapped in the zircon. Specifically, cerium's oxidation ratio is related to the amount of oxygen in the atmosphere. The authors created cerium-infused zircon in the lab at various oxidative ratios to make a calibration curve to which they could then compare the early Earth samples.
>
> Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

So here's where we stand. If you are a materialist, then you need a reducing environment on the early Earth in order to get organic building blocks (amino acids) from inorganic materials. However, the production of these organic building blocks (amino acids) *requires* that the early Earth atmosphere be oxygen-free. And the problem with this new research, which confirms previous research, is that the early Earth contained huge amounts of oxygen – the same amount of oxygen as we have today. This is lethal to naturalistic scenarios for creating the building blocks of life on the Earth's surface.

Other problems

If you would like to read a helpful overview of the problems with a naturalistic scenario for the origin of life, check out this article by Casey Luskin.

Excerpt:

> The "origin of life" (OOL) is best described as the chemical and physical processes that brought into existence the first self-replicating molecule. It differs from the "evolution of life" because Darwinian evolution employs mutation and natural selection to change organisms, which requires reproduction. Since there was no reproduction before the first life, no "mutation – selection" mechanism was operating to build complexity. Hence, OOL theories cannot rely upon natural selection to increase complexity and must create the first life using only the laws of chemistry and physics.

> There are so many problems with purely natural explanations for the chemical origin of life on earth that many scientists have already abandoned all hopes that life had a natural origin on earth. Skeptical scientists include Francis Crick (solved the 3-dimensional structure of DNA[1]) and Fred Hoyle (famous British cosmologist and mathematician), who, in an attempt to retain their atheistic worldviews, then propose outrageously untestable cosmological models or easily falsifiable extra-terrestrial-origin-of-life / panspermia scenarios[2] which still do not account for the natural origin of life. So drastic is the evidence that Scientific American editor John Horgan wrote, "[i]f I were a creationist, I would cease attacking the theory of evolution … and focus instead on the origin of life. This is by far the weakest strut of the chassis of modern biology."[3]

The article goes over the standard problems with naturalistic scenarios of the origin of life: wrong atmosphere, harmful UV radiation, interfering cross-reactions, molecular oxygen, meteorite impacts, chirality, etc.

Charles Thaxton explains the origin of life

Here's a helpful little video on the problem from origin of life chemist Charles Thaxton, who authored "The Mystery of Life's Origin" with Walter Bradley and Roger Olsen.

There's another video like this one featuring Dean Kenyon, and you can get the video clips online here. I really wish someone would post it online. I have the video and ripped it from my VHS tape, so maybe I should do it! It's a great interview. Both of these videos (Thaxton, Kenyon) are highly recommended for intermediate and advanced Christians. For beginners, I would recommed "Unlocking the Mystery of Life", which you can watch for free right here:

If you are looking for a hot issue to put some time into, then this is a good place to start. And note that this problem of the building blocks of life is *logically prior* to the problem of forming functional sequences of amino acids (e.g. – proteins), which people like Stephen C. Meyer debate about. In debates on the origin of life, ID people usually just assume that the amino acids exist, and then get on with discussing the problem of generating sequences of amino acids and base pairs into sequences that exhibit specified complexity. But as you see from the research, it's an unwarranted assumption – those building blocks are not a given, and the naturalist has to account for them.

Pregnant woman uses her shotgun to scare burglars out of her home

December 8, 2011 | by Wintery Knight | Link | Original Link

From CBS News. (H/T Wes from Reason to Stand)

Excerpt:

> It's the last thing two burglary suspects expected to hear when they broke into a Coon Rapids home. From within the house came the unmistakable sound of a pump shotgun. At the other end of that gun was a 22-year-old woman who is nine weeks pregnant.
>
> The young woman asked not to be identified because the two suspects are still at large. However, she says when the men ignored her barking pit bull and black lab, and broke through a kitchen door, she had no other choice but to chamber a round into the 12-gauge shotgun.
>
> There's perhaps no other sound that commands as much respect and fear. The young woman at the business end of that gun was home alone and prepared to protect herself.
>
> […]With a single pump of her 12-gauge shotgun, the would-be burglars bolted out the door and through the backyard.
>
> "Yes, a shotgun racking is something you don't forget if you've ever heard one. So, it frightened these two suspects off right away, they took off running," said Coon Rapids Police Captain John Hattstrom.
>
> They ran across the backyard and into a nearby church parking lot where they were seen getting into a two-door, newer model automobile. But they didn't escape without notice. The woman was able to get a long look at the two and provided police with a description.

The thing that liberals never understand about legally-owned firearms is that the people who own them are law-abiding people and they would prefer *not to have to fire the weapon at all* when they have to use the weapon to deter or halt a crime. This is known as peace through strength – the best way to stop an evil person from doing something evil is to raise the cost of doing evil. And weapons in the hands of law abiding people accomplishes that.

For those who would like to know what the Bible says about self-defense, check out this podcast featuring famous theologian Wayne Grudem.

The case for legal firearm ownership… in videos!

ABC News explains in this short 6-minute clip:

And here is a longer 44-minute show from Fox Business: (featuring a debate between economist John Lott and the Brady Campaign spokesman)

There are other debates in the show as well.

Neurosurgeon calls Mark Levin show and explains what Obamacare really does

December 8, 2011 | by Wintery Knight | Link | Original Link

I found this on my friend Wes' Facebook page.

Consider this news story from the UK, where they have a massive state-run health care system called the National Health Service.

Excerpt:

> A young woman who is starving to death after being diagnosed with a paralysed stomach has been told that NHS bosses refuse to fund an operation to save her.
>
> Rudi Hargreaves, 22, has shrunk from a healthy 10st to a skeletal 5st 10lb after being diagnosed with the crippling condition last year.
>
> Within weeks of being diagnosed with gastroparesis, Rudi found her size 12 clothes were hanging off her – as her stomach became unable to digest food at a normal rate.
>
> The condition can be treated with a £14,000 operation to fit a gastric pacemaker – although this is still considered to be an experimental treatment.
>
> But health chiefs have refused to fund the surgery, saying 'insufficient supporting information' has been provided by her GP.
>
> […]A spokesperson for NHS Hull said: 'To date, the application in question has not been agreed as, crucially, insufficient supporting information has been provided to allow due consideration to take place.
>
> 'Any requested procedures must also fall in line with the provider trust's priorities for service development and delivery.
>
> 'The patient's clinician has been invited to provide the necessary clarification, receipt of which should enable the patient's case to be progressed within the PCT.'

What's even more troubling is the situation in countries like Canada, where the government decides whether you will be treated. And worse, if they deny you treatment, you *cannot* pay for treatment out of pocket. You have to leave the country and pay someone else out of pocket for the treatment, even though you have have already paid some huge amount of your earned income into the system for many years – which will go to treat other people who need abortions, breast implants , sex changes and IVF. So your money is good enough for them to collect over your life, but when you need treatment, you may not be allowed to get it, and you may not even have the money (after taxes) to go abroad for treatment.

Fast and Furious' goal was to undermine legal firearm ownership

December 9, 2011 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> Newly obtained documents show that the Bureau of Alcohol, Tobacco, Firearms and Explosives discussed using its covert operation Fast and Furious to argue for new rules about gun sales. We told you so.
>
> […]As CBS' Sharyl Attkisson reports, emails show ATF officials discussed using the deliberate transfer of weapons to Mexican drug cartels to justify a new gun regulation known as "Demand Letter 3."
>
> We say deliberate because congressional testimony by ATF agents demonstrates how the tracking of Fast and Furious weapons stopped at the border and that requests to interdict the weapons transfers and arrest the gun traffickers were denied by higher-ups.
>
> Demand Letter 3 was so named because it was the third ATF attempt to have Southwest gun shops report all long-gun (rifle or shotgun) sales to the ATF — even those to law-abiding American citizens with all the proper registration and other forms.
>
> On July 14, 2010, five months before Terry's murder, ATF Field Ops Assistant Director Mark Chait emailed Bill Newell, the ATF's Phoenix special agent in charge of Fast and Furious: "Bill, can you see if these guns were all purchased from the same (licensed gun dealer) and at one time? We are looking at anecdotal cases to support a demand letter on long-gun sales. Thanks."
>
> On Jan. 24, as the ATF was preparing to announce arrests in Fast and Furious, another email showed Newell saw it as an opportunity "to address multiple sales on long guns issue."
>
> After the press conference, Chait emailed Newell that in "light of our request for Demand Letter 3, this case could be a strong supporting factor if we can determine how many multiple sales of long guns occurred during the course of the case."

You can read the news article from CBS News right here. The headline is "Documents: ATF used "Fast and Furious" to make the case for gun regulations".

College student discovers election fraud in Indiana's 2008 primary

December 9, 2011 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> Shocking election fraud allegations have stained a state's 2008 presidential primary – and it took a college student to uncover them.
>
> "This fraud was obvious, far-reaching and appeared to be systemic," 22-year-old Ryan Nees told Fox News, referring to evidence he uncovered while researching electoral petitions from the 2008 Democratic Party primary in Indiana.
>
> Nees' investigation centered on the petitions that put then-senators Barack Obama and Hillary Clinton on the ballot. As many as 150 of the names and signatures, it is alleged, were faked. So many, in fact, that the numbers raise questions about whether Obama's campaign had enough legitimate signatures to qualify for a spot on the ballot.
>
> **"What seems to have happened is that a variety of people in northern Indiana knew that this fraud occurred, and actively participated and perpetuated the fraud, and did so on behalf of two presidential campaigns," according to Nees.**
>
> **Prosecutors are now investigating. The scandal has already led to the sudden resignation Monday night of Butch Morgan, chairman of the St. Joseph County Democratic Party. He denied any wrongdoing, saying he looks "forward to an investigation that will exonerate me."**
>
> Nees, a junior at Yale University, served as an intern in the Obama White House last year and supports the president's re-election. But as an intern at the non-partisan political newsletter Howey Politics Indiana, he delved into the Byzantine and complicated world of petition signatures and found reams of signatures that he says appeared to be written in the same handwriting, some apparently copied from previous petitions.

This is why we need to have a mandatory government-issued photo ID presented by anyone who wants to vote. But Democrats oppose voter identification laws.

Excerpt:

> **Democratic National Committee Chairwoman Debbie Wasserman Schultz, saying that voter fraud in the U.S. is almost nonexistent, vowed Thursday to "get photo IDs into the hands" of people in states with Republican-sponsored voter-ID laws.**
>
> **"Republicans across the country have engaged in a full-scale attack on**

> **the right to vote, seeking ways to restrict or limit voters' ability to cast their ballots for their own partisan advantage," said Rep. Wasserman Schultz, Florida Democrat. "Democrats refuse to stand by and watch this happen."**
>
> This year, 17 states controlled by Republicans have approved tougher laws to prevent voter fraud, some including measures that require voters to present a government-issued photo ID at the polls. A total of 31 states now require voters to show a photo ID, and similar laws are pending in Illinois, Iowa, Massachusetts, Nebraska, New Jersey, New York and Pennsylvania.
>
> Republican officials say the new laws have been necessary in light of recent examples of voter fraud linked to the Democratic Party and its supporters, such as the now-defunct group ACORN, which was responsible for an estimated 400,000 fraudulent registrations in 2008.
>
> Other recent examples of voter fraud include a case in Wake County, N.C., where three voters were charged in August with voting twice in the 2008 presidential election, and a member of the executive committee of the NAACP in Tunica County, Miss., who was sentenced in April to five years in prison for fraudulently casting absentee ballots. She was convicted of voting in the names of six other voters, as well as in the names of four dead voters.
>
> […]Mrs. Wasserman Schultz dismissed evidence of past voter fraud as isolated.

The truth is that Democrats get a huge boost from voter fraud, probably in the neighborhood of 3-5%.

Gay student gets Christian campus club suspended at SUNY Buffalo

December 9, 2011 | by Wintery Knight | Link | Original Link

From Christian Post.

Full text:

> The State University of New York-Buffalo (SUNY Buffalo) is looking into allegations that a Christian campus group is in violation of school policy and the law by requiring its leaders to sign a faith-based statement.
>
> This week's investigation by a committee of the Student Association comes after sophomore Steven Jackson stepped down from a leadership position with InterVarsity Christian Fellowship over differing views on sexuality.
>
> JoAnna Datz, president of the Student Association at SUNY Buffalo, told The Christian Post Wednesday that "the [investigative] committee has been meeting and collecting objective information, reviewing the Student Association Constitution, clubs documents, and just collecting information."
>
> She said there is a lot of information that the senators need to be educated on regarding what happened between Jackson and the club.
>
> On Friday, the university's newspaper, The Spectrum, reported on a letter sent to InterVarsity's executive board informing the group of its suspension. It stated: "All peripheral privileges afforded to Student Association clubs are revoked for Intervarsity Christian Fellowship until further notice."
>
> […]Jackson served as InterVarsity's treasurer and is openly gay.
>
> Datz told The Christian Post that when a club is formed at SUNY Buffalo their constitution is reviewed before they can become recognized. So originally InterVarsity's constitution was approved. But if they made any changes since its inception, none of those have been reviewed by the SA. It wasn't until last year, Datz said, that a rule was put in place that any changes to club constitutions must be reviewed.
>
> The investigation committee will be looking over InterVarsity's constitution. The campus group requires leaders to be in agreement with its doctrinal statement, purpose statement, and living a life of Christian integrity. Membership, however, is open to all.
>
> The requirement that leaders sign a certain set of beliefs is at the heart of the controversy. Datz said this week they have also been debating the differences between membership and leadership in this particular case.
>
> Jim Lundgren, director of Collegiate Ministries for Intervarsity, stressed to The Christian Post that the organization does not discriminate based on sexual orientation. In Jackson's case, however, "he decided to pursue a sexually active

> homosexual relationship" and InterVarsity doesn't affirm a sexually active relationship outside of marriage.
>
> SA's executive board is expected to make a decision this coming Sunday at their meeting.
>
> If InterVarsity is found to be in violation of antidiscrimination policies, Datz said the senate could choose to derecognize them as a club, take away their funding or require that they change their constitution.

But now I turn to the underlying problem.

Some Christians don't think there is a problem with that

The Biblical standard is no sex before or outside of marriage and marriage is defined as being between one man and one woman. In general, even divorce isn't permitted. That's what Christians believe about sex. So what happens when someone who doesn't believe that wants to join a Christian organization in a leadership capacity?

Christians are not being mean when they exclude a person from an assembly of Christians because of a public, unrepented, sinful lifestyle.

Look at 1 Cor 5:

[1] It is actually reported that there is sexual immorality among you, and of a kind that even pagans do not tolerate: A man is sleeping with his father's wife.

[2] And you are proud! Shouldn't you rather have gone into mourning and have put out of your fellowship the man who has been doing this?

[3] For my part, even though I am not physically present, I am with you in spirit. As one who is present with you in this way, I have already passed judgment in the name of our Lord Jesus on the one who has been doing this.

[4] So when you are assembled and I am with you in spirit, and the power of our Lord Jesus is present, [5] hand this man over to Satan for the destruction of the flesh, so that his spirit may be saved on the day of the Lord.

[6] Your boasting is not good. Don't you know that a little yeast leavens the whole batch of dough?

[7] Get rid of the old yeast, so that you may be a new unleavened batch—as you really are. For Christ, our Passover lamb, has been sacrificed.

[8] Therefore let us keep the Festival, not with the old bread leavened with malice and wickedness, but with the unleavened bread of sincerity and truth.

[9] I wrote to you in my letter not to associate with sexually immoral people—

[10] not at all meaning the people of this world who are immoral, or the greedy and swindlers, or idolaters. In that case you would have to leave this world.

[11]But now I am writing to you that you must not associate with anyone who claims to be a brother or sister but is sexually immoral or greedy, an idolater or slanderer, a drunkard or swindler. Do not even eat with such people.

[12] What business is it of mine to judge those outside the church? Are you not to judge those inside?

[13] God will judge those outside. “Expel the wicked person from among you.”

So, this might be a surprise to many of you, but there is actually a lot of support for the idea of shunning someone who claims to be a Christian, yet who openly commits to a lifestyle that opposes the Bible’s moral standards. 1 Cor 5 actuallysays that it is ok to get along with non-Christian sinners, and *not OK* to get along with people who claim to be Christians but who are in some serious sinful situation that they are not sorry about at all. I think it’s a great idea to be friends with people who are non-Christian, and to treat them nicely, so long as they know that we disagree with them on certain issues and they are OK with letting us do that. Everyone sins – but Christians shouldn’t sin unrepentantly and repeatedly and then try to justify it as consistent with Christianity. But non-Christians are exempt from Christian moral rules, obviously.

What annoys me is when nice “Christians” try to make me feel guilty for taking the Bible seriously on sexual morality. Just because you want to think of yourself as “nice” according to the standards of the age, and you want non-Christians to like you and ask you out with them to movies, it doesn’t mean that suddenly it has become OK to redefine the Bible to mean what you want it to mean. Those rules are there for a reason, and your job is to adapt your views and defend them. You aren’t in charge.

The problem is that Christianity has been redefined so that people in the Church now think that their job is to sing happy songs, feel good, and then go out into the world telling everyone that the Bible has nothing at all to say about right and wrong. Instead of telling people “you are free to do what you like, but doing X is not wise or moral”, now we say “whatever you want to do is fine with me, as long as you feel good”. We want to be liked by men more than we want to be liked by God.

Could tougher gun control laws lower the violent crime rate?

December 9, 2011 | by Wintery Knight | Link | Original Link

Let's look at what happened after gun laws changed in Washington, D.C. and Chicago.

Excerpt:

> Murder and violent crime rates were supposed to soar after the Supreme Court struck down gun control laws in Chicago and Washington, D.C.
>
> Politicians predicted disaster. "More handguns in the District of Columbia will only lead to more handgun violence," Washington's Mayor Adrian Fenty warned the day the court made its decision.
>
> Chicago's Mayor Daley predicted that we would "go back to the Old West, you have a gun and I have a gun and we'll settle it in the streets…"
>
> The New York Times even editorialized this month about the Supreme Court's "unwise" decision that there is a right for people "to keep guns in the home."
>
> But Armageddon never happened. Newly released data for Chicago shows that, as in Washington, murder and gun crime rates didn't rise after the bans were eliminated — they plummeted. They have fallen much more than the national crime rate.
>
> Not surprisingly, the national media have been completely silent about this news.
>
> One can only imagine the coverage if crime rates had risen. In the first six months of this year, there were 14% fewer murders in Chicago compared to the first six months of last year – back when owning handguns was illegal. It was the largest drop in Chicago's murder rate since the handgun ban went into effect in 1982.
>
> Meanwhile, the other four most populous cities saw a total drop at the same time of only 6 percent.
>
> Similarly, in the year after the 2008 "Heller" decision, the murder rate fell two-and-a-half times faster in Washington than in the rest of the country.
>
> It also fell more than three as fast as in other cities that are close to Washington's size. And murders in Washington have continued to fall.
>
> If you compare the first six months of this year to the first six months of 2008, the same time immediately preceding the Supreme Court's late June "Heller" decision, murders have now fallen by thirty-four percent.
>
> Gun crimes also fell more than non-gun crimes.
>
> Robberies with guns fell by 25%, while robberies without guns have fallen by eight percent. Assaults with guns fell by 37%, while assaults without guns fell by 12%.

> Just as with right-to-carry laws, when law-abiding citizens have guns some criminals stop carrying theirs.

And it's not just in big cities. MSNBC explains how legal gun ownership reduces crime. Excerpt:

> Americans overall are far less likely to be killed with a firearm than they were when it was much more difficult to obtain a concealed-weapons permit, according to statistics collected by the federal Centers for Disease Control. But researchers have not been able to establish a cause-and-effect relationship.

> In the 1980s and '90s, as the concealed-carry movement gained steam, Americans were killed by others with guns at the rate of about 5.66 per 100,000 population. In this decade, the rate has fallen to just over 4.07 per 100,000, a 28 percent drop. The decline follows a fivefold increase in the number of "shall-issue" and unrestricted concealed-carry states from 1986 to 2006.The highest gun homicide rate is in Washington, D.C., which has had the nation's strictest gun-control laws for years and bans concealed carry: 20.50 deaths per 100,000 population, five times the general rate. The lowest rate, 1.12, is in Utah, which has such a liberal concealed weapons policy that most American adults can get a permit to carry a gun in Utah without even visiting the state.
>
> The decline in gun homicides also comes as U.S. firearm sales are skyrocketing, according to federal background checks that are required for most gun sales. After holding stable at 8.5 to 9 million checks from 1999 to 2005, the FBI reported a surge to 10 million in 2006, 11 million in 2007, nearly 13 million in 2008 and more than 14 million last year, a 55 percent increase in just four years.

In fact, just this week a pregnant woman thwarted burglars who invaded her home by pumping a shotgun to load a shell. The noise alone was enough to scare them off.

If you ever need to debate this, I recommend buying these academic studies published by the University of Chicago Press and by Harvard University Press. The former shows how crime rates dropped in the USA when Americans rescinded gun control laws, and the latter shows how crime rates rose in the UK when the British strengthened their gun control laws. Sometimes is good to have the data handy.

Want both sides? Then watch a debate on gun control

This debate is in 13 parts, featuring the two of the *best* proponents of legal firearm ownership – John Lott and Gary Kleck. The real sparks fly during the Q&A, so don't miss that. (If you can't watch the debate, then you can read this post and this post instead).

Here's part 1, which contains the introduction.

Here are the remaining speeches:

- Pro-firearm: **Guns Reduce Crime Debate**: John R. Lott (2 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: R Gil Kerlikowske (3 **of 13**)

- Pro-firearm: **Guns Reduce Crime Debate**: Stephen Halbrooke (4 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: John J Donohue III (5 **of 13**)
- Pro-firearm: **Guns Reduce Crime Debate**: Gary Kleck (6 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: Paul Helmke (7 **of 13**)
- Q&A Part 1: **Guns Reduce Crime Debate**: Q&A Part 1 (8 **of 13**)
- Q&A Part 2: **Guns Reduce Crime Debate**: Q&A Part 2 (9 **of 13**)
- Q&A Part 3: **Guns Reduce Crime Debate**: Q&A Part 3 (10 **of 13**)
- Q&A Part 4: **Guns Reduce Crime Debate**: Q&A Part 4 (11 **of 13**)
- Conclusions Part 1: **Guns Reduce Crime Debate** Closing Arguments Part 1 (12 **of 13**)
- Conclusions Part 2: **Guns Reduce Crime Debate** Closing Arguments Part 2 (12 **of 13**)

This is everything you need to know about whether legal ownership of firearms reduce crime.

Does going to university necessarily educate you and provide you with job skills?

December 10, 2011 | by Wintery Knight | Link | Original Link

The Heritage Foundation explains why universities don't necessarily provide students with a useful education, at least in the non-STEM areas.

Excerpt:

> Guess how many top-tier universities offer a course on Lady Gaga? Four! The University of Virginia, the University of South Carolina, Wake Forest University, and Arizona State University all now offer semester-long explorations of Lady Gaga's apparently profound influence—since 2007—on music, fashion, and the LGBT lifestyle. Yet none of these universities requires students to take a course in U.S. history before graduation. Professors and faculty at top-ranked institutions are giving preference to frivolous classes at the expense of true education.
>
> In a new study by the National Association of Scholars, only one in 75 top universities required students to study western civilization. In 1964, more than half required students take a two-semester course that covered the history of western civilization from Greece to the modern era. The other half of universities required courses that guaranteed graduates understood the history of their society. But studying the foundations of our society no longer seems to be a priority for American universities.
>
> It is not just studying western civilization that has been tossed out the window. There is a dearth in all general requirements. Asking "What Will They Learn," the American Council of Trustees and Alumni has found that only 20 percent of universities require students to take a U.S. government or history class. Only 5 percent require students to take a class in economics. Many, including top liberal arts colleges, have *no* general education requirements. With this setup, it is increasingly unlikely that college graduates will leave their alma maters even grasping the basics.

I recommend going to university and I have the BS and MS in computer science, myself. But if, you have a child in university, my advice is to 1) monitor every course they choose, and 2) have a career mentor meet with them periodically to make sure that what they are learning is what is actually needed in the field.

Regarding the general need for history and economics, I think this is something that it might be better for students to learn before they get to university. It's probably safer to learn history on your own, and then just take economics. I would try to avoid any course where the teacher can teach their point of view and isolate it from reality. Stick with math, science, engineering and physics.

Mitt Romney supports the anti-Christian and anti-business ENDA law

December 10, 2011 | by Wintery Knight | Link | Original Link

This is an article from 2007 from the Christian post. I thought it might be a useful reminder of what Mitt Romney really believes when he's not running for office.

Excerpt:

> Romney during an interview with NBC's "Meet the Press" said he supports the contentious Employment Non-Discrimination Act (ENDA), which adds "sexual orientation" to a list of federally protected classes that prohibits discrimination on the basis of race, color, religion, sex or national origin.
>
> The bill upsets conservative leaders because it grants special protection to employees based on their "actual or perceived" sexual orientation. Moreover, it would force Christian organizations that oppose homosexuality to hire gay employees.
>
> "Mitt Romney's Christmas present to the homosexual lobby disqualifies him as a pro-family leader," said Peter LaBarbera, longtime pro-family advocate and founder of the Republicans For Family Values website.
>
> "Laws that treat homosexuality as a civil rights are being used to promote homosexual 'marriage,' same-sex adoption and pro-homosexuality indoctrination of schoolchildren," he said. "These same laws pose a direct threat to the freedom of faith-minded citizens and organizations to act on their religious belief that homosexual behavior is wrong."
>
> The former Massachusetts governor responded on "Meet the Press" that ENDA "makes sense" at the state level. But LaBarbera warns that if Romney "openly" promotes homosexual agenda at the state level then he cannot be trusted at the federal level.
>
> He pointed out that the state's "sexual orientation" nondiscrimination law laid the groundwork for Massachusetts legalizing gay "marriage" – the first in the country to do so.
>
> Moreover, the ENDA-like law forced Boston's Catholic Charities to shut down its century-old adoption agency because it refused to place children in gay households against Catholic teaching.
>
> "Given Romney's extensive pro-homosexual record and willingness now to depart from principle on this crucial issue, should we trust a 'President Romney' not to reverse course again on federal pro-homosexual laws such as 'Hate Crimes' and ENDA?" LaBarbera posed.

The Washington Times explains more about what it is exactly that Romney supports.

Excerpt:

> According to its leftist proponents, ENDA would merely insulate people who choose to engage in homosexual conduct (sexual orientation) or those who suffer from gender confusion (gender identity) against employment intolerance. In truth, however, this legislation effectively would codify the very thing it purports to combat: workplace discrimination.
>
> ENDA would force – under penalty of law – Christian, Jewish or Muslim business owners to adopt a secular-humanist viewpoint, ignoring all matters surrounding sexual morality while making hiring and firing decisions. Unlike race or sex, homosexual and cross-dressing behaviors are both volitional and mutable. Nonetheless, and despite the reality that such conduct is in direct conflict with every major world religion, thousands of years of history and uncompromising human biology, ENDA would compel business owners with 15 or more employees to leave sincerely held religious beliefs at the workplace door and submit to the demands of the homosexual activist lobby.
>
> This is government-sanctioned viewpoint discrimination. It is no different from forcing a deeply religious business owner to hire and accommodate an "out and proud" adulterous "swinger." It directly alienates the unalienable rights of people of faith. It pits the government directly against the free exercise of religion and is, therefore, unconstitutional on its face.
>
> During his second term, President George W. Bush issued a Statement of Administration Policy on ENDA, highlighting its unconstitutionality: "[ENDA] is inconsistent with the right to the free exercise of religion as codified by Congress in the Religious Freedom Restoration Act (RFRA)."
>
> President Obama, however, has publicly endorsed the bill and promises to sign it into law should it pass. This is in perfect keeping with his demonstrated belief that the federal government's constitutionally limited powers are more of a suggestion than a requirement. Mr. Obama has appointed at least one like-minded ENDA heavy. Chai R. Feldblum is a lesbian activist and sexual nihilist lawyer who in the past has publicly supported legalized polygamy and bisexual polyamory.
>
> One of Mr. Obama's recent 15 controversial recess appointments, Ms. Feldblum was sworn in on April 7 as a commissioner of the U.S. Equal Employment Opportunity Commission (EEOC). As ENDA's chief framer, Ms. Feldblum would be charged with its primary enforcement. This is the classic fox-guarding-the-henhouse scenario.
>
> In the past, Ms. Feldblum has repeatedly and candidly summed up the mindset behind the bill. She has publicly stated that the battle between religious freedom and unfettered sexual license (aka homosexual "rights") is a "zero-sum game," meaning the two cannot possibly coexist in harmony. It's a "winner takes all" approach.

> When asked about the Christian business owner or religious organization that morally objects to hiring people openly engaged in the homosexual lifestyle, Ms. Feldblum snapped: “Gays win, Christians lose.” And where Americans’ constitutionally guaranteed right to religious liberty comes into conflict with the postmodern concept of homosexual “rights,” Ms. Feldblum has admitted having “a hard time coming up with any case in which religious liberty should win.”

And Mitt Romney supported this in 2007.

Newt Gingrich and Michaele Bachmann won the Iowa debate, Romney lost

December 11, 2011 | by Wintery Knight | Link | Original Link

That's not me saying that… that's CBS News.

Excerpt:

> **WINNERS**
>
> **Newt Gingrich**
>
> Newt Gingrich is now clearly the front-runner for the Republican nomination for president. Saturday's debate in Iowa was the first one since he has surged in the polls and Gingrich handled it with his usual aplomb. Many expected the debate to be a full-throated attack on the former House speaker, but shots were fired at both Gingrich and Mitt Romney, which helps Gingrich.
>
> His recent surge stemmed in part because of impressive debate performances and he was clearly at ease on the stage Saturday. Many of his answers showed more depth than his rivals, especially his lengthy factual explanation of why he changed his position on a very important issue for voters: the individual mandate to buy health insurance. He also struck Mitt Romney hard in the early part of the debate, telling Romney that the reason he is also not a professional politician is because he lost a 1994 bid to unseat Massachusetts Sen. Ted Kennedy. And, perhaps most significantly, the thrice-married Gingrich had as strong an answer on questions of infidelity as could be expected. He directly addressed the issue, acknowledging mistakes and said he is older and wiser now.
>
> **Michele Bachmann**
>
> Bachmann also did quite well for herself Saturday night, and sought to go after both Gingrich and Romney by calling them "Newt Romney" in a sustained attack for what she called their similarities (Gingrich and Romney both took issue with the characterization). It may be too late for the Minnesota lawmaker. She has essentially bet her entire campaign on winning Iowa, but she has struggled to get out of the lower tier in opinion polls and Gingrich's surge makes it even harder for her to be a top-tier candidate. Saturday was the first debate since businessman Herman Cain dropped out of the race, and Bachmann sought to woo his former supporters but it appeared a bit too transparent and insincere. Not to mention that most of Cain's supporters have already moved on, many even before his officially ended his bid last week.

And the loser:

> **LOSERS**
>
> **Mitt Romney**

> Romney has been strong in most of the debates until now, though this debate he may have lost for not winning. While most of his answers were adequate, Saturday's debate was about whether Gingrich could take the heat and Gingrich clearly won. On top of that, Romney challenged Texas Gov. Rick Perry to a $10,000 bet about what he said in his book about the Massachusetts health care plan and its connection to President Obama's signature legislative achievement. Romney may have won the spat with Perry (who didn't actually bite), but betting that kind of money may have backfired and perpetuated Romney's image as someone who does not have empathy with average voters because of his enormous wealth.

I think I just heard Michael Medved, Hugh Hewitt, Jennifer Rubin, and the entire staff of National Review sobbing uncontrollably. It was a bad night for RINOs who want to give short shrift to social issues. They just saw their RINO candidate go down in flames on national television.

And more, this time from the left-wing The Daily Beast.

Excerpt:

> Newt not only survived, but thrived, and showed why he deserves to be the frontrunner and why he's not likely to lose altitude quickly.
>
> And Mitt Romney, after a series of flawless debate performances, made a huge unforced error proposing a $10,000 bet. Basic errors and bad moments are one thing. But when you make a mistake that reminds people of your greatest vulnerability, it can be a campaign killer.
>
> The Mitt moment reminds me of when John Kerry took the stage in front of a hall of veterans and tried to explain a vote against funding American troops in battle, and said: "I actually voted for it, before I voted against it."

> Michelle Bachmann had a very strong performance and tied together the two frontrunners as Newt Romney: both similarly inconsistent in their conservative orthodoxy.
>
> Newt wins hands down. The whole story line as I wrote earlier was whether Newt would walk off the stage without being bloodied. And he walked off the stage like Mohammed Ali without a scratch. And knocked Romney to the canvas by reminding the audience that Mitt Romney would be a career politician if he hadn't lost to Ted Kennedy.
>
> And voters will long remember and Mitt will long regret his bet that reminded everyone of a candidate who seems rich, elite, and out of touch.

I was in the Indian restaurant on Saturday reading my lunch book – I am just starting Arthur Brooks' "The Battle: How the Fight between Free Enterprise and Big Government Will Shape America's Future ". I was surprised to see that Newt Gingrich gave the foreword to the book, and it was really very conservative. (Here's a paraphrase of his

foreword). Newt is not my candidate, but if he's the nominee, I'll support him. I am still hoping that Michele Bachmann or Rick Santorum can win in Iowa.

UPDATE: Watch the full debate here.

Hugh Hewitt: is he a conservative radio talk show host?

December 11, 2011 | by Wintery Knight | Link | Original Link

Hugh Hewitt is a strong supporter of Mitt Romney. Let's look at Romney's views.

Here is Mitt Romney on abortion:

And more:

Mitt Romney on immigration:

Mitt Romney on global warming:

Here is Mitt Romney on gun control:

Here is Mitt Romney on embryonic stem cell research:

Here is Mitt Romney on the flat tax:

So long as Hugh Hewitt endorses Romney, then Hugh Hewitt is not a conservative in any sense of the word.

Only one Democrat senator voted to limit future IMF bailouts for Europe

December 11, 2011 | by Wintery Knight | Link | Original Link

Sen. Jim Demint

First, a quick re-cap on Jim Demint's Amendment 501, which would have prevented the IMF from using $108 billion of American money to bail out foreign nations.

Excerpt:

> The Senate on Wednesday defeated an amendment in a 44-55 vote that would have prevented the International Monetary Fund (IMF) from using $108 billion in U.S. monies to bail out foreign nations.
>
> The author of the amendment, Sen. Jim DeMint (R-S.C.), said he is concerned that the IMF is using U.S. funds to rescue irresponsible nations and banks. He said the U.S. can no longer afford to offer such aid.
>
> "There is no excuse for us giving away money around the world when we cannot even keep our promises here in America today, promises we have made to our seniors, promises we have made to our veterans," said DeMint.

Now, Jim explains in the Wall Street Journal why 55 Democrat senators shouldn't have voted against it.

Excerpt:

> If the United States wants to help Europe find a way out of its current debt crisis, we must be a strong, world economic leader, not merely the lender of last resort.
>
> American taxpayers sent $40 billion to Greece last year, through the International Monetary Fund, to stave off an economic collapse. But the bailout did not prevent Greece's day of fiscal reckoning. It only delayed it. Austerity

> measures are still needed throughout Europe's socialized economy and the debt contagion has not been stopped. Financial chaos has spread from Greece to Ireland, Portugal, Italy and Spain, and it now threatens the very future of the 17-member euro zone.
>
> Undeterred, President Obama last month told the press after breaking from a closed-door meeting with European leaders, "the United States stands ready to do our part to help them resolve this issue." He would do better to focus his attention stateside. The most dangerous threat to the U.S. economy is not across the pond. It's in the swampland of Washington, D.C.
>
> […]Greece's economy reached its tipping point and was bailed out when government debt topped 137% of its gross domestic product. Despite all the measures that have been taken to aid it, Greece's debt-to-GDP-ratio is even higher now, at 160%. Ireland was bailed out at 74% of GDP and is now at 80%. Portugal was bailed out at 94% of GDP and is now expected to top 100%. The bailouts have arguably made the European debt crisis worse, not better.
>
> Total U.S. debt, including entitlement liabilities, reached 100% of GDP when Congress increased the debt ceiling in August. Our $15 trillion debt now rivals the size of the entire U.S. economy.
>
> When he first took office, President Obama promised to cut the federal deficit in half by 2013. But instead he's increased it by more than $4 trillion. Indeed, under his direction, the U.S. government spent about $1 trillion on a Keynesian-style stimulus that failed to create the jobs promised, will spend trillions more creating a European-style health-care entitlement with ObamaCare, and has more Americans on welfare than ever before.
>
> **[…]This year the U.S. sent about $67 billion to the IMF, which represents 17.7% of the IMF's yearly budget—nearly three times more than any other nation. On top of that, taxpayers provided an additional $108 billion credit line to the IMF in 2009.**
>
> **In 2010, the IMF sent nearly $40 billion in assistance to Greece, which did nothing to prevent the country's economic collapse in 2011. On Monday, the IMF approved another $2.95 billion worth of bailout funds for the struggling country.**
>
> **[…]Earlier this year, I offered an amendment to repeal the IMF's authority to use the additional $108 billion credit line to provide any more bailouts. It was overwhelmingly rejected by the Democrat-controlled Senate. Forty-four senators voted for it; only one was a Democrat.**

This has to stop. We have to stop electing people who don't believe that people are responsible to create their own wealth, instead of stealing it from others – and impoverishing generations yet unborn. The right way to solve economic problems is to create the conditions that incentivize people to create wealth, not to discourage them by

confiscating what they earn. There is a problem in Europe right now – huge numbers of benefits are being taken from those who produce (the private sector) and given to those who don't (the public sector). The first step is to stop the bailouts.

Donald Sensing posted some thoughts from Abraham Lincoln on his blog that seem appropriate for this post.

Excerpt:

> If destruction be our lot we must ourselves be its author and finisher. As a nation of free men we must live through all time, or die by suicide.

> You cannot help men permanently by doing for them what they could and should do for themselves.

> Any society that takes away from those most capable and gives to the least will perish.

> Few can be induced to labor exclusively for posterity. Posterity has done nothing for us.

> No man is good enough to govern another man without that other man's consent.

> You cannot build character and courage by taking away man's initiative and independence.

> Let every man remember that to violate the law is to trample on the blood of his father, and to tear the charter of his own and his children's liberty. Let reverence for the laws … become the political religion of the nation.

> If ever this free people, if this Government itself is ever utterly demoralized, it will come from this incessant human wriggle and struggle for office, which is but a way to live without work.

> We have to distrust each other. It's our only defense against betrayal.

> Things may come to those who wait, but only the things left by those who hustle.

> Nearly all men can stand adversity, but if you want to test a man's character, give him power.

> Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich and, hence, is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him labor diligently and build one for himself, thus, by example, assuring that his own shall be safe from violence when built.

> It has ever been my experience that folks who have no vices have very few virtues.

I understand that stealing money from working people and their employers and giving it to lazy people is an important goal for Democrat politicians, because it builds up their self-esteem and it makes them feel admired and popular. But it’s not their money. They need to stop. Obama’s desire to “spread the wealth around” is not a moral policy, it’s an immoral policy – because it’s not his wealth. He didn’t produce it.

The top 5 myths about Christmas

December 11, 2011 | by Wintery Knight | Link | Original Link

From Take Two Apologetics. It's an interview with Krista Bontrager. I removed the links from the excerpt below, so you can click through to their site if you want the links.

Excerpt:

> **Krista, many of us were taught that Jesus was born in a stable because "there was no room in the inn." Was He born in a stable?**
>
> Probably not. Nowhere in the Bible does it state that Joseph went from home to home looking for a place to stay. That story stems from many translations' use of the word "inn" in Luke 2:7. From that, we extrapolate a whole slew of events—the innkeeper, innkeeper's wife, a No Vacancy sign flashing. The problem is that the word used in Luke 2 (*kataluma*) is not the word for inn—that's a bad English translation. The word is better translated as "upper room" or "guest room." In fact, the 2011 translation of NIV makes that correction. Luke 22:11 also uses *kataluma* to describe the guest room where the last supper took place. In contrast, *pandocheion* (correctly translated as "inn") appears inthe parable of the Good Samaritan.
>
> **Where was Jesus born, then, if not in a stable?**
>
> It's much more likely He was born in a home. Mary and Joseph were going to their ancestral home, which means they had extended family there. It's almost inconceivable that their family would not have taken them in considering the cultural practices of that time.
>
> **So if Jesus was born in a home, why does the Bible say He was placed in a manger?**
>
> That's an important detail because it tells us what part of the house they were in. In those days, homes had an upper level where the family would sleep and a lower level where animals were kept at night for the animals' protection and to provide heat. It seems that Jesus was born in that lower level where the animals were kept. And he was placed in a manger (feed trough) because they make for a great little cradle. In fact it reminds me of the makeshift bed my husband and I once made for our daughter when we stayed overnight at a hotel.
>
> **What about some of the characters often suggested as being present at Christ's birth?**
>
> The shepherds were present, but the three wise men were not. Matthew's account apparently takes place during a different time frame than Luke's. One clue is that the Greek word Matthew used to describe Jesus is a *paidion*, which can mean anything from an infant to a toddler. This range of definitions would be consistent with King Herod killing all the Jewish boys ages two and under

> (Matthew 2). This would mean that Jesus was probably two or younger when He was visited by the wise men.
>
> **Okay, so we've eliminated the stable and the wise men from the Nativity. What about the date? Was Jesus born on December 25?**
>
> Maybe. The standard story is that December 25 was adopted after Constantine's conversion to Christianity because it was on a pagan holiday and the winter solstice. Christians then co-opted the holiday and Christianized it. What's interesting is that the early church put almost no emphasis on celebrating the birth of Christ. They were much more concerned with the resurrection. It's not until AD 200 where possible dates are mentioned for the celebrating of Christ's birth. By about AD 300 there were two dates: December 25 (for the west) and January 6 (for the east). There does seem to be a tradition of December 25 long before Constantine's conversion, so that's why I say maybe. This article from the *Biblical Archaeology Review* gives a good summary of "How December 25 Became Christmas."

I found this post over on Apologetics 315. Brian puts up a post with apologetics stories every Friday. There's more in there – I am listening to the 5 part lecture series on church history right now. (It's Calvinist, but polite)

Why do people hate Tim Tebow? Why do people want Tim Tebow to fail?

December 12, 2011 | by Wintery Knight | Link | Original Link

The Denver Broncos, their amazing kicker and their amazing Christian quarterback, all won again in an exciting overtime win. That's three games in a row (at least, I'm not following it closely) where Tim Tebow and the Broncos have managed to come from behind to win at the last possible second.

Here's the scoop on the latest nail-biting victory by the Denver Broncos.

> Tim Tebow has led the Broncos to five fourth-quarter comebacks since replacing Kyle Orton at starting quarterback eight games ago, when Denver was 1-4.
>
> "I guess I've just got to get to the stadium and start practicing a little bit earlier," Tebow said.
>
> The win is Denver's sixth in a row, and secures the Broncos (8-5) the AFC West lead, which they shared with Oakland entering Sunday's games. Chicago dropped to 7-6, further clouding its playoff chances.
>
> The Broncos could be playoff bound, but the only prediction coming out of Denver locker room Sunday was this: "I'm definitely going to be going bald by the end of the season," said the 27-year-old Prater, who has made four game-winning field goals this season. "Bald or gray, one of the two."
>
> Denver could have made Sunday's game much less of a heart-stopper but muffed two scoring chances earlier in the game. A 28-yard attempt by Prater was blocked in the second quarter. In the third quarter, Broncos receiver Demaryius Thomas broke away from coverage near the end zone but let a deep pass slip from Tebow through his hands.
>
> Tebow said he told Thomas not to worry about it, that Thomas would score the game-winning touchdown.
>
> The prediction was off, but not by much.
>
> With 4:34 left in regulation, the Broncos were trailing 10-0. Tebow completed seven straight passes to lead Denver on a 63-yard scoring drive, capped by two receptions by Thomas. The 10-yard touchdown catch came with 2:08 remaining.
>
> "It was just a big relief," Thomas said.
>
> Chicago, still leading by three points, lost the opportunity to run off time on the clock when running back Marion Barber, starting in place of the injured Matt Forte, ran out of bounds with less than two minutes left in regulation.
>
> "I might have thanked the Lord when he did that," Tebow said.
>
> Tebow and the Broncos offense regained possession with 53 seconds left. Tebow completed three passes to put the Broncos in field-goal range, then Prater kicked

> a career record-tying 59-yarder with eight seconds left to send the game into overtime.
>
> "You can't say enough about Prater and how clutch he is," Tebow said.

Man, can the Denver kicker kick field goals – he nailed a 59-yard field goal today. But the quarterback Tim Tebow is the one getting all the attention lately. And I think because this is a Christian blog, we need to take a look at why that is.

I read this article in the Wall Street Journal about Tim Tebow, and I asked myself the question "does God care whether Tim Tebow wins football games?".

First, Tim doesn't think that God cares about who wins football games:

> In the waning moments against the New York Jets, Mr. Tebow manufactured a 95-yard game-winning drive, punctuated by his own 20-yard touchdown dash. He brought the Broncos back from imminent defeat, just as he had done in previous weeks against the Miami Dolphins, Oakland Raiders and Kansas City Chiefs.
>
> And when the shouting was over, Mr. Tebow did what he always does—he pointed skyward and took a knee in prayer. In postgame interviews, the young quarterback often starts by saying, "First, I'd like to thank my Lord and Savior Jesus Christ" and ends with "God bless." He stresses that football is just a game and that God doesn't care who wins or loses.

He's right about that. God doesn't care about who wins and loses football games. He doesn't care about making us feel happy or sad, either. He doesn't care about giving us what we want. God has one reason and one reason alone for creating us. To give us time on Earth to respond to his drawing us toward him. It's our job to puzzle about science and history and logic now and try to see if he is there and what he is like. Our job is to know God and to serve God. You're not going to be able to tell whether God exists based on the Denver Broncos' wins and losses. Football is not a premise in any argument for God's existence or Jesus' resurrection.

But that doesn't mean that Tim Tebow can't use football to serve God. Here are a couple of ways he helps to do that.

First, charity:

> While at Florida, Mr. Tebow became well known for spending his summers helping the poor and needy in the Philippines. He also spoke in prisons and appeared to accept every opportunity to volunteer. He encouraged his teammates and classmates to follow his lead.
>
> As Mr. Tebow recounts in his book "Through My Eyes" (written with Nathan Whitaker), after he won the Heisman Trophy in 2007, he had the idea to use his fame to raise money for the orphanage that his family runs and for other organizations. Since National Collegiate Athletic Association rules prevented him from raising money for his own causes, he worked with the university to found a student society that could be used for charity.

> According to the former Florida coach Urban Meyer, Mr. Tebow's philanthropic efforts reshaped campus culture, and for a time, volunteering became fashionable. In his senior year, the powder-puff football tournament that he launched, with the help of the university's sororities and fraternities, raised $340,000 for charity.
>
> Mr. Tebow's acts of goodwill have often been more intimate. In December 2009, he attended a college-football awards ceremony in Lake Buena Vista, Fla. The night before, at another gala at Walt Disney World Resort, he met a 20-year-old college-football fan named Kelly Faughnan, a brain-tumor victim who suffers from hearing loss and visible, continual tremors. She was wearing a button that said "I love Timmy." Someone noticed and made sure that the young woman had a chance to meet the player.
>
> Mr. Tebow spent a long while with Ms. Faughnan and her family, and asked her if she'd like to be his date for the award ceremony the following night. She agreed, and the scene of Mr. Tebow escorting the trembling young woman down the red carpet led much of the reporting about the event.

You can read more about their date here. (H/T Tim McGrew) Tim Tebow considers his presence something to be given away to others who would benefit from it. It's not something he uses to gratify his own needs. He gives himself as a gift to people and he leaves them better than he found them.

Second, Tim Tebow gets people curious and/or angry about Christianity, because he acts on his beliefs:

> In 2010, while still at the University of Florida (where he won the Heisman Trophy and helped the Gators to win two national championships), Mr. Tebow filmed a Super Bowl commercial for Focus on the Family, the mega-ministry known for its conservative political advocacy. The ad is about how Mr. Tebow's mother was advised to abort her son following a placental abruption, but she refused and, well, now we have Tim Tebow.
>
> The ad takes the softest possible approach to the subject and never uses the terms "abortion" or "pro-life," but its intent was clear, and it generated controversy. Since then, feelings about Mr. Tebow have been a litmus test of political and social identity. If you think he's destined to be a winner, you must be a naive evangelical. If you question his long-term chances as an NFL quarterback, you must hate people who love Jesus.

In another article, Tim Tebow is quite honest about his refusal to engage in sex before marriage.

Excerpt:

> Tebow's successful college football career and current position as Denver Bronco's quarterback make him a manly-man in an everyday sense, but

> evangelical Christians say it's his unashamed willingness to adhere to the moral teachings of his faith that make him a man in a religious sense.
>
> Tebow, who told reporters that yes, he was a virgin and yes, he was waiting until marriage to have sex, has become an example of contemporary "biblical manhood," a good guy, willing to speak out for Christianity and actually practice what he preaches.
>
> The notion of biblical masculinity is based on a complementation view of gender roles, as described in Scripture, which positions men as head of the household. The leaders of the movement to restore biblical manhood say today's men aren't living according to that Christian call, and social and spiritual downfalls have caused them to be lazy and passive or overly authoritative. There's a man crisis in society, they say, and the church needs to educate men on how to fulfill their responsibilities.

Consistent Christians have to be different like that. People think that none of us actually take these things seriously. But there are people out there like Tim, who understand what sex and love and marriage and parenting are really about, and have the self-control to try to do things as correctly as they can. And we need people to see that there is something different about evangelical Christians – we are the ones who take this stuff seriously. We are the ones who care about children's need for a mother and a father and a stable marriage, and we advocate for chastity and traditional marriage so that vulnerable children get the stability and love they need as they develop.

But not everyone is going to respond to Tebow's chastity, charity and pro-life activism with admiration and curiosity. Some will hate Tim and will want him to fail. The reason why people hate him is because people who are sinning, especially sexually, feel better when they think that "everyone is doing it". In fact, that's exactly why the left tries so hard to sexualize children, to give them condoms, and to have Christians pay for their abortions and recognize gay marriages. The anti-Christians don't want to believe that anyone is out there trying to be good. They feel that if they could just bring everyone like Tebow down to their level, then all the evil that they are doing will be OK. What would be great, they think, is if people like Tebow could celebrate their sinful choices so that they would feel better about them.

The Bible actually talks about this in Romans 1, where the Bible explains that sinful people know about the moral law but "they not only continue to do these very things but also approve of those who practice them." They want Tim Tebow to approve of their sinfulness and selfishness, and by choosing to go a different way, he is disapproving of their choices, and they don't like that. They oppose the idea that there is any purpose to sexuality other than feeling good. They don't want anyone to impose rules on their pursuit of pleasure. And they don't want anyone to tell them that what they are doing is wrong. I am not advocating coercing anyone to be moral, but I do think that people like Tim Tebow should be free to be chaste, and free to express his views on what he thinks is moral when it comes to sex and abortion.

Watch the ABC Republican primary debate that drew 7.6 million viewers

December 12, 2011 | by Wintery Knight | Link | Original Link

Here's the video of the debate.

And here's the story from Reuters:

> Saturday night's GOP debate was the most-watched of the 2012 campaign as an average of 7.6 million viewers tuned in to watch the presidential candidates take on such hot topics as unemployment and immigration.
>
> Despite a relatively late start time — 9 p.m. on the East Coast — 2.1 million of those viewers were in the key adults 25-54 viewer group.
>
> Both of those numbers beat the previous highs, held by Fox News in total viewers (6.11 million on September 22) and MSNBC in the 25-54 demographic (1.73 million on September 7).
>
> They were also well ahead of the numbers for the only other debate on one of the major broadcast networks, CBS News' telecast on Nov 12.
>
> Moderated by Diane Sawyer and George Stephanopoulos, the ABC debate was broadcast live from Des Moines, Iowa, with the Iowa caucus — the first tally of the election season — less than a month away.
>
> Between the two current front-runners — Mitt Romney and Newt Gingrich — Gingrich was seen as the winner of the contest, which was also hosted by Yahoo News, the Republican Party of Iowa and the Des Moines Register.

I wrote before about who won the debate: Newt Gingrich and Michele Bachmann tied for the win.

Navy buys fuel for $15 per gallon from Democrat-connected green energy firm

December 13, 2011 | by Wintery Knight | Link | Original Link

I found this Hot Air story on Right Wing News. Hot Air was at the top of John Hawkins' list of the top 40 conservative blogs.

Excerpt: (with links removed)

> This is going to help the Defense Department weather looming budget cuts, for sure. Teaming up with the Department of Agriculture (which has a cheery Rotary Club ring to it), the Navy has purchased 450,000 gallons of biofuel for about $16 a gallon, or about 4 times the price of its standard marine fuel, JP-5, which has been going for under $4 a gallon.
>
> You won't be surprised to learn that a member of Obama's presidential transition team, T. J. Glauthier, is a "strategic advisor" at Solazyme, the California company that is selling a portion of the biofuel to the Navy. Glauthier worked – shock, shock – on the energy-sector portion of the 2009 stimulus bill.
>
> The Navy sale isn't Solazyme's first trip to the public trough, of course. The company got a $21.8 million grant from the 2009 stimulus package.

See, this is why we need to vote for lower and lower taxes. The more money that you give the government to spend, the more likely they are going to waste it buying votes and rewarding their supporters and fundraisers. Do you think that a private company could waste money like this, and stay afloat? No way – they have competitors to worry about. If they waste money, then they will go out of business. However, the government can just spend the money with abandon – it just gets added to the national debt. Eventually, the young people, who vote for for Obama in droves, will have to pay the money back. This will be hard for them to do given the fact that many of them are growing up without two parents supporting them, and often without a good education. What a mess. Leave the money in the hands of the private sector schools and private sector job creators – they actually have to care about pleasing customers and reducing wasteful spending.

Let's do a quick review of more instances of stimulus spending.

- Obama fundraisers got 80% of green energy loans ($16.4 billion)
- Obama gave $443 million no-bid contract to drug firm run by Democrat fundraiser
- Another green energy firm goes bankrupt after getting $43 million loan from taxpayers
- $737 million green jobs loan given to Nancy Pelosi's brother-in-law
- Obama to conduct campaign fundraiser with wind power stimulus recipient
- Obama administration knew $535 million Solyndra loan was too risky

What exactly was he trying to stimulate? His 2012 election campaign?

By the way, check out John’s list of the top 40 blogs – I am number 40.

Michael Shermer and Greg Koukl debate on God, atheism, meaning and morality

December 13, 2011 | by Wintery Knight | Link | Original Link

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

HH = Hugh Hewitt
GK = Greg Koukl
MS = Michael Shermer

HH: Special edition of the Hugh Hewitt Show. As we come to the end of what I call the decade of the atheists, I am taking a day here at the end of the year to look back at what that has been about, and what progress or lack thereof has been made in that conversation, what it meant, and what it ought to mean, and whether or not those of you who are just finished celebrating Christmas were in fact simply involving yourself in a pagan kind of ritual that grew up over the years, or whether you're worshipping the one, true God. All that and more, because this has been the decade of the atheists, Richard Dawkins, Christopher Hitchens, Sam Harris, many others, but today, I want to ask did they make a difference at all, or is in fact faith in God generally stronger than ever. To join me in this all day special conversation in studio, two guests. Greg Koukl is the founder and the president of Stand To Reason, http://www.str.org. He is a leading Christian apologist. He's an author most recently of Tactics: A Gameplan For Discussing Your Christian Convictions from Zondervan Press. Before that, Relativism, he's got a lot of other books and pamphlets as well at Amazon.com. But you can find out most about Greg at http://www.str.org. Michael Shermer is the editor of Skeptic Magazine. He is the founder of the Skeptic Society, author of a number of books, including The Mind Of The Market: How Biology And Psychology Shape Our Economic Minds, and Why Darwin Matters: The Case Against Intelligent Design. Both Michael and Greg have been guests on the Hugh Hewitt Show before. They're both very generous with their time to spend an entire day doing this, and so welcome to you both. Gentlemen, I believe in biography before everything. Greg Koukl, K comes before S. Give people a little bit of a rundown on who you are and how you ended up doing this.

GK: Well, just a broad background here. I approach the issue that we're talking about today not as a philosopher or a theologian, though I have advanced degrees in both, but really as a human being that's trying to make sense out of my world. What worldview, what picture of reality does the best job of answering the questions? That wasn't always my perspective. I was raised in a religious home, nominally religious. And then in the 60s, during the counterculture, like a whole bunch of other young people, I went crazy. You know, you abandon the views of the establishment, you embrace all these new things that are invading the world in the 60s, and I did that. I was at Michigan State University in their Honors College there as a prelaw student, as it turned out. I had thought I had tried

Christianity because of my background. I thought I was too smart to be a Christian. And so I just didn't give real serious consideration to that until I went to the West Coast, and went, I was a student at UCLA. And at that time, I began to give fresh consideration to the claims that Jesus of Nazareth was making on my life. And in 1973, I made a commitment to follow Him. And that began to change everything. In 1976, I spent three months in Europe, five weeks of that behind the Iron Curtain working with Christians who are suffering there as a result of their own convictions as Christians, back when they had an Iron Curtain. A number of years later, in 1982, I went to Thailand to work with Cambodian refugees. My job was to feed 18,500 people in Sakeo refugee camp, which the result of the Cambodian holocaust of 1975-1976, and then in 1993, I decided to kind of focus my efforts and start an organization with some other people, particularly Melinda Penner, who many who are listening know as The Enforcer. And that organization is called Stand To Reason. And Hugh, I had two basic goals with starting Stand To Reason. One is to train Christians to think more carefully about their convictions. There just was a lot of nonsense being spewed by Christians who I think had the right ideas, but were not communicating them well, and were not thinking well about those ideas. And secondly, I wanted to develop some tools to show that Christianity is actually worth thinking about. Some of these were tools of engagement. There was too much of a bellicose atmosphere between those who believed in Jesus and the Christian worldview and those who don't. And I wanted to see that engagement look more like diplomacy than D-Day. And so there's kind of a general attitude thing that I wanted to see happen, building ambassadors for Christ. Secondly, I wanted to help them with the new tools of evidence, and the information that has been coming out in the last ten or fifteen years that have been very, very powerful, I think, to commend the Christian worldview to the rest of the world – things about big bang cosmology, for example, the design inferences that we find in the universe, the evidence for the existence of the soul, the evidence from the primary source documents about Jesus of Nazareth and his resurrection. All of these things, there's been a lot of work done in the last fifteen or twenty years. And so our goal is to try to bring these things down to a level where people can understand them, throw the ball so that they can catch it, for believers in Christ to do so, but without having a bunch of religious language attached to it, one, and two, using an external approach. In other words, using the philosophy and the science to demonstrate that their views are worth thinking about, instead of simply throwing Bible verses at them, and in the process, I've written a number of books, one of them on abortion called Precious Unborn Human Persons. It's basically a small monograph. The next one, Relativism: Feet Firmly Planted In Mid-Air that I co-authored with Frank Beckwith, who you know. And the one most recently is the one you just mentioned, Tactics: A Game Plan For Discussing Your Christian Convictions.

HH: With that introduction, Mike Shermer, how about you?

MS: Well, I was born and raised in the Southern California area, and my home was, neither of my homes, as my parents were divorced, neither of them were religious, but neither were they anti-religious. They were just not religious. But in the nascent Jesus

movement of the early 70s, I became a born again when I was in high school, 1971. And I remember it was a, my best friend, he was a Presbyterian, so on a Saturday night, I accepted Christ into my heart. And then Sunday, I went to the local Presbyterian church with his family, and went up to the alter and all that with the other people that were called forward. And then on Monday, I remember returning back to high school to tell my buddy, Frank, that I had finally become religious and accepted Jesus like he had been telling me about, and hoping I would. And instead of being excited, he was disappointed, because he was a Jehovah's Witness, and that I had gone to the wrong church, the Presbyterians. Anyway, so that always stuck in the back of my mind like wow, aren't we all on the same bus together in the same journey? Well, not always. Anyway, so…but I took it pretty seriously. I went to Bible study classes. There was a little place in La Crescenta called the Barn, where Christians met and had Bible study classes, things like that. And then I went to Pepperdine University in Malibu there to, really to matriculate initially into theology, but then I switched to psychology, really for logistical reasons. I just wanted to be a college professor, because it's, you know, it's a great gig that you hardly have to work and you get good pay. Don't ever listen to those professors complain about their pay. It's the best gig going. And I wanted in on that. And theology was my field, but to get a PhD, you have to do Hebrew, Greek, Aramaic and Latin. And I could barely get through Spanish, so I realized okay, I have to do something I'm actually good at, which was science, which was experimental psychology. And so I switched fields. But while I was at Pepperdine, I took courses in the New Testament, the Old Testament, the life of Jesus. I took an entire semester course in the writings of C.S. Lewis. We read everything that Lewis wrote, and I really loved C.S. Lewis. I still like C.S. Lewis. I think he's a great writer. But then eventually, when I went to graduate school, when I was in a different environment, not surrounded by Christians, and getting different perspectives. And for a number of reasons, I ultimately lost my faith, and let go of God, and became essentially a secularist, or a non-believer, whatever. I never really call myself an atheist. I mean, I don't like to identify myself or define myself by what I don't believe, because atheism doesn't really stand for anything. There's no principles behind it. There's no platform or set of planks that we live our lives by. We just simply don't believe in God. So then I got into, well, actually I had a ten year span where I was a bike racer living here in Orange County, and did Race Across America five times, and I was the assistant director, and the executive director of the race. And so I spent quite a bit of time in a completely different profession, but teaching part time psychology. Then after ten years of bike racing, I realized my body wasn't going to hold out forever, and I might have to use my brain again. So I went back and got a PhD in the history of science at Claremont, and then became a fulltime professor at Occidental College in L.A. But on the side, we just started the Skeptics thing as just sort of a hobby in my garage. It was nothing, really, just for fun, and a lecture series at Cal Tech. And it just got bigger and bigger, and by 1997-98, when my first book, Why People Believe Weird Things did really well, I had a literary agent that got me a big advance for my next book, and a lecture agent, and so on, and I realized you know, I think I could actually make a living as a writer and an editor and a public intellectual, and actually teach more people than I can teach in a classroom, that is just

reach more people. And so I've been doing that every since. I quit teaching at Oxy in 98, and returned to teaching just two years ago at Claremont Graduate University, just one class a year, Evolution, Economics & the Brain. It's a PhD level course. So it's just for fun. So my main job, my day job, is editing and writing.

HH: We've got a minute and a half to the break, so I'll let you go first, Greg. What's your first question for Michael? I'll lead most of this conversation, but in between, I'll let you pose each other questions. Do you have a question or anything that you're curious about his background?

GK: Well, about his background?

HH: Just anything.

GK: Well, I think, and this is just going to seed further conversation, Michael, but I think the biggest, one of the biggest problems, it's not the only big problem, but one of the biggest problems that atheists have to deal with is the problem of morality. Listen, if you have a guy who drags a woman into an alley, and then molests her, and then…that's our music. Okay, I'll finish my illustration in just a few moments. But I want to raise the nature of morality, is the question, or how best to explain the existence of real morality.

– – – –

HH: When we went to break, I began just the first opportunity to ask each other a question. So Greg, you were bringing up the…rephrase it for the audience who just tuned in for Michael.

GK: Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are

an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative? And if they're relative, then how can we make moral judgments that are meaningful on other people?

HH: Michael Shermer?

MS: Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong, and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

HH: Greg?

GK: Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process,

and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

HH: One minute to the break, Michael Shermer.

MS: I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

HH: Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

MS: Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends,

honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

HH: Greg Koukl?

GK: Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

HH: Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

MS: Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our

actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

HH: Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you can.

MS: Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

GK: Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't

really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me. I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

MS: But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

GK: Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic evolution, and from outside terms, neither is better than the other. Why should we do that, Michael?

MS: Yeah, well I don't see how entering God into the equation changes that problem at all.

GK: Well, that's the next step. What I'm trying to show is that the should comes from the

outside, and if we can demonstrate that, then we can ask…

MS: But there's no outside.

GK: That's my point. On your view, morals are relative, and there is no difference.

MS: No, but I don't think even in your view, there's an outside.

GK: Well, we can get to that in the next step.

MS: …because adding God doesn't add anything.

– – – –

HH: Greg, reset the debate. What just happened there?

GK: Well, what I'm arguing is basically, you have two choices. You have objective morality, or subjective morality. Subjective morality means that when we say something's wrong, we're not talking about the action itself, we're talking about ourselves. Now there are sophisticated ways of characterizing how we're talking about ourselves, whether it's culture, whether it's evolution. But ultimately, you end up with no morality. I think that's false. I think people know there is objective morality. And if evolution, no materialistic system can explain it, given the discovery of objective morality, then we have to take the next step and ask what is the best explanation for objective morality. Michael, I think, wants to deny objective morality, but I think he's been smuggling the notion in subtly, as many times happens in these kinds of discussions. And he's, I'm not sure if he's denied that or not.

MS: Well, I think there's only two kinds of people – those who think there's only two types of morality, objective and subjective, and those that don't, which is the rest of us.

GK: Okay.

MS: Seriously, I mean, I reject your dichotomy of there's either objective reality or it's all subjective relativism and anything goes, and what Hitler did is perfectly fine. No, I don't believe that. I don't think anybody, hardly anybody actually really believes that, except for maybe a few academic philosophers who've never been in the real world. Really, I think we all recognize that there are deep, provisional truths, moral truths, that we recognize as real. And so what you want to get at is what's the outside source? And as you know, since you read my book, this is an old problem that everybody's familiar with in your business anyway, and that is Plato's Euthyphro's dilemma, in which Socrates asks his student, Euthyphro, the point which I should first wish to understand is whether the pious, or holy, is beloved by the gods because it is holy, or holy because it is beloved of the gods. In other words, which comes first, that the moral principle really exists out there in sort of an ideational world, and the gods say hey, look…

GK: They're beholden to that.

MS: …that's a real, moral principle…

GK: Right.

MS: …and we're going to instruct you through the holy book that's what you should do.

GK: And that makes the gods contingent…

MS: Or do they not really exist other than in the mind of God, who says listen, I've decided that killing is wrong, and I'm telling you in this particular book, and ignore those other holy books, because they're wrong. And so now we get to the problem of which is, which do you believe, for example?

GK: Okay, this is a famous dilemma you actually mentioned at one of the earlier segments, and it has been answered very carefully. I'll give a possible answer for it.

HH: One minute to the break.

GK: Okay, one minute. One answer is to say that God says something is right because it's, the rightness of it is grounded in His nature. It's not an arbitrary act of His will, voluntarism, it isn't that he has some external standard that makes him now contingent, but that God is good in Himself, and that His commands flow forth from His nature. That's a possible solution for it. What you can't do is you can't jump from evolution and say well, if you go your way, I see a difficulty there, so I can ignore the evidence that's facing me right now for moral objectivism. That, I think, is a false move. So I can answer the objection, but also I think it's a false move.

HH: But you'll do it after the break.

– – – –

HH: But I want to go back and pick up the thread that we were at right before the end of the break. And Michael Shermer, I'm going to have you reset the debate for people wandered in off the street in the middle of this. Where are we in the conversation right now between you and Greg Koukl?

MS: Okay, just in case anybody's just checking on online, it's http://www.skeptic.com instead of…

HH: I'm sorry.

MS: No big deal. Anyway, so, well, is there an outside source to these moral principles that God then recognizes and says yeah, this is part of the universe, it really is wrong to kill other people, and I as the Deity am telling you this is what I know as part of nature? Or, do no such moral principles actually exist anywhere outside of the Deity Himself, and then He tells us through His Holy books? Okay, so which is the right answer to that question? And two, assuming that…well, you did say something about it's in God's nature. Well, if we're made in God's image, wouldn't that also put the moral principles in our nature as well?

GK: It does…

MS: So then we're tapping into those principles that really exist in us. And how is that any different from what I've been arguing already?

GK: No, the difference there, just on that particular issue, is I agreed earlier when you said it's part of our nature. The source is what's different. What's part of our nature is the knowledge of external things. In my case, these things are external. They are external like math principles are external to my mind. I don't invent them in my mind. In your case, the way you account for them being universal, in the sense that they're part of all

humankind, is that evolution has created this. These are two entirely different things. In my case, I'm talking about an object of reality, and in your case, you're talking about a subjective reality. And I know you want to jump in. Just one more point here. I am not complicating things at all, or oversimplifying things. The issue is quite simple if you start at the bottom. Either moral obligations are objects, or they're part of the object, or they're part of the subject. They are objectively true, or they're not. There are no other options. Now if you agree that morality is not objective, then it's a crap shoot, really. It's not whatever you want, if what you mean your society isn't going to allow you to do whatever you want. It's not whatever you want if you meant that well, evolution is going to determine certain things for you, that aids the species. But it is whatever you want. What is is right, if there is no outside objective moral standard that's governing you. Now how you want to ground that, that has it's own…that's another issue. And grounding it in God makes a lot of sense, and it even, I'm not even subject to the kind of problems that you Euthyphro dilemma that was just offered there. There is an answer to that, that avoids that problem. But it seems to me if there are objective moral laws, then that suggests an objective moral law giver. And if it's not, then it's just deterministic biology, or it's whatever the group says. And then we could be all over the map.

MS: Well, then you have the problem, it seems to me, of determining which moral values in the Holy book that you embrace, the Bible, which not everybody embraces as the source, other people have different holy books and sources, so…but anyway, granting yours, which of the moral principles are you going to adhere to, and which not? So for example, I presume you would reject slavery, as everybody would today. And yet Christians of centuries past embraced slavery, and used Biblical references as political support for slavery, as you well know. And William Wilberforce, who over, you know, sort of single-handedly, against all his fellow Christians who were standing up against him, said no, this is a bad idea. And so I think you have the problem of, like, which moral principles are you going obey, and which not?

GK: Oh, no, you're absolutely right, Michael. We have the problem as human beings, actually, regardless of our understanding about where morality comes from, of trying to figure out which is the appropriate applicable principle in this given situation. Your system suggests that we're basically kind of following an evolutionary impulse, and that's what we're obeying, and so we're not really obeying goodness itself, where I'm suggesting that the problem of moral decision making is difficult, because there are a lot of competing moral goods. But there is an answer to the problem if we think through it carefully. And you don't have to have a Bible, and I think you understand this, Michael. People…my view isn't that people have to have a Bible to know right and wrong. The Bible itself, in Romans Chapter 2, teaches that that is on everybody's heart in some fashion that allows him to have access to it, which is what you said earlier. It's in all of our natures. We agree on that particular point. So you don't need to have the Bible. But if you do, then you have a problem with interpretation. That's true of everything. We don't make the issue simpler in a sense by saying oh, well, morals are objective, because now we have to ask which objective moral principles apply in this circumstance.

MS: Well, so…right…

GK: So I readily agree that there's a challenge there in moral decision making.

MS: So how do you know what's right and wrong? How do you personally know? Is it from the Bible? Do you listen to the still, small voice within? Do you pray?

GK: I reflect on my moral nature, on my moral intuitions. Just like I know how math principles are right and wrong, I reflect on those things as well.

MS: Well, me, too. So how is it any different, because I do the same thing.

GK: And I have a…well, the difference is, well, I just described. You are reflecting on a nature that you're compelled by certain evolutionary things to do something, and it could just as well have been that evolution pushed you in an entirely different direction, so that rape or child molesting, or something like that, is wrong. I mean, we're not even talking now so far, Hugh, about the details of how evolution accomplishes this, which is another issue. We're just talking about it conceptually right now.

MS: Actually, I don't do that. I don't even think about evolution or Darwinism or anything like that when I'm thinking about right and wrong.

GK: Right, I know.

MS: Like when I interact with other people…

GK: …in the explanation, you do.

MS: Yeah, in my explanation. Yeah, but when I think about well, what should I do in this situation, how should I treat this other person, is this really right or wrong, I just try to put myself in their shoes, and think well, how would I feel?

GK: Fair enough.

MS: And I think you do, too. I think that's what we all do.

GK: We are both drawing on the same faculties.

MS: Right.

GK: That isn't the question whether we have the faculties. The question is where do the faculties come from, and what ground them? What makes these things good or bad? You just told me a few moments ago, Michael, that you can go either direction. You could obey your baser nature, which is evolutionary determined, or the higher nature. Well, what is higher and lower in evolution?

MS: Well, this is a good question. Say…take the slavery issue, for example. How do you know that's wrong?

GK: Actually, you raised the question of xenophobia earlier. We could do our tribal instinct thing, which we're by nature dictated to follow, but we can rise above that. So I don't know why…what's above that, unless you're importing some external standard of morality?

MS: Right, so where does it come from?

GK: How do you adjudicate between the two on an evolutionary basis?

MS: I think…yeah, I think that there is a long term trend over the last, maybe, couple of thousand years, to expanding the circle of moral sentiments of who we're going to count as fellow group members that we do not rape, pillage, destroy and kill. And the question is why has that happened, let's say, since the Enlightenment, where we no longer want to treat blacks like we used to, and we want to give women the right to vote, and so on, and now gay marriage is up on the table for discussion and so on. We keep sort of expanding the circle of sentiments. Why would that be? I actually think that it's possible there is sort of a built-in to maybe the universe or something, a tendency toward, well, Robert Wright calls this playing more nonzero games, more win-win games, that is all of us benefit if we have more positive moral exchanges between us. This is why I promote free trade. I think it's one of these mechanisms of generating not just more wealth, but more goodwill between people. And I think that may be very well built into the system, whether there's a God or not. I think it might actually be there.

GK: Well, this is a very important juncture in our conversation, because what Michael has appealed to is something very much like a universal mind, that is this perspective over the whole enterprise, looking down saying as all the things fit together, this would be better for everyone, and that somehow directs the process.

MS: I'm not quite committed to that, by the way. I just think it's an interesting idea…

GK: But if…okay, now fair enough…

MS: And I'm not sure if it's a bottom up process, or a top down process, so…

GK: Well, this is the question then. If it is a bottom up process, if it's in the genes, how is it that the genes, then, in any of their working, can anticipate, in a sense, the greater good for all mankind? That strikes me as completely con…

MS: Not just the genes, no, something a higher order than that, that in the species itself, I mean, we're not talking just about natural selection of individuals, where the organism is the target of selection. But here, I'm talking about group selection. I think group selection has a reasonable case to be built around social organizations, that they themselves are the target of selection. So religion, for example, is a great unifying social force. It brings people together, it unifies them for both good and evil actions, and it's, I think, also part of our nature.

GK: Okay, very good, group selection. There's natural selection, which is on the genes, and then there is group selection. Natural selection is materialistic, and it's unguided. Group selection entails intelligent design, because the group is involved there, encouraging or discouraging the behaviors. And when you form your group, it's kind of a social contract thing, that's fine as an explanation, but just keep in mind that both of them are relativistic. And if one group thinks that their group will do better by destroying other groups, it is certainly "morally" within their rights to do so.

– – – –

HH: Gentlemen, for people who have just walked in on the middle of this, we've been not going around in circles, we've been actually moving towards a very sharply defined disagreement. But I want you both to state what that disagreement is in one minute or

less, not to each other, but for the audience who just walked in. If you had to summarize for them in a minute, or in 90 seconds each, what they missed, Greg Koukl, how would you say that?

GK: You have to make a decision, listener, as to whether morality is objective in some sense, or merely subjective. Is it a quality of the action, so when we say rape is wrong, we're talking about rape? Or are we just talking about our feelings or our emotions, or maybe our biological conditioning? As far as I'm concerned, you can go either direction with it at this particular point, but if you decide to go with a subjectivist view, a relativistic view, which is what the evolutionary explanation offers, then you have to be consistent with that to be fair. You can't start then smuggling what sounds like objective morality in the back door, because now you've got another morality that is not accounted for by your evolutionary scheme. And you've got to find another accounting for that, and I think this turns out to be one of the best arguments in favor of theism of some sort, the moral argument. But this is the essence of it, what we're discussing right now.

HH: Michael Shermer?

MS: Well, I reject what I consider to be a false alternative between objective and subjective morality. I reject subjective morality, I reject relativistic morality. I believe there are objective moral standards. I prefer, I slightly prefer the word transcendent moral values. I don't believe in God, but I could be wrong. If there's a God, it seems to me that the moral standards, moral principles should exist anyway, whether there's a God or not, and that what God is doing, if He's doing anything, is He's telling us what those are. And here, I see a serious problem you have of interpreting what those are, because there's more than one holy book. People have many claims about moral values based on God, of which we vehemently disagree with. So when I asked you earlier about how do you know what's right and wrong, you said I reflect upon it, and I used the expression the still, small voice within. And so okay, so we all do that. I think it all begins with the Golden Rule. Everything else is commentary after that, as the great rabbi said, that is how do you feel, how would you feel if I did this, how would I feel if you did this to me? Well, maybe I should put myself in your shoes, and that's where morality begins, and I think that's absolute, whether there's a God or not.

HH: Okay, gentlemen, I had a lot to cover that is not related to this, but I don't want to move on too expeditiously. Do you think we have covered this issue?

GK: Yeah, I think we've done a pretty good job, and I think the differences are fairly clear in the, what, hour or so we've been talking about this issue. And I mean, I can take another shot here, then I'd get the last word on it, but I think we've summed up our views fairly accurately.

HH: All right, then let me ask you one question before we move to my second set. Michael, you've referred a few times to the presence of many holy books as though that somehow diminishes the idea that one may or may not have more authority than the other. Is that necessarily true, just that there are many holy books, there may be a hierarchy of authority among them, correct?

MS: Just take the current events of Islam. Clearly, they have a very different view of morality of how women should be treated than we do, and yet they're basing it on similar holy texts, and some different holy texts. And so how are people of goodwill, who genuinely believe to get along in the world? Clearly, appeals to God is not going to solve our problem, is it?

HH: Okay, I didn't state it very well, then. What I was asking is just does the fact there are many holy books in any way diminish the authority of any one in particular? Just because there are many of them, you've said it a few times, and it's usually as an aside that…it's kind of …

MS: Oh, okay. There could be one, yeah, there could be one that's really right, and the rest are wrong.

HH: You know, there's kind of an implied, and I don't want to put words in your mouth, but when I'm a believer, as I am, in Scripture, and I hear you say that, I hear a sneer, oh, many holy books, but not an argument that one of them can't be right. Do you see what I'm getting at?

MS: Oh, yes, one of them could be right, and the rest wrong, but how do you know which one?

GK: Well, that's a different question.

MS: Because people of genuine belief in faith like you, who are Islamic, believe just as strongly as you do that women should be treated certain ways, and you would disagree. So how are we to settle this?

GK: I'm so glad he put it that way, because that point has absolutely nothing to do with the discussion. You don't cancel out…

MS: But isn't it an interesting point, though?

GK: Wait, let me finish. No, it is an interesting point, maybe, for sociologists, but as to the issue at question, let me finish the thought, Mike, and then you can respond to it. You don't decide whether a book or revelation is true or false, or anything else for that matter, by looking at how strongly different people hold the views. You have to look at the reasons for the views. I mean, let's just talk about science for example. There are very strongly held views by scientists on a lot of different things, even opposing views about how the Darwinian project worked out. It wouldn't be fair of me to Michael to say well, your particular view, I don't know if you're a punctuated equilibrium guy, or you're a classical Darwinist, or whatever, but it would be unfair for me to say to Michael look, you couldn't be right, nor could they be right, because you both have equally strong beliefs that you are true. That is a non-issue in the discussion. Something else has to be focused on to try to break the tie.

MS: Okay, that's a good example, because in that example, at least in principle, it could be settled through more data collection, whether evolution moves along in fits and starts, as described by punctuated equilibrium, or it moves gradually by gradualism. We can at least in principle settle that dispute.

GK: Why can't the other one be settled in principle?

MS: How would you settle the dispute between a Muslim and a Christian on how women should be treated? How would you settle that? I mean, they go look, it says right here in the Scripture, and you say but it says in my Scripture, so how are we going to settle that?

GK: Well…the question here, yeah, well in principle, it can be settled in actually two different ways. One, based on the authority of the book, and so you can look at the books, and say do I have any good, independent reasons, not just leaps of faith, but any good reasons to believe that this is actually a communication of God over and against this one being a communication of God? And there are lots of different strategies to go about that. Or one could just look at the claims themselves, and say look, based on what seems to be a common sense of right and wrong and morality that we all seem to have, and using our best faculties to reflect on it, I have reasons to mistrust this one, and trust this one more. Those are two, at least in principle ways, that you can go about adjudicating between those claims.

MS: I have a better way to settle it. Ask the women. How do you feel being treated like this? Which would you prefer? I think you'll get a pretty straightforward answer there, unless the guy's behind the door with a shotgun, and she has to give a certain answer.

GK: Okay, this presumes that we ought to care what other people think about how they're treated, which presumes an objective morality, and now we're back into that thing again. So that plays into my hands, not his.

MS: And I agree, there's an objective morality.

HH: But I…when I come back from break, we've got to go to break, when I come back, and I'll ask you, Michael, when we start, is there a way to adjudicate between the reasonability of those books, because it seems to me that the audience driving around right now has on their mind, and I always try and put myself in the point of the audience, wait a minute, how do you decide between many books claiming to be the revealed wisdom of God, and if your answer is you can't, don't bother, fine. If your answer is you can, pick this one, fine. But let's get to that. Is there an objective way to pick between the books?

– – – –

HH: But I want to get back to the subject I was raising. As between the books that claim to be the revealed wisdom of God, is there an objective way to judge them on their merits? Greg Koukl, let me start with you.

GK: Well yes, let's say, for example, if the documents in question claim that God communicated in an historical way, penetrated history and certain, particular things happened, now you've got an historical test for that kind of thing. You can look at the details that are expressed. Maybe there's some prophecy that is proclaimed at one time, and you have reason to believe was fulfilled at another time. You ask me in principle how it could be done, this is a way in principle that it could be done. You could see whether the view of the world that the books portray seem to comport with one's deepest intuitions about the way the world really is. I actually think religion is a very messy and

untidy business. And with my philosophical training, I like to have all the loose ends tied up. But the fact is, life is not tidy. And no matter what view you take, there are going to be problems and unanswered questions. So I take the perspective, as I mentioned at the beginning of the show, Hugh, as a man looking at my universe trying to make the most sense out of it. What picture of the world, what worldview does the best job of answering most of the questions? And I think this worldview-type analysis would be helpful here. If you have a book that gives a worldview that has a certain feature that seem to resonate with your deepest intuitions about the world, that seems to me a plus for the book. If you have another book that seems to indicate something entirely different, like the Vedas, for example, that suggest that the universe is just an illusion, that it's all Maya. Well this, to me, does not resonate with my deepest intuitions. So here's another way that in principle, at least, one could test one worldview against another with their religious books.

HH: Mike Shermer?

MS: That does seem problematic to me, even within your own Holy book, of how much we, how many of the Old Testament rules and laws we no longer obey – death penalty for disobedient children and adulterous people and so on. We would no longer practice that ever in our country. Why is that? I mean, that was once considered to be Holy Scripture, now it's rejected by most believers. So obviously, there are decisions being made in people's minds about what's right and wrong that is external to the source itself, that comes from, what, culture, parents, upbringing and so on.

HH: Okay, I'm going to recede from it, although my question was how would you choose between the books. I want to come back to that, Michael, but Greg has a response to that.

GK: Yeah, of course. Look, the Old Testament law was written for Jews. This is not like we're just making something up out here. It is a proper hermeneutic It was written to Jews under a very specific situation, and it was meant to be applied to them under the theocracy. There are some people who hold this, but certainly not the majority, that these same laws in the same way ought to be applied today. That's why we call it the Old Covenant and the New Covenant. Even within the Christian worldview, there is a place for that, and now there's a place for something new. So there's no contradiction there at all.

HH: Yeah, you know, Michael, that does seem to me, Hitchens has made that argument to me a number of times, and it's just a silly argument.

MS: Which argument?

HH: The argument that the Old Testament rules that have been abandoned somehow indict the New Testament laws and morality. It's just a silly argument.

MS: Well wait. You still obey some of the Old Testament rules. So how do you…

HH: Yes.

MS: Which ones do you pick and choose from?

HH: I'll give you Al Mohler's book. Again, I'm not a participant. I don't want to answer. I want to ask you, though. To me, it was nonresponsive when I said as between the books,

how do you judge which books?

MS: Okay, which books? I would just say…

HH: Of all the holy books that claim to have universal wisdom and knowledge about God, and I could name ten of them, is there a way to choose…

MS: I don't think so. I'm answering your question. I don't think there is any outside way to do that. Even in principle, because the ultimate, the original source of those books came through some human source, some revelatory experience that somebody had, that had to at some point put pen to paper and write down what the God said.

HH: Let me rephrase it, then. On the basis of human reason, there is no way to evaluate all those books as to which ones are at least more closely approximating the way that people ought to live or not?

MS: Oh, that's a different question. Maybe I misheard, because I think we could do that, but what's that standard of the way we ought to live? What are we using for that standard? I would argue there is such a standard, and it's not from religion.

HH: And so you would evaluate those books based upon your independently arrived at understanding of what is morality?

MS: I think we do do that.

HH: Greg Koukl?

GK: Yeah, I think we do do that to a degree, too, and here Mike and I have no debate about the existence of a moral sense in human beings. The difference is whether that moral sense is merely an expression of our subjective emotions, which it seems to me what he argues for, though he wants to ennoble that and call that kind of objective morality, or is it our ability to grasp moral realities that are outside of us that would not change, even if our own opinions about it happen to change. That's the difference between objective and subjective. And Mike, you appealed for a kind of third category, but either…I don't see where there is a third category. It's either in the object or in the subject, and that's pretty much the law of excluded middle there.

HH: Remember that thought. We'll come right back to Michael Shermer.

– – – –

HH: Michael Shermer, what were you going to say?

MS: Well, so let's take another current example of whether homosexuality is a sin, leaving aside marriage as a political question, but just is homosexuality a sin or not. Now I presume you would argue it is, and it's right there in the Old Testament, a man shall not sleep with another man, it's an abomination. But why stick with that one, which seems to me equally culturally dependent as some of the other Old Testament on small populations struggling in a harsh environment, in which you want lots of marriage, lots of children and so on. I could kind of see that rules back then, but why bother now? I mean, why not abandon that one along with slavery and some of the other ones?

HH: Greg Koukl? Well, okay, this one goes to a matter of authority, because I think there are complicated, and for some, persuasive arguments that homosexuality is wrong, per

se, because of natural law arguments or whatever, but those don't resonate with most people. I think what Michael's getting at here is how is it that the New Testament, or now why are you still holding over that from the Old Testament when things have changed? And the reason is, it's not just an incidental part of the Old Testament law. It seems to be indicated there that the behavior itself transcends, morally speaking, any local law. Some of the laws in the Old Testament were for local things, but some seemed to transcend, like it's wrong to kill, or rather, wrong the murder is the Hebrew word. And so in the New Testament, even though we're not in the Old Covenant situation, we have these same kinds of things, these more transcendent things that apply to all human beings, prohibited. And one of those that's spoken to is the homosexuality issue. And the reason that Paul gives in Romans Chapter 1 is that God made human beings for one purpose, the man for the woman, and the man, in the case of male homosexuality, abandoned the woman that God made for them and burned in their passion against someone else. So there's a violation of the natural order. Now this isn't something that I'm probably going to come up with all on my own just thinking about, and this is where I think Divine revelation is helpful to have us dial down on some of the moral things. And you're certainly free not to accept that, but this is what makes homosexuality durable as a sin, in a sense, from the Old Testament times to the New Testament, because of the reasons that God gives that it's wrong.

MS: But using that sort of a moral intuition, and the still, small voice or the reflective aspects of morality, given that we live in a modern world in which we have plenty of people, we don't need more, and somebody, the evidence seems to show people are just born this way, it's like asking a gay person when they chose to become homosexual would be like me asking you when you chose to become heterosexual. And you'd say well, I didn't choose. This is my nature. And that's what gay people say. This is my nature. I've always felt like this. So why would you care? Who cares if somebody finds love with a member of the same sex, and love and marriage leads to fidelity and more moral behavior that we all agree is good for society? Why block that?

GK: Okay, just as a matter of fact, it is not the case that science has shown that this is genetic. There is no gay gene. This has not been demonstrated.

MS: No, not a gay gene…

GK: Or anything like that.

HH: Okay, we're going way off the off-ramp, gentlemen.

GK: Okay, the answer is, why would any Christian object to that?

MS: Yeah.

GK: Because out of fidelity to their God, because they believe that God has said this is wrong, and so they're going to oppose it in principle, even though it is not within their purview, then, to bring persecution upon that person, because there's another value that they hold, and that is that all human beings are made in the image of God.

MS: Okay, here's my prediction.

HH: I don't want a prediction. I want to get back to my question, Michael Shermer.

MS: Yup.

HH: Based upon what I would say your evolutionarily-constructed moral law, what you consider to be the societal moral law, have you evaluated the various holy books, and given them a hierarchy, which is best, which is not so good, which is terrible?

MS: No, I guess I have not.

HH: And why not, if that matters so much?

MS: I don't, I'm not that interested. I love studying religion, though I have not read the Koran, for example.

HH: Greg Koukl, is it necessary for someone who's going to say there's an evolutionary moral law, and talk about God, to have that kind of assessment?

GK: I actually don't, I'm sympathetic to Mike. I mean, there's a lot of books to read, you can't read them all. And if he thinks he has come upon a cogent and powerful explanation for the world as he sees it, then he doesn't have a motivation to go outside of that. My argument has been that it's not adequate, and that's why some other kind of solution is going to be necessary.

HH: Okay, here's my objection. If there's a moral law, and there's a societal good, and one of these books is really bad for it, and one of these books generally support it, then you ought to, even as an agnostic, make a choice between that which is really horrific, a Hitlerian approach to, you know, a Nazi, Mein Kampf, don't read that one, that's horrible, versus the New Testament is pretty nice. I think…

MS: Yeah, I guess I would attest that the New Testament's better than the Old Testament. I guess I would agree. I think Jesus was a big step forward. I think the feminization of some of the morality in the book of Ruth toward the end of the Old Testament is a big improvement over the early books, so yeah, I guess I do evaluate.

HH: And where do you put the Koran in that? You haven't read it at all, it just doesn't matter?

MS: Oh, I've read it, of course since 9/11, I've read lots of parts of it that everybody quotes, which are all the, you know, the horrific parts. And that seems to me far beneath the Bible in terms of what we would consider moral values. But anyway…

HH: Do any of the books have a better grounding in natural science?

MS: No, I don't think so.

HH: Do any of the books have a better grounding in history?

MS: It depends on which books. I mean, parts of the Old Testament have some good grounding in history, and others don't.

HH: This is a transition. Greg Koukl, how is the historical evidence for the accounts of these various books?

GK: Well, it depends on which one you're talking about. Some of these books aren't history books. They're poetic books that are meant in poetic language, the Bhagavad

Gita, for example, to tell something about reality. I think the unique thing about the Judeo-Christian revelation is that principally, the theological story is told through history, so the history is really important. The big event of the Old Testament is the exodus, you know, and this was the salvation event where God intervened. The big event in the New Testament is similar to that, parallel to that, is the resurrection of Christ. Now obviously, we have a lot more access to information about the life of Jesus of Nazareth than we do about the exodus. In fact, there's a kind of a big hole there in terms of archaeology for that period of time. But there's not a big hole when it comes to the life of Christ. And the documentary evidence is quite extensive. And not just the primary source documentation for the life of Jesus, which we call Matthew, Mark, Luke and John, which by the way, should not be simply dismissed because they were written by Christians. Historians don't dismiss them for that reason. But we have to look at these as historical documents. And when we do, we find a tremendous amount of powerful testimony from those documents about the person of Jesus, what He taught, and what He did, which also points to a literal time-history resurrection of Jesus of Nazareth. Now if that actually happened, that puts this worldview in a whole different category.

HH: Well, that's my transition, is to the person of Christ, because most of our audience is Christian. And a lot of this argument has been, as I've had with many of the new atheists, silly to believe in Jesus.

– – – –

HH: Mike Shermer, as I said at the end of last hour, last segment, is it silly to believe in the historical person of Jesus Christ? And is it silly to believe in the claims and the accounts of him as recorded in the New Testament.

MS: I don't like the word silly, because it trivializes a serious issue. I think it's an empirical claim on one level, whether Christ rose from the dead or not, but on the other hand, I think it's an article of faith. You can show all 13 million Jews in the world that evidence for the risen Christ, and eyewitnesses, and the rock was rolled away or whatever, and they almost universally, except for the small population of Jews For Jesus, reject the evidence. So I don't think it's ultimately provable. I do think it's an article of faith, like many other articles of faith of religion. I don't like the word silly at all. I think that trivializes it unnecessarily.

HH: Greg Koukl?

GK: Yeah, a frustrating situation for atheists is that the vast majority of people in this country, the rank and file, don't believe in Darwinian evolution. But I wouldn't be free then to say well, this is just, evolution's obviously an article of faith, because look at all the people who look at the evidence that you provide so persuasively and don't believe it. This is an observation that leads to no conclusion about this issue at all.

HH: And so, and it's frustrating as well, because it seems to me central for agnostics, atheists, to answer the question about the empirical evidence, and whether it is of high quality…I had this conversation with Richard Dawkins. Dawkins likes to argue you know, I'm a Latin teacher, and I'm just arguing that Rome existed, and a lot of people are

arguing Rome didn't exist. And it's the same with evolution. And I challenged him, I asked him the historical evidence for the personhood of Jesus is overwhelming, isn't it?

MS: Yes.

HH: And so, is the proof…

MS: Well, I don't know about overwhelming. I think Jesus existed.

HH: Well, is it overwhelming? Or just a guess?

MS: I think there's good enough evidence for us to conclude that somebody named Jesus of Nazareth existed.

HH: And on the basis of what we know generally about historical text, isn't there pretty good, and perhaps even overwhelming evidence that the Gospels are reliable, historically tested accounts about what this person did?

MS: Well now, it's getting a little fuzzier, because of the inconsistency of the accounts. And you could say well, okay, eyewitnesses saw things slightly differently. Yeah, but there's some important differences between the four Gospels. And what about the other Gospels that are not in the canonical books, the gospel of Thomas, for example? And there's legitimate, theological research on these other books, and why can't those be concluded?

HH: One minute, Greg.

GK: Well, there is legitimate, theological research, and not only on Thomas, but a whole bunch of other pseudepigrapha that come afterwards. There are all kinds of literary documents that make claims to write about Jesus that we know, because of their dating, couldn't possibly have the eyewitness accounts of the information that the Matthew, Mark, Luke and John canonical Gospels have. So just because there are other things that claim to be gospels, it doesn't mean that they're contenders as source of historical information. And the scholars in the field make this distinction. Now Thomas is one of those few documents where they seem to take seriously, but our documents of Thomas are like 3rd Century, and looks to have been written in the 2nd Century. So why is it that the 1st Century documents of the Gospels don't get preeminence there as historical documents? They should.

HH: When we come back, the third hour is given over to do the anti-God people have to put up with the same rigorous defense of their beliefs as they ask the theists to put up with theirs. Stay tuned.

– – – –

HH: And I want to spend this hour talking really about the debate over the debate. And it's occurring at an unusual time, because just a couple of weeks ago surfaced one of the greatest scandals in the history of modern science, Climategate, in which incredibly unscientific behavior on the part of scientists has been revealed. The atheists have often in the past few years tried to position the debate as between reason and faith. But now we find the tactics that people of faith are often accused of, absolutely evident on the part of the behavior of scientists – data manipulation, witch hunts against scientists with

whom they disagreed with, a refusal to confront contrary evidence. And I took that, and I applied it to this debate over intelligent design, Michael Shermer, and I'm wondering whether or not the opponents of intelligent design have been using the same tactics that the Climategate scientists, who are now deeply scandalized, embarrassed and discredited, have been using for the last, obviously, we just learned about it. But have the proponents of the anti-God view been just as intellectually dishonest as the Climategate scientists?

MS: Well, on the Climategate thing, I think the smoking guns are not what I thought they would be. I have some sympathy for the global warming skeptics. I was once one, and could be persuaded again. I think that's just a data question there. But what I think it revealed was how political scientists are. They're very liberal and very tribal, and like everybody else, they circle the wagons when they think they're being attacked from outside. And I think that's what we saw. So to that extent, do atheists, have atheists done that? Yes, they have. They've circled the wagons, they feel like they're under siege. At time, I think particularly since 9/11 with the fear of Islamic terrorism, and then since the Bush administration pushing an Evangelical agenda into politics, way more than Bush Sr., ever did as a Methodist, and certainly more than Reagan ever did, I think that's what caused non-believers to feel like they needed to push back somewhat. And then you just get specific cultural phenomenon like Dawkins' book takes off, or Hitchens' book takes off, something like that. I mean, the book sales on those books are more than cumulative all the other books they've ever written, plus all of a bunch of other books, so I think you get a combination of those events there.

HH: Greg Koukl, first your response, then I have a follow up.

GK: Well yeah, I think that there is kind of a shell game and a muscling going on, and we see it in the field. And I think what people don't realize, and I didn't realize this until maybe six or seven years ago when this was explained to me, and when explained, I really saw this, that there are actually two definitions of science that are in play here, Hugh. One of them is a methodological definition, the scientific method. You know, follow certain methods, and you come up with the right results. Now if you don't follow that method, then that's called bad science, and you can't trust the results you come up with. But there's more going on here. It isn't just a methodology. There is also a philosophical definition. This philosophical definition is metaphysical materialism, or called naturalism. A metaphysical view is a total view of reality, and on this view, nothing exists but the molecules in motion. That's materialism. That's also part of the definition. So currently, in the state of science, in order to be doing science, good science, you have to be doing the right methodology, but you also have to come to the right kinds of conclusions. You have to come to conclusions that comport with naturalism and materialism. And if you don't, you're accused of doing religion instead of science. I just want people to see that there's a difference here, and lots of times in this discussion, this metaphysical issue trumps the methodology. Notice that a lot of times, the arguments aren't against ID proper, that is the evidence that they've offered. It's a dismissal by saying you're not doing science, you're doing religion. This isn't real scientists at work like we are, these are phonies. And

so it's a way of discrediting based on the kind of conclusions that they come up. Now this happens all the time, and you can see a bullying that's going on in the field, and a lot of people have identified this, Guillermo Gonzalez for example, a famous example from Iowa State University, denied tenure though very qualified. Francis Beckwith, for goodness sake, a philosopher, not a scientist, but the same kind of thing happened to him at Baylor before it got reversed, and a lot of other people. There's a political game going on here, and it seems to me that if the evidence for Darwinian evolution is so powerful, then why do you have to do these political moves that are driven not by the methodology, but largely by the metaphysics doing the magic? Why? And I think because the metaphysics are doing a large part of the work, and the method doesn't give the evidence that's necessary to convince the most people.

HH: Michael Shermer?

MS: Of course, other fields of science don't deal with these issues, like why are Christian groups not up in arms about the Krebs cycle being taught in biochemistry classes and biology classes. Why not? I mean, if you're going to object to methodological naturalism, why pick on just one, particular little subfield?

GK: Because it doesn't have any ramifications for these other things.

MS: Yeah, of course. That's right.

GK: But it does…

MS: Because certain fields of science do bump up against political and religious implications.

GK: But it's not just that, Michael. It has to do with the evidence in question. Nobody has, even from my side of things, has any difficulty with the Krebs cycle, because methodological naturalism is the thing that governs day to day science.

HH: Why don't you explain the Krebs cycle for our audience.

MS: Oh, it's just a…

GK: I can, but he…

HH: I know, but don't use terms like that for the audience.

MS: It's just a biochemical process in cells of using energy.

GK: Yeah. And so at this point, to finish my thought, though…

MS: Yeah.

GK: What this points out is that these kinds of issues are not the kind of thing that affect day to day science. But when it comes to the issue of origins, then it's something entirely different. You have a different category that you're talking about, and this is where the muscling has been done, and that's why the complaints have been raised, muscling that is illegitimate considering what's at stake.

MS: Well, muscling on both sides. I mean, it's political on both sides, so the left and the right both push back against each other, all the way back to the Catholic Church and Galileo.

GK: Well, okay, I'm glad…

MS: I mean, that tension has always been there. Let's not…

GK: Great. And it was wrong with Galileo, and it should be wrong now. That's my point. If it was wrong then, and with the monkey trial and everything, now everything is in reverse, and I think this is what Hugh was getting at. If the power plays were wrong in the past, then they should be wrong now, and why don't we just let everybody lay their cards on the table and play fair, and then let the best idea win?

MS: I agree. So just put it out there. Like the Climategate? Yeah, let's get that original data. I agree. Sure. Now let me just back up for a second on an example not related to religion, but on another field that I deal with, extra sensory perception. Can we actually read the minds of other people? Okay, setting aside the TV psychics and all that silly stuff, there are some scientists who actually believe that mind exists separate from brain, and that we can connect to each other, and there's a famous physicist named Roger Penrose, who has this theory about that quantum mechanics explains how when neurons fire, the collapse of the wave function inside the atoms, inside the nerves, fire in a sequence that my cells can read your cells. They're actually communicating, somehow, across a distance, all right? I don't happen to think that's true, but let's say it turned out to be true, and that now we have a naturalistic explanation for extra sensory perception. Well, that would no longer be the paranormal, would it? Now it would be quantum neuroscience, or neurophysics, or something like that. So at some point, you need some kind of a natural explanation for the phenomenon in question that we can test. So for example, when somebody, when cosmologists talk about well, the galaxies are structured in this odd way where there must be more matter out there, we'll call it dark energy or dark matter, they don't actually mean that as an explanation. It isn't an explanation. It's just a word filler until we can figure out what's going on. So at some point, it's not that no one's allowing you to introduce the supernatural, it's just that no different than calling it ESP, that doesn't explain it. We need some kind of a mechanism that causes it.

GK: Okay, to be fair, Michael, I was at the debate one week ago that you did with Professor Prothero and Steve Meyer, and the others from the ID thing. And you started out your presentation by saying this is all about religion, it's not about science. That's the first thing you said. And then you referred to the other guys as, you and your partner, as 'those guys,' and we are doing real science, and they're not. In fact, Steve Meyer raised a complaint at the personal attack there, because both of them have advanced degrees in their fields. Now I mean, this is an example of the kind of thing that I'm talking about. It's like, you didn't say to these guys well, you're real scientists, we're real scientists, but really, the facts matter, so let's look at the facts. There are all of these kind of subtle and sometimes not so subtle invectives, or shout across there. Now I've been in debates before. I know how that works. I'm just simply saying that your kind of tone of innocence here, it strikes me as disingenuous, because this is a game that you guys play all the time when in public circumstances. And sometimes, it's not just invectives, it's actually muscling, we won't publish your paper, we won't let people know about it, we're going to

criticize you in front of all these people and try to discredit you.

HH: A response coming back from Michael Shermer when we return.

– – – –

HH: Michael Shermer, I was not at this debate. I have no idea what Greg just referenced. So I want to give you a chance to go back to what he was just talking about. Did you attack Steven Meyer's scientific credentials?

MS: Actually, I didn't. My partner did. Well, you know…

HH: Did you correct your partner at that point?

MS: Well…

GK: Steven Meyer corrected him, actually, is what happened.

MS: Yeah, I mean, this is a part of the format of debate, right? I mean, it's a contest. It's competitive. You're supposed to, you know, you're supposed to come out…like a lawyer, you're supposed to defend your position. You're not supposed to…if it's a panel discussion, that's different than a debate. This was a debate. I actually do think that it's perfectly fine for Steven Meyer to publish books like his new book on DNA, and put forth testable hypotheses. Okay, at least now we're getting somewhere, where if you give us something we can take back to the lab and test, then we're doing science. If it's just I infer that there's a designer behind this, okay, that's nice, but what am I supposed to do with that? So the analogy I made is that let's say it turns out life did not originate on Earth, that it was seeded here either through meteorites or comets, or maybe even extra-terrestrials brought it here and seeded it, and they are from the Planet Vega, a planet around the Star Vega. Let's say something like that.

HH: A dysfunctional GM car, okay.

MS: Yeah, exactly, yeah. Right. Good, we needed some humor there. And…but and let's say we found a little pod out in Blythe or something in the desert with the blueprints of how they made DNA. Well, that would be interesting, but we'd still want to know well, where did the Vegans come from? I mean, who made those guys? Did they evolve on this planet? Or were they seeded there from someplace else? Or did God do it? Or…in other words, at some point, we need some natural explanation for where life came from. And if you take this back far enough, you will end up at an infinite regress. Well, God, outside of space and time, came into our space and time, stirred the particles, and created life. Okay, but where did, if not God, the intelligent designer, where did He come from? Did he evolve? Or is he a standalone, the last causal link? And there, we bump up against the great unknown. I don't see how that's resolvable.

GK: I've got so much to say about this, I'm not sure where to begin. Let me just start with the power play. At that debate, Richard Sternberg was the other I.D. guy there, and Richard Sternberg used to be with the Smithsonian. But he had the audacity of publishing a paper by Steven Meyer in a journal, a peer review journal that was associated with the Smithsonian, and he got bounced. This is the kind of thing that I'm talking about.

MS: You know, I just called them. He's still there. At least, he's still on their list.

GK: Okay, well, the firestorm…

MS: I don't think he got bounced.

GK: …surrounding that, you don't…okay, forget the bounce thing. The firestorm surrounding it you don't deny?

MS: Yes, of course. We're all emotional, yeah. Right.

GK: Well, it goes beyond that. And so the point to bringing up the debate, I understand that there is these things you do in debates, but this in the debate was the microcosm of the bigger issue, and that's why I pointed that out. Now with regards to, you know, life beginning on other planets, and then who designed the Designer and that kind of thing, it's a very odd question. And virtually all the guys on Mike's side of this debate ask the same question – who created God, or some variation of that. And what's curious is that Mike and none of these other guys believe that God was created, because they don't believe in God. I don't believe that God was created, because I think that God is eternal. So nobody in the discussion believes that God was created or designed. So why does the question come up that who designed the Designer, or who created God? Frankly, it's a distraction. It's a distraction from the evidence in front of us, for intelligent design. If I'm walking down the beach as we could here in Newport, Hugh, and I see a footprint in the sand, a shoeprint in the sand, I don't need to know who the manufacturer of the shoe is before I can properly conclude from the evidence that a shoe made the print. The same thing is true here. We're focusing on one issue, and that is whether the evidence suggests an intelligent designer. If we come to the conclusion that that's the case, much like forensic pathology, there's a dead man with five holes in his chest from bullets, gee, it doesn't look like natural causes, now let's go search for the person who did it. That's the next step. But we can't say, I think, vacuous challenges like who created God when none, all of these guys know that nothing about our view requires God's creation. They say this to, I think, distract from the main issue, the evidence for design itself, which is compelling, Hugh.

MS: Oh, I don't say it as a distraction. I think it's a really interesting question. Where did the universe come from in the first place. And if there were multiple universes, you still have the same problem – where did those come from.

GK: I agree. I agree.

MS: And I do think, Greg, at some point, we do bump up against limitations of our knowledge, of our language…

GK: Right.

MS: …of what our brains are capable of solving. And there is a leap of faith for all of us. You either decide to believe, or you decide not to believe. And I don't think it's ultimately provable one way or the other. Now on the other question positing a designer from the evidence of design, I think there is an inference there in which we have vast experience of people shooting each other, and we know what that is. And so you come across somebody with five bullet holes, okay, there's a natural inference there based on experience. And we've seen people make tennis shoes, so we know that they're made

when we see the print. Okay, there's a natural inference there. But we've never seen any designer design DNA. We just have the product, the artifact, from which we infer what? And there, it isn't the same as an artifact that's made by us.

HH: All right. Now gentlemen, I want to switch for the last three segments of the show leading into a larger question about belief in God generally. Is it good or bad for people? And regardless of whether it's true, or the true true, to use Francis Schaeffer, but is it good or bad? Because that leads me to the second question, are the new atheists involved in an evil project or a good project? Because these are both obvious question. So Greg, you want to take a first pass?

GK: Yeah, I'll take a shot at it, and again, I want to go back to my earliest comment when we started talking about morality. It depends on what you mean by good. And I'm just weighing in now to say that when you're using the word good, I'm taking this as good in the objective sense.

HH: Yes.

GK: Do objective goods, oughts that we should do and whatever, come to pass better when there is belief in God? There's a famous story of a Hassidic Jew that was standing in front of a German machine gun having just dug his own grave. And he said just before he was gunned down, he said God is watching. Now one thing that the German officer didn't believe at that point was that God was watching. Nor did Mao, nor did Lenin, nor did Stalin, nor did many other people who did great atrocities, did they believe that God was watching. As David Berlinski has pointed out, that's actually the definition of secularism. God is not watching. Now I don't think it takes, you know, a lot of deep thinking to realize, and Michael might call this a shallow motivation regardless, to realize that if people really believe that God is watching, their behavior is going to be better on balance than if they really believe that God is not watching.

HH: Michael Shermer?

MS: Well, I do think that religion and belief in God is good when it does good, and evil when it does evil. And we can make a laundry list of goods and evils that religion does. You have Hitchens' book here, and he's got a laundry list in there of all the evils.

GK: And we agree on that, by the way, Michael.

MS: And you could take David Brooks' book, Who Really Cares, and he documents how Republicans and conservatives and religious people give more money and more time, and donate more blood and so on then securalists, atheists, nonbelievers, and Democrats. So I would say that's great. I mean, I sponsor a child through World Vision, because I think they do the job. They put the boots on the ground, and they make things happen. And religion is really good for that. And so I think it's too simple to say is religion good or evil. I mean, come on, it's a big, complex, social, historical force that does lots of good things, and lots of bad things.

HH: When we come back, I'll follow up, because I don't think it's too simple. I think it's actually the question about whether or not the anti-God people are engaged in evil if

they're destroying belief in God.

– – – –

HH: So Michael, I come back to this. You said yeah, religion's done a lot of good and a lot of bad, but generally speaking, and the utilitarian view, is belief in God good for the planet? And if it is good for the planet, have the anti-God people been involved in an evil project?

MS: I don't think they have been involved in an evil project. I think what it…it makes it okay to not believe in God. Remember, atheism isn't a thing. There's no, like, central set of tenets that we adhere to or believe in, or anything like that as you would a Republican or conservative, or something like that, or a Christian or a Jew or whatever. We don't have anything like that, because there is nothing. It's just simply we just don't believe. Now because we're social creatures, we like to feel like we belong to a family, an extended family, a group of friends, a bowling league, social capital, this is called. Everybody likes to feel like they belong. Because religion is so dominant in America, particularly the Christian religion, those of us who are either not Christian or not believers, we feel a little alienated, a little lonely, and a little left out. And we'd like to have our own group. So in part, what the new atheist movement is tapping into is that social feeling of wanting to belong to a group. And I don't think there's anything wrong with that. I think it's good that there are people out there, groups out there that make that okay.

HH: Greg Koukl?

GK: Yeah, your question was not whether religion does good, but whether belief in God does good, if I recall it correctly.

HH: Yup.

GK: And so I want to return specifically to that. The atheists do have a code. It's not very complicated. It's just that as Michael just put it, there is nothing. So what is the moral consequence on a people if they believe there is nothing? That's really the question. The 20th Century, which we just left, was the bloodiest century in the history of the world. And just a casual adding up of the numbers shows over 100 million that were dead at the hands of just three people – Lenin, Stalin, and Mao Tse Tung. Now these people had a particular ideology at which atheism was its foundation. Because they didn't believe in God, and there is a natural kinship here between worldviews and the actions that follow them, because they didn't believe in God, it was the state that was the greater power. And if the state is the greatest power, and they were the state, then they had no one to answer to. And consequently, they were able to do these things that everyone views as an atrocity. Now this, I think, is logical. This follows from that worldview. I'm not saying that atheists are all evil like that. They're not. Mike is a fine guy. What I'm saying is that given the atheistic worldview, you are allowed to do those kinds of things, because there is no transcendent rule that's keeping you from doing otherwise.

HH: Michael Shermer?

MS: Nobody kills or dies in the name of atheism, because there's nothing to kill or die for.

People kill and die for causes, for ideologies, for beliefs. And communism is a faux religion. It is exactly like a religion, a set of tenets that people adhere to, and then we're going to go out and change people's minds, or impose our views on them and so on. That's what social groups do, whether they're political, ideological, economic, religious, whatever. And that's what communism is. And it's nothing more than that. Nobody killed in the name of that. In any case, Hitler's not a good example, because as we've seen now…

GK: I didn't use him.

MS: …with the indictment of the Catholic Church, they were very much involved in the whole Nazi process there…

HH: That's…time out, Michael. That's simply not true, but let's not go there. I would want to have an expert in the Vatican's many, many interventions to save lives, and then we'd have a long conversation…

MS: Oh, of course they did. Yes, yes.

HH: Let's just not throw it out there. Let's just not throw it out there.

GK: The real issue here is not whether people did it in the name of atheism or not. But it has to do with the kinship of behaviors to worldviews. Whether people are thinking of this as a rationale, gee, I'm an atheist, so I can go kill people, is not the issue. The issue is how is it that people actually live out the deep beliefs that they have about the world? And it seems obvious that when people have believed that there's nothing else but us and our rules, what we make, for whatever reasons we do, and we answer to no one, and there isn't going to be any final justice or final judgment or final reckoning, well, it seems very clear to see how this is going to have a deleterious effect on behaviors.

MS: Yeah, but if Torquemada had gas chambers, wow, what would the numbers have been in the Inquisition? I mean, in the name of God, Torquemada…

GK: So you're saying there is no relationship between the worldviews?

MS: Well, you brought up the numbers.

GK: Right.

MS: It isn't numbers that's important. It's what your capable of doing. And religious beliefs and political ideologies are no different as belief systems driving behavior that's moral or immoral. People kill in the name of religion just as much as they do in the name of a political ideology.

GK: This is false, just quantifiably, first of all.

MS: No, I disagree.

GK: But secondly, there is the idea…

MS: Not by the numbers.

GK: The idea is what's important. People just have to reflect in the idea. Which one is a better encourager to good behavior, that God exists. That was your question.

– – – –

HH: It seems that we're onto something very important here, and Michael, I sense defensiveness on your part, so I'm going to let you go first. If, in fact, the new atheists launch a series of responses that lead people to not believe in God, and those people in not believing in God act a certain way, that's causation. That's responsibility. Ought the new atheists ought to own their responsibility? If they kill God, ought they not to own the results of killing God?

MS: First of all, I don't think that's going to happen. It didn't happen at the turn of the 20th Century.

HH: Didn't ask that question, though.

MS: Yeah, yeah, I know. Sure, okay, I'll stand up and be responsible. Why not?

HH: Greg Koukl, have they been? It's a flippant response. That's okay. But…

GK: Yeah, well…

MS: No, it's a true response. Yes…

GK: What I was…okay, great. So what do we take away from that?

HH: Right.

GK: Listen, I'm arguing if there is no God, then everything is permitted. There is no objective morality.

MS: I don't agree with that. Come on.

GK: I understand that. I understand you don't, but you have ground objective morality…

MS: Yes, you can. We're back to where we began.

GK: Your morality is subjective.

MS: No, it's not.

GK: It's something that's in the subject. It's in the genes…

MS: That's objective.

GK: And it creates…yes, okay. Well, it is objective, but it's not objective in the way that I'm talking about it. It's objectively in the subject, and ethicists have made this distinction for a long time between objective and subjective. I'm not going to go there again. Let me just finish the equation here. If there is no God, then everything is permitted. If the new atheists are right, then there is no God. Therefore, if the new atheists are right, then everything is permitted. Now I think that follows. And I think this, then, creates a problem. Again, I don't think that all of the atheists are bad people in everything that they do. They're just as bad as the rest of us religious people. Let's face it. The question has to do with the impact of worldviews, and that is really what's in play here.

HH: I do agree, Michael, that's where I'm coming back down to. I take responsibility for it if in fact the people who allowed and facilitated the rise of the atheist monsters of the 20th Century were around today, they would deny responsibility for them, even though they facilitated it with the collapse of the orders that previously held back the monsters. It seems to me now that Dawkins, et cetera, your rhetoric is much milder than Dawkins, but that they were about unleashing the beast again, because the beast is eager. The

most eager thing in the world for the Devil, the Christians have always said, is not to be believed in. And you guys are doing a good job.

MS: If they, if Dawkins and Hitchens and so on were promoting some kind of a political agenda hooked to the atheism, whereby you're supposed to go out and do this or do that, then yes, I'd think you have a point, and I'd be concerned about it. That is, is it leading to greater liberty, or greater tyranny? That's the question, liberty and tyranny, is at stake in terms of the boots on the ground, actual change.

HH: Greg Koukl, if you take down a dam when it's not raining, and nothing happens for give years, ten years, fifteen years, twenty years, and then the hundred year flood comes, which happens every hundred years, and you destroy everything in front of it…

GK: Then you're in trouble. Right.

HH: You're responsible.

GK: Well, you made the point. And actually, Sam Harris is very explicit about this in his book. He said that there are some beliefs that are so dangerous, and he's talking about theism here, that it's justified to even kill people for that belief. Now two things are in play here. Sam Harris acknowledges the relationship between worldviews. You believe certain things that have certain consequences, which I think is true and that's what I'm arguing, and then he exemplifies it himself with the danger of atheism. He thinks that they, atheists, not all believe this, and certainly Michael doesn't, he is not going to get involved in this, but he seems to suggest that some people should be killed for their beliefs. And whether Dawkins has a political agenda or not is irrelevant. If he is laying the foundation that justifies a certain political agenda, then the dominoes are going to fall. It's a logical slippery slope, and it's one to be concerned about.

MS: You see, I place at the feet of the monstrous evil of the 20th Century Marxism, Leninism. If Marx and Lenin just simply said we're atheists, and they wrote atheist books, nothing would have happened. It's that they hooked it to something else, which is the confiscation of private property, the confiscation of individual liberties, the ownership of productivity. That's what destroyed those societies and led to the monstrous problems.

HH: Greg Koukl?

GK: Well yeah, I agree with that as far as it goes, except to say that there was something else that was in place that allowed them to do such a thing, and that there was a, again, a kinship between the belief system and the results of that belief system, the particular things. Now could religious people have done that? Yes, but it's a lot harder to hang the behavior of Christians who say they're Christians that's evil, on Jesus Himself, because Jesus didn't teach that kind of thing. Instead, you have Christians that are acting contrary to Jesus' own behavior and teaching. In this case, you have behaviors that are fully consistent with an atheistic worldview.

MS: But you left out the first World War, which was Christian nations fighting Christian nations – Germany and France and England were all Christian nations. They all believed God was on their side. And they imposed just as much destruction as happened in World

War II. They just didn't have any…

HH: I actually don't believe any of them believed God were on their side when they went into that war. I know the history of World War I fairly well. They did not march to war on the basis…

MS: Well, but you would call them Christian nations.

HH: But they did not, then went to war on the basis of economics…

MS: Well, okay…

GK: But even if they did, it's not the point.

HH: It had nothing to do with God.

MS: Okay, I would agree.

GK: The point is what is it that, does the worldview that they have justify what they did? And now we're back to Jesus again, which they can't put it on Jesus, but the atheists can put it on atheism.

HH: Very quickly, this segment and last, of the various world religions, which has contributed the most to human progress in the alleviation of suffering? It's an objective question. It's not a question about which is correct or which is true. Just if you look through of all the world religions, which has contributed the most to human progress and the alleviation of suffering? Michael Shermer, do you have an answer to that?

MS: I'd say probably Christianity.

HH: Greg Koukl?

GK: Yeah, this is well documented. Under The Influence, for example, is one of the books that has been written to show this is the case.

MS: Oh, that's a Judeo-Christian…

HH: Does that necessarily tell us anything about the truth claims of the religion, Greg Koukl?

GK: Well, when you look at the particular truth claims, I think it does. These things were done in a way that were consistent with the Christian worldview, and seem to resonate with the other people who didn't share their worldview as something that's good. This is why going back to worldview perspective is so valuable. I think these are outliving of a worldview that deeply resonates with our deepest intuitions about the way the world actually is.

MS: I'm in favor of any ideology that gives more people more freedom and liberty and individual power, whether that's religious or nonreligious.

HH: We'll be back. I'm going to give a minute to each of my guests to wrap this up. Don't go anywhere, America.

– – – –

HH: I want to thank Michael Shermer of Skeptic Society, http://www.skeptic.com, and Greg Koukl of Stand To Reason, http://www.str.org for their time and their patience. Greg

Koukl, a minute, fifteen for you.

GK: Yeah, I started out talking about worldviews. And as a man trying to make sense of my world and finding a worldview that seems to fit reality as I experience it. I think atheism is way too austere for me, Hugh. It commits me to too many counterintuitive things – everything comes from nothing, like comes from nonlife, consciousness comes from matter, morality comes from a reorganization of molecules. None of this seems to make sense to me. There is another alternative that seems to make a lot more sense, that a big bang needs a big banger, that a moral law comes from a moral lawgiver, that design comes from a designer. These notions are captured well, I think, in the Biblical account of life. And the person of Jesus, especially, exemplifying these notions, and then giving us a way to live that makes sense. And this is why I'm a Christian and not an atheist. I think it makes the best sense of the world as we know it.

HH: Michael Shermer?

MS: I'm an atheist, because I don't believe in God, and there's nothing to follow from that. I think we have an absolute moral standard, we have objective moral truths, we all know what they are, we listen to our small inner voice within that comes from our evolutionary heritage as a social primate species, in which we care deeply about our fellow group members. We have empathy and sympathy, and that's where the moral emotions come from. In terms of religion, I think religion is good when it does good, it's bad when it does bad. In general, I'm in favor of anything that leads to greater freedom, greater liberty, greater autonomy for more people in more places. And that has been the trend for the last five hundred years, that I attribute to the general secular idea, from the Enlightenment, that people have value in and of themselves, and I think religion has fostered, after the fact, sort of just slightly behind the wave, reinforcing those good, human values, and attenuating the bad ones. And that's why they've discarded so many of the Old Testament values that we no longer adhere to. So I think that's the long term trend, and I think we should continue to count people, more and more people as part of our fellow in-groups, and I think free trade and travel and the internet is the best way to encourage that.

HH: Thank you, Michael Shermer of Skeptic Magazine, http://www.skeptic.org, Greg Koukl of Stand To Reason, http://www.str.org. Once again, all their books I've been talking about are linked at Hughhewitt.com. I want to thank Adam and Generalissimo for all their work in producing today.

End of interview.

Wow: Ezra Klein admits the real unemployment rate is 11 percent

December 13, 2011 | by Wintery Knight | Link | Original Link

From the left-leaning Washington Post, of all places.

Excerpt:

> Typically, I try to tie the beginning of Wonkbook to the news. But today, the most important sentence isn't a report on something that just happened, but a fresh look at something that's been happening for the last three years. In particular, it's this sentence by the Financial Times' Ed Luce, who writes, "According to government statistics, if the same number of people were seeking work today as in 2007, the jobless rate would be 11 percent."
>
> Remember that the unemployment rate is not "how many people don't have jobs?", but "how many people don't have jobs and are actively looking for them?" Let's say you've been looking fruitlessly for five months and realize you've exhausted every job listing in your area. Discouraged, you stop looking, at least for the moment. According to the government, you're no longer unemployed. Congratulations?
>
> Since 2007, the percent of the population that either has a job or is actively looking for one has fallen from 62.7 percent to 58.5 percent. That's millions of workers leaving the workforce, and it's not because they've become sick or old or infirm. It's because they can't find a job, and so they've stopped trying. That's where Luce's calculation comes from. If 62.7 percent of the country was still counted as in the workforce, unemployment would be 11 percent. In that sense, the real unemployment rate — the apples-to-apples unemployment rate — is probably 11 percent. And the real un- and underemployed rate — the so-called "U6" — is near 20 percent.
>
> There were some celebrations when the unemployment rate dropped last month. But much of that drop was people leaving the labor force. The surprising truth is that when the labor market really recovers, the unemployment rate will actually rise, albeit only temporarily, as discouraged workers start searching for jobs again.

Yeah, because taking money away from private sector job creators costs jobs. That is straight out of Henry Hazlitt's "Economics in One Lesson": Public Works Means Taxes.

Look:

More stimulus spending means fewer jobs
From the Weekly Standard.

Excerpt:

> When the Obama administration releases a report on the Friday before a long weekend, it's clearly not trying to draw attention to the report's contents. Sure enough, the "Seventh Quarterly Report" on the economic impact of the "stimulus," released on Friday, July 1, provides further evidence that President Obama's economic "stimulus" did very little, if anything, to stimulate the economy, and a whole lot to stimulate the debt.
>
> The report was written by the White House's Council of Economic Advisors, a group of three economists who were all handpicked by Obama, and it chronicles the alleged success of the "stimulus" in adding or saving jobs. The council reports that, using "mainstream estimates of economic multipliers for the effects of fiscal stimulus" (which it describes as a "natural way to estimate the effects of" the legislation), the "stimulus" has added or saved just under 2.4 million jobs — whether private or public — at a cost (to date) of $666 billion. That's a cost to taxpayers of $278,000 per job.
>
> In other words, the government could simply have cut a $100,000 check to everyone whose employment was allegedly made possible by the "stimulus," and taxpayers would have come out $427 billion ahead.

When the government takes a dollar from a job creator, they take half of it for themselves, and then they often give the other half to some favored group, like a "green energy" company or Planned parenthood or a labor union. Then they who turns around and give half of that handout right back to Obama as a campaign donation. The only way to stop them from doing more of this stimulus is to stop giving them money.

Do you know what has been proven to create jobs, though? TAX CUTS FOR THE RICH.

Consider this article by the Cato Institute, which discusses how the Reagan tax cuts affected the unemployment rate.

Excerpt:

> In 1980, President Carter and his supporters in the Congress and news media asked, "how can we afford" presidential candidate Ronald Reagan's proposed tax

> cuts?
>
> Mr. Reagan's critics claimed the tax cuts would lead to more inflation and higher interest rates, while Mr. Reagan said tax cuts would lead to more economic growth and higher living standards. What happened? Inflation fell from 12.5 percent in 1980 to 3.9 percent in 1984, interest rates fell, and economic growth went from minus 0.2 percent in 1980 to plus 7.3 percent in 1984, and Mr. Reagan was re-elected in a landslide.
>
> […]Despite the fact that federal revenues have varied little (as a percentage of GDP) over the last 40 years, there has been an enormous variation in top tax rates. When Ronald Reagan took office, the top individual tax rate was 70 percent and by 1986 it was down to only 28 percent. All Americans received at least a 30 percent tax rate cut; yet federal tax revenues as a percent of GDP were almost unchanged during the Reagan presidency (from 18.9 percent in 1980 to 18.1 percent in 1988).
>
> What did change, however, was the rate of economic growth, which was more than 50 percent higher for the seven years after the Reagan tax cuts compared with the previous seven years. This increase in economic growth, plus some reductions in tax credits and deductions, almost entirely offset the effect of the rate reductions. Rapid economic growth, unlike government spending programs, proved to be the most effective way to reduce unemployment and poverty, and create opportunity for the disadvantaged.

The Heritage Foundation describes the effects of the Bush tax cuts.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also lowered tax rates on capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.

> Here’s what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

It worked for Reagan and it worked for Bush – they made unemployment go down, while Obama’s public works spending has made unemployment go up. Those are the facts. And we have to live in the world as it is. We may not like it, it may not be intuitive to us, it may not line up with our feelings, but that is the way the world is. When you let people with capital keep more of the money they earn, they *hire more people* and they *try to make more money*. When the rich risk their capital, they take the rest of us up with them – either by giving us jobs, or by offering us things that we are free to buy or not. Things like iPods, laptops and kitchen appliances. And the more competition there is among sellers in a free market, the lower the prices go, and the higher the quality gets.

Christopher Hitchens debates William Lane Craig: Does God Exist?

December 13, 2011 | by Wintery Knight | Link | Original Link

Here's the full debate on video. Hugh Hewitt is the moderator.

Now I think most people are familiar with Christopher Hitchens and his arguments – he is widely regarded as the top atheist debater in the world, and has written bestselling books on atheism. So below is a little more about the Christian debater William Lane Craig. Craig is regarded as the top defender of Christianity in the world, although many people are unfamiliar with his arguments. Here is a written explanation of the five arguments he uses in the debate with Hitchens, if you want to follow along. This is a good debate for any of you who have never seen a debate on God's existence before.

About William Lane Craig

Let's review William Lane Craig's qualifications:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

Here is a partial list of his past debates against the top atheist scholars. Many of those have audio and video. His best recent debate was against the British philosopher Peter Millican. Recommended for advanced students only.

Iran laughs as Obama pleads for return of unmanned drone

December 14, 2011 | by Wintery Knight | Link | Original Link

"Ummm... can we have our drone back mister?" (H/T Sid)
CNN reports:

> President Barack Obama said Monday that the United States has asked Iran to return a U.S. drone aircraft that Iran claims it recently brought down in Iranian territory.
>
> “We’ve asked for it back. We’ll see how the Iranians respond,” Obama said in a news conference, alongside Iraqi Prime Minister Nouri al-Maliki.
>
> A top Iranian military official previously vowed not to return the unmanned American stealth plane that it says it has.
>
> […]Former U.S. Vice President Dick Cheney on Monday criticized Obama’s decisions on the drone, but for an entirely different reason. He said that, after the aircraft went down, the president should have ordered an airstrike over Iran.
>
> “The right response to that would have been to go in immediately after it had gone down and destroy it,” the Republican, who served with President George W. Bush, told CNN’s Erin Burnett. “You can do that from the air … and, in effect, make it impossible for them to benefit from having captured that drone.”
>
> Instead, “he asked nicely for them to return it, and they aren’t going to,” Cheney said.

> […]One U.S. official said the United States can't be certain it's the real stealth drone, because U.S. personnel don't have access to it. But he added there's no reason to think it's a fake. However, a second senior U.S. military official said that a big question is to how the drone could have remained virtually intact given the high altitude it is believed to have crashed from.

All American Blogger found this story on Fox News:

> In an interview broadcast live Monday night on Venezuelan state television, Iranian President Mahmoud Ahmadinejad said nothing to suggest his country would grant the U.S. request.
>
> "The Americans have perhaps decided to give us this spy plane," Ahmadinejad said. "We now have control of this plane."
>
> Speaking through an interpreter, Ahmadinejad said: "There are people here who have been able to control this spy plane, who can surely analyze this plane's system also. … In any case, now we have this spy plane."
>
> He added, "Very soon, they're going to learn more about the abilities and possibilities of our country."
>
> On Tuesday, a semi-official Iranian news agency said authorities have shrugged off the U.S. request. Defense Minister Gen. Ahmad Vahidi said the United States should apologize for invading Iranian air space instead of asking for the return of the unmanned aircraft.

Remember when Iran was having their elections and they started shooting people down in the street? Unlike Germany, France and Canada, Obama had nothing to say about that. Ronald Reagan would have had something to say. Margaret Thatcher would have something to say. But Obama had nothing to say. Maybe the Iranians looked at what Obama did and decided that Obama is a paper tiger.

Lately, we've seen an Iranian-backed attack on U.S. soil, an Iranian-backed attack on a U.K. embassy, and increased Iranian operations in Latin America. What could be emboldening Iran to be so aggressive? If we are nice to them and bow down to them and give them money, won't that make them like us more?

Meet Rick Schenker, head of Ratio Christi, a pro-apologetics campus ministry

December 14, 2011 | by Wintery Knight | Link | Original Link

Rick Schenker president of Ratio Christi

Here's an interview with the founder of Ratio Christi, Rick Schenker.

About Rick:

> *Rick Schenker is president of Ratio Christi, a campus-based, Christian apologetics organization, which he joined in February, 2011. Rick has a visionary leadership style, and has experience in business, government, public and media relations, fundraising, and non-profit management. He has a bachelor's degree in Bible from Central Bible College, and has done graduate work in public policy at Regent University, along with additional postgraduate work in leadership and public administration. Rick has extensive experience in grass-roots political organization and campaigns in the state of Pennsylvania. As the chief elected official of the County government in Erie, Pennsylvania, he oversaw 1,100 employees and a $300 million budget.*

Excerpt:

> **TBS**: Thank you for allowing us to interview you for TheBestSchools.org. Please give our readers an overview of Ratio Christi? What is it? How did it get started? What are its goals?
>
> **RS**: **Ratio Christi** is a global movement that equips university students and faculty to give historical, philosophical, and scientific reasons for following Jesus Christ. Ratio Christi (Latin for "The Reason of Christ") is placing Christian apologetics clubs at universities both nationally and internationally. Bringing together faith and reason in order to establish the intellectual voice of Christ in the University, Ratio Christi is engaging in the battle for the mind of Christians and skeptics alike. We unashamedly defend the veracity of God, the Bible, and Christ's resurrection. Ratio Christ started three and a half years ago as a ministry of Southern Evangelical Seminary and became an independent non-profit

> organization in early 2011. Since that time, Ratio Christi has developed strong partnerships with many other seminaries and organizations, focusing on Christian apologetics and worldview issues. By working together, we now have approximately 60 clubs in various stages of development in universities across the country and around the world.
>
> **TBS**: Please give us a bit of background about yourself. What were some of the things you were doing before assuming the helm of Ratio Christi? How did the opportunity to head up Ratio Christi present itself?
>
> **RS**: I am a grass-roots political organizer. I was an elected official, and decided to leave politics to pursue work within Christian ministry. Unfortunately, even though I had run a few nonprofits, and a government with a $300 million budget, I couldn't find a job. Sometime in 2010, I was considering getting a master's degree in apologetics, and ran into the Ratio Christi web site. It was a student-run ministry at Southern Evangelical Seminary. In politics, I had become used to spotting trends that could turn into mass movements. As soon as I saw Ratio Christi, I knew it was a mass movement waiting to happen. I called them up and asked them to let me run it. Based on our 500% growth in the last six months, it is apparent that this is something that was not only needed, but ready and waiting to happen in God's timing.

Here's more:

> **TBS**: One of the striking claims you make on your web site is that "you are not building an organization, you are building a movement"? Could you please expand on what you see as the difference between the two? What would a Ratio Christi movement look like?
>
> **RS**: First, Ratio Christi is not the movement. We are simply a grass-roots organization for a greater movement. A movement is usually something that grows beyond the efforts or abilities of the leaders involved in starting it. Ratio Christi is involved in a movement in which apologetics is sweeping through the culture. Because of the rapid growth of neo-atheism in the university, Christian students are under attack. When confronted with intellectual challenges to Christianity, many Christian college students will abandon their faith. You can't blame them. If the faith of their parents is irrational, then it should be abandoned. In many cases, Christian students are ridiculed and openly humiliated by fellow students and sometimes faculty, for believing in God, the Bible, and Jesus Christ. Then along comes some good apologetics training, and suddenly the students realize that their faith can stand up to intellectual scrutiny. They see that the scientific, historical, and philosophical evidence is on the side of Christianity. They get pumped up about that. The same is true for adults and high school students. Most people didn't know there was so much evidence that supports the Christian worldview. Ratio Christi wants to help propogate the message that Christianity is not only good, it is true. We want to get the word

out, organize cooperation with like-minded ministries, put people and resources in universities and communities, and generally help facilitate what we see as a broader work of God.

TBS: You also say on your web site that you are not in competition with other "full-service" campus ministries, because Ratio Christi is more narrowly focused on "the battle of ideas that permeates the university." That seems like an admirable goal. But by placing so much emphasis on reasoned discourse, are you concerned at all that Ratio Christi may be raising the bar too high for a truly broad-based campus ministry? After all, you wouldn't want it seem like undergraduates needed to be philosophy majors in order to participate effectively in their local Ratio Christi chapter, would you?

RS: We do exactly what we say. We go onto a campus to support other Christian ministries. A highly trained apologist is placed on a campus to meet weekly with a small group of students that want to go deeper into the study of the intellectual framework of the Christian faith. RC offers to do training for other student ministries and extends the offer to Christian faculty members. The bar is not too high; this is stuff high school students could and should be learning. Yes, it takes hard work, but loving God with all our mind is part of what it means to be a disciple of Jesus Christ. There is a full range of students involved, from those who have already studied these things deeply to those with no previous exposure. Atheists, agnostics, and those of other belief systems are encouraged to attend. This is a safe place where you can bring your questions. And we do encourage all students to get involved with other campus ministries that do more Bible studies, have worship services, and other fellowship opportunities. RC is simply there to help them deal with the tough questions. Does God exist? Doesn't science disprove God? Did Jesus really rise from the dead? If God is good and all powerful, why is there evil and suffering? These are the hard questions, and that is what an apologist is trained to handle. Students love it. They love learning the critical-thinking skills necessary to analyze competing worldviews through logical discourse.

TBS: What has been your experience, so far, with the reception of your local Ratio Christi chapters on mainstream secular campuses? Has it been hard to get them recognized? Have there been any noteworthy cases of backlash against students on secular campuses for getting involved with their local Ratio Christi chapter?

RS: Actually it has been surprisingly easy. Since most universities are theoretically all about academic freedom, we approach it from this angle. They should welcome the opportunity to discuss these issues as long as it is done in a civil format. It helps that current case law supports the right of free association on campus. We have been blessed to have the expertise of the **Alliance Defense Fund** helping guide us in understanding the legal obligations that the universities are under. Since secular thought dominates most educational

> institutions, the backlash against Christianity is already there. We just try to even the playing field by giving a sound intellectual defense of the faith. Our arguments are appealing to those that are intellectually honest, so there is no need to back down in the face of opposition.

And more:

> **TBS**: One of the most striking things you say on your web site is that you want to make your local Ratio Christi campus chapters welcoming to agnostics and atheists. We certainly see the point of trying to provide a structure for believers and nonbelievers to meet with each other and get to know each other as people, in a nonthreatening environment. But we wonder, given the tensions that exist on college campuses and in American culture generally today, how much success you've had so far in this endeavor. Have the chapters had much luck in really engaging with agnostic and atheist students in a constructive way? If not, do you have any thoughts about how you might achieve a better result with this distinctive and important dimension of your work?
>
> **RS**: Actually, it is fairly normal for our chapters to engage with agnostic and atheist individuals, both in the meetings and around the campus. There has also been a lot of interaction with skeptic/atheist groups, such as co-sponsoring events or setting up discussion forums. Clubs representing other world religions have also been interested in engaging in discussion with our clubs. These interactions are very civil discussions, and our apologists teach Christian students to follow the advice of I Peter 3:15–16, to "always be prepared to give an answer to everyone who asks you to give the reason for the hope that you have. But do this with gentleness and respect, keeping a clear conscience, so that those who speak maliciously against your good behavior in Christ may be ashamed of their slander." It is easier to do this with gentleness and respect when you are confident in your answers. We have found the reception to a reasoned approach to faith to be quite positive. On the other hand, there are many students among the neo-atheists that have picked up on the tactics of Dawkins and others by practicing a lot of ad hominem arguments against Christians. This is usually some kind of generalized attack like "All Christians are stupid because of X," but the majority of the discourse on campus is usually quite civil.

Reading this interview was a real encouragement to me. I was very excited by what they are doing on these campuses.

I was in IVCF as an undergraduate and Campus Crusade as a graduate student, and we never did anything with apologetics. Not one thing in six years! They actually *blocked* every suggestion that the other students and I had to bring in speakers, show debate and lecture DVDs, and organize debates. I didn't learn one useful thing in 6 years. Everything was always about people sharing their feelings, prayer walks and testimonies. And lots of singing. I know that other IVCF and Crusade groups are different, because I know that

some of them do support apologetics, but the ones I attended were really dead set against apologetics.

If any of you are thinking about getting me a Christmas gift because you like the blog, just make a donation to Ratio Christi. Any amount would be great. They take PayPal! (At least – they took my donation through PayPal)

In case you are wondering what they do, here is a sample debate, featuring William Lane Craig and Michael Tooley:

That debate took place at the University of North Carolina.

You can watch another full debate they did (William Lane Craig vs Lawrence Krauss) with this Youtube playlist. That one occurred at North Carolina State University.

Here's my snarky summary of that debate, in case you don't want to watch it. The audio is not the best.

Unborn babies adapt their development based on cues from mom

December 14, 2011 | by Wintery Knight | Link | Original Link

Unborn baby scheming about the progress of science

From CNN:

> When does learning begin? As I explain in the talk I gave at TED, learning starts much earlier than many of us would have imagined: in the womb.
>
> I was surprised as anyone when I first encountered this notion. I'm a science writer, and my job is to trawl the murky depths of the academic journals, looking for something shiny and new — a sparkling idea that catches my eye in the gloom.
>
> […]What it all adds up to is this: much of what a pregnant woman encounters in her daily life — the air she breathes, the food and drink she consumes, the chemicals she's exposed to, even the emotions she feels — are shared in some fashion with her fetus. They make up a mix of influences as individual and idiosyncratic as the woman herself. The fetus treats these maternal contributions as information, as what I like to call biological postcards from the world outside.
>
> By attending to such messages, the fetus learns the answers to questions critical to its survival: Will it be born into a world of abundance, or scarcity? Will it be safe and protected, or will it face constant dangers and threats? Will it live a long, fruitful life, or a short, harried one?
>
> The pregnant woman's diet and stress level, in particular, provide important

> clues to prevailing conditions, a finger lifted to the wind. The resulting tuning and tweaking of the fetus's brain and other organs are part of what give humans their enormous flexibility, their ability to thrive in environments as varied as the snow-swept tundra in Siberia and the golden-grassed savanna in Africa.
>
> The recognition that learning actually begins before birth leads us to a striking new conception of the fetus, the pregnant woman and the relationship between them.
>
> The fetus, we now know, is not an inert blob, but an active and dynamic creature, responding and adapting as it readies itself for life in the particular world it will soon enter. The pregnant woman is neither a passive incubator nor a source of always-imminent harm to her fetus, but a powerful and often positive influence on her child even before it's born. And pregnancy is not a nine-month wait for the big event of birth, but a crucial period unto itself — "a staging period for well-being and disease in later life," as one scientist puts it.
>
> This crucial period has become a promising new target for prevention, raising hopes of conquering public health scourges like obesity and heart disease by intervening before birth. By "teaching" fetuses the appropriate lessons while they're still in utero, we could potentially end vicious cycles of poverty, infirmity and illness and initiate virtuous cycles of health, strength and stability.

For those who would like to hear an excellent, formal academic debate on abortion, I will steer you towards this debate between the ACLU's Nadine Strossen and Life Training Institute's Scott Klusendorf. You've probably never heard anything like this debate – it features real arguments on both sides that will help you to decide whether abortion is moral or not. Over 50 million unborn children have been aborted in the United States since abortion was legalized. Is it time for us to be more careful about with sex? Maybe it's not just another form of recreation.

For those of you who would like something to read, I recommend "The Case for Life" by Scott Klusendorf for beginners. Advanced students will benefit more from"Defending Life" by Francis J. Beckwith, published by Cambridge University Press.

What working at Wal-Mart taught a young conservative woman about the poor

December 14, 2011 | by Wintery Knight | Link | Original Link

My friend Jose sent me this wonderful article from The College Conservative.

Excerpt:

> During the 2010 and 2011 summers, I was a cashier at Wal-Mart #1788 in Scarborough, Maine. I spent hours upon hours toiling away at a register, scanning, bagging, and dealing with questionable clientele. These were all expected parts of the job, and I was okay with it. What I didn't expect to be part of my job at Wal-Mart was to witness massive amounts of welfare fraud and abuse.
>
> I understand that sometimes, people are destitute. They need help, and they accept help from the state in order to feed their families. This is fine. It happens. I'm not against temporary aid helping those who truly need it. What I saw at Wal-Mart, however, was not temporary aid. I witnessed generations of families all relying on the state to buy food and other items. I literally witnessed mothers of small children asking their mothers if they could borrow their EBT cards. I once had a man show me his welfare card for an ID to buy alcohol. The man was from Massachusetts. Governor Michael Dukakis' signature was on his welfare card. Dukakis' last gubernatorial term ended in January of 1991. I was born in June of 1991. The man had been on welfare my entire life. That's not how welfare was intended, but sadly, it is what it has become.

Here are just two short anecdotes:

> a) People ignoring me on their iPhones while the state paid for their food. (For those of you keeping score at home, an iPhone is at least $200, and requires a data package of at least $25 a month. If a person can spend $25+ a month so they can watch YouTube 24/7, I don't see why they can't spend that money on food.)
>
> d) A man who ran a hotdog stand on the pier in Portland, Maine used to come through my line. He would always discuss his hotdog stand and encourage me to "come visit him for lunch some day." What would he buy? Hotdogs, buns, mustard, ketchup, etc. How would he pay for it? Food stamps. Either that man really likes hotdogs, or the state is paying for his business. Not okay.

I urge you with every fiber of my body to click through and read the true story of Welfare Queen #1 and Welfare Queen #2. Read them, and weep. Just because someone is poor, it doesn't mean that they are automatically a good person. Maybe they are poor because they are irresponsible and selfish. Had you ever considered that? In any case, it's not the

government's job to hand out money without knowing anything about the person who is getting the money. Government should leave the money in the hands of people who earn it, and let *us* decide who deserves to receive charity. (At the most, they should give us a tax deduction for charity up to 10% of our gross income to encourage more private charity)

But wait! There's more!

From Human Events, toll workers being paid over $100,000 a year by the government.

Excerpt:

> Ladies and gentlemen, meet Princesella Smith, who raked in $89,599 for operating the toll lanes at the George Washington Bridge in 2011.
>
> Smith isn't alone. An investigation by the New York *Post* revealed that another toll booth operator pulled in a whopping $102,670 in 2011, $40K of that money coming in overtime. In total, as the *Post* notes, there are at least 24 New York and New Jersey workers who have raked in more than $80,000 as "public" workers at a job that requires us to hand them even more of our money.
>
> […]Besides excessive wages to people whose only skill requirement is to sit on a stool and count and collect dollar bills, tax dollars reserved for transportation uses have gone to a panoply of nonessential programs. As Ronald Utt of The Heritage Foundation points out, the "highway trust fund" has been raided to pay for Indian reservations, historic preservation sites, Appalachian and Mississippi Delta development, roadside beautification, bicycles, hiking paths, university research, and—the granddaddy of all expenses—feeding the $425 million beast that is the Department of Transportation.
>
> The Port Authority (PA), for instance, employees a gardener for $94,000 and a blacksmith for $146,000 a year. Heck, there are even retired PA employees who are making around that amount by cashing in on unused vacation and comp time. (Here's an idea: As we're facing budget deficits well into our future, how about requiring public employees to use their vaca time … or lose it. No cashing in allowed.)
>
> The larger problem highlighted with transportation spending, as Ronald Utt underscores, is the concept of public ownership. A paltry 65% of highway taxes collected actually go to making driving a more pleasant experience for commuters. The rest is squandered on whatever fancies a politician's spending appetite at a given moment. As the number of people driving has increased on the nation's roads and highways (up 71% since 1970), lawmakers in Washington, D.C., and around the country have funneled money to stupid bike lines and high-speed rail debacles.

If I were President, I would immediately cancel all pensions for retired public sector workers and outlaw public sector unions. What a colossal waste of money.

UPDATE: John Hawkins just posted a column entitled "The Five Things You Can Learn

From Wal-Mart“.

Pew Research: U.S. marriage rate slumps to a record low

December 15, 2011 | by Wintery Knight | Link | Original Link

Marriage and family

UPDATE: Welcome, visitors from IOwnTheWorld. Thanks for the link! Readers should check out John Hawkins' list of the top 40 conservative blogs for more great blogs!

ECM sends me this depressing article from the BBC.

Excerpt:

> Barely half of Americans – a record low – are currently married, according to a Pew Research Center analysis of Census data.
>
> Just 51% of adult Americans are married, compared with 72% in 1960.
>
> The median age of first marriage has also hit a new high, of 26.5 for brides and 28.7 for grooms.
>
> Pew said the number of adults co-habitating, single-person households and single parents had meanwhile increased in recent decades.
>
> The study found that 20% of adults today aged 18 to 29 are married, compared with 59% in 1960.
>
> It is unclear whether they are delaying matrimony or abandoning it altogether.
>
> The analysis also found the number of new marriages in the US had declined by five percentage points between 2009-10.
>
> This may not necessarily have been caused by the economic downturn, since a similar trend has continued in Europe regardless of business cycles.
>
> Pew, a nonpartisan think tank and polling organisation, found the percentage of those Americans who have been married at least once had declined as well – 72% in 2010, from 85% in 1960.
>
> If the trend persists, in a few years less than half of Americans will be married, Pew said.

I think that there are many causes for this problem. One of them has to be that the recession has hit men harder than women, and it is harder for a man to contemplate marriage when he isn't the provider. A second reason is that the expansion of government makes it less important for women to men to fit the provider role, and men sink to those expectations and concentrate on other things that women want. A third reason is the men are performing poorly in school and earning fewer degrees, probably for the reasons that Christina Hoff Sommers explained in "The War Against Boys" – i.e. – feminism in the schools. A fourth reason would be the decline of prestige associated with marriage – men marry more when they get respect from their wives and society as a whole for doing something challenging and difficult. A fifth reason would be feminism's drive to push premarital sex as something natural and normal to women – if women offer premarital sex to men as a form of recreation, then men have a big disincentive not to marry – they can already get the sex without having to commit for life to one woman. Furthermore, I don't think that men feel comfortable about marrying a woman with a lot of previous sex partners – men know, and research confirms, that the higher number of prior sex partners is a huge risk of divorce. A sixth reason is that men's incomes are taxed more and more, so that the government has more and more authority to interfere with his leadership – e.g. – a man cannot afford to select a private school or a religious school because the government takes the money and he is left with a politicized, failing public school that doesn't accomplish the goals he wants for his children. A seventh reason would be that divorce is very bad for men's finances – men have to pay alimony and child support, too.

I was chatting about this post over with ECM, and he said that the easy availability of pornography was another cause for the decline of marriage.

I wrote a longer, snarkier post about the decline of marriage here.

New York Times profiles philosopher Alvin Plantinga and discusses his new book

December 15, 2011 | by Wintery Knight | Link | Original Link

Christian philosopher Alvin Plantinga

Alvin Plantinga is widely regarded as the top Christian philosopher in the world, and a former head of the largest professional association of philosophers – the American Philosophical Association (APA).

Mary sent me this article from the New York Times about Alvin Plantinga and his new book, published by Oxford University Press – the top academic press in the world. Excerpt:

> From Calvin [College], and later from the University of Notre Dame, Mr. Plantinga has led a movement of unapologetically Christian philosophers who, if they haven't succeeded in persuading their still overwhelmingly unbelieving colleagues, have at least made theism philosophically respectable.
>
> "There are vastly more Christian philosophers and vastly more visible or assertive Christian philosophy now than when I left graduate school," Mr. Plantinga said in a recent telephone interview from his home in Grand Rapids, adding, with characteristic modesty, "I have no idea how it happened."
>
> Mr. Plantinga retired from full-time teaching last year, with more than a dozen books and a past presidency of the American Philosophical Association to his name. But he's hardly resting on those laurels. Having made philosophy safe for theism, he's now turning to a harder task: making theism safe for science.
>
> For too long, Mr. Plantinga contends in a new book, theists have been on the defensive, merely rebutting the charge that their beliefs are irrational. It's time for believers in the old-fashioned creator God of the Bible to go on the offensive, he argues, and he has some sports metaphors at the ready. (Not for nothing did

> he spend two decades at Notre Dame.)
>
> In "Where the Conflict Really Lies: Science, Religion and Naturalism," published last week by Oxford University Press, he unleashes a blitz of densely reasoned argument against "the touchdown twins of current academic atheism," the zoologist Richard Dawkins and the philosopher Daniel C. Dennett, spiced up with some trash talk of his own.
>
> […] Longtime readers of Mr. Plantinga, who was raised as a Presbyterian and who embraced the Calvinism of the Christian Reformed Church as a young man, are used to such invocations of theological concepts. And even philosophers who reject his theism say his arguments for the basic rationality of belief, laid out in books like "Warranted Christian Belief" and "God and Other Minds," constitute an important contribution that every student of epistemology would be expected to know.
>
> But Mr. Plantinga's steadfast defense of the biochemist and intelligent-design advocate Michael Behe, the subject of a long chapter in the new book, is apparently another matter.
>
> "I think deep down inside he really isn't a friend of science," Michael Ruse, a philosopher of science at Florida State University, said of Mr. Plantinga. "I'm not objecting to him wanting to defend theism. But I think he gets his victory at the level of gelding or significantly altering modern science in unacceptable ways."
>
> Mr. Dennett was even harsher, calling Mr. Plantinga "Exhibit A of how religious beliefs can damage or hinder or disable a philosopher," not to mention a poor student of biology. Evolution is a random, unguided process, he said, and Mr. Plantinga's effort to leave room for divine intervention is simply wishful thinking.
>
> "It's just become more and more transparent that he's an apologist more than a serious, straight-ahead philosopher," Mr. Dennett said.
>
> When Mr. Plantinga and Mr. Dennett (who said he has not read Mr. Plantinga's new book) faced off over these questions before a standing-room-only crowd at a 2009 meeting of the American Philosophical Association, the event prompted ardent online debate over who had landed better punches, or simply been more condescending. (A transcript of the proceedings was published last year as "Science and Religion: Are They Compatible?")
>
> Mr. Plantinga, who recalled the event as "polite but not cordial," allowed that he didn't think much of Mr. Dennett's line of reasoning. "He didn't want to argue," Mr. Plantinga said. "It was more like he wanted to make assertions and tell stories."

Would you like to know how well Daniel Dennett can debate the naturalism/theism dispute? First of all, Plantinga has debated Dennett, and you can find the audio for it at Apologetics 315.

William Lane Craig also presented several arguments against naturalism to Daniel

Dennett in 2007, and Dennett responded by calling it a “first-rate piece of philosophical reasoning”. I link to the exchange and complain about Dennett’s weak response to Craig’s arguments in a previous post.

You may also find this recent interview with Alvin Plantinga, conducted by Brian Auten, informative.

The resurgence of Christian theism in analytical philosophy

Now let’s move from the specific to the aggregate. What is going on with these Christian philosophers?

Well, you can read an excellent article about the resurgence of Christian theism in philosophy departments in the peer-reviewed philosophy journal *Philo*, which, in my opinion, is the best journal for atheists and agnostic philosophers. The article is authored by the well-known atheist Quentin Smith.

He writes:

> THE DESECULARIZATION OF ACADEMIA THAT EVOLVED IN PHILOSOPHY DEPARTMENTS SINCE THE LATE 1960s
>
> By the second half of the twentieth century, universities and colleges had been become in the main secularized. The standard (if not exceptionless) position in each field, from physics to psychology, assumed or involved arguments for a naturalist world-view; departments of theology or religion aimed to understand the meaning and origins of religious writings, not to develop arguments against naturalism. Analytic philosophers (in the mainstream of analytic philosophy) treated theism as an antirealist or non-cognitivist world-view, requiring the reality, not of a deity, but merely of emotive expressions or certain “forms of life” (of course there were a few exceptions, e.g., Ewing, Ross, Hartshorne, etc., but I am discussing the mainstream view).
>
> […]The secularization of mainstream academia began to quickly unravel upon the publication of Plantinga’s influential book on realist theism, God and Other Minds, in 1967. It became apparent to the philosophical profession that this book displayed that realist theists were not outmatched by naturalists in terms of the most valued standards of analytic philosophy: conceptual precision, rigor of argumentation, technical erudition, and an in-depth defense of an original world-view. This book, followed seven years later by Plantinga’s even more impressive book, The Nature of Necessity, made it manifest that a realist theist was writing at the highest qualitative level of analytic philosophy, on the same playing field as Carnap, Russell, Moore, Grünbaum, and other naturalists. Realist theists, whom hitherto had segregated their academic lives from their private lives, increasingly came to believe (and came to be increasingly accepted or respected for believing) that arguing for realist theism in scholarly publications could no longer be justifiably regarded as engaging in an “academically unrespectable” scholarly pursuit.

Naturalists passively watched as realist versions of theism, most influenced by Plantinga's writings, began to sweep through the philosophical community, until today perhaps one-quarter or one-third of philosophy professors are theists, with most being orthodox Christians. Although many theists do not work in the area of the philosophy of religion, so many of them do work in this area that there are now over five philosophy journals devoted to theism or the philosophy of religion, such as Faith and Philosophy, Religious Studies, International Journal of the Philosophy of Religion, Sophia, Philosophia Christi, etc. Philosophia Christi began in the late 1990s and already is overflowing with submissions from leading philosophers. Can you imagine a sizeable portion of the articles in contemporary physics journals suddenly presenting arguments that space and time are God's sensorium (Newton's view) or biology journals becoming filled with theories defending élan vital or a guiding intelligence? Of course, some professors in these other, non-philosophical, fields are theists; for example, a recent study indicated that seven percent of the top scientists are theists.1 However, theists in other fields tend to compartmentalize their theistic beliefs from their scholarly work; they rarely assume and never argue for theism in their scholarly work. If they did, they would be committing academic suicide or, more exactly, their articles would quickly be rejected, requiring them to write secular articles if they wanted to be published. If a scientist did argue for theism in professional academic journals, such as Michael Behe in biology, the arguments are not published in scholarly journals in his field (e.g., biology), but in philosophy journals (e.g., Philosophy of Science and Philo, in Behe's case). But in philosophy, it became, almost overnight, "academically respectable" to argue for theism, making philosophy a favored field of entry for the most intelligent and talented theists entering academia today. A count would show that in Oxford University Press' 2000–2001 catalogue, there are 96 recently published books on the philosophy of religion (94 advancing theism and 2 presenting "both sides"). By contrast, there are 28 books in this catalogue on the philosophy of language, 23 on epistemology (including religious epistemology, such as Plantinga's Warranted Christian Belief), 14 on metaphysics, 61 books on the philosophy of mind, and 51 books on the philosophy of science.

And how have naturalist philosophers reacted to what some committed naturalists might consider as "the embarrassment" of belonging to the only academic field that has allowed itself to lose the secularization it once had? Some naturalists wish to leave the field, considering themselves as no longer doing "philosophy of mind," for example, but instead "cognitive science." But the great majority of naturalist philosophers react by publicly ignoring the increasing desecularizing of philosophy (while privately disparaging theism, without really knowing anything about contemporary analytic philosophy of religion) and proceeding to work in their own area of specialization as if theism, the view of approximately one-quarter or one-third of their field, did not exist. (The numbers

> “one-quarter” and “one-third” are not the result of any poll, but rather are the exceptionless, educated guesses of every atheist and theist philosophy professor I have asked [the answers varied between “one-quarter” and “one-third”]). Quickly, naturalists found themselves a mere bare majority, with many of the leading thinkers in the various disciplines of philosophy, ranging from philosophy of science (e.g., Van Fraassen) to epistemology (e.g., Moser), being theists. The predicament of naturalist philosophers is not just due to the influx of talented theists, but is due to the lack of counter-activity of naturalist philosophers themselves. God is not “dead” in academia; he returned to life in the late 1960s and is now alive and well in his last academic stronghold, philosophy departments.

Quentin Smith is a good friend of William Lane Craig, who is a philosopher/theologian and the top Christian defender in the world, and probably of all time. Smith is the co-author, with William Lane Craig, of the book “Theism, Atheism, and Big Bang Cosmology“, also published by Oxford University Press. Craig and Smith debated at Harvard University in 2003, and I transcribed the debate for posterity. If some of you are looking for a way to help promote Christian apologetics, you should pick a debate that hasn’t been transcribed and transcribe it. A lot of people read these debate transcripts. I had them printed out in my binder when I was an undergraduate student, in case my professors got boring! I like a good fight.

On a lighter note, my office plant is named Alvin Plantinga. It was grown in water and then given to me by an atheist with whom I work. We discuss these interesting topics over lunch every few months. And so should you. Why not send the New York Times article and the Philo article to an atheist in your office and get the conversation started? There’s enough in this post alone to help you sound like Alvin Plantinga!

RINO Mitt Romney deploys another RINO John Sununu to attack Newt Gingrich

December 15, 2011 | by Wintery Knight | Link | Original Link

Richard Miniter posted this Washington Post article on Facebook.

Excerpt:

> In an effort to bring down surging front-runner Newt Gingrich, the Romney campaign has deployed a very strange choice of attack dog: former White House chief of staff John Sununu.
>
> Sununu is everywhere these days. On a campaign conference call with reporters last week, he accused Gingrich of "a pattern of anti-principled actions that really irritated his own leadership and produced 88 percent of the Republicans in Congress voting for his reprimand." On Sunday, the Romney campaign put him up against former Pennsylvania congressman Bob Walker on CNN's "State of the Union," where Sununu hit Gingrich for his "$500,000 outstanding bill at Tiffany's" and warned, "The conservatives that he has turned his back on should recognize the fact that he's not a conservative." And this week, Sununu has begun hitting the airwaves on conservative talk radio, telling host Scott Hennen that Gingrich is "not stable."
>
> All of this raises a question: Has the Romney campaign lost its mind?
>
> No doubt Sununu's support is important for Romney in New Hampshire, where he was a popular governor in the 1980s and served as chairman of the state Republican Party from 2009-2011. But Sununu is a discredited figure among conservatives. To deploy him on the national stage — in an effort to convince conservatives that Gingrich is not one of them — is, quite simply, insanity.
>
> The New Hampshire newspaper the Union Leader reports that Sununu said in an interview last week, "Then-House Minority Whip Gingrich reneged after telling then-President George H.W. Bush (41) that he approved of the 1990 budget agreement with Democrats that included tax increases." This is supposed to show that Gingrich is an unreliable leader. Gingrich denies ever supporting the deal, but even so: Gingrich ended up on the right side — opposing the Bush tax increase, which is still reviled by conservatives to this day. So the Romney campaign is attacking Gingrich for opposing a massive tax increase — and is doing so by using the White House chief of staff who *brokered* the deal in which Bush broke his "no new taxes" pledge.
>
> How on earth does trotting out the mastermind of Bush's still-hated "read my lips" tax flip-flop to attack Gingrich help Romney? This is not territory where Team Romney should want to tread. Conservatives' biggest worry is that Romney will flip-flop the way "41" did on his tax pledge. Sending out a man responsible

> for that reversal as a national spokesman only helps Gingrich and raises questions about Romney's judgment.
>
> […]As White House chief of staff, Sununu spent hundreds of thousands of taxpayer dollars flying on military jets to ski lodges, golf resorts, and even his dentist in Boston, as well as taking a government limousine to New York to attend a Christie's stamp auction. He was investigated by the White House counsel's office and forced to repay the government. A few months later, he was forced to resign. The New York Times reported "The uproar over the 1990 budget deal, in which Mr. Sununu was seen by many Republican lawmakers as a malevolent influence, exacerbated Mr. Sununu's troubles. In the same fashion, he was badly wounded by disclosures of his extensive use of military aircraft for personal and political trips."

But it's worse than that. John Sununu is the one responsible for recommending David Souter to then-President George H.W. Bush for a Supreme Court appointment.

The New York Times explains everything you need to now about John Sununu, (and, consequently, about Mitt Romney).

Excerpt:

> John H. Sununu, the White House chief of staff, said today that he had assured President Bush that David H. Souter would uphold conservative values on the Supreme Court. He also said he had given "strong personal support" to Judge Souter at a key moment in the President's decision-making.
>
> As Governor of New Hampshire, Mr. Sununu named Judge Souter an Associate Justice of its Supreme Court.
>
> "I was looking for someone who would be a strict constructionist, consistent with basic conservative attitudes, and that's what I got," the chief of staff said in an interview. "I was able to tell the President that I was sure he would do the same thing when he encountered Federal questions.
>
> "What he says and does is what he is. No pretense, no surprises." Their Kind of Man?
>
> The chief of staff's comments were designed to advance the overall White House strategy of seeking to convince conservatives that Judge Souter was their kind of man, who could be trusted to vote "right" on the big issues, without getting him involved in fierce debates about abortion or flag burning or other contentious specifics.
>
> […]Mr. Sununu said that President Bush had had two candidates under consideration when he retired to his office on Monday with a yellow legal pad to make his decision – the two he had just spoken with, Judge Souter and Judge Edith H. Jones, 41, who sits on the Court of Appeals for the Fifth Circuit, in Houston.

Let me tell you something. I am a strong conservative on fiscal issues, foreign policy and social issues. My candidates for President in 2012 are Michele Bachmann, followed by Rick Santorum, followed by Rick Perry. And if I had a choice to nominate anyone to be on the Supreme Court of the United States, the *last person in the world* that I would choose is David Souter, and the *first person in the world* I would choose is Edith H. Jones. She is my absolute favorite for the Supreme Court, followed closely by Janice Rogers Brown.

I recommended Jones and Brown in this old post from May 2009, and nothing has changed since then – they are my favorites. But John Sununu passed on Edith Jones and recommended *David Souter* – a staunchly liberal activist judge. Sununu is not a conservative.

If you would like to see some videos of Mitt Romney explaining his liberal views on everything from abortion to gun control to global warming, then click here.

Walter Bradley: three scientific phenomena that point to a designed universe

December 15, 2011 | by Wintery Knight | Link | Original Link

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor. Here's a bio:

> Walter Bradley (B.S., Ph.D. University of Texas at Austin) is Distinguished Professor of Engineering at Baylor. He comes to Baylor from Texas A&M University where he helped develop a nationally recognized program in polymeric composite materials. At Texas A&M, he served as director of the Polymer Technology Center for 10 years and as Department Head of Mechanical Engineering, a department of 67 professors that was ranked as high as 12th nationally during his tenure. Bradley has authored over 150 refereed research publications including book chapters, articles in archival journals such as the Journal of Material Science, Journal of Reinforced Plastics and Composites, Mechanics of Time-Dependent Materials, Journal of Composites Technology and Research, Composite Science and Technology, Journal of Metals, Polymer Engineering and Science, and Journal of Materials Science, and refereed conference proceedings.
>
> Dr. Bradley has secured over $5.0 million in research funding from NSF grants (15 yrs.), AFOSR (10 years), NASA grants (10 years), and DOE (3 years). He has also received research grants or contracts from many Fortune 500 companies, including Alcoa, Dow Chemical, DuPont, 3M, Shell, Exxon, Boeing, and Phillips.
>
> He co-authored The Mystery of Life Origin: Reassessing Current Theories and has written 10 book chapters dealing with various faith science issues, a topic on which he speaks widely.
>
> He has received 5 research awards at Texas A&M University and 1 national research award. He has also received two teaching awards. He is an Elected Fellow of the American Society for Materials and the American Scientific Affiliation (ASA), the largest organization of Christians in Science and Technology in the world. He is President elect of the ASA and will serve his term in 2008.

You can read more about his recent research in this article from Science Daily.

Below, I analyze a lecture entitled “Is There Scientific Evidence for an Intelligent Designer?”. Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

The MP3 file is here.

Evidence #1: The design of the universe

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living

beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – "carbon-based life), but the bonds are not so tight that they can't be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet must sufficient mass in order to retain an atmosphere, etc.

The best non-theistic response to this argument is to postulate a multiverse, but that is very speculative and there is no experimental evidence that supports it.

Evidence #2: The origin of the universe

1. The progress of science has shown that the entire physical universe came into being out of nothing (= "the big bang"). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.

- And there were other discoveries as well, mentioned in the lecture.

The best non-theistic response to this argument is to postulate a hyper-universe outside of ours, but that is very speculative and there is no experimental evidence that supports it.

Evidence #3: The origin of life

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current non-theistic response to this is to speculate that aliens may have seeded the Earth with life at some point in the past.

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

Is it moral for a woman to conceive a child from an anonymous sperm donor?

December 16, 2011 | by Wintery Knight | Link | Original Link

I am opposed to any policy or program that increases the odds that a child will not have a relationship with their biological father as they grow up. This would include anything that makes it easier for parents to divorce or that facilitates single motherhood. Consequently, I oppose premarital sex, abortion, sex education in schools, no-fault divorce, and giving legal recognition to cohabitation or same-sex marriage. I want children to be able to have their biological father and biological mother close at hand, and to be able to rely on them and know them, so that they don't feel alone and lost in the world. Although I am willing to permit other arrangements, I think society should celebrate traditional marriage – for the sake of the children.

Well, consider one challenge to this ideal situation where a child grows up with a mother and a father: conception via anonymous sperm donor.

Here's a video that shows how children are hurt when they are denied a relationship with their biological father: (H/T Stacy McCain)

Robert Stacy McCain writes this:

> The practice of anonymous sperm donors, and children fathered by them, is certainly legal and has a market. That would lead one to conclude that it is ethical, rather than unethical. In other words I'd say ethical means 'not illegal'.
>
> But is it moral? […]That is, does anyone think that the Almighty is pleased, and/or glorified by people thumbing their noses at the clear, simple, obvious, form-follows-function beauty of:
>
> Therefore shall a man leave his father and his mother, and shall cleave unto his wife: and they shall be one flesh. Gen 2:24
>
> There is vast capacity to use modern technology to tinker about with the natural order of things. I'd like to fall short of a sweeping judgement here, in the space of a blog post. It's possible that there may exist a really good case for why using an anonymous sperm donor is not immoral. But it seems that protecting the father's (or the mother's in the case of an egg donor) privacy at the expense of dropping a sizable existential dilemma on the offspring is immoral. That is, the biological parents (i.e. DNA providers) are doing to the child emotionally what the government is doing economically: casting debts upon them without any sort of dialogue. A variation on taxation without representation, if you will. Progressivism seems to be about finding the least vocal victim.

I don't think that it's enough for the child to just know who their biological father is, or to just see a picture of their biological father. I think it's important that we promote the best situation for children, where each child has a real *relationship* with their biological father.

And we can do that, if we are serious, in several ways.

Promoting marriage

Here are few wild, shoot-from-the-hip ideas to help children to have access to their fathers:

1. We can research how fatherlessness affects children
2. We can research what decisions are likely to lead to stable marriage, e.g. – regular church attendance and chastity
3. We can repeal laws that are hostile to lasting marriage, e.g. – no-fault divorce
4. We can enact laws that are hostile to divorce, e.g. – shared custody laws
5. We can stop paying unmarried women to have babies
6. We can give tax deductions to married couples who have babies
7. We can give tax deductions to couples planning on marrying if they undergo marital counseling from a program of their own choosing
8. We can give tax deductions to married couples whose children earn incomes, e.g. – the parents get a tax deduction for 1% of income earned by each child *for life*
9. We can give tax deductions to married couples whose children don't collect government assistance, e.g. – the parents get a 1% tax deduction on their household income for every child who doesn't collect government welfare during the year
10. We ban IVF for women who have not been married for at least 5 years
11. We ban all taxpayer funding of IVF treatments
12. We ban ban all private insurance coverage for IVF treatments

And so on, like that. This communicates to women that it is not OK to have a baby with an anonymous sperm donor. It communicates that we as a society want fathers to be around their children. It communicates that cohabitation is not the same thing as marriage. It communicates that marriages are for life. We need to get tough if we want children to be spared from the harm of not knowing their biological fathers.

Paul Ryan teams up with Democrat Ron Wyden to push Medicare reform plan

December 16, 2011 | by Wintery Knight | Link | Original Link

Rep. Paul Ryan
From Investors Business Daily.

Excerpt:

> Pity the poor Democrats. Here they were counting on scaring seniors about GOP plans to "destroy" Medicare when Rep. Paul Ryan teams up with a prominent Senate Democrat to offer a compromise reform.
>
> From the White House on down, Democrats were wringing their hands this week about the bi-partisan Medicare reform plan offered up by Ryan and Sen. Ron Wyden, D-Ore.
>
> Their plan would shift Medicare from an open-ended health benefit to one in which the government provides a set amount of money for insurance. Seniors could choose from a variety of private, approved plans, as well as the traditional government-run Medicare.
>
> The subsidy would be based on the second cheapest plan in an area, and if seniors wanted more expansive coverage, they'd have to pay the difference out of their own pockets. The reform would also cap the growth in Medicare.
>
> […]As one Democratic congressional aide told the New York Times, "this plan gives bipartisan political cover to Ryan and other Republicans against whom we have been waging a very successful political offensive."
>
> […]While we prefer Ryan's original proposal to his current one, it's to his credit

> that he realized the political need to produce a bi-partisan compromise. Wyden, too, deserves credit for his willingness to buck his party and sacrifice short-term political gain for much needed long-term reforms.

I took a look at Wyden's ACU ratings, and he has a 9.23 out 100. I have no idea how Ryan got this guy on board. It's magic.

Dept. of Labor: public school teacher compensation doubles average of private sector

December 16, 2011 | by Wintery Knight | Link | Original Link

From CNS News. (H/T Doug Ross)

Excerpt:

> Public school teachers receive greater average hourly compensation in wages and benefits than any other group of state and local government workers and receive more than twice as much in average hourly wages and benefits as workers in private industry, according to a new report from the Bureau of Labor Statistics.
>
> Public primary, secondary and special education teachers are paid an average of $56.59 per hour in combined wages and benefits, BLS said in the report released last week.
>
> That is slightly more than twice the $28.24 in average hourly wages and benefits paid to workers in private industry.
>
> In fact, according the BLS, the $28.24 in average hourly wages and benefits that private-industry workers now earn in the United States is less than the overall national average for hourly wages and benefits of $30.11.
>
> That is because the overall national average compensation is dragged upwards from the private-industry average by the much higher wages and benefits paid to state and local government workers—who take in an average of $40.76 per hour, according to BLS.
>
> […]According to BLS, private school primary, secondary and special ed teachers worked an average of 1,560 hours per year—or an average of 155 hours more than their public school counterparts.
>
> According to the BLS report, private school teachers were not compensated as highly as public school teachers. When private school primary, secondary and special ed teachers were added to the pool with public teachers, average hourly wages and benefits for teachers dropped from $56.59 to $53.87. The report did not publish the disaggregated average compensation for private school teachers alone.
>
> The $56.59 average hourly compensation for an American public primary, secondary and special education teachers includes $39.69 in wages and $16.90 in benefits, BLS reported.
>
> For each hour at work, according to BLS, the average American public school teacher is paid $4.78 in retirement and savings benefits alone.
>
> The average private sector worker, according to BLS, is paid $1.02 per hour in retirement and savings benefits–or less than one-fourth the average hourly

> retirement and savings benefits paid to public school teachers.

And what do we get for overpaying public school teachers? ECM sent me this article from the Manhattan Insitute.

Excerpt:

> If an out-of-control national debt weren't reason enough to worry about America's global competitiveness, here's another. Virtually all education reformers recognize that America's ability to remain an economic superpower depends to a significant degree on the number and quality of engineers, scientists, and mathematicians graduating from our colleges and universities—scientific innovation has generated as much as half of all U.S. economic growth over the past half-century, on some accounts. But the number of graduates in these fields has declined steadily for the past several decades. A report by the Information Technology and Innovation Foundation concludes that "bachelor's degrees in engineering granted to Americans peaked in 1985 and are now 23 percent below that level." Further, according to the National Center for Education Statistics, only 6 percent of U.S. undergraduates currently major in engineering, compared with 12 percent in Europe and Israel and closer to 20 percent in Japan and South Korea. In another recent study, conducted by the Conference Board of Canada, the U.S. scored near the bottom relative to major European countries, Canada, and Japan in the percentage of college graduates obtaining degrees in science, math, computer science, and engineering. It's likely no coincidence that the World Economic Forum now ranks the U.S. fifth among industrialized countries in global competitiveness, down from first place in 2008.
>
> Making matters worse is mounting evidence that America's best students—kids we're counting on to become those engineers, scientists, and mathematicians—have had a drop-off in academic performance over the past decade. A recent Thomas B. Fordham Institute study finds that the country's highest-performing students in the early grades are losing some of that advantage as they move through elementary school and into high school.

The teacher unions want taxpayers to give them even more money, which no expectations of better performance. And Obama agrees.

Excerpt:

> Our president agrees it's a good idea. Obama took in more teachers' union campaign funds than any other donor — $50 million in 2008. Not surprising, he touts pay hikes to teachers as his chief economic plan. "How do we pay them more?" he asked last month.
>
> A quick search of the atmosphere around teachers' salaries on Google News suggests he's off base.
>
> - In Sudbury, Mass., teachers are expected to get an 8% annual raise.

> - Polk County, N.J. — in the same state where Gov. Chris Christie had to explain basic economics to an angry, six-figure teacher unwilling to accept a salary freeze — teachers will get step raises.
> - In Alameda County, Calif., unions are demanding the county drain its rainy day fund to pay teachers.
> - In Richmond, Va., Gov. Bob McDonnell has struggled to find an extra $1.6 billion for teachers' pensions.
>
> Oh yes, and don't forget that the largest chunk of the stimulus package of 2009 went to "education."
>
> Yet educational output isn't improving.
>
> Why throw more money at a costly and unproductive system without demanding better results?
>
> In reality, it's like pouring public money into bankrupt Solyndra — money straight down the drain.

This is not good. We have to stop falling for the old canard that if you raise taxes to give the Department of Education more money, then it will automatically result in better student performance. It's a lie.

Three debates on divine sovereignty, predestination and free will

December 16, 2011 | by Wintery Knight | Link | Original Link

Earlier in the week I presented a philosophical debate on God and morality/purpose and a scientific/philosophical debate on God's existence and a scientific/philosophical debate on abortion. But this time I present to you three debates featuring a Calvinist debater and a foreknowledge debater. These debates are incredibly good and very friendly and cordial. If you have never heard a debate on theology before, then these are the ones to get you started. Theological debates are more fun than you think, you just need to choose the good ones.

The two views being debated are Calvinism and Foreknowledge. Calvinism is the view that God unilaterally predetermines a selected group of individuals who will know him – the "elect". Foreknowledge is the view that God draws people to him who he foreknows will freely respond to his overtures and come to know him. What does the Bible teach about these issues?

The Calvinist debater is Dr. James White:

> James White is the director of Alpha and Omega Ministries, a Christian apologetics organization based in Phoenix, Arizona. He is a professor, having taught Greek, Systematic Theology, and various topics in the field of apologetics. He has authored or contributed to more than twenty books, including *The King James Only Controversy*, *The Forgotten Trinity*, *The Potter's Freedom*, and *The God Who Justifies*. He is an accomplished debater, having engaged in more than one-hundred moderated, public debates with leading proponents of Roman Catholicism, Islam, Jehovah's Witnesses, and Mormonism, as well as critics such as Bart Ehrman, John Dominic Crossan, Marcus Borg, and John Shelby Spong. He is an elder of the Phoenix Reformed Baptist Church, has been married to Kelli for more than twenty-eight years, and has two children, Joshua and Summer.

The Foreknowledge debater is Dr. Michael Brown:

> Michael L. Brown holds a Ph.D. in Near Eastern Languages and Literatures from New York University and has served as a visiting or adjunct professor at Southern Evangelical Seminary, Gordon Conwell Theological Seminary (Charlotte), Trinity Evangelical Divinity School, Fuller Theological Seminary, Denver Theological Seminary, the King's Seminary, and Regent University School of Divinity. He has contributed numerous articles to scholarly publications, including the Oxford Dictionary of Jewish Religion and the Theological Dictionary of the Old Testament. Dr. Brown is the author of twenty books, including, Our Hands Are Stained with Blood: The Tragic Story of the "Church" and the Jewish People, which has been translated into more than twelve languages, the highly-acclaimed five-volume

> series, Answering Jewish Objections to Jesus, a commentary on Jeremiah (part of the revised edition of the Expositor's Bible Commentary), and several books on revival and Jesus revolution.

Now, let's get ready to rumble!

First debate

A nice friendly debate that introduces the topic. This is the best debate for casual listeners and non-Christians.

The MP3 file is here.

Summary:

- Introduction to Calvinist James White and some of his 90 debates
- What is Calvinism and why is it important?
- Does God love all people the same way in Calvinism?
- Does God desire the salvation of all people in Calvinism?
- Is the offer of salvation to all people a genuine offer on Calvinism?
- Does Calvinism diminish or augment God's sovereignty?
- Can God accomplish his will by permitting evil creaturely actions?
- Did Jesus die only for the "chosen", or for the possibility of salvation for all?
- Does a person's responding to God's offer of savaltion detract from Gods glory?
- Does our ability to resist God's grace mean that we are "stronger" than God?

There is a little static in the audio for a few seconds every time they come back from a break, but nothing major.

Second debate, on specific passages in the Bible

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- John 6
- Romans 8, 9
- Ephesians 1

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the Calvinist debater.

Third debate, on specific passages in the Bible

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- Luke 13:34-35 (Deuteronomy 5:28-29)

- Ezekiel 18:21-32 (Jeremiah 3:19-20; Ezekiel 22:30-31)
- 1 John 2:1-2 (2 Pet 2:1).

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the foreknowledge debater.

William Lane Craig debates James Crossley: Did Jesus rise from the dead?

December 17, 2011 | by Wintery Knight | Link | Original Link

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and so there isn't very much to mock him for.

SUMMARY

William Lane Craig's opening speech

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing

- The empty tomb was discovered by women
    - the testimony of women of women was not normally allowed in courts of law
    - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

James Crossley's opening speech

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

William Lane Craig's first rebuttal

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't

undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

James Crossley's first rebuttal

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

William Lane Craig's second rebuttal

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

James Crossley's second rebuttal

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling

- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for

that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

William Lane Craig's conclusion

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

James Crossley's conclusion

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don’t have any earlier sources, so we just don’t know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn’t check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

25% of UK women under 16 admit they've engaged in premarital sex

December 17, 2011 | by Wintery Knight | Link | Original Link

From the UK Daily Mail.

Excerpt:

> More than a quarter of young women today lost their virginity when they were below the legal age of consent, NHS figures reveal.
>
> Some 27 per cent of 16 to 24 year-olds admit they were 15 or under when they had sex for the first time.
>
> One in eight of this age group have already had sex with at least ten different partners.
>
> […][J]ust 4 per cent of women now aged 55 to 64 first had sex when they were under-age. This rises to 10 per cent of 45 to 54 year-olds, and 14 per cent of 35 to 44 year-olds.
>
> […]Norman Wells, director of the Family Education Trust said: 'Over recent years we have witnessed the systematic removal of every restraint which in previous generations served as a disincentive to underage sexual activity.
>
> 'Sex education in many schools has had the effect of breaking down the natural inhibitions of children with regard to sexual conduct, and the age of consent is rarely enforced, so young people no longer have any fear of legal proceedings.
>
> 'On top of that, the ready availability of contraception means that a girl's fear of pregnancy is no longer considered a good enough reason for rejecting her boyfriend's advances, and confidentiality policies mean that a girl need not worry about what her parents would think about her being sexually active, obtaining contraception, being treated for a sexually transmitted infection or even having an abortion, because they don't have to be told.'
>
> The figures have come from a survey of the sexual behaviours of 8,420 men and women aged 16 to 69, carried out by the NHS this year for the first time.
>
> They also reveal that one in seven women aged 16 to 24 who had lost their virginity had caught a sexually transmitted infection at least once. Only four in ten said they always used contraception when having sex.

The UK Daily Mail reports on a new study that shows that women who lose their virginity as teenagers are more likely to divorce. (H/T Dina, Mysterious C)

Excerpt:

> Women who lost their virginity as young teenagers are more likely to divorce – especially if it was unwanted, according to new research.

> The University of Iowa study shows that 31 per cent of women who had sex for the first time as teens divorced within five years, and 47 per cent within 10 years.
>
> Among women who delayed sex until adulthood, 15 per cent divorced at five years, compared to 27 per cent at 10 years.
>
> The findings were published in the April issue of the Journal of Marriage and Family.
>
> Author Anthony Paik, associate professor of sociology in the university's College of Liberal Arts and Sciences, examined the responses of 3,793 married and divorced women to the 2002 National Survey of Family Growth.
>
> The study showed, however, that if a young woman made the choice to lose her virginity as a teenager, there was no direct link to a marital split later in life.
>
> If the sexual act took place before the age of 16 women were shown more likely to divorce, even if it was wanted.

So what caused this explosion of premarital sex?

Excerpt:

> Planned Parenthood's anointed sex missionaries received their first federal funding in the Lyndon Johnson administration. The sort of "sex education" now pushed in Santa Fe and elsewhere started in 1968 when the National Education Association Journal called for "sex education as an integral part of school curriculum beginning in early grades."[3] Planned Parenthood, the NEA, and herds of shrill progressives were following a behavioral pattern characteristic of the 1960s left.
>
> An early example of the pattern emerged in the reactions to Rachel Carson's 1962 Silent Spring scare-book, which got DDT banned and still enables the malaria deaths of about 3,000 children a day. Paul Ehrlich's 1968 Population Bomb — turned dud — warned of mass starvations unless humanity curbs its reproductive enthusiasm. Then also in 1968, the NEA Journal demanded solutions to imagined problems.
>
> Imagined, because calls for sex education were based on "problems" that lived only in the minds of anointed ones seeking to spread agendas. "Contraception education" would allegedly reduce unwanted pregnancies and illegitimate births.[4] A "crash educational program"[5] would arrest out-of-control venereal disease, while general sex education would address "the emotionally disastrous results of irresponsible sexual behavior."[6] The claims shared a common thread: fictitious bases.
>
> Not only were there no disease and illegitimacy crises, but indicators were solidly improving at the time of the alarmists' claims. As Sowell documents in The Vision of the Anointed,[7] teenage pregnancies and venereal disease declined during the 1950s and 1960s. Yet over skeptics' protests that sex education would

> increase sexual behavior, Planned Parenthood and public schools forged ahead to curtail behaviors that were already fading. Sex-ed was off and running.
>
> And results followed.
>
> During the 1970s, pregnancies among fifteen- to nineteen-year-olds jumped 41 percent.[8] Between 1970 and 1984, abortions among unwed fifteen- to seventeen-year-olds more than doubled and birth rates jumped 29 percent.[9] By 1976, five years of data showed unmarried girls fifteen to nineteen having sex at increasing rates.[10] And not only did venereal disease not subside, but teen gonorrhea rates tripled between 1956 and 1975.[11]
>
> In the 1950s, 13 percent of teen girls had been sexually active. By the late 90s, the figure had tripled. Premarital intercourse, approved by less than a third of women in the 1950s, was acceptable to 91 percent by the late 80s. By 2005, over two-thirds of Blacks and half of Latino high-schoolers were having intercourse, while over half of all teens fifteen to nineteen were performing oral sex. By 2006, babies born to unmarried women accounted for 37 percent of all births, [12] 70 percent among Blacks. The Black illegitimacy rate reflected a 218 percent explosion over forty-five years.
>
> Such realities have drawn dismissive responses from sex-ed advocates. Incredibly, the horrific trends of the 1970s and 1980s were offered as reason for more sex education.[13] **Yet amid cover-ups and excuses, the sex-ed crowd's true motives were exposed in 1978, in of all places, Congress. One committee report noted that despite sex education's stated objective of reducing teen pregnancies and sexually-transmitted disease, the real goal "of most sex educators appears to be encouragement of healthy attitudes about sex and sexuality."**

When I hear about things like this I think about the statistics that how that relationship stability is directly correlated to the number of pre-marital sexual partners. The more pre-marital sexual partners you have, the less like that your marriage will last. Those are the facts. And my concern is for the children who are being born from these women who will not have a stable development to grow up in, with a mother when they're young, and a father as they grow older.

Why does the left push premarital sex even when we know that it undermines marriage? Two reasons. First, they oppose marriage because it traditionally implies different sex roles – men work, women stay home. Feminists on the left want women to work like men work. They don't want women to aspire to marriage and family. Second, the left thinks that the best way to stop people from having feelings of shame and guilt when they have premarital sex is to encourage everyone to do it. They want to normalize it.

The way that the left deals with the skyrocketing numbers of teen pregnancies and sexually-transmitted infections that result from this policy is to double down with more sex education, free abortions and more government spending on social programs, followed by tax hikes to pay for all the lifestyle-outcome-equalizing. And then, of course,

fewer working men can afford to marry because of those tax rates, and fewer women can afford to stay home and raise their young children.

After all, the left things that there's no social problem in the world that can't be fixed by a little more government intervention and public school indoctrination. If worse comes to worse and the health care costs costs increase, we can just make health care "free" by nationalizing it to completely separate behaviors from consequences. That should get rid of the problem, because if you make getting sick free, people will stop getting sick. And if all of these broken homes create children who commit criminal acts, we can always ban guns. That should get rid of the crime problem, because if you make it impossible for law abiding people to defend themselves, then criminals will stop committing crimes. That's how the left thinks. Or rather – that's how the left *feels*.

60 Minutes edits out Obama's claim to be the fourth best President in US history

December 18, 2011 | by Wintery Knight | Link | Original Link

Newsbusters has the 60 Minutes transcript. (H/T ECM)

Excerpt:

> KROFT: Tell me, what do you consider your major accomplishments? If this is your last speech. What have you accomplished?
>
> PRESIDENT OBAMA: Well, we're not done yet. I've got five more years of stuff to do. But not only saving this country from a great depression. Not only saving the auto industry. But putting in place a system in which we're gonna start lowering health care costs and you're never gonna go bankrupt because you get sick or somebody in your family gets sick. Making sure that we have reformed the financial system, so we never again have taxpayer-funded bailouts, and the system is more stable and secure. Making sure that we've got millions of kids out here who are able to go to college because we've expanded student loans and made college more affordable. Ending Don't Ask, Don't Tell. Decimating al Qaeda, including Bin Laden being taken off the field. Restoring America's respect around the world.
>
> The issue here is not gonna be a list of accomplishments. As you said yourself, Steve, you know, **I would put our legislative and foreign policy accomplishments in our first two years against any president — with the possible exceptions of Johnson, F.D.R., and Lincoln — just in terms of what we've gotten done in modern history.** But, you know, but when it comes to the economy, we've got a lot more work to do. And we're gonna keep on at it.

Here are the facts:

The Obama Economic Record			
	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011
Is that the record of the 4th best President in U.S. history?

Failed Democrat politician sues pro-life group for exposing his voting record

December 18, 2011 | by Wintery Knight | Link | Original Link

From U.S. News and World Report. (H/T Sense of Events)

Excerpt:

> When voters in Ohio's 1st Congressional District threw Democrat Steve Driehaus out of office after only one term, he did not bow out gracefully. No, he decided to get even. So he did what anyone does in today's culture: he sued somebody.
>
> Charging that its activities contributed to his defeat and thus to his "loss of livelihood," Driehaus is suing the Susan B. Anthony List, a group that supports pro-life candidates for Congress and which has been one of the leading and most effective organizations involved in the fight to cut off federal funding to Planned Parenthood.
>
> During the 2010 elections the Susan B. Anthony List engaged in a campaign to identify and call out a group of allegedly anti-abortion-rights members of Congress who provided the margin that allowed President Barack Obama's reform of the nation's healthcare system to get through the U.S. House of Representatives. The Susan B. Anthony List said their vote in favor of the law, which did not include any pro-life protections, amounted to a betrayal of their pro-life principles.
>
> According to Driehaus, who was one of that group, what the Susan B. Anthony List said in its public communications amounted to a malicious lie that contributed to his defeat. Amazingly, rather than laugh the suit out of court U.S. District Court judge Timothy S. Black, an Obama appointee, is allowing it to go forward. …
>
> Driehaus's suit is breaking new legal ground and may already be having a very chilling effect on political speech. It goes directly at the heart of our First Amendment protections and criminalizes what is at least a difference of opinion. And it's curious that the case has not received more attention from the national press.
>
> What is equally curious, however, is why Judge Black has allowed the case to move forward and why he did not recuse himself from it since, as Barbara Hollingsworth reported Friday in The Washington Examiner, he apparently is the former president and director of the Planned Parenthood Association of Cincinnati. As seeming conflicts of interest go this one is a real humdinger.

So this politician takes certain positions and the SBA List makes known to the public what those positions are, and he sues them. And an Obama-appointed judicial activist thnks that the case should go forward. This is just another example of the left wanting to

control speech and the flow of information. There is something alarming about the way that the left operates when dealing with dissent. They are so desperate to achieve uniformity of opinion, for all their misleading talk about diversity, that they don't blink about using force to silence anyone who disagrees with them. And this doesn't just happen on the abortion issue, where pro-life demonstrators are routinely hand-cuffed and arrested by police. It happens with everything from same-sex marriage to global warming to Darwinian evolution.

People on the secular left are the most close-minded people in the world, and they seem to think nothing about using force to punish those who disagree with them. They won't debate – they prefer to overpower. Is it really so hard to believe? We just came off of the 20th century where the secular leftists murdered 100 million people, in places like Cambodia, North Kora, China and the Soviet Union. Human rights, like the right to life and freedom of speech, are *invented* rights on a secular leftist worldview. They aren't objective – and that's why people on the secular left find it so easy to violate them – because their worldview has no capacity to ground fundamental human rights. If there is no Creator and Designer of the universe, then anything is possible – we are all just matter in motion. Whatever standards of conduct we agree on are arbitrary and subjective – just conventions that vary from by time and place – from one society to the next. For a secular leftist, any immoral act is permissible. Their rule is "do what you like, and don't get caught".

Not all secular leftists are fascists, to be sure. But their worldview does seem to lend itself to narrow-mindedness and intolerance.

Rick Santorum exposes Mitt Romney's record on gay rights in Iowa GOP primary debate

December 19, 2011 | by Wintery Knight | Link | Original Link

I wanted to wait until till Monday to post this make sure everyone saw this.

Excerpt:

> After the debate, Romney issued a challenge that Santorum wouldn't be able to find any respected legal authorities that would agree with his characterization of Romney's culpability.
>
> Romney, as he has been on so many other things over the years, is wrong.
>
> When I contacted Mat Staver, Founder and Chairman of Liberty Counsel, for his response to the exchange, he sent me the following statement:
>
> *"Rick Santorum's statement during the debate about Mitt Romney's actions regarding same-sex marriage are correct. I litigated in Massachusetts by filing a suit in federal court to prevent the implementation of same-sex marriage. Due to federalism issues with the federal courts being asked to block a state court action, the federal courts were constrained not to get involved.*
>
> *Having spent considerable time reviewing the Massachusetts Constitution, drafted by John Adams, I can say that the Massachusetts Constitution is unique with respect to marriage and domestic relations by vesting the authority over marriage to the Legislature. The provision is explicitly set forth in the Massachusetts Constitution. The Massachusetts Supreme Judicial Court ruled that the Legislature should act within a certain time to implement same-sex marriage, but the Legislature refused to act. Yet, Gov. Romney on his own went ahead of the Legislature and forced the implementation of same-sex marriage. Not only was he not required to implement same-sex marriage, the Massachusetts Constitution gave him no authority to do so. Gov. Romney should not have acted until the Legislature acted as that is the body vested by the Massachusetts Constitution with authority over marriage.*
>
> *Sen. Rick Santorum was right and Gov. Mitt Romney was wrong."*

And more:

> Likewise, Dr. Herb Titus was the founding dean of the School of Public Policy at Regent University, and later served as the founding dean of Regent Law School. Before that he studied under Dr. Francis Schaeffer, and graduated from Harvard Law School. Titus has worked with the U.S. Justice Department, and is admitted to practice before the U.S. Supreme Court. His book *God, Man, and Law* is a must-read for anyone interested in preserving the rule of law for the next generation.

> I contacted Dr. Titus on Friday morning for his response to the Santorum-Romney exchange. He replied back with the following:
>
> *…I am a graduate of the Harvard Law School. I am an active member of the Virginia bar and the bar of a number of federal courts, including the United States Supreme Court. As a professor of constitutional law for nearly 30 years in four different ABA-approved law schools, and as a practicing lawyer, I have written a number of scholarly articles and legal briefs on a variety of constitutional subjects; including the nature of legislative, executive and judicial powers and the constitutional separation of those powers.*
>
> *I am generally familiar with the Massachusetts Constitution, and especially familiar with that constitution's provision dictating that no department shall exercise the powers that belong to either of the other two departments "to the end it may be a government of laws and not of men."*
>
> *As Governor, Mr. Romney has claimed that he had no choice but to obey the Supreme Judicial Court's opinion. This claim is false for several reasons….*

The quote continues listing SIX REASONS why Romney did not have to issue the marriage licenses to gay couples. But he did it anyway.

Here's a 2007 New York Times article to show that explains Romney's real record.

Excerpt:

> Mitt Romney seemed comfortable as a group of gay Republicans quizzed him over breakfast one morning in 2002. Running for governor of Massachusetts, he was at a gay bar in Boston to court members of Log Cabin Republicans.
>
> Mr. Romney explained to the group that his perspective on gay rights had been largely shaped by his experience in the private sector, where, he said, discrimination was frowned upon. When the discussion turned to a court case on same-sex marriage that was then wending its way through the state's judicial system, he said he believed that marriage should be limited to the union of a man and a woman. **But, according to several people present, he promised to obey the courts' ultimate ruling and not champion a fight on either side of the issue.**

Got that? Mitt Romney isn't going to fight anyone to protect traditional marriage.

More:

> Jonathan Spampinato, a Republican activist who is openly gay and worked as Mr. Romney's deputy political director during the run for governor, says he always felt that Mr. Romney was comfortable with gays. When it came to gay rights beyond the issue of marriage, Mr. Spampinato recalls, Mr. Romney asserted during that campaign that there was only the smallest difference between himself, a supporter of domestic partnership rights like survivorship and hospital visitation, and his Democratic opponent, Shannon O'Brien, who backed civil

> unions.
>
> “He explained his position to Log Cabin club members early on,” Mr. Spampinato remembered, “by saying, ‘Regardless of what you call it, if you look at the benefits I support and the benefits Shannon supports, there’s probably a hair of difference.’ ”
>
> […]Recollections by gay Republicans whom Mr. Romney courted and worked with during his campaign for governor, and in his unsuccessful run for the Senate in 1994, produce a portrait of a man they genuinely saw as their partner in their fight for broader acceptance.
>
> After the breakfast meeting in 2002, where the Log Cabin board unanimously decided to endorse him, he said in an interview with Bay Windows, a gay newspaper, that he would use his bully pulpit as governor to lobby legislators for domestic partnership benefits.
>
> “Those kinds of things I think I can generate a great deal of public support for,” he said, “and therefore create pressure for legislators that otherwise might not think in those terms.”
>
> **And, in the aftermath of the Massachusetts court decision, Mr. Romney, though aligning himself with the supporters of a constitutional amendment, did order town clerks to begin issuing marriage licenses to same-sex couples. Some members of Log Cabin Republicans say that in doing so, he ultimately fulfilled his promise to them despite his own moral objections.**

Would Romney support legislation like ENDA, which would force Christian churches and ministries to hire gays?

> “He couldn’t have been more kind and interested in understanding gay rights,” said Rich Tafel, who was executive director of Log Cabin’s national organization at the time. “He struck me as a business person who just wanted to understand this issue, and he wanted to communicate that he wasn’t antigay at all.”
>
> **Leaders of the group worked with Mr. Romney’s Senate campaign to draft a letter, which he eventually released, about his commitment to gay rights. He declared that he would go beyond Mr. Kennedy’s considerable record on the issue. He pledged his support for federal legislation that barred discrimination against gay men and lesbians in employment, and praised President Bill Clinton’s “don’t ask, don’t tell” policy for the military as a first step toward “gays and lesbians being able to serve openly and honestly.”**

Mitt Romney’s record shows strong support for abortion and gay rights. Whatever he says now when he is running for President doesn’t count – he’s been pro-abortion and pro-gay rights since 1994. Nothing he does while on the campaign trail should cause us to doubt

his record.

Barack Obama's Hawaiian vacation estimated to cost $4 million dollars

December 19, 2011 | by Wintery Knight | Link | Original Link

Obama plans to hit the golf course at taxpayer expense
From Hawaiian Reporter. (H/T Director Blue)

Excerpt:

> The U.S. Secret Service has arrived, street barricades are in place, and the U.S. Coast Guard has stationed itself in the waters surrounding Kailua, Oahu.
>
> That is a sure sign President Barack Obama's security team is preparing for the first family to arrive in the small beachside community as early as Friday night for what is expected to be a 17-day vacation.
>
> The President and his family are traveling separately to Hawaii because he wants resolve the payroll tax cut issue before leaving Washington – and his wife does not want to wait.
>
> But the advanced trip and the cost that comes with it – as much as $100,000 (flight and security) – adds to an already expensive vacation for the taxpayers.
>
> *Hawaii Reporter r*esearch shows the total cost for the President's visit for taxpayers far exceeded $1.5 million in 2010 – but is even more costly this year because he extended his vacation by three days and the cost for Air Force One travel has jumped since last assessed in 2000. In addition, ***Hawaii Reporter*** was able to obtain more specifics about the executive expenditures.
>
> The total cost (based on what is known) for the 17-day vacation roundtrip

> vacation to Hawaii for the President, his family and staff has climbed to more than **$4 million**. Here's why.
> **TRAVEL: $3,629,622**
>
> The biggest expense is President Barack Obama's round trip flight to Hawaii via Air Force One, a cost the GAO office estimated at $1 million in the year 2000. Contacted today, the GAO confirmed there is no report the independent office affiliated with Congress has prepared since 2000 to operate Air Force One and Air Force Two.
>
> However, the U.S. Air Force provides the most current numbers of $181,757 per flight hour. Travel time for Air Force One direct from Washington D.C. to Hawaii is about 9 hours or $1,635,813 each way for a total of **$3,271,622** for the round trip to Hawaii and back.
>
> The cost for USAF C-17 cargo aircraft that transports the Presidential limos, helicopters and other support equipment to Hawaii was not made available. However, the flight time between Andrews Air Force Base and Hawaii is at about 21.5 hours roundtrip, with estimated operating cost of $12,000 per hour. (Source: GAO report, updated by C-17 crew member). The United States Marine Corps provides a presidential helicopter, along with pilots and support crews for the test flights, which travel on another C-17 flight**.** That is **$258,000,** not including costs for the 4 to 6 member crew's per diem and hotel.
>
> Mrs. Obama's early flight to Hawaii costs about $63,000 (White House Dossier), but add security and personnel for a total of about **$100,000.**

The rest of that article calculates the remaining components of the FOUR MILLION DOLLAR bill.

On another topic, here is a re-cap on our budget situation in 2012:

Barack Obama, Budget Deficit and Debt to GDP

Remember, the Democrats took control of the House and Senate in January 2007, and that's when the overspending started.

Why should we expect someone who can spend FOUR MILLION dollars on a vacation to have the discipline and frugality to balance the nation's books?

What opposition to Christmas displays tells us about atheism

December 19, 2011 | by Wintery Knight | Link | Original Link

A post critical of litigious atheists, by Doug Giles.

Excerpt:

The atheists I grew up with in Texas were a tad bit pluckier than today's lardy hagfish atheists who file lawsuits every winter when they see a child wrapped in swaddling clothes.

Yep, the anti-theists I used to hang out with in the Lone Star state were rugged individualists who were so busy milking this existence that they didn't have time to bleat like a stuck sheep because a plastic baby Jesus statue endangered their delicate beliefs.

My other non-believing buddies who weren't the robust Hemingway types were usually heady stoners who were into physics, Pink Floyd and Frisbee and were completely comfortable around people of faith versus today's reflexively irate, touchy atheists who pop a blood vein in their forehead if they accidentally hear "Silent Night" playing at Macy's.

For God's sake atheists, *übermensch* up why don't you?

Giles then goes on to explain one of the latest attempts by former-Pentecostal-hymn-singer Dan Barker to ban nativity scenes and other Christmas stuff from being displayed.

Then concludes:

Yep, according to the 21st century metrosexual atheist motif, anything that offends them should now be banned. That makes me scratch my head because I thought the atheists were the tough-minded ones who could stare death in the face and mock God and His dictates, but now a silicone statue of Yeshua in diapers puts them in a tailspin. Hello, sweetie.

He mentions Dan Barker in his article, so I think it's worth linking to this post I wrote about how Dan Barker abandoned Christianity. To persist in the Christian life requires a certain amount of intelligence and wisdom. You have to be good at life. Dan couldn't cut it.

Video: William Lane Craig and Peter Millican debate "Does God Exist?"

December 20, 2011 | by Wintery Knight | Link | Original Link

From Justin Brierley and the Reasonable Faith UK Tour:

The debate was held at the University of Birmingham, England in 2011. I would put this debate in the top 3 Craig debates ever, along with his debates against Austin Dacey and Walter Sinnott-Armstrong.

My summary of the Craig-Millican is below. This debate is really meant for advanced students, but if you read my post "What you need to know about the BVG Theorem" before watching the debate, it should help you to follow along.

Dr. Craig's opening speech:

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the

existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

Dr. Millican's opening speech:

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence

we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

Dr. Craig's first rebuttal:

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt

their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

Dr. Millican's first rebuttal:

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations.

But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

Dr. Craig's second rebuttal:

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

Dr. Millican's second rebuttal:

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that

makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

Dr. Craig's final rebuttal:

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

Dr. Millican's final rebuttal:

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3 minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they

undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

UK Liberal Democrats oppose tax breaks for getting married and staying married

December 20, 2011 | by Wintery Knight | Link | Original Link

From the UK Telegraph.

Excerpt:

> In a speech designed to reassert the Liberal Democrats' voice in government, the embattled Deputy Prime Minister will also set out his vision of an "Open Society" — in direct contrast to the Big Society trumpeted by David Cameron, the Prime Minister.

> Tax breaks for married couples are a key demand of the Tory faithful and Mr Cameron has committed to their introduction before the next election. The issue has the potential to become a major source of friction within the Coalition in the New Year.
>
> As Mr Clegg delivers his speech in Westminster on Sunday, a number of Tory MPs will meet David Gauke, the Treasury minister, to press the government to introduce the tax break for married couples as soon as possible. It means Mr Clegg is now in open disagreement with the senior Coalition partner on two major areas of policy — the marriage tax break and Europe.
>
> **In his speech to Demos, the Left-leaning think tank, Mr Clegg will say: "We should not take a particular version of the family institution, such as the 1950s model of suit-wearing, breadwinning dad and aproned, homemaking mother, and try and preserve it in aspic.**

> "That's why Open Society Liberals and Big Society Conservatives will take a different view on a tax break for marriage. We can all agree that strong relationships between parents are important, but not agree that the state should use the tax system to encourage a particular family form."
>
> […] Research has suggested that children brought up by two married parents living together are happier, fare better at school and are less likely to become heavily involved in alcohol, crime or drugs.
>
> The Centre for Social Justice [CSJ], a pro-family think tank set up by Iain Duncan Smith, the Work and Pensions Secretary, said that just one in 11 married couples separated before their child's fifth birthday, compared with a third of unmarried couples.
>
> Gavin Poole, its executive director, said: "Nick Clegg's stance flies in the face of all the evidence, completely ignoring national and international data demonstrating how important marriage is to the health and wellbeing of children and families."

And this isn't surprising – Obama has said the same thing about not preferring traditional marriage over other arrangements.

Excerpt:

> President Obama has included homosexual couples raising children in a list of "American families" in a recent proclamation declaring Monday National Family Day.
>
> "Whether children are raised by two parents, a single parent, grandparents, a same-sex couple, or a guardian," said Obama in the proclamation, "families encourage us to do our best and enable us to accomplish great things."
>
> The president went on to encourage participation in Family Day by sharing an evening meal as a family unit. "A strong nation is made up of strong families, and on this Family Day, we rededicate ourselves to ensuring that every American family has the chance to build a better, healthier future for themselves and their children," he said.
>
> The family day proclamation is in keeping with Obama's oft-professed support for the homosexualist agenda.
>
> When Obama proclaimed June "LGBT (lesbian, gay, bisexual, transgender) Pride Month," he reiterated that he supports several issues on the homosexual docket, including homosexual hate crime legislation, homosexual "affirmative action" in the workplace, allowing open homosexuals in the military, and adoption to homosexual couples.
>
> During the same month, Obama signed a presidential memorandum extending spousal benefits to homosexual partners and other unmarried partners of federal employees.

It's important to realize that the secular left, including our own Democrats here at home, are committed to the destruction of marriage. They support policies like sex education, single mother welfare, no-fault divorce, redefining marriage, and so on. They do not support traditional marriage. And they will oppose and and all incentives given to people who choose to marry and who choose to stay married. They do not care about providing children with a stable environment to grow up in, with a mother and a father who are biologically linked to the children. They would rather have more children growing up in poverty and exposed to violence, neglect and abuse than promote traditional marriage.

The secular left opposes traditional marriage for 2 reasons. First, they do not like the way that traditional marriage tends to lend itself to the man working and the woman staying at home – they want both people to work and pay taxes, so the parents are "equal" and they want the government feed and educate the children instead, so all the children are "equal". Second, they do want to encourage "healthy attitudes" about sex, so that people who have sex before marriage do not feel guilty about it – since the school has told them that "everyone is doing it". The left doesn't want people who decide not to marry to feel bad about sex. They prefer to remove the moral boundaries that protect children.

In fact, if you are a woman, and you vote for the leftists, and you are wondering why you are not married, you should understand that the very policies you vote for are the policies that take away a man's willingness to marry and his ability to perform the traditional obligations of a husband and father. He has no reason to commit in order to get sex – you're giving him sex for free. And he has no money to provide for a family – he paid it all to the state in taxes. And he has no ability to lead on moral and spiritual issues – that's all been beaten out of him in the public schools, where objective morality and theism are frowned on. Think before you vote.

Why do men become feminists? Why do men support feminism?

December 20, 2011 | by Wintery Knight | Link | Original Link

This is a must-read from Stuart Schneiderman.

Excerpt: (links removed)

> How does a man become a feminist? What would lead a normally constituted American male to throw in with an ideology that appears to be unfriendly to men?
>
> The answer is: gratitude.
>
> True enough, very few men openly identify themselves as feminists. Still, many men happily mouth the basic tenets of the feminist credo. They may not understand what they are saying, but they support the cause because they feel grateful for what feminism has done for them.
>
> Take Hugo Schwyzer. He has been married four times. He has had countless casual sexual encounters and no small number of relationships. Manifestly, he feels grateful and perhaps endebted to feminism for having provided him with so much free love.
>
> So, he defends the feminist party line.
>
> In debating Neely Steinberg Schwyzer does not dispute that feminism, especially sex-positive feminism, has helped create the hookup culture.
>
> Yet, Schwyzer thinks it's a good thing, for him, for his fourth wife, and for everyone who wants to learn from experience.
>
> […]Steinberg explains what feminism has done for men: "Instead of embracing the emotional and biological differences between men and women, or at least considering them, sex-positive feminists buried their heads in the sand, unintentionally creating, in the meantime, a veritable sexual playground for men, often times at the expense of women, many of whom just wanted relationships that were both sexually and emotionally satisfying. Women were told they could have their cake and eat it too, but the dessert in many ways has been a better payoff for men."
>
> How does feminism create male adherents to its cause? It provides them with an endless supply of young women.
>
> Of course, this assumes that men want nothing more from women than free sex. If men are looking for marriage and family, the hookup culture detracts from this goal. It teaches men to respect women less. It teaches women to respect themselves less.
>
> It should not surprise anyone that fewer and fewer Americans are getting married

> today.

That’s the excerpt, read the whole thing – but watch out for the F word, which occurs once. I think you’ll notice that he is talking about some of the same things I talk about.

Michele Bachmann takes on NBC leftist David Gregory on Meet the Press

December 20, 2011 | by Wintery Knight | Link | Original Link

From Newsbusters. (14 minutes)

Here's the partial transcript:

> **MICHELE BACHMANN: When I came into Congress in January of 2007, the country was $8.67 trillion in debt; today it's $15 trillion. Next year it'll be $17 trillion. We're acting like Greece and like Italy, and that's what people are frustrated with. They want us to act like a first world nation, not like what President Barack Obama's doing. He's acting like we're a banana republic. We've got to get our act together and stop spending money that we don't have.**
>
> DAVID GREGORY: You're not – I mean, you're seriously calling the United States acting like a banana republic compared to the sort of debt issues that, that the Eurozone countries have had?
>
> **BACHMANN: What, what I'm doing is I'm – what I'm doing is saying that what – the decisions that Barack Obama is making is acting like a banana republic. It's absolutely irresponsible what President Obama is doing to get behind measures to, to increase spending to such a level that we're going into debt $1.5 trillion every year. This compares to President George Bush. Back in 2007, our debt for the entire year was $160 billion.**
>
> GREGORY: Congresswoman, that just misstates the record.
>
> BACHMANN: Well, we topped that just in the month of November alone.
>
> GREGORY: I mean, the Bush presidency, the-
>
> BACHMANN: There's no comparison. We're talking-
>
> GREGORY: -the, the debt – wait a minute, Congresswoman.
>
> BACHMANN: David, let me just finish.
>
> GREGORY: No, wait a minute. I just want to stop you for accuracy.
>
> BACHMANN: Let me just finish. We're talking-
>
> GREGORY: For accuracy, Congresswoman.
>
> BACHMANN: -we're talking 10 times.
>
> GREGORY: For accuracy, the debt exploded under the Bush administration.
>
> **BACHMANN: For accuracy. For accuracy. David, David, then, then let me finish. Do a comparison. I agree with you that there was too much money that was spent under George Bush. But for the year 2007, the**

> **debt for the year was $160 billion. The debt for this last year was about $1 1/2 trillion. That's almost 10 times more in debt than George Bush. And just for the month of – for the month of, I think it's November of this year, it was more than the entire year for 2007. So there's no question that the debt has just skyrocketed under, under President Obama in comparison to George Bush.**
>
> GREGORY: Let me just point out, I don't want to appear to be cutting you off. Sometimes the satellite delay can exacerbate that, so I wanted to make sure you could finish your point.

Can you imagine that DAVID GREGORY doesn't even know what the deficit graph looks like?

Here it is:

Last Republican budget was in 2007

The last Republican budget was 2007. The deficit was 160 billion. It's almost TEN TIMES that under Obama. The Democrats took over the House and Senate in the 2006 mid-term elections. Doesn't David Gregory know that? Does anyone in the mainstream media know ANYTHING?

Atlanta abortion doctor charged with Medicare fraud

December 21, 2011 | by Wintery Knight | Link | Original Link

From the liberal Atlanta Journal-Constitution.

Excerpt:

> A metro Atlanta physician and his former office manager have been charged with Medicaid fraud after they billed the government nearly $400,000 for abortion services – which are barred from federal funding – and for ultrasounds not performed, authorities said.
>
> Dr. Tyrone Cecil Malloy and CathyAnn Edwards Warner are charged in an indictment handed up Dec. 8 by a DeKalb County grand jury with two counts each of Medicaid fraud, according to a news release issued Monday by the Georgia Attorney General's Office.
>
> Malloy was arrested last week and has been released on bond to await trial, Channel 2 Action News reported. An arrest warrant was issued for Warner, and DeKalb and Clayton county authorities working together took her into custody Monday afternoon.
>
> […]The alleged fraud occurred at Malloy's Old National Gynecology, a medical practice in the 6200 block of Old National Highway in College Park, whose website says it specializes in first-trimester abortions.
>
> According to the indictment, between Dec. 9, 2007 and Aug. 9, 2010, the defendants billed the Georgia Medicaid program approximately $131,615 for new patient visits when, in reality, the visits were for elective abortions.
>
> The Georgia Medicaid program is funded jointly by the state and the U.S. Department of Health and Human Services. Under federal law known as the Hyde Amendment, federal funds cannot be used for elective abortion services; nor are abortions covered by Georgia Medicaid, the indictment states.
>
> Malloy and Warner also are charged in the indictment with billing Georgia Medicaid about $255,024 for detailed ultrasounds that actually were never performed during the same period from 2007 through 2010.

What happens when the government gets involved with paying medical bills? We get fraud. Government will never be as careful about how taxpayer money is spent as a private company will be about spending their own money.

Richard Dawkins, who claims to oppose genocide, vows to “destroy” Christianity

December 21, 2011 | by Wintery Knight | Link | Original Link

Rev. George Pitcher writes about an interview of Christopher Hitchens conducted by Richard Dawkins. (H/T Thinking Christian)

Excerpt:

> But the centrepiece of this Christmas edition is the main coup for the New Statesman – an interview by Prof. Dawkins with Christopher Hitchens, the great polymath who today lost his fight against cancer. It’s a fascinating read over three double-page spreads. Not least because Prof. Dawkins reveals a charming humility, allowing Hitchens to show his intellectual superiority at his own expense. Hitchens is thoughtful about CS Lewis and Christianity and rather leaves Prof. Dawkins floundering in his wake, occasionally interjecting little assents to show that he’s still there, as he struggles to keep up.
>
> But one of these interjections is most revealing. About half-way through, the Prof gets this in edgeways: ‘Do you ever worry that if we win and, so to speak, destroy Christianity, that vacuum would be filled by Islam?’
>
> So, ‘if we win…and destroy Christianity’. True, there’s a ‘so to speak’ in there, but it doesn’t do much. Try ‘If we win and, so to speak, kill all the Jews’ as an alternative. Doesn’t really work, does it? And Prof Dawkins can hardly claim that he was misquoted or taken out of context. He was editing the magazine, after all – there’s even a picture of him doing so, pen poised masterfully over page proofs.

Now you might think that Dawkins intends to destroy Christianity in debates, and not in the wars and purges of atheism that occurred last century in North Korea, Cambodia, China, the Soviet Union, and so on. Those atheist regimes caused the deaths of 100 million people, according to Harvard University Press. But Dawkins has refused to debate William Lane Craig on more than one occasion. So whatever he means by “destroy Christianity”, he doesn’t mean “defeat them in rational debate, using superior arguments and evidence”. He had his chance to do that, and he passed on it. So, he must mean something else by “destroying Christianity” other than persuasion.

Let’s find out what Richard Dawkins thinks about morality. Dawkins has previously written this:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will

> automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> ("God's Utility Function," *Scientific American*, November, 1995, p. 85)

Dawkins' view is that nothing is really good or bad objectively. Cultures just evolve certain conventions, and those conventions vary arbitrarily by time and place. I think we need to interpret his goal of destroying Christianity against the backdrop of his nihilism. 50 million unborn children have been killed in the United States since 1973 alone. That's 50 million people with distinct genetic codes different from their mothers or their fathers, who will never grow up to achieve their potential.

Dawkins himself is in favor of infanticide:

So what might destroying Christianity look like to an atheist?

Here it what destroying Christianity means in North Korea, the most atheistic country on the planet.

Excerpt:

> A Christian woman accused of distributing the Bible, a book banned in communist North Korea, was publicly executed last month for the crime, South Korean activists said Friday.
>
> The 33-year-old mother of three, Ri Hyon Ok, also was accused of spying for South Korea and the United States, and of organizing dissidents, a rights group said in Seoul, citing documents obtained from the North.
>
> The Investigative Commission on Crime Against Humanity report included a copy of Ri's government-issued photo ID and said her husband, children and parents were sent to a political prison the day after her June 16 execution.

That's what Kim Jong Il means by "destroy Christianity". What does Dawkins mean by it?

FLASHBACK: American Atheists calls for the eradication of Christianity.

If Ron Paul were President, 16 to 28 states would keep abortion legal

December 21, 2011 | by Wintery Knight | Link | Original Link

Which states would Ron Paul allow to legalize abortion?
From the Weekly Standard. (H/T Triablogue)

Excerpt:

> "[Ron Paul] has an outstanding chance of winning in Iowa," according to Bob Vander Plaats, who served as Mike Huckabee's 2008 state campaign chairman. "There's a lot about Ron Paul that people like," Vander Plaats says, pointing to Paul's "almost prophetic" vision of our economic problems and his commitment to do away with "politics as usual."
>
> But Paul could face trouble with values voters in Iowa, where 60 percent of GOP caucusgoers are evangelical Christians. Vander Plaats says his socially conservative umbrella organization, the Family Leader, has ruled out endorsing Paul because "sometimes [Paul's] libertarian views trump his moral compass."
>
> **"On abortion, [Paul] believes that's a states' rights issue, we believe that's a morality issue," says Vander Plaats. In a post-*Roe* v. *Wade* world, "We don't believe abortion should be legal in Maine and illegal in Iowa."** (Paul voted for the Partial-Birth Abortion Ban Act in 2003, but expressed deep reservations about voting for a federal law on abortion.)
>
> "We're very concerned" about Paul's position that the government shouldn't recognize civil marriage, Vander Plaats continues. The group also balks at some of Paul's foreign policy views. "Even though we may agree with him that we're

> not called to be the policeman of the world, we do believe we're called to stand shoulder to shoulder with Israel," says Vander Plaats. "And we do believe [a nuclear-armed] Iran is a definite threat not only to Israel, but to our freedom as well."
>
> […]Vander Plaats says he doesn't think very many Iowa voters are aware that Paul thinks it should be up to states to decide whether or not to protect human life. But now that Paul leading in the Iowa polls, his positions may come under greater scrutiny.

Here's a 2006 USA Today article listing the states that would make abortion legal under Ron Paul's plan.

Excerpt:

> •**Twenty-two state legislatures are likely to impose significant new restrictions on abortion.** They include nearly every state in the South and a swath of big states across the industrial Rust Belt, from Pennsylvania to Ohio and Michigan. These states have enacted most of the abortion restrictions now allowed.
>
> •**Sixteen state legislatures are likely to continue current access to abortion.** They include every state on the West Coast and almost every state in the Northeast. A half-dozen already have passed laws that specifically protect abortion rights. Most of the states in this group have enacted fewer than half of the abortion restrictions now available to states.
>
> •**Twelve states fall into a middle ground between those two categories.** About half are in the Midwest, the rest scattered from Arizona to Rhode Island.
>
> […]The 22 states likely to enact new restrictions include 50% of the U.S. population and accounted for 37% of the abortions performed in 2000, the latest year for which complete data were available.
>
> The 16 states likely to protect access to abortion include 35% of the U.S. population and accounted for 48% of the abortions performed.

So Ron Paul, *far from being pro-life*, would allow abortion on demand in 16 to 28 states, many of them the most populous states in the union – like California and New York. I understand that he calls allowing abortion in 16 to 28 states "pro-life", but voters have to think and decide – is that really pro-life? Is it really pro-life when the number of abortions per year will drop from 1.1 million to 550,000? Is that pro-life? (Assuming that the people in the pro-life states don't just cross the border to get an abortion elsewhere – which is false, of course). Paul's position is that he is personally pro-life, but he thinks that other people should be allowed to decide if an unborn baby can be killed or not, at the state level. Isn't that *pro-choice* though?

Similarly, Paul would allow states to redefine marriage to be anything they want it to be,

since he thinks that the definition of marriage is an issue that states should decide. That’s his view. Is that pro-marriage? Does that position take seriously the need for children to be raised by a mother and a father?

Ex-Planned Parenthood board member confirmed to 9th circuit court of appeals

December 22, 2011 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> Last week, the Senate confirmed the nomination of Alaska Supreme Court Justice Morgan Christen to become a member of the U.S. 9th Circuit Court of Appeals,one of the most left-wing federal appeals courts in the nation.
>
> The confirmation has President Barack Obama adding yet another pro-abortion judge to the nation's judicial system. Although Christen had to wait months to be confirmed, she will now serve on a court that will decide pro-life legislation coming from Pacific Coast states — usually declaring it unconstitutional.
>
> […]When she submitted her application to become a state Supreme Court justice, Christen made no mention of the fact that she is a former board member of Planned Parenthood and served the pro-abortion group in the mid 1990s.
>
> In his statement announcing Christen's nomination, Obama said, "I am proud to nominate this outstanding candidate to serve on the United States Court of Appeals. I am confident Justice Morgan Christen will serve the American people with integrity and distinction."
>
> […]The Alaska Planned Parenthood organization on which Christen served has been a vocal opponent of pro-life legislation at the state capital — most notably opposing repeated attempts by state legislators to pass parental notification and consent legislation allowing parents to know when their minor daughter is considering an abortion and requiring Planned Parenthood, the nation's leading abortion business, to obtain permission from the girl's parents beforehand.

Barack Obama is the most pro-abortion President in the history of the United States.

Who gives more to charity? Religious people or secular people?

December 22, 2011 | by Wintery Knight | Link | Original Link

Barbara Kay explains in the National Post.

Full text:

> No matter where you live, charity begins at home. But, as we learn from the Fraser Institute's newly released annual report on charitable giving, the question of where charity ends depends on where you live. For the 13th year in a row, Quebec has come out on the bottom of the Fraser Institute's charity scale.
>
> Of the provinces, Manitobans are the biggest givers, with 26% of those filing taxes donating to a registered charity, and 0.89% of total income being donated. Saskatchewan and Prince Edward Island tied for second place. Ontario, Canada's largest province, tied Alberta for fourth place with 24% of its tax filers donating 0.74% of total income to registered charities.
>
> And then there's Quebec. Oh dear. Only 21.7 % of Quebecers claimed donations to registered charities, and gave only 0.30% of their total income. On average dollar value donated, Alberta led with $2,112. And Quebec limped in at $606, half the national average of $1,399.
>
> Lest Albertans and Manitobans get swelled heads, they should know that no Canadian provinces are a patch on the Americans. Almost 27% of American tax filers donated to registered charities, compared with 23% of Canadians. Countrywide, Americans gave 1.32% of their aggregate personal income to charity, more than double the 0.64% that Canadians gave.
>
> What's up with these statistics? Aren't we supposed to be kinder and gentler than Americans?
>
> Well, one clue to deconstructing the Canadian figures, and in particular Quebec's lousy performance, comes from the news release: "Utah was by far the most generous jurisdiction in North America, with 33.4% of tax filers donating 3.09% of the total income earned in the state, nearly three-and-a-half times the share of aggregate income donated by Canada's top province (0.89%), Manitoba."
>
> Why? Here's a clue: Mormons constitute about 60% of Utah's population. Mormons give a lot to charity, in part because of their tithing system. And, countrywide, it's not just Mormons. The United States is a religious country – and research tells us that observantly religious people generally give more to charity (both in time and money) than non-religious people. Canada's secularism makes it a less generous place, no matter what we tell ourselves about the virtues of being Canadian.
>
> Another well-observed sociological phenomenon is that big government tends to

> discourage charity – both because people have less money to give to charity in high-tax jurisdictions, and because coddled nanny-state citizens believe that taking care of the poor huddled masses has become government's job. Statism dampens the impulse to be generous at an individual level.
>
> Quebec scores high on both secularism and nanny-statism. In fact, it is the least religious of the Canadian provinces (and in fact the most militantly anti-religious). Quebec also is the most statist (and highly taxed) of the provinces. Quebecers figure their taxes are taking care of all the social problems, or should be taking care of them, and it is therefore no surprise that they are the least likely to take responsibility for the afflictions of others.
>
> Taking personal responsibility for alleviating the sufferings of others is the mark of a mature individual. Statism tends to suffocate the blessing of empathy, and thereby promotes civic immaturity. One more in a long litany of reasons for working to bring down the size of government.

These findings echo Arthur Brooks' study on who gives most. Religious people give more than secular people, and that just stands to reason, given that the former generally takes morality to be objective, and the latter generally takes it to be subjective.

Typical working UK mother spends 19 minutes per day with her children

December 23, 2011 | by Wintery Knight | Link | Original Link

From the UK Daily Mail. (H/T Dina)

Excerpt:

> According to the Office of National Statistics, a typical working mother spends as little as 19 minutes a day with her children; working fathers even less.
>
> Time-neglect is what child psychologists call it, and they are studying its effect in middle-class families with increasing concern.
>
> 'We are seeing some of the most privileged and yet in some ways the most neglected children in history,' says child psychologist Dr Richard House, from the University of Roehampton.
>
> We have some of the longest working hours in Europe and the recession is piling pressure on parents to be the last to leave the office. The guilt parents feel about this has consequences for when they are with their children.
>
> 'Parents are reluctant to say "No" when they need to. They try to compensate by lavishing gifts on them. Neither is good for children's well-being and healthy development,' says Dr House.
>
> His warnings follow a Unicef report that admonished British parents for trapping their children in a 'cycle of compulsive consumerism' by showering them with toys and designer labels rather than time.
>
> […]Unicef's research also shows that what children actually want is more stable family time, as do many of the parents struggling to provide for them.
>
> More than two-thirds of mothers work, and no one would want to see the progress women have made in the workplace reversed.

No one except the husbands and the children, but who cares about them?

More:

> Historian Rebecca Fraser, mother of three daughters and author of A People's History Of Britain, says that while nostalgia for the Fifties is understandable, the progress of women in education makes a return to that model unlikely.
>
> 'In 1951, only one quarter of the tiny British student population (5 per cent of adults) were women, while in 2011 more than half the student population are female,' she says.
>
> 'With so many attending university, it is probably inevitable that most women are going to continue to want a career.'
>
> […]Child-care experts warn that time-neglect by high-achievers can have serious

> consequences on their children.
>
> Professor Suniya Luthar, a world expert in the welfare of children from affluent homes, has just completed research that shows the numbers of teenagers with significant mental health issues can be up to three times higher among those from high-achieving and prosperous families.
>
> ‘Traditionally, the view is that these children have it all, but the pressures on them are immense,’ says Professor Luthar.
>
> ‘The solution for any parent is to spend time with them.’
>
> They also need clear boundaries, she says, something that ‘uber-working’ parents often are less able to enforce.

Every decision a woman makes has to be based on the plan for a marriage, family and children. Ideologies like feminism and socialism are incompatible with marriage and family. What is the use of a woman crying crocodile tears over her voluntary neglect of her own children when every decision she made prior to marriage and after marriage is based on an anti-family, pro-government worldview?

When a woman votes for government to tax her future family, regulate her husband’s employer, and restrict the family to purchasing government services only (day care, public schools), then she must not complain when she is forced into the workplace and her child is handed to strangers to raise. That is the end result of being taken in by fashionable ideologies. When you oppose low taxes and small government, you oppose keeping money in the family. And that means that the wife will work, and the children will be raised by strangers. Women who vote for socialism, environmentalism, feminism, etc. are forcing themselves away from their future children.

Think before you act – don’t act on feelings and intuitions. If you want a marriage and a family, then vote accordingly.

Ron Paul ends CNN interview about his controversial newsletters

December 23, 2011 | by Wintery Knight | Link | Original Link

Video here:

Here’s a video of Ron Paul promoting the newsletters in 1995.

The conservative Weekly Standard has more about the Ron Paul newsletters.

I have to be diplomatic about this and not comment, but I think that this revelation is good for the Republican party. I recommend that Ron Paul voters look into backing Michele Bachmann, which gets you all of the conservatism, but without the conspiracy-theory baggage. If electability is a concern, then we should be looking to Newt Gingrich.

Is Mitt Romney a flip-flopper? What are his flip-flops?

Here’s an ad that the Democrats have prepared to use if Romney becomes the nominee. This is not the candidate we want.

Iraq plunges into chaos as U.S. troops withdraw

December 24, 2011 | by Wintery Knight | Link | Original Link

From the Heritage Foundation.

Excerpt:

> The Obama Administration's risky decision to seek the quickest possible exit from Iraq has contributed to a mushrooming political crisis there that is rapidly unraveling the hard-won gains of U.S. troops and threatens to plunge the country into a civil war that will greatly benefit Iran.
>
> Shortly after the December 15 end-of-mission ceremony for U.S. troops, Iraqi Prime Minister Nouri al-Malikipurged many senior Sunni Arab political leaders from his fractious governing coalition. Maliki's government, dominated by Shiite political parties of various stripes, also announced that it will prosecute Vice President Tareq al-Hashemi, a leader of the predominantly Sunni Arab Iraqiyah party, on terrorism charges. Hashemi, who denounced the allegations as propaganda cover for a political coup, has fled to the semi-autonomous Kurdish region in northern Iraq.
>
> Iraq's fragile unity is now dissolving in growing political tensions between the leaders of the Shiite majority and Sunni minority and between the Shiite-dominated central government and the non-Arab Kurdish minority. But the Obama Administration, blindsided by simmering tensions that it had downplayed in its rush for the exit, appears to be on auto-pilot.
>
> The Administration gave a higher priority to domestic political considerations than to Iraq's long-term security needs when it neglected to negotiate an extension of the U.S. troop presence past the end-of-year deadline set by the 2008 Status of Forces Agreement. Although the Bush Administration had envisioned a follow-on agreement to extend the military presence, and the Obama Administration had initially planned for a smaller residual force of military trainers and advisers, in the end politics trumped security in the White House's deliberations.

Pulling troops out of the Middle East will make it harder for us to gather intelligence and support our allies against Islamic aggression. This decision to pull troops out ahead of the 2012 election is very similar to the decision to delay the Keystone XL pipeline until after the election.

Excerpt:

> In November, the White House announced it would delay deciding on the project until after next year's election. Administration officials claim they need more time to evaluate the potential environmental impacts of the $7 billion, 2,100-mile project to transport crude oil from Alberta, Canada, to major American refineries

> in the Gulf Coast.
>
> Not content to wait until 2013, Republicans inserted a Keystone approval provision into the payroll tax extension. The result of that move is still in flux, as House Republicans have rejected the Senate's measure.
>
> Regardless of the outcome, President Obama's desire to delay the pipeline is just the latest example of his pernicious proclivity for putting politics over sound policy when it comes to energy regulations.
>
> The president simply doesn't want to bear the political costs of deciding either way on Keystone until after his re-election bid. He's wants to remain non-committal.
>
> […]Shambling on Keystone might be smart politics — but there's no good policy reason to delay approval. And there is a huge cost of delay, which can be captured in just four letters: J-O-B-S.
>
> Keystone XL requires miles of pipe to be welded and installed, and at least 30 new pumping facilities to be constructed. American workers would staff many of those operations.
>
> Indeed, if Keystone XL were allowed to proceed as planned, oil sands development and related operations would directly create thousands of new jobs. Tens of thousands additional positions would be created indirectly at businesses along the pipeline's pathway.
>
> That same political strategizing driving the Keystone delay also undergirds the White House's stance on hydraulic fracturing.
>
> Colloquially know as "fracking," this technique has proven invaluable in extracting natural gas buried under the earth's surface. It involves pumping a high-pressure mixture of water and sand into the rock surrounding deposits to free up gas for collection.
>
> In the Marcellus shale — a massive reserve running from Ohio and Pennsylvania into New York — fracking is the only way for developers to get access to gas located deep underground. Unfortunately, policymakers high and low have succumbed to environmentalist alarmism on fracking.
>
> New York — with the tacit support of the White House — has instituted a fracking moratorium and effectively prohibited exploration of the parts of the Marcellus that run under the state.
>
> Again, the cost of currying favor with environmentalists? Jobs. According to the Department of Environmental Conservation, Marcellus development in New York could generate up to 80,000 new local positions.

The more we decline to develop our own energy resources here at home, the worse it is for our economy. But it's also bad for our national security to continue to buy oil from people who don't like us very much. If we could develop our own energy resources at home – and buy from Canada – then we could use the money we save to keep our

commitments in the Middle East. It’s not good for our economy or our national security to make short-sighted decisions that are going to hurt us in the long-run.

The meaning of Christmas, from a Charlie Brown Christmas

December 24, 2011 | by Wintery Knight | Link | Original Link

They don't show things like this anymore on TV…

Luke 2:1-14:

[1] Now in those days a decree went out from Caesar Augustus, that a census be taken of all the inhabited earth.

[2] This was the first census taken while Quirinius was governor of Syria.

[3] And everyone was on his way to register for the census, each to his own city.

[4] Joseph also went up from Galilee, from the city of Nazareth, to Judea, to the city of David which is called Bethlehem, because he was of the house and family of David,

[5] in order to register along with Mary, who was engaged to him, and was with child.

[6] While they were there, the days were completed for her to give birth.

[7] And she gave birth to her firstborn son; and she wrapped Him in cloths, and laid Him in a manger, because there was no room for them in the inn.

[8] In the same region there were *some* shepherds staying out in the fields and keeping watch over their flock by night.

[9] And an angel of the Lord suddenly stood before them, and the glory of the Lord shone around them; and they were terribly frightened.

[10] But the angel said to them, "Do not be afraid; for behold, I bring you good news of great joy which will be for all the people;

[11] for today in the city of David there has been born for you a Savior, who is Christ the Lord.

[12] This *will be* a sign for you: you will find a baby wrapped in cloths and lying in a manger."

[13] And suddenly there appeared with the angel a multitude of the heavenly host praising God and saying,

[14] "Glory to God in the highest,
And on earth peace among men with whom He is pleased."

And my friend Kelly posted this on Facebook:

God and sinners reconciled.

Merry Christmas, all!

What does Christmas mean to Christians?

December 25, 2011 | by Wintery Knight | Link | Original Link

It's the time of year when we explain what Christianity is about.

God exists

Basically, we know from a variety of scientific arguments that the universe was created and fine-tuned for life by an intelligent agent that existed causally prior to the beginning of the universe, because this agent brought the universe into being. Our purpose as humans is to enter into a two-way loving relationship with this Creator/Designer of the universe. This is the only way that we can ultimately be happy and fulfilled.

We avoid God

Now, when you look at human experience, none of us is interested in finding out about the character of this Creator/Designer, because we are afraid that if we find out too much about him then we will have our freedom to do as we please constrained by the demands of a relationship with an all-powerful, all-good being. Just knowing that such a person exists and has a character distinct from our own is enough to cause us to flee from him so that we can stay autonomous from the obligations of the moral law that he expects us to follow.

Christians believe that this universal desire to avoid an all-powerful, all-good God who will judge us is a result of bad behaviors inherited by us from the very first rebellion against God by our ancestors. Ever since that rebellion, the capability for relating to God has been lost, because we no longer have the ability to stop our rebellion against God. Christians call the first rebellion of our ancestors "The Fall of Man".

What does this rebellion look like for us today? Well, we want to do whatever we want, in order to be happy, and to ignore God's demands. We want to have happy feelings, including security, community and being morally good, all without a relationship with

God. We want to acquire and rearrange matter for our selfish ends without acknowledging and honoring the Creator/Designer of that matter. And, of course, we would like other people to affirm, voluntarily or involuntarily, that our rebellion against God is really the height of moral goodness.

Additionally, some people imagine that God, if he exists at all, must desire our happiness. And of course when their needs are not met by this invented God, then they become even more bitter at God, and eventually decide that God could not really exist since their selfish needs are not being met by him. It never seems to occur to us humans that some pain and suffering may be permitted by God in order to turn our attention away from pleasure and security in this life, and back towards a relationship with him.

This is the mess we find ourselves in. This propensity for turning away from God and trying to pursue selfish happiness and security apart from a relationship with God is what the Bible calls "sin". Every single one of us deserves severe punishment for refusing to pursue a genuine two-way love relationship with the God who is there. That is the mess we are in before Jesus appears to address this problem.

Jesus saves the day

I cannot say much about *how* Jesus solves the problem of rebellion against God, because that is really the story of Easter, and today we are dealing with the story of Christmas. But I can say that the solution to the problem requires that God step into history to communicate with his creatures and to perform actions in order to be reconciled with them. That is the message of Christmas: God is stepping into history to do something to end our rebellion. Easter is the story of *what he does*.

This is talked about in the Bible in John 1, for example.

John 1:1-5:

[1]In the beginning was the Word, and the Word was with God, and the Word was God.

[2]He was with God in the beginning.

[3]Through him all things were made; without him nothing was made that has been made.

[4]In him was life, and that life was the light of men.

[5]The light shines in the darkness, but the darkness has not understood it.

You can substitute the word "Word" there for *Logos*, which really means *logic* or *reason* or *wisdom.* This is a person with a divine nature, identified with the eternal being of God, who exists causally prior to the creation of the universe, who is going to take on an additional human nature, including a human body. (Christians believe that there is one divine "what" being and three divine "who" persons). Software engineers, you can think of Jesus having two natures as multiple inheritance in C++.

And it continues in John 1:10-14:

[10]He was in the world, and though the world was made through him, the world did not recognize him.

[11]He came to that which was his own, but his own did not receive him.

[12]Yet to all who received him, to those who believed in his name, he gave the right to become children of God—

[13]children born not of natural descent, nor of human decision or a husband's will, but born of God.

[14]The Word became flesh and made his dwelling among us. We have seen his glory, the glory of the One and Only, who came from the Father, full of grace and truth.

Here the word grace doesn't mean like a graceful ballet dancer. It means an instance of mercy received from a superior. A person (a "who") identified with the divine being (a "what") has decided to make us a top-down offer of mercy.

The same message of God stepping into history is found in the Christmas carols that people sing at Christmas.

Christmas carols

Here's the best one, "O, Holy Night", and it says:

O holy night! The stars are brightly shining.
It is the night of the dear Savior's birth.
Long lay the world in sin and error pining,
Till He appeared and the soul felt its worth.

When we were in rebellion, we had lost our most valuable capacity – the capacity of being in a direct relationship with God. And if Jesus can accomplish his mission, then we are going to regain that capacity for a direct relationship with God.

Now look at "Hark! The Herald Angels Sing", which one of my favorites:

Hark! The herald angels sing,
"Glory to the newborn King!
Peace on earth and mercy mild,
God and sinners reconciled."

Basically, as I often say, there are only two kinds of people in the world. There are people who are willing to respond to the offer of a relationship with God, with all the little sacrifices and compromises that a relationship entails, and then there are people who are not willing to respond. For the people who are willing to respond, the appearance of Jesus is the best thing that could possibly happen, because now we are finally going to have a chance to deal directly with God, face-to-face, to find out what he is like, and change ourselves to be more like him, with his help.

And that is why people celebrate Christmas. It's the anniversary of the birth of Jesus. It is the story of God stepping into history to be reconciled with his rebellious creatures. It's the story of the divine *Logos* divesting himself of his glory and subjecting himself to the life of a creature in order to rescue us from our sinful, self-destructive rebellion. This love for undeserving creatures is above and beyond the call of duty. We didn't love him, but instead he loved us first, and he loved us enough to come down here and suffer with us so that we could be reconciled with God.

MERRY CHRISTMAS!

Did Jesus speak and act with the authority of God?

December 25, 2011 | by Wintery Knight | Link | Original Link

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

1 Corinthians

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

4 Hear, O Israel: The LORD our God, the LORD is one.

5 Love the LORD your God with all your heart and with all your soul and with all your strength.

6 These commandments that I give you today are to be upon your hearts.

7 Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

8 Tie them as symbols on your hands and bind them on your foreheads.

9 Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

4So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

5For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

6yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

Philippians

Check out Philippians 2:5-11.

5Your attitude should be the same as that of Christ Jesus:

6Who, being in very nature God, did not consider equality with God something to be grasped,

7but made himself nothing, taking the very nature of a servant, being made in human likeness.

8And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

9Therefore God exalted him to the highest place and gave him the name that is above

every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

Mark's gospel

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

The “Q” source for Matthew and Luke

Here’s Matthew 11:27, which is echoed in Luke 10:22:

[27]“All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]“All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him.”

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier “Q” source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

Learn more

You can learn more about the early belief in the divinity of Jesus by listening to a lecture by William Lane Craig and reading the related paper, and by listening to the debate between Richard Bauckham and James Crossley on that topic. The first link contains other scholarly debates on Jesus.

Richard Bauckham and James Crossley debate the divinity of Christ

December 25, 2011 | by Wintery Knight | Link | Original Link

Richard is very thorough and works only with minimal facts that skeptical scholars will agree with. James Crossley is an excellent atheist. I used to think he was mean, but now he seems so reasonable. I hope someone can befriend him and introduce him to some of the evidence for theism from the progress of science, so that he can perhaps becomes a Christian.

Here is the MP3 file.

I wrote a summary so you can follow along as you listen.

More stuff

In another recent discussion, Richard Bauckham defends the reliability of the gospels against James Crossley. Crossley debated against William Lane Craig before on the resurrection and he debated against Michael Bird here, (part 1, part 2). The topic was "How did Christianity Begin?".

Summary

Main topic:
– was belief in Jesus' divinity develop late, or was it there from the beginning?
– how did the early Jewish community reconcile the idea of Jesus' divinity with monotheism?

Moderator:
– was the the worship of Jesus as God a late development in history
– was it accepted by converts from the Jewish community

Bauckham:
– high Christology was not a result of pagan influences
– Jews reconciled Jesus' divinity with their Jewish monotheism

Moderator:
– is the degree of Christology a historian is willing to accept just the result of bias?

Crossley:
– bias is always a factor in what individual people think
– but in a public discussion, what matters is the evidence

Moderator:
– High-Christology is used by Christians as an argument for the resurrection
– Christians ask: what cause could account for the effect of early high Christology?

Crossley:
– we agree that the first Christians witnessed something after Jesus' death
– what they witnessed had a role in their forming their high opinion of Jesus
– the high opinion was because they believed he had been resurrected (1 Cor 15)

– whether he was or not is a separate question

Moderator:
– is a high Christology a good argument for inferring the resurrection?

Bauckham:
– the resurrection makes people think Jesus is unique, but not necessarily divine
– it was really the belief in the exaltation of Jesus to God's right hand that did it
– what God does in Judaism is to create the universe and rule over the universe
– if Jesus is seated at God's right hand, then is participating in ruling creation
– so Jesus is being identified with God very early
– the exaltation might have been caused by post-mortem visions of Jesus, e.g. – Stephen

Moderator:
– how were early monotheistic Jews able to reconcile the divinity of Jesus with monotheism?

Crossley:
– the high Christology may not be early because disputes about it are going on in John
– there were other figures in Judaism like the Word of God and Wisdom that were very high
– maybe Paul's Christology is not as high and he is thinking something high but not deity
– and in John the Christology is being pushed higher to deity, and then there are disputes

Moderator:
– Phillipians and 1 Corinthians are the first evidences of what people thought about Jesus
– John is actually much later

Crossley:
– it may be that Paul's Christology is high and that he just never got into any disputes

Bauckham:
– in Phillipians, Paul incorporates Jesus into the shema, the core of Jewish monotheism
– in 1 Corinthians, he does the same thing

Moderator:
– is this evidence consistent with the idea that Jesus is more like Wisdom or the Word of God

Crossley:
– in Paul's letters, there are no conflicts about Jesus' divinity, they appear later in John
– if Paul's letters taught a divine Jesus, there would be conflicts in the letters
– so there is possibly an evolving Christology from very high to divine

Bauckham:
– the Word and Wisdom of God are different from exalted figures – they are separate
– the Word and Wisdom of God are intrinsic to God's own identity
– and so Word and Wisdom are divine in the sense that they below to God's identity

Moderator:
– is Jesus an exalted human figure or someone identified with God?

– is the identification of Jesus with divinity compatible with Jewish monotheism?
– or was this concept developed later in a pagan context where one more God would not matter?

Bauckham:
– NT scholars typically separate functional Christology and ontic Christology
– but I say that there is no such disctinction
– if Jesus does the functions of God (like ruling), then it means he is identified with God
– there is a distinction between who God is (identity) and what God is (nature)
– Jews were not as concerned with the identification of a man with the God
– Jews were disturbed by the idea that THIS shamed and crucified man would be identified with God

Moderator:
– is this high Christology too much of a sharp break with Jewish monotheism to have been early?

Crossley:
– the Phillipians passage is a strong early passage for Richard's view
– definitely the crucifixion is a major problem for the early Jewish monotheists
– but the deification of a human being is also a strong problem in spite of what Richard says
– both Jews and Muslims will have objections to identifying Jesus with the divine

Moderator:
– How can Paul write something like this when he was such a high-ranking Jew?

Bauckham:
– Jewish monotheism could accomodate something surprising like this without surrendering anything
– John starts his gospel at the creation of the universe to say Jesus was there as "the Word"

Moderator:
– was the early church thinking of Jesus the same way that the church today does?

Crossley:
– it's hard to say because the language today reflects a lot of development
– in the early church people were still thinking about what to make of Jesus

Moderator:
– what about in the other gospels, do they indicate a strong notion of Jesus as divine?

Crossley:
– nothing as strong as Paul's letters and John, especiall the disputes with the Jews

Moderator:
– so did the writers of the other gospels have different views of Jesus' divinity than Paul and John?

Crossley:

– well the same claims are not there in the text, the claims are not as grand as in Paul and John

Bauckham:
– but in Mark, the earliest gospel, Jesus forgives sins and calms storm – acting as God acts
– Jesus also asks “why do call me good, only God is good”
– the “seated at the right hand of God” and “coming on the clouds” passages

Crossley:
– I don’t think those claims are as high as John, because Moses controls nature as well
– the other actions may be more that Jesus has authority to do these things

Moderator:
– but the author of Mark writes that the disciples are catching on that Jesus was more than a man

Bauckham:
– Jews were not as concerned with the unitary nature of God, but there is only one God (being)
– there can’t really be any evolution from Jesus as a created being to Jesus as divine
– in paganism, there are lower divinities, but that is not the case in Jewish monotheism

Moderator:
– the fact that Jesus was worshiped by Jews means he was already viewed as divine

Crossley:
– that point is debatable, but can be sustained with a careful exegesis like Richard does
– there is some room there for an evolving Christology – the gap may not be as big as Richard says

Moderator:
– do you think that the worship of Jesus was the result of increasing Christology over time?

Crossley:
– it may not have been conscious, but John is the clearest statement and it is the latest gospel
– it may be that a dispute with Jews was required to spell it out even if it was present before

Moderator:
– what about idea that the early church worshiped him because they just though it was a new revelation?

Bauckham:
– the early Christians worshiped as Jews and then met separately afterward to worship Jesus
– worship is about distinguishing God from the created world
– you wouldn’t worship Jesus without some idea of what you were doing

Crossley:

– other things that set Jesus apart were the exorcisms and the vision to Paul that converted him

Barack Obama is the worst President ever

December 26, 2011 | by Wintery Knight | Link | Original Link

Bill Whittle explains. (7 minutes)

This is not to mention his record on abortion – the most pro-abortion President ever. Or the election of hardline Muslim extremists in Egypt.

The man is a catastrophic failure.

Former Ron Paul campaign official explains Ron Paul's views on foreign policy

December 26, 2011 | by Wintery Knight | Link | Original Link

From Right Wing News, an exclusive interview with a Ron Paul insider who was working for Ron Paul from 1987-2003.

Excerpt:

> Ron Paul was opposed to the War in Afghanistan, and to any military reaction to the attacks of 9/11.
>
> He did not want to vote for the resolution. He immediately stated to us staffers, me in particular, that Bush/Cheney were going to use the attacks as a precursor for "invading" Iraq. He engaged in conspiracy theories including perhaps the attacks were coordinated with the CIA, and that the Bush administration might have known about the attacks ahead of time. He expressed no sympathies whatsoever for those who died on 9/11, and pretty much forbade us staffers from engaging in any sort of memorial expressions, or openly asserting pro-military statements in support of the Bush administration.
>
> On the eve of the vote, Ron Paul was still telling us staffers that he was planning to vote "No," on the resolution, and to be prepared for a seriously negative reaction in the District. Jackie Gloor and I, along with quiet nods of agreement from the other staffers in the District, declared our intentions to Tom Lizardo, our Chief of Staff, and to each other, that if Ron voted No, we would immediately resign.
>
> Ron was "under the spell" of left-anarchist and Lew Rockwell associate Joe Becker at the time, who was our legislative director. Norm Singleton, another Lew Rockwell fanatic agreed with Joe. All other staffers were against Ron, Joe and Norm on this, including Lizardo. At the very last minute Ron switched his stance and voted "Yay," much to the great relief of Jackie and I. He never explained why, but I strongly suspected that he realized it would have been political suicide; that staunchly conservative Victoria would revolt, and the Republicans there would ensure that he would not receive the nomination for the seat in 2002. Also, as much as I like to think that it was my yelling and screaming at Ron, that I would publicly resign if he voted "No," I suspect it had a lot more to do with Jackie's threat, for she WAS Victoria. And if Jackie bolted, all of the Victoria conservatives would immediately turn on Ron, and it wouldn't be pretty.
>
> If you take anything from this lengthy statement, I would hope that it is this final story about the Afghanistan vote, that the liberal media chooses to completely ignore, because it doesn't fit their template, is what you will report.
>
> If Ron Paul should be slammed for anything, it's not some silly remarks he's

> made in the past in his Newsletters. It's over his simply outrageously horrendous views on foreign policy, Israel, and national security for the United States. His near No vote on Afghanistan. That is the big scandal. And that is what should be given 100 times more attention from the liberal media, than this Newsletter deal.

I think Paul's comments on World War 2, which I didn't excerpt here, are pretty disturbing as well. I guess I just don't believe that he knows enough about national security and counter-terrorism to be President. If I asked him questions like "who is FARC?" or "who is the Quds force?" or "How is Iran working with the Mexican drug cartels?" or "How is Iran working with Hugo Chavez?" then all I'll get in response is Libertarian rhetoric.

Ron Paul doesn't know a thing about national security or Islamic terrorism, he can't quote any specifics at all about who terrorists are, what they've done, what they want to do, etc.. It's like asking a witch doctor to explain modern medicine. You'll only get conspiracy theories and unverifiable assertions – never any details. Everything Ron Paul asserts about how unilateral disarming would do this, or unilateral withdrawal would do that is really nothing more than his uninformed personal ideology. If you asked him to prove out any of his views on foreign policy, you would just get more excitable old crank rhetoric – devoid of data and history.

The best way to engage a libertarian who thinks that Ron Paul conspiracy theory diplomacy would work is to bring up a specific example when actual counter-terrorism produced results. For example, when KSM was waterboarded and gave up intelligence on the 9/11-style attack on Los Angeles, or when enhanced interrogation techniques led to the location of Osama Bin Laden. You can also point out how Clinton's policies of appeasement emboldened terrorists to commit actual terrorist attacks against American assets. And how Bush's invasions of Iraq and Afghanistan did actually dissuade terrorist attacks from occurring. And how large-scale attacks resumed under Obama, e.g. – the NYC subway bomb, the NYC Times Square bomb, the attempted assassination of the Saudi ambassador in New York, etc., to name a few. This is kryptonite to a fever-swamp libertarian who forms his foreign policy reading dead economists from the 1800s – prior to the invention of nuclear weapons.

Like this:

How to defeat Ron Paul in 2012

We can’t put someone like Ron Paul in charge of national security. It would be like putting a witch doctor in as the Surgeon General. Conspiracy theories are not good foreign policy. The antidote is to talk about the way things work in the real world.

Libertarian: a person who thinks waterboarding a terrorist to prevent a 9/11 attack is “cruel”, but who thinks aborting 50 million unborn babies since 1973 is “just”. Just understand what libertarianism is, and the scope in which it is useful, and don’t apply it to areas where it doesn’t apply.

WaPo: Obama's energy policies "infused with politics at every level"

December 27, 2011 | by Wintery Knight | Link | Original Link

From Hans Bader.

Excerpt: (with the links removed)

> Even the liberal *Washington Post*, which hasn't endorsed a Republican for President since 1952, seems to be souring on the Obama Administration's failed energy programs, saying they were "infused with politics at every level." As it noted in discussing the Solyndra scandal: "Obama's green-technology program was infused with politics at every level, The Washington Post found in an analysis of thousands of memos, company records and internal e-mails. Political considerations were raised repeatedly by company investors, Energy Department bureaucrats and White House officials. The records, some previously unreported, show that when warned that financial disaster might lie ahead, the administration remained steadfast in its support for Solyndra," which was owned by major Obama backers, like George Kaiser.
>
> As law professor Glenn Harlan Reynolds notes, "all the 'stimulus' and 'green energy' stuff was never anything but a program to put taxpayer money into the hands of cronies and supporters."
>
> The Obama Administration hastily approved the taxpayer subsidies for Solyndra despite obvious danger signs and warnings from accountants about the company's likely collapse, themisgivings of agency officials, and the company's mismanagement and lousy-quality products. (Solyndra executives are now pleading the 5th Amendment to avoid disclosing incriminating information.) The Obama administration was determined to shovel taxpayer money to its cronies as fast as it could. As an Obama fundraiser and Solyndra stakeholder exulted, "there's never been more money shoved out of the government's door in world history and probably never will be again than in the last few months and the next 18 months. And our selfish parochial goal is to get as much of it . . . as we possibly can." "At the time Solyndra received its grant, Vice President Joe Biden declared that the Solyndra investment is 'exactly what the [the stimulus package] is all about.'"
>
> While diverting taxpayer money away from productive and efficient businesses to corporate-welfare recipients controlled by political cronies, the Obama Administration is busy wiping out jobs through thousands of pages of counterproductive regulations. Some of these new regulations are designed to spawn lawsuits that will enrich trial lawyers at businesses' and consumers' expense.

Here's an excerpt from the Washington Post piece he linked:

> Since the failure of the company, Obama's entire $80 billion clean-technology program has begun to look like a political liability for an administration about to enter a bruising reelection campaign.
>
> Meant to create jobs and cut reliance on foreign oil, Obama's green-technology program was infused with politics at every level, The Washington Post found in an analysis of thousands of memos, company records and internal e-mails. Political considerations were raised repeatedly by company investors, Energy Department bureaucrats and White House officials.
>
> The records, some previously unreported, show that when warned that financial disaster might lie ahead, the administration remained steadfast in its support for Solyndra.
>
> The documents reviewed by The Post, which began examining the clean-technology program a year ago, provide a detailed look inside the day-to-day workings of the upper levels of the Obama administration. They also give an unprecedented glimpse into high-level maneuvering by politically connected clean-technology investors.
>
> They show that as Solyndra tottered, officials discussed the political fallout from its troubles, the "optics" in Washington and the impact that the company's failure could have on the president's prospects for a second term. Rarely, if ever, was there discussion of the impact that Solyndra's collapse would have on laid-off workers or on the development of clean-
> energy technology.
>
> "What's so troubling is that politics seems to be the dominant factor," said Ryan Alexander, president of Taxpayers for Common Sense, a nonpartisan watchdog group. "They're not talking about what the taxpayers are losing; they're not talking about the failure of the technology, whether we bet on the wrong horse. What they are talking about is 'How are we going to manage this politically?' "
>
> The administration, which excluded lobbyists from policy-making positions, gave easy access to venture capitalists with stakes in some of the companies backed by the administration, the records show. Many of those investors had given to Obama's 2008 campaign. Some took jobs in the administration and helped manage the clean-energy program.
>
> Documents show that senior officials pushed career bureaucrats to rush their decision on the loan so Vice President Biden could announce it during a trip to California. The records do not establish that anyone pressured the Energy Department to approve the Solyndra loan to benefit political contributors, but they suggest that there was an unwavering focus on promoting Solyndra and clean energy. Officials with the company and the administration have said that nothing untoward occurred and that the loan was granted on its merits.

I am really surprised to see such a strongly-worded denunciation of Obama's energy policies in a liberal newspaper.

Take a look at the rest of Hans' post where he talks about the effects of environmental regulations on job creation and the stimulus' effect on long-term economic growth. Basically, the only thing that Obama did right in 3 years was sign those free trade deals – and he sat on those for two years so as not to anger his union buddies. The rest has been a disaster from start to finish.

Christmas not so merry for Christians living under Islamic rule

December 27, 2011 | by Wintery Knight | Link | Original Link

I found that video on Right Scoop via Director Blue.

Gates of Vienna has more news coverage, and they are claiming that the death toll in Nigeria is at least 60 people from 5 separate bombings.

Here's a longer essay about the problem from Dave Warren. (H/T ECM)

Excerpt:

> The "Arab Spring," which was welcomed this year as an expression of "democracy" by the West's political, media, and chattering classes, has brought social convulsion to one Arab state after another. Against the background of what is to my view instead a large catastrophe, Christian communities that have existed in each state since centuries before the arrival of Islam, are being eliminated.
>
> …[W]ith the Americans gone, Iraq now slips the rest of the way off the world media map. It may crawl back on with full-scale civil war. And perhaps, eventually, notice will be taken that Iran's revolutionary regime, already represented within Maliki's entourage, is using the disorder to attach Iraq as a satellite. This is not something even Shia Iraqis could want; but they will have it as a consequence of disintegrative war between Sunni and Shia, Arab and Kurd, abetted by an utterly corrupt and dysfunctional "democratic" political class.

> Meanwhile, tonight's Midnight Mass has been cancelled, so far as I can see through the Internet, at Christian churches throughout the country. Estimates of the number of Christians who have fled Iraq now approach or exceed one million; and the reason for their leaving may be read in graffiti sprayed over their empty and assaulted churches. This persistently reminds worshippers of past massacres, and promises they will be next.
>
> The collapse of once-peaceful Egypt into disorder has had similar effects, as the old secular military establishment bids to retain some semblance of its former power and pomposity, while the Islamist parties sweep parliamentary elections.
>
> In the first moments of Egypt's "Arab Spring," triggered by the country's relatively tiny and secular middle class, Coptic Christians were already feeling the rise in heat. But there were several fine displays of solidarity, in which leading Muslims attended church services in defiance of Islamist terror threats.
>
> As ever, in revolutionary situations, the heroic phase ended quickly. We're advancing now through the squalid phases. For the safety of their parishioners, night church services are already switched to broad daylight, and as in Iraq,

> there are ever-more-cumbersome security measures to pass through, to get into a church at all.
>
> Nothing can be done, or more certainly, nothing will be done by our own "progressive" governing classes, even to anticipate the coming fallout.

Something to keep in your prayers. And when you get the chance to vote, keep in mind Christians living in other countries where there is no religious liberty. I find it interesting to note that the two situations Warren raised have different solutions. In Iraq, the right thing to do was to keep our forces in there to stabilize the region. In Egypt, the solution was not to get involved at all.

Obama will ask for $1.2 trillion dollar increase in the debt limit

December 27, 2011 | by Wintery Knight | Link | Original Link

The Obama Economic Record

	INAUGURATION DAY	TODAY	CHANGE
Unemployed Americans	12 million	14 million	↑ 2 million
Unemployment Rate	7.8%	9.1%	↑ 17%
Gas Prices	$1.85	$3.43	↑ 85%
Federal Debt	$10.6 trillion	$14.7 trillion	↑ 39%
Debt per person	$34,731	$47,047	↑ $12,316
Misery Index	7.8	12.9	↑ 65%
Food Stamp Recipients	32 million	45 million	↑ 41%
Health Insurance Premiums	$3,354	$4,129	↑ 23%
Home Values	$193,400	$172,600	↓ 11%
U.S. Global Competitiveness	1st	5th	↓ 4 places
Americans in Poverty	39.8 million	46.2 million	↑ 6.4 million

Obama Economic Record November 2011
From Reuters.

Excerpt:

> The White House plans to ask Congress by the end of the week for an increase in the government's debt ceiling… according to a senior Treasury Department official on Tuesday.
>
> The approval is expected to go through without a challenge, given that Congress is in recess until later in January and the request is in line with an agreement to keep the U.S. government funded into 2013.
>
> The debt is projected to fall within $100 billion of the current cap by December 30, when the United States has $82 billion in interest on its debt and payments such as Social Security coming due. President Barack Obama is expected to ask for authority to increase the borrowing limit by $1.2 trillion, part of the spending authority that was negotiated between Congress and the White House this summer.
>
> […]The debt limit currently stands at $15.194 trillion and would increase to $16.394 trillion with the request.

And yet some people apparently think that he is doing a good job with the economy.

Perhaps this story provides a clue about why things have gone so badly:

> After an hour of hiking, President Obama Monday got down to the serious business at hand, heading out to golf for the second day in his first three days of vacation. He was back on the course at Marine Corps Base Hawaii.
>
> With this one, Obama reaches a new milestone, having gone golfing 90 times in less than three years as president. That's about three months of golf, given that the excursions generally take about five hours – much of the useful portion of the day.
>
> What's more, it's the 32nd time he's been on the links this year, a record for the president. His 32 outings eclipses the 2010 mark of 30 and is far ahead of his 2009 tally of 28 rounds as president.
>
> And remember, there are still five days left in the year for Obama to pad his new record, which he almost certainly will.
>
> Along for Monday's round were three of Obama's Hawaii friends, Mike Ramos, Greg Orme and Bobby Titcomb. The latter, you may remember, was arrested in April in a prostitution sting.

It's the children who are going to be paying for Obama's spending spree. Remember, the last Republican budget was in 2007 – and the deficit then was $160 billion. Then the Democrats took over the House and the Senate and the deficit rose dramatically and is not going down in the near future.

RINO Mitt Romney now open to European-style VAT tax

December 28, 2011 | by Wintery Knight | Link | Original Link

ABC News reports.

Excerpt:

> In a December 24 story in the **Wall Street Journal**, Romney is described not favoring the idea of "layering a VAT onto the current income tax system. But he adds that, philosophically speaking, a VAT might work as a replacement for some part of the tax code, 'particularly at the corporate level,' as Paul Ryan proposed several years ago. What he doesn't do is rule a VAT out."
>
> A value added tax, or VAT, is a form of the consumption tax in which the tax is levied based on a product's price, not including the cost of materials, that originated in and is popular in Europe, imposed by the European Commission, and the governments of France and the UK, among others.
>
> Gingrich's campaign was not the only one to notice. The **American Enterprise Institution**'s James Pethokoukis wrote that "(m)any conservatives/libertarians simply hate, hate, hate the idea of a VAT….They view it as a way to fund a massive expansion of government. I would be surprised if those quotes don't end up in a 30-second, anti-Romney ad in Iowa or New Hampshire"
>
> Anti-tax crusader **Grover Norquist** once called the VAT "a European-style sales tax. It's assessed on the profits generated at every stage of production (raw material, manufacturer, wholesaler, retailer, etc.), so there is constant reporting and payment. As such, it's an extremely efficient money machine for big government. The VAT is embedded inside the price of a good … As such, people forget they pay it, and European governments have found it too easy to raise the tax repeatedly over time."

People think that Romney should be the candidate because he "is the most electable". But is that true?

Seven reasons why Romney's electability is exaggerated

John Hawkins writing for Townhall.com lists the seven reasons. (H/T Right Wing News)

Reasons 2 and 3:

> 2) **He's a proven political loser**: There's a reason Mitt Romney has been able to say that he's "not a career politician." It's because he's not very good at politics. He lost to Ted Kennedy in 1994. Although he did win the governorship of Massachusetts in 2002, he did it without cracking 50% of the vote. Worse yet, he left office as the 48th most popular governor in America and would have lost if he had run again in 2006. Then, to top that off, he failed to capture the GOP

> nomination in 2008. This time around, despite having almost every advantage over what many people consider to be a weak field of candidates, Romney is still desperately struggling. Choosing Romney as the GOP nominee after running up that sort of track record would be like promoting a first baseman hitting .225 in AAA to the majors.
>
> 3) **Running weak in the southern states**: Barack Obama won North Carolina, Virginia, and Florida in 2008 and you can be sure that he will be targeting all three of those states again. This is a problem for Romney because he would be much less likely than either Gingrich or Perry to carry any of those states. Moderate northern Republicans have consistently performed poorly in the south and Romney won't be any exception. That was certainly the case in 2008 when both McCain and Huckabee dominated Romney in primaries across the south. Mitt didn't win a single primary in a southern state and although he finished second in Florida, he wasn't even competitive in North Carolina or Virginia. Since losing any one of those states could be enough to hand the election to Obama in a close race, Mitt's weakness there is no small matter.

For my own part, I find it surprising that people who are ostensibly pro-life are willing to appoint a Republican candidate who has no pro-life record. Until he started running for the Presidency, Mitt Romney was 100% pro-abortion. That's 12 years of abortion advocacy. His record is pro-abortion. Many of the other candidates, especially Santorum and Bachmann, have a pro-life record. Newt has a 98% pro-life voting record. So why are we settling for someone who has a question mark on social issues?

Ron Paul’s isolationist foreign policy views echo Neville Chamberlain

December 28, 2011 | by Wintery Knight | Link | Original Link

From Doug Ross at Director Blue, 10 fun facts about Ron Paul.

Here’s fact #7:

> And so I asked Congressman Paul: if he were President of the United States during World War II, and as president he knew what we now know about the Holocaust, but the Third Reich presented no threat to the U.S., would he have sent American troops to Nazi Germany purely as a moral imperative to save the Jews?
>
> And the Congressman answered:
>
> *“No, I wouldn’t. I wouldn’t risk American lives to do that. If someone wants to do that on their own because they want to do that, well, that’s fine, but I wouldn’t do that.”*
>
> Paul then looked at me, and I politely thanked him for his time. He smiled at me again and nodded his head, and many of his young followers were also smiling, and nodding their heads in agreement. Clearly, I was the only one in the room who was disturbed by his response.
>
> When I first presented the story of Paul’s comments about the Holocaust to major news media outlets two years ago, they were so stunned they were afraid to publish my story, and as a result it has remained unpublished until now.
>
> I went to great lengths afterwards to learn more about the basis for Paul’s comments. I spoke to Eric Dondero, a former senior aide for Paul, in February 2010. Dondero is quoted in a *Weekly Standard* article today about Paul’s isolationist beliefs.
>
> When I called Dondero again this morning, and told him I was finally going forward with the story, he told me that Paul had made similar comments to him.
>
> “He told me numerous times it was not worth it to intervene to save the Jews in World War II,” Dondero said. “I don’t think that’s because he’s an antisemite. It’s because he’s an extreme isolationist and he’s trying to be 100% principled–he doesn’t think there’s any reason to intervene for human rights or any other reason anywhere on the planet.”
>
> Calls to Rep. Paul’s congressional office and campaign office last week and this morning were not returned.

It’s not just the Holocaust, either. It’s the wholesale abandonment of the United Kingdom to conquest by Nazi Germany. And it’s not just the United Kingdom. It’s the complete takeover of the Asia-Pacific theater, and Australia, and New Zealand, by Imperial Japan.

That's what Ron Paul would have let happen.

Historians will tell you that Hitler could have been contained if Western leaders had responded militarily when he broke the Locarno treaties by remilitarizing the Rhineland in 1936. Do you think that Ron Paul would have gone to war in 1936 to stop Hitler – when he was still relatively weak? The Polyanna isolationism of Ron Paul is *exactly* what causes world wars. People like Ron Paul ignore aggressors when they make small invasions and then in a few years we have a world war on our hands. *Ron Paul is a warmonger – his naive isolationism gets us into world wars by emboldening and coddling tyrants with a naive stick-your-head-in-the-sand foreign policy*. Ron Paul doesn't know anything about the threat of terrorism – his foreign policy is based on economics theories authored by people who died before nuclear weapons were invented. You can't trust someone who makes foreign policy using theories, but who is ignorant of the real dangers we face.

"Those who do not learn from history are doomed to repeat it"
– George Santayana

It's not a surprise to me that Ron Paul is popular with young people who don't understand military history and the threat of terrorism. They don't know who Neville Chamberlain was, or they would recognize Ron Paul as the second coming of Neville Chamberlain.

Thomas Sowell explains what causes wars

Let's take a look at the lessons of history and find out what really causes wars.

Here's an article from Townhall.

Excerpt:

> On the international scene, trying to assuage aggressors' feelings and look at the world from their point of view has had an even more catastrophic track record. A typical sample of this kind of thinking can be found in a speech to the British Parliament by Prime Minister Neville Chamberlain in 1938: "It has always seemed to me that in dealing with foreign countries we do not give ourselves a chance of success unless we try to understand their mentality, which is not always the same as our own, and it really is astonishing to contemplate how the identically same facts are regarded from two different angles."
>
> Like our former ambassador from the Carter era, Chamberlain sought to "remove the causes of strife or war." He wanted "a general settlement of the grievances of the world without war." In other words, the British prime minister approached Hitler with the attitude of someone negotiating a labor contract, where each side gives a little and everything gets worked out in the end. What Chamberlain did not understand was that all his concessions simply led to new demands from Hitler — and contempt for him by Hitler.
>
> What Winston Churchill understood at the time, and Chamberlain did not, was that Hitler was driven by what Churchill called "currents of hatred so intense as to sear the souls of those who swim upon them." That was also what drove the men who drove the planes into the World Trade Center.

> Pacifists of the 20th century had a lot of blood on their hands for weakening the Western democracies in the face of rising belligerence and military might in aggressor nations like Nazi Germany and imperial Japan. In Britain during the 1930s, Labor Party members of Parliament voted repeatedly against military spending, while Hitler built up the most powerful military machine in Europe. Students at leading British universities signed pledges to refuse to fight in the event of war.
>
> All of this encouraged the Nazis and the Japanese toward war against countries that they knew had greater military potential than their own. Military potential only counts when there is the will to develop it and use it, and the fortitude to continue with a bloody war when it comes. This is what they did not believe the West had. And it was Western pacifists who led them to that belief.
>
> Then as now, pacifism was a "statement" about one's ideals that paid little attention to actual consequences. At a Labor Party rally where Britain was being urged to disarm "as an example to others," economist Roy Harrod asked one of the pacifists: "You think our example will cause Hitler and Mussolini to disarm?"
>
> The reply was: "Oh, Roy, have you lost all your idealism?" In other words, the issue was about making a "statement" — that is, posturing on the edge of a volcano, with World War II threatening to erupt at any time. When disarmament advocate George Bernard Shaw was asked what Britons should do if the Nazis crossed the channel into Britain, the playwright replied, "Welcome them as tourists."

Most people think that Thomas Sowell is a libertarian, but he isn't a full libertarian. He just reports the evidence. If the evidence is pro-war, then he's pro-war. Ronald Reagan and Margaret Thatcher called this view "peace through strength". There is only one reason why evil people do not attack – because they think that good people have the firepower to make them pay dearly for their aggression, and – and this is very important – the will to use it. We need to be wary of people like Ron Paul who minimize patriotism and heroism, and charge proponents of military power with "imperialism".

Here's an article that explains it more.

Excerpt:

> In France, after the First World War, the teachers' unions launched a systematic purge of textbooks, in order to promote internationalism and pacifism.
>
> Books that depicted the courage and self-sacrifice of soldiers who had defended France against the German invaders were called "bellicose" books to be banished from the schools.
>
> Textbook publishers caved in to the power of the teachers' unions, rather than lose a large market for their books. History books were sharply revised to conform to internationalism and pacifism.
>
> The once epic story of the French soldiers' heroic defense against the German

> invaders at Verdun, despite the massive casualties suffered by the French, was now transformed into a story of horrible suffering by all soldiers at Verdun— French and German alike.
>
> In short, soldiers once depicted as national heroes were now depicted as victims— and just like victims in other nations' armies.
>
> […]France, where pacifism and internationalism were strongest, became a classic example of how much it can matter.
>
> During the First World War, France fought on against the German invaders for four long years, despite having more of its soldiers killed than all the American soldiers killed in all the wars in the history of the United States, put together.
>
> But during the Second World War, France collapsed after just six weeks of fighting and surrendered to Nazi Germany.
>
> At the bitter moment of defeat the head of the French teachers' union was told, "You are partially responsible for the defeat."
>
> Charles de Gaulle, Francois Mauriac, and other Frenchmen blamed a lack of national will or general moral decay, for the sudden and humiliating collapse of France in 1940.
>
> At the outset of the invasion, both German and French generals assessed French military forces as more likely to gain victory, and virtually no one expected France to collapse like a house of cards — except Adolf Hitler, who had studied French society instead of French military forces.
>
> Did patriotism matter? It mattered more than superior French tanks and planes.

Everybody wants peace. Everyone – on both sides of the issue. But it is not weakness but strength that deters wars. Strength, and the will to defeat evil.

Read Theodore Dalrymple's "Life at the Bottom" online for free

December 28, 2011 | by Wintery Knight | Link | Original Link

I want to recommend that you read a book that is available online for free.

The author is a psychiatrist in a British hospital that deals with a lot of criminals and victims of crime. So he gets to see the worldview of the "underclass" up close, and to understand how the policies of the compassionate secular left are really working at the street level. The theme of the book is that the left advances policies in order to feel good about themselves, even though the policies actually hurt the poor and vulnerable far more than they help them. And the solution of the elites is more of the same.

The whole book is available ONLINE for free! From City Journal!

Table of Contents

The Knife Went In 5
Goodbye, Cruel World 15
Reader, She Married Him–Alas 26
Tough Love 36
It Hurts, Therefore I Am 48
Festivity, and Menace 58
We Don't Want No Education 68
Uncouth Chic 78
The Heart of a Heartless World 89
There's No Damned Merit in It 102
Choosing to Fail 114
Free to Choose 124
What Is Poverty? 134
Do Sties Make Pigs? 144
Lost in the Ghetto 155
And Dying Thus Around Us Every Day 167
The Rush from Judgment 181
What Causes Crime? 195
How Criminologists Foster Crime 208
Policemen in Wonderland 221
Zero Intolerance 233
Seeing Is Not Believing 244

Lots more essays are here, all from City Journal.

My favorite passage

The only bad thing about reading it online is that you miss one of the best quotes from the introduction. But I'll type it out for you.

> The disastrous pattern of human relationships that exists in the underclass is also becoming common higher up the social scale. With increasing frequency I am consulted by nurses, who for the most part come from and were themselves traditionally members of (at least after Florence Nightingale) the respectable lower middle class, who have illegitimate children by men who first abuse and then abandon them. This abuse and later abandonment is usually all too predictable from the man's previous history and character; but the nurses who have been treated in this way say they refrained from making a judgment about him because it is wrong to make judgments. But if they do not make a judgment about the man with whom they are going to live and by whom they are going to have a child, about what are they ever going to make a judgment?
>
> "It just didn't work out," they say, the "it" in question being the relationship that they conceive of having an existence independent of the two people who form it, and that exerts an influence on their on their lives rather like an astral projection. Life is fate.

This is something I run into myself. I think that young people today prefer moral relativists as mates, because they are afraid of being judged and rejected by people who are too serious about religion and morality. The problem is that if you choose someone who doesn't take religion and morality seriously, then you can't rely on them to behave morally and exercise spiritual leadership when raising children. And being sexually involved with someone who doesn't take morality seriously causes a lot of damage.

An excerpt

Here's one of my favorite passages from "Tough Love", in which he describes how easily he can detect whether a particular man has violent tendencies on sight, whereas female victims of domestic violence – and even the hospital nurses – *will not* recognize the same signs.

> All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.
>
> This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious

> young egotist to whom I would give a wide berth in the broadest daylight.
>
> Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.
>
> This failure of recognition is almost universal among my violently abused women patients, but its function for them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.
>
> Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.
>
> At first, of course, my female patients deny that the violence of their men was foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how* they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

Go read the rest!

Afghan teen imprisoned by in-laws for 5 months for refusing prostitution

December 29, 2011 | by Wintery Knight | Link | Original Link

Map of the Middle East
From the UK Telegraph.

Excerpt:

> Sahar Gul, 15, was found in the basement of her husband's house in northeastern Baghlan province late on Monday after her parents reported her disappearance to the police.

> "She was beaten, her fingernails were removed and her arm was broken," district police chief Fazel Rahman told AFP.
>
> Three women including the teenager's mother in-law had been arrested in connection with the case but her husband had fled the area, he added.
>
> The case highlights how women continue to suffer in Afghanistan despite the billions of pounds of international aid which has poured into the country during the decade-long war.

> "The 15-year-old girl was brought to hospital with severe shock," said Pul-i-Khurmeri hospital chief Dr Gul Mohammad Wardak.
>
> "She had injuries to her legs and face and the nails on her left had been removed."
>
> Sahar Gul was married to her husband seven months ago in the neighbouring province of Badakhshan, but she was brought to Baghlan to live with her husband, said Rahima Zareefi, the provincial head of women affairs.

> During this time her parents were unable to contact her, she said.
>
> […]And according to figures in an Oxfam report in October, 87 per cent of Afghan women report having experienced physical, sexual or psychological violence or forced marriage.

I wonder if any of the billions of pounds of international aid has been spent on introducing Christianity as an alternative to Islam in these countries? Or is that not an option for solving the problem of the mistreatment of women? I know that Christian taxpayers are taxed to pay for this aid money. What’s the goal here, and are all options on the table?

Is the New York Times a reliable news source or leftist agitprop?

December 29, 2011 | by Wintery Knight | Link | Original Link

From the New York Times.

Excerpt:

> In state after state, guns are being allowed in places once off-limits, like bars, college campuses and houses of worship. And gun rights advocates are seeking to expand the map still further, pushing federal legislation that would require states to honor other states' concealed weapons permits. The House approved the bill last month; the Senate is expected to take it up next year.
>
> The bedrock argument for this movement is that permit holders are law-abiding citizens who should be able to carry guns in public to protect themselves. "These are people who have proven themselves to be among the most responsible and safe members of our community," the federal legislation's author, Representative Cliff Stearns, Republican of Florida, said on the House floor.
>
> To assess that claim, The New York Times examined the permit program in North Carolina, one of a dwindling number of states where the identities of permit holders remain public. The review, encompassing the last five years, offers a rare, detailed look at how a liberalized concealed weapons law has played out in one state. And while it does not provide answers, it does raise questions.
>
> More than 2,400 permit holders were convicted of felonies or misdemeanors, excluding traffic-related crimes, over the five-year period, The Times found when it compared databases of recent criminal court cases and licensees. While the figure represents a small percentage of those with permits, more than 200 were convicted of felonies, including at least 10 who committed murder or manslaughter. All but two of the killers used a gun.

National Review explains what's wrong with this analysis.

Excerpt:

> All of these numbers are completely meaningless; in any large population, there will be some crime. The only way to see what these numbers mean is to compare concealed-carry holders to the general population. Fortunately, state-level murder data are easy to find.
>
> North Carolina has a statewide murder rate of about 5 per 100,000. Even without counting manslaughter, that's 25 murders committed per 100,000 North Carolinians every five years. There are about 230,000 valid concealed-carry permits in North Carolina, so by pure chance, you'd expect these folks to be responsible for nearly 60 murders over five years. And yet only ten of them

> committed murder or manslaughter. Instead of "rais[ing] questions," the *Times* has demonstrated yet again that permit holders are more peaceful than the general population.

And do you know what else is missing from the New York Times analysis? Any investigation into *the number of crimes prevented by defensive handgun usage by licensed concealed carry permit holders*. After all, a good journalist would want to weight the bad consequences of a policy together with the good consequences, right? That would be a fair and balanced approach that would inform the readers instead of misleading them.

Do gun control laws reduce violent crime?

Here's what happened after gun laws changed in Washington, D.C. and Chicago.

Excerpt:

> Murder and violent crime rates were supposed to soar after the Supreme Court struck down gun control laws in Chicago and Washington, D.C.
>
> Politicians predicted disaster. "More handguns in the District of Columbia will only lead to more handgun violence," Washington's Mayor Adrian Fenty warned the day the court made its decision.
>
> Chicago's Mayor Daley predicted that we would "go back to the Old West, you have a gun and I have a gun and we'll settle it in the streets…"
>
> The New York Times even editorialized this month about the Supreme Court's "unwise" decision that there is a right for people "to keep guns in the home."
>
> But Armageddon never happened. Newly released data for Chicago shows that, as in Washington, murder and gun crime rates didn't rise after the bans were eliminated — they plummeted. They have fallen much more than the national crime rate.
>
> Not surprisingly, the national media have been completely silent about this news.
>
> One can only imagine the coverage if crime rates had risen. In the first six months of this year, there were 14% fewer murders in Chicago compared to the first six months of last year – back when owning handguns was illegal. It was the largest drop in Chicago's murder rate since the handgun ban went into effect in 1982.
>
> Meanwhile, the other four most populous cities saw a total drop at the same time of only 6 percent.
>
> Similarly, in the year after the 2008 "Heller" decision, the murder rate fell two-and-a-half times faster in Washington than in the rest of the country.
>
> It also fell more than three as fast as in other cities that are close to Washington's size. And murders in Washington have continued to fall.
>
> If you compare the first six months of this year to the first six months of 2008, the same time immediately preceding the Supreme Court's late June "Heller"

> decision, murders have now fallen by thirty-four percent.
>
> Gun crimes also fell more than non-gun crimes.
>
> Robberies with guns fell by 25%, while robberies without guns have fallen by eight percent. Assaults with guns fell by 37%, while assaults without guns fell by 12%.
>
> Just as with right-to-carry laws, when law-abiding citizens have guns some criminals stop carrying theirs.

And it's not just in big cities. MSNBC explains how legal gun ownership reduces crime. Excerpt:

> Americans overall are far less likely to be killed with a firearm than they were when it was much more difficult to obtain a concealed-weapons permit, according to statistics collected by the federal Centers for Disease Control. But researchers have not been able to establish a cause-and-effect relationship.

> In the 1980s and '90s, as the concealed-carry movement gained steam, Americans were killed by others with guns at the rate of about 5.66 per 100,000 population. In this decade, the rate has fallen to just over 4.07 per 100,000, a 28 percent drop. The decline follows a fivefold increase in the number of "shall-issue" and unrestricted concealed-carry states from 1986 to 2006.The highest gun homicide rate is in Washington, D.C., which has had the nation's strictest gun-control laws for years and bans concealed carry: 20.50 deaths per 100,000 population, five times the general rate. The lowest rate, 1.12, is in Utah, which has such a liberal concealed weapons policy that most American adults can get a permit to carry a gun in Utah without even visiting the state.
>
> The decline in gun homicides also comes as U.S. firearm sales are skyrocketing, according to federal background checks that are required for most gun sales. After holding stable at 8.5 to 9 million checks from 1999 to 2005, the FBI reported a surge to 10 million in 2006, 11 million in 2007, nearly 13 million in 2008 and more than 14 million last year, a 55 percent increase in just four years.

If you ever need to debate this, I recommend buying these academic studies published by the University of Chicago Press and by Harvard University Press. The former shows how crime rates dropped in the USA when Americans rescinded gun control laws, and the latter shows how crime rates rose in the UK when the British strengthened their gun control laws. Sometimes is good to have the data handy.

Want both sides? Then watch a debate on gun control

This debate is in 13 parts, featuring the two of the *best* proponents of legal firearm ownership – John Lott and Gary Kleck. The real sparks fly during the Q&A, so don't miss that. (If you can't watch the debate, then you can read this post and this post instead).

Here's part 1, which contains the introduction.

Here are the remaining speeches:

- Pro-firearm: **Guns Reduce Crime Debate**: John R. Lott (2 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: R Gil Kerlikowske (3 **of 13**)
- Pro-firearm: **Guns Reduce Crime Debate**: Stephen Halbrooke (4 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: John J Donohue III (5 **of 13**)
- Pro-firearm: **Guns Reduce Crime Debate**: Gary Kleck (6 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: Paul Helmke (7 **of 13**)
- Q&A Part 1: **Guns Reduce Crime Debate**: Q&A Part 1 (8 **of 13**)
- Q&A Part 2: **Guns Reduce Crime Debate**: Q&A Part 2 (9 **of 13**)
- Q&A Part 3: **Guns Reduce Crime Debate**: Q&A Part 3 (10 **of 13**)
- Q&A Part 4: **Guns Reduce Crime Debate**: Q&A Part 4 (11 **of 13**)
- Conclusions Part 1: **Guns Reduce Crime Debate** Closing Arguments Part 1 (12 **of 13**)
- Conclusions Part 2: **Guns Reduce Crime Debate** Closing Arguments Part 2 (12 **of 13**)

This is everything you need to know about whether legal ownership of firearms reduce crime. And you get both sides – unlike in the New York Times.

Here is my previous article exposing the ignorance of NYT executive editor Bill Keller.

100 babies aborted by moms that had taxpayer-funded IVF

December 29, 2011 | by Wintery Knight | Link | Original Link

From the UK Daily Mail. (H/T Dina)

Excerpt:

> More than 100 unborn babies were aborted last year by women who were pregnant with twins, triplets or quintuplets but wanted to give birth to fewer children.
>
> With a rise in multiple pregnancies widely attributed to IVF treatment, increasing numbers of women are choosing to terminate one or more foetuses while continuing with their pregnancy to deliver at least one of their babies.
>
> Experts suggest that many of the women opt for abortions because of health concerns, as multiple pregnancies are considered more dangerous to mother and baby.
>
> But some women admitted they were considering the procedure because they did not feel able to cope with more than one baby at a time.
>
> The figures are likely to renew the controversial debate over whether IVF clinics should continue implanting several embryos in order to improve couples' chances of having a baby.
>
> The Department of Health statistics reveal 59 women aborted at least one foetus while continuing to give birth to another baby in 2006 – the number had risen to 85 by 2010.
>
> During 2010, 101 foetuses were selectively terminated because some mothers aborted one or more unborn babies.
>
> Of the 85 women undergoing selective reductions last year, 51 were reducing a pregnancy from twins to a single baby, up from 30 in 2006.
>
> There were also 20 procedures to reduce triplets to twins and nine terminations to take a pregnancy from triplets to a single child.
>
> Separate figures from the Human Fertilisation and Embryology Authority (HFEA) show that almost one third of selective abortions carried out in 2009 involved pregnancies that were a result of fertility treatment.
>
> […]Medical experts said there was a clear link between the rise in the number of selective abortions and the increasing use of IVF.

Under the NHS, up to three rounds of IVF can be obtained at taxpayer expense.

John Bolton: Ron Paul’s foreign policy is worse than Barack Obama

December 30, 2011 | by Wintery Knight | Link | Original Link

Partial transcript:

> That’s why I think the debate on the Republican side is so important. And why when I see, I have to be candid, a candidate like Ron Paul whose foreign policy is if anything is worse than the Obama administration apparently leading in Iowa according to some polls, it just gives me great concern. …
>
> But I guess I’d say to people who look at Ron Paul and have some measure of support for his domestic policies on the libertarian side, I’d have to say look, I consider myself pretty libertarian but you cannot live in fantasy land. The rest of the world is not going to leave us alone and we need a Commander-in-Chief who understands that. A Ron Paul president would simply not address the challenges we face.
>
> So if you’re thinking about Ron Paul because of his domestic issues, think again and look at virtually any of the other candidates and consider how they would be as Commander-in-Chief. That’s the president’s first duty, defending the country.

John Bolton is probably the person I trust most on foreign policy.

In other news, Ron Paul endorses the Occupy Movement. Some capitalist.

Hypocrisy on the left: do the actions of liberals match their words?

December 30, 2011 | by Wintery Knight | Link | Original Link

Funny video from American Power Blog.

That's one case, but are leftists always hypocrites?

Do As I Say Not As I Do

I had a long drive on the way to my parents' house for Christmas and I decided to listen to the audio book version of Peter Schweizer's 2004 book "Do As I Say Not As I Do". In that book, he profiles a number of leftist public figures, and he discovers that leftists don't practice what they preach, because even they know that leftist ideas *don't actually work*. I really recommend the book, so let's take a closer look at it and you'll see why you should read it, too.

Here's a 32 minute 2011 lecture about the book:

And here's an interview with the author from FrontPage magazine.

Excerpt:

> **FrontPage:** Give us some of the best examples of the gulf between some liberals' social criticisms and the ingredients of their private lives. Give us some insights, for instance, into the likes of Noam Chomsky, Michael Moore, Cornel West, Hillary Clinton, Ted Kennedy and Barbra Streisand.
>
> **Schweizer:** Looking for liberal hypocrisy is, as they say in the military, a target-rich environment. Noam Chomsky, for example, has attacked wealthy Americans who set up trusts to avoid paying inheritance taxes. But this self-professed "radical socialist" has a tax attorney and did the very same thing. (When I asked him about this hypocrisy he said it was okay because he and has family have been working on behalf of suffering people all these years.)

> Michael Moore's hypocrisy is pathological. He has said numerous times that he doesn't own a single share of stock and that capitalism is not acceptable "on any level." And yet, I found that, according to tax returns filed with the IRS, he has owned shares in Halliburton, numerous oil companies, defense contractors and other multinationals through a tax shelter. When it comes he race he's also wildly hypocritical. He says that Americans who happen to live in largely white neighbhorhoods do so because they are "racists." But he lives in Central Lake, Michigan, which according to the U.S. Census has more than 2,500 residents and not a single black person in the entire town.
>
> Cornel West has numerous times condemned middle class blacks that abandon the "chocolate cities" for the "vanilla suburbs" but guess what, his flavour of choice is vanilla, too.

> Ted Kennedy likes to pose as the Robin Hood of the Senate, forcing wealthy Americans to pay their taxes to help the poor. But I discovered that Kennedys record of actually paying taxes is horrible. Tax the inheritance tax. He says that Americans should pay 49% to the IRS when they die in the name of "social justice." But according to public records, the Kennedys have almost completely avoided contributing to "social justice" by placing their assets in trusts that are located overseas. The Kennedys, over the past thirty years, have paid less than 1% in inheritance taxes on more than $300 million. Ted Kennedy, like Hillary Clinton and George Soros, loves higher taxes. On other people.

And:

> **FrontPage:** Why do you think people are drawn to leftist ideals and what kind of people are they? Self-contempt appears to be a common ingredient, no?
>
> **Schweizer:** Yes, self-contempt is a big part of it. Dietrich Bonhoeffer, the great German pastor who stood up to Hitler, wrote a book about "cheap grace." Liberals are guilty of cheap grace in the political sense. They feel guilty and their form of penance is embracing the destructive ideas of the progressive faith. But it's cheap grace because as I show it the book, they don't actually change the way they live. I think that the religious comparison makes sense because in many respects the modern day left represents a religious movement. They are motivated by a sense of sin, guilt, and the need for salvation and absolution in the political sense. Socialism offers salvation to them. Of course, they don't actually plan to live like socialists.

I would really recommend taking a look at this book. It's similar to Paul Johnson's "Intellectuals" if you've ever read that, but it's better.

Evangelicals in Iowa rally to Rick Santorum, pushing him into 3rd place

December 30, 2011 | by Wintery Knight | Link | Original Link

The leftist Washington Post reports.

Excerpt:

> The CNN/Opinion Research poll released this week showed Santorum moving into third place in Iowa at 16 percent.
>
> […]The poll showed Santorum taking 22 percent of born-again Christians, moving him into first place among that group. And if he can make other born-agains believe that he's the one viable alternative to Romney and Paul, then maybe he can create enough of a rallying effect to unite evangelicals behind his campaign.
>
> "That bandwagon effect at the end can be very powerful in moving numbers dramatically in the last five days," said former Iowa Republican Party chairman Steve Grubbs, pointing to Huckabee's win.
>
> There's also the fact that many voters are receptive to Santorum; other polling has suggested he is a popular second-choice pick.
>
> That suggests voters want to vote for Santorum, but perhaps didn't see him as someone who could actually win. But if they now see him as a viable option, maybe they move into his camp.
>
> "So it means he still has upside — beyond evangelicals but certainly including them," said Nick Ryan, the founder of the pro-Santorum super PAC that is current running a quarter-million dollars worth of ads in the Hawkeye State.
>
> The problem, though, is that Santorum is running against two other lower-tier candidates — Texas Gov. Rick Perry and Minnesota Rep. Michele Bachmann — who have significant appeal to evangelicals as well. And they aren't so far behind Santorum (they take 11 percent and 9 percent, respectively) that they wouldn't also appear to be viable options.
>
> […]For either Perry or Bachmann, finishing behind Santorum in Iowa likely means the end of their campaign, and that means that Santorum is going to have to work at stealing their supporters.
>
> But at least for now, it appears that he has a genuine opportunity to steal votes from a large pool of voters that doesn't like either of the two frontrunners.
>
> And given the topsy-turvy nature of the race in Iowa, it isn't out of the question to think he he could pick up enough votes to win.

Let's confirm Santorum's surging poll numbers with this Fox News article.

Excerpt:

> After a poll Wednesday showed Santorum suddenly moving into third position in Iowa, a Rasmussen Reports survey released Thursday showed the same line-up. The poll showed Mitt Romney and Ron Paul in a dead heat, with 23 and 22 percent respectively, and Santorum in third with 16 percent.
>
> In a troubling sign for Newt Gingrich, the same survey showed the ex-House speaker tied for fourth with Rick Perry.
>
> The polls nationally and in Iowa have been notoriously fickle this season, and the shape of the race just five days out is no guarantee of any particular outcome on caucus day. Also, national polling continues to show Santorum in the low single digits, leading only former Utah Gov. Jon Huntsman.

Just to be clear, if you are a pure social conservative, there here is the candidate ranking for you:

1. Rick Santorum (Persuasive, Good positions, legislative record, voting record)
2. Michele Bachmann (Good positions, legislative record, voting record)
3. Newt Gingrich (Good positions, voting record)
4. Rick Perry (Good positions, legislative record)
5. John Huntsman (Pro-life, pro-gay-rights)
6. Ron Paul (effectively pro-abortion, effectively pro-gay-marriage)
7. Mitt Romney (Record is pro-abortion, pro-gay-rights)

Santorum gets the edge over Bachmann because he is more persuasive on abortion and marriage – he actually tries to convince people who don’t agree with him. They both take the right positions and have good records of activism, but Santorum is a social conservative apologist. Social conservatives should not vote for anyone other than Bachmann or Santorum. Perry would be the lowest I would go when everything is factored in.

Bad news for believers in naturalistic explanations of the Cambrian explosion

December 31, 2011 | by Wintery Knight | Link | Original Link

Before we see the new discovery, let's review what the Cambrian explosion is all about.

Video 1:

Video 2:

Casey Luskin explains the new discovery at Evolution News.

Excerpt:

> A recent article in *Science* begins by observing that the lack of evolutionary ancestors for the animal phyla that appear abruptly in the Cambrian explosion has been troubling to many evolutionary scientists:
>
> > Ever since Darwin there has been a disturbing void, both paleontological and psychological, at the base of the Phanerozoic eon. If his theory of gradualistic evolution be true, then surely the pre-Phanerozoic oceans must have swarmed with living animals — despite their conspicuous absence from the early fossil record.
> >
> > (N. J. Butterfield, "Terminal Developments in Ediacaran Embryology," *Science*, Vol. 334:1655-1656 (December 23, 2011).)
>
> The articles goes on to explain that in 1998, tiny fossil animal embryos were reported that offered "palpable relief" to those evolutionary scientists worried about the lack of Precambrian ancestors.
>
> However, new analyses of these microfossils now strongly suggest that they were not multicellular animals, and thus could not be Precambrian multicellular metazoa that have long been the holy grail for evolutionary paleontologists. Rather, they likely represent single-celled amoeba-like organisms.
>
> […]A Science Daily article on the study explains that many Darwinian scientists will be dismayed by the results of this study:
>
> > Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> How did the investigators determine the nature of these ancient organisms? The fossils were exceptionally well preserved, such that, as the lead author on the paper stated, "the fossils are so amazing that even their nuclei have been preserved." These allowed the authors to determine that these were in fact

> eukaryotic organisms, but not multicellular animals.

Casey goes on to answer the response by naturalists that “the fossil record is incomplete”.

I think it’s important, when deciding whether naturalistic evolution happened, to be aware of these problem areas. So often when discussing Darwinian evolution, people like journalists and philosophers and economists, etc. will just accept the theory because they trust in what experts tell them. There can be a lot of pressure in the university to not be seen as a dumb person, so that people will just go along with whatever their professor tells them to believe. And, that’s not necessarily a bad policy when time is short. However, that is taking evolution on blind faith. It’s a good thing, as we get older, to go back and revisit these things to see if they are really true.

For example, a really educated Darwinian should be able to finish a sentence like this: “People who doubt fully naturalistic evolution do so because of the following pieces of scientific evidence…” If you meet someone who cannot finish this statement, but who still espouses Darwinian evolution, then you know that you are dealing with someone who has jumped to the answer without really working through the problem by themselves. It can be very tempting, especially for artsy types, to just try to jump to the answer that all the smart people believe without really working through the problem. But that’s not a good way to decide what’s true. Everyone has to work through these problems themselves, and listening to the best people on both sides is the way to do that. People who question evolution nowadays don’t question that the universe is billions of years old or that scientific methods have to be used to answer scientific questions. By all means, let’s decide how we got here by appealing to science.

If you would like to see a nice hour-long video on the Cambrian explosion, then click here.

By the way, if you missed my previous post on the new discovery of oxygen in the early Earth’s environment, and the challenge it represents to naturalistic scenarios for the origin of life, then do check that out.

Mitt Romney and Rick Santorum: who has the pro-life record on abortion?

December 31, 2011 | by Wintery Knight | Link | Original Link

Let's start with an article from Stand to Reason which explains what pro-life politicians *should* sound like. (H/T Drew)

Excerpt:

> Why are major pro-life presidential candidates so bad at answering for the pro-life position?
>
> During the 1992 race, vice-presidential candidates Gore and Quayle went face to face. Quayle fumbled badly when Gore asked him directly, "Would you take away a woman's right to choose abortion?" Here was a great chance to bring some moral clarity to the discussion. Instead, he babbled.
>
> Mr. Quayle might have simply answered: I think the question is phrased wrong. Rather, "Why do you think it's OK to kill an innocent human being just because it's in the way and can't defend itself?" If Al Gore objected to that characterization, it would be very fair to say, "Which one of my terms is inaccurate? Kill? Innocent? Human being? Defenseless? In the way? (Maybe you'd prefer "troublesome," "expensive," or just simply "crippled"?)
>
> The most recent squandered opportunity came last night. (Alan Keyes went on a hunger strike. Maybe if that doesn't work he'll just hold his breath until he turns blue. That'll really show 'em.)
>
> "If a woman was brutally raped and would be emotionally traumatized by carrying to term, would you allow her to have an abortion, or would you force her to have the child?"
>
> This is a perfect forum for clarifying this issue, an ideal opportunity for a leader to offer clearheaded advocacy for the unborn, a terrific time to clear the rhetoric from the air and get to the real issue.
>
> The simple answer is: Why complicate the crime of rape with the crime of taking an innocent child's life? Or, to put it another way: Why should the child pay with its life because its father is a rapist? (This is even a better response because it asks a question.)

Greg was writing this in 1996, but we do actually have several pro-life candidates this time, and one of them, Rick Santorum, is actually pretty articulate on social issues.

Excerpt:

> As a member of the U.S. Senate from 1995 until 2007, Santorum was the prime author and champion of key pro-life bills, including the Born-Alive Infants Protection Act, a ban on partial-birth abortion, and the Unborn Victims of Violence

> Act, which makes it a separate crime if an unborn child is harmed or killed during the commission of a stipulated list of federal crimes.
>
> Santorum not only has signed the Susan B. Anthony Pro-Life Presidential Pledge, but he has helped raise money for that organization, too.
>
> Santorum believes that abortion is never justified, including in cases of rape or incest. During a Republican presidential debate last summer in Ames, Iowa, when panelist Byron York noted that many Americans favor abortion under certain circumstances, Santorum didn't flinch or back off from his uncompromising position.
>
> "You know, the Supreme Court of the United States, in a recent case, said that a man who committed rape could not be killed, would not be subjected to the death penalty; yet the child conceived as a result of that rape could be," he said. "That sounds to me like a country that doesn't have its morals correct. That child did nothing wrong. That child is an innocent victim."

Rick Santorum actually tries to convince you if you don't see things his way on social issues. I think there are two candidates who would be pro-life activists if they were elected – Michele Bachmann and Rick Santorum. But I have more confidence in Santorum's ability to persuade people who are not already pro-life to be sympathetic to the pro-life view. He can build consensus, because he is a pro-life apologist, rather than just being pro-life. Rick Santorum is doing exactly what Greg Koukl said that real pro-lifers do.

Now let's take take a look at Mitt Romney's record on abortion.

Excerpt:

> Two months after his pro-life conversion, Mitt Romney appointed Matthew Nestor to the bench in Massachusetts. Romney seeming bowed to political pressure making Nestor a judge even after Nestor, according to the Boston Globe as far back as 1994, had campaigned for political office championing his pro-abortion views.
>
> One year after his pro-life conversion, in July of 2005, Mitt Romney vetoed legislation that would expand the use of the morning after pill arguing that it would contribute to abortions. But just three months later Mitt Romney slid back and signed a bill that expanded state subsidized access to the morning after pill.
>
> Writing in the Boston Globe on October 15, 2005, Stephanie Ebbert noted:
>
> Governor Mitt Romney has signed a bill that could expand the number of people who get family-planning services, including the morning-after pill, confusing some abortion and contraception foes who had been heartened by his earlier veto of an emergency contraception bill. … The services include the distribution of condoms, abortion counseling, and the distribution of emergency contraception, or morning after pills, by prescription …
>
> But that's nothing. Two whole years after the pro-life view had settled into Mitt

> Romney's conscience and a year after Mitt Romney had vetoed legislation expanding access to the morning after pill, he expanded access to abortion and gave Planned Parenthood new rights under state law. Yes, *that* Planned Parenthood.
>
> [Romneycare], in addition to providing healthcare coverage for the uninsured and forcing everyone to have insurance, expanded abortion services in the State of Massachusetts. It also required that one member of the MassHealth Payment Policy Board be appointed by Planned Parenthood of Massachusetts.
>
> From Chapter 58 of the Acts of 2006:

> SECTION 3. Chapter 6A of the General Laws is hereby amended by inserting after section 16I the following 6 sections: . . . Section 16M. (a) There shall be a MassHealth payment policy advisory board. The board shall consist of the secretary of health and human services or his designee, who shall serve as chair, the commissioner of health care financing and policy, and 12 other members: … 1 member appointed by Planned Parenthood League of Massachusetts … (Massachusetts General Court Website, http://www.mass.gov, Accessed 2/5/07)

That's an example of Mitt Romney's record on abortion. Those are the facts on Rick Santorum and Mitt Romney when it comes to abortion.

Mitt Romney and Rick Santorum on abortion – in their own words

We've already seen that Santorum has the pro-life record and Romney has the pro-abortion record. So now let's compare Mitt Romney in his own words with Rick Santorum in his own words.

Mitt Romney:

Rick Santorum:

Just to be clear, if you are a pure social conservative, there here is the candidate ranking for you:

1. Rick Santorum
2. Michele Bachmann
3. Newt Gingrich
4. Rick Perry
5. Ron Paul
6. John Huntsman
7. Mitt Romney

Social conservatives need to vote for a candidate that has a pro-life record, not just pro-life rhetoric and a charming smile.

Happy New Year, and a big thank you to all Wintery Knight readers!

January 1, 2012 | by Wintery Knight | Link | Original Link

The Wintery Knight blog

It's the end of another year of blogging here at Wintery Knight.

I wanted to thank each and every one of our readers, especially those who leave comments, and those who send us tips.

We are ending the year with a final page visit count of 1,084,779.

Please click here for the full summary of our numbers since January of 2009.

We've got Blog Awards!

I also wanted to report to you that Wintery Knight was recently named to the Top 40 Conservative Blogs for the fourth quarter of 2011 by John Hawkins of Right Wing News. And we were also received one of the Fabulous 50 Blog Awards from Doug Ross. We tied for "Best Political Blogging". I also want to thank Brian Auten of Apologetics 315 for frequently linking to my posts on Christian apologetics and theology in his Weekly Apologetics Bonus Links.

Help Us Out

I wanted to ask you to please send me news tips for any stories that you find that are interesting and relevant to the blog, particularly those of you in the early Republican primary states. Also, if you see any stories related to Christian topics, especially apologetics, please send them to me.

To support the blog financially, please click on one of the book images in the center column when you are zoomed in on a specific post, and then buy anything (not just the

book you clicked) from Amazon.com. We receive a portion of all sales that are made after you click on one of the book images and go through to Amazon.com.

Also, if you are not already my friend on Facebook, then please friend me. Facebook is the place where you can get to know me more as a person. You can also follow me on Twitter. If you know someone else who might like our blog, won't you please consider telling them about us?

That's all for now! Happy New Year!

Rick Santorum surges past 20% support level in latest Iowa poll

January 1, 2012 | by Wintery Knight | Link | Original Link

From Real Clear Politics:

> Mitt Romney leads the Republican field in the Des Moines Register's final pre-Iowa caucuses poll released Saturday night.
>
> The Register's highly anticipated survey, which was accurate in predicting both the Democratic and Republican caucus winners in 2008, shows Romney holding the support of 24 percent of respondents. Ron Paul is in second place at 22 percent, while Rick Santorum has ascended into third with 15 percent.
>
> **However, Santorum appears to have all of the late momentum on his side, having surged significantly in the final two days of the four-day polling period. If considered separately, he is at 21 percent in that period, while Romney remained atop the pack at 24 percent during the second half of the poll's sample.**
>
> A whopping 41 percent of likely Republican caucus-goers said they are open to changing their minds.
>
> […]Perhaps the last significant wild card before Tuesday is the potential endorsement of Iowa Rep. Steve King, who told RealClearPolitics in an interview just hours before the Register's poll was released that there was about a 50/50 chance he would get behind a candidate at the last minute.
>
> "With big decisions, at some point your intellect is overcome by your instincts — at least mine is," King said. "If I make a bold decision in the next few days, it will be one of conviction, and I will be eager to advocate for that position and defend it against all critics, if I happen to have any, and I'm sure I will."
>
> The endorsement of King, perhaps Iowa's most influential conservative voice, has for months been heavily sought by the Republican candidates.
>
> Until recently, the five-term congressman has hinted that he was unlikely to back anyone publicly, but he suggested to RCP on Saturday that he may change his mind given the recent polling gains by Ron Paul, whose foreign policy King said is "so alarming to me."
>
> Just before the Register poll was released, King gave his sense of where the Iowa horse race stands.
>
> "If I had to pick them, I'd say this: Romney, Santorum, Paul, in that order — then I think likely Gingrich," he said. "I do think Romney's strong enough to win here in Iowa, and I do think Paul's support is drifting away from him — people are coming to grips with what that would really mean. And the third component of this is the ascendancy of Rick Santorum. Is his ascendancy a sharp enough incline to catch

> up with Ron Paul and Mitt Romney?”
>
> King said that the final poll conducted by Iowa’s largest newspaper “would be a factor” in his decision, since he wanted to get behind someone who had discernible momentum.
>
> In 2008, King endorsed Fred Thompson, whose campaign quickly fizzled after he finished third in the Hawkeye State.

I was for Fred Thompson in 2008. If I were Steve King, I would be endorsing Rick Santorum now. So, I am predicting an endorsement of Rick Santorum by Steve King today, and a second-place finish for Rick Santorum on Tuesday in the Iowa caucuses. Santorum is the most conservative of the top 3 candidates. Gingrich is also a conservative, but he is not in the top 3 in Iowa.

Could Obama have done better? He could learn from Canada's success

January 1, 2012 | by Wintery Knight | Link | Original Link

Prime Minister Stephen Harper

Here's an editorial from Investors Business Daily.

Excerpt:

> Away from the low growth and high regulation of an America under Washington's thumb, our northern neighbor is economically strong. As 2011 ends, Canada has announced yet another tax cut — and will soar even more.
>
> The Obama administration and its economic czars have flailed about for years, baffled about how to get the U.S. economy growing.
>
> In reality, the president need look no further than our neighbor, Canada, whose solid growth is the product of tax cuts, fiscal discipline, free trade, and energy development. That's made Canada a roaring puma nation, while its supposedly more powerful southern neighbor stands on the outside looking in.
>
> On Thursday, Canadian Prime Minister Stephen Harper announced that he will slash corporate taxes again on Jan. 1 in the final stage of his Economic Action Plan, dropping the federal business tax burden to just 15%.
>
> Along with fresh tax cuts in provinces such as Alberta, total taxes for businesses in Canada will drop to 25%, one of the lowest in the G7, and below the Organization of Economic Cooperation and Development average.
>
> "Creating jobs and growth is our top priority," said Minister Jim Flaherty. "Through our government low-tax plan … we are continuing to send the message that Canada is open for business and the best place to invest."

> It's not just that Canada's conservative government favors makers over takers. Harper's also wildly popular for shrinking government. "The Harper government has pursued a strategic objective to disembed the federal state from the lives of citizens," wrote University of Calgary Professor Barry Cooper, in the Calgary Herald.
>
> Harper also has made signing free trade treaties his priority. Canada now has 11 free trade pacts in force, and 14 under active negotiation — including pacts with the European Union and India, among others.
>
> "We believe in free trade in Canada, we're a free-trading nation. That's the source of our strength, our quality of life, our economic strength," Flaherty said last month.
>
> Lastly, Canada has pursued its competitive advantage — oil. And it did so not through top-down "industrial policy," but by getting government out of the way.
>
> Harper has enacted market-friendly regulations to accomplish big things like the Keystone Pipeline — and urged President Obama to move forward on it or else Canada would sell its oil to China.
>
> These policies have been well-known since the Reagan era. But in a country that's been institutionally socialist since the 1950s, Harper's moves represent a dramatic affirmation for free market economics.
>
> For Canada, they've had big benefits.
>
> Canada's incomes are rising, its unemployment is two percentage points below the U.S. rate, its currency is strengthening and it boasts Triple-A or equivalent sovereign ratings across the board from the five top international ratings agencies, lowering its cost of credit.
>
> Is it too much to ask Washington to start paying attention to the Canadian success story?
>
> These sound principles work every time they are tried, and they have led to a transformation in Canada.

Although this article doesn't mention it, Stephen Harper is also the most solid statesman on foreign policy issues as well.

And here's a view from up north from Canadian journalist Brian Lilley.

Excerpt:

> Prime Minister Stephen Harper has put out his own list of accomplishments for the year that just ended but here are a few of the key conservative minded actions that spring to mind for me.
>
> - Ending political welfare. The per-vote subsidy that made political parties lazy and unresponsive to the voters of this country and insulated them from angering their core supporters will be gone by 2015-2016. Legislation

> ending the subsidy has already passed but the parties are slowly being weaned off the money and will get smaller amounts each year until the subsidy is gone.
> - They saw the light of common sense and released the names of those on their wanted list of suspected foreign war criminals. These were people that officials admitted should not be in the country, had been ordered out but that were still in Canada. At first officials would only admit there was a list of suspected war criminals but not say who they were. After much pressure, common sense won the day.
> - Ending the insane rules that would see farmers from certain provinces jailed for daring to sell their wheat to the customer of their choice. The Canadian Wheat Board still exists for those that want to use its centralized system. For those that want freedom, they now have that choice.
> - While much attention has been paid to Bill C-10, the omnibus crime bill, the government has passed C-2 (the mega-trials bill), this bill will make it easier to conduct the mega-trials now associated with organized crime without infringing on the right to a fair trial.
> - While the bill to end the gun registry has not been passed yet, it has been introduced and will pass early this year.
> - Immigration. On this file the Conservatives continue to push for ever higher numbers of newcomers while keeping those skeptical of high immigration onside by cracking down on fraud, cleaning up the system and putting Canada first.
>
> Another thought for those, often myself included, that like to say this government is not conservative enough.

Lilley also notes that electing Harper presented a national day care program (which punishes families with stay-at-home), increasing unemployment benefits (which encourages people not to work), etc.

Michael Murray explains how to talk about religion in the public square

January 1, 2012 | by Wintery Knight | Link | Original Link

In this post, I want to discuss a research paper by evangelical Christian philosopher Michael J. Murray. The title of the paper is "Who's Afraid of Religion?"

Murray begins with a distinction, as philosophers love to do:

> …we would be perfectly happy to have a discussion of claims like…"Mahayana Buddhism emerged in the first century BCE with the appearance of the Mahayana sutras." … It is OK to speak of religion… as a historical phenomenon or a socio-cultural influence. It is something altogether different to discuss religious commitments that one owns. That is the sort of religion that troubles us.

People who aren't religious feel discomfort about hearing about the religious beliefs of others, because those beliefs influence public policy, but (they think) those beliefs are based non-rational factors, such as place of birth, parental beliefs, peer groups, emotions, prejudices, superstitions, etc. They are uncomfortable living in a government that was voted in by people whose views are based on irrational religious beliefs.

Murray has some illustrations of this "theo-phobia" here:

> …think about the last time you heard a devoutly religious person argue, on explicitly religious grounds, that gay marriage should be banned, or that intelligent design should be taught in the public school biology curriculum, or that abortion is murder and thus should be outlawed.

He thinks that arguing for views on pureliy religious grounds makes people uncomfortable.

And I agree with that. I feel uncomfortable when people argue for positions from faith-based premises, especially if I don't believe in their religion. But do discussions of religious beliefs necessarily have to be about faith-based personal preferences? Or is there another way to discuss religion that doesn't make non-religious people squirm with discomfort?

In the remainder of the paper, Murray explores five reasons why theo-phobia exists in academic settings:

1. Religion supports oppression, violence, and tyranny and is thus best ignored, excluded or perhaps even actively opposed.
2. Religion is a personal or subjective matter and as a result can't be subjected to canonical standards of rational scrutiny. It thus has no place in the academy.
3. Religion can't have a role in scholarly inquiry since it at best plays a balkanizing role in the scholarly world.

4. If religion is allowed to have a role in the academy it will quickly intrude into domains where it does not belong.
5. Reason #5 is kept secret until the end of the paper.

Regarding point 1, Murray argues that religious excesses can be controlled by falsifying the religion using reason and evidence, because *religions make testable claims.* So, if academics are afraid of the excesses of a dangerous religion, they should *falsify it by arguing that its claims are false.* There is no reason to be afraid of expressions of religious belief when you are free to argue against the testable truth claims of that religion.

I repeat: different religions make different claims about the external world. Either the universe had a beginning (Christianity) or it didn't (Mormonism). Either Jesus died on the cross (Christianity) or he didn't (Islam). If academics are worried about the effects of some religion, they *can* argue against it! If a religious person is *not* willing to defend the testable truth claims, then they are discredited anyway by refusing to engage.

For the remaining 4 points, especially the last one, *I recommend you read the whole article*. Give it to your friends, religious and non-religious, who believe that faith is fundamentally different from other academic disciplines. Some truth claims of different religions *can be tested*. And Christians especially should help others to feel comfortable talking to them by sticking to *testable truth claims and publicly accessible evidence.*

I'll give you a hint about reason #5, from atheist philosopher Thomas Nagel of New York University. Nagel is quoted as follows:

> "In speaking of the fear of religion, I don't mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers.
> ("The Last Word" by Thomas Nagel, Oxford University Press: 1997)

So we learn from Murray that religions stand or fall based on logical consistency and empirical validation against the external world, *just like any other academic discipline*. So long as you stick to discussing the public, testable claims of religions, there is no reason to be uncomfortable about discussing religions. Don't discuss the parts of a religion that can't be tested, only discuss the parts that can be tested.

(Note: Nagel isn't all bad, he defends intelligent design as science in a research paper summarized here).

If you would like to see how you can discuss religion in a public forum, check out this debate between a Christian philosopher, William Lane Craig, and an atheist Christopher Hitchens:

It can be done. Theists just have to learn to stick to discussing things that can be tested and proved using public knowledge.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

Rick Santorum for President of the United States

January 1, 2012 | by Wintery Knight | Link | Original Link

I am endorsing Rick Santorum for President.

Here's the break-down on the other two leaders in the Republican primary, Romney and Paul:

Mitt Romney: When Mitt Romney was running for office in Massachusetts, he tried to assure Mass voters that he was solidly pro-abortion and pro-gay rights. And when elected, that's how he governmed. The only thing that he has ever done to appeal to social conservatives is smile and look handsome, starting in 2006 – when he was out of office. I've written before about Romney's pro-abortion record and Romney's pro-gay-marriage record. He is a social liberal. The most socially liberal candidate in the primary.

Here is an excerpt from an assessment of Mitt Romney's economic record from Club for Growth:

> Because of his long tenure in public life, especially his presidential run in 2008, Mitt Romney is considered a well-vetted candidate by now. Perhaps to his consternation, he has developed an unshakeable reputation as a flip-flopper. He has changed his position on several economic issues, including taxes, education, political free speech, and climate change. And yet the one issue that he doesn't flip on – RomneyCare – is the one that is causing him the most problems with conservative voters. Nevertheless, he labels himself as a pro-growth fiscal conservative, and we have no doubt that Romney would move the country in a pro-growth direction. He would promote the unwinding of Obama's bad economic policies, but we also think that Romney is somewhat of a technocrat. After a career in business, quickly finding a "solution" seems to be his goal, even if it means more government intrusion as a means to an end. To this day, Romney supports big government solutions to health care and opposes pro-growth tax code reform – positions that are simply opposite to those supported by true economic conservatives. How much Romney's philosophy of governance will affect his policy goals if elected, we leave for the voters to decide.

There is no reason for us to counter Obama with Obama-lite.

Ron Paul: Ron Paul is the absolute worst candidate on foreign policy and national security, and bad on social policy, too. Ron Paul opposes a constitutional amendment defining marriage, because he doesn't think that the federal government should define traditional marriage as being between one man and one woman. He has a moderately pro-life voting record. NRLC says that he votes pro-life only 75% of the time.

Excerpt from the Club for Growth report on Ron Paul's fiscal policy:

> When it comes to limited government, there are few champions as steadfast and principled as Representative Ron Paul. In the House of Representatives, he plays

> a very useful role constantly challenging the status quo and reminding his colleagues, despite their frequent indifference, that our Constitution was meant to limit the power of government. On taxes, regulation, and political free speech his record is outstanding. While his recent pork votes are troubling, the vast majority of his anti-spending votes reflect a longstanding desire to cut government down to size.
>
> But Ron Paul is a purist, too often at the cost of real accomplishments on free trade, school choice, entitlement reform, and tort reform. It is perfectly legitimate, and in fact vital, that think tanks, free-market groups, and individual members of Congress develop and propose idealized solutions. But presidents have the responsibility of making progress, and often, Ron Paul opposes progress because, in his mind, the progress is not perfect. In these cases, although for very different reasons, Ron Paul is practically often aligned with the most left-wing Democrats, voting against important, albeit imperfect, pro-growth legislation.

Ron Paul has not been able to move legislation to implement his pro-growth vision. His fiscal positions are excellent, but he has *no record whatsoever* of being able to build enough consensus.

Let's meet Rick Santorum

Here's an article that explains the pros and cons of Rick Santorum as candidate. I really recommend this article. It is from a Catholic web site, so there is Catholic stuff in it, but it mentions all the weaknesses and strengths that I'm familiar with – it's a balanced article.

Excerpt:

> As a member of the U.S. Senate from 1995 until 2007, Santorum was the prime author and champion of key pro-life bills, including the Born-Alive Infants Protection Act, a ban on partial-birth abortion, and the Unborn Victims of Violence Act, which makes it a separate crime if an unborn child is harmed or killed during the commission of a stipulated list of federal crimes.
>
> Santorum not only has signed the Susan B. Anthony Pro-Life Presidential Pledge, but he has helped raise money for that organization, too.
>
> Santorum believes that abortion is never justified, including in cases of rape or incest.
>
> […]Santorum has been similarly staunch in taking a stand against same-sex "marriage," which has earned him the enmity of homosexual-activist groups.
>
> […]"Rick Santorum has been a hero of the movement in every sense on marriage, life and religious liberty. No one has been braver or taken more hits for his courage than Rick," said Maggie Gallagher, co-founder of the National Organization for Marriage.
>
> For Santorum, the issues of marriage and abortion aren't just social issues —

> they spill over into his economic philosophy.
>
> "You cannot have limited government if you have broken families, because someone has to pick up the pieces; and the ones who pick up the pieces are the taxpayers," Santorum has said.
>
> While some argue that an emphasis on social issues is detrimental to a politician's chances of being elected, Santorum on Dec. 20 got two endorsements from family-issues leaders that some say could provide the needed boost in the Jan. 3 Iowa caucuses to make Santorum a first-tier candidate.
>
> Santorum was endorsed by Bob Vander Plaats, a leading Christian conservative in Iowa, and Chuck Hurley, another family-issues stalwart. Both are affiliated with The Family Leader, which Vander Plaats founded. Hurley is president of the affiliated Iowa Family Policy Center.
>
> "We care about any issue affecting the family, from the sanctity of human life to preserving a biblical view of marriage, and even issues such as gambling and economic issues," said Julie Summa, spokeswoman for The Family Leader.
>
> Summa said that the board of The Family Leader unanimously supported Santorum but decided that only the two leaders, not the organization, would endorse him because some of their conservative Christian constituency supports other candidates.
>
> "When you listen to Senator Santorum speak," Summa added, "he ties everything back to the family, including economics. Our economy is better when we have strong families."

And here is the Club for Growth report on Santorum's fiscal policy, which is his weakest link.

Excerpt:

> On the whole, Rick Santorum's record on economic issues in the U.S. Senate was above average. More precisely, it was quite strong in some areas and quite weak in others. He has a strong record on taxes, and his leadership on welfare reform and Social Security was exemplary. But his record also contains several very weak spots, including his active support of wasteful spending earmarks, his penchant for trade protectionism, and his willingness to support large government expansions like the Medicare prescription drug bill and the 2005 Highway Bill.
>
> As president, Santorum would most likely lead the country in a pro-growth direction, but his record contains more than a few weak spots that make us question if he would resist political expediency when it comes to economic issues.

It's not that weak for a weak link, is it?

My concerns about Rick Santorum are mostly on fiscal policy. I don't like his vote against

NAFTA in 1993, and I don't like his plan to focus corporate tax cuts on the manufacturing *only* – I want across the board tax cuts. His support for Arlen Specter over Pat Toomey was hard for me to get over, too. But it's minor – there is no perfect candidate.

Rev. James Leonard points out that Santorum has a good pro-growth record:

> First, Santorum was the first of the candidates to endorse the Ryan plan. No statist would ever do so. Santorum has pledged to cut 5 trillion dollars in the next 5 years.
>
> Second, Santorum co-sponsored and fought for a balanced budget amendment that failed by a single vote, prompting Santorum to demand that the RINO (Hatfield, OR) who voted against it be stripped of his chairmanship. He did so even against such stalwart Republicans as Jesse Helms who defended the RINO. Santorum's fight led to the RINO's early retirement.

One final thing: Rick Santorum introduced an amendment to No Child Left Behind Act in 2001 to encourage critical thinking on issues like evolution and global warming in the schools. That's good, but it's also good that Rick has been pushing away from the idea of a federal role in education at all. Another plus.

PPP poll of 1340 likely Iowa voters: Paul 20, Romney 19, Santorum 18

January 2, 2012 | by Wintery Knight | Link | Original Link

From Democrat pollster PPP.

Excerpt:

> Ron Paul is at 20%, Mitt Romney at 19%, and Rick Santorum at 18%. Rounding out the field are Newt Gingrich at 14%, Rick Perry at 10%, Michele Bachmann at 8%, Jon Huntsman at 4%, and Buddy Roemer at 2%.
>
> The momentum in the race is completely on Santorum's side. He's moved up 8 points since a PPP poll earlier in the week, while no one else has seen more than a one point gain in their support. Among voters who say they decided who to vote for in the last seven days he leads Romney 29-17 with Paul and Gingrich both at 13.
>
> Santorum's net favorability of 60/30 makes him easily the most popular candidate in the field. No one else's favorability exceeds 52%. He may also have more room to grow in the final 48 hours of the campaign than the other front runners: 14% of voters say he's their second choice to 11% for Romney and only 8% for Paul. Santorum's taken the lead with two key groups of Republican voters: with Tea Partiers he's at 23% to 18% for Gingrich, 16% for Paul, 15% for Bachmann, and only 12% for Romney. And with Evangelicals he's at 24% to 16% for Gingrich, and 15% for Paul and Romney.
>
> Other than Santorum's rise the other big story of this week is Paul's fall. He was at 24% earlier in the week but has dropped to 20%. That decline in support coincides with a precipitous drop in his favorability numbers. On our last poll he was at +13 (53/40), but that's gone down 21 points on the margin to -8 (43/51).

Robert Stacy McCain writes that Santorum has a decent ground game in New Hampshire.

If you missed my endorsement of Santorum, click here.

A Christian and a postmodern relativist debate atheism and Christianity

January 2, 2012 | by Wintery Knight | Link | Original Link

I listened to an episode of the the radio show "Unbelievable", which is broadcast in the UK by Premier Christian radio.

Details:

> "The Atheist's Bible" (Duckworth & Co) has been a bestseller in the USA. It brings together a mass of quotes from atheists, agnostics and more. Its compiler Joan Konner speaks to Justin Brierley about why she put it together and her own thoughts on atheism. She interacts with Christian apologist Peter Williams whose own book "The Sceptic's Guide to Atheism" (Paternoster) has just been published.
>
> Joan and Peter debate whether atheism has some fundamental faith assumptions of its own, as Peter argues that atheistic naturalism is a self-defeating notion. Joan argues that Christianity is arrogant in its exclusive claims.

The MP3 file is here.

Some people in our society believe that moral rules and the purpose of life should be decided based on an individual's feelings and intuitions, and not by any external state of affairs that can be reasoned about or proven. I call these people postmoderns. Postmoderns are opposed to organized religions as well, because they usually come with set ideas of what's right and wrong. Some organized religions, like Christian theism, try to show that their system of morality and their ideas about meaning and purpose in life should be accepted because their system is true – i.e. – because Christian claims about the way the world is are true, and therefore humans are obligated to act based on Christian morality and Christian ideas about the purpose of life. Postmoderns are especially hostile to these truth-claiming religions, and they attack them in several ways.

What postmoderns believe about religion

1. Postmoderns think that truth claims made by a religion cannot be proven true or false using public, testable evidence, because then people in some religions that contradict history or science would feel bad. I.e. – they think that claims made by a religion, like "the physical universe came into being out of nothing" cannot be tested using scientific experiments and shown to be true or false, because if you tested it and found that the universe did begin to exist, then people like Mormons who think that the universe is eternal would feel bad. So the safest thing for a postmodern to do is to assert that religions are all neither true nor false, and cannot be tested. This is, of course, not the view of religion that many religious people have – we think that morality and purpose are true objectively *because* we are able to make a case that the religion that defines them is true.

2. Postmoderns try to argue that changing their actions to comply with an objective moral reality or an object purpose, even if it has been shown to be true using logic and evidence, is “coercive” and opposed to individual freedom. I.e. – they think that even if a religion like Christian theism is shown to be true using science and history, they shouldn’t have to care about it, they should just be able to do whatever makes them feel good without caring about what’s true. It’s not that they have considered the case for Christian theism, it’s that they decide, in advance of considering the evidence, that they will not let the real state of affairs in the universe determine what is right or wrong, or what they are supposed to do with their lives. They don’t want to let what can be demonstrated about reality “coerce” their search for happiness.

3. For postmodernists, the purpose of religion cannot be to hold true beliefs about the external world. If the purpose of a religion were to have true beliefs, then religions that were false would be excluded, and that would make people in those false religions feel bad. So, the purpose of religions must be to make people behave well, because then they are all equivalent, and no religion is excluded. It is irrelevant to a postmodern that Christians claim that their religion hinges on a historical event, (the resurrection), which either happened or didn’t. Postmodernists refuse to assess the case for or against a religion by studying whether a religion’s claims are true. The want to treat them all as equal independently of truth, because, they claim, all religions are equally good at making people behave nicely. Postmoderns also like this view because it means that they do not have to waste any time assessing whether religions are true or false.

4. Tolerance, to a postmodernist, means that everyone has to behave as if morality is not real and that life has no objective meaning. If you think that the universe is any one way, or that people ought to act any particular way, then you are “intolerant” according to a postmodernist – because you think that your view of morality and purpose is real, and that it applies to others. Postmodernists want everyone to just arbitrarily decides their likes and dislikes, as well as the goals that give them significance. Postmodernists disagree with those who think that morality and meaning are objective – that they are set up by a Designer, and not up for individual humans to decide however they like.

Responding to postmodernism

I think that many people who have this postmodern/subjectivist/relativist view of morality and purpose are people who have been raised in strict religious environments that were focused more on rituals and compliance, and less on debate and truth. It’s a lot easier to persuade a postmodernist when you 1) express a genuine interest in them as a person, and 2) take the time to try to show them why you think that your religion is true. Trying to ram moral rules and a purpose to life down someone’s throat without settling the truth question is stupid and counter-productive. Never talk about religion and theology unless you can link it to analytical philosophy, history or science. When talking to a postmodern, try to avoid sounding like a pastor. Don’t sound mystical. Don’t speak Christianese. Try to show them that evaluating a religion’s claims is no different than evaluating any other testable claim.

It’s especially important to argue that religion is about truth, because no one is going to be able to defend morality and purpose in the context of a religion unless they can argue that the major claims of that religion are true. These days, most people are postmodern, and they’ve been trained to be offended by anyone who tells them that what they are doing is wrong or that what they are believing is false. If you aren’t coming from a truth perspective, with all your arguments and facts in order, then it is tremendously difficult to withstand the sobs and victimhood of an aggrieved postmodern. Pointing out the selfish motives of postmodernists is not a bad idea either – show how they care about truth in technical areas, say, but have a selective dislike of truth in religious and moral areas.

Iran set to steal military technology from the drone Obama gave them

January 2, 2012 | by Wintery Knight | Link | Original Link

Fars News reports. (H/T Gateway Pundit)

Excerpt:

> Senior Iranian officials announced here in Tehran on Monday that experts of the country's Science and Defense Ministries are likely to launch joint cooperation to study and analyze the technology of the US drone that was downed by Iran early in December.
>
> "We have had some meetings with the Defense Minister about the kind of cooperation that the academic community can have with our country's Armed Forces on the US spy drone and once we come to the final conclusions we will be ready for cooperation," Iranian Minister of Science, Research and Technology Kamran Daneshjou told FNA on Monday.
>
> "The country's universities have informed the Science Ministry that they are ready to study and analyze the US stealth drone and demanded the Science Ministry to inform the Defense Ministry of their preparedness in this regard," he added.
>
> Iran first announced on December 4 that its defense forces had downed the aircraft through a sophisticated cyber attack.
>
> The drone is the first such loss by the US. US officials have described the loss of the aircraft in Iran as a setback and a fatal blow to the stealth drone program.
>
> The RQ-170 has special coatings and a batwing shape designed to help it penetrate other nations' air defenses undetected.

So what was Obama doing when he refused to act to destroy the drone? (See video above)

Obama doesn't have time for national security

Obama golfs while Iranians neutralize our stealth drone program. George W. Bush golfed 24 times in 8 years. Obama has golfed 90 times in 3 years. I think he needs to do less golfing, and more national security decision making.

Gary Habermas and Joel Marcus discuss the resurrection of Jesus

January 2, 2012 | by Wintery Knight | Link | Original Link

A dialog between Dr. Gary Habermas and Dr. Joel Marcus.

Dr. Habermas is a conservative evangelical who argues that the evidence for the resurrection is strong. Dr. Marcus is fairly moderate, definitely not an evangelical, so it makes for an interesting, but friendly, disagreement. He agrees with Gary on some things, but not on others.

About the speakers:

Gary Habermas

Chair, Department of Philosophy, Liberty University
Distinguished Research Professor

Ph.D., History and Philosophy of Religion, Michigan State University (1976)
M.A., Philosophical Theology, University of Detroit (1973)
B.R.E., Christian Education, Bible, Social Sciences; William Tyndale College (1972)

Distinguished Research Professor; Liberty Baptist Theological Seminary and Graduate School; Chair, Department of Philosophy and Theology, Liberty University; current appointment: teaching in PhD program, Liberty University, 1981-Present.

Joel Marcus

Professor of New Testament and Christian Origins, Duke University

B.A., New York University
M.A., M.Phil., Ph.D, Columbia University-Union Theological Seminary, New York

Joel Marcus teaches New Testament with an emphasis on the Gospels and the context of early Christianity in first-century Judaism. His publications include two monographs on Mark and a two-volume commentary on the same Gospel in the *Anchor Bible* series (Doubleday, 2000, 2009). His current research focuses on the parting of the ways between ancient Judaism and the Christianity of the first three centuries A.D.

This is MP3 audio of the discussion is in 3 parts.

- Part 1 of 3 (35 minutes)
- Part 2 of 3 (35 minutes)
- Part 3 of 3 (36 minutes)

Each part is 8 Mb. The last segment is Q&A with students.

The top 10 worst federal rules of 2011

January 3, 2012 | by Wintery Knight | Link | Original Link

From the Heritage Foundation.

Here's the one that I disliked the most:

> **6. The Bring on the Blackouts Rule.** The EPA is proposing to force power plants to reduce mercury by 90 percent within three years—at an estimated cost of $11 billion annually. A significant number of coal-fired plants will actually exceed the standard—by shutting down altogether. Indeed, grid operators, along with 27 states, are warning that the overly stringent regulations will threaten the reliability of the electricity system and dramatically increase power costs. Just like candidate Obama promised.

Oh, one more:

> **9. The Chill the Economy Regulation.** The EPA issued four interrelated rules governing emissions from some 200,000 boilers nationwide at an estimated capital cost of $9.5 billion. These boilers burn natural gas, fuel oil, coal, biomass (e.g., wood), refinery gas, or other gas to produce steam, which is used to generate electricity or provide heat for factories and other industrial and institutional facilities. Under the so-called Boiler MACT, factories, restaurants, schools, churches, and even farms would be required to conduct emissions testing and comply with standards of control that vary by boiler size, feedstock, and available technologies. The stringency and cost of the new regulations provoked an outpouring of protest, including 21 governors and more than 100 Members of Congress. On May 18, the EPA published a notice of postponement in the Federal Register, but the regulations remain on the books.

If I were President, then the first thing that I would do is abolish the EPA, the Department of Energy and the Department of Education. We have too much government!

CBS News smears Santorum with racism because he is anti-welfare

January 3, 2012 | by Wintery Knight | Link | Original Link

CBS News is painting Santorum's opposition to welfare as racism – by inserting words he didn't say into their "transcript" of his speech.

Excerpt:

> The left and media are sending out a false story about what Rick Santorum said at an Iowa event. A CBS News transcript falsely claimed that Santorum said if elected he plans to cut regulations and entitlements and he doesn't want to "make black people's lives better by giving them somebody else's money."
>
> The video is below. It's clear he did NOT say that, and he was referring to people on welfare in general, and race was not mentioned. But that doesn't keep people like this from using it as propaganda. It's frustrating because so many will read the false story and believe it. But that's the purpose of the propaganda.
>
> Here is what Santorum said in full:
>
> *"It [Medicaid] just keeps expanding. I was Indianola a few months ago, and I was talking with someone who works at the Department of Public Welfare here, and she told me that the state of Iowa is going to get fined if they don't sign up more people under the Medicaid program. They're just pushing harder and harder to get more and more of you dependent upon them so that they can get your vote. "I don't want to make [pause] lives, people's lives better by giving them somebody else's money."*
>
> Even liberal Tommy Christopher at Mediaite admits Santorum didn't say what the CBS transcript says he did.
>
> The left is determined to paint the GOP as bigoted because even if they lose a tiny portion of the black vote, it could be enough for Obama to lose, so they lie.

Journalists are indoctrinated in J-school to view conservatives as guilty of SIXHIRB – sexism, intolerance, xenophobia, homophobia, Islamophia, racism, bigotry. While the rest of learn quantitative, marketable skills, journalists spend 4 years learning how to be biased and how to mislead the public.

Santorum is pro-family, and so he opposes welfare. Welfare is anti-family because it makes fathers optional and encourages women to have children with men who will not commit for life and will not prepare to provide for a family. The mainstream media believes that it is too much of a burden on women to insist on these antiquated sex roles – they would rather tax working fathers to subsidize fatherlessness. And if they have to drum up popular support for subsidized fatherlessness by smearing conservatives, then that's what they'll do. Santorum says, and I agree, that people on welfare would be better

off if they were working, instead.

In other news, leftist Alan Colmes mocks Rick and Karen Santorum for grieving over their miscarriage.

Excerpt:

> National Review Editor Rich Lowry and Liberal commentator Alan Colmes clashed on Fox News Monday when Lowry interjected to rebuke Colmes' criticism of the way Republican presidential candidate Rick Santorum and his wife handled the death of their infant newborn Gabriel, who lived for only two hours in 1996.
>
> "I even think some of the dastardly characters we have in the main stream media are not going to go as low as you just have Alan," Lowry said at one point.
>
> The heated rhetoric began early on in the segment when Colmes said undecided voters will ultimately not stick with the surging Santorum once people "get a load of some of the crazy things he's said and done, like taking his two-hour-old baby when it died right after child birth home and played with it so that his other children would know that the child was real."

You have to exercise judgment when dealing with the mainstream media. They have their worldview, and they fit the facts to it.

MIT physicist explains the challenge of cosmic fine-tuning for naturalism

January 3, 2012 | by Wintery Knight | Link | Original Link

Here's the article from Harper's magazine. The MIT physicist says that the fine-tuning is real, and is best explained by positing the existence of an infinite number of universes that are not fine-tuned – the so-called multiverse.

Excerpt:

> While challenging the Platonic dream of theoretical physicists, the multiverse idea does explain one aspect of our universe that has unsettled some scientists for years: according to various calculations, if the values of some of the fundamental parameters of our universe were a little larger or a little smaller, life could not have arisen. For example, if the nuclear force were a few percentage points stronger than it actually is, then all the hydrogen atoms in the infant universe would have fused with other hydrogen atoms to make helium, and there would be no hydrogen left. No hydrogen means no water. Although we are far from certain about what conditions are necessary for life, most biologists believe that water is necessary. On the other hand, if the nuclear force were substantially weaker than what it actually is, then the complex atoms needed for biology could not hold together. As another example, if the relationship between the strengths of the gravitational force and the electromagnetic force were not close to what it is, then the cosmos would not harbor any stars that explode and spew out life-supporting chemical elements into space or any other stars that form planets. Both kinds of stars are required for the emergence of life. The strengths of the basic forces and certain other fundamental parameters in our universe appear to be "fine-tuned" to allow the existence of life. The recognition of this finetuning led British physicist Brandon Carter to articulate what he called the anthropic principle, which states that the universe must have the parameters it does because we are here to observe it. Actually, the word *anthropic*, from the Greek for "man," is a misnomer: if these fundamental parameters were much different from what they are, it is not only human beings who would not exist. No life of any kind would exist.
>
> If such conclusions are correct, the great question, of course, is *why* these fundamental parameters happen to lie within the range needed for life. Does the universe care about life? Intelligent design is one answer. Indeed, a fair number of theologians, philosophers, and even some scientists have used fine-tuning and the anthropic principle as evidence of the existence of God. For example, at the 2011 Christian Scholars' Conference at Pepperdine University, Francis Collins, a leading geneticist and director of the National Institutes of Health, said, "To get our universe, with all of its potential for complexities or any kind of potential for

> any kind of life-form, everything has to be precisely defined on this knife edge of improbability…. [Y]ou have to see the hands of a creator who set the parameters to be just so because the creator was interested in something a little more complicated than random particles."
>
> Intelligent design, however, is an answer to fine-tuning that does not appeal to most scientists. The multiverse offers another explanation. If there are countless different universes with different properties—for example, some with nuclear forces much stronger than in our universe and some with nuclear forces much weaker—then some of those universes will allow the emergence of life and some will not. Some of those universes will be dead, lifeless hulks of matter and energy, and others will permit the emergence of cells, plants and animals, minds. From the huge range of possible universes predicted by the theories, the fraction of universes with life is undoubtedly small. But that doesn't matter. We live in one of the universes that permits life because otherwise we wouldn't be here to ask the question.

I thought I was going to have to go outside this article to refute the multiverse, but Lightman is honest enough to refute it himself:

> The… conjecture that there are many other worlds… [T]here is no way they can prove this conjecture. That same uncertainty disturbs many physicists who are adjusting to the idea of the multiverse. Not only must we accept that basic properties of our universe are accidental and uncalculable. In addition, we must believe in the existence of many other universes. But we have no conceivable way of observing these other universes and cannot prove their existence. Thus, to explain what we see in the world and in our mental deductions, we must believe in what we cannot prove.
>
> Sound familiar? Theologians are accustomed to taking some beliefs on faith. Scientists are not. All we can do is hope that the same theories that predict the multiverse also produce many other predictions that we can test here in our own universe. But the other universes themselves will almost certainly remain a conjecture.

The multiverse is not pure nonsense, it is theoretically possible. The problem is that the multiverse generator itself would require fine-tuning, and, as Lightman indicates, we have no independent experimental evidence for the existence of the multiverse. Atheists just have to take it on faith, and hope that their speculations will be proved right. Meanwhile, the fine-tuning is just as easily explained by postulating God, and we have independent evidence for God's existence, like from the cosmological argument, the moral argument, and so on.

We need to be frank about atheists and their objections to the progress of science. Within the last 100 years, we have discovered that the physical universe came into being out of nothing 15 billion years ago, and we have discovered that this one universe is fine-tuned

for intelligent life. Atheists are 100 years out of date, and they are hoping that all of this 100 years of progress will be overturned, so that they can go back to their comfortable belief that the universe is eternal and that the parameters of this universe are undesigned.

While I was listening the Dennis Prager show, an atheist caller called Prager and asserted that atheism was true because he has a happy life as an atheist. And I think that's what atheism is. They believe that God, if he exists, should have the goal of making them happy. And if they are already happy, then why would they care about whether there is a God out there who might ask them to do things (like not kill babies) which might make them unhappy?

Atheists *don't care* about science as something that determines what they should or should not believe. If science proves that they are accountable to God, then they invent speculations and hope in those speculations against the science – as with the multiverse or the aliens seeding the Earth with life or the unobservable, untestable hyper-universe that spawned this universe.

To see these arguments examined in a debate with a famous atheist, simply watch the debate between William Lane Craig and Christopher Hitchens, and judge which debater is willing to form his beliefs on scientific progress, and which debater is forming his beliefs *against* the science we have today, and hoping that the good science we have today based on experiments will be overturned by speculative theories at some point in the future. When you watch that debate, it becomes very clear that Christian theists are interested in conforming their beliefs to science, and atheists are very interested in speculating against what science has shown in order to promote their own happiness. Whatever standard of morality they invent for themselves has to be self-made, so that they can satisfy it merely by doing whatever they feel like doing. And if science shows that the universe doesn't conform to invented morality, because it is designed, then atheists just say "so much the worse for science".

Just to re-cap, we've had peer-reviewed scientific publications *in the last month* that have made the illusion of naturalism even less likely, in the areas of the fossil record and the origin of life. And we now have the Borde-Vilenkin-Guth theorem, showing that any cosmology that features an expanding universe will have a beginning. The progress of science marches on against atheism, in virtually every area, and all we see from the likes of Richard Dawkins is the complete refusal to engage in debates with theists about the evidence. So who is anti-science now?

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones

- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument

Perry and Bachmann to reassess their campaigns after disappointing loss in Iowa

January 4, 2012 | by Wintery Knight | Link | Original Link

Here are the Iowa election results from Fox News as of 2 AM on Wednesday morning:

Candidate	Votes	Percent
Santorum	29,968	25%
Romney	29,964	25%
Paul	26,186	22%
Gingrich	16,241	14%
Perry	12,592	11%
Bachmann	6,070	5%
Huntsman	744	<1%

And now the good news for Rick Santorum: Rick Perry and Michele Bachmann are both reassessing their campaigns.

Fox News:

> Michele Bachmann said she's soldiering on, giving no indication that she would bail on her Republican presidential campaign after a last-place showing in the contested Iowa caucuses, while Rick Perry, who finished just ahead of her in fifth, said he's going back to Texas to "determine whether there is a path forward."
>
> "I believe I am the best conservative who can and who will beat Barack Obama in 2012," Bachmann told supporters late Tuesday night following projections that she would be last in the six-way contest. Jon Huntsman decided not to compete in Iowa.
>
> "In 2012, there could be another president in the White House. Who knows? There could be another Michele in the White House," Bachmann said, referencing her shared name with first lady Michelle Obama.
>
> Despite her pledges to go on, Bachmann campaign manager Keith Nahigian told The Associated Press that he couldn't say with certainty whether Bachmann would go forward with her candidacy.
>
> "I don't know yet," he said. "It's hard to tell, but everything is planned."
>
> Asked about the report, Bachmann Communications Director Alice Stewart told Fox News that the AP story said it's "uncertain." "That's true," she said.
>
> Bachmann's 6 percent showing was a sharp turn after finishing in first place during the Ames, Iowa, GOP straw poll over the summer.
>
> Perry, who doubled Bachmann's raw vote total but earned only 11 percent

> overall, said he's reassessing what he will do. He's making that decision in light of the first-in-the-nation vote, but not before the Texas governor announced his campaign was making an ad buy in South Carolina, the third state to vote.
>
> Perry has described the GOP presidential race as a marathon, but after spending the most of any campaign on Iowa advertising, his poor showing in Iowa won't lend any momentum as the candidates go to New Hampshire, the first primary state of the election season, where Perry places last in polling.

The latest results are actually worse for Bachmann – 5%, not 6%. I think she should get out now and endorse Rick Santorum.

What's interesting is that Mitt Romney had to spend a heck of a lot more money than Rick Santorum did in order to get the same 25% of the vote. What does that tell you about Mitt Romney as a candidate?

UPDATE: Bachmann is out, Perry is still in.

Oil prices rise over tensions between US and Iran

January 4, 2012 | by Wintery Knight | Link | Original Link

Gas Prices under Obama and Bush
From the liberal Los Angeles Times.

Excerpt:

> Oil prices soared Tuesday as tensions grew over key Persian Gulf oil shipments.
>
> In afternoon trading benchmark crude jumped $3.80, or 3.8 percent, to $102.63 per barrel in New York.
>
> Brent crude, which is used to price foreign oil varieties that are imported by U.S. refineries, rose $3.87, or 3.6%, to $111.25 per barrel in London.
>
> Prices climbed as soon as exchanges opened for the first day of 2012 trading. Commodity prices tend to rise at the beginning of January as investors start the new year with a fresh round of trading. This year prices were driven by heightened concerns that Iran might try to close the Strait of Hormuz in the Persian Gulf to oil tankers, if Western nations impose new sanctions.
>
> Iran warned the U.S. to stay out of the strategic waterway, where one-sixth of the world's oil shipments pass every day. On Monday its navy fired a cruise missile as part of a military exercise.
>
> The U.S. and European nations are mulling further economic sanctions against Iran because of its nuclear program. A standoff could result that would be damaging to the global economy.

> A dustup with Iran could slow crucial oil supplies at a time when the world needs every drop. Global oil demand is expected to rise to a record 89.5 million barrels per day in 2012.
>
> Three of the world’s largest economies — the U.S., China and India — continued to grow with increased manufacturing activity in December.

Meanwhile, Obama continues to dither over the Keystone XL pipeline.

How good a job is Obama doing running car companies?

January 4, 2012 | by Wintery Knight | Link | Original Link

Investors Business Daily explains.

Excerpt:

> President Obama's electric car vision is off to a hot start. First the heavily subsidized Chevy Volt started catching fire. Then government-backed Fisker Automotive had to recall all its cars due to a fire hazard.
>
> Late last month, Fisker, the electric car startup that is busy spending its $529 million in Department of Energy loans, announced a recall of its entire fleet of luxury Karmas because of a faulty battery that posed a fire risk.
>
> The battery maker at fault — A123 Systems — is another Obama grantee, having gotten $380 million in taxpayer support to make advanced car batteries.
>
> Fisker says it's already fixed the problem, but this is just the latest in a series of troubles plaguing the new car company.
>
> Although it once promised to be profitably churning out 1,200 cars a month by now, Fisker has so far sold only about 240 — at a price almost 14% higher than promised. And the more moderately priced electric sedan it says it will build in an abandoned Delaware plant is still nowhere to be seen.
>
> Bad as this is, Fisker's troubles are just a taste of the expensive and dangerous mess in store for car buyers should Obama succeed in forcing the industry to bend to his green dreams.
>
> In May, a Chevy Volt caught fire three weeks after a government crash test of the car. In follow-up tests in November, a second Volt caught fire after a test crash, and a third began to smoke and emit sparks.
>
> […]Volt sales came in about 30% below GM's forecast for 2011 — in a year when overall retail car sales beat industry analyst forecasts by almost 12% — earning the Volt third place on 24/7 Wall Street's list of worst product flops of 2011.
>
> And that's despite the substantial tax break to Volt buyers and the hundreds of millions in grant money to its suppliers.

Obama is spending a lot of taxpayer money on his Solyndra-style boondoggles. Taking money away from employers and families and just throwing it in the trash. We are now officially over 100% debt-to-GDP. We are entering a Greece-style debt situation and this dingbat is throwing our money away on Peter Pan energy policies.

Video and transcript of Rick Santorum's inspiring Iowa victory speech

January 5, 2012 | by Wintery Knight | Link | Original Link

The speech is 20 minutes long, and it sounds like what a Republican sounds like.

Here is the full transcript of Rick Santorum's Iowa speech.

Excerpt:

> SPEAKER: FORMER SEN. RICK SANTORUM, R-PA.,
>
> PRESIDENTIAL CANDIDATE
>
> [*]
>
> SANTORUM: Thank you. Thank you. Game on.
>
> (APPLAUSE) As all of you know, I do not speak from notes, but there's a couple things I want to say that are a little — little more emotional, so I'm going to read them as I wrote them.
>
> C.S. Lewis said a friend is someone who knows the song in your heart and can sing it back to you when you've forgotten the words. My best friend, my life mate, who sings that song when I forget the words, is my wife, Karen.
>
> (APPLAUSE)
>
> People have asked me how I've done this, sitting back at the polls and not getting a whole lot of attention paid to us. How did you keep going out to Iowa, in 99 counties, and 381 town hall meetings and speeches? Well, every morning when I was getting up in the morning to take on that challenge, I've required a strength from another particular friendship, one that is sacred. I've survived the challenges so far by the daily grace that comes from God.
>
> (APPLAUSE)
>
> For giving me his grace every day, for loving me, warts and all, I offer a public thanks to God.
>
> (APPLAUSE)
>
> Third, thanks. Thank you so much, Iowa.
>
> (APPLAUSE)
>
> You — you, by standing up and not compromising, by standing up and being bold and leading, leading with that burden and responsibility you have to be first, you have taken the first step of taking back this country.
>
> (APPLAUSE)
>
> This journey started officially just a few months ago in June, when I stood on the steps of the county courthouse in Somerset County, Pennsylvania. I decided to go there, not the typical place someone announces for president — it's not where I

was born, it's not where I ever lived — but it's where my grandfather came back in 1925. He came by himself, even though he was married with two children, one of them being my father. He came after having fought in World War I, because Mussolini had been in power now three years, and he had figured out that fascism was something that would crush his spirit and his freedom and give his children something less than he wanted for them.

So he made a sacrifice. He left to the coal fields of southwestern Pennsylvania. He worked in the mine at a company town, got paid with coupons, he used to call them, lived in a shack. Eventually, he figured out that that was a trip to nowhere, so he started taking less — taking money less so he could start to save, and he did. And after five years, he got his citizenship and brought my father over at the age of 7. He ended up continuing to work in those mines until he was 72 years old, digging coal. I'll never forget the first time I saw someone who had died. It was my grandfather. And I knelt next to his coffin. And all I could do — eye level — was look at his hands. They were enormous hands. And all I could think was those hands dug freedom for me.

And so to honor him, I went to Somerset County, because I believe foundationally, while the economy is in horrible condition, while our country is not as safe as it was, and while threats are rising around the world, while the state of our culture under this administration continues to decline with the values that are unlike the values that built this country, that the essential issue in this race is freedom, whether we will be a country that believes that government can do things for us better than we can do for ourselves, or whether we believe, as our founders did, that rights come to us from God and, when he gave us those rights, he gave us the freedom to go out and live those — live those rights out to build a great and just society not from the top down, but from the bottom up.

(APPLAUSE)

My grandfather taught me basic things that my dad taught me over and over again: Work hard, work hard, and work hard. And I think about that today. There are so many men and women right now who would love to work hard, but they don't have the opportunity.

And we have two parties who are out talking about how they're going to solve those problems. One wants to talk about raising taxes on people who have been successful and redistributing money, increasing dependency in this country, promoting more Medicare and food stamps and all sorts of social welfare programs, and passing Obamacare to provide even more government subsidies, more and more dependency, more and more government, exactly what my grandfather left in 1925.

And then there's another vision, with another vision, the Republican vision, which is, let's just cut taxes, let's just reduce spending and everyone will be fine.

I believe in cutting taxes. I believe in balancing budgets. I propose cutting $5

> trillion from this budget over the next five years. I support a balanced budget amendment that puts a cap at 18 percent of GDP as a guarantee of freedom for this country. But …
>
> (APPLAUSE)
>
> But I also believe we as Republicans have to look at those who are not doing well in our society by just cutting taxes and balancing budgets, and that's why I put forth a plan that Iowans responded to. It's a plan that says, yes, let's flatten the tax code, get rid of it, replace it with five deductions. Let's create two rates, 10 percent and 28 percent. Why 28 percent? If it's good enough for Ronald Reagan, it's good enough for me.
>
> (APPLAUSE) And then I take the corporate tax, cut that in half, because it's the highest in the world, and we need to be competitive. But when I traveled around Iowa to the small towns, I found a lot of those small towns were just like the small towns that I traveled around in Pennsylvania. They were towns that were centered around manufacturing and processing, those good jobs that built those towns, and those jobs slowly, whether it's in Hamburg, whether it's in Newton, or any place in between, we found those jobs leaving Iowa.
>
> Why? Because our workers didn't want to work? Because our workers weren't competitive? No. It's because government made workers uncompetitive by driving up the cost of doing business here. It's 20 percent more expensive to do manufacturing jobs in this country than it is in the top nine trading partners that we have to compete with. And that's why we're losing our jobs.
>
> And so when Republican purists say to me, well, why are you treating manufacturing different than retail? I say because Wal- Mart's not moving to China and taking their jobs with them.
>
> (APPLAUSE)
>
> So we eliminate the corporate tax on manufacturing so we can compete. We take the regulations, every regulation that's over $100 million, and we repeal all those regulations, repeal them all, and there's a lot of them. Under the Bush and Clinton administrations, they averaged 60 regulations over $100 million a year. This administration hit 150 last year.
>
> You don't want to know what's crushing business. This administration is crushing business.

I'm taking a second look at Santorum's economic policies and it seems to me that they will very good for blue collar workers especially. By cutitng corporate taxes, everyone in the country who makes anything at all is going to have about 6 job offers before noon.

As far as social policy and foreign policy, Santorum is number one. He really is a fine candidate. My endorsement of Rick Santorum is here. I previously liked Bachmann and Cain, but with those two now out, I find that Rick Santorum is actually better than either of them in many ways.

UPDATE: Wow! Rick Santorum raised over a million dollars already today!

Ten pitfalls of the foolish Christian apologist

January 5, 2012 | by Wintery Knight | Link | Original Link

From Apologetics 315, a list of ten common traps that Christian apologists fall into.

Here are my really bad ones: (links removed)

> **1. The foolish apologist speaks before listening**. Proverbs 18:13 says, "He who answers before listening – that is his folly and his shame." Not only does he communicate to others that he could care less about what they have to say, but he also becomes unable to give a well informed answer. *The wise apologist is patient, seeks to understand, and avoids monologue.*
>
> **7. The foolish apologist neglects spiritual disciplines**. He finds reading philosophy more interesting than reading the Bible, so he neglects the Bible. Prayer is seldom and rushed. In fact, prayer, meditation, Bible study, worship and fellowship take the back seat to study. The foolish apologist deceives himself that he is being spiritual, all the while drifting away. The wise apologist sits at the feet of Jesus.
>
> **9. The foolish apologist isolates himself from others**. He doesn't need their input. He doesn't appreciate correction. He has his own plans, his own agenda, and own personal ministry. He refuses to let iron sharpen iron. When he falls, he has no one to help him up. He's accountable to himself only. *The wise apologist surrounds himself with godly counsel and fellow laborers.*

I know that some people will think that I am guilty of number 8, but sometimes you have to break the rules in order to get the conversation started, and then walk it back later. That's how you get the other person to engage.

Do any of these pitfalls that Christian apologists fall into sound familiar to you?

Recently widowed mother uses legally owned gun to defend her child

January 5, 2012 | by Wintery Knight | Link | Original Link

From liberal CNN. (H/T All American Blogger)

Excerpt:

> An Oklahoma 911 operator calmly advised a recently widowed mother who asked if it was permissible to shoot an intruder, officials said Wednesday.
>
> "I've got two guns in my hand. Is it OK to shoot him if he comes in this door?" asked Sarah Dawn McKinley of Blanchard.
>
> "Well, you have to do whatever you can do to protect yourself," dispatcher Diane Graham responded during the incident on New Year's Eve day. "I can't tell you that you can do that, but you do what you have to do to protect your baby."
>
> In the end, McKinley, 18, fired a 12-gauge shotgun and killed Justin Shane Martin after he entered her residence, according to a Blanchard Police Department affidavit filed in court Wednesday.
>
> "You have to make a choice, you or him. I chose my son over him," McKinley told CNN Oklahoma City affiliate KWTV. Her boy is 3 months old.
>
> First Assistant District Attorney James Walters told CNN that McKinley will not be charged because she acted in self-defense.
>
> "A person has the right to protect themselves, their family and their property," Walters said.
>
> As for the 911 operator's guidance?
>
> "I would agree with that advice," the prosecutor said.

In the United States, you still have the ability to defend your home from intruders. But I know that in leftist countries like the UK, the police are trained to arrest people who defend themselves from criminals.

In the UK, the police protect criminals from law-abiding citizens

Look at this recent article UK Telegraph.

Excerpt:

> Officers were called to Vincent Cooke's house in the affluent Stockport suburb of Bramhall, just before 8pm on Saturday following reports of a break-in.

> Mr Cooke, 39, a married father of one who has run a number of small courier and logistics companies, was relaxing alone in the detached interwar property when the two intruders struck, Greater Manchester Police said.
>
> His wife Karen, 34, and 12-year-old son returned home during the incident but

> escaped unharmed. Police said that during the break-in Mr Cooke was threatened and one of the intruders, Raymond Jacob, 37, of was stabbed.

> Mr Cooke, who is one of five children, was being questioned on suspicion of murder on Sunday night.

I thought the response of the police was interesting – self-defense is murder:

> "Clearly this is a serious incident in which a man has lost his life and at this time we believe the dead man was one of two men who were attempting to carry out a burglary at the house."
>
> The other suspected intruder fled in a small white Citroen van. Police last night confirmed a second man had been arrested in connection with the incident.
>
> On Sunday afternoon relatives of Mr Jacob, of Northern Moor, Greater Manchester, laid flowers outside Mr Cooke's home.
>
> One read: "To my baby boy who will always be my baby boy. I will miss you, but never stop loving you. Mum."
>
> Last night friends and relatives also left tributes for Mr Jacob social networking websites.
>
> "Still doesnt feel real, cant believe your gone we will all miss you," said Danielle Leach on Facebook.

Just to be clear about the facts, here's the UK Sun.

Excerpt:

> Two knife-wielding intruders burst into the home of company director Vincent Cooke, 39.
>
> Burglar Raymond Jacob, 37, is believed to have been stabbed with his own knife.
>
> Mr Cooke was later arrested in Bramhall, Cheshire. His wife and son fled the house unhurt.

Isn't the mother's reaction interesting? It's not unexpected coming from the feminized UK, though, where no one is responsible for anything they do. In fact, the one who judges and refuses to bail others out is the bad one. How mean! Defending your home from armed intruders! Just let them kill you! After all, the government already takes your money, so why not not ban self-defense so they take your life as well?

This is not unusual in the new Harriet Harman-onized UK. It happens all the time.

Consider this story from the UK Telegraph.

Excerpt:

> Miss Klass, a model for Marks & Spencer and a former singer with the pop group Hear'Say, was in her kitchen in the early hours of Friday when she saw two teenagers behaving suspiciously in her garden.

> The youths approached the kitchen window, before attempting to break into her garden shed, prompting Miss Klass to wave a kitchen knife to scare them away.
>
> Miss Klass, 31, who was alone in her house in Potters Bar, Herts, with her two-year-old daughter, Ava, called the police. When they arrived at her house they informed her that she should not have used a knife to scare off the youths because carrying an “offensive weapon” – even in her own home – was illegal.
>
> Jonathan Shalit, Miss Klass’s agent, said that had been “shaken and utterly terrified” by the incident and was stepping up security at the house she shares with her fiancé, Graham Quinn, who was away on business at the time.
>
> He said: “Myleene was aghast when she was told that the law did not allow her to defend herself in her own home. All she did was scream loudly and wave the knife to try and frighten them off.

You can read more about how the 1997 ban on handguns in the UK doubled violent crime in the four years after the ban at Reason magazine. Similarly, in the United states, legalizing the concealed carrying of firearms resulted in dramatic declines in violent crime. But that is just common sense. The more people who own guns and can defend themselves, the less crime there will be.

How the Labor Party killed marriage in the UK

January 5, 2012 | by Wintery Knight | Link | Original Link

Kathy Gyngell explains in this UK Daily Mail article. (H/T Dina)

Excerpt:

> Across its various forms and rules [marriage] is a human universal and with good reason. Marriage everywhere is the bridge between affinal and kin relationships a bond integral to the functioning and survival of human society. It defines social relationships, social and economic responsibilities.
>
> It establishes genealogical connections and confers 'belonging' and social identity. It prevents incest now more prevalent in our underclass than we know (something of deep concern to the more thoughtful of our politicians and social workers). No other set of relationships or connections whether through friendship, work, sport or volunteering – replicate the function of marriage. The state certainly cannot the failure of communism demonstrated that.
>
> […]I believe governments (successive ones) are culpable for setting marriage adrift as the sexual/ cultural revolution swept in. This was not the case elsewhere.
>
> **Britain silently, casually and progressively abolished the family … first through liberalising the divorce laws; later came the official signal that marriage no longer mattered.**
>
> **Former Chancellor Nigel Lawson's reform of personal taxation set in train the abolition of the married couple's allowance. (He failed, as he had planned in his Green Paper, to balance independent taxation by transferring the unused personal allowance to a non-earning, most likely child-rearing-spouse.)**
>
> **But it was Gordon Brown's first budget that did the real damage. It marked, as Harriet Harman emphasized triumphantly at the time, "the end of the assumption that families consist of a male breadwinner and a female helpmate in the home". Labour's new measures did not just recognise that women were in paid work and needed help with childcare, they pushed this agenda aggressively with tax incentives and a massive expansion of childcare facilities.**
>
> **Married mothers at home were indeed marked as second class citizens. What¹s more their families were to subsidise, through their disproportionately burdensome taxes, those families with no breadwinner at all. Frank Field¹s intention to cut back on lone-parent benefits in order to discourage dependency was abandoned in the face of party fury and threatened rebellion.**

> **State support for lone parenthood has entrenched illegitimacy the word no one dares speak. This is our root social problem. It is why we are now Europe¹s pre-eminent 'transient shack up' society. We cannot rest the entire blame on the pill per se (available across Europe) or on women's lib. Betty Friedman and Germaine Greer (both made their way onto most European bookshop shelves) or cultural osmosis, though feminism and socialism have proved a pernicious mix.**
>
> The fact is other countries in Europe have done more to support and sustain marriage and married families. They have capitulated less to aggressive feminist ideologues people who viewed marriage as the tool of an oppressive patriarchal regime, if not as prostitution (Jenni Murray in the past) but never as an institution the majority of young women continued to aspire to.
>
> That marriage socialised men, and that women had power in marriage, did not occur to this particular monstrous regiment of women. Nor did men marshal the arguments against this craziness, for fear of falling foul of irrational and strident Gingerbread demands for lone parent economic independence – courtesy of the state of course.
>
> Whatever cost to the state and taxpayer – subsidising lone mothers back to work, putting their fatherless children into state paid for childcare and continuing to mop after what were never viable families in the first place, whether in the form of Louise Casey or Sure Start, remains the mantra of left and most of the centre of politics.

Marriage didn't just die in the UK by accident. It was a victim of a partnership of big government and militant feminism. Financial incentives were put in place by the secular left with the goal of discouraging people from marrying and have a mother stay at home and raise the children. The mistake that many women made is that they believed that they could keep marriage as is, with men seeking to commit for life, and add to it a government-provided safety net that would catch them if the men they freely chose fail to perform. Instead of getting serious about consulting with their parents, and choosing the right man for the responsibilities of marriage, women followed their hearts, and hoped to transform the wrong men using mystical powers. Somehow, they believed, premarital sex coupled with peer approval and an expensive wedding ceremony could transform a man who was not qualified for marriage at all into the perfect husband and father. When all of this failed, women refused to point the finger at themselves, and instead voted for more and more government social programs to equalize all households, regardless of their decisions about men. After all, men are so unpredictable! And courting intelligently and chastely is "too strict".

This is why the typical mother in the UK spends 19 minutes per day with her children, and the average father spends even less. If everyone has to work to pay taxes for the welfare state, then there is no money left in the family for a stay-at-home parent. This is exactly what the feminists wanted – the end of marriage, and it's unequal sex roles for wives and

husbands. And the only way to go back to the way it used to be is for women to stop outsourcing the roles of the husband and father to government, and start marrying the right men for those jobs.

George Will: Rick Santorum connects with the working class

January 6, 2012 | by Wintery Knight | Link | Original Link

From the liberal Washington Post, a column by moderate conservative George Will.

Excerpt:

> On Sept. 26, 1996, the Senate was debating whether to ban partial-birth abortion, the procedure whereby the baby to be killed is almost delivered, feet first, until only a few inches of its skull remain in the birth canal, and then the skull is punctured, emptied and collapsed. Santorum asked two pro-choice senators opposed to the ban, Russ Feingold (D-Wis.) and Frank Lautenberg (D-N.J.), this: Suppose the baby slips out of the birth canal before it can be killed. Should killing it even then be a permissible choice? Neither senator would say no.
>
> On Oct. 20, 1999, during another such debate, Santorum had a colloquy with pro-choice Sen. Barbara Boxer (D-Calif.):
>
> Santorum: "You agree that, once the child is born, separated from the mother, that that child is protected by the Constitution and cannot be killed. Do you agree with that?"
>
> Boxer: "I think that when you bring your baby home . . . ."
>
> Santorum is not, however, a one-dimensional social conservative. He was Senate floor manager of the most important domestic legislation since the 1960s, the 1996 welfare reform. This is intensely pertinent 15 years later, as the welfare state buckles beneath the weight of unsustainable entitlement programs: Welfare reform repealed a lifetime entitlement under Aid to Families with Dependent Children, a provision of the 1935 Social Security Act, and empowered states to experiment with new weaves of the safety net.
>
> White voters without college education — economically anxious and culturally conservative — were called "Reagan Democrats" when they were considered only seasonal Republicans because of Ronald Reagan. Today they are called the Republican base.
>
> Who is more apt to *energize* them: Santorum, who is from them, or Romney, who is desperately seeking enthusiasm?
>
> **Romney recently gave a speech with a theme worthy of a national election, contrasting a "merit-based" or "opportunity" society with Barack Obama's promotion of an "entitlement society," which Romney termed "a fundamental corruption of the American spirit": "Once we thought 'entitlement' meant that Americans were entitled to the privilege of trying to succeed. . . . But today the new entitlement battle is over the size of the check you get from Washington. . . . And the only**

> **people who truly enjoy any real rewards are those who do the redistributing — the government."**
>
> **Romney discerns the philosophic chasm separating those who embrace and those who reject progressivism's objective, which is to weave a web of dependency, increasingly entangling individuals and industries in government supervision.**
>
> **Santorum exemplifies a conservative aspiration born about the time he was born in 1958. Frank Meyer, a founding editor of William F. Buckley's National Review in 1955, postulated the possibility, and necessity, of "fusionism," a union of social conservatives and those of a more libertarian, free-market bent.**

Please make sure you watch Rick Santorum's speech in Iowa, or read the transcript. The speech was very good, and it's also very interesting.

In a new national poll from today (Thursday), Santorum now trails Romney nationally 29%-21%. Gingrich is third with 16%. According to another poll, Santorum is now running third in liberal New Hampshire.

By the way, I am completely fine with a Gingrich/Santorum ticket. But I would prefer a Santorum/Gingrich ticket, if I can get it. Those are the two great conservative communicators in this Republican primary. Both candidates are from the working class, and both are men with bold ideas.

Mitt Romney raised taxes by $740 million while he was governor of Massachusetts

January 6, 2012 | by Wintery Knight | Link | Original Link

Deroy Murdock explains in this Scripps Howard News Service article.

Excerpt:

> Hot on the heels of his eight-vote Iowa-caucus landslide, Willard Mitt Romney is crisscrossing New Hampshire before Tuesday's key primary. Romney is masquerading as a limited-government, free-market executive from next-door Massachusetts. From the Golden Gate to the Granite State, voters should greet Romney's impersonation with a quarry full of skepticism.
>
> **In fact, Romney increased taxes by $309 million, mainly on corporations.** These tax hikes, described by Romney apologists as "loophole closures," totaled $128 million in 2003, $95.5 in 2004, and $85 million in 2005. That final year, Romney proposed $170 million in higher business taxes, the Boston Globe reports. However, the Bay State's liberal, Democratic legislature balked and only approved an $85 million increase.
>
> "Tax rates on many corporations almost doubled because of legislation supported by Romney," Boston Science Corporation chairman Peter Nicholas explained in the January 6, 2008 Boston Herald. Also, Romney raised the tax on subchapter S corporations owned by business trusts from 5.3 percent to 9.9 percent — an 85 percent hike.
>
> "Romney went further than any other governor in trying to wring money out of corporations," the Council on State Taxation's Joseph Crosby complained.
>
> **Romney also created or increased fees by $432 million.** He was not dragooned into this by greedy Democratic lawmakers; Romney himself proposed these items. In 2003 alone, Romney concocted or boosted 88 fees. Romney charged more for marriage licenses (from $6 to $12), gun registrations (from $25 to $75), a used-car sales tax ($10 million), gasoline deliveries ($60 million), real-estate transfers ($175 million), and more. Particularly obnoxious was Romney's $10 fee per Certificate of Blindness. Romney also billed blind people $15 each for discount-travel ID cards.
>
> While Romney can take credit for a $275 million capital-gains tax rebate, property-tax relief for seniors, and a two-day, tax-free shopping holiday, he also must take responsibility for signing $740.5 million in higher taxes, plus that $85 million in business taxes that he requested and legislators rejected.
>
> "Romney did not even fight higher death-tax rates," notes former California State Assembly Minority Whip Steve Baldwin, a Romney critic. "When the (Massachusetts) legislature considered this issue, Romney's official position was

> ‘no position.’ This echoed Barack Obama’s ‘present’ votes in the Illinois State Senate.”
>
> As Romney drained his constituents’ pockets, the Public Policy Institute of New York’s Cost of Doing Business Index rated Massachusetts in 2006 as America’s fourth costliest state in which to practice free enterprise. The Tax Foundation dropped Massachusetts from America’s 29th most business-friendly state to No. 36. The Tax Foundation also calculated that, under Romney, Massachusetts’ per-capita tax burden increased from 9.3 percent to 9.9 percent. In real dollars, the Romney-era per-capita tax burden grew by $1,175.71.
>
> As if impoverishing his own taxpayers were not bad enough, Romney’s March 5, 2003 signature raised taxes on non-residents retroactive to that January 1. Perpetrating taxation without representation, Romney’s law declared that, “gross income derived from… any trade or business, including any employment,” would be taxable, “regardless of the taxpayer’s residence or domicile in the year it is received.”
>
> Consequently, according to data furnished by the Massachusetts Department of Revenue, between 2002 and 2006, New Hampshire residents who work or do business in the Bay State shipped Massachusetts $95 million above what they paid when Romney arrived. The average tax paid by New Hampshirities to Massachusetts grew by 19.1 percent, from $2,392 in 2002 to $2,850 in 2006.

Romney has a pro-abortion record and pro-gay-marriage record. Not only did he pass Romneycare in Massachusetts, but now we know that he also raised taxes. Why is he running as a Republican? I don’t see anything in his record that would cause me to believe that he is a Republican.

You can see Mitt Romney explaining all of his liberal views in his own words in these videos.

Obama’s defense cuts undermine our national security

January 6, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> The administration announces a leaner version of our military involving the cutting of tens of thousands of ground troops as a leading defense contractor closes a major plant due to budget cuts.
>
> In an unusual appearance at the Pentagon on Thursday, President Obama laid out his plans for a “leaner” military based on the need “to renew our economic strength here at home, which is the foundation of our strength in the world.”
>
> In other words, failed domestic policies require us to cut our military in a dangerous world.
>
> […]Yet as Russia rearms, Iran pursues its nukes and China pushes toward a global reach, it is hard to argue that less is more.
>
> […]**Defense cuts are already having a domestic effect. Boeing Co. announced Wednesday it will close its defense plant in Wichita, Kan., by the end of 2013, moving future aircraft maintenance, modification and support to other facilities.**
>
> **The closure, prompted by defense cuts, will cost 2,160 workers their jobs.**
>
> […]**A 14-page analysis by the Republican majority staff of the House Armed Services Committee says the cumulative cuts will result in the Army and Marines losing 200,000 troops.**
>
> **The Navy will shrink to 238 vessels from today’s 300 and would lose two carrier battle groups needed to project American power and influence. Strategic bombers will fall from 153 to 101. Air Force fighters would drop by more than half, from 3,602 aircraft to 1,512 planes.**
>
> As a chart produced by the committee shows, the cumulative cuts are real cuts, both in spending levels and in military capability. The Joint Chiefs of Staff chairman, Army Gen. Martin Dempsey, said in written statements released during his recent confirmation hearings, “National security didn’t cause the debt crisis, nor will it solve it.”
>
> We would note that defense is a constitutional imperative — not an optional budget item — and that the question should be what do we need to defend ourselves and our interests, not simply what we can afford as the result of failed administration policies.

If you are expecting the President to keep the country safe and to protect our interests abroad, then you don’t elect a Democrat. Democrats can’t do national security or foreign policy, because they think that a weaker America is better than a stronger America. And, when elected, Democrats weaken America.

Should men marry women who don't want to be wives and mothers?

January 6, 2012 | by Wintery Knight | Link | Original Link

Consider this article by Suzanne Venker from National Review. (H/T Salvo Mag)

Excerpt:

> A new report by Pew Research Center shows that barely half — 51 percent — of adults in the United States are married. In place of marriage are nontraditional living arrangements — including cohabitation, single-person households, and single parenthood — that may likely continue. The share of adults who are currently married could drop to below half within several years.
>
> While the report says it's "beyond the scope of this analysis to explain *why* [emphasis mine] marriage has declined," senior writer D'Vera Cohn adds this: "I'm struck by the fact that a large percentage of people who say that marriage is obsolete still want to get married. I think they may be having two ideas in their head at once: one about the institution of marriage and what its status is in society today, which is to say that it's a lot less dominant, central, or important in society, [and another about] their own wishes for their future, in which they personally would very much like to be married."
>
> Indeed they do. But some major changes have to take place first.
>
> […][W]e must retract the message Boomers sent young women about female empowerment. Indeed, it isn't a coincidence that marriage rates have plummeted alongside America's fascination with the feminist movement. Empowerment for women, as defined by feminists, neither liberates women nor brings couples together. It separates them. It focuses on women as perpetual victims of the Big Bad Male. Why would any man want to get married when he's been branded a sexist pig at "hello"? In the span of just a few decades, women have managed to demote men from respected providers and protectors to being unnecessary, irrelevant, and downright expendable.
>
> […]Women have also been raised by their feminist mothers to "never depend on a man." As a result, couples no longer think of themselves as one unit but as separate entities sharing space. "The confusion over roles is there, as are the legacies of a self-absorbed, me-first, feminist-do-or-die, male-backlash society," wrote Judith Wallerstein and Sandra Blakeslee in *The Good Marriage: How and Why Love Lasts.* Honestly, are we really surprised marriage is on the decline?
>
> […]There may be more than one reason Americans are delaying or eschewing marriage, but almost all of them can be attributed to feminism. Feminists assured women their efforts would result in more satisfying marriages, but that has not happened. Rather, women's search for faux equality has damaged

> marriage considerably (some might say irrevocably, but I'm an optimist) by eradicating the complementary nature of marriage — in which men and women work together, as equals, toward the same goal but with an appreciation for the unique qualities each gender brings to the table. Today, men and women are locked in a battle. The roles have changed too drastically, and the anger runs deep.
>
> I don't know about you, but I don't call that progress.

You know something? Women can't neglect the roles of men in a marriage and then expect to get married to a man. That is going to come to a shock to a lot of feminists who think that they can act selfishly and men will still continue to woo them and marry them and love them faithfully for life. Men have noticed that feminists are no longer interested in being wives and mothers. And that feminsts are no longer respecting men for their traditional roles as protectors, providers and moral/spiritual leaders. Feminists don't want men who earn and save – that's bad because men who earn and save have authority to make decisions, unless the woman works too. They don't want men who can use guns to defeat burglars and use reason and evidence to defeat lies – that's bad because guns and truth are scary. They don't want men who make moral judgments and exclusive theological statements – that's bad because moral judgments and exclusive theological statements can hurt people's feelings, and make women less popular with her friends.

According to feminists, men are supposed to be fun, funny and sexy! They should provide drama and turmoil – not stability. It's the government's job to provide, protect and lead. Men should be replaced by welfare checks, policemen and universal public school education for children – from birth to adulthood. But all of those views are completely opposed to marriage – so why do feminists think that are suitable for marriage? What man in his right mind would consider *marriage* to a feminist? Marriage isn't when a woman does whatever she feels like all the time, and neglects her husband and children. Marriage means that women take care of their husbands and children, and in return husbands take care of their wives and children, too.

Rick Santorum helps liberal college students to understand the logic of marriage

January 7, 2012 | by Wintery Knight | Link | Original Link

If you do a search on this, you will find most of the mainstream media talking about how the students booed Santorum. Apparently, neither the college students nor the media are capable of understanding that if you can marry anyone you want, then that means that there can be no prohibition of polygamy. And, of course, this is exactly what is happening in countries that have embraced same-sex marriage, like Canada.

Excerpt:

> Canada's decision to legalize gay marriage has paved the way for polygamy to be legal as well, a defense lawyer said Wednesday as the two leaders of rival polygamous communities made their first court appearance.
>
> The case is the first to test Canada's polygamy laws.
>
> Winston Blackmore, 52, and James Oler, 44, are each accused of being married to more than one woman at a time. The charges carry a maximum penalty of five years in prison, British Columbia Attorney General Wally Oppal said.
>
> But Blackmore's lawyer, Blair Suffredine, said during a telephone interview that marriage standards in Canada have changed.
>
> "If (homosexuals) can marry, what is the reason that public policy says one person can't marry more than one person?" said Suffredine, a former provincial lawmaker. Canada's Parliament extended full marriage rights to same-sex couples in 2005.

Actually, law professors at Queen's University are already demanding that polygamy be legalized.

Take a look at this post from the Vancouver Sun.

Excerpt:

> A Queen's University law professor says that polygamy should be legal in Canada.
>
> Queen's issued a news release on the day that a polygamy reference opened in British Columbia, where the government is seeking a legal opinion on whether Canada's 128-year-old ban on multiple marriage violates the freedom of religion guarantees in the Charter of Rights.
>
> Bev Baines, head of the Department of Gender Studies and a constitutional law expert, argues that Canada is a multicultural country and it is therefore unconstitutional to criminalize people for their marital relationships.
>
> "The law achieves nothing," Baines said in the release. "We've had the law on

> the books since 1892 and we had no prosecutions in the last 60 years aside from a failed attempt last January. We don't stop polygamy by having a law."

What I find disturbing is that the media and the college students are unable to follow the logic that legal scholars in Canada are now following. Are they not aware of what is happening in nations that have legalized gay marriage? Or can they only understand who is booing who? The journalists certainly think that booing a Presidential candidate is more appropriate than the use of reason to evaluate moral arguments. Sometimes I wonder if journalists learn anything at all in college except how to accuse conservatives of SIXHIRB – sexism, intolerance, xenophobia, homophobia, Islamophobia, racism, bigotry.

Here's a previous post I write making the secular case against gay marriage.

Shared parenting: UK moms and dads could get legal right to see their children

January 7, 2012 | by Wintery Knight | Link | Original Link

Michael sent me this article from the UK Telegraph.

Excerpt:

> Courts will be put under a legal duty to ensure that both fathers and mothers are given access to children in divorce settlements.

> Parents who refuse to accept the orders will be in contempt of court and risk serious penalties or even jail.
>
> The news will give hope to campaign groups who have argued for years that the role of fathers in bringing up their children should be enshrined in law.
>
> Under the present system family courts tend to leave children with their mothers in the vast majority of cases.
>
> According to the Office for National Statistics, one in three children, equivalent to 3.8 million, lives without their father.
>
> Nick Clegg, the Deputy Prime Minister, and Iain Duncan Smith, the Welfare Secretary, are understood to support the plans. The Conservatives also pledged to introduce the reforms while in opposition.
>
> Tim Loughton, the children's minister, said: "Our vision is to establish that, under normal circumstances, a child will have relationship with both his or her parents, regardless of their relationship with each other.
>
> "We must do everything we can to improve the system so that it gives children the best chance of growing up under the guidance of two loving parents.
>
> "All the evidence tells us that children genuinely benefit from a relationship with both parents, with the potential to make different contributions to their child's development.
>
> "The culture has shifted away from the traditional view that mothers are primarily responsible for the care of children. Increasingly society recognises the valuable and distinct role of both parents.
>
> "We are looking closely at all the options for promoting shared parenting through possible legislative and non-legislative means."

This is good news. Not only is this good for parents who are already divorced, but the presumption of shared parenting will also deter people from divorcing. Many people are encouraged to divorce because they think they will not have to deal with their spouse ever again.

Newt Gingrich denounces bias and bigotry by George Stephanopoulos and Diane Sawyer

January 8, 2012 | by Wintery Knight | Link | Original Link

If you missed the debate on Saturday night, don't be concerned. It was completely ruined by the bias of the ABC News moderators and commentators.

I have never soon two people in the media with such outright disdain for conservative views, especially on social values. Newt was the only one to call them on it.

This article from CNS News explains.

Excerpt:

> Former House Speaker Newt Gingrich staunchly defended traditional marriage, describing the union of one man and one woman as the "core of our civilization," and an institution that is worth "protecting and upholding."
>
> […]Gingrich also raised the issue of bias in the news media. While homosexual activists blast discrimination against them, what about anti-Christian bigotry?
>
> "You don't hear the opposite question asked," Gingrich said.
>
> "Should the Catholic Church be forced to close its adoption services in Massachusetts because it won't accept gay couples, which is exactly what the state has done? Should the Catholic Church be driven out of providing charitable services in the District of Columbia because it won't give in to secular bigotry? Should the Catholic Church find itself discriminated against by the Obama administration on key delivery of services because of the bias and the bigotry of the administration?
>
> "The bigotry question goes both ways. And there's a lot more anti-Christian bigotry today than there is concerning the other side. And none of it gets covered by the news media."

Here's an article explaining how bad the moderation was. (H/T Director Blue)

> When questioning former Massachusetts Gov. Mitt Romney, Stephanopoulos, a former senior advisor in the administration of Democratic President Bill Clinton, premised some inquiries on the assertion — offered without supporting facts — that Romney's job-creation statistics were inaccurate.
>
> "Now, there have been questions about that calculation of 100,000 jobs. So if you could explain it a little more," Stephanopoulos asked Romney of the former governor's claims about jobs created by companies he has helmed. "I've read some analysts who look at it and say that you're counting the jobs that were created but not counting the jobs that were taken away. Is that accurate?"
>
> "No, it's not accurate," Romney bluntly responded. "It includes the net of both.

> I’m a good enough numbers guy to make sure I got both sides of that.”
>
> Stephanopoulos did not cite any analysts by name.
>
> In another line of questioning, Stephanopoulos asked Romney if he believes “that states have the right to ban contraception, or is that trumped by a constitutional right to privacy?”
>
> Romney responded by questioning Stephanopoulos’ logic and his choice to raise a hypothetical situation that would never happen.
>
> “You’re asking — given the fact that there’s no state that wants to do so, and I don’t know of any candidate that wants to do so — you’re asking could it constitutionally be done?” Romney asked, with a hint of incredulity.
>
> Stephanopoulos, undeterred, pressed Romney again: “I’m asking you, do you believe that states have that right or not?”
>
> Amid a chorus of “boos” from the audience, Romney again parried the impossible hypothetical.

That’s what I mean when I say the debate was not worth watching. It was a parody of a debate.

Wikipedia says: Prior to joining ABC News, he was a senior political adviser to the 1992 U.S. presidential campaign of Bill Clinton and later became the White House Communications Director for two years, before being replaced by David Gergen after political fallout from the mid-term election of 1994, in which the Republican party took over the U.S. House and Senate.

Is Rick Santorum conservative or liberal? What are Rick Santorum's political views?

January 8, 2012 | by Wintery Knight | Link | Original Link

Rick Santorum Iowa Caucuses

Quin Hilyer explains, in the pro-Romney National Review, of all places.

Excerpt:

> On taxes, for instance, Santorum has always been superb. The Club for Growth's white paper on Santorum, calling his tax stances "very strong," confirms that "Santorum has consistently supported broad-based tax cuts and opposed tax increases either by sponsoring key legislation or by casting votes on relevant bills."
>
> His record on a host of other conservative issues is as solid as that of any politician in the past two decades. He has been firmly and repeatedly against all sorts of regulatory abuse, against McCain-Feingold and other restrictions on political speech, for school choice, for tort reform, for a strong military, and for a balanced-budget amendment.
>
> Obviously he has been as stalwart a defender of social conservatism, for 20 full years, as any other public figure. And as virtually every conservative involved in the judicial wars during Santorum's time in the Senate has confirmed, in person or in print, Santorum and his staff were *the* go-to people in the Senate when you needed to find tireless, committed advocates for conservative jurists. **Santorum is, wrote Ed Whelan of the Ethics and Public Policy Center, "the candidate in whom I have by far the greatest confidence" in terms of how likely he would be "to appoint excellent Supreme Court justices and lower-court judges and to work tenaciously to get them confirmed."**
>
> Meanwhile, as Santorum frequently (and entirely accurately) reminds anybody who will listen, his work on the single most important conservative policy reform of the past half century, the 1996 welfare-to-work effort that cut spending and

> poverty rates simultaneously, was seminal, indefatigable, and remarkably effective. **Iowa's Sen. Chuck Grassley explained to the *Des Moines Register* a week ago that he was unconvinced about welfare reform until Santorum paid him an office call and "took a lot of time to convince me of his point of view… The sincerity and effort that he has to get his point across in the presidential campaign is almost a total reflection of how he operated as a United States senator." Grassley yielded and voted for reform.**
>
> More broadly, until Rep. Paul Ryan's recent prominence, nobody in Congress has been as passionate and fearless an advocate for entitlement reform as Santorum. Medicaid block grants. Investment accounts for Social Security. Medicare payments controlled by the beneficiaries rather than third-party payers. Choice rather than government mandates. Indeed, **Santorum was the first candidate this year to fully embrace Ryan's proposed reforms — with this exception, as he reminded me in a phone interview on Thursday: "I've criticized Ryan on one thing: waiting ten years [for many of the reforms to kick in]. We can't afford to wait. We've got to start now."**
>
> […]As for overall spending and his much-discussed history of support for "earmarks" (a position also shared by tightwad Ron Paul), conservative groups' ratings show that Santorum was better than the average Republican, despite representing a state far bluer than those of most of his Republican colleagues. He demonstrated particular courage in his support for the Freedom to Farm Act and in frequent opposition to floor amendments that would have put additional spending in appropriations bills. Denizens of Capitol Hill in the 1990s fondly remember Santorum's repeated use of a prop during floor debate called the "Spendometer," which he used to make a persuasive (and entertaining) case against wasteful federal largesse.
>
> Out of office, he vociferously opposed TARP, the various "stimulus" packages, and the bailouts of car companies and of Fannie Mae and Freddie Mac. All those stances were perfectly in line with the voting record he had established in the House and Senate.

Evangelical Christian stalwart Gary Bauer is endorsing Rick Santorum.

Excerpt:

> Social conservative leader and former presidential candidate Gary Bauer will endorse Rick Santorum in South Carolina, he confirmed to The Hill on Saturday.
>
> Bauer said that he didn't want to get into the details of the endorsement since it was officially still embargoed, but confirmed his support and said he'll work to get other social conservatives on board for Santorum.
>
> "I want to do whatever I can to convince my colleagues that Sen. Santorum is the right man," he told The Hill.

> […]Bauer has organized a Friday meeting with top social conservatives in Texas to see if they can coalesce behind one candidate. He said the point of the meeting is not to try to stop Mitt Romney from being the Republican nominee, but that he believes Santorum would be the best candidate to beat President Obama, as well as the best commander in chief.

It's worth remembering what Rick Santorum did to encourage critical thinking in public school science education, too. This is good news for us who want to have evidence for and against things like naturalistic macro-evolution and anthropogenic catastrophic global warming presented to students. That's above and beyond the basics of conservatism, right there – and he's solid on school choice.

The best thing about Santorum, though, is that he has a working class background and he isn't afraid to debate with people instead of just speaking about his beliefs and generalities. He tries to convince people, and to reason things out with them.

Review of the book “Is God Just a Human Invention?”

January 8, 2012 | by Wintery Knight | Link | Original Link

Is God Just A Human Invention?

The thorough, chapter-by-chapter review of the book is here at Apologetics 315.

Excerpt:

> One of the brashest challenges that religious truth has experienced over the past several decades is the remarkable rise of the pugnacious New Atheists. Sean McDowell and Jonathan Marrow, new generation Christian apologists, have undertaken the task of contesting this anti-theistic upsurge. And in *Is God Just a Human Invention? And Seventeen Other Questions Raised by the New Atheists* the authors have pulled together a wide range of research that powerfully critiques the arguments from the combative non-theists.
>
> […]The authors deal with the scientific and philosophical challenges to Christian theism in a reasoned and respectful manner.
>
> […]*Is God Just a Human Invention?* is loaded with exceptional quotes from Christian and non-Christian thinkers. Additionally, the book furnishes very short essays at the back of each chapter from various erudite Christian scholars that augment the thesis of what was advanced by the authors.
>
> This volume combines simplicity and applicability without forfeiting precision. The authors lead the reader into the full girth of the many contemporary discussions concerning the defense of Christianity. They offer several of the leading arguments for Christian theism while toppling some of the most belligerent of the objections promoted by the New Atheists. They have written, with abundant care, to attain a thoroughness that is not often established in popular books. The wisdom and excellence with which each chapter is written makes this a crucial volume for the budding apologist’s library.

Here are the 18 topics, and after each topic a Christian scholar discusses the relevance of each topic.

1. Is Faith Irrational? (Commentary by: Gregory Koukl)
2. Are Science and Christianity at Odds? (Commentary by: John Warwick Montgomery)
3. Are Miracles Possible? (Commentary by: Gary R. Habermas)
4. Is Darwinian Evolution the Only Game in Town? (Commentary by: William A. Dembski)
5. How Did the Universe Begin? (Commentary by: R. Douglas Geivett)
6. How Did Life Begin? (Commentary by: Fazale R. Rana)
7. Why Is the Universe Just Right for Life? (Commentary by: Jay W. Richards)
8. Has Science Shown There Is No Soul? (Commentary by: Dale Fincher and Jonalyn Fincher)
9. Is God Just a Human Invention? (Commentary by: Garry DeWeese)
10. Is Religion Dangerous? (Commentary by: Douglas Groothuis)
11. Does God Intend for Us to Keep Slaves? (Commentary by: Paul Copan)
12. Is Hell a Divine Torture Chamber? (Commentary by: Frank Turek)
13. Is God a Genocidal Bully? (Commentary by: Clay Jones)
14. Is Christianity the Cause of Dangerous Sexual Repression? (Commentary by: Kerby Anderson)
15. Can People Be Good Without God? (Commentary by: Mark D. Linville)
16. Is Evil Only a Problem for Christians? (Commentary by: Randy Alcorn)
17. What Good Is Christianity? (Commentary by: Glenn S. Sunshine)
18. Why Jesus Instead of the Flying Spaghetti Monster? (Commentary by: Darrell L. Bock)

If you're looking for a good book on Christian apologetics for beginners, this is a great choice.

By the way, my Dad is currently reading my copy of this book! So it's fine for normal people.

I have some book reviews that people have sent me in my inbox, so maybe I should be reading them and posting them too! I get a bit behind on e-mail, though.

Labor unions who lobbied for Obamacare receive the most waivers from Obamacare

January 8, 2012 | by Wintery Knight | Link | Original Link

From the Daily Caller.

Excerpt: (links removed)

> Labor unions continued to receive the overwhelming majority of waivers from the president's health care reform law since the Obama administration tightened application rules last summer.
>
> Documents released in a classic Friday afternoon news dump show that labor unions representing 543,812 workers received waivers from President Barack Obama's signature legislation since June 17, 2011.
>
> By contrast, private employers with a total of 69,813 employees, many of whom work for small businesses, were granted waivers.
>
> The Department of Health and Human Services revised the rules governing applications for health reform waivers June 17, 2011, amid a steady stream of controversial news reports, including The Daily Caller's story that nearly 20 percent of last May's waivers went to businesses in House Minority Leader Nancy Pelosi's district in California.
>
> The labor unions receiving waivers include those that are monitored under the 1947 Taft-Hartley Act, and those that are not. The waivers granted since June 17 are valid until 2013, but recipients must make sure their employees understand the "limits of their coverage," according to HHS documents.
>
> HHS granted waivers on a year-by-year basis under its initial application process, but waivers granted after June 17 are valid for a maximum of two-and-a-half years.
>
> By and large, unions backed the health care overhaul, a law from which nearly a half million of their workers are now exempt.

By the way, be skeptical of what people on the left say – it's not necessarily what they actually do.

I wrote a post a while back showing that what liberals say in public is primarily designed to make them look good to others and feel good about themselves – but they don't live the way they talk. E.g. – Michael Moore owned stock in Haliburton, Noam Chomsky took money from the Pentagon, Nancy Pelosi evades environmental restrictions in a business she owns, etc. Liberals can be hypocrites. Sometimes, they are just selling an image to their followers.

New PLOS study finds that men and women have major personality differences

January 9, 2012 | by Wintery Knight | Link | Original Link

From Science Daily. (H/T Levin)

Excerpt:

> Men and women have large differences in personality, according to a new study published Jan. 4 in the online journal *PLoS ONE*.
>
> The existence of such differences, and their extent, has been a subject of much debate, but the authors of the new report, led by Marco Del Giudice of the University of Turin in Italy, describe a new method for measuring and analyzing personality differences that they argue is more accurate than previous methods.
>
> The researchers used personality measurements from more than 10,000 people, approximately half men and half women. The personality test included 15 personality scales, including such traits as warmth, sensitivity, and perfectionism. When comparing men's and women's overall personality profiles, which take multiple traits into account, very large differences between the sexes became apparent, even though differences look much smaller when each trait is considered separately.
>
> However, the study indicates that previous methods to measure such differences have been inadequate, both because they focused on one trait at a time and because they failed to correct for measurement error.
>
> The authors conclude that the true extent of sex differences in human personality has therefore been consistently underestimated.

This has implications for many questions, not the least of which is gay marriage. If men and women are different, then children get the benefits of those differences, and they get the benefit of seeing the two sexes interact in a love relationship that's about commitment and cooperation – not just lust and attraction.

I really appreciate it when my readers send me great articles like this that I can use, where we can all learn something about the way the world really is.

Atheist Jerry Coyne explains why morality is impossible and incoherent for atheists

January 9, 2012 | by Wintery Knight | Link | Original Link

Let's review what you need in your worldview in order to have a rationally grounded system of morality:

1) Objective moral values

There needs to be a way to distinguish what is good from what is bad. For example, the moral standard might specify that being kind to children is good, but torturing them for fun is bad. If the standard is purely subjective, then people could believe anything and each person would be justified in doing right in their own eyes. Even a "social contract" is just based on people's opinions. So we need a standard that applies regardless of what people's individual and collective opinions are.

2) Objective moral duties

Moral duties (moral obligations) refer to the actions that are obligatory based on the moral values defined in 1). Suppose we spot you 1) as an atheist. Why are you obligated to do the good thing, rather than the bad thing? To whom is this obligation owed? Why is rational for you to limit your actions based upon this obligation when it is against your self-interest? Why let other people's expectations decide what is good for you, especially if you can avoid the consequences of their disapproval?

3) Moral accountability

Suppose we spot you 1) and 2) as an atheist. What difference does it make to you if you just go ahead and disregard your moral obligations to whomever? Is there any reward or punishment for your choice to do right or do wrong? What's in it for you?

4) Free will

In order for agents to make free moral choices, they must be able to act or abstain from acting by exercising their free will. If there is no free will, then moral choices are impossible. If there are no moral choices, then no one can be held responsible for anything they do. If there is no moral responsibility, then there can be no praise and blame. But then it becomes impossible to praise any action as good or evil.

5) Ultimate significance

Finally, beyond the concept of reward and punishment in 3), we can also ask the question "what does it matter?". Suppose you do live a good life and you get a reward: 1000 chocolate sundaes. And when you've finished eating them, you die for real and that's the end. In other words, the reward is satisfying, but not really meaningful, ultimately. It's hard to see how moral actions can be meaningful, ultimately, unless their consequences last on into the future.

Atheists can't ground any of these. Let's take a closer look at #4.

Atheists can't ground freedom of the will

Here's Jerry Coyne's editorial in USA Today to explain why atheists can't ground free will. (H/T Neil Simpson)

Excerpt:

> And that's what neurobiology is telling us: Our brains are simply meat computers that, like real computers, are programmed by our genes and experiences to convert an array of inputs into a predetermined output. Recent experiments involving brain scans show that when a subject "decides" to push a button on the left or right side of a computer, the choice can be predicted by brain activity at least seven seconds before the subject is consciously aware of having made it. (These studies use crude imaging techniques based on blood flow, and I suspect that future understanding of the brain will allow us to predict many of our decisions far earlier than seven seconds in advance.) "Decisions" made like that aren't conscious ones. And if our choices are unconscious, with some determined well before the moment we think we've made them, then we don't have free will in any meaningful sense.

If you don't have free will, then you can't make moral choices, and you can't be held morally responsible.

Here are some more atheists to explain more about how atheists view morality.

William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Michael Ruse says atheists have no objective moral standards:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory.(Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

When village atheists talk about how they can be moral without God, it's important to ask them to justify the minimum requirements for rational morality. Atheists may act inconsistently with their worldview, expecting praise and blame for complying with the arbitrary standards of their peer group, but there is nothing more to morality on atheism that imitating the herd – when they are looking, anyway.

If you would like to hear a good debate where the importance of free will for morality is explained further, then click here.

Here is a good transcript of a debate on morality and atheism. And here's a debate between William Lane Craig and secular humanist Paul Kurtz that you can watch on Youtube.

Santorum and Gingrich expose Romney's liberal record in Sunday's NBC debate

January 10, 2012 | by Wintery Knight | Link | Original Link

Here's a clip from the NBC debate on Sunday.

Here's Rick Santorum on same-sex marriage:

You can watch the full video of the NBC debate here (70 minutes).

What about Mitt Romney?

Here's an excellent ad by Newt explaining Mitt Romney's record on tax hikes:

Mitt Romney has a net worth of $250 million dollars. He was born in a rich family and has no experience of what ordinary Americans are facing.

Romney has a pro-abortion record and pro-gay-marriage record. Mitt Romney raised taxes by $740 million as governor of Massachusetts. He passed Romneycare in Massachusetts, which is substantially similar to Obamacare. Why is he running as a Republican? I don't see anything in his record that would cause me to believe that he is a Republican.

You can see Mitt Romney explaining all of his liberal views in his own words in these videos.

Rick Santorum's pro-family economic plan TRIPLES the child tax deduction

January 10, 2012 | by Wintery Knight | Link | Original Link

The title of this article in the liberal Washington Post is "Santorum wants tax code to reward traditional marriage and families". HOLY SNARK.

Excerpt: (links removed)

> Rick Santorum's socially conservative brand has helped him break through with a last-minute surge in Iowa. But his agenda isn't restricted to reimposing "Don't Ask, Don't Tell,"outlawing gay marriage nationwide, or promoting prayer in public schools. Santorum also wants to use the federal tax incentives to promote traditional marriage and families.
>
> "Tax policy as social policy" is the most distinguishing characteristic of Santorum's tax reform platform. The Pennsylvania Republican wants to reduce taxes by tripling the child tax credit, which currently stands at $1,000 per child. Santorum also wants to reduce federal taxes that penalize married couples. Under the current tax code, some spouses who earn about the same salary on the middle-to-upper end of the spectrum pay more in taxes by filing jointly as a married couple than they would as individuals. Justin Wolfers explains further: "The U.S. has a household-based taxation system which subsidizes married families when one person stays home and taxes most people extra if they choose to marry and both work full-time. The average tax cost of marriage for a dual-income couple is $1,500 annually."
>
> As James Pethokoukis points out, such policies are in line with a pro-natalist policy that some policy analysts have pushed for, both for social and economic reasons, citing Robert Stein's commentary in National Affairs. "Too many free-market economists still consider families an afterthought — arguing that the tax code should be 'neutral' about raising children, as if parenting were merely one hobby among many. But raising children is hardly just another pastime: It is one of the most important services any American can perform for our country," Stein writes, arguing that higher fertility rates would also bolster the financial future of Social Security and Medicare. By contrast, candidates like Rick Perry would eliminate the child tax credit and most other kinds of deductions in the tax code.

Since when did politicians care about ordinary families? Rick Santorum cares about working class families.

Why Christians and social conservatives should vote for Rick Santorum

January 10, 2012 | by Wintery Knight | Link | Original Link

Mary sent me this article from Life Site News.

Excerpt:

> GOP presidential candidate Rick Santorum has taken the Obama administration to task for its role in eroding traditional views on sexuality to make way for a more pluralistic view.
>
> During a campaign event in Muscatine, Iowa last month, Santorum took on a questioner challenging his marriage views by expounding on the benefits of a traditional household for children and society, and blasting the "hate" branding used by gay rights leaders and media against marriage defenders.
>
> Santorum said that he learned radio conservative pundit Bill Bennett's wife, who runs an abstinence program called Best Friends, had been pressured by the Obama administration not to use the word "abstinence" or uphold the traditional family as better than other lifestyles.
>
> "The Obama administration has said to them, they can't use the word abstinence anymore. They can't use it, because of course that is a cultural artifact of a bygone era, and therefore you can't promote that," said Santorum. "You can't promote traditional marriage, because it's one of a variety of different lifestyles, and it's no better or worse than any other lifestyle, which is simply not the case."
>
> "I love it when the left says, quit trying to impose your morality on us," he continued. "What's that? that's their morality, and they're now imposing it on us.
>
> "The idea that this is a morality that may not be based in faith does not make it more legitimate than one that may be based in part in faith. But in their eyes, it is different. They want to drive faith and moral conclusions that come from faith out of the public square of the public law, and replace it with their values."
>
> In a recent discussion with Dr. James Dobson, Bennett had said that his wife Elayne had been told by the Obama administration that they "strongly prefer that she not use the word 'abstinence'" in her program, which received public funds.
>
> Santorum went on to defend marriage as a fruitful union uniquely suited to raising children that society is best served by defending, and blamed its erosion beginning with the no-fault divorce movement of the 1960s and 70s.
>
> "We have seven children, and I can tell you that my wife brings a very different thing to our children's growth and development than I do, because we're different. It's not just we're different because we're different people, we're different because we're husband and wife, male and female, and there are different attributes and qualities that go with that. Yes, true: the way God made

> us.
>
> "So what we need is a society that promotes that. … other relationships are important in society: my relationship with my aunt, my relationship with my friends … but they don't have the unique benefit that men and women bonding together for the purposes of marrying, having, and raising children and nurturing them to be successful citizens of our country. That's why we should focus and promote marriage as something that is a good."
>
> **He also took a moment to criticize those who were poised to label his position or statements "hateful" because he defended marriage, something he said doesn't mesh with the values America promotes.**
>
> **"Everybody's trying to impose their values. … Come into the public square make your case as to why same-sex marriage should be the law of the land. I have no prob with that at all. Make the argument," he said. "But accept the fact that other people who disagree with you don't hate people who disagree with them, they just happen to believe that marriage is a good that should be preserved."**

I think there really is only one social conservative activist left in the Republican Primary. Rick Santorum. He knows how to debate social issues well enough to spot the self-refuting rhetoric of the "tolerant" left. The left wants to impose their moral relativism on society, and Rich Santorum will fight them. If you are sick and tired of being labeled as hateful because you think that traditional marriage is best for children, then vote for someone who can make the case for you.

The Christian Post says that social conservative stalwart Gary Bauer has endorsed Rick Santorum.

Excerpt:

> Social conservative leader Gary Bauer endorsed Rick Santorum at a campaign event in South Carolina on Saturday.
>
> In a Sunday press release, Bauer said, "the main 'pillars' of Senator Santorum's governing philosophy – smaller, constitutionally-based government, lower taxes, a strong and confident American role in the world to keep our nation safe, a commitment to defending America's families and defending the sanctity of life – is exactly the blueprint to put America back on the right track."
>
> Bauer was previously president of the Family Research Council and helped build that organization into the top advocacy organization and think tank representing social conservatives. Bauer also served in the Department ofEducation under President Ronald Reagan. Currently, he heads Campaign for Working Families and American Values.

Here is Rick Santorum's speech at the Right to Life convention in 2011.

Part 1:

Part 2:

If you are a pure social conservative, there here is the candidate ranking for you:

1. Rick Santorum
2. Newt Gingrich
3. Rick Perry
4. Ron Paul
5. John Huntsman
6. Mitt Romney

Santorum is the best, and Gingrich has a good voting record. Perry would be OK, but he can't persuade anyone in a debate. The rest are all social liberals. Mitt Romney would be the absolute worst candidate on social issues. And that's why the Republican establishment and the news media are pushing him as the nominee.

Chris Sinkinson debates John Hick on religious pluralism

January 10, 2012 | by Wintery Knight | Link | Original Link

Looks like Justin Brierley on the Unbelievable radio show found a pastor with a Ph.D in philosophy, and he can really whip some ass.

The players:

> John Hick is a noted philosopher and theologian who is a proponent of a pluralist view of religion – that there is one light (God) but many lampshades (religious expressions).
>
> Chris Sinkinson is a pastor and Bible tutor who has critiqued Hick's work. He says that pluralism empties Christianity of any content and in its own way disrespects other religions more than his own exclusivist stance.

The MP3 file is here.

Justin does a great job as moderator of this debate. He said what I was thinking a number of times.

One quick thing. If you like this debate, then you need to order the Greer-Heard forum MP3s from the Harold Netland vs. Paul F. Knitter debate. Paul Knitter's case for pluralism is essentially the same as Hick's although he emphasizes the "evangelicals are mean" argument more than the "I want people of other religions to like me" argument.

if you can't buy the Knitter lectures, then at least read this.

Anyway, here is my snarky summary. I creatively paraphrase some of the things that Hick says to make it more clear. And funny.

—-

Hick:
– had an experience looking at the buildings of other religions
– other religions have buildings, so all religions are equal
– I spent some time in the East, and met nice Eastern people
– since Eastern people are nice that means all religions are equal

Justin:
– isn't Jesus' claim to be the exclusive path to salvation offensive?

Sinkinson:
– all religions that are exclusive and have to deal with religious pluralism
– even John Hick writes polemically in favor of his own view
– even John Hick thinks that religions that are exclusive are false

Justin:
– what about the blind man and the elephant?
– the story seems to say that other people have a partial grasp?

– but the story-teller himself has the privileged view
– so isn't the religious pluralist just as arrogant as exclusivists?

Hick:
– well, it's not arrogant to claim to have the right answer
– Jesus never made the claim to be God incarnate
– Jesus never made the claim to be the exclusive path to God
– historians don't think that John's gospel is reliable because it is late
– the proclamation of exclusivity was added by evangelists much later

Sinkinson:
– the historians who doubt the high Christology are radical skeptics
– the mainstream of historical scholarship accepts a high Christology
– the EARLIEST history about Jesus has the highest Christology

Hick:
– the moderate scholars do think Jesus was divine but that he didn't think he was divine
– the phrase "Son of God" was used to describe any remarkable person
– only later did the early church turn the generic term into "God the Son"

Sinkinson:
– there is reflection on Jesus' identity and developments, but not invention
– Jesus and his followers were in trouble precisely for linking him to deity
– why else would Jesus get into trouble and get crucified?

Hick:
– the Romans crucified him because people were saying he was the Messiah
– but the Messiah was not identified as being divine, but political
– and that's why the Romans crucified him

Justin:
– do you (Sinkinson) think that people in other religions can be saved?

Sinkinson:
– the traditional view is exclusivism
– the other world religions are logically contradictory with Christianity
– you have to respect their differences – they are not the same as Christianity
– exclusivists allow that people can be saved by responding to natural theology
– and there are also other cases where non-Christians are saved, like old testament saints and babies who die in infancy

Hick:
– but people's religions are based on where they are born
– so it's not fair for God to expect people to be saved in one religion only

Sinkinson:
– the plurality of religions grouped by location doesn't make christianity false
– that would be the genetic fallacy – rejecting an idea because of its origin
– the real question to consider is whether it is true
– and even the objection assumes that God is a God of love, who should be fair

– but how do you know that God is loving? that is an exclusive view
– how can the “blob” ultimate of religious pluralism be “loving” and “fair”

Hick:
– the ultimate reality is loving or not loving depending on each person’s religion

Sinkinson:
– but some religions and theistic and some are atheistic
– how can those God exist and not exist?

Hick:
– God is beyond everyone’s understanding, except mine
– God is beyond all definitions, except mine
– God is beyond all human understanding, except mine
– i’m not contradicting myself, it’s a mystery! a mystery!
– as long as you don’t look to closely, they’re all the same!
– allow me to tell you about God, which no one can do but me

Justin:
– doesn’t your religious pluralism mean that Christianity is false?

Hick:
– well, Christianity can’t be true, because it disagrees with other religions
– Christianity can’t falsify other religions, that would be mean to them
– other religions are just as “profound” as Christianity – and that’s what matters – not whether a religion makes true claims
– some religions are older than Christianity, that means they can’t be disagreed with
– we can’t let Christianity be true, because then some people will feel bad
– if people feel bad, then they don’t like me and then I feel bad
– if there’s one thing I know about the unknowable ultimate reality, it’s that it wants me to be liked by lots of people

Sinkinson:
– your view seems to be agnosticism – that nothing can be known about the “ultimate real”
– if we can’t express in words what God is like, then why are you saying what God is like?

Hick:
– the indescribable ultimate is described (falsely, but interestingly) by various tradition

Sinkinson:
– does the “ultimate real” exist?

Hick:
– no

Justin:
– are all the exclusive religions wrong, and only you are right?

Hick:
– all propositions about God in all the religions are false

– the experience of being deluded and having feelings about your delusions is “valid” in all religions
– all religions are equally good ways to believe false things and to have feelings about your false beliefs
– only my propositions about God are true
– everyone who disagrees with me is wrong

Sinkinson:
– so all the propositions of all the religions are wrong
– but all the experiences and feelings are “right”

Hick:
– yes
– all propositions about God are humanly constructed, and so false
– except mine – mine are true!

Sinkinson:
– so everything distinctive about Christianity are literally false?

Hick:
– yes, Christian doctrines are all false
– because if they were true, other religions would be false, and they would feel bad
– and we can’t have that, because everyone has to like me
– only things that don’t offend people in other religions can be true

Sinkinson:
– so do we have to then treat all religions as non-propositional?

Hick:
– well just don’t ask people about the content of their beliefs
– just treat their religion as non-cognitive rituals, feelings and experiences
– don’t inquire too deeply into it, because all religions are all nonsense
– i’m very respectful and tolerant of different religions!

Sinkinson:
– but Muslims, for example, think their religion is making truth claims

Hick:
– but there can be tolerance as long as you treat religions as non-propositional nonsense

Sinkinson:
– um, I have a higher respect for religions than you do
– I actually consider that the claims of other religions could be true
– I think that other religions make truth claims and not nonsense claims

Hick:
– well they are all useful because they are all false
– I don’t emphasize beliefs, I emphasize living, experiences and feelings
– as long as everyone accepts my view and rejects their religion, we’ll all be tolerant

Justin:

– erm, isn't that an exclusive claim?
– you're trying to say that your view of what religion is is right, and everyone else is wrong

Hick:
– I'm not arrogant, I just think that all the religions of the worlds are false
– only my statements about religion are true – everyone else is wrong
– I'm tolerant, and Christians are arrogant

Justin:
– but you think Sinkinson's view is wrong
– why should we accept your view and deny his view?

Hick:
– His view of salvation is false, and mine is true

Sinkinson:
– you use words with set meanings, but you mean completely different things
– when I say salvation, I mean deliverance from sins through Jesus

Hick:
– I get to decide what salvation means for everyone, you intolerant bigot

Sinkinson:
– but that word has a specific meaning that has held true in all of Christian history
– but what you mean by salvation is people having subjective delusions that are not true

Hick:
– I don't like using the word salvation

Sinkinson:
– but you just used it!
– and you think that it is present in different world religions, but it isn't

Hick:
– God is unknowable and indescribable
– God isn't a wrathful God though
– and the Christian description of God is false
– Evangelical Christians are mean
– I had experiences with people of other faiths
– and these experiences taught me that religions that think that the universe is eternal are true
– as long as you reduce religion to behaviors and not truth, then religions are all good at producing behaviors
– if you just treat all religions as clothing fashion and food customs, they are all valid
– the main point of religion is for people to agree on cultural conventions and stick to them
– never mind the propositional statements of religions… who cares about truth? not me!
– but Christianity is definitely false

Sinkinson:
– the Judeo-Christian God is different – he reveals himself to humans
– he is distinct from the other religions
– he is personal, and is loving but also angry at sin

Hick:
– But God isn’t a person, and he isn’t a non-person
– I can’t say what he is – I’ll offend someone if I say anything at all!
– except Christians – I can offend them because they are arrogant bigots
– I’m also very spiritual – I meditate on my breathing

Sinkinson:
– you can’t assess a religion by the experiences that people have
– people who have weird experiences do all kinds of evil things
– so the real question has to be about truth – is the New Testament reliable?, etc.

Why does God allow his creatures to suffer?

January 10, 2012 | by Wintery Knight | Link | Original Link

Another great post from Christian Apologetics UK. This thing is so full of arguments, it's hard to choose what to excerpt!

I'll choose something from Section 2:

Third, there is the free-will defence. Love is only genuine when it is not coerced. True love requires the ability to exercise free will. Thus, to facilitate the ability of free creatures to genuinely *love* God requires that one take the risk that these free creatures will choose to *reject* God or to violate His commandments.

Fourth, as suggested by proponents of Molinism, it is possible that only a world which was suffused with a certain amount of evil and suffering would result in the maximum number of people *freely* coming to know God. The doctrine of divine middle knowledge attests that God has knowledge of counterfactuals: That is, God has knowledge of what His free creatures would do under any circumstances. If this is the case, then it is possible that God has chosen to actualise a world — out of an array of possible worlds — in which the maximum number of people would choose to know God as their Creator and Saviour, without being in violation of their rights of autonomy and existential freedom of the will.

Fifth, God often *uses* evil and suffering to accomplish his ends. One classic example of this is in the story of Joseph being sold into slavery by his jealous brothers, an incident which set in motion a chain of events which ultimately led to Joseph being falsely accused of a crime and subsequently being thrown into prison. Later, Joseph is promoted to the position of Pharaoh's right-hand man, and is in a unique position to be able to administer food during times of severe famine: Including the saving of his family. In Genesis 50:20, Joseph says, *"You intended to harm me, but God intended it for good to accomplish what is now being done, the saving of many lives."*

Everybody needs to know how to answer this objection, so read the post.

Here's an excellent lecture on the problems of evil and suffering by Doug Geivett, if you want something to listen to. And here's a good text post on the problem of proving that God doesn't have a morally sufficient reason to permit suffering.

Canadian Conservative MP Joe Oliver declares war on green radicals

January 11, 2012 | by Wintery Knight | Link | Original Link

Canada 2011 Federal Election Seats

Terence Corcoran writes in the Financial Post about the Canadian Minister of Natural Resources Joe Oliver.

Excerpt:

> Through most of 2011, Canadian energy officials in politics and industry watched with bewildered helplessness and some shock as Washington allowed environmentalists to seize control of TransCanada's $7-billion Keystone XL pipeline issue. They stood by aghast as President Barack Obama, a captive of U.S. green activists and Hollywood movie stars, caved in to political pressure and postponed a decision to approve the project, a potential economic bonanza that promised to deliver thousands of jobs to Americans and billions of barrels of Canadian oil sands production to Texas.
>
> No such green hijacking is going to take place in Canada, at least not without an official fight. On the eve of hearings, which begin Tuesday in Kitimat, B.C., into the $5.5-billion Northern Gateway pipeline — to carry the same oil sands production from Alberta to the West Coast and on to China — the Harper government clearly aims to do what Barack Obama cannot or will not do in America, namely stand up to the growth-killing professional green movement.
>
> It is a cliché in journalism to declare metaphorical wars at the drop of a news release. **In this case, it looks like war is exactly what Natural Resources Minister Joe Oliver launched Monday in an unprecedented open letter warning that Canada will not allow "environmental and other radical groups" to "hijack our regulatory system to achieve their radical ideological agenda."**
>
> **What a welcome war this is. Never before has a Canadian politician**

> **challenged the hitherto saintly protectors of the environment in such direct language. More importantly, Mr. Oliver took straight aim at a troubling trend in Canadian environmentalism — the foreign funding of Canadian green activist groups with the express purpose of shutting down Canadian resource development** — first documented in the *National Post* by Vancouver investigative writer Vivian Krause.
>
> **"These groups," said Mr. Oliver, "seek to exploit any loophole they can find, stacking public hearings with bodies to ensure that delays kill good projects. They use funding from foreign special interests to undermine Canada's national economic interest. They attract jet-setting celebrities with some of the largest personal carbon footprints in the world to lecture Canadians not to develop our natural resources."**

That's one reason why the Canadian economy is booming.

We elected a President who gave $535 million to Solyndra, blocked the Keystone XL pipeline, placed a moratorium on Gulf oil drilling and subsidized the Chevy Volt to by $250,000 PER VEHICLE. Note that all of the Chevy Volts sold have now been recalled for repairs. We could have been like Canada, if only we had not elected environmentalists and socialists.

Court of Appeals upholds Texas sonogram law

January 11, 2012 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> A federal appeals court has upheld a pro-life law in Texas allowing women a chance to see an ultrasound of their unborn child prior to an abortion.
>
> During the recent 82nd Texas Legislative Session, the Sonogram Bill (House Bill 15) was passed and signed into law by Governor Rick Perry. This historic law protects a pregnant woman's right to view her unborn child and hear the heartbeat of that child before making a decision about an abortion. On August 30, federal district court Judge Sam Sparks enjoined crucial parts of this law – further jeopardizing the health of women undergoing abortions—just two days before the law was to go into effect.
>
> The injunction was sought by the New York based Center for Reproductive Rights, an abortion advocacy group that files lawsuit against pro-life legislation.
>
> Texas Attorney General Greg Abbott, who is pro-life, quickly filed an appeal on the same day that the lower court released the injunction with the 5th Circuit Court of Appeals in New Orleans.
>
> Last Tuesday, a federal three-judge panel heard arguments to determine whether to lift the injunction. The panel was critical of the grounds for the injunction and Jonathan Mitchell, Solicitor General, argued for the law before the panel. Mitchell explained that the level of scrutiny and the arguments used to rule the law as unconstitutional — and thus block the law from going into effect — were misapplied and needed to be overturned.
>
> Chief Judge Edith Jones, of the three-judge panel, asked pro-abortion attorneys how medical sonogram imaging, and a factual description of that image could be viewed as radical or against the health of women.
>
> Today, the court ruled the state can enforce the law and said Judge Sparks was wrong to rule that abortion practitioners would likely win their case in court.
>
> […]The legislation allows women to see the ultrasound 24 hours before the abortion and abortion centers typically do ultrasounds to estimate the age of the baby before the abortion but they don't normally allow women a chance to see or explain to them in detail the development of their unborn child. When used in pregnancy centers offering abortion alternatives, approximately 80 percent of women change their mind about having an abortion.

There are so many incremental laws and initiatives that a pro-lifer like Rick Perry can implement. What I find disturbing is when people accept a candidate like Mitt Romney, who has a pro-abortion record, as being equal to candidates who have a pro-life record.

Does the Santorum Amendment promote critical thinking in the science classroom?

January 11, 2012 | by Wintery Knight | Link | Original Link

Here's a post from Evolution News to explain.

Excerpt: (links removed)

> With his near-win in Iowa and his recent rise in the polls, Republican presidential candidate Rick Santorum is facing new scrutiny about his views on intelligent design and evolution. Reporters and others have expressed particular interest in the so-called "Santorum Amendment" authored by Senator Santorum, which was adopted in revised form in the Conference Report of the landmark No Child Left Behind Act. A media backgrounder on Rick Santorum, evolution, and intelligent design is available to download at: http://www.discovery.org/a/18071.

> The Santorum Amendment won overwhelming bipartisan support in the United States Senate. In fact, Sen. Ted Kennedy enthusiastically endorsed the Amendment on the Senate floor. Others voting in favor of the Amendment included Sen. Hillary Clinton, Sen. Joe Biden, Sen. Barbara Boxer, Sen. Harry Reid, Senator John McCain, and Senator Sam Brownback. (See Congressional Record, June 13, 2001, p. S6153.)
>
> The Santorum Amendment did not mandate teaching intelligent design, nor did it encourage teaching creationism or religion in the classroom. Instead, it encouraged open discussion and inquiry by teachers and students of the evidence both for and against controversial scientific theories such as Darwin's theory of evolution.
>
> The approach advocated in the Santorum Amendment is favored by the vast majority of Americans, no matter what their race, gender, or political party. According to a nationwide Zogby poll in 2009, 80 percent of likely voters "agree that teachers and students should have the academic freedom to discuss both the strengths and weaknesses of evolution as a scientific theory."
>
> "Allowing discussions of all the scientific evidence about evolution in the classroom is good for students and good for science. It's the mainstream approach supported by most Americans," says Dr. John West, Associate Director of Discovery Institute's Center for Science & Culture. "Those who are trying to put a gag order on teachers and students to insulate Darwin's theory from critical inquiry are the real extremists."

You can also listen a podcast with David DeWolf on this topic.

Supreme Court hands Obama administration a major defeat on religious liberty

January 11, 2012 | by Wintery Knight | Link | Original Link

From the Competitive Enterprise Institute.

Excerpt: (most links removed)

> The Supreme Court has rejected the Obama administration's argument that it can dictate who churches hire as ministers or clergy in *Hosanna-Tabor Evangelical Lutheran Church and School* v. *Equal Employment Opportunity Commission*. The Obama administration unsuccessfully arguedthat the government can dictate who churches hire, as long as it also subjects secular employers to the same dictates regarding who they hire (so-called rules of general applicability). Taken to its logical conclusion, this argument would allow the government to ban a church or synagogue from hiring based on religion (defeating the whole purpose of religious freedom, which is to allow churches to promote their own religion) or sex (preventing the Catholic Church from having a male priesthood). No Supreme Court justice bought the administration's argument, made on behalf of the Equal Employment Opportunity Commission (EEOC). The Supreme Court unanimously found that such government control over who churches can hire would violate the religion clauses of the First Amendment.
>
> If federal antidiscrimination laws covered churches' hiring of clergy, as the Obama administration demanded, they would have to not just avoid discriminating based on things like sex or religion, but would also have to radically alter sensible hiring criteria by eliminating longstanding, neutral church practices that have the affect of inadvertently screening out more members of a minority group than of other groups (so-called "disparate impact" or "unintentional discrimination"). For example, some branches of the Lutheran Church have hiring criteria for religious broadcasters on their radio programs, such as "knowledge of Lutheran doctrine," and "classic music training," that few minorities satisfy (only 2 percent of all people with Lutheran training are minorities, and only 0.1 percent of people with both Lutheran training and classical music training are minorities), given the Lutheran Church's historical roots in overwhelmingly white areas like Scandinavia and Minnesota. Even though they are happy to have black applicants, and do not treat black applicants worse based on their race, the EEOC could easily sue them for racially disparate impact if the Obama administration's argument had been accepted. (The religion clauses of the First Amendment not only protect who churches hire as ministers, but also other people who serve as "voices of the church," such as theology professors, and religious broadcasters on behalf of a church.)

> We previously wrote about ways that the Obama administration is attacking religious freedom and separation of church and state at this link. We described how the Equal Employment Opportunity Commission is wiping out jobs and discouraging hiring and job creation through onerous interpretations of federal employment laws, at this link.

Good news for religious liberty means bad news for Barack Obama.

Obama appoints amnesty advocate to head his Domestic Policy Council

January 12, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> In another move aimed at aiding his re-election, President Obama on Tuesday announced that Cecilia Munoz, a former senior vice president of the National Council of La Raza (NCLR), would replace Melody Barnes as head of his Domestic Policy Council.
>
> […]The NCLR, whose name translates as "the race," is a tax-exempt nonprofit that describes itself as "the largest national Hispanic civil rights and advocacy organization in the United States." It most recently led in vocal opposition against Arizona SB 1070, a law attacked by Attorney General Eric Holder as a discriminatory incarnation of profiling that usurped federal authority over immigration policy.
>
> When then-candidate Obama spoke to the NCLR national convention in 2008, he told the group what it wanted to hear — that Latino "communities are terrorized by ICE immigration raids." He also condemned those "communities taking immigration enforcement into their own hands," such as those that have passed state laws or local ordinances to check that those who are here are in fact here legally.
>
> At this year's La Raza convention, Obama touted the federal Dream (Development, Relief and Education for Alien Minors) Act, a thinly disguised amnesty program that is part of "comprehensive immigration reform" designed to pit those who have successfully eluded the border patrol on a path to citizenship.
>
> Munoz has been serving since January 2009 as director of the Office of Intergovernmental Affairs at the time of that appointment. She was La Raza's vice president for research, advocacy and legislation.
>
> Since her entering the Obama administration, according to the watchdog group Judicial Watch, federal funding for La Raza has increased dramatically. In fiscal 2008, NCLR received $2.8 million in federal grants, and in fiscal 2009 it got $4.1 million. In 2010, the total rocketed to more than $11 million.
>
> […]La Raza has ties it refuses to condemn with groups such as MECHa, which has spent the last three decades indoctrinating Latino students on American campuses, claiming that California, Arizona, Mexico, Texas and southern Colorado were stolen and should be returned to their rightful owners, the people of Mexico.

> MECHa's slogan is derived from the rhetoric of Cuban dictator Fidel Castro: "Through the race, everything; outside the race, nothing."

Here's a good article summarizing all of the ways that the Obama administration has been pushing a backdoor amnesty since he was elected.

Does the Bible teach that faith is opposed to logic and evidence?

January 12, 2012 | by Wintery Knight | Link | Original Link

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

What is faith according to the Bible?

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous

tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

What is faith according to Bible-based theologians?

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia** – This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus** – This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia** – This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

How do beliefs form, according to Christian philosophers?

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

The article goes on to make some very informative comments on the relationship between apologetics and belief.

Should we legalize drugs and prostitution like Ron Paul wants?

January 12, 2012 | by Wintery Knight | Link | Original Link

The UK Telegraph explains how Ron Paul's policies have been tried and they have *failed*.

Excerpt:

> Amsterdam authorities say they are to halve the number of brothels and marijuana shops in the city's "red light" district and surrounding area

> The city announced plans to clean up the area a year ago and since then 109 sex "windows", from which prostitutes attract customers, have been closed. The new measures aim to reduce the number of windows to 243 from 482 last year, a city spokesman said.
>
> Amsterdam also wants to close half of the 76 cannabis shops in the city centre.
>
> "Money laundering, extortion and human trafficking are things you do not see on the surface but they are hurting people and the city. We want to fight this," deputy mayor of Amsterdam Lodewijk Asscher told Reuters.
>
> "We can still have sex and drugs but in a way that shows the city is in control."
>
> Prostitution was legalised in the Netherlands in 2000 and its soft drug policy, one of the most liberal in Europe, allows the sale of marijuana and possession of less than 5 grams (0.18 oz).

> But Amsterdam's toughening line is part of a wider trend in Holland.
>
> Two Dutch cities near the Belgian border want to close all their cannabis shops to combat drug tourism and crime.
>
> The 800-year-old red light district needs to diversify and showcase the city's history, Mr Asscher said.
>
> "This is a nice, old part of town. We can attract different groups of tourists. You should be able to have a beer at the old church square, watch fashion, and visit Chinatown," he added.

The Family Research Council explains how Ron Paul's drug policies don't actually work as advertised anywhere they've been tried.

Excerpt:

> Legalizers believe most black market and organized syndicate involvement in the drug business would die and that drug-induced crime would decrease with drug legalization. But these assertions are not supported by the facts. The United States experimented with legalization and it failed. From 1919 to 1922, government-sponsored clinics handed out free drugs to addicts in hopes of

> controlling their behavior. The effort failed. Society's revulsion against drugs, combined with enforcement, successfully eradicated the menace at that time.[32]
>
> California decriminalized marijuana in 1976, and, within the first six months, arrests for driving under the influence of drugs rose 46 percent for adults and 71.4 percent for juveniles.[33] Decriminalizing marijuana in Alaska and Oregon in the 1970s resulted in the doubling of use.[34] Patrick Murphy, a court-appointed lawyer for 31,000 abused and neglected children in Chicago, says that more than 80 percent of the cases of physical and sexual abuse of children now involve drugs. There is no evidence that legalizing drugs will reduce these crimes, and there is evidence that suggests it would worsen the problem.[35]
>
> Legalization would decrease drug distribution crime because most of those activities would become lawful. But would legalization necessarily reduce other drug-related crime like robbery, rape, and assault? Presumably legalization would reduce the cost of drugs and thus addicts might commit fewer crimes to pay for their habits. But less expensive drugs might also feed their habit better, and more drugs means more side effects like paranoia, irritability and violence. Suggestions that crime can somehow be eliminated by redefining it are spurious. Free drugs or legalizing bad drugs would not make criminal addicts into productive citizens. Dr. Mitchell S. Rosenthal, expert on drugs and adolescents and president of Phoenix House, a resident treatment center in New York, said, "If you give somebody free drugs you don't turn him into a responsible employee, husband, or father."[36] The Justice Department reports that most inmates (77.4 percent male and 83.6 percent female) have a drug history and the majority were under the influence of drugs or alcohol at the time of their current offense. And a surprisingly large number of convicted felons admit their crime motive was to get money for drugs. For example, 12 percent of all violent offenses and 24.4 percent of all property offenses were drug-money motivated.[37]
>
> […]The extent to which individuals commit "drug-related crimes only" is overstated. Most incarcerated "drug"offenders violated other laws as well. Princeton University professor John Dilulio found that only 2 percent — i.e., 700 — of those in federal prisons were convicted of pure drug possession. They generally committed other and violent crimes to earn a sentence.[40]
>
> However, 70 percent of current inmates were on illegal drugs when arrested and, if drugs become cheaper, violent crime could reasonably be expected to increase.[41]

And more:

> History provides evidence that legalization of drugs in foreign nations has not been successful. For example, opium was legalized in China earlier this century. That decision resulted in 90 million addicts and it took a half-century to repair the

> damage.[59]
>
> Egypt allowed unrestricted trade of cocaine and heroin in the 1920s. An epidemic of addiction resulted. Even in Iran and Thailand, countries where drugs are readily available, the prevalence of addiction continues to soar.[60]
>
> Modern-day Netherlands is often cited as a country which has successfully legalized drugs. Marijuana is sold over the counter and police seldom arrest cocaine and heroin users. But official tolerance has led to significant increases in addiction. Amsterdam's officials blame the significant rise in crime on the liberal drug policy. The city's 7,000 addicts are blamed for 80 percent of all property crime and Amsterdam's rate of burglary is now twice that of Newark, New Jersey.[61] Drug problems have forced the city to increase the size of the police force and the city fathers are now rethinking the drug policy.[62]
>
> Dr. K. F. Gunning, president of the Dutch National Committee on Drug Prevention, cites some revealing statistics about drug abuse and crime. Cannabis use among students increased 250 percent from 1984 to 1992. During the same period, shootings rose 40 percent, car thefts increased 62 percent, and hold-ups rose 69 percent.[63]
>
> Sweden legalized doctor prescriptions of amphetamines in 1965. During the first year of legalization, the number of intravenous"speed" addicts rose 88.5 percent. A study of men arrested during the legalization period showed a high correlation between intravenous use and a variety of crimes.[64]
>
> Dr. Nils Bejorot, director of the Swedish Carnegie Institute and professor of social medicine at the Karolinska Institute in Stockholm, believes the solution to the growing drug problem is consistent social and legal harassment of both users and dealers.[65]
>
> Great Britain experimented with controlled distribution of heroin between 1959 and 1968. According to the British Medical Journal, the number of heroin addicts doubled every sixteen months and the increase in addicts was accompanied by an increase in criminal activity as well.[66] And British authorities found that heroin addicts have a very good chance of dying prematurely. On the crime front, Scotland Yard had to increase its narcotics squad 100 percent to combat the crime caused by the "legal" addicts.[67]
>
> The Swiss opened a "legalized drug" area in Zurich seven years ago and local addicts were given drugs, clean needles, and emergency medical care. Unfortunately, the liberal policy backfired and the number of addicts surged to 3,500; violence surged, too. "Needle Park," as it came to be known, was a place of open warfare among rival gangs, and even police faced gunfire. Their cars were attacked and overturned. In February 1995, officials ended the experiment, conceding that it had evolved into a grotesque spectacle.[68]

Why does legalizing drugs increase crime? Because drugs are addictive and they cost money to obtain. Addiction reduces the ability to hold down a job, which is a legal way of

getting money. Therefore, addicts will resort to crime in order to get the money to buy their drugs, since their addiction impairs their ability to hold down a job.

Here is an article that takes a look at Ron Paul's views on social policy and one that looks at Ron Paul's views on foreign policy.

William Lane Craig discusses Romans 9 and "corporate election"

January 13, 2012 | by Wintery Knight | Link | Original Link

Here's the post on Reasonable Faith. He's responding to a questioner who is an atheist,and who thinks that Calvinism makes belief in Christianity impossible.

Part of the question:

> In Romans 9, Paul describes Jacob and Esau as being judged as loved and hated (or "loved less") before they did any good or evil. Paul then goes on to liken all of us as clay molded by a potter, and states that it is not the will of he who runs but of He who shows mercy which saves us. Paul relates God telling Pharaoh: "for this purpose I have raised you up …" and then discusses an idea that the vessels God made for "common use" are there only for the purpose of showing His patience to his more special pots.
>
> Many Reformed think this passage shows double-predestination and unconditional election, and I am forced to agree with them – as is Christ Himself in John 6:65! The Reformed God is something I view as tyrannical and unworthy of worship, and indeed it is tough for someone outside the faith to respond to the Calvinist interpretation of Romans 9 with anything but hatred: as the prominent Reformed scholar James White describes this very chapter, "I understand that the only way one can believe this is by an act of grace."
>
> In my view, this defeats your position of molinism, since one cannot freely choose God on his own in any potential setting without God's prior help. Furthermore, the context of the related story in John 6 has disciples abandoning Christ, prompting what He says in 6:65 and proving that Christ is not offered as a free gift to all! What is left for the freedom of man to choose Christ given these passages?

Part of the answer:

> Second, let's talk about Paul's doctrine of election in Romans 9. I want to share with you a perspective on Paul's teaching that I think you'll find very illuminating and encouraging. Typically, as a result of Reformed theology, we have a tendency to read Paul as narrowing down the scope of God's election to the very select few, and those not so chosen can't complain if God in His sovereignty overlooks them. I think this is a fundamental misreading of the chapter which makes very little sense in the context of Paul's letter.
>
> Earlier in his letter Paul addresses the question of what advantage there is to Jewish identity if one fails to live up to the demands of the law (2. 17-3.21). He says that although being Jewish has great advantages in being the recipients of God's revelatory oracles, nevertheless being Jewish gives you no automatic claim

to God's salvation. Instead, Paul asserts the radical and shocking claim that "He is not a real Jew who is one outwardly, nor is true circumcision something external and physical. He is a Jew who is one inwardly, and real circumcision is of the heart, spiritual and not literal" (2. 28-29).

Paul held that "no human being will be justified in God's sight by works of the law" (3.20); rather "we hold that a man is justified by faith apart from works of law" (3. 29). That includes Gentiles as well as Jews. "Or is God the God of Jews only? Is He not the God of Gentiles also? Yes, of Gentiles also, since God is one" (3. 29-30).

Do you realize what that meant to Paul's Jewish contemporaries? Gentile "dogs" who have faith in Christ may actually be more Jewish than ethnic Jews and go into the Kingdom while God's chosen people are shut out! Unthinkable! Scandalous!

Paul goes on to support his view by appeal to the example of none less than Abraham, the father of the Jewish nation. Abraham, Paul explains, was pronounced righteous by God *before* he received circumcision. "The purpose," says Paul, "was to make him the father of all who believe without being circumcised [*i.e*., the Gentiles] and who thus have righteousness reckoned to them and likewise the father of the circumcised who are not merely circumcised [note the qualification!] but also follow the example of faith which our father Abraham had before he was circumcised" (4.11-12).

This is explosive teaching. Paul begins chapter 9 by expressing his profound sorrow that ethnic Jews have missed God's salvation by rejecting their Messiah [= *Christ*]. But he says it's not as though God's word had failed. Rather, as we have already seen, "not all who are descended from Israel belong to Israel, and not all are children of Abraham because they are his descendants" (9. 6-7). Being ethnically Jewish is not enough; rather one must be a child of the promise—and that, as we've seen, may include Gentiles and exclude Jews.

The problematic, then, with which Paul is wrestling is how God's chosen people the Jews could fail to obtain the promise of salvation while Gentiles, who were regarded by Jews as unclean and execrable, could find salvation instead. Paul's answer is that God is sovereign: He can save whomever He wants, and no one can gainsay God. He has the freedom to have mercy upon whomever He wills, even upon execrable Gentiles, and no one can complain of injustice on God's part.

So—and this is the crucial point—*who is it that God has chosen to save?* The answer is: *those who have faith in Christ Jesus*. As Paul writes in Galatians (which is a sort of abbreviated Romans), "So you see that it is men of faith who are the sons of Abraham" (Gal. 3. 7). Jew or Gentile, it doesn't matter: God has sovereignly chosen to save all those who trust in Christ Jesus for salvation.

That's why Paul can go on in Romans 10 to say, "There is no distinction between

> Jew and Greek; the same Lord is Lord of all and bestows his riches upon all who call upon him. For ‘everyone who calls upon the name of the Lord will be saved'” (10. 12-13). Reformed theology can make no sense at all of this wonderful, universal call to salvation. Whosoever will may come.
>
> Paul’s burden, then, in Romans 9 is not to narrow the scope of God’s election but to broaden it. He wants to take in all who have faith in Christ Jesus regardless of their ethnicity. Election, then, is first and foremost a corporate notion: God has chosen for Himself a people, a corporate entity, and it is up to us by our response of faith whether or not we choose to be members of that corporate group destined to salvation.
>
> Of course, given God’s total providence over the affairs of men, this is not the whole story. But Molinism makes good sense of the rest. John 6. 65 means that apart from God’s grace no one can come to God on his own. But there’s no suggestion there that those who refused to believe in Christ did not do so of their own free will. God knows in exactly what circumstances people will freely respond to His grace and places people in circumstances in which each one receives sufficient grace for salvation if only that person will avail himself of it. But God knows who will respond and who won’t. So again the fault does not lie with God that some persons freely resist God’s grace and every effort to save them; rather they like Israel fail to attain salvation because they refuse to have faith.

My view of election and Romans 9 is corporate election. Like middle knowledge, once you understand the concept of corporate election and re-read Romans 9, it turns out that the whole thing reads naturally. If you reject corporate election and middle knowledge because you like Calvinism, then there are lots of problems with the rest of the Bible, as William Lane Craig described here.

If you’d like to see Bill take on an atheist professor from the prestigious University of Michigan – Ann Arbor, who argues that Calvinist theology disproves the existence of a benevolent God, then read this debate.

The problem with the slogan “Christianity is not a religion, it’s a relationship”

January 13, 2012 | by Wintery Knight | Link | Original Link

From blogger Allston Dee.

Excerpt:

> Most people understand the word religion to mean a set of supposed truth claims about God and life after death; which are united with a way of life informed by those very truth claims. If this is how religion is defined, then Christianity surely is a “religion.”
>
> Think of it this way—without proper doctrine, beliefs and sacraments (visible religious acts to symbolize God’s grace), how could one know they are in right relationship with God in the first place? If there was no religion (as defined above) at all, how does one know they are in relationship with God?
>
> […]Take for example the Christians and the Jews. An essential doctrine of the Christian faith is that Jesus *is* God and *is* the promised Messiah. Conversely, Jews believe that Jesus *is not* the promised Messiah and that he *is not* God. The law of non-contradiction (this is the second of the three basic laws of logic) attests that both of these statements cannot be true at the same time and in the same way. Either the Christians are right, or the Jews are right, or they are both wrong.
>
> […]It’s worth noting that most religions have a sense of a relationship with God. Given that Mormons, Jews, Muslims and Christians all claim to have a relationship with God—and that we know contradicting views on the nature of God cannot be true at the same time and in the same way—there must be something that defines the true nature of God and how we come into relationship with Him.

He writes that you need to know who God is before you can have a relationship with him. I agree.

And Melinda Penner of Stand to Reason also had something interesting to add to this:

> First, we don’t know about Christianity by faith. Everyone knows about the claims of Christianity and the Bible in the same ways other things are known. Faith isn’t a way of knowing. It’s trusting in what we have come to know to be true. Faith is laying hold personally of what is true in the Bible. Knowledge is the first step and it’s no different than coming to know about anything else. So it can be discussed between those who have faith and those who don’t because they’re both operating in the same way to evaluate truth claims. Faith comes after knowing.
>
> Second, Christianity isn’t a private topic. This is a way to subjectivize Christianity – to relativize what Christians believe. But essential to the what the Bible

> teaches is that it's not subjective or relative. It's true for all people. Things happened in history that were witnessed and reported. And what the Bible teaches is for all people. So engage in consideration of the truth claims of Christianity, but don't dismiss them as private, subjective beliefs.

I agree with her, too. My concern with the notion of Christianity as a relationship is that people will cash it out as a subjective thing that they do for fun privately and that it is never the basis of public actions or words. And my fear is that without theology, people just project their own character onto God and discern his character through their feelings and intuitions, instead of through a study of the Bible and theology.

A relationship is not projecting your needs and desires onto the other person. A relationship is when you get to know the other person by studying him, and you start to incorporate his values and goals into your behavior. You re-prioritize to take his needs into account when you act. And when you act on his interests, it may be the case that other people won't like you, and that might make you feel bad. But when you are the other person's friend, you do what's right *for them* and you just live with the fact that not everyone is going to like that. The Christian life is not about a private relationship and private feelings. It's about the public actions you take because of your knowledge and convictions about God's character. It's not private. It's not meant to make you feel good. It's public.

Consider Matthew 10:32-33:

32"Whoever acknowledges me before men, I will also acknowledge him before my Father in heaven.

33But whoever disowns me before men, I will disown him before my Father in heaven.

And her's another like it 1 Corinthians 4:1-4:

1So then, men ought to regard us as servants of Christ and as those entrusted with the secret things of God.

2Now it is required that those who have been given a trust must prove faithful.

3I care very little if I am judged by you or by any human court; indeed, I do not even judge myself.

4My conscience is clear, but that does not make me innocent. It is the Lord who judges me.

And 2 Timothy 2:4:

4 No one serving as a soldier gets entangled in civilian affairs, but rather tries to please his commanding officer.

And 2 Corinthians 5:20:

20 We are therefore Christ's ambassadors, as though God were making his appeal through us. We implore you on Christ's behalf: Be reconciled to God.

A good ambassador doesn't represent himself – he doesn't project his character onto his sovereign. A good ambassador represents his sovereign, and that requires knowing about

him, as well as experiencing him. When you have a relationship, you have a responsibility to know who that other person is and to act on their interests – which may be quite different from your interests. And it really doesn’t matter what the people around you, who are not friends with your friend, think about you for doing that.

Nearly 1 million workers vanished under Obama: real unemployment rate at 11%

January 13, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily. (H/T Doug Ross)

Excerpt:

> Initial jobless claims unexpectedly jumped by 24,000 last week to 399,000 as more workers lost their jobs, the Labor Department said Thursday. At the same time, the economy continues to lose workers.
>
> In the 30 months since the recession officially ended, nearly 1 million people have dropped out of the labor force — they aren't working, and they aren't looking — according to data from Labor's Bureau of Labor Statistics. In the past two months, the labor force shrank by 170,000.
>
> This is virtually unprecedented in past economic recoveries, at least since the BLS has kept detailed records. In the past nine recoveries, the labor force had climbed an average 3.5 million by this point, according to an IBD analysis of the BLS data.
>
> "Given weak job prospects, many would-be workers dropped out of (or never entered) the labor force," noted Heidi Shierholz of the Economic Policy Institute in her analysis of the BLS jobs report issued last Friday. "That reduces the measured unemployment rate but does not represent real improvement."
>
> According to the BLS, the "labor force participation rate" — the ratio of the number of people either working or looking for work compared with the entire working-age population — is now 64%, down from 65.7% when the recession ended in June 2009. That's the lowest level since women began entering the workforce in far greater numbers several decades ago.
>
> If you adjust for this drop, the unemployment rate would be close to 11%, instead of the official 8.5%.

Stimulus spending doesn't create jobs. But we know from the past that tax cuts did cut the unemployment rate.

Margaret Thatcher explains conservatism in the House of Commons

Standard and Poor's cuts credit ratings for nine European Union countries

January 14, 2012 | by Wintery Knight | Link | Original Link

From CNBC.

Excerpt:

> Standard & Poor's downgraded the credit ratings of nine euro zone countries, stripping France and Austria of their coveted triple-A status but not EU paymaster Germany, in a Black Friday 13th for the troubled single currency area.
>
> […]S&P lowered its long-term rating on Cyprus, Italy, Portugal and Spain by two notches, and cut its rating on Austria, France, Malta, Slovakia and Slovenia by one notch.
>
> The move puts highly indebted Italy on the same BBB+ level as Kazakhstan and pushes Portugal into junk status.
>
> The credit-rating agency affirmed the current long-term ratings for Belgium, Estonia, Finland, Germany, Ireland, Luxembourg and the Netherlands.
>
> […]The credit-rating agency put all 14 euro-zone nations — Austria, Belgium, Cyprus, Estonia, Finland, France, Ireland, Italy, Luxembourg, Malta, the Netherlands, Portugal, Slovenia, and Spain — on "negative" outlook for a possible further downgrade.
>
> Germany was the only country to emerge totally unscathed with its triple-A rating and a stable outlook.
>
> A negative outlook indicates that S&P believes there is at least a one-in-three chance that a country's rating will be lowered in 2012 or 2013.

It's gotten so bad that Greek families are abandoning their children, and ordinary medicines like Aspirin are in short supply.

Greece is a socialist country

Why is this happening to Greece?

Well, Greece elected a socialist majority in 2009, and the socialist party was in power from 1981 to 1989, 1993 to 2004, and now 2009 to 2012.

Excerpt:

> The Panhellenic Socialist Movement, better known as PASOK, is a Greek centre-left political party and the current majority party in the Greek Parliament. In 1981 PASOK formed the first socialist government in Greece's history, and subsequently governed the country for most of the 1980s, 1990s and early 2000s. PASOK served as the main opposition party between 2004 and 2009. It is a member of the Party of European Socialists and the Socialist International. In

> the European Parliament it has 8 out of 22 Greek MEPs. On 31 January 2006, the party's president, George Papandreou, was elected President of the Socialist International, the worldwide organisation of social democratic, socialist and labour parties. Following the 2009 legislative election, PASOK became the majority party and Papandreou became Prime Minister.

The Wall Street Journal explains what the socialists in Greece have been doing lately.

Excerpt:

> **"The present government has done absolutely nothing during the last 12 months to speed up privatizations, reduce the public sector or open up closed professions," Athanasios Papandropoulos, a leading economic analyst, told me recently in an interview. "In these 12 months it has not fired even one civil servant. The only thing it is doing is trying to tax the private sector out of existence. Why should we believe that they will do something different now?"**
>
> **One commentator writing in the newspaper Kathimerini this week made the point even more forcefully: "Whereas more than 1,000 Greeks were losing their jobs in the private sector every day in August, the government was assuring civil servants with lifetime tenure that their job privileges were not in danger."**
>
> **Structural reforms have been repeatedly announced by Greek officials during the past. Yet nothing has happened.** Greece's plans tend to resemble Soviet Five Year Plans: They look good on paper but have absolutely no bearing on reality. Anyone in the government who tries to point this out is forced to resign. Economist Stella Balfousia, the head of the Greek Parliament budget office, had to tender her resignation after her office published a report contradicting the government's official forecasts on debt and deficit.
>
> Privatization is a case in point. Greece will have to raise some €1.7 billion by the end of September from the privatization program and €5 billion by the end of the year from the medium-term fiscal strategy program. Yet in the past year and a half not a single privatization has taken place. The explanation given for this is the low share prices of the listed companies. The real reason is probably that Greek politicians are loath to give up the system of spoils that they have long run through these enterprises, which are staffed by the party faithful in exchange for votes.

I saw that Zero Hedge posted recently regarding the massive withdrawal of deposits from Greek banks.

Excerpt:

> The year is not over yet, and already Greece's banks have lost €36.7 billion of their deposit base in 2011, and a whopping €64.6 billion since the beginning of

> 2010, **which is down from €233 billion to €173 billion in under two years**. In October another €3.5 billion was withdrawn from Greek banks and likely either redeposited somewhere deep in the heart of Switzerland, or converted to various inert metals and buried somewhere in the back yard. The good news: the outflow is just over half of October's record €6.8 billion. The bad news: at this rate of outflows, Greek banks will have zero deposits in around 4 years. Which at the end of the day is all the matters, because while the Troica can keep funding capital shortfalls indefinitely, all faith in the country's banks has now been lost and Greece is officially a zombie economy. The fact that the country's deficit as a % of GDP is about to be re-revised even higher is no longer even meaningful: the Greek economy and its banking sectors are now officially dead. We merely feel bad for anyone who still has cash in banks as, just like gold in 1930s America, any residual cash may soon be "sequestered" for national security purposes. After all there are bankers who need record bonuses, and Military sales from Europe and the US that have to proceed using what will likely soon be "commingled" deposit cash.

Greece is a socialist nation. And they are reaping the rewards of socialism. You cannot spend your way out of debt. You cannot create jobs by taxing job creators. You cannot create wealth by punishing those who create wealth.

Since Barack Obama was elected, we have been running deficits of about $1.3 trillion dollars each year. The last Republican deficit under Bush and Boehner was $160 billion dollars. We made a mistake and we elected a socialist, and now we are Greece – just a little less far down the road to serfdom.

150 evangelical leaders agree to endorse Rick Santorum after two-day conference

January 14, 2012 | by Wintery Knight | Link | Original Link

Rick Santorum Iowa Caucuses
From Life News.

Excerpt:

> After a Friday-Saturday meeting with more than 150 leaders and representatives of evangelical, pro-family and pro-life groups, the organizations have declared consensus support for Rick Santorum's Republican presidential campaign.
>
> Tony Perkins, the president of the Family Research Council and a participant in last night's private meeting, addressed a press conference call today to provide additional information about the decision and expected endorsements from some of those attending.
>
> Perkins said the leaders of the evangelical groups came to the meeting each supporting the various different GOP candidates seeking to replace pro-abortion President Barack Obama. Participants engaged in a question and answer session with representatives of each of the campaigns, except for former Utah Governor Jon Huntsman, who did not send a spokesman to the event.
>
> After the session, the leaders discussed the presidential race amongst themselves and then undertook a three-round ballot process. Perkins said the discussion culminated in an agreement that the groups and leaders each have "an overriding passion and desire to defeat Barack Obama" this November. Although the leaders of the various organizations strongly support various candidates, they eventually decided to support Santorum.
>
> "I think it was vigorous discussion of who they felt best represented the conservative movement and who they think had the best chance of succeeding," he said, but adding that there would not be a "coordinated effort" amongst the

> groups and leaders to endorse Santorum.
>
> "There is a hope and expectation that those represented by the constituency will make a difference in South Carolina," he said, adding that some in attendance threw their support behind Santorum to avoid having a repeat of 2008 where conservative candidates split the vote.
>
> Perkins indicated Santorum, Newt Gingrich and Rick Perry but only Gingrich and Santorum made the final ballot. There were 114 votes on the final ballot, as some leaders had to catch returning flights home, and Santorum emerged with a majority (85) of those voting, the FRC president said.
>
> […]The names and groups participating were not released, but Perkins mentioned former Republican presidential candidate Gary Bauer as another organizer of the private meeting. He said the names of organizations and leaders participating will become public as they begin making endorsements.
>
> […]Last week, the pro-life group CatholicVote issued an endorsement for Santorum.

Bauer has already endorsed Santorum. I agree that Gingrich is definitely the runner-up, and would be a fine choice for conservatives, but Santorum really is the best overall. My biggest concern about this is how younger evangelicals are so apathetic when it comes to politics and have no idea how to think carefully about things like free market capitalism, abortion, marriage and peace through strength. The young evangelicals are largely illiterate, making their decisions based on emotions and intuitions, because they think that Christianity is about being "nice" so that more people like them. Oh well.

What I find interesting is when even moderate conservative bloggers – ones who are not evangelical – are beginning to notice that there is an *integrity* argument for Rick Santorum.

Look at this comment from Jeff Goldstein – he's replying to some Ron Paul person, I guess:

> BMoe –
>
> We've talked at length about this here, so if you haven't already done so, I'd say go back and look at the various riffs on how Santorum's ideas of family as the unit of individual autonomy is tied to his Catholicism / Thomism. Also, how family communitarianism is not at all like collectivism.
>
> My own belief — and James Pethokoukis took this up, as well (I believe I did a post on it), is that Santorum is reacting in the excerpt on individualism you cite, to the Objectivists — those whose ideological foundation is Rand. That is, the libertarians. You may disagree with Santorum — and there's plenty of room to do so — but it does no good to caricature the belief. **Santorum is not a collectivist. And his ideas about the family — and government's role in nurturing that unit — amount to things like increased tax credits for producing new citizens, or increased credit for charitable giving, so that**

> **charity is taken away from the state.**
>
> And he tries to balance his own views with the constraints placed on elected officials by the Constitution, which for Santorum includes the 9th and 10th Amendments.
>
> These are often difficult waters to traverse. But with Santorum, he tells you what he thinks and believes. For me, that's a net positive.
>
> Romney mouths platitudes about limited government, and yet it's clear he doesn't believe a word of it. **Santorum believes in a social safety net for the truly disadvantaged and indigent, but he tempers that with an animus toward those who would game the system — and toward programs that have the net impact of institutionalizing dependence on government.**
>
> **What I liked about Cain — he didn't have all the answers, because he hasn't studied every question — I like about Santorum. You can see his thinking. He shows his work.**

And a bit later, same guy:

> **Also, BMoe, I think it pretty obvious by now I'm not a social conservative. I'm just far less bothered by them then I used to be back when I was given to accepting the caricature of such creatures.**
>
> Nowadays I see that it is the "liberal" secularists who are far more dangerous, because their God is the State, and they therefore serve their God by granting that ever more power comes from the State.
>
> The religious folk simply want the state to leave them the f**k alone, often times. And me and my spaghetti bulbs tend to commiserate.

I think that's right. I am not thrilled with Santorum's blue-collar worker economic plan. I'm an investor and a white collar software engineer. I'm chaste and have no children and no plans to marry, so Santorum's tripling of the tax deduction for children won't help me. But what is appealing about the man is his vision: he wants more working families and he wants them to face less financial pressure if they have more children, and more choice in education. I get that. It's not applicable to me, but I get it. I get what his vision is.

Rick Santorum at the Values Voters Summit

Here's a 3-part speech by Rick Santorum at the Family Research Council:

Part 1:

Part 2:

Part 3:

The Family Research Council is my third favorite think tank, behind the Heritage Foundation and the American Enterprise Institute.

Here's something to read if you can't see the speech.

Rick Santorum would not stand idle while Iran develops nuclear weapons

January 14, 2012 | by Wintery Knight | Link | Original Link

Map of the Middle East
From Fox News.

Excerpt:

> Republican presidential candidate Rick Santorum said Saturday the U.S. was wrong to condemn the killing of an Iranian nuclear scientist this week.
>
> The Obama administration's public posture on the death Wednesday of Mostafa Ahmadi Roshan does not reflect the hard line Santorum supports in keeping Iran from obtaining nuclear weapons, the former Pennsylvania senator said while campaigning in conservative upstate South Carolina.
>
> "Our country condemned it. My feeling is we should have kept our mouth shut," Santorum told about 200 people packed into a popular breakfast diner in Greenville.
>
> Santorum is vying to emerge as conservatives' alternative to former Massachusetts Gov. Mitt Romney in the Jan. 21 South Carolina primary. Romney leads in public and private polls of likely voters, although former House Speaker Newt Gingrich is within striking distance, with a week to go before balloting begins.
>
> However, Santorum has risen here since his breakthrough near-tie with Romney in the Iowa caucuses on Jan. 3. He has a robust state organization and is making aggressive inroads with evangelical conservatives, like many of those who were at the Country Ham House Saturday morning.
>
> And while Santorum stresses values issues, he has also argued for a tough stand on Iran's nuclear capability. Responding to a question in Greenville, he said he

> supports missile strikes to stop its nuclear program, if Iran refuses to submit to inspections.
>
> "If these are people who are developing a weapon to be used to either destroy the state of Israel or to spread terror — a reign of terror — around the world, we shouldn't be sitting on the sidelines and letting it happen," he said. "They cannot have a nuclear weapon, because you, in Greenville, will not be safe."

That's what I've been saying for months. There are things we could be doing to show them that having nuclear weapons and interfering in Syria and Iraq are not good ideas for them. Covert operations, arming student groups, pro-West broadcasts, little "accidents" at Iranian training camps in Venezuela. Nice country you got there, guv'nor. Would be a shame if anything were to 'appen to it.

Typical working UK mother spends 19 minutes per day with her children

January 15, 2012 | by Wintery Knight | Link | Original Link

This is a re-post of a story I posted during the Christmas holidays, and I wanted to make sure everyone saw it.

From the UK Daily Mail. (H/T Dina)

Excerpt:

> According to the Office of National Statistics, a typical working mother spends as little as 19 minutes a day with her children; working fathers even less.
>
> Time-neglect is what child psychologists call it, and they are studying its effect in middle-class families with increasing concern.
>
> 'We are seeing some of the most privileged and yet in some ways the most neglected children in history,' says child psychologist Dr Richard House, from the University of Roehampton.
>
> We have some of the longest working hours in Europe and the recession is piling pressure on parents to be the last to leave the office. The guilt parents feel about this has consequences for when they are with their children.
>
> 'Parents are reluctant to say "No" when they need to. They try to compensate by lavishing gifts on them. Neither is good for children's well-being and healthy development,' says Dr House.
>
> His warnings follow a Unicef report that admonished British parents for trapping their children in a 'cycle of compulsive consumerism' by showering them with toys and designer labels rather than time.
>
> […]Unicef's research also shows that what children actually want is more stable family time, as do many of the parents struggling to provide for them.
>
> More than two-thirds of mothers work, and no one would want to see the progress women have made in the workplace reversed.

No one except the husbands and the children, but who cares about them?

More:

> Historian Rebecca Fraser, mother of three daughters and author of A People's History Of Britain, says that while nostalgia for the Fifties is understandable, the progress of women in education makes a return to that model unlikely.
>
> 'In 1951, only one quarter of the tiny British student population (5 per cent of adults) were women, while in 2011 more than half the student population are female,' she says.
>
> 'With so many attending university, it is probably inevitable that most women are

> going to continue to want a career.'
>
> […]Child-care experts warn that time-neglect by high-achievers can have serious consequences on their children.
>
> Professor Suniya Luthar, a world expert in the welfare of children from affluent homes, has just completed research that shows the numbers of teenagers with significant mental health issues can be up to three times higher among those from high-achieving and prosperous families.
>
> 'Traditionally, the view is that these children have it all, but the pressures on them are immense,' says Professor Luthar.
>
> 'The solution for any parent is to spend time with them.'
>
> They also need clear boundaries, she says, something that 'uber-working' parents often are less able to enforce.

Every decision a woman makes has to be based on the plan for a marriage, family and children. Ideologies like feminism and socialism are incompatible with marriage and family. What is the use of a woman crying crocodile tears over her voluntary neglect of her own children when every decision she made prior to marriage and after marriage is based on an anti-family, pro-government worldview?

When a woman votes for government to tax her future family, regulate her husband's employer, and restrict the family to purchasing government services only (day care, public schools), then she must not complain when she is forced into the workplace and her child is handed to strangers to raise. That is the end result of being taken in by fashionable ideologies. When you oppose low taxes and small government, you oppose keeping money in the family. And that means that the wife will work, and the children will be raised by strangers. Women who vote for socialism, environmentalism, feminism, etc. are forcing themselves away from their future children.

Think before you act – don't act on feelings and intuitions. If you want a marriage and a family, then vote accordingly.

Wall Street Journal: Rick Santorum is a supply-sider for the working man

January 15, 2012 | by Wintery Knight | Link | Original Link

Just to refresh everyone, a proponent of supply-side economics is someone who believes that economic growth is driven more by innovation and entrepreneurship, and less by consumer spending and government stimulus spending. Supply-siders are all about *creating wealth* – by letting creative people have the money invent something valuable that consumers will want to buy – like an iPhone or a Kindle. Demand-siders are all about *redistributing wealth* – by having the government take from one group of people to give it to another group of people – like a Solyndra loan or a Chevy Volt subsidy.

Here's the Wall Street Journal article about Rick Santorum, and where he fits on the scale.

Excerpt on his economic plan for businesses:

> 'I'm someone who believes that making things creates wealth," says Rick Santorum. It is primary day in New Hampshire, and the former Pennsylvania senator and current presidential candidate is describing his plan to slash corporate tax rates. To encourage companies to make things, he would completely eliminate the federal income tax on manufacturers. For all other businesses, the rate would be cut in half, to 17.5% from 35%.
>
> […]I ask if his corporate tax plan opens him up to criticism that he and President Obama are both favoring particular sectors of the economy, with Mr. Santorum picking manufacturing while Mr. Obama anoints green energy. "Oh, green energy is not a sector, I mean, come on. It's like a half-dozen companies," says Mr. Santorum.
>
> Does this mean the Obama policy would be more legitimate if the president were favoring a larger group of Solyndras?
>
> "He's talking about handing out tax-free grants and loans," says Mr. Santorum, who adds that his own plan "is a conservative approach. It's supply-side. It's cutting rates. Why are we cutting the corporate rate to 17.5% and making it simple? . . . Because we think it's what's necessary to grow the economy. . . . So if what's necessary to grow the economy in one sector of the economy is different from another, then why should we have the same tax rate?" He argues that manufacturing has been hit particularly hard by the costs of regulation and litigation.

That's pro-growth – we're all going to have multiple job offers if he executes this plan – back to 4% unemployment like under Bush.

But what about his economic plan for taxpayers?

> Mr. Santorum also believes that making babies creates wealth. It's very difficult

> to grow an economy with a shrinking population, he says, pointing to the "demographic winter in Europe" as a cause of that region's troubles. To help avoid that fate in the U.S., he wants to triple the per-child tax credit and also cut individual tax rates.
>
> […]On the personal tax side, rewarding child-rearing is consistent with the pro-life views of Mr. Santorum, who has seven children. But the case he makes seems to echo the analysis of some Wall Street economists, who view population growth as a critical advantage the United States will enjoy over China and the euro zone.
>
> Mr. Santorum argues that the cost of Europe's massive welfare states made it too expensive for young people to have families. He notes that with plummeting birth rates, many European countries have resorted to "baby bonuses" to try to reverse the tide, but the demographic picture remains bleak, while the costs of entitlement programs have exploded.
>
> "Who are benefits promised to, overwhelmingly? Well, they're promised to older people. And if you have a society like Europe that is upside down where there are a lot more older people than younger people, you have economic calamity," he says. Asked if giving generous per-child credits will result in an even larger number of households exempt from the income tax and therefore amenable to more spending, he says his plan will drive growth and that, in turn, will bring more people on to the tax rolls. Elimination of deductions might also keep some people paying income taxes. He aims to balance overall taxes and spending at 18% of GDP. Spending has soared to 24% in the Obama era.
>
> In a still-crowded field of non-Romneys trying to compete for the Republican nomination, Mr. Santorum could emerge in the Jan. 21 South Carolina primary as the man who can bring together the old Reagan coalition. A champion of cultural conservatives with a blue-collar background, he is also making the case for deep cuts in federal spending. His credibility on this last issue derives from the political price he paid for being an early promoter of entitlement reform.

And what about his plan for entitlement reform?

> To prevent an economic calamity on this side of the Atlantic, he also proposes to cut $5 trillion from federal spending in five years. He calls the plan advanced by House Budget Chairman Paul Ryan "a good starting point," but he notes that few of the spending cuts happen in the first decade of the plan. Also, Mr. Santorum says that he wants to reform Social Security, not just Medicare and Medicaid. "I like the Ryan plan on the Medicare side. I don't like waiting 10 years. I don't like waiting 10 years on anything. I've also talked about Social Security."
>
> Has he ever, going back at least to the 1990s. Says Mr. Santorum, "Some guy just walked up to me at the [New Hampshire campaign] headquarters with a picture of me standing at the presidential podium in Kansas City, Missouri, in

> April 1998 when I went with Bill Clinton to talk about Social Security reform. I was the Republican lead on the issue," he recounts, a dangerous proposition for someone representing Pennsylvania, a state with one of the oldest populations in the country. "And I won re-election after that, I might add."
>
> But after winning that 2000 election—his second Senate victory and his fourth straight win in Democratic territory—Mr. Santorum aggressively backed President George W. Bush's call for allowing younger workers to own personal accounts.

It's much easier to contemplate marriage when you 1) have multiple job offers and 2) you are keeping more of what you earn and 3) children are less of a burden on your income and 4) the government is not going to bankrupt those children with out of control entitlements. Marriage-minded men who want to start families will love this plan. It is a signal to men to start working, start marrying and start having children. Men think about these things, you know – losing our jobs, whether our children will be better off than we were, and so on. Santorum gets it – he has a pro-marriage, pro-family economic plan.

Eric Metaxas endorses Rick Santorum, urges Gingrich and Perry to drop out

January 16, 2012 | by Wintery Knight | Link | Original Link

Everyone knows Eric Metaxas – he is the author of great biographies of William Wilberforce and Dietrich Bonhoeffer. The Wall Street Journal is talking about something Eric said on Sunday.

Excerpt:

> Republican presidential candidates Newt Gingrich and Rick Perry should drop out of the race before South Carolina's Saturday primary, prominent conservative author Eric Metaxas said at a Sunday prayer breakfast.
>
> Mr. Metaxas said he was optimistic some of the candidates competing for the state's conservative voters would take themselves out of contention to allow South Carolinians to coalesce around an alternative to former Massachusetts Gov. Mitt Romney.
>
> "It's more likely that some of these wonderful men that are running will hear God's voice and get out of the race before Saturday for the good of this country," Mr. Metaxas, who has endorsed former Pennsylvania Sen. Rick Santorum, said Sunday at a weekend gathering of the South Carolina Republican Party – a day after Mr. Santorum picked up strong support from conservative Christian groups. To be effective, the candidates must drop out before next Saturday's contest, he said.
>
> "This is the last exit before the bridge," Mr. Metaxas said in an interview later. "They've been dividing the vote and so if they don't do this now, they will harm the country because they can't hang on to the bitter end." Other presidential hopefuls, Texas Rep.Ron Paul and former Utah Gov. Jon Huntsman, are less relevant, Mr. Metaxas said.
>
> Mr. Santorum, who spoke at the breakfast after Mr. Metaxas, did not explicitly urge other candidates to drop out, but appealed to voters to gather behind him, regardless of his perceived shot at seizing the White House.
>
> "Will the people of South Carolina vote their conscience or will they let people…. tell you who's the one you should choose because we have to win?" he asked.

Across the pond, Tim Stanley of the UK Telegraph is suggesting something similar.

Why are gas prices so high? 11 more Solyndras in Obama's energy program

January 16, 2012 | by Wintery Knight | Link | Original Link

Hans Bader reviews Obama's energy plan.

Excerpt: (links removed)

> A liberal Congress must share the blame for this fiasco, since the massive $800 billion stimulus package it passed in 2009 funded these boondoggles. As a Solyndra stakeholder exulted, "there's never been more money shoved out the government's door in world history." But as the Washington Post noted, energy programs were "infused with politics at every level" under Obama. His Administration hastily approved subsidies for Solyndra, whose executives are now pleading the 5th Amendment, despite obvious danger signs and warnings about the company's likely collapse. (Later, federal officials successfully pressured Solyndra to delay its announcement about upcoming layoffs until just after the 2010 election, to avoid embarrassing the Obama Administration).
>
> The Obama Administration also used green-jobs money from the stimulus package to outsource American jobs to countries like China: "Despite all the talk of green jobs, the overwhelming majority of stimulus money spent on wind power has gone to foreign companies, according to a new report by the Investigative Reporting Workshop at the American University's School of Communication in Washington, D.C." As the Investigative Reporting Workshop noted, "79 percent" of all green-jobs funding "went to companies based overseas . . .In fact, the largest grant made under the program so far, a $178 million payment on Dec. 29, went to Babcock & Brown, a bankrupt Australian company." (The stimulus package also funnelled money to left-wing community organizers and liberal lobbying groups.)

What does it mean to you when Obama takes money from consumers and business owners in order to spend, spend, spennd on his campaign fundraisers and other beneficiaries of "green energy"?

Click here to see a graph of gas prices from January 2009.

Alexander Vilenkin: “All the evidence we have says that the universe had a beginning”

January 16, 2012 | by Wintery Knight | Link | Original Link

From Uncommon Descent.

Excerpt:

> Did the cosmos have a beginning? The Big Bang theory seems to suggest it did, but in recent decades, cosmologists have concocted elaborate theories – for example, an eternally inflating universe or a cyclic universe – which claim to avoid the need for a beginning of the cosmos. Now it appears that the universe really had a beginning after all, even if it wasn’t necessarily the Big Bang.
>
> At a meeting of scientists – titled “State of the Universe” – convened last week at Cambridge University to honor Stephen Hawking’s 70th birthday, cosmologist Alexander Vilenkin of Tufts University in Boston presented evidence that the universe is not eternal after all, leaving scientists at a loss to explain how the cosmos got started without a supernatural creator. The meeting was reported in *New Scientist* magazine (Why physicists can’t avoid a creation event, 11 January 2012).
>
> […]In his presentation, Professor Vilenkin discussed three theories which claim to avoid the need for a beginning of the cosmos.

The three theories are chaotic inflationary model, the oscillating model and quantum gravity model. Regular readers will know that those have all been addressed in William Lane Craig’s peer-reviewed paper that evaluates alternatives to the standard Big Bang cosmology.

More:

> One popular theory is eternal inflation. Most readers will be familiar with the theory of *inflation*, which says that the universe increased in volume by a factor of at least 10^78 in its very early stages (from 10^−36 seconds after the Big Bang to sometime between 10^−33 and 10^−32 seconds), before settling into the slower rate of expansion that we see today. The theory of *eternal inflation* goes further, and holds that the universe is constantly giving birth to smaller “bubble” universes within an ever-expanding multiverse. Each bubble universe undergoes its own initial period of inflation. In some versions of the theory, the bubbles go both backwards and forwards in time, allowing the possibility of an infinite past. Trouble is, the value of one particular cosmic parameter rules out that possibility:
>
> > But in 2003, a team including Vilenkin and Guth considered what eternal inflation would mean for the Hubble constant, which describes

> mathematically the expansion of the universe. They found that the equations didn't work (Physical Review Letters, DOI: 10.1103/physrevlett.90.151301). "You can't construct a space-time with this property," says Vilenkin. It turns out that the constant has a lower limit that prevents inflation in both time directions. "It can't possibly be eternal in the past," says Vilenkin. "There must be some kind of boundary."

A second option explored by Vilenkin was that of a cyclic universe, where the universe goes through an infinite series of big bangs and crunches, with no specific beginning. It was even claimed that a cyclic universe could explain the low observed value of the cosmological constant. But as Vilenkin found, there's a problem if you look at the *disorder* in the universe:

> Disorder increases with time. So following each cycle, the universe must get more and more disordered. But if there has already been an infinite number of cycles, the universe we inhabit now should be in a state of maximum disorder. Such a universe would be uniformly lukewarm and featureless, and definitely lacking such complicated beings as stars, planets and physicists – nothing like the one we see around us.
>
> One way around that is to propose that the universe just gets bigger with every cycle. Then the amount of disorder per volume doesn't increase, so needn't reach the maximum. But Vilenkin found that this scenario falls prey to the same mathematical argument as eternal inflation: if your universe keeps getting bigger, it must have started somewhere.

However, Vilenkin's options were not exhausted yet. There was another possibility: that the universe had sprung from an eternal cosmic egg:

> Vilenkin's final strike is an attack on a third, lesser-known proposal that the cosmos existed eternally in a static state called the cosmic egg. This finally "cracked" to create the big bang, leading to the expanding universe we see today. Late last year Vilenkin and graduate student Audrey Mithani showed that the egg could not have existed forever after all, as quantum instabilities would force it to collapse after a finite amount of time (arxiv.org/abs/1110.4096). If it cracked instead, leading to the big bang, then this must have happened before it collapsed – and therefore also after a finite amount of time.
>
> "This is also not a good candidate for a beginningless universe," Vilenkin concludes.

So at the end of the day, what is Vilenkin's verdict?

> "All the evidence we have says that the universe had a beginning."

This is consistent with the Borde-Guth-Vilenkin Theorem, which I blogged about before, and which William Lane Craig leveraged to his advantage in his debate with Peter Millican.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past. Even speculative alternative cosmologies do not escape the need for a beginning.

Conclusion

If the universe cam into being out of nothing, which seems to be the case from science, then the universe has a cause. Things do not pop into being, uncaused, out of nothing. The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

Republican candidates should push incremental pro-life measures

January 16, 2012 | by Wintery Knight | Link | Original Link

If Republicans want to stand out from Democrats on social issues, then we have to find ways to make our pro-family, pro-marriage, pro-child positions resonate with the public at large. For example, on the pro-life issue, we should not be focused on outright bans on abortion, but instead on incremental measures to restrict abortion accessibility.

Here are some ideas for incremental pro-life measures:

- Outlaw sex-selection abortions
- Require parental consent before having an abortion
- Require that additional information be provided to women considering abortions (e.g. – mandatory sonogram)
- Eliminate subsidies for abortion providers
- Require all private insurance plans to have a version of each plan offered that does not cover abortion
- Restrict the most vicious methods of abortion, such as partial birth abortion
- Recognizing unborn children who are harmed during a crime as victims of that crime
- Outlaw abortions after the time when the unborn child gains the ability to feel pain
- Increase the tax deduction for children
- Reward adults with tax incentives for getting married and staying married

Let's take a closer look at the first item in the list.

Consider this front page story from today in Canada's National Post newspaper. The title is "Canada is haven for parents seeking sex-selective abortions: medical journal". Canada is the only country in the developed world that has no law governing abortion. They are strongly pro-abortion.

But consider this excerpt from the article:

> An editorial in a major Canadian medical journal Monday urges doctors to conceal the gender of a fetus from all pregnant women until 30 weeks to prevent sex-selective abortion by Asian immigrants.
>
> A separate article in the same issue of the *Canadian Medical Association Journal* warns that Canada has become "a haven for parents who would terminate female fetuses in favor of having sons" due to advanced prenatal testing and easy access to abortion.
>
> "Female feticide happens in India and China by the millions, but it also happens in North America in numbers large enough to distort the male to female ratio in some ethnic groups," said the editorial by interim editor-in-chief Rajendra Kale.
>
> While few studies have been done to assess how frequent the practice may be

> among immigrant communities in Canada, the editorial points to research that suggests sex-selection is more common among immigrants from India, China, Korea, Vietnam and the Philippines who already have at least one daughter.
>
> It cites U.S. census data from 2000 that shows male-biased sex ratios among U.S.-born children of Asian parents, and a study of 65 Indian women in the U.S. from 2004-2009 that showed 89% of them terminated pregnancies with female fetuses.
>
> Kale told AFP he believes that several hundred sex-selective abortions take place in Canada each year.
>
> […]Kale's controversial proposal was welcomed by conservative groups but opposed by the pro-choice advocates who warned that the debate extends much further than sex-selective abortion in minority groups.

Canadians are more liberal on social issues than Americans, yet they nevertheless oppose sex-selection abortions. According to a recent poll, 92% of Canadians oppose sex-selection abortions. It therefore seems reasonable for Republicans to pass a bill to ban sex-selection abortions.

And in fact the "PRENDA" bill that Trent Franks introduced that does just that.

Excerpt:

> A U.S. congressman has reintroduced legislation that would ban sex-selection or race-based abortions. Congressman Trent Franks, an Arizona Republican who is a member of the House Judiciary Committee, has brought back the Prenatal Nondiscrimination Act.
>
> The measure would prohibit knowingly performing or financing sex-selection or race-based abortions.
>
> […]"[T]he Prenatal Nondiscrimination Act, or "PRENDA," … restricts sex-selection abortion and race-selection abortion, and the coercion of a woman to obtain either. The woman seeking an abortion is exempted from prosecution, while abortion providers are held to account," wrote Franks in a letter to colleagues on Monday.
>
> […][A] 2006 poll showed a majority of Americans would likely support the bill. A 2006 Zogby International poll shows that 86% of the American public desires a law to ban sex selection abortion. The poll surveyed a whopping 30,117 respondents in 48 states.

So the majority of Americans would support this measure.

Now comes the interesting part – the pro-abortion group Planned Parenthood, which receives taxpayer funding to perform abortion procedures, opposes the bill.

Excerpt:

> As members prepare to hear from experts on how the sex-selection abortion

> culture has made its way from nations like China and India to the United States, according to one study, Planned Parenthood, NARAL, ACLU and a total of 30 pro-abortion groups banded together for a letter opposing the legislation, the Prenatal Nondiscrimination Act.
>
> The claim the bill, sponsored by pro-life Rep. Trent Franks, an Arizona Republican, is "simply more of the same from the anti-choice extremists choice extremists in the House" and they urged a no vote on it.
>
> "[T]he bill will effectively exacerbate already existing disparities by limiting some women's access to comprehensive reproductive health care and penalizing health care providers," they allege.
>
> They claim: "Instead of addressing health disparities and ensuring accessible and culturally competent medical care for all women, the Prenatal Nondiscrimination Act will further isolate and stigmatize some women — particularly those in the Asian American and Pacific Islander and African American communities — from exercising their fundamental human right to make and implement decisions about their reproductive lives."
>
> Nancy Northup, President of Center for Reproductive Rights talked about her group's opposition to the bill with Fox News and said it is an "anti-choice" measure that she claims is a "trumped up bill for a trumped up problem," and a "ridiculous waste of congressional resources at a time when the U.S. economy is faltering."
>
> "This bill is a cynical and offensive attempt to evoke race and sex discrimination when actually it's about taking women's rights away," she said.

So I think this is enough to show that abortion can actually be an asset to a Republican candidate. So long as the person is able to focus on incremental measures that are supported by 60% or more of the population, then the pro-life issue would not be a liability in the 2012 election contest. In fact, it could be very useful to have Obama have to go on record as being opposed to a ban on sex-selection abortions. Most voters have no idea exactly how liberal Obama is on the abortion issue. Raising incremental pro-life measures in a debate situation would be a good way to bring out his extremism on the life issue. Candidates like Rick Santorum, who actually have a record of proposing incremental measures, will be particularly effective in making such arguments.

To learn more about the effects of sex-selection abortions in countries that allow it, you can check out this Wall Street Journal article.

Video of the 2012 Fox News South Carolina Republican primary debate

January 17, 2012 | by Wintery Knight | Link | Original Link

Debate re-cap is here for those who can't watch the video and didn't see the debate.

Here are two great clips from the debate.

Newt Gingrich lights up leftist moderator Juan Williams:

Santorum shows why Mitt Romney is a hypocrite:

This was the best debate since the Fox News / Google debate. It made me very proud to be a Republican, (except for Ron Paul).

The whole debate

Here's the whole debate in one clip:

I highly recommend this debate!

Darwinism-advocates at NCSE now want to indoctrinate children in global warming

January 17, 2012 | by Wintery Knight | Link | Original Link

From the Washington Times.

Excerpt:

> On Monday, the National Center for Science Education, a nonprofit group that denounces intelligent design and supports an evolution-only curriculum in the classroom, will expand its mission. The organization of scientists, anthropologists and others is turning its attention to climate change, and it will mount an aggressive effort to teach the nation's schoolchildren that climate change is real and is being driven by human activity.
>
> "For 20 years, we've helped teachers cope with what we can only describe as societal or political problems in teaching evolution. They're running into the same opposition in teaching climate change," NCSE Executive Director Eugenie Scott said. "We worry, because of our experience with evolution, that basic science is going to be compromised as a result of this political and ideological opposition. Good science needs to be taught."
>
> Critics point out important distinctions between the defense of evolution and the promotion of climate change, since the latter carries more obvious and immediate policy implications. Alarmists call for broad federal policies to combat climate change, such as President Obama's proposed "cap-and-trade" legislation, which is designed to limit carbon emissions. Although that measure is on hold, a law imposed by the European Union requires all airline companies to pay for their carbon emissions during flights in and out of Europe. Officials at the United Nations have even called for a global tax on carbon dioxide emissions.

I've always said that there are only two beliefs that are accepted by most people that I do not accept. Darwinian evolution and man-made catastrophic global warming. I always find it telling when the people who push an ideology go after children, in order to indoctrinate them when they have the least understanding of how the real world works. Look at how the Darwinists and the global warmists handle criticism – by attacking and silencing anyone who dissents from their orthodoxy. That should tell you everything you need to know about their ability to win a debate. Notice also how they are not pushing for more Big Bang cosmology, fine-tuning or Cambrian explosion in the schools. That would not be germane to their secular leftist agenda.

A MUST-READ interview with Dr. William A. Dembski, author of “The Design Inference”

January 17, 2012 | by Wintery Knight | Link | Original Link

Who is William Dembski?

> Dr. Dembski has taught at Northwestern University, the University of Notre Dame, and the University of Dallas. He has done postdoctoral work in mathematics at MIT, in physics at the University of Chicago, and in computer science at Princeton University. A graduate of the University of Illinois at Chicago where he earned a B.A. in psychology, an M.S. in statistics, and a Ph.D. in philosophy, he also received a doctorate in mathematics from the University of Chicago in 1988 and a master of divinity degree from Princeton Theological Seminary in 1996. He has held National Science Foundation graduate and postdoctoral fellowships.

I found this fascinating interview posted at “The Best Schools”. It’s an exceedingly great read. I could not take my eyes off of it until I read the whole thing.

Excerpt:

> **TBS:** You have stated that “design theorists oppose Darwinian theory on strictly scientific grounds.” But then why is the ID movement so heavily populated with religious believers? Could we not expect more of the scientific community to support ID if your statement were true? Why do the majority of the world’s leading scientific bodies oppose ID and claim that it does not qualify as science?
>
> **WD**: The quote needs context. I’ve also written that intelligent design, besides being a scientific program, has a theological dimension, in trying to understand divine action, and a cultural dimension, in trying to overturn naturalism. So intelligent design is a number of things. But at its core, it is a scientific program. Indeed, unless there is good science to back it up, all the cultural and theological superstructures that people build on it will be in vain.
>
> As for why religious believers tend to be associated with design, I could turn the question around. If Darwinian evolution is strictly scientific, then why is that field so heavily populated with atheists? In one survey of around 150 prominent evolutionary biologists, only two were religious believers (as I recall, Will Provine was behind this survey). I see a scientific core to both intelligent design and Darwinian evolution. And I see no merit in questioning their scientific status by the company they keep. The character of the proposals that both approaches make is what really ought to count.
>
> But why, then, have so many scientific bodies turned against ID? I recall speaking at a symposium at Grove City College back in 2007, and University of Wisconsin historian of science Ron Numbers mentioning that over 100 professional scientific

> societies had issued formal denunciations of intelligent design. It's probably more by now.
>
> I've been unimpressed with these denunciations. In every case, they have seemed to me politically motivated, attempting to ensure that the professional society doesn't lose face should some of its wayward members be perceived as sympathizing with ID. I recall the AAAS denunciation of ID. I was a member at the time, though I let my membership lapse subsequently. When my colleagues inquired into who was behind their denunciation and what materials they had read that convinced them to issue it, it became clear that the materials were unread and the denouncers didn't understand what they were denouncing.
>
> As for more scientists coming on board with ID if it were legitimate, I think this question misses the point. The question is not legitimacy, but incentives. There are no incentives for coming on board with ID save that one thinks it offers some interesting ideas and true insights. There is no federal funding for ID research. If it's known that you accept intelligent design and you're in the mainstream academy, you can expect your career to be derailed. Support ID and expect some pain.
>
> On the other hand, if you denounce intelligent design, you score points. Think of Judge Jones (right) in the *Dover v. Kitzmiller* case. After ruling against ID in 2005, he was voted one of 2005's ten most sexy geeks by *Wired* magazine. *Time* magazine voted him one of the 100 most important thinkers of 2005. And the last I heard, he had been awarded four honorary doctorates (I've confirmed two of them). Jones's claim to fame prior to *Dover* was not expertise in the theoretical underpinnings of evolutionary biology, but rather heading the Pennsylvania liquor commission.
>
> I could recount case after case of mediocre academics who have done well for themselves (tenure, named professorships, etc.) by denouncing ID. And I can recount case after case of very bright individuals whose careers have been derailed for supporting, or even showing sympathy toward, ID. The documentary *Expelled* demonstrates this last point.

And more:

> **TBS:** In 2000, after organizing and hosting a very successful and visible international conference (whose proceedings, coedited by you and Bruce Gordon, are now published as *The Nature of Nature*[ISI, 2011]), you were first demoted, then essentially fired, by Baylor University, in Waco, Texas. Can you explain how this came about? What were the ramifications of Baylor throwing you under the bus for you personally? What do you think the long-term ramifications of this incident have been for our intellectual culture as a whole?
>
> **WD**: The short of it is that Baylor hired me to start an intelligent design think-tank, the Michael Polanyi Center, we put on a tremendously successful

> conference, and three days after the conference the faculty senate voted 27–2 to shut the center down. Not immediately, but a few months later, the Baylor administration acceded to the faculty senate's wishes.
>
> When I protested the center's dissolution, I was fired as director from a center that had already ceased to exist. This, at Baylor—an ostensibly Christian institution. But in fact, the science faculty at Baylor were probably more Darwinian than their secular counterparts, having to prove that they were as "reliable" in their science as those outside.
>
> The whole story is available online, arranged chronologically in a series of news articles: "**The Rise and Fall of Baylor University's Michael Polanyi Center**." If I had it to do again, I would never have gone to Baylor. But the past is past. It's all there. It made national news. And Baylor got a black eye for its failure to respect freedom of thought and expression. But massive institutions like Baylor can handle a bit of battering. Private individuals who get chewed up by them are less fortunate.
>
> The bottom line is that ID remains without the sort of institutional support that could accelerate its research and acceptance. I give the Darwinists credit here for their implacable opposition to ID. The Polanyi Center was the first and remains the last ID center at any college or university. It's a sad commentary, not just on higher education, but on Christian higher education specifically.
>
> One of the main lessons I've drawn from this is that most of the academic world, Christian included, is not so much concerned with truth as with fitting in and looking good. Perhaps I should have known that from the start. After the Polanyi Center closed, so too did much of the sympathy toward and curiosity about ID. In many people's minds, ID was no longer a winner, and people like to be associated with a winner. We saw the same phenomenon a few years later with the *Dover* trial.
>
> But history teaches that truth has little to do with winning and losing. Christ—the one who calls himself "the way, the truth, and the light"— is hardly a picture of victory on the Cross. So, I never lose heart.
>
> For me personally, the Baylor episode has been better in the aftermath than in its unfolding at the time. Lots of people rallied to me. And I gained many valuable conversation partners. I had enough visibility and support so that I could land on my feet. But it could easily have turned out worse.
>
> As for the ramifications of this incident for our culture as a whole, I don't want to read too much into this. I don't think it should be read as a decisive battle that changes the course of a war. Rather, I would see it as emblematic of the corruption that had existed in the academy already. This incident merely underscored the degree to which secular ideology was and remains entrenched in the academy.

This interview is fairly long, and well worth the read. William Dembski is someone I

admire a great deal. He is probably the toughest Christian I know. How could someone as intelligent as he is – with multiple Masters degrees, Ph.Ds and post-doctoral posts – persist in his Christian faith after having his career ruined by Darwinian fascists and cowardly Christian theistic evolutionists, too? If you ever wondered where my extreme disgust for theistic evolutionists comes from, the answers are in this interview. It is not easy to do what Bill Dembski did and come out the other side. People in evangelical circles seem to fixate on sports heros, musicians, theologians and pastors. But none of these comes close to the level of toughness and defiance of William Dembski. If the world were fair in any way, then Christians would know more about William Dembski *and his academic work* than they know about Tim Tebow – no offense to Tebow.

Three debates on Calvinism, Molinism and middle knowledge

January 17, 2012 | by Wintery Knight | Link | Original Link

Last month, I posted a philosophical debate on God and morality/purpose and a scientific/philosophical debate on God's existence and a scientific/philosophical debate on abortion. This time it's 3 debates featuring a Calvinist debater and a foreknowledge debater. These debates are incredibly good and very friendly and cordial. If you have never heard a debate on theology before, then these are the ones to get you started. Theological debates are more fun than you think, you just need to choose the good ones.

The two views being debated are Calvinism and Foreknowledge. Calvinism is the view that God unilaterally predetermines a selected group of individuals who will know him – the "elect". Foreknowledge is the view that God draws people to him who he foreknows will freely respond to his overtures and come to know him. What does the Bible teach about these issues?

The Calvinist debater is Dr. James White:

> James White is the director of Alpha and Omega Ministries, a Christian apologetics organization based in Phoenix, Arizona. He is a professor, having taught Greek, Systematic Theology, and various topics in the field of apologetics. He has authored or contributed to more than twenty books, including *The King James Only Controversy*, *The Forgotten Trinity*, *The Potter's Freedom*, and *The God Who Justifies*. He is an accomplished debater, having engaged in more than one-hundred moderated, public debates with leading proponents of Roman Catholicism, Islam, Jehovah's Witnesses, and Mormonism, as well as critics such as Bart Ehrman, John Dominic Crossan, Marcus Borg, and John Shelby Spong. He is an elder of the Phoenix Reformed Baptist Church, has been married to Kelli for more than twenty-eight years, and has two children, Joshua and Summer.

The Foreknowledge debater is Dr. Michael Brown:

> Michael L. Brown holds a Ph.D. in Near Eastern Languages and Literatures from New York University and has served as a visiting or adjunct professor at Southern Evangelical Seminary, Gordon Conwell Theological Seminary (Charlotte), Trinity Evangelical Divinity School, Fuller Theological Seminary, Denver Theological Seminary, the King's Seminary, and Regent University School of Divinity. He has contributed numerous articles to scholarly publications, including the Oxford Dictionary of Jewish Religion and the Theological Dictionary of the Old Testament. Dr. Brown is the author of twenty books, including, Our Hands Are Stained with Blood: The Tragic Story of the "Church" and the Jewish People, which has been translated into more than twelve languages, the highly-acclaimed five-volume series, Answering Jewish Objections to Jesus, a commentary on Jeremiah (part of

> the revised edition of the Expositor's Bible Commentary), and several books on revival and Jesus revolution.

Now, let's get ready to rumble!

First debate

A nice friendly debate that introduces the topic. This is the best debate for casual listeners and non-Christians.

The MP3 file is here.

Summary:

- Introduction to Calvinist James White and some of his 90 debates
- What is Calvinism and why is it important?
- Does God love all people the same way in Calvinism?
- Does God desire the salvation of all people in Calvinism?
- Is the offer of salvation to all people a genuine offer on Calvinism?
- Does Calvinism diminish or augment God's sovereignty?
- Can God accomplish his will by permitting evil creaturely actions?
- Did Jesus die only for the "chosen", or for the possibility of salvation for all?
- Does a person's responding to God's offer of savaltion detract from Gods glory?
- Does our ability to resist God's grace mean that we are "stronger" than God?

There is a little static in the audio for a few seconds every time they come back from a break, but nothing major.

Second debate, on specific passages in the Bible

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- John 6
- Romans 8, 9
- Ephesians 1

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the Calvinist debater.

Third debate, on specific passages in the Bible

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- Luke 13:34-35 (Deuteronomy 5:28-29)
- Ezekiel 18:21-32 (Jeremiah 3:19-20; Ezekiel 22:30-31)

- 1 John 2:1-2 (2 Pet 2:1).

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the foreknowledge debater.

J.W. Wartick: a philosophical challenge to Mormonism

January 18, 2012 | by Wintery Knight | Link | Original Link

It's here on his blog "Always Have a Reason". He critiques two concepts of God in Mormonism: Monarchotheism and Polytheism. I think most of you will already know about the infinite regress critique of Mormon polytheism, so let's take a look at this Monarchotheism.

Excerpt:

> Stephen Parrish and Carl Mosser take Mormon teaching to expound the concept of God known as Monarchotheism, "the theory that there is more than one God, but one God is clearly preeminent among the gods; in effect, he is the monarch or ruler of all the gods" (Parrish and Mosser, 195, cited below). This concept of God is embodied (see *Teachings of the Prophet Joseph Smith* cited in P+M, 201). Furthermore, this God is contingent, the organizer of a world that was originally chaos, and one of many gods (Ibid, 201). Furthermore, Joseph Smith himself taught that this "God himself was once as we are now, and is an exalted man…" (*TPJS* 345, cited in P+M, 202).
>
> […]There are many difficulties with this Mormon concept of God. Perhaps most crucial is the inclusion of contingency in the concept of God. If God is contingent, then it does indeed beg the question "Who Made God?" Consider this against classical theism, which holds that God exists necessarily. Classical theists can respond to this question by simply saying, "No one made God, because God, as necessarily existent, never came into being." Yet Mormons who hold God is contingent must answer this question.
>
> That's not the only difficulty with God as contingent either, for holding that God is contingent removes several of the reasons to believe that such a deity exists. Consider one of the classical arguments for the existence of God: that contingent things have all come into being, so there must be something which has always existed in order to terminate the infinite regress. Of course, if this deity which terminates the regress is, itself, contingent, then one must continue the regress to the next step. Thus, this Mormon concept of God provides no grounding for the universe itself.

He has a couple more critiques to this position as well. But relevant to the contingency problem is the evidence from modern physics. If the Mormon God does not exist eternally, then it could not be the cause of the universe. Therefore, the universe could not have come into being on Mormon theology. Mormon theology requires an eternal universe, putting it at odds with Christian theology, as well as the Big Bang cosmology.

You can read my article on Mormonism right here. I attack Mormonism on scientific and

historical grounds. First, the conflict with modern cosmology. Second, the Book of Abraham is a fraud – it’s an Egyptian burial narrative.

Republicans pushing to rescind Democrats' $100 billion EU bailout fund

January 18, 2012 | by Wintery Knight | Link | Original Link

Here's a shocking story from Matthew Boyle of the Daily Caller.

Excerpt:

> When California Democratic Rep. Nancy Pelosi was the Speaker of the House in 2009, President Barack Obama and congressional Democrats authorized $100 billion in spending as a line of credit for the International Monetary Fund to be used in times of emergency — funds that could now be used to bail out European banks.
>
> As the Eurozone takes a turn for the worse and chatter heats up about more European Union and IMF bailouts across the continent, Republicans in Congress are pushing to rescind the $100 billion set-aside.
>
> That $100 billion is an addition to the $64.4 billion the U.S. Treasury will provide in quotas to the IMF this year. That new funding has not been formally appropriated, but the IMF could request the money whenever it pleases.
>
> […]McMorris Rodgers is leading the charge, with more than 80 House Republicans, to rescind that line of credit before the IMF takes any more of it. She told TheDC that IMF officials confirmed to her that about $6 billion of the $100 billion has been used to help bail out Portugal, as well as St. Kitts and Nevis, a small Caribbean country.
>
> […]Europe has fallen into dire financial straits as of late. Just last week, the continent saw several of its countries hit with credit downgrades. Though Greece has received the most attention, McMorris Rodgers warns that Greece is just the beginning of what could be a larger and more out-of-control downward European spiral.
>
> "I think it's important to recognize that Greece — all the eyes have been on Greece — Greece is a relatively small country," she said. "You're talking two percent of the European Union, 11 million people, and yet there's already been over $300 billion in bailout funds made available to Greece through the European Union and the IMF. That's more than their entire GDP.
>
> "So, if they [the EU and the IMF] were to continue down that trend, the amount of money we could be talking about is just off the charts."
>
> As vice chair of the House Republican Caucus, McMorris Rodgers is the highest-ranking Republican woman in Congress. She has sponsored a bill that would rescind the extra bailout funds and use them for deficit reduction. South Carolina Republican Sen. Jim DeMint has already gathered more than 20 co-sponsors for the Senate's version of the legislation.

> The U.S. Treasury ordinarily has about $65 billion set aside for international banking emergencies, an IMF credit line that's already been tapped. Without any approval from Congress, Geithner promised the IMF in an official statement that he plans to double that $65 billion quota.
>
> "Our current quota is about $65 billion and now, so, that raises the question: 'How are you going to pay for that [doubled quota], Mr. Secretary?'" McMorris Rodgers said.

Bailing out the EU? But we have our own debts to worry about.

Thanks to Obama's trillion-dollar deficits in 2009, 2010 and 2011, the United States' gross debt is now more than our GDP. After Obama gets his $1.2 trillion debt limit extension approved, our new credit limit will be $16.3 trillion – which is 107% of our annual GDP. When Obama took office, our debt was at $8 trillion.

How bad is bad?

Greece's debt to GDP ratio is about 160%, which is higher than America's 107% ratio – but ours is rising. We can look at Greece and see what is in our future if we don't fix things now.

USA Today explains how this debt crisis is affecting ordinary Greek citizens.

Excerpt:

> Unable to pay off its loans, Greece has been forced to slash its spending and public benefits, raise taxes and rely on bailouts from the wealthier EU nations. Though its new prime minister says the country has a pathway to recovery, Greeks say they aren't hopeful about a change in their lives anytime soon.
>
> Higher taxes, high unemployment and little economic growth added to reductions in services and pensions that have been part of the attempted solution to Greece's financial ills have forced people to the brink who have never been there. Greeks have been taking to the streets to protest the changes. The government this week said that 1,580 demonstrations had been held in Athens this year.
>
> "After 34 years of work, I can't get a pension; I need at least four more years of work," Katsikadakos said. "Plus, I have to pay 450 euros every month to the state for health insurance and social security, just because I own a company, even when I have zero income."
>
> About 183,000 businesses will shut down by summer, according to a new study from the General Confederation of Professional Craftsmen. The study expects that 100,000 of those will close in the next month or two, leaving hundreds of thousands of people jobless.
>
> One out of four small- and medium-size-business owners say it's possible they'll declare bankruptcy in the next year, according to a recent state survey. If true, it would mean 320,000 lost jobs.

> […]Taxes to pay for the public sector and an expensive pension system have been high. Three new taxes have been added since 2009: a self-employment tax of 300 to 500 euros, a solidarity tax of about 1% to 5% of one's income and a real estate tax.

This is bad, but what is worse is the effect of this debt crisis on young people in Greece – they are the real victims of their parents' pattern of voting for the Greek socialist party over and over and over again – with predictable results. Youth unemployment in Greece is now near 50%. The young people are the ones who are having their futures ruined because of the voting choices of their parents.

Louisiana governor Bobby Jindal unveils education reform plan

January 18, 2012 | by Wintery Knight | Link | Original Link

Here are the details on Bobby Jindal's new education plan, from New Orleans Online Access.

Excerpt:

> Gov. Bobby Jindal on Tuesday outlined a far-reaching set of proposals aimed at improving education in Louisiana, including a state-wide voucher program for low-income students, an expansion of autonomous charter schools and steps to link a teachers' classroom performance to their job protections and their compensation. The governor has been promising for months now to make education reform the centerpiece of his second-term agenda.
>
> […]The voucher program may prove the most controversial aspect of the plan. Jindal is proposing to help pay tuition at private and parochial schools for any child of a low-income family who attends a school that receives a letter grade of C, D or F.
>
> More than 70 percent of Louisiana's public schools would fall into that category, opening up districts across the state to competition for public funding from private institutions. Parents who opt out of those public schools would be able to take the public funding set aside for their child with them to pay for tuition.
>
> Voucher opponents argue that offering private school tuition siphons money away from public education, but the governor is framing the idea as a way to put decision-making in the hands of parents.
>
> Also toward that end, Jindal is proposing to fast-track the approval of new charter schools for proven charter operators. Charters are publicly funded but privately managed and typically overseen by nonprofit boards. They compete with traditional public schools in their area for students.
>
> Jindal is also proposing to end regular annual pay increases for teachers based on years in the classroom, ban the use of seniority in all personnel decisions and weaken the power that local school boards have in hiring and firing decisions in favor of superintendents.
>
> Teachers coming into the classroom for the first time would also see major changes under Jindal's plan: districts would have greater flexibility to establish their own pay scales for new teachers and tenure would be set aside only for those who earn high ratings on evaluations five years in a row.

I thought it might be helpful to also post this quick introduction to the issue of school choice, from the Cato Institute.

I don’t agree with the Cato Institute on everything, but they’re right on this issue. The Heritage Foundation also has 3 small videos explaining school choice – with cartoons!

There’s an even longer video narrated by John Stossel that you can watch, that really explains the why school reform matters – and why it’s a conservative issue. Like the sex-selection abortion issue that I blogged about here before, this is an issue that conservatives need to seize on. Here, we can really let our compassionate side show by helping the poorest students, especially those in visible minorities, who simply cannot get a quality education in a public school monopoly that is not responsive to the needs of parents, or their children. This is an issue where we can win – the only losers are the educational bureaucrats and the teacher unions. But the kids are more important.

John Hawkins writes the most scathing anti-Romney column EVER

January 18, 2012 | by Wintery Knight | Link | Original Link

Quin Hillyer of the American Spectator linked to the Anti-Romney post, and he called it "The Most Scathing Anti-Romney Column, Ever". The actual title of the post is "Five Ways Conservatives Will Have to Sell Their Souls if Romney Wins".

Excerpt:

> If you were trying to come up with the most atrocious candidate imaginable to go toe-to-toe with Barack Obama in 2012, you couldn't do much better than Mitt Romney. He was an unpopular moderate governor who lost 2 out of the 3 major elections he's run in and whose signature issue Romneycare is an enormous failure. Moreover, he's so uninspiring that he makes Bob Dole look like Ronald Reagan and that's before you consider his incessant flip-flopping that makes it impossible to really know where he stands on any issue.
>
> Romney's candidacy also runs counter to almost every political trend in the book right now. He's the antithesis of everything the Tea Party stands for — a moderate establishment-endorsed, principle-free Rockefeller Republican. On the other hand, he's like a bad guy straight out of central casting for the Occupy Wall Street crowd, a conscience-free 1 percenter who makes $10,000 bets and lectures the public about how corporations are people — while hordes of poor and middle class Americans that he fired trail in his wake telling tales of woe about how Romney made their lives into a living hell.
>
> At one time, I thought both Gingrich and Perry were more electable than Romney. I have, however, reassessed and now believe Gingrich, Perry, Santorum, and even Huntsman, who just left the race, are ALL more electable than Mitt. It's also worth noting that all of those candidates, including Huntsman, are more conservative than Romney. It's mind-boggling to consider the fact that if Romney wins, the conservative base will have chosen the guy behind Romneycare over the man behind the Contract with America, America's premier social conservative, and the best job-creating governor in America, all of whom would also be more electable.
>
> Here we are in what may be, forgive me for the cliché, the most important election of our lifetimes and the GOP may end up choosing a candidate who's one part Charlie Crist and one part John Kerry as our nominee. If that's the case, conservatives should certainly vote for him over Obama. After all, Mitt Romney will undoubtedly often do the wrong thing if he becomes President, but Barack Obama will almost always fail the country. So Romney would definitely be the lesser of two evils.
>
> Yet and still, conservatives will probably have to pay a big price if Romney

> becomes the nominee. Barring an unforeseen miracle, we're not going to see someone who was a third rate, unpopular moderate governor become a great, popular, and conservative President. The idea that Republicans in Congress will keep Romney in line isn't borne out by anything that has happened in the last decade. During the Bush years, time and time again, conservatives in Congress abandoned their principles to follow Bush's lead. It has been much the same under Obama. Many Democrats were willing to take votes that ended their careers because they felt compelled to stick by Barack. Mitt would have little to fear from the Tea Party or the rest of the conservative base either. After all, his thinking will be, if grassroots conservatives still had any sway in the Republican Party, he wouldn't be the nominee. What are they going to do after he gets the nomination? Vote for Obama? Same goes if he gets elected. No matter how Nixonian Mitt turns out to be, conservatives will still view our own Massachusetts version of Arnold Schwarzenegger as preferable to whatever socialist the Democrats run against him in 2016.

ANNOUNCEMENT: I am now cross-posting some of my posts at John Hawkins' Right Wing News, since he gave me permission to guest blog there. Right Wing News is one of the top conservative blogs.

Brian Auten interviews Casey Luskin on intelligent design

January 18, 2012 | by Wintery Knight | Link | Original Link

Brian Auten interviews Casey Luskin, one of my favorite intelligent design advocates.

Details:

> Today's interview is with Casey Luskin, Research Coordinator for the Discovery Center's Center for Science and Culture. In this interview Casey talks about his background and interest in Intelligent Design, defining terms (ID, evolution, creationism, Darwinism), common objections to ID as a scientific endeavor, some milestones in the history of the ID movement, the Dover trial, responding to critics who say "ID is dead," "not science," and more. This is a good overall introduction to Intelligent Design.

It's 75 minutes long or so, and very informative.

About Casey:

> Casey Luskin is an attorney with graduate degrees in both science and law. He earned his B.S. and M.S. in Earth Sciences from the University of California, San Diego. His Law Degree is from the University of San Diego. In his role at Discovery Institute, Mr. Luskin works as Research Coordinator for the Center for Science and Culture. He formerly conducted geological research at Scripps Institution for Oceanography (1997-2002).
>
> Luskin is also co-founder of the Intelligent Design and Evolution Awareness (IDEA) Center, a non-profit helping students to investigate evolution by starting "IDEA Clubs" on college and high school campuses across the country. For his work with IDEA, the Intelligent Design and Undergraduate Research Center named an award honoring college graduates for excellence in student advocacy of intelligent design (ID) the "Casey Luskin Graduate Award."

Please download the MP3 file at Brian's site, along with links to other relevant resources.

In Canada, a revolt against global warming socialism creates an economic boom

January 19, 2012 | by Wintery Knight | Link | Original Link

Before we look at Canada, let's first look at how Barack Obama has decided to appease his green socialism supporters by rejecting the Keystone XL pipeline.

Excerpt:

> The Obama administration rejected the long-delayed TransCanada oil sands crude project, a decision welcomed by environmental groups but blasted by the domestic energy industry.
>
> After delaying the project past the November 2012 election, President Barack Obama was compelled by Congress to decide by Feb. 21 on whether to approve the pipeline that would sharply boost the flow of oil from Canada's oil sands.
>
> […]Republicans, in turn, blasted Obama for breaking his promise to create jobs by scuttling the $7 billion pipeline.
>
> House Speaker John Boehner, R.-Ohio, said Republicans will keep fighting for the Keystone pipeline because it is "good for the U.S. economy because it would create thousands of jobs."
>
> "All options are on the table" for fighting for the sands pipeline between the western province of Alberta and Houston, Boehner told reporters. "This is not the end of the fight."
>
> Republicans in the Senate have said they could legislate an approval of the pipeline that could get around any rejection by President Obama.

Just to be clear, this pipeline would be paid for with billions of dollars from a Canadian company based in Calgary, Alberta – the Houston of the North. They would pay for the pipeline, they would create the jobs here, and it would cost us *nothing* to take their money. This would not only cut gas prices for consumers, but it would help us to stop sending money abroad to countries that don't like us very much.

How are the Canadians responding to Obama's stupidity? They are already talking about building the pipeline to the west coast and selling their oil to China.

Canadian conservatives have no time for global warming nonsense.

Excerpt:

> It is a cliché in journalism to declare metaphorical wars at the drop of a news release. In this case, it looks like war is exactly what Natural Resources Minister Joe Oliver launched Monday in an unprecedented open letter warning that Canada will not allow "environmental and other radical groups" to "hijack our regulatory system to achieve their radical ideological agenda."

> […]Mr. Oliver took straight aim at a troubling trend in Canadian environmentalism — the foreign funding of Canadian green activist groups with the express purpose of shutting down Canadian resource development… "These groups," said Mr. Oliver, "seek to exploit any loophole they can find, stacking public hearings with bodies to ensure that delays kill good projects. They use funding from foreign special interests to undermine Canada's national economic interest. They attract jet-setting celebrities with some of the largest personal carbon footprints in the world to lecture Canadians not to develop our natural resources."

And they pulled out of the Kyoto Accord.

Excerpt:

> Canada will formally withdraw from the Kyoto Protocol on climate change, the Minister of the Environment has said.
>
> Peter Kent said the protocol "does not represent a way forward for Canada" and the country would face crippling fines for failing to meet its targets.
>
> […]The protocol, initially adopted in Kyoto, Japan, in 1997, is aimed at fighting global warming.
>
> […]He said meeting Canada's obligations under Kyoto would cost $13.6bn (10.3bn euros; £8.7bn): "That's $1,600 from every Canadian family – that's the Kyoto cost to Canadians, that was the legacy of an incompetent Liberal government".

They want jobs. They don't have money to burn on a dozen Solyndras. They don't pass job-killing regulations on energy companies.

Since 2006, the Canadians have been electing and re-electing Conservative prime minister Stephen Harper. The man has a BA and MA in economics, and he comes from the same fold as Reagan and Thatcher on fiscal conservativism and foreign policy. He has no patience for leftist community organizers like Obama. The Conservatives were re-elected again in 2011, this time with a majority government. Their House of Commons is majority conservative. Their Senate is majority conservative. And Harper has been packing the Supreme Court with fresh conservatives, every time there's a vacancy. Canada's economy is booming. And Canadians know how to keep it booming – they are cutting corporate taxes to 15% – less than half of our 35% corporate tax rate. We could be taking their money for the Keystone XL pipeline right now, but we're not, because we elected an anti-business ideologue instead of an economist.

Norwegian authorities seize Indian couple's children for feeding them by hand

January 19, 2012 | by Wintery Knight | Link | Original Link

From the UK Daily Mail.

Excerpt:

> An Indian couple have had their children taken away by Norwegian social workers because they were feeding them with their hands and sleeping in the same bed as them.
>
> Anurup and Sagarika Bhattacharya lost custody of their three-year-old son and one-year-old daughter eight months ago after authorities branded their behaviour inappropriate.
>
> […]Norwegian Child Protection Services removed the youngsters from their home in May, 2011, leaving their parents horrified with the outcome of the report.
>
> Father Anurup told Indian television channel NDTV: 'They told me 'why are you sleeping with the children in the same bed?'.
>
> '(I told them) this is also a purely cultural issue. We never leave the children in another room and say goodnight to them.'
>
> Anurup added: 'Feeding a child with the hand is normal in Indian tradition and when the mother is feeding with a spoon there could be phases when she was overfeeding the child.
>
> 'They said it was force feeding. These are basically cultural differences.'
>
> […]The parents have been told that they can only see their children twice a year, for an hour during each visit until the kids turn 18 when they will no longer be bound by the current restrictions under current Norwegian law.
>
> Norway's Child Protective Service has come under much scrutiny in the past for excessive behaviour in their handling of child cruelty.
>
> Lawyer Svein Kjetil Lode Svendsen said: 'There has been a report in UN in 2005 which criticized Norway for taking too many children in public care.
>
> 'The amount was 12,500 children and Norway is a small country.'
>
> With the Bhattacharyas' visas set to expire in March, they have revealed that they will be forced to stay against their will until the return of their infants.

Norway is a welfare state with a big intrusive government and small citizens. But Norway isn't the only European country that likes to seize children from their families.

This article about homeschooling in Sweden was just posted this week.

Excerpt:

> A leader of Sweden's Liberal Party last week called for a change in the country's

> social services law so that the government can take children away from home-schooling families more easily by allowing social workers to do so.
>
> The call for the change comes amidst already stringent penalties in Sweden for home schooling. The Home School Legal Defense Association and Alliance Defense Fund have applied to the European Court of Human Rights on behalf of one family whose child was abducted by the government in 2009 and have filed a brief in a Swedish appellate court on behalf of another family fined an amount equivalent to $26,000 U.S..
>
> Liberal Party politician Lotta Edholm called for the change to the country's social services law in a Jan. 10 column in Aftonbladet, a prominent Swedish newspaper. Edholm then wrote on her blog: "Today I write with Ann-Katrin Aslund on Aftonbladet's debate page that the social services law should be amended so that social services are able to intervene when children are kept away from school by their parents—often for religious or ideological reasons."

This kind of thing happens all the time in Europe. It happens in Germany. It happens in France. It happens in the UK. This is what secular leftists believe – that children are the property of the state, citizens of the world, and they should not be overly influenced by their parents. It's the government's job to decide what children will believe, not the parents. The parents are just there to work to pay the taxes for the public day cares, public schools and social workers.

Four reasons why positing the resurrection best explains the historical data

January 19, 2012 | by Wintery Knight | Link | Original Link

From Ratio Christi at Ohio State University.

Introduction:

> When it comes to the Christian faith, there is no doctrine more important than the resurrection of Jesus. Biblical faith is not simply centered in ethical and religious teachings. Instead, it is founded on the person and work of Jesus. From a soteriological perspective, if Jesus was not raised from the dead, we as His followers are still dead in our sins (1Cor.15:7).

He lists four pieces of "historical bedrock". These are the facts that even really skeptical atheists like Bart Ehrman and James Crossley will give you in a debate.

1. The post-mortem appearances
2. Paul's use of the Greek word "soma", which means *body*
3. Identification of Jesus as divine by the earliest Christian community
4. The rapid growth of early Christianity even after its founder was dead

This is a very very minimal set. He did not even use the burial, much less the empty tomb, which is a harder sell.

Here's a closer look at Reason #2 of 4:

> **2.The Bodily Resurrection of Jesus Explains Paul's Use of the Word "Soma"**
>
> Whenever the New Testament mentions the word body, in the context of referring to an individual human being, the Greek word (soma, always refers to a literal, physical body). This is significant because Paul uses the word soma to describe the resurrection body of Jesus (1 Cor.15:42-44).Greek specialist Robert Gundry says "the consistent and exclusive use of soma for the physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism." (1) Furthermore, N.T. Wright's The Resurrection of the Son of God shows that the Greek word for resurrection which is "anastasis" was used by ancient Jews, pagans, and Christians as bodily in nature, with this being the case until much later(A.D. 200).
>
> The only explanation that can be given to the emphatic insistence on the early proclamation of the bodily resurrection of Jesus, rather than translation or even a spiritual body is the fact that the apostles did in fact actually witness a material resurrection.

And one Bible passage from his Reason #3: 1 Corinthians 8:4-6.

[4]So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

[5]For even if there are so-called gods, whether in heaven or on earth (as indeed there are many “gods” and many “lords”),

[6]yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

1 Corinthians is unanimously viewed by historians across the ideological spectrum – from evangelical to atheist – as a genuine epistle written by Paul, around 55 AD. I think this passage argues strongly that the *earliest* Christians thought of Jesus as other than an ordinary man. And the Ratio Christi post has many more passages to support Reason #3 as well.

Read the whole thing. If you want to see a great debate on the historicity of the resurrection of Jesus, you should watch William Lane Craig debate James Crossley.

Peer-reviewed paper in medical journal challenges Darwinian evolution

January 19, 2012 | by Wintery Knight | Link | Original Link

Casey Luskin explains over at Evolution News.

Summary: (links removed)

> A new article by Dr. Joseph Kuhn of the Department of Surgery at Baylor University Medical Center, appearing in the peer-reviewed journal Baylor University Medical Center Proceedings, poses a number of challenges to both chemical and biological evolution. Titled "Dissecting Darwinism," the paper begins by recounting some of the arguments raised during the Texas State Board of Education debate that challenged chemical and biological evolution. Those challenges include:
>
> 1. Limitations of the chemical origin of life data to explain the origin of DNA
> 2. Limitations of mutation and natural selection theories to address the irreducible complexity of the cell
> 3. Limitations of transitional species data to account for the multitude of changes involved in the transition.
>
> (Joseph A. Kuhn, "Dissecting Darwinism," Baylor University Medical Center Proceedings, Vol. 25(1): 41-47 (2012).)

It's a good little introduction to where the action is on the origins debate but regular readers will have read it all before.

But there was one thing I found interesting.

The naturalistic response to this paper: (links removed)

> The journal also published a rebuttal to Dr. Kuhn by Charles Stewart Roberts, a cardiovascular surgeon in Virginia. Dr. Roberts's rebuttal simply asserted, as if it were a truth that required no scientific backing, that all biological features could be produced by evolution:

> The notion of "irreducible complexity" in a cell, as an argument against evolution, is beyond my present understanding. Knowing that life has existed on planet earth for billions of years, however, I suspect that there has been time enough for evolution, no matter how complex, with reducibility.

I was having a debate with an atheist on Facebook and this guy did nothing but duck and dodge by citations of peer-reviewed evidence, like the paper from December 2011 on the oxygen in the early Earth's atmosphere, which destroys naturalistic origin of life scenarios. My favorite of his speculations was when he responded to the Big Bang cosmology by saying "one can easily envision a scenario in which the universe has existed eternally". Or something like that. Atheists – always easily envisioning things that

are falsified by the available experimental evidence.

Casey comments on Roberts' "rebuttal": (links removed)

> We've addressed this sort of unsophisticated and poorly articulated argument in defense of defending Darwinian evolution many times. You can't just vaguely appeal to vast and unending amounts of time (and other probabilistic resources) and assume that Darwinian evolution can produce anything "no matter how complex." Rather, you have to demonstrate that sufficient probabilistic resources exist to produce the feature.
>
> Rather than making assumptions, proponents of intelligent design ask what the Darwinian mechanism can, or cannot, do. For example, a 2010 peer-reviewed research paper by pro-ID scientist Doug Axe modeled a population of evolving bacteria, and found that there are severe limits on the ability of Darwinian evolution to produce multi-mutation features. (A multi-mutation feature is one that requires multiple mutations to be present before there is any advantage given to the organism.)
>
> Axe's research makes assumptions very generously favoring Darwinian evolution. He assumed the existence of a huge population of asexually reproducing bacteria that could replicate quickly — perhaps nearly 3 times per day — over the course of billions of years. But he found that complex adaptations requiring more than six neutral mutations would exhaust the probabilistic resources available over the entire history of the earth.
>
> […]Axe's work suggests that we cannot assume, as Roberts does, that sufficient probabilistic resources exist to produce all the features we see in life, "no matter how complex." Indeed, follow-up research by Axe and Ann Gauger suggests that many features might require more mutations before conferring an advantage than could arise in the history of the earth. Their 2011 study attempted to convert one protein into another, closely related protein — the kind of transformation that evolutionists claim happened easily in the history of life. Through mutational analysis, they found that a minimum of seven independent mutations — and probably many more — would be necessary to convert the protein and its function into that of its allegedly close relative.

Evolutionary theory certainly can explain some things. It works up to a point. But there is only so much time available, so much material to react, and so many reactions per second. Hand-waving is not going to prove the neo-Darwinian hypothesis. It's going to take published experimental results. Like the results of Doug Axe and Ann Gauger.

Oh by the way, there's another peer-reviewed article confirming the inability of naturalistic mechanisms to create first life discussed on Evolution News. (David L. Abel, "Is Life Unique?," *Life*, Vol. 2:106-134 (2012)). I can't blog on all of them!

Newt Gingrich slams Jon King for leftist media bias in CNN debate

January 20, 2012 | by Wintery Knight | Link | Original Link

This video clip from the opening of the debate is 3 minutes, and Newt got a standing ovation.

Newt's daughters seem to like him.

More Newt from the debate:

More Newt:

Newt's conclusion:

Newt is mainting his 6 point lead over Romney in the latest South Carolina Republican primary poll. (Released Thursday night)

Excerpt:

> Thursday may have been one of the most eventful days of the Republican campaign so far, but the state of the race in South Carolina didn't change much. Newt Gingrich continues to lead Mitt Romney by 6 points, 35-29, with Ron Paul and Rick Santorum each tied for third at 15%.
>
> Revelations from the Marianne Gingrich interview haven't taken a toll on Newt's image yet. For the first time in our South Carolina tracking this month his favorability is better than Romney's, with 53% of voters holding a positive opinion of him compared to 51% for his chief competitor.
>
> Gingrich's lead with evangelicals held steady today at 40-22 over Romney. He's also doing well with Tea Party voters (46-21), registered Republicans (38-30), voters describing themselves as very conservative (41-21), men (39-27), and voters in the Upstate (36-25).
>
> Romney is leading with non-evangelicals (39-30), independents (30-26), moderates (44-23), and women (32-31). The problem for him is that all of those groups are a minority within the South Carolina Republican electorate.

> Both Gingrich (81%) and Romney (79%) have supporters who are pretty firmly committed to them. 81% of Paul's supporters say they'll definitely vote for him as well. Santorum has the voters most likely to abandon him for one of the more viable contenders in the final 36 hours, with 32% of them saying they could end up voting for someone else. Gingrich is the second choice of 45% of Santorum voters open to changing their minds, compared to 22% for Romney.
>
> Things look good for Newt. He has the lead, his support seems to have more room to grow than Romney's, and so far he's not seeing any ill effects from his ex-wife going to the media. It's important to note though that many average South Carolina voters- the non-political junkies- will get their first exposure to the

> Marianne Gingrich story in the morning paper or on the news sometime tomorrow. That may or may not end up having a big impact on his numbers. But it's important to keep in mind.
>
> PPP surveyed 836 likely Republican primary voters on January 18th and 19th. The margin of error for the survey is +/-3.4%.

Here are the last few polls:

South Carolina President Insider Advantage 1/18 – 1/18	Romney 29 Gingrich 32 Paul 15 Santorum 11 Perry 3
South Carolina President Rasmussen Reports 1/18 – 1/18	Romney 31 Gingrich 33 Paul 15 Santorum 11 Perry 2
South Carolina President PPP (D) 1/18 – 1/18	Romney 28 Gingrich 34 Paul 15 Santorum 14 Perry 5

I think at this point, it may be an all hands on deck situation to keep Romney out of the nomination.

Does Mitt Romney's Romneycare health care plan fund abortion with taxpayer dollars?

January 20, 2012 | by Wintery Knight | Link | Original Link

Fred Thompson made the point about Romneycare and abortion during the 2008 campaign, and Politifact agreed with Fred's charge against Romney.

Excerpt:

> Fred Thompson's campaign is trying to take the much-touted health insurance program that Mitt Romney helped create as governor of Massachusetts and turn it into a liability with conservative Republican voters who dominate the party's primary elections.
>
> The Thompson campaign, which has been playing up the former U.S. senator's antiabortion stances, sent out this e-mail in November 2007:
>
> "So what sort of services does Romney's health care plan provide? Per the state Web site: $50 co-pay for abortions.
>
> "While court mandate requires Massachusetts to cover 'medically necessary' abortions in state-subsidized health plans, Mitt Romney's plan covers ALL abortions — no restrictions."
>
> And it's true.
>
> One of the crowning moments of Mitt Romney's tenure as governor of Massachusetts was the creation of Commonwealth Care, a state-run, state-subsidized health insurance program for people making up to 300 percent of the federal poverty level. Although private insurers provide the coverage, the state helps pay the bills and determines what services must be covered.
>
> That list includes abortion. And the co-pay is indeed $50.
>
> Romney has recently sought to distance himself from some details of the plan, but he has touted it in debates and interviews as a model for the nation.
>
> "I love it. It's a fabulous program," Romney said during a May 3, 2007, Republican debate in Simi Valley, Calif. "Now I know there's some people who wonder about it. Sen. Kennedy at the signing of the bill, we were all there together, he said, 'You know, if you've got Mitt Romney and Ted Kennedy agreeing to the same bill, that means one thing — one of us didn't read it.'
>
> […]Although Romney shares responsiblity with the state legislature and the program's board, Commonwealth Care was his pet project, and he takes credit for it. We find Thompson's claims true.

Those are the facts. Romney may *say* he is pro-life, but he doesn't have the *record* of pro-life activism of Rick Santorum, or even the good pro-life voting record of Newt Gingrich.

Many more details of Romneycare and abortion here.

Watch Mitt Romney explain his views on abortion and stem cell research in his own words.

UK midwives protest ruling forcing them to perform abortions

January 20, 2012 | by Wintery Knight | Link | Original Link

From the UK Telegraph. (H/T Dina)

Excerpt:

> Mary Doogan, 57, and Concepta Wood, 51, told NHS Greater Glasgow and Clyde they were not prepared to delegate, supervise or support staff who were looking after patients through "the processes of medical termination of pregnancy". Their position was rejected by officials and they hope to have the ruling set aside in a judicial review.

> The women claim the refusal to recognise their entitlement to conscientious objection violates their rights under Article 9 of the European Convention on Human Rights.
>
> They say they "hold a religious belief that all human life is sacred from the moment of conception and that termination of pregnancy is a grave offence against human life". Their involvement in the process would be wrongful and "an offence against God".
>
> Miss Doogan and Mrs Wood, both midwifery sisters at the Southern General Hospital in Glasgow, are seeking a ruling at the Court of Session in Edinburgh on their entitlement to conscientious objection under the 1967 Abortion Act. David Johnston QC, for the women, said the matter became an issue for the midwives, who were long-standing employees, in 2007.

> They had both previously given notice of conscientious objection to any involvement in abortions and said they were not expected to participate in such treatment. But in 2007 the health board introduced changes that meant patients undergoing medical terminations were cared for in the labour ward, where the women worked. They were not expected to administer abortion-inducing drugs but management said requiring conscientious objectors to provide care for patients through a termination was lawful.

If the health care system were private, then it would be easy for midwives to find another company to work for that did not violate their consciences. But when the government runs the whole health care system, where are you supposed to go? They are a monopoly and they make the rules. Yet another reasons for Christians to vote for smaller government. In a free market, if you don't want to buy something from one store, you can go to another store. There is competition. But where are these nurses supposed to go? They are midwives, and the government and the courts make the rules in a government-run health care system.

Even here at home, Obama is showing his hostility to rights of conscience.

Red Tails movie aims to revive old-fashioned, patriotic war movie genre

January 20, 2012 | by Wintery Knight | Link | Original Link

The trailer:

And here's a review:

> "Red Tails" is almost certain to be derided as an 'old-fashioned' film, as if using cinematic forms and languages of the past were in and of itself a bad thing.
>
> It isn't.
>
> One of the traps of thinking about popular art is the idea that if artists aren't constantly pursuing the latest or the next ways of doing things that they're somehow failing. As a result, truly rich forms of expression are abandoned simply on the basis of arbitrary sell-by dates, even when they still have much to offer. Consider the films of Guy Maddin, which use the form of silent cinema to thrillingly modern effect; somewhat similarly, "The Artist" no doubt makes some audiences aware of how plastic and lively the silent film medium was.
>
> In the case of "Red Tails," the old-school inspiration derives from any number of patriotic and sentimental World War II movies of the sort that producer George Lucas grew up on. Following his lead, screenwriters John Ridley and Aaron McGruder and director Anthony Hemingway have told the story of the famed Tuskegee Airmen, the first African-Americans commissioned to fly and maintain planes by the U. S. military, almost as if they were doing so in the 1940s.
>
> […]In many ways, this film could've starred James Cagney, William Bendix or Audie Murphyand been made 60-odd years ago — with, of course, the crucial difference of race, which, in and of itself, is a worthwhile thing to achieve.

I might go see this on Saturday, because I love war movies. My collection of DVDs is about two-thirds black and white World War 2 movies! By far my favorite genre. More than that, the P-51 Mustang and the B-17 Flying Fortress hold special places in my heart (not so much the old Curtis P-40 Warhawks they are flying initially – blech!). The plot from the reviews I read reminds me of what it is like to be a Christian scholar and apologist. The Air Force is like the church, the generals are the pastors, and the Tuskegee airmen are the apologists and scholars.

B-17 Queen of the Skies

As a child, my mother bought me Avalon Hill's B-17 Queen of the Skies from the hobby shop downtown. I remember her telling me that I couldn't get anything over $10, so I scoured the store trying to find a game that was less than $10. I found B-17 – it was the only one! But when we got to the register, we found out that it was actually $16.99 not $6.99. But she bought it for me anyway, and I played it a lot – it was a 1-player game. Understanding the fight between the Allied Air Force and the Luftwaffe taught me a lot about the importance of having military superiority in war. I hope the movie is as realistic as the game was.

If you want to see another good war movie about the air war in Europe, try "12 O'Clock High" and "Memphis Belle". A good one in the Pacific theater is "Midway".

A summary of Dr. Laura's Proper Care and Feeding of Husbands

January 21, 2012 | by Wintery Knight | Link | Original Link

Sue Bohlin of Probe Ministries read the book and her assessment is here.

Excerpt:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.*{1} We need this book because millions of wives either don't know how to love their husbands wisely and well, or they're too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, "with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families."{2} While the women's movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.{3}
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God.{4} *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

She talks about men's needs for direct communication, respect, appreciation, support, and sex.

And ends with this:

> I can't recommend *The Proper Care and Feeding of Husbands* highly enough. In fact, I gave a copy to my new daughter-in-law! Let me close with one more piece of wisdom from Dr. Laura: "[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration and approval of a woman. . . Women need to better appreciate the magnitude of their power and influence over men, and not misuse or abuse it."{25} Amen!

And here's another summary of the book that I found.

Full text:

> Dr. Laura Schlessinger has written another book that deserves a place on the best seller list with six of her other books, such as Ten Stupid Things Women Do to Mess Up Their Lives and Ten Stupid Things Men Do to Mess Up Their Lives. The Proper Care and Feeding of Husbands, from this unmarried man's perspective, is an excellent manual for women on how to get want they want from men and

marriage and, generally, how to be happy. Dr. Laura makes a number of important, practical points, based on her experience in private practice, from advising her radio callers, and from literally hundreds of letters and emails she received from men and women while she was writing the book. Here are the points that struck this writer, together with commentary:

1. **Men Need Women, and This Need Gives Women Huge Influence**. Dr. Laura states the point as follows: "[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration, and approval from a woman." Women have great power and influence over men, and wives in particular have tremendous power over their husbands. How they use this power essentially controls the relationship, because women are the masters of most relationships and marriages. That's why Dr. Laura says that she probably won't write The Proper Care and Feeding of Wives: wives already have most of the power and their marriages depend, for the most part, on them.

2. **Women Err in Favoring Children Over Husband**. A friend once told this writer that once a woman has children, her husband is relegated to the moral equivalence of a piece of furniture. How sad if this is true in many marriages. Here's how Dr. Laura puts it: "Once wives became mothers, they had no time to be wives. The men would even compliment their wives on being great mothers, but expressed considerable pain over not being shown love, affection, or sexual interest. The typical reply from a wife challenged with this was 'I only have time to take care of one person, and our child is that person. I'm just too tired for you.' This puts fathers in the ugly and uncomfortable position of feeling competitive with and resentful of their children, whom they love so much."

3. **Men and Women Are Different**. That men and women are deeply different ought not to be notable, but for the fact that it is so often challenged today. Dr. Laura says that society tries to make both men and women "unisex." But men are happiest being men, and women are happiest being women, with few exceptions. The differences start to manifest themselves very early. In one study Dr. Laura mentions, a barrier was placed between 1 year-old babies and their mothers. What did the little boys do? They attempted to get around the barrier or knock it down. The little girls? They cried until their mothers' picked them up. Men tend to respond to things physically, women verbally. In fact, the two sexes are just right for each other.

4. **Not Every Thought and Feeling Needs to be Said**. Women tend to be so verbal, so expressive, that they can tire out men easily unless they exercise some restraint. Dr. Laura reports that wives generally overwhelm their husbands with communication. "Husbands imagine (so foolishly) that their wives are telling them something they actually need to know because they're supposed to do

> something about it. Otherwise, men can't imagine why the 'communication' is happening at all. It confuses them, frustrates them, and their response is to turn off. That's when they unfairly become labeled insensitive." Husbands and fiances are not girlfriends or psychologists, and women who want attention should adjust their communication style accordingly when speaking with them.

> 5. **Men Are Not Mind-Readers**. Most men are not very intuitive compared to most women. Many women "get caught up in the absurdly romanticized notion that 'if he loved me, he'd just know what I'm thinking, what I'd like, what he should say.'" If a woman wants her man to do something, she should just ask him plainly, without nagging, and show appreciation when he does it. To act otherwise, as many women do, shows arrogance and lack of respect for the husband's difference, and it leads to unhappiness in the marriage and in the family.

> 6. **Man Is an Embodied Soul**. No, Dr. Laura didn't put it that way; "embodied soul" is a Catholic concept. But that concept is what underlies her discussion of how important it is to a man that his wife try to keep up her appearance. What does it mean that we are embodied souls? It means that our bodies are integral parts of who we are. We are not just souls. Our bodies are not like clothing that we can take on or off. There was no time during which we had only souls and not bodies, and in eternity as well we will have bodies. It is through our bodies, in fact, that we communicate to our loved ones and to the rest of the world. One thinks of the beautiful line from the old Anglican marriage rite: bride and groom pledge to each other "with my body I thee worship." It is ironic, but in many cases men–sex-crazed pigs in the minds of many women–actually have a truer understanding of the beauty of the body and the meaning of the marital embrace than their wives do. "Objectification" may come as much or more from the woman's side as from the husband's if the woman sees her own body as being separate from rather than an integral part of herself. Dr. Laura writes: "In reading all the letters from men, I was struck by their depth of senstivity about the issue of women's appearance. It wasn't an impersonal, animal reaction (as it is with women the men don't personally know), it was a deeply personal one. The wife's comfort with and appreciation of her own body and femininity, and her willingness to share that with her husband, actually fed his sense of well-being, his feeling of being loved as a husband and valued as a 'man.'"

> 7. **Infidelity by Omission**. Brides and grooms make a number of vows, not only of sexual fidelity. Marital vows include and imply words like love, honor, protect, and care for. "[W]hen one breaches those vows by neglect, is that also not a form of infidelity? Perhaps we should start looking at the act of intentionally depriving a spouse of legitimate needs as infidelity, too, because it stems from being unfaithful to the intent of the vows."

> 8. **In the Bedroom**. To her credit, Dr. Laura gives due place to the importance for marriage of the marital act: “The bedroom is the foundation of marriage and family.” St. Josemaria Escriva, founder of Opus Dei, that supposedly conservative institution within the Church, put it this way: “The marriage bed is an altar.” Enough said?

> 9. **Women Should Appreciate Men’s Masculinity**. Dr. Laura relates a trip she made recently to a swimming pool. A mom and a dad were wading with their infant child. Mom held the child against her chest, cooed to him, and swooped him up and down. She passed the baby to dad. He turned the baby’s face outward and swooshed him forward and up into the air. “Mom equals protection and nurturance. Dad equals autonomy and adventure. It is the perfect balance that helps produce a functional, secure human being.” Too many women, though, act like Alice Kramdens, constantly belitting their husbands, shooting down their aspirations, treating them like children. Dr. Laura writes: “When a wife treats her man like he’s one of her children, when she puts him down or thwarts his need for autonomy, adventure, risk, competition, challenge, and conquest, she ends up with a sullen, unooperative, unloving, hostile lump.”

> 10. **Thou Shalt Not Covet**. Dr. Laura contributes a novel (to this writer) and insightful contemporary application of the commandment, “thou shal not covet.” Specifically, she understands it as a rebuke to people who want it all, especially feminists. “Perhaps the feminist notions about women having power if they do it all has obstructed too many women’s ability to realize that in real life we all make choices, and that the true joy and meaning of life is not in how many things we have or do, but in the sacrifice and commitment we make to others within the context of the choices we’ve made. The Tenth Commandment, about coveting, reminds us that none of us can have everything there is nor everything we want. Without enjoying and appreciating our gifts and blessings, we create a hell on earth for ourselves and for those who love us.”

Please make an effort to buy this book and read it.

Scott Klusendorf: Five questions for pro-life candidates

January 21, 2012 | by Wintery Knight | Link | Original Link

Pro-lifer Scott Klusendorf on pro-life issues and candidate selection. (H/T Scott)

Summary:

> In 2008, a handful of notable pro-life evangelicals and Catholics threw their support behind a presidential candidate sworn to uphold elective abortion as a fundamental right. They argued that doing so constituted an enlightened pro-life vote that was morally superior to the narrow party politics of religious conservatives. Instead of passing laws against abortion, so the argument went, the candidate and his party would "reduce" it by addressing its underlying causes.1 True, he was mistaken on abortion, but he was right on other, important "whole-of-life" issues such as opposition to war, concern for the poor, and care for the environment. The candidate's political strategy was simple: shrink the significance of abortion so it was more or less equal with other issues.2
>
> It worked. Twice as many white evangelicals age eighteen through forty-four voted for Barack Obama in 2008 than voted for John Kerry in 2004. Catholics, meanwhile, supported Obama at fifty-four percent, up seven points from what they gave Kerry four years earlier. The candidate got just enough pro-life votes from these groups to tip the election his way.3
>
> I submit that each of these alleged pro-life votes represents a profound misunderstanding of the pro-life position. The fundamental issue before us is not merely how to reduce abortion, but who counts as one of us. How we answer will determine whether embryos and fetuses enjoy the protection of law or remain candidates for the dumpster. As Francis Beckwith points out, a society that has fewer abortions but protects the legal killing of unborn humans is still deeply immoral.4 Given what's at stake, it's vital that pro-life Christians persuasively answer five key questions before the 2012 election

He makes 5 points in the article.

Here's point #4:

> 4. Instead of passing laws against abortion, shouldn't pro-life Christians focus on reducing its underlying causes?
>
> First and foremost, the abortion debate turns on the question of human equality. That is, in a nation dedicated to the proposition that all men are created equal, do the unborn count as members of the human family? With that fundamental question in mind, it's unreasonable for liberals to insist that pro-lifers surrender the legal fight to focus on underlying causes. As my colleague Steve Weimar points out, this is like saying the "underlying cause" of spousal abuse is

> psychological, so instead of making it illegal for husbands to beat their wives, the solution is to provide counseling for men. There are "underlying causes" for rape, murder, theft, and so on, but that in no way makes it misguided to have laws banning such actions.8
>
> Moreover, why are liberals even concerned about reducing the number of abortions in the first place? If destroying a human fetus is morally no different than cutting one's fingernails, then who cares how many abortions there are? The reason to reduce elective abortion is that human life is unjustly taken-but if that's the case, then restricting the practice makes perfect sense. Imagine a nineteenth-century lawmaker who said that slavery was a bad idea and we ought to reduce it, but owning slaves should remain legal. If those in power adopted his thinking, would this be a good society? True, politics isn't a sufficient answer to injustice, but it's certainly a necessary one. Martin Luther King, Jr., once said, "The law can't make the white man love me, but it can stop him from lynching me."9 Frankly, if Christians don't think the government-sanctioned killing of unborn children merits a political response, then they not only misunderstand the moral gravity of the situation, but also their mandate to love their neighbor as themselves.

Underlying causes talk reminds me of how liberals, once in power, push contraception as a way of preventing unwanted pregnancy. The numbers from the UK show that this is like throwing gasoline on a fire – the number of abortions just goes up because contraception is not foolproof, and it just normalizes sex all the more.

Point #5 is really worth reading, but too long to excerpt here.

Wall Street banks make huge contributions to Mitt Romney

From The Hill. (H/T Riehl Worldview)

Excerpt:

> It’s important not to overstate the perils Romney faces. He is still by far the best-funded candidate in the race. He has a state-by-state infrastructure that is the envy of his rivals. Even if he were to lose Saturday’s South Carolina primary, he would likely remain the overall favorite to clinch the nomination.
>
> But the procession of errors has been striking nonetheless — and it has raised concerns among many in the GOP about his vulnerabilities in a general election contest with President Obama.
>
> Most of Romney’s awkwardness has revolved around questions about his wealth. During a heated exchange during a debate last month, he ill-advisedly offered to bet Perry $10,000 that his own account of what he had written in one of his books was correct. Perry declined, saying he was “not in the betting business,” but the episode heightened perceptions that Romney is out of touch with most Americans.
>
> The same pattern keeps cropping up. Earlier this week, he was asked about the effective tax rate he pays on his income, and managed to injure himself twice in the space of a few sentences. First, he acknowledged that his tax rate was

> “probably closer to the 15 percent rate than anything.” He then added: “I get speaker’s fees from time to time, but not very much.”
>
> The first claim was almost certainly true. Romney’s income is believed to come chiefly from long-term investments rather than earned income, and that would indeed make him liable for capital gains tax levied at a 15 percent rate. But it still places the multimillionaire in a more lightly taxed band than many voters — something which Newt Gingrich tried to take advantage of with his mocking proposal to introduce a “Mitt Romney 15 percent flat tax.”
>
> Perhaps even worse was Romney’s “not very much” comment. His latest financial disclosure form, which covered the period from February 2010 to February 2011, revealed that he earned $374,327 for speeches. The sum is approximately seven times the median household income in the United States.
>
> Those remarks had been preceded by a televised debate at which he gave a muddled response about whether he would release his tax returns.
>
> Romney flubbed the tax-return question for a second time at a debate last Thursday, eliciting boos from the crowd when he said he would “maybe” follow the example of his late father, former Michigan Gov. George Romney, who released 12 years of tax returns when running for the presidency in 1968.
>
> Romney’s mangled syntax on these occasions seems symptomatic of a wider personal unease in discussing his finances. GOP consultants say he needs to get over that discomfort if he is to prove an effective candidate.

Another concern that I have is that Mitt Romney has $20-100 million dollars in his retirement account.

Excerpt:

> Like many Americans, Mitt Romney has an individual retirement account. Unlike most Americans, Mr. Romney has between $20.7 million and $101.6 million in it, a big chunk of his fortune.
>
> Experts on estate planning said it is highly unusual to accumulate such a considerable sum in an IRA, an investment vehicle restricted by annual contribution limits. It appears that Mr. Romney’s grew so large mostly because it holds investments in Bain Capital, the private-equity firm he helped start.
>
> […]Mr. Romney is one of the richest presidential candidates in decades, and his GOP opponents increasingly are trying to turn wealth into a liability. President Barack Obama is expected to do the same if the former Massachusetts governor wraps up the nomination. Mr. Romney’s tax liability has emerged as a debating point in the GOP nominating contest, a proxy for a bigger argument over who should shoulder the nation’s tax burden.
>
> In recent days, Mr. Romney’s rivals have pressed him to release his tax returns. They have attacked him for his role at Bain Capital, the source of his wealth. When Mr. Romney revealed Tuesday that his effective federal income-tax rate

> had been about 15% in recent years, both the White House and GOP candidates used the number as a cudgel.
>
> […]Michael Whitty, a lawyer at Vedder Price in Chicago who advises private-equity executives, said it is impossible to determine from Mr. Romney's public disclosures how the IRA grew so large. Based on its listed holdings, which include many Bain Capital vehicles, Mr. Whitty theorizes Mr. Romney may have invested in Bain funds through a 401(k)-type plan, or directed some of his Bain holdings into such a plan, which he then rolled into an IRA.

How is he going to explain that? This might be one of the reasons why Romney is not releasing his tax returns. He needs to be pounded on this by Gingrich and Santorum until he drops out – we can't afford to choose a nominee who has no hope of beating Barack Obama.

How the left uses “bullying” to restrict free speech that offends them

January 22, 2012 | by Wintery Knight | Link | Original Link

From Hans Bader at the Competitive Enterprise Institute.

Full text: (links removed)

> A school superintendant has labeled a column in a school newspaper thatcriticized homosexuality as “bullying.” (The Shawano High School newspaper decided to run dueling student opinion pieces on whether same-sex couples should be able to adopt children; the student article that was labeled as “bullying” answered the question “no.” The school district also publicly apologized for the column, and said that it is “taking steps to prevent items of this nature from happening in the future.”)
>
> Whatever the wisdom (or lack thereof) of featuring something like that in a school newspaper, it seems strange to argue that a viewpoint in a student *newspaper* is “bullying.” (The Shawano School District’s bullying policy provides that “bullying” may lead to “warning, suspension,” “expulsion,” etc.) A conservative Christian who thought that homosexuality was immoral successfully challenged a school “harassment” code that punished students with such viewpoints in *Saxe* v. *State College Area School District*(2001), a case in which a federal appeals court ruled that there is no “harassment” exception to the First Amendment for speech which offends members of minority groups. Speech cannot be banned simply by labeling it as violence, either: for example, in *Bauer* v.*Sampson*, another federal appeals court ruled that a campus newspaper’s illustration depicting a college official’s imaginary death was protected by the First Amendment, even though the college declared it a violation of its policy against “workplace violence.”
>
> But schools and anti-bullying activists have adopted incredibly overbroad definitions of bullying. The anti-bullying website NoBully.com, and schools like Fox Hill and Alvarado Elementary, define even “eye rolling” and other expressions of displeasure or hostility as bullying, even though doing so raises First Amendment problems.
>
> The Obama administration claims bullying is an “epidemic” and a “pandemic.” But in reality, bullying and violence have steadily gone **down** in the nation’s schools, as studies funded by the Justice Department have shown. The Obama administration’s StopBullying.gov website defines a vast array of speech and conduct as bullying: it classifies “teasing” as a form of “bullying,” and “rude” or “hurtful” “text messages” as “cyberbullying.” Since “creating web sites” that “make fun of others” also is deemed “cyberbullying,” conservative websites that poke fun at the president are presumably guilty of cyberbullying under this

> strange definition. (Law professors such as UCLA's Eugene Volokh have criticized bills by liberal lawmakers like Congresswoman Linda Sanchez (D-Calif.) that would ban some criticism of politicians as cyberbullying.)

It's very important to understand what liberals mean when they say "bullying" and how they use it to silence those who might offend them. It's using government power to force individuals to accept the morality of the state. There's a word for that.

Hypocrisy on the left: do the actions of liberals match their words?

January 22, 2012 | by Wintery Knight | Link | Original Link

Funny video from American Power Blog.

That's one case, but are leftists always hypocrites?

Do As I Say Not As I Do

I had a long drive on the way to my parents' house for Christmas and I decided to listen to the audio book version of Peter Schweizer's 2004 book "Do As I Say Not As I Do". In that book, he profiles a number of leftist public figures, and he discovers that leftists don't practice what they preach, because even they know that leftist ideas *don't actually work*. I really recommend the book, so let's take a closer look at it and you'll see why you should read it, too.

Here's a 32 minute 2011 lecture about the book:

And here's an interview with the author from FrontPage magazine.

Excerpt:

> **FrontPage:** Give us some of the best examples of the gulf between some liberals' social criticisms and the ingredients of their private lives. Give us some insights, for instance, into the likes of Noam Chomsky, Michael Moore, Cornel West, Hillary Clinton, Ted Kennedy and Barbra Streisand.
>
> **Schweizer:** Looking for liberal hypocrisy is, as they say in the military, a target-rich environment. Noam Chomsky, for example, has attacked wealthy Americans who set up trusts to avoid paying inheritance taxes. But this self-professed "radical socialist" has a tax attorney and did the very same thing. (When I asked him about this hypocrisy he said it was okay because he and has family have been working on behalf of suffering people all these years.)

> Michael Moore's hypocrisy is pathological. He has said numerous times that he doesn't own a single share of stock and that capitalism is not acceptable "on any level." And yet, I found that, according to tax returns filed with the IRS, he has owned shares in Halliburton, numerous oil companies, defense contractors and other multinationals through a tax shelter. When it comes he race he's also wildly hypocritical. He says that Americans who happen to live in largely white neighbhorhoods do so because they are "racists." But he lives in Central Lake, Michigan, which according to the U.S. Census has more than 2,500 residents and not a single black person in the entire town.
>
> Cornel West has numerous times condemned middle class blacks that abandon the "chocolate cities" for the "vanilla suburbs" but guess what, his flavour of choice is vanilla, too.

> Ted Kennedy likes to pose as the Robin Hood of the Senate, forcing wealthy Americans to pay their taxes to help the poor. But I discovered that Kennedys record of actually paying taxes is horrible. Tax the inheritance tax. He says that Americans should pay 49% to the IRS when they die in the name of "social justice." But according to public records, the Kennedys have almost completely avoided contributing to "social justice" by placing their assets in trusts that are located overseas. The Kennedys, over the past thirty years, have paid less than 1% in inheritance taxes on more than $300 million. Ted Kennedy, like Hillary Clinton and George Soros, loves higher taxes. On other people.

And:

> **FrontPage:** Why do you think people are drawn to leftist ideals and what kind of people are they? Self-contempt appears to be a common ingredient, no?
>
> **Schweizer:** Yes, self-contempt is a big part of it. Dietrich Bonhoeffer, the great German pastor who stood up to Hitler, wrote a book about "cheap grace." Liberals are guilty of cheap grace in the political sense. They feel guilty and their form of penance is embracing the destructive ideas of the progressive faith. But it's cheap grace because as I show it the book, they don't actually change the way they live. I think that the religious comparison makes sense because in many respects the modern day left represents a religious movement. They are motivated by a sense of sin, guilt, and the need for salvation and absolution in the political sense. Socialism offers salvation to them. Of course, they don't actually plan to live like socialists.

I would really recommend taking a look at this book. It's similar to Paul Johnson's "Intellectuals" if you've ever read that, but it's better.

Did Obama really create jobs with his green energy and stimulus programs?

January 22, 2012 | by Wintery Knight | Link | Original Link

From Hans Bader writing for the DC Examiner.

Excerpt: (links removed)

> There are only 140,000 jobs in the whole renewable-energy sector, but in a new ad, Obama is taking credit for a "clean energy industry" that has "2.7 million jobs." Obama inflated the number of "clean-energy" jobs by adding people who have nothing to do with clean-energy, like "trash collectors" and bureaucrats. By inflating the total, Obama was able to paper over his complete failure to live up to his utterly unrealisticcampaign promise "to create 5 million new green jobs." Most of America's existing green jobs predate the Obama Administration, which did not create them: "from 2003-2010, the rate of growth for clean jobs was 3.4 percent."
>
> Indeed, the Obama Administration used federal green-jobs money to outsource American jobs to countries like China: "Despite all the talk of green jobs, the overwhelming majority of stimulus money spent on wind power has gone to foreign companies, according to a new report by the Investigative Reporting Workshop" at American University. "79 percent" of all green-jobs funding "went to companies based overseas," with the largest payment going to a bankrupt Australian company. "Most of the jobs are going overseas," said Russ Choma at the Investigative Reporting Workshop.
>
> Meanwhile, America actually lost jobs in wind-manufacturing: "Even with the infusion of so much stimulus money, a recent report by American Wind Energy Association showed a drop in U.S. wind manufacturing jobs last year." (CBS News recently reported that there are 11 more companies, in addition to Solyndra, that are embroiled in financial trouble after receiving billions of dollars in taxpayer money; five have already filed for bankruptcy).
>
> Obama's mythical green-jobs are like other imaginary jobs he claimed to have created with the $800 billion stimulus package. The Obama Administration took credit for jobs created in 440 non-existent Congressional districts, such as Arizona's 15th and 86th districts (Arizona only had 8 Congressional districts, as ABC News noted with amusement). The *Washington Examiner* noted that at least "75,000 jobs" Obama has claimed credit for are "clearly imaginary" or "highly doubtful." Readers can view its interactive map of "Inflated Jobs by State."

He's going to have trouble defending this in a debate, as long as we pick someone who will go after him.

Why Mitt Romney lost to Newt Gingrich in South Carolina

January 23, 2012 | by Wintery Knight | Link | Original Link

A couple of days ago, Mitt Romney was leading by 14 points in South Carolina – and he lost it by 12 points. What happened?

First, here's a snippet from Gingrich's victory speech:

> "One of the key issues and I'm prepared to take this straight at the president and frankly straight at the elite media. One of the key issues is the growing anti-religious bigotry of our elites, and if you go to newt.org, my campaign site there's a 54-page paper there on the balance of power, putting the judiciary back in its proper role in eliminating dictatorial bigots such as justice Berry in San Antonio who issued a ruling not only could the students not pray at their graduation, if they used the word "benediction" the word "invocation," the word "God," asked the audience to stand or a moment of silence he would put the superintendent in jail. Now we don't have speech dictatorship in America by anti-religious bigots, period.
>
> The second big theme, frankly, is one that every South Carolinian understands. It's jobs, economic growth, balancing the budget, having stable money, and let's be very clear, and again this makes some of the elite media nervous. **President Obama has been historically the most effective food stamp president in American history**. I worked with ronald reagan to create jobs and 16 million jobs were created by the American people in the 1980s. i worked with Bill Clinton, a democrat to create jobs and 11 million jobs were created by the American people during the four years that I was speaker.
>
> I would like to be the best paycheck president in American history and I want to go into every neighborhood of every ethnic background in every part of the country and say to people very simply, **if you want your children to have a life of dependency and food stamps, you have a candidate as Barack Obama.** If you want your children to have a life of independency and paychecks, you have a candidate that's Newt Gingrich, and I'll bet you we have votes everywhere."

That's red meat for conservatives. We like policy papers and statistics. We like substance and bold contrasts.

Byron York explains how Newt won in the Washington Examiner. (H/T Smitty @ The Other McCain)

Excerpt:

> Romney stages perfect events. For example, on the eve of the primary, Romney's rally in North Charleston was perfect from a production point of view:

> stage just right, big flags, big Romney signs, smooth introductions from South Carolina Gov. Nikki Haley and Virginia Gov. Bob McDonnell, all topped off by a showy entrance by Romney, who arrived in his big campaign bus that drove right into the room.
>
> It was perfect in every sense but engaging with the voters. **Romney's stump speech was a clipped — some would say dumbed down — list of generalities, concluding with this: "I love this land, I love its Constitution, I revere its founders, I will restore those principles, I will get America back to work, and I'll make sure that we remain the shining city on the hill." Romney offered his supporters very little to chew on. In this primary race, voters are hungry for substance, and Romney didn't give them much.**
>
> Gingrich's last event before the voting, a couple of hours later, was a rally on the hangar deck of the USS Yorktown, a World War II aircraft carrier that is now a floating museum across the bay from Charleston. It was a most un-perfect affair. To begin with, it just so happened that dozens of Cub Scouts were having an overnight on the Yorktown at the same time as Gingrich and the press showed up for the rally. Their presence contributed to an air of happy chaos on board, and Gingrich was delighted to invite a few scouts on stage with him at the beginning of his speech. **When Gingrich got to the substance of his remarks, he was wandering, expansive, and detailed, where Romney had been brief and canned. But Gingrich kept the crowd with him the whole way, and in the end had engaged his audience more than Romney could have hoped for. Gingrich respected them enough to discuss issues with them seriously.**
>
> […]**Gingrich's success here in South Carolina shows more than just a skepticism toward establishment Republicanism. It also shows a hunger for real substance in the campaign, for a candidate who will talk to voters and give them more than phrases like "I believe in America."** Mitt Romney's team of seasoned campaign professionals may not think Newt Gingrich has any business playing a deciding role in the race. But they better believe it, and they better take seriously what the Gingrich challenge represents — before it's too late.

If you listen to Romney closely in debates, he never speaks like Newt Gingrich or Rick Santorum. With those two, you get specifics. Rick Santorum talks about his efforts to push for balanced budgets or his bill to ban partial birth abortions. Newt Gingrich talks about the millions of jobs created when he was Speaker of the House and his 98.5% pro-life voting record.

What does Mitt Romney talk about? He never talks about his record – because it's liberal. He passed socialized medicine with taxpayer subsidies for abortions. He raised taxes by $740 million dollars. He handed out licenses for gay marriages. When he speaks, he talks

about how much he loves the United States, and how he would like to achieve results – results he never achieved when he was governor of Massachusetts. Mitt Romney has a Democrat record.

Note: Gingrich was losing to Romney 43-18 in Florida according to the January 17th CNN poll, but the latest ARG poll has Gingrich up 34.4 to 25.6, and the latest Rasmussen Reports poll has it at 41-32 for Newt. That's how quickly things change because of a couple of good debates, with some real substance.

Rick Santorum gets endorsements from James Dobson and John Stemberger

January 23, 2012 | by Wintery Knight | Link | Original Link

First James Dobson.

Excerpt:

> James Dobson, the founder and former president of Focus on the Family, has joined a number of social conservative and pro-life leaders have who announced endorsements for Republican presidential candidate Rick Santorum.
>
> Dobson today announced his personal endorsement of the former Pennsylvania senator, and is not speaking on behalf of the pro-life Christian group he led before his retirement.
>
> "The institution of the family is the key issue facing this great nation. It is the foundation, the bedrock, upon which every dimension of Western Civilization rests," he said. "If it is undermined or weakened by cultural and governmental forces, the entire superstructure will collapse in short order. And indeed, today it is in serious jeopardy. The very definition of marriage is threatened, which has implications for the next generation and the stability of society itself."
>
> "Of all the Republican candidates who are vying for the presidency, former Sen. Santorum is the one who has spoken passionately in every debate about this concern," Dobson continued. "He has pleaded with the nation and its leaders to come to the aid of marriages, parents, and their children. What a refreshing message."
>
> "The Congress voted in 1969 to impose a marriage penalty tax on husbands and wives who were struggling to raise their children. That unfair tax continued for 32 years, until George W. Bush rolled it back," Dobson added. "Now, if Democrats and some Republicans have their way, the marriage penalty tax will be re-imposed in 2013. We desperately need a president who will intercede on behalf of those who are caring for the next generation and working to build this nation."
>
> "While there are other GOP candidates who are worthy of our support, Sen. Santorum is the man of the hour. His knowledge of international politics, especially Israel and the turmoil in the Middle East, is highly relevant to the dangerous world in which we live. This is why I am endorsing former Senator Rick Santorum for president of the United States, and urge my countrymen to join us in this campaign," Dobson concluded.
>
> […]Previously, Concerned Women for America president Penny Nance, former Planned Parenthood director turned pro-life activist Abby Johnson, and pro-life nurse and blogger Jill Stanek issued endorsements for Santorum. They follow a weekend meeting in which key evangelical leaders saidthey supported him.

> Santorum also picked up the endorsement of CatholicVote as well as former Republican presidential candidate Gary Bauer.

You can't get a better pro-life and pro-family endorsement than James Dobson! I also like that Dobson talked about Santorum's foreign policy credentials. Indeed, Rick Santorum is the best candidate if you like social policy and foreign policy. He even sounds better on fiscal policy in the debates – and even better on illegal immigration than Gingrich. Those *were* his weak points.

But there's more – a key endorsement for Rick Santorum in Florida:

> The Rick Santorum for President campaign is proud to announce that Rick Santorum has received the endorsement of Florida pro-family leader John Stemberger. Stemberger had previously endorsed Gov. Rick Perry (R-TX) and served as Perry's state co-chairman during the Florida Presidency Five event in Orlando. This marks the latest in a line of national conservative leaders to coalesce behind theSantorum campaign.
>
> John Stemberger, in a statement released to his supporters, said: "Senator Santorum has been a champion for the timeless values of life, marriage, family and religious liberty. His personal life and character is a genuine reflection of the principles he stands for in every way. He is the only candidate in this race who has consistently argued during debates for the primacy of the family unit as the basis for social order and a sound economy. As an economic conservative, Rick Santorum can also unite the tea party, evangelicals and pro-life Catholics to form a winning coalition. I am proud to give my full support to Rick Santorum for President of the United States."
>
> Rick Santorum said: "I am honored to receive John's endorsement today. John has been a stalwart defender of the family and the traditional values. I am looking forward to working with John in the coming weeks to help our campaign win the primary in the critical swing state of Florida."
>
> Stemberger has been a leading conservative voice for Floridians, leading the successful marriage amendment campaign in 2008 and serving as the former political director for the Republican Party of Florida in the1990s.

Don't count Rick Santorum out yet in Florida – he has a week to make his pitch to Floridians.

Peer-reviewed paper looks at the causes of homosexuality

January 23, 2012 | by Wintery Knight | Link | Original Link

Muddling Towards Maturity writes about a new paper about homosexuality.

Excerpt:

> Stanton L. Jones, provost and professor of psychology at Wheaton College, has for years been a student of the latest research on homosexuality. His most recent article, "Same-Sex Science: The social sciences cannot settle the moral status of homosexuality," was published in the February 2012 issue of *First Things* magazine (http://www.firstthings.com/article/2012/01/same-sex-science) and is a condensed version of his longer paper with citations,"Sexual Orientation and Reason: On the implications of False Beliefs about Homosexuality" (http://www.wheaton.edu/CACE/Hot-Topic)
>
> Stanton offers authoritative analysis of current research. He sets the record straight and corrects popular misimpressions. I am posting the links in anticipation of giving these two articles a careful reading at my earliest opportunity. Stanton previously published (with Mark A. Yarhouse) in 2000, "*Homosexuality: the Use of Scientific Research in the Church's Moral Debate*."

I read over the condensed version of the paper, and found some interesting things.

Regarding the healthiness of homosexuality:

> Evelyn Hooker, in her 1957 study, was careful to reject only the claim that homosexuality is always pathological. She never made the logically distinct assertion that homosexual persons on average are just as psychologically healthy as heterosexuals. It is well that she did not, because the consistent findings of the best, most representative research suggest the contrary, despite a few scattered compatible findings from smaller studies of less representative samples. One of the most exhaustive studies ever conducted, published in 2001 in the *American Journal of Public Health* and directed by researchers from Harvard Medical School, concludes that "homosexual orientation . . . is associated with a general elevation of risk for anxiety, mood, and substance-use disorders and for suicidal thoughts and plans." Other and more recent studies have found similar correlations, including studies from the Netherlands, one of the most gay-affirming social contexts in the world. Depression and substance abuse are found to be on average 20 to 30 percent more prevalent among homosexual persons. Teens manifesting same-sex attraction report suicidal thoughts and attempts at double to triple the rate of other teens. Similar indicators of diminished physical health emerge in this literature.

And regarding the notion of being born gay:

> Recent studies show that familial, cultural, and other environmental factors contribute to same-sex attraction. Broken families, absent fathers, older mothers, and being born and living in urban settings all are associated with homosexual experience or attraction. Even that most despised of hypothesized causal contributors, childhood sexual abuse, has recently received significant empirical validation as a partial contributor from a sophisticated thirty-year longitudinal study published in the *Archives of Sexual Behavior*. Of course, these variables at most partially determine later homosexual experience, and most children who experienced any or all of these still grow up heterosexual, but the effects are nonetheless real.
>
> To say that psychological and environmental variables play a part in causation does not mean that biology does not, rather just not to the extent that many gay-affirming scholars claim. The two most influential contemporary theories of biological causation focus respectively on fraternal birth order and genetics; each has some level of support, but for modest-sized causal effects at best.
>
> […]Contrary to the assumptions of many social conservatives, biology does appear to play a modest part in determining sexual orientation. Contrary to the assumptions of many social progressives, psychological and environmental variables also appear to play at least a modest part in determining sexual orientation.

And what about reparative therapy?

> Is sexual orientation immutable? With Mark Yarhouse of Regent University, I recently studied people seeking to change their sexual orientation. We assessed the sexual orientations and psychological distress levels of 98 individuals (72 men, 26 women) trying to change their sexual orientation through ministries organized under Exodus International, beginning early in the process and following them over six to seven years with five additional, independent assessments. Our original round of findings was published in a book titled *Ex-Gays?*; the latest round, in the*Journal of Sex and Marital Therapy.*
>
> Of the 61 subjects who completed the study, 23 percent reported success in the form of “conversion” to heterosexual orientation and functioning, while 30 percent reported they were able to live chastely and had disidentified themselves from homosexual orientation. On the other hand, 20 percent reported giving up and fully embracing homosexual identity, and the remaining 27 percent continued the process of attempted change with limited and unsatisfactory success.

Are heterosexual and homosexual relationships the same?

> Even so, intriguing hints of differences, of “nonequivalency,” between

> heterosexual and homosexual couples emerge from Peplau and Fingerhut's survey. They mention one large study that found that 28 percent of lesbians had had sex outside their primary relationship—comparable to the 21 percent of women in relationships with men and 26 percent of men in relationships with women. By contrast, 82 percent of gay men had had sex with someone other than their main partner. However one construes such a striking difference in sexual monogamy, whether as a trivial stylistic difference or as indicative of something fundamental and pervasive, such a finding seriously challenges the equivalency hypothesis.
>
> Stability is a relational characteristic of direct relevance to the types of functional concerns intrinsic, for instance, to evaluation for adoption fitness. How does equivalence look in this area? Peplau and Fingerhut cite one study that found that over a five-year period, 7 percent of married heterosexual couples broke up, compared with 14 percent of cohabiting male couples and 16 percent of cohabiting lesbian couples. They also summarize, without mentioning specific numbers, a more representative study from Norway and Sweden, which have sanctioned same-sex partnerships since the 1990s, reporting "that the rate of dissolution within five years of entering a legal union is higher among same-sex partnerships than among heterosexual marriages, with lesbian couples having the highest rates of dissolution." Their rendering underplays the magnitude of the actual findings, which was that gay male relationships are 50 percent more likely to break up than heterosexual marriages, while lesbian relationships are 167 percent more likely to break up than heterosexual marriages. Odd that they would not mention these actual numbers.

There's more – I just cited a few bits that jumped out at me.

I recommend reading the condensed paper just to get an idea of what the issues are and what the research says.

Haitian man who could not be deported kills three people in Florida

January 24, 2012 | by Wintery Knight | Link | Original Link

From the Miami Herald.

Excerpt:

> When burglar Kesler Dufrene became a twice-convicted felon in 2006, a Bradenton judge shipped him to prison for five years. And because of his convictions, an immigration judge ordered Dufrene deported to his native Haiti.
>
> That never happened.
>
> Instead, when Dufrene's state prison term was up, Miami immigration authorities in October 2010 released him from custody. Two months later, North Miami police say, he slaughtered three people, including a 15-year-old girl in a murder case that remains as baffling today as it did the afternoon the bodies were discovered.
>
> DNA on a rifle found inside the house and cellphone tracking technology later linked Dufrene to the Jan. 2, 2011, slayings.
>
> But North Miami detectives never got to interrogate him. Just 18 days after the murders, Dufrene shot and killed himself when he was cornered by Manatee County sheriff's deputies in Bradenton after an unrelated break-in and shooting there.
>
> **The episode is a black eye for U.S. authorities, who by law could not detain Dufrene indefinitely after the Obama administration ordered a temporary halt of deportations to the island nation.**
>
> […]The failure to deport Dufrene infuriates the victims' family members. "This guy shouldn't have been in America," said Audrey Hansack, 37, who moved back to her native Nicaragua after the murder of her daughter Ashley Chow. "I'm so upset with the whole situation. Because of immigration, my daughter is not alive."

Just to be clear, the policy of the Obama administration is *a backdoor amnesty*.

Excerpt:

> The Obama administration is taking steps to grant what amounts to amnesty to as many as 300,000 illegal aliens.
>
> **In a recent announcement on a sleepy August Friday in Washington, D.C., the Department of Homeland Security directed immigration enforcement officials to start dropping cases against as many deportable alien lawbreakers as possible.**

> The administration is clearing out removal cases wholesale. Despite insisting that it will give them case-by-case treatment, an interagency committee is charged with finding all the cases it can to grant relief.
>
> This backdoor amnesty broadens and encourages use of “prosecutorial discretion” on behalf of foreigners who face removal orders. Not only will potentially thousands of illegals be allowed to remain in the United States, but the administration has also confirmed that those aliens can obtain work permits.

Democrats are soft on crime, and they favor amnesty for illegal immigrants. And this is the result of their views. Three dead people in Florida.

What happened to the ethics charges against Newt Gingrich?

January 24, 2012 | by Wintery Knight | Link | Original Link

Here are the facts from Legal Insurrection.

Excerpt:

> So Romney is going on attack. The centerpiece will be Newt Gingrich's consent to a single ethics violation (out of 84 charged) in the 1990s. The process was highly politicized by Democrats, including Nancy Pelosi. Newt ultimately was vindicated by the IRS on the issue, but you wouldn't know it from Romney's speech yesterday in Florida:
>
> "Speaker Gingrich has also been a leader," the former Massachusetts governor said. "He was a leader for four years as speaker of the House. And at the end of four years, it was proven that he was a failed leader and he had to resign in disgrace. I don't know whether you knew that, he actually resigned after four years, in disgrace.
>
> Romney continued:
>
> "He was investigated over an ethics panel and had to make a payment associated with that and then his fellow Republicans, 88 percent of his Republicans voted to reprimand Speaker Gingrich. He has not had a record of successful leadership."
>
> In 1999, Brent Bozell wrote a great column about how the media covered up Newt's vindication, Newt Is Vindicated, But Nobody Knows It:
>
> The judgment is in. After three and a half years of investigation, the IRS has cleared Newt Gingrich and his allied nonprofit groups of any violation of the tax laws in the controversy over his television history course "Renewing American Civilization."
>
> So after having run countless news reports highlighting the accusations that ultimately forced Gingrich to pay a $300,000 fine, did the media correct the record with a decent airing of the decision? Are you ready? ABC, CBS, and NBC devoted exactly zero seconds to Newt Gingrich's vindication. Only CNN's Brooks Jackson filed a decent TV report, on the early-evening show "Inside Politics." …
>
> Gingrich issued a statement that clearly expressed his feelings: "I consider this a full and complete vindication. I urge my colleagues to go back and read their statements and watch how they said them, with no facts, based on nothing more than a desire to politically destroy a colleague."
>
> But the damage hadn't been done simply by devious politicians like Bonior, but by journalists. In the face of Newt's innocence, some reporters couldn't muster even a regret.

> Bozell followed up that column last month, noting that the media continues to hide Newt's vindication.
>
> It has been 4,689 days since the IRS formally cleared Newt Gingrich of any violation of tax law. It's been 4,689 days since ABC, CBS, and NBC have had the opportunity to report it. What the heck. Why not today? Now is the time for these networks to report the truth for once. The networks owe it to the American people to report the fact that in 1999 the IRS completely vindicated Gingrich.
>
> Between December 15, 1996 and January 31, 1997 the network morning and evening newscasts filed a staggering 244 stories. Total number of network stories on the news that Newt was completely innocent? Zero. That's beyond pathetic. Oh and what about CNN? We found that the cable network filed one — count 'em, one — story. They're probably exhausted by all that effort, so we'll let them off the hook.
>
> Now you can add to the list the Romney campaign, which uses the worst of Nancy Pelosi's machinations to its advantage, and like the mainstream media, hides the truth.

What does it say about Romney that he would smear Newt with charges that were obviously politically motivated – pressed by radical leftist Democrat Nancy Pelosi? Well, it says that Romney is desperate and lacks honesty and integrity.

Assessing Obama's claims about income inequality in America

January 24, 2012 | by Wintery Knight | Link | Original Link

From Zero Hedge.

Excerpt:

> Tonight's stunning financial *piece de resistance* comes from Wyatt Emerich of The Cleveland Current. In what is sure to inspire some serious ire among all those who once believed Ronald Reagan that it was the *USSR* that was the "Evil Empire", **Emmerich analyzes disposable income and economic benefits among several key income classes and comes to the stunning (and verifiable) conclusion that "a one-parent family of three making $14,500 a year (minimum wage) has more disposable income than a family making $60,000 a year." And that excludes benefits from Supplemental Security Income disability checks. America is now a country which punishes those middle-class people who not only try to work hard, but avoid scamming the system.** Not surprisingly, it is not only the richest and most audacious thieves that prosper – it is also the penny scammers at the very bottom of the economic ladder that rip off the middle class each and every day, courtesy of the world's most generous entitlement system. Perhaps if Reagan were alive today, he would wish to modify the object of his once legendary remark.

And it gets worse for those who don't report their income:

> If the one-week-a-month worker maintains an unreported cash-only job on the side, **the deal gets better than a regular $60,000-a-year job.** In this scenario, you maintain a reportable, payroll deductible, low-income job for federal tax purposes. This allows you to easily establish your qualification for all these welfare programs. Then your black-market job gives you additional cash without interfering with your benefits. Some economists estimate there is one trillion in unreported income each year in the United States.

> This really got me thinking. Just how much money could I get if I set out to deliberately scam the system? **I soon realized that getting a low-paying minimum wage job would set the stage for far more welfare benefits than you could earn in a real job, if you were weilling to cheat.** Even if you dodn't cheat, you could do almost as well working one week a month at minimum wage than busting a gut at a $60,000-a-year job.
>
> SSI pays $8,088 per year for each "disabled" family member. A person can be deemed "disabled" if thy are totally lacking in the cultural and educational skills needed to be employable in the workforce.

> **If you add $24,262 a year for three disability checks, the lowest paid welfare family would now have far more take-home income than the $60,000-a-year family.**

Why am I getting up early every morning and going in to work to pay for the lifestyles of these other people? Well – this is how the Democrats are able to get elected. They buy votes from the people who are dependent on government by paying them off with money taken from people who work for a living. And they think that this Robin Hood redistribution of wealth is noble and compassion. I am “greedy” because I want to tax cuts to keep more of what I earn.

How well did Obama-style tax hikes on the rich work for Illinois?

January 25, 2012 | by Wintery Knight | Link | Original Link

Central United States
From the Wall Street Journal.

Excerpt:

> Run up spending and debt, raise taxes in the naming of balancing the budget, but then watch as deficits rise and your credit-rating falls anyway. That's been the sad pattern in Europe, and now it's hitting that mecca of tax-and-spend government known as Illinois.
>
> Though too few noticed, this month Moody's downgraded Illinois state debt to A2 from A1, the lowest among the 50 states. That's worse even than California. The state's cost of borrowing for $800 million of new 10-year general obligation bonds rose to 3.1%—which is 110 basis points higher than the 2% on top-rated 10-year bonds of more financially secure states.
>
> This wasn't supposed to happen. Only a year ago, Governor Pat Quinn and his fellow Democrats raised individual income taxes by 67% and the corporate tax rate by 46%. They did it to raise $7 billion in revenue, as the Governor put it, to "get Illinois back on fiscal sound footing" and improve the state's credit rating.
>
> So much for that. In its downgrade statement, Moody's panned Illinois lawmakers for "a legislative session in which the state took no steps to implement lasting solutions to its severe pension underfunding or to its chronic bill payment delays." An analysis by Bloomberg finds that the assets in the pension fund will

> only cover “45% of projected liabilities, the least of any state.” And—no surprise—in part because the tax increases have caused companies to leave Illinois, the state budget office confesses that as of this month the state still has $6.8 billion in unpaid bills and unaddressed obligations.
>
> It’s worth contrasting this grim picture with that of Wisconsin north of the border. Last winter Madison was occupied by thousands of union protesters trying to bully legislators to defeat Republican Governor Scott Walker’s plan to require government workers to pay a larger share of their health-plan costs, and to shore up the pension system by trimming future retirement liabilities. The reforms passed anyway.
>
> In contrast to the Illinois downgrade, Moody’s has praised Mr. Walker’s budget as “credit positive for Wisconsin,” adding that the money-saving reforms bring “the state’s finances closer to a structural budgetary balance.” As a result, Wisconsin jumped in Chief Executive magazine’s 2011 ranking of each state’s business climate—moving to 17th from 41st. Illinois dropped to 48th from 45th as ranked by the nation’s top CEOs.

And in Ohio, Republican Governor John Kasich also saw success.

Excerpt:

> Ohio’s new fiscal responsibility is getting noticed and rewarded.
>
> Standard & Poor’s upgraded the state’s credit forecast from “negative” to “stable,” in time for a $417 million bond sale last week to refinance at a lower interest rate and restructure debt.
>
> Ohio’s lean budget will pay off with lower costs for borrowing, saving taxpayers as much as $1 million or more over the course of a year, according to the state’s Office of Budget and Management. It’s like having a credit-card company lower its annual percentage rate: The borrower can either accelerate the payoff or spend the savings elsewhere.
>
> So essentially, cutting state programs spared money for state programs.
>
> This is vindication for the Kasich administration. When Gov. John Kasich took office this year, the state was $8 billion in the hole and its rainy-day fund totaled $1.78. That’s not a typo; Ohio barely had enough in the bank to buy itself a cup of coffee. A small one.

> […]Investors pay attention to these ratings, especially since Ohio stands out as other states continue to struggle. “There are a lot of jitters in the credit market; I can’t imagine it won’t be helpful,” said Robin Prunty, primary credit analyst with Standard & Poor’s.

> […]Most states still are struggling with the economic recovery and phasing out one-time money from the federal stimulus program that Kasich’s predecessor used to paper over the deficit. S&P’s revised outlook reflects its view that Ohio’s

> economy “is steadily recovering.”
>
> “The outlook revision reflects the state’s progress in moving toward structural budget balance through fiscal 2013 and the modest economic recovery under way,” its report says.

Republican tax policies work, and Democrat policies don’t. Taxing the rich sounds good, but it doesn’t help the poor. To help the poor, we need to encourage people with capital to risk it by engaging in enterprises for profit. That is what causes workers to be hired and wealth to be created – forming valuable products and services through ingenuity and labor. Workers who build skills and experience while working have more confidence and can be more productive, making them more free because they can succeed independently of government handouts.

How Barack Obama used taxpayer dollars to outsource green energy jobs

January 25, 2012 | by Wintery Knight | Link | Original Link

This is from Hans Bader at GlobalWarming.org.

He links to this ABC News story.

Excerpt:

> Despite all the talk of green jobs, the overwhelming majority of stimulus money spent on wind power has gone to foreign companies, according to a new report by the Investigative Reporting Workshop at the American University's School of Communication in Washington, D.C.
>
> Nearly $2 billion in money from the American Recovery and Reinvestment Act has been spent on wind power, funding the creation of enough new wind farms to power 2.4 million homes over the past year. But the study found that nearly 80 percent of that money has gone to foreign manufacturers of wind turbines.
>
> "Most of the jobs are going overseas," said Russ Choma at the Investigative Reporting Workshop. He analyzed which foreign firms had accepted the most stimulus money. "According to our estimates, about 6,000 jobs have been created overseas, and maybe a couple hundred have been created in the U.S." Even with the infusion of so much stimulus money, a recent report by American Wind Energy Association showed a drop in U.S. wind manufacturing jobs last year.
>
> […]Iberdrola, one of the largest operators of renewable energy worldwide, is based in Spain and has received the most U.S. stimulus dollars — $577 million. It buys some of its turbines from another Spanish manufacturer, Gamesa, which has a U.S. connection. Gamesa has two facilities to manufacture turbine blades in Pennsylvania, but the company said the market forced it to temporarily lay off nearly 100 workers.
>
> […]A Chinese company called A-power is helping to build a massive $1.5 billion wind farm in West Texas. The consortium behind the project expects to get $450 million in stimulus money.
>
> Walt Hornaday, an American partner on the project, said it would create some American jobs. "Our estimation," he said, "is that we are going to have on the order of 300 construction jobs just within the fence of the project."
>
> But that's in addition to 2,000 manufacturing jobs — many of them in China.

And this News Max story.

Excerpt:

> Gulf Oil CEO Joe Petrowski says President Barack Obama's weekend comments in

> Brazil that the United States looks forward to purchasing oil drilled for offshore by that nation “is rather puzzling,” and “hypocritical” as his administration has imposed a virtual moratorium on domestic drilling. The signal to purchase more foreign oil comes after the U.S. Export-Import Bank invested more than $2 billion with Brazil’s state-owned oil company, Petrobras, to finance exploration.
>
> “Any drilling, or any new production, especially production outside the Mideast – that is inherently unstable and probably is going to become more unstable as we move forward – is a positive,” Petrowski said Tuesday on Fox News.
>
> “But why Brazil, when we could have the jobs and foreign exchange in this country, is rather puzzling – and I’d say somewhat humorous,” Petrowski told Fox News’ Neal Cavuto. “What is it about Brazil that they have that we don’t have?

Read the rest here – there’s a lot more Obama outsourcing to read about.

Have you turned away from God? Here's what to do about it

January 25, 2012 | by Wintery Knight | Link | Original Link

A good foundational article from Kevin Alan Lewis. It explains what Christians believe about how people who turn away from God can be reconciled with God. The Bible calls turning away from God "sin", and it also talks about how to fix the sin problem, and so be saved from God's anger.

Summary:

> While the means of biblical salvation includes many concepts such as justification, adoption and regeneration, the objective of biblical salvation is easy to understand: to enjoy a loving, mentoring relationship with our Creator, the one true God. As Adam walked with God, so should we. But how can one restore a broken relationship with God?
>
> **The requirements for restoring a broken friendship are easy to understand but difficult for most to do. To restore a lost friendship, the offended person must be willing to forgive by bearing the harm caused by the transgressor, electing not to hold it against him if certain conditions are met. The conditions for forgiveness are that the offending party must repent, confess his sin and want to restore the relationship with the offended party. Since the goal of forgiveness is the restoration of a genuine friendship, the offending party must begin with repentance. When the sinner genuinely repents, confesses and receives the offer of forgiveness, the estranged parties reconcile, walking together again in righteous harmony. If anyone has ever lost and genuinely restored a meaningful friendship, they know this is the only way to do it.**
>
> One purely hypothetical illustration may help. If I screamed at my wife, calling her unmentionable names, my wife would rightly be offended and our intimate fellowship would surely be broken. So how would I return to a genuine state of e-harmony with my wife? First, my wife must be willing to bear the harm I caused her and not hold it against me. But to restore the relationship in any meaningful sense, I need to realize that what I did was wrong, repent, and confess my sin to my wife — preferably with symbols of my repentance in hand, such as flowers and candy! When these conditions are fulfilled, my wife will forgive me.
>
> So how does this relate to Jesus Christ as the only way? Simple. To restore the broken relationship with the one true God, the offended party, God, must be willing to bear the consequences of our sin. God accomplishes this by means of the Second Person of the Trinity assuming a full human nature, living a sinless life, and satisfying our penalty for sin on the cross. Sinners, the offenders, need

> to repent, confess and trust God’s offer of forgiveness. When we do, we are reconciled to God for the purpose of fellowship with him as his beloved children. This is biblical salvation.

Very often, people don’t reflect on how they treat God. Many of us are born in wealthy countries, and are relatively free of pain and suffering, with many years of leisure in which to puzzle about things. Yet many of us are content to go through life without giving any serious consideration big questions; does God exist? what is God like? what does God want from me? People know that the answers to those questions can mean the end of our autonomy, so we just don’t ask them – or we ask them and don’t answer them honestly.

God certainly provides enough evidence in nature and conscience to cause us to puzzle about his existence and character, but many of us don’t We want to do our own thing, and can’t be bothered to care about what anyone else thinks about it, including God. Maybe, especially God. This is not the way that we should be treating the person who created us and who has designed us to know him. This turning away from God is not good. There is a way for us to be reconciled with God, but we have to be reconciled with him in a way that is on his terms.

Public school punishes boy for writing editorial critical of gay adoption

January 25, 2012 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> A 15-year-old Wisconsin boy who wrote an op-ed opposing gay adoptions was censored, threatened with suspension and called ignorant by the superintendent of the Shawano School District, according to an attorney representing the child.
>
> […]Wegner, a student at Shawano High School, was asked to write an op-ed for the school newspaper about whether gays should be allowed to adopt. Wegner, who is a Christian, wrote in opposition. Another student wrote in favor of allowing gays to adopt.
>
> […]After the op-ed was published, a gay couple whose child attends the high school, complained.
>
> The school immediately issued an apology – stating Wegner's opinion was a "form of bullying and disrespect."
>
> "Offensive articles cultivating a negative environment of disrespect are not appropriate or condoned by the Shawano School District," the statement read. "We sincerely apologize to anyone we may have offended and are taking steps to prevent items of this nature from happening in the future."
>
> But Staver said what the school system did next was absolutely outrageous. He said the 15-year-old was ordered to the superintendent's office where he was subjected to hours of meetings and was accused of violating the school's bullying policy.
>
> "The superintendent called him ignorant and said he had the power to suspend him," Staver said. "He's using his position to bully this student. This is absolutely the epitome of intolerance."
>
> Staver said the boy's parents were never notified.
>
> At one point, Staver said the superintendent gave him a chance to say he regretted writing the column.
>
> "When Mr. Wegner stated that he did not regret writing it, and that he stood behind his beliefs, Superintendent Carlson told him that he 'had got to be one of the most ignorant kids to try to argue with him about this topic,'" Staver said.
>
> At that point, Staver said the superintendent told the boy that "we have the power to suspend you if we want to."
>
> The superintendent allegedly told Wegner that he was personally offended by Wegner's column.

Thoughtful Christians need to understand that their values are never going to be reflected in a secular public school system. Many public schools are run by unionized teachers and administrators who *must* support big government, because the bigger the government, the bigger their salaries. Quite often, public schools don't focus on making children educated so they can get jobs and be independent – they focus on making them favor bigger government.

Christians should not support parents being *forced* to pay into a failing public school system. Many Christian parents favor homeschooling and private schools. Why should they be forced to pay for failing public schools like the one in the story above? It's important for Christians to think clearly about education. Christians should favor school choice, a system in which parents get a voucher from the government and then can freely choose any school they want. If parents have the right to choose their school from many options, then schools will have to compete to provide what parents want.

Why does Warren Buffett pay less in taxes than his secretary?

January 26, 2012 | by Wintery Knight | Link | Original Link

Let's take a look at this article from the libertarian Cato Institute.

Excerpt:

> In 2007, Buffett said that he paid a 17.7 percent tax rate. Alan Reynolds notes that Buffett earns large amounts of capital gains, which are taxed at a maximum federal rate of 15 percent. People in the top income groups do report a lot of capital gains, which reduces their overall effective tax rate. However, capital gains are included in chart 1, above, and you can see that the top income groups still pay much higher tax rates than others on average. One reason is that a large amount of income at the top is small business income, which is hit by ordinary income tax rates of up to 35 percent.
>
> You have to go to the extreme top end of the income spectrum in order for capital gains realizations to really push down overall effective tax rates. The IRS publishes data for the 400 highest-income taxpayers. For these taxpayers, the average effective income tax rate in 2008 was 18.1 percent.
>
> Since the beginning of the income tax, we have nearly always had special treatment of capital gains for some very good reasons, as I discuss here. I point out that virtually all high-income nations recognize that capital gains are different and that special rules are needed. A number of OECD nations have long-term capital gains tax rates of zero, including New Zealand and the Netherlands.
>
> Another important aspect to this debate regards the link between capital gains and dynamism in the economy and dynamism in tax payments. The political left makes it seem as if there were a permanent aristocracy at the top end of the income spectrum in America. However, IRS data show the exact opposite—the top 400 are a highly dynamic group. Notice first in IRS Table 1 that 57 percent of AGI for these taxpayers is capital gains. That is a key reason why the people in this group are constantly changing—large capital gains realizations are occasional events that rocket people to the top of the AGI heap. One example is when an entrepreneur sells her successful and longstanding business and retires.
>
> The last table in the IRS document reveals the dynamism. The IRS traced the identities of all taxpayers who showed up in the top 400 anytime between 1992 and 2008. The IRS found that there were a huge 3,672 different taxpayers who appeared during that timeframe. Of these 3,672, fully 73 percent only appeared once in the top 400! And 85 percent appeared only once or twice.
>
> So at the top end of our capitalist system is a continual generation of new wealth and new wealthy people, and that dynamism reflects the still-energetic and free-

> wheeling nature of our economy.

Another thing to keep in mind is that Warren Buffett is a big hypocrite.

Excerpt:

> Two weeks ago, when billionaire Warren Buffett called for higher taxes on rich people like him, the liberal media predictably gushed and fawned.
>
> Yet when Americans for Limited Government revealed last week that Buffett's company Berkshire Hathaway has been in an almost decade-long dispute with the IRS over how much taxes it owes, these same press members couldn't care less:
>
> According to Berkshire Hathaway's own annual report — see Note 15 on pp. 54-56 — the company has been in a years-long dispute over its federal tax bills.
>
> According to the report, "We anticipate that we will resolve all adjustments proposed by the U.S. Internal Revenue Service ('IRS') for the 2002 through 2004 tax years at the IRS Appeals Division within the next 12 months. The IRS has completed its examination of our consolidated U.S. federal income tax returns for the 2005 and 2006 tax years and the proposed adjustments are currently being reviewed by the IRS Appeals Division process. The IRS is currently auditing our consolidated U.S. federal income tax returns for the 2007 through 2009 tax years."
>
> Americans for Limited Government researcher Richard McCarty, who was alerted to the controversy by a federal government lawyer, said, "The company has been short-changing the tax collection agency for much of the past decade. Mr. Buffett's company has not fully settled its tax bills from 2002-2009. Yet he says he'd happily pay more. Except the IRS has apparently been asking him to pay more going on nine years."

As if that wasn't bad enough, Obama's cancellation of the Keystone XL pipeline will benefit Buffett.

Excerpt:

> Some 20,000 middle-class jobs could have immediately come from Obama's approval of the Keystone XL pipeline from Canada, with hundreds of thousands more created over the project's lifetime. Yet he shut it down, even while he claimed in his address that he supported an "all of the above" energy strategy.
>
> As Bosanek might be aware, her boss stands to benefit handsomely from that decision, much as other Obama supporters, like the campaign donors who owned Solyndra and other green enterprises, cleaned up from the diversion of tax dollars from the middle class into green boondoggles.
>
> Keystone XL was designed to transport oil from the Canadian tar sands to the Gulf of Mexico. It apparently also would have enabled oil producers in the booming oil fields of North Dakota to ship their product to Gulf refineries more

> cheaply.
>
> Keystone XL would help to advance further development of the oilfields in the Bakken Shale formation, which has led to an economic boom in North Dakota.
>
> Plans were under way to tie into Keystone XL and ship increasing amounts of Bakken oil south through the pipeline to Gulf Coast refineries.
>
> Would we rather get our oil from Canada and North Dakota or from the Middle East through the Strait of Hormuz?
>
> Now Bakken producers say they'll be dependent on railway tank cars — Buffett's railway tank cars.
>
> Many of the rail shipments from the Bakken fields are being handled by Burlington Northern & Santa Fe Railway Co., which has more than 1,000 miles of track in the region.
>
> Buffett's holding company, Berkshire Hathaway, has agreed to buy BNSF in a deal valuing the railroad at $34 billion. Berkshire already owns 22% of Burlington Northern and will pay $100 a share in cash and stock for the rest.
>
> It is the American people who should benefit from our government's energy policies, not just billionaires and friends of Obama like Warren Buffett.
>
> Now, that would be fair.

And finally, Warren Buffett's secretary pays a lot in taxes because she has a huge income, which is highly taxed. Her annual income is at least $200,000.

Who pays the cost of raising taxes on imported goods?

January 26, 2012 | by Wintery Knight | Link | Original Link

The Heritage Foundation explains the consequences of tariffs for *all* the groups who are affected.

Excerpt:

> "Over a thousand Americans are working today because we stopped a surge in Chinese tires," asserted President Obama in his State of the Union Address. President Obama referred to steep tariffs that his Administration imposed on tires imported from China.Not everyone sees it that way. According to the Tire Industry Association (TIA):
>
> TIA believes this was a politically motivated decision that will end up costing more jobs than it saves. These tariffs will not bring back the jobs that the union claims have been lost; it will not create any new tire manufacturing jobs, and it will most likely result in the loss of thousands of retail tire industry jobs here in the U.S., affecting everyone from the shop that services your tire to the tire wholesalers—many of whom are small businesspeople struggling to stay afloat in this economy. This, all during a time when we can ill afford to be losing more U.S. jobs.
>
> The Association pointed out that there is more at stake than dollars and cents:
>
> This tariff will price these tires out of reach of many consumers, and will lead to a tightening in the remaining supply of lower-cost tires. Also, given that the lower-cost tires imported from China help those most vulnerable in this current economy—working-class citizens—we are deeply concerned that many consumers may delay or even defer replacing their tires when necessary, thus creating a potential safety hazard on America's roads.

When you put a tax of lower-priced goods, the people who are hurt the most are *working class workers.* During a recession, people have even less money to spend and they need to be able to have the option of buying cheaper foreign goods. Tariffs take away that option, and force families to pay higher prices for the things they need.

Two things you can do to make your marriage last

January 26, 2012 | by Wintery Knight | Link | Original Link

First, don't have sex before you're married.

Story from Life Site News.

Excerpt:

> Couples who reserve sex for marriage enjoy greater stability and communication in their relationships, say researchers at Brigham Young University.
>
> A new study from the Mormon college found that those couples who waited until marriage rated their relationship stability 22 percent higher than those who started having sex in the early part of their relationship. The relationship satisfaction was 20 percent higher for those who waited, the sexual quality of the relationship was 5 percent better, and communication was 12 percent better.
>
> The study, published in the American Psychological Association's Journal of Family Psychology, involved 2,035 married individuals who participated in a popular online marital assessment called "RELATE." From the assessment's database, researchers selected a sample designed to match the demographics of the married American population. The extensive questionnaire included the question "When did you become sexual in this relationship?"
>
> Couples that became sexually involved later in their relationship – but prior to marriage – reported benefits that were about half as strong as those who waited for marriage.
>
> […]Sociologist Mark Regnerus of the University of Texas at Austin, who was not involved in the study, responded to its findings, saying that "couples who hit the honeymoon too early – that is, prioritize sex promptly at the outset of a relationship – often find their relationships underdeveloped when it comes to the qualities that make relationships stable and spouses reliable and trustworthy." Regnerus is the author of *Premarital Sex in America*, a book forthcoming from Oxford University Press.
>
> Because religious belief often plays a role for couples who choose to wait, Busby and his co-authors controlled for the influence of religious involvement in their analysis.
>
> "Regardless of religiosity, waiting helps the relationship form better communication processes, and these help improve long-term stability and relationship satisfaction," Busby said.

Second, make sure you attend church regularly after you're married.

From Citizen Link.

Excerpt:

> It’s a number that is trumpeted from the rooftops — and the pulpit: Half of marriages among Christians and non-Christians alike end in divorce.
>
> But the reality is that Christians who attend church regularly get divorced at a much lower rate.
>
> Professor Bradley Wright, a sociologist at the University of Connecticut, found that among people who identify as Christians but rarely attend church, 60 percent have been divorced. Of those who attend church regularly, 38 percent have been divorced.
>
> W. Bradford Wilcox, a leading sociologist at the University of Virginia and director of the National Marriage Project, found a nearly identical spread between “active conservative Protestants” who regularly attend church and people with no religious affiliation.
>
> Professor Scott Stanley from the University of Denver, who is working on the Oklahoma Marriage Initiative, said couples with a vibrant religious faith have more and higher levels of the qualities that marriages need to avoid divorce.
>
> “Whether young or old, male or female, low-income or not, those who said that they were more religious reported higher average levels of commitment to their partners, higher levels of marital satisfaction, less thinking and talking about divorce and lower levels of negative interaction,” he said. “These patterns held true when controlling for such important variables as income, education and age at first marriage.”

I think that young people who are serious about having a successful marriage need to study research to find out what works (chastity, pre-marital counseling, church attendance, etc.) and then demand that prospective mates demonstrate those skills before the wedding.

UPDATE: Commenter Mbelina has a third thing to do: Christians should choose to marry other Christians who take their Christian worldview seriously.

Physicist Michael Strauss discusses Christianity and science at Stanford university

January 26, 2012 | by Wintery Knight | Link | Original Link

This is one of my favorite lectures, by one of the people I admire the most for his scientific work and robust, evangelical Christian faith.

About Michael Strauss:

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the

> Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of *B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to "faculty members who excel in all their professional activities and who relate those activities to the students they teach and mentor."

He seems to have done a fine job of integrating his faith with a solid career in physics research. It would be nice if we were churning out more like him, but that would require the church to get serious about the integration between science and faith.

The lecture:

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips, one of which I was able to try out recently at IHOP, and it worked.

You can also listen to the audio here. (MP3)

Summary:

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been

tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

Rick Santorum destroys Mitt Romney on RomneyCare in CNN debate

January 27, 2012 | by Wintery Knight | Link | Original Link

Is Rick Santorum right to criticize Romneycare as being essential a state-level version of Obamacare?

Reason magazine explains the similarities between Obamacare and Romneycare.

Excerpt:

> ObamaCare, which includes a health insurance mandate, is a near carbon copy of RomneyCare: a hefty Medicaid expansion coupled to equally large middle-class insurance subsidies, new regulations that all but turn health insurance into a public utility, and an individual mandate to buy a private insurance plan. Indeed, the same Obama administration that Romney accused of being fundamentally anti-American has on multiple occasions explicitly cited the plan that Romney signed into law as the direct model for their plan.
>
> Romney's only real contrast between his plan and the president's plan boiled down to a single, simple distinction: Obama's overhaul was a federal overhaul; Romney's was state-based. Romney would have us believe that the same system of mandates and regulations that constitutes an unconscionable imposition on individual liberty at the federal level is somehow a natural and great part of the American way of life at the state level.

Is Rick Santorum right about the number of "free riders" who choose to pay a fine and get free health care? Of course.

> As *The Wall Street Journal* pointed out this morning:
>
> Uncompensated hospital care [in Massachusetts] rose 5% from 2008 to 2009, and 15% from 2009 to 2010, hitting $475 million (though the state only paid out $405 million). "Avoidable" use of emergency rooms—that is, for routine care like a sore throat—increased 9% between 2004 and 2008.
>
> Romney also decried ObamaCare for failing to lower health costs. He's right. But the overbudget RomneyCare doesn't either: Indeed, its designers have explicitly admitted that the state's plan was to increase coverage first and hope to figure out how to control spending sometime later.

National Review cites a Boston Herald article to explain what RomneyCare did to Massachusetts:

> For Mitt Romney, who's been campaigning on his ability to create jobs, this study from the conservative Beacon Hill Institute can't be welcome. From the *Boston Herald*:

> The Beacon Hill Institute study found that, on average, Romneycare:
>
> - cost the Bay State 18,313 jobs;
> - drove up total health insurance costs in Massachusetts by $4.311 billion;
> - slowed the growth of disposable income per person by $376; and
> - reduced investment in Massachusetts by $25.06 million.

Here's another must-see clip from my friend Tim:

And another one I found for Jeremy:

Here's the full transcript of the debate.

Mitt Romney

- Mitt Romney's tax returns would make him lose the election to Obama
- Does Mitt Romney's Romneycare health care plan fund abortion with taxpayer dollars?
- John Hawkins writes the most scathing anti-Romney column EVER
- Santorum and Gingrich expose Romney's liberal record in Sunday's NBC debate
- Mitt Romney raised taxes by $740 million while he was governor of Massachusetts
- Mitt Romney and Rick Santorum: who has the pro-life record on abortion?
- RINO Mitt Romney now open to European-style VAT tax
- Is Mitt Romney a flip-flopper? What are his flip-flops?
- RINO Mitt Romney deploys another RINO John Sununu to attack Newt Gingrich
- Mitt Romney supports the anti-Christian and anti-business ENDA law
- Mitt Romney gaffe: Romney fails miserably in interview with Bret Baier
- Jon Huntsman's anti-Romney ads are awesome
- Mitt Romney's political views on gay marriage, abortion and global warming
- Mitt Romney flip-flop videos: flat tax, abortion, health care, public sector unions, global warming
- Mitt Romney on global warming, climate change, environmental regulations
- Mitt Romney on abortion and stem cell research in his own words
- White House used Mitt Romney's Romneycare as a blueprint for Obamacare
- Mitt Romney on the issues: Mitt Romney political views and positions in 2012

Rick Santorum

- Rick Santorum gets endorsements from James Dobson and John Stemberger
- Wall Street Journal: Rick Santorum is a supply-sider for the working man
- Rick Santorum would not stand idle while Iran develops nuclear weapons
- 150 evangelical leaders agree to endorse Rick Santorum after two-day conference
- Why Christians and social conservatives should vote for Rick Santorum
- Rick Santorum's pro-family economic plan TRIPLES the child tax deduction
- Is Rick Santorum conservative or liberal? What are Rick Santorum's political views?
- Rick Santorum helps liberal college students to understand the logic of marriage

- George Will: Rick Santorum connects with the working class
- Video and transcript of Rick Santorum's inspiring Iowa victory speech
- Rick Santorum for President of the United States
- Mitt Romney and Rick Santorum: who has the pro-life record on abortion?
- Rick Santorum wins Fox News Republican primary debate (with video)
- Rick Santorum explains why socialism is hostile to the family

Indiana passes right-to-work law and is now open for business – and jobs

January 27, 2012 | by Wintery Knight | Link | Original Link

Central United States
From GOP USA.

Excerpt:

> Indiana is poised to become the first right-to-work state in more than a decade after the Republican-controlled House passed legislation on Wednesday banning unions from collecting mandatory fees from workers.
>
> It is yet another blow to organized labor in the heavily unionized Midwest, which is home to many of the country's manufacturing jobs. Wisconsin last year stripped unions of collective bargaining rights.
>
> The vote came after weeks of protest by minority Democrats who tried various tactics to stop the bill. They refused to show up to debate despite the threat of fines that totaled $1,000 per day and introduced dozens of amendments aimed at delaying a vote. But conceding their tactics could not last forever because they were outnumbered, they finally agreed to allow the vote to take place.
>
> The House voted 54-44 Wednesday to make Indiana the nation's 23rd right-to-work state. The measure is expected to face little opposition in Indiana's Republican-controlled Senate and could reach Republican Gov. Mitch Daniels' desk shortly before the Feb. 5 Super Bowl in Indianapolis.
>
> "This announces especially in the Rust Belt, that we are open for business here," Republican House Speaker Brian Bosma said of the right-to-work proposal

> that would ban unions from collecting mandatory representation fees from workers.
>
> Republicans recently attempted similar anti-union measures in other Rust-Belt states like Wisconsin and Ohio where they have faced massive backlash. Ohio voters overturned Gov. John Kasich's labor measures last November and union activists delivered roughly 1 million petitions last week in an effort to recall Wisconsin Gov. Scott Walker.
>
> Indiana would mark the first win in 10 years for national right-to-work advocates who have pushed unsuccessfully for the measure in other states following a Republican sweep of statehouses in 2010. But few right-work states boast Indiana's union clout, borne of a long manufacturing legacy.

Every time one state enacts a right-to-work law, it puts competitive pressure on other states. The reason why is because businesses are attracted to right-to-work states, and they will prefer to expand there, rather than in union-friendly states. In fact, some companies will just up and move to right-to-work states, leaving the union-friendly states with no employers at all.

36 Obama aides owe $833,000 to IRS, federal employees owe $3.4 billion

January 27, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> How embarrassing this must be for President Obama, whose major speech theme so far this campaign season has been that every single American, no matter how rich, should pay their "fair share" of taxes.
>
> Because how unfair — indeed, un-American — it is for an office worker like, say, Warren Buffet's secretary to dutifully pay her taxes, while some well-to-do people with better educations and higher incomes end up paying a much smaller tax rate.
>
> Or, worse, skipping their taxes altogether.
>
> A new report just out from the Internal Revenue Service reveals that 36 of President Obama's executive office staff owe the country $833,970 in back taxes. These people working for Mr. Fair Share apparently haven't paid any share, let alone their fair share.
>
> Previous reports have shown how well-paid Obama's White House staff is, with 457 aides pulling down more than $37 million last year.
>
> […]The report finds that thousands of federal employees owe the country more than $3.4 billion in back taxes. That's up 3% in the past year.

Democrats are actually quite hypocritical. They say one thing in public, in order to give the appearance of being generous and compassion, but in private they do something completely different. I wrote more about hypocrisy on the left in this post.

Michael Licona and Shane Puckett debate the resurrection of Jesus

January 27, 2012 | by Wintery Knight | Link | Original Link

This debate has got a lot of comments on Apologetics 315.

Details:

On January 11, 2012, Mike Licona debated agnostic Shane Puckett on the topic "Did Jesus Rise from the Dead?" Shane was ranked #32 in the world as a collegiate debater in 2000 and has trained 3 national debate champions. The debate was held at the First Baptist Church of West Monroe.

Dr. Licona takes the affirmation and speaks first. I have not seen the debate, but people seem to think that Michael Licona did well.

Full Debate MP3 Audio here *(1hr 45min)*

And you can visit Mike Licona's web site here.

Consider this your Friday night fun!

(Or you can watch Horatio Hornblower with Gregory Peck)

Fitch cuts credit ratings on 6 more European nations

January 28, 2012 | by Wintery Knight | Link | Original Link

From Zero Hedge.

Excerpt:

> Fitch Ratings-London-27 January 2012: Fitch Ratings has today concluded its review of the six eurozone sovereigns it placed on Rating Watch Negative (RWN) on 16 December 2011.
>
> The rating actions on the long-term (LT) and short-term (ST) Issuer Default Ratings (IDRs) are as follows:
>
> -Belgium LT IDR downgraded to 'AA' from 'AA+'; Negative Outlook; ST IDR affirmed at 'F1+'
> -Cyprus LT IDR downgraded to 'BBB-' from 'BBB'; Negative Outlook; ST IDR affirmed at 'F3'
> -Ireland LT IDR affirmed at 'BBB+'; Negative Outlook; ST IDR affirmed at 'F2'
> -Italy LT IDR downgraded to 'A-' from 'A+'; Negative Outlook; ST IDR downgraded to 'F2' from 'F1'
> -Slovenia LT IDR downgraded to 'A' from 'AA-'; Negative Outlook; ST IDR downgraded to 'F1' from 'F1+'
> – Spain LT IDR downgraded 'A' from 'AA-'; Negative Outlook; ST IDR downgraded to 'F1' from 'F1+'
>
> All the ratings have been removed from RWN, with the Negative Outlook on all six countries indicating a slightly greater than 50% chance of a downgrade over a two-year time horizon.
>
> […]**The Negative Outlooks on eight eurozone countries (the six sovereigns in this review along with 'AAA'-rated France and 'BB+'-rated Portugal) primarily reflect the risk that the crisis could intensify further**.

Now consider that Barack Obama is taking us down the same road as these European welfare states. The problem with socialism is that you eventually run out of other people's money. That's what is happening in Europe, and it's going to happen here, unless we get serious about who we elect as President.

My previous post on S&P downgrades of the credit ratings of various European countries.

16 scientists explain why global warming is not a threat

January 28, 2012 | by Wintery Knight | Link | Original Link

From the Wall Street Journal. (H/T Levin)

Excerpt:

> Perhaps the most inconvenient fact is the lack of global warming for well over 10 years now. This is known to the warming establishment, as one can see from the 2009 "Climategate" email of climate scientist Kevin Trenberth: "The fact is that we can't account for the lack of warming at the moment and it is a travesty that we can't." But the warming is only missing if one believes computer models where so-called feedbacks involving water vapor and clouds greatly amplify the small effect of CO2.
>
> The lack of warming for more than a decade—indeed, the smaller-than-predicted warming over the 22 years since the U.N.'s Intergovernmental Panel on Climate Change (IPCC) began issuing projections—suggests that computer models have greatly exaggerated how much warming additional CO2 can cause. Faced with this embarrassment, those promoting alarm have shifted their drumbeat from warming to weather extremes, to enable anything unusual that happens in our chaotic climate to be ascribed to CO2.

And:

> Although the number of publicly dissenting scientists is growing, many young scientists furtively say that while they also have serious doubts about the global-warming message, they are afraid to speak up for fear of not being promoted—or worse. They have good reason to worry. In 2003, Dr. Chris de Freitas, the editor of the journal Climate Research, dared to publish a peer-reviewed article with the politically incorrect (but factually correct) conclusion that the recent warming is not unusual in the context of climate changes over the past thousand years. The international warming establishment quickly mounted a determined campaign to have Dr. de Freitas removed from his editorial job and fired from his university position. Fortunately, Dr. de Freitas was able to keep his university job.
>
> This is not the way science is supposed to work, but we have seen it before—for example, in the frightening period when Trofim Lysenko hijacked biology in the Soviet Union. Soviet biologists who revealed that they believed in genes, which Lysenko maintained were a bourgeois fiction, were fired from their jobs. Many were sent to the gulag and some were condemned to death.
>
> Why is there so much passion about global warming, and why has the issue become so vexing that the American Physical Society, from which Dr. Giaever resigned a few months ago, refused the seemingly reasonable request by many

> of its members to remove the word “incontrovertible” from its description of a scientific issue? There are several reasons, but a good place to start is the old question “cui bono?” Or the modern update, “Follow the money.”
>
> Alarmism over climate is of great benefit to many, providing government funding for academic research and a reason for government bureaucracies to grow. Alarmism also offers an excuse for governments to raise taxes, taxpayer-funded subsidies for businesses that understand how to work the political system, and a lure for big donations to charitable foundations promising to save the planet. Lysenko and his team lived very well, and they fiercely defended their dogma and the privileges it brought them.

Read the whole thing! This is a must-read.

UPDATE: My friend Neil Simpson has found another recent study showing that there has been no significant global warming for 15 years – and the numbers come from the British Met Office, and the University of East Anglia (home of Climategate).

Herman Cain endorses Newt Gingrich

January 29, 2012 | by Wintery Knight | Link | Original Link

Herman Cain gives Newt Gingrich endorsement
From the liberal Washington Post. (H/T Richard)

Excerpt:

> Businessman Herman Cain threw his support to Republican presidential contender Newt Gingrich late Saturday.
>
> The move by the former GOP candidate and tea-party favorite comes three days before the Florida primary, at a moment when Gingrich is badly in need of something to rekindle the momentum he gained in the wake of his South Carolina primary victory.
>
> […]**Cain is the latest in a series of popular conservative figures to back the former House speaker, while much of the GOP establishment is marshaling against him. Among Gingrich's other recent supporters are former Alaska governor Sarah Palin; his onetime presidential rival, Texas Gov. Rick Perry; and former senator Fred Thompson (Tenn.)**
>
> […]He remains popular today among grassroots conservatives. He demonstrated particular popularity in Florida, where he earned a surprising win of a straw poll last summer — and launched his dramatic, if short-lived, rise to the top of the field.
>
> […]Gingrich said he hopes Cain will co-chair a commission to lead the policy discussion on the economy and taxes. He compared the idea to his request that Perry lead a commission on the 10th Amendment, which he proposed when Perry endorsed him in advance of last weekend's South Carolina primary.
>
> "I realize that as a co-chair fo a commission like that, there would be a little thing called 9-9-9 that would be brought in and put on the table. So I fully expect that," Gingrich said.

Gingrich also just got endorsed by the Florida Tea Party. He already had the endorsement of many other Tea Party groups nationwide.

I still like Rick Santorum better than Gingrich, because of his activism on social issues, but I admire the way that Gingrich is attracting so many endorsements from high profile conservatives. Nobody wants Romney to be the nominee except for Democrats , Barack Obama and the mainstream media, including Fox News.

A third Obama-subsidized green energy firm is bankrupt after $118.5 million loan

January 29, 2012 | by Wintery Knight | Link | Original Link

CNS News explains how well stimulus spending stimulates the economy.

Excerpt:

> The third federally subsidized green energy company to declare bankruptcy seems to indicate a pattern, said Rep. Cliff Stearns, chairman of the House Energy and Commerce subcommittee on oversight and investigations.
>
> "One bankruptcy may be a fluke, two could be coincidence, but three is a trend," Stearns said in a written statement. "Our investigation continues, and we are working to ensure taxpayers never are never again stuck paying hundreds of millions of dollars because of the administration's risky bets."
>
> Ener1, which makes batteries for electric vehicles, announced Thursday it had filed for Chapter 11 bankruptcy protection. The company had been awarded a $118.5 million from the Energy Department through the American Recovery and Reinvestment Act, better known as the stimulus.
>
> The Obama administration has already been under fire for a $535 million stimulus-funded loan it made to California-based solar panel company Solyndra, which filed for Chapter 11 bankruptcy protection last fall before being raided by the FBI. The House Energy and Commerce Committee has been investigating the Solyndra loan.Also late last fall, the Massachusetts-based Beacon Power, green energy storage plant that got $43 million in stimulus funds, filed for Chapter 11 bankruptcy protection.
>
> Ener1 announced the Chapter 11 filing one year to the day that Vice President Joe Biden visited a Greenville, Ind. plant on Jan. 26, 2011.

If we want the economy to do well, then we need to elect someone who understands free market capitalism – not a socialist community organizer. Let the private sector create jobs. They know how to compete. They know how to survive. They know how to give customers what they want. They know how to be efficient.

Courting rules: how men use self-control to make relationships count for God

January 29, 2012 | by Wintery Knight | Link | Original Link

Consider this piece of research from Medical News Today. (H/T Uncommon Descent)

Excerpt:

> Thinking about religion gives people more self-control on later, unrelated tasks; according to results from a series of recent Queen's University study.
>
> "After unscrambling sentences containing religiously oriented words, participants in our studies exercised significantly more self-control," says psychology graduate student and lead researcher on the study, Kevin Rounding.
>
> Study participants were given a sentence containing five words to unscramble. Some contained religious themes and others did not. After unscrambling the sentences, participants were asked to complete a number of tasks that required self-control – enduring discomfort, delaying gratification, exerting patience, and refraining from impulsive responses.
>
> Participants who had unscrambled the sentences containing religious themes had more self-control in completing their tasks.
>
> "Our most interesting finding was that religious concepts were able to refuel self-control after it had been depleted by another unrelated task," says Mr. Rounding. "In other words, even when we would predict people to be unable to exert self-control, after completing the religiously themed task they defied logic and were able to muster self-control."
>
> "Until now, I believed religion was a matter of faith; people had little 'practical' use for religion," Mr. Rounding explains. "This research actually suggests that religion can serve a very useful function in society. People can turn to religion not just for transcendence and fears regarding death and an after-life but also for practical purposes."

So why would religious people have more self-control than non-religious people? Speaking as a Christian, I would argue that self-control is not a by-product of religion, but that it is a tool used by Christians to achieve certain ends that fit with the Christian worldview.

First, let's look at how people who don't have self-control operate. I have been chatting with some friends recently about the lifestyle that people get into when they get away from their parents for the first time. (Assuming the parents don't take education and apologetics seriously). The fun lifestyle, it was explained to me, goes something like this:

1. A bunch of friends meet in a bar
2. They drink a lot, listen to music and dance around

3. They meet people and have conversations in which the men are careful not to express any moral judgments, religious convictions or conservative political views to the women
4. They gradually get more and more drunk, and it gets later and later
5. The friends retire to different people's houses in order to hook-up, which involves anything from kissing to intercourse
6. They keep doing this, there is no structured courting and no parental oversight, and occasionally people move in together or have kids out of wedlock by hooking up
7. Some of these children are aborted in order to keep the woman free for work and having more fun
8. The children who are born are often raised fatherless, causing all kinds of damage on them, especially making the girls prone to have sex much too early and the boys more violent
9. Any marriages that emerge break up shortly after since no one is willing to sacrifice for the marriage or the children
10. Government expands to address the broken homes with more police, day care, welfare, etc.

I never really knew much about this until recently when some of the people who read my blog have been explaining it all to me. The thing that strikes me the most about what secular people do is that they have no agenda for God when they go out and meet people – especially when it's men talking to women. They don't bring their relationships or group activities inline with religion, and so there is no reason to be self-controlled – they have no plan that they are are trying to achieve, they are just there to have fun.

Now what about Christians? When I go out with my male friends, we are not drinking anything – we're going to play a sport like racquetball/squash or something and then we are going to go to a restaurant to eat and talk about apologetics and science and war and education and investments and parenting and education and the threat of Islamic fundamentalism. After that, we might go back to someone's house to play video games or play pool or watch a debate and discuss that. But always we have an agenda – we are trying to build each other up in our Christian lives and planning different activities like conferences, debates, etc.

But when dealing with women, who are very often influenced by feminism these days, it's different. Most men seem to think that if a woman has sex with them, that this is some great affirmation of them. I don't think that and my friends don't think that. I have learned from women that they give up sex as a way to control men, to make them hang around and buy them things, but without having to be led by the man. Women who have been influenced by feminism *hate* the idea that men will tell them to read books, act morally, honor their obligations to men and children, develop religious convictions that exclude others and make them unpopular, mentor other Christians, and so on. They want to have men around, but they don't want to be told not to act selfishly/irresponsibly/amorally.

Sex is a tool that feminist women use in order to get men to "like" them, without having to let men do what men do – lead, provide, set moral boundaries, defeat lies, and fit the woman to a plan so that she can help him achieve it. So the bottom line is that a woman giving me sex is no good for me – in fact, it would be bad. It would be a way for her to control me and to prevent me from having the leverage to lead her and fit her to my plan – a plan that includes a stable home for raising children who will have an influence. Instead of standing her up with duties and obligations (read this book, stop spending money, debate your non-Christian friends), I would just shut up and let her continue to let her act in ways that are no good for marriage and parenting. Men with plans understand what women are for, and the thing that we are looking for is not sex, but help. We need someone to help us achieve our plan.

So that brings us back to the topic of the post. The reason why I don't play the hook-up game is because it gets me nothing. I cannot get a woman to do the things I need her to do by giving her leverage over me. When you first meet a woman, she is very likely not to be ready to do what you need her to do in a marriage – she needs to be mentored. Right from the start, I want her to know that what I am offering her is the ability to do useful work, to achieve important goals, and work together with someone who is supportive, appreciative, thoughtful, romantic, devoted, faithful, attentive and caring over a long period of time. And the way that I communicate that I am not here just to provide women with fun is by giving them tasks to do right from the start, and making it clear to them why I need them to do things.

Back to the original topic, I hope that this makes clear why religious people exhibit self-control when secular left people do not. Christian men have a goal for our relationships with women. We need them to support us in our plans by having particular skills and performing particular tasks. During the courtship, men refrain from sex to prevent a woman from escaping from her obligations to get those skills and train to perform those tasks. To have sex is to give up leadership in the relationship and to let women control the relationship. And when women control the relationship, it means that the goal of the relationship is almost always going to be to please them – and not God.

Christian men should never give up control of the relationship by giving up sobriety and chastity, because we know that relationships work better when men lead and emphasize what men care about most: morality, reason, chastity, evidence, theology, apologetics, marriage, family, parenting, free market capitalism, personal responsibility, law and order, illegal immigration, protecting the unborn, national security, traditional marriage, the debt crisis, etc. Self-control is the tool we use to lovingly prepare women for the tasks that we need them to perform – tasks that we often cannot perform ourselves – and always with the higher goal of making the relationship please God by achieving something for him.

Montreal Muslims found guilty of first degree murder in Shafia trial

January 29, 2012 | by Wintery Knight | Link | Original Link

From the National Post. (H/T Blazing Cat Fur)

Excerpt:

> After Canada's first mass-honour-killings trial, three members of a Montreal family have all been found guilty of first-degree murder in the drowning deaths of four other family members — including three teenage sisters.
>
> A jury on Sunday handed down its guilty verdicts for Mohammad Shafia and Tooba Mohammad Yahya, as well as their 21-year-old son, Hamed.
>
> They had been charged with murder after the bodies of three Shafia sisters — Zainab, 19, Sahar, 17, and 13-year-old Geeti — were discovered in a submerged vehicle in a canal near Kingston, in June 2009.
>
> Also in the vehicle was Rona Amir Mohammad, the 52-year-old first wife of Shafia, whom he married in his native Afghanistan before the polygamous family moved to Canada in 2007 and settled in Montreal.
>
> A conviction for first-degree murder carries with it an automatic life sentence with no chance of parole for 25 years.
>
> […]A dozen independent witnesses — including Montreal police, social workers, teachers and school officials — testified the girls feared their father and even some of their siblings, who they believed were spying on them, and were depressed and desperate to get away.
>
> On wiretap recordings played for jurors, Shafia called his daughters "whores," "filthy" and "rotten children" who betrayed the family and Islam and did "cruelty" to Shafia by secretly taking boyfriends and by wearing revealing clothes.
>
> Prosecutors alleged that the victims died in an honour killing orchestrated by Shafia to cleanse the shame he felt from the conduct of his daughters.
>
> The trial also heard that Shafia's first wife, who was living in Canada illegally, wanted a divorce from Shafia and was supportive of the daughters who were dating.

Blazing Cat Fur also points out this Montreal Gazette article, which says that the relatives of the Shafia murderers *approve* of honor killings.

Like the UK, Canada has major, major problems with immigrants who are not integrated properly into Western culture and values. The Liberal government that was in power for decades was always pushing for "diversity" and "multiculturalism", just like the UK Labour Party. Liberal professors, like those at Queen's University in Kingston, are even

pushing for Canada to adopt polygamy, in order to respect the cultural beliefs of Muslims.

In Canada, polygamous Muslims can already collect multiple welfare checks for their multiple wives.

Excerpt:

> Hundreds of [Greater Toronto Area] Muslim men in polygamous marriages — some with a harem of wives — are receiving welfare and social benefits for each of their spouses, thanks to the city and province, Muslim leaders say.
>
> Mumtaz Ali, president of the Canadian Society of Muslims, said wives in polygamous marriages are recognized as spouses under the Ontario Family Law Act, providing they were legally married under Muslim laws abroad.
>
> "Polygamy is a regular part of life for many Muslims," Ali said yesterday. "Ontario recognizes religious marriages for Muslims and others."
>
> He estimates "several hundred" GTA husbands in polygamous marriages are receiving benefits. Under Islamic law, a Muslim man is permitted to have up to four spouses.
>
> However, city and provincial officials said legally a welfare applicant can claim only one spouse. Other adults living in the same household can apply for welfare independently.
>
> The average recipient with a child can receive about $1,500 monthly, city officials said.

This is another situation where liberal Toronto lawmakers want to support "multiculturalism" and "diversity".

Oh, and did you know that multiculturalists also support sex-selection abortions? It turns out that sex-selection abortions are very popular in non-Western nations, like India. Yes – it's another area where leftists side with "multiculturalism" and "diversity". One wonders what multiculturalists think of honor killings and burning widows on the funeral pyres of their husbands. After all, if you accept all views on moral issues as valid, then you approve of all of these views as valid. That's what moral relativism and tolerance means – celebrating everyone's point of view as equally valid.

Well, I for one think that honor killings and sex-selection abortions and widow burning and polygamy are all morally wrong. I guess I am not multicultural and diverse enough.

You can read more about the Shafia trial and the verdict here at Blazing Cat Fur.

Paul Ryan takes Obama's State of the Union speech apart

January 30, 2012 | by Wintery Knight | Link | Original Link

Budget hawk Paul Ryan on Fox News Sunday.

Snippet 1:

> "The irony of this is the president's policies do the exact opposite. We basically have this. The president can't run on his record. It's a miserable record. He is not going to change his tune and moderate like say Bill Clinton did in 1996 because he's really stuck with his ideology so he has no choice but to divide. So he is going to run a very decisive campaign for political gain and he has this concept of fairness and equality where he uses the kind of rhetoric we use, but the policies he's producing will result in crony capitalism will result in more power in the government to supervise our lives, to give us a stagnant economy where the rich and the powerful are the ones who are picking it. So what I'm trying to say is he is giving us a future of debt, doubt, and decline. "

And snippet 2:

> "The president isn't leading. The president isn't truthful with the American people about what kind of fiscal train wreck is coming, we're going to be. And we'll pass budgets to show the country exactly how we propose to fix the problem. You know the thing that is frustrating about this, Chris, is there is an emerging bipartisan census on fixing these big problems. There are Democrats who do agree with us on how to do tax reform. Get the loopholes out, lower the rates. We're getting a bipartisan consensus on Medicare reform. The problem is the president and his party leader are out on the left standing on the sidelines looking in. So what we clearly need is a new White House and a new Senate and then we can realize this emerging bipartisan consensus on how to fix these problems".

It's good that we have Paul Ryan to respond to Obama's rhetoric.

New York teacher worth $10 million is paid $100,000 a year to do nothing

January 30, 2012 | by Wintery Knight | Link | Original Link

The New York Post reports on the horror of teacher unions.

Excerpt:

> In a defiant raspberry to the city Department of Education — and taxpayers — disgraced teacher Alan Rosenfeld, 66, won't retire.
>
> Deemed a danger to kids, the typing teacher with a $10 million real estate portfolio hasn't been allowed in a classroom for more than a decade, but still collects $100,049 a year in city salary — plus health benefits, a growing pension nest egg, vacation and sick pay.
>
> Mayor Bloomberg and Gov. Cuomo can call for better teacher evaluations until they're blue-faced, but Rosenfeld and six peers with similar gigs costing about $650,000 a year in total salaries are untouchable. Under a system shackled by protections for tenured teachers, they can't be fired, the DOE says.
>
> […]Accused in 2001 of making lewd comments and ogling eighth-grade girls' butts at IS 347 in Queens, Rosenfeld was slapped with a week off without pay after the DOE failed to produce enough witnesses at a hearing.
>
> But instead of returning Rosenfeld to the classroom, the DOE kept him in one of its notorious "rubber rooms," where teachers in misconduct cases sat idle or napped. As The Post reported, Rosenfeld kept busy managing his many investment properties and working on his law practice. He's a licensed attorney and real-estate broker.
>
> […]Asked what work he does, Rosenfeld laughingly told his friend, "Oh, I Xeroxed something the other day."
>
> Rosenfeld could have retired four years ago at 62, but his pension grows by $1,700 for each year he stays — even without teaching. If he quit today, his annual pension would total an estimated $85,400.
>
> […]Rosenfeld will also get paid for 100 unused sick days when he leaves.
>
> New York has no mandatory retirement age for teachers.

Teacher unions are the base of the Democrat party. Democrats keep telling parents that the solution to public school failure is to shovel more tax money at the teacher unions, who just turn around and donate it right back to the Democrats. It's a vicious circle. The solution is to abolish public sector unions and the Department of Education. Let parents have a voucher and let them decide which school meets their needs. When parents have the money back in their pockets, schools will have to care about children again.

It's important for people to understand that Democrats are not good. They screw children

out of an education and then lie to parents about wanting what’s best for children. But they just want more money for their own campaign war chests, and that’s what they get when they persuade a gullible public to spend more on “education”.

What is the Christian doctrine of the Trinity?

January 30, 2012 | by Wintery Knight | Link | Original Link

The Christian doctrine of the Trinity

I have a friend who is considering Christianity and he is stuck on the doctrine of the Trinity. Tom, this one's for you.

Excerpt:

> So, what exactly do we mean when we talk about the Trinity? Writing in the early third century, in hisAgainst Praxeas, Tertullian is credited with first employing the words "Trinity", "person" and "substance" to convey the idea of the Father, Son and Spirit being "one in essence — but not one in person". Indeed, Tertullian writes,
>
> > "Thus the connection of the Father in the Son, and of the Son in the Paraclete, produces three coherent Persons, who are yet distinct One from Another. These Three are, one essence, not one Person, as it is said, "I and my Father are One," in respect of unity of substance not singularity of number."
>
> This concept was established as church orthodoxy at the famous Council of Nicaea in A.D. 325. The Nicene Creed speaks of Christ as "God of God, Light of Light, very God of very God, begotten not made, being of one substance with the Father."
>
> It is this definition that I am going to assume in the discussion that follows. Succinctly, then, the doctrine of the Trinity may be defined thusly: Within the one being or essence that is God, there exists three co-equal and co-divine distinct persons — namely the Father, Son and Holy Spirit — who share that essence fully and completely. This concept is not to be confused with polytheism, which maintains that there are multiple gods. While orthodox Christianity

> emphatically holds there to be only one God, we nonetheless understand God to be complex in his unity. The concept is also not to be confused with the ancient heresy of modalism, which maintains that God exists in three different modes. The Son has never been the Father and the Holy Spirit has never been the Son or the Father. Modalism is refuted by the picture given to us in all four gospels (Matthew 3:16-17; Mark 1:9-11; Luke 3:21-22; John 1:32-34) in which the Holy Spirit descends on Jesus in the form of a dove and a voice is heard from Heaven "This is my beloved Son. With him I am well pleased." Similarly, it should be noted that the Father, Son and Spirit do not each make up merely a third of the Godhead. Rather, each of the three persons is God in the full and complete sense of the word.
>
> Having shown that Scripture emphatically rejects the notion that the Father, Son and Spirit are synonymous persons, only five propositions remain to be demonstrated in order to provide Biblical substantiation for the concept of the Trinity. Those propositions are:
>
> 1. There is only one eternal God.
> 2. The Father is the eternal God.
> 3. The Son is the eternal God.
> 4. The Holy Spirit is the eternal God.
> 5. Although the Father, Son and Holy Spirit are non-synonymous persons, the concept of the Trinity does not violate the law of non-contradiction.
>
> Let's take a look at each of these in turn.

He then takes a close look at what the Bible says about God with respect to those assertions. There can be no doubt that the Bible teaches that God is one divine substance, and three persons.

Why social conservatives should support free market capitalism

January 30, 2012 | by Wintery Knight | Link | Original Link

The free enterprise system should not be adopted simply because it is the best system for creating wealth. The best reason to support free market capitalism is a *moral* reason. Arthur Brooks, President of the American Enterprise Institute, and a Christian, describes the moral argument for free market capitalism.

Excerpt:

> It might seem that the best case for free enterprise is the material one. Free enterprise lets people make more money, buy more and nicer stuff, and have a greater degree of comfort. The freer our economy is, the more competitive the US economy is vis-à-vis the rest of the world. And so on.
>
> But these aren't our best arguments. There is another reason, a transcendent reason, for which free enterprise matters most—and this is the case we all must be able to make today.
>
> We all learned early on in school that the Declaration of Independence claimed for each of us the unalienable right to "life, liberty, and the pursuit of happiness." Note that the founders didn't assert a right to be happy; such is the domain of tinpots and crackpots, of 1984's "Ministry of Plenty" and Josef Stalin's aggrandizing self-description as the Soviet Union's "Constructor of Happiness." So what, in practice, does this right to pursue happiness mean?
>
> It means the right to define and earn our happiness through our ideas, hard work, and gumption, to earn our success by creating value honestly, in our own lives and in the lives of others. It doesn't mean the pursuit of a big lottery win or an inheritance. Those bring money, but not happiness. And a mountain of evidence shows that after a fairly low threshold, more money doesn't make us happier. The best case for free enterprise has nothing at all to do with money or material goods or wealth. Those are just icing on the cake. We must stop talking about free enterprise as just an engine of wealth creation. It's much more than that.
>
> In short, the secret to the pursuit of happiness is earning our own success; creating value with our lives and in the lives of others. This earned success is the fruit of hard work and just rewards in a system built on merit. Only in a free enterprise system is effort and innovation rewarded over connections and predation. (And this means that we have to draw a distinction between free enterprise, which is based on opportunity and competition between ideas, and corporate cronyism, which is just another form of statism masquerading as free enterprise.)

Here are 3 reasons why I think that social conservatives should support free market

capitalism.

1) Right to work

It’s very important for Christians to have an economic system in place that allows them to work without having to promote anti-Christians ideas. But when government gets too big, what happens is that Christians are no longer free to take any job they want, and still keep a clear conscience. In some states, you have to join a union which uses your union dues to elect Democrats, who very often are liberal on social issues. Or, you have big government forcing Christians to perform abortions against their consciences. Or, you have big government forcing Christian organizations to provide health insurance plans that cover abortions and contraceptives. That’s why Christians need to vote against big government regulations on employment – we need the freedom to work at a job that does not violate our consciences.

2) Right to earn

It’s very important for Christians to keep what they earn so that they have the maximum amount of money to make decisions that make sense for them, according to their consciences. Take the example of day care and education. The big government statist is constantly trying to to create more and more government-run day care and public schools. Why? They want to take money away from families so that they cannot afford individualized private and parochial schools, and lump them all into government run schools that are more “equal”. The problem is that this is bad for Christians who want more oversight into what their children learn. For example, what sense does it make for a Christian man to pay for day care and public schools when he marries a teacher who becomes a stay at home homeschooling mother for his children? He has to pay for day care and public schools he will never use, and it eats into the money he has to afford a stay-at-home homeschooling mom. Christians should oppose a day care and education system run by a secular leftist government. They will never reflect the values of Christian parents.

3) Right to spend

It’s very important for Christians to have the freedom to purchase products and services that make sense in their worldview. Take the example of health care. Secular leftists would love to force private medical insurance companies to cover things like abortion and contraception as health care. In some states, these things are specified as mandatory for every health care plan. That means that Christians who purchase health care are being forced to pay for services like abortion which they will never use themselves. This is nothing more than the redistribution of wealth in order to lower the cost of abortions for people, in order to encourage them to be sexually active before they are able to accommodate children. Christians need to oppose this – we do not want to have to pay for things that go against our consciences.

So, in addition to the reasons that Brooks mentioned (the happiness of earning your own way and serving others), it’s important for Christians to understand how free market capitalism fits into their plans. We do not want to support big government, especially

when big government so often is not compatible with Judeo-Christian values. In the free market, it is much harder for ALL the businesses to conspire together to block Christians from working, earning and spending according to their consciences. We must resist top-down control of the free market so that we have the liberty to do what we ought to do in order to be virtuous.

Mitt Romney's record as governor is pro-abortion and pro-socialized medicine

January 31, 2012 | by Wintery Knight | Link | Original Link

Byron York explains Mitt Romney's liberal record as governor of Massachusetts.

Excerpt:

> To win election as a Republican in Massachusetts, and then to govern effectively, Romney had to align himself with the left side of the GOP. And to do that, he adopted positions that haunt him still.
>
> Perhaps the most fateful was on abortion. Romney's reputation as a "perfectly lubricated weather vane" — to use the memorable phrase of former rival Jon Huntsman — comes from his decision to run for Senate in 1994 and governor in 2002 as a strongly pro-choice candidate, and then to run for president in 2008 as a strongly pro-life candidate.
>
> According to a new book by Boston journalist Ron Scott, when Romney was planning that '94 Senate run, he commissioned polling that showed a pro-life candidate could not win statewide election in Massachusetts. So Romney, who said he was personally pro-life, became politically pro-choice.
>
> And not just pro-choice, but ardently pro-choice. "I am not going to change our pro-choice laws in Massachusetts in any way," Romney said in an Oct. 29, 2002, debate. "I will preserve them. I will protect them. I will enforce them. I do not take the position of a pro-life candidate. I am in favor of preserving and protecting a woman's right to choose." When The Boston Globe said there was not a "paper's width" of difference between Romney and his Democratic opponent on abortion, Romney proudly quoted the paper.
>
> If Romney had chosen a less liberal state to live in, he would not have had to do that — and, of course, he would not have had to switch back to a pro-life position in 2004-2005, as he formed a political action committee and began working toward a run for the Republican nomination for president.
>
> As a candidate for office in Massachusetts, Romney also had to take positions on guns, global warming and gay rights that later caused him difficulties in Republican presidential politics. He even had to renounce Ronald Reagan — an extremely unwise thing to do in today's GOP. "Look, I was an independent during the time of Reagan-Bush," Romney said in a 1994 debate with Sen. Ted Kennedy. "I'm not trying to return to Reagan-Bush." Now, of course, Romney sings Reagan's praises at nearly every campaign stop.
>
> If he hadn't run in Massachusetts, he wouldn't have had to bash Reagan in the first place.
>
> But, after abortion, the most devastating consequence of Romney's choosing

> Massachusetts has been the issue of universal health care. In extending coverage to everyone in the state, Romney helped fulfill a long-time liberal goal; just look at the love-fest with Kennedy at the bill's 2006 signing ceremony. But Romney did not effectively control rapidly rising health care costs. And he could not have anticipated how deeply unpopular universal coverage schemes would become with the Republican base after Obamacare.
>
> In the campaign, Romney has blamed the Democratic Massachusetts legislature for Romneycare's problems and denied vigorously that he believes his bill would be a good model for the nation. It's a difficult position to take on his signature achievement in office. And it would not have happened had Romney not chosen to run in Massachusetts.

We can't afford to run a moderate against Barack Obama – Obama is going to win because he will just point out that Romney agreed with him on everything when he was governor of Massachusetts. Republican voters are pro-life and we oppose government-run health care. we need to elect someone who has a Republican record.

Did Obama's $800 billion dollar stimulus program stimulate the economy?

January 31, 2012 | by Wintery Knight | Link | Original Link

The numbers are in.

Excerpt:

> Recall the original Obama economic team. It consisted of President Obama, Vice President Joe Biden, Treasury Secretary Timothy Geithner, and White House economists Lawrence Summers, Christina Romer, Austan Goolsbee, and Jared Bernstein. It was the Democrats' Best and Brightest—but not one with a smidgen of executive experience in either the private or public sector. And into their hands was entrusted an $800 billion stimulus spending plan, a package whose details were fleshed out by Harry Reid and Nancy Pelosi. What could go wrong?
>
> Lots, it turns out. And Michael Grabell, a reporter for ProPublica, documents the many failings of the American Recovery and Reinvestment Act in "Money Well Spent? The Truth Behind the Trillion-Dollar Stimulus, the Biggest Economic Recovery Plan in History," out this week. Rather than focus on questionable Keynesian economics behind the stimulus, Grabell focuses on its execution and management.
>
> In reporting on the stimulus over three years, I traveled to 15 states, interviewed hundreds of people and read through tens of thousands of government documents and project reports. What I found is that the stimulus failed to live up to its promise not because it was too small (as those on the left argue) or because Keynesian economics is obsolete (as those on the right argue), but because it was poorly designed. Even advocates for a bigger stimulus need to acknowledge that their argument is really one about design and presentation.
>
> Take the tax cut piece of the plan. Inspired by new research in behavioral economics, Team Obama constructed the $116 billion tax credit so it was "dribbled" out in paychecks at about $10 a week. Grabell:
>
> Perhaps that would have worked if the tax cut had been substantial. But spread out in tiny increments, it did little to overcome the prevailing fear of losing a job, a home and years of retirement savings. Not only did Obama lose the political credit but also the consumer excitement that a large check would have provided.
>
> Or how about the infrastructure spending. Grabell says it was beset by regulatory obstruction and union pandering:
>
> The timing of the stimulus was poor to bring about the flood of construction projects everyone expected in the first year. States had to advertise the project to allow contractors to submit bids. They needed to review those bids and sign the contracts. Then, they had to go back to the U.S. Department of

> Transportation for the final OK. ..
>
> Some projects in public housing, waterworks and home insulation remained paralyzed for six months to a year as short-staffed agencies reviewed Buy American waiver requests and calculated prevailing wages for weatherization work in every county in America.
>
> In Michigan, human services officials estimated that 90% of the homes in line for weatherization work would need a historic preservation review. But as of late fall 2009, the office responsible had only two employees.
>
> Public transit advocates expected a windfall for bus companies like New Flyer in St. Cloud, Minn. But the transit money took longer to get out the door because every grant had to be reviewed by the Labor Department to ensure that it wouldn't have a negative impact on transit unions.
>
> In short, Big Government screwed up the Big Spend. Biden said the stimulus would "literally drop kick us out of the recession." But Grabell concludes that "the stimulus ultimately failed to do what America expected it to do — bring about a strong, sustainable recovery. The drop kick was shanked."

Previously, I wrote about the $447 billion stimulus – son of stimulus. It was also a shank.

Courting rules: how to tell if a woman is a committed Christian

January 31, 2012 | by Wintery Knight | Link | Original Link

I was having a chat with a friend of mine a few days back and we were discussing how a man can tell if a woman is marriage material. Now this friend is not yet a Christian, but he is a conservative. So I suggested to him this list of questions (below) that I ask women when I want to test them.

Before we look at the list, let me just point out what kinds of questions are bad. You want to avoid asking leading questions that will allow the person to just give a yes or no answer. Don't ask "who did you vote for?" – that's much too easy to fake. You want them to argue for their positions on different issues at length, and in their own words, and with reference to their own experiences.

It's also a good idea for men to observe a candidate's behavior over time to see if it's consistent with her answers. Also, I think that even if the woman gets none of the questions right, but begins to ask you for books to read so that she can answer them, then that counts as a right answer. You just have to make sure she follows through, though. I sent one woman a book on Christianity and capitalism for her Christmas gift in 2009 and it took her 18 months for her to write the book review! In all honesty, these questions are pretty tough, so I think that the best you can hope for is that the person becomes curious. I had to learn the answers over many years. Having said that, you could probably cover most the topics with about $40 worth of introductory books.

When scoring the answers, you can award bonus points for extras, e.g. – naming any scholar as an authority (especially non-Christian scholars), referencing a book or a debate, referencing peer-reviewed papers, listing and refuting other points of view, recounting debates she herself has had with opponents, and pointing to her own past writings. Best of all is passion and aggression in answering the questions. Sometimes it is a good idea to pretend to disagree with her, or to pretend to be unconvinced, and then have her try to convince you. Another good thing to look for is susceptibility and vulnerability – she should have real feelings about these topics – it shows that she's invested in them.

Note: these questions can be used to test Christian men, as well.

QUESTIONS

1. Cosmology

What scientific evidence would you point to to show that God created the universe OR that God fine-tuned the universe, or parts of the universe, for intelligent life?

SAMPLE ANSWER: The big bang theory, the fine-tuning argument, galactic habitability, stellar habitability, or terrestrial habitability.

BONUS POINTS: referencing hard evidence like light element abundances, cosmic

microwave background radiation, or specific instances of fine-tuning.

WHY IT MATTERS: She can't be a Christian unless she *knows* God exists, and that can't just be based on feelings and community. An awareness of the scientific evidence shows a seriousness about spiritual things – that her belief is rooted in objective reality, not in subjective feelings, culture, community, etc. It's not "her truth", it's "the truth". If she doesn't know why she believes, then she can't be relied upon to make decisions as a Christian, especially in stressful situations. There is always going to be a conflict between doing what one feels like and doing what is consistent with reality. Having scientific facts helps a person to do what they ought to do.

2. Intelligent Design

Explain the concept of intelligent design and explain how it applies to the i) origin of life OR ii) to the fossil record.

SAMPLE ANSWER: Explain the concept of specified complexity and Dembski's explanatory filter, then explain how it applies to (i) amino acid sequencing or the double helix, OR (ii) to the sudden origin of animal phyla in the Cambrian explosion.

BONUS POINTS: Ideally, for the origin of life question, she's going to mention things like UV radiation, chirality, cross-reactions and peptide bonds, then calculate the approximate probabilities for generating a protein by chance. For the Cambrian explosion, she should graph out the introduction of phyla over time, and explain the Ediacaran fauna and why they are not precursors to the Cambrian fauna. Bonus points for bashing theistic evolution, or talking about the early earth environment and the problems with forming amino acids.

WHY IT MATTERS: Darwinian evolution is bad science because it is really just philosophy (naturalism) masquerading as science. You can't marry anyone who pre-supposes a materialist view of metaphysics like naturalists do, and then allows that philosophical assumption to overrule the scientific evidence. You don't want to be paired up with someone who lets their prejudices overturn data.

3. The problems of evil and suffering

Assuming that Christianity is true, why do you think that God would allow suffering and evil in the world? Distinguish between human evil and natural evil in your answer. Also explain what role you think God's permission of evil and suffering has in maturing Christians.

SAMPLE ANSWER: Define the deductive and inductive problems of evil, explains several different responses to them, such as free will, character formation, natural law, the ripple effect, etc. Mention the burden of proof for claims that certain evils are gratuitous, i.e. – noseeums.

BONUS POINTS: explaining how evil relates to Christian theology and God's purposes for humans being knowledge of him and not just happiness, talking about Jesus' own suffering and the meaning and purpose of it. More bonus points for pointing out how atheists cannot even complain about evil without assuming objective morality, which

requires a moral lawgiver.

WHY IT MATTERS: Lots of nasty things can happen in a marriage. Children can get sick or die, jobs can be lost, and so on. It helps when you are dealing with a person who expects it and will not jettison their responsibilities and belief in Christ in order to pursue happiness unencumbered. The main thing is that the woman thinks that the purpose of life is to know God, and that suffering and evil play a role in gaining knowledge of God. You definitely do not want to marry someone who thinks that the purpose of life is happiness, and that God is some big bearded grandfather in the sky who just wants to hand out goodies to people and make sure they are having a good time regardless of what they choose to do.

4. The moral argument

What is the is-ought fallacy? What is the difference between moral objectivism and moral relativism? Give one reason why moral relativism is false. Give one reason why an atheist cannot rationally ground prescriptive morality. Explain why objective morality relates to God's existence.

SAMPLE ANSWER: Explain the is-ought fallacy. Explain objective and subjective morality. Discuss the reformer's dilemma and how it refutes relativism. Explain that atheism requires materialism, and materialism denies free will – so moral choices are impossible. Outline the moral argument.

BONUS POINTS: Give more than one reason where only one was asked for, refute attempts to assert objective morality on atheism, explain how moral obligations are related to God's design for humans.

WHY IT MATTERS: You can't marry a person who thinks that the moral law is not a brake on their desire to be happy. There are going to be times in the marriage when self-sacrifice is required by the moral law – either for you, for God, or for the children. It will not be easy to be moral then, so you are looking for someone who thinks that morality is real, and not subject to their feelings and whims. It might be worth asking the person when she has had to do the right thing when it was against her self-interest, like those valedictorians who name Jesus in their speeches and then get censored.

5. The resurrection of Jesus

Assume you are talking to a non-Christian. Explain how you would make a case for the bodily resurrection of Jesus on historical grounds. This person does not accept the Bible as inspired and/or inerrant.

SAMPLE ANSWER: Explain the criteria for establishing minimal facts / historical bedrock, list a set of minimal facts, explain why they pass the criteria, propose at least two naturalistic alternatives to the resurrection, and disprove them. MUST mention 1 Corinthians 15:3-7 in order to pass.

BONUS POINTS: listing atheist scholars who support each minimal fact, discussing N.T. Wright's work on the Jewish concept of resurrection, referencing Richard Bauckham's work on the gospels as eyewitness testimony, mentioning the pre-suppositions

(naturalism, relativism) of liberal scholars like Crossan and Borg.

WHY IT MATTERS: The resurrection is the cornerstone of Christian belief. A person cannot encounter skeptics and not be able to defend the resurrection on historical grounds to them. The resurrection matters to how people act: they act completely differently depending on whether they believe that this life is all there is, or that this life is just a precursor to eternal life with God. You want someone who takes the long-term perspective.

6. World religions

Name two major world religions and argue against them using either the laws of logic, scientific evidence or historical evidence. Explain the concept of middle knowledge, and why it is relevant to the problem of religious pluralism.

SAMPLE ANSWER: Refute Theravada Buddhism with the big bang, or refute Islam with the crucifixion of Jesus, etc. MUST mention specific beliefs of that religion that are testable, and not just argue that they reject Christianity and are therefore false. Explain how middle knowledge reconciles free will and divine sovereignty, and that it also helps to solve the problem of people who have never heard the gospel.

BONUS POINTS: Using evidence that is universally accepted by people outside of that religion. Using scientific evidence. Referencing Acts 17:27 or other Bible passages when explaining middle knowledge. Mentioning objections to middle knowledge, such as the grounding objection.

WHY IT MATTERS: Many younger Christians today believe that Christianity is moralistic therapeutic deism. They think that the purpose of religion is to have good feelings and to be nice to other people and to make other people feel good. It’s all about feelings. You need to make sure that she knows how to make people feel bad and is comfortable doing it, with evidence. Middle knowledge also grounds the person’s willingness to see people as being responsible for their acceptance or rejection of Christ. Instead of taking a hands-off fatalistic approach to salvation, someone who accepts middle knowledge is going to take persuasion seriously and expend effort to try to change the people around them.

7. Abortion

How would you establish that the unborn are fully human and deserve protection? Explain three pro-abortion arguments and then show why they are false. Name three incremental pro-life policies that you would introduce if you were a legislator.

SAMPLE ANSWER: Use the SLED test and the law of biogenesis. Talk about the DNA signature of the unborn being distinct from the mother. Explain and refute the back-alley abortions argument, the it’s the woman’s body argument, the Judith Jarvis Thompson violinist argument, etc. Legislation would be parental notification, banning funding for abortion providers, mandatory sonograms, etc.

BONUS POINTS: Refute more pro-abortion arguments, reference specific legislation that is in-flight or was recently signed into law. Experiences protesting abortion or debating abortion with pro-abortionists. Experience counseling a post-abortive or crisis pregnancy

woman. Mentioning biological details of foetus development.

WHY IT MATTERS: Basically, because people who think that sex is for recreation, and that it is ok to kill children to avoid any limits on the pursuit of happiness are not qualified for marriage. You can't enter into an intimate commitment with someone who is willing to commit murder in order to get out of the consequences of their own selfish pursuit of pleasure. That is not going to work in a marriage – you need someone who makes good decisions, avoids harming others, is chaste and self-controlled, and takes responsibility for her actions when they go awry.

8. Marriage

Explain the public purposes of marriage, and then outline three threats to marriage and explain what legislation you would propose to neutralize these threats. What choices should people make before marriage to make sure they will have a stable, loving marriage?

SAMPLE ANSWER: Some public purposes of marriage are i) to force moral constraints on sexual activity, ii) to produce the next generation of humans, iii) to provide children with a stable, loving environment in which to grow up. Three threats to marriage are i) cohabitation, ii) no-fault divorce – which leads to fatherlessness, and iii) same-sex marriage. There are others, too. For legislation, there are things like tax incentives, shared parenting laws, school choice to de-monopolize politicized public schools, etc. Pre-marriage behaviors are things like chastity, experience with children, having lots of savings, being physically fit, etc. Having a degree in experimental science, math or economics is excellent for a woman. Avoid artsy degrees, especially English.

BONUS POINTS: Name more threats to marriage, explain the effects of fatherlessness on children, explain how divorce courts work, explain how socialism impacts the family through taxation and wealth redistribution, explain what happens to women and children after a divorce.

WHY IT MATTERS: It's important for people who want to get married that they understand that marriage takes time and effort, and it requires both spouses to prepare for marriage, to be diligent at choosing a good spouse, and to understand what spouses and children need in order to stay engaged.

9. Children

Explain a person you admire and then tell me what you would do as a mother in order to produce that person from one of your children. What are some people and laws that you would change to make your job easier?

SAMPLE ANSWER: Jay Richards. Jay Richards is one of the most well-rounded Christian scholars operating today. He has knowledge of multiple areas, including economics and science. To make a Jay Richards, you need to be very careful about his education – which could mean homeschooling and saving money for later university tuition, as well as exposing him to apologetics and debates at an earlier age. He would need to have the dedicated attention of his mother for the first two years of his life, at least. Some laws

that would help would be lower taxes, school choice, and academic freedom laws.

BONUS POINTS: Explaining how different things like day care, public schools, divorce, etc. harm children. Explaining how mother and fathers contribute to the child's moral, cognitive, spiritual, etc. development at different times. Explain how the child is harmed if both parents are not present and engaged to play these roles.

WHY IT MATTERS: Marriage is an enormous sacrifice for a man. Not only is there the risk of divorce, but wives and children are very expensive. A man can serve God fine as a bachelor. He has to have compelling reasons why getting married would serve God more than staying single. Producing influential children seems to be one of the major reasons for a man to get married, and he needs to see evidence that his wife is on board with that.

10. Husbands

Explain the roles of a man in a marriage, and tell me some of the things you would do in order to help your man to achieve those roles. What groups would oppose your husband from fulfilling those roles, and what have you done in your life to prepare yourself to help your husband in his roles? What are some of the most important things that a man needs from a woman, and what specific things should a wife do to provide them?

SAMPLE ANSWER: Men are supposed to be protectors, providers and moral/spiritual leaders. In order to help men to be protectors, women have to give them time to study to discern truth from lie, and support their ability to be physically strong, and to own firearms. It is also a good idea for women to have a positive view of good men who use force to restrain evil, as with the American military. Women should support the use of force against radical Islam and terrorists, as well. In order to help men to be providers, women have to advocate for fiscal conservatism in the public square. That would mean advocating for lower taxes, less government spending and smaller government. It would also mean being frugal in the home and helping the man to move ahead at work. If the children are up and out of the house, it could mean going back to work or starting a business to help make ends meet – or monitoring investments. For a man to be a moral and spiritual leader, a woman has to be supporting of him making moral judgments in the home, disciplining the children, holding her accountable for moral errors, and for making exclusive truth claims when it comes to spiritual things. She should not censor him when he gets into debates about spiritual things, even if other people who disagree feel bad – so long as he is not being a jerk. Her goal is not to be popular or liked, but to support her husband in his roles. The most important thing a man needs is respect, and that means treating him as important and significant, being grateful for his contributions, soliciting his opinion on things, being mindful of his male nature, which is more visual and sexual.

BONUS POINTS: Having read "The Proper Care and Feeding of Husbands", "Men and Marriage", "Love and Economics" and "Taken Into Custody". More bonus points for having written about what she learned about men and marriage from books like that. The goal here is for her to have a real awareness and sympathy for what men are facing as husbands and fathers, and to have an idea of what women can do to support them in

their roles.

WHY IT MATTERS: As a man, you have certain needs – the biggest need is for respect. If you are thinking of marrying a woman who cannot define respect, and doesn't know how to give you respect, then you are going to be in for a world of hurt. The more she views marriage as a joint project with specific goals and external challenges, the more understanding and support you will get. No one wants to fly a plane with someone who doesn't know how to fly a plane, fix a plane or navigate a plane. The more she knows about men and marriage, the better it will go for you – and the children.

Parting thoughts

This list is not exhaustive, it's just to give you an idea of the kinds of things you should be looking for. A lot of it is the attitude. You are looking for a woman who does not shift blame onto you, who takes responsibility when she is wrong, who argues using logic and evidence, who loses arguments gracefully, and wins arguments gracefully, and who loves you and cares for you even if you are fighting. If the woman is resentful and doesn't want to learn anything to deepen her faith, then drop her and find someone who will learn – it will be much better for you to partner with someone lovable and helpful, instead of a selfish lazy feminist.

If I were making a list for women, I would emphasize different things more centered around the specific roles that men play in the marriage – asking for his resume, work history, savings, investments, past relationships with women, parenting ability, self-defense ability, mentoring ability, and especially on moral issues and Christian truth claims.The most important thing that a woman needs is love, and the man should be ready to speak about love at length, and explain how he is going to provide her with love during the courtship and during the marriage. Women need to know that they are significant and desired by the man.

UPDATE: Commenter straightright recommends this post on Dalrock blog, which contains general interview questions for a wife candidate, motivated by the concerns that men have about marriage. I really recommend this post.
