> **causing bodily harm, offences that carry up to 10 years in prison. The charges were later dropped.**
>
> The repeat offender, who was on bail after threatening another homeowner with a crowbar, was given house arrest.
>
> “One of the hardest things I have ever had to do is answer questions from my young grandchildren, trying to explain why their grandfather was in trouble for protecting their grandmother,” Joseph told the committee.
>
> Marilyn echoed his feelings. “At the time of our home invasion, I never would have dreamed that Joe would be charged for possibly saving my life. If he did not take action, it’s possible he would have had to explain to our children and grandchildren why he did not take action to protect their mother and grandmother.”
>
> Defending themselves against the charges cost the couple $30,000, draining their retirement savings.

I guess that the jails in Canada are meant primarily for law-abiding people or legal gun owners. Criminals apparently go free, aka “house arrest”. That’s liberal jurisprudence – all very tolerant, you know. Let’s hope the Conservatives can fix the mess the Liberal Party made.

Are Darwinists right to say that the appendix has no useful functions?

June 7, 2012 | by Wintery Knight | Link | Original Link

Evolution News points to this Washington Post article.

Excerpt:

> The appendix "acts as a good safe house for bacteria," said Duke surgery professor Bill Parker, a study co-author. Its location — just below the normal one-way flow of food and germs in the large intestine in a sort of gut cul-de-sac — helps support the theory, he said. Also, the worm-shaped organ outgrowth acts like a bacteria factory, cultivating the good germs, Parker said. That use is not needed in a modern industrialized society, Parker said. If a person's gut flora dies, it can usually be repopulated easily with germs they pick up from other people, he said. But before dense populations in modern times and during epidemics of cholera that affected a whole region, it wasn't as easy to grow back that bacteria and the appendix came in handy.

Evolution News adds:

> Additionally, Loren G. Martin, professor of physiology at Oklahoma State University, lists various likely functions for the appendix . Writing on *Scientific American*'s website, he includes these examples:
>
> - being "involved primarily in immune functions"
> - "function[ing] as a lymphoid organ, assisting with the maturation of B lymphocytes (one variety of white blood cell) and in the production of the class of antibodies known as immunoglobulin A (IgA) antibodies."
> - helping with "the production of molecules that help to direct the movement of lymphocytes to various other locations in the body"
> - "suppress[ing] potentially destructive humoral (blood- and lymph-borne) antibody responses while promoting local immunity"
> - Additionally, it is "an important 'back-up' that can be used in a variety of reconstructive surgical techniques"
>
> Likewise, a few months back David Klinghoffer reported that researchers in the journal *Clinical Gastroenterology and Hepatology* found:
>
> > Individuals without an appendix were four times more likely to have a recurrence of *Clostridium difficile*, [a pathogen common in hospitals,] exactly as Parker's hypothesis predicted. Recurrence in individuals with their appendix intact occurred in 11% of cases. Recurrence in individuals without their appendix occurred in 48% of cases.

> In other words, the appendix performs important immune-related functions. Thus, the appendix is not there to occasionally explode. With the appendix increasingly considered to be an important organ that you wouldn't want to lose, researchers have also found that antibiotics can cure many cases of appendicitis (see Eriksson *et al.*, 2006).

It just goes to show you that it's a good idea to not decide your worldview by appealing to cartoons and funny one-liners. First of all, just because something is not perfect, it doesn't mean that it isn't designed. The Chevy Volt vehicle that Obama subsidizes with your tax dollars might burst into flames unexpectedly, but it's still designed. Secondly, no designed object can be perfect in every way – every engineered object is a tradeoff of different, conflicting design goals. It might be nice to have a laptop that can last for 16 hours on a single charge, but then it's either going to either weigh 12 pounds or cost $4000.

Junk DNA

This isn't the only time that arguments of "poor design" are made by Darwinists, either – I also hear a lot about Junk DNA.

Look at what the peer-reviewed journal Nature says:

> In 1961, French biologists François Jacob and Jacques Monod proposed the idea that 'regulator' proteins bind to DNA to control the expression of genes. Five years later, American biochemist Walter Gilbert confirmed this model by discovering the lac repressor protein, which binds to DNA to control lactose metabolism in Escherichia colibacteria[1]. For the rest of the twentieth century, scientists expanded on the details of the model, but they were confident that they understood the basics. "The crux of regulation," says the 1997 genetics textbook Genes VI (Oxford Univ. Press), "is that a regulator gene codes for a regulator protein that controls transcription by binding to particular site(s) on DNA."
>
> **Just one decade of post-genome biology has exploded that view. Biology's new glimpse at a universe of non-coding DNA — what used to be called 'junk' DNA — has been fascinating and befuddling.** Researchers from an international collaborative project called the Encyclopedia of DNA Elements (ENCODE) showed that in a selected portion of the genome containing just a few per cent of protein-coding sequence, between 74% and 93% of DNA was transcribed into RNA[2]. **Much non-coding DNA has a regulatory role; small RNAs of different varieties seem to control gene expression at the level of both DNA and RNA transcripts in ways that are still only beginning to become clear.** "Just the sheer existence of these exotic regulators suggests that our understanding about the most basic things — such as how a cell turns on and off — is incredibly naive," says Joshua Plotkin, a mathematical biologist at the University of Pennsylvania in Philadelphia.

Let’s not be too hasty when making these “bad design” arguments – let’s be guided by the progress of science, and not just by cartoons and snarky terms like “junk DNA”.

Canadian conservatives pass bill to repeal Section 13 speech code

June 8, 2012 | by Wintery Knight | Link | Original Link

Canada 2011 Federal Election Seats

It's the end of the Canadian speech code. (H/T Andrew)

Excerpt:

> The federal Conservatives voted late Wednesday to repeal controversial sections of the Canadian Human Rights Act banning hate speech on the Internet, backing a bill they say promotes freedom of expression and would have the courts play a larger role in handling hate-crime cases.
>
> In a free vote of 153 to 136, the Tory caucus supported a private member's bill from Alberta Conservative MP Brian Storseth that would scrap Section 13 of the human rights code, which deals with complaints regarding "the communication of hate messages by telephone or on the Internet."
>
> Storseth argues the current human rights code fails to protect freedom of speech, which is guaranteed under the Charter of Rights and Freedoms, and believes Canadians are better off if the government repeals sections 13 and 54 — the latter section dealing with associated penalties.
>
> "It's a really important step for freedom of expression in our country," Storseth said Thursday, the morning after the bill passed third and final reading in the House of Commons.
>
> "There hasn't been a tremendous pushback as you would have seen seven or eight years ago when this issue first really arose, and I think it's because there has been a fruitful debate in our country."
>
> Senior cabinet ministers supported the bill and the results generated loud applause from Conservative MPs. Prime Minister Stephen Harper is overseas and wasn't present for the vote. Most opposition politicians voted against the bill,

> although Newfoundland and Labrador Liberal MP Scott Simms supported it.
>
> Storseth, a backbencher, said the current human rights code allows too many frivolous cases to proceed against citizens, when the Criminal Code already covers hate speech that could generate harm against an individual or group.
>
> Acts of hate speech are serious crimes that should be investigated by police officers, not civil servants, he said, adding that the cases should be handled by "real judges and real lawyers," instead of a quasi-judicial body such as the human rights commission.
>
> The bill would effectively strip the human rights commission of its ability to rule on cases of hate speech over the phone and Internet, he said, and instead hand many of the powers to the courts.
>
> Storseth said he has also been speaking with colleagues in the Conservative-dominated Senate in hopes the bill will pass through the upper chamber and receive royal assent by the end of the year. The bill contains a one-year implementation period.

For those who need a refresher course on how bad these secular leftist fascism panels really were, you can read this article about the punishment received by a Christian pastor who wrote an editorial critical of gay activism in the schools. He was put on trial for 5 years and had to pay over $100,000 in legal fees, including the legal fees of his accuser. His crime? *Making his accuser feel offended.*

Teachers helped schoolgirl, 15, have an abortion without her parents' knowledge

June 8, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail.

Excerpt:

> Teachers helped a 15-year-old pupil to have an abortion that her parents knew nothing about.
>
> Her mother and father finally learned about the termination when she told them after it had happened.
>
> Last night family campaigners said the case showed how parents are increasingly being sidelined by the law.
>
> It is understood that the girl went to a hospital where it was confirmed she was pregnant. In line with her wishes, doctors did not tell her parents but notified the school in Salford, Greater Manchester, instead.
>
> Teachers discussed the termination with the girl, checking she was comfortable with her decision. They also gave her time off school and supported her when she went for the procedure.
>
> **Under the law, teachers, doctors and nurses can offer sexual advice or treatment – including an abortion – to children without telling their parents as long as the child is considered mature enough to make the decision. However, they must ensure that every effort is made to encourage a young person to involve their parents in the decision.**

It's important for Christian parents to realize that the time where they could expect teachers to confirm and support them in teaching their children values is gone. We should be voting for lower taxes and greater school choice. The only solution to problems like this is to put the money back in the hands of the parents and let them choose private schools that are accountable to parents. When teachers and school officials are paid through compulsory taxation, they are not accountable to their customers (parents). They do as they please. Even if they fail parents and children utterly, they still get paid. It needs to stop.

How Canada made dissent against same-sex marriage illegal

June 8, 2012 | by Wintery Knight | Link | Original Link

Political map of Canada

Dina sent me this helpful article by Michael Coren, writing in National Review.

Here's the argument:

> A considered and empathetic opposition to same-sex marriage has nothing to do with phobia or hatred, but that doesn't stop Christians, conservatives, and anybody else who doesn't take the fashionable line from being condemned as Neanderthals and bigots. This is a lesson that Canadians have learned from painful experience.
>
> Same-sex marriage became law in Canada in the summer of 2005, making the country the fourth nation to pass such legislation, and the first in the English-speaking world. In the few debates leading up to the decision, it became almost impossible to argue in defense of marriage as a child-centered institution, in defense of the procreative norm of marriage, in defense of the superiority of two-gender parenthood, without being thrown into the waste bin as a hater. What we've also discovered in Canada is that it can get even worse than mere abuse, and that once gay marriage becomes law, critics are often silenced by the force of the law.

The article is full of examples of how pro-marriage opinions were stifled and crushed by the state, once same-sex marriage was made legal.

Here's an excerpt:

> Four years ago, a Christian organization in Ontario that works with some of the most marginalized disabled people in the country was taken to court because of its disapproval of an employee who wanted to be part of a same-sex marriage. The government paid the group to do the work because, frankly, nobody else was willing to. As with so many such bodies, it had a set of policies for its employees. While homosexuality was not mentioned, the employment policies did require that employees remain chaste outside of marriage, and marriage was interpreted as the union of a man and a woman. The group was told it had to change its hiring and employment policy or be closed down; as for the disabled people being helped, they were hardly even mentioned.
>
> In small-town British Columbia, a Knights of Columbus chapter rented out its building for a wedding party. They were not aware that the marriage was to be of a lesbian couple, even though the lesbians were well aware that the hall was a Roman Catholic center — it's increasingly obvious that Christian people, leaders, and organizations are being targeted, almost certainly to create legal precedents. The managers of the hall apologized to the couple but explained that they could not proceed with the arrangement, and agreed to find an alternative venue and pay for new invitations to be printed. The couple said that this was not good enough, and the hall management was prosecuted. The human-rights commission ruled that the Knights of Columbus should not have turned the couple down, and imposed a small fine on them. The couple have been vague in their subsequent demands, but feel that the fine and reprimand are inadequate.
>
> As I write, two Canadian provinces are considering legislation that would likely prevent educators even in private denominational schools from teaching that they disapprove of same-sex marriage, and a senior government minister in Ontario recently announced that if the Roman Catholic Church did not approve of homosexuality or gay marriage, it "would have to change its teaching." What has become painfully evident is that many of those who brought same-sex marriage to Canada have no respect for freedom of conscience and no intention of tolerating contrary opinion, whether that opinion is shaped by religious or by secular belief.

Read the whole thing, and learn from the mistakes of others.

A documentary on D-Day: June 6th, 1944

June 8, 2012 | by Wintery Knight | Link | Original Link

We’re taking a break this Friday from our regularly scheduled Friday movie to present a documentary on D-Day, since June 6th was the the anniversary of D-Day. This is my favorite D-Day documentary. I watched it when I was a young man. It features the famous World War 2 historian Stephen Ambrose.

IMDB mean rating: 8.2/10.

IMDB median rating: 8/10.

The documentary is in 3 parts.

Part 1:

Part 2: (this one covers the Pointe du Hoc operation at the beginning)

Part 3:

In case you missed it, here is my earlier post on D-Day, which was very popular.

Happy Friday!

Obama: private sector job creation is “doing fine”

June 9, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> “The private sector is doing fine,” Obama said at a press conference on Friday. “Where we’re seeing weaknesses in our economy, have to do with state and local government — oftentimes, cuts initiated by governors or mayors who are not getting the kind of help that they have in the past from the federal government and who don’t have the same kind of flexibility as the federal government in dealing with fewer revenues coming in.”
>
> State and local leaders were not the only ones to blame for a bad economy, as the president also blamed Republicans in Congress.

What are the facts? Is Obama right?

Here is a comparison of public and private pay in Ohio, for example:

Ohio Average Pay: Public vs. Private

Does Obama know how to create jobs? Let’s compare him to Bush:

Labor Force Participation 2012 (click for larger image)

There is no recovery. We haven't created any jobs. We've actually *lost 5 million jobs* since the Democrats took over the House and Senate in January 2007.

When George W. Bush was President, we had unemployment around 4 or 5 percent for 8 years, which deficits as low as $160 billion in 2007. Barack Obama has had four budget deficits of a trillion or more in a row, and his unemployment rate has been double Bush's rate. Bush has an MBA from Harvard and had private sector job creation experience. Obama doesn't know anything about economics. He's a lawyer who benefited from affirmative action, and who has never released his grades. You can't elect an unqualified person and get performance.

Pro-abortionists angry over Australia's first pro-life student group

June 9, 2012 | by Wintery Knight | Link | Original Link

From Life Site News.

Excerpt:

> The board of the student union at the oldest university in Australia has voted 6-5 to approve the only pro-life student society in Australia.
>
> The decision has been met with outrage by stunned pro-abortion students (one of whom described the pro-life society as "f***ed" and "bulls***"), who have begun organising events, petitions and constitutional amendments which would ban pro-life groups from ever again gaining approval at the university.
>
> Yesterday, Friday June 1, the board of the University of Sydney Union (USU) approved the registration of LifeChoice Sydney, a nonpartisan, nonsectarian pro-life advocacy group which aims to "promote the dignity of human life from conception to natural death" at Sydney University.
>
> […]Outraged students have begun composing a motion calling for the USU board to rescind the registration of LifeChoice, censure the board members who voted in favour of their registration, and amend the USU constitution to read:
>
> "The Board shall be forbidden from registering or providing any funding, resources, publicity or use of Union premises to a group discriminatory on the basis of sex, sexuality, gender diversity, class, race and ethnicity or disability, including any group which opposes a woman's right to choose to have an abortion."
>
> Meanwhile, an online petition has been created on the website of activist group GetUp!, demanding that the USU overturn its decision to approve the group. "This isn't about freedom of speech or equal opportunity," the petition reads. "This is about funding and giving legitimacy to a group whose sole target is women. This 'LifeChoice' Society is an attack on women's rights and by allowing its formation the Union is failing its students and undermining the inclusiveness it seeks to promote."
>
> […]In August 2006, roughly 15 police and security guards were needed to protect a small crowd of students at Sydney University attending a guest lecture by Mississippi pro-lifer Terri Herring, when a coalition of roughly 80 protestors attempted to disrupt the event.

What's wrong with a different point of view? Who's being intolerant now?

Younger evangelicals put happiness and popularity over morality

June 10, 2012 | by Wintery Knight | Link | Original Link

Here's an interesting post by Mark Tooley in the American Spectator. (H/T Jay Richards)

Excerpt:

> A new generation of evangelical elites is imploring evangelicals to step back from the culture wars. Mostly they want to escape polarizing strong stances on same-sex marriage and abortion, and perhaps also contentious church-state issues, like the Obamacare contraceptive mandate.
>
> Purportedly the evangelical church is failing to reach young, upwardly mobile professionals because evangelicals, who now broadly comprise perhaps one third of all Americans, are seen as reactionary and hateful. On their college campuses, at their coffee shops, and in their yoga classes, among other venues, some outspoken hip young evangelicals want a new public image for their faith.
>
> […]A popular young evangelical blogger echoing Merritt's theme is Rachel Evans, who conveniently grew up in the Tennessee small town famous for the Scopes Monkey Trial. Her 2010 book was *Evolving in Monkey Town: How a Girl Who Knew All the Answers Learned to Ask the Questions.* "We are tired of the culture wars," she explained in a recent interview. "We are tired of politics." Lamenting the church's preoccupation with "shame and guilt," she urged evangelicals to reconsider their opposition to same-sex unions.

The post has a nice history of how evangelicals have always been involved in moral and political issues, and it's worth reading. But I want to make a different point below.

What's at the root of this movement to back away from moral issues? Here's what I think is the problem. When you advocate for moral causes like protecting the unborn, or school choice, or freeing the slaves, a bunch of people are not going to like you. Christians in the time of Jesus knew that being bold about their Christian convictions would make a lot of people think bad things about them – they expected it. But young evangelicals have gotten the idea that being a Christian should not involve any sort of unhappiness and unpopularity. They wouldn't have learned this from the Bible, because the Bible emphasizes suffering and unpopularity as part of the normal Christian life. It is their experience of church (and the hedonistic culture around them) that is likely to reinforce that view.

What young evangelicals learn in many churches is that religion is something that is centered on the Bible and the church building – it is not something that flows into real life. They learn that you can't find out anything about God from the Big Bang, the DNA, the fossil record, or even from the peer-reviewed research on abortion, divorce, or gay marriage. They learn from the Bible that helping the poor is good, but then they never

pick up an economic textbook to see *which economic system really helps the poor.* What you learn about in church is that religion is private and has no connection to reality whatsoever. This fits in with their view that Christianity should make them happy, because they've learned that it doesn't involve any studying to connect the Bible to the real world.

What follows from having a view that Christianity only lives in the Bible and church, and not out there in the real world of telescopes and microscopes? Well, most young evangelicals interpret what their pastor is telling them as "our flavor of ice cream" or "our cultural preference". They don't link Christianity to the real world, they don't think that it's true for everyone. They think that you just accept what the Bible says on faith, and that's all. No reasons can be given to non-Christians outside of just asking them to accept the Bible. Younger evangelicals believe that there are no facts that confirm or disprove Christianity – it's just a blind belief. Young evangelicals think that their faith doesn't have to be complemented with careful study of how things work in the real world.

What is the result of this anti-intellectual compartmentalization of faith? The result is that young evangelicals will balk at the idea of telling someone that they are going to Hell if they don't believe in Jesus. They will balk at the idea that feminism is to blame for the destruction of the family. They will balk at the idea that the best way to help the poor is to push for free market capitalism. They will balk at the idea that it is wrong to kill unborn children. They will balk at the idea that disarmament and pacifism embolden terrorists and tyrants to attack peace-loving people. They will balk at the idea that traditional marriage is better for society and children. They will balk at the idea that man-made catastrophic global warming is not supported by science. *They lack courage because they first lack knowledge*. They don't know how to make the case using hard evidence. They don't learn that hard evidence is important in church.

If the purpose of religion is to have happy feelings and be liked, then studying the real world to find out whether the Bible is true is bad religion. If religion is divorced from reality, then it's just a personal preference influenced by how a person was raised. No young evangelical is going to lift a finger to take bold moral stands if they think their worldview is just one option among many – like the flavors of ice cream in the frozen section of the grocery store. They have to know that what they are saying is true – then they will be bold. An example: there was a time when people believed that God did not create the first living cell, because it was just a simple lump of protoplasm that could easily come about by accident. Now we know better, and we can boldly make the case for intelligent design based on hard evidence – if we put in the time to study the evidence. And it is the same for everything – from theological claims, to moral claims, to social claims, to economic claims, to foreign policy claims. It doesn't matter if people call you names when you have the facts to support unpopular claims, *and that's why public, authentic Christianity is built on facts.* Non-Christians being offended by your claims doesn't change the way the world is.

We have to turn away from our own ignorance, laziness and cowardice if we hope to have the ability to stand up for our beliefs in public. Christianity is not about being happy and

feeling good and being liked by others. In a society that is increasingly secular and relativistic, studying outside the Bible necessarily precedes an authentic Christian life. There is no shortcut. We might have been able to get away with fideism 50 years ago, but not anymore. Not now.

Ohio governor John Kasich's energy policy: sustainability and job creation

June 10, 2012 | by Wintery Knight | Link | Original Link

All of the above makes a lot of sense in Ohio, as John Kasich explains in the Columbus Dispatch.

Excerpt:

> Ohio's agriculture and manufacturing sectors are highly productive and among our state's largest employers. They're also big energy users and part of the reason why Ohio ranks seventh nationally in energy generation.
>
> With energy being so important to major Ohio job creators, it's critical that we do everything possible to make it inexpensive, plentiful and reliable.
>
> Unfortunately, Ohio faces major headwinds on energy from Washington. The U.S. lacks the kind of comprehensive energy policy it takes to achieve energy independence and help job creators secure low prices and reliable supplies. Furthermore, coal — which supplies 86 percent of our electricity — irritates the current president, and his administration's EPA repeatedly threatens more red tape on Ohio's growing shale-oil-and-gas industry.
>
> This uncertainty from Washington isn't sustainable for Ohio. If we want to see more Ohioans working again, we need to foster low costs and greater certainty in energy, and if we can't get it with help from Washington, then Ohio must seek it ourselves.

That's his thesis – now let's see some of the details:

> [M]y administration worked with Ohio State University and Battelle to convene the Governor's 21st Century Energy & Economic Summit. Over two days, the summit brought together 50 panelists from business, government, academia and environmental groups and more than 1,000 attendees to discuss the latest, brightest thinking on energy. These conversations were the first step in helping Ohio's policymakers develop a comprehensive energy policy to support job creation. That work continued over the winter and produced a comprehensive plan covering the full range of Ohio energy issues. I'm proud to say I'm signing that plan into law on Monday.
>
> A major focus of Ohio's new energy policy is oil-and-gas production in our state's Utica shale formations. With new technologies making it possible to tap oil, natural gas and natural-gas liquids in shale rock deep beneath the surface, the potential exists to permanently lift the economy of eastern Ohio and turn Ohio into a major oil-and-gas producer. It's only smart to make sure that as this new industry comes on the scene, strong policies are in place that can help ensure its safety and success. Ohio's energy policy does that by modernizing our regulatory

> structure to protect the public, the environment and the industry's workers and to facilitate the industry's growth.
>
> Ohio's new energy policy also promotes clean-energy generation. While Ohio's manufacturers are certainly big energy users, they're also potential sources of clean energy. The U.S. Department of Energy estimates that as much as 2,000 megawatts of energy could be generated by capturing and reusing the waste heat in Ohio factories. That's enough to power more than 1.4 million Ohio homes. To help encourage this, Ohio's new energy policy adds waste heat to the list of clean-energy sources, along with solar and wind, that can earn special "renewable energy credits," credits that manufacturers can then sell for extra income.
>
> Other highlights of Ohio's new energy policy include efforts to encourage the use of cars that run on natural gas, to improve state buildings' energy efficiency, to get electricity to the places where it's most needed to create jobs, to create programs that link Ohioans who need jobs with training for the new jobs in the oil-and-gas industry, and to make valuable investments in clean-coal research and technology.

If I had to pick the 3 best governors in the USA, I would pick Scott Walker in Wisconsin, John Kasich in Ohio and Bobby Jindal in Louisiana. These guys punch way above their weight, and all 3 states are swing states. You have to have better ideas to win those states. You have to win on the merits.

Gallup: Obama suffers 10% drop in support from Jewish voters

June 11, 2012 | by Wintery Knight | Link | Original Link

From NewsMax. (H/T ECM)

Excerpt:

> In the first significant drop in Jewish support for a Democratic Party candidate in over two decades, President Barack Obama has seen a 10-point plunge in support among Jewish voters, according to the Gallup polling agency.
>
> To put the decline in perspective, Obama is pulling in the same support among Jews as Michael Dukakis, the former Massachusetts governor who lost to George H. W. Bush in 1988.
>
> Gallup notes the 10-point drop is "five points worse than his decline among all registered voters compared with 2008."
>
> Specifically, Obama currently has the support of 64 percent of Jewish registered voters, according to Gallup. This is 10 percent less than the percentage of Jews who voted for Obama in 2008. Republican Mitt Romney enjoys 29 percent support among Jews.
>
> The move is significant because American Jews have been bedrock supporters of the Democratic Party for decades. Often regarded as instinctively liberal but hawks on support for Israel, Jews are a key voting bloc in Florida, one of a handful of high electoral vote "swing" states Obama must win to defeat Romney. Their votes also could make a difference in a close race in Ohio or Pennsylvania.
>
> The Republican Jewish Coalition notes the 29 percent of Jewish voters who support Romney, represents the "highest level of Jewish support for a Republican presidential candidate in 24 years." RJC Executive Director Matt Brooks said that if the numbers hold in November, they would spell "a disaster" for Obama and his party.
>
> Gallup noted that while Jews are only 2 percent of the general population, Jews tend to vote in higher numbers than other groups – 83 percent of Jewish registered voters said they definitely would vote in comparison to 78 percent of the general public.

Florida (3.4% Jewish), Pennsylvania (2.3%) and Ohio (1.3%) all have significant Jewish populations. If the Republicans win Florida, Ohio and Pennsylvania, I don't think they can be defeated. This is a big deal.

New study finds that children do best in traditional mother-father families

June 11, 2012 | by Wintery Knight | Link | Original Link

TWO MOMS VS. MOM AND DAD

A study released Sunday finds that adult children (ages 18-39) of lesbian mothers are more likely to report negative outcomes in several categories than adult children raised by married mother-father parents.

Selected outcome	Had married parents	Had lesbian mothers
Family received welfare growing up*	17%	69%
Currently cohabiting*	9%	24%
Currently on public assistance*	10%	38%
Currently employed full time*	49%	26%
Currently unemployed*	8%	28%
Recently or currently in therapy*	8%	19%
Identifies as 100 percent heterosexual*	90%	61%
Had an affair while married or cohabiting*	13%	40%
Has ever had a sexually transmitted infection*	8%	20%
Was ever touched sexually by a parent or other adult*	2%	23%
Was ever forced to have sex unwilfully*	8%	31%
Currently married	43%	36%
Thought recently about suicide	5%	12%
Is in a same-sex romantic relationship	4%	7%

*Statistically significant difference.

Source: "How different are the adult children of parents who have same-sex relationships? Findings from the New Family Structures Study," Social Science Research, June 10, 2012

Straight vs. lesbian parenting (click for larger image)
From the Washington Times. (H/T Jonathan)

Excerpt: (links removed)

> Two studies released Sunday may act like brakes on popular social-science assertions that gay parents are the same as — or maybe better than — married, mother-father parents.
>
> "The empirical claim that no notable differences exist must go," Mark Regnerus, a sociology professor at the University of Texas at Austin, said in his study in Social Science Research.
>
> Using a new, "gold standard" data set of nearly 3,000 randomly selected American young adults, Mr. Regnerus looked at their lives on 40 measures of social, emotional and relationship outcomes.
>
> He found that, when compared with adults raised in married, mother-father families, adults raised by lesbian mothers had negative outcomes in 24 of 40 categories, while adults raised by gay fathers had negative outcomes in 19 categories.
>
> Findings such as these do not support claims that there are "no differences" between gay parenting and heterosexual, married parents, said Mr. Regnerus, who helped develop the New Family Structures Study at the university.

> Instead, “children appear most apt to succeed well as adults when they spend their entire childhood with their married mother and father, and especially when the parents remain married to the present day,” he wrote.
>
> Mr. Regnerus‘ study of 2,988 persons ages 18 to 39 — including 175 adults raised by lesbian mothers and 73 adults raised by gay fathers — marks the first research from the new dataset, which initially included some 15,000 persons.
>
> The second study, also in Social Science Research, takes a critical look at the basis of an oft-cited American Psychological Association (APA) report on gay parenting.
>
> The APA brief says, “Not a single study has found children of lesbian or gay parents to be disadvantaged in any significant respect relative to children of heterosexual parents,” said Loren Marks, associate professor at the School of Human Ecology at Louisiana State University.
>
> However, after looking at the 59 studies that undergird this assertion, “the jury is still out,” Mr. Marks said. “The lack of high-quality data leaves the most significant questions [about gay parenting] unaddressed and unanswered.”
>
> Problems with the APA-cited studies were their tiny size; dependence on wealthy, white, well-educated lesbian mothers; and a failure to examine common outcomes for children, such as their education, employment and risks for poverty, criminality, early childbearing, substance abuse and suicide. Instead, the APA studies often looked at children’s gender-role behaviors, emotional functioning and sexual identity.

This story was also reported on Science Daily, with the predictable liberal spin.

Here is my previous post on the data that shows why same-sex unions are not good for raising children.

Why do women have abortions? Are women responsible or are men to blame?

June 11, 2012 | by Wintery Knight | Link | Original Link

Dina said me this astonishing article from the UK Daily Mail.

Excerpt:

> **Her first abortion came when she was 17, following a bitterly regretted drunken encounter with a colleague at an office party.**
>
> […]Her bold decision to speak out about her abortions comes after it was revealed that the NHS spends more than £50 million a year on repeat terminations.
>
> One third of the 189,000 abortions carried out in England and Wales in 2010 involved women who'd had at least one before. In some cases, a staggering seven abortions had previously been carried out on the same woman.

Abortion one:

> The first one… was when she… got pregnant when she ended up in bed with a 22-year-old colleague called Brian.
>
> **'Although I knew I could get pregnant, we didn't use contraception. I just didn't think it would happen to me…**
>
> […]**Michelle visited her GP and found out she was entitled to a free NHS abortion at her local hospital.**

Abortion two:

> **[S]he met John, 35, an Irish soldier stationed at barracks near her home, and they embarked on a three-week fling. It left her with another unplanned, and unwanted, pregnancy.**
>
> […]**Michelle was once again granted an NHS abortion at nine weeks — this time at a private London clinic, in July 2000.**

Abortion three:

> Then, a year later, **she met her current partner, Paul, at a local pub.**
>
> […]Michelle says she was open about her abortions, and told Paul, 36 — who is an estates manager — that she didn't want any more children.
>
> […][I]n July, **Michelle was going through a rocky period with Paul when she discovered she was pregnant again.**
>
> She says: 'At the time we were barely speaking, as we were both so stressed out. We hadn't been intimate for months, but one night relations thawed and we had

> sex.
>
> **‘Until then, we’d been using condoms but this time we didn’t. Although I thought about getting the morning-after pill, I ended up leaving it to chance.’**
>
> […]**At nine weeks, Michelle was granted a third NHS abortion, at another London clinic.**

Three taxpayer-funded abortions for three pregnancies brought on by this woman’s own free decisions.

In the UK, abortions, IVF and single motherhood are all taxpayer-funded. If women had to pay for their own abortions, their own IVF, their own out-of-wedlock births, then maybe they would not be making decisions like this woman has. When you pay people to do something, you mustn’t be surprised when they do that thing more. Lowering the cost of anything means that more people will buy it. And making it free is the worst of all. The first step to ending abortion is that society needs to understand that virtually every woman who has one is at least partly responsible for her own decision-making. The sooner we stop feeling compassion for women like this one, and start feeling compassion for unborn children and taxpayers, the sooner abortion will end. This woman is not a victim – she made these decisions and the consequences were absolutely devastating.

And many Christian leaders are part of the problem – they seem to really like blaming men for cases like the one above. Man-blaming Christian leaders have to do their part and stop blaming men for women’s irrational belief that recreational sex will be followed by an offer of marriage if the woman becomes pregnant. Men who have recreational sex don’t want marriage, and pregnancy doesn’t turn them into marriage-minded men. Men who have recreational sex want… recreational sex. Marriage is a heavy burden, and men who fool around are not going to “do the right thing”. Men who have recreational sex before marriage are not the sort of men who can be depended on to “do the right thing”. The sooner we start holding women accountable for their own decisions – and shaming them – the sooner abortion will stop.

UPDATE: This comment from straightright is worth reading if you are annoyed by the “poor me, I’m a victim” tone of the article.

Married Mormon man comes out as gay on his tenth anniversary

June 12, 2012 | by Wintery Knight | Link | Original Link

ECM sent me this post, and it is a must-read.

Excerpt:

> Hi guys.
>
> Lolly and I are sitting by a pool in the blazing sun, tanning our Seattle-white skin. We are having the time of our lives. Our kids are being watched by their Aunt Kati and Uncle Blake while we relax, celebrating ten incredible years of marriage.
>
> And, side by side, we are finishing the final details of this post which we have written together over the course of the last month.
>
> This is a different post than what you're used to seeing here on The Weed. If you are here to laugh and read something light-hearted and fun, you probably want to skip this one. It's long. And it's serious. And I won't be offended by anyone who decides to wait until things get light-hearted again.
>
> This is the post where I tell you that I, Josh Weed, am homosexual.
>
> […]When we do tell people about this—and we've been telling a lot of people lately, so we've gotten really practiced at it—they usually have a lot of really good, genuine questions. Here are some of the questions we're most frequently asked (there really should be an acronym for that—I know! I'll call it a FAQ!). We hope answering these questions will help you understand how we make sense of this delicate and complicated issue in our lives.

Excerpt:

> Here is the basic reality that I actually think many people could use a lesson in: sex is about more than just visual attraction and lust and it is about more than just passion and infatuation. I won't get into the boring details of the research here, but basically when sex is done right, at its deepest level it is about intimacy. It is about one human being connecting with another human being they love. It is a beautiful physical manifestation of two people being connected in a truly vulnerable, intimate manner because they love each other profoundly. It is bodies connecting and souls connecting. It is beautiful and rich and fulfilling and spiritual and amazing. Many people never get to this point in their sex lives because it requires incredible communication, trust, vulnerability, and connection. And Lolly and I have had that from day one, mostly because we weren't distracted by the powerful chemicals of infatuation and obsession that usually bring a couple together (which dwindle dramatically after the first few years of marriage anyway). So, in a weird way, the circumstances of our

> marriage allowed us to build a sexual relationship that is based on everything partners should want in their sex-life: intimacy, communication, genuine love and affection. This has resulted in us having a better sex life than most people I personally know. Most of whom are straight. Go fig.

Click through and read it. This reminds me of Ari's book "Bias Incident", where the protagonist argues that gay people can and should marry someone of the opposite sex and have children. And then the sky falls on him! I hope you all consider buying that book. It's only $0.99!

Disclaimer: I am not endorsing homosexuality, Mormonism or anything!

Europe is going socialist – what's the worst that could happen?

June 12, 2012 | by Wintery Knight | Link | Original Link

European Debt to GDP and Credit Rating
From MSN Money.

Excerpt:

> **European finance officials have discussed as a worst-case scenario limiting the size of withdrawals from ATM machines, imposing border checks and introducing capital controls in at least Greece should Athens decide to leave the euro.**
>
> EU officials have told Reuters the ideas are part of a range of contingency plans. They emphasized that the discussions were merely about being prepared for any eventuality rather than planning for something they expect to happen – no one Reuters has spoken to expects Greece to leave the single currency area.
>
> […]The discussions have taken place in conference calls over the past six weeks, as concerns have grown that a radical-left coalition, SYRIZA, may win the second election, increasing the risk that Greece could renege on its EU/IMF bailout and therefore move closer to abandoning the currency.
>
> No decisions have been taken on the calls, but members of the Eurogroup Working Group, which consists of euro zone deputy finance ministers and heads of treasury departments, have discussed the options in some detail, the sources said.
>
> **As well as limiting cash withdrawals and imposing capital controls, they have discussed the possibility of suspending the Schengen agreement, which allows for visa-free travel among 26 countries, including most of the European Union.**

> […]Another source confirmed the discussions, including that the suspension of Schengen was among the options raised.
>
> "These are not political discussions, these are discussions among finance experts who need to be prepared for any eventuality," the second source said. "It is sensible planning, that is all, planning for the worst-case scenario."

I noticed an article that came out in CNN Money that explained how American households had lost almost 40% of their net worth since 2007 – the exact year that Nancy Pelosi took control of the House and Harry Reid took control of the Senate. The Democrats have been running the European playbook since they took over in 2007. We are just a few steps behind the Europeans thanks to the borrow and spend policies of the Democrats.

In Asia, questioning Darwinism on scientific grounds is no problem

June 12, 2012 | by Wintery Knight | Link | Original Link

From Evolution News.

Excerpt:

> In Korea, a mainstream publisher of popular and science texts, Book 21 Publishing Group, has brought out an edition of *Explore Evolution*, a textbook presenting both sides of the evolution debate. The translation was done by a pair of Korean academics, Seung Yup Lee and Eung Bin Kim, whose scientific specialties are respectively in biomimetics and environmental microbiology. Both teach at universities, Sogang and Yonsei, ranked in Korea's top ten.
>
> Dr. Lee's research fuels his questions about macroevolution. His work on the amazing "natural design" of the South American Hercules beetle and its humidity-sensing shell was highlighted in *Nature*. In the Preface to the Korean *Explore Evolution*, Lee advocates investigating "alternative theories" to undirected Darwinian evolution.
>
> Korea also has its own Research Association for Intelligent Design, with an impressive masthead of biologists, chemists and other scientists at top research institutions. Sogang University in Seoul hosts an Annual Symposium on Intelligent Design. The event has included presentations on William Dembski and Robert Marks's Law of Conservation of Information and on protein translation as evidence of intelligent design.
>
> China, of course, is Asia's biggest market for ideas. Illustra Media has had considerable success distributing DVDs of prime ID-related titles there.
>
> […]Producer and director Lad Allen had *Unlocking the Mystery of Life* and *Privileged Planet* dubbed into Cantonese and Mandarin, moving a hundred thousand copies into China via Hong Kong. He estimates that three or four times that many DVDs were illegally pirated and copied.
>
> […]Illustra has completed a Japanese translation of *The Privileged Planet*, lip-synced by Japanese actors in Tokyo. But *Unlocking the Mystery of Life* is Illustra's most-translated film, with editions in Khmer (Cambodian), Thai, Sri Lankan, and Mongolian as well as a variety of European languages.
>
> On the book-publishing side, Center for Science & Culture senior fellow Paul Chien has been largely responsible for introducing intelligent design to China. A biologist at the University of San Francisco, Chien has translated Phil Johnston's*Darwin on Trial* and Michael Behe's *Darwin's Black Box* among other titles.
>
> He recently finished work on Denyse O'Leary's *By Design Or By Chance?*, to be

> followed by Stephen Meyer's *Signature in the Cell*.

It's good that there are still some places left where a person can ask questions about what natural causes can do and what intelligent causes can do.

Do children raised by gays and lesbians do as well as those of married parents?

June 12, 2012 | by Wintery Knight | Link | Original Link

TWO MOMS VS. MOM AND DAD

A study released Sunday finds that adult children (ages 18-39) of lesbian mothers are more likely to report negative outcomes in several categories than adult children raised by married mother-father parents.

Selected outcome	Had married parents	Had lesbian mothers
Family received welfare growing up*	17%	69%
Currently cohabiting*	9%	24%
Currently on public assistance*	10%	38%
Currently employed full time*	49%	26%
Currently unemployed*	8%	28%
Recently or currently in therapy*	8%	19%
Identifies as 100 percent heterosexual*	90%	61%
Had an affair while married or cohabiting*	13%	40%
Has ever had a sexually transmitted infection*	8%	20%
Was ever touched sexually by a parent or other adult*	2%	23%
Was ever forced to have sex unwilfully*	8%	31%
Currently married	43%	36%
Thought recently about suicide	5%	12%
Is in a same-sex romantic relationship	4%	7%

*Statistically significant difference.

Source: "How different are the adult children of parents who have same-sex relationships? Findings from the New Family Structures Study," Social Science Research, June 10, 2012

Straight vs. lesbian parenting (click for larger image)

ECM pointed out to me that some more information about the two studies that were just published in the mainstream science journal *Social Science Research* appeared in National Review.

Excerpt:

> The mainstream academic journal *Social Science Research* has just published two articles that expose and challenge the schlock social science on gay parenting that has been uncritically embraced and propagated by so many people eager to advance the cause of gay marriage.
>
> In "Same-sex parenting and children's outcomes: A closer examination of the American Psychological Association's brief on lesbian and gay parenting," LSU professor Loren Marks addresses a puzzle: On the one hand, studies based on "large, representative samples" have shown that "[c]hildren who grow up in a household with only one biological parent are worse off, on average, than children who grow up in a household with both of their biological parents." On the other hand, "social science research *with small convenience samples* has repeatedly reported no significant differences between children from gay/lesbian households and heterosexual households." (Pp. 735-736 (emphasis added).)
>
> Marks's essential answer to the puzzle is that the studies "with small convenience samples" are unreliable. Among other things:

> 1. “[S]ocial researchers examining same-sex parenting have repeatedly selected *small, non-representative, homogeneous samples of privileged lesbian mothers* to represent all same-sex parents.” (P. 739 (emphasis added).)
>
> 2. “[I]n *selecting heterosexual comparison groups* for their studies, many same-sex parenting researchers have not used marriage-based intact families as heterosexual representatives, but have instead *used single mothers*.” (P. 741 (emphasis added).) Despite the broad claims made on behalf of the research, “with rare exceptions, the research does not include studies comparing children raised by two-parent, same-sex couples with children raised by marriage-based, heterosexual couples. (P. 742.)
>
> 3. The American Psychological Association’s claim that “not a single study has found children of lesbian or gay parents to be disadvantaged” fails to take account of the largest study that actually examined “children’s developmental outcomes.” (Pp. 742-743.)
>
> 4. The same-sex parenting studies have failed to address a range of outcomes for children that are usually the focus of national studies on children, including drug and alcohol abuse, truancy, sexual activity, and criminality. (Pp. 743-744.)

These new studies contradict the politically correct pronouncements of the APA. But evidence came out last week that they are “controlled” the gay rights movement, according to a former President of the APA, who is himself pro-same-sex-marriage.

We should not be redefining marriage if it is going to hurt vulnerable children. I made the case before from the research that same-sex unions are not the same as heterosexual married couples. And now we have direct evidence that the differences matter to children.

Obama administration sues Florida for purging non-citizens from voter rolls

June 13, 2012 | by Wintery Knight | Link | Original Link

From Breitbart. (H/T Dr. G)

Excerpt:

> The US Department of Justice announced Monday it will sue Florida to stop the state from purging ineligible voters from its voter rolls. The DOJ statement came after Florida filed suit against the Department of Homeland Security for failing to cooperate with efforts to clean up the state's voter registration records.
>
> A preliminary comparison between drivers license records and voter registration has flagged as many as 182,000 registered voters who may not be US citizens. Florida officials sought access to the DHS immigration database (SAVE) to verify their matches but DHS has refused to respond to the state's requests.
>
> At least 141 non-citizens have been found on the voter rolls and 47 on this list have cast ballots in previous elections. More than 500 on the list have been identified as citizens and lawful voters.
>
> Florida Secretary of State Ken Detzner released a statement after filing the suit in Washington DC:
>
> > For nearly a year, the U.S. Department of Homeland Security has failed to meet its legal obligation to provide us the information necessary to identify and remove ineligible voters from Florida's voter rolls… We can't let the federal government delay our efforts to uphold the integrity of Florida elections any longer. We've filed a lawsuit to ensure the law is carried out and we are able to meet our obligation to keep the voter rolls accurate and current.

Let this be a lesson to conservatives. The first thing you do when you get power is pass a voter identification law. Some form of state-issued photo ID that can be checked in a database, and purple ink on the fingers after voting. Democrats love to cheat in elections, and they are quite open about their desire to do so.

White House says no special counsel needed to investigate national security leaks

June 13, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> The White House on Monday dismissed calls for a special prosecutor to investigate the national security leaks that have prompted concern from lawmakers on both sides of the aisle.
>
> The *New York Times* recently reported that President Obama had approved "kill lists" for the U.S. drones strikes in Pakistan and Yemen. The newspaper also revealed the extent of U.S. involvement in cyber attacks on Iran. And other news outlets have leaked details of the raid that killed Osama bin Laden.
>
> Speaking on CNN's "State of the Union" Sunday, Sen. John McCain (R-Ariz.) said "it's obvious" that the leaks "came from individuals who are in the administration. The president may not have done it himself, but the president is certainly responsible as commander-in-chief."
>
> […]During a White House news conference Friday, Obama said, "The notion that my White House would purposely release classified national security information is offensive. It's wrong. And people I think need to have a better sense of how I approach this office and how the people around me here approach this office."
>
> Later that day, McCain responded in a statement, "What the President did not unequivocally say today is that none of the classified or highly sensitive information recently leaked to the media came from the White House. I continue to call on the President to immediately appoint a special counsel to fully investigate, and where necessary, prosecute these gravely serious breaches of our national security."
>
> […]On Sunday, McCain — on CNN's "State of the Union" — repeated that a special counsel should be appointed to lead the leaks investigation.
>
> "I have great respect for the two individuals (the U.S. attorneys from D.C. and Maryland) that were appointed," McCain told CNN. But he also noted that Eric Holder has no credibility with Congress.
>
> "This needs a special counsel, someone entirely independent of the Justice Department," McCain insisted – "someone with credibility like Mr. Bob Bennett."

The response of the White House to being held accountable for leaking national security secrets to benefit their election campaign has been to be *offended*. I.e. – "how dare you accuse me of leaking secrets for political gain?" But everything points to a source within the White House for the leaks, up to and including Barack Obama himself.

I wrote previously about the leak on the British agent who foiled the recent bombing attack, as well. The Democrats are simply unreliable on national security and counter terrorism. Even before that I wrote about the leak of information about the planned strike on Iran by Israel. And so on.

Entitlements programs are going bankrupt: how can we fix them?

June 13, 2012 | by Wintery Knight | Link | Original Link

From the American Enterprise Institute, a post that explains in brief how to reform each of the three largest entitlement programs so that they will not go bankrupt by the time today's younger workers need them.

Here are the programs:

1. Social Security (a social program to redistribute wealth from current workers to current retirees)
2. Medicaid (a social program to provide health care to low income/low wealth Americans)
3. Medicare (a social program to provide health care and prescription drugs to older Americans)

And here's one of the solutions (for Social Security):

> **Social Security** is the easiest entitlement program to reform and can be done without raising taxes.
>
> - The age should be gradually raised to 70 by 2065.
> - Benefits should be indexed to price inflation, not wage inflation, as the program's purpose is to keep the elderly out of poverty.
> - Benefits should gradually be reduced for earners with high incomes. The system should be a way to keep individuals out of poverty, not create a dependent upper- and middle-class.
>
> Together these three reforms would ensure Social Security stays solvent. The entire system, however, could be easily replaced with a new program designed to keep seniors out of poverty and empower them throughout their retirement. People should be given the incentive to work longer by eliminating the Social Security payroll tax for individuals over 62, and a basic income supplement should be provided to impoverished senior citizens. Workers should then be given ownership of their retirement savings by enrolling all workers 55 and younger into a retirement savings account funded by 5 percent of the worker's earnings (2.5 percent from the individual and 2.5 percent from the employer). These simple reforms would create a system that actually provides a safety net for needy citizens — all for 60 percent of what the U.S. currently spends on Social Security.

Click through for the other two problems and solutions.

Wall Street slashes GDP growth forecasts: recession on the horizon?

June 14, 2012 | by Wintery Knight | Link | Original Link

Year	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

2012	8.3	8.3	8.2	8.1	8.2							

The Democrats took over the House and Senate in 2007
James Pethokoukis says we're doomed. (H/T ECM)

Excerpt:

> In the seven quarters since [August 2010], the U.S. economy has grown at an average annual clip of just 2.1%, including just 1.7% last year.
>
> And right now, 2012 looks like more of the same. GDP expanded at a mere 1.9% pace in the first quarter.
>
> And after a weak retail sales number today, Wall Street economists have been slashing their second-quarter GDP forecasts:
>
> - Goldman Sachs cut its forecast to 1.6% from 1.8%.
> - Bank of America/Merrill Lynch cut its forecast to 1.9% from 2.4%.
> - Macroeconomic Advisers cut its forecast to 1.8% from 2.0%.
> - CIBC World Markets cut its forecast to 2.0% from 2.3%.
> - Barclays Capital cut its forecast to 1.8% from 2.1%
> - Action Economics cut its forecast to 1.8% from 2.0%.
>
> This analysis from JPMorgan provides a good summary:
>
> After today's retail sales report our best estimate is that second quarter real GDP is currently tracking a 2.0% annual growth rate, lower than our prior projection of 2.5%. Moreover, we see some downside risk to our new forecast. The largest reason for the downward revision is today's retail sales report, which lowers our tracking of real consumer spending growth from 2.8% to 2.2%. … In addition, first

> quarter GDP, which currently prints at 1.9%, looks to be tracking closer to 1.7%. Given the weaker momentum in first half growth, achieving our second half outlook for 2% growth will require more things to go right than wrong, which hasn't been the case recently.
>
> The current White House forecast of 3% GDP growth this year looks hopelessly out of reach. And growth this anemic is probably not fast enough to generate enough sustained job growth to bring down the unemployment rate.

At this rate, I would say that we will be back in a recession within 12 months. Obama simply isn't doing anything to stop the bleeding.

Hawaii Planned Parenthood caught counseling sex-selection abortions

June 14, 2012 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> Live Action released new undercover footage today showing two Planned Parenthood clinics, in Maui and Honolulu, advising undercover investigators on how to procure a sex-selective abortion of her baby girl because she wants a boy instead. Officials with the group say Planned Parenthood claims publicly to condemn sex-selective abortion but continues to provide them to women who request them.
>
> The Planned Parenthood Maui Clinic worker counsels Live Action's undercover journalist to wait for a late-term abortion to double-check that the baby is actually a girl before killing her. Then, another worker at Planned Parenthood Honolulu makes sure the woman signs up for QUEST, Hawaii's taxpayer-funded insurance, which will pay for her elective, late-term, sex-selective abortion.
>
> "If that's, you know, if that's what you wanna base your decision on–really–it's up to you," assures the Maui Planned Parenthood counselor, Leslie Watson, when a purportedly pregnant woman explains she wants an abortion because of the sex of the baby.
>
> Watson counsels the woman to be certain about the sex of her unborn child before going through with an abortion, telling her to seek an ultrasound from an OB/GYN and not to worry if they might judge a sex-selective abortion: "This is your reason and this is your situation. So they should be accommodating because this can help you determine and it's nobody's business and nobody's reason but yours."
>
> In Honolulu, the Planned Parenthood counselor "Rogue" tells the woman it is okay to have multiple abortions of girl pregnancies so long as the abortions are spaced far enough apart. The Planned Parenthood counselor suggests paying for the abortions using Hawaii's QUEST state health insurance.
>
> "So if I wanted to terminate a girl the government would pay for it?" asks the woman. "They don't care," the Planned Parenthood counselor replies.
>
> In response to false complaints from abortion advocates that the videos are edited or manipulated, Live Action released the full, unedited video footage which shows the employees at both abortion facilities ensuring that the taxpayers of Hawaii fund the purely sex-selective abortion.

Here's the previous Live Action sting, in case you missed it.

New large-scale UK study confirms the importance of fathers to children

June 14, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail.

Excerpt:

> A father's love is as important to a child's emotional development as a mother's, a large-scale study has confirmed.
>
> Examining the cases of more than 10,000 sons and daughters revealed how a cold or distant father can damage a child's life, sometimes for decades to come.
>
> The review of 36 studies from around the world concluded that his love is at least as important to youngsters as that of their mothers.
>
> Researcher Professor Ronald Rohner said that fatherly love is key to development and hopes his findings will motivate more men to become involved in caring for their offspring.
>
> 'In the US, Great Britain and Europe, we have assumed for the past 300 years that all children need for normal healthy development is a loving relationship with their mother,' he said.
>
> 'And that dads are there as support for the mother and to support the family financially but are not required for the healthy development of the children.
>
> 'But that belief is fundamentally wrong. We have to start getting away from that idea and realise the dad's influence is as great, and sometimes greater, than the mother's.'
>
> His conclusions came after he examined data from studies in which children and adults were asked how loving their parents were.
>
> Questions included if they were made to feel wanted or needed, if their parents went out of their way to hurt their feelings and if they felt loved.
>
> Those taking part also answered questions about their personality. These ranged from 'I think about fighting or being mean' to 'I think the world is a good, happy place'.
>
> Tallying the results showed that those rejected in childhood felt more anxious and insecure as well as hostile and aggressive.
>
> Many of the problems carried over into adulthood, reported the study published in the journal Personality and Social Psychology Review.
>
> Crucially, a father's love was often just as important as a mother's. In some cases, it was even more so. One reason for this may be that rejection is more painful when it comes from the parent the child regards as more powerful or respected.

You can read more about how fatherlessness damages children here.

I think the first question we should ask the people who want to redefine marriage is this: “which parent to do you think that a child can do without? the mother or the father?”. We must do everything we can as a society to keep both of a child’s natural parents in the home while the child grows up. If we really care about children, then we should prefer to meet their needs, even if the grown-ups have to be a bit more responsible in their decision making. if the conflict is between innocent children and selfish grown-ups, then the children should win.

We need laws and policies that promote traditional marriage, not laws and policies that break it down and destroy it. Repealing no-fault divorce, lowering subsidies for single motherhood, and making shared parenting the default position, would all help solve the problem. Policies like school choice and lower corporate tax rates helps men to be able to perform in their role as provider. We have to be practical and ask: “what makes men capable of marriage and parenting?” If we want strong fathers, then it makes sense to ask how to make fatherhood more reasonable: what do men need in order to do what we want them to do?

Christians should be especially concerned about the presence of fathers, given the evidence I blogged about before showing how the presence of quality fathers is essential for passing Christian beliefs on to children. Churches need to ask themselves tough questions: Are we teaching women how to choose men based on practical concerns and proven abilities in our churches? And are we doing a good job of attracting men to churches by promoting the masculine, practical aspects of Christianity that men like – like science, apologetics debates, economics and foreign policy?

Mike Licona debates Bart Ehrman on the Unbelievable radio show

June 14, 2012 | by Wintery Knight | Link | Original Link

From the Unbelievable radio show.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here.

Snarky summary of the radio debate: (items with * are my made-up paraphrases/clarifications)

Ehrman:
– Bart's new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible
– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts
– there is no naturalistic explanation of these three facts
– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:
– all historians would accept these three facts, except for maybe the group appearances

– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3 years

– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization
– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story
– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians
– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:
– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:
– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole Bible
* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so
* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus'

name!
* “one angel vs two angels” proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn’t die on the cross

Licona:
– but you don’t deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don’t know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian
* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:
– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:
– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one
* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:
– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:
– so it's not bias you are concerned about, it's that you don't want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I

mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I'm not really interested in butting heads with professors – it's easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:
– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is "weird" but that doesn't prove that God created the universe out of nothing
* if it's a miracle then I'm going to have to not sin, and maybe even go to Hell, and we can't have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism
– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it's not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

Doug Groothuis explains why conservatives should unite behind Romney

June 15, 2012 | by Wintery Knight | Link | Original Link

From Patheos, a MUST-READ post from evangelical philosopher Dr. Douglas Groothuis.

Excerpt:

> Many conservatives (Christian or otherwise), me included, are disappointed that Mitt Romney will be the Republican candidate for President. They lament that a more principled conservative (such as Michele Bachmann, or, to a lesser degree, Rick Santorum) was not selected. Perhaps they stand for the libertarian principles of Ron Paul. Whatever the case, many will be tempted to not vote at all or to cast a protest vote. This is a deep mistake, based on faulty ideas about politics and the meaning of a political vote. In this short essay, I will labor to convince fellow conservatives, whether Christians or not, to support and vote for Mitt Romney for President. I have waited to endorse Romney until all the other competitors have been eliminated. I do not expect to convert political liberals to this cause, which would require much more argumentation.

His list of points are:

- we have to be realistic about the alternatives
- protest votes are wasted votes
- the differences between Democrats and Republicans are HUGE
- Romney is far more preferable to the alternative

Click through to read the rest. I highly recommend this post.

Here's just a fragment I liked because it touches on religious liberty, which is my core concern:

> **Third**, the essential principles between the two parties, however each candidate may vary from them, are sharply divided. Democrats support a larger government and heavier taxation and regulation. They view the Constitution as a wax nose they twist any way they want (progressivism), pit corporations and "the wealthy" against "the common man" (call it class warfare, a holdover from Marxism), and support a weakened national defense (the only area of the federal government Obama is trying to cut). They do not support religious liberty, and they are pro-abortion with a vengeance. **Under ObamaCare, every American would be subsidizing the killing of innocent human beings with their own tax dollars. Ponder that, for God's sake. It denies the First Amendment (by requiring many religious people to violate their religious principles) and sets a dangerous precedent for state intrusion into matters of religious conscience. Further, the Democratic party in**

> **general, and now Obama very pointedly, do not respect heterosexual monogamy as the norm. They favor same-sex marriage, which is not marriage at all.**
>
> Republicans support smaller government, lighter taxation and regulation, a higher view of the Constitution as a body of objective truths to be applied rightly today, and the opportunities allowed by a basically free market. They advocate a strong national defense (or "Peace through strength," in Reagan's formulation) and are much more pro-life. **This means a Republican president is far more likely to appoint Supreme Court justices who honor the Constitution and oppose *Roe v. Wade*; to appoint dozens of federal judges with great influence, all of whom are likely to have a high and proper view of the Constitution; and to use executive orders (whether or not they are constitutional; they probably are not) in the pro-life cause, such as refusing to give foreign aid in support of abortions abroad and refusing to fund abortions in the military. While there are exceptions, Republicans support the historical and traditional family. While they grant all citizens the rights enumerated in the Constitution, they do not support same-sex marriage.**

Its very hard for me to post link to this endorsement, but I feel that Dr. Groothuis has earned the right to be featured here because of his longstanding support for Michele Bachmann, and then later Rick Santorum when Michele dropped out. I think his post is realistic, and explains the real alternatives facing Christians and conservatives. There are few Christians I respect more on worldview and policy matters than Doug Groothuis, and he is the author of one of the top books on Christian Apologetics.

What I really liked about this article is how many books that Doug referenced, including David Freddoso's book "The Case Against Barack Obama". That book was one of the reasons why I started blogging in January of 2009. If everyone knew the real Barack Obama, then no one would vote for him. It's a lack of knowledge that causes people to vote for him. Anyone who knows his real record and affiliations knows that he is totally unqualified to run so much as a lemonade stand.

The American Psychological Association (APA) on lesbian and gay parenting

June 15, 2012 | by Wintery Knight | Link | Original Link

Here's the abstract from a study published in the peer-reviewed journal "Social Science Research".

Abstract:

> In 2005, the American Psychological Association (APA) issued an official brief on lesbian and gay parenting. This brief included the assertion: "Not a single study has found children of lesbian or gay parents to be disadvantaged in any significant respect relative to children of heterosexual parents" (p. 15). The present article closely examines this assertion and the 59 published studies cited by the APA to support it. Seven central questions address: (1) homogeneous sampling, (2) absence of comparison groups, (3) comparison group characteristics, (4) contradictory data, (5) the limited scope of children's outcomes studied, (6) paucity of long-term outcome data, and (7) lack of APA-urged statistical power. The conclusion is that strong assertions, including those made by the APA, were not empirically warranted. Recommendations for future research are offered.

And some the findings:

- 26 of 59 APA studies on same-sex parenting had no heterosexual comparison groups.
- In comparison studies, single mothers were often used as the hetero comparison group.
- No comparison study had the statistical power required to detect a small effect size.
- Definitive claims were not substantiated by the 59 published studies.

In fact, the assertions of the APA are contradicted by a recently released *large-scale* study of gay and lesbian parenting.

Here are the facts from a study released last Sunday:

TWO MOMS VS. MOM AND DAD

A study released Sunday finds that adult children (ages 18-39) of lesbian mothers are more likely to report negative outcomes in several categories than adult children raised by married mother-father parents.

Selected outcome	Had married parents	Had lesbian mothers
Family received welfare growing up*	17%	69%
Currently cohabiting*	9%	24%
Currently on public assistance*	10%	38%
Currently employed full time*	49%	26%
Currently unemployed*	8%	28%
Recently or currently in therapy*	8%	19%
Identifies as 100 percent heterosexual*	90%	61%
Had an affair while married or cohabiting*	13%	40%
Has ever had a sexually transmitted infection*	8%	20%
Was ever touched sexually by a parent or other adult*	2%	23%
Was ever forced to have sex unwilfully*	8%	31%
Currently married	43%	36%
Thought recently about suicide	5%	12%
Is in a same-sex romantic relationship	4%	7%

*Statistically significant difference.

Source: "How different are the adult children of parents who have same-sex relationships? Findings from the New Family Structures Study," Social Science Research, June 10, 2012

Heterosexual vs. gay parenting (click for larger image)

This data is not surprising – we know that fatherless children do far worse than children who have a father present, even when all the factors like income and wealth and education are corrected for. Children need a mother and a father.

Is the APA unbiased?

Why would the APA make pronouncements that go against the scientific facts? Well, consider what a former President of the APA says about the APA:

> A former president of the American Psychological Association (APA), who also introduced the motion to declassify homosexuality as a mental illness in 1975, says that the APA has been taken over by "ultraliberals" beholden to the "gay rights movement," who refuse to allow an open debate on reparative therapy for homosexuality.
>
> Dr. Nicholas Cummings was President of the APA from 1979 to 1980, and also served as a member of the organization's Council of Representatives. He served for years as Chief of Mental Health with the Kaiser-Permanente Health Maintenance Organization, and is the author of the book "Destructive Trends in Mental Health: The Well-Intentioned Path to Harm."
>
> In an interview with representatives of the National Association for Research and Therapy of Homosexuality (NARTH) in late April, Cummings said that the organization's problems began with the rejection of the Leona Tyler Principle, which required that all public positions of the APA be supported by scientific evidence.
>
> The APA "started changing pretty drastically by the late 1980s," said Cummings. "By the mid 1990s, the Leona Tyler principle was absolutely forgotten, that political stances seemed to override any scientific results. Cherry-picking results

> became the mode. The gay rights movement sort of captured the APA."
>
> Cummings says that the movement for "diversity" in the APA, which he endorsed, had resulted in a lack of diversity regarding heterosexuals.
>
> "If I had to choose now, I would see a need to form an organization that would recruit straight white males, which are underrepresented today in the APA," he said.
>
> Cummings says that he personally is not in opposition to the homosexual movement, including gay "marriage," pointing out that he was the author of the motion to strike homosexuality from the APA's list of mental illnesses. However, he is distressed at the loss of scientific objectivity at the organization.

More evidence against same-sex marriage is available in this research paper from the Family Research Council think tank, compiled from mainstream statistics like the Census Bureau and the Department of Justice.

Here is my comprehensive case against gay marriage.

Computer models utterly fail to predict climate changes

June 15, 2012 | by Wintery Knight | Link | Original Link

From the Financial Post, an editorial by Ross McKitrick of the University of Guelph. He is an expert reviewer for the UN's Intergovernmental Panel on Climate Change. (H/T ECM)

Excerpt:

> [I]n 2008 and 2010, a team of hydrologists at the National Technical University of Athens published a pair of studies comparing long-term (100-year) temperature and precipitation trends in a total of 55 locations around the world to model projections. The models performed quite poorly at the annual level, which was not surprising. What was more surprising was that they also did poorly even when averaged up to the 30-year scale, which is typically assumed to be the level they work best at. They also did no better over larger and larger regional scales. The authors concluded that there is no basis for the claim that climate models are well-suited for long-term predictions over large regions.
>
> A 2011 study in the *Journal of Forecasting* took the same data set and compared model predictions against a "random walk" alternative, consisting simply of using the last period's value in each location as the forecast for the next period's value in that location. The test measures the sum of errors relative to the random walk. A perfect model gets a score of zero, meaning it made no errors. A model that does no better than a random walk gets a score of 1. A model receiving a score above 1 did worse than uninformed guesses. Simple statistical forecast models that have no climatology or physics in them typically got scores between 0.8 and 1, indicating slight improvements on the random walk, though in some cases their scores went as high as 1.8.
>
> The climate models, by contrast, got scores ranging from 2.4 to 3.7, indicating a total failure to provide valid forecast information at the regional level, even on long time scales. The authors commented: "This implies that the current [climate] models are ill-suited to localized decadal predictions, even though they are used as inputs for policymaking."
>
> Indeed. Nor is the problem confined just to a few models. In a 2010 paper, a co-author and I looked at how well an average formed from all 23 climate models used for the 2007 IPCC report did at explaining the spatial pattern of temperature trends on land after 1979, compared with a rival model that all the experts keep telling me should have no explanatory power at all: the regional pattern of socioeconomic growth. Any effects from those factors, I have been told many times, are removed from the climate data before it is published. And yet I keep finding the socioeconomic patterns do a very good job of explaining the patterns of temperature trends over land. In our 2010 paper we showed that the climate

> models, averaged together, do very poorly, while the socioeconomic data does quite well.

The computer models have to be able to predict changes in specific regions, otherwise we have no reason to trust that they are accurate. We have to be able to evaluate whether the models work by *testing them.* When we can test them to predict climate change in specific regions, they fail.

Friday night movie: The Lion, the Witch and the Wardrobe (2005)

June 15, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.1/10]

IMDB median rating: [7/10]

Description:

> When the Pevensie family are evacuated out to the country, they are unaware of the adventure they will encounter. During a game of hide and seek, the youngest daughter, Lucy (Henley) discovers a wardrobe which transports her to the land of Narnia. Covered in snow, Narnia is full of weird and wonderful creatures, but is watched over by the evil White Witch, Jadis (Swinton). When all four Pevensie children end up through the wardrobe, they discover that it was meant to be, as two daughters of Eve and two sons of Adam must join with the mighty lion, Aslan (Neeson) to defeat the evil White Witch.

One version of this movie has over 1 million views on Youtube, so I am assuming that the movie company is OK with it being posted now.

Happy Friday!

Obama declares amnesty for 800,000 illegal immigrants

June 16, 2012 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> President Obama said Friday the United States will stop deporting hundreds of thousands of young illegal immigrants and give them work permits, a move praised fellow Democrats but criticized by Republicans on Capitol Hill who said the administration has side-stepped the country's legislative process.
>
> The executive order will apply to illegal immigrants who came to the U.S. before they were 16 and are younger than 30. They also must have no major criminal offenses, have been in the country for at least five continuous years, have graduated from a U.S. high school or have earned a GED, or served in the military.
>
> Individuals who have been convicted of a felony offense, a significant misdemeanor offense, or three or more other misdemeanor offenses not occurring on the same date and not arising out of the same act, omission, or scheme of misconduct are not eligible to be considered for deferred action under the new process.
>
> "These are young people who study in our schools and play on our playgrounds," the president said. "They are Americans in every single way but one – on paper."
>
> Those now eligible also can apply for a work permit that will be good for two years with no limits on how many times it can be renewed.
>
> The change is expected to impact roughly 800,000 illegal immigrants.

This is nothing but suspending the rule of law to buy votes from a special interest group. Who pays for it? You do – you have to pay for the extra school, health care and policing costs of illegal immigration.

Governor Bobby Jindal signs bill to ban abortions after 20 weeks

June 16, 2012 | by Wintery Knight | Link | Original Link

Republican Governor Bobby Jindal

Weekly Citizen reports:

> Governor Bobby Jindal signed two new laws. The legislation – SB 766 by Senator John Alario and HB 1086 by Representative Alan Seabaugh – are part of the Governor's 2012 legislative package.
>
> **SB 766 by Senator John Alario** prohibits abortions of an unborn child who is 20 weeks or older, and provides for license revocation and disciplinary action for any person who intentionally or knowingly performs or induces an abortion on a woman when she has a baby who is 20 weeks or older.
>
> **HB 1086 by Representative Alan Seabaugh** prohibits euthanasia for the non-terminally ill and the severely disabled. Prior to Governor Jindal signing this new law those same protections were only offered for the terminally ill.
>
> Governor Jindal said, "It is incumbent upon us to protect the weakest and most vulnerable among us, and these new laws will protect innocent human life."
>
> Earlier this year, Governor Jindal signed SB 330 by Senator Rick Ward to create a specific crime for performing an abortion in Louisiana if the abortionist is not licensed to practice medicine in Louisiana. The legislation also created the crime of aggravated criminal abortion by dismemberment when the unborn child is dismembered in the course of a criminal abortion.
>
> Governor Jindal also signed SB 708 by Senator Sharon Weston Broome to require that the fetal heartbeat be made audible and ultrasound images be displayed for optional review prior to an abortion.

Here's the breakdown of possible running mates for the Republican nominee.

Jindal is in first place:

1a. Gov. Bobby Jindal, LA — No single person better combines the ability to excite the Republican "base" with the breadth of resumé experience, the reformist record, and the proven ability ofcrisis management than does Jindal. At age 25 he rescued Louisiana's state health-care system from Medicaid-induced collapse; he helped forge a national Medicare solution (along Paul Ryan's later lines) that won over Democratic moderates like John Breaux and Bob Kerrey but fell short when Bill Clinton pulled the plug during the Lewinsky mess; he ran Louisiana's second-largest system of colleges; he served as the number two guy at the federal Department of Health and Human Services; he served three years in Congress and emerged from Hurricane Katrina as the only Louisiana politician with his stature enhanced by his highly effective responses; and he has been the most successful conservative reformer (and the only re-elected one) ever to serve as Louisiana's governor. As governor he pushed through some needed ethics reformed, pared state government, kept taxes low, handled the BP oil spill superbly, and pushed through (partly in his first term, partly in his second) a series of education reforms (expanding choice and improving accountability) that, combined, probably outstrip even those of Florida's Jeb Bush and Wisconsin's Tommy Thompson as the boldest and best school improvements in modern American history.

Some will gripe that Jindal adds no geographical advantage to the ticket — and they are right. But that consideration pales in comparison with what he will add in one particular area. It is almost certain that, regardless of how the Supreme Court rules on Obamacare, the question of "what would Republicans do to replace it" will dominate campaign coverage throughout the summer and perhaps all the way until Election Day. Romney himself, as the author of Romneycare and a once-avid advocate of an individual insurance mandate, is poorly equipped to handle this question. No high-ranking elected official in the country, however, can match Jindal for his expert knowledge on health-care policy, nor can anybody else match Jindal's ability to explain positive, conservative alternatives to the Left's state-controlled systems. In short, he takes a major Romney weakness and turns it into a strength, on an issue that really could sway the whole election.

Jindal also will be hard to attack. He has been somewhat inoculated by none other than James Carville, who said (for the dust-jacket of Jindal's excellent book) that "I don't agree with the guy on everything, but Governor Jindal has provided competent, honest, and personable leadership throughout some of Louisiana's toughest times."

Alas, nobody is perfect, and while national conservatives love Jindal, numerous Louisiana conservatives (some of them quite perspicacious, not to mention friends of mine) will bend anybody's ear about certain alleged shortcomings and apostasies. Individually, their complaints may have merit. Collectively, they still don't add up to an effective indictment of somebody who has had more success

> with conservative governance than anybody in Louisiana history.
>
> Conservatives also will complain that Jindal is sometimes too inaccessible, and that his own geniality masks a serious political ruthlessness in his administration. In truth, there *is* a certain air of LBJ-like political muscle — definitely minus the corruption, thank goodness — that comes from the administration. On the other hand, in the hardball realm of national politics in which the Left and its media allies have no compunction about smearing conservatives relentlessly, conservatives could probably use a measure of ruthless effectiveness.
>
> If Bobby Jindal and his team are deceptively tough, it also means they are tough to beat. Conservatives and Republicans of all stripes should celebrate such a quality — and Mitt Romney darn well ought to make use of it.

He is tied for first place with former senator John Kyl of Arizona.

I would prefer Wisconsin congressman Paul Ryan, Pat Toomey or Bobby Jindal. Go with ice cold competence. These are all people with stong fiscal conservative credentials but who are also thoughtful, reflective social conservatives.

Many of Obama's young supporters now unemployed, living with parents

June 17, 2012 | by Wintery Knight | Link | Original Link

From Bloomberg News.

Excerpt:

> In the hard economic times since 2008, when Foster voted for President Barack Obama's message of hope, America's young voters have been battered. They've disproportionately sustained job losses, wage declines and detours on their career paths.
>
> For many, even the normal rites of passage to adulthood have been disrupted, as they delay such life steps as leaving home, getting married and having children.
>
> […]One in six 16- to 24-year-olds last year was idle, neither working nor attending school even for just an hour a week, according to an analysis of Labor Department data by Lawrence Katz, a Harvard economics professor. Among 20- to 24-year-old men, almost one in five was idle last year.
>
> As of May, 41 percent of the nation's net decline in full- time jobs from four years earlier was among under-25-year-olds, an age group that represents just 14 percent of the workforce, according to the Bureau of Labor Statistics. Under-35-year-olds account for 65 percent of the decline in full-time employment, though they comprise only 35 percent of the labor force.
>
> Even among young people who have full-time work, real wages have dropped, while older workers' pay has kept even or slightly improved. Median weekly earnings after inflation fell 6 percent among 18- to 24-year-olds in full-time jobs from 2007 to 2011, according to an analysis of Labor Department data by the Pew Research Center in Washington.
>
> […]The portion of 18- to 24-year-olds who say they will definitely vote dropped to 47 percent this year from 64 percent in 2008, according to polls conducted by the Institute of Politics during March and April of each election year.
>
> Support for Obama also has declined, with the president besting Republican Mitt Romney 41 percent to 29 percent in the age group compared with 53 percent to 32 percent against Republican John McCain in 2008, according to the poll.
>
> Sixty-six percent of voters under 30 cast ballots for Obama in the last election, the highest share for a presidential candidate from that age group going back to the start of modern exit polls in 1980. Turnout in the age group was the highest in 16 years, according to the U.S. Census Bureau.

Note that Romney's support among young people is DOWN to 29 from McCain's level of 32. DOWN.

What amazes me is that the support is still so high for Obama. But I think this just goes to show you how thoroughly indoctrinated young people are in the public schools, and how little diversity of opinion and critical thinking there is in higher education.

As Greece's private sector dies, so does government-provided health care

June 17, 2012 | by Wintery Knight | Link | Original Link

From Reuters. (H/T ECM)

Excerpt:

> Greece's rundown state hospitals are cutting off vital drugs, limiting non-urgent operations and rationing even basic medical materials for exhausted doctors as a combination of economic crisis and political stalemate strangle health funding.
>
> With Greece now in its fifth year of deep recession, trapped under Europe's biggest public debt burden and dependent on international help to keep paying its bills, the effects are starting to bite deeply into vital services.
>
> […]Greece, a member of the euro zone that groups some of the richest nations on earth, has descended so far that drugmakers are even working on emergency plans to keep medicines flowing into the country should it crash out of the currency bloc.
>
> The emergency has grown out of a tangle of unpaid bills, with pharmacists and doctors complaining of being unable to pay suppliers until competing health insurers clear a growing backlog of unfilled state payments.
>
> […]Greeks have long had to give medical staff cash "gifts" to ensure good treatment. Nevertheless the health system was considered "relatively efficient" before the crisis despite a variety of problems including a fragmented organization and excess bureaucracy, according to a 2009 report for the Organisation for Economic Cooperation and Development.
>
> But it has been unable to respond to the growing crisis. The European Union and International Monetary Fund, which provided a 130 billion euro lifeline to Greece in March, have demanded big cuts to the system as part of a wider package of austerity measures.
>
> But powerful medical lobbies and unions have resisted fiercely. Caretaker Prime Minister Panagiotis Pikrammenos, in office until a new government is formed after the elections, has pleaded for a solution but been powerless to force a change.

What's the lesson here? The lesson is that government programs have no money of their own – they don't make anything or do anything that people want of their own free will. Only private companies do that because they have to compete with other sellers to please the customer. Government is a parasite on the private sector – everything they do is funded from taxes taken from workers and employers. When the economy goes bad, it's not just private sector jobs that are lost, it's public sector health care programs. That's why no one should want government to go beyond the minimal functions set out in

the Constitution.

UPDATE: On Sunday, Greece voted to reject Obamanomics and to live within their means.

Are gay relationships typically stable and monogamous?

June 18, 2012 | by Wintery Knight | Link | Original Link

ECM sent me this post from The Public Discourse which explains a bit more about the two studies on gay parenting that were in the news last week. Some people are complaining that the study did not use enough long-term gay relationships. This quote explains why that was not feasible.

Excerpt:

> The [NFSS] study found that the children who were raised by a gay or lesbian parent as little as 15 years ago were usually conceived within a heterosexual marriage, which then underwent divorce or separation, leaving the child with a single parent. That parent then had at least one same-sex romantic relationship, sometimes outside of the child's home, sometimes within it. **To be more specific, among the respondents who said their mother had a same-sex romantic relationship, a minority, 23%, said they had spent at least three years living in the same household with both their mother and her romantic partner. Only 2 out of the 15,000 screened spent a span of 18 years with the same two mothers. Among those who said their father had had a same-sex relationship, 1.1% of children reported spending at least three years together with both men.**
>
> This strongly suggests that the parents' same-sex relationships were often short-lived, a finding consistent with the broader research on elevated levels of instability among same-sex romantic partners. For example, a recent 2012 study of same-sex couples in Great Britain finds that gay and lesbian cohabiting couples are more likely to separate than heterosexual couples.[3] A 2006 study of same sex marriages in Norway and Sweden found that "divorce risk levels are considerably higher in same-sex marriages"[4] such that Swedish lesbian couples are more than three times as likely to divorce as heterosexual couples, and Swedish gay couples are 1.35 times more likely to divorce (net of controls). Timothy Biblarz and Judith Stacey, two of the most outspoken advocates for same-sex marriage in the U.S. academy, acknowledge that there is more instability among lesbian parents.[5]
>
> **Therefore, while critics of the NFSS have faulted it for lacking comparisons between children of IBFs and the children of committed and intact gay or lesbian couples, this was attempted, but was not feasible. Despite drawing from a large, representative sample of the U.S. population, and despite using screening tactics designed to boost the number of respondents who reported having had a parent in a same-sex relationship, a very small segment reported having been**

> **parented by the same two women or two men for a minimum of three years. Although there is much speculation that today there are large numbers of same-sex couples in the U.S. who are providing a stable, long-term parenting relationship for their children, *no studies* based upon large, random samples of the U.S. population have been published that show this to be true, and the above-cited studies of different nations show that on average, same-sex couple relationships are more short-lived than those of opposite-sex couples.**
>
> Despite the lack of empirical evidence for the claim that today there are large numbers of stable, two-parent gay households, for the last ten years, contemporary gay parenting research has nevertheless claimed that there are "no significant differences" (and some benefits) to being raised by same-sex parents. Therefore, Regnerus analyzed the new NFSS data to verify this claim. In the end, he found the claim to be more plausible when comparing the grown children of parents who had a same-sex relationship to the grown children of divorced, adopted, single-parented, or step-parented arrangements. The claim is false if one compares the grown children of a parent who had a same-sex relationship to those from IBFs. While the study has been criticized for "comparing apples to oranges," Regnerus's work studies the *reality* of the population of children who were raised by parents who had same-sex relationships.

I think this is an important point to make – and it's consistent with the research from previous studies. People have been getting their opinions about what the gay lifestyle is really like for children from biased sources and popular culture. But we need to look at research to really know what is true. Any leftist Hollywood producer with money can make a TV show in which all the religious/conservative people look like devils, and all the gay couples are faithful, committed, monogamous and non-violent. But that's not research – that's television.To really make policies that protect children, we have to look at the facts.

The right way to think about gay marriage is to think about it as an extension of no-fault divorce. The same feminists and leftists who pushed for the legalization of no-fault divorce told us back then that the children would be fine, that children are resilient. No-fault divorce *was a change in the definition of marriage.* The leftists said that divorce would never become widespread, and that it would not harm children in any way. It was all a pack of lies. If the practices of the gay lifestyle become conflated with marriage, then marriage will come to denote relationships engaged in for "love" not children, such that unchastity, infidelity, increased domestic violence and frequent break-ups are incorporated back into the definition of marriage.

Some women think that fathers should not protect their children with force

June 18, 2012 | by Wintery Knight | Link | Original Link

Women often ask me why I am cautious about getting married. I have a number of reasons for being cautious. I have general concerns about the anti-chastity, anti-marriage, anti-parenting culture. I am concerned about the financial situation that the country is in, which my future children would inherit.

But there is a quirky reason that I almost never tell anyone, and that has to do with the aversion that many women have of men using force to punish evil. The kind of woman I am thinking about is comfortable with banning self-defense, banning guns, coddling criminals, opposing just wars, blaming Israel for Middle East tensions, etc. Even non-feminist women tend to want to regulate and seize firearms, even though though they know nothing about them, except that they go "boom" and loud noises are scary, and therefore bad. These women oppose wars, even they don't want to know anything about how military history shows that weakness provokes aggression – not strength. They don't like martial arts, they won't play wargames, they don't know anyone in the military, they think that contact sports are evil.

Now how widespread is this attitude, do you think? Sure there are some Harriet Harman and Lynne Featherstone types in the UK, and some Bertha Wilson and Beverley McLachlin types in Canada, and some Ruth Bader Ginsburg and Betty Friedan types in the United States. But how widespread is this? How many women want to use laws, courts, schools and government to prevent men fulfilling their traditional roles as protectors, providers and moral/spiritual leaders? How many women want to control the judgmental things that men say, and the use of force by men to protect the weak and punish evildoers?

First, consider this news story sent to me by Wes:

> According to the Lavaca County Sheriff's Office, the 23-year-old father and his family were enjoying a barbecue last Saturday at their ranch on Shiner's outskirts where they keep horses and chickens.
>
> His young daughter had gone off toward the barn, to feed the chickens, the child's grandfather — who isn't being named, to protect the identity of his granddaughter — told CNN affiliates KSAT and KPRC.
>
> Then her father heard screaming and ran. He found a 47-year-old man in the act of sexually abusing his [4-year old] daughter, according to Sheriff Micah Harmon.
>
> The father stopped the alleged abuser, then pounded him repeatedly in the head.
>
> […]The father himself called 911, saying his daughter's alleged abuser was lying, beaten, on the ground. Afterward, the sheriff said that the admitted killer appeared "very remorseful" and didn't know the other man would die at the scene.

Now here are some reactions from women to this story.

Here's Jezebel:

> Like, okay, instead of a trial, let's just put a dad and a child molester in a room, and give the dad a sword and give the child molester a mild sedative and call it justice! And Judge Judy can referee! Nope. I'm not a legal wizard, but I'm going to stick with my gut here, which says that WE DO NOT JUST GO ABOUT MURDERING PEOPLE.
>
> Now, for the record, I also don't believe that the government should be allowed to murder people who murder people, so take my opinion with however much salt you want. Is it *less* upsetting when someone murders a child molester? I guess so. (Although, and I know I'm opening a can of worms here, even child molesters *are* officially human beings and entitled to the same legal recourse as any other citizen. Also, a lot of them get murdered in prison anyway, so…you guys will get your wish.) Is accidental deadly force excusable if someone walks in on a person actively molesting their child? I think yes. But that doesn't mean we should legalize murder and normalize vengeance. If that was even a real question.

Got that? Defending your family is murder, and executing a serial murderer is also murder. This is from a web site that is radical on abortion – somewhere to the left of Obama, which is loony territory.

And here's CafeMom:

> I'm a parent, for cripes sakes. I never want to see a child being hurt in any fashion. Just last night I sat in my house with my heart beating fast against my chest because I'd heard a rumor that a local teen had to be airlifted out of an accident scene (good news: it was one of those exaggerations that spreads on Facebook — she's fine). In that sense, if the allegation of abuse is true, then I would have been shaking with anger and horror both. If I were that father, I would have *wanted* to kill that man.
>
> But wanted to does not equal would have.
>
> Consider this: when you take justice into your own hands, what happens? You get in trouble. You, the person who, up until that very moment, was in the right.
>
> You may say it's "worth it" because the other person got what you thought was "coming," but you are forever marred by having sunk to the criminal level. You are what you profess to despise.

Got that? Defending your family is sinking down to the level of a criminal.

This is actually quite common, and I do ask about it when I am evaluating women for friendships and courtships. I once was courting a Christian woman who told me that soldiers should not use violence to stop terrorists, and policemen should not use firearms to stop criminals, even as a last resort. She imagined that there was always some other

feasible alternative to violence, and that war and use of deadly force was *never* justified. She even said that capital punishment was *always* wrong. (This is in spite of what the Bible says).

What some women really want is to feminize men and to dominate them – stopping them from getting into debates, from defending themselves with force, from telling the truth if it offends others, from judging immorality, from excluding others whose beliefs are false, from disciplining their children, and so on. I was once called a "bully" by a woman for saying that I would discourage my daughter from studying ballet instead of a STEM field in college, even though my motive was to make sure that she could be financially independent, so that she would be able to pick a husband for the right reasons, instead of being desperate.

Feminism – the denial of and disrespect for distinct male roles – has influenced everything in society. Feminism has influenced the tax rates, the size of government, the laws, the courts, the schools… everything. If I were to get married, I would be getting married in a world dominated by feminism – where the majority of single/younger women are fully supportive of regulating and controlling men, as evidenced by their voting patterns.

Many women just seem to have this enormous confidence about regulating and dominating other peoples lives, and these convictions are often not based on any evidence, but merely on intuitions and feelings – or even the desire to be perceived by others as "nice". I am frequently encourtering women on the right and the left who boast to me about how they do not judge others – as if having no informed, evidence-based moral convictions was a qualification for being a wife and mother. Who wants to marry a hedonistic sociopath? Not me.

I think it is very important for me to be careful about getting into a relationship where the state can intrude and regulate my entire life, in the event of a divorce or because I have children and they want to be a "co-parent" with me, as a Canadian educrat recently said. I can take care of myself, but when you have to face divorce courts, or let your children face government agencies and public schools forcing their secular left viewpoint on tiny little kids, it's a lot to ask of a man.

I am already being forced to give a third of my salary to fund a secular leftist bureaucracy which opposes my plans and my values. For me to consider marriage, I would have to be convinced that the woman would support me. And the precondition for support is having an informed view of what men care about and what we are trying to achieve. Women need to show that they are willing to recognize the differences of a man, and his distinct roles, and to give him space to make his contributions.

This understanding of the contributions of men has to be done at the micro level of defending the family, but also at the macro level of defending the nation. Women ought to make an effort to understand and affirm the use of force by Western nations against tyranny and oppression. Counter-terrorism, national security and a robust peace through strength foreign policy are not things that come easily to women, and *that's exactly why*

they should be open to studying those things, so that their minds are naturally changed as they grow in knowledge.

UPDATE: Grand jury says there will be no charges laid against the father.

Is 1 Cor 15:3-7 based on early eyewitness testimony?

June 18, 2012 | by Wintery Knight | Link | Original Link

I recently was told by an atheist this about 1 Corinthians 15:3-7:

> What Paul reports in 1 Corinthians is not an eyewitness account – nor does he claim it to be. He says he 'received' it. A believer posted on my site that she often receives things from God – she hears his voice. I asked if it was an audible voice, and she said, yeah – sort of.
>
> If eyewitness doesn't mean witnessed with the eye, and audible doesn't mean heard with the ear – then I don't really know how to have a reasonable conversation with believers. Folks like this are ultimately going to believe whatever they want, no matter what.

I sputtered for a while at the suggestion that Paul's early creed in 1 Cor 15:3-7 was an auditory hallucination and not an early tradition received from the eyewitnesses, but then I calmed down and wrote something sensible, so here it is, without quotes. (Keep in mind that I was very angry when I wrote this because… GAAAHHHH!!!)

Note: I should be clear and say that skeptics accept that the people who report having appearances had some sort of experience where they thought they saw Jesus. Gerd Ludemann calls them "visions", for example.

—-

If you study these things, you will find that the tradition in 1 Corinthians 15 is accepted by atheistic scholars like James Crossley as going back to 1-3 years after the death of Jesus. This is an early creed that was received from the eyewitnesses Peter and John when Paul visited them several times in Jerusalem, as documented in Galatians 1 and 2, where Paul meets the eyewitnesses. And of course, Paul has his own eyewitness experience, documented in 1 Cor 15:8. This account is admitted by atheistic scholars on the far left fringe. Even the Jesus seminar colors it red in their "The Five Gospels" book. It is the only way to explain Paul's conversion. He was an eyewitness. He met with the eyewitnesses.

Here is an introduction:
http://www.reasonablefaith.org/the-witness-of-the-pre-pauline-tradition-to-the-empty-tomb

> The evidence that Paul is not writing in his own hand in I Cor. 15.3-5 is so powerful that all New Testament scholars recognize that Paul is here passing on a prior tradition. In addition to the fact that Paul explicitly says as much, the passage is replete with non-Pauline characteristics, including, in order of appearance: (i) the phrase "for our sins" using the genitive case and plural noun is unusual for Paul; (ii) the phrase "according to the Scriptures" is unparalleled in Paul, who introduces Scriptural citations by "as it is written"; (iii) the perfect passive verb "has been raised" appears only in this chapter and in a pre-Pauline

> confessional formula in II Tim. 2.8; (iv) the phrase “on the third day” with its ordinal number following the noun in Greek is non-Pauline; (v) the word “appeared” is found only here and in the confessional formula in I Tim. 3.16; and (vi) “the Twelve” is not Paul’s nomenclature, for he always speaks of the twelve disciples as “the apostles.”
>
> Now the visit during which Paul may have received this tradition is the visit you mention three years after his conversion on the road to Damascus (Gal. 1.18). This puts the tradition back to within the first five years after Jesus’ death in AD 30. So there’s not even an apparent inconsistency with Paul’s appropriating the language of the formula to encapsulate the Gospel he was already preaching during those first three years in Damascus.

I have heard atheists accept the 1 Cor 15 creed as having that early date in debates with Craig.

Here are a few of them:
http://www.garyhabermas.com/articles/dialog_rexperience/dialog_rexperiences.htm

Quote:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: “However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul’s.”[3]
>
> (2) In addition to Paul’s own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: “It is almost universally agreed today that Paul is here citing tradition.”[4] Critical scholars agree that Paul received the material well before this book was written.[5]
>
> The most popular view is that Paul received this material during his trip to

Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul's use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]

Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]

Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.

(3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]

These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.

(4) Not only do we have Paul's account that the other major apostles confirmed

> his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his firsthand, direct approval of their resurrection message.

Now, some of the people he lists there are people who I think are so far on the secular left that they are on the far left fringe to the point of being irrational – they are so biased. And yet they don't deny 1 Cor 15, or that it is based on eyewitness accounts.

That why you see people like Bart Ehrman, Gerd Ludemann, James Crossley, Michael Goulder, etc. giving Craig the appearances as a historical fact in debates. Atheist or not, people who deny the resurrection accept the appearances listed in this creed, and they think it is based on eyewitness testimony, including Paul's. That's the way it is. That's what you read in the papers. That's what you see in debates. This is a given.

That's what I mean when I say they are non-negotiable. I mean that scholars on the far left secular skeptical fringe consider them to be non-negotiable.

Washington Post columnist bashes Obamacare

June 19, 2012 | by Wintery Knight | Link | Original Link

The Washington Post is one of the most liberal newspapers, but not the worst. For example, further left there's the New Republic and National Journal, which are basically Marxist. Well the article I'm looking at today was written by a columnist who has worked for both National Journal *and* New Republic. He's even work for Newsweek which is just Democrat propaganda. Surprisingly, his WaPo article is actually fairly accurate about the problems with Obamacare, although his opinions of what to do instead are still left-wing.

He lists 5 reasons why Obamacare is bad policy:

1. *It increases uncertainty and decreases confidence when recovery from the Great Recession requires more confidence and less uncertainty.*
2. *The ACA discourages job creation by raising the price of hiring.*
3. *Uncontrolled health spending is the U.S. system's main problem — and the ACA makes it worse.*
4. *Obama's program also worsens the federal budget problem.*
5. *The ACA discriminates against the young in favor of the old.*

Here's are the details on numbers 2,4 and 5:

> *(2) The ACA discourages job creation by raising the price of hiring.* This is basic economics. If you increase the price of labor, companies will buy less of it. Requiring employers to buy health insurance for some workers makes them more expensive, at least in the short run. Particularly vulnerable are low-skilled workers, notes economist Diana Furchtgott-Roth of the Manhattan Institute. Because the employer mandate exempts firms with fewer than 50 workers, there's a huge incentive for firms to stop at 49, she says.
>
> *(4) Obama's program also worsens the federal budget problem.* Driven by Medicare and Medicaid, health care already exceeds one-fourth of the budget and is headed toward a third. It's the crux of the problem. So Obama creates *another* huge health program. The administration's retort: the program lowers the budget deficit. This is rhetorical hocus-pocus. Here's what happens. From 2012 to 2022, the ACA raises federal spending by $1.762 trillion, estimates the Congressional Budget Office. However, all of this and a bit more is offset by tax increases and assumed cuts in Medicare. But these tax increases and cuts could have been used to shrink the huge budget deficits that pre-existed Obamacare. Now they can't; moreover, the Medicare cuts might be repealed or reduced.
>
> *(5) The ACA discriminates against the young in favor of the old.* Government policy already does this through payroll taxes that have young workers subsidizing Social Security and Medicare benefits. The ACA compounds the effect

> by forcing some young Americans to buy insurance at artificially high premiums that would pay for the care of a sicker, older population.

Higher unemployment, more debt and passing the costs on to the younger generation who can't even find jobs with their worthless degrees in political correctness.

I think there are a lot of leftist nuts who are getting increasingly disengaged with Obama's plan to "help the poor". It's not working because Obama has no idea how to help the poor. The way to help the poor is to give them jobs, and the way to give them jobs is to give more incentives to the private sector job creators, and the way to give incentives to the private sector job creators is to *lower their taxes* and *decrease their regulatory burden*. That's what would actually work. Obama did the opposite, and nowhere is this more visible than in his Obamacare boondoogle.

Do children of gay parents perform as well as those of heterosexual parents?

June 19, 2012 | by Wintery Knight | Link | Original Link

Some interesting numbers from the large-scale studies on children raised by gay fathers and lesbian mothers released last week. (H/T ECM)

Abbreviations:

- LM = lesbian mothers
- GF = gay fathers
- IBF = intact biological family (heterosexual couple)

Here are the findings:

> **Economics:**
>
> On economic outcomes, grown children of an LM were almost four times more likely to be currently on public assistance than the grown children of IBFs. As young adults, they were also 3.5 times more likely to be unemployed than the grown children of IBFs.
>
> **Crime:**
>
> On criminal outcomes, the children of GFs showed the greatest propensity to be involved in crime. They were, on average, more frequently arrested and pled guilty to more non-minor offenses than the young-adult children in any other category. The children of LMs reported the second highest frequency of involvement in crimes and arrests, and in both categories the young-adult children of intact biological families reported the lowest frequency of involvement in crimes or arrests.
>
> **Sexual abuse:**
>
> [W]hen asked if they were ever touched sexually by a parent or other adult, the children of LMs were eleven times more likely to say “yes” than the children from an IBF, and the children of GFs were three times more likely to say “yes.” The children of IBFs were the least likely of all family types to have ever been touched sexually: only 2% reported affirmatively (compared to 23% of LMs who replied “yes”). When asked if they were ever forced to have sex against their will, the children of LMs were the worst off again—four times more likely to say “yes” than the children of IBFs. The children of GFs were three times more likely to have been forced to have sex than the children of IBFs. In percentages, 31% of LMs said they had been forced to have sex, compared with 25% of GFs and 8% of IBFs. These results are generally consistent with research on heterosexual families. For instance, a recent federal report showed that children in heterosexual families are least likely to be sexually, physically, or emotionally

abused in an intact, biological, married family.[7]

Sexually transmitted diseases:

Regarding physical health, when asked if they had ever had a sexually transmitted infection (STI), the young-adult children of GFs were three times more likely to say “yes” than those of IBFs. Children of LMs were two and a half times more likely to say “yes,” followed by the children of stepfamilies, who were twice as likely to have had an STI as children of IBFs. Children of IBFs and children from “other” family types were the least likely of all to have had an STI.

Drug use:

When asked to report upon frequency of marijuana use, the young-adult children of divorced parents were the worst off, reporting that they had used marijuana on average one and a half times more frequently than children of IBFs; next came the children of LMs, followed by the children of single parents, and the children of GFs. The children adopted prior to age 2 by strangers (people unrelated to them) and the children of IBFs reported least frequent marijuana use as young adults.

Emotional health:

Respondents were asked to report their sentiment about their family experiences while growing up. The children of LMs reported the lowest levels of perceived safety in their childhood home, followed by children of GFs, with the children of IBFs reporting the highest levels of perceived safety. When asked if they were recently or currently in therapy “for a problem connected with anxiety, depression, relationships, etc.,” children adopted by strangers reported receiving such therapy the most**,** followed by the children of LMs. The children from IBFs were least likely to report receiving therapy.

On the CES-D depression index, an eight-measure survey of respondents’ happy-to-depressed thoughts over the previous seven days, the young-adult children of LMs and GFs reported statistically significantly higher levels of depression than young-adult children from IBFs. The young-adult children of GFs were twice as more likely to have thought about suicide in the previous 12 months as the children of LMs, and almost five times more likely than the children of IBFs to have thought about the same.

Relationships:

The study asked questions about the history and current status of the young adults’ relationships. When asked to rate the quality of their current relationship, the children of GFs reported the lowest, followed by children adopted by strangers, the children of stepfamilies, and then the children of LMs.

When asked about the number of times they thought that their current relationship was in trouble, the children of GFs reported the highest numbers again, followed by the children of divorced parents. The children of IBFs reported

> both the highest levels of relationship quality and the lowest frequency of thinking their relationship to be in trouble of all of the family arrangements.
>
> When asked about infidelity, children of LMs were three times more likely to report having had had an affair while married/cohabiting than children of IBFs, followed by children from stepfamilies (who were two and a half times more likely than IBFs) and children of GFs (who were twice as likely).
>
> **Sexual orientation:**
>
> The NFSS asked respondents to identify their sexual orientation and found that children of LMs were more open to same-sex romantic relationships, bisexuality, and asexuality than any other group. Daughters of LMs reported an average of just over one female sex partner and four male sex partners in their lifetimes, in contrast to daughters of IBFs who reported an average of only 0.22 female sex partners and 2.79 male sex partners in their lifetimes. Daughters of LMs were also most likely to self-report asexuality, “not sexually attracted to either males or females” (4.1% of females from lesbian mothers compared to 0.5% of females from IBFs). Children of GFs were the next least likely to identify as fully heterosexual. Children from IBFs were most likely of all family types to identify as entirely heterosexual.

I think that we need to think though the consequences of redefining marriage for all of the parties who are concerned, and one of those parties is definitely the children of gay fathers and lesbian mothers. Are they well served by redefining marriage? Should we be celebrating and affirming same-sex parenting as being equal to parenting in intact biological families?

Video: William Lane Craig and Peter Millican debate "Does God Exist?"

June 19, 2012 | by Wintery Knight | Link | Original Link

Which debate would I consider to be the best to show an intelligent skeptic?

This one, between William Lane Craig and Peter Millican.

The debate was held at the University of Birmingham, England in 2011. I would put this debate in the top 3 Craig debates ever, along with his debates against Austin Dacey and Walter Sinnott-Armstrong.

My summary of the Craig-Millican is below. This debate is really meant for advanced students, but if you read my post "What you need to know about the BVG Theorem" before watching the debate, it should help you to follow along.

Dr. Craig's opening speech:

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

Dr. Millican's opening speech:

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence

we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

Dr. Craig's first rebuttal:

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt

their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

Dr. Millican's first rebuttal:

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations.

But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It’s not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn’t mean that multiplication doesn’t work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it’s similar to nothing.

We don’t have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can’t be an abstract object because they don’t cause effects, so it must be a mind. But there are all sorts of things we’ve never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have “algorithmic properties” as well as physical properties, it doesn’t mean that computers have minds.

Dr. Craig’s second rebuttal:

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that’s not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God’s goal is not just to convince people that he exists. God’s goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can’t translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

Dr. Millican's second rebuttal:

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that

makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

Dr. Craig's final rebuttal:

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

Dr. Millican's final rebuttal:

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3 minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they

undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

New study finds that belief in Hell is associated with reduced crime

June 20, 2012 | by Wintery Knight | Link | Original Link

From Science Daily. (H/T Wes)

Excerpt:

> Religions are thought to serve as bulwarks against unethical behaviors. However, when it comes to predicting criminal behavior, the specific religious beliefs one holds is the determining factor, says a University of Oregon psychologist.
>
> The study, appearing in the Public Library of Science journal*PLoS ONE*, found that criminal activity is higher in societies where people's religious beliefs contain a strong punitive component than in places where religious beliefs are more benevolent. A country where many more people believe in heaven than in hell, for example, is likely to have a much higher crime rate than one where these beliefs are about equal. The finding surfaced from a comprehensive analysis of 26 years of data involving 143,197 people in 67 countries.
>
> "The key finding is that, controlling for each other, a nation's rate of belief in hell predicts lower crime rates, but the nation's rate of belief in heaven predicts higher crime rates, and these are strong effects," said Azim F. Shariff, professor of psychology and director of the Culture and Morality Lab at the UO. "I think it's an important clue about the differential effects of supernatural punishment and supernatural benevolence. The finding is consistent with controlled research we've done in the lab, but here shows a powerful 'real world' effect on something that really affects people — crime."
>
> Last year, in the International Journal for the Psychology of Religion, Shariff reported that undergraduate students were more likely to cheat when they believe in a forgiving God than a punishing God.
>
> Religious belief generally has been viewed as "a monolithic construct," Shariff said. "Once you split religion into different constructs, you begin to see different relationships. In this study, we found two differences that go in opposite directions. If you look at overall religious belief, these separate directions are washed out and you don't see anything. There's no hint of a relationship."
>
> The new findings, he added, fit into a growing body of evidence that supernatural punishment had emerged as a very effective cultural innovation to get people to act more ethically with each other. In 2003, he said, Harvard University researchers Robert J. Barro and Rachel M. McCleary had found that gross domestic product was higher in developed countries when people believed in hell more than they did in heaven.

Here's a quick re-cap on what counts as atheist morality, according to atheist scholars:

> “Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin’s views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That’s the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either. “
> – Cornell University evolutionist William Provine, in a debate with Phillip E. Johnson
> Source: http://www.arn.org/docs/orpages/or161/161ma
>
> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, ‘Love thy neighbor as thyself,’ they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory. (Michael Ruse, “Evolutionary Theory and Christian Ethics,” in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).
>
> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won’t find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

I’ve often argued on this blog that it is impossible for atheists to ground morality on an atheistic worldview. Atheism not only makes it hard for them to ground self-sacrificial actions rationally, but it even excuses them from having to make moral choices – since on their view they are only doing what they are programmed to do in response to certain instincts and sensory inputs. They don’t think there are any real objective moral values and objective moral duties, nor is there any free will, nor any afterlife. What kind of rational basis for self-sacrificial morality do those beliefs create? Morality isn’t doing what makes you feel good, or doing what most people like. Morality is doing hard things because they are *right* objectively. They can know right and wrong, and they can choose to do right and wrong, but none of that is rationally grounded by what they believe.

Ultimately, I think that people’s actions are bounded by what they think is rational. It’s easy to do things right when it feels good, but what about when it feels bad?

Rising student debt will impact future housing demand

June 20, 2012 | by Wintery Knight | Link | Original Link

Bad news for homeowners from the California Association of REALTORS. (H/T Captain Capitalism)

Excerpt:

> At May's midyear legislative meetings held by the National Association of Realtors in Washington, DC, a panel of experts in a session titled "Shifting Demographics and Housing Choice: A Whole New World?" discussed future housing market demand and trends to keep in mind as we think about the future of housing in the U.S.
>
> The biggest takeaway was that baby boomers will increasingly contribute to housing supply as they age, yet echo boomers are in a difficult position to absorb the inventory. The echo boomers, also called Millennials, are those currently ages 17 to 31, and account for 62 million people. And although future housing demand highly dependents on different rates of household formation among Echo Boomers, this generation is in a precarious position.
>
> In addition to having seen the worst housing downturn, these younger buyers have been hit hard by the recession. Faced with an uncertain job market, no real income growth, tighter mortgage lending rules, and mounting student and credit card debt, it is no surprise that some of them do not put priority on homeownership.
>
> **The concern over student debt is particularly alarming. According to a number of recent research studies, college seniors who graduated with student loans each owed an average of $25,250, up significantly from an average of $12,750 in 1996. Parents have accumulated student debt as well, $34,000 on average. The aggregate amount of student loan debt in the U.S. is over $1 trillion currently. The pace at which debt is mounting adds to the concern. Between March 31, of this year and 2011, student loan debt rose by $64 billion. However, over the same period, all other forms of household debt fell by $383 billion. Put another way, since the peak in household debt in the third quarter of 2008, student loan debt has increased by $293 billion, while other forms of debt fell by $1.53 trillion.**
>
> The rise in student debt is attributable to rising cost of education. Since 1978, the cost of tuition in the U.S. has increased more than 900 percent, 650 points above inflation. Between1990 and 2010 alone, tuition rose by 116 percent while the median household incomes inched a mere 2.1 percent.

The libertarian Cato Institute knows what the problem is (see my bold below) and they know how to fix it too.

Excerpt:

> The real answer is for the federal government to get out of the higher education subsidy business altogether, as a Cato essay argues.
>
> The following are some key points from the essay:
>
> - The effect of subsidy programs, in part, is to impose taxes on blue collar workers—who have not attended college—to pay for the tuition of future white-collar professionals. Why should the government subsidize future high earners at the expense of average working people?
> - **Federal student aid programs transfer wealth from taxpayers to academic institutions. That's because the rise in student subsidies over the decades appears to have fueled inflation in education costs. Tuition and other college costs have soared as subsidies have risen. College cost inflation induced by federal aid probably hurts low-income families—the people that federal aid was supposed to target—more than others.**
> - Federal aid has probably helped increase student enrollment, but many of those additional students may not have been ready, or suited, for college. This is evidenced by the rising shares of college students who require remedial work, and the fact that institutions have lowered their standards to adapt to the rise in second-rate students.
> - Increasing top-down control and subsidization of higher education from Washington is creating a threat to the strength of the American system. As we have seen in K-12 education, the growth in federal subsidies is usually accompanied by calls for more oversight, micromanagement, and rising levels of red tape imposed by Washington.
> - Federal student loan and grant programs have been subject to waste and fraud for decades. The Pell grant program (which SAFRA would enlarge) costs taxpayers hundreds of millions of dollars per year in fraud. Another ongoing problem is the high default rate on student loan programs.

Will the student debt problem be fixed through privatization? Not while Obama is in office. The universities are dominated by secular leftists – they are the ones who benefit from these rising tuition costs. Obama isn't going to do a thing to stop them from getting your money through subsidies, otherwise he would lose lots of campaign donations!

In the meantime, the best policy is to make sure that you do your degree in a STEM field (science, technology, engineering or math). Non-STEM degrees, according to Captain

Capitalism, are not recommended.

In Los Angeles schools, only 45% of students can read at grade level

June 20, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> There's a law in California that requires school districts to take student progress into account when they evaluate teachers. The statute goes back 40 years; language specifically prescribing the use of statewide tests was added to it in 1999.
>
> Until a court ruling last week, this idea of judging teachers by measurable results was pretty much a dead letter. Union opposition saw to that.
>
> But a group of parents and students filed suit to force the Los Angeles city schools to follow the law. School Superintendent John Deasy, though nominally a defendant, was on their side. This was all about pushing the teachers' union into the 21st Century.
>
> **On June 12, Superior Court Judge James Chalfant ruled for the plaintiffs. He noted that the current system of review gave 99.3% of the district's teachers the highest possible rating in the 2009-10 academic year, when only 45% of students performed at grade level in reading and 56% did so in math.** In a bit of judicial understatement, he said this process "provides little meaningful evaluation."
>
> The reaction of United Teachers Los Angeles to Chalfant's decision was a teachable moment about union attitudes. A statement from UTLA President Warren Fletcher praised Chalfant for declining to rule on the question of whether a new evaluation system had to be worked out in collective bargaining. In other words, the union still holds out the hope that results-based assessment of teacher performance can be stymied at the negotiating table.
>
> […]The real dividing line is between those who cling to the old ways — rewarding teachers by seniority, course work and credentials — and those who believe in making teachers accountable for how well their students learn.
>
> The latter group is a rising force. According to a 2011 report from the National Council on Teacher Quality, 24 states required teacher evaluations to have "objective evidence of student learning."
>
> California was not among those states at the time, but last week's ruling should push it in that direction. And the more that unions resist such progress, the more they will cement their public reputation as guardians of mediocrity — or worse — in the teaching ranks.

Teacher unions protect underperforming teachers from having to care about what their customers – parents – think of them. You will never get good service when you are forced to pay for public schools through taxes. The only way to *make* teachers care about children is to put the money back into the parents' pockets and then let them choose a school that works for them. Then, and only then, will schools serve parents.

Free speech hero Mark Steyn reflects on the demise of Section 13 fascism

June 20, 2012 | by Wintery Knight | Link | Original Link

Canada 2011 Federal Election Seats

Kathy Shaidle at Five Feet of Fury linked to this editorial which explains how the battle for free speech was won up in the frozen North.

Excerpt:

> Justice Minister Rob Nicholson had voiced support for the legislation. So had the Prime Minister. The result, then, was never in doubt: at 9:35 p.m. on June 6, by a vote of 153-136, Parliament got Canada's human rights bureaucrats out of the business of policing speech on the Internet. There was a scattering of applause, and handshakes for Storseth (the bill requires the rubber stamp of Senate approval). "To be honest, it's all a blur," says the three-term MP, laughing. But if the passage of Bill C-304 represents a fundamental shift in Canadian culture, you'd never have known it that night. Members dealt with a few housekeeping matters, then waded through a supply bill. Finally, one by one, they trickled out into the cool Ottawa night.
>
> The effect of killing Section 13 will be debated for years among anti-racist groups and civil libertarians. But it is undoubtedly a turning point. Since 1999, Canadians who felt aggrieved by material transmitted online have been encouraged to seek redress under federal human rights law, which targeted material "likely to expose a person or persons to hatred or contempt" based on grounds of discrimination like race, religion or sexual orientation. Storseth's bill repeals the provision outright, leaving the Criminal Code as the primary bulwark against the dissemination of hate propaganda by electronic means.
>
> With it will go one of the most divisive disputes to grip the country since the introduction of the Charter of Rights itself—a contest of values that over the past five years has pitted Canadians' desire to protect minorities from discrimination

> against the bedrock principle of free speech. Mainstream media outlets, most notably *Maclean's,* have been hauled before commissions to answer for their published content. The commissions themselves have come under fire for allowing their processes to be used as a bludgeon against legitimate expression, tailored as they are to encourage complainants to come forward. Meantime, a Saskatchewan law similar to Section 13 has become the subject of a Supreme Court challenge that could invalidate hate-speech provisions in most provincial human rights codes. By year's end, it is conceivable that no human rights commission in the country will be in the business of adjudicating published material.

And here's a must-read cri-de-coeur from free speech hero Mark Steyn in Maclean's magazine. (H/T Binks the Web Elf)

Excerpt:

> Operationally, Section 13 was stinkingly corrupt. There are some 34 million Canadians, yet just one individual citizen had his name on almost every Section 13 prosecution of the last decade. Just as Matthew Hopkins appointed himself England's Witchfinder General in 1645 and went around the country turning in raven-tressed crones for the bounty of a pound per witch, so Richard Warman appointed himself Canada's Hatefinder General and went around turning in shaven-headed tattooed losers in their mums' basements for far more lucrative bounties of tens of thousands of dollars. He filed his complaints as a supposedly "offended" and "damaged" private citizen while an employee of Her Majesty's Government. And, in fairness to Matthew Hopkins, he didn't personally put on a pointy black hat and ride around on a broomstick. Whereas Mr. Warman joined Stormfront and other "white supremacist" websites and posted copious amounts of hate speech of his own, describing, for example, Jewish members of cabinet as "scum" and gays as a "cancer." That's how "hateful" Canada is: there's so little "hate" out there that the country's most famous Internet Nazi is a taxpayer-funded civil servant.
>
> For Warman, there was little risk: you paid his costs, and the dice were loaded. After Hosni Mubarak was "re-elected" with 97.1 per cent of the vote, he was said to be furious with his officials for stealing too much of the election and making him look like one of those crude ham-fisted dictator-for-life types like Saddam and Kim Il-Sung. So next time round his officials arranged for him to "win" with a mere 96.3 per cent of the vote. Canada's "human rights" commissars had no such squeamishness: until the tenacious Marc Lemire won his landmark victory in 2009, Section 13 prosecutions had a three-decade 100 per cent conviction rate even the Soviets might envy.
>
> That wasn't even the most basic affront. Until Maclean's intervened in 2008, Lemire's Section 13 trial was scheduled to be held in secret. I couldn't quite believe this when I chanced to happen upon the "judge's" rationale, and I

> suggested en passant that we should get Maclean's estimable QC Julian Porter to file a whatchamacallit, a brief or motion or whatever, referencing precedents and other jurisprudential-type stuff, and put a rocket up these totalitarian buggers by treating their dank outhouse of pseudo-justice as a real courtroom subject to real law. Secret trials are for Beijing and Tehran, yet in the name of "human rights" they were introduced to Ottawa.
>
> **The line that sums up my objection to the racket was formulated by the Toronto blogger Kathy Shaidle: "You're too stupid to tell me what to think." In recent days, the last lonely defenders of the Canadian thought police have all volunteered to demonstrate Miss Shaidle's proposition. The Opposition [NDP] critic for "public safety," Randall Garrison, bemoaned the demise of the commissars' "power to educate Canadians." "We do have a serious problem," said Garrison. "If you take away the power to take [websites] down, it's not clear they have any mandate to even talk to people about it and educate them about it."**

The Conservatives held up their end of the deal once they got their majority, didn't they? Everyone who said they were not going to do anything with their majority should hang their heads in shame, now. They can't do everything, but they can certainly do some things.

This is a lesson for us down here. If you love your country, then get out and vote in November! And make sure your friends vote, too – you should be convincing them to vote by giving them the facts about Obama's catastrophic failures even now.

Obama covers-up DOJ operation that allowed gun smuggling to Mexican drug cartels

June 21, 2012 | by Wintery Knight | Link | Original Link

First, a re-cap of the details of the Fast and Furious gun smuggling operation:

> Issa argues the documents will shine light on a number of revelations about just how much knowledge Holder and the the U.S. Department of Justice as well as the Obama administration had about the Fast and Furious, including:
>
> - The Justice Department switching its view from denying whistleblower allegations to admitting they were true.
> - Hiding the identity of officials who led the charge to call whistleblowers liars and retaliate against them.
> - The reactions of top officials when confronted with evidence about gunwalking in Fast and Furious, including whether they were surprised or were already aware.
> - The Justice Department's assessment of responsibility for officials who knew about reckless conduct or were negligent.
> - Whether senior officials and political appointees at fault in Operation Fast and Furious were held to the same standards as lower level career employees whom the Department has primarily blamed.
>
> Operation Fast and Furious resulted in hundreds of weapons purchased at gun shops in Arizona ending up in Mexico, many of them at crime scenes. Initially, the department denied that gun-walking had taken place.
>
> Relying on the tactic, federal agents from the U.S. Bureau of Alcohol, Tobacco, Firearms and Explosives abandoned their usual practice of intercepting all weapons they believed to be illicitly purchased. Instead, the goal of gun-walking was to track such weapons to high-level arms traffickers, who had long eluded prosecution, and to dismantle their networks.

From The Hill:

> A House panel voted Wednesday to place Attorney General Eric Holder in contempt of Congress for his failure to comply with a subpoena, defying an assertion of executive privilege from President Obama.
>
> The House Oversight and Government Reform Committee, led by Republican Chairman Darrell Issa (Calif.), approved a resolution along party lines to place Holder in contempt after battling him for months over access to internal agency documents about the gun-tracking operation known as "Fast and Furious."
>
> The vote came after Obama escalated the conflict by sending a letter to the committee claiming executive privilege over the documents the panel had

> sought.
>
> All 23 Republicans on the committee voted for the contempt resolution, while all 17 Democrats voted against it. Every member of the panel was present for the vote.
>
> Minutes after the panel's decision, House Speaker John Boehner (R-Ohio) and Majority Leader Eric Cantor (R-Va.) announced that the full House will vote on the contempt measure next week.
>
> "While we had hoped it would not come to this, unless the attorney general reevaluates his choice and supplies the promised documents, the House will vote to hold him in contempt next week," the Republican leaders said in a statement. "If, however, Attorney General Holder produces these documents prior to the scheduled vote, we will give the Oversight Committee an opportunity to review in hopes of resolving this issue."

How legitimate is it to use executive privilege to block a investigation of a gun-smuggling operation that makes Watergate look like patty-cake?

Here's what Obama said about it – before he did it:

> President Obama criticized former President George W. Bush for trying to "hide" behind executive privilege in 2007 after the Bush administration refused to turn over subpoenaed documents related to the controversial firings of nine U.S. attorneys.
>
> In an interview on CNN's "Larry King Live," Obama said there's been "a tendency on the part of this administration to try to hide behind exec privilege every time there's something a little shaky that's taking place."
>
> "I think the administration would be best served by coming clean on this," Obama said, after Bush claimed executive privilege on the issue.
>
> "There doesn't seem to be any national security issues involved with the U.S. attorney question. There doesn't seem to be any justification for not offering up some clear plausible rationale for why these U.S. attorneys were targeted when by all assessments they were doing an outstanding job. I think the American people deserve to know what was going on there," he said.

Who knows how many people those guns have murdered? Hundreds? Thousands? Tens of thousands? You can read a statement from the family of the slain Border Patrol agent Brian Terry here. He was one of the victims of the Obama administration's plan to allow guns to be smuggled across the border into the hands of ultra-violent Mexican drug cartels.

In a way, none of this surprises me – we knew that Obama was heavily involved in illegal drug use during his high school years, as he admits in his own books.

Did Barack Obama order the sale of American firearms to Mexican drug cartels in order to justify stricter gun control measures? Was this gun smuggling plan done in collusion with

the Mexican drug cartels who benefited from it? What did Obama know, and when did he know it? Now that Obama has blocked the release of Fas and Furious documents, will we ever get the truth about who ordered Fast and Furious?

China confirms that photo of forced late-term abortion is authentic

June 21, 2012 | by Wintery Knight | Link | Original Link

From AFP:

> Chinese authorities confirmed Thursday that a woman was forced to abort seven months into her pregnancy, several days after her plight came to light when images of her baby's corpse were posted online.
>
> Rights groups have blamed authorities in north China's Shaanxi province for forcing Feng Jianmei to abort her pregnancy because she failed to pay a hefty fine for exceeding China's strict "one-child" population control policy.
>
> The Shaanxi provincial government said in a statement that a preliminary probe had confirmed the case was "basically true", and the investigators have recommended action be taken against the perpetrators.
>
> […]Chinese web users have reacted in anger to the abortion, with one comparing it to acts perpetrated by "Japanese devils and Nazis", after photos online showed Feng lying on a hospital bed next to the blood-smeared body of her baby.
>
> A relative told AFP on Wednesday that Feng and her husband had opposed the termination.
>
> […]China has implemented its draconian family planning policy since the late 1970s in an effort to control a population that has grown to 1.3 billion people, the world's largest.
>
> Under the policy, urban families are generally allowed to have one child, while rural families can give birth to two children if the first is a girl. They have to pay a fine if they contravene the rules.
>
> Rights groups say that as a result of the policy, thousands of women have been forced by authorities to terminate their pregnancies.
>
> Blind activist Chen Guangcheng, who recently left China for the United States after fleeing house arrest, was once jailed after angering local officials for bringing to light hundreds of forced abortions.
>
> Official statistics show that since the start of the policy, the number of abortions peaked in 1983, with a total of 14.37 million terminations that year.

You can see the absolutely horrifying photo of the woman and her child here on Life Site News. China is, of course, a country whose official state religion is atheism. There is no grounding for human rights – like the right to life – on atheism. The strong can do anything thing they want to the weak if it makes them feel good – there is no objective morality, so things like this are rational on atheism.

Would the Democrats be any different than China on the issue of coerced abortions? Vice

president Joe Biden expressed support for China's one-child policy, and presumably for their methods of enforcing it. Not only is Barack Obama the most pro-abortion President ever, but he also has voted for infanticide several times and he opposed the ban on partial birth abortions. Additionally, Obama appointed John Holdren to be his "science czar", and Holdren had previously advocated for mass sterilizations and coerced abortions.

Take a good look at that picture. That's what happens when a country turns its back on God and his moral laws.

William Lane Craig lectures on the moral argument at Georgia Tech (2008)

June 21, 2012 | by Wintery Knight | Link | Original Link

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can grab the MP3 file of the lecture, or read this essay by Dr. Craig which covers exactly the same ground as the video.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

Questions and answers: (individual Youtube clips)

- Aren't Christians motivated by fear of Hell?
- Is morality purely conditional?
- Is moral relativism livable?
- Atheism and nihilism
- How do you know objective morality is based on God?
- What good is morality in light of immortality?
- Was Hitler a Christian?

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor.

Quebec launches taxpayer-funded anonymous registry of homophobic acts

June 21, 2012 | by Wintery Knight | Link | Original Link

Political map of Canada
From Life Site News.

Excerpt:

> In what they are touting as a "world first," a Quebec homosexual activist group has launched a "registry of homophobic acts" with support and funding from the Quebec Government's Justice Department. Standing alongside Montreal Police Chief Johanne Paquin and Commander Alain Gagnon, the leadership of the group Gai Ecoute launched the anonymous tipster registry at a press conference today.
>
> Included in the definition of actions classified as "homophobic" and deemed worthy of reporting to the registry are: "any negative word or act toward a homosexual or homosexuality in general: physical abuse, verbal abuse, intimidation, harassment, offensive graffiti, abuse, injurious mockery, inappropriate media coverage and discrimination."
>
> A press release from the group says that anyone who has experienced or witnessed an act of homophobia "must" report it to the registry of homophobic acts.
>
> Funding and support for the venture comes from the Quebec Justice Ministry's department of "The Fight Against Homophobia." The Justice Ministry was tasked with fighting homophobia in 2008 and last year pledged $7 million to 'anti-homophobia' activities.
>
> LifeSiteNews spoke briefly with Roger Noël, the coordinator of The Office of the

> Fight against Homophobia in the Department of Justice. Noël refused to answer questions about the registry and directed calls to Gai Ecoute or else to the Communications department of the Quebec Government. Calls to the Communications department were not returned by press time.
>
> Laurent McCutcheon, President of Gai Ecoute, boasted that the registry was the first of its kind in the world. “We created it to know the real situation of homophobia,” he said. “The compilation and analysis of these data will better identify the problem and will enable us to act at the level of prevention.”

I really don’t recommend that any authentic Christians live in Quebec. It’s not a good place to get married and have a family.

Gay marriage: John Piper won't endorse traditional marriage amendment

June 22, 2012 | by Wintery Knight | Link | Original Link

From the Minneapolis Star Tribune, headline: "Key Minnesota pastors opt out of marriage fight."

Excerpt:

> Two key conservative evangelical leaders in Minnesota are not endorsing the marriage amendment or directing followers to vote for it, marking the first time during debate over the measure that major faith leaders have not encouraged members to take a stand on the issue.
>
> Influential preacher and theologian the Rev. John Piper came out against gay marriage during a sermon Sunday but did not explicitly urge members of his Minneapolis church to vote for the amendment.
>
> The Rev. Leith Anderson, former Minnesota Gov. Tim Pawlenty's longtime pastor, also said this week he does not plan to take a public side on the amendment, which would change the state Constitution to define marriage as a union between a man and a woman.
>
> Religious observers say the lack of formal backing from the two influential figures could signal that evangelical leaders in Minnesota are taking a less active role in supporting the amendment — a marked departure from evangelicals in dozens of other states where similar amendments have passed.
>
> "Don't press the organization of the church or her pastors into political activism," Piper said during his sermon, posted on Bethlehem Baptist Church's website.
>
> […]Piper had been under pressure from conservative groups to weigh in on the amendment, according to his spokesman David Mathis, adding that Piper did not hold back over concerns the church could lose its tax-exempt status.
>
> "Basically our position is, we're not taking one as a church," Mathis said.

John Piper has no opinion about whether the state of Minnesota legalizes gay marriage or not – he doesn't want to get involved in politics. He is famous for pushing "Christian Hedonism" in his books, and also believes in predestination.

My advice for pastors who are pro-marriage

I think that it is important for pastors who want to take conservative positions and really have an effect on the real world to base their positions on logical arguments and evidence. Many pastors seem to just read what the Bible says to people in their churches, but they don't really think about how the Bible applies to public policy. They don't really think that the Bible has any bearing outside of the church – this is called subjectivism, and in Christian circles, it is closely tied to fideism.

Pastors who pass on studying apologetics often find themselves having to back away from what the Bible says in public, because they are afraid of being labeled bigots. If your views on moral questions are just held on faith, then it's hard to tell people that public policy should be based on private faith. It's like condemning people to Hell because they don't like the same flavor of ice cream as you. It is much easier to tell someone that smoking is bad for their health though. Why? Because if you put the work in, you can use arguments and evidence, and it's easy to be bold when you have arguments and evidence. But it takes work to build your case.

Neil and other people are telling me that Piper has stated his view against gay marriage in a sermon, and he cites Bible verses. My problem with this is that Piper's sermon only applies to people who are inerrantists – who think that the Bible is authoritative. If Piper really opposed gay marriage, then he would support the marriage amendment, and he would persuade people in his state – not just his choir and congregation – using arguments and evidence that people in his state find convincing.

Here's my argument:

1) If Piper sincerely opposes gay marriage, then he doesn't want gay marriage to be legalized
2) To stop gay marriage from being legalized, the marriage amendment must pass
3) To pass the marriage amendment, the majority of Minnesotans must vote for it
4) The majority of Minnesotans are not Biblical inerrantists who are persuaded by Piper's sermon and his citing of Bible verses
5) Piper's flock cannot persuade the majority of Minnesotans with Piper's sermon and his citing of Bible verses
6) Therefore, Piper will have to have some way to persuade these non-inerrantist Minnesotans, if he sincerely opposes gay marriage

If your friend is on fire, you do not preach a sermon and quote the Bible to him. You throw a bucket of water on him – that's what works. If you really want something to happen, you do what works. Preaching sermons with Bible verses to your flock and then declining to support the marriage amendment in public with evidence and arguments that appeal to the majority of Minnesota voters is not going to stop gay marriage. There are other pastors, like Wayne Grudem and Mark Driscoll who do study the research that bears on these sorts of issues and they do use evidence to persuade others – even non-Christians. They have arguments and evidence – they are bold and they do not care about sounding nice. Grudem even writes about politics and urges Christians to be involved in specific policies and legislation.

The secular left is very happy with pastors who don't make any arguments or cite any evidence in public. They are easily marginalized and then non-Christians have NO REASON AT ALL to vote with us on social issues. It even has an effect on Jews and other religions, because they are told by the media "the only reason to oppose gay marriage is religious bigotry". It's similar to how Darwinists can marginalize opposition to evolution by pointing to fideistic pastors and then claiming that the only opposition to evolution is

religious, not scientific. The pastors who refuse to study and make public arguments and cite research papers play right into this. They make it easy for non-Christians to vote against us because this is just "our view". It's not true of the real world. It's just Bible verses. It's not Bible verses *supported by evidence.*

Many pastors also kept silent during the time of slavery and Nazism, and said that they didn't want to get involved in politics or approve specific legislation. Presumably, they expressed their personal opinions to their church choirs behind closed church doors, citing Bible verses which slave-owners and Nazis would not find convincing. But they thought that this was the best they could do since "you can't argue anyone into the Kingdom of God" and "Jesus isn't a Republican or a Democrat". Not every pastor is going to be bold like a William Wilberforce or a Dietrich Bonhoeffer, and make their case in public.

The continuous refusal to engage in the public square with reasons and evidence is not good for Christianity. In fact, we may even lose our religious liberty when we only speak about Bible verses to the church choir behind closed church doors.

Look at what happened in Canada where gay marriage is legal:

> In what they are touting as a "world first," a Quebec homosexual activist group has launched a "registry of homophobic acts" with support and funding from the Quebec Government's Justice Department. Standing alongside Montreal Police Chief Johanne Paquin and Commander Alain Gagnon, the leadership of the group Gai Ecoute launched the anonymous tipster registry at a press conference today.
>
> Included in the definition of actions classified as "homophobic" and deemed worthy of reporting to the registry are: "any negative word or act toward a homosexual or homosexuality in general: physical abuse, verbal abuse, intimidation, harassment, offensive graffiti, abuse, injurious mockery, inappropriate media coverage and discrimination."
>
> A press release from the group says that anyone who has experienced or witnessed an act of homophobia "must" report it to the registry of homophobic acts.

And here's what happened in Denmark where gay marriage is legal:

> Homosexual couples in Denmark have won the right to get married in any church they choose, even though nearly one third of the country's priests have said they will refuse to carry out the ceremonies.
>
> The country's parliament voted through the new law on same-sex marriage by a large majority, making it mandatory for all churches to conduct gay marriages.

Giving sermons in church is safe. But speaking out against gay marriage in public on public policy is not completely safe. If pastors pass on making arguments and producing objective evidence and pointing to current events now – when it is still relatively safe to do so – then we mustn't shed a tear when the next piece of legislation forces pastors to

have to perform gay wedding ceremonies in their churches. Knowledge and practical wisdom are needed to be a good faithful pastor, I think. By being unable to speak out persuasively on moral issues, we leave ourselves open to the things that happen in Canada and Denmark… and around the world. We shouldn't wait too long before we make our stand – voting "present" is not a good idea.

UPDATE: People are asking me what arguments Piper should be using instead of the sermons and Bible verses, which have limited appeal to the majority of Minnesota voters.

In order to influence the culture as a whole, Piper would have to use arguments like these:

Philosophical:
http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1722155

Evidential:
http://www.thepublicdiscourse.com/2012/06/5640

Human rights:
http://www.law.harvard.edu/students/orgs/jlpp/Vol30_No3_Severinoonline.pdf

If Piper's goal is to DO GOOD at a practical level, then he has to use public square arguments that are convincing to people who do not accept a very very conservative view of the Bible (which I accept). He has to decide whether Christianity is something subjective and private (about him and his life, and maybe the people who hear his sermons in his church) or public and practical (about society and law). Right now, he is enjoying the liberties that exist because the foundation of the United States is Judeo-Christian, but he has to do his part in public using secular arguments and evidence to protect those foundations, or they could be taken away.

If Piper wants children to *actually* have a mother and a father, and wants Christians to *actually* retain their religious liberty and freedom of conscience, then he will have to GO PUBLIC and use PUBLIC means of persuasion. If every single person in his church agreed with him, and every fundamentalist Christian in Minnesota agreed with him, that would still not be enough to defend marriage.

Ratings agency Moody’s downgrades 15 banks, some by two notches

June 22, 2012 | by Wintery Knight | Link | Original Link

From Yahoo News.

Excerpt:

> Ratings agency Moody’s downgraded many of the world’s biggest banks on Thursday, lowering credit ratings of 15 companies by one to three notches.
>
> Morgan Stanley, one of the most closely watched firms, had its long-term debt rating lowered by just two notches, one level less than had been expected, and its stock rose in after-hours trading. The downgrade left Morgan Stanley more highly rated than Bank of America Corp and Citigroup but a step below Goldman Sachs Group.
>
> Credit Suisse , which last week was warned about weak capital levels by Switzerland’s central bank, was the only bank in the group to suffer a three-notch downgrade. But its new A1 deposit and senior debt ratings, however, rank higher than many of its peers.
>
> […]In addition to Morgan Stanley, downgraded by two notches were Barclays , BNP Paribas , Royal Bank of Canada , Citigroup, Goldman Sachs Group, JPMorgan Chase , Credit Agricole , Deutsche Bank , and UBS .
>
> Falling one notch were Bank of America, HSBC Holdings , Royal Bank of Scotland and Societe Generale.
>
> Nomura and Macquarie were included in an original list of global banks, but have already been downgraded.

I don’t think that the Obama administration should be so concentrated on legalizing gay marriage and subsidizing green energy right now. I also think that if you are going off to college, you would do well to study a STEM field. There’s a storm coming.

$9 billion in green energy stimulus creates 910 direct jobs: $9.8 million per job

June 22, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> The Obama administration distributed $9 billion in economic "stimulus" funds to solar and wind projects in 2009-11 that created, as the end result, 910 "direct" jobs — annual operation and maintenance positions — meaning that it cost about $9.8 million to establish each of those long-term jobs.
>
> At the same time, those green energy projects also created, in the end, about 4,600 "indirect" jobs – positions indirectly supported by the annual operation and maintenance jobs — which means they cost about $1.9 million each ($9 billion divided by 4,600).
>
> Combined (910 + 4,600 = 5,510), the direct and indirect jobs cost, on average, about $1.63 million each to produce.
>
> As explained in a report by the National Renewable Energy Laboratory, which is part of the U.S. Department of Energy, the American Recovery and Reinvestment Act ("economic stimulus") of 2009 included Section 1603, a grant program run through the Treasury Department.
>
> The 1603 program offered "renewable energy project developers a one-time cash payment" to reduce the need for green energy companies "to secure tax equity partners" and also help them to achieve " 'the near term goal of creating and retaining jobs' in the renewable energy sector."

The nice government gave away your taxpayer dollars to "green energy" firms in order to relieve them of the trouble of trying to justify their projects to profit-minded shareholders. Taxpayer money can be wasted without having to care what taxpayers think, you see. If these solar and wind companies are anything like Solyndra, then there is a Democrat fundraiser who is the beneficiary of this spending. That's what stimulus spending means – paying off your campaign contributors so they will give you more money for your next campaign. This "green energy" is what gullible young people are taught to support in public school classrooms – and they are the ones who will be paying the bill.

Recall that the CBO recently calculated that the cost of each job created from Obama's other stimulus spending was between $540,000 and $4.1 million.

According to the AEI, in 2015, consumers will be paying $3.2 billion more per year for electricity.

Friday night detectives: two more episodes of Sherlock Holmes

June 22, 2012 | by Wintery Knight | Link | Original Link

Jeremy Brett is the best Sherlock Holmes *ever*.

Here are 2 episodes of “The Return of Sherlock Holmes”.

The Blue Carbuncle

IMDB mean rating: 8.5 / 10.

IMDB median rating: 9 / 10.

When the Countess of Morcar’s priceless blue carbuncle is stolen, a reformed thief is charged with the crime.

Silver Blaze

IMDB mean rating: 8.1 / 10.

IMDB median rating: 8 / 10.

Holmes investigates the disappearance of a champion racehorse and the murder of its trainer on a lonely moor.

These are considered to be two of the best Sherlock Holmes short stories.

If you like these two, there are two more linked in the related posts! (Links fixed)

Happy Friday!

Top doctor: NHS is killing off 130,000 elderly patients a year

June 23, 2012 | by Wintery Knight | Link | Original Link

From the UK Daily Mail:

> NHS doctors are prematurely ending the lives of thousands of elderly hospital patients because they are difficult to manage or to free up beds, a senior consultant claimed yesterday.
>
> Professor Patrick Pullicino said doctors had turned the use of a controversial 'death pathway' into the equivalent of euthanasia of the elderly.
>
> He claimed there was often a lack of clear evidence for initiating the Liverpool Care Pathway, a method of looking after terminally ill patients that is used in hospitals across the country.
>
> It is designed to come into force when doctors believe it is impossible for a patient to recover and death is imminent.
>
> It can include withdrawal of treatment – including the provision of water and nourishment by tube – and on average brings a patient to death in 33 hours.
>
> There are around 450,000 deaths in Britain each year of people who are in hospital or under NHS care. Around 29 per cent – 130,000 – are of patients who were on the LCP.
>
> Professor Pullicino claimed that far too often elderly patients who could live longer are placed on the LCP and it had now become an 'assisted death pathway rather than a care pathway'.
>
> He cited 'pressure on beds and difficulty with nursing confused or difficult-to-manage elderly patients' as factors.
>
> Professor Pullicino revealed he had personally intervened to take a patient off the LCP who went on to be successfully treated.
>
> […]Professor Pullicino, a consultant neurologist for East Kent Hospitals and Professor of Clinical Neurosciences at the University of Kent, was speaking to the Royal Society of Medicine in London.
>
> […]He said: 'The lack of evidence for initiating the Liverpool Care Pathway makes it an assisted death pathway rather than a care pathway.
>
> 'Very likely many elderly patients who could live substantially longer are being killed by the LCP.
>
> 'Patients are frequently put on the pathway without a proper analysis of their condition.

More from a different UK Daily Mail article:

> The health service ‘looks like a supertanker heading for an iceberg’, the head of the NHS Confederation has warned.
>
> His comment came as a survey revealed the squeeze on NHS finances is so serious that almost half of its leaders think it will reduce quality of care for patients over the next year.
>
> The research, carried out before the confederation’s annual conference in Manchester, shows that NHS leaders fear that growing financial pressures will mean treatment rationing and longer waiting times.
>
> Of the 252 chief executives and chairs of NHS organisations questioned, almost half believe the financial burden on the health service is ‘very serious’ and 47 per cent say this means quality of care will reduce over the next 12 months.
>
> Mike Farrar, chief executive of the confederation which represents organisations providing NHS services, said: ‘Despite huge efforts to maintain standards of patient care in the current financial year, healthcare leaders are deeply concerned about the storm clouds that are gathering around the NHS.
>
> ‘Our survey shows that many NHS leaders see finances getting worse and that this is already having a growing impact on their patients. In response, they are cutting costs in the short term but they know that much more radical solutions are the only answer in the long run.
>
> […]**Mr Farrar added that politicians had ‘consistently failed’ to put the long-term interests of the population’s health above their short-term electoral interests.**
>
> […]Katherine Murphy, chief executive of the Patients Association said: ‘This survey confirms what everybody inside the health and social care system is already saying – the next decade is likely to be the most challenging one in the history of the NHS.
>
> **‘Treatments are being rationed, waiting times for elective procedures are going up and patients continue to be treated poorly on our hospital wards.**

In a government-run system, whether you get treatment or not depends on a bureaucrat, whose only desire is to be re-elected. Sometimes, killing you is the best way for them to get re-elected, as seen in the euthanasia numbers. But, in a private health care system, it makes no sense to kill patients, because then the money stops coming in. Doctors actually care about you in a for profit system. They want to help you, and they want you to live.

Is the Bible's definition of faith opposed to logic and evidence?

June 23, 2012 | by Wintery Knight | Link | Original Link

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

What is faith according to the Bible?

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous

tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

What is faith according to Bible-based theologians?

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia** – This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus** – This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia** – This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

How do beliefs form, according to Christian philosophers?

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

The article goes on to make some very informative comments on the relationship between apologetics and belief.

14-year old boy uses parents' handgun to deter armed intruder

June 24, 2012 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> A 14-year-old Phoenix boy shot an intruder who broke into his home while brandishing a gun as the teenager watched his three younger siblings, police said.
>
> The teen and his brothers and sisters were at home alone at their residence at 55th Avenue and Baseline when a woman rang the doorbell Friday. The teen didn't open the door because he didn't recognize her, Police Officer James Holmes said Saturday.
>
> Soon after, the teen heard a bang on the door, rushed his siblings upstairs and got a handgun from his parent's bedroom. When he got to the top of the stairs, he saw a man breaking through the front door and point a gun at him.
>
> The boy shot the 37-year-old man, who is in critical condition but expected to survive and be booked into jail.
>
> Holmes said the suspect did not get a shot off. He declined to release his name until he is booked into jail.
>
> The woman who rang the home's doorbell got away.

This is why families own firearms legally, so that they can defend themselves from armed criminals when the police will take too long to arrive.

In a previous post I noted how feminists who denigrate the traditional roles of men like provider, protector, etc. disapprove of men using force or arms to deter or defeat evildoers – not to mention the use of force in a just war. I'm sure that there are more socialists and feminists who will read a story like this and want to seize the firearms and separate the children from their parents and put them into child protective custody. There are people on the left who think that criminals are victims and that families with guns to defend themselves are the real criminals, and they need to be disarmed.

D.A. Carson summarizes the Bible in 221 words

June 24, 2012 | by Wintery Knight | Link | Original Link

I just got back from church today and it was a disaster, with the pastor quoting verses out of context and cutting off verses halfway through. It was horrible – he basically said that the point of being a Christian was to be nice to others so you would feel good. Completely ignored passages about turning away from immorality and about being hated by others because of your views on God's existence and authority and the identity of Jesus. Anyway, I've finished my churching and Bible reading for the day, so I thought I would clear the bad taste from church by posting this nice D.A. Carson.

Here it is:

> God is the sovereign, transcendent and personal God who has made the universe, including us, his image-bearers. Our misery lies in our rebellion, our alienation from God, which, despite his forbearance, attracts his implacable wrath.
>
> But God, precisely because love is of the very essence of his character, takes the initiative and prepared for the coming of his own Son by raising up a people who, by covenantal stipulations, temple worship, systems of sacrifice and of priesthood, by kings and by prophets, are taught something of what God is planning and what he expects.
>
> In the fullness of time his Son comes and takes on human nature. He comes not, in the first instance, to judge but to save: he dies the death of his people, rises from the grave and, in returning to his heavenly Father, bequeaths the Holy Spirit as the down payment and guarantee of the ultimate gift he has secured for them—an eternity of bliss in the presence of God himself, in a new heaven and a new earth, the home of righteousness.
>
> The only alternative is to be shut out from the presence of this God forever, in the torments of hell. What men and women must do, before it is too late, is repent and trust Christ; the alternative is to disobey the gospel (Romans 10:16;2 Thessalonians 1:8; 1 Peter 4:17).

I got this from from a tweet from Please Convince Me.

Everybody likes D.A. Carson and this nice clear restatement of the Christian worldview makes me forget what happened this morning in church. Moralistic therapeutic deism! Yuckers!

What happens to people who never hear about Jesus and the gospel?

June 24, 2012 | by Wintery Knight | Link | Original Link

One of the most difficult questions for Christians to answer, especially when posed by adherents of other religions, is the question of what happens to those who have never heard of Jesus? In this post, I will explain how progress in the field of philosophy of religion has given us a possible (and Biblical) solution to this thorny question.

First, Christianity teaches that humans are in a natural state of rebellion against God. We don't want to know about him, and we don't want him to have any say in what we are doing. We just want to appropriate all the gifts he's given us, do whatever we want with them, and then have eternal bliss after we die. We want to do whatever we want and then be forgiven, later.

Along comes Jesus, who, through his sinless life and his death on the cross, heals that rift of rebellion between an all-good God and rebellious man. Now we have a real understanding of the fact that God is real, that he has power over death, and that he has very specific ideas on what we should be doing. If we accept Jesus' atoning sacrifice and follow his teachings, we can avoid the penalty of our rebellion.

The only problem is that in order to appropriate that free gift of reconciliation, people need to actually *know* about Jesus. And there are some people in the world who have not even *heard* of him. Is it fair that these other people will be sent to eternal separation from God, just because they happened to be born in the wrong place at the wrong time?

Enter William Lane Craig to save the day. His solution is that God orders the world in such a way that anyone who would freely choose to acknowledge Jesus and appropriate his teachings in their decision-making *will* be given eternal life. God knows in advance who would respond, and chooses their time and place of birth, and he supplies them with the amount of evidence they need.

And this agrees with what the Bible teaches. The apostle Paul says this in his apologetic on Mars Hill in Acts 17:22-31:

> 22 So Paul stood in the midst of the Areopagus and said, "Men of Athens, I observe that you are very religious in all respects.
> 23 "For while I was passing through and examining the objects of your worship, I also found an altar with this inscription, ' N D ' Therefore what you worship in ignorance, this I proclaim to you.
> 24 "The God who made the world and all things in it, since He is Lord of heaven and earth, does not dwell in temples made with hands;
> 25 nor is He served by human hands, as though He needed anything, since He Himself gives to all people life and breath and all things;
> 26 and He made from one man every nation of mankind to live on all the face of the earth, **having determined their appointed times and the boundaries**

> **of their habitation,**
> **27 that they would seek God, if perhaps they might grope for Him and find Him, though He is not far from each one of us;**
> 28 for in Him we live and move and exist, as even some of your own poets have said, ‘For we also are His children.’
> 29 “Being then the children of God, we ought not to think that the Divine Nature is like gold or silver or stone, an image formed by the art and thought of man.
> 30 “Therefore having overlooked the times of ignorance, God is now declaring to men that all people everywhere should repent,
> 31 because He has fixed a day in which He will judge the world in righteousness through a Man whom He has appointed, having furnished proof to all men by raising Him from the dead.”

In this research paper, Craig explains in detail how God foreknows how people will choose in every set of circumstances, and how God uses that knowledge to get everyone where they need to be *without violating their free will.* God wants the best for everybody, and has ordered to whole universe in order to give each of us our best opportunity for eternal life.

Here is a summary of the what is in his paper:

> The conviction of the New Testament writers was that there is no salvation apart from Jesus. This orthodox doctrine is widely rejected today because God’s condemnation of persons in other world religions seems incompatible with various attributes of God.
>
> Analysis reveals the real problem to involve certain counterfactuals of freedom, *e.g.*, why did not God create a world in which all people would freely believe in Christ and be saved? Such questions presuppose that God possesses middle knowledge. But it can be shown that no inconsistency exists between God’s having middle knowledge and certain persons’ being damned; on the contrary, it can be positively shown that these two notions are compatible.

Go read this paper and equip yourself to answer this common question!

Book review of “Creating Life in the Lab”

June 25, 2012 | by Wintery Knight | Link | Original Link

I saw that Brian Auten posted this book review by Luke Nix.

Introduction:

> *Creating Life In The Lab: How New Discoveries in Synthetic Biology Make A Case For The Creator* is Dr. Fazale Rana’s latest contribution to Christian apologetic literature. The goal of the book is to provide a case for God’s existence from the controversial efforts of scientists to “play God” by creating life. He has written the book with the backdrop of Franenstein to provide some cultural connection. The book has thirteen chapters plus an appendix that includes a short refresher on biochemistry. The book, though not officially, is divided into two parts: the first examining the quest to create artificial life and the second investigates scientists research behind the origin of life.

Here are a couple of chapter summaries:

> **Chapter 6—A Scientist’s Splendor**
> In Chapter 6 Dr. Rana goes yet another level with the attempts to create artificial life in the lab. In Chapter 4 he described an approach that takes existing components and moves them around to create new organisms. In Chapter 5 he described an approach that creates the components and assembles them. In this chapter, Rana describes the efforts to create novel proteins and information-containing molecules (DNA in natural life)—both the basic components of the components used in the previous approaches. Rana goes over the attempts to create proteins from scratch and the complications involved with such an endeavor. He also explains the intricate and tedious processes that are required to produce enzymes that don’t come close to being as efficient as those found in nature. He uses both to not only show the immense intelligence required to create the building blocks of life, but to also provide a critique of the evolutionary paradigm. In the previous chapters, Rana showed that putting life together from preexisting building blocks required great intelligence and resources; in this chapter Rana adds to that by showing what is required to create the building blocks themselves. This adds yet another level of power to his argument for a Creator.
>
> **Chapter 7—The Particulars of Life’s Formation**
> Dr. Rana now switches the focus slightly. He moves from discussing the approaches to creating life in the lab to the relationship between it and those researching the origin of life. He begins with Chapter 7 describing the connections advantages that both research projects offer the other. He then goes over a short history of origin-of-life research. He describes the most popular models and where some fail but have been replaced by newer models. He

> discusses the prebiotic soup, the DNA/protien world, the RNA world, and others. He refers the reader to his earlier work “Origins of Life”, co-authored with Dr. Hugh Ross, for more details on the strengths and weaknesses of the particular models.

Luke does a chapter-by-chapter review of the book. I will definitely be getting this book to understand this stuff. It’s always good to be familiar with the details of cosmology, fine-tuning and origin of life.

Obama: 25% fewer male graduates than female graduates is a great accomplishment

June 25, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> In an op-ed published Saturday in Newsweek, President Barack Obama marked the 40th anniversary of the enactment of Title IX–which bars gender discrimination in education—and noted that more women in the United States are now graduating from college than men, which he characterized as "a great accomplishment" for the nation.
>
> "In fact, more women as a whole now graduate from college than men,"Obama wrote. "This is a great accomplishment—not just for one sport or one college or even just for women but for America. And this is what Title IX is all about."
>
> According to the Census Bureau, 685,000 men and 916,000 women graduated from college in 2009 (the latest year for which statistics have been published). That means 25 percent fewer men received college degrees than women.

And:

> In the nationwide collegiate class of 1975, which started college before Title IX was implemented, the males graduating from college outnumbered females, 505,000 to 418,000–meaning 17 percent fewer women graduated than men.
>
> By 1985, according to Census Bureau data, the number of women graduating from college each year was outstripping the number of men. In that year, about 497,000 women graduated from college and 483,000 men. That gave women a margin over men of almost 3 percent.
>
> In every year since 1985, according to the Census Bureau, women have outnumbered men in graduating from college, with women dramatically expanding their advantage over men in receiving college diplomas to the 25 percent advantage they achieved in 2009.
>
> In his Newsweek op-ed, President Obama said Title IX helped America ensure what he called "equal education."

It's important to understand that the widespread unwillingness of men to get married, and their inability to provide for a family if they are married, have been caused by specific policies and laws, and not by a deficiency of "manhood". From no-fault divorce to normalizing premarital sex to biased domestic violence laws to higher tax rates to false accusations to discrimination in education to discrimination in hiring, and beyond – men are being actively discouraged and prevented from taking on the traditional role of being sole provider for their families. Pastors who expect to reverse this trend have to do more

than resort to bellowing two-word slogans (“Man Up!”) at the dwindling numbers of men in their churches. This marriage strike problem is caused by policies and laws, and it requires a political and legal response.

Christians should be especially concerned about the presence of fathers in the home, given the evidence I blogged about before showing how the presence of quality fathers is essential for passing Christian beliefs on to children. Churches need to ask themselves tough questions: Are we teaching women how to choose men based on practical concerns and proven abilities in our churches? And are we doing a good job of attracting men to churches by promoting the masculine, practical aspects of Christianity that men like – like science, apologetics debates, economics and foreign policy?

Why is this weakening of men’s ability to graduate and get jobs a priority of the left? The left is dominated by feminist thought, and they do not want men having different roles than women in the home. It’s sad that many men who are ignorant of these threats to male leadership go along with it and then find out too late what the effects of their feminist sympathies are.

Which President causes more outsourcing? Obama or Bush?

June 25, 2012 | by Wintery Knight | Link | Original Link

From Hans Bader, a realistic assessment of Obama's record on outsourcing.

Excerpt:

> "79 percent" of all green-jobs funding in Obama's $800 billion stimulus package went to foreign companies, with the largest payment going to a bankrupt Australian company. For example, the Obama Administration spent $1.6 billion on Chinese and other foreign wind power. The practical effect of those subsidies was to outsource American jobs. ABC News reported on thesubsidies for Chinese wind turbines contained in the stimulus package:
> Despite all the talk of green jobs, the overwhelming majority of stimulus money spent on wind power has gone to foreign companies, according to a new report by the Investigative Reporting Workshop at the American University's School of Communication in Washington, D.C.
>
> Nearly $2 billion . . . has been spent on wind power. . .But the study found that nearly 80 percent of that money has gone to foreign manufacturers of wind turbines.
>
> "Most of the jobs are going overseas," said Russ Choma at the Investigative Reporting Workshop. He analyzed which foreign firms had accepted the most stimulus money. "According to our estimates, about 6,000 jobs have been created overseas, and maybe a couple hundred have been created in the U.S." Even with the infusion of so much stimulus money, a recent report by American Wind Energy Association showed a drop in U.S. wind manufacturing jobs last year.
>
> The stimulus package also showered money on left-wing community organizers and liberal lobbying groups.
>
> Earlier, NewsMax reported on a $2 billion subsidized loan by the U.S. government to a Brazilian oil company:
>
> Gulf Oil CEO Joe Petrowski says President Barack Obama's weekend comments in Brazil that the United States looks forward to purchasing oil drilled for offshore by that nation "is rather puzzling," and "hypocritical" as his administration has imposed a virtual moratorium on domestic drilling. The signal to purchase more foreign oil comes after the U.S. Export-Import Bank invested more than $2 billion with Brazil's state-owned oil company, Petrobras, to finance exploration.
>
> The CEO of General Electric, which has received government "green jobs" money, is a close Obama advisor. GE has been busy outsourcing American jobs, eliminating a fifth of its U.S. workforce since 2002. GE made $14.2 billion in

> profits in 2010, but paid no taxes at all, even though America's corporate tax rates are among the highest in the world. Indeed, GE actuallyreceived a tax benefit of $3.2 billion from the government in 2010, and received a preferential bailout at taxpayer expense.

Read the whole post. It just goes on and on and on and on like this. What causes outsourcing? When you have the highest corporate tax rate in the world – that causes outsourcing. When you keep piling on regulations and regulations onto businesses, from Obamacare to Dodd-Frank – that causes outsourcing. When you take money collected from taxes paid by American businesses and hand it out to foreign companies owned by Democrat-allies – that causes outsourcing. When you block energy companies from developing energy here at home – that causes outsourcing.

Quebec court orders Dunkin' Donuts to pay $16.4 million to failed franchise owners

June 26, 2012 | by Wintery Knight | Link | Original Link

Political map of Canada

ECM sent me this story about the most immoral and socialist province in Canada.

Excerpt:

> Former Dunkin' Donuts franchisees have been awarded a total of $16.4-million in damages from the company for losses suffered because of the "Tim Hortons phenomenon," in which the donut shop saw almost all of its Quebec stores close in less than a decade as it lost market share, according to a superior court decision released Thursday.
>
> The Quebec Superior Court ruled that Dunkin Donuts Canada Ltd. failed to protect and enhance its brand at the cost of the 21 franchisees and misled owners to get them to buy into a new strategy that ultimately failed.
>
> "In this case, you have a very large franchisor with a successful chain and it's facing a competitive threat by another large chain, i.e. Tim Hortons," said Toronto-based franchise lawyer David Sterns of Sotos LLP. "And the judge's view is that the franchisor couldn't just cede the territory to the competitor, that it was incumbent on the franchisor to hold the ground for the system."
>
> There are currently 11 Dunkin' Donuts stores left in Quebec, from a high of more than 200 in 1998.
>
> In 2003 the franchisees launched the suit against Dunkin' Brands — formerly Allied Domecq Retailing International Canada Ltd. — claiming they were induced under false pretenses to join a remodelling program that would boost sales by

> 15% in the first year and several subsequent years, which never happened.
>
> The company also failed to live up to a promise to invest $40-million, half of which would come from franchise fees.

The lesson here for business owners and job creators is clear: never, ever start a business or expand a business in Quebec. They're not just secular and anti-family, they're socialist and anti-business.

Here's an interesting post about Quebec's fiscal situation:

> Quebec's austerity measures which include the raising of tuition fees for its post-secondary students have been headline news in Canada for the past month. In light of that, I thought that it was time to do a brief posting on Quebec's financial situation.
>
> Let's start by looking at Quebec's debt. Quebec is Canada's second-most indebted province after Ontario and has the misfortune of having a bond credit rating that is in the lower middle of the pack, well below Alberta, Saskatchewan and British Columbia, Manitoba and below New Brunswick and Ontario at A+ (Standard and Poor's), the same rating as Nova Scotia. This poor rating makes it more expensive for Quebec to service its debt. Quebec's total debt in fiscal 2011 – 2012 is estimated to be $170.9 billion; this compares to Ontario's estimated debt of $237.6 billion. Quebec's debt nearly twice the size of all other provinces combined (excluding Ontario).
>
> Quebec's debt-to-GDP is estimated to be 51.2 percent in 2011 – 2012, the highest in Canada by a very wide margin with Ontario coming in second place at 37.2 percent and Nova Scotia coming in third place at 35.2 percent.
>
> […]If the Harper government follows through with its plans to wean Canada's have-not provinces from the federal teat, Quebec may find it impossible to meet its fiscal goals. As well, when interest rates return to normal levels, Quebec's expenditures on debt interest payments will become an ever-increasing portion of its overall spending. Since Quebec is already Canada's most highly taxed regime, if the province hopes to meet its targets, it has only one choice – cut spending now.

It's a worthless, backwards province that exists only by stealing money from hard-working provinces like Alberta and Saskatchewan. I hope Harper cuts them off – it's not like they vote for him anyway. Let them eat grass and leaves for a few years.

How well are American schools teaching science?

June 26, 2012 | by Wintery Knight | Link | Original Link

Stuart Schneiderman links to this post.

Excerpt:

> The results are in and America's elementary, middle and high school students are stumped by science.
>
> The National Center for Education Statistics released the findings of their National Assessment of Educational Progress science exam this week and it doesn't bode well for the state of STEM (Science, Technology, Engineering and Mathematics) education. While the majority of students at the fourth, eighth and twelfth grade levels could successfully complete straightforward hands-on or computer-based tasks and arrive at the correct conclusions, once additional variables or more complex calculations were introduced, their performance declined dramatically.
>
> For example, 75% of high school seniors could successfully use test strips to test water samples for the levels of four pollutants, record the data and interpret whether the results exceeded EPA standards, but only 25% of students were able to design and conduct an investigation using a simulated calorimeter and related patterns in temperature changes in two different metals to determine which metal has the higher specific heat capacity. Results were the same at the lower grade levels, where only 24% and 35% of eighth and fourth graders respectively were able to handle the more difficult experiments. Students also had difficulty in explaining how they arrived at a correct conclusion, with only 27% of twelfth graders able to both select a correct answer and explain why they did so in one section of the test. And in another section, only 11% were able to make a final recommendation that was supported by the data they had worked with in the experiment.
>
> […]Currently, only about a third of bachelor's degrees awarded in the US are in the STEM fields – by contrast, over half of Chinese and Japanese college students are specializing in STEM subjects. The economic and career benefits of STEM education are well-documented. STEM occupations are forecasted to grow faster than non-STEM occupations through to 2020. Over the course of the recession, unemployment in STEM fields has been almost half that of non-STEM fields. And STEM professionals earn, on average, approximately 26% more than non-STEM counterparts.
>
> […]**If there's a bright spot in the NAEP report, it's the fact that female students are matching or exceeding the performance of their male peers in both hands-on and interactive tasks.**

I always encourage Christians to go into STEM fields, especially men who have a Biblical

mandate to provide for their families, if they have one. Women can be more flexible in what they study. Men are obligated to go for the bucks.

Regarding that comment in bold that I highlighted, Stuart writes:

> Schools are not teaching advanced scientific problem-solving and reasoning, but they have achieved gender parity.
>
> Is this an accidental correlation or is the connection causal?
>
> It is certainly possible that educators have chosen gender parity over scientific excellence. If so, then that would help to explain their failure.
>
> Educators may have chosen to close the gender gap at the expense of boys. They may have devalued certain types of reasoning because girls do not do as well on them. They may have changed the content of experiments to make science a more girl-friendly field?
>
> We know that when boys believe that a field is identified as more feminine, they turn off and go back to their video games.
>
> We know that teachers of the humanities and social sciences now actively discriminates against boys.
>
> Is the same thing true of science?
>
> If you read through the Department of Education report you will observe that the tests mostly involve girl-friendly and environmentally correct topics. They ask how sun-loving plants grow, how to test for pollution, and, how heat is conducted in frying pans.
>
> Do you believe that ten or twelve year old boys will crank it up to study how to cook an omelet?
>
> Sometimes the questions are directed at more boy friendly topics like electronic circuits and magnetic fields but they do not teach about cars, guns, and boats. They do not address questions about mining, agribusiness and construction.
>
> Does it matter? I suspect that it does.

I think some combination of homeschooling and private schools is required if you expect your children to make a difference in the world. Young men especially will benefit from being taken out of the feminized public schools. That's something I think about when dating and courting – picking the future teacher of my children.

Regardless, all Christians should be advocates for school choice. We shouldn't be paying for a failed, politicized public school system. Give every parent a voucher and let the public schools compete for funding by pleasing customers – like every other business has to.

Canadian gynecologists oppose discussion of when life begins

June 26, 2012 | by Wintery Knight | Link | Original Link

Mary sent me this article from Life Site News.

Excerpt:

> The Society of Obstetricians and Gynaecologists of Canada (SOGC) said in a position statement released last month that they are "troubled" by a private members motion that seeks to determine when human life begins.
>
> Motion 312, proposed by Conservative MP Stephen Woodworth, seeks a re-examination of section 223 of the Criminal Code, which states that a child only becomes a "human being" once he or she has fully proceeded from the womb. If passed, Parliament would set up a special committee to consider the medical evidence relating to the humanity of the unborn child.
>
> The Society of Obstetricians and Gynaecologists of Canada represents over 3,800 health-care professionals including gynaecologists, obstetricians, family physicians, nurses, midwives, and other health professionals.
>
> The SOGC says it is concerned that if the motion passed it "would challenge and change the fundamental principle of women's autonomy."
>
> "Current law makes it clear that a woman and her foetus in utero are treated legally as one person, not two," the SOGC observes, expressing concern that if the motion passes it would "suggest that a pregnant woman serves as a mere carrier for another person with full legal rights" and that her "interests, needs, or choices" would be considered second to those of the unborn child.
>
> The SOGC also expressed concern that the motion might restrict "women's reproductive and sexual rights and decision-making."
>
> […]Woodworth has argued that his motion is simply a response to the advances of science in the past decades which prove beyond a doubt that the unborn child is human, thereby calling into question the validity of section 223 of the Criminal Code.
>
> "There might be some people who can convince themselves that a child magically transforms into a human being when their little toe pops out of the birth canal," he told reporters while announcing his motion earlier this year. "However, I've concluded that modern medical science will inform us that children are in reality human beings at some point before the moment of complete birth."

I bet a lot of these doctors, nurses and midwives are pro-life, but these big organizations always seem to take the leftist view on every issue.

Larry Brinkin: Gay activist arrested for possession of child pornography

June 27, 2012 | by Wintery Knight | Link | Original Link

I'm not excerpting much of these stories because I'm not going to put the graphic details of the charges on my blog.

But here's the San Francisco Chronicle. (H/T PJ Tatler)

Excerpt:

> San Francisco police have arrested veteran gay rights advocate Larry Brinkin in connection with felony possession of child pornography.
>
> Brinkin, 66, who worked for the San Francisco Human Rights Commission before his retirement in 2010, was taken into custody Friday night. He spent the night in jail before he was released on bail, according to a spokeswoman for the sheriff's department.
>
> The district attorney's office will decide Tuesday whether to file charges. "We're still reviewing the case," district attorney's spokeswoman Stephanie Ong Stillman said Monday.

The San Francisco Weekly has more.

Excerpt:

> Police say they arrested 66-year-old Larry Brinkin, the high-profile gay activist, on possession of child pornography on Friday night.
>
> […]According to the search warrant, SFPD acted after receiving a tip from the Los Angeles Police Department, which obtained from AOL an e-mail exchange between a Los Angeles user and zack3737@aol.com. Police say they linked the AOL address to Brinkin's IP address; he is owner of the account and paid for AOL service with his credit card.

In completely unrelated news, Barack Obama is getting a lot of support from gay activists.

Should we measure inequality by comparing income or consumption?

June 27, 2012 | by Wintery Knight | Link | Original Link

From the American Enterprise Institute.

Excerpt:

> We argue in this paper that income data are not the best measure of overall welfare. What matters for household well-being is consumption, since households are better able to smooth consumption rather than income over their lifetime. To that end, we use two alternative sources of data to assess changes in consumption inequality.
>
> Our first source, the Consumer Expenditure (CEX) Survey, shows aggregated changes in consumption expenditures for households at all levels of the income distribution. Using these data, we find that consumption inequality has increased only marginally since the 1980s. Further, consumption inequality narrows in periods of recessions, such as during the 2007–2009 recession. We also construct Gini coefficients from the CEX data and find that they have remained relatively stable over time, suggesting that the inequality has not widened significantly.
>
> The second data source we use is the Residential Energy Consumption Survey (RECS), which allows us to assess consumption inequality in durable goods. Consumption of durable goods is recorded less well in the CEX data but is important in thoroughly assessing consumption inequality. The RECS survey includes questions on household use of appliances such as microwaves, dishwashers, computers, and printers. Simple tabulations of these data across years suggest that a higher percentage of low-income households is able to afford and possess these items. In addition, the quality of dwelling spaces has improved and more low-income households have heating and air conditioning today than at any time in the past.
>
> To see if these differences are statistically significant, we present regression tables showing the likelihood that a household owns any of these items. The results suggest a significant narrowing of the gap between low-income and other households in certain durable-goods items, such as color televisions, microwaves, refrigerators, and air conditioners. In other items, like computers and printers, the gap was small to begin with but widened as usage of these items became more widespread and cost of these items declined. However, in recent times, even this gap has narrowed. For a third category of items, including clothes washers, clothes dryers, and dishwashers, the gap has tended to be fairly stable over time. Even in a statistical sense, there is a trend toward narrowing the consumption gap between low-income and other households.

When people measure income inequality, they usually don’t count all of the generous welfare programs, food stamps and other handouts that provide this minimum level of wealth to the poorest of the poor. That’s why the poor have many of the same amenities that the rich have. If you want to see real poverty, go to a communist nation like Cuba, North Korea, Zimbabwe or Venezuela.

Census Bureau confirms DC schools spending $29,409 per pupil

June 27, 2012 | by Wintery Knight | Link | Original Link

Andrew J. Coulson of the Cato Institute explains how he got the Census Bureau to revise their numbers.

Excerpt: (links removed)

> Four years ago, I wrote an op-ed for the *Washington Post* revealing that DC spent nearly $25,000 per pupil during the 2007-08 school year. I calculated this figure from the public budget documents of the District of Columbia, which I subsequently summarized and linked on this blog.
>
> No education reporter followed up on my findings, and much lower per pupil figures continue to be reported to this day. My $25,000 figure was even greeted with skepticism by analysts at free market think tanks. One state education policy analyst wrote to say that my figure was "out of line with credible information," and that I gave my critics "too much ammunition with this clearly questionable set of statistics."
>
> Indeed, the Census Bureau figures for DC's total K-12 expenditures were substantially lower than mine. I made a note to track down the discrepancy, but other projects intervened. When I updated my calculation to use DC budget estimates for the 2008-09 school year, I found that District spending had risen to over $28,000 / pupil. The comparable number for that year reported by the Bureau of the Census was just $18,181 (which you get by dividing the total expenditure figure in Table 1 by the enrollment figure in Table 15).
>
> So you can see why most folks were skeptical. Skeptical, but wrong.
>
> Back in March of this year I asked my then research intern to contact the Census Bureau and ask where they got their total spending data. It turns out, they got them from a DCPS official. We presented evidence to the Bureau that that DCPS official had missed a few line items when completing the Census Bureau's forms—to the tune of about $400 million. The Census Bureau agreed and is in the process of obtaining corrected data for the 2008-09 year. In the meantime, they made sure to ask DC officials to include all relevant items when filling out their forms for the 2009-10 school year. **The result: Census Bureau data now show DC spent a total of $29,409 per pupil (obtained by dividing total expenditures in Table 1 by enrollment in Table 15). This is just a bit higher than my calculation for the preceding year.**
>
> Kudos to the Census Bureau for taking the initiative and getting DC to accurately report its public school expenditures. Now that education reporters can simply open a Census Bureau .pdf file and divide one number by another, I wonder if

> any will report what DC really spends per pupil? I suspect that they still will not, continuing to mislead the general public, but I would be delighted to be proven wrong.
>
> Oh, and, BTW, this spending figure is about triple what the DC voucher program spends per pupil—and the voucher students have a much higher graduation rate and perform as well or better academically.

He's talking about the D.C. Opportunity Scholarship voucher program which Obama dismantled and defunded in order to appease the teacher unions.

According to U.S. News, D.C. students are underperforming:

> South Dakota, Nebraska, and Washington, D.C. performed the worst, with some of the worst student test scores and college readiness indexes in the nation.

Keep in mind that D.C. votes 92.5% to 6.5% for Obama in the 2008 election. This is where leftism in education comes from.

We ought to care about this, because the students in Washington D.C. are some of the poorest students in the nation – and they are often minority students. What sort of opportunity to succeed are we giving these children when we allow leftists like Obama to destroy voucher programs that are their only hope?

Conservative leader Tim Hudak to push right to work and secret ballots

June 28, 2012 | by Wintery Knight | Link | Original Link

Political map of Canada

Wow, the Canadians are trying to imitate Scott Walker and John Kasich.

Excerpt:

> In a move certain to upset the organized labour movement, Ontario workers would be able to opt out of collective agreements and union dues under dramatic changes to provincial workplace laws proposed by PC Leader Tim Hudak.
>
> Employers would no longer be required to collect dues on behalf of unions and secret ballots would be restored in certification votes.
>
> “The rules that are governing the workplace, they haven’t changed. And the way that many of our unions are run, particularly public sector unions, haven’t caught up with the times,” Hudak said. “No business would be caught today operating with a typewriter or a rotary phone, but our union laws and many union practices are still stuck in the 1940s.”
>
> Hudak released a white paper Tuesday, entitled Paths to Prosperity: Flexible Labour Markets, which calls for significant rewrites to the labour laws in Ontario which he says would make the province’s business environment more competitive and create jobs.
>
> […]Hudak’s real goal is to strip unions of their funding, in particular the Working Families Coalition that actively campaigns against Conservatives, he said.
>
> […]The white paper says the provincial government should lead the way by

> ending automatic paycheque deductions for dues and give private sector employers the same option.
>
> The monopoly that union shops enjoy in bidding for public contracts across Ontario's municipal and broader public sectors would also likely end under the Tories.
>
> Unions should be required to reveal how they spend the dues they collect, that workers have a right to know when their dues are spent on political causes, like anti-Israel campaigns and Quebec student protests, Hudak said.

While it's true that many (or even most) of the people who are stuck in unions are good, patriotic, hard-working people, union leaders are generally secular socialists. They support all kinds of nasty leftist groups. The best way to defund them is to allow workers to not have to have union dues automatically deducted from their pay checks. I would expect that most union workers in Ontario would elect not to pay dues to their unions – at least if they are anything like the workers in Wisconsin.

Two British conservatives to watch: Iain Duncan-Smith and Michael Gove

June 28, 2012 | by Wintery Knight | Link | Original Link

Here's an article from the UK Telegraph about Iain Duncan-Smith.

Excerpt:

> I've known Iain for many years since my days working for Lady Thatcher back when he was party leader. Few British politicians understand the Special Relationship as well as IDS, and he has made a concerted effort to cultivate ties with leaders in the United States, frequently visiting Washington over the past decade both in opposition and in government.
>
> It was refreshing to see a British official showing leadership on an issue that few Washington politicians have seriously addressed since the reforms of the 1990s. His message was a compelling one – that Britain (and for that matter the West as a whole) is facing up to the biggest cultural challenge of the early 21st Century – dealing with "entrenched and intergenerational worklessness and welfare dependency." In his speech he attacked "an obsession with inputs – with pouring money into social programmes so that governments are seen to be doing something," a sentiment that tens of millions of Americans would heartily agree with:
>
> So we are now faced with a fundamental challenge. Levels of social breakdown high and rising. Millions of people stuck out of work on benefits. Millions not saving nearly enough for their retirement. And politicians – of all hues – addicted to spending levels as a measurement of success, rather than life change as a measurement of success.
>
> These are areas ripe for reform – but how do you reform when there is no money? The answer – you change the way you reform. Not just cheese-slicing, but recalibrating whole systems so that you change behaviours, and change the culture that allowed spending to get out of control in the first place.
>
> With good reason IDS consistently ranks at the top of ConservativeHome's poll of cabinet ministers, with an approval rating in the latest survey of 84 per cent. Together with Michael Gove (who currently ranks second), he has been the most consistently impressive minister in Cameron's government. It is not hard to see why he is so popular with the grassroots. Duncan Smith is a conviction politician offering clear-cut conservative solutions to major problems, emphasising individual responsibility, a strong work ethic, and traditional values as opposed to big government meddling. His welfare reforms are a major step in the right direction, and the most radical since the system's creation in the 1940s. They deserve widespread support, on both sides of the Atlantic.

Iain Duncan-Smith stands for pro-family policies and welfare reform. What does Michael Gove stand for?

Here's an article about him in the UK Daily Mail. (H/T Dina)

Excerpt:

> One Cabinet minister is increasingly standing apart from the crowd. Yesterday, this newspaper revealed that Education Secretary Michael Gove wants to bring back O-level-style exams.
>
> Although this brave proposal is popular with parents across England, it is not uncontroversial. It takes us back to a system that separated academically gifted children from those with different aptitudes.
>
> But I would argue that the abolition of O-levels in the Eighties was actually an early sign of the culture of dishonesty in our national life.
>
> Britain fell into the grip of a dishonest kindness. We started to hand out good exam results like sweeties — regardless of whether pupils had really learnt anything at school.
>
> We told ourselves that it didn't matter whether parents spent their time working with their children or just letting them lounge in front of the TV.
>
> We allowed school-leavers to think that a life on benefits was socially acceptable when it's actually a place where they would easily rot and never fulfil their potential.
>
> The statistics that poured out of the schools system suggested that all was well, however.
>
> Like tractor production data from the old Soviet Union the latest exam grades were always better than last summer's.
>
> We were told to rejoice but employers and universities saw through the big lie. They complained that the children graduating from Britain's schools lacked basic literacy and numeracy skills. Britain started sliding down the international league tables that compared the abilities of children in China, Germany, Korea and Britain.
>
> Michael Gove is the first Education Secretary to say that enough is enough. He has said he's not afraid to preside over a drop in exam grades. They'll look less good, he concedes, but they'll be more honest.
>
> The teaching unions that have presided over the 'All Must Have Prizes' system will fight him tooth and nail. They want to protect their jobs-for-life regime where bad teachers are rarely sacked but are instead allowed to damage countless pupils' life chances, year after year.
>
> Gove is undeterred. He's ready to close down a system where children who can't manage their times tables are studying for exactly the same exams as those who are on track to study physics at Oxbridge.

> […]The compassionate politician who cares about equality of opportunity won't accept this status quo, and will point out that the current system is dishonest. It puts children with very different abilities through the same sausage machine and then pretends that those who get 'F' or 'G' grades have still passed.
>
> Michael Gove wants academically gifted children to be stretched by studying O-levels.
>
> He wants other children to have a more appropriate educational experience, albeit an equally rigorous and demanding one.
>
> This Government's investment in high-quality apprenticeships and a new generation of technical colleges is early proof that it is serious about restoring the standing of vocational education.

Michael Gove's specialty is education reform – he wants to stop the left from bashing kids into the same mold, regardless of their individual abilities and aptitudes.

Those are the two guys to watch. They're not perfect, but they are the two best in the UK, in my opinion.

Dr. Tim McGrew on alleged historical errors in the gospels

June 28, 2012 | by Wintery Knight | Link | Original Link

I see that Brian Auten of Apologetics 315 is posting a lot of Tim McGrew material on his channel. Timothy J. McGrew (University of Scranton BA Philosophy 1988; Vanderbilt University PhD Philosophy 1992) is a Professor of Philosophy at Western Michigan University.

Here are a couple of Dr. McGrew's videos – with slides! – on alleged errors in the gospels.

Alleged errors in Mark and Matthew:

n this lecture, entitled Alleged Historical Errors in the Gospels, Dr. Timothy McGrew critiques seven of the strongest objections to the historical reliability of the Gospels of Mark and Matthew. This is about 55 minutes of content followed by fifteen minutes of Q&A.

More on this talk here. (including MP3)

Alleged errors in Luke and John:

In this lecture, entitled Alleged Historical Errors in the Gospels, Dr. Timothy McGrew critiques the strongest objections to the historical reliability of the Gospels of Luke & John. This is about 55 minutes of content followed by thirty minutes of Q&A.

More on this talk here. (including MP3)

Bio of Tim McGrew:

> Dr. Timothy McGrew is Professor of Philosophy at Western Michigan University. He specializes in theory of knowledge, logic, probability theory, and the history and philosophy of science, and he has published in numerous journals including Mind, The Monist, Analysis, British Journal for the Philosophy of Science, and Philosophia Christi. His most recent publications include the article on "Evidence" in The Routledge Companion to Epistemology (forthcoming), a co-authored anthology in The Philosophy of Science (Blackwell, 2009), and a paper (with Lydia McGrew) on the the argument from miracles in The Blackwell Companion to Natural Theology (Blackwell, 2009).

His wife Lydia also has a doctorate, and she writes about Christianity, apologetics and culture at "What's Wrong With the World" blog. She had some interesting comments about the whole John Piper cafuffle last week, that set off a small firestorm when I posted it on my Facebook page. It was a must-read!

A silver lining on today's cloudy Supreme Court decision?

June 29, 2012 | by Wintery Knight | Link | Original Link

Ok, so on first blush this seems like a bad decision for conservatives. So here are a few things that I found that say that it isn't that bad.

Here's moderate pragmatist Dick Morris.

Excerpt:

> Right now, presidential polls show Romney and Obama both in the mid-40s. The single most unpopular thing Obama has done is the health care law. Now it is going to be the lynchpin issue. It means that the election itself will increasingly be polarized around opinions of the health care law – a fifteen point loser for the Democrats.
>
> In a real sense, the Supreme Court did not let Obama off the hook by striking down the law. Now he will have to defend it during the election.
>
> Remember what this law does. It requires everyone to spend upwards of 7 percent of their income on health insurance or pay a fine of several thousand dollars. Neither is an attractive alternative for the young and the poor who are the president's political base. And, with the expansion of Medicaid rejected by the Court, the government will not be there to help them.
>
> In 2010, Democrats running for Congress (most of whom lost) did not even attempt to defend Obamacare. They put as much distance between themselves and the law as they could. But now, neither Obama nor his Senate and House candidates will have that option since the Supreme Court has kicked the football back into political play.

And here's conservative Townhall.

Excerpt:

> Over, and over, and over, President Obama assured us that this was not a tax. He was not raising taxes on the middle class (that's what the *Republicans* were doing, remember?). Nope, says the CJ: ya raised our taxes. Politically, that's going to prove troublesome for Obama this fall, and in a much more substantial way than having his "signature legislative accomplishment" overturned altogether.
>
> For one, **Roberts took away Obama's ability to campaign against the Court.** They upheld his law; he can't do as he did after Citizens United and construe the ACA ruling as a massively political attack on the little guy and his uninsured plight. He has nothing to blame on the Justices. All they did was recharacterize the "penalty" as constitutional under the taxing power. Roberts

> robbed Obama of a scapegoat, and stuck Obama with an unpopular law in an election year. *Ouch.*
>
> Second, **Roberts has literally forced Obama to acknowledged that he broke a promise, and raised taxes**. And tax increases don't resonate well with the voters. Now, it's doubtful Obama will assume responsibility for raising taxes – note that in his speech today, he didn't acknowledge the Court's reasoning for the ruling, only that they ruled in his favor. But the GOP has just added a major weapon to its arsenal: want to lower taxes? Then don't reelect Obama.
>
> This third observation is one that isn't immediately eminent, but nonetheless just as important as those prior two, if not more so. **Roberts has made it substantially easier to repeal Obamacare, and substantially harder to pass anything like it in the future**. As noted above, Americans don't like taxes. And thanks to the fact that many will opt to pay the tax rather than buy insurance (as that will cost less), the insurance problem in this country hasn't been solved. The fact that we've settled the question of the mandate's constitutionality means we can turn to the rest of the law, and address the flaws contained therein, and perhaps find a *real* solution to the healthcare crisis. As for future laws, Democrats lost the ability to hide behind "penalty" language. Roberts saw that the mandate waddled and quacked, and gave it the appropriate name. (He also forbade Congress from actually "mandating" anything, so that name isn't even correct anymore.) The ACA barely passed the first time; future iterations of this theory are destined to fail, because Congress will have to stand up and say, "We propose to enact a new tax so as to influence your behavior." If that isn't the proverbial lead balloon, I don't know what is.
>
> So there you have it: it's really not all bad. It's not what we wanted, but then – as I suspect Obama will learn in the coming months – we must remember to be careful what we wish for.

UPDATE: I have been told that if something is a tax, then it only has to get 50 votes in the Senate to repeal it, and not 60. I'm not sure if this is correct. Additionally, Romney got $3.2 million in donations the day the Supreme Court made their decision. So that is good news for sure.

That's the silver lining. It's a big cloud, but there is a small silver lining.

UPDATE: Wes sent me this full list of all the taxes contained in Obamacare. All we have to do now is win in November.

Attorney general Eric Holder faces possibility of jail after citation for contempt

June 29, 2012 | by Wintery Knight | Link | Original Link

From Fox News.

Excerpt:

> The GOP-led House voted Thursday to hold Attorney General Eric Holder in contempt of Congress for failing to provide key information pertaining to Operation Fast and Furious, making Holder the first sitting Cabinet member to be held in contempt.
>
> The vote was **255-67**, with 17 Democrats breaking ranks to side with Republicans in favor of contempt.
>
> […]Congressional sources tell Fox News that House GOP leaders will now meet to decide the next steps, but the investigation is expected to go forward with more subpoenas being issued.
>
> "Today's vote is the regrettable culmination of what became a misguided and politically motivated investigation during an election year," Holder said afterward. "By advancing it over the past year and a half, Congressman Issa and others have focused on politics over public safety."
>
> The vote, which holds the attorney general in criminal contempt, was followed by a second vote that held Holder in civil contempt of Congress. The civil contempt vote allows Congress to go to court to seek additional documents.
>
> The criminal-contempt vote is supposed to direct a U.S. attorney to convene a grand jury to review the case and decide whether to indict Holder.
>
> However, considering Holder would be investigated by his own employees, some analysts have said it's unlikely that would happen. If the case proceeds, though, Holder could face a maximum one year in jail if convicted.

Now that's bipartisanship you can approve of.

Obamacare: higher taxes, higher debt, higher unemployment and higher premiums

June 29, 2012 | by Wintery Knight | Link | Original Link

A few of the problems with Obamacare

Here are a few articles that I have been using lately to inform people about the problems with Obamacare

- Heritage Foundation: Obamacare Raises Taxes on 3 Million Middle-Class Americans
- Cato Institute: ObamaCare's Cost Could Top $6 Trillion in first 10 years
- Life News: Obamacare is pro-abortion and pro-government controlled rationing
- Heritage Foundation: The 3 Biggest Ways Obamacare Kills Jobs
- Investors Business Daily: Obama's Broken Health-Premium Savings Promise
- Reason: Obamacare will lead to longer wait times and crowded emergency rooms
- Doctor Patient Medical Association: 83% of doctors contemplating quitting over Obamacare

But I thought that the best defense is a good offense, and so without further ado, let me re-post something that defends American health care.

A defense of American health care

Story from the Hoover Institute at Stanford University.

The article compares American health care to health care in other places like Canada, the UK and Europe.

The full article. I almost never cite the full article, but this is a must read.

> MEDICINE AND HEALTH:
> Here's a Second Opinion
>
> By Scott W. Atlas
>
> *Ten reasons why America's health care system is in better condition than you might suppose. By **Scott W. Atlas.***
>
> Medical care in the United States is derided as miserable compared to health care systems in the rest of the developed world. Economists, government officials, insurers, and academics beat the drum for a far larger government role in health care. Much of the public assumes that their arguments are sound because the calls for change are so ubiquitous and the topic so complex. Before we turn to government as the solution, however, we should consider some unheralded facts about America's health care system.
>
> **1. Americans have better survival rates than Europeans for common cancers.**Breast cancer mortality is 52 percent higher in Germany than in the United States and 88 percent higher in the United Kingdom. Prostate cancer

mortality is 604 percent higher in the United Kingdom and 457 percent higher in Norway. The mortality rate for colorectal cancer among British men and women is about 40 percent higher.

2. Americans have lower cancer mortality rates than Canadians. Breast cancer mortality in Canada is 9 percent higher than in the United States, prostate cancer is 184 percent higher, and colon cancer among men is about 10 percent higher.

3. Americans have better access to treatment for chronic diseases than patients in other developed countries. Some 56 percent of Americans who could benefit from statin drugs, which reduce cholesterol and protect against heart disease, are taking them. By comparison, of those patients who could benefit from these drugs, only 36 percent of the Dutch, 29 percent of the Swiss, 26 percent of Germans, 23 percent of Britons, and 17 percent of Italians receive them.

4. Americans have better access to preventive cancer screening than Canadians. Take the proportion of the appropriate-age population groups who have received recommended tests for breast, cervical, prostate, and colon cancer:

- Nine out of ten middle-aged American women (89 percent) have had a mammogram, compared to fewer than three-fourths of Canadians (72 percent).
- Nearly all American women (96 percent) have had a Pap smear, compared to fewer than 90 percent of Canadians.
- More than half of American men (54 percent) have had a prostatespecific antigen (PSA) test, compared to fewer than one in six Canadians (16 percent).
- Nearly one-third of Americans (30 percent) have had a colonoscopy, compared with fewer than one in twenty Canadians (5 percent).

5. Lower-income Americans are in better health than comparable Canadians. Twice as many American seniors with below-median incomes self-report “excellent” health (11.7 percent) compared to Canadian seniors (5.8 percent). Conversely, white, young Canadian adults with below-median incomes are 20 percent more likely than lower-income Americans to describe their health as “fair or poor.”

6. Americans spend less time waiting for care than patients in Canada and the United Kingdom. Canadian and British patients wait about twice as long—sometimes more than a year—to see a specialist, have elective surgery such as hip replacements, or get radiation treatment for cancer. All told, 827,429 people are waiting for some type of procedure in Canada. In Britain, nearly 1.8 million people are waiting for a hospital admission or outpatient treatment.

7. People in countries with more government control of health care are highly dissatisfied and believe reform is needed. More than 70 percent of German, Canadian, Australian, New Zealand, and British adults say their health system needs either “fundamental change” or “complete rebuilding.”

8. Americans are more satisfied with the care they receive than Canadians. When asked about their own health care instead of the “health care system,” more than half of Americans (51.3 percent) are very satisfied with their health care services, compared with only 41.5 percent of Canadians; a lower proportion of Americans are dissatisfied (6.8 percent) than Canadians (8.5 percent).

9. Americans have better access to important new technologies such as medical imaging than do patients in Canada or Britain. An overwhelming majority of leading American physicians identify computerized tomography (CT) and magnetic resonance imaging (MRI) as the most important medical innovations for improving patient care during the previous decade—even as economists and policy makers unfamiliar with actual medical practice decry these techniques as wasteful. The United States has thirty-four CT scanners per million Americans, compared to twelve in Canada and eight in Britain. The United States has almost twenty-seven MRI machines per million people compared to about six per million in Canada and Britain.

10. Americans are responsible for the vast majority of all health care innovations. The top five U.S. hospitals conduct more clinical trials than all the hospitals in any other developed country. Since the mid- 1970s, the Nobel Prize in medicine or physiology has gone to U.S. residents more often than recipients from all other countries combined. In only five of the past thirty-four years did a scientist living in the United States not win or share in the prize. Most important recent medical innovations were developed in the United States.

Despite serious challenges, such as escalating costs and care for the uninsured, the U.S. health care system compares favorably to those in other developed countries.

This essay appeared on the website of the National Center for Policy Analysis on March 24, 2009. An earlier version was published in the *Washington Times.*

Available from the Hoover Press is *Power to the Patient: Selected Health Care Issues and Policy Solutions,* edited by Scott W. Atlas. To order, call 800.935.2882 or visit www.hooverpress.org.

Scott W. Atlas is a senior fellow at the Hoover Institution and a professor of radiology and chief of neuroradiology at Stanford University Medical School.

Note that the author is a professor of radiology and chief of neuroradiology at Stanford

University Medical School. Stanford and Harvard are generally regarded as the two best universities in the United States.

Correcting myths about American health care

Some people believe misleading myths about American health care by cherry-picking data from left-wing propaganda movies or Guardian editorials/comments, but here is the Michael Tanner, health care policy expert at the libertarian Cato Institute, to give us the facts.

Excerpt:

> **The Claim:** Though we spend more, we get less.
>
> **The Facts:** America offers the highest quality health care in the world. Most of the world's top doctors, hospitals and research facilities are located in the United States. Eighteen of the last 25 winners of the Nobel Prize in Medicine either are U.S. citizens or work here. U.S. companies have developed half of all the major new medicines introduced worldwide over the past 20 years. And Americans played a key role in 80 percent of the most important medical advances of the past 30 years.
>
> If you are diagnosed with a serious illness, the United States is the place you want to be. Tens of thousands of patients from around the world come to this country every year for treatment.
>
> Critics of American health care often point out that other countries have higher life expectancies or lower infant mortality rates, but those two indicators are bad ways to measure the quality of a nation's health-care system. In the United States, very low-birth-weight infants have a much greater chance of being brought to term with the latest medical technologies. Some of those low-birth-weight babies die soon after birth, which boosts our infant mortality rate, but in many other Western countries, those high-risk, low-birth-weight infants are not included when infant mortality is calculated.
>
> Life expectancies are also affected by other factors like violent crime, poverty, obesity, tobacco, and drug use, and other issues unrelated to health care. When you compare the outcome for specific diseases like cancer or heart disease, the United States outperforms the rest of the world.

And one more myth:

> **The Claim:** A government-run health-care system would expand access to care.
>
> **The Facts:** The one common characteristic of all national health care systems is that they ration care. Sometimes they ration it by denying certain types of treatment altogether. More often, they ration indirectly, imposing cost constraints through budgets, waiting lines, or limited technology. One million Britons are waiting for admission to National Health Service hospitals at any given time, and shortages force the NHS to cancel as many as 100,000

> operations each year. Roughly 90,000 New Zealanders are facing similar waits. In Sweden, the wait for heart surgery can be as long as 25 weeks. In Canada more than 800,000 patients are currently on waiting lists for medical procedures.

If you liked this post, please tweet it on Twitter, share it on Facebook and e-mail it to your friends. Get the discussion started now before the election. The left is counting on us to be distracted with television, movies and other nonsense. We need to be persuading people now because this could be our last chance to turn away from socialism in this country.

Friday night movie: The Lady Vanishes (1938)

June 29, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [8.0/10]

IMDB median rating: [8/10]

Description:

> Travellers on a trans-European train are delayed for a night due to bad weather in a small fictional country called Mandrika. The passengers cram into the small village hotel where socialite Iris Henderson meets an old governess called Miss Froy. Shortly after the journey restarts, Miss Froy disappears.

This is by one of my favorite directors, Alfred Hitchock, who made many great patriotic movies.

Happy Friday!

Governors Bobby Jindal and Scott Walker refuse to implement Obamacare

June 30, 2012 | by Wintery Knight | Link | Original Link

Melissa send me this post from The leftist Huffington Post.

Excerpt:

> Just because the Supreme Court affirmed that the Affordable Care Act is the law of the land, doesn't mean that Republican governors are rushing to follow it.
>
> "We're not going to start implementing Obamacare. We're committed to working to elect Governor Romney to repeal Obamacare," said Louisiana Gov. Bobby Jindal (R) Friday morning on a call with reporters hosted by the Republican National Committee.
>
> The Affordable Care Act requires states to set up health care benefits exchanges to help Americans buy insurance. If a state fails to act, the federal government will operate that state's exchange program.
>
> States have until Jan. 1, 2013, to demonstrate to the Department of Health and Human Services that it has a plan in place for the exchanges, which are required to be up and running by Jan. 1, 2014.
>
> "On the exchanges, we've continued not to implement the exchanges in Louisiana. We're going to work very hard to get Governor Romney elected so this law will be repealed long before the effective dates," Jindal added.
>
> […]On Thursday, another leading Republican governor — Wisconsin's Scott Walker — similarly said, "Wisconsin will not take any action to implement Obamacare. I am hopeful that political changes in Washington, D.C., later this year ultimately end the implementation of this law at the federal level."
>
> […]"Here in Louisiana, we've not applied for the grants, we've not accepted many of these dollars," Jindal said. "We're not implementing the exchanges. We don't think it makes any sense to implement Obamacare in Lousiana. The next opportunity we have to get rid of this law is to get Governor Romney elected, and I absolutely believe that he will be elected in November, and one of his first actions will be to repeal and replace this law."

It's good to see some Republican governors in tune with the mood of the public.

75% of the costs of Obamacare will be paid by those making $120,000 or less

June 30, 2012 | by Wintery Knight | Link | Original Link

The video shows the chief economist of the Wall Street Journal, Stephen Moore, making the claim that nearly 75% of Obamacare costs will fall on the backs of those Americans making less than $120,000 a year. (H/T Gateway Pundit)

The Heritage Foundation explains more, using the official numbers from the Congressional Budget Office. (H/T Bad Blue)

Excerpt:

> President Obama repeatedly promised not to raise taxes on middle-class families. Yesterday, the Supreme Court ruled that he already has.
>
> Chief Justice John Roberts upheld the President's health care law on the grounds that the "individual mandate" is a constitutionally permissible tax increase. This violates Obama's pledge. Middle-class families will pay the vast majority of these new taxes.
>
> Obamacare imposes a penalty—or tax increase—on Americans who do not purchase health insurance. The Congressional Budget Office estimates that most of those paying these taxes are middle-class individuals and families making less than 500 percent of the federal poverty level: $59,000 for an individual and $120,000 for a family of four. Three million lower-income and middle-class Americans will pay an estimated $2 billion in these "mandate taxes."
>
> The Supreme Court's interpretation puts the President in a peculiar situation. In 2008, he promised not to raise taxes on the middle class and accused Republican nominee John McCain of wanting to tax health benefits: "And I can make a firm pledge: under my plan, no family making less than $250,000 will see their taxes increase…not any of your taxes. My opponent can't make that pledge…. [H]e wants to tax your health benefits." Who could have predicted that Obama would raise taxes on millions of Americans who do not have health insurance?
>
> Obama grossly mischaracterized his health care plan, and now American citizens will pay the price. He has both attacked individual freedom and burdened millions in the middle class.

I thought that Obama said that he would raise taxes on the middle class? For a full list of the taxes in Obamacare, click here.

Despite record youth unemployment, young people support Obama 52-27

July 1, 2012 | by Wintery Knight | Link | Original Link

Labor Force Participation 2012 (click for larger image)
From Breitbart.

Excerpt:

> Even as unemployment among college graduates remains stuck above the national average at 9.3 percent, a Reuters/Ipsos poll of four-year college graduates finds that President Barack Obama leads his Republican challenger Mitt Romney 52 percent to 27 percent.
>
> The poll's findings are especially surprising given reports last month that, for the first time in American history, unemployment for college graduates eclipsed that of high school graduates. As Jed Graham of *Investor's Business Daily* reported, "Out of 9 million unemployed in April, 4.7 million had gone to college or graduated and 4.3 million had not, seasonally adjusted Labor Department data show."
>
> Still, some unemployed college graduates say they are sticking with Mr. Obama in 2012: "I was really excited when Obama won," said Joe Zmudczynski, a 2011 graduate of Michigan's Ferris State University who now lives at home with his parents. "He's still my favorite. It's not like you can snap your fingers and everything gets better."

Leftist PBS explains:

> Returning to the nest with mom and dad after college and even into the thirties is becoming increasingly more common, but also less stigmatized. Young adults who live with their folks are cheerful, upbeat even, about their choice.
>
> That's the finding of **a new Pew report**, released Thursday morning. Three in 10 young adults (aged 25 to 34) say they've lived at home recently during the down

> economy, and 78 percent said they were satisfied doing so. Another 77 percent said they were optimistic about their future finances.
>
> The number of young adults living in a multi-generational household — which can be any combination of grandparents, parents and adult children — saw a steep uptick during the recent recession, after being on the rise since 1980, said Kim Parker, the study's lead author and a senior researcher with Pew's Social & Demographic Trends Project. Historically, such high rates of moving back home haven't been seen since the late 1940s.

Here's an Associated Press piece on Yahoo News:

> The college class of 2012 is in for a rude welcome to the world of work.
>
> A weak labor market already has left half of young college graduates either jobless or underemployed in positions that don't fully use their skills and knowledge.
>
> Young adults with bachelor's degrees are increasingly scraping by in lower-wage jobs — waiter or waitress, bartender, retail clerk or receptionist, for example — and that's confounding their hopes a degree would pay off despite higher tuition and mounting student loans.
>
> […]Taking underemployment into consideration, the job prospects for bachelor's degree holders fell last year to the lowest level in more than a decade.
>
> […]The figures are based on an analysis of 2011 Current Population Survey data by Northeastern University researchers and supplemented with material from Paul Harrington, an economist at Drexel University, and the Economic Policy Institute, a Washington think tank. They rely on Labor Department assessments of the level of education required to do the job in 900-plus U.S. occupations, which were used to calculate the shares of young adults with bachelor's degrees who were "underemployed."
>
> About 1.5 million, or 53.6 percent, of bachelor's degree-holders under the age of 25 last year were jobless or underemployed, the highest share in at least 11 years. In 2000, the share was at a low of 41 percent, before the dot-com bust erased job gains for college graduates in the telecommunications and IT fields.
>
> Out of the 1.5 million who languished in the job market, about half were underemployed, an increase from the previous year.

The EPI is a left-wing think tank.

As if this were not bad enough, remember that the secular socialists have run the national debt up from 8 trillion to 16 trillion since taking over the House and Senate in January 2007. Labor union bailouts, green energy payoffs to Democrat fundraises, health care takeovers, and massive welfare spending, have to be paid back. Who is going to pay all of this back? Students with degrees in feminist studies and peace studies? And yet, incredibly, the government-run public school system and the universities have

brainwashed these young fools into voting for their own dependence and enslavement. That’s what secularism and leftism offers young people: the road to serfdom.

The Wintery Knight’s favorite apologetics lectures

July 1, 2012 | by Wintery Knight | Link | Original Link

These are the lectures that made me who I am today. Each of these is awesome. If you only have time for two, listen to Dr. Bradley’s Journey to Faith and Giants in the Land.

Dr. Walter L. Bradley

Ph.D. in Materials Science, University of Texas at Austin, 1968
B.S. in Engineering Science, University of Texas at Austin, 1965

- Journey to Faith (his testimony)
- Giants in the Land
- Truth in Religion
- Scientific Evidence for an Intelligent Designer

Dr. J.P. Moreland

B.S. in Chemistry, University of Missouri
M.A. in Philosophy, University of California Riverside
Th.M. in Theology, Dallas Theological Seminary
Ph.D. in Philosophy, University of Southern California

- The Importance of the Mind in Christian Living
- Atheism, Theism, and the Meaning of Life
- Love Your God with All Your Mind (for Christians)

Dr. Philip E. Johnson

A.B., Harvard University, 1961
J.D., University of Chicago, 1965

- The Grand Metaphysical Story of Science
- Can Science Know the Mind of God?
- Darwinism on Trial

Dr. Douglas Geivett

Ph.D., University of Southern California
M.A., Dallas Theological Seminary
M.A., Gonzaga University
B.S., Multnomah School of the Bible

- The Problems of Evil and Suffering (at Apologetics 315)

Dr. William Lane Craig

D.Theol., University of Munich
Ph.D., University of Birmingham (UK)

M.A., Trinity Evangelical Divinity School
M.A., Trinity Evangelical Divinity School
B.A., Wheaton College

- In Intellectual Neutral (at Apologetics 315)

Student who was fired for opposing homosexuality loses court case

July 2, 2012 | by Wintery Knight | Link | Original Link

From the Christian Post.

Excerpt:

> A Christian student at a Georgia university who was expelled from her school's counseling program for expressing her disagreement with homosexuality has lost a court case against the school.
>
> "(Jennifer) Keeton's speech and conduct were evidently impelled by the absolutist philosophical character of her beliefs, but that character does not entitle her to university accommodation and it is irrelevant to the court's analysis," wrote Judge J. Randall Hall, of the Southern District of Georgia, siding with the university. "Neutrality as a legal standard is immutable, it does not bend to the strength or tenor of personal conviction."
>
> Keeton refused to change the way she engages with homosexual students because of her religious beliefs, and was expelled from the counseling program at Augusta State University in 2010, which stressed that the program should not discriminate against students regardless of their sexual orientation.
>
> […]Keeton was initially placed on probation, and school officials required her to follow a "remediation plan." This included attending sensitivity training, going to gay pride events and writing papers on her experiences and the lessons she had learned in tolerance. When Keeton refused to comply, she was removed from her position.
>
> "The remediation plan imposed on Keeton pursuant to those policies placed limits on her speech and burdened her religious beliefs, but, as the allegations show, the plan was motivated by a legitimate pedagogical interest in cultivating a professional demeanor and concern that she might prove unreceptive to certain issues and openly judge her clients," the judge said. "The allegations show, in sum, that while Keeton was motivated by her religious beliefs, Defendants were not."
>
> Hall added that the American School Counselor Association's Ethical Standards for School Counselors clearly states that counselors cannot impose their own values on clients, and must take on each case from a neutral viewpoint. The judge also defended Augusta State's remediation plan, stating that it did not infringe on Keeton's first amendment rights, but was an attempt to get her to comply with the school's policies.
>
> In a similar case, Julea Ward from Eastern Michigan University was also expelled from her counseling job because of her views on homosexuality. She had

> requested that a gay client be transferred to another counselor, which the school argued went against its policies, despite the fact that it allows client transfers based on non-religious reasons. A lower-court initially ruled in favor of Eastern Michigan University, but the 6th U.S. Circuit Court of Appeals overturned the decision, arguing that Ward's constitutional rights were violated.

Remember, these schools very often get public funding, which means that Christians are paying to have this done to them. That's what you get when you vote for more goverment and more grants for universities. These places are generally not our friends – across the board. Also, think of how she gave them thousands of dollars in tuition.

What's the lesson here? I think that the lesson is that the safest way to avoid losing thousands of dollars is to study STEM-related fields in a secular university or any field in a Christian university. The best schools for Christians are listed here. I agree that Wheaton College should be left off the list and I think that Grove City, Biola, Houston Baptist and Hillsdale are the best, especially Grove City. Christians have to be careful where we go to school and what we study now.

One last point. It is a good idea for Christians to learn how to talk about their convictions on moral issues using evidence, and not talking about their faith or the Bible to people who don't like us very much. The Bible informs your faith, but that is not something you share with non-Christians who are hostile to you.

A simple introduction to Obamacare

July 2, 2012 | by Wintery Knight | Link | Original Link

Here's a helpful article from the UK Daily Mail that Dina sent me that explains the basics for people who are wondering what all the fuss is about. The author Diana Furchtgott-Roth has a B.A. and M.A. in economics, the latter from Oxford University.

Excerpt:

> Although the Court has upheld PPACA, the law as currently structured is unworkable. This is because the penalty for not signing up for insurance, which is now termed a tax, $750 a year, is too small relative to the cost of health care coverage, about $5,500 a year.
>
> Since insurance companies are required to take all applicants, healthy people, especially the young, will pay the tax rather than buy the insurance. This makes the pool of insured individuals sicker and more costly, on average, and their premiums will be higher. With higher premiums, more people will choose to pay the tax, and a downward spiral will unfold.
>
> Unless Congress raises the tax to the level of premiums, the system will have to be replaced with a public option.
>
> […] It is clear that PPACA has severe economic costs, and is at least partially responsible for the slow economic recovery, and needs to be replaced.
>
> PPACA raises employment costs by requiring employers to offer qualifying insurance coverage or pay a penalty—now a tax. Because this requirement will apply, starting in 2014, to firms with more than 49 full time employees, it will discourage the hiring of full-time workers, especially low-wage hands whose work can more easily be divided among part-timers. Firms with over 49 workers will have to pay $2,000 a year for each employee without qualifying coverage. Expanding to 50 workers would, in 2014, cost a firm $40,000 a year (the first 30 workers are exempt).
>
> PPACA encourages employers to substitute part-time for full-time workers to avoid the tax. A firm with 60 employees would pay a tax of $60,000 a year if it did not have qualifying health coverage. But if it put 11 workers on part-time, and hired another 11 part-timers, it would not owe a tax, because it would have 49 full-timers. The full-timers who become part-timers and lose salary and benefits would be worse off.
>
> PPACA raises health insurance costs by requiring an overly-generous plan. In order to be counted as a 'qualified benefit plan' and be able to sell health insurance in the exchange, an underwriter must cover routine health care—such as check-ups, and contraceptives—without copayment. It must also cover maternity care, mental health and substance abuse.

> Unfortunately, plans that encourage shopping around, such as catastrophic plans with large deductibles combined with health savings accounts, where people can save tax-free for medical care, are prohibited by PPACA for Americans ages 30 and above.
>
> A health insurance system needs to be accessible, portable, and inexpensive, just like other forms of insurance.
>
> […]The same should be true of health insurance. Those who can't afford it should be offered refundable tax credits, or vouchers, to purchase it themselves, so they can have the same choice of doctors and services as other Americans.
>
> Just as in other forms of insurance, America can lower costs by reducing unnecessary regulation, increasing competition and patient choice. Patients should decide what type of coverage meets their needs, not be told what they must purchase by the federal government.
>
> For example, if some people want their children to be on their insurance plan until age 26, or age 28, or age 30, they should be able to purchase plans that cover their children, at a price. Others who do not have children, or who do not want their children on their plans, should not have to pay the costs.
>
> How would such a system operate?
>
> Congress could give all Americans tax credits for buying health insurance; allow plans to compete over state lines; and set up state risk pools to insure those with uninsurable conditions.

What an excellent article. Her suggestions are also good, and the Republicans have offered a plan to achieve those goals: Paul Ryan's health care plan.

Student debt forcing college graduates to put their plans on hold

July 2, 2012 | by Wintery Knight | Link | Original Link

First, from Yahoo News, some anecdotes to help everyone understand what faces young people trying to get an education and find a job. (H/T Captain Capitalism)

Excerpt:

> We asked Yahoo News readers to tell us their experiences with student loan debt. Over 600 graduates (and not-quite graduates) of all ages emailed to share their stories. We'll be sharing more of their stories in the next week over at our Tumblr.
>
> Overwhelmingly, Yahoo News readers told us they felt burdened by their debt. "We do not like debt," wrote Katelyn Fagan, who graduated from Brigham Young University in 2011. She and her husband have a combined student loan debt of just under $70,000. Fagan tried to work while in college, but wanted to focus on her academics. "Maybe I could have sought out other employment options (and I sometimes did) but school was my top priority."
>
> "Student loans have basically ruined my life," says Tanya Carter, who graduated from the University of Toledo in 2008. She went to community college for two years before transferring, and attended classes part-time so she could also work. When Carter maxed out on federal loans, she turned to private loans to finish her degree. As a result of all that debt, she writes: "I never see myself owning a home, vehicle, or maybe not even getting married."
>
> The need to delay starting a family because of financial worries was a common concern. Lauren Dollard graduated from Fordham University in 2008 with $157,000 in debt, including interest. "My boyfriend won't marry me because of my debt," she says. "He doesn't want it attached to his name (I know, this could also be an excuse)." She said she would trade her "fancy private school education" in a heartbeat to live "as an independent adult."
>
> April Flores graduated from San Diego State in 2008 with $80,000 in private loans and $30,000 in subsidized loans. "It is going to be hard to buy a house and start a family with our debt," she writes. "We joke and say that our baby is Sallie Mae, but it is true! Education is invaluable, but I was not wise in my early 20s and did not make the right decisions when it came to my private loans."
>
> Flores was far from alone in bemoaning her failure to understand the implications of those promissory notes. Salvatore Aiello graduated from the University of South Carolina in 2009 with $68,000 in debt. "I blame ignorance in my pursuit of loans; my high school did a terrible job explaining our options when it came to financial aid," he told us. "They made it seem that if I wasn't rich or beyond

> poverty I would not have been able to go to college." Aiello followed up with a second email—he and his girlfriend are now expecting their first child. They are, in his words, "very excited at the unexpected blessing but terrified."

Here's an article from the New York Times in which a professor explains what causes tuition rates to rise: (H/T Cato Institute)

> ACADEMIC economists like to make fun of businesspeople: they want competition when they enter a new market but are quick to lobby for subsidies and barriers to competitors once they get in. Yet scholars like me are no better. We work in the least competitive and most subsidized industry of all: higher education.
>
> We criticize predatory loans by mortgage brokers, when student loans can be just as abusive. To avoid the next credit bubble and debt crisis, we need to eliminate government subsidies and link tuition financing to the incomes of college graduates.
>
> Nearly eight million students received Pell grants in 2010, costing $28 billion. In addition, the federal direct loan program, which allows nonaffluent students to get government-guaranteed loans at low interest rates, cost taxpayers $13 billion in 2010-11. Total subsidies to university education amount to $43 billion a year, including around $2 billion in Congressional earmarks — and that does not even include tax subsidies (for college funds); tax breaks (for university endowments, for example); and subsidies dedicated to research.
>
> Just as subsidies for homeownership have increased the price of houses, so have education subsidies contributed to the soaring price of college. Between 1977 and 2009 the real average cost of university tuition more than doubled.
>
> These subsidies also distort the credit market. Since the government guarantees student loans, lenders have no incentive to lend wisely. All the burden of making the right decision falls on the borrowers. Unfortunately, 18-year-olds aren't particularly good at judging the profitability of an investment without expert advice, and when they do get such advice, it generally counsels taking the largest possible loan. The stock of student loans has reached $1 trillion, while the percentage of borrowers in default jumped to 8.8 percent in 2009 from 6.7 percent in 2007.
>
> Last but not least, these subsidized loans keep afloat colleges that do not add much value for their students, preventing people from accumulating useful skills.

That article also contains the solution:

> Investors could finance students' education with equity rather than debt. In exchange for their capital, the investors would receive a fraction of a student's future income — or, even better, a fraction of the increase in her income that derives from college attendance. (This increase can be easily calculated as the difference between the actual income and the average income of high school

> graduates in the same area.)

The solution is to privatize the entire student loan system, and make the loans conditional on future earnings. That way, universities will be chosen based on their ability to provide jobs to students, and students will have to justify to banks (who represent ordinary people who put money on deposit with an expectation of a return!) why they should get a loan and how they expect to pay it back.

But what has Obama actually done?

Let's see:

> The president, by way of administrative fiat, plans to continue redefining the federal student-loan industry, making taxpayers absorb the financial risks of federal direct lending and leading the country over a cliff into future funding shortfalls. On Wednesday, the president announced his executive order to reduce monthly student-loan payments, consolidate loans into direct loans, and offer loan forgiveness after 20 years, all in the name of college access.
>
> President Obama's executive action would cap monthly repayment at 10 percent of discretionary income and offer students an incentive for consolidating Federal Family Education Loans (FFEL) and direct loans into the direct-loan program, which administers loans directly to students, instead of having them issued by banks. Students will be given a 0.5 percent interest-rate reduction for switching to the direct-loan program.
>
> But why the urgency to employ executive action to shift to the direct-loan program now? The federal government is currently lending to students at an interest rate of 6.8 percent while it is borrowing at less than 1 percent, and the difference is kept by the federal government and spent on other programs, like converting the popular Pell Grant program into an entitlement. The president is lobbying for more students to move to direct loans so that the government can spend the money elsewhere. As Rep. John Kline, chairman of the House Committee on Education and the Workforce, said, "It's a pretty big slush fund." Under the Healthcare and Education Reconciliation Act, all new federal student loans are now direct loans, but there are still $400 billion outstanding loans that are not.
>
> But these "savings" are misleading, as future shortfalls are inevitable. These loans are riddled with risk. When pressed by a reporter about why students would want to pay back the loan if they will be forgiven anyway, Secretary Duncan simply said that "people want to do the right thing." However, student-loan default rates have been increasing for nearly ten years and are now at 8.8 percent. On top of these high defaults, the jobless rate for Americans with at least a bachelor's degree is now 5.1 percent, the highest since 1970.
>
> **As former CBO director Doug Holtz-Eakin wrote, "The Secretary of Education is now one of the top financial executives in the U.S., and**

> **Congress spent nearly all of the over-estimated 'savings' on the President's health care reform and unaffordable education entitlements and will add more than a trillion dollars of risky loans to the national balance sheet by 2017."**

Just like the housing bubble, the Democrats have again made it easier for a certain segment of the population whose votes they wanted to borrow money – money that they now don't have to pay back. Being a leftist means taking money away from people who earned it and giving it to others (students, universities) who don't have to pay it back.

NHS horror story: neglected patient calls police for water, dies of thirst

July 3, 2012 | by Wintery Knight | Link | Original Link

I spotted this UK Daily Mail story on my FB feed from bioethicist Wesley J. Smith.

Excerpt:

> A young patient who died of dehydration at a leading teaching hospital phoned police from his bed because he was so thirsty, an inquest heard yesterday.
>
> Officers arrived at Kane Gorny's bedside, but were told by nurses that he was in a confused state and were sent away.
>
> The keen footballer and runner, 22, died of dehydration a few hours later.
>
> A coroner had such grave concerns about the case that she referred it to police.
>
> Yesterday an inquest was told how Mr Gorny died after blunders and neglect by 'lazy and careless' medical staff at St George's Hospital in Tooting, South London.
>
> His mother Rita Cronin, a civil servant told Westminster Coroner's Court that staff tutted at her and repeatedly refused to listen to her concerns that her son hadn't been given vital medication.
>
> At one point he became so desperate and upset that staff sedated and restrained him – and on the night before his death, his mother said, he was not checked on by medical staff, despite being in a room on his own.
>
> […]When he arrived at hospital for the hip operation, nurses assured the family they would give him his medication and said: 'Don't worry, he's in good hands – we'll look after him.'
>
> But, despite the repeated reminders and insistence by both Mr Gorny and his family, staff failed to give him the tablets and he became severely dehydrated after being refused water.
>
> In an interview with the Daily Mail in 2010, Miss Cronin said of the nurses who treated him: 'They were lazy, careless and hadn't bothered to check his charts and see his medication was essential. He was totally dependent on the nurses to help him and they totally betrayed him.'
>
> Yesterday Miss Cronin told the inquest she received a distressed phone call from her son on May 27, 2009, in which he told her he'd called the police because he was so desperate for a drink.
>
> […]She then went to the hospital where she found him 'confused and angry', shouting at staff and behaving in an uncharacteristically abusive manner.
>
> Despite this, one doctor asked if he was 'coming off the booze' and another asked if he was 'always like this'. Miss Cronin said: 'He sounded really, really distressed. He said "They won't give me anything to drink". 'He also said "I've

> called the police. You better get here quickly: they're all standing around the bed getting their stories straight".'
>
> When Miss Cronin arrived, she recalled: 'They weren't doing anything. They seemed out of their depth. It felt like the two locum doctors were nervous about calling anyone more senior than them.'
>
> The inquest heard Mr Gorny was restrained by security guards and sedated with strong medication to calm him down. Later, he was put into a side room and left alone.
>
> Miss Cronin said she sat in his room for three hours the night before he died without a single nurse checking on him or giving him vital medicine.

Dr. Smith also linked to this article where doctors have to *prescribe water to patients* in order to ensure that they do not die of dehydration in the NHS. This is what you get in a secular socialist system of health care where you pay through your working life and then when you ask for health care, you get in line, because they spent *your money* buying votes from people with "free" breast implants, sex changes, abortions, contraceptives and IVF. Is that health care?

The benefit of the free enterprise system with respect to health care is that you keep your money in your pocket and you pay for quality health care at the best price. No one complains about Amazon.com, they only complain about the Department of Motor Vehicles. There is a reason for that. Amazon has to compete for your business, but government monopolies don't. You have no choice when it comes to government monopolies. They don't care. They get paid anyway.

If God has a reason for allowing evil and suffering, should we know what it is?

July 3, 2012 | by Wintery Knight | Link | Original Link

This tiny little thing is a No-See-Um

Have you heard about the terrible noseeums? Then read on, for Steven Cowan will tell you about them.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude. Consider the recent Tsunami in the Indian Ocean that took the lives of almost 200,000 people. Consider as well the infamous Nazi Holocaust in which millions of Jews and others were mercilessly slaughtered. Moreover, we can watch the evening news on almost any day and hear of people in our neighborhoods being robbed, beaten, and murdered. How and why could God allow such things?

Excerpt:

> However, perhaps God's existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God's existence is inconsistent with pointless or gratuitous evil. By "pointless evil," Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe's argument may be simply stated as follows:

> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the "noseeum inference." Like the pesty little bugs that some readers may be familiar with, a "noseeum" is something that you cannot see—it is a "no-see-um." And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I "no-see-um" a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in concluding that there was no such planet.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous. Humans just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a

noseeum. Just because we don't see it doesn't mean it isn't there, and the burden of proof is on the person who says there is NO morally sufficient reason. They're making the claim, they have to shoulder the burden of proof.

By the way, I HAVE the PDF of the William Alston paper. But I can't post it publicly because it's copyrighted.

However, here is a summary of his argument: (it's unnecessarily wordy – this is not Thomas Sowell or Theodore Dalrymple writing this)

> The recent outpouring of literature on the problem of evil has materially advanced the subject in several ways. In particular, a clear distinction has been made between the "logical" argument against the existence of God ("atheological argument") from evil, which attempts to show that evil is logically incompatible with the existence of God, and the "inductive" ("empirical", "probabilistic") argument, which contents itself with the claim that evil constitutes (sufficient) empirical evidence against the existence of God. It is now acknowledged on (almost) all sides that the logical argument is bankrupt, but the inductive argument is still very much alive and kicking.
>
> In this paper I will be concerned with the inductive argument. More specifically, I shall be contributing to a certain criticism of that argument, one based on a low estimate of human cognitive capacities in a certain application. To indicate the point at which this criticism engages the argument, I shall use one of the most careful and perspicuous formulations of the argument in a recent essay by William Rowe (1979).
>
> 1. There exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse. ,
> 2. An omniscient, wholly good being would prevent the occurrence of any intense suffering it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse.
> 3. There does not exist an omnipotent, omniscient, wholly good being (p. 336).
>
> Let's use the term 'gratuitous suffering' for any case of intense suffering, E, that satisfies premise 1, that is, which is such that an omnipotent, omniscient being could have prevented it without thereby losing some greater good or permitting some evil equally bad or worse.'
>
> […]The criticism I shall be supporting attacks the claim that we are rationally justified in accepting 1, and it does so on the grounds that our epistemic situation is such that we are unable to make a sufficiently well grounded determination that 1 is the case. I will call this, faute de mieux, the agnostic thesis, or simply agnosticism. The criticism claims that the magnitude or complexity of the question is such that our powers, access to data, and so on are radically insufficient to provide sufficient warrant for accepting 1.And if that is so, the

> inductive argument collapses.

What the atheist has to show is that God could have prevented some instance of evil that appears to be pointless without losing any overall goodness. I.e. – suppose someone gets sick and has to stay home instead of going to a party. The person is suffering, but how do we know that God isn't justified in allowing this suffering? What if, by allowing this suffering, God protects the person from being killed by a drunk driver? If the atheist says that there cannot be ANY moral justification for allowing the suffering, he has to be able to know what would happen in the future to know that nothing good would never come out of it. That's the burden of proof on the atheist, and Alston claims that the atheist is not in a position to know that.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very difficult thing for an atheist to show, given our human cognitive limitations.

But as I said before, atheist confuse the purpose of life. They think that the purpose of life is to have happy feelings, and they wonder "how could allowing me to suffer create MORE happy feelings?" And that's where the problem arises. They can't accept the idea that God has a right to form their character, to put them through certain experiences, and to place humans in times and places where he can orchestrate a world that meets his needs, not our needs.

I also found this opening speech from a debate that Steven Cowan did on the problem of evil, which may also be useful to you.

The *best* place to learn about no-see-ums is in this excellent lecture by Biola University professor Doug Geivett.

William Lane Craig vs Walter Sinnott-Armstrong: evil, suffering and God's existence

July 3, 2012 | by Wintery Knight | Link | Original Link

This is one the top 4 best debates that William Lane Craig has done in my opinion. (The other two are Craig-Millican debate and the first and second Craig-Dacey debates) This one doesn't seem to get a lot of play on the Internet: there's no video, transcript or anything. But it is a great debate, and on a problem we are all concerned about: the problem of evil and suffering. One other thing – Sinnott-Armstrong is also a very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics.

The MP3 file is here.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church.

The debaters:

- William Lane Craig
- Walter Sinnott-Armstrong

The format:

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

SUMMARY:

WSA opening speech:

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.
4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

WLC opening speech:

Summarizing Walter's argument

1. If God exists, gratuitous does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while still retaining the same amount of knowledge of God's existence and character.
- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

- If God exists, gratuitous does not exist.
- *God exists*
- Therefore, gratuitous does not exist.

Four reasons to think that God exists:

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

Obama campaign contributor and gun control advocate ran Fast and Furious

July 3, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily:

> A campaign contributor who was an architect of the 1994 assault weapons ban was the mastermind behind the Fast and Furious operation that let guns walk into Mexico, including those that killed two U.S. agents.
>
> Shortly after the murder of Border Patrol Agent Brian Terry on Dec. 15, 2010, Attorney General Eric Holder's deputy chief of staff, Monty Wilkinson, received an email from U.S. Attorney for Arizona Dennis Burke telling him just that:
>
> "The guns found in the desert near the murder(ed) BP officer connect back to the investigation we were going to talk about — they were AK-47s purchased at a Phoenix gun store."
>
> It is an email that helps demonstrate that Holder, despite his congressional testimony — as vague, contradictory and misleading as it was — could not have been ignorant about Fast and Furious and its deadly consequences.
>
> It also brings to light the name of Dennis Burke, a seldom-mentioned Obama campaign donor who oversaw Fast and Furious and helped convert it from a gun-interdiction to a gun-walking program.
>
> Burke, who resigned shortly after the scandal became public, has long been a gun-ban architect for the Democratic Party.
>
> As a lawyer for the Democrats on the Senate Judiciary Committee, he was behind the ineffectual 1994 "assault weapon" ban that sunset in 2004. Burke was also the chief of staff for Arizona Gov. Janet Napolitano for a number of years before she became the secretary of homeland security.
>
> Former Sen. Dennis DeConcini, D-Ariz., had high praise for Burke's 1994 effort: "Dennis had all these pictures of these guns — the street sweepers and the AK-47s. And it passed by one vote. A lot of it was not my eloquence on the bill; it was stuff that Dennis had done."
>
> Burke also is an Obama donor, a prime consideration in the staffing of the Obama administration. Federal Election Commission records show that on Jan. 9, 2008, while working for Napolitano, Burke contributed $2,000 to Sen. Barack Obama's presidential primary campaign. Since 1997, according to FEC records, Burke has given $16,350 to Democratic candidates.
>
> Burke would leave that Gov. Napolitano post to join the Obama transition team. He was soon rewarded for his many contributions, monetary and otherwise, when on July 10, 2009, the president nominated him to be the U.S. attorney in Arizona. The Senate confirmed him that Sept. 15.

> In July 2010, Burke told the Arizona Capitol Times there had "clearly been direction provided already by President Obama and Attorney General Holder as to what they want to be doing."

Please see below for more Fast and Furious news.

Muslim airline hijackers beaten to death by Chinese passengers

July 4, 2012 | by Wintery Knight | Link | Original Link

From Australian News: (H/T Pat Dollard)

> TWO men who allegedly tried to hijack a plane in China were beaten to death by passengers and crew.
>
> The Global Times newspaper reported that two of the suspects died in hospital from injuries they suffered during the ensuing fight with passengers and crew on board.
>
> The men were part of a six-strong gang involved in the foiled hijack of a Tianjin Airlines flight bound for the regional capital of Urumqi last Friday.
>
> Just minutes after the flight took off from Hetian, southwest Xinjiang, the men, all aged between 20 and 36, stood up and announced their plans to terrified passengers.
>
> The gang reportedly broke a pair of aluminium crutches and used them to attack passengers while attempting to break into the cockpit, Hou Hanmin, a regional government spokeswoman said.
>
> They were tackled by police and passengers who tied them up with belts before the plane, carrying 101 people, returned to the airport safely just 22 minutes later.
>
> Hanmin added that police were still testing materials they had been carrying, thought to be explosives.
>
> The men were reported to be Uighurs, the local Muslim ethnic minority. There have been clashes between authorities and Uighurs resentful of government controls over their religion and culture.
>
> Dilxat Raxit, spokesman for the German-based World Uyghur Congress which campaigns for Uighurs' rights, said that it wasn't a hijacking attempt, rather an in-flight brawl over a seat dispute.
>
> "We warn China not to use this incident as another excuse for crackdown," he said in an emailed statement.
>
> Two more suspects are reportedly being treated in hospital after mutilating themselves.

If this happened in America, the pro-multiculturalism secular leftists would be complaining about excessive violence, criminal's rights and due process. Probably, the Chinese passengers would be sued for racial profiling, and the airline would be sued for not assisting the hijackers.

Note: I am non-white and half my family is Muslim. And my view is that we need to use

DISPROPORTIONAL VIOLENCE in order to deter terrorists. Period.

Happy Independence Day 2012!

July 4, 2012 | by Wintery Knight | Link | Original Link

The Stars and Stripes

The Declaration of Independence

Here's the complete text of the Declaration of Independence here.

The best book to read about the Revolutionary War is David McCullough's "1776", which I highly recommend. The audio book version is awesome.

George Washington and the American Revolution

Washington Crossing the Delaware

To really understand the founding of the United States, you should read about the story of Washington crossing the Delaware. At this point in the Revolutionary War, the British commanders had achieved a stunning series of victories against the Americans. They had even sent word home to the King that the war was over, and that the Americans would be forced to surrender. But Washington did not give up. He attacked the British forces and took them by surprise – and he won the Battle of Trenton! That was the turning point of the war. There almost *never was* a United States of America – that's how close the revolution came to failing.

Ronald Reagan vision of America

Ronald Reagan

Here is a portion of Ronald Reagan's farewell speech:

Excerpt:

> I've spoken of the shining city all my political life, but I don't know if I ever quite communicated what I saw when I said it. But in my mind it was a tall proud city built on rocks stronger than oceans, wind-swept, God-blessed, and teeming with people of all kinds living in harmony and peace, a city with free ports that hummed with commerce and creativity, and if there had to be city walls, the walls had doors and the doors were open to anyone with the will and the heart to get here. That's how I saw it, and see it still.
>
> And how stand the city on this winter night? More prosperous, more secure, and happier than it was eight years ago. But more than that; after two hundred years, two centuries, she still stands strong and true on the granite ridge, and her glow has held steady no matter what storm. And she's still a beacon, still a magnet for all who must have freedom, for all the pilgrims from all the lost places who are hurtling through the darkness, toward home.

This is no ordinary nation.

Songs of America

Whenever I drive on long trips, I always practice singing "The Star-Spangled Banner" and "America the Beautiful".

Even if you are not an American, you can be an honorary American, just for today, if you sing the songs below. God knows that there are other people in the world that love freedom and look to the United States as the model.

If we fall now, then you other freedom-loving people abroad must be ready to pick up the torch!

United States Air Force

The Star Spangled Banner

Lyrics:

"Oh, say can you see by the dawn's early light
What so proudly we hailed at the twilight's last gleaming?
Whose broad stripes and bright stars thru the perilous fight,
O'er the ramparts we watched were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there.
Oh, say does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

On the shore, dimly seen through the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected now shines in the stream:
'Tis the star-spangled banner! Oh long may it wave
O'er the land of the free and the home of the brave!

And where is that band who so vauntingly swore
That the havoc of war and the battle's confusion,
A home and a country should leave us no more!
Their blood has washed out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight, or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave!

Oh! thus be it ever, when freemen shall stand
Between their loved home and the war's desolation!
Blest with victory and peace, may the heav'n rescued land
Praise the Power that hath made and preserved us a nation.
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust."
And the star-spangled banner in triumph shall wave

O’er the land of the free and the home of the brave!”

America the Beautiful

Lyrics:

“O beautiful for spacious skies,
For amber waves of grain,
For purple mountain majesties
Above the fruited plain!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for pilgrim feet
Whose stern impassioned stress
A thoroughfare of freedom beat
Across the wilderness!
America! America!
God mend thine every flaw,
Confirm thy soul in self-control,
Thy liberty in law!

O beautiful for heroes proved
In liberating strife.
Who more than self their country loved
And mercy more than life!
America! America!
May God thy gold refine
Till all success be nobleness
And every gain divine!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for halcyon skies,
For amber waves of grain,
For purple mountain majesties
Above the enameled plain!
America! America!
God shed his grace on thee

Till souls wax fair as earth and air
And music-hearted sea!

O beautiful for pilgrims feet,
Whose stem impassioned stress
A thoroughfare for freedom beat
Across the wilderness!
America! America!
God shed his grace on thee
Till paths be wrought through
wilds of thought
By pilgrim foot and knee!

O beautiful for glory-tale
Of liberating strife
When once and twice,
for man's avail
Men lavished precious life!
America! America!
God shed his grace on thee
Till selfish gain no longer stain
The banner of the free!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
Till nobler men keep once again
Thy whiter jubilee!"

Here is my favorite version of America the Beautiful, sung by Ray Charles. This is the same version you hear on the Mark Levin show on Friday. Perfection.

Remember to be grateful for the Founding Fathers, and other patriots, who risked everything for liberty in the Revolutionary war. Be grateful to those men and women still fighting abroad to keep those freedoms safe from evil. And most of all, be grateful to God that America is still the beacon of liberty.

Happy Independence Day!

Dinesh D’Souza: What’s so great about America?

July 4, 2012 | by Wintery Knight | Link | Original Link

Dinesh D’Souza

Here is the essay, which provides an immigrant’s perspective on America (Dinesh is the son of East Indian immigrants).

Excerpt:

> Is America worthy of a reflective patriotism that doesn’t mindlessly assert, “My country, right or wrong,” but rather examines the criticisms of America and finds them wanting? As an immigrant who has chosen to become an American citizen, I believe that it is. Having studied the criticisms of America with care, my conclusion is that the critics have a narrow and distorted understanding of America. They exaggerate American faults, and they ignore what is good and even great about America.
>
> The immigrant is in a good position to evaluate American society because he is able to apply a comparative perspective. Having grown up in a different society-in my case, Mumbai, India-I am able to identify aspects of America that are invisible to people who have always lived here. As a “person of color,” I am competent to address such questions as what it is like to be a nonwhite person in America, what this country owes its minority citizens, and whether immigrants can expect to be granted full membership in this society. While I take seriously the issues raised by the critics of America, I have also developed an understanding of what makes America great, and I have seen the greatness of America reflected in my life. Unlike many of America’s homegrown dissidents, I am also acutely conscious of the daily blessings that I enjoy in America.
>
> Here, then, is my list of what makes America great.

He focuses on the following areas:

- America’s Good Life
- Equality
- The Pursuit of Happiness
- The Ethics of Work
- Religious Liberty
- Ideals and Interests
- America’s Virtue

Read the whole thing. It’s long it’s similar to his book of the same name, but up to date.

Keith Hennessey explains one strategy for undoing Obamacare

July 5, 2012 | by Wintery Knight | Link | Original Link

In the Wall Street Journal.

Excerpt:

> Now that the Supreme Court has ruled ObamaCare's individual mandate constitutional, the direction of American health policy is in the hands of voters. So how do we get from here to "repeal and replace"?
>
> Step one is electing Mitt Romney as president, along with Republican House and Senate majorities. Without a Republican sweep, the law will remain in place.
>
> But a President Romney does not need 60 Republican senators to repeal core elements of ObamaCare. Democrats lost their 60th senate vote in early 2010 after Scott Brown took Edward Kennedy's seat. To bypass a Senate GOP filibuster and enact portions of ObamaCare, they used a special legislative procedure called reconciliation.
>
> Reconciliation allows a bill to pass the Senate in a limited time period, with limited amendments, and with only 51 votes; filibusters are not permitted. In 2010, Democrats split their health-policy changes into two bills, one of which they enacted through this fast-track process. In 2013, a Republican majority could use the same reconciliation process to repeal those changes.
>
> The reconciliation process, however, applies only to legislative changes to taxes, spending and debt, or the change must be a "necessary term or condition" of another provision that affects taxes or spending.
>
> Crucial parts of ObamaCare meet this test. Thus, if a President Romney has cohesive and coordinated majorities in the House and Senate, a reconciliation bill could repeal the Affordable Care Act's Medicaid expansion, insurance premium and drug subsidies, tax increases (all 21 or them), Medicare and Medicaid spending cuts, its long-term care insurance program known as the Class Act, and its Independent Payment Advisory Board, a 15-member central committee with vast powers to control health-care and health markets.
>
> Chief Justice John Roberts ruled that the financial penalty enforcing the individual mandate is within Congress's constitutional power to "lay and collect Taxes," and that the mandate and penalty are inextricably linked. This should suffice to enable repeal, through reconciliation, of both the individual and employer mandates, and their respective penalty taxes.
>
> The state exchanges and insurance rules—"guaranteed issue," which forces an insurer to sell a policy to someone who is already sick, and "community rating," which severely limits the insurer's right to charge that person a higher

> premium—are procedurally more difficult. Yet both are linked to the individual mandate, which increases taxes. Whether they can be repealed in a reconciliation bill will ultimately be decided by the Senate Parliamentarian.
>
> Once the individual mandate is repealed, these popular insurance changes cannot stand by themselves. Without the mandate, people have every incentive to save on premiums and not buy insurance until they fall ill. This will send premiums through the roof for healthy people and, if the government clamps down on increased premiums, destroy private insurance companies. Those Republicans who say they favor legislated guaranteed-issue and community-rating requirements but oppose the mandate will be forced to acknowledge that all three must go.

So, for those who are concerned about repealing Obamacare, this is the way forward. We have a tough battle to get it it done, but it is possible.

Michael Licona on ancient biography and harmonizing Bible contradictions

July 5, 2012 | by Wintery Knight | Link | Original Link

Brian Auten posted the latest lecture by Dr. Michael Licona at Apologetics 315. Brian's site has the MP3 file (48 minutes, 44.5 Mb). I can make a smaller version for anyone who wants it.

Here is the video and my point-form summary.

The topic:

- Contradictions do not affect the minimum facts case for the resurrection, although they are troubling
- Most people respond to alleged contradictions by trying to harmonize them
- Most verses that appear contradictory can be harmonized successfully
- Some verses cannot be harmonized successfully without really damaging the texts
- Christians should not gloss over these few real contradictions nor pretend that they don't exist
- How should we respond to the verses that cannot easily be harmonized?

Genre considerations:

- The genre of the gospels is "ancient biography"
- Ancient biography is not the same genre as modern biography

Insignificant differences

1. Contradictions vs. Differences:

- In ancient biography, if a source mentions one person's name, it does not mean that other people were not present
- Example: one woman versus two women at the tomb, an account may only mention one woman when there are two
- That is a difference, not a contradiction

2. Time compression:

- in ancient biography, writers are allowed to leave out events in order to compress time
- Some gospels omit details (guy version) and other gospels give more details (girl version)
- For example, the cursing of the fig tree in Mark and Matthew

3. Narrative flow:

- the ancient biographer’s style was to link together events into a narrative, even if they are slightly out of order
- This means that the ordering matters less to ancient biographers than forming a coherent narrative
- For example, the prediction by Jesus that Peter would deny him

Significant differences:

1. Biography allows for portrait painting

- When people paint portraits, they sometimes use illustrations or imagery to convey the person’s character
- For example, Shakespeare adds things to his history of Julius Caesar to make it more dramatic
- For example, the genealogies in Matthew, the portrait of Jesus in the garden in John

2. Even if there are contradictions in an account it doesn’t mean that the basic facts are undermined

- For example, even if we don’t know for sure if one thief or two thieves cursed Jesus, no one doubts that he was crucified
- The basic details of the story are not affected by apparent contradictions

Then there is a period of Questions and Answers.

How to prevent your children from losing their faith in college

July 5, 2012 | by Wintery Knight | Link | Original Link

Here's an interview with Blake Anderson of Ratio Christi.

Excerpt:

> **(KW): What are some of the specific challenges to Christianity?**
> **(BA):** When someone with a Ph.D. behind their name suddenly confronts a student with supposed evidence that the New Testament books were forgeries and dismisses the historicity of the Christian narrative, if that student has not been well grounded in the evidence for the historical accuracy of the accounts of Jesus' life the odds are heavily in favor of that student dismissing their parents' and pastor's faith as outdated. In philosophy class when the professor appears to eloquently demonstrate how Immanuel Kant showed two hundred years ago how we can't really know anything unless it is of the physical world, what chance does a young adult have if all they have for equipping is some Sunday School Bible stories? And when the most articulate current defenders of neo-Darwinian evolution essentially mock anybody that doesn't agree with them it will take much more than a good feeling in your heart to keep you from being demoralized and eventually giving up on a supernatural Creator.
>
> The frustrating thing in all of this is that there are good answers to these assertions. The problem isn't that there aren't answers on the same academic level as those that are challenging Christianity; there are. The problem is that so few Christians are aware of where to go to get answers.

And another:

> **(KW): What can we do to better prepare Christian students for these types of confrontations?**
> **(BA):** This may sound harsh, but first, get our heads out of the sand and realize that our methods for the last thirty years have resulted in five to eight out of every ten solid Christian teens abandoning their faith in some way. It's not pretty. It's truly a massacre, and until we face into that hard reality our teens will be the unfortunate fodder. This is not a game and no one will be benefited by pretending it isn't happening.
>
> Second, encourage your children to express their doubts, hard questions, and objections. Don't suppress these and run from them. You won't know all the answers, so be prepared to dig in yourself and spend serious time in learning. Your faith will be shaken, but if you truly trust in Christ you won't use avoidance you will engage. There is nothing to fear. God isn't afraid of your children's questions so you should not be either.

> Third, remember that teens are influenced by their parents' beliefs far more than is thought. You and other adults have massive influence in their lives. They need older mature mentors who can show them how to integrate their faith and their interests in life.
>
> Fourth, teach critical thinking skills and logic to your junior high and high schoolers. In this extremely emotive culture, students need to know how to think rather than just what to think. If young people are taught how to think and process information and critically evaluate ideas that they are presented with, they will be able to stand head and shoulders above their peers (and professors for that matter). Then ground them in why Christianity is true and matches objective reality. It's not enough to know the basic tenants of Christianity. They must know how to defend those beliefs as objectively true in the face of attack. They need to be exposed to anti-Christian ideas in a controlled environment prior to being sent out on their own. Inoculate your children by allowing them to explain and defend their faith against opposing ideas, instead of hiding them from false philosophies until they go off to college.

Read the rest! There are two things that parents need to do. They need to connect Christian teachings and beliefs with objective evidence from hard data, such as from science and history. And they need to provide their children with experiences to acquaint them with the reality of the moral law – specifically, the importance of having moral boundaries in order to avoid hurting yourself and others.

CBO: 20 million Americans could lose employer-provided health coverage under Obamacare

July 6, 2012 | by Wintery Knight | Link | Original Link

From The Hill:

> As many as 20 million Americans could lose their employer-provided coverage because of President Obama's healthcare reform law, the nonpartisan Congressional Budget Office said in a new **report** Thursday.
>
> The figure represents the worst-case scenario, CBO says, and the law could just as well increase the number of people with employer-based coverage by 3 million in 2019.
>
> The best estimate, subject to a "tremendous amount of uncertainty," is that about 3 million to 5 million fewer people will obtain coverage through their employer each year from 2019 through 2022.
>
> The new report adds more detail to this week's **update** of the law's coverage provisions, which CBO released Tuesday. Compared to a year ago, the law is now anticipated to cover 2 million fewer people but cost $50 billion less over 10 years, after factoring penalties paid by individuals and businesses that don't get or provide healthcare coverage.
>
> Republicans immediately pounced after the new numbers came out because they appear to violate Obama's pledge that people who like their health plans will be able to keep them. Last year, CBO's best estimate was that only 1 million people would lose employer-sponsored coverage.
>
> "President Obama's string of empty promises is quickly becoming a disappointing trail of broken promises," House Budget Committee Chairman Paul Ryan (R-Wis.) said in a statement. "He promised Americans that his overhaul of the health care sector would not jeopardize the health coverage of those who liked what they had. As nonpartisan analysts made clear today, millions of Americans will soon learn the hard way that Washington's overreach into their health care decisions will result in sharp disruptions to their coverage and their care."

I think this is important because conservatives are constantly being portrayed as "mean" in the media because we don't embrace big government health care solutions. Everyone agrees on the problems, and everyone wants to help. The difference is that we conservatives think that health care is better when it is run profitably and is responsive to consumers and offers choice, low prices and high quality – like Amazon. We want privatized, market-driven health care with vouchers given to each citizen to purchase what they need, and to encourage them to save the rest for their old age while making healthier choices now.

The alternative is Department of Motor Vehicles health care – long lines, huge budget

overruns, one-size-fits-all, lousy service and nowhere else to go for better better service. Why think that government is better at anything than the private sector? The private sector does everything better and cheaper and with better quality. So what if people get rich providing goods and services? As long as the customers are happy, and the children of the customers don't get stuck paying for huge trillion dollar cost overruns.

Here are a few articles that I have been using lately to inform people about the problems with Obamacare:

UN finalizes plan to allow future confiscation of legally-owned guns

July 6, 2012 | by Wintery Knight | Link | Original Link

From CNS News:

> Amid energetic lobbying from both sides, the Obama administration is taking part in month-long negotiations at United Nations headquarters aimed at finalizing a conventional arms trade treaty, which supporters say will save millions of lives but opponents fear threatens to restrict Second Amendment rights at home and U.S. arms sales policies abroad.
>
> […]In a letter to Obama and Secretary of State Hillary Clinton on the eve of the conference, 130 Republican lawmakers outlined their concerns that the treaty being negotiated could negatively affect U.S. security, foreign policy and economic interests – as well as Americans' constitutional rights.
>
> "The ATT must not accept that free democracies and totalitarian regimes have the same right to conduct arms transfers: this is a dangerous piece of moral equivalence," the letter stated.
>
> "Moreover, the ATT must not impose criteria for determining the permissibility of arms transfers that are vague, easily politicized, and readily manipulated," it continued, referring in particular to U.S. arms sales to Taiwan and Israel.
>
> The lawmakers warned that they would oppose the appropriation or authorization of any taxpayer money to implement a "flawed" treaty.
>
> The Bush administration in 2006 cast the lone negative vote when 153 nations passed a U.N. General Assembly resolution that began the treaty-drafting process, which is now in its final phase in New York. President Obama reversed that position in 2009, backing the initiative but making its support conditional on consensus decision-making.
>
> […]ATT proponents and the U.N. say the initiative will not affect domestic gun ownership, but Second Amendment advocacy groups are adamantly opposed to the treaty, which Gun Owners of America calls "a backdoor attempt by the Obama administration to impose radical gun control on America citizens."
>
> Addressing the Conservative Political Action Conference last February, National Rifle Association vice-president Wayne LaPierre accused Obama of working behind the scenes with the U.N. on a "treaty that could effectively ban or severely restrict civilian ownership of firearms worldwide."
>
> "I've been around long enough to know that the U.N. has little regard for our Constitution and none at all for the Second Amendment," LaPierre said. "But I never thought I'd see the day when an American White House would tolerate a proposal that would literally gut one of our most fundamental freedoms in this

> country."
>
> Last March Sen. Jerry Moran (R-Kan.) introduced legislation prohibiting any funds for negotiating an ATT that would restrict U.S. citizens' Second Amendment rights. The bill has 19 co-sponsors, all Republicans.

I think when deciding whether to believe the nice-sounding words of the Obama administration, we should look at their record on gun control and their record of keeping their word. They are gun control radicals, and what they claim will happen to us before a bill is passed often isn't any great predictor about what follows next. Remember "you can keep your current health insurance"? Not so much.

The apologetics of Jesus

July 6, 2012 | by Wintery Knight | Link | Original Link

From Eric Chabot of Ratio Christi. (H/T The Poached Egg via J Warner Wallace)

He lists eight ways that Jesus makes his case.

Here's one of the ways:

> **2. Jesus Appealed to Evidence**
>
> Jesus knew He could not show up on the scene and not offer any evidence for His Messiahship. In his book On Jesus, Douglas Groothuis notes that Jesus appealed to evidence to confirm His claims. John the Baptist, who was languishing in prison after challenging Herod, sent messengers to ask Jesus the question: "Are you the one who was to come, or should we expect someone else?" (Matt. 11:3). This may seem an odd question from a man the Gospels present as the prophetic forerunner of Jesus and as the one who had proclaimed Jesus to be the Messiah. Jesus, however, did not rebuke John's question. He did not say, "You must have faith; suppress your doubts." Instead, Jesus recounted the distinctive features of His ministry:
>
> "Go back and report to John what you hear and see: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised, and the good news is preached to the poor. Blessed is the man who does not fall away on account of me." (Matt. 11:4-6; see also Luke 7:22).
>
> Even in the Messiah Apocalypse, which is dated between 100 and 80 B.C.E mentions a similar theme as seen in Matt.11: 4-6: "He [God] frees the captives, makes the blind see, and makes the bent over stand straight…for he will heal the sick, revive the dead, and give good news to the humble and the poor he will satisfy, the abandoned he will lead, and the hungry he will make rich."
>
> Jesus' works of healing and teaching are meant to serve as positive evidence of His messianic identity, because they fulfill the messianic predictions of the Hebrew Scriptures. What Jesus claimed is this:
>
> 1. If one does certain kinds of actions (the acts cited above), then one is the Messiah.
> 2. I am doing those kinds of actions.
> 3. Therefore, I am the Messiah.

And:

> **5. The Miracles of Jesus**
>
> In the Bible, miracles have a distinctive purpose: they are used for three reasons:
> 1. To glorify the nature of God (John 2:11; 11:40)
> 2. To accredit certain persons as the spokesmen for God (Acts 2:22; Heb. 2:3–4)

> 3. To provide evidence for belief in God (John 6:2, 14; 20:30–31). (3)
>
> Nicodemus, a member of the Jewish ruling council, the Sanhedrin, told Jesus, "'Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him' " (Jn. 3:1–2). In Acts, Peter told the crowd that Jesus had been "accredited by God to you by miracles, wonders and signs, which God did among you through him" (Acts 2:22).
>
> In Matthew 12:38-39, Jesus says, "A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of Jonah the prophet." In this Scripture, God confirmed the Messianic claim when Jesus said the sign that would confirm his Messiahship was to be the resurrection.
>
> It is important to note that not all witnesses to a miracle believe. Jesus did not do His miracles for entertainment. They were done to evoke a response. So perhaps Paul Moser is right on target in what he calls "kardiatheology" – a theology that is aimed at one's motivational heart (including one's will) rather than just at one's mind or one's emotions. In other words, God is very interested in moral transformation.
>
> We see Jesus' frustration when His miracles did not bring the correct response from his audience. "Even after Jesus had done all these miraculous signs in their presence, they still would not believe in him" (John 12:37). Jesus himself said of some, "They will not be convinced even if someone rises from the dead" (Luke 16:31). One result, though not the purpose, of miracles is condemnation of the unbeliever (cf. John 12:31, 37). (4)

I am forever pointing this out to people. Jesus didn't get people to follow him because he was nice. And he didn't just talk to people who agreed with him. He even promised "a wicked generation" his resurrection – which he called "the sign of Jonah". This is the way we should be – using whatever evidence we can dig up from science, history, law, and even the social sciences (when arguing moral issues).

Read the rest here. Surprise! Jesus loves to convince people, and not just by quoting the Bible to people who already accept the Bible, either.

Friday night movie: Sands of Iwo Jima (1949)

July 6, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.5/10]

IMDB median rating: [8/10]

Description:

> Marine sergeant John Stryker seems a martinet and a bully as he trains young Marines for combat in the Pacific war. In the end, as survival in the bloody battle of Iwo Jima depends on the lessons Stryker has drilled into them, his troops discover why he was so hard on them. Nominated for 4 Oscars, won 1 Oscar.

Happy Friday!

Which side of the abortion debate is uncomfortable with evidence?

July 8, 2012 | by Wintery Knight | Link | Original Link

Here's a short, sweet post by Eric Metaxas sent to me by Mary.

Excerpt:

> It's hard not to blame the influence of technology for the seemingly inexorable spread of the culture of death. Accurate and safe prenatal testing has led to the destruction of an estimated 90 percent of unborn children diagnosed with Down syndrome. Sonograms reveal that the sex of yet-to-be-born children has led to a "small-h" holocaust against girls in places such as China and India, where boys are often preferred.
>
> But technology can also be a huge advantage in the fight to recognize and protect the sanctity of human life—*every* human life. For example, pro-lifers have worked diligently to place sonogram machines into pregnancy care clinics, and the presence of these high-tech wonders—which clearly show the humanity of the fetus—has no doubt contributed mightily to a substantial drop in the abortion rate, as well as a marked *increase* in the percentage of Americans who consider themselves to be pro-life.
>
> It seems that our technological prowess doesn't so much corrupt our hearts as reveal what's in them.
>
> You can see this principle in action in a recent article in *Slate* magazine. The writer, Allison Benedikt, recounts "the latest in baby-making fads," such as midwives and birth photographers. But what really gets her attention: "Pregnant woman are Photoshopping sonograms onto their naked stomach glamour-shots."
>
> […]For Benedikt, such uses of technology are troubling—even "bad for women." She writes, "… the more we treat fetuses like people—including them in our family photo shoots, tagging them on our Facebook walls, giving them their own Twitter accounts—the harder it will be to deny that they are people when the next, say, personhood amendment comes up, with legislators and activists arguing that 'the unborn child' inside a pregnant woman's womb should have the same rights as the living among us."
>
> **In other words, don't believe what your lying eyes tell you about fetuses, because if we start viewing them as people, those mean ol' anti-choicers might start demanding that we treat them that way.**
>
> This approach to the unborn—"nothing to see here, folks, just move along"—says so much about the pro-choice worldview. But it gets worse. Writing about the recent congressional debate over sex-selection abortion, instead of bemoaning the elimination of millions of future women, Benedikt urges pro-choicers to

> embrace sex-selection abortion.
>
> She writes: “No matter how many ultrasound pics get posted to Facebook, these are fetuses with female genitals or male genitals—not little girls and little boys. If pro-choicers object to aborting because of the sex of the fetus, aren’t we then saying that abortion is ‘murdering’ girls? . . . That is not the case to make if your goal is to protect abortion rights. Gulp for a second if you must, then get over it.” Wow!

What does this tell us about the pro-abortion crowd? Is the pro-abortion view reasonable? Does it fit with what we know about the unborn from science? Which side cares about the truth in this debate?

Should Christians normally hear the voice of God in their daily lives?

July 8, 2012 | by Wintery Knight | Link | Original Link

There are two views on the topic of decision making and the will of God. The view you learn in the church is called "the traditional view". I call this view the mystical/postmodern view. The more practical view is called "the wisdom view". I call this view the battlefield/military view. I am a proponent of the wisdom view.

Let's learn about the two different views:

> [The traditional view is] that God has a plan for our lives and that we receive guidance through methods such as "open and closed doors", "feeling led" and "the still, small, voice". Once the view has been well explained, through the foil of a fictional seminar, the book continues to critique this view, explaining how it is based on a poor use and understanding of scriptures, and how some of the reasons given in support of the view do not apply.
>
> [The wisdom view] holds that God does not have an "individual will" for our lives, but rather that all of God's will can be summed up within two categories, God's sovereign will and God's moral will. Basically God's sovereign will is all the things that god decrees will happen. It is hidden (mostly) from us, and does not play an active part in our decision, although some of it is revealed in the bible. God's moral will is the part that we must concern ourselves with in making decisions. It is fully revealed in the bible and our decisions must be made within it. We may use wisdom in applying god's moral will to our lives, or we may be in an area not covered by god's moral will. We must finally submit in advance to God's sovereign will, being prepared for him to sovereignty intervene and redirect us through whatever means he wills (see James).

Here's a bit more from someone else:

> Regarding the view that God has a personal will for us individually that we have to discern and find, J.I. Packer says, "The first thing to say is that the idea of guidance is actually a novelty among orthodox evangelicals. It does not go back farther than the last century. Second, it has led people to so much foolish action on the one hand, and so much foolish inaction on the other, as well as puzzlement and heartbreak when the 'hotline' to God seems to go silent, that it has to be discredited. Third, it must be said that Scripture gives us no more warrant constantly to expect personal 'hotline,' 'voice-from-the-control-tower' guidance than to expect new authoritative revelations to come our way for the guidance of the whole church." (Hot Tub Religion, page 118).
>
> As to the point of the question, how do I make decisions, I attempt to make decisions in light of three factors: God's moral will, wisdom, and my personal

> desires. If something is opposed to God's moral will, then I should obviously flee from it. If it's not opposed, then I consider the wisdom of the choices. For example, would it be wise for me to marry a woman who loves Jesus, though we have nothing else in common? Probably not. If the options pass the criteria of wisdom, then I'm free to choose how I wish. If I'm offered two jobs, and both are honoring to God, and both would be wise to take, then I'm free to choose the job I would like more. I don't need to put out a fleece or await some other confirmation from God. If it's moral and wise, then the only question as to whether or not it will honor Him is my attitude.
>
> Some examples of this model used in the Bible (in theological circles referred to as the Wisdom Model) are in Paul's planning of a mission to Rome in Romans 1:9-15, 15:22-24, the Jerusalem Council (Acts 15:1-29), and Paul's instructions for legal disputes (1 Cor 6:3-6).

The best book on this topic is Garry Friesen's "Decision Making and the Will of God". In it, you'll find a full assessment about what the Bible teaches on this topic.

When I am trying to decide what will be effective, I look at Christian scholars, at their papers, books, and public debates. That's effectiveness because it is addressed to a non-Christian audience in public with the force of reason and evidence. It is persuasion and it is addressed to rational minds. I want to change the minds of people who have a large influence on society on the whole. I don't think that offering Christianity as life-enhancement or self-help is really "having an influence". I think that offering Christianity as truth, with support, is "having an influence".

So let me be clear about what I believe:

- I don't think that God normally talks to people directly
- I don't believe that life is an Easter egg hunt, filled with clues accessible only to emotion and intuition
- I don't believe that God expects people to discover a specific will for their lives using non-rational means
- I think that people make up their own life plan that is consistent with the Bible
- The goal of the life plan is to be effective, and there are no other considerations
- I think that there are many good things a person can do, but that some are more effective than others
- I think that with respect to the goal of serving God effectively, *my happiness is expendable*
- I don't think that the purpose of doing something for the Lord is to feel good about ourselves
- I don't think that people should choose ineffective things to do just because they like them
- I don't think that people should choose ineffective things to do just because they are good at them
- I think people should do hard things that they don't like – as long as it's more

effective
- I don't think that any course of action is as effective as any other – some plans accomplish more
- I don't think that life is totally unpredictable and irrational and subjective
- I think that we can know what is or is not effective by studying and learning about the world
- I think life is like a battlefield that must be surveyed, understood and acted upon deliberately

I think that every person is the commanding officer of his or her own life, and each person must study everything they can, make a plan that is consistent with the Bible's moral prescriptions, execute the plan and achieve whatever they can achieve for the Lord. And the goal is not comfort or happy feelings, but real achievements. Life is more like a war than a vacation resort or a buffet or a shopping center. God's will for us is not have happy feelings, but that we freely choose to sacrifice ourselves out of obedience and service to him. In my case, that means studying hard things, making money, saving money, and giving money away to good scholars, sponsoring good events and being persuasive to non-Christians. I cried when I had to learn calculus, because it was so hard. But who cares?

I think that it is very important to realize that God is not impressed by our not being smart and not being effective. If we have the ability to be smart, then we should be smart, whether it makes us happy or not. If we have the ability to make money, then we should make money, whether it makes us happy or not. If we have the ability have a great influence, then we should have a great influence, whether it makes us happy or not. There will be plenty of time for happiness after we're dead. With respect to God's purposes in the world, my happiness is expendable. The thought about what "I want" doesn't enter into my mind.

Whenever someone questions my plans by saying that I am asserting my will over God's will, the first question I want to ask that person is this: "how do you know what God's will is?" and "what is your basis for thinking that my plan will not be effective?". I want to know if I have misunderstood something about the way the world is, or miscalculated in some way. I want someone to look at my calculations and show where they are going to produce a less optimal result for the Lord. That's the only concern I have – effectiveness.

This article by Greg Koukl may be helpful.

And I also found this summary of the Friesen book useful:

- Part 1
- Part 2
- Part 3
- Part 4
- Part 5
- Part 6

- Part 7
- Part 8
- Part 9

In nine parts.

Is the accelerating universe compatible with Hinduism?

July 8, 2012 | by Wintery Knight | Link | Original Link

First, a news story – and then we'll see how the accelerating universe relates to the existence of God.

Excerpt:

> Three astrophysicists who discovered that the universe's expansion is accelerating rather than decelerating, as had been expected, win the Nobel Prize in physics.
>
> Adam Riess was sure he'd spotted a blatant error in his results. It was 1997, and the young post-doc's measurements of distant, exploding stars implied that the universe was expanding at a faster and faster rate, instead of slowing down, as he had expected.
>
> It wasn't an error at all. Instead, what was at fault were some basic assumptions about the workings of the universe.
>
> On Tuesday, the Johns Hopkins University astrophysicist received the Nobel Prize in physics for the revolutionary discovery and its implications, along with team leader Brian Schmidt of Australian National University and astrophysicist Saul Perlmutter of UC Berkeley and Lawrence Berkeley National Laboratory, who had reached the same conclusion independently.
>
> At the time of their work, astrophysicists believed that the rate of expansion of the universe — set in motion by the Big Bang 13.7 billion years ago — would be slowing down as matter was pulled together by gravity. The goal at the time was to figure out how rapid the deceleration was.
>
> What the two teams found instead was that the expansion of the universe was accelerating — an observation that could best be explained by the existence of a mysterious "dark energy" that pushes matter farther and farther apart.
>
> Many scientists had thought that, just as the universe started with the Big Bang, it would end with a Big Crunch — with gravity pulling all the matter in the universe inward.

Does anyone remember that week that I wrote those posts about "Why I am not a… <insert some religion here>"? I explained why I was not all kinds of different religions and denominations, including Roman Catholicism, Calvinism, Hinduism, Judaism, Islam, etc. Everyone was offended and we fought about it. Ah, I remember it well.

Now let's apply science to the Hindu religion and see if they go together, especially this new discovery about the expansion of the universe.

Why I am not a Hindu

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally "oscillating" model of the universe.
3. The "oscillating" model requires that the universe exist eternally into the past.
4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The "oscillating" model requires that the expansion of the universe reverse into a collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the "bounce" mechanism.

So that's one reason why I am not a Hindu. And now we have more scientific confirmation that there is no cycle of universes coming into being and going out of being.

The absolute origin of the universe out of nothing is also incompatible with Buddhism and Mormonism and maybe other religions. They also require an eternally existing universe.

And modern cosmology disagrees with atheism, too

I think it's important for all of you to be familiar with the scientific evidence for the Big Bang. It will help you with your cosmological argument, and it will help you to refute many, many other religions that require eternal universes, including atheism.

I wrote about how the Big Bang theory falsifies atheism before.

Excerpt:

> According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* The Big Bang has been confirmed by experimental evidence such as redshift measurements, light element abundances and the cosmic microwave background radiation. This falsifies eternal models of the universe, which are *required* by atheist Scriptures.

The experimental evidence that confirms the Big Bang creation out of nothing falsifies many worldviews. Those who care about evidence will have to choose some other religion that is compatible with what we know from science today.

William Lane Craig comments on the Higgs Boson "God" particle

July 9, 2012 | by Wintery Knight | Link | Original Link

At the beginning of the podcast, Dr. Craig continues to discuss the topic from last week, which was the gay parenting studies, but then he goes on to discuss the Higgs-Boson particle story. The gay parenting discussion goes for 6 minutes, and then there is 17 minutes on the Higgs-Boson story.

Summary:

- What is the Higgs-Boson particle?
- What did the scientists find?
- What is the significance of the discovery?
- Does the discovery challenge the Standard Model?
- What forces of nature does it help to explain?
- Is this discovery relevant to the origin of the universe?
- What is the theological relevance of this discovery?
- Why is the Higgs-Boson called the "God particle"?

Dr. Lawrence Krauss is mentioned in the podcast, so here is a link to the William Lane Craig – Lawrence Krauss debate. One of my funnier summaries, because Lawrence Krauss is a nutcase.

I was happy to see that Dr. Craig was keeping up with all the news, and he had some good careful thoughts about both topics, which is what we expect from Dr. Craig.

Google starts worldwide campaign to legalize gay marriage, Target donates to gay activists

July 9, 2012 | by Wintery Knight | Link | Original Link

From The Weekly Standard.

Excerpt:

> Google yesterday reportedly launched a worldwide gay marriage campaign, officially beginning in Poland and Singapore.
>
> "Google is launching a new campaign called 'Legalize Love' with the intention of inspiring countries to legalize marriage for lesbian, gay, and bisexual people around the world," dot429.com reports. "The 'Legalize Love' campaign officially launches in Poland and Singapore on Saturday, July 7th. Google intends to eventually expand the initiative to every country where the company has an office, and will focus on places with homophobic cultures, where anti-gay laws exist."
>
> A Google spokesman, Mark Palmer-Edgecumbe, tells the website, "We want our employees who are gay or lesbian or transgender to have the same experience outside the office as they do in the office. It is obviously a very ambitious piece of work."
>
> […]As the *Huffington Post* notes, "Google has indicated its support of the issue before. In 2008, the company published a blog post opposing a California amendment that would ban same-sex marriage (the amendment passed)."

And here's Target:

> For June "Pride Month," dedicated to celebrate lesbian, gay, bisexual, and transgender persons, the Target Corp. announced it would sell "gay pride" t-shirts and donate 100 percent of the proceeds to the Family Equality Council (FEC), a group that, among other issues, supports same-sex marriage and works to remove restrictions against LGBT persons adopting children.
>
> In June, Target Corp. agreed to sell t-shirts in its stores nationwide for $12.99 to help the Family Equality Council raise $120,000 towards the defeat of the Minnesota Marriage Amendment in the Great Lakes State this November, according to Minnesota Public Radio.
>
> The t-shirts, 10 varieties, promoted pro-gay themes such as the rainbow coupled with the word "Pride" or "Harmony" and "Love is Love." A typical ad for one of the t-shirts read: "PRIDE Mens Heather Grey Rainbow Colorblock Crew Graphic T-Shirt. Target will Donate 100% of PRIDE Merchandise Sales to Family Equality Council. Free shipping when you spend $50."

People say that big business is conservative, but it really isn't. Small business is

conservative. Big Business is leftist. The more that we conservatives can block political contributions by big unions and big business, the better things will be for the institution of marriage and the rights of children to a stable relationship with a mother and a father.

Are radical feminists able to court and marry successfully?

July 9, 2012 | by Wintery Knight | Link | Original Link

Stuart Scheiderman wrote a post about something I have encountered even with complementarian Christian women.

He writes:

> In England a reporter named Sarah Bridge… has just written a book about bettering her dating skills. It is unabashedly entitled: First Catch Your Husband: Adventures On The Dating Front Line.
>
> To promote her book she has offered a synopsis in the form of a long article in the London Daily Mail.
>
> In Bridge's analysis, successful thirty-something women have developed habits and routines that are perfectly suited to singlehood. Independent and autonomous, they make their own decisions,conduct their lives as they see fit and do not answer to anyone.
>
> For a single person, these are good habits. When you are unattached they will serve you well.
>
> Unfortunately, a woman who is looking for a man will find these same habits to be an obstacle.
>
> […]Normally, a woman who has earned her independence will defend it fiercely. She will refuse to compromise her habits, her rituals or her routines. An alien life form, i.e., a man, will seem to be undermining her equanimity. The closer he gets, the more she connects, the more she will feel threatened.
>
> Even if she has not undergone any dating traumas, she will, under normal circumstances have a difficult time engaging a relationship, to say nothing of a marriage.
>
> When such a woman meets a man the impulse to defend her singlehood will overpower her wish to connect.
>
> As Bridge sees it, independent women defend themselves by being critical, overbearing, and, to use her word, "snippy."

Here's one of the women interviewed by the author about her dating technique:

> She was not connecting with them but was asserting her superiority at their expense. She was playing out a scenario that she could report to her girlfriends, thus providing them with endless entertainment. It's called solidarity with the sisterhood.
>
> Seeing that the sisterhood finds it uproarious women who share these anecdotes

> cannot understand why the men in question never call them again. Often they console themselves by saying that these men are easily intimidated by strong women.
>
> Beyond showing off their ability to provide an endless stream of criticism, these women insist on being in complete control. They must be in charge.
>
> X Factor judge Kelly Rowland explains that she chooses the restaurant, opens the door for herself and pays the bill. Of course, she is asserting her independence, but she is also acting as though he is not there and is not a man.
>
> Evidently, the man is will be thinking to himself: why does she need me for? If he has been rendered superfluous, a piece of furniture, then he is not likely to stay around very long.
>
> Bridge says that her generation learned these bad habits from their mothers. One must add that their mothers were simply mouthing the feminist party line.

It seems to me that the problem that modern feminists are having is that they are treating relationships as something that is all about their fulfillment and not putting a moment's thought into marriage as an institution with certain requirements. If marriage is the goal they are trying to reach, and they want to have a husband and children, then they need to think about how to reach that goal realistically.

Here's what they should be asking about husbands:

- what is the goal of having a husband?
- why should a man be interested in marriage and fatherhood at all?
- what are the responsibilities of a husband and father?
- what should men be able to do before they are ready for marriage?
- what does a husband need from his wife?
- what should a woman be able to do meet those needs?

And about children:

- what is the goal of having children?
- what do children need from their mother?
- what do children need from their father?
- what should a woman do to prepare to raise children?
- why are marriage and biological parents important to children?

And about marriage:

- what is the purpose of marriage?
- how should men and women form their characters to be ready for marriage?
- what worldview best grounds moral values like fidelity and self-sacrifice?
- what causes a man to remain faithful and committed to a woman into her old age?

I think if I had to pick one thing for a woman to focus on, it would be the need to take

seriously the leadership role of the man in the relationship. Men (if they are good men) all have the desire to achieve certain goals through some plan. They are looking for the right woman to help them. If a woman wants to get a good man to commit, then she has to show him that she is willing to learn about his plan for marriage and to do what he expects her to do to help him to achieve those goals – or better, to come up with effective ways to achieve those goals that he did not even think of. A smart man will expect a woman to demonstrate her ability to help him and her willingness to help him before he thinks about marriage. What is needed is not the ability to take orders, but the ability to innovate in order to solve problems.

Men know how to find out if a woman has prepared for marriage and parenting and we know how to find out if she wants to understand and care for a husband. What I see quite a lot these days from women is 1) a refusal to believe that men know anything of value, and 2) a refusal to be led by men in a courtship, and 3) dismissing men's emotional needs. I think a lot of this is caused 1) their mothers did not choose a man who would be there to teach them morality and religion when they were growing up, 2) lack of trust for men caused by past promiscuity, drug abuse and partying, 3) a prior commitment to feminism and career which causes them to be dismissive and disrespectful of men's needs, goals and plans. Many women today think that men are there primarily to serve their needs, and not to lead them.

For men, the best piece of advice I have is to remain chaste. It is a capital error to allow women like the ones described in Stuart's post to manipulate you with sex. Feminists use sex to get attention from men without having to listen to them, care about them, learn from them, or follow their lead. The best thing to do to detect a bad woman is to explain your plan to her and then ask her to help or to study something that will help or to solve problems or to take on obligations or anything that she doesn't want to do herself. It is amazing how easy it is to detect women who want a selfish "fairy tale wedding" marriage if you know what to ask them.

Ten reasons why the jobs situation is much worse than reported

July 9, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

There are 10 reasons listed.

Here's #2:

> **2. The jobless rate actually makes the labor market look better than it actually is. The rate only counts people who want a job but don't have one. But the labor force participation rate was 63.8% in June, just above near modern-era lows. (It was 66.2% in January 2008 and 67.3% in April 2000). Otherwise, unemployment would be around 11%.**

And #4:

> 4. Chronic unemployment. The average length of unemployment rose to 39.9 weeks in June, close to recent peak. It was 17.4 weeks at the January 2008 peak and 23.9 weeks in June 2009, when the recession officially ended. Long-term joblessness is particularly bad because skills erode or become obsolete, leading to permanent losses in income.

And #9:

> 9. Entrepreneurial activity fading. The number of startup firms has crashed from pre-recession highs, still near levels previously seen in the early 1980s, when the number of establishments was far lower. Establishments less than a year old, including those belonging to the same firm, **totaled 556,553 in 2010**, according to the latest Commerce Department data. That's down 26% from the peak of 747,278 in 2006. Meanwhile, the number of employees at startups has plunged, with a greater share of new firms with no employees — one-man shops. Very small startups are less likely to invest or to grow, a bad sign for future hiring.

But it's worse than that. The number of people going onto federal disability payments is outpacing the number of new jobs being created.

How states can resist Obamacare, and the benefits of doing so

July 10, 2012 | by Wintery Knight | Link | Original Link

From the American Spectator, a look at what states can do to block the implementation of Obamacare.

Excerpt:

> Although the voters can put an end to the madness on November 6, the states don't need to wait until Election Day to take aim at a point of vulnerability that remains in place despite the Court's latest caprice. They can refuse to implement the law's insurance exchanges.
>
> […]**The law calls for the states to set up these new bureaucracies, whose ostensible purpose will be to provide "marketplaces" in which people with no employer-based health insurance can shop for coverage at competitive rates. Now that the Court has upheld the individual mandate, these insurance exchanges constitute the key to the success or failure of the law. They are also its Achilles' heel.**
>
> **How's that? Well, as the Cato Institute's Michael Cannon succinctly puts it, "Without these bureaucracies, Obamacare cannot work." And, oddly enough, the law doesn't actually require states to set up these "marketplaces." Moreover, there is no rational incentive for them to do so. If a state sets up an exchange, it then must pay for it, which won't be cheap. Cannon writes, "States that opt to create an exchange can expect to pay anywhere from $10 million to $100 million per year to run it." This is a burden that the states, most of which are already in deep financial trouble, are not likely to embrace with enthusiasm.**
>
> The federal government can set up its own exchanges, in theory, but Obamacare stipulates that Washington would then be required to pick up the tab as well. And, as Cannon goes on to point out, "The Obama administration has admitted it doesn't have the money — and good luck getting any such funding through the GOP-controlled House." And it gets worse. If the federal government is forced to set up an exchange, it faces yet another huge problem. As Sally Pipes and Hal Scherz write, "The text of the law stipulates that only state-based exchanges — not federally run ones — may distribute credits and subsidies."
>
> Thus, if a state refuses to set up an exchange, the feds have no real ability to do so either. The states have an opportunity, therefore, to shoot a poison arrow directly into Obamacare's Achilles' heel.
>
> […]"Resisting the implementation of exchanges is good for hiring and investment. The law's employer mandate assesses penalties — up to $3,000 per

> employee — only to businesses who don’t satisfy federally-approved health insurance standards and whose employees receive ‘premium assistance’ through the exchanges.”
>
> In other words, a state that declines to set up an exchange will protect the businesses of that state from avoidable and job-killing penalties. This reality has apparently begun to sink in. There has been a noticeable decline in enthusiasm for exchanges among states that had begun work on them shortly after Obamacare passed.

The article notes that a bunch of governors and legislatures in conservative states have already taken steps to resist implementing Obamacare, including Louisiana governor Bobby Jindal, who is an Oxford-educated expert in health care policy.

Scottish court orders man to pay £39,500 to woman after failed cohabitation

July 10, 2012 | by Wintery Knight | Link | Original Link

From the Scotsman.

Excerpt:

> A LANDMARK Supreme Court ruling, in which a man has been ordered to pay his former partner compensation after they separated, could open the doors for thousands of claims from unmarried couples who split up, a family lawyer has claimed.
>
> In yesterday's judgment, the Supreme Court ruled that Angus Grant should pay Jessamine Gow £39,500 after the cohabiting pensioners' relationship ended.
>
> The right to compensation for unmarried couples became available under section 8 of the Family Law (Scotland) Act 2006, but had not been tested in the Supreme Court until yesterday.
>
> [The ruling] does create a precedent that could allow unmarried couples to seek financial compensation similar to that available to divorcing couples, but without the assumption of an equal division of assets.
>
> Last night, a family law expert warned that it could affect thousands of couples and lead to a rush for "cohabitation agreements" – a kind of pre-nuptial for the unmarried – from people planning to move in together.
>
> […]**Robert Wright, professor of economics at Strathclyde University, said: "It will make people rethink cohabitation, rethink marriage. It might lead to people waiting longer, so we could see less cohabitation, less marriage and less fertility."**

Are people responsible for the damage caused by their own free decisions? According to the court, they are not.

Dina sent me this UK Daily Mail article by Melanie Phillips, which comments on this story.

Excerpt:

> The relentless war against the family in Britain continues in the highest court of the land. Baroness Hale, the veteran 'lifestyle choice' radical who, as a member of the UK Supreme Court, is the country's top female judge, has called for cohabiting couples to be given more legal rights.
>
> […]For sure, cohabitation often results in hardship, very much more so indeed than marriage. Cohabitation breaks down far more frequently than marriage, and even more so after the birth of any children. Cohabitation is therefore one of the most significant factors behind Britain's catastrophic and galloping phenomenon of mass fatherlessness, the single most important cause of so much misery and

> harm for both children and adults, and the major cause in turn of unquantifiable damage to society.
>
> If people want to avoid the hardship they very understandably fear will result from the absence of legal protection under cohabitation, they can choose to get married. That's what marriage is *for*. To bestow this legal protection upon cohabitation is to turn the ratchet of family breakdown another notch. First you undermine marriage by removing the stigma of 'living together', illegitimacy and unmarried motherhood; then you turn the ratchet by hymning the sanctity of 'lifestyle choice' and the social acceptability of cohabitation as an alternative to marriage; then you turn it again by bestowing the benefits of marriage upon un-marriage, thus incentivising a socially destructive phenomenon which will create yet more misery and harm.
>
> Lady Hale's call is not for justice in family life but gross injustice. It is yet another boost to our rights-without-responsibilities, something-for-nothing, me-first culture which has already advanced the destruction of family life in Britain, created regional deserts of social and moral breakdown and made victims out of the most vulnerable.

My biggest concern about this is the message that it sends to men who are already turning away from the responsibilities of marriage. Men already have to contend with no-fault divorce, a massive repression, etc. which causes them to doubt the reasonableness of marriage at this time. This ruling will push them even further away from relationships with women, by making even cohabitation threatening financially. I don't think that the judge in this case realizes the incentives that are being created by this decision. When men see that relationships with women that go beyond just sex are becoming more costly and risky, they will stop doing that. Why take the risk of being cleaned out financially? My prediction is that this short-sighted ruling will push men and women further apart, so that sex without any structured relationship becomes the norm, and children have even less of a stable environment in which to grow up.

People are more inclined these to complain that men need to "man up" and get married, but it is important to consider what the incentives are for men. Are we doing a good job of educating men with practical skills, encouraging job creators with lower taxes and less regulation, and lowering the legal risks of marriage for men? Are we encouraging women to understand men and to respect them, which is the main thing that men are looking for in a marriage? Are we encouraging women to be chaste so that men are encouraged to perform at a higher level to earn a woman's commitment to him in marriage? If we are not giving men incentives to marry – or even to cohabitate – then we mustn't be surprised when men decide that other things are more rewarding than marriage.

Is the news media biased when reporting on gay scandals?

July 10, 2012 | by Wintery Knight | Link | Original Link

Dr. Michael Brown explains his view by comparing the reporting of the Ted Haggard scandal with the Larry Brinkin scandal.

Excerpt:

> According to published reports, when Larry Brinkin was arrested two weeks ago, the police found… [CENSORED BY WK]. Yet the media has barely reported this terribly disturbing incident.
>
> But, you ask, who was Larry Brinkin? He was "a central figure in the gay rights movement," a man who was so influential that, "The San Francisco board of supervisors actually gave a 'Larry Brinkin Week' in February 2010 upon his retirement." It was Brinkin who first used the term "domestic partnerships" in a legal dispute, marking a watershed moment in gay activist history, yet news of his alleged crimes against infants and children, not to mention his alleged White Supremacist leanings, has received very little media attention.
>
> Is there a double standard here? Imagine what the media would be doing if Brinkin had been a conservative Christian leader.
>
> When evangelical leader Ted Haggard fell, the media was quick to pounce, suggesting that this exposed the corrupt nature of evangelical Christianity as a whole. And media leaders have done this repeatedly whenever there has been a scandal connected to an evangelical (or Catholic) leader, and the news is blared from the headlines. But where, I ask you, is the outrage or the front page news when a gay leader commits atrocities such as those allegedly committed by Larry Brinkin? And why isn't the media claiming that Brinkin's transgressions expose the corrupt nature of gay activism as a whole?
>
> The failure of a Christian leader is considered endemic and representative; the failure of a gay leader is considered an aberrant exception. Why the unequal treatment?
>
> […]The answer is that Brinkin's arrest has received relatively little media attention because he was a gay activist leader, not a conservative Christian leader, and there is no hiding the mainstream media's pro-gay, anti-conservative Christian bias. And because Brinkin's arrest has not been widely reported, the general public has not been confronted afresh with the horrors of child pornography.
>
> […]Brinkin, for his part, was no smalltime player, with the San Francisco Examiner describing him as an "iconic San Francisco gay activist who brought the nation's first domestic partnership lawsuit in 1982." And he was, after all, a

> respected, long-term leader within the Human Rights Campaign, the world's largest gay activist organization. Why hasn't the HRC been tarred and feathered the way evangelicals (or Catholics) are after one of their leaders falls? Why the inconsistency?

I reported on the Larry Brinkin scandal in a previous post.

Sean McDowell reviews Sam Harris' new book "Free Will"

July 10, 2012 | by Wintery Knight | Link | Original Link

Jay Watts of LTI tweeted this book review by Sean McDowell.

Excerpt:

> After rightly emphasizing the importance of the question of free will, Harris concludes, "Free will *is* an illusion" (p. 5). According to Harris, we are not the conscious source of our actions and we could not have behaved differently in the past than we did. He says, "I, as the conscious witness of my experience, no more initiate events in my prefrontal cortex than I cause my heart to beat" (9). "In physical terms," says Harris, "we know that every human action can be reduced to a series of impersonal events" (27).
>
> Harris rightly points out that there are three main approaches to the problem of free will and determinism: *determinism, libertarianism,* and *compatibilism*. He then says, "Today, the only philosophically respectable way to endorse free will is to be a compatibilist" (16). But if determinism were true, as Harris asserts, why would *any* position be philosophically unrespectable? After all, people are determined to hold their beliefs—whether compatibilist, libertarian, or determinist—by forces outside of their control. Why would he bother to critique other positions if the people who hold them couldn't have believed differently? In fact, his critique is just the result of chemicals moving in his brain, so why do they matter? What makes his chemicals more respectable than others?
>
> Later in the book Harris says that giving up free will (and becoming more aware of the background causes of our feelings) allows people to have greater creative control over their lives. "Getting behind our conscious thoughts and feelings," says Harris, "can allow us to steer a more intelligent course through our lives" (p. 47). Do you see the contradiction? The idea of "steering" a more intelligent course through life, of course, has no meaning in a deterministic world. On Harris' view we can't steer anything! The belief that we can steer our lives is an illusion. All of our beliefs and behavior are *entirely* the result of forces outside our control. In one breath Harris says all our beliefs are determined, but then in another breath he speaks about steering the course of our lives. Which is it?
>
> […]He says that dispensing with the idea of free will allows us to focus on things that matter most—assessing risk, protecting the innocent, and deterring crime (p. 53). He seems to be implying that we *ought* to accept his deterministic views for the betterment of mankind. Yet again, if determinism is true then we can't change any of our beliefs—we can't *freely* follow his logic since our beliefs are already set. The very fact that he argues for his position undermines his stated belief in determinism.

Sean McDowell did a debate a while back in which he argued that morality was not rationally grounded on atheism because atheism denies free will, and free will is necessary for making moral choices. And here is the atheist Lawrence Krauss denying that free will exists. It's very hard to see how there could be any freedom of the will if humans are just matter in motion, which is the view of humans that fits most naturally with atheism.

Another atheist William Provine also says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Like Provine, Krauss also denied that objective morality existed at all in his debate with William Lane Craig. His view is that morality evolves in different times and places arbitrarily, and that whatever evolves in any group is right for them in their time and place. It's important to understand what the implications of atheism are for things like rationality and morality.

I always thought that the "freethought" name that atheists sometimes apply to themselves was ironic for that reason. Not only are they not free, but they have no non-physical minds to think with, either.

How to apologize effectively: responsibility, restitution, repentance

July 11, 2012 | by Wintery Knight | Link | Original Link

One of my friends recommended this book "Things I Wish I'd Known Before We Got Married" by Gary Chapman, so I got it and read it this weekend. The book re-capped one of his other books about the 5 languages of apologies or something.

Here's a re-cap of his five languages of apologies.

Here are the two that I want to emphasize:

Apology Language #3: Making Restitution

In the public arena, our emphasis upon restitution is based upon our sense of justice. The one who commits the crime should pay for the wrongdoing. In contrast, in the private sphere of family and other close relationships, our desire for restitution is almost always based upon our need for love. After being hurt deeply, we need the reassurance that the person who hurt us still loves us.

"How could they love me and do that?" is the question that lingers in our minds. The words "I'm sorry; I was wrong" may not be enough.

For some people, restitution is their primary apology language. For them the statement, "It is not right for me to have treated you that way," must be followed with "What can I do to show you that I still care about you?" Without this effort at restitution, this person will question the sincerity of the apology. They will continue to feel unloved even though you may have said, "I am sorry; I was wrong." They wait for the reassurance that you genuinely love them.

The question, then, is how do we make restitution in the most effective way? Since the heart of restitution is reassuring the spouse or family member that you genuinely love him or her, it is essential to express restitution in the love language of the other person.

[…]If restitution is the primary apology language of an individual, then this becomes the most important part of the apology. "I'm sorry; I was wrong" will never be taken as sincere if these words are not accompanied by a sincere effort at restitution. They wait for the assurance that you still genuinely love them. Without your effort to make amends, the apology will not have the desired results of forgiveness.

Apology Language #4: Genuinely Repenting

The word repentance means "to turn around" or "to change one's mind." In the context of an apology, it means that an individual realizes that his or her present behavior is destructive. The person regrets the pain he or she is causing the other person, and he chooses to change his behavior.

Without genuine repentance, the other languages of apology may fall on deaf ears. What people who've been hurt want to know is, "Do you intend to change, or will this happen again next week?"

How then do we speak the language of repentance?

> - **It begins with an expression of intent to change.** When we share our intention to change with the person we have offended, we are communicating to them what is going on inside of us. They get a glimpse of our heart—and this often is the language that convinces them we mean what we say.
> - **The second step down the road of repentance is developing a plan for implementing change.** Often apologies fail to be successful in restoring the relationship because there is no plan for making positive change.
> - **The third step down the road of repentance is implementing the plan.** Following through with the plan gives evidence to the offended party that your apology was sincere.

Most people do not expect perfection after an apology, but they do expect to see effort.

Thus, expressing your desire to change and coming up with a plan is an extremely important part of an apology to this person. Inviting the offended person to help you come up with a plan for change is perhaps the best way to effectively show repentance.

I think this is somewhat useful, but I wanted to add some of my own thoughts to make it more practical.

Here are some practical tips that I recommend to someone who has done something morally wrong and who wants to apologize.

To fix the problem you need more than talk

To me, the only thing that needs an apology is breaking a moral rule – you can't beat someone up for just making a mistake. Whenever someone breaks a moral rule with me, like disrespecting me or being selfish, then I pick out a book for them to read and ask them to read it and then write something about how what they learned in the book applies to what they did to me. I don't pick very long books! But I do this for a very important reason.

The very important reason is that I don't trust people who just agree with me. I don't trust people's words. If someone is really sorry about something, then I want them to read something that describes the moral rule that they broke, and explains what place the moral rule has in some plan for achieving some greater goal. Let me give an example.

Suppose that I am friends with a young lady who wants me to help her to get her atheist uncle, who has a degree in physics, to consider whether Christian theism might not be true. I accept her quest and begin to negotiate with Dr. Michael Strauss, a particle physicist who does research on the top quark at Fermilab, and also teaches physics at the University of Oklahoma – Norman. I contact Dr. Strauss, and contact Lawrence Krauss, the atheist physicist, and I set up a debate between them at the local university. I notify her of my plan, and she promises to bring her uncle to the debate.

The day of the debate comes and it goes off without a hitch – Strauss demolishes Krauss, and Krauss cries for his mommy. The audience laughs at Krauss and he runs away sobbing into the night, clutching his Darwin doll tightly. I beam with delight at a plan perfectly executed, and then look around for the young lady and her uncle, so that we can all go out for a late dinner with Dr. Strauss. But she and her uncle are nowhere to be found! I rush around the auditorium frantically, but to no avail. Finally, in desperation, I call her cell phone.

She answers. I say "where are you? where is your evil uncle Dawkins? The debate is over and we won!". She says "Oh, I totally forgot. The worship leader at the local mega church had a better idea anyway. She invited me over to her church with my uncle to try snake-handling instead." Me: "You did *what???!!!"* She (excited): "Yes, this is a lot more fun than a stuffy debate, and my uncle is about to play patty-cake with a harmless rattlesnake, and… uh oh". Me: "Oh no…" She: "Um, I'll call you back. I need to make a call *right now.*". Click.

Wow, that's pretty awful.

So here's what I would expect from her by way of apology.

1. Read something on science apologetics as a make-up assignment. Something like Edgar Andrews' "Who Made God?".
2. Listen to Dr. Michael Strauss' lecture on science apologetics, which he delivered at Stanford University.
3. Go back to the uncle and sit down with him and watch Dr. Michael Strauss' lecture on science apologetics from Stanford University, which is up on Youtube.
4. When the lecture is over, talk with the uncle about his remaining questions, and be available should he think of any more questions.

This would make up for all the work I put into the event because it fixes the problem, and it makes sure that it will never happen again.

The goals of this apology is not just to hear the words "I'm sorry". It's not even just about making me feel better. I think the real customer of a mistake like this is God, who is not well served by ineffective Christians. My goal is to prepare her for future evangelism, and for future nurturing of any children she might have. The only way to convince someone to take the right course of action the next time is to change their mind between the time they failed and the next time they try again. There is no way to change how a person behaves unless they convince themselves by reading about the issues, on their own time, through their own effort.

For more on how beliefs change, see this lecture by J.P. Moreland, entitled "Love Your God With All Your Mind".

Republicans introduce bill to block tax on pro-life religious institutions

July 11, 2012 | by Wintery Knight | Link | Original Link

First, let's look at this article from Life News, which discusses the tax that Obamacare imposes on pro-life religious institutions.

Excerpt:

> The new Obama mandate that requires religious groups to pay for birth control and drugs that may cause abortions for their employees could result in fines as much as $2,000 per employee or $100 each day if they refuse to comply.
>
> Recently, Republicans in Congress asked the Congressional Research Service to examine the new mandate and the consequences for employers that do not want to follow it because it would violate their consciences and CRS issued a document finding noncompliant employers could face federal fines of $100 per day per employee.
>
> "If a group health plan or health insurance issuer failed to provide contraceptive services pursuant to guidelines authorized by ACA, it seems possible … that a plan participant could be able to bring a claim for that benefit," the memo states.
>
> The report indicates the IRS is empowered to levy a tax penalty on noncompliant religious employers of $100 per day for each employee in their health plan.
>
> Commerce Committee Republicans, according to Politico, are not happy with the findings.
>
> "Implementing a federal mandate that violates the conscience of an individual or organization, regardless of their religious affiliation or organizational purpose, is in direct violation with the First Amendment," the committee said in a release announcing the report. "Imposing a fine on these individuals pours salt in the wound."
>
> They said, according to Politico, that a charity or hospital with 100 employees "chooses to exercise its religious rights instead of complying with the Obamacare mandate, it could be subject to a $3.65 million annual fine.

The Republicans have introduced a bill to block the tax on pro-lifers who object to being forced to dispense drugs that cause abortions.

Excerpt:

> "Sebelius's taxman is coming. Sebelius's taxman is coming."
>
> That was the rallying cry of Jim Sensenbrenner on Tuesday in the House of Representatives, where along with his chief co-sponsor Diane Black, he announced the Religious Freedom Tax Repeal Act, meant to be "a follow-on" to the recently concluded Fortnight for Freedom called for by the U.S. Catholic

> bishops, focusing on prayer and education about religious liberty.
>
> The Freedom Tax Repeal Act seeks to “shock people into how confiscatory the taxes imposed would be for those who choose not to violate their consciences are,” Representative Sensenbrenner tells me.
>
> “What has not been discussed” in most of the debate over the Department of Health and Human Services contraception, sterilization, and abortion-inducing drug mandate, Sensenbrenner says, “is the tax that is imposed upon those that fail to comply with that mandate, either through religious objections or moral grounds. Those taxes are severe; they are confiscatory.”
>
> “It is $100 per employee per day,” Sensenbrenner says, spelling out the taxing implications out. “So, a religious institution that, say, has a church and an elementary school beside it that has 50 employees total, which include the administrative and maintenance personnel, end up being taxed $36,500 per employee per year. Or the 50-employee institution would have to pay a tax of $1,825,000 per year, every year.

A lot of people who claim to be pro-life seem to think that Obamacare is a great idea, but one wonders whether they know anything about the law at all – or whether they are really as pro-life as they claim to be.

Can a Christian marry an atheist or a Jew or a Muslim or a Hindu?

July 11, 2012 | by Wintery Knight | Link | Original Link

I think that the best way to answer the question, "should I marry a non-Christian?", is to ask whether it makes any difference if your spouse is on board with your plans for your ministry and with your marriage. So let's take a look at a case where someone famous who chose a Christian wife, and we'll see how much that decision affected his ministry and his marriage.

I want to draw your attention to a talk on "Vision in Life" given by Dr. William Lane Craig. Dr. Craig is the ablest defender of the Christian faith operating today. He has done formal academic debates with all of the best known atheists on major university campuses in front of *thousands* of university students. This list of atheists and agnostics includes people like Christopher Hitchens and Victor Stenger. The Hitchens debate took place in an auditorium filled with 5000 students, and many thousands more were watching at churches all over the world. How did Dr. Craig get these opportunities to evangelize on secular university campuses?

Well, he owes a lot of his success to his amazing wife Jan, as we shall see in the summary of his talk on that topic.

The MP3 file is here. (32 minutes)

This talk was Dr. Craig's chapel address to Biola University students, and he is introduced by his son, John, a Biola University grad.

In the talk, it becomes clear that Bill's wife Jan plays an *enormous* role in his success. Indeed, you will see that if it were not for her, he never would have gotten *either* of his doctorates, or even his second Masters degree. Why was she so supportive of his plans? Because she had the same broad goal of evangelism through scholarship. Let's see how she encouraged him.

Here is a quotation that occurs about 11 minutes into the talk, as Bill describes the completion of his Bachelor's degree at Wheaton:

> And it was at Wheaton that my vision began to focus on presenting the gospel in the context of giving an intellectual defense of the faith, to appeal not only to the heart but also to the head, as well. And so I determined that I would go on to seminary for further training.
>
> But, my senior year, in chapel, we heard a speaker who challenged us, before going on to further education, to take a couple of years out, and to wring out the sponge, so to speak, that had been soaking up all that knowledge, and to work with university students while we were still about the same age.
>
> And so I joined the staff of Campus Crusade for Christ for 2 years, and was assigned to Northern Illinois University. And that was where I met my wife Jan.

> She was a graduate of the University of North Dakota where she had come to faith in Christ. And she had a similar vision for her life of evangelism and discipleship.
>
> And as we worked at NIU together, she with gals and I with the guys, leading students to Christ and discipling them to walk with the Lord, we fell in love. And we decided that we would be more effective if we joined forces and became a team.

It is at this point in the talk where Bill begins to explain just how Jan molded him into the lean, mean debating machine that travels the world striking terror into the hearts of atheists.

Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

In an article on his web site, he talks about how Jan encouraged him to do his first Ph.D:

> As graduation from Trinity neared, Jan and I were sitting one evening at the supper table in our little campus apartment, talking about what to do after graduation. Neither of us had any clear leading or inclination of what we should do next.
>
> So Jan said to me, "Well, if money were no object, what would you really like to do next?"
>
> I replied, "If money were no object, what I'd really like to do is go to England and do a doctorate under John Hick."
>
> "Who's he?" she asked.
>
> "Oh, he's this famous British philosopher who's written extensively on arguments for the existence of God," I explained. "If I could study with him, I could develop a cosmological argument for God's existence."

> But it hardly seemed a realistic idea.
>
> The next evening at supper Jan handed me a slip of paper with John Hick's address on it. "I went to the library today and found out that he's at the University of Birmingham in England," she said. "Why don't you write him a letter and ask him if you can do a doctoral thesis under him on the cosmological argument?"
>
> What a woman! So I did, and to our amazement and delight Professor Hick wrote back saying he'd be very pleased to supervise my doctoral work on that subject. So it was an open door!

And in the same article, he explains how Jan encouraged him to get his second Ph.D:

> As Jan and I neared the completion of my doctoral studies in Birmingham, our future path was again unclear to us. I had sent out a number of applications for teaching positions in philosophy at American universities but had received no bites. We didn't know what to do.
>
> I remember it like yesterday. We were sitting at the supper table in our little house outside Birmingham, and Jan suddenly said to me, "Well, if money were no object, what would you really *like* to do next?"
>
> I laughed because I remembered how the Lord had used her question to guide us in the past. I had no trouble answering the question. "If money were no object, what I'd really like to do is go to Germany and study under Wolfhart Pannenberg."
>
> "Who's he?"
>
> "Oh, he's this famous German theologian who's defended the resurrection of Christ historically," I explained. "If I could study with him, I could develop a historical apologetic for the resurrection of Jesus."
>
> Our conversation drifted to other subjects, but Jan later told me that my remark had just lit a fire under her. The next day while I was at the university, she slipped away to the library and began to research grants-in-aid for study at German universities. Most of the leads proved to be defunct or otherwise inapplicable to our situation. But there were two grants she found that were possibilities. You can imagine how surprised I was when she sprung them on me!

Both of these Ph.D experiences are also described in the talk. And the talk concludes as follows:

> I am so thankful to be married to a woman who is tremendously resourceful, tremendously talented and energetic, who could have pursued an independent career in any number of areas, but instead, she has chose to wed her aspirations to mine, and to make it her goal to make me the most effective person I can be, for Christ. And she has been like my right arm in ministry over these many years. And it is a tremendous privilege to be a team with a person like that.

> And you young men, I would encourage you, if you marry, to find a gal who shares your vision, not some independent vision, but who is interested in aligning herself with you, and pursuing together a common vision and goal that will draw you [together], so that you will avoid the growing separateness that so often creeps into marriages.

And now you know the rest of Bill's story. *The person you marry will have an enormous influence on the impact you will have for Christ and his Kingdom.* It is up to you to decide whether that influence is going to be positive or negative, by deciding if you will marry, and if you do marry, by deciding whom you will marry. If you marry a non-Christian, you cannot expect to achieve the same things for God as you can with someone who accepts your core convictions and is willing to sacrifice their happiness so that God can be made happier.

You may also be interested in this talk given by William Lane Craig, entitled "Healthy Relationships" (National Faculty Leadership Conf. 2008) (audio here) In that talk, he offers advice to Christians who want to have a marriage that is consistent with their Christian faith.

Can you forgive someone who refuses to confess their guilt?

July 11, 2012 | by Wintery Knight | Link | Original Link

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's Jesus Through Middle Eastern Eyes (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's his response in full, copied with permission from his Facebook note:

> Regarding Bailey's comments on Matthew 6:12, he errs by not considering the theological context of this statement and fails to consider any implied biblical conditions for forgiveness inherent in the statement. The text simply does not mean what he says it means. He is reading too much into the statement.
> Bailey states, "Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when there is no confession of guilt…"
>
> Bailey errs. Here, Jesus is giving a model for prayer commensurate with the way His Kingdom works. Jesus teaches them to pray: "Forgive us our debts, as we also have forgiven our debtors." This is a statement of the objective, "forgiveness," without a discussion of any express or implied conditions to accomplish the objective. It is also a statement of the proper attitude of the Christian, that is, that we must have a demeanor of being willing to forgive, just as God was willing to forgive us. Bailey's assertion that there is no "confession of guilt" or repentance is merely an unwarranted assumption.
>
> Moreover, the use of "as" (Grk. hos) in the passage introduces a comparison between the way we forgive and the way God forgives. This comparative phraseology is employed elsewhere on the subject of forgiveness. For example, Ephesians 4:32 states that we should be "forgiving each other just as God in Christ also has forgiven" us. Here, the comparative "just as" (Grk. kathos) is employed and indicates our forgiveness is to be just like God's forgiveness of us, which flows from a loving disposition. So in the same manner that God forgives, we must forgive. We are to be "imitators of God" (Eph. 5:1). See also Matthew

5:48 and Luke 6:36 for exhortations to imitate God.

To ascertain whether the Scriptures describe any conditions for forgiveness, one must search elsewhere in the Scriptures for comment. This is the nature of systematic theology. We need to examine what the entire Bible says on a given topic, such as forgiveness. And the Bible contains ample support for the notion that there are conditions for forgiveness.

First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.

Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, “unless you repent, you will all likewise perish.” In Mark 1:15 John the Baptist commands that we must “repent and believe the Gospel.” The connection between repentance and forgiveness of sins (i.e. “salvation”) is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.

So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other’s sins. It does.

Jesus stated in Luke 17:3, “If your brother sins, rebuke him; and if he repents, forgive him.” Here, the meaning is clear. The word “if” (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.

This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word “reprove” is used rather than “rebuke” and the word “listen” is employed rather than “repent,” but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. “listen”). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).
These passages in Luke and Matthew give us the connection between sin, rebuke, repentance and forgiveness. Other biblical texts that merely mention “forgiveness” as a concept or an objective do not necessarily proffer every

aspect of the doctrine of forgiveness. As such, they must be read in light of the clear conditions expressed in other passages.

Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.
Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot "walk together" in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer's soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).

Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.

Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

Psychological problems arise from many issues other than lack of forgiveness. For example, a lack of trust in God that He has a particular instance of evil under His sovereign control can cause undue anxiety in one's life. Also, if a counselee's self worth is grounded in the shifting sand of how others treat him (i.e., badly) rather than being grounded in the fact that he is a divine image bearer and inherently valuable no matter how badly anyone treats him, he will likely fall into anxiety, depression, and other sorts of psychological maladies. Changing the biblical doctrine of forgiveness will not truly help a counselee. It only makes it

> worse.
>
> Soli Deo Gloria

I agree with Dr. Lewis, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

Should the government restrict men's participation in STEM fields?

July 12, 2012 | by Wintery Knight | Link | Original Link

Hans Bader from the Competitive Enterprise Institute is concerned about politics being injected into science.

Excerpt: (links removed)

> Quotas limiting the number of male students in science may be imposed by the Education Department in 2013. The White House has promised that "new guidelines will also be issued to grant-receiving universities and colleges" spelling out "Title IX rules in the science, technology, engineering and math fields." These guidelines will likely echo existing Title IX guidelines that restrict men's percentage of intercollegiate athletes to their percentage in overall student bodies, thus reducing the overall number of intercollegiate athletes. (Under the three-part Title IX test created by the Education Department's Office for Civil Rights, where I used to work, colleges are allowed to **temporarily** comply by increasing the number of female athletes rather than cutting the number of male athletes, but the only viable **permanent** way to comply with its rule is to **restrict** men's participation relative to women's participation, reducing overall participation.) Thus, as Charlotte Allen notes, the Obama administration's guidelines are likely to lead to "science quotas" based on gender.
>
> […]Obama hinted that Title IX quotas would soon come to engineering and techology, saying that "Title IX isn't just about sports," but also about "inequality in math and science education" and "a much broader range of fields, including engineering and technology. I've said that women will shape the destiny of this country, and I mean it."

What causes more men to go into the STEM fields than women?

> Gender disparities in a major are not the product of sexism, but rather the differing preferences of men and women. The fact that engineering departments are filled mostly with men does not mean they discriminate against women anymore than the fact that English departments are filled mostly with women proves that English departments discriminate against men. The arts and humanities have well over 60 percent female students, yet no one seems to view that gender disparity as a sign of sexism against men. Deep down, the Obama administration knows this, since it is planning to impose its gender-proportionality rules only on the STEM fields (science, technology, engineering, and math), not other fields that have similarly large gender disparities in the opposite direction.

> Many women are quite capable of mastering high-level math and science, but simply don't find working in such a field all that interesting. As Dr. Sommers notes, many "colleges already practice affirmative action for women in science," rather than discriminating against them. Susan Pinker, a clinical psychologist, chronicled cases of women who "abandoned successful careers in science and engineering to work in fields like architecture, law and education," because they wanted jobs that involved more interaction with people, "not because they had faced discrimination in science." Far from being discouraged by society from pursuing a career in math or science, these women had been strongly encouraged to pursue such a a career: "Once they showed aptitude for math or physical science, there was an assumption that they'd pursue it as a career even if they had other interests or aspirations. And because these women went along with the program and were perceived by parents and teachers as torch bearers, it was so much more difficult for them to come to terms with the fact that the work made them unhappy."
>
> As Susan Pinker notes, "A mountain of published research stretching back a hundred years shows that women are far more likely than men to be deeply interested in organic subjects—people, plants and animals—than they are to be interested in things and inanimate systems, such as electrical engineering, or computer systems."

Is this good for our economy? Should we be discouraging the best male students who want to study science and engineering to do their education abroad in Canada or Europe? Should women be steered into careers that may make it harder for them to have families and raise their children?

New study: Earth is currently in a 2000-year old cooling trend

July 12, 2012 | by Wintery Knight | Link | Original Link

Report from the UK Daily Mail.

Excerpt:

> How did the Romans grow grapes in northern England? Perhaps because it was warmer than we thought.
>
> A study suggests the Britain of 2,000 years ago experienced a lengthy period of hotter summers than today.
>
> German researchers used data from tree rings – a key indicator of past climate – to claim the world has been on a 'long-term cooling trend' for two millennia until the global warming of the twentieth century.
>
> This cooling was punctuated by a couple of warm spells.
>
> These are the Medieval Warm Period, which is well known, but also a period during the toga-wearing Roman times when temperatures were apparently 1 deg C warmer than now.
>
> They say the very warm period during the years 21 to 50AD has been underestimated by climate scientists.
>
> Lead author Professor Dr Jan Esper of Johannes Gutenberg University in Mainz said: 'We found that previous estimates of historical temperatures during the Roman era and the Middle Ages were too low.
>
> 'This figure we calculated may not seem particularly significant, however it is not negligible when compared to global warming, which up to now has been less than 1 deg C.'
>
> In general the scientists found a slow cooling of 0.6C over 2,000 years, which they attributed to changes in the Earth's orbit which took it further away from the Sun.
>
> The study is published in Nature Climate Change.
>
> It is based on measurements stretching back to 138BC.
>
> The finding may force scientists to rethink current theories of the impact of global warming
>
> Professor Esper's group at the Institute of Geography at JGU used tree-ring density measurements from sub-fossil pine trees originating from Finnish Lapland to produce a reconstruction reaching back to 138 BC.
>
> In so doing, the researchers have been able for the first time to precisely demonstrate that the long-term trend over the past two millennia has been

> towards climatic cooling.
>
> Professor Esper said: ‘Such findings are also significant with regard to climate policy, as they will influence the way today’s climate changes are seen in context of historical warm periods.’
>
> The annual growth rings in trees are the most important witnesses over the past 1,000 to 2,000 years as they indicate how warm and cool past climate conditions were.
>
> Researchers from Germany, Finland, Scotland, and Switzerland examined tree-ring density profiles.

The study is linked here.

More social scientists stepping forward to defend Regnerus study

July 12, 2012 | by Wintery Knight | Link | Original Link

Good news! See the part in bold below, too.

Excerpt:

> An influential group of social scientists … have issued a public statement defending Mark Regnerus's controversial study on same-sex parenting.
>
> Regnerus, a sociologist at the University of Texas at Austin, published a paper in the July issue of Social Science Research that examined "how different are the adult children of parents who have same-sex relationships?" His findings, based on his New Family Structures Study, indicated that young-adult children of parents who have had same-sex relationships are more likely to experience emotional and social problems.
>
> His Slate article published in June drew more than 450 comments and set off a chorus of criticism.
>
> In response, a group of 18 professors — including Michael Emerson, Christian Smith, Rodney Stark, W. Bradford Wilcox, and Bradley Wright — posted a defense on the website of Baylor University's Institute for Studies of Religion. They argue that rather then Regnerus' study being "anti-gay," "breathtakingly sloppy," and "gets everything wrong" (as many media outlets have alleged), such public criticism is unwarranted for three reasons:
>
> 1. Media outlets have not properly critiqued the "small, nonrepresentative samples" used by previous studies that showed equal or more positive outcomes for children of same-sex parents vs. heterosexual parents. "By contrast, Regnerus relies on a large, random, and representative sample of more than 200 children raised by parents who have had same-sex relationships, comparing them to a random sample of more than 2,000 children raised in heterosexual families, to reach his conclusions," they wrote.
> 2. Those critical of Regnerus surveying children from same-sex relationships with high levels of instability "fail to appreciate … that Regnerus chose his categories on the basis of young adults' characterizations of their own families growing up, and the young adults whose parents had same-sex romantic relationships also happened to have high levels of instability in their families of origin."
> 3. **Another new study (published this month in the Journal of Marriage and Family) — also based on a large, nationally representative, and**

> **random survey — comes to conclusions that parallel those of Regnerus's study.**

So that new study something to look forward to! I blogged about the criticisms of the Regnerus study and the other study that came out of the same time, in case anyone wants to double-check the details.

When pastors undermine the relevance of Christianity to the culture

July 12, 2012 | by Wintery Knight | Link | Original Link

Eric Metaxas has posted another dynamite Breakpoint commentary. (H/T Kelli)

Excerpt:

> Here's a particularly egregious case in point: the recent campaign to remove a great movie, *The Blind Side*, from the shelves of LifeWay Christian stores. Remember, *The Blind Side* was denounced as Christian propaganda by many liberal critics. It explicitly depicts an affluent white Christian family devoting itself to helping an impoverished black kid because it's the Christian thing to do.
>
> The film's offense, according to a Florida pastor who started the campaign to have LifeWay stores pull the DVD, is that the movie contains "explicit profanity, God's name in vain, and racial slurs." It doesn't seem to matter that the objectionable language is used to depict the palpably unpleasant world from which the young black man, Michael, was rescued by his adoptive family.
>
> What seems to matter to this pastor is that if we "tolerate" the presence of this movie in Christian bookstores, our children and grandchildren will "embrace" this kind of behavior. I'm not making this up – this is the exact reason given by the pastor. And frankly, I think it's insane. I saw the movie myself. I even let my 12-year-old daughter see it. That's because it is a great film and I recommend it highly.
>
> But sadly, LifeWay caved in and removed the "offensive" discs from their shelves.
>
> For outsiders looking in, the moral of the story is that "there is no pleasing Christians. They always seem to be looking for something to be mad about."
>
> We complain about the calumnies and caricatures of Christians on the big screen; and then, when an Academy Award-winning film shows us at our very best, we complain that scenes depicting harsh, inner-city reality are too true to life!
>
> We are, in effect, making our participation contingent on all our possible objections being met beforehand. Since there are many people who would be happy if we stayed within our cultural and religious ghettos, it's difficult to imagine how we Christians can hope to be taken seriously in cultural discussions and debates with this kind of an approach.
>
> Concerns about the language in the film also miss the larger point: what made the Tuohys — the family depicted in the film — such great Christian exemplars wasn't their non-use of profanity; it was their willingness to reach out and embrace someone in need.
>
> If we Christians can't get this, then maybe we really should refrain from

> commenting on culture in the first place.

The Blind Side is on the very very exclusive Wintery Knight list of great courting movies: (not in order)

1. Rules of Engagement
2. Bella
3. The Lives of Others
4. United 93
5. Taken
6. Cinderella Man
7. The Blind Side
8. Cyrano de Bergerac
9. Amazing Grace
10. We Were Soldiers
11. Stand and Deliver
12. Blackhawk Down
13. The Pursuit of Happyness
14. High Noon

These are the movies that you show women to get them to understand what it is that men do in a marriage, so that they can recognize, understand, support and affirm men in their married roles.

If you missed his last Metaxas Breakpoint commentary that I featured, it's about how pro-abortion people are uncomfortable with the evidence for the humanity of the unborn from things like ultrasounds and sonograms.

Romney boldly urges NAACP to embrace free enterprise and reject dependence

July 13, 2012 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> Romney knew he'd be booed when he said he'd get rid of ObamaCare, the job- and growth-killing behemoth that is the fruition of the cradle-to-grave nanny state on which many people have become increasingly dependent. He knew his accurate description of minority joblessness in this third recovery summer wouldn't bring applause. He told the truth anyway, even if it didn't get him one more black vote, and even if the National Association for the Advancement of Colored People attendees, for whom advancement has been replaced by dependence, couldn't handle the truth.
>
> "In June," said Romney, "the overall unemployment rate remained stuck at 8.2%" — but the rate for blacks "actually went up, from 13.6% to 14.4%."
>
> He noted that black students account for 17% of students nationwide, with 42% of those trapped in failing schools. He spoke of "neighborhoods filled with violence and fear (and) empty of opportunity."
>
> And on a matter that separates most black church leaders from Obama, he pledged to defend traditional marriage as the president embraces the gay version.
>
> Romney's speech didn't pander to anybody.
>
> Nor was it demeaning or insensitive to his audience. He merely pointed out that Obama's philosophy of dependence on government was not the answer to their need for jobs, education and stable communities.
>
> "The president will say he will do those things, but he will not, he cannot, and his record of the last four years proves it," Romney told the dubious crowd, adding: "If you want a president who will make things better in the African American community, you're looking at him."

Here's an excerpt from the full text:

> Finally, I will address the institutionalized inequality in our education system. And I know something about this from my time as governor.
>
> In the years before I took office our state's leaders had come together to pass bipartisan measures that were making a difference. In reading and in math, our students were already among the best in the nation — and during my term, they took over the top spot.
>
> Those results revealed what good teachers can do if the system will only let

> them. The problem was, this success wasn't shared. A significant achievement gap between students of different races remained. So we set out to close it.
>
> I urged faster interventions in failing schools, and the funding to go along with it. I promoted math and science excellence in schools, and proposed paying bonuses to our best teachers.
>
> I refused to weaken testing standards, and instead raised them. To graduate from high school, students had to pass an exam in math and English — I added a science requirement as well. And I put in place a merit scholarship for those students who excelled: the top 25 percent of students in each high school were awarded a John and Abigail Adams Scholarship — which meant four years tuition-free at any Massachusetts public institution of higher learning.
>
> When I was governor, not only did test scores improve — we also narrowed the achievement gap.
>
> The teachers unions were not happy with a number of these reforms. They especially did not like our emphasis on choice through charter schools, particularly for our inner city kids. Accordingly, the legislature passed a moratorium on any new charter schools.
>
> As you know, in Boston, in Harlem, in Los Angeles, and all across the country, charter schools are giving children a chance, children that otherwise could be locked in failing schools. I was inspired just a few weeks ago by the students in one of Kenny Gamble's charter schools in Philadelphia. Right here in Houston is another success story: the Knowledge Is Power Program, which has set the standard, thanks to the groundbreaking work of the late Harriet Ball.
>
> These charter schools are doing a lot more than closing the achievement gap. They are bringing hope and opportunity to places where for years there has been none.
>
> Charter schools are so successful that almost every politician can find something good to say about them. But, as we saw in Massachusetts, true reform requires more than talk. As Governor, I vetoed the bill blocking charter schools. But our legislature was 87 percent Democrat, and my veto could have been easily over-ridden. So I joined with the Black Legislative Caucus, and their votes helped preserve my veto, which meant that new charter schools, including some in urban neighborhoods, would be opened.
>
> When it comes to education reform, candidates cannot have it both ways — talking up education reform, while indulging the same groups that are blocking reform. You can be the voice of disadvantaged public-school students, or you can be the protector of special interests like the teachers unions, but you can't be both. I have made my choice: As president, I will be a champion of real education reform in America, and I won't let any special interest get in the way.

I think he is right to emphasize the marriage issue, because 1300 black pastors recently

expressed grave misgivings about Obama due to his support for gay marriage.

Who is responsible for building up the faith of children? Parents or pastors?

July 13, 2012 | by Wintery Knight | Link | Original Link

This article is from Probe Ministries. (H/T The Poached Egg)

Excerpt:

> In 2010, we commissioned a survey to help us examine the causes and potential opportunities to change the marked shift in the thinking of young adults over the last decade. We surveyed over 800 born again, young adults across America to get an understanding for what they thought about spiritual and cultural issues *and* how they felt about their beliefs and actions. One area of questioning was, "When you think about how you developed the religious beliefs you hold today, who do you feel had the greatest influence on you? Did your beliefs come from your family, your friends, your church, your independent studies, your college professors, or others?"
>
> The answers we received to this question were not shocking but still sobering. Over sixty-five percent of the respondents reported that the source that had the greatest influence on their religious beliefs was a family member, with the vast majority of those saying it was parents or grandparents. Over twenty percent of the respondents pointed to another influential individual such as a pastor, youth leader, or college professor. Only about eleven percent stated that something less personal such as a youth group or the Bible was the greatest influencer of their religious beliefs.
>
> As Christian Smith noted, "What the best empirical evidence shows . . . is that . . . when it comes to religion, parents are in fact *hugely*important."{5}In fact, "religious commitments, practices, and investments made during childhood and the teenage years, by parents and others in families and religious communities, matter – they make a difference."{6}
>
> Of those who stated that a family member was the primary influence, over seven out of ten stated it was their mother or grandmother while less than three out of ten said it was their father or grandfather. So clearly amongst born again young adults, the female side of the family has a greater influence in passing down religious beliefs than do the males. One can postulate that this may be due to a combination of greater spiritual involvement on the female side of the family and a higher level of communication with their children. However, the rate of fatherly influence almost doubles for young adults with a biblical worldview compared to those without such a worldview. So it appears that fathers who hold a biblical worldview are much more likely to be involved in establishing the spiritual beliefs of their children.
>
> **Less than one out of ten of the respondents listed a pastor as the**

> **primary source of influence, and only three percent listed a youth group. These church-related functions may have an important role in helping to shape our religious beliefs, but our survey shows that it is at best a secondary role for the vast majority of people. We are mistaken if we are relying on the church to pass on the right type of beliefs to our children. Parents, what you communicate through your lives is picked up by your children. What are you communicating to them concerning religious beliefs?**

I have been working through a Bible study with a regular WK-reader (Tracy) and we are going through Deuteronomy right now. Today (Thursday) I read Deuteronomy 6-8. And here are a couple of verses that I think you should see related to this topic.

Deuteronomy 6:4-9:

[4] Hear, O Israel: The Lord our God, the Lord is one.

[5] Love the Lord your God with all your heart and with all your soul and with all your strength.

[6] These commandments that I give you today are to be on your hearts.

[7] Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

[8] Tie them as symbols on your hands and bind them on your foreheads.

[9] Write them on the doorframes of your houses and on your gates.

It’s our responsibility to teach our children, and if you don’t have children, then you just pick someone else who is willing to listen to you. We must all make an effort.

Are any scientists persuaded by science alone to accept a young Earth?

July 13, 2012 | by Wintery Knight | Link | Original Link

John Ankerberg explains what happened when he asked the two leading proponents of young Earth creationism, John Morris and Duane Gish, whether any prominent scientists had ever been convinced by science alone to accept a young Earth. (H/T TQA)

Excerpt:

John Morris says no:

> When I was arguing for the young earth view in the early years of our television ministry, I remember when my friend Dr. John Morris, the President of the Institute for Creation Research (ICR) and one of the world's largest young earth organizations, was being interviewed on KKLA radio in Los Angeles. He was asked, "Had he or any of his associates ever met or heard of a scientist who became persuaded that the universe or earth is only thousands of years old, based on scientific evidence without a reference to a particular interpretation of the Bible?" Morris' answer was no, he had not.

Duane Gish says no:

> Later, Duane Gish, also of ICR, was asked the same question. I was interested in his answer as I had invited Dr. Gish to be my guest in the very first debate I held on science and the Bible. I had arranged for him to debate Dr. Vincent Sarich, who was the Chairman of the Department of Anthropology at Berkeley and an evolutionist. When Dr. Gish was asked if he knew of any scientist who had ever been persuaded by the scientific evidence that the universe or the earth was 6,000 years old, he also said no.

I think that this is telling. Young Earth creationism is very much an inward-focused activity.

Take a look at the locations for upcoming events for Answers in Genesis:

- First Baptist Church Kimberling City
- Macedonia Baptist Church
- Cornerstone Church
- Antioch 1611 Baptist Church
- First Baptist Church
- Grace Community Church
- Colonial Baptist Church
- Evangelical Free Church of Bay City

And the Institute for Creation Research:

- Glenview Baptist Church
- Lakeside Baptist Church
- First Baptist Church
- Ridgeview Church

Contrast that with the recent Reasonable Faith UK tour, which features public debates and lectures at the top universities in the UK, against the top scientists and philosophers in the UK.

Here are some of those events:

Monday 17th October 2011
7.30pm "*Does God Exist?*"
Public Debate with Stephen Law, lecturer in Philosophy at Heythrop College, London and Editor of the magazine of the Royal Institute of Philosophy THINK. Arranged by Premier Radio.
Westminster Central Hall, Storeys Gate, London, SW1H 9NH

Tuesday 18th October 2011
12.45pm Student Lecture *"The Evidence for God"*
Pippard Lecture Theatre (Sherfield Building), Imperial College London (South Kensington Campus), Exhibition Road, London SW7 2AZ

Wednesday 19th October 2011
7.30pm Public lecture "*The Origins of the Universe – has Hawking eliminated God?"* on Stephen Hawking's *The Grand Design* followed by a panel response
William Lane Craig will discuss the issues arising from his presentation with Revd Dr Rodney Holder, physicist with the Faraday Institute for Science and Religion, Cambridge.
St. Andrew the Great, Cambridge

Thursday 20th October 2011
7.30pm Debate at the Cambridge Union: *"This House Believes that God is not a Delusion"*
Proposing the motion: William Lane Craig and Peter S. Williams
Opposing the motion: Arif Ahmed and Andrew Copson
The Cambridge Union, Cambridge

Friday 21st October 2011
7.30pm "*Does God Exist?*"
Debate with Professor Peter Millican, Gilbert Ryle Fellow and Professor of Philosophy at Hertford College, Oxford University
The Great Hall, Birmingham University, Edgbaston, B15 2TT

Tuesday 25th October 2011
7.30pm Lecture "*Is God a Delusion?*" A Critique of Dawkins' *The God Delusion*
[or a debate with Richard Dawkins if he should accept the invitation]
Sheldonian Theatre, Broad Street, Oxford, OX1 3AZ

Wednesday 26th October 2011
7.30pm "*Does God Exist?*"

Debate with Dr Peter Atkins, former Professor of Chemistry at Oxford University
University Place Lecture Theatre, Manchester University, Oxford Road, Manchester, M13 9PL

I think that Christians need to reflect on what arguments can actually be sustained in public with good science at the highest levels, and which arguments are not sustainable in public. I don't mind if someone is a young Earth person, but they should have a realistic view of how defensible that position is scientifically.

UPDATE: J.W. Wartick evaluates common arguments for young Earth creationism here.

UPDATE: An excellent debate, with summary, on the age of the Earth, featuring Jason Lisle and Hugh Ross.

Friday night movie: King Lear (1971)

July 13, 2012 | by Wintery Knight | Link | Original Link

Thanks to the jerk who pulled down the Sandbaggers videos, I must now post a new movie, and here it is:

IMDB mean rating: [7.4/10]

IMDB median rating: [8/10]

Description:

> The Shakespeare tragedy that gave us the expression "How sharper than a serpent's tooth it is to have a thankless child." King Lear has not one but two ungrateful children, and it's especially galling because he turned over his entire kingdom to them. Paul Scofeld is an ancient, imposing shell of a Lear tormented by his too-long life as well as by daughters he calls "untatural hags." At one point, the king looks his eldest daughter, Goneril (Ireme Worth), straight in the eye and declares, "Thou art a boil, a plague-sore, of embossed carbuncle in my corrupted blood." These are the troubles not even the best-trained family counselor could ever hope to resolve.

Happy Friday!

How did the Reagan tax cuts and Bush tax cuts affect unemployment?

July 14, 2012 | by Wintery Knight | Link | Original Link

Consider this article by the Cato Institute, a libertarian think tank, which discusses how the Reagan tax cuts affected the unemployment rate.

Excerpt:

> In 1980, President Carter and his supporters in the Congress and news media asked, "how can we afford" presidential candidate Ronald Reagan's proposed tax cuts?
>
> Mr. Reagan's critics claimed the tax cuts would lead to more inflation and higher interest rates, while Mr. Reagan said tax cuts would lead to more economic growth and higher living standards. What happened? Inflation fell from 12.5 percent in 1980 to 3.9 percent in 1984, interest rates fell, and economic growth went from minus 0.2 percent in 1980 to plus 7.3 percent in 1984, and Mr. Reagan was re-elected in a landslide.
>
> […]Despite the fact that federal revenues have varied little (as a percentage of GDP) over the last 40 years, there has been an enormous variation in top tax rates. When Ronald Reagan took office, the top individual tax rate was 70 percent and by 1986 it was down to only 28 percent. All Americans received at least a 30 percent tax rate cut; yet federal tax revenues as a percent of GDP were almost unchanged during the Reagan presidency (from 18.9 percent in 1980 to 18.1 percent in 1988).
>
> What did change, however, was the rate of economic growth, which was more than 50 percent higher for the seven years after the Reagan tax cuts compared with the previous seven years. This increase in economic growth, plus some reductions in tax credits and deductions, almost entirely offset the effect of the rate reductions. Rapid economic growth, unlike government spending programs, proved to be the most effective way to reduce unemployment and poverty, and create opportunity for the disadvantaged.

The conservative Heritage Foundation describes the effects of the Bush tax cuts.

Excerpt:

> President Bush signed the first wave of tax cuts in 2001, cutting rates and providing tax relief for families by, for example, doubling of the child tax credit to $1,000.
>
> At Congress' insistence, the tax relief was initially phased in over many years, so the economy continued to lose jobs. In 2003, realizing its error, Congress made the earlier tax relief effective immediately. Congress also lowered tax rates on

> capital gains and dividends to encourage business investment, which had been lagging.
>
> It was the then that the economy turned around. Within months of enactment, job growth shot up, eventually creating 8.1 million jobs through 2007. Tax revenues also increased after the Bush tax cuts, due to economic growth.
>
> In 2003, capital gains tax rates were reduced. Rather than expand by 36% as the Congressional Budget Office projected before the tax cut, capital gains revenues more than doubled to $103 billion.
>
> The CBO incorrectly calculated that the post-March 2003 tax cuts would lower 2006 revenues by $75 billion. Revenues for 2006 came in $47 billion above the pre-tax cut baseline.
>
> Here's what else happened after the 2003 tax cuts lowered the rates on income, capital gains and dividend taxes:
>
> - GDP grew at an annual rate of just 1.7% in the six quarters before the 2003 tax cuts. In the six quarters following the tax cuts, the growth rate was 4.1%.
> - The S&P 500 dropped 18% in the six quarters before the 2003 tax cuts but increased by 32% over the next six quarters.
> - The economy lost 267,000 jobs in the six quarters before the 2003 tax cuts. In the next six quarters, it added 307,000 jobs, followed by 5 million jobs in the next seven quarters.
>
> The timing of the lower tax rates coincides almost exactly with the stark acceleration in the economy. Nor was this experience unique. The famous Clinton economic boom began when Congress passed legislation cutting spending and cutting the capital gains tax rate.

Those are the facts. That's not what you hear in the media, but they are the facts.

Crime rates in Chicago and DC drop after gun control laws are struck down

July 14, 2012 | by Wintery Knight | Link | Original Link

From Fox News – what happens to crime rates when gun control laws are repealed? (H/T Reason To Stand)

Excerpt:

> Murder and violent crime rates were supposed to soar after the Supreme Court struck down gun control laws in Chicago and Washington, D.C.
>
> Politicians predicted disaster. "More handguns in the District of Columbia will only lead to more handgun violence," Washington's Mayor Adrian Fenty warned the day the court made its decision.
>
> Chicago's Mayor Daley predicted that we would "go back to the Old West, you have a gun and I have a gun and we'll settle it in the streets…"
>
> The New York Times even editorialized this month about the Supreme Court's "unwise" decision that there is a right for people "to keep guns in the home."
>
> But Armageddon never happened. Newly released data for Chicago shows that, as in Washington, murder and gun crime rates didn't rise after the bans were eliminated — they plummeted. They have fallen much more than the national crime rate.
>
> Not surprisingly, the national media have been completely silent about this news.
>
> One can only imagine the coverage if crime rates had risen. In the first six months of this year, there were 14% fewer murders in Chicago compared to the first six months of last year – back when owning handguns was illegal. It was the largest drop in Chicago's murder rate since the handgun ban went into effect in 1982.
>
> Meanwhile, the other four most populous cities saw a total drop at the same time of only 6 percent.
>
> Similarly, in the year after the 2008 "Heller" decision, the murder rate fell two-and-a-half times faster in Washington than in the rest of the country.
>
> It also fell more than three as fast as in other cities that are close to Washington's size. And murders in Washington have continued to fall.
>
> If you compare the first six months of this year to the first six months of 2008, the same time immediately preceding the Supreme Court's late June "Heller" decision, murders have now fallen by thirty-four percent.
>
> Gun crimes also fell more than non-gun crimes.
>
> Robberies with guns fell by 25%, while robberies without guns have fallen by eight percent. Assaults with guns fell by 37%, while assaults without guns fell by

> 12%.
>
> Just as with right-to-carry laws, when law-abiding citizens have guns some criminals stop carrying theirs.

Read the whole thing, there are more lovely facts in there. If you ever need to debate this, I recommend buying these academic studies published by the University of Chicago Press and by Harvard University Press. The former shows how crime rates dropped in the USA when Americans rescinded gun control laws, and the latter shows how crime rates rose in the UK when the British strengthened their gun control laws. Sometimes is good to have the data handy.

Let's learn about the issue from the news

ABC News explains in this short 6-minute clip:

And here is a longer 44-minute show from Fox Business: (featuring a debate between economist John Lott and the Brady Campaign spokesman)

There are other debates in the show as well.

Now watch a 3-on-3 debate on gun control

This debate is in 13 parts, featuring the two of the *best* proponents of legal firearm ownership – John Lott and Gary Kleck. The real sparks fly during the Q&A, so don't miss that. (If you can't watch the debate, then you can read this post and this post instead).

Here's part 1, which contains the introduction.

Here are the remaining speeches:

- Pro-firearm: **Guns Reduce Crime Debate**: John R. Lott (2 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: R Gil Kerlikowske (3 **of 13**)
- Pro-firearm: **Guns Reduce Crime Debate**: Stephen Halbrooke (4 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: John J Donohue III (5 **of 13**)
- Pro-firearm: **Guns Reduce Crime Debate**: Gary Kleck (6 **of 13**)
- Anti-firearm: **Guns Reduce Crime Debate**: Paul Helmke (7 **of 13**)
- Q&A Part 1: **Guns Reduce Crime Debate**: Q&A Part 1 (8 **of 13**)
- Q&A Part 2: **Guns Reduce Crime Debate**: Q&A Part 2 (9 **of 13**)
- Q&A Part 3: **Guns Reduce Crime Debate**: Q&A Part 3 (10 **of 13**)
- Q&A Part 4: **Guns Reduce Crime Debate**: Q&A Part 4 (11 **of 13**)
- Conclusions Part 1: **Guns Reduce Crime Debate** Closing Arguments Part 1 (12 **of 13**)
- Conclusions Part 2: **Guns Reduce Crime Debate** Closing Arguments Part 2 (12 **of 13**)

This is everything you need to know about whether legal ownership of firearms reduce crime.

Outsourcing billions of taxpayer dollars through stimulus spending

July 15, 2012 | by Wintery Knight | Link | Original Link

A lot of talk about outsourcing in the news these days. CNS News explains who has the real record of outsourcing.

Excerpt:

> The Obama administration allowed millions of dollars in federal stimulus funds to go to foreign companies, despite recent statements by President Barack Obama that he opposes "shipping jobs overseas."
>
> […]Obama's 2009 economic stimulus spending law–the $787 billion American Recovery and Reivnestment Act–gave millions of federal dollars to foreign companies or funded domestic companies that built factories in foreign countries or bought foreign products.
>
> For example, there is the North Carolina LED manufacturer Cree Inc. Cree was awarded $39 million through a stimulus-funded tax credit program in January 2010. However, half of the company's employees are in China and the company opened a manufacturing plant in Huizhou City, China in November 2009, according to an article in the industry publication *LEDs Magazine*.
>
> […]Another example of stimulus outsourcing is Japanese wind energy firm Eurus Energy, whose U.S. subsidiary, Eurus Energy America, received $91 million in stimulus funds to build a wind farm in Texas, according to a 2010 report from American University. That wind farm reportedly was built with wind turbines manufactured by another Japanese company – Mitsubishi.
>
> "Eurus Energy America, the U.S. subsidiary of a Japanese firm, received $91 million in stimulus money for its Bull Creek wind farm in Texas. The farm consists of 180 Mitsubishi turbines," the American University report said.
>
> Eurus told American University that the wind farm was actually built by British firm RES Americas and is now being run by EnXco, an American subsidiary of the French energy firm EDF Energies Nouvelles.
>
> […]Another example of the Obama administration funding foreign companies is a $337 million loan guarantee from the Department of Energy's green energy lending program.
>
> That loan went to California energy firm Sempra Energy for a solar power array in Arizona. However, according to a Feb. 4, 2011 *New York Times* report, Sempra Energy bought its solar panels from the Chinese firm Suntech.
>
> The project, known as Mesquite Solar 1, reportedly used 800,000 of the Chinese solar panels.
>
> Perhaps the best-known example of Obama administration funding of foreign

> companies is its $500-million loan guarantee to Finnish automaker Fisker Automotive. That loan, part of the Energy Department's electric vehicle lending program, was made to help Fisker establish a U.S. manufacturing presence.
>
> However, the company never established an American factory, choosing instead to shutter its U.S. operations and continue building cars in Finland.

But that's not all.

Consider this post from Hans Bader, which further assesses Obama's record on outsourcing.

Excerpt: (links removed)

> "79 percent" of all green-jobs funding in Obama's $800 billion stimulus package went to foreign companies, with the largest payment going to a bankrupt Australian company. For example, the Obama Administration spent $1.6 billion on Chinese and other foreign wind power. The practical effect of those subsidies was to outsource American jobs. ABC News reported on the subsidies for Chinese wind turbines contained in the stimulus package:
> Despite all the talk of green jobs, the overwhelming majority of stimulus money spent on wind power has gone to foreign companies, according to a new report by the Investigative Reporting Workshop at the American University's School of Communication in Washington, D.C.
>
> Nearly $2 billion . . . has been spent on wind power. . .But the study found that nearly 80 percent of that money has gone to foreign manufacturers of wind turbines.
>
> "Most of the jobs are going overseas," said Russ Choma at the Investigative Reporting Workshop. He analyzed which foreign firms had accepted the most stimulus money. "According to our estimates, about 6,000 jobs have been created overseas, and maybe a couple hundred have been created in the U.S." Even with the infusion of so much stimulus money, a recent report by American Wind Energy Association showed a drop in U.S. wind manufacturing jobs last year.
>
> The stimulus package also showered money on left-wing community organizers and liberal lobbying groups.
>
> Earlier, NewsMax reported on a $2 billion subsidized loan by the U.S. government to a Brazilian oil company:
>
> Gulf Oil CEO Joe Petrowski says President Barack Obama's weekend comments in Brazil that the United States looks forward to purchasing oil drilled for offshore by that nation "is rather puzzling," and "hypocritical" as his administration has imposed a virtual moratorium on domestic drilling. The signal to purchase more foreign oil comes after the U.S. Export-Import Bank invested more than $2 billion with Brazil's state-owned oil company, Petrobras, to finance exploration.
>
> The CEO of General Electric, which has received government "green jobs"

> money, is a close Obama advisor. GE has been busy outsourcing American jobs, eliminating a fifth of its U.S. workforce since 2002. GE made $14.2 billion in profits in 2010, but paid no taxes at all, even though America's corporate tax rates are among the highest in the world. Indeed, GE actually received a tax benefit of $3.2 billion from the government in 2010, and received a preferential bailout at taxpayer expense.

That post goes on and on and on and on like that. Obama likes to "spread the wealth around", remember?

What causes outsourcing? When you have the highest corporate tax rate in the world – that causes outsourcing. When you keep piling on regulations and regulations onto businesses, from Obamacare to Dodd-Frank – that causes outsourcing. When you take money collected from taxes paid by American businesses and hand it out to foreign companies owned by Democrat-allies – that causes outsourcing. When you block energy companies from developing energy here at home – that causes outsourcing.

UPDATE: I put millions in the post title, but it's actually billions. At least $29 billion.

Congressional report: abstinence education is the best form of sex education

July 15, 2012 | by Wintery Knight | Link | Original Link

Life News reports:

> The House Energy & Commerce Health Subcommittee released a report on Friday entitled A Better Approach to Teenage Pregnancy Prevention: Sexual Risk Avoidance. The report makes it clear that abstinence education is the best approach when it comes to the different approaches for teaching sex education to teenagers.
>
> The report examined the theory and the evidence behind both Sexual Risk Avoidance Abstinence Education and Sexual Risk Reduction, or so-called Comprehensive" Sex Education and concluded that abstinence education is the superior approach and one that deserves policy priority.
>
> "America's teens need guidance to protect them from the consequences of risky sexual behavior. Unfortunately, the current course of national policy on teenage pregnancy prevention is undermining the desired health outcome," the report says. "Careful examination of research confirms that a value-neutral and risk reduction approach to sexual behavior is not consistent with teenage behavioral theory and not effective in impacting America's high rates of teenage pregnancy and STIs."
>
> The report goes on to recommend that abstinence education: "is a better approach, because it is built on sound theory and empirical evidence."
>
> Valerie Huber, executive director of the National Abstinence Education Association, applauded the report and its findings.
>
> "We applaud the leadership of Rep. Pitts to correct current sex education policy by reestablishing a priority on the SRA abstinence education approach based on the evidence of effectiveness," she said. The findings of this report reinforce the value of the Abstinence Education Reallocation Act, which will implement many of the policy changes suggested in the congressional report."
>
> The new report comes on the heels of a recently released NAEA, study that reached similar conclusions. But Huber says the Congressional Report is significant because it was released by the subcommittee which has jurisdiction over the nation's sex education policies and provides a hopeful sign that Congress will work to correct the current federal sex education policy in the next session.

Other studies have shows that abstaining from sex before marriage, and even limiting the number of partners, helps marriages to be more stable and also more intimate.

Cornelius Van Til and presuppositional apologetics

July 15, 2012 | by Wintery Knight | Link | Original Link

Here's J.W. Wartick's take from Always Have a Reason blog.

Excerpt:

> Cornelius Van Til pioneered the field of "presuppositional apologetics" primarily through his works *Christian Apologetics* and *The Defense of the Faith*. His arguments are easily misunderstood as question begging or viciously circular. Herein, I have presented a brief outline and analysis which reveals that while the presuppositional approach may indeed have some logical faults, the overall system has a certain power to it and can be integrated into a total-apologetic system.
>
> […]The key to understand here is that Van Til does not accept that there is a neutral reason "out there" by which Christians and non-Christians can arbitrate the truth of Christianity; his point is that there *is no neutral ground* and that one's presuppositions will determine one's end point. Again, he writes, "this [apologetic method] implies a refusal to grant that any area or aspect of reality, any fact or any law of nature or of history, can be correctly interpreted except it be seen in the light of the main doctrines of Christianity" (*Christian Apologetics*, 124).
>
> However, Van Til takes it even further and argues that one must presuppose the truth of Christianity in order to make sense of reality: " What is the content of this presupposition, then? It is this: "I take what the Bible says about God and his relation to the universe as unquestionably true on its own authority" (*The Defense of the Faith*, 253); again, "The Bible is thought of as authoritative on everything of which it speaks. Moreover, it speaks of everything" (*Christian Apologetics*, 19). Thus, Van Til's apologetic does not make Christianity the conclusion of an argument; rather, Christianity is *the starting presupposition*.
>
> The presuppositional approach here cannot be stressed enough. For Van Til, one simply *cannot* grant to the non-Christian any epistemic point. "We cannot avoid coming to a clear-cut decision with respect to the question as to whose knowledge, man's or God's, shall be made the standard of the other. …[O]ne must be determinative and the other subordinate" (*The Defense of the Faith* 62-63).
>
> What place is had for evidences in Van Til? At some points, he seems to be very skeptical of the use of Christian evidences. In particular, the fact that he argues there is no neutral evaluation grounds between the Christian and non-Christian seems to imply that there can be no real evaluation of such arguments apart from Christianity. One of Van Til's most famous illustrations of the use of evidences can be found in *The Defense of the Faith* pages 332 and following. He uses three persons, Mr. Black (non-Christian), Mr. Grey (Christian non-

> presuppositionalist), and Mr. White (presuppositional/reformed apologist):
>
> > Mr. Grey… says that, of course, the "rational man" has a perfect right to test the credibility of Scripture by logic… by experience… [Mr. Grey then takes Mr. Black a number of places to show him various theistic evidences. Mr. Black responds:] "you first use intellectual argument upon principles that presuppose the justice of my unbelieving position. Then when it it is pointed out to you that such is the case, you turn to witnessing [subjectively].
> >
> > …At last it dawned upon Mr. White that first to admit that the principles of Mr. Black, the unbeliever, are right and then to seek to win him to the acceptance of the existence of God the Creator… is like first admitting that the United States had historically been a province of the Soviet Union but ought at the same time to be recognized as an independent and all-controlling power… If one reasons for the existence of God and for the truth of Christianity on the assumptions that Mr. Black's principles of explanation are valid, then one must witness on the same assumption [which makes witnessing wholly subjective.] (p. 332-339)
>
> It can be seen here that even evidences for Van Til must be based within a presupposition. There is no way to look at evidences in the abstract. One can either offer them within the presuppositions of Christianity or outside of Christianity. For Van Til, once one has agreed to offer evidences outside of Christianity, one has granted the presuppositions of the non-believer, and therefore is doomed to fail.

This would include using arguments like the cosmological argument, the fine-tuning argument, arguments from miracles, etc. – including the resurrection. That seems to be Van Til's view. No evidence allowed – you have to presuppose Christianity is true in order to make sense of the world.

Now, I think we need to make a distinction between using questioning the pre-suppositions of our opponents, as with William Lane's Craig's moral argument, Plantinga's epistemological argument for reason and Menuge's ontological argument for reason. There are arguments for theism that question the pre-suppositions of an atheist. Certainly, non-theists cannot ground things like morality, free will, consciousness and rationality on atheism. But that's not what Van Til is saying. He says that an atheist cannot be swayed by evidence unless he first becomes a Christian. I.e. – he is saying that atheist Anthony Flew is lying when he says that evidence caused him to turn to believe in God. On Van Til's view, that's impossible.

My view of presuppositional apologetics is that is as a system, it is circular reasoning. It assumes Christianity in order to prove Christianity. But there is an even worse problem with it. It's not a Biblical way of doing apologetics. It's man's way of doing apologetics, not God's. I think that the best way to understand Van Til's apologetics is by saying that it

really just a sermon disguised as apologetics. The problem is that Van Til's sermon has no basis in the Bible. Wherever he is getting his view from, it's not from the Bible. When I look the Bible, I don't see any Biblical support for the view that pre-suppositional apologetics is the *only approved way* of defending the faith. Instead, the standard method seems to be evidentialism.

In Romans 1, Paul writes that people can learn about God's existence from the natural world.

Romans 1:18-23:

[18]The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness,

[19]since what may be known about God is plain to them, because God has made it plain to them.

[20]For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.

[21]For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.

[22]Although they claimed to be wise, they became fools

[23]and exchanged the glory of the immortal God for images made to look like mortal man and birds and animals and reptiles.

And in Acts, Peter appeals to eyewitness testimony for the resurrection, and Jesus' miracles.

Acts 2:22-24, and 36:

[22]"Men of Israel, listen to this: Jesus of Nazareth was a man accredited by God to you by miracles, wonders and signs, which God did among you through him, as you yourselves know.

[23]This man was handed over to you by God's set purpose and foreknowledge; and you, with the help of wicked men, put him to death by nailing him to the cross.

[24]But God raised him from the dead, freeing him from the agony of death, because it was impossible for death to keep its hold on him.

And finally from the same chapter:

[36]"Therefore let all Israel be assured of this: God has made this Jesus, whom you crucified, both Lord and Christ."

Professor Clay Jones of Biola University makes the case that the use of evidence when preaching the gospel was *standard operating procedure* in the early church.
(H/T Apologetics 315)

Intro:

> In 1993 I started working for Simon Greenleaf University (now Trinity Law School)

> which offered an M.A. in Christian apologetics (Craig Hazen was the director). Much of my job was to promote the school and although I had studied Christian apologetics since my sophomore year in high school, I decided I needed to see whether an apologetic witness had strong Biblical precedence.
>
> It does.
>
> As I poured through the Scripture I found that Jesus and the apostles preached the resurrection of Christ as the sign of the truth of Christianity.
>
> What follows are some of the passages which support the resurrection witness.

Here is my favorite verse from his massive list list of verses in favor of the evidential approach to Christian apologetics:

> Mat. 12:39-40: A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth.

Jesus is saying that the resurrection was deliberately given as a sign to unbelievers to convince them. ("The Sign of Jonah" = the resurrection)

So, I see that God uses nature and miracles to persuade, which can be assessed using scientific and historical methods. Can anyone find me a clear statement in the Bible that states that only pre-suppositional arguments should be used? I could be wrong, and I am willing to be proven wrong. I think we should use the Biblical method of apologetics, not the fallen man's method of apologetics.

UPDATE: Excellent apologetics blog Triablogue has responded to my post.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds
- William Lane Craig's case for the resurrection of Jesus

Obama says that small business owners didn't build their own businesses

July 16, 2012 | by Wintery Knight | Link | Original Link

He feels comfortable spending other people's money: why?
It's right on the White House web site, cached on National Review:

> . . .There are a lot of wealthy, successful Americans who agree with me — because they want to give something back. They know they didn't — look, if you've been successful, you didn't get there on your own. You didn't get there on your own. I'm always struck by people who think, well, it must be because I was just so smart. There are a lot of smart people out there. It must be because I worked harder than everybody else. Let me tell you something — there are a whole bunch of hardworking people out there. (Applause.)
>
> If you were successful, somebody along the line gave you some help. There was a great teacher somewhere in your life. Somebody helped to create this unbelievable American system that we have that allowed you to thrive. Somebody invested in roads and bridges. **If you've got a business — you didn't build that. Somebody else made that happen.**
>
> The Internet didn't get invented on its own. Government research created the Internet so that all the companies could make money off the Internet. The point is, is that when we succeed, we succeed because of our individual initiative, but also because we do things together. There are some things, just like fighting fires, we don't do on our own. I mean, imagine if everybody had their own fire service. That would be a hard way to organize fighting fires. . .

See, that's why Obama is so confident about talking the money earned by businesses owners and their employees. You don't really run your own business, Obama does. He is the one who puts in the 70 hour weeks and takes the risks and borrows money from

family. When I was working 70 hour weeks in IT start-ups, that wasn't me working those hours, that was Obama. That's why he's entitled to tax me so much. He was actually working weekends to earn my salary. He has a right to my salary, because I didn't really earn it.

FLASHBACK: Obama says that limited government and capitalism have never worked

Can the Episcopalian church commit apostasy and still survive?

July 16, 2012 | by Wintery Knight | Link | Original Link

Here's an interesting article from BeliefNet. (You have to click through all 4 pages to get it all, and it's worth it)

Excerpt:

> The headlines coming out of the Episcopal Church's annual U.S. convention are stunning — endorsement of cross-dressing clergy, blessing same-sex marriage, the sale of their headquarters since they can't afford to maintain it.
>
> The American branch of the Church of England, founded when the Vatican balked at permitting King Henry VIII to continue annulling marriages to any wife who failed to bear him sons, is in trouble.
>
> Somehow slipping out of the headlines is a harsh reality that the denomination has been deserted in droves by an angry or ambivalent membership. Six prominent bishops are ready to take their large dioceses out of the American church and align with conservative Anglican groups in Africa and South America.

Let's see some of the bad news:

> Membership has dropped so dramatically that today there are 20 times more Baptists than Episcopalians. U.S. Catholics out-number the Episcopal Church 33-to-1. There are more Jews than Episcopalians. Twice as many Mormons as Episcopalians. Even the little African Methodist Episcopal denomination — founded in in 1787 — has passed the Episcopalians.

> Among the old mainstream denominations reporting to the National Council of Churches, the Episcopal Church suffered the worst loss of membership from 1992-2002 — plunging from 3.4 million members to 2.3 million for a 32 percent loss. In the NCC's 2012 yearbook, the Episcopal Church admitted another 2.71 percent annual membership loss.

They elected Katharine Jefferts Schori as their presiding bishop. According to the article, she mocks traditional Christian doctrines like creation, incarnation and the Trinity, and she tells everyone in the audience that they are becoming God.

> "Jefferts Schori leaves a wide wake of destruction behind with this sermon: the eternal triune God has been torn down, human beings are to boldly claim our place as God, and the sacraments of the Eucharist and Baptism have been turned into things our hands make. In other words, Jefferts Schori accepts that now humanity, animals and God are one undifferentiated blob.

More:

> "Yesterday," reports Angela O'Brien from the convention, "the House of Bishops of the Episcopalian Church approved a new provisional blessing for gay unions, while the full General Convention voted in favor of general acceptance for transgender clergy.
>
> "Some Episcopalian bishops spoke out against the resolution on ame-sex blessings. Bishop Bauerschmidt, of the Episcopal Diocese of Tennessee, urged the bishops to defeat the resolution.
>
> […]A few years ago, the annual national Episcopal convention overwhelmingly refused even to consider a resolution affirming that Jesus Christ is Lord.
>
> […]At this year's convention, David Virtue reported: "In all the talk about same sex this and transgender that, there is absolutely no talk about sin. A psychologist friend of mine opined that talk of 'sin' here would be considered psychologically damaging and offensive to a lot of people, especially gays, so it is off the radar screen. 'No sin, please; we're Episcopalians.'

Another interesting editorial by Ross Douthat appeared in the New York Times yesterday, discussing this same issue.

Excerpt:

> IN 1998, John Shelby Spong, then the reliably controversial Episcopal bishop of Newark, published a book entitled "Why Christianity Must Change or Die." Spong was a uniquely radical figure — during his career, he dismissed almost every element of traditional Christian faith as so much superstition — but most recent leaders of the Episcopal Church have shared his premise. Thus their church has spent the last several decades changing and then changing some more, from a sedate pillar of the WASP establishment into one of the most self-consciously progressive Christian bodies in the United States.
>
> As a result, today the Episcopal Church looks roughly how Roman Catholicism would look if Pope Benedict XVI suddenly adopted every reform ever urged on the Vatican by liberal pundits and theologians. It still has priests and bishops, altars and stained-glass windows. But it is flexible to the point of indifference on dogma, friendly to sexual liberation in almost every form, willing to blend Christianity with other faiths, and eager to downplay theology entirely in favor of secular political causes.
>
> Yet instead of attracting a younger, more open-minded demographic with these changes, the Episcopal Church's dying has proceeded apace. Last week, while the church's House of Bishops was approving a rite to bless same-sex unions, Episcopalian church attendance figures for 2000-10 circulated in the religion blogosphere. They showed something between a decline and a collapse: In the last decade, average Sunday attendance dropped 23 percent, and not a single

> Episcopal diocese in the country saw churchgoing increase.
>
> […]Practically every denomination — Methodist, Lutheran, Presbyterian — that has tried to adapt itself to contemporary liberal values has seen an Episcopal-style plunge in church attendance. Within the Catholic Church, too, the most progressive-minded religious orders have often failed to generate the vocations necessary to sustain themselves.
>
> Both religious and secular liberals have been loath to recognize this crisis. Leaders of liberal churches have alternated between a Monty Python-esque "it's just a flesh wound!" bravado and a weird self-righteousness about their looming extinction. (In a 2006 interview, the Episcopal Church's presiding bishop explained that her communion's members valued "the stewardship of the earth" too highly to reproduce themselves.)

I know that some Lutheran (LCMS, LCWS) and Presbyterian (PCA) are still relatively conservative, but those other denominations like United Church of Christ, ELCA Lutherans and PCUSA Presbyterians have, in my opinion, abandoned orthodoxy.

Minimum wage: doing what feels good doesn't produce good results

July 16, 2012 | by Wintery Knight | Link | Original Link

Government Spending Vs Jobs
From Investors Business Daily.

Excerpt:

> How amusing to watch Democrats wring their hands over what they can do to get businesses to create jobs, when one of the biggest job killers is the minimum wage they keep hiking.
>
> Recall that it was Democrats who raised the federal wage floor a whopping $2.10 an hour in the middle of the recession. The record 41% increase has led to record unemployment among young people, especially black teens.
>
> Congress started ratcheting up the minimum wage from $5.15 an hour in mid-2007, arguing it would help abate poverty. But retailers looking to slash costs eliminated low-skilled, entry-level jobs rather than pay the mandated increases.
>
> Now 1.5 million fewer teens are working. Last year's unemployment rate for workers ages 16 to 19 shot up to 26% from 2007's 15%.
>
> As for black teens, their joblessness soared to a record 43% after the final raise to $7.25 took effect in mid-2009. It helped put more than half of young black men out of work — a first.
>
> The president proposes cranking the minimum wage even higher to $9.50. Then he wants to raise it every year thereafter as a "living wage" indexed to inflation.

Yes, this is the problem that happens when you elect someone who knows nothing whatsoever about economics. And when I say nothing, I mean he is in disagreement with virtually all economists *across the ideological spectrum*.

Moderate economist Gregory Mankiw of Harvard University lists the policies that are accepted by virtually all economists.

Here's Greg's list, together with the percentage of economists who agree:

1. A ceiling on rents reduces the quantity and quality of housing available. (93%)
2. Tariffs and import quotas usually reduce general economic welfare. (93%)
3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
6. The United States should eliminate agricultural subsidies. (85%)
7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
9. The gap between Social Security funds and expenditures will become unsustainably large within the next fifty years if current policies remain unchanged. (85%)
10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
11. A large federal budget deficit has an adverse effect on the economy. (83%)
12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
13. The government should restructure the welfare system along the lines of a "negative income tax." (79%)
14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

From CNBC, we get this article showing that any increase in the minimum wage will *raise* the unemployment rate for young people.

Excerpt:

> A quarter of teenagers were jobless in March, representing a surprising increase from February, even as the unemployment rate for the rest of the population decreased.
>
> This figure may only get worse if budget-strapped states raise the minimum wage, and it could also be a sign of greater structural damage underlying our economy, analysts said.
>
> The unemployment rate for 16- to 19-year olds jumped back up to 24.5 percent in March, up from 23.9 percent the prior month, according to the latest jobs data from the Labor Department.
>
> […]"Even when comprehending that teen employment is volatile in nature, the data that exists serves up some shock and awe," said Brian Sozzi, a retail research analyst with Wall Street Strategies, in a note Wednesday. "If these

> (wage) increases do go through, the prospect for teen employment will remain grim as employers search for workers with advanced skills to fill positions."
>
> Twelve states, including Illinois and Pennsylvania, are considering a hike in the minimum wage. While this has been the subject of a long-running debate, many economists and analysts say raising this pay bar may cause more teen layoffs, even as it helps teens who manage to stay employed make more.
>
> "Minimum wage increases over the past few years has definitely made it worse," said Peter Boockvar, chief equities strategist at Miller Tabak. "In fact, there should be zero minimum wage for teenagers, or at most, something much less than the current rate."
>
> Teens typically are the first to be fired and the last to be hired back in a normal economic cycle, so this rate can be considered a kind of leading indicator of employment.

A new study shows that only 25% of teens will be able to find jobs this summer. And Obama thinks that this number is apparently too high. He wants to lower it by raising the price that must be paid by employers who would like to hire younger workers.

You can find out more about how raising the minimum wage increases unemployment from this comprehensive, 50-year, government study.

>
> * The minimum wage has reduced employment in foreign countries.Canada: Forrest (1982); Chile: Corbo (1981); Costa Rica: Gregory (1981); France: Rosa (1981).

This is why it is important for voters to understand economics. When you raise the price of labor, fewer employers will purchase labor. Supply and demand.

Why does God let people suffer? Why is there so much evil in the world?

July 17, 2012 | by Wintery Knight | Link | Original Link

I just wanted to draw your attention to this 4 page essay by Joe Manzari, which is the best darn summary of the state of the art on the problems of evil and suffering I have seen. The problem of evil is an objection to the existence of God based on the presence of evil or suffering in the world. The arguments basically infer that if God is all-good and all-powerful, then there should not *be* any evil or suffering.

There are two kinds of problem of evil.

The Logical/Deductive Problem of Evil:

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An exampel of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omnipotent being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God

> can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

Inductive/Probabilistic Problem of Evil

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is the second one:

(1) If God exists, gratuitous evil does not exist.
(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order for the character of humans to develop through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that premise 2 is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil that we observe more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.

Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.

2. Mankind is in a state of rebellion against God and God's purposes.
   We humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about him as possible. Part of knowing God is knowing what he designed us to do – to love him and to love others. And so, the less we know about God, the more we stray from his design for our lives.
3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

The Argument for God from Evil

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That’s right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again. More on this argument for God’s existence *from evil* here.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I’ve been through… but then, that’s why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

For more on the problem of evil, listen to this lecture by Douglas Geivett, professor of philosophy at Biola University. Then you *must listen* to this debate between William Lane Craig and Walter Sinnott-Armstrong (with summary by me). Another debate transcript is here, with William Lane Craig and Kai Nielsen. Here’s a book debate between William Lane Craig and Walter Sinnott-Armstrong, published by Oxford University Press, 2004.

Obama administration sends $3.1 million more to Planned Parenthood

July 17, 2012 | by Wintery Knight | Link | Original Link

Abortion is big business in the United States, and there's no bigger player than Planned Parenthood. Not only do they get paid for performing abortions, but they also get taxpayer money from the government.

Take a look at the latest news about those subsidies:

> After reaching an agreement to send more than $1 million over three years to a Planned Parenthood in Tennessee, the Obama administration has awarded $3.1 million in federal funds to Planned Parenthood affiliates in New Jersey.
>
> The grant announcement was made Tuesday by Sens. Frank R. Lautenberg (D-NJ) and Robert Menendez, (D-NJ), two pro-abortion Democrats in the U.S. Senate who are longtime allies of Planned Parenthood. The funding comes through the Department of Health and Human Services to Planned Parenthood and other agencies.
>
> […]The new funding brings the New Jersey Family Planning League's total federal funding this year to nearly $6.3 million. The NJFPL works with Planned Parenthood of Metropolitan New Jersey, Planned Parenthood of Central and Greater Northern New Jersey, Hoboken Family Planning, and Women's Health and Counseling Center in Somerville to fund 25 locations.
>
> […]Marie Tasy, Executive Director of New Jersey Right to Life, also criticized the decision.
>
> "Last year, a Planned Parenthood affiliate in Perth Amboy, New Jersey was caught on camera showing a willingness to aid and abet sex traffickers of young women," Tasy said. "President Obama is clearly more concerned with protecting Planned Parenthood's bottom line so they can continue to support his re-election campaign at the taxpayer's expense than protecting women and girls from the violence of sex trafficking and abortion."

Planned Parenthood got $363 million dollars from the federal government in 2010.

Planned Parenthood has a very close working relationship with the Obama administration – they even boast about it:

> The Planned Parenthood abortion business has enjoyed a cozy relationship with President Barack Obama and his administration. Planned Parenthood has received millions in taxpayer funds, thanks to Obama, and its president has been a frequent visitor to the White House.
>
> Now, Planned Parenthood president Cecile Richards is admitting just how close the relationship has been.

> "I've been working with this administration for the last three years on getting women better health care access in a whole host of ways," Richards says in a new interview with National Journal. Interestingly, the web site cuts off the rest of what Richards says before quoting her as saying Obamacare and its abortion funding components "is the single most important opportunity to expand women's health care access in this country that we will ever see."

What about the Republicans? Are they pro-abortion? Well, according to Dr. Michael New, 2012 had the second-highest number of pro-life laws passed at the state level.

Excerpt:

> The Guttmacher Institute recently released a report which found that states enacted 39 abortion restrictions in 2012. This means that 2012 was the second-most productive year in terms of the number of pro-life bills that were passed. The only year that was more productive was 2011, which saw the enactment of 80 pieces of pro-life legislation.
>
> […]Three states, Arizona, Georgia, and Louisiana, have passed versions of "Pain Capable Abortion Protection Act," which bans abortion after 20 weeks of gestation, when there is medical evidence that the unborn can feel pain. Utah became the first state to enact a 72-hour waiting period before having an abortion. Arizona and South Dakota strengthened their informed-consent laws by requiring counseling on the negative mental-health consequences of abortion.
>
> Mississippi's law requiring abortion providers to have admitting privileges at a local hospital has received plenty of attention due to the fact that it may result in the closure of Mississippi's lone abortion clinic. However, similar laws were signed this year in both Arizona and Tennessee. Some have speculated that the Tennessee law, which took effect July 1, may result in the closure of both abortion clinics in Knoxville.
>
> When Republicans make substantial gains in state legislatures, there typically is a short-term increase in the amount of pro-life legislation that is enacted. However, the Republican gains in 2010 have resulted in considerably more pro-life legislation than the Republican gains in 1994.

You'll remember that 2011 was the first year following the surge in elected Republicans because of the Tea Party.

Do Democrats pay their fair share of taxes?

July 17, 2012 | by Wintery Knight | Link | Original Link

Funny video from American Power Blog.

That's one case, but are leftists always hypocrites like that?

Do As I Say Not As I Do

I recently listened to the audio book version of Peter Schweizer's 2004 book "Do As I Say Not As I Do". In that book, he profiles a number of leftist public figures, and he discovers that leftists don't practice what they preach, because even they know that leftist ideas *don't actually work*. I really recommend the book, so let's take a closer look at it and you'll see why you should read it, too.

Here's a 32 minute 2011 lecture about the book:

And here's an interview with the author from FrontPage magazine.

Excerpt:

> **FrontPage:** Give us some of the best examples of the gulf between some liberals' social criticisms and the ingredients of their private lives. Give us some insights, for instance, into the likes of Noam Chomsky, Michael Moore, Cornel West, Hillary Clinton, Ted Kennedy and Barbra Streisand.
>
> **Schweizer:** Looking for liberal hypocrisy is, as they say in the military, a target-rich environment. Noam Chomsky, for example, has attacked wealthy Americans who set up trusts to avoid paying inheritance taxes. But this self-professed "radical socialist" has a tax attorney and did the very same thing. (When I asked him about this hypocrisy he said it was okay because he and has family have been working on behalf of suffering people all these years.)

> Michael Moore's hypocrisy is pathological. He has said numerous times that he doesn't own a single share of stock and that capitalism is not acceptable "on any level." And yet, I found that, according to tax returns filed with the IRS, he has owned shares in Halliburton, numerous oil companies, defense contractors and other multinationals through a tax shelter. When it comes he race he's also wildly hypocritical. He says that Americans who happen to live in largely white neighbhorhoods do so because they are "racists." But he lives in Central Lake, Michigan, which according to the U.S. Census has more than 2,500 residents and not a single black person in the entire town.
>
> Cornel West has numerous times condemned middle class blacks that abandon the "chocolate cities" for the "vanilla suburbs" but guess what, his flavour of choice is vanilla, too.
>
> Ted Kennedy likes to pose as the Robin Hood of the Senate, forcing wealthy Americans to pay their taxes to help the poor. But I discovered that Kennedys record of actually paying taxes is horrible. Tax the inheritance tax. He says that

> Americans should pay 49% to the IRS when they die in the name of "social justice." But according to public records, the Kennedys have almost completely avoided contributing to "social justice" by placing their assets in trusts that are located overseas. The Kennedys, over the past thirty years, have paid less than 1% in inheritance taxes on more than $300 million. Ted Kennedy, like Hillary Clinton and George Soros, loves higher taxes. On other people.

And:

> **FrontPage:** Why do you think people are drawn to leftist ideals and what kind of people are they? Self-contempt appears to be a common ingredient, no?
>
> **Schweizer:** Yes, self-contempt is a big part of it. Dietrich Bonhoeffer, the great German pastor who stood up to Hitler, wrote a book about "cheap grace." Liberals are guilty of cheap grace in the political sense. They feel guilty and their form of penance is embracing the destructive ideas of the progressive faith. But it's cheap grace because as I show it the book, they don't actually change the way they live. I think that the religious comparison makes sense because in many respects the modern day left represents a religious movement. They are motivated by a sense of sin, guilt, and the need for salvation and absolution in the political sense. Socialism offers salvation to them. Of course, they don't actually plan to live like socialists.

I would really recommend taking a look at this book.

Democrats and their unpaid taxes

One last parting shot: Democrats talk about how job creators and employees are greedy to not want to pay taxes on their earnings, but Democrats actually have huge amounts of unpaid taxes that they refuse to pay:

> A new report just out from the Internal Revenue Service reveals that 36 of President Obama's executive office staff owe the country $833,970 in back taxes. These people working for Mr. Fair Share apparently haven't paid any share, let alone their fair share.
>
> Previous reports have shown how well-paid Obama's White House staff is, with 457 aides pulling down more than $37 million last year. That's up seven workers and nearly $4 million from the Bush administration's last year.
>
> Nearly one-third of Obama's aides make more than $100,000 with 21 being paid the top White House salary of $172,200, each.
>
> The IRS' 2010 delinquent tax revelations come as part of a required annual agency report on federal employees' tax compliance. Turns out, an awful lot of folks being paid by taxpayers are not paying their own income taxes.
>
> The report finds that thousands of federal employees owe the country more than $3.4 billion in back taxes. That's up 3% in the past year.
>
> That scale of delinquency could annoy voters, hard-pressed by their own costs,

> fears and stubbornly high unemployment despite Joe Biden's many promises.
>
> The tax offenders include employees of the U.S. Senate who help write the laws imposed on everyone else. They owe $2.1 million. Workers in the House of Representatives owe $8.5 million, Department of Education employees owe $4.3 million and over at Homeland Security, 4,697 workers owe about $37 million. Active duty military members owe more than $100 million.
>
> The Treasury Department, where Obama nominee Tim Geithner had to pay up $42,000 in his own back taxes before being confirmed as secretary, has 1,181 other employees with delinquent taxes totaling $9.3 million.
>
> As usual, the Postal Service, with more than 600,000 workers, has the most offenders (25,640), who also owe the most — almost $270 million. Veterans Affairs has 11,659 workers owing the IRS $151 million while the Energy Department that was so quick to dish out more than $500 million to the Solyndra folks has 322 employees owing $5 million.
>
> The country's chief law enforcement agency, the Department of Justice, has 2,069 employees who are nearly $17 million behind in taxes.

Even that leftist Warren Buffett's company is in court for unpaid taxes. Leftists are hypocrites, and when we here them talk, we need to keep in mind that this isn't how they live themselves. It's just posing and preening for admiration.

Douglas Groothuis lectures on the kalam cosmological argument

July 17, 2012 | by Wintery Knight | Link | Original Link

I watched lecture and it was excellent and comprehensive. He even talked about J.P. Moreland, Alan Padgett and other scholars. There were some things I had heard before, and some things that were new. He covered a lot of books that I had to read when I was sorting all of this stuff out, too.

Here's the description from the video:

> Doug Groothuis gives a lecture on the Kalam Cosmological Argument. What's interesting about this lecture is that Groothuis did not accept the Kalam Cosmological Argument at first but was later convinced by it.
>
> Notes:
>
> http://www.relyonchrist.com/Lecture/13.htm
> http://www.relyonchrist.com/Lecture/14.htm
>
> Kalam Cosmological Argument
>
> (Moreland, Scaling the Secular City; see also William Lane Craig, Reasonable Faith [Crossway, 1994]; Paul Copan and William Lane Craig, Creation from Nothing [Baker, 2004]; William Lane Craig and Walter Sinnott-Armstrong, God: A Debate Between a Christian and an Atheist [Oxford, 2004])
>
> Preliminary: concepts of (a) the actual infinite and (b) the potential infinite
>
> 1. The universe had a beginning
> 2. The impossibility of the actual infinite (distinguish from potential infinite)
> 3. The impossibility of traversing an actual infinite (even if it exists); forming an actual infinite through successive addition, piece by piece…
> 4. Scientific confirmation from Big Bang cosmology (absolute origination). See also John Jefferson Davis, "Genesis 1:1 and Big Bang Cosmology," in The Frontiers of Science and Faith (InterVarsity, 2002), 11 — 36; and Robert Jastrow, God and the Astronomers (revised ed., 1992).
> 5. Scientific confirmation from second law of thermodynamics.
> 6. Astronomer Fred Hoyle (who once advanced the steady state cosmology) argues against the universe being infinitely old in virtue of its hydrogen consumption. The argument can be stated as a modus tolens deduction (denying the consequent).
> 7. Can everything come from nothing without a cause? The "pop theory" (biting the metaphysical bullet)
> 8. Philosophical critique of everything from nothing…
> 9. God and time (see Greg Gansell, editor, God and Time: Four Views [InterVarsity, 2001])

> 10. Argument against an impersonal cause
> 11. Argument against God needing a cause (Bertrand Russell)
> 12. Quentin Smith's acceptance of Big Bang cosmology and denial of God's existence.
> 13. Unitary: Ockham's razor
> 14. Incorrigible, inextinguishable (having existed, God cannot fail to exist)
> 15. Personal, volitional ("personal explanation"—R. Swinburne)
> 16. Omnipotent: nothing is a greater expenditure of power than exnihilating the entire cosmos. This is rational to hold, given the argument.
> 17. Supplies the necessary conditions for impeccable and omnipotent goodness: (1) – (4). Need (5) moral argument and (6) the Incarnation for the final necessary condition, which, with (1) – (4), make for necessary and sufficient conditions.

What I liked about this lecture is that it kept my attention all the way through. It was very fun to listen to, because he considers a ton of alternative views and explains his view, which doesn't agree with Bill Craig all the way. There is a 17 minute Q&A period at the end.

The consequences of the feminization of education in the UK

July 18, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail. The article starts with an excellent explanation of what male teachers bring to the classroom when they are not regulated by politically correct feminists, using one Eric Sutton as an example.

Then there is this:

> Which brings me to the reason I'm taking a trip down Memory Lane today — the news that there has been a significant increase in the number of men training as primary school teachers.
>
> For the past 40-odd years, the feminisation of state education has been a disaster. There are more than 4,250 schools in Britain where not a single male teacher can be found in the staff room. The Eric Suttons of this world are as extinct as the stegosaurus.
>
> Coupled with the trendy, 'child-centred' teaching methods indoctrinated by Marxist training colleges, this has been responsible for a collapse in discipline and an alarming increase in illiteracy.
>
> Generations of boys have been utterly betrayed by the system set up to educate them — many written off as suffering from a bewildering array of fashionable 'hyperactivity disorders' and pumped full of mind-bending drugs simply because young female teachers have no idea how to control or inspire them.
>
> Mr Sutton didn't need Ritalin to bring an unruly child to order, just a well-aimed blackboard eraser.
>
> With no competitive sport to channel their physical excesses — a consequence of the pernicious 'all-must-have-prizes' culture identified by Melanie Phillips — and zero intellectual stimulation, young men are leaving school unsuited to the adult world.
>
> The rise in single motherhood and absentee fathers, coupled with a monopoly of female primary school teachers, means that countless thousands of boys reach puberty without having encountered a male role model, apart from the local 'gangstas'.
>
> Our sick society, which considers any man who wants to work with children to be a potential paedophile, has helped to turn primary schools into testosterone-free zones.
>
> A male teacher who volunteered to take young boys and girls swimming would be lucky to escape without a knock on the door from the nonce squad or a petrol bomb being lobbed through his front window.
>
> Those hardy male souls who have taken the plunge report hostility and

> ‘intimidation’ from all-female staff rooms — which tends to suggest they are probably not cut out for dealing with a class full of seven-year-old savages, either.
>
> All this combined with relatively low wages has conspired against encouraging any young family man to become a primary school teacher.
>
> The good news is that recent changes which allow teachers to earn a salary while they train in school have begun to attract more men into the profession. And the Government has launched a campaign to persuade male graduates to take up a career in primary education.
>
> The numbers applying have risen by 51 per cent, albeit from a low base.
>
> Eric Sutton would have approved.

Boys simply do not learn well from female teachers, and they especially don’t learn well when they are distracted by girls. Boys are in rapid retreat as a result of these policies. Not only that, but feminism’s emphasis on sex education and recreational premarital sex does nothing to encourage men to take on the traditional male roles and commit to a woman in order to get sex in the context of marriage. Much of the idiotic “man up” rhetoric on the right and left fails to recognize these three factors which discourage men from stepping into their roles as leaders, providers and protectors.

I think that more male teachers is a good sign for the success of boys in the UK, because boys who lack male leadership from fathers and teachers do not easily accept the roles that society needs them to play – including protecting, providing and leading on moral and spiritual issues. It’s nice to see that the UK is taking steps to come out of the long dark night of feminism, even as America dips further and further into it, with the decline of males aided by government intervention. Maybe the collapse of the traditional family needs to happen realize the harm that feminism has done to children, and especially to young men.

New Ernst and Young report: proposed tax increases will cost 710,000 jobs

July 18, 2012 | by Wintery Knight | Link | Original Link

Here's the news from The Hill:

> Allowing tax rates for the country's highest earners to rise, an idea endorsed by top Democrats, would have a dire effect on the economic recovery, according to a new report prepared for business groups that was released Tuesday.
>
> The study from Ernst & Young found that letting tax rates for the wealthiest Americans lapse would sap $200 billion and some 700,000 jobs out of the economy, reduce wages by 1.8 percent and lead to a decrease in investment.
>
> "These results may suggest to policy makers that allowing the top tax rates to increase comes with economic consequences," Ernst & Young's Robert Caroll and Gerald Prante wrote in the report for the Independent Community Bankers of America, the National Federation of Independent Business, the S Corporation Association and the U.S. Chamber of Commerce.
>
> "Long-run output can be expected to fall, and, depending on the use of the revenues, living standards, as reflected by workers‟ real after-tax wages, may also be lower."
>
> Top Republicans, including House GOP leaders and committee chairmen, jumped on the Tuesday report, as they continue to battle with President Obama and Democrats over how to proceed on tax issues and the broader fiscal cliff.
>
> Obama reiterated last week his plan to only extend the Bush-era rates for annual family incomes up to $250,000 for another year, a proposal many congressional Democrats have coalesced behind. Republicans on the Hill want to extend all current rates for a year.

The key findings are here on the House Ways and Means Committee's web site:

> **Lower wages, fewer jobs and less investment**
>
> - Output in the long-run would fall by 1.3 percent, or $200 billion in today's economy.
> - Employment in the long-run would fall by 0.5 percent, meaning roughly 710,000 fewer jobs in today's economy.
> - Capital stock and investment in the long-run would fall by 1.4 percent and 2.4 percent, respectively.
> - Real after-tax wages would fall by 1.8 percent, reflecting a decline in workers' living standards relative to what would have occurred otherwise.
>
> **Every state in the U.S. feels the impact of tax hikes**

> - The report, which offers a state-by-state look at the impact on economic output and employment, finds that every state is affected negatively by the tax increases contemplated by the Obama Administration.

Ernst & Young is one of the top financial firms in the world. The report is entitled "Long-run macroeconomic impact of increasing tax rates on high-income taxpayers in 2013".

Even though Obama has increased our debt by nearly 6 trillion in less than four years, that money hasn't created any jobs because government is not efficient at creating jobs that last. When you take money away from people who create jobs, you lose the jobs. Wasting money on green energy firms that go bankrupt is a great plan to pay back your campaign fundraisers, but it's not a good plan to create jobs. Bailing out labor unions with billions of taxpayer dollars so that they can create electric cars that catch fire is not the right way to create jobs, either. That's what the stimulus was – $800 billion dollars taken out of the hands of businesses and sent directly to Obama's allies. We need to get the government out of our business if we want job creation.

Obama ends welfare reform and calls for $12.7 trillion of new welfare spending

July 18, 2012 | by Wintery Knight | Link | Original Link

From the Heritage Foundation explains the 1996 Welfare Reform Act and its detractors. Excerpt:

> Last Thursday, the Obama Administration quietly issued new bureaucratic rules that overturned the popular welfare reform law of 1996. This was an illegal move, and it completely undoes years of progress that helped millions of Americans.
>
> The 1996 reform replaced the old Aid to Families with Dependent Children (AFDC) program with a new program called Temporary Assistance to Needy Families (TANF). At the core of the TANF program were new federal work standards that required able-bodied welfare recipients to work, prepare for work, or at least look for work as a condition for receiving aid. Welfare reform turned "welfare" into "workfare."
>
> Under the old, pre-reform AFDC program, welfare was a one-way handout: Government mailed checks to recipients who did nothing in return. Reform changed that. The new TANF program was based on fairness and reciprocal responsibility: Taxpayers continued to provide aid, but beneficiaries were required, in exchange, to engage in constructive behavior to increase self-sufficiency and reduce dependence.
>
> The TANF work requirements were not onerous. Under the law, some 40 percent of adult TANF recipients in a state were required to engage in "work activities," which is defined as unsubsidized employment, subsidized employment, on-the-job training, attending high school or a GED program, vocational education, community service work, job search, or job readiness training. Participation was part-time, 20 hours per week for mothers with children under six and 30 hours for mothers with older children.
>
> […]As welfare dependence fell and employment increased, child poverty among the affected groups fell dramatically. For a quarter century before the reform, poverty among black children and single mothers had remained frozen at high levels. Immediately after the reform, poverty for both groups experienced dramatic and unprecedented drops, quickly reaching all-time lows.
>
> None of this reduced the left's antipathy for welfare reform. The left had strongly opposed work requirements in welfare in 1996. When TANF faced reauthorization in 2001, they again aggressively sought to repeal federal work standards; they repeated the attack in 2006. For the most part, they lost those battles. But they were not done.
>
> […]Having lost repeated legislative battles to abolish workfare, the left has now

> gone backdoor, using an arcane bureaucratic device called a section 1115 waiver to declare the actual work standards written in the TANF law null and void and grant federal bureaucrats carte blanche authority to devise new replacement standards.

Now that we are in an election year, I expect to see a lot of promises by the Democrats of more and more handouts, bailouts and rewards to all of their various constituencies. And all paid for by the job creators in the private sector, and their hard-working employees. After all, “the private sector is fine” and “if you’ve got a business — you didn’t build that. Somebody else made that happen”.

One third of young women admits regret for the way they lost their virginity

July 18, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from UK Daily Mail.

Excerpt:

> A recent survey of teenage girls conducted by Glasgow University revealed that in Britain — which has the third highest number of sexually active 13 to 15-year-olds in the world (only Denmark and Iceland have more) — more than a third of young women regret their decision to have sex so early.
>
> A worrying 38 per cent of teenage girls regretted losing their virginity, and a fifth said they felt pressured to do so.
>
> […]…becoming sexually active at an early age can have devastating lifelong consequences, according to clinical psychologist Dr Michael Mantell. 'It's a psychological disaster waiting to happen,' he says. 'It leads to empty relationships and low self-worth.
>
> 'The experience creates worry, regret, self-recrimination, guilt, loss of self-respect, shaken trust, depression, stunted personal development, damaged relationships and relationship skills. It can also have a negative impact on marriage, should one ever take place.'
>
> […]'It has become the norm in our culture to be embarrassed if you have not had sex, as if there is something wrong with you, but, in my view, young people should be discouraged from rushing into it.'
>
> The prospects of pregnancy and sexually transmitted diseases loom large in underage sex. But psychological damage is just as real a threat, according to Dr Mantell.
>
> 'Having sex carries a sense of "being adult" for teenagers,' he says. 'This leads to the notion they can do other things that adults do, which is why data suggests teenagers who begin having sex at a significantly earlier time in their lives than their peers are more likely to engage in delinquent behaviour.'
>
> There are other worries too, says Dr Mantell. 'Girls who become sexually active in their teens are more than three times as likely to be depressed as those who don't.
>
> 'A girl's self-worth is often damaged and she can come to rely on external evaluations of herself — "If I looked better, he would have stayed longer," or "If I gave better sex, he would have wanted more."
>
> 'She knows she's been "used", which affects her ability to express affection and appreciation, and will always leave her wondering if it's only about sex, and not

> her own particular qualities.'
>
> […]Psychologist Dr Mantell says when a girl experiences sex early in life and free of commitment, she learns an erroneous message that sex means nothing. 'Her experience is that nothing happened as a result of her having sex, which creates the belief that sex and commitment have nothing to do with each other.
>
> 'Later this can be carried into marriage, where the girl may believe that sex is not an important part of marriage when, clearly, it is.'
>
> Dr Mantell says there is a physiological issue here, too. 'Oxytocin is a chemical released into the system with sexual behaviour and is often linked to pregnancy and breast-feeding. It bonds people, one to another. When a young woman has multiple partners, some studies suggest her level of oxytocin is diminished, which can have longer-lasting effects — such as leading to bonding difficulties in marriage.'

The article has multiple frightening examples of how specific women lost their virginity and then experienced negative outcomes. I really recommend that everyone click through to the story (I linked to the printable version of the story, so no ads) and then read the cases of Kristen and Kimberley.

William Lane Craig vs. John Shelby Spong on the resurrection of Jesus

July 19, 2012 | by Wintery Knight | Link | Original Link

William Lane Craig is the greatest Christian debater in the history of the church, and Episcopal Bishop John Shelby Spong is a very liberal non-Christian.

Part 1 of 2: (61 minutes)

Part 2 of 2: (42 minutes)

The moderator is none other than the famous journalist David Aikman! The opening speeches are only 15 minutes, and the rebuttals are 10 minutes. This debate is accessible because Craig's opponent is not really attacking him on a scholarly basis, but more as the pretty typical liberal atheist that you meet at work.

Craig spends all of his opening speech explaining historical methods, sources, dating and how he infers the resurrection as the best explanation of the minimal facts. The resurrection of Jesus is quite awesome to debate when people are given time to explain the historical methods and how the scholars use these methods to evaluate which facts are likely to be historical and which are not.

New study finds that boys benefit from bonding with Dads in first three months

July 19, 2012 | by Wintery Knight | Link | Original Link

First, an article from Dina from the UK Daily Mail.

Excerpt:

> Dr Paul Ramchandani, who led the Oxford University study, said behavioural problems in early childhood often lead to health and psychological problems in adulthood which can be difficult to overcome.
>
> But he said most research on how parents affect a baby's behaviour and development has focused on mothers, when fathers also play an important role. The research team recruited 192 families from maternity units and experts filmed the mothers and fathers separately as they played with their children at home in different situations – looking at how caring or engaged they were.
>
> The parents did psychological tests, while the children's behaviour was assessed examining whether they were fretful, disobedient, had tantrums or in the worst cases showed aggression by hitting and biting.
>
> 'We found that children whose fathers were more engaged in the interactions had better outcomes, with fewer subsequent behavioural problems,' said Dr Ramchandani.
>
> 'At the other end of the scale children tended to have greater behavioural problems when their fathers were more remote and lost in their own thoughts, or when their fathers interacted less with them.
>
> 'This association tended to be stronger for boys than for girls, suggesting that perhaps boys are more susceptible to the influence of their father from a very early age.'
>
> The study, which is published today in the Journal of Child Psychology and Psychiatry, found the three-month-olds with less engaged fathers were more likely to be in the 10 per cent of children who displayed the beginnings of behavioural problems at one year old.

This is surprising to me, and it conflicts with my idea of avoiding the little monsters until they are ready to learn apologetics at the age of 6. Now because of this study, I would have to be involved with the children right away, if I ever have any. Well, live and learn!

Now add to that study this article on single motherhood from the leftist New York Times that Stuart Schneiderman found.

Excerpt:

> The economic storms of recent years have raised concerns about growing inequality and questions about a core national faith, that even Americans of

humble backgrounds have a good chance of getting ahead. Most of the discussion has focused on labor market forces like falling blue-collar wages and lavish Wall Street pay.

But striking changes in family structure have also broadened income gaps and posed new barriers to upward mobility. College-educated Americans like the Faulkners are increasingly likely to marry one another, compounding their growing advantages in pay. Less-educated women like Ms. Schairer, who left college without finishing her degree, are growing less likely to marry at all, raising children on pinched paychecks that come in ones, not twos.

Estimates vary widely, but scholars have said that changes in marriage patterns — as opposed to changes in individual earnings — may account for as much as 40 percent of the growth in certain measures of inequality. Long a nation of economic extremes, the United States is also becoming a society of family haves and family have-nots, with marriage and its rewards evermore confined to the fortunate classes.

[…]About 41 percent of births in the United States occur outside marriage, up sharply from 17 percent three decades ago. But equally sharp are the educational divides, according to an analysis by Child Trends, a Washington research group. Less than 10 percent of the births to college-educated women occur outside marriage, while for women with high school degrees or less the figure is nearly 60 percent.

[…]While many children of single mothers flourish (two of the last three presidents had mothers who were single during part of their childhood), a large body of research shows that they are more likely than similar children with married parents to experience childhood poverty, act up in class, become teenage parents and drop out of school.

[…]Four decades ago, families in the top income fifth spent about four times as much as those at the bottom fifth on things like sports, music and private schools, according to research byGreg J. Duncan of the University of California, Irvine, and Richard J. Murnane of Harvard. Now affluent families spend seven times as much.

Two parents also bring two parenting perspectives. Ms. Faulkner does bedtime talks. Mr. Faulkner does math. When Ms. Faulkner’s coaxing failed to persuade Jeremy to try hamburgers, Mr. Faulkner offered to jump in a pool fully clothed if he took a bite — an offer Jeremy found too tempting to refuse.

While many studies have found that children of single parents are more likely to grow up poor, less is known about their chances of advancement as adults. But there are suggestions that the absence of a father in the house makes it harder for children to climb the economic ladder.

Scott Winship of the Brookings Institution examined the class trajectories of 2,400 Americans now in their mid-20s. Among those raised in the poorest third as

> teenagers, 58 percent living with two parents moved up to a higher level as adults, compared with just 44 percent of those with an absent parent.
>
> A parallel story played out at the top: just 15 percent of teenagers living with two parents fell to the bottom third, compared with 27 percent of teenagers without both parents.
>
> “You’re more likely to rise out of the bottom if you live with two parents, and you’re less likely to fall out of the top,” Mr. Winship said.

That article has some poignant illustrations of what fatherlessness does to a child.

Still think that single motherhood by choice is a great idea? Now if you were a legislator, tell me what legislation you would introduce to make sure that the government was encouraging fatherhood and discouraging single motherhood. How would you make marriage and fathers in the home easier for men, and single motherhood harder for women? It’s a policy problem – we have to change the incentives if we want to protect the children. How would you communicate to women that they need to get married before they have children, and how would you help them to know how to evaluate a man so that they can tell if he will make a good husband and father, and perform the traditional male roles in the family?

Doug Groothuis interviewed by Michael Brown on his radio show

July 19, 2012 | by Wintery Knight | Link | Original Link

Mary mentioned this radio show episode to me, and now I can share it with you, because the MP3 has been posted. You simply must listen to this inspiring interview.

Here's Dr. Groothuis' bio:

> Douglas R. Groothuis (Ph.D., Philosophy, University of Oregon) is professor of philosophy at Denver Seminary in Denver, Colorado. He has also been a visiting professor or adjunct faculty member at Fuller Theological Seminary (Colorado Springs extension), Metropolitan State College of Denver, Westminster Theological Seminary (California campus), University of Oregon, New College Berkeley and Seattle Pacific University.
>
> His articles have been published in professional journals such as*Religious Studies, Sophia, Theory and Research in Education, Philosophia Christi, Themelios, Think: A Journal of the Royal Institute of Philosophy, Christian Scholar's Review, Inquiry* and*Journal of the Evangelical Theological Society.* He has written several books, including *Truth Decay, In Defense of Natural Theology* (coeditor),*Unmasking the New Age, Jesus in an Age of Controversy, Deceived by the Light, The Soul in Cyberspace*, and, in the Wadsworth Philosophers Series,*On Pascal* and *On Jesus*. Read more here.

The MP3 file is here. (99 minutes, 57 Mb)

Here's a summary of the topics:

- the relationship between Christianity and philosophy
- which Christian thinker inspired Dr. Groothuis to study apologetics (it's Francis Schaeffer)
- is apologetics mandatory and non-negotiable for *every* Christian, or is it optional?
- what is fideism? is fideism Biblical? should Christians avoid education? are faith are reason opposed?
- was Jesus good at making logical arguments? was Jesus an intelligent person?
- how Christianity addresses the problems of purpose and meaning for individuals
- what are the major sections of Doug's new book on Christian Apologetics?

And there are questions from callers. The first question is on faith vs. knowledge, and what the Bible says about them. And there's another point about the importance and significance of Jesus' suffering, and how it fits in to the problem of evil and suffering. He talks about how an atheist professor is using his apologetics book as a text book at the very very secular University of Colorado at Boulder (blech!), and invited him to speak to his students. He contrasts Christian theism with naturalism and the role that science

plays in apologetics. He goes over the two best scientific arguments for God's existence.

Dr. Groothuis is on Facebook and Twitter. He has nearly 2500 Facebook friends and nearly 2000 Twitter followers. He is one of my favorite Christian scholars, because he has a worldview that fully integrates every topic you can possibly imagine. He is very, very evangelical – and not ashamed of it. A very passionate, authentic and influential Christian, who just happens to be a first class scholar and teacher. I think this interview has a very clear message, especially to young men: if you learn apologetics, God will use you. You will have adventures if you only take the time to arm yourself through study.

You can get a copy of Dr. Groothuis' "Christian Apologetics" book. It won the 2012 Christianity Today Award of Merit. I really recommend the book.

I also posted a lecture that Dr. Groothuis delivered on the kalam cosmological argument earlier in the week.

I am also a big fan of the interviewer, Dr. Michael Brown, who is solid on the same-sex marriage issue, and I have featured one of his debates on same-sex marriage before on this blog.

What is intelligent design? Dr. Stephen C. Meyer explains the theory

July 19, 2012 | by Wintery Knight | Link | Original Link

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell". (H/T Chris S.)

You can get an MP3 of the lecture here. (30 MB)

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell

- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive
- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

Proteins are constructed from a sequence of amino acids:

A sequence of amino acids forming a protein

Proteins sticking onto the double helix structure of DNA:

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

UPDATE: You can see Dr. Stephen C. Meyer debate Dr. Peter Ward as well.

Democrat Steny Hoyer: unemployment checks and food stamps stimulate the economy

July 20, 2012 | by Wintery Knight | Link | Original Link

Why are we in a recession? Maybe it's because the people running the country believe that unemployment checks and welfare are better than earned paychecks for "stimulating" the economy.

Here's CNS News to explain what Democrats are trying to achieve:

> House Minority Whip Steny Hoyer (D-Md.) said Tuesday that food stamps and unemployment insurance are the two "most stimulative" things you can do for the economy.
>
> During a pen and pad briefing with reporters on Capitol Hill, Hoyer was asked if any Democrats are "reconsidering the wisdom" of letting the Bush tax cuts expire at year's end for the top income earners given the still struggling U.S. economy.
>
> "I haven't talked to any who are of that mind," said Hoyer. "If you talk to economists, they will tell you there are two things that are the most stimulative that you can do — one's unemployment insurance, the other's food stamps, okay?"
>
> "Why is that?" he said. "Because those folks who receive those resources must spend them. And they'll spend them almost upon receipt. Most economists with whom I talk believe that those with significant discretionary income, that that's not the case."
>
> Unless action is taken by Congress, the Bush tax cuts will expire on Jan. 1, 2013. Originally enacted in 2001 and 2003, President Barack Obama and Congress renewed the cuts for all income-brackets for two years in 2010.
>
> […]The Congressional Budget Office (CBO has projected that if the Bush tax cuts are allowed to expire at the end of 2012, coupled with the defense cut sequester, it will lead to a 1.3 percent contraction in GDP after Jan. 1, 2013.

If the Bush tax cuts are allowed to expire, it is expected that 710,000 people will lose their jobs. This will achieve the Democrats goal of "stimulating the economy" with higher unemployment and more food stamps. This continues the Democrat plan of increasing the record number of people on welfare and food stamps. They will pay for this "stimulus" by adding more debt to the $8 trillion they have already run up since January 2007. The debt will be paid by young people and children. The real plan behind making millions of people dependent on government is, of course, to be able to buy their votes and to control them. Democrats are the anti-freedom party. You have too much freedom when you have a job. It leads to "inequality". If everyone received their daily bread from the government, and rode on mass transit to labor camps instead of driving in cars, and slept

in identical apartments with identical furniture and identical television programs to watch, then the world would be more equal. And equality is what Democrats want most.

So what is the Republican alternative plan for the economy? To let job creating businesses keep their own money and hire people to do work. Republicans want to stop taxing and regulating job creating businesses so that people can be put back to work, and have the confidence to spend money. That's how you stimulate the economy – we know this because it has worked for Reagan and Bush before. Obama's approach has *never* worked. The Democrats have been running the show since January 2007. And that's why we are down 5 million jobs since Steny Hoyer became the House Whip in January of 2007. This is not going to end until the Democrats are voted out.

Should abortion be legal? Scott Klusendorf vs Nadine Strossen

July 20, 2012 | by Wintery Knight | Link | Original Link

Abortion can be a complicated issue, but the nice thing about Scott is that he cuts right to the core of the debate and makes sure to clarify what each side is saying. He strips away the rhetoric and gets down to the real arguments on each side and the pro-life side comes out on top.

Relevant resources

Recently, Scott taught two classes on the techniques that he uses when debating abortion.

The first talk was on Tactics. Here is the PDF. In the handout, Scott explains how to use questions to make your opponent give reasons for their views instead of just asserting them.

The second talk was on Relativism. Here is the PDF. In the handout, Scott explains what moral relativism is, and some of the problems with the view.

You can find out more about Scott's organization, the Life Training Institute, on their web page. He is the #1 pro-life debater in the United States, in my opinion. I have met Scott, and he is someone I personally admire. His book "The Case for Life" is the best introduction to pro-life apologetics that you can get. With that book, *anyone* can learn to be confident and bold when defending the right of unborn children to live.

Should gay marriage be legal? Michael Brown vs Eric Smaw

July 20, 2012 | by Wintery Knight | Link | Original Link

This is a must-see debate! (And you can buy Michael Brown's new book here if you like it – I bought two copies)

About the debate:

> On April 21, 2011 at 7:30pm at UCF's Health and Public Affairs Building (Room 119), Rollins College professor, Dr. Eric Smaw and author and seminary professor Dr. Michael L. Brown will debate the question "Should same sex marriage be legalized in America?" The event will be held at 4000 Central Florida Blvd and is open to the public. After the formal portion of the debate, Brown and Smaw will field questions from the audience.

About the speakers:

> **Dr. Smaw** will be responding in the affirmative. He earned his Ph.D. in Philosophy of Law from the University of Kentucky in 2005. His areas of expertise are philosophy of law, international law, human rights, ethics, and modern philosophy. He has published articles on human rights, terrorism, and cosmopolitanism. His most recent publication is "Swaying in the Balance: Civil Liberties, National Security, and Justice in Times of Emergency".
>
> **Dr. Brown** will be responding in the negative. He earned his Ph.D. in Near Eastern Languages and Literatures from New York University and is a nationally known evangelical lecturer and radio host. He is the author of numerous scholarly articles and twenty books, including the recently published study "A Queer Thing Happened to America", which is quickly being recognized as the definitive work on the history and effects of gay activism on American culture.

Here are the first two parts:

Part 1 of 10:

Part 2 of 10:

The rest of the segments are here.

Summaries of the opening speeches

Summary of Dr. Brown's opening speech:

There is no compelling reasons by the state should change the definition of marriage

The reason the state conveys benefits for marriage is because marriage is beneficial for the state

Traditional marriage is recognized by the state for several reasons:
– it domesticates men

– it protects women
– it provides a stable, nurturing environment for children

Marriage has three public purposes:
– to bind men and women together for RESPONSIBLE procreation
– to get the benefit
– to provide children with two parents who are bonded to them biologically
– to create the next generation of people to keep the society going

Normally, opposite sex couples create children

Homosexual couples can NEVER create children together

Men and women are differences that are complementary

Monogamy is the norm for opposite sex couples.

For gay men, open relationships / cheating is the norm.
This is because women have a tempering effect on sexuality.

There is no evidence that recognizing same-sex civil unions and marriages have changed this trend.

Same-sex marriage guarantees that children will either not have a father or a mother
So which of the sexes is dispensable when raising children?

For example, consider Dawn Stefanowicz, who grew up with a gay father and no mother
She never got a chance to see a man model love and protect a women within a marriage
That makes an enormous difference in a woman's life – in the way she relates to men

Even with scientific advancements, every baby has a mother and a father

If we change the definition of marriage so that it is based on consent, then why limit it to just two people
If marriage is not the union of male and female, then why have only TWO people
In Canada, you have civil liberties lawyers arguing for for polygamy
In the United States, Professor David Epstein was in a consensual relationship with his daughter
Should incestuous relationships also be celebrated as marriage? Why not?
Should polyamorous relationships also be celebrated as marriage? Why not?

Sexual orientation is not the same as race
Men are women are different in significant ways, but different races are not
You need separate bathrooms for men and women, but not for people of different races

Summary of Dr. Smaw's opening speech: (He ended his speech after only 10 minutes)

You can redefine marriage so that it no longer based on the public purposes he mentioned (controlling procreation, fusing complementary male and female natures, providing children with mothers and fathers who are biologically linked to them, providing children with a comparatively stable development environment that offers comparatively less instability, promiscuity and domestic violence rates compared to cohabitation, etc.), but is instead based on consent and feelings, and that redefinition of marriage won't

open marriage up to polygamy, polyamory, etc.

If you like feminism, then you should allow same-sex marriage

If you like abortion rights, then you should allow same-sex marriage

Homosexuals participate in society by working at various jobs, so they are participating in society

Homosexuals should be given the same tax breaks as married people because they work at various jobs for money

Working at a job for money achieves the same public purpose as procreating and staying together to raise children in a stable environment

You can listen to the rest for the rebuttals, and cross-examination. Oh yes – there was cross-examination! It starts two thirds of the way through Part 5, if you want to jump to it. And sparks were flying! There is also Q&A from the audience of students.

This is such a great debate – I love to hear two passionate guys disagreeing about something. I love to hear both sides of the issues. There is always something to learn by listening to the other side. It makes me more effective and more tolerant when I stand up to defend my side of the argument.

By the way, my own secular case against same-sex marriage is right here, if you want to see how I would debate this issue. Also check out the recent studies on the effects of gay parenting on children.

Friday night movie: The Quiet Man (1952)

July 20, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [8.2/10]

IMDB median rating: [9/10]

Description:

> John Ford's The Quiet Man celebrates one of Hollywood's most romantic and enduring epics. The first American feature to be filmed in Ireland's picturesque countryside, Ford richly imbued this masterpiece with his love of Ireland and its people. Sean Thornton is an American who swears off boxing after accidentally killing an opponent. Returning to the Irish town of his birth, he finds happiness when he falls in love with the fiery Mary Kate. Though he is sorely tempted to pick up the gloves against her brother, the town bully, Sean is determined not to use his fists. Mary Kate and Sean wed but her brother refuses to pay the dowry. Sean would rather walk away than accept this challenge. Even when his new wife accuses him of cowardice, Sean stands firm. But when she boards a train to leave, he is finally ready to take matters into his own hands.

Happy Friday!

Do gun-free zones prevent incidents like the Colorado theater shooting?

July 21, 2012 | by Wintery Knight | Link | Original Link

"Dang. Now what do we do?"

Do criminals about to do a mass shooting care about signs?
(Thanks to TM for the image)

In light of the shooting at the Colorado theater, which is apparently a gun-free zone, I want to review why I think that gun-free zones should be renamed slaughterhouse zones.

Here's Dr. John R. Lott to make the case.

Excerpt:

> It wasn't supposed to happen in England, with its very strict gun-control laws. And yet last week, Derrick Bird shot twelve people to death and wounded eleven others in the northwestern county of Cumbria. A headline in the London Times read: "Toughest laws in the world could not stop Cumbria tragedy."
>
> But surely this was an aberration. Because America has the most guns, multiple-victim public shootings are an American thing, right? No, not at all. Contrary to public perception, Western Europe, most of whose countries have much tougher gun laws than the United States, has experienced many of the worst multiple-victim public shootings. Particularly telling, all the multiple-victim public shootings in Western Europe have occurred in places where civilians are not permitted to carry guns. The same is true in the United States: All the public shootings in which more than three people have been killed have occurred in

> places where civilians may not legally bring guns.
>
> Look at recent history. Where have the worst K–12 school shootings occurred? Nearly all of them in Europe. The very worst one occurred in a high school in Erfurt, Germany, in 2002, where 18 were killed. The second-worst took place in Dunblane, Scotland, in 1996, where 16 kindergartners and their teacher were killed. The third-worst, with 15 dead, happened in Winnenden, Germany. The fourth-worst was in the U.S. — Columbine High School in 1999, leaving 13 dead. The fifth-worst, with eleven murdered, occurred in Emsdetten, Germany.
>
> It may be a surprise to those who believe in gun control that Germany was home to three of the five worst attacks. Though not quite as tight as the U.K.'s regulations, Germany's gun-control laws are some of the most restrictive in Europe. German gun licenses are valid for only three years, and to obtain one, the person must demonstrate such hard-to-define characteristics as trustworthiness, and must also convince authorities that he needs a gun. This is on top of prohibitions on gun ownership for those with mental disorders, drug or alcohol addictions, violent or aggressive tendencies, or felony convictions.
>
> The phenomenon is not limited to school attacks. Multiple-victim public shootings in general appear to be at least as common in Western Europe as they are here. The following is a partial list of attacks since 2001. As mentioned, all of them occurred in gun-free zones — places where guns in the hands of civilians are outlawed.

He then lists about two dozen incidents – all occurring in gun free zones.

The Elusive Wapiti updates his “Marry a Zealot” post

July 21, 2012 | by Wintery Knight | Link | Original Link

The Elusive Wapiti updates his marital advice for young Christian men.

He begins like tis:

> Ten months ago, I published the second installment in the ‘Advice to My Sons’ series, titled “Marry a Zealot“, in which I exhort them and others to become fervent Believers–and seek out other Believers as mates–to best insure them against the ravages of divorce should they marry.
>
> The point of that post was to highlight the additional protection that serious religious conviction, as indicated by active religious attendance, provides them against divorce, an important consideration for men in the post-Christian West nowadays. By way of contrast, a secondary point of that post was to show that mere self-identification or occasional participation in religious services exposed a fellow of the marrying kind to greater risk of marital disruption than if he and/or his wife had no religious affiliation at all.
>
> Since the link to the pdf that supported that post has since disappeared, I did some spadework to recover the data that supports this advice. I was able to locate it here, on page 9 of the scholarly article Bad News about the Good News–The Construction of the Christian-Failure Narrative, *Journal of Religion & Society*, volume 14. The article drew the data shown in the following tables from the General Social Survey, 1980-2009.

His main concern is how religious belief correlates with divorce.

Here shows the evidence then says this:

> When one takes one’s faith seriously enough to put it into action, as measured in this case by attending church at least once per week, this behavior appears to yield anti-divorce benefits. Yet I am thoroughly unimpressed with a 38% divorce rate for Evangelicals, a group whose noisy claims to family values are belied by their itchy dissolutive trigger fingers. Moreover, the picture for active black Protestants remains dark and grim; their marriages garner no protection whatsoever from church attendance. The data for Roman Catholics is much more encouraging, and it seems that the RCC has been more effective than Protestant denominations at countering the scourge of divorce. Perhaps the theological rigidity and hierarchical structure associated with Marianism makes it less vulnerable to socio-political contagions like feminism and divorce, while the, ahem, diversity, of Protestantism makes it more prone to worldly influences.

I think that it is a good idea in general for young men to not leave marriage at the level of feelings. I have posted before a list of questions to find out if a woman is a zealot. I think that young Christian men should read Wapiti’s post and then my post and then act

accordingly.

Be your child's parent first, and not just their friend

July 22, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail.

Excerpt:

> A generation of children are growing up badly behaved because their parents are too afraid to discipline them, a leading clinical psychologist and broadcaster has warned.
>
> The rise of the so-called 'friend-parent' – who tries to be their child's equal rather than their boss – means youngsters are approaching adolescence ill-equipped for the read world, according to Professor Tanya Byron.
>
> Professor Byron, who featured on the BBC series House of Tiny Tearaways, said she is treating children at her clinic with behavioural problems as a direct result of such parenting tactics.
>
> She said: 'Children as young as six are brought to my clinics by parents who are anxious that any time they try to set a boundary, the child becomes distressed.
>
> 'In this age of the "friend-parent", such children are then swaddled, protected and essentially regressed for fear of upsetting them.'
>
> She said parents are so preoccupied with getting their children on their side that they are waiting on them hand and foot – denying them important life skills.
>
> […]**She warned that without boundaries and chores, a child's development could be impaired.**

Here's something about the importance of having a stay-at-home mother who is engaged in educating the children and forming their character:

> Psychologist Dr Aric Sigman said the 'friend-parent' phenomenon could be explained by the fact that women are choosing to start families when they are older.
>
> He said: 'There is the feeling that by saying "no" to your children or being in charge somehow damages your relationship with them.
>
> **'Parents today, in particular mothers, are much older than ever before. They are also likely to be working as well.**
>
> **'The result is children are seeing their parents for less hours a day, so if the children start displaying challenging behaviour because they haven't had the attention they need, they feel guilty and let it go, rather than disciplining them for it and risk them getting upset.'**

Definitely the permissiveness of working mothers and the marginalization of fathers in the home is a huge factor in explaining why children are so immature.

This article makes me think about the way that I am always trying to lead other Christians and get them to read more, learn more and carry out better plans so that they are more effective as Christians. I like to push them in a particular direction, give them rewards for progress, and set boundaries to keep them on the path. If they are going off the path, then I feel justified in disciplining them by removing privileges or rewards and giving them the silent treatment, etc. Some people call that bullying – but it's really just leading. And that's what parents do – they are tough about leading their children to grow stronger.

It is very important that parents have a vision for what they want their children to achieve, and then take the time to set up and explain boundaries for, using evidence so that the boundaries are not viewed as arbitrary. Parents should be leading the children using structured activities so that the right views are formed and confirmed by experience. Spending time with children is important so that they know that you care about them. That will not happen by accident, it takes study to know how to be convincing, and it takes planning to engineering activities that will give someone the experiences they need to see what the things that we want them to believe are true.

It’s worse to be raised by a single mother than a married couple, even if you’re not poor

July 22, 2012 | by Wintery Knight | Link | Original Link

Here’s one of my favorite sociologists W. Bradford Wilcox writing about single motherhood in the left-leaning Slate.

Excerpt:

> Take two contemporary social problems: teenage pregnancy and the incarceration of young males. Research by Sara McLanahan at Princeton University suggests that boys are significantly more likely to end up in jail or prison by the time they turn 30 if they are raised by a single mother. Specifically, McLanahan and a colleague found that boys raised in a single-parent household were more than twice as likely to be incarcerated, compared with boys raised in an intact, married home, even after controlling for differences in parental income, education, race, and ethnicity. Research on young men suggests they are less likely to engage in delinquent or illegal behavior when they have the affection, attention, and monitoring of their own mother and father.
>
> But daughters depend on dads as well. One study by Bruce Ellis of the University of Arizona found that about one-third of girls whose fathers left the home before they turned 6 ended up pregnant as teenagers, compared with just 5 percent of girls whose fathers were there throughout their childhood. This dramatic divide was narrowed a bit when Ellis controlled for parents’ socioeconomic background—but only by a few percentage points. The research on this topic suggests that girls raised by single mothers are less likely to be supervised, more likely to engage in early sex, and to end up pregnant compared with girls raised by their own married parents.
>
> **It’s true that poorer families are more likely to be headed by single mothers. But even factoring out class shows a clear difference. Research by the Economic Mobility Project at Pew suggests that children from intact families are also more likely to rise up the income ladder if they were raised in a low-income family, and less likely to fall into poverty if they were raised in a wealthy family. For instance, according to Pew’s analysis, 54 percent of today’s young adults who grew up in an intact two-parent home in the top-third of household income have remained in the top-third as adults, compared with just 37 percent of today’s young adults who grew up in a wealthy (top-third) but divorced family.**
>
> **Why is this? Single mothers, even from wealthier families, have less time. They are less likely to be able to monitor their kids. They do not have a partner who can relieve them when they are tired or frustrated**

> **or angry with their kids. This isn't just a question of taking kids to the array of pampered extracurricular activities that many affluent, two-parent families turn to; it's about the ways in which two sets of hands, ears, and eyes generally make parenting easier.**

I think that people who think that it is hatred and bigotry to say that there should be rules around marriage and sex understand the reasons for these moral boundaries. We are trying to protect the children, and so we have boundaries about who can have sex and who can get married. Children need a mother and a father, and we need to promote and celebrate that as marriage, and not anything else. We should be rewarding people for getting married and staying married.

Pro-lifers should not condone premarital sex as a pathway to marriage

July 22, 2012 | by Wintery Knight | Link | Original Link

Mike Adams on abortion: click for larger image.

Professor Mike S. Adams is pro-life, but he posted something on Facebook that I must disagree with.

He posted this:

> Over 80% of post-abortive women said they would have had the baby if the guy had been supportive. Five guys find out their girl is pregnant: The first two pressure abortion, the third walks away or was never present, the fourth sticks around for 80 to 120 days, and the fifth steps up totally. This not a woman's problem. It is a lack-of-manhood problem.

Mike has about 5000 friends, and 44 of them liked it. I would think that most of these people would call themselves pro-life conservatives. But I don't think what he posted promotes the pro-life cause.

I replied to him with this:

> Mike I could not disagree more. It's a woman's problem unless it is rape, since the woman consents to sex with a man she is not married to. In fact, the cause of abortion is YOUR opinion – namely, the opinion that women should not be obligated to be chaste or to think rationally about who they are having sex with. There is a path to marriage that goes through courtship, and that path has a name: self-control. Stop enabling the poor choices of women, because we have to stop the murder of unborn children.

Many of Mike's friends supported him. So I wrote this:

> Wow. I had no idea that so many of Mike's friends think that the Bible is a pack of lies when it says that fornication is morally wrong. I guess you guys aren't Christians then, since you feel so free and easy about revising the Bible when you feel like it.
>
> If fornication is wrong, it's wrong for women AND men. And you don't fornicate and then expect happy outcomes from it. There is a word for a person who sins and then expects a good outcome. A FOOL.

Then Mike replied to me:

> Sorry Wintery. Where I come from the man leads and is, therefore, responsible.

I replied to that with this:

> Mike, I agree with male leading – IF the man is a Christian. But the men that these women chose are not Christians. And you can't expect men to act morally unless they have a theistic framework that grounds morality.
>
> Women should not be told, by you and others, that they can choose to have sex with immoral men and then expect the immoral men to act morally. That is just enabling abortion by justifying a lack of prudence and wisdom. Instead, we should be holding women accountable to choose men who WILL control themselves.
>
> We should not be supporting the fantasy view of love that says that recreational sex magically leads men to commit to protect, provide and lead women for life. That view is neither wise nor Biblical. On the contrary, recreational sex leads men to NOT commit. Women have to learn how to select men, to evaluate them for marriage, and to make them prove themselves. We need to tell men AND women that sex before marriage is morally wrong. And we need to be convincing by showing them how recreational sex does not lead to stable marriages, and puts children, unborn and born, in harm's way. Telling the truth about the danger of premarital sex is the best way to stop the killing of unborn children.
>
> Here's an example to make the point. We do not blame bears for mauling campers. Bears are bears, and they were bears before the campers showed up in their cave. We ought to blame the camper for choosing to wander off the trail and into the bear's den in order to PET THE BEAR. Wild bears may eat free food that is offered to them, but they are not going to let you pet them and hug them. Women, like campers, need to be responsible. They need to choose the right man for marriage. They need to exercise self control. They need to make the man prove his ability to commit and support a family BEFORE they have sex with him. No one hires an employee without understanding what job they need done and then making sure that the candidate they choose can do the job. And that's what we need to tell women.

Obviously, I was a little upset when I wrote that, but I hope it wasn't *too* bad.

So what's the point I was trying to make by being critical of Mike? I think the problem we have today is that men who are pro-life are unwilling to hold women accountable for their own poor decisions about sex and marriage. Basically, conservative and/or Christian men think that women don't need to think through what choices are most likely to avoid abortion and most likely to achieve marriage. These men give tacit approval to the popular trend of trying to achieve marriage through premarital sex (or cohabitation), when the research shows that these behaviors do not result in long-lasting stable marriages. In fact, sex out of wedlock is a good way to get into a situation where an

abortion will occur.

In my view, Mike is ainadvertently *encouraging* women to get into the situations where they will be pressured to abort by reinforcing the idea that there is nothing wrong with their plan to achieve marriage by having premarital sex (or cohabitating), and then *expecting* men to respond to their pregnancy by MARRYING them. Mike seems to be telling women that it is normal for them to expect that marriage will follow from premarital sex with men who have not been vetted for the roles of provider, protector and leader As if marriage is natural for men who don't even have jobs and who are surrounded by women willing to have sex with them on the first date. Any man who will have recreational premarital sex with a woman is exactly the kind of person who *will not* commit to lifelong providing and fidelity – he is having sex before marriage because he wants recreation, without the commitment and self-sacrifice that marriage requires. Rationally speaking, it makes no sense for men to buy the cow, and to keep buying the cow with 40 years of labor, when they can get the milk for free. And that's what we need to tell women – think with your minds, not with your emotions.

Here is an interesting statistic from Relevant Magazine:

> [A] recent study reveals that 88 percent of unmarried young adults (ages 18-29) are having sex. The same study, conducted by The National Campaign to Prevent Teen and Unplanned Pregnancy, reveals the number doesn't drop much among Christians. Of those surveyed who self-identify as "evangelical," 80 percent say they have had sex.
>
> […]In addition to having premarital sex, an alarming number of unmarried Christians are getting pregnant. Among unmarried evangelical women between the ages of 18 and 29, 30 percent have experienced a pregnancy (a number that's actually 1 percent higher than among those who don't claim to be evangelical).
>
> According to the Guttmacher Institute, nearly half of all pregnancies in America are unintended. And of those, 40 percent end in abortion. More than 1 million abortions occur in the United States each year. **But perhaps the most disturbing statistic for the Church: 65 percent of the women obtaining abortions identify themselves as either Protestant or Catholic (37 percent Protestant and 28 percent Catholic). That's 650,000 abortions obtained by Christians every year.**

Christian women are not told that premarital sex is wrong by many Christians and conservatives – and out of that refusal by "Christians" and "conservatives" to take a stand, we get 650,000 abortions per year. We need to have more courage to tell women to be more self-controlled and responsible when they choose who to have sex with, and when to have sex. We need to tell women to make good decisions that lead to stable marriages. We need to tell women to study these issues and to support policies that produce strong, moral men who are willing to marry – for example, by reforming education so that our schools produce men who can find jobs, perhaps by having more

male teachers in the classroom. We need to tell women to support policies that make marriage more friendly for men, like abolishing no-fault divorce, and promoting shared parenting. Christians in particular need to counteract the views of love and romance that are prevalent in popular culture with a view of relationships built around chastity and love. Although many people today are uncomfortable with moral absolutes and moral judgments, it would be a good be a good idea for women to promote these things, so that the men they are choosing from are more moral.

In the end, I agree with Mike S. Adams in one respect. Abortion *may* be caused by a lack of manhood problem. Only the lack of manhood doesn't come from the men that women choose to have premarital sex with. The lack of manhood comes from men who refuse to hold women accountable for their own free foolish decisions that put unborn children in harm's way. In addition to the abortion problem that results from those foolish decisions, there is also the explosion in out-of-wedlock births to weigh in the balance. Again, the more people tell women that they should expect men who engage in recreational sex to commit to marriage after premarital sex (or cohabitation), the more fatherlessness we get.

Giddy up, Mike.

Three men shot while shielding their girlfriends during Aurora, Colorado shooting

July 23, 2012 | by Wintery Knight | Link | Original Link

From the NY Daily News. (H/T Doug G. and Joe C.)

Here's one of the stories:

> Three survivors of the Colorado movie-theater massacre escaped with minor wounds, but were left with broken hearts because their heroic boyfriends died saving them.
>
> In final acts of valor, Jon Blunk, Matt McQuinn and Alex Teves used their bodies to shield their girlfriends as accused madman James Holmes turned the Aurora cineplex into a shooting gallery.
>
> Blunk's girlfriend, Jansen Young; McQuinn's girlfriend, Samantha Yowler; and Teves' gal pal Amanda Lindgren made it out of the bloodbath — but they would have been killed had it not been for the loves of their lives.
>
> "He's a hero, and he'll never be forgotten," a tearful Jansen Young told the Daily News of Blunk. "Jon took a bullet for me."
>
> […]Jansen Young, 21, said Blunk took her to see Friday's midnight premiere of "The Dark Knight Rises" to celebrate her graduation from veterinarian school. As the black-clad killer burst into the theater and unleashed tear gas and a torrent of indiscriminate gunfire, Blunk selflessly protected his girlfriend.
>
> He pushed Jansen on the ground and under her seat, then threw his body on top of her, the mother said. "He was 6-feet-2, in incredible shape, which is why he was able to push her down under the seats of the theater," the mother said. "He pushed her down on the floor and laid down on top of her and he died there."
>
> […]Equally heroic was the 24-year-old [Alex] Teves, who hurled his girlfriend to the floor as bullets whizzed through the theater.
>
> "He pushed her to the floor to save her and he ended up getting a bullet," said his aunt, Barbara Slivinske, 57. "He was gonna hit the floor himself, but he never made it."
>
> […]Samantha Yowler had a similar story of horror and heroism about her boyfriend, Matt McQuinn, whose last living act was to shield her from death. Yowler, 26, survived with a gunshot wound to the knee and is in fair condition after undergoing surgery.

This makes me sad, that self-sacrificial men should be killed by a criminal like this. It would have been better all around if the movie theater allowed the three heroes to carry their own weapons so that they could have shot back at the criminal. Not only would that have saved lives, but it would have deterred the assailant from even trying such a course

of action. This story shows what we have to pay as a society when we prevent innocent law-abiding people from defending themselves from violent crooks.

Are people who don't pay any federal taxes "paying their fair share"?

July 23, 2012 | by Wintery Knight | Link | Original Link

The top 20% paid 94.1% of all income taxes in 2009

From Investors Business Daily.

Excerpt:

> The proportion of those paying no income taxes continues to hit higher highs — a trend that will ultimately make lowering taxes and reducing government impossible.
>
> For decades, "fairness" has been liberal Democrats' outcry against demands for lower taxes. The rich, President Obama endlessly contends, don't pay "their fair share."
>
> It's about as far from the truth as you can get. As the Congressional Budget Office showed in a new report on the distribution of household income and federal taxes, the rich are getting hit by the taxman harder than ever.
>
> As CNBC reporter Robert Frank put it, the top 1% that Obama complains about "paid an average effective tax rate of 28.9% on their income — far more than any other group, and more than twice the average effective rate of the middle class, who paid 11% on average."
>
> Beyond that, however, is the fact that more Americans who are nowhere near to being rich are paying no taxes at all on the money they take in — which means they have no interest in getting our ever-expanding government leviathan under control.
>
> A new study from the Tax Foundation found the number of those filing tax returns who pay no income taxes now numbers over 58 million, amounting to a staggering 41% of all tax returns. Compare that with 1990, when only about 21% of tax returns were found to have no tax liability.

> What's more, the median income of these nonpayers has increased by 40% in just nine years. "The threshold at which a typical married couple with two children will likely be a nonpayer is now $47,000," the Tax Foundation found.

It's remarkable to me that people complain about the rich not paying taxes. The rich are the only ones who pay taxes. Half the country has no federal tax liability *at all*. The top 50% of taxpayers are paying almost ALL the federal taxes. According to the Congressional Budget Office data in the image above, the top 20% of taxpayers paid 94.1% of all taxes. That data is echoed by data from the Internal Revenue Service.

Is that fair?

How can anyone look at these numbers and honestly claim that "the rich", by which the leftists mean the most productive entrepreneurs and workers, are "not paying their fair share" of taxes? THEY ARE THE ONLY ONES WHO PAY TAXES.

Christians and social justice: is redistribution of wealth good for the poor?

July 23, 2012 | by Wintery Knight | Link | Original Link

Discovery Institute fellow Jonathan Witt pens this article in the American Spectator on the Gospel, business and social justice.

Excerpt:

> The third term, *social justice*, is unlike the other two in its having a justifiable raison d'être. It stretches back to 19th century Catholic social thought and was used in the context of nuanced explorations of law, ethics, and justice. Unfortunately, this nuance and precision usually falls away in popular usage, and the term has been co-opted by the left to imply that ordinary justice is a mere tool of the ruling elite, with the real deal being "social justice."
>
> This impoverished meaning needs to be addressed. If a society extends justice to the rich and well-connected but allows the poor to be bullied and swindled by corrupt players inside and outside of the government, the problem isn't unsocial justice but a lack of justice. If the poor in many developing nations can't get access to credit or the courts because they can't register their businesses, and they can't register their businesses because they don't have the bribe money and connections to navigate a byzantine regulatory maze, the problem is injustice, plain and simple. Such a society doesn't need a social brand of justice any more than a poor neighborhood without stores needs a *social grocery store*. The neighborhood needs an ordinary grocery store, and the unjust society needs basic justice. Grocery stores and justice are already intrinsically social.
>
> More than accurate semantics is at stake here. Often the popular call for "social justice" boils down to an ill-conceived call for coercive wealth transfers — for instance, getting rich countries to transfer more of their tax revenues to the governments of poor countries as foreign aid. It'd be nice if this approach actually helped the poor, since we've been using it for the past 60 years. Unfortunately, the statistical and narrative testimony on this strategy hovers between mixed and scandalous.
>
> The reasons for this are complex but not so complex as to excuse the status quo. Much of the aid money gets quietly funneled into the pockets of corrupt politicians. In other cases the aid money reaches its intended target but, since the aid money is fungible, it still supports bad actors. It does so by freeing a regime of the political necessity of paying for the schools, road projects and emergency relief already covered by the foreign assistance. This, in turn, allows the regimes to spend more of their tax revenues for enhancing their own wealth and power.
>
> Worse, the small fraction of aid money that actually reaches its intended

> destination often puts indigenous producers out of business, since it's difficult to compete against free goods from abroad. Haiti's rice farmers, for instance, once exported rice, but today their livelihoods have been all but wiped out by subsidized U.S. rice dumped on the country as foreign aid.
>
> Add to all of this international "social justice" the devastating cultural effects of America's welfare state. The neighborhoods flooded with 50 years of this domestic "social justice" now face far higher levels of criminal injustice and anti-social behavior than before the justice arrived.
>
> Much of the problem stems from welfare's effect on the institution of the family. The percentage of children being raised by both of their biological parents in America's poorest neighborhoods used to be low and fairly comparable to what was found in middle and upper class neighborhoods, but the Great Society programs of the 1960s changed that.
>
> As George Gilder put it in *Wealth and Poverty*, the underclass husband and father was "cuckolded by the compassionate state," a violation which has incited "that very combination of resignation and rage, escapism and violence, short horizons and promiscuous sexuality that characterizes everywhere the life of the poor."
>
> Yale University sociologist Elijah Anderson put it almost as bluntly in a 1989 journal article: "It has become increasingly socially acceptable for a young woman to have children out of wedlock — significantly, with the help of a regular welfare check."
>
> The plain testimony of history is that the left's strategy for saving the poor has been a tragic failure. It has stifled development in poor countries, bred a fatherless underclass in the United States, and all but bankrupted the European Union. Cloaking all of this in the guise of "social justice" serves only to perpetuate the tragedy.

It turns out that the very people who cry the loudest about wanting to help the poor – by redistributing wealth from those who produce to those who don't – are the ones who incentivize people to make decisions that will make them poorer and expose them to more violence. Sure, there is a certain amount of uncertainty in life, but when you reward failure and punish success, you get more takers and fewer makers. The alternative to taxation and redistribution is to leave wealth in the hands of the individuals and businesses and trust them to make the decision about sharing. When businesses pay less in taxes, they expand – and more people start up new businesses, because they are attracted by the chance to make higher profits. Although letting individuals and business keep their own money is frowned on by the secular left, that's because they themselves project their tendency not to give to charity and create jobs onto everyone else. They don't understand charity and entrepreneurialism, that's why they take money away from people who work and who create wealth.

I do want to say one other thing. I find it troubling when Christians present themselves to me as being social conservative, and fiscally liberal. There is no such thing as a social

conservative and a fiscal liberal. If a person demands that the state provide cheese sandwiches to the children of single mothers in public schools, then it creates more of an incentive to become a single mother, and less of an incentive to marry. That redistribution *lowers* the cost of single motherhood and *raises* the cost of marriage. It has been shown that single motherhood is the leading cause of child poverty – so why would we put into place incentives that encourage people to not make good decisions about sex? Why subsidize people who refuse to exercise self-control in sexual matters? Why make it encourage people to inflict fatherlessness on their own innocent children? Marriage is correlated with increased safety for women and children. Lowering the moral standards and paying people to make mistakes *isn't good for them*. And it's *not good for their children*.

The more you tax those who produce, the fewer of them you get. And the more you subsidize those who collect, the more of them you get. When men see themselves as slaves of the state – working only to be plundered – they stop working and they stop marrying. Why would a man work to feed the children of someone who could not even bother to get married before having babies? Why would a man get married knowing that half of what he earns will go to the state? Let families keep more of their own money, so that families are empowered – and not government. Let families keep their own money so they decide how to spend it, instead of depending on government. Let single mothers have to face the cost of their decisions. Let them ask charities for help, not the government. When people have to ask their neighbors for help, they know that they have done wrong, and that the money they get came from someone who worked for it. That is not there when government taxes and writes them a no-guilt check. Then it's an entitlement, and they don't learn their lesson.

Instead, let individuals and businesses make the decision to help those who *they think* are truly willing to try to improve their lot in life. Those are the ones who need support. When you leave wealth distribution to the government, no one is there to make those moral judgments. And it's worse than that. When government takes over industries like health care, they are often supported by naive pro-lifers who think that wealth redistribution is compassion. But a secular government has no interest in women who stay home to raise their children – they want women to get out into the work force and pay income taxes. A single-payer health care system is *always* going to be pro-abortion for that reason. And any pro-lifer who votes "with their heart" for single-payer health care is a fool. They are, in effect, pro-abortion. Think before you vote.

Marriage researcher Brad Wilcox's lecture on marriage and society

July 24, 2012 | by Wintery Knight | Link | Original Link

There are two parts. The lecture and then the Q&A.

Let's learn a bit about Brad first:

> W. Bradford Wilcox is Director of the National Marriage Project at the University of Virginia, Associate Professor of Sociology at the University of Virginia, and a member of the James Madison Society at Princeton University.
>
> He earned his undergraduate degree at the University of Virginia and his Ph.D. at Princeton University. Prior to coming to the University of Virginia, he held research fellowships at Princeton University, Yale University and the Brookings Institution.
>
> Mr. Wilcox's research focuses on marriage, parenthood, and cohabitation, and on the ways that gender, religion, and children influence the quality and stability of American marriages and family life. He has published articles on marriage, cohabitation, parenting, and fatherhood in *The American Sociological Review, Social Forces, The Journal of Marriage and Family* and *The Journal for the Scientific Study of Religion*. His first book, *Soft Patriarchs, New Men: How Christianity Shapes Fathers and Husbands* (Chicago, 2004), examines the ways in which the religious beliefs and practices of American Protestant men influence their approach to parenting, household labor, and marriage. With Nicholas Wolfinger, Wilcox is now writing a book titled, *Soul Mates: Religion, Sex, Children, & Marriage among African Americans and Latinos*, for Oxford University Press. With Eric Kaufmann, Wilcox is finishing a book on the causes and consequences of low fertility in the West.

The MP3 file for the lecture is here.

The MP3 file for the Q&A is here.

This lecture covers marriage, cohabitation, single parenthood and divorce.

24-year old woman dies during abortion at Planned Parenthood clinic

July 24, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from CBS News.

Excerpt:

> The family of a Chicago woman who died after an abortion at Planned Parenthood says it wants answers about her death.
>
> Tonya Reaves, 24, died late Friday night from a hemorrhage, with a cervical dilation and evacuation, as well as an intrauterine pregnancy as contributing causes, according to the medical examiner's office.
>
> She died after she'd had an abortion at Planned Parenthood at 18 S. Michigan Av, according to the medical examiner's office.
>
> Her death was ruled an accident, but the Reaves family wants to know more, especially Tonya's twin sister Toni.
>
> "We were born the same day. She was my other half," Toni said.
>
> Toni Reaves said the family is trying to get through this.
>
> "It happened so fast. She was just fine one day and then the next day she was gone. We're just trying to figure out what happened… what happened," she said.
>
> Toni Reaves said her sister was engaged to be married and had one son – Alvin – who just had his first birthday.
>
> In a written statement, Planned Parenthood of Illinois CEO Carole Brite said "We were shocked and saddened upon learning of a tragic development at a nearby hospital. Our hearts go out to the loved ones of this patient.

It's stories like this that confirm to me that sex is something that really should be reserved for marriage. It is just horribly unnatural to get pregnant and then kill your own child. That's not what people do when they get pregnant. It's remarkable to me that so many people could honestly believe that killing an innocent human being could somehow be a legitimate way to end a pregnancy.

And if the risk of dying isn't bad enough – there are other complications, too.

Abortion isn't safe for babies or mothers

Life News talks about a study from the *British Journal of Psychiatry*.

Excerpt:

> A new study published in the *British Journal of Psychiatry* by leading American researcher Dr. Priscilla Coleman of Bowling Green State University finds women who have an abortion face almost double the risk of mental health problems as women who have their baby.

Consider this article in the UK Daily Mail, which talks about a study published the journal *Cancer Epidemiology*.

Excerpt:

> An abortion can triple a woman's risk of developing breast cancer in later life, researchers say. A team of scientists made the claim while carrying out research into how breastfeeding can protect women from developing the killer disease. While concluding that breastfeeding offered significant protection from cancer, they also noted that the highest reported risk factor in developing the disease was abortion. Other factors included the onset of the menopause and smoking. The findings, published in the journal Cancer Epidemiology, are the latest research to show a link between abortion and breast cancer. The research was carried out by scientists at the University of Colombo in Sri Lanka. It is the fourth epidemiological study to report such a link in the past 14 months, with research in China, Turkey and the U.S. showing similar conclusions.
>
> […]There has been an 80 per cent increase in the rate of breast cancer since 1971, when in the wake of the Abortion Act, the number of abortions rose from 18,000 to nearly 200,000 a year.

Note that there were only 300 people in the new study, so it is a small study. But it confirms the Turkey study that I blogged on before, and the China study that I blogged about before, and the American study that I blogged about before.

The right time to think about a pregnancy is before you have it. My advice is to avoid sex altogether before you are married. You'll make a better match, and you'll avoid causing grievous harm to others and to yourself. Don't put yourself in a position where a decision like that has to be made. Draw the line before you have to draw the line.

Mark Regnerus and the progressive war against science

July 24, 2012 | by Wintery Knight | Link | Original Link

Here's an interesting article in the Chronicle of Higher Education, written by a non-conservative professor of sociology. He writes about the recent research paper by Mark Regnerus on the effects of gay parenting on children.

Excerpt:

> Whoever said inquisitions and witch hunts were things of the past? A big one is going on now. The sociologist Mark Regnerus, at the University of Texas at Austin, is being smeared in the media and subjected to an inquiry by his university over allegations of scientific misconduct.
>
> […]Regnerus has been attacked by sociologists all around the country, including some from his own department. He has been vilified by journalists who obviously (based on what they write) understand little about social-science research. And the journal in which Regnerus published his article has been the target of a pressure campaign.
>
> The Regnerus case needs to be understood in a larger context. Sociologists tend to be political and cultural liberals, leftists, and progressives.
>
> […]Many sociologists view higher education as the perfect gig, a way to be paid to engage in "consciousness raising" through teaching, research, and publishing—at the expense of taxpayers, donors, and tuition-paying parents, many of whom thoughtfully believe that what those sociologists are pushing is wrong.
>
> **It is also easy for some sociologists to lose perspective on the minority status of their own views, to take for granted much that is still worth arguing about, and to fall into a kind of groupthink. The culture in such circles can be parochial and mean. I have seen colleagues ignore, stereotype, and belittle people and perspectives they do not like, rather than respectfully provide good arguments against those they do not agree with and for their own views.**
>
> The temptation to use academe to advance a political agenda is too often indulged in sociology, especially by activist faculty in certain fields, like marriage, family, sex, and gender. The crucial line between broadening education and indoctrinating propaganda can grow very thin, sometimes nonexistent. Research programs that advance narrow agendas compatible with particular ideologies are privileged. Survey textbooks in some fields routinely frame their arguments in a way that validates any form of intimate relationship as a family, when the larger social discussion of what a family is and should be is still continuing and worth

> having. Reviewers for peer-reviewed journals identify "problems" with papers whose findings do not comport with their own beliefs. **Job candidates and faculty up for tenure whose political and social views are not "correct" are sometimes weeded out through a subtle (or obvious), ideologically governed process of evaluation, which is publicly justified on more-legitimate grounds—"scholarly weaknesses" or "not fitting in well" with the department.**

The Weekly Standard has more on what happened to Regnerus:

> As of mid-July, a month after his paper was published, these are some of the things that have happened to Mark Regnerus. Three of his colleagues in the sociology department at UT joined with a fourth to -publish a widely distributed op-ed in the *Huffington Post* accusing him of "besmirching" the university through his "irresponsible and reckless misrepresentation of social science research." Led by Gary Gates, the UCLA demographer who had declined Regnerus's offer to help design the study, more than 200 "researchers and scholars" signed a letter to the editor of *Social Science Research*. The letter demanded that the editor "publicly disclose the reasons" why he published the paper and insisted that he hire scholars more sensitive to "LGBT parenting issues" to write a critique for the journal's next edition. UT's Director of Research Integrity sent Regnerus a letter informing him that a formal complaint of "scientific misconduct" had been lodged against him. The complaint, made by a gay blogger/activist/"investigative journalist" called Scott Rose, triggered an official inquiry into Regnerus's research methods and his relationship with the Witherspoon Foundation; he's now preparing to appear before a panel of faculty investigators. Requests have been filed with the Texas attorney general's office demanding that Regnerus, as an employee of a state-run institution, make public all email and correspondence related to his study. And he has hired a lawyer.
>
> A large number of his fellow social scientists—members in good standing of the guild of LGBT researchers—would like to destroy his career.

It seems that whenever it comes to secular progressive ideology – eternal universe, naturalistic origin of life, global warming, gay parenting – that it is ok for the secular leftist bullies to attack good science with coercive force.

I really strongly recommend that young Christians seeking to have an influence consider carefully how hostile, close-minded and bigoted that the modern secular leftist university is towards evangelicals. It doesn't matter how good your scholarship is in the non-science and soft science fields. It's just not a good place to make a career anymore. The only way for things to get better is to start starving out all non-productive areas of the university. These are the areas that are the most politicized. Stop doing degrees in non-STEM fields. Stick with things that are beyond the reach of the secular left, like math, experimental sciences, engineering and technology. If you must go into a non-STEM field – like law school – then I really recommend that you keep your religious views and

political views close to your vest until you are out of school.

By repealing section 13, Canada takes a baby step toward freedom of speech

July 24, 2012 | by Wintery Knight | Link | Original Link

What is section 13, you ask? Section 13 is the part of Canadian law that makes it illegal for Canadians to offend people on the left. The Conservatives now have a majority, so they've voted in the House of Commons to repeal it. But it still isn't repealed.

Here it is:

> "It is a discriminatory practice for a person or a group of persons acting in concert to communicate telephonically or to cause to be so communicated, repeatedly, in whole or in part by means of the facilities of a telecommunication undertaking within the legislative authority of Parliament, any matter that is likely to expose a person or persons to hatred or contempt by reason of the fact that person or those persons are identifiable on the basis of a prohibited ground of discrimination."
> — Section 13 of the Canadian Human Rights Act

Here is an example of what Canada did to people with unpopular opinions: (H/T Binks)

> Among the more high-profile targets of Canada's "human rights" zealots was journalist Ezra Levant, who spent 900 days and $100,000 defending himself against "hate speech" charges. As editor of the *Western Standard*magazine, Levant in 2006 published some examples of "Muhammad cartoons" to illustrate a news article about the worldwide firestorm touched off by the cartoons when they were originally published in a Danish magazine. A Canadian imam filed a "human rights" complaint, and Levant was dragged into the meat grinder.
>
> "Section 13 has had a brutal effect on free speech in Canada," Levant told Chalcedon. "It's not that the number of prosecutions under Section 13 was ever that large. But it made examples of people, and inspired tremendous self-censorship. But now we're free, and we can say things that are politically incorrect."
>
> But how free? The "human rights" legislation in Canada's thirteen provinces is still, so far, intact.
>
> "The provincial human rights machinery remains," Levant said, "but this, the federal repeal, has got to cast a shadow over those. [Journalist, author, and commentator] Mark Steyn, for instance, was charged in three different jurisdictions for the same 'offense.' But now we're seeing the censorship being challenged in Saskatchawan, and questioned in some other provinces."
>
> **Section 13 over the years, he said, "has attracted bullies to the 'human rights' system. Ninety percent of the defendants charged under Section 13 can't afford a lawyer. And because countersuits are not allowed,**

> **there’s no way to recover your legal expenses.”**
>
> **In Canada’s “human rights” system, the government pays all the plaintiff’s legal costs, but none of the defendant’s. Nor is there any “double jeopardy” rule to prevent a defendant from being tried multiple times for the same incident.**
>
> **“Except for me – I’m a Jew – no non-Christian has ever been prosecuted by a human rights tribunal,” Levant said. “And the federal Human Rights Commission really enjoyed Section 13! They had a one hundred percent conviction rate over thirty-two years.**

A 100% conviction rate!

This something for us to think about. When you meet a secular leftist who complains about being offended by your speech, you should ask yourself the question “how far would he go with that?”. Because in Canada, the secular went very far, indeed. And similarly in the UK and in some European countries.

We should be grateful that we have the first and second amendments, because a lot of people don’t.

Triablogue: a funeral for atheism

July 25, 2012 | by Wintery Knight | Link | Original Link

The Poached Egg linked to this striking post on Triablogue. (H/T Please Convince Me)

Excerpt:

> If there is no objective morality, then why are they arguing for anything? It's not as if you're supposed to be an atheist. Absent objective moral norms, there's nothing you're supposed believe or disbelieve.
>
> Likewise, atheists not only admit, but insist on the fact that evolution is blind. It has no prevision or purpose. Brains weren't made to think. Yet they still act as if their brains were made to think.
>
> Likewise, they admit that what we value has no intrinsic value. Evolution has programmed us to project value on certain things. But that's an illusion.
>
> We value love. We value our parents, kids, spouse, and friends. Yet there's nothing objectively right or good about loving friends and family. That's just brain chemistry. The indifferent effect of a thoughtless process conditioning us to feel that way.
>
> Pull its string and the doll cries. It doesn't cry because there's something *worth* crying about.
>
> Atheists cry when a loved one dies. Yet they can retrace the process. They can see the pull-string. They can see evolution tugging their string. They don't cry because the death of their loved one actually means anything. They cry because blind evolution pulled their string. A doll's prerecorded cry at the demise of another doll.
>
> They can see evolution take the doll apart. They can see evolution operating on themselves. They dissect themselves. Peel back the layers. Cloth. Metal. Plastic. A pile of parts. The more you look the less you find.
>
> Atheists act as though these are throwaway concessions that don't cost them anything in the long run. That having admitted that atheism has these consequences, it's time to resume the argument. Get back to the issue at hand. Having another beer.
>
> But there's nothing more to say. At that point the atheist is sitting on a pile of spent rounds.
>
> It's like a doctor telling a man he has stage 4 pancreatic cancer. He has 2 weeks to live. Having got that out of the way, let's get back to what he plans to do with the rest of his life.
>
> But there is no "rest of his life" to plan for. At most, he can make funeral arrangements. Pick a coffin. Pick a tombstone. Prepay the florist. Buy a cemetery plot. Choose an epitaph.

> Atheism ran out of road miles ago. There's nowhere left to go. That's the end of the line.

The argument that Hays makes seems to be that if there is no objective morality, then discovering the truth and persuading others of the truth and living according to the truth are no longer morally right. Therefore, we have no moral obligation to do any of these things, on atheism.

The author, Steve Hays, engages with atheists who object to this argument in the comments to the post.

Is gay marriage a threat to religious liberty and liberty of conscience?

July 25, 2012 | by Wintery Knight | Link | Original Link

Dr. Robert P. George makes the case in the Public Discourse.

Excerpt:

> Since most liberals and even some conservatives, it seems, apparently have no understanding at all of the conjugal conception of marriage as a one-flesh union—not even enough of a grasp to consciously consider and reject it—they uncritically conceive marriage as sexual-romantic domestic partnership, as if it just couldn't possibly be anything else. This is despite the fact that the conjugal conception has historically been embodied in our marriage laws, and explains their content (not just the requirement of spousal sexual complementarity, but also rules concerning consummation and annulability, norms of monogamy and sexual exclusivity, and the pledge of permanence of commitment) in ways that the sexual-romantic domestic partnership conception simply cannot. Still, having adopted the sexual-romantic domestic partnership idea, and seeing no alternative possible conception of marriage, they assume—and it is just that, an assumption, and a gratuitous one—that no actual reason exists for regarding sexual reproductive complementarity as integral to marriage. After all, two men or two women can have a romantic interest in each other, live together in a sexual partnership, care for each other, and so forth. So why can't they be married? Those who think otherwise, having no rational basis, discriminate invidiously.
>
> […]Thus, advocates of redefinition are increasingly open in saying that they do not see these disputes about sex and marriage as honest disagreements among reasonable people of goodwill. They are, rather, battles between the forces of reason, enlightenment, and equality—those who would "expand the circle of inclusion"—on one side, and those of ignorance, bigotry, and discrimination—those who would exclude people out of "animus"—on the other. The "excluders" are to be treated just as racists are treated—since they are the equivalent of racists. Of course, we (in the United States, at least) don't put racists in jail for expressing their opinions—we respect the First Amendment; but we don't hesitate to stigmatize them and impose various forms of social and even civil disability upon them and their institutions. In the name of "marriage equality" and "non-discrimination," liberty—especially religious liberty and the liberty of conscience—and genuine equality are undermined.
>
> The fundamental error made by some supporters of conjugal marriage was and is, I believe, to imagine that a grand bargain could be struck with their opponents: "We will accept the legal redefinition of marriage; you will respect our

> right to act on our consciences without penalty, discrimination, or civil disabilities of any type. Same-sex partners will get marriage licenses, but no one will be forced for any reason to recognize those marriages or suffer discrimination or disabilities for declining to recognize them." *There was never any hope of such a bargain being accepted.* Perhaps *parts* of such a bargain would be accepted by liberal forces *temporarily* for strategic or tactical reasons, as part of the political project of getting marriage redefined; but guarantees of religious liberty and non-discrimination for people who cannot in conscience accept same-sex marriage could then be eroded and eventually removed. After all, "full equality" requires that no quarter be given to the "bigots" who want to engage in "discrimination" (people with a "separate but equal" mindset) in the name of their retrograde religious beliefs. "Dignitarian" harm must be opposed as resolutely as more palpable forms of harm.
>
> […][T]here is, in my opinion, no chance—*no chance*—of persuading champions of sexual liberation (and it should be clear by now that this is the cause they serve), that they should respect, or permit the law to respect, the conscience rights of those with whom they disagree. Look at it from their point of view: Why should we permit "full equality" to be trumped by bigotry? Why should we respect religions and religious institutions that are "incubators of homophobia"? Bigotry, religiously based or not, must be smashed and eradicated. The law should certainly not give it recognition or lend it any standing or dignity.
>
> The lesson, it seems to me, for those of us who believe that the conjugal conception of marriage is true and good, and who wish to protect the rights of our faithful and of our institutions to honor that belief in carrying out their vocations and missions, is that there is no alternative to winning the battle in the public square over the legal definition of marriage. The "grand bargain" is an illusion we should dismiss from our minds.

You can read about some examples of attacks against proponents of traditional marriage in my secular case against same-sex marriage.

William Lane Craig lectures on failure in the Christian life

July 25, 2012 | by Wintery Knight | Link | Original Link

I found this audio on Brian Auten's Apologetics 315 web site.

Here is the MP3 file.

Here is the video.

And here is my summary.

Intro:

- the topic of failure is not one that is often discussed by Christians
- failure #1: failure in the Christian life which is the result of sin
- failure #2: when a Christian is defeated while trying to serve God
- the consequences for failure #1 can be worse for the Christian
- the consequences for failure #2 can be worse for the world as whole
- how is it possible for a person to fail when they are obeying God? (#2)
- how can it be that God can call someone to a task then let them fail?
- failure is not persecution – persecution is normal for Christians
- failure is not trials – testing is normal for Christians to grow

Bill's failure:

- Bill had submitted all the coursework for his second doctoral degree
- but he had to pass a comprehensive oral examination
- he failed to pass the comprehensive exam
- Bill and Jan and his supporters had all prayed for him to pass
- how could God allow this to happen?

Solution to the problem:

- God's will for us may be that we fail at the things we try in life
- there are things that God may teach us through failure
- Bill learned that human relationships are more important than careers
- we need to realize that "success" in life is not worldly success
- true success is getting to know God well during your life
- and failure may be the best way to get to know God well
- it may even be possible to fail to know God while achieving a lot
- the real measure of a man is loving God and loving your fellow man

Practical:

- give thanks to God regardless of your circumstances

- try to learn from your failure
- never give up

The ending of Bill’s story:

- Bill spent an entire year preparing for a re-take of his exam
- Bill was awarded his second doctorate “magna cum laude” (with great distinction)
- Bill learned that American students are not well prepared for exams
- the year of studying remedied his inadequate American education
- in retrospect, he is thankful for the failure – he learned more

If you like this, you should pick up Craig’s book “No Easy Answers”.

Lee Strobel: why does God allow tragedy and suffering?

July 26, 2012 | by Wintery Knight | Link | Original Link

I found MP3 audio, video and a full transcript of Lee Strobel's sermon on suffering at Apologetics 315.

Strobel has 5 points in his sermon:

- God is not the creator of evil and suffering.
- Though suffering isn't good, God can use it to accomplish good.
- The day is coming when suffering will cease and God will judge evil.
- Our suffering will pale in comparison to what God has in store for his followers.
- We decide whether to turn bitter or turn to God for peace and courage.

Here's one of them:

> Though suffering isn't good, God can use it to accomplish good. He does this by fulfilling His promise inRomans 8:28: "And we know that in all things God works for the good of those who love him, who have been called according to his purpose."
>
> Notice that the verse doesn't say God causes evil and suffering, just that he promises to cause good to emerge. And notice that the verse doesn't say we all will see immediately or even in this life how God has caused good to emerge from a bad circumstance. Remember, we only see things dimly in this world. And notice that God doesn't make this promise to everyone. He makes the solemn pledge that he will take the bad circumstances that befall us and cause good to emerge if we're committed to following Him.
>
> The Old Testament gives us a great example in the story of Joseph, who went through terrible suffering, being sold into slavery by his brothers, unfairly accused of a crime and falsely imprisoned. Finally, after a dozen years, he was put in a role of great authority where he could save the lives of his family and many others.
> This is what he said to his brothers in Genesis 50:20: "You intended to harm me, but God intended it for good to accomplish what is now being done, the saving of many lives." And if you're committed to God, He promises that He can and will take whatever pain you're experiencing and draw something good from it.
>
> You might say, "No, he can't in my circumstance. The harm was too great, the damage was too extreme, the depth of my suffering has been too much. No, in my case there's no way God can cause any good to emerge."
>
> But if you doubt God's promise, listen to what a wise man said to me when I was researching my book The Case for Faith: God took the very worst thing that has

> ever happened in the history of the universe — deicide, or the death of God on the cross — and turned it into the very best thing that has happened in history of universe: the opening up of heaven to all who follow Him. So if God can take the very worst circumstance imaginable and turn it into the very best situation possible, can he not take the negative circumstances of your life and create something good from them?
>
> He can and He will. God can use our suffering to draw us to Himself, to mold and sharpen our character, to influence others for Him – He can draw something good from our pain in a myriad of ways…if we trust and follow Him.

Click through for links to the audio and video, as well as a PDF of the full transcript.

I wrote a post on the problem of evil recently which surveys more academic responses to the problem of evil.

Department of Justice threatens to seize business from Catholics

July 26, 2012 | by Wintery Knight | Link | Original Link

CNS News editor-in-chief Terry Jeffrey writes about it on Townhall.

Excerpt:

> The Newland family owns and operates Hercules Industries, a Colorado-based corporation that manufactures heating, ventilation and air-conditioning equipment. Through their hard work and dedication, and through their willingness to reinvest their own money in building their family business, they have managed to create jobs for 265 people while exerting a positive influence on the communities they serve.
>
> […]The Newlands sued to protect their free exercise of religion in this regard because Health and Human Services Secretary Kathleen Sebelius issued a regulation, under the Obamacare law, that requires virtually all health care plans to cover — without cost-sharing — sterilizations, artificial contraception and abortifacients.
>
> Under Obamacare, businesses that employ more than 50 people must provide their employees with insurance or pay a penalty, and the required insurance must include the mandated cost-sharing-free coverage for sterilizations, artificial contraception and abortifacients.
>
> At Hercules Industries, the Newlands provide a generous self-insured health-care plan to their employees. It does not cover sterilization, artificial contraception or abortifacients.
>
> […]In response to the Newlands' complaint that ordering them to violate the teachings of the Catholic Church in the way they run their business is a violation of their First Amendment right to the free exercise of religion, the Obama administration told the federal court that a private business has no protection under the First Amendment's free exercise clause — especially if the business is incorporated.
>
> […]This is just as if the Justice Department were to tell a family owned newspaper that it must publish editorials calling for a confiscatory estate tax, basing its coercion of the newspaper on the supposition (which lawyers for the Alliance Defending Freedom argue DOJ is by analogy making) that as a for-profit secular and incorporated employer, the paper has no First Amendment right to freedom of speech.

I'm a Protestant, and even I could not comply with any regulation that forces me to subsidize behavior that I consider immoral – namely, dispensing drugs that cause unborn human children to die. I would like to go through my life without murdering any innocent

people, thank you very much, and it’s not the government’s place to force me to murder people. And that’s one good reason right there to oppose Obamacare, although there are others.

In UK schools, 90 children are sent home every day for attacks in class

July 26, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail.

Excerpt:

> Official figures revealed that 90 children are sent home every day for attacking teachers or classmates.
>
> And the worst deterioration in behaviour is being seen in the most affluent parts of the country. Teachers blamed parents for failing to equip children with the social skills they need to cope in the classroom.
>
> Last year primary schools expelled nearly 300 pupils aged 11 and under for violence and handed out almost 17,000 suspensions. This means that on any given school day in 2010/11, 90 pupils were ordered out of school for attacking a member of staff or fellow pupil.
>
> Primaries were forced to bar pupils more than 10,000 times for persistent disruption in lessons and 6,390 times for verbal abuse.
>
> Hundreds more pupils were sent home for other serious breaches of school rules such as bullying, racist abuse, sexual misconduct, theft, drugs or alcohol offences and damage to property.
>
> Figures issued by the Department for Education shows that while the number of secondary pupils being suspended or expelled is falling, there is a worsening picture at primary level – especially in the most affluent parts of the country.
>
> The number of suspensions has increased most sharply in the country's wealthiest areas.
>
> The trend follows claims from teachers that spoilt middle-class children are just as likely to challenge authority at school.
>
> Earlier this year, Dr Mary Bousted, general secretary of the Association of Teachers and Lecturers, said: 'A minority of children are very aware of their rights, have a total disregard of school rules and are rather less aware of their responsibility for their own learning and how to show respect to staff and other students.
>
> 'This can apply as much to over-indulged middle class children as those from challenging families.'

Everyone seems to be puzzled about why children of wealthy families might be more likely to misbehave. But I think that children are influenced by their parents the most, and in wealthy families, both parents are probably working. Who is there to supervise and and interact with the children if both parents are working? A day care worker is not the same

as a parent. Children definitely need a lot of attention and discipline – does anyone really believe that day care workers can substitute for a parent in that task?

Walter Bradley: three scientific phenomena that point to a designed universe

July 26, 2012 | by Wintery Knight | Link | Original Link

Dr. Walter L. Bradley

Dr. Walter L. Bradley (C.V. here) is the Distinguished Professor of Engineering at Baylor.

Here's a bio:

> Walter Bradley (B.S., Ph.D. University of Texas at Austin) is Distinguished Professor of Engineering at Baylor. He comes to Baylor from Texas A&M University where he helped develop a nationally recognized program in polymeric composite materials. At Texas A&M, he served as director of the Polymer Technology Center for 10 years and as Department Head of Mechanical Engineering, a department of 67 professors that was ranked as high as 12th nationally during his tenure. Bradley has authored over 150 refereed research publications including book chapters, articles in archival journals such as the Journal of Material Science, Journal of Reinforced Plastics and Composites, Mechanics of Time-Dependent Materials, Journal of Composites Technology and Research, Composite Science and Technology, Journal of Metals, Polymer Engineering and Science, and Journal of Materials Science, and refereed conference proceedings.
>
> Dr. Bradley has secured over $5.0 million in research funding from NSF grants (15 yrs.), AFOSR (10 years), NASA grants (10 years), and DOE (3 years). He has also received research grants or contracts from many Fortune 500 companies, including Alcoa, Dow Chemical, DuPont, 3M, Shell, Exxon, Boeing, and Phillips.
>
> He co-authored The Mystery of Life Origin: Reassessing Current Theories and has written 10 book chapters dealing with various faith science issues, a topic on which he speaks widely.
>
> He has received 5 research awards at Texas A&M University and 1 national research award. He has also received two teaching awards. He is an Elected Fellow of the American Society for Materials and the American Scientific Affiliation (ASA), the largest organization of Christians in Science and Technology in the world. He is President elect of the ASA and will serve his term in 2008.

You can read more about his recent research in this article from Science Daily.

Below, I analyze a lecture entitled “Is There Scientific Evidence for an Intelligent Designer?”. Dr. Bradley explains how the progress of science has made the idea of a Creator and Designer of the universe more acceptable than ever before.

The MP3 file is here.

Evidence #1: The design of the universe

1. The correspondence of natural phenomena to mathematical law

- All observations of physical phenomena in the universe, such as throwing a ball up in the air, are described by a few simple, elegant mathematical equations.

2. The fine-tuning of physical constants and rations between constants in order to provide a life-permitting universe

- Life has certain minimal requirements; long-term stable source of energy, a large number of different chemical elements, an element that can serve as a hub for joining together other elements into compounds, etc.
- In order to meet these minimal requirements, the physical constants, (such as the gravitational constant), and the ratios between physical constants, need to be withing a narrow range of values in order to support the minimal requirements for life of any kind.
- Slight changes to any of the physical constants, or to the rations between the constants, will result in a universe inhospitable to life.
- The range of possible ranges over 70 orders of magnitude.
- Although each individual selection of constants and ratios is as unlikely as any other selection, the vast majority of these possibilities do not support the minimal requirements of life of any kind. (In the same way as any hand of 5 cards that is dealt is as likely as any other, but you are overwhelmingly likely NOT to get a royal flush. In our case, a royal flush is a life-permitting universe).

Examples of finely-tuned constants and ratios: (there are more examples in the lecture)

a) The strong force: (the force that binds nucleons (= protons and neutrons) together in nucleus, by means of meson exchange)

- if the strong force constant were 2% stronger, there would be no stable hydrogen, no long-lived stars, no hydrogen containing compounds. This is because the single proton in hydrogen would want to stick to something else so badly that there would be no hydrogen left!
- if the strong force constant were 5% weaker, there would be no stable stars, few (if any) elements besides hydrogen. This is because you would be able to build up the nuclei of the heavier elements, which contain more than 1 proton.
- So, whether you adjust the strong force up or down, you lose stars than can serve as long-term sources of stable energy, or you lose chemical diversity, which is necessary to make beings that can perform the minimal requirements of living

beings. (see below)

b) The conversion of beryllium to carbon, and carbon to oxygen

- Life requires carbon in order to serve as the hub for complex molecules, but it also requires oxygen in order to create water.
- Carbon is like the hub wheel in a tinker toy set: you can bind other elements together to more complicated molecules (e.g. – "carbon-based life), but the bonds are not so tight that they can't be broken down again later to make something else.
- The carbon resonance level is determined by two constants: the strong force and electromagnetic force.
- If you mess with these forces even slightly, you either lose the carbon or the oxygen.

3. Fine-tuning to allow a habitable planet

- A number of factors must be fine-tuned in order to have a planet that supports life
- Initial estimates predicted abundant life in the universe, but revised estimates now predict that life is almost certainly unique in the galaxy, and probably unique in the universe.
- Even though there are lots of stars in the universe, the odds are against *any* of them supporting complex life.
- Here are just a few of the minimal requirements for habitability: must be a single star solar system, in order to support stable planetary orbits, the planet must be the right distance from the sun in order to have liquid water at the surface, the planet must sufficient mass in order to retain an atmosphere, etc.

The best non-theistic response to this argument is to postulate a multiverse, but that is very speculative and there is no experimental evidence that supports it.

Evidence #2: The origin of the universe

1. The progress of science has shown that the entire physical universe came into being out of nothing (= "the big bang"). It also shows that the cause of this creation event is non-physical and non-temporal. The cause is *supernatural*.

- Atheism prefers an eternal universe, to get around the problem of a Creator having to create the universe.
- Discovery #1: Observations of galaxies moving away from one another confirms that the universe expanded from a single point.
- Discovery #2: Measurements of the cosmic background radiation confirms that the universe exploding into being.
- Discovery #3: Predictions of elemental abundances prove that the universe is not eternal.
- Discovery #4:The atheism-friendly steady-state model and oscillating model were both falsified by the evidence.

- And there were other discoveries as well, mentioned in the lecture.

The best non-theistic response to this argument is to postulate a hyper-universe outside of ours, but that is very speculative and there is no experimental evidence that supports it.

Evidence #3: The origin of life

1. The progress of science has shown that the simplest living organism contains huge amounts of biological information, similar to the Java code I write all day at work. This is a problem for atheists, because the sequence of instructions in a living system has to come together all at once, it cannot have evolved by mutation and selection – because there was no replication in place prior to the formation of that first living system!

- Living systems must support certain minimum life functions: processing energy, storing information, and replicating.
- There needs to be a certain amount of complexity in the living system that can perform these minimum functions.
- But on atheism, the living system needs to be simple enough to form by accident in a pre-biotic soup, and in a reasonable amount of time.
- The minimal functionality in a living system is a achieved by DNA, RNA and enzymes. DNA and RNA are composed of sequences of proteins, which are in turn composed of sequences of amino acids.

Consider the problems of building a chain of 100 amino acids

- The amino acids must be left-handed only, but left and right kinds are equally abundant in nature. How do you sort out the right-handed ones?
- The amino acids must be bound together using peptide bonds. How do you prevent other types of bonds?
- Each link of the amino acid chain needs to be carefully chosen such that the completed chain with fold up into a protein. How do you choose the correct amino acid for each link from the pool of 20 different kinds found in living systems?
- In every case, a human or other intelligence could solve these problems by doing what intelligent agents do best: *making choices.*
- But who is there to make the choices on atheism?

The best current non-theistic response to this is to speculate that aliens may have seeded the Earth with life at some point in the past.

The problem of the origin of life is not a problem of chemistry, it is a problem of engineering. Every part of car functionality can be understood and described using the laws of physics and chemistry. But an intelligence is still needed in order to assemble the components into a system that has the minimal requirements for a functioning vehicle.

EPA study finds that water in Dimock, PA is safe to drink despite fracking

July 27, 2012 | by Wintery Knight | Link | Original Link

Here's an excerpt from the EPA press release that exonerates fracking:

> The U.S. Environmental Protection Agency announced today that it has completed its sampling of private drinking water wells in Dimock, Pa. Data previously supplied to the agency by residents, the Pennsylvania Department of Environmental Protection and Cabot Oil and Gas Exploration had indicated the potential for elevated levels of water contaminants in wells, and following requests by residents EPA took steps to sample water in the area to ensure there were not elevated levels of contaminants. Based on the outcome of that sampling, EPA has determined that there are not levels of contaminants present that would require additional action by the Agency.
>
> […]Overall during the sampling in Dimock, EPA found hazardous substances, specifically arsenic, barium or manganese, all of which are also naturally occurring substances, in well water at five homes at levels that could present a health concern. In all cases the residents have now or will have their own treatment systems that can reduce concentrations of those hazardous substances to acceptable levels at the tap. EPA has provided the residents with all of their sampling results and has no further plans to conduct additional drinking water sampling in Dimock.

The Washington Times explains the context of this report.

Excerpt:

> Closely watched tests by the Environmental Protection Agency have found that the drinking water in Dimock, Pa., is safe to drink, despite concerns from some residents and environmentalists that nearby fracking had contaminated supplies.
>
> For the past seven months, EPA sampled water at private wells serving 64 homes in the small northeastern Pennsylvania town, the primary setting of the anti-natural-gas documentary "Gasland."
>
> EPA found hazardous substances such as arsenic and manganese in water supplies at five of the homes in question, but said Wednesday that the residences have or will soon have treatment systems "that can reduce concentrations of those hazardous substances to acceptable levels at the tap."
>
> Agency officials also said EPA will conduct no further testing and will stop delivering fresh water to Dimock residents.
>
> "The sampling and an evaluation of the particular circumstances at each home did not indicate levels of contaminants that would give EPA reason to take further

> action," EPA Regional Administrator Shawn M. Garvin said in a statement. "Throughout EPA's work in Dimock, the agency has used the best available scientific data to provide clarity to Dimock residents and address their concerns about the safety of their drinking water."
>
> […]**In its Wednesday announcement, EPA made clear that the pollutants it identified occur naturally in the area.**

Remember the EPA is one of the most politicized, anti-business agencies in the government. If I were President, the first two agencies I would eliminate are the EPA and the federal Department of Education. And yet even the EPA could not find anything wrong with fracking. That means that there is nothing wrong with fracking.

Why do people think that secular leftists are guided by reason and science? It seems to me that they are always embracing fashionable nonsense that isn't proven out by the experimental data. Let's make our policy based on what the experimental evidence shows.

Horror in China: newborn female baby left to die in trash with her throat cut

July 27, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this hair-raising article from the UK Daily Mail. (WARNING: Not suitable for younger readers!)

Excerpt:

> An abandoned newborn baby is recovering in hospital after having her throat cut, being put in a plastic bag and thrown into a garbage bin in China's Liaoning province.
>
> The female baby – so newborn that her placenta and umbilical cord were still attached – was discovered by a man who was searching a bin for recyclables.
>
> Local residents called police and the tiny girl was taken to hospital, where she remains in a critical condition.
>
> A resident who witnessed the girl being taken to hospital said: 'She was still breathing and had a heartbeat. Blood from the wound stained the whole body.'
>
> Doctors worked to close a two-inch wound across her neck, so deep that it went down to her windpipe.
>
> A doctor at the hospital said that had the cut been any deeper at all 'she would have died instantly'.
>
> The girl was found in Anshan city, in northeast China.
>
> She is believed to be a victim of the country's notorious one child policy – and seems to confirm the long-held belief that parents upon which this restriction is imposed prefer boys.

Remember, the Democrat party, and anyone who votes for them, is in favor of abortion through all 9 months of pregnancy. In fact, Democrat vice President Joe Biden has expressed that he has no objection to China's one-child policy. And finally, Barack Obama goes even further left than Biden, and has voted multiple times against born-alive infant protection legislation. The Democrats have also expressed support for sex-selection abortion. If you vote for a Democrat, you are voting for violence against unborn girls – just like what happens in China.

David Cameron's fixation on gay marriage cripples the UK Conservative Party

July 27, 2012 | by Wintery Knight | Link | Original Link

From the UK Daily Mail. (H/T Dina)

Excerpt:

> When he became Tory leader seven years ago, the youthful and telegenic David Cameron pledged to transform the blue-rinse image of his party and boost its membership by attracting thousands of young, ethnic and gay members.
>
> In doing so, he would destroy forever the Tories' reputation as the 'nasty party' as these new 'inclusive' members joined the 300,000 activists whose average age was 64
>
> 'I was elected Leader of the Conservative Party on a mandate to change and modernise the party,' he said. 'I want to increase membership. I want to see a broader base. I want to see a significant increase in the number of members from all communities.'
>
> […]But the bitter and ineluctable truth is that, far from increasing numbers, Mr Cameron has presided over the sharpest decline in membership in the Conservative party's history.
>
> **Today, I can reveal that the number of Tory party members has fallen below 130,000, a drop of around 60 per cent since he took over in 2005.**
>
> […]**The uncompromising language deployed by Mr Cameron who, in another sop to the Lib Dems, has cynically dumped his repeated promise to reward traditional marriage through the tax system, enraged Tory MPs and activists alike.**
>
> […]In a tense meeting in Downing Street last month between Mr Cameron and 20 of the party's most senior members, he was given a stark warning that membership will plunge below the psychologically crucial 100,000 mark if there were no change of heart on same-sex marriage.
>
> […]The damage done by the gay marriage proposals is not confined to within the party. Potential Tory voters don't like them.
>
> A national poll by ComRes on the likely effects of allowing gay marriage — which, incidentally, was not in any of the parties' manifestos — revealed the Conservatives could lose 1.1 million votes and 30 parliamentary seats in an election because so many supporters would stay at home or switch to UKIP.
>
> A ComRes poll also revealed that 56 per cent of Mr Cameron's constituents who voted for him at the election oppose his plans to make redefining marriage a priority.

> Andrew Hawkins, the chairman of ComRes, said: 'It's the way it has been handled that has done so much damage. The Government has a consultation, but says it is pressing ahead whether people like it or not.
>
> **'One of the scariest things for the Tories is that three in four of those people who voted for Cameron in 2010, but say they won't again, cite gay marriage as the reason.**
>
> […]**One senior party official said: 'Gay marriage is the final straw. In London, Bristol, Birmingham and other major cities, there are dozens of constituencies with no party organisation at all.**
>
> **'The voluntary party is virtually extinct in Scotland and in parts of Wales.**
>
> **We are relying on a dwindling band of volunteers, the majority of whom are in their 70s. It's the most desperate situation the party has ever faced.'**

The UK Telegraph notes that Cameron has angered American Republicans with his "unprecedented" embrace of Barack Obama – despite the Falklands betrayal, the leaking the name of a British agent to the press, and other gaffes by Obama.

In other UK news, I note that nearly two-thirds of Scots oppose the legalization of same-sex marriage, but the liberal Scottish National Party is going forward with plans to legalize it. But nothing is set in stone yet, and things could still go the other way. (H/T Dina)

Friday night movie: Great Expectations (1946)

July 27, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.8/10]

IMDB median rating: [8/10]

Description:

> Great Expectations is a 1946 British film directed by David Lean, based on the novel by Charles Dickens and stars John Mills, Bernard Miles, Finlay Currie, Jean Simmons, Martita Hunt, Alec Guinness and Valerie Hobson. It won two Academy Awards (Best Art Direction and Best Cinematography) and was nominated for three others (Best Picture, Best Director and Best Screenplay).
>
> Pip, a good-natured, gullible young orphan, lives with kind blacksmith Joe Gargery and his bossy, abusive wife 'Mrs. Joe'. When the boy finds two hidden escaped galley convicts, he obeys under -probably unnecessary- threat of a horrible death to bring the criminals food he must steal at peril of more caning from the battle-ax. Just when Pip fears to get it really good while they have guests, a soldier comes for Joe who takes Pip along as assistant to work on the chains of escaped galley-convicts, who are soon caught. The better-natured one takes the blame for the stolen food. Later Pip is invited to became the playmate of Estelle, the equally arrogant adoptive daughter of gloomy, filthy rich Miss Havisham at her estate, who actually has 'permission' to break the kind kid's heart; being the only pretty girl he ever saw, she wins his heart forever, even after a mysterious benefactor pays trough a lawyer for his education and a rich allowance.

This movie has a special significance to me. It was one of the first classics I ever read, and there is much wisdom in it, especially for young men.

Happy Friday!

Tactics for defending traditional marriage

July 28, 2012 | by Wintery Knight | Link | Original Link

Timmy posted this guide to defending marriage on his Facebook page.

Excerpt:

I. THE MOST EFFECTIVE SINGLE SENTENCE:

Extensive and repeated polling agrees that the single most effective message is:

"Gays and Lesbians have a right to live as they choose,
they don't have the right to redefine marriage for all of us."

This allows people to express support for tolerance while opposing gay marriage. Some modify it to "People have a right to live as they choose, they don't have the right to redefine marriage for all of us."

Language to avoid at all costs: "Ban same-sex marriage." Our base loves this wording. So do supporters of SSM. They know it causes us to lose about ten percentage points in polls. Don't use it. Say we're against "redefining marriage" or in favor or "marriage as the union of husband and wife" NEVER "banning same-sex marriage."

II. MAIN MESSAGE THE 3X5 CARD.

> • Marriage is between a husband and wife. The people of [this state] do not want marriage to be anything but that. We do not want government or judges changing that definition for us today or our children tomorrow.
>
> • We need a marriage amendment to settle the gay marriage issue once and for all, so we don't have it in our face every day for the next ten years.
>
> • Marriage is about bringing together men and women so children can have mothers and fathers.
>
> • Do we want to teach the next generation that one-half of humanity—either mothers or fathers—are dispensable, unimportant? Children are confused enough right now with sexual messages. Let's not confuse them further.

> • Gays and Lesbians have a right to live as they choose; they don't have a right to redefine marriage for the rest of us.

Mary also sent me this excellent peer-reviewed paper on traditional marriage and same-sex marriage, authored by two guys from Princeton University and one guy from the University of Notredame. One of those guys is the famous Robert P. George!

I've also prepared an evidential case against same-sex marriage using arguments that will be convincing to people who don't have any religious commitment.

Alvin Plantinga's evolutionary argument against naturalism

July 28, 2012 | by Wintery Knight | Link | Original Link

Here's the link at First Things. (H/T ECM)

Excerpt:

> Although Darwin admits he wasn't much of an abstract thinker, he could not shake the "inward conviction" that "the Universe is not the result of chance." Unlike many who followed after him, he appears to have intuitively understood the paradox of combining naturalism with evolutionary theory: If evolution is a non-teleological process, it undercuts our ability to trust that we can form true beliefs and convictions.
>
> To have trustworthy convictions, we have to have properly functioning noetic equipment (i.e., a brain, spinal cord, sensory apparatus, etc., that recognize reality). But can a strictly materialistic, non-teleological, evolutionary process produce such reliable equipment? The philosopher Alvin Plantinga, one of the greatest thinkers of our era, thinks the answer is "no." Although his argument is too complex and tightly argued to be adequately summarized, the basic outline of his case shows his point to be all but incontrovertible.
>
> Plantinga claims, not that evolution is untrue, but that the truth of evolution is incompatible with the truth of naturalism. "As far as I can see, God certainly could have used Darwinian processes to create the living world and direct it as he wanted to go," he argues. "Hence evolution as such does not imply that there is no direction in the history of life."
>
> What does imply that life is not directed, he adds, is not evolutionary theory itself, but the theory of *unguided* evolution: the idea that "neither God nor any other person has taken a hand in guiding, directing, or orchestrating the course of evolution." For our purposes, we'll call this view "evolutionary naturalism."
>
> Evolutionary naturalism assumes that our noetic equipment developed as it did because it had some survival value or reproductive advantage. Unguided evolution does not select for belief except insofar as the belief improves the chances of survival. The truth of a belief is irrelevant, as long as it produces an evolutionary advantage.

If you want to hear Plantinga giving a lecture on this same argument live on a university campus, click here.

Summary:

> In a talk given at The Veritas Forum at Oregon State University in January 1996, Professor Alvin Plantinga presents an evolutionary argument *against* naturalism.

> In a complex, but important philosophical argument, he argues that it is not rational to accept belief in naturalism and evolution, because such beliefs provide no rational basis for trusting our cognitive faculties.

Or you can watch the videos that I posted a while back.

The argument first appeared in his book "Warrant and Proper Function", published by Oxford University Press in 1993. It should be noted that Plantinga is a Calvinist, a supporter of middle knowledge, and has lent some support to intelligent design. In his latter years, he has turned feisty, and writes snarky things to confound atheists.

Tea Party conservatives and social conservatives endorse Ted Cruz in Texas primary

July 29, 2012 | by Wintery Knight | Link | Original Link

Republican Senate candidate Ted Cruz

There is a Republican primary on Tuesday for Kay Bailey Hutchinson's Senate seat, and my candidate is Ted Cruz. Tea Party leader Sarah Palin recently endorsed him.

Excerpt:

> Sarah Palin told a cheering crowd late Friday that America needs to get back to its "clinging to God and guns" roots, as the tea pea party's biggest names made a series of last-minute, high-profile appearances around Texas to support insurgent conservative U.S. Senate candidate Ted Cruz.
>
> The former Alaska governor and 2008 GOP vice presidential candidate spoke to more than 1,000 boisterous and sweating Cruz supporters gathered under a mercilessly early-evening sun on a grassy knoll in The Woodlands, a well-to-do Houston suburb. She told them that "to make America great, we don't need a fundamental transformation, we need a fundamental restoration."
>
> "Fighters like Ted Cruz can lead the charge for us," Palin said.
>
> Cruz, the former Texas Solicitor General, is locked in a fierce and increasingly nasty battle with the mainstream Texas GOP choice, Lt. Gov. David Dewhurst, for the Republican nomination to replace retiring U.S. Sen. Kay Bailey Hutchison. The pair face a runoff Tuesday because neither won a majority in a nine-Republican senatorial field during the state's May 29 primary.

The conservative Club For Growth is backing Ted Cruz:

And social conservative leader James Dobson likes Ted Cruz, too.

Excerpt:

> Today, we are excited to announce that national pro-life, family values leader Dr. James Dobson is endorsing our Senate campaign.
>
> In his endorsement announcement, Dr. Dobson said: "**I'm pleased to endorse Ted Cruz for U.S. Senate because he's exactly the kind of candidate we need to turn this country around**. Religious freedom is under assault every day. We need leaders with the courage to stand strong for conservative values in this battle. Ted Cruz is such a leader—one who will not only vote his convictions in the Senate, but will also lead the fight to defend life, traditional marriage, and religious liberty."
>
> Dr. Dobson added: "Ted Cruz stands out among conservative leaders across the country today. **He has a consistent record of standing up for faith, family, and freedom, and winning values battles on a national level**….I urge all Texans who love life, family, faith, and freedom to not only vote for Ted Cruz, but to work hard for his campaign."

Even moderate conservative George Will thinks that Republican candidate Ted Cruz is the man to replace Kay Bailey Hutchison in Texas.

Excerpt:

> For a conservative Texan seeking national office, it could hardly get better than this: In a recent 48-hour span, Ted Cruz, a candidate for next year's Republican Senate nomination for the seat being vacated by Republican Kay Bailey Hutchison, was endorsed by the Club for Growth PAC, FreedomWorks PAC, talk-radio host Mark Levin and Erick Erickson of RedState.com.
>
> For conservatives seeking reinforcements for Washington's too-limited number of limited-government constitutionalists, it can hardly get better than this: Before he earned a Harvard law degree magna cum laude (and helped found the Harvard Latino Law Review) and clerked for Chief Justice William Rehnquist, Cruz's senior thesis at Princeton — **his thesis adviser was professor Robert George**, one of contemporary conservatism's intellectual pinups — was on the Constitution's Ninth and 10th amendments. Then as now, Cruz argued that these amendments, properly construed, would buttress the principle that powers not enumerated are not possessed by the federal government.

> […]At age 14, Cruz's father fought with rebels (including Fidel Castro) against Cuba's dictator, Fulgencio Batista. Captured and tortured, at 18 he escaped to America with $100 sewn in his underwear. He graduated from the University of Texas and met his wife — like him, a mathematician — with whom he founded a small business processing seismic data for the oil industry.
>
> By the time Ted Cruz was 13, he was winning speech contests sponsored by a Houston free-enterprise group that gave contestants assigned readings by

> Frederic Bastiat, Friedrich Hayek and Ludwig von Mises. In his early teens he traveled around Texas and out of state giving speeches. At Princeton, he finished first in the 1992 U.S. National Debate Championship and North American Debate Championship.
>
> As Texas's solicitor general from 2003 to 2008, Cruz submitted 70 briefs to the U.S. Supreme Court, and he has, so far, argued nine cases there. He favors school choice and personal investment accounts for a portion of individuals' Social Security taxes. He supports the latter idea with a bow to the late Daniel Patrick Moynihan, who said such accounts enable the doorman to build wealth the way the people in the penthouse do.
>
> Regarding immigration, Cruz, 40, demands secure borders and opposes amnesty for illegal immigrants but echoes Ronald Reagan's praise of legal immigrants as "Americans by choice," people who are "crazy enough" to risk everything in the fundamentally entrepreneurial act of immigrating.

You can find out more about Ted Cruz on his positions page. I was interested in his stance on social issues, in particular.

Excerpt:

> **Ted Cruz has fought to protect innocent human life. He played a leading role in several important cases, including defense of the partial-birth abortion ban, parental consent laws, and prohibiting state funds from going to abortion. These cases have all been part of the ongoing effort to ensure that every child in America receives the protection and respect he or she deserves.**
>
> - Authored an amicus brief for 13 states, successfully defending the federal Partial Birth Abortion Ban Act. The ban was upheld 5-4 before the U.S. Supreme Court;
> - Authored an amicus brief for 18 states, successfully defending the New Hampshire parental notification law. The law was upheld 9-0 before the U.S. Supreme Court [note: this brief was awarded the Best Brief Award from the National Association of Attorneys General for U.S. Supreme Court briefs written in 2005-06];
> - Successfully defended Texas's Rider 8, which prohibits state funds for groups that provide abortions, winning unanimously before the Fifth Circuit court of appeals.
>
> **Ted Cruz has worked hard in defense of traditional marriage, including his intervention in a case protecting Texas marriage laws. In addition, he has fought on the federal level to defend marriage between one man and one woman as the fundamental building block of society.**
>
> - When a Beaumont state court granted a divorce to two homosexual men

> who had gotten a civil union in Vermont, Cruz, under the leadership of Attorney General Greg Abbott, intervened in defense of the marriage laws of the State of Texas, which successfully led to the court judgment being vacated;
> - Worked with Attorney General Abbott to send a letter to Congress in support of the federal Defense of Marriage Act.

He has a solid recordconservative policies on that page: energy production, voter fraud prevention, border security, legal firearm ownership – you name it, this guy has been fighting for conservative principles. Like Michele Bachmann, he has actually tried to do pro-life and pro-marriage things. We don’t just have to take his word for it, he has the actions to prove his words.

A look at homeschooling and alternatives to college

July 29, 2012 | by Wintery Knight | Link | Original Link

I do think that college can still be a good deal as long as you are careful to choose a major that will re-coup the costs of your education in a timely fashion. That will probably mean a STEM degree in something like computer science or petroleum engineering. I myself have the BS and MS in computer science, and I think that those are excellent choices for a man to deliver on his obligation to provide for a family. But it was a much better deal back when tuition was very low, and salaries were very high. Plus, public schools used to me much better at preparing you to go to school to learn STEM subjects. These new problems: underperforming public schools, college debt, and a weak job market, it makes sense to consider alternatives to the mainstream education system.

Here's an article about homeschooling – an alternative to brick-and-mortar schools – that was posted in the Wall Street Journal.

Excerpt:

> Today in the U.S., some two million children are home schooled, growing at an annual rate of 7% to 15% for over a decade, according to the president of the National Home Education Research Institute. The term "home schooler" once implied "isolationist religious zealot" or "off-the-grid anarchist who makes her own yogurt." Today, it also means military parents who hate to see their kids keep changing schools; or the family with a future Olympian who ice skates five hours a day; or your cousin whose daughter is gifted but has a learning disability. The average home schooler is no longer a sideshow oddity.
>
> "I could never ever teach math," more than a few parents told me in horror at the very idea of home schooling. Or science. Or a foreign language. But mostly, it was math. Here's my secret: I can't teach math either. Once they start calling them integers instead of numbers, I recoil as from a fat, angry snake, which is why Alice takes an online math class, with great lashings of help from her father.
>
> But the biggest thing people want to talk about is socialization. Everyone is worried that I keep my child in a crate with three air holes punched in it and won't let her have friends until she gets her AARP card. There's a long answer, of course, but I'll sum it up this way: Homo sapiens have walked the Earth for at least 130,000 years and, in this time, they learned to be human from their elders, not from their peers. Mandatory education in the U.S. is less than 150 years old. Learning to be a productive adult human by spending a third of every day with other kids might be a good idea, but it's too soon to tell. I'm still unsure that the people best equipped to teach a 14-year-old boy how to be a man are other 14-year-old boys.
>
> In fact, home-schooled kids are just as socialized as other children. They certainly seem to grow up to be, and feel, fully engaged. One study, by a Canadian home-

> schooling group, found that 67% of formerly home-schooled adult respondents said they are "very happy," as opposed to the general population's 43%. Another study, published in the Journal of College Admission, found that home-schooled students perform better on their ACTs, have higher college GPAs and are more likely to graduate in four years.

So how far would you go with alternatives to mainstream education? Well, the smartest engineer I know doesn't even have a college degree in computer science – or the student loans that often go with them.

Just look at these numbers: (links removed)

> Across the nation, graduates are tossing their caps into the air and investing their hopes of success in their sheepskins. Not since the Magna Carta has so much faith been put into a piece of paper; indeed, belief in the college diploma seems these days to outpace belief in the document that binds a man and a woman. For the past couple of generations, conventional wisdom has said that a college degree is the golden ticket to a great job. For a time, because of the simple laws of supply and demand, this was true.
>
> In 1947, when just 5 percent of Americans age 25 and over held at least a bachelor's degree, the supply was low, making demand for degreed employees higher. However, with easier access to college through taxpayer-funded student loans, today's bachelor's degree has become yesterday's high-school diploma. Now that over 30 percent of Americans 25 and over have a college degree—and the President has called for that figure to grow to 60 percent—the supply is up, which might help explain why 53 percent of recent graduates are unemployed or underemployed.
>
> What's more, the burgeoning cost of college means that even for those who do land good jobs after graduation, payoff on their investment will be diminished and take more time. The graduation rates tripled between 1980 and 2010, rising 37 percent between 1999 and 2010. Two-thirds of bachelor's degree recipients graduated with debt in 2008, compared with less than half in 1993. The average debt for last year's college was $24,000, while the total outstanding national student debt has passed $1 trillion, more than the nation's credit card debt. Not surprisingly then, the national student loan default rate is on the rise, too, hitting 8.8 percent for the 2009 budget year. Even the number of Ph.D. holders on public assistance has made recent headlines.

College still works for people, but you have to choose your major more carefully – or just choose to focus on practical skills and then attend a trade school. It's probably a good idea to put more emphasis on getting *work experience* at an early age, no matter what you do after high school. Work experience is very important for getting a job, which is why the liberal fixation on higher minimum wage rates hurts younger workers. Sometimes, online degree options can be more cost effective than regular school, but

again work has to be done to see where the jobs are and what skills are required before you make a decision.

People sometimes ask me whether this is it for civilization, and I point to new discoveries and feedback mechanisms like these alternatives to government-run or government-regulated schools as an example of how we can get things turned around. What taxpaying parents need to realize is that they have to start thinking practically about laws and policies that promote freedom in education. We have to vote for more choice and competition, and lower taxes, so that we can buy what we want instead of letting an ideologue who has spent his or her entire life in a bubble decide for us.

U.S. GDP growth slows to 1.5% in second quarter

July 30, 2012 | by Wintery Knight | Link | Original Link

Democrats took the House and Senate in January 2007
From CBS Marketwatch.

Excerpt:

> The U.S. economy slowed sharply in the second quarter, growing just 1.5% as consumers slashed spending and businesses grew more cautious about hiring and investing, underscoring that an already wobbly recovery is losing even more steam.
>
> In the U.S., though, new government figures showed that growth in gross domestic product, the broadest measure of goods and services churned out by the economy, slowed sharply from the first quarter's 2% annual rate and the fourth quarter's 4.1%.
>
> That downward slope in growth is worrisome to economists. As the economy loses steam, a pullback can become self-reinforcing as businesses and consumers worry about the future.
>
> The slowing economy, along with government data showing the recovery has been weaker than thought, raises the specter that a sudden shock—such as an escalation of Europe's crisis, or next year's looming tax increases and spending cuts—could shove the U.S. back into recession.
>
> […]One of the biggest obstacles to recovery is a dearth of consumer spending, which accounts for two-thirds of demand in the economy.
>
> Spending rose 1.5% in the second quarter, lower than 2.4% in the first, reflecting weaker demand for cars and big-ticket items. A big reason is the stagnant labor market. Employers added fewer jobs in the second quarter than they have since the labor market began recovering in 2010.

> "The economy is kind of being strangled," said Bob Baur, chief global economist at Principal Global Investors. "We underestimated how much uncertainty may have contributed to a lack of desire to expand and hire." Mr. Baur expects 2% to 2.5% growth in the second half of the year but has "grown more cautious," he said.
>
> […]Businesses, meanwhile, appear to have grown more cautious about spending. The new GDP report showed that nonresidential fixed investment expanded 5.3% in the second quarter, less than the 7.5% in the first, though spending on equipment and software was healthy. Joseph Carson, an economist at Alliance Bernstein, said: "Uncertainty surrounding U.S. tax laws has created confusion and concern among companies, which has probably depressed investment spending."

Remember, the Obama administration thinks that higher government dependency "stimulates" the economy:

> House Minority Whip Steny Hoyer (D-Md.) said Tuesday that food stamps and unemployment insurance are the two "most stimulative" things you can do for the economy.
>
> During a pen and pad briefing with reporters on Capitol Hill, Hoyer was asked if any Democrats are "reconsidering the wisdom" of letting the Bush tax cuts expire at year's end for the top income earners given the still struggling U.S. economy.
>
> "I haven't talked to any who are of that mind," said Hoyer. "If you talk to economists, they will tell you there are two things that are the most stimulative that you can do — one's unemployment insurance, the other's food stamps, okay?"

Of course, all that spending on unemployment and food stamps costs money, so they just borrowed that money from future generations of Americans – your children. The national debt is nearly $16 trillion, but they just keep borrowing. They don't know what else to do, because they have no idea how jobs are created in the first place.

Republicans think that the best way to stimulate the economy is to create jobs by encouraging businesses to risk their capital in business ventures. But the Republicans aren't in charge, so we are following the Democrat playbook. Many companies have responded to the Democrat plan to punish "the rich" by expanding their businesses in other countries that are less hostile to job creators. When you introduce burdensome regulations (EPA, Obamacare, Dodd-Frank, etc.) and high corporate taxes (35% – highest in the world!), that means that businesses can hire fewer people at home, and they are forced to expand elsewhere.

Richard Miniter: Obama canceled Bin Laden kill mission THREE TIMES

July 30, 2012 | by Wintery Knight | Link | Original Link

What kind of foreign policy do you get when you put radical leftists in charge?

This kind. (H/T Richard M.)

Excerpt:

> At the urging of Valerie Jarrett, PresidentBarack Obama canceled the operation to kill Osama bin Laden on three separate occasions before finally approving the May 2, 2011 Navy SEAL mission, according to an explosive new book scheduled for release August 21. The Daily Caller has seen a portion of the chapter in which the stunning revelation appears.
>
> In ”Leading From Behind: The Reluctant President and the Advisors Who Decide for Him,“ Richard Miniter writes that Obama canceled the “kill” mission in January 2011, again in February, and a third time in March. Obama’s close adviser Valerie Jarrett persuaded him to hold off each time, according to the book.
>
> Miniter, a two-time New York Times best-selling author, cites an unnamed source with Joint Special Operations Command who had direct knowledge of the operation and its planning.
>
> Obama administration officials also said after the raid that the president had delayed giving the order to kill the arch-terrorist the day before the operation was carried out, in what turned out to be his fourth moment of indecision. At the time, the White House blamed the delay on unfavorable weather conditions near bin Laden’s compound in Abbottabad, Pakistan.
>
> But when Miniter obtained that day’s weather reports from the U.S. Air Force Combat Meteorological Center, he said, they showed ideal conditions for the SEALs to carry out their orders.
>
> “President Obama’s greatest success was actually his greatest failure,” Miniter told The Daily Caller Friday. ”Leading From Behind,“ he said, traces the arc of six key Obama administration decisions, and shows how the president made them — and, often, failed to make them.

Should we give Obama any credit for killing Bin Laden?

I’ve written before about how George W. Bush deserves credit for Bin Laden kill.

But there are a couple of other data points to add that recently emerged, as well.

First, the decision on the Bin Laden raid was made by the American Armed Forces, not by Barack Obama, as a newly released memo reveals.

Second, Obama had already drafted a memo to blame the military if the operation failed.

In fact, Obama has weakening our counter-terrorism and defense capabilities from the

day he took office.

Excerpt:

> Sen. Jim Inhofe, R-Okla., a senior member of the Senate Armed Services Committee, called the president's victory lap in Afghanistan on the anniversary of the death of Osama bin Laden at the hands of the Navy SEALs "an attempt to shore up his national security credentials, because he has spent the past three years gutting our military."
>
> Indeed he has. "He cut the F-22, future combat system, C-17 and our ground-based interceptor in Poland, to name a few," Inhofe noted.
>
> […]President Obama's defense policies fulfill a campaign pledge he made to the far-left group Caucus for Priorities a month before the January 2008 Iowa caucuses. Caucus for Priorities is an offshoot of a bigger group, Priorities Action Fund, created by Ben Cohen, the peace activist and co-founder of Ben & Jerry's ice cream.
>
> In a video made for the group, Obama called for a further deterioration in our military strength.
>
> "I will cut investments in unproven missile defense systems. I will not weaponize space. I will slow our development of future combat systems," he said.
>
> So far, he has kept his word.
>
> In the video, he also vowed, "I will set a goal of a world without nuclear weapons. To seek that goal, I will not develop new nuclear weapons, I will seek a global ban on the production of fissile material and I will negotiate with Russia to take our ICBMs off hair-trigger alert, and to achieve deep cuts in our nuclear arsenals."
>
> He has kept that promise as well.
>
> As the Heritage Foundation notes, since Obama took office, over 50 major weapons programs of more than $300 billion have been cut or delayed.
>
> Obama, who betrayed Poland and Czechoslovakia on missile defense and shut down key weapon systems like the F-22 Raptor, has vowed to veto any changes to the mandated cuts, including $650 billion from defense as called for by the Budget Control Act over the next decade.
>
> That comes on top of $460 billion in defense cuts already agreed to — a total of $1.1 trillion in defense cuts our commander in chief is OK with.
>
> A 14-page analysis by the Republican majority staff of the House Armed Services Committee says the cumulative cuts will result in Army and Marine Corps losing 200,000 troops.
>
> The Navy will shrink from 300 ships to 238 vessels and would lose two carrier battle groups needed to project American power and influence. Strategic bombers will fall from 153 to 101. Air Force fighters would drop by more than half, from 3,602 aircraft to 1,512 planes. These are real cuts, both in spending

> and in military capability.

In fact, the main priority of the Obama administration seems to be redirecting the U.S. military to fight global warming intervening in favor of South American socialist dictators, dismantling our nuclear arsenal, allowing Iranian Islamists to rig elections and shoot pro-democracy protesters, giving drone technology to the Iranians, setting up the the Muslim Brotherhood in Egypt and Libya, and handing over the keys to our European missile defense system to the Russians.

This is not the full list of how this man has been a disaster for world peace and national security. And it is a list that is ignored by his supporters who think with their emotions and who have their hands out for more of their share of their neighbor's earnings.

Chick-Fil-A under fire for supporting a child's right to a mother and a father

July 30, 2012 | by Wintery Knight | Link | Original Link

Like marriage? Support Chick-Fil-A on August 1st!

I had Chick-Fil-A for lunch every day last week. Why? Well, take a look at this Washington Times article.

Excerpt:

> Each day brings new evidence of the left's hatred for Christians and other traditionalists, but the smear campaign against Christian-owned Chick-fil-A sets a new low.
>
> The Atlanta-based, 1,600-restaurant chain, famous for its misspelling-prone cows that urge consumers to "eat mor chikin," is under a full-scale fascistic assault, complete with obscene celebrity tweets and government bullying.
>
> Acting more like Benito Mussolini than Paul Revere, Boston Mayor Thomas M. Menino said he will block Chick-fil-A from opening a restaurant in his city. Chicago Alderman Proco Joe Moreno said he will stop Chick-fil-A from building its second Chicago store. In Philadelphia, Councilman James F. Kenney sent a letter to Chick-fil-A President Dan Cathy advising his company to "take a hike and take your intolerance with you." Meanwhile, the Jim Henson Co., owner of the Muppets, has canceled a deal to provide toys for Chick-fil-A kids' meals. This is just the beginning.
>
> What has the dastardly company done? Chick-fil-A's management, while not

> political, is an unapologetic defender of traditional values. Like the Boy Scouts, the company has enraged liberals who are at war with nature and nature's God.
>
> This isn't the first time Chick-fil-A has been singled out. In February 2011, homosexual activists launched an unsuccessful boycott when they found out that the company donated food to the Pennsylvania Family Institute's marriage retreat. Seriously, it doesn't take much to tick them off.
>
> The current hysteria began after Mr. Cathy, son of the chain's founder, gave an interview that ran in the Baptist Press on July 16.Mr. Cathy noted that Chick-fil-A's management is "based on biblical principles, asking God and pleading with God to give us wisdom on decisions we make about people and the programs and partnerships we have. And He has blessed us." When asked about the company's positions in support of marriage and family, Mr. Cathy went on to say, "Well, guilty as charged. We are very much supportive of the family — the biblical definition of the family unit."
>
> This was too juicy to ignore. CNN ran a July 19 religion blog post that read, "Chick-fil-A's marriage stance causing a social storm." Casually striking a match while pouring the gasoline, writer Brad Lendon wrote that "the comments of company President Dan Cathy about gay marriage to Baptist Press on Monday have ignited a social media wildfire."
>
> It doesn't matter that Mr. Cathy never brought up "gay marriage," as noted by the Weekly Standard's Mark Hemingway. All Mr. Cathy did was defend the company's stance that families are paramount and that the company supports the family unit "in its biblical definition."

So, would you like to support Chick-Fil-A? Me too!

And here is what I have when I go there:

- Deluxe Spicy Chicken Sandwich with Pepper Jack cheese
- Large Waffle Fries
- Regular Diet Lemonade with Splenda

You can see their full menu here.

There is an all-hands-on-deck effort to support Chick-Fil-A scheduled for this Wednesday, August 1, 2012. If you're going to support Chick-Fil-A, that would be a good day to do it. Maybe I'll see you there! (I'll probably be there all week for lunch again!)

For a robust defense of marriage, click here.

Advice for Christians who discuss their faith with atheists… from an atheist

July 31, 2012 | by Wintery Knight | Link | Original Link

I spotted this post by Jeffery Jay Lowder on The Secular Outpost, and I think it's good advice.

> There are times where two people speak the same language, use the same words, and mean *very* different things by the same words. In conversations between Christians and atheists, "faith" is one such word. For many atheists, the word "faith" means, by default, belief *without* evidence or even belief *against* the evidence. In contrast, I doubt many Christians would accept that definition. For example, according to the NIV translation, Hebrews 11:1 states, "Now faith is confidence in what we hope for and assurance about what we do not see."
>
> Victor Reppert, at *Dangerous Idea,* writes this about the word "faith."
>
> Every time you use the word "faith" in a discussion with an atheist, they are going to declare victory. They will presume that you are believing for no reason, and that you are are admitting that the evidence is against you.
>
> I think he is probably right. If Christians want to dialogue with atheists, I think Christians would be well served to speak the 'language' of atheists. The word "faith" simply has too much baggage associated with it; inserting that word into the conversation is likely to become a distraction from whatever point the Christian was probably trying to make. So if you're a Christian talking with atheists, my advice is to temporarily delete the word "faith" from your vocabulary. Find some other way to make your point.

A better word to use is "trust", and here's Christian apologist Greg Koukl of Stand to Reason to make the same point:

Christian apologist Jonathan Morrow had a similar post on Think Christianly. (Mark well the part he put in bold)

Excerpt:

> In today's post I want to share a conversation I had with some of the sharp young men during lunch. It had to do with how we talk about Christianity with our friends, family, and coworkers. Most of the time, well meaning Christians talk about Christianity in the context of religion…not reality. Is that a problem? Yes, and here's why. Religion is understood as a personal and private feeling that is not accessible by everyone else. You can't question, challenge, or investigate it; you must simply be tolerant of it (and by tolerant, I am using the modern misunderstanding of tolerance which believes that all religious views are equally valid simply because a person sincerely believes them). That's why having a

> conversation about Christianity as a religion is a dead end. It's a non-starter.
>
> That's why I encouraged these students to talk about Christianity in the context of reality where terms like truth, knowledge, reason, and evidence apply. Any claim about reality is either true or false (it can't be both). *If Christianity is not the kind of thing that can be true or false…the battle has already been lost and the Gospel cannot be seriously considered*. We need to talk about Christianity in the same way we talk about having a prescription filled at the pharmacy or receiving instruction from a Doctor.
>
> In today's society, religion is a fuzzy (i.e., socially constructed or psychologically projected) category that makes little difference in everyday life. **But if Christianity is true, then it speaks to ALL of life. It makes a comprehensive claim on reality**. Jesus didn't intend to merely address two hours of our week. As Christians we need to have more conversations about reality and less about religion.

I've even written a post about the concept of faith that is presented in the Bible and the word faith has nothing to do with blind belief in the Bible – it's always based on evidence, so that people can know for certain what the truth is. I highly recommend it for anyone who disagrees with Jeffery,Greg or Jonathan. When you're talking about Christianity, you're talking about what you know. You're talking about the way the world is, for everyone. When you talk about your belief in God, you should say "trust". You should not say "faith".

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

Federal court: Obama appointees interfered with New Black Panther prosecution

July 31, 2012 | by Wintery Knight | Link | Original Link

From the Washington Examiner.

First, recall the details of the incident that got the New Black Panthers into trouble:

> The New Black Panthers case stems from a Election Day 2008 incident where two members of the New Black Panther Party were filmed outside a polling place intimidating voters and poll watchers by brandishing a billy club. Justice Department lawyers investigated the case, filed charges, and when the Panthers failed to respond, a federal court in Philadelphia entered a "default" against all the Panthers defendants. But after Obama was sworn in, the Justice Department reversed course, dismissed charges against three of the defendants, and let the fourth off with a narrowly tailored restraining order.

Now here's the latest:

> A federal court in Washington, DC, held last week that political appointees appointed by President Obama did interfere with the Department of Justice's prosecution of the New Black Panther Party.
>
> […]Obama's DOJ had claimed Judicial Watch was not entitled to attorney's fees since "none of the records produced in this litigation evidenced any political interference whatsoever in" how the DOJ handled the New Black Panther Party case. But United States District Court Judge Reggie Walton disagreed. Citing a "series of emails" between Obama political appointees and career Justice lawyers, Walton writes:
>
> The documents reveal that political appointees within DOJ were conferring about the status and resolution of the New Black Panther Party case in the days preceding the DOJ's dismissal of claims in that case, which would appear to contradict Assistant Attorney General Perez's testimony that political leadership was not involved in that decision. Surely the public has an interest in documents that cast doubt on the accuracy of government officials' representations regarding the possible politicization of agency decision-making.
>
> …
>
> In sum, the Court concludes that three of the four fee entitlement factors weigh in favor of awarding fees to Judicial Watch. Therefore, Judicial Watch is both eligible and entitled to fees and costs, and the Court must now consider the reasonableness of Judicial Watch's requested award.

The Obama administration thought that this incident was nothing to be concerned about. Obama used to work for ACORN, an organization famous for voter fraud schemes.

Excerpt:

> The radical activist group ACORN “works” for the Democratic Party and deliberately promotes election fraud, ACORN employees told FBI investigators, according to an FBI document dump Wednesday.
>
> The documents obtained by Judicial Watch, a watchdog group, are FBI investigators’ reports related to the 2007 investigation and arrest of eight St. Louis, Mo., workers from ACORN’s Project Vote affiliate for violation of election laws. All eight employees involved in the scandal later pleaded guilty to voter registration fraud.
>
> Project Vote is ACORN’s voter registration arm. Project Vote continues to operate despite the reported dissolution of the national structure of ACORN.
>
> The handwritten reports by FBI agents show that ACORN employees reported numerous irregularities in the nonprofit group’s business practices.

Why should we be surprised that the Obama administration would turn a blind eye to this New Black Panther incident?

What is the “unforgiveable sin” in Mark 3 and Matthew 12?

July 31, 2012 | by Wintery Knight | Link | Original Link

Take a look at these two puzzling passages from the New Testament.

Mark 3:28-29:

28 Truly I tell you, people can be forgiven all their sins and every slander they utter,

29 but whoever blasphemes against the Holy Spirit will never be forgiven; they are guilty of an eternal sin.”

Matthew 12:30-32:

30 “Whoever is not with me is against me, and whoever does not gather with me scatters.

31 And so I tell you, every kind of sin and slander can be forgiven, but blasphemy against the Spirit will not be forgiven.

32 Anyone who speaks a word against the Son of Man will be forgiven, but anyone who speaks against the Holy Spirit will not be forgiven, either in this age or in the age to come.

What can it mean?

Well, here’s a post by Dr. Paul Gould to shed some light on it.

Excerpt:

> Taken in isolation, it is hard to make sense of this passage—how is it that all kinds of sins can be forgiven but one sin will not be forgiven? What is going on here? Well, here is a principle of sound biblical interpretation:
>
> Principle #1: I*n order to correctly understand a passage, we must always look at it within its context.*
>
> And what is the passages context? The broader context can be found in Matthew 12:22-32. In this broader context we read of Jesus performing a miracle (he performs an exorcism and heals a blind and mute man), we read of the crowd’s amazement and wonderment over the identity of Jesus (“Could this be the Son of David?”), we find the slanderous (and murderous) charge of the Pharisees, and we find Jesus’ response to the Pharisees charge (both his reasoned response to their explicit charge that he drives out demons by Satan’s power as well as his warning to the Pharisees if they continue to attribute to Satan what is in fact the work of God’s Spirit).
>
> After looking at this passage in context, we find that the “unforgivable sin” is (basically) attributing what is in fact the work of God’s Spirit to His ultimate enemy, Satan.
>
> Fair enough, you say, but there are other problems passages that talk about the unforgivable sin—Hebrews 6, 1 John 5, and Hebrews 10 come to mind. What

> about those passages? Well, here is our second principle of biblical interpretation:
>
> Principle #2: *Always interpret unclear passages in light of the clear teachings of Scripture (as a whole)*.
>
> And what is the clear teaching of Scripture related to sin and forgiveness? It is this:
>
> Forgiveness of sins is a consequence of man's repentance, and repentance is a consequence of the activity of the Holy Spirit in our hearts. So in the end, it seems that blasphemy against the Holy Spirit is nothing more or less than the unrelenting rejection of His advances.

The only unforgiveable sin is the sin of deliberately rejecting God's efforts to draw you into a saving relationship with him. What does this mean for you? It means that if you are a Christian and you believe the essentials of the faith, then you aren't going to be able to lose your salvation by performing sinful actions. Sinful actions will damage you before you die, and you will lose rewards in the after-life, but you won't be separated from God when you die.

By the way, I do believe in resistible grace, and therefore, I believe that humans are responsible for their choice to refuse God's drawing them towards him. Many people think that once you are saved, you can't lose your salvation, but I think that the Bible is very clear that you can, will all the warnings about apostasy and the parable of the seeds, etc. I also think that the Bible is very clear in teaching resistible grace.

William Lane Craig lectures on the evidence for the resurrection of Jesus

July 31, 2012 | by Wintery Knight | Link | Original Link

Justin Brierley, host of the Unbelievable radio show, tweeted about this lecture.

This is a long form explanation of the resurrection argument that Dr. Craig makes in all of his debates on the existence of God. The speaker introduction goes for 6 minutes, then Dr. Craig speaks for 35 minutes, then it's a period of questions and answers with the audience. The total length is 93 minutes, so quite a long period of Q&A. The questions in the Q&A period are quite good.

Introduction:

- Many people who are willing to accept God's existence are not willing to accept the God of Christianity
- Christians need to be ready to show that Jesus rose from the dead as a historical event
- Private faith is fine for individuals, but when dealing with the public you have to have evidence
- When making the case, you cannot assume that your audience accepts the Bible as inerrant
- You must use the New Testament like any other ancient historical document
- Most historians, Christian and not, accept the basic minimal facts supporting the resurrection of Jesus

Fact #1: the burial of Jesus following his crucifixion

- Fact #1 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #1 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #1 passes the criterion of enemy attestation, since it praises one of the Sanhedrin
- Fact #1 is not opposed by any competing burial narratives

Fact #2: on the Sunday following his crucifixion, Jesus' tomb was found empty by some women

- Fact #2 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #2 is implied by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #2 is simple and lacks legendary embellishment, which argues for an early

dating
- Fact #2 passes the criterion of embarrassment, because it has female, not male, witnesses
- Fact #2 passes the criterion of enemy attestation, since it is reported by the Jewish leaders

Fact #3: Jesus appeared to various people in various circumstances after his death

- Fact #3 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #3 is supported by multiple, independent reports of the events from all four gospels
- Fact #3 explains other historical facts, like the conversion of Jesus' skeptical brother James

Fact #4: the earliest Christians proclaimed their belief in the resurrection of Jesus

- Fact #4 explains why the earliest Christians continued to identify Jesus as the Messiah
- Fact #4 explains why the earliest Christians were suddenly so unconcerned about being killed

Dr. Craig then asks which hypothesis explains all four of these facts. He surveys a number of naturalistic hypotheses, such as the hallucination theory or various conspiracy theories. All of these theories deny one or more of the minimal facts that have been established and accepted by the broad spectrum of historians. In order to reject the resurrection hypothesis, a skeptic would have to deny one of the four facts or propose an explanation that explains those facts better than the resurrection hypothesis.

I listened to the Q&A period while doing housekeeping and I heard lots of good questions. Dr. Craig gives very long answers to the questions. One person asked why we should trust the claim that the Jewish leaders really did say that the disciples stole the body. Another one asked why we should take the resurrection as proof that Jesus was divine. Another asks about the earthquake in Matthew, which Mike Licona and I doubt is intended to be historical, but is more likely to be apocalyptic imagery. Dr. Craig is also asked about the Jewish scholar Geza Vermes, and how many of the minimal facts he accepts. Another questioner asked about the ascension.

You can see this evidence used in an actual debate, against a historian who disagrees with Dr. Craig. That post contains a point by point summary of the debate that I wrote while listening to it.

If you are looking for a good book to read on this topic, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

Meet the Chinese woman who saved more than 30 abandoned babies

August 1, 2012 | by Wintery Knight | Link | Original Link

Here's an inspiring article from the UK Daily Mail. (H/T Dina)

Excerpt:

> A woman has been hailed a hero after details of her astonishing work with abandoned children has emerged.
>
> Lou Xiaoying, now 88 and suffering from kidney failure, found and raised more than 30 abandoned Chinese babies from the streets of Jinhua, in the eastern Zhejiang province where she managed to make a living by recycling rubbish.
>
> She and her late husband Li Zin, who died 17 years ago, kept four of the children and passed the others onto friends and family to start new lives.
>
> Her youngest son Zhang Qilin – now aged just seven – was found in a dustbin by Lou when she was 82.
>
> 'Even though I was already getting old I could not simply ignore the baby and leave him to die in the trash. He looked so sweet and so needy. I had to take him home with me,' she said.
>
> 'I took him back to our home, which is a very small modest house in the countryside and nursed him to health. He is now a thriving little boy, who is happy and healthy.
>
> 'My older children all help look after Zhang Qilin, he is very special to all of us. I named him after the Chinese word for rare and precious.
>
> 'The whole thing started when I found the first baby, a little girl back in 1972 when I was out collecting rubbish. She was just lying amongst the junk on the street, abandoned. She would have died had we not rescued her and taken her in.
>
> 'Watching her grow and become stronger gave us such happiness and I realised I had a real love of caring for children.
>
> 'I realised if we had strength enough to collect garbage how could we not recycle something as important as human lives,' she explained.
>
> 'These children need love and care. They are all precious human lives. I do not understand how people can leave such a vulnerable baby on the streets.

There are lots of pictures and more to read! It's a very, very touching story of self-sacrificial love.

Ted Cruz wins Texas Republican Senate primary election 56-44

August 1, 2012 | by Wintery Knight | Link | Original Link

CNBC reports on another Tea Party primary victory.

Excerpt:

> Tea Party favorite Ted Cruz scored a stunning upset over a longtime Texas state officeholder in a Republican U.S. Senate primary runoff on Tuesday, transforming Cruz into a national conservative star and marking a resurgence of the movement to shrink the size of U.S. government.
>
> Cruz, 41, a former state solicitor general who has never held elected office, became the third insurgent Republican this year to defeat an establishment Republican in a U.S. Senate primary.
>
> He scored a surprisingly comfortable victory with about 56 percent of the vote to about 44 percent for Lieutenant Governor David Dewhurst, who a year ago was considered the frontrunner.
>
> […]Cruz spent a year and a half crisscrossing the state, introducing himself at Tea Party meetings and Republican women's club gatherings as a "constitutional conservative."
>
> And he drew support from conservative stars such as former Alaska Governor Sarah Palin and money from national conservative groups such as the Club for Growth. That group's political action committee spent $5.5 million to support Cruz, the organization said.
>
> Cruz, whose father came to Texas from Cuba with $100 sewn into his underwear, would become the first Hispanic U.S. senator from Texas if he wins in November.
>
> Dewhurst and Cruz had similar policy positions. Both pledged to do away with President Barack Obama's health care reform and to rein in Washington spending.
>
> Cruz, a Princeton University debate champion and a Harvard Law School graduate, stood out with sharp debate performances.

This is the third big Tea Party victory in a Republican primary. Richard Mourdock beat Richard Lugar in Indiana and Deb Fischer beat Jon Bruning in Nebraska. You can read more about Ted Cruz here.

Obamacare begins forcing states to cap and cut prescription drug benefits

August 1, 2012 | by Wintery Knight | Link | Original Link

From Life News. (H/T Doug Ross via BadBlue)

Excerpt:

> When Democrats in Congress pushed the Obamacare bill through, pro-life groups warned about rationing that could take place as a result. Although liberal groups and the mainstream media laughed at the projections, they are now coming to pass.
>
> A new report from Kaiser Health indicates states are now moving in the director of capping or cutting prescription drug benefits.
>
> Illinois Medicaid recipients have been limited to four prescription drugs as the state becomes the latest to cap how many medicines it will cover in the state-federal health insurance program for the poor.
>
> Sixteen states impose a monthly limit on the number of drugs Medicaid recipients can receive and seven states have either enacted such caps or tightened them in the past two years, according to the Kaiser Family Foundation (KHN is a program of the foundation). The limits vary across the country. Mississippi has a limit of two brand-name drugs. In Arkansas adults are limited to up six drugs a month.
>
> Since June, Alabama has had the nation's stingiest Medicaid drug benefit after limiting adults to one brand-name drug. HIV and psychiatric drugs were excluded. On Aug. 1 the state will relax the limit to its previous level — four brand-name drugs — after the restriction saved more money than expected and the state received money as part of a settlement with a pharmaceutical company.
>
> Other states with Medicaid drug limits are Arkansas, California, Kansas, Kentucky, Louisiana, Maine, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Utah and West Virginia.
>
> […]NRLC has said Obamacare contains "multiple provisions that will, if fully implemented, result in government-imposed rationing of lifesaving medical care."
>
> The department of Health and Human Services (HHS) will be empowered to impose so-called "quality and efficiency" measures on health care providers, based on recommendations by the Independent Payment Advisory Board, which is directed to force private health care spending below the rate of medical inflation. In many cases treatment that a doctor and patient deem needed or advisable to save that patient's life or preserve or improve the patient's health but which runs afoul of the imposed standards will be denied, even if the patient

> wants to pay for it.
>
> The law empowers HHS to prevent older Americans from making up with their own funds for the $555 billion the law cuts from Medicare by refusing to permit senior citizens the choice of private-fee-for-service plans whose premiums are sufficient to provide unrationed care but which HHS, in its unlimited discretion, disallows. The Obama health care law could thus lead to elimination of the only way that seniors will have to escape rationing — by limiting their right to spend their own money to save their own lives.

We should not be surprised by this. In the UK, patients regularly have treatments cut off by the government because they are deemed “lost causes” and because the government needs to cut costs. In Canada, patients are barred by law from using their own money to purchase or supplement their medical care. That’s why they have to leave the country and pay out of pocket for faster treatment when they are placed on waiting lists. Socialist health care means waiting lists and rationing by death panels. Get used to it, that’s what “equality” means. It means you pay based on income, and you are treated based on government decree – and after the bureaucrats take their cut, of course.

There is another way. We can use the forces of choice and competition to lower costs the same way that costs are lowered in the free market. In the private sector, the laptop that costed $3000 5 years ago was $1000 last year and is $400 today. That’s how the private sector works, and that’s what we need to do with health care. Get the government out it. The profit motive of business owners drives quality up and price down. It does in every area we care about, and health care is no different.

Douglas Groothuis' exhortation to Christians to study apologetics

August 1, 2012 | by Wintery Knight | Link | Original Link

Dr. Groothuis' article lays out 6 "enemies" to the task of apologetics. I'll look at the first 4.

Enemy #1: We don't defend God's existence and character to other people

If we really cared about God like we say we do, then we would care enough to defend his reputation in public. If we really loved our neighbor and believed that they need to follow Jesus in order to be reconciled with God, we would tell them that. But we don't really care enough about God when his reputation is slammed in public. That's what being a good friend to God and to our neighbor requires.

Groothuis writes:

> Too many Christians don't seem to care that Christianity is routinely ridiculed as outdated, irrational, and narrow-minded in our culture. They may complain that this "offends" them (just as everyone else is complaining that one thing or another "offends" them), but they do little to counteract the charges by offering a defense of the Christian world view in a variety of settings. Yet Scripture *commands* all Christians to have a reason for the hope that is within them and to present this with gentleness and respect to unbelievers (1 Peter 3:15).
>
> Our attitude should be that of the Apostle Paul who was "greatly distressed" when he beheld the idolatry of sophisticated Athens. This zeal for the truth of God led him into a fruitful apologetic encounter with the thinkers gathered to debate new ideas (see Acts 17). It should for us as well. Just as God "so loved the world" that he sent Jesus to set us right with God (John 3:16), Jesus' disciples should so love the world that they endeavor to reach the lost by presenting the Gospel and answering objections to the Christian faith (John 17:18).

Enemy #2: We separate Christianity from the reasons and evidence that ground it

Many Christians alter their theology in order to "get along" with other religions that conflict with ours. Instead of wrestling with the competing truth claims of other religions, some Christians just change the nature of our religion so that it is just our personal preference or cultural narrative, instead of being about truth. If the Bible claims that Jesus rose from the dead, we reinterpret that historically testable claim so that it's only true *for us.* If the Bible says that the universe began to exist, we reinterpret that scientifically testable claim so that it is only true *for us*.

Groothuis says:

> For some Christians, faith means belief in the absence of evidence and argument. Worse yet, for some faith means belief *in spite of* evidence to the

> contrary. The more irrational our beliefs, the better–the more "spiritual" they are… When Christians opt for irrationalism, they become just another "religious option," and are classified along with Heaven's Gate, the Flat Earth Society, and other intellectually impaired groups.

Enemy #3: We don't take the time to study the reasons and evidence we have

We don't make time for preparing a defense for our beliefs by leveraging the resources produced by Christian scholars.

Groothuis says:

> Many Christians are not aware of the tremendous intellectual resources available to defend "the faith that was once for all entrusted to the saints" (Jude 3). This is largely because many major churches and parachurch organizations virtually ignore apologetics… Few evangelical sermons ever address the evidence for the existence of God, the resurrection of Jesus, the justice of hell, the supremacy of Christ, or the logical problems with nonChristian worldviews. Christian bestsellers, with rare exceptions, indulge in groundless apocalyptic speculations, exalt Christian celebrities (whose characters often do not fit their notoriety), and revel in how-to methods.

Enemy #4: We would rather be liked by people than be a friend to God

Somehow, we have gotten the idea that the purpose of Christianity is for us to be happy. Being popular and accepted by non-Christians makes us feel happy. Moral judgments are divisive, so we avoid making those. Exclusive salvation is divisive, so we avoid exclusivity. All of this so that our lives will be easier and happier.

Groothuis says:

> In our pluralistic culture, a "live and let live" attitude is the norm, and a capitulation to social pressure haunts evangelicalism and drains its convictions. Too many evangelicals are more concerned about being "nice" and "tolerant" than being biblical or faithful to the exclusive Gospel found in their Bibles. Not enough evangelicals are willing to present and defend their faith in challenging situations, whether at school, at work, or in other public settings. The temptation is to privatize faith, to insulate and isolate it from public life entirely. Yes, we are Christians (in our hearts), but we have difficulty engaging anyone with what we believe and why we believe it. This is nothing less than cowardice and a betrayal of what we say we believe.

You can read the rest of the article here.

China takes children from their families to train as athletes

August 1, 2012 | by Wintery Knight | Link | Original Link

From the UK Daily Mail.

Excerpt:

> For during recent years its swimmers and coaches have been caught cheating so many times it is difficult to keep count – and it has modelled its draconian training system on precisely that which produced Schneider and other turbo-charged East Germans before the Iron Curtain fell.
>
> It began in the Eighties when, determined to end the nation's perennial humiliation at major athletics and swimming championships, China's Communist regime decreed that a generation of future champions must be harvested and honed.
>
> To that end, school teachers were ordered to scrutinise their pupils for signs of natural sporting ability and report any child with obvious potential to regional coaches who would install them in one of 3,000 new state training camps.
>
> According to her mother, Qing Dingyi, as quoted by the Chinese state media, little Ye 'expressed a wish to become a swimmer at the tender age of seven'.
>
> In truth, she was picked out because she had an unusually masculine physique with extremely large hands and long limbs: attributes at first thought best suited to a career in track and field.
>
> After being whisked away from her modest two-bedroom apartment, in Hangzhou, a city of 6.2 million, and installed into the Chen Jingluin sports school, however, it was decided she would be best suited to swimming, and by 11 she had won her first major junior championship.
>
> Her mother insists she and her husband, a manual worker, had always impressed on her that 'results are not important, but you should always enjoy the taking part'. One doubts she dares voice this opinion in the presence of her daughter's coaches.
>
> In swimming, as in most other Olympic sports, they enforce a regime so relentlessly harsh that it has been compared, by those few Western observers who have managed to penetrate the obsessive secrecy with which it is guarded, to that in some 19th-century prisons.
>
> Indeed, after being shown how China's child gymnasts are trained some years ago, in his capacity as an Olympic observer, Britain's Olympic gold-winning oarsman Sir Matthew Pinsent – a man who knows a thing or two about pushing the human body to its limits – pronounced it a 'pretty disturbing experience'.
>
> Children who our own sports authorities would deem far too young even to

> countenance focusing seriously on one sport, let alone be taken away from their parents and billeted in these boot-camps, had been driven so hard that they wept, and one claimed to have been beaten by his coach.
>
> The International Olympic Committee promised then to investigate his claims but seven years on there is no evidence that anything has remotely changed.
>
> Only last January harrowing photographs were posted on the internet showing Chinese children crying in pain as they were put to work.
>
> In case they had forgotten why they were there, a large sign on the wall reminded them. 'GOLD' it said simply.

What a tragedy. This is why I boycott the Olympics. To me there is nothing more important than having everything child welcomed into the world by his or her biological parents, and then having a stable loving environment to grow up in. I reject both the selfishness of adults and the fascist ideologies of socialist states. There is nothing more important to children than their parents. Children are more important than anti-family ideologies like feminism and socialism.

I recommend clicking through and reading the full article, and look at the pictures, too. This is what happens when the state takes precedence over individuals and families. We need to make sure that secularism and socialism do not dominate here, like they do in China.

Coalition of African American Pastors launches national pro-marriage campaign

August 2, 2012 | by Wintery Knight | Link | Original Link

Here's some good news from CNS News.

Excerpt:

> The Coalition of African American Pastors (CAAP) announced at the National Press Club on Tuesday that the grassroots group – comprised of the more than 3,000 members – is a launching a national campaign to support marriage between one man and one woman and to oppose the Obama administration's efforts to advance same-sex marriage.
>
> "The time has come for a broad-based assault against the power that be that wants to change our culture to one of men marrying men and women marrying women," CAAP President William Owens said at the press conference, held to announce the Marriage Mandate campaign, which includes a petition seeking 100,000 signatures pledging support for traditional marriage.
>
> "Mr. President, I'm not going to stand with you, and there are thousands of others across this country that are not going to stand with you with this foolishness," Owens said.
>
> In a press release announcing the campaign, Owens encouraged black pastors and the black community to "withdraw their support for [Obama]."
>
> "Today we will be launching a nationwide campaign rallying black pastors and African Americans to voice their opposition to the president's position on same-sex marriage, and withdraw their support from him," said Owens, who told reporters he voted for Obama in the 2008 presidential election.
>
> "We will see that the black community is informed that the president is taking them for granted while pandering to the gay community," Owens said.
>
> Bishop Janice Hollis, presiding Prelate of the Covenant of International Fellowship of Churches, called Obama's support of gay marriage a "travesty" and said it reflects the "disorder in the highest office in the land."
>
> Owens said CAAP sent a letter to Obama and Attorney General Eric Holder in May asking for a meeting to discuss the gay marriage issue.
>
> "We wrote the president and Mr. Holder May the second, requesting an audience with him to discuss this very issue," Owens said. "He has not given us the courtesy of any reply.
>
> "The Coalition of African American Pastors (CAAP) consists of 3,742 African American pastors, and he has totally ignored us," Owens said.
>
> He said Obama is ignoring the black community "because he feels that he has us

> in his pocket."
>
> "Well, we are not in his pocket," Owens said.

In the 2008 election, black Protestants voted overwhelmingly for the pro-abortion and pro-gay-marriage Obama. (He had a radical pro-abortion record and had come out for gay marriage earlier, so this was all known then).

Which religions supported Obama most in 2008?
So 94% of African-American Christians voted for an abortion and gay marriage radical.
NINETY-FOUR PERCENT.

I actually believed, based on this voting data, that American black Protestant churches were *officially* pro-abortion and pro-gay-marriage. I just considered them to be apostate denominations the same way that denominations like the Episcopal Church and the Presbyterian Church United States of America are apostate. (Note: this does not apply to non-American black churches, which are conservative).

These voting numbers confirm my experiences. For example, I remember one African American woman at work who was interested in me who could not understand why I would not join her in working on The United Way workplace partnership initiative. I took her aside in the hallway and told her that the United Way supported abortion and opposed the Boy Scouts, and she was like "*So what?*". She attended church weekly and she supported Barack Obama. So I just figured based on these voting numbers and my personal experiences that most African-American churches were pro-abortion, pro-gay-marriage, pro-socialism, etc.

This action by the 3,742 black African-American pastors shocks me as much as if those gay bishops in the Episcopal church had suddenly came out in favor of defending traditional marriage. Maybe these 3,742 pastors will be able to begin to educate their

flocks about what the Bible actually says on these issues so that these voting numbers change. I did know about the good African-American pastors like Harry Jackson and Ken Hutcherson who are pro-life and pro-marriage, but I just thought that there were only a handful of faithful black pastors. I guess I was wrong, at least on the marriage issue, and that’s a good thing. Color me surprised.

Ohio coal mine closes because of Obama administration environmental policies

August 2, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> A stop not scheduled during the president's third visit to the battleground state in four weeks was a coal-mining operation near Brilliant, Ohio, run by Ohio American Energy Inc., a subsidiary of Murray Energy Corp. The operation employed 239 workers at its peak but will be closing as the result of President Obama's environmental policies.
>
> Regulatory actions by President Obama and his appointees and followers were cited as the entire reason in the press release that announced the closing. "Mr. Obama has already destroyed 83,000 megawatts of coal-fired electricity generation in America," said Michael T.W. Carey, vice president of government affairs for Murray Energy. "Electric prices in the recent PJM Interconnection monthly auction were bid up 800% for 2015-16 because of this," he added.
>
> PJM Interconnection, the company that operates the electric grid for 13 states, including Ohio, recently held its 2015 capacity auction. This gave the first real indication of just how drastic the effects of Obama's war on coal will be. The market-clearing price for new 2015 capacity was $136 per megawatt.
>
> That's eight times higher than the price for 2012, which was just $16 per megawatt. In Pennsylvania, the new market price is $167 per megawatt — 10 times higher. In northern Ohio, which is suffering from more forced coal-plant retirements than the rest of the region, the 2015 price is an astounding $357 per megawatt.
>
> This is one campaign promise President Obama has kept. In 2008, candidate Obama promised a system under which "if somebody wants to build a coal-powered plant, they can; it's just that it will bankrupt them because they're going to be charged a huge sum for all that greenhouse gas that's being emitted."

I'm sure that some of the people who lost their jobs voted for Obama. Maybe they were even familiar with that quote of his. But they just didn't put two and two together to make four. Will you do that in November? I think that the one thing you want to do in life is to NOT hurt yourself with your own actions. Never vote to take away your own job.

Obamacare subsidizes the risky behaviors of sexually active women

August 2, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> Starting August 1, the Democrats' health care law — as implemented by the Health and Human Services Administration — entitles 47 million women to eight new "prevention-related" health care services "without paying more out of their own pocket," HHS reminded Americans on Tuesday.
>
> In addition to the controversial contraceptive mandate, HHS says virtually all health plans must cover– at no charge — the following items for sexually active women.
>
> — HIV screening and counseling: "Sexually-active women will have access to annual counseling on HIV," HHS said, noting that women are at increased risk of contracting HIV/AIDS.
>
> — Counseling on sexually transmitted infections: "Sexually-active women will have access to annual counseling on sexually transmitted infections," HHS said. "These sessions have been shown to reduce risky behavior in patients, yet only 28 percent of women aged 18-44 years reported that they had discussed STIs with a doctor or nurse."
>
> — HPV (human papillomavirus): This sexually transmitted disease is linked to cervical cancer. According to HHS, "Women who are 30 or older will have access to high-risk human papillomavirus (HPV) DNA testing every three years, regardless of Pap smear results."
>
> — Interpersonal and domestic violence screening: "Screening and counseling for interpersonal and domestic violence should be provided for all adolescent and adult women," HHS says. "An estimated 25% of women in the United States report being targets of intimate partner violence during their lifetimes. Screening is effective in the early detection and effectiveness of interventions to increase the safety of abused women."
>
> — Contraceptive coverage: The HHS regulation requires nearly all health insurance plans to provide women with sterilizations and all FDA-approved contraceptives, including emergency contraception, without any fees or co-pay.

It is a major priority of the Obama administration: making it easier for women to have casual recreational sex with people outside of marriage. Sometimes, this recreational sex will result in increased sickness and disease, and sometimes this recreational sex will result in unplanned pregancies. But no matter – the taxpayers are there to pick up the tab for these activities. After all, "the private sector is fine" and business owners and workers

“didn’t build that”, so it’s no problem at all to “spread the wealth around” from job creators and workers to pay for these expenses. And it has the added benefit of buying votes. Not only that, but Planned Parenthood will make generous donations to the Democrat Party in exchange for all the new business they’ll get.

Chinese Communist Party members increasingly attending church

August 2, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> More Communist Party members in the Peoples Republic of China are attending church, according to the U.S. State Department's latest report on International Religious Freedom.
>
> "Although CCP members are required to be atheists and generally are discouraged from participating in religious activities, their attendance at official church services in Guangdong Province was reportedly growing, as authorities increasingly chose to turn a blind eye to their attendance," the report stated.
>
> Representative Frank Wolf (R-Va.), who authored the International Religious Freedom Act of 1998, backed up claims that more Chinese Communists as well as members of the media are becoming Christians, despite continuing religious repression in China.
>
> "It is definitely taking place around the country," Wolf told CNSNews.com. "There's a large number of Chinese who have become Christian, there are a number of people in the government and even some in the media who have become Christians."
>
> […]The International Religious Freedom Report, released on July 30, also noted that in 2011, there was a "marked deterioration" of religious freedom in China.
>
> The report discussed the persecution of religious groups, including Christians, Uighur Muslims, Catholics and Tibetan Buddhists:
>
> "Some religious and spiritual groups are outlawed. Tibetan Buddhists in China are not free to venerate the Dalai Lama and encounter severe government interference in religious practice," the report said.
>
> "The government continued to severely repress Muslims living in the Xinjiang Uighur Autonomous Region and other parts of China. Crackdowns on Christian house churches, such as the Shouwang church in Beijing, continued."
>
> The report also noted that Chinese authorities broke up Christmas and Easter celebrations and designated many Christian groups as "evil cults." Authorities also detained numerous Uighur Muslims without bothering to discern between peaceful worship and criminal activity.
>
> Many Catholic clergymen who remain loyal to the Vatican instead of the Chinese Catholic Patriotic Association (CCPA) also have been detained by the Communist regime.

> […]The Chinese constitution permits the citizenry to hold religious beliefs, but restricts the practicing and worship of religion to “normal religious activities”—a term that is left undefined by the constitution.
>
> Since 1999, China has been designated by the U.S. State Department as a “Country of Particular Concern” under the International Religious Freedom Act of 1998.

What’s striking to be is how similar the views of the repressive Chinese government are to the views of many atheists in the West. In China, even religious people have to act like atheists in public. It’s an atheist paradise. It reminds me a little of what is happening here with Obamacare and religious institutions being forced to provide abortion-inducing drugs against their consciences.

Chick-Fil-A appreciation day sets sales record

August 3, 2012 | by Wintery Knight | Link | Original Link

Chick-Fil-A Appreciation Day sets sales record
From the Los Angeles Times.

Excerpt:

> Chick-fil-A appears to have set a company record in sales on Wednesday, a day on which Americans were encouraged to show their support for the fast-food restaurant whose leadership has drawn both criticism and praise in recent weeks for its opposition to same-sex marriage.
>
> The privately held company declined to give specific sales figures but released a statement to the Los Angeles Times confirming that frenzied sales of chicken sandwiches and cross-cut waffle fries had made for a record-setting day.
>
> “We are very grateful and humbled by the incredible turnout of loyal Chick-fil-A customers on August 1 at Chick-fil-A restaurants around the country,” said Steve Robinson, executive vice president of marketing, in the statement. “While we don’t release exact sales numbers, we can confirm reports that it was a record-setting day.”
>
> […]Robinson said the Atlanta-based company was “grateful and humbled by the incredible turnout of loyal Chick-fil-A customers” who showed up at outlets in droves coast-to-coast. Customers often waited in long lines, many weathering the blistering summer sun, just to get in the front door.
>
> Such images — as well as those of crowded Chick-fil-A counters and long lines of cars snaking through the drive-thru lanes — created a social media frenzy on Wednesday as they were shared and reshared on a variety of platforms, including Twitter.
>
> The images suggested that sales were indeed going gangbusters, and confirmation of those suspicions arrived when Orange County Pastor Rick Warren

> tweeted a snippet of a conversation he'd had with Dan Cathy, president of the popular fast-food chain:
>
> @DanCathy just called me. #ChickFilA has already set a world record today, with 7 more hrs to go in the West. #OutOfChicken"
>
> The company, which proudly abides by Bible-based principles and closes its doors to sales on Sundays, stressed in its statement that Chick-fil-A did not promote Wednesday's turnout.
>
> It also stressed that its employees abide by a service tradition to "treat every person with honor, dignity and respect — regardless of their belief, race, creed, sexual orientation or gender."

But not everyone is happy about the protests. Here is an example taken from Sooper Mexican:

This sort of thing happens often, actually.

Why is it that everyone is so angry with people who express a pro-marriage point of view? I think the problem is that militant secularists are very focused on hedonism in this life. They cannot ground objective morality, including human rights such as the right to free speech. They have no notion of an after-life, so they are trying pack in as much happiness as they can. Their purpose in life is not to form their own character in this life, so they can be rightly related to God. They want to be selfish and they want to be celebrated by others for it.

Often, militant atheists know nothing at all about Christianity and why Christians hold to their positions. This makes them even more intolerant of Christians who act like Christians in public and who participate in politics, like the abolitionists or pro-life activists. These people have never sat through a formal academic debate, and they have never heard the arguments for God's existence and Christianity in particular. They don't want to listen, they just want to shame Christians and smash the windows of their businesses and put them into prisons until there is no one left to call their selfishness into question.

People who supported Chick-Fil-A were protesting this coercion and censorship by the secular left. They were saying, "you can't use the law and the government to take away my freedom to speak out in protest of things like slavery, abortion and redefining marriage". It's ironic that everyone is always accusing Christians of hypocrisy, and yet when we are authentic in public, they try to coerce us into acting like non-Christians!

I noticed that Gay Patriot, a well-known gay Republican and supporter of gay marriage, was out with his partner to Chick-Fil-A. He got some Chick-Fil-A food, and spent some time talking to the pro-marriage Chick-Fil-A customers. And everyone was nice to him. He is not a militant secularist – he thinks that everyone should be able to participate in defining policy and not be discriminated against for their views. No one who went to Chick-Fil-A was protesting Gay Patriot's freedom to do what he pleases in his own life. We were protesting the government's use of force to silence and coerce those who don't

want to have marriage redefined for the whole society. And we can defend our view using a variety of secular reasons, too, if anyone is interested.

Muslim leader of underage sex-trafficking gang gets 22-year sentence

August 3, 2012 | by Wintery Knight | Link | Original Link

He's definitely a Muslim, according to the UK Telegraph:

> Taxi driver Shabir Ahmed, 59, was already serving a 19 year sentence from May for conspiracy, two rapes, aiding and abetting rape, sexual assault and sex trafficking. His domineering temper earned him the nickname "Daddy" by the white teenage victims.

> The ringleader, who called the judge a 'racist b——', was one of nine men jailed at Liverpool Crown Court for a total of 77 years for passing round the youngsters and plying them with drugs and drink.

> […]His victim, who cannot be named, revealed Ahmed once made her kneel on the floor in a pose called the 'chicken', with her arms threaded through her legs and touching her ears, before striking her on the back with a cricket bat.
>
> The girl, now an adult, claims she was repeatedly raped over many years. He left her never wanting to have sex again or get married.
>
> The girl said when she was first raped she was so young she needed to stand on a chair to reach a sink.
>
> She said: "I remember reading about the time the Roald Dahl book 'The BFG', and it described a person screaming and no sound came out – it was like that."
>
> She said the "shame" meant she did not tell police until March last year when she heard Ahmed was being investigated over the grooming case.
>
> The court heard during one rape attack she muttered under her breath :"sex maniac". Ahmed giggled: "Yes, that's what I am!"
>
> Rachel Smith, prosecuting, told the jury of six men and six women, two of whom were Asian: "Ahmed was violent and controlling."
>
> Ahmed told the court he was a standard-bearer for "targeted and weakened British Muslims", and claimed the police were anti-Muslim
>
> He said of the Rochdale grooming trial: "We were all innocent. My only crime was to be Muslim. Not of the majority race."
>
> In May, Ahmed and his eight co-defendants were jailed for their role in a child-sex ring.
>
> After that trial, Judge Gerald Clifton called him an "unpleasant and hypocritical bully" and told all the nine men they were driven by "lust and greed", adding: "You treated the victims as worthless and beyond respect."
>
> Takeaway worker Kabeer Hassan, 25, was given a total of 12 years for rape and

> conspiracy. Taxi driver Abdul Aziz, 41, got 18 years for conspiracy and sex trafficking; Dad-of-five Abdul Rauf, 43, was jailed 12 years for conspiracy and sex trafficking; Mohammed Sajid, 35, got 12 years for rape, conspiracy, sex trafficking and sexual activity with a child.
>
> Married Adil Khan, 42, was jailed for 18 years for conspiracy and sex trafficking. Taxi driver Mohammed Amin, 45, was caged for six years for conspiracy and sexual assault while cabbie Abdul Qayyum, 44, was jailed for five years for conspiracy. Hamid Safi, 22, was jailed for four years for conspiracy and sex trafficking.

Is this sort of child-rape compatible with Islam?

In Christianity, men aren't allowed to have sex with anyone unless they are married to them. Marriage is for life, and you only get to marry one person. So you have two choices: a self-sacrificial lifelong marriage or lifelong chastity. If you had sex with someone you aren't married to, then you're not doing Christianity right.

I have female friends who are in other religions like Hinduism and Judaism and Buddhism and atheism. And my goal for those women (and the men, too!) is to get them into a relationship with God through the person and work of Jesus Christ.That is the goal that Christians have for people outside of their religion: to get them to freely love God because they are convinced that it is rational to do so. We are trying to change the other person's mind. We use reasons and evidence to do that.

When I read the Bible, I find that there is a model and specification for dealing with non-Christians in the New Testament.

Here are some tips for dealing with non-Christians:

- listen to their their concerns
- find answers to their questions through study
- write to them
- give them books to read
- give them lectures and debates to watch
- do stuff for them to make their lives easier
- don't send mixed signals by getting romantic
- try to share in their daily triumphs and defeats
- protect them from threats and coercion
- share food, water and shelter with them if they need it
- just let them come along with me when I am doing stuff
- etc.

When I think about how to get along with peaceful non-Christians, I think of the parable of the good Samaritan. Someone cannot consider your case for Christianity if they are sick or dying. If you want someone to listen to your reasons, you have to serve them first and earn the right to be heard. The book of James makes the same point – you have to take care of a person's physical needs as a way of acting out your belief that they were made

to know God. Even if the person isn't willing to listen to you, you still have to treat them well, because this is how you imitate the love that God has for everyone.

I think that most of the women that these Muslims go after are fatherless, and that's why they are so vulnerable. I am really at a loss to understand how anyone who claims to know God could look at a fatherless woman and see her as prey. Fatherless women are *not* prey – they are children of God made to know him, and made to achieve things for him. They are like the widows and orphans that the Bible is always encouraging us to take care of, because their condition of fatherlessness was not something they chose. They are victims. And we must treat them as victims, and heal them and build them up. The first thing I think of when I think of a fatherless woman is how to build her up so that she is in a good place to consider reasons and evidence that might persuade her to become a Christian.

I believe that everyone was made to know God in Christ, and that's the basis for how I interact with people of different faiths. They all have value because God made them. They were all made to know God. They are not there for me to use and abuse. God would not be happy with me if I didn't do everything possible to point them toward him and to help them along. That's what he wants me to do with them.

Stephen C. Meyer and Keith Fox debate intelligent design and evolution

August 3, 2012 | by Wintery Knight | Link | Original Link

From Justin Brierley's "Unbelievable" podcast.

Details:

> Stephen Meyer is a leading proponent of Intelligent Design who directs the Centre for Science and Culture at the Discovery Institute in Seattle. His most recent book "Signature in the Cell" claims to show that the DNA code is the product of intelligent mind, not naturalistic processes. Keith Fox is Professor of Biochemistry at Southampton University. He chairs the UK Christians in Science network but disagrees strongly with ID. They debate how life could have originated and whether design is allowed as an explanation in science.

The MP3 file is here.

Summary: (stuff in italics is my snarky paraphrase)

Meyer:

- background and how he got interested in intelligent design
- his research focus is on the origin of life – the first replicator
- summarizes the history of origin of life studies
- authored the book "Signature in the Cell"
- the DNA enigma: where did the information in DNA come from?
- naturalistic explanations of the DNA information have failed
- but intelligent agents are known to be able to produce information
- the best explanation of the information in DNA is that an intelligent agent authored it
- Meyer's book was named by atheist philosopher of science Thomas Nagel as a Times Literary Supplement Book of the Year in 2010
- why is design so controversial? Many people think that Darwin explained why nature appears design
- the Darwinian view is that nature can create the appearance of design using mutation and selection
- however, Darwinian mechanisms cannot explain the origin of the first living cell, it assumes replication, and the origin of life is about where the first replicator comes from

Fox:

- Meyer's argument is not about the evolution of life after the first cell
- Meyer's case for design is about the origin of life

- naturalists do not know a naturalistic explanation for the origin of life
- there are a number of naturalistic hypotheses for the origin of life, like the RNA-first hypothesis
- maybe in a few years one of them will turn out to be correct
- what intelligent design is arguing from a gap in our current naturalistic knowledge to infer that God intervened in nature

Meyer:

- that's not what intelligent design is at all
- the approach ID theorists use is the inference to best explanation
- you evaluate all explanations, non-intelligent causes and intelligent causes
- you prefer the best possible explanation
- we know that minds are capable of producing information just like the information we find in DNA

Fox:

- living cells replicate, so they have the ability to introduce mutations as they replicate and then some of those mutations can be selected
- so maybe the process of replicating that living cells do created the first living cell
- maybe the first living cell created itself, X brought X into being, self-creation, what's irrational about that?

Meyer:

- the issue is the origin of life – where did the first living cell come from?
- you cannot appeal to the operations that a living cell can perform to explain the origin of the first living cell
- there was no first living cell operating before the first living cell
- there was no replication, mutation or selection before the first living cell
- in fact, in my book I show that there is no known naturalistic mechanism that is able to produce the information needed for the first living cell
- *nothing can create itself, that is self-contradictory*

Fox:

- Well, you are just saying that because something is complex that God did it

Meyer:

- Sadly, no. What I actually said needed to be explained was the information, not complexity
- And we know from software engineering that the process of adding information to code is performed by programmers
- in the absence of any adequate naturalistic explanation for information, we are

justified in taking the explanation that we are familiar with – namely, intelligent agency – based on our uniform, universal experience of what causes information

Fox:

- well, maybe we can appeal to the mutation and selection in existing living cells to explain the origin of the first living cell
- maybe there were living cells before the first living cell, and then these other living cells created the first living cell

Meyer:

- we can't keep invoking mutation and selection when those processes are not operating prior to the origin of the first living cell

Fox:

- well maybe some bare-bones self-replication molecule was a precursor to the first living cell

Meyer:

- even to generate very limited replicator would require a large amount of information
- the argument I am making is – where does the evolution come from?

Fox:

- well, maybe we will think of an explanation for information that is naturalistic in 20 years
- we've thought of explanations to things that were NOT information before
- so maybe we will be able to think of something to explain information based on our ability to explain NOT information before

Moderator: Change topics: the Dover decision

Meyer:

- the Discovery Institute opposed the policy that causes the trial
- the wording of the statute was poor
- the judge was completely wrong in his decision
- young earth creationists used the phrase "intelligent design" to cover their agenda
- intelligent design is an inference using the normal methods of science

Fox:

- intelligent design is a science stopper because it stops looking for a naturalistic explanation
- everything in nature must have a naturalistic explanation
- everything has to be explained using matter and time and chance

- it just has to be that way!!!!

Meyer:

- well, what luck would you have explaining an effect like Mt. Rushmore?
- can you explain that using matter,time and chance?
- Mt. Rushmore was the product of intelligence, not wind and erosion
- similarly, there is information in the cell, and we know that intelligence causes information

Fox:

- So you are saying that we don't understand and therefore an intelligence is necessary?

Meyer:

- no I am saying we DO understand and we are making an inference based on that understanding
- you are the one who is insisting on a material explanation because you pre-suppose materialism
- we know that minds have causal powers, and we can infer mind as an explanation from information

Fox:

- well nature is a seamless chain of material causes and effects

Meyer:

- agents can act without violating the laws of nature
- even humans can act as intelligent agents to create information in books, and they don't violate the laws of nature
- intelligent causes are real, and they explain effects in nature

Fox:

- you're trying to impose on science something to do with meaning and purpose

Meyer:

- no that's not what we're doing, we're inferring from from the fact that we ourselves are known causes of information to the fact that an intelligence cause is the best explanation for information in the cell

Fox:

- *but I am a materialist*, I need a materialist explanation

Meyer:

- mind IS an answer to the how question
- we infer to mind in many other scientific disciplines, like cryptography, archaeology, etc.
- a materialist might accuse an archaeologist of engaging in a “scribe-of-the-gaps” argument, but the best explanation of an artifact with information is a scribe
- we are inferring that mind is the cause from the nature of the effect: information

Moderator: is it appropriate to call DNA “information”
Fox:

- well DNA is just a molecular polymer, any reference to information is just by analogy

Meyer:

- DNA is a molecular polymer, but it also exhibits the property of specified complexity
- the arrangement of bases, which function as machine instructions in a software program, for performings task in the cell
- we have observed that the property of specified complexity always comes from an intelligence

Fox:

- well, maybe there are other sequences that would work, so maybe it’s really not uncommon to develop functioning sequences by chance alone, without an intelligence

Meyer:

- you can measure how precise the functional specificity is in DNA and proteins

Moderator: is Shannon information the same as functional information
Meyer:

- Shannon information refers to the sequences of digits or symbols that do not necessarily have any function, i.e. – a four character string QSZX has as much Shannon information as WORD. However, only the latter is functional against the pattern of the English language. There are arrangements of DNA bases and amino acids that have the same number of symbols/characters as a functional sequence would have, but they have no biological function – they do not exhibit specified complexity

Fox:

- Well, maybe there are lots and lots of sequences of DNA and proteins so that it is fairly easy to get a functional one by chance

Meyer:

- DNA sequences that are functional are extremely rare, protein sequences are even more rare
- this is not my opinion, this is what the research shows – functional protein sequences are rare

Fox:

- well maybe there are other functional sequences that are occur before the first functional sequence that are precursors to the first functional sequence
- maybe there are billions of years of replication, mutation and selection before the first replication, mutation and selection

Meyer:

- you can't get to the first selectable functional sequence by appealing to precursor selectable functional sequences – there are no selectable functional sequences before the FIRST one
- you have to get the first selectable functional sequence by chance alone, because there is nothing to mutate or select before the first replicator
- the chance hypothesis has been rejected because the minimal amount of information for the simplest replicator is too high to get by chance alone, given the resources, including time, that are available

Moderator: *Keith are you confident that naturalism will be able to substantiate these naturalism-of-the-gap speculations that you offer in response to Meyer's actual science that we have today?*

Fox:

- well, it is hard to know for sure because it was just a fluke event
- but there's nothing irrational or unscientific or miraculous about it – the fluke would have a material explanation
- there is nothing that we can detect that would implicate God, my speculations about a fluke which I cannot observe or measure or test would all be compatible with an atheistic worldview that omits God as a causal entity

Meyer:

- where are those material processes that could account for this fluke then?
- the whole point of this argument is that the information in DNA transcends the material components in the sequence
- it's the arrangement of the material parts/letters/characters/symbols/instructions that needs to be explained

Fox:

- Well, I just have a different philosophy of science that rules out intelligent causation a priori

Meyer:

- Yes, that's the difference between us – you pre-suppose that all explanations of natural phenomena must exclude intelligent causes

There is a bit more where Meyer talks about how parts of the cell are implementations of various design patterns (Gang of Four design patterns) that are used by software architects who design software.

Find more posts on Stephen C. Meyer here.

Friday night movie: Pitfall (1948)

August 3, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.6/10]

IMDB median rating: [8/10]

Description:

> John Forbes is a family man who's tired of the 9 to 5 humdrum of his job an insurance company executive. Life gets a little more exciting for him when he calls upon femme fatale Mona Stevens. Her boyfriend has robbed a store insured by Forbes' company and has showered her with gifts using the loot. Forbes comes to collect the ill-gotten gifts, but the boyfriend is in jail, and Forbes falls hard for Mona and begins an affair. The only problem is that MacDonald, a private dick who freelances for the insurance company, has had his eyes on Mona first. The obsessed MacDonald turns the soon-to-be-released boyfriend against Forbes.

Happy Friday!

Lessons from the UK on how to reduce crime

August 4, 2012 | by Wintery Knight | Link | Original Link

From Ed West, writing in the UK Telegraph.

Excerpt:

> A year after the riots, things are looking up in London. As the Economist reported last week, gun crime is down considerably, while overall crime continues to fall, and homicide is down to its lowest level since the early 1980s.
>
> In fact Britain is following the example of the United States, where crime rose sharply from the 1960s to the early 1990s, when it began to fall almost as steadily. The US crime explosion had several causes, but the most prominent was the huge drop in the average length of sentences in the mid-1960s, largely as a result of political fashion. That trend was already reversed by the 1980s, but it took a while before Americans began to see that handing out tough sentences was effective – even at the cost of incarcerating one per cent of the population.
>
> Today even Guardian writers accept that this "contentious" policy reduces crime, although for many years those advocating it were called everything under the sun. The most prominent of those advocates was the late James Q Wilson,who before he died wrote about the fall in crime he had helped to bring about:
>
> One obvious answer is that many more people are in prison than in the past. Experts differ on the size of the effect, but I think that William Spelman and Steven Levitt have it about right in believing that greater incarceration can explain about one-quarter or more of the crime decline. Yes, many thoughtful observers think that we put too many offenders in prison for too long. For some criminals, such as low-level drug dealers and former inmates returned to prison for parole violations, that may be so. But it's true nevertheless that when prisoners are kept off the street, they can attack only one another, not you or your family.
>
> As Wilson pointed out, there are many other factors, such as a more competent and technically sophisticated police force, while rehabilitation programmes also make a difference (although longer stretches also make these more effective, since prisoners serving short sentences are out on the streets before they have finished their education). But prison still works pretty effectively.
>
> So in London, and across Britain, crime is falling largely because our prison population has topped 86,000; a terrible waste for those inside, but better that their lives are wasted than those of their victims on the outside. And the benefits are considerable.

This dovetails nicely with Stephen Harper's tough-on-crime measures.

Excerpt:

> And while the overall homicide rate was up seven per cent — there were 598 homicides in Canada in 2011, 44 more than the previous year — the number in Ontario actually hit record lows.
>
> Altogether, police services reported nearly 2 million incidents last year, about 110,000 fewer than in 2010, the agency reported.
>
> The decline in the crime rate was driven mostly by decreases in property offences, mischief, break-ins and car theft. But the severity of crime index — a tool used to measure the extent of serious crime in Canada — also declined by six per cent.
>
> “Overall, this marked the eighth consecutive decrease in Canada’s crime rate,” the study said. “Since peaking in 1991, the crime rate has generally been decreasing, and is now at its lowest point since 1972.”
>
> Not surprisingly, the Conservatives took credit for the decline Tuesday, attributing falling crime rates over the last four decades to the government’s tough-on-crime agenda, which is just six years old.
>
> “These statistics show that our tough on crime measures are starting to work. Our government is stopping the revolving door of the criminal justice system,” said Julie Carmichael, a spokeswoman for Public Safety Minister Vic Toews.
>
> “The fact of the matter is that when the bad guys are kept in jail longer, they are not out committing crimes and the crime rate will decrease. However, there is still more work to do.”

The Democrats will never embrace measures like this here at home, even though they work. They are soft on crime.

New study: university professors admit they would discriminate against conservatives

August 4, 2012 | by Wintery Knight | Link | Original Link

From the Washington Times.

Excerpt:

> It's not every day that left-leaning academics admit that they would discriminate against a minority.
>
> But that was what they did in a peer-reviewed study of political diversity in the field of social psychology, which will be published in the September edition of the journal Perspectives on Psychological Science.
>
> Psychologists Yoel Inbar and Joris Lammers, based at Tilburg University in the Netherlands, surveyed a roughly representative sample of academics and scholars in social psychology and found that "In decisions ranging from paper reviews to hiring, many social and personality psychologists admit that they would discriminate against openly conservative colleagues."
>
> […][C]onservatives represent a distinct minority on college and university campuses. A 2007 report by sociologists Neil Gross and Solon Simmons found that 80 percent of psychology professors at elite and non-elite universities are Democrats. Other studies reveal that 5 percent to 7 percent of faculty openly identify as Republicans. By contrast, about 20 percent of the general population are liberal and 40 percent are conservative.
>
> Mr. Inbar and Mr. Lammers found that conservatives fear that revealing their political identity will have negative consequences. This is why New York University-based psychologist Jonathan Haidt, a self-described centrist, has compared the experience of being a conservative graduate student to being a closeted gay student in the 1980s.
>
> In 2011, Mr. Haidt addressed this very issue at a meeting of the Society for Personality and Social Psychology — the same group that Mr. Inbar and Mr. Lammer surveyed. Mr. Haidt's talk, "The Bright Future of Post-Partisan Social Psychology," caused a stir. The professor, whose new book "The Righteous Mind" examines the moral roots of our political positions, asked the nearly 1,000 academics and students in the room to raise their hands if they were liberals. Nearly 80 percent of the hands went up. When he asked whether there were any conservatives in the house, just three hands — 0.3 percent — went up.
>
> […]"Because of the way the confirmation bias works," Mr. Haidt says, referring to the pervasive psychological tendency to seek only supporting evidence for one's beliefs, "you need people around who don't start with the same bias. You need some non-liberals, and ideally some conservatives."

But that's not all – those findings are confirmed by other studies of campaign donations by professors:

> Professors, administrators and others employed at the eight universities of the Ivy League have given $375,932 to Obama and $60,465 to Romney, according to data compiled by the Center for Responsive Politics, a Washington watchdog group that tracks campaign finance issues.
>
> […]The president's academic advantage extends behind the Northeast's ivied walls and into the Midwest.
>
> At Ohio State University in Columbus, for example, Obama has raised $18,230 from faculty and staff, compared with Romney's $3,500.

What is the cause of this massive slant towards Democrats? Is it because Democrats are smarter? Are lifelong welfare recipients and Hollywood celebrities smarter than business owners and economists? Well, consider this essay by secular libertarian professor Robert Nozick who explains why university professors are liberal.

Excerpt:

> What factor produced feelings of superior value on the part of intellectuals? I want to focus on one institution in particular: schools. As book knowledge became increasingly important, schooling–the education together in classes of young people in reading and book knowledge–spread. Schools became the major institution outside of the family to shape the attitudes of young people, and almost all those who later became intellectuals went through schools. There they were successful. They were judged against others and deemed superior. They were praised and rewarded, the teacher's favorites. How could they fail to see themselves as superior? Daily, they experienced differences in facility with ideas, in quick-wittedness. The schools told them, and showed them, they were better.
>
> The schools, too, exhibited and thereby taught the principle of reward in accordance with (intellectual) merit. To the intellectually meritorious went the praise, the teacher's smiles, and the highest grades. In the currency the schools had to offer, the smartest constituted the upper class. Though not part of the official curricula, in the schools the intellectuals learned the lessons of their own greater value in comparison with the others, and of how this greater value entitled them to greater rewards.
>
> The wider market society, however, taught a different lesson. There the greatest rewards did not go to the verbally brightest. There the intellectual skills were not *most* highly valued. Schooled in the lesson that they were most valuable, the most deserving of reward, the most entitled to reward, how could the intellectuals, by and large, fail to resent the capitalist society which deprived them of the just deserts to which their superiority "entitled" them? Is it surprising that what the schooled intellectuals felt for capitalist society was a deep and sullen animus that, although clothed with various publicly appropriate reasons,

> continued even when those particular reasons were shown to be inadequate?

Economist Thomas Sowell has written an entire book about this called "The Vision of the Anointed", and you can read some of the best quotes here. I've written before about how the mainstream news media is also dominated by leftists, too.

I think it's important to keep in mind that being able to build a profitable business is also intelligence of a kind. Someone who can repeat what their professors say isn't necessarily more intelligent than a business owner or engineer or nurse. Especially if the professor fails badly when given a task to do in the real world. For example, Democrat Christina Romer is a leftist professor of economics. She can parrot nonsense about socialism and stimulus all day to students. But when she was put in charge of real economic issues in the real world, her economic plan failed – and she admitted it.

William Lane Craig asks: should Christians embrace postmodernism?

August 5, 2012 | by Wintery Knight | Link | Original Link

Here's a short clip:

Dr. Craig thinks that Christianity does a lot better when it is commended to others using logic and evidence. He thinks that postmodernism undermines logic and evidence.

Sean McDowell has more on what this means for Christians:

> In Postmodern Youth Ministry, for example, Tony Jones argues that postmodernity is the most important culture shift of the past 500 years, upending our theology, philosophy, epistemology (how we know things), and church practice. It is an "earthquake that has changed the landscape of academia and is currently rocking Western culture." (p. 11). Thus, to be relevant in ministry today, according to Jones and other postmodernists, we must shed our modern tendencies and embrace the postmodern shift.
>
> For the longest time I simply accepted that we inhabit a postmodern world and that we must completely transform our approach to ministry to be effective today. But that all changed when I had the opportunity of hearing philosopher William Lane Craig speak at an apologetics conference not too long ago. "This sort of [postmodern] thinking," says Craig, "is guilty of a disastrous misdiagnosis of contemporary culture." ("God is Not Dead Yet," Christianity Today, July 2008, p. 26). He argues that the idea that we live in a postmodern world is a myth. This may strike you as awfully bold. How can he make such a claim?
>
> For one thing, says Craig, postmodernism is unlivable and contradictory: "Nobody is a postmodernist when it comes to reading the labels on a medicine bottle versus a box of rat poison. If you've got a headache, you'd better believe that texts have objective meaning!" (Reasonable Faith, 2008, p. 18) Craig speaks to tens of thousands of (mostly non-Christian) college students around the world every year and his conclusion is that we live in a cultural milieu that is deeply modernist. Reason, logic, and evidence are as important today as ever (although he's careful not to overstate their importance, too).
>
> Postmodernism and Apologetics
>
> But this is not all Craig has to say! In the introduction to Reasonable Faith, Craig provocatively claims, "Indeed, I think that getting people to believe that we live in a postmodern culture is one of the craftiest deceptions that Satan has yet devised" (p. 18). Accordingly, we ought to stop emphasizing argumentation and apologetics and just share our narrative. Craig develops this idea further:
>
> And so Satan deceives us into voluntarily laying aside our best weapons of logic and evidence, thereby ensuring unawares modernism's triumph over us. If we

> adopt this suicidal course of action, the consequences for the church in the next generation will be catastrophic. Christianity will be reduced to but another voice in a cacophony of competing voices, each sharing its own narrative and none commending itself as the objective truth about reality, while scientific naturalism shapes our culture's view of how the world really is (p. 18-19).
>
> **In a personal email, Craig relayed to me that he believes postmodernism is largely being propagated in our church by misguided youth pastors.** While he meant the comment more to elicit a smile than to be taken as a stab in the back, I can't help but wonder if he is right.
>
> If our culture were so profoundly postmodernist, why have the "New Atheists," as Wired magazine dubbed them, been so influential? Popular writers such as Christopher Hitchens, Sam Harris, and Richard Dawkins have recently written bestselling books attacking the scientific, historic, and philosophical credibility of religion in general and Christianity in particular. Their writings have wreaked havoc on many unprepared Christians. If our culture were postmodern their challenges should have fallen on deaf ears.

This is my experience as well. When I was an undergraduate student, I attended IVCF and the woman running it (Jill) was a feminist who pushed postmodernism and feminism hard. Every week brought another testimony emphasizing love and forgiveness while minimizing or denying theology, science, history and logic. She turned down all the efforts of the men to bring in professors to speak about the cosmological argument or the resurrection, etc.. It was testimonies and prayer walks and praise hymns every week. When I questioned the people she chose to give their testimonies (mostly women), I found that none had any reasons for thinking that what they were talking about really was true. As a consequence of that, they were soft on doctrine – regularly throwing out Bible verses that did "resonate" with their "intuitions". The same thing happened to me again with Campus Crusade as a graduate student. Personal testimonies of changed lives, divorced from any search for truth, every week.

One girl in particular that I knew at that time named Kerry was fond of bashing the laws of logic and the use of evidence. When I questioned her about it, she cited the influence of a charismatic youth pastor named Drew. A little more probing revealed that she denied the reality of Hell, and was a universalist. She eventually married a friend of mine and to this day has never read a single book on apologetics all the way through. Her beliefs are very much focused on the here and now, making friends and feeling good about herself. She never shook the habit of dismissing any argument, no matter how well-supported, that contradicted her intuitions.

Why did the pollster poll 9% more Democrats than Republicans?

August 5, 2012 | by Wintery Knight | Link | Original Link

From National Review, a transcript of an interaction on the Hugh Hewitt show about a new poll by Democrat pollster Quinnipiac:

> HH: Do you expect Democrats, this is a different question, do you, Peter Brown, expect Democrats to have a nine point registration advantage when the polls close on November 6th in Florida?
> PB: Well, first, you don't mean registration.
> HH: I mean, yeah, turnout.
> PB: Do I think…I think it is probably unlikely.
> HH: And so what value is this poll if in fact it doesn't weight for the turnout that's going to be approximated?
> PB: Well, you'll have to judge that. I mean, you know, our record is very good. You know, we do independent polling. We use random digit dial. We use human beings to make our calls. We call cell phones as well as land lines. We follow the protocol that is the professional standard.
> HH: As we say, that might be the case, but I don't know it's responsive to my question. My question is, should we trust this as an accurate predictor of what will happen? You've already told me there…
> PB: It's an accurate predictor of what would happen is the election were today.
> HH: But that's, again, I don't believe that, because today, Democrats wouldn't turn out by a nine point advantage. I don't think anyone believes today, if you held the election today, do you think Democrats would turn out nine percentage points higher than Republicans?
> PB: If the election were today, yeah. What we found is obviously a large Democratic advantage.
> HH: I mean, you really think that's true? I mean, as a professional, you believe that Democrats have a nine point turnout advantage in Florida?
> PB: Our record has been very good. You know, Hugh, I…
> HH: That's not responsive. It's just a question. Do you personally, Peter, believe that Democrats enjoy a nine point turnout advantage right now?
> PB: What I believe is what we found.
> HH: Geez, I just, and an eight point in Ohio? I'm from Ohio. Democrats haven't had an eight point advantage in Ohio since before the Civil War. I mean, that just never happens, but Peter, I appreciate your coming on. I'm not persuaded that Quinnipiac Polls haven't hurt themselves today, but I appreciate your willingness to come on and talk about it.

I will stick with the Rasmussen Reports polls, thanks.

Doug Axe explains the chances of getting a functional protein by chance

August 5, 2012 | by Wintery Knight | Link | Original Link

I've talked about Doug Axe before when I described how to calculate the odds of getting functional proteins by chance.

Let's calculate the odds of building a protein composed of a functional chain of 100 amino acids, by chance. (Think of a meaningful English sentence built with 100 scrabble letters, held together with glue)

Sub-problems:

- BONDING: You need 99 peptide bonds between the 100 amino acids. The odds of getting a peptide bond is 50%. The probability of building a chain of one hundred amino acids in which all linkages involve peptide bonds is roughly (1/2)^99 or 1 chance in 10^30.
- CHIRALITY: You need 100 left-handed amino acids. The odds of getting a left-handed amino acid is 50%. The probability of attaining at random only L–amino acids in a hypothetical peptide chain one hundred amino acids long is (1/2)^100 or again roughly 1 chance in 10^30.
- SEQUENCE: You need to choose the correct amino acid for each of the 100 links. The odds of getting the right one are 1 in 20. Even if you allow for some variation, the odds of getting a functional sequence is (1/20)^100 or 1 in 10^65.

The final probability of getting a functional protein composed of 100 amino acids is 1 in 10^125. Even if you fill the universe with pre-biotic soup, and react amino acids at Planck time (very fast!) for 14 billion years, you are probably not going to get even 1 such protein. And you need at least 100 of them for minimal life functions, plus DNA and RNA.

Research performed by Doug Axe at Cambridge University, and published in the peer-reviewed Journal of Molecular Biology, has shown that the number of functional amino acid sequences is tiny:

> Doug Axe's research likewise studies genes that it turns out show great evidence of design. Axe studied the sensitivities of protein function to mutations. In these "mutational sensitivity" tests, Dr. Axe mutated certain amino acids in various proteins, or studied the differences between similar proteins, to see how mutations or changes affected their ability to function properly. He found that protein function was highly sensitive to mutation, and that proteins are not very tolerant to changes in their amino acid sequences. In other words, when you mutate, tweak, or change these proteins slightly, they stopped working. In one of his papers, he thus concludes that "functional folds require highly extraordinary sequences," and that functional protein folds "may be as low as 1 in 10^77."

The problem of forming DNA by sequencing nucleotides faces similar difficulties. And remember, mutation and selection cannot explain the origin of the *first* sequence, because mutation and selection require replication, which does not exist until that first living cell is *already in place*.

But you can't show that to your friends, you need to send them a video. And I have a video!

A video of Doug Axe explaining the calculation

Here's a clip from Illustra Media's new ID DVD "Darwin's Dilemma", which features Doug Axe and Stephen Meyer (both with Ph.Ds from Cambridge University).

I hope you all read Brian Auten's review of Darwin's Dilemma! It was awesome.

Related DVDs

Illustra also made two other great DVDs on intelligent design. The first two DVDs "Unlocking the Mystery of Life" and "The Privileged Planet" are must-buys, but you can watch them on youtube if you want, for free.

Here are the 2 playlists:

- Unlocking the Mystery of Life (12 videos in a playlist)
- The Privileged Planet (12 videos in a playlist)

I also recommend Coldwater Media's "Icons of Evolution". All three of these are on sale from Amazon.com.

North Carolina Planned Parenthood will expand using federal taxpayer dollars

August 6, 2012 | by Wintery Knight | Link | Original Link

According to Life News, the North Carolina legislature voted to cancel funding of Planned Parenthood, the largest abortion provider in the United States. The Obama administration responded by awarding them an even BIGGER grant directly from the federal government with federal taxpayer dollars.

Life News writes:

> Following a recent announcement that the Obama administration would replace the state taxpayer funding North Carolina cut for a Planned Parenthood abortion referral business, a Durham clinic says it will be able to expand.
>
> As LifeNews reported, for the third time in July and the fifth time overall, the Obama administration has override the decision of a state to revoke taxpayer funding for the Planned Parenthood abortion business. The Obama administration usurped the will of the North Carolina legislature by awarding $426,000 in federal grants directly to Planned Parenthood affiliates in the state.

Here's the latest news:

> The Durham clinic of Planned Parenthood — recently at risk of closing its doors — will be able to serve an additional 500 patients thanks to a federal grant.

> The clinic had been threatened with closure because the state legislature this year cut Planned Parenthood's $125,000 budget allotment. Instead, the Newsom Street facility will grow its services because Planned Parenthood has received a Title X grant worth $426,000 — nearly three times as much as state lawmakers cut.
>
> Last year, the clinic overall had 2,244 patient visits. Officials expect a total volume of 2,727 this year, mainly from subsidized patients.

Obama's full pro-abortion record is available here – he is not a moderate on this issue. I hope this story shows social conservatives why they need to care about fiscal issues. If the government didn't have money from "the rich" they couldn't be paying off abortion providers. And I hope that this story shows fiscal conservatives why they need to care about social issues. If abortion were illegal, then the federal government wouldn't be handing out hundreds of thousands of dollars to subsidize it. We are all in this together.

A closer look at the Obama administration's $525 million loan to Solyndra

August 6, 2012 | by Wintery Knight | Link | Original Link

From the Manhattan Institute. (H/T Tom)

Here's the first thing to note about this story:

> Both Republican and Democratic administrations have practiced a "green" industrial policy by supporting ventures that promised to pursue renewable, non-carbon-based energy production or energy conservation.
>
> The DOE's authority to issue loan guarantees for innovative, clean energy technologies, the Energy Policy Act of 2005, was passed by a Republican House and Senate and signed into law by George W. Bush. Under the law, Congress authorized the issuance of $4 billion in loan guarantees in 2007, and $47 billion in 2009 with the objective of encouraging the development of new technologies.[2] [3]
>
> **However, no DOE loan guarantees were made during the Bush administration. The DOE wanted to make a loan to Solyndra, but career officials at the Office of Management and Budget (OMB) did not approve it, on the grounds that the project was not financially sound.**
>
> The Section 1705 Loan Program was created by the 2009 American Reinvestment and Recovery Act, which amended the Energy Policy Act of 2005.[4] The 2009 stimulus bill gave the DOE an additional $3.95 billion for loan guarantees.[5]

So that's where the money came from. It was "stimulus" money. And now the shocking part:

> **By November 2008, Solyndra had raised $450 million from investors and was applying for a loan guarantee from the DOE under the Energy Policy Act of 2005. But the loan was turned down in January 2009 in the waning days of the Bush administration, on the grounds that "there is presently not an independent market study addressing long term prospects for this company" and "there is concern regarding the scale-up of production assumed in the plan for Fab 2," a second factory.[7]**
>
> On January 13, 2009, Lachlan Seward, director of the loan program at the DOE, wrote, "After canvassing the Committee it was the unanimous decision not to engage in further discussions with Solyndra at this time."[8] Lachlan was referring to the DOE Credit Committee, which was composed of DOE officials.
>
> When President Obama took office days later, the DOE's tone changed. In a March 10, 2009, e-mail to an unnamed official, a senior adviser to Energy

> Secretary Steven Chu wrote, “The solar co [sic] board approved the terms of the loan guarantee last night, setting us up for the first loan guarantee conditional commitment for the president’s visit to California on the 19th.”[9] As events soon revealed, March 19, 2009, was a wildly premature target date for a presidential visit. In fact, President Obama didn’t visit Solyndra until May 2010.
>
> E-mails dated 2009 depict White House and DOE officials rushing to sign off on the project so that Vice President Joe Biden could appear at the Fremont plant in September 2009 to trumpet the administration’s support for green jobs. There was confusion about who would go and when, as well as a palpable sense of urgency. Within the OMB—historically the most fiscally conservative agency in any administration—there was anxiety about premature planning and precedent.
>
> On March 10, 2009, an OMB official whose name was blacked out by the administration before the e-mails were released to Congress wrote, “DOE is trying to deliver the first loan guarantee within 60 days from inauguration (the prior administration could not get it done in four years). This deal is NOT [sic] ready for prime time.”[10]
>
> […]On August 31, 2009, an unidentified OMB official wrote to Terrell McSweeny, domestic policy adviser to Vice President Biden, saying “We have ended up in the situation of having to do rushed approvals on a couple of occasions (and we are worried about Solyndra at the end of this week). We would prefer to have sufficient time to do our due diligence reviews and have the approval set the date for the announcement rather than the other way around.”[12] Regardless of these concerns, the loan was approved on September 3, and Biden announced it via satellite at Solyndra’s plant on September 4.
>
> […]On May 24, 2010, Valerie Jarrett, senior adviser to the president, forwarded a Cleantech Blog post by Philip Smith to Ron Klain, chief of staff to Vice President Biden. The post outlined the doubts of Pricewaterhouse Coopers, Solyndra’s auditors, about the company. It stated, “On a pure business analysis you have to agree with the auditors—they are not a going concern.”[14] Jarrett said to Klain in an e-mail, “As you know, a Going Concern letter is not good. Thoughts?”[15]
>
> Although Jarrett and Klain knew that Solyndra would go under, two days later, on May 26, 2010, the president visited the newly built Solyndra manufacturing plant in Fremont, California, and declared, “It is here that companies like Solyndra are leading the way toward a brighter, more prosperous future …. We can see the positive impacts right here at Solyndra.”

Fascinating. This is what the government does with the money that it is borrowing from your children. This is what the “stimulus” efforts of the Obama administration amounted to. Not only was the Solyndra loan an opportunity to pay back a Democrat campaign fundraiser, but we now learn that it was also rushed through to provide Obama with a publicity opportunity. Is that the main job of the President of the United States? To waste money on photo opportunities?

William Lane Craig asks: can we be good without God?

August 6, 2012 | by Wintery Knight | Link | Original Link

A video lecture in 3 parts, and a peer-reviewed paper to go with the clips.

Part 1 of 3:

Part 2 of 3:

Part 3 of 3:

And here is the article that discusses the same topic, in more detail, and with footnotes.

Excerpt:

> Can we be good without God? At first the answer to this question may seem so obvious that even to pose it arouses indignation. For while those of us who are Christian theists undoubtedly find in God a source of moral strength and resolve which enables us to live lives that are better than those we should live without Him, nevertheless it would seem arrogant and ignorant to claim that those who do not share a belief in God do not often live good moral lives–indeed, embarrassingly, lives that sometimes put our own to shame.
>
> But wait. It would, indeed, be arrogant and ignorant to claim that people cannot be good without belief in God. But that was not the question. The question was: can we be good without God? When we ask that question, we are posing in a provocative way the meta-ethical question of the objectivity of moral values. Are the values we hold dear and guide our lives by mere social conventions akin to driving on the left versus right side of the road or mere expressions of personal preference akin to having a taste for certain foods or not? Or are they valid independently of our apprehension of them, and if so, what is their foundation? Moreover, if morality is just a human convention, then why should we act morally, especially when it conflicts with self-interest? Or are we in some way held accountable for our moral decisions and actions?
>
> Today I want to argue that if God exists, then the objectivity of moral values, moral duties, and moral accountability is secured, but that in the absence of God, that is, if God does not exist, then morality is just a human convention, that is to say, morality is wholly subjective and non-binding. We might act in precisely the same ways that we do in fact act, but in the absence of God, such actions would no longer count as good (or evil), since if God does not exist, objective moral values do not exist. Thus, we cannot truly be good without God. On the other hand, if we do believe that moral values and duties are objective, that provides moral grounds for believing in God.

This is the easiest argument for God's existence to discuss with non-Christians. If you would like to hear a good debate on this topic, I recommend the debate between Arif

Ahmed and Glenn Peoples.

Does legalized abortion reduce the number of unwanted pregnancies?

August 7, 2012 | by Wintery Knight | Link | Original Link

Here's economist John R. Lott to explain.

First he points out what happened around the time that abortion was legalized:

- A sharp increase in pre-marital sex.
- A sharp rise in out-of-wedlock births.
- A drop in the number of children placed for adoption.
- A decline in marriages that occur after the woman is pregnant.

Then he writes this: (links removed)

> Many of these changes might seem contradictory. Why would both the number of abortions and out-of-wedlock births go up? If there were more illegitimate births, why were fewer children available for adoption?
>
> For the first puzzle, part of the answer lies in attitudes toward premarital sex. With abortion seen as a backup, women as well as men became less careful in using contraceptives as well as more likely to have premarital sex.
>
> There were more unplanned pregnancies. But legal abortion did not mean every unplanned pregnancy led to abortion. After all, just because abortion is legal does not mean that the decision is an easy one.
>
> Academic studies have found that legalized abortion, by encouraging premarital sex, increased the number of unplanned births, even outweighing the reduction in unplanned births due to abortion.
>
> In the United States from the early 1970s, when abortion was liberalized, through the late 1980s, there was a tremendous increase in the rate of out-of-wedlock births, rising from an average of 5 percent of all births from 1965 to 1969 to more than 16 percent two decades later (1985 to 1989).
>
> For blacks, the numbers soared from 35 percent to 62 percent. While not all of this rise can be attributed to liberalized abortion rules, it was a key contributing factor, nevertheless.
>
> With legalization and a woman not forced to go through with an unplanned pregnancy, a man might well expect his partner to have an abortion if a sexual encounter were to result in an unplanned pregnancy.
>
> But what happens if the woman refuses — say, she is morally opposed or, perhaps, she thought she could have an abortion but upon becoming pregnant decides she can't go through with it?
>
> Many men, feeling tricked into unwanted fatherhood, likely will wash their hands

> of the affair altogether, thinking, “I never wanted a baby. It’s her choice, so let her raise the baby herself.”
>
> What is expected of men in this position has changed dramatically in the last four decades. Evidence shows that the greater availability of abortion largely ended “shotgun” marriages, where men felt obligated to marrying the women.
>
> What has happened to these babies of reluctant fathers?
>
> The mothers often raise the children on their own. Even as abortion has led to more out-of-wedlock births it has dramatically reduced adoptions of children born in America by two-parent families.
>
> Before Roe, when abortion was much more difficult, women who would have chosen an abortion but were unable to get one turned to adoption as their backup. After Roe, women who turned down an abortion also were the type who wanted to keep the child.
>
> But all these changes — rising out-of-wedlock births, plummeting adoption rates and the end of shotgun marriages — meant one thing: more single-parent families. With work and other demands on their time, single parents, no matter how “wanted” their child may be, tend to devote less attention to their children than do married couples; after all, it’s difficult for one person to spend as much time with a child as two people can.
>
> From the beginning of the abortion debate, those favoring abortion have pointed to the social costs of “unwanted” children who simply won’t get the attention of “wanted” ones. But there is a trade-off that has long been neglected. Abortion may eliminate “unwanted” children, but it increases out-of-wedlock births and single parenthood. Unfortunately, the social consequences of illegitimacy dominated.
>
> Children born after liberalized abortion rules have suffered a series of problems from difficulties at school to more crime. The saddest fact is that it is the most vulnerable in society, poor blacks, who have suffered the most from these changes.
>
> […]Liberalized abortion undoubtedly has made life easier for many, but like sex itself sometimes, it has had many unintended consequences.

You can read more about it in Dr. Lott’s book “Freedomnomics“, which is a response to the popular leftist book Freakonomics.

Ethical adult stem cell treatment leaves two men HIV-free

August 7, 2012 | by Wintery Knight | Link | Original Link

There are two kinds of stem-cell research. The first kind is called embryonic stem-cell research (ESCR). This kind is opposed by pro-lifers because it kills unborn persons by extracting their stem cells for use in medical research. The second kind is called adult stem-cell research (ASCR). This kind is supported by pro-lifers.

Which kind produces more scientific discoveries and new treatments?

Well, consider this article from Life News which describes a new treatment made possible by ethical adult stem cell research. (H/T Mary)

Excerpt:

> Adult stem cells are responsible for another incredible scientific breakthrough.
>
> On Thursday at the AIDS 2012 Conference in Washington, DC, researchers unveiled that two HIV-positive men have been found to be HIV-free following bone marrow transplants. Researchers believe giving bone marrow transplants, which by nature involve the use of adult stem cells, to patients undergoing anti-retroviral therapy could potentially cure the AIDS-causing virus.
>
> "We expected HIV to vanish from the patients' plasma, but it is surprising that we can't find any traces of HIV in their cells," said Dr. Timothy Henrich, one of the researchers studying the two men. "It suggests that under the cover of anti-retroviral therapy, the cells that repopulated the patient's immune system appear to be protected from becoming re-infected with HIV."
>
> Only time will tell if the two men have been permanently cured of the virus. "Studies over time including biopsies of lymphatic tissue would be required," said Dr. Michael Saag, an infectious disease expert from University of Alabama at Birmingham.

Pro-abortion people love to throw money at unethical embryonic stem cell research, but the real cures are all being produced by adult stem cell research.

In case you haven't been following the controversy over stem cell research and the different viewpoints of the Bush and Obama administrations, here is a good article from Public Discourse that tells the story.

Growing up with two lesbian mothers: a child's perspective

August 7, 2012 | by Wintery Knight | Link | Original Link

A man raised by two lesbians tells his story in the latest Public Discourse. (H/T Brian)

Introduction:

> The children of same-sex couples have a tough road ahead of them—I know, because I have been there. The last thing we should do is make them feel guilty if the strain gets to them and they feel strange.

> Between 1973 and 1990, when my beloved mother passed away, she and her female romantic partner raised me. They had separate houses but spent nearly all their weekends together, with me, in a trailer tucked discreetly in an RV park 50 minutes away from the town where we lived. As the youngest of my mother's biological children, I was the only child who experienced childhood without my father being around.
>
> After my mother's partner's children had left for college, she moved into our house in town. I lived with both of them for the brief time before my mother died at the age of 53. I was 19. In other words, I was the only child who experienced life under "gay parenting" as that term is understood today.
>
> Quite simply, growing up with gay parents was very difficult, and not because of prejudice from neighbors. People in our community didn't really know what was going on in the house. To most outside observers, I was a well-raised, high-achieving child, finishing high school with straight A's.
>
> Inside, however, I was confused. When your home life is so drastically different from everyone around you, in a fundamental way striking at basic physical relations, you grow up weird. I have no mental health disorders or biological conditions. I just grew up in a house so unusual that I was destined to exist as a social outcast.

A striking snippet:

> In terms of sexuality, gays who grew up in traditional households benefited from at least seeing some kind of functional courtship rituals around them. I had no clue how to make myself attractive to girls. When I stepped outside of my mothers' trailer, I was immediately tagged as an outcast because of my girlish mannerisms, funny clothes, lisp, and outlandishness. Not surprisingly, I left high school as a virgin, never having had a girlfriend, instead having gone to four proms as a wisecracking sidekick to girls who just wanted someone to chip in for a limousine.
>
> When I got to college, I set off everyone's "gaydar" and the campus LGBT group

> quickly descended upon me to tell me it was 100-percent certain I must be a homosexual. When I came out as bisexual, they told everyone I was lying and just wasn't ready to come out of the closet as gay yet. Frightened and traumatized by my mother's death, I dropped out of college in 1990 and fell in with what can only be called the gay underworld. Terrible things happened to me there.
>
> It was not until I was twenty-eight that I suddenly found myself in a relationship with a woman, through coincidences that shocked everyone who knew me and surprised even myself. I call myself bisexual because it would take several novels to explain how I ended up "straight" after almost thirty years as a gay man.

Click here for the rest. I blogged before about a study that found that gay parents are more likely to raise children who become gay.

Another good book that gives a first-person account is "Out From Under" by Dawn Stefanowicz.

William Lane Craig asks: are there objective truths about God?

August 7, 2012 | by Wintery Knight | Link | Original Link

In a lecture entitled “Are there Objective Truths About God?”, philosopher William Lane Craig responds to the nasty reactions you get from postmoderns when you claim that your religion is true, and that other religions are false. See, we think that there are objective truths about God – that there are some propositions that describe the way God is, and that people who don’t believe in them are factually mistaken. But some people want to say that every statement about God is subjective – true for each person – so that conflicting claims are fine and no one is wrong, because everyone is just describing their own preferences. Unfortunately, Christianity claims to be true for everyone – (e.g. – God is three persons and one being), so that Christians are committed to defending the idea that there are objective truths about God.

Here’s the link to a page containing the lecture audio. (H/T Be Thinking)

The MP3 file is here.

So what questions does Bill answer in the lecture?

What is a self-refuting statement?

The main concept in the lecture is self-refutation. A self-refuting sentence is a sentence that, if true, makes itself false or meaningless. For example, suppose someone said to you: “there are no sentences longer than 5 words” then that would be self-refuting since it falsifies itself. Bill argues that objections to the idea that there are objective truths about God are all self-refuting.

What is truth?

Craig holds that “truth” is a property of a proposition such that a proposition is true if it corresponds to the external world. For example, if I claim that there is a crocodile in your closet and we find a crocodile in your closet, then my statement was true. If there is no crocodile in your closet then my statement was false. The real objective world out there is what makes propositional claims true or false – these are not claims about an individual’s preferences, they are claims about the world. Bill is concerned with truth claims about God that are objective – whether there are propositions about God that are true regardless of what anyone thinks.

Are there objective truths about God?

Bill discusses 3 objections to the idea that there are objective truths about God. Each objection seeks to make religion subjective, (true for each person, like food preferences or clothing fashion).

Objection #1:The Challenge of Verificationism

The first challenge is that religious claims cannot be verified using the 5 senses, and therefore religious statements are objectively meaningless.

Consider the statement “Only propositions that can be verified with the 5 senses are meaningful”. That statement cannot be verified with the 5 senses. If the statement is true, it makes itself meaningless. It’s self-refuting.

Objection #2: The Challenge of Mystical Anti-Realism

The second challenge is that religious claims, and claims about God, are neither true nor false.

Consider the statement “Propositions about God cannot be true or false”. Craig asks – why should we accept that? Any reason given would have to assert something about God that is true or false, and those reasons would contradict the original statement. For example, “God is too great to be grasped by human categories of thought” is a proposition about God that the speaker thinks is true, which contradicts the original assertion.

Objection #3: The Challenge of Radical Pluralism

The third challenge is that each person invents an entire reality of their own, and that there is no mind-independent objective world shared by individuals.

Consider the statement “There is no objective reality shared by all individuals”. That statement is a statement that applies to all individuals, regardless of what they think. It’s self-refuting.

Conclusion

Craig ends the lecture by arguing that it is OK for Christians to think that other people’s views are false. It does not follow that just because someone thinks other people’s views are wrong that they am going to mistreat other people. In fact, in Christianity it is objectively true that it is good for Christians to love their enemies. It is objectively true that all human beings have value, because human beings are made by God. So even if Christians disagree with others, they still treat them well, because they think that there are moral truths that they have to conform to.

My thoughts

Sometimes, non-Christians think that it is dangerous to hold beliefs too strongly. But I think what really matters is the content of the belief – some beliefs are false and some are true – you want to believe the true beliefs as strongly as you can, as long as the evidence warrants it. In Christianity, I am absolutely obligated to treat people with whom I disagree with respect and gentleness (1 Pet 3:15-16). The more convinced I am about *that* belief, the *better* my opponents will be treated. A *stronger* belief in Christianity means *more* tolerance for those who disagree.

Why do non-Christians get so offended when Christians claim to be right about there being only one way to be rightly related to God? Well, for many it’s because their worldview is a personal preference, and they feel uncomfortable having to defend it rationally and evidentially – which is what Christians do that makes us so different from everyone else. For most people, religion is just their cultural preference – like cooking style, or favorite sport, or clothing style. That’s why they respond to your truth claims

with name-calling like “you’re intolerant” and “you’re judgemental” and “you’re arrogant”. These are just shorthand ways of saying, “I’m offended that you’ve thought things through more than I have, and that your careful arguments and evidence make the blind faith that I was raised in look bad – so I’ll just call you a name rather than do any thinking about what you’re saying”.

This happens a lot with insecure people who are raised to think that their religion is a racial, national or cultural identity. They haven’t thought anything through, or considered any alternatives, and they think that if you tell them they are wrong *on matters of fact* that somehow this amounts to some sort of racism or prejudice. You make factual claims, and they hear discrimination. But that’s not how Christians think of religion – we only care if it’s true or not – just like we care whether the claims of history or science are true or not. For many non-Christians, religion is not about truth at all but about personal preferences – and they cannot understand why Christians say that they have to go to Hell for having the wrong personal preferences. You have to *tell them* that religion is about truth. Then they understand why you are disagreeing with them and you can have a conversation about what is true.

For further study

A debate between a Christian and a postmodern, featuring Christian scholar Peter Williams and a very strange liberal person. This audio really makes it clear why people are opposed to objective truth claims about religion. Williams’ opponent is the epitome of postmodern relativist irrational universalism.

Who really gets rich from gasoline? Big oil companies or big government?

August 8, 2012 | by Wintery Knight | Link | Original Link

Here's a great article that will blow your mind from the Wall Street Journal. (H/T Tom)

Excerpt:

> With the average price of gas in America hovering around $3.50 per gallon for regular unleaded, it costs more than $50 to fill a typical car's 15-gallon tank this summer. Why does gas cost so much?
>
> You may blame high gas prices on rich oil company executives or greedy gas station owners. The truth is that governments rake in a larger profit at the pump than anyone—and with gas taxes on the rise in many parts of the country, there's no relief in sight.
>
> The price of a gallon of gas is based on the combination of four costs: that of crude oil, of refining gas, of distribution and marketing, and of taxes.
>
> Crude oil costs make up about 76% of the cost of gasoline, according to U.S. Energy Information Administration (EIA). Thus $2.66 of a $3.50 gallon of gasoline is set before the oil is even refined. Global markets, reacting to supply and demand, determine the cost of crude oil. Just like any commodity, from gold to corn, a shortage in supply or an increase in demand leads to a rise in prices.
>
> Refining oil is the next step in the process—and the next expense for drivers. Gasoline is extracted from crude oil and additives, including lubricants and detergents to reduce engine deposits, are added. As of January 2012, the EIA found that refining was responsible for 6% of the cost of gasoline.
>
> Distribution and marketing—the part of the process most apparent to consumers—constitutes another 6% of gas prices. That portion of the cost includes the shipping and transportation of the gasoline, a markup to cover retailers' expenses, and any advertising created to appeal to customers.
>
> The remaining 12%—or almost 50 cents per gallon today—goes directly to federal, state and local governments in an array of sales and excise taxes. The federal gas tax is 18.4 cents on every gallon of gasoline sold in America. State gas-tax rates vary from a low of eight cents per gallon in Alaska to a jarring 49 cents per gallon in New York. Other states where it's steep to fill up include California and Connecticut—each with 48.6-cent-per-gallon gas taxes—and Hawaii, at 47.1 cents per gallon.
>
> Some local governments have gotten in on the act, too. In California, local sales and excise taxes on gasoline average 3.1%, according to the Los Angeles Times. That works out to about 12 cents in local taxes for each gallon of gas, based on the state's current average of $3.80 per gallon.

> […]**Exxon, for example, made only seven cents per gallon of gasoline in 2011. That's a drop in the bucket compared to the nearly 50 cents per gallon that federal, state and local governments rake in on an average gallon of gas pumped in the U.S.**

That's not going to stop the unproductive socialists in government for accusing oil companies of being greedy. Who's really greedy? Government is greedy. They take more of your money in gas taxes than the oil companies do.

Focus on the Family and National Right to Life to register 5 million new voters

August 8, 2012 | by Wintery Knight | Link | Original Link

Here is some good news from Life News.

Excerpt:

> In one of the largest voter registration campaigns of its kind, two leading prolife organizations are working to try to register as many as five million new pro-life voters and to get them to the polls this November.
>
> With some pro-life groups saying the upcoming presidential election could decide the fate of legalized abortion, registering pro-lifer voters to take part in the upcoming election is crucial.
>
> "The upcoming general election is less than 100 days away, and the Gallup polling firm (whose numbers at this point have predicted the winner in every race since 1964 except one) has Barack Obama and Mitt Romney at a tie," says the National Right to Life Committee, one of the two groups.
>
> "Every vote matters, and National Right to Life is excited to be participating in one of the largest voter registration projects in American history," NRLC adds. "National Right to Life Educational Trust Fund has partnered with Focus on the Family in a project called Commit 2 Vote 2012. This project sends mailings directly to our supporters who are not yet registered to vote but whose participation in this year's election is crucial."

Here are the top 20 pro-life states: (the link has a full list of 50)

1. Louisiana
2. Oklahoma
3. **Pennsylvania**
4. Nebraska
5. Arkansas
6. **Missouri**
7. Texas
8. South Dakota
9. North Dakota
10. **Indiana**
11. Kansas
12. Kentucky
13. Georgia
14. Arizona
15. Mississippi

16. **Virginia**
17. **Ohio**
18. **Michigan**
19. Idaho
20. South Carolina

The states I listed in BOLD went *either* for Obama in 2008 *or* they were decided by less than 2% of the vote. Pennsylvania is surprising – it went 55-44 for Obama and yet it is "pro-life".

Barack Obama's religion: a closer look at his religious beliefs

August 8, 2012 | by Wintery Knight | Link | Original Link

Barack Obama claims to be a Christian in public. But is he really a Christian? Well there are at least two ways to look at this question. One way is to look at what Obama does, and see if it matches up with what Christians are supposed to do, and what they have done. Another way is to look at what Obama says, and see if it matches up with what the Bible says, and what the early Church believed.

What are Christians supposed to do?

There are a lot of places I could look to see whether or not Obama's actions are the actions of a Christian, but I will just choose one: abortion. If you want to know what Christians believe about abortion, you need to go back to the very earliest followers of Jesus. At that time, the Roman authorities believed not only in abortion but also infanticide. The earliest Christians opposed not only infanticide, but also abortion.

Let's see:

> Extrabiblical Jewish Literature
>
> The noncanonical Jewish wisdom literature further clarifies first-century Judaism's view of abortion. For example, the *Sentences of Pseudo-Phocylides* 184–186 (c. 50 B.C.–A.D. 50) says that "a woman should not destroy the unborn in her belly, nor after its birth throw it before the dogs and vultures as a prey." Included among those who do evil in the apocalyptic *Sibylline Oracles* were women who "aborted what they carried in the womb" (2.281–282). Similarly, the apocryphal book *1 Enoch* (2nd or 1st century B.C.) declares that an evil angel taught humans how to "smash the embryo in the womb" (69.12). Finally, the first-century Jewish historian Josephus wrote that "*the law* orders all the offspring to be brought up, and forbids women either to cause abortion or to make away with the fetus" (*Against Apion* 2.202).
>
> Contrast these injunctions with the barbarism of Roman culture. Cicero (106–43 B.C.) records that according to the Twelve Tables of Roman Law, "deformed infants shall be killed" (*De Legibus* 3.8). Plutarch (c. a.d. 46–120) spoke of those who he said "offered up their own children, and those who had no children would buy little ones from poor people and cut their throats as if they were so many lambs or young birds; meanwhile the mother stood by without a tear or moan" (*Moralia* 2.171D).
>
> Early Christian Literature
>
> Against the bleak backdrop of Roman culture, the Hebrew "sanctity of human life" ethic provided the moral framework for early Christian condemnation of abortion and infanticide. For instance, the *Didache* 2.2 (c. A.D. 85–110)

> commands, “thou shalt not murder a child by abortion nor kill them when born.” Another noncanonical early Christian text, the *Letter of Barnabas* 19.5 (c. A.D. 130), said: “You shall not abort a child nor, again, commit infanticide.” There are numerous other examples of Christian condemnation of both infanticide and abortion. In fact, some biblical scholars have argued that the silence of the NT on abortion per se is due to the fact that it was simply assumed to be beyond the pale of early Christian practice. Nevertheless, Luke (a physician) points to fetal personhood when he observes that the unborn John the Baptist “leaped for joy” in his mother’s womb when Elizabeth came into the presence of Mary, who was pregnant with Jesus at the time (Luke 1:44).
>
> More than merely condemning abortion and infanticide, however, early Christians provided alternatives by rescuing and adopting children who were abandoned. For instance, Callistus (d. c. A.D. 223) provided refuge to abandoned children by placing them in Christian homes, and Benignus of Dijon (3rd century) offered nourishment and protection to abandoned children, including some with disabilities caused by unsuccessful abortions.

What does Obama believe? Not only is Barack Obama the most pro-abortion President ever, but he also has voted for infanticide several times and he opposed the ban on partial birth abortions.

Excerpt:

> BAIPA [The Born Alive Infant Protection Act] (both the federal and Illinois state versions) on the other hand, was introduced to insure that babies who survive attempted abortions are provided the same medical care and sustenance as any other infant born alive. BAIPA was introduced after evidence was presented that babies born alive after unsuccessful abortions were simply discarded in utility closets without food, care, or medical treatment until they died.
>
> As both Andy and I pointed out last night (and numerous times before), state senator Obama fought against the Illinois version of BAIPA that was identical in all material respects to the federal version. During the 2008 presidential campaign, Obama claimed that he voted against the Illinois BAIPA because it failed to contain a “neutrality clause” making it clear that the bill did not affect the right to an *abortion*. This is false. Documents obtained by National Right to Life show that the Illinois BAIPA did, in fact, contain a neutrality clause identical to the federal version.
>
> As noted yesterday, not one U.S. senator voted against BAIPA. Even NARAL didn’t oppose it. At the time of the vote, CNN reported that NARAL’s spokesman said the following:
>
> We, in fact, did not oppose the bill. There is a clear legal difference between a fetus *in utero* versus a child that’s born. ***And when a child is born, they deserve every protection that the country can provide.*** (Emphasis added).

> The logical import of Obama's vote against BAIPA is that he disagrees, i.e., once a baby has been targeted for abortion it thereafter has no inherent right to the food, comfort, and medical care provided to other babies born alive. Indeed, during Illinois state senate deliberations on BAIPA, Obama stated that one of his objections was that the bill was "designed to ***burden the original decision*** of the woman and the physician to induce labor and perform an abortion." Apparently, once the decision to abort has been made, a child is doomed even if born alive.

And of course we now know that Barack Obama supports redefining marriage so that marriage will mean two men or two women. He opposes the traditional view of marriage: one man and one woman, having children and then raising them. Barack Obama's view directly contradicts the Bible's teaching on marriage not to mention the words of Jesus himself. It seems to me that Obama's actions on these issues don't line up with what Christians have always believed on crucial issues like protecting children and defending marriage.

What are Christians supposed to say?

In order to be a Christian, you must accept that all people everywhere are in rebellion against God, and that Jesus is God stepping into history, and that there is no reconciliation with God apart from an explicit belief in Jesus' deity, and the significance of Jesus' death and resurrection. Namely, that his death was a payment for each person's rebellion against God. Christians also believe that a person must accept that those who do not know Jesus and believe in what he did will not go to Heaven, but will be separated from God for eternity in a place called Hell.

Let's look at what the Bible says.

Acts 4:8-12:

[8] Then Peter, filled with the Holy Spirit, said to them: "Rulers and elders of the people!

[9] If we are being called to account today for an act of kindness shown to a man who was lame and are being asked how he was healed,

[10] then know this, you and all the people of Israel: It is by the name of Jesus Christ of Nazareth, whom you crucified but whom God raised from the dead, that this man stands before you healed.

[11]Jesus is

"'the stone you builders rejected, which has become the cornerstone.'

[12] Salvation is found in no one else, for there is no other name under heaven given to mankind by which we must be saved."

John 14:1-6:(Jesus speaking)

[1] "Do not let your hearts be troubled. You believe in God; believe also in me.

[2] My Father's house has many rooms; if that were not so, would I have told you that I am going there to prepare a place for you?

[3] And if I go and prepare a place for you, I will come back and take you to be with me that you also may be where I am.

[4]You know the way to the place where I am going."

[5]Thomas said to him, "Lord, we don't know where you are going, so how can we know the way?"

[6] Jesus answered, "I am the way and the truth and the life. No one comes to the Father except through me.

Philippians 2:5-11:

[5]Your attitude should be the same as that of Christ Jesus:

[6]Who, being in very nature God, did not consider equality with God something to be grasped,

[7]but made himself nothing, taking the very nature of a servant, being made in human likeness.

[8]And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

Romans 10:1-4:

[1] Brothers and sisters, my heart's desire and prayer to God for the Israelites is that they may be saved.

[2] For I can testify about them that they are zealous for God, but their zeal is not based on knowledge.

[3] Since they did not know the righteousness of God and sought to establish their own, they did not submit to God's righteousness.

[4] Christ is the culmination of the law so that there may be righteousness for everyone who believes.

And in Romans 10:9, "If you declare with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you will be saved." I could go on, but that should be enough. Christians do not think that these teachings are mere opinions – we think they are facts. We think they are true and binding and knowable.

To be believe in Jesus means to believe that he is who he says he is – God stepping in history, giving his own life up in order to take the punishment that each person deserves who rebels against God. And we *all* rebel against God, according to the Bible.

Now let's take a look at what Obama says. Pay attention to whether he thinks that what he is saying are his own opinions or whether they are facts.

Excerpt:

> **Falsani:** What do you believe?
>
> **OBAMA:** […]I believe that there are many paths to the same place, and that is a belief that there is a higher power, a belief that we are connected as a people. That there are values that transcend race or culture, that move us forward, and there's an obligation for all of us individually as well as collectively to take responsibility to make those values lived.

And:

> **Falsani:** Do you believe in heaven?
>
> **OBAMA**: Do I believe in the harps and clouds and wings?
>
> **Falsani:** A place spiritually you go to after you die?
>
> **OBAMA**: What I believe in is that if I live my life as well as I can, that I will be rewarded. I don't presume to have knowledge of what happens after I die. But I feel very strongly that whether the reward is in the here and now or in the hereafter, the aligning myself to my faith and my values is a good thing.
>
> When I tuck in my daughters at night and I feel like I've been a good father to them, and I see in them that I am transferring values that I got from my mother and that they're kind people and that they're honest people, and they're curious people, that's a little piece of heaven.
>
> **Falsani:** What is sin?
>
> **OBAMA**: Being out of alignment with my values.
>
> **Falsani:** What happens if you have sin in your life?
>
> **OBAMA**: I think it's the same thing as the question about heaven. In the same way that if I'm true to myself and my faith that that is its own reward, when I'm not true to it, it's its own punishment.

And:

> **OBAMA**: […]This is something that I'm sure I'd have serious debates with my fellow Christians about. I think that the difficult thing about any religion, including Christianity, is that at some level there is a call to evangelize and proselytize. There's the belief, certainly in some quarters, that people haven't embraced Jesus Christ as their personal savior that they're going to hell.
>
> **Falsani:** You don't believe that?
>
> **OBAMA**: I find it hard to believe that my God would consign four-fifths of the world to hell.

Again, not only did Jesus mention Hell constantly, but the earliest Christians believed in a literal, eternal Hell. Obama doesn't get to override Jesus, the Bible and the early church and substitute his own religion, and his own standard of sin and salvation. What I find

annoying is that he apparently cannot reconcile God's goodness with the existence of Hell. That's like Apologetics 101. You would have to know nothing at all about Christianity to say what he said. You would have had to avoided reading anything that answers any questions about Christianity – because that question is easy.

To me what Obama expressed there in his answers was religious pluralism, radical subjectivism, postmodern relativism, and universalism. In no way shape or form are those beliefs consistent with what the Bible teaches. Not even close – this is not even disputable. To be a Christian, you have to believe that there are objective truths about God, independent of different people's opinions. And that these truths are knowable, through reason, science, history and revelation in the Bible. Only atheists think that religion is non-cognitive subjective wish-fulfillment meant to make people feel good and have community, etc. If you think religion is like picking a flavor of ice cream instead of picking a prescription drug for an illness, then you're not a Christian. Period.

So in both cases, when you look at what Obama says and what Obama does, it's very clear that he is not a Christian by any stretch of the imagination. There is a lot more to being a Christian than just calling yourself one. You have to act the way that Christians are supposed to act – the way they always acted since the beginning of Christianity. And you have to believe the basic things that Christians are supposed to believe. Things that are *clearly taught* in multiple books of the new Testament and things that were believed by the earliest followers of Jesus, right up to the present day. If I had to guess what Obama really believes, I would speculate that he inclines toward atheism, or agnosticism at best.

UPDATE: Barack Obama denies that Jesus is the unique son of God at the 2012 Easter Prayer Breakfast.

CNN fact-checks latest pro-Obama ad: it's full of lies

August 9, 2012 | by Wintery Knight | Link | Original Link

Radical leftist Wolf Blitzer fact checking a pro-Obama ad?

Let's see:

Bridget posted this blurb which summarizes the situation for those who can't see the video above:

> The ad centers around the story of Joe and Ranae Soptic of Kansas City, Missouri. Joe lost his job when GST Steel went under in 2001, after 8 years of Bain Capital attempting to save the dying steel plant. Romney's site addresses the claims regarding GST:
>
> > In 1993, GS Technologies, a company Bain Capital had invested in, purchased a struggling Kansas City steel plant from Armco. Prior to this investment, Armco announced plans to close the Kansas City plant if a buyer could not be found.
> >
> > This investment – and $170 million in upgrades – kept the Kansas City plant competitive in a tough international market and saved the steel workers' jobs for eight years.
>
> In addition, the plant finally went under 2 years after Romney *left* Bain Capital to head up the Salt Lake City Olympics. Even if you believe the Obama campaign's fact-checked and disproven claim that Romney left Bain in 2002, it would be obscene to blame Romney and Bain when the investment was designed to save GST Steel.
>
> Now, the kicker that makes this the most offensive ad I have seen in a long time (although not in history, as a 2010 ad compared one GOP candidate to the Taliban). Soptic's wife died *in 2006*, five years after he lost his job and health insurance with GST's closing. When she went in for pneumonia, her cancer was so far evolved that it was untreatable, making health care irrelevent. The argument is basically that "some guy, who once worked for a company managed by the company Romney managed, lost his wife to cancer, so Mitt Romney killed her." This is ridiculous. President Obama should immediately disown this ad, but I doubt that's going to happen.

I'm actually surprised at CNN. I consider them less objective than Doonesbury cartoons. I guess even a stopped clock is right twice a day.

Obama campaign denies knowledge… yet they knew about it in May!

Although the Obama campaign is denying any knowledge of this story, Yahoo News says that the Obama campaign actually knew it was a fraud back in May.

Excerpt:

> As Politico first reported, Soptic told essentially the same story in a May 14, 2012, conference call hosted by the Obama campaign. Here's what he said then, according to a partial recording of the call passed along by a Republican official:
>
> After we lost our jobs, we found out that we were going to lose our health insurance, and that our pensions hadn't been funded like Bain promised they would be. I was lucky to find another job as a custodian in a local school district. They gave me some health insurance, but I couldn't afford to buy it for my wife. A little while later she was diagnosed with lung cancer. I had to put her in a county hospital because she didn't have health care, and when the cancer took her away, all I got was an enormous bill. That put a lot of stress on me: I thought I'd be paying it off until I died myself. That probably wouldn't have happened if Bain kept its promise and I was allowed to keep our health insurance.
>
> "It's upsetting what Mitt Romney and his partners did to us," he added.
>
> The revelation drew an immediate rebuke from Romney campaign spokesman Ryan Williams, who said Obama and his campaign "are willing to say and do anything to hide the president's disappointing record."
>
> "But they're not entitled to repeatedly mislead voters," he said.
>
> The Obama campaign did not immediately respond to a request for comment.

Even if Obama disowned the ad, it's not going to make a difference to his rank and file – they get most of their news from the Comedy Channel anyway.

Pro-abortion Claire McCaskill to face pro-life challenger Todd Akin

August 9, 2012 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> A marquee prolife versus pro-abortion matchup will take place in Missouri in a Senate race that pro-life advocates believe they can win on their way to getting a pro-life majority in the U.S. Senate.
>
> Senator Claire McCaskill of Missouri is one of the Democrats' most vulnerable senators heading into the 2012 elections and, following the Missouri Republican primary last night, she will now face pro-life Rep. Todd Akin.
>
> […]EMILY's List, the political action committee that works to elect pro-abortion women, is recommending McCaskill to their supporters, encouraging contributions on her behalf. In order to receive the blessing of EMILY's List, candidates must support even the most extreme elements of the pro-abortion movement including partial-birth abortion and taxpayer funding of abortion.
>
> Since taking office in January 2007, McCaskill has not cast one pro-life vote. According to her votes, McCaskill supports abortion funding under healthcare reform, taxpayer funding of Planned Parenthood and taxpayer funding of embryonic stem cell research. McCaskill also voted to use American tax dollars to fund the United Nations Population Fund (UNFPA), which participates in carrying out China's oppressive One Child Policy. The One Child Policy has resulted in millions of forced abortions and made millions of baby girls into victims of sex-selection abortion.

I'm not about to endorse someone *just because* he is a social conservative, running against a radical pro-abortion leftist. I want to see foreign policy credentials, and fiscal conservatism, too!

Here are his awards for the most recent session of Congress:

Group	Award	Rating	Date
Center for Security Policy	Champion of National Security	100%	2010
National Tax Limitation Committee	Tax Fighter Award	A	2010
National Federation of Independent Businesses	National Guardian of Small Business Award		2010

Family Research Council	Friend of the Family	100%	2010
U.S. Chamber of Commerce	Spirit of Enterprise		2009
American Conservative Union	Defender of Liberty	100%	2009

Ok, I'm good with him. And Claire McCaskill's rating from the American Conservative Union is 0 in 2011, 17 in 2010, and an average of 14.6 over her 5 years of service.

Defense cuts to an already weakened military exposes us to aggression

August 9, 2012 | by Wintery Knight | Link | Original Link

Mackenzie Eaglen is a defense policy analyst for the American Enterprise Institute.

Here's a recent article that she wrote from the Wall Street Journal. (Full text also here on the AEI web site)

Excerpt:

> Washington is battling these days over "sequestration," the $500 billion additional cut to the defense budget looming in January.
>
> […]In April 2011—long before the near shutdown of the government and the last-minute debt-ceiling deal, which paved the way for sequestration—the president outlined $400 billion in defense cuts he had already approved. He also said that he wanted to "do that again" and find another $400 billion in military spending reductions. All this without any talk of threats, strategy or requirements—just arbitrary budget targets imposed on the military.
>
> Even before sequestration and the possible loss of a half-trillion dollars, the U.S. military has seen three years of budget cuts. The consequences are already here. We have to look all the way back to 1916 to find a year when the Air Force purchased fewer aircraft than are included in Mr. Obama's 2013 budget request.
>
> Many of the Air Force's aerial refueling tankers predate human space flight. Training aircraft are twice as old as the students flying them. The F-15 fighter first flew 40 years ago. A-10 ground-attack planes were developed in the Carter years. And all of our B-52 bombers predate the Cuban missile crisis.
>
> Then there's the Navy, which is the smallest it has been since 1916. At 286 combat and combat-support ships, the Navy today is less than half the size it reached during the Reagan administration. And what about those men and women who have been fighting America's wars in Afghanistan and Iraq since 2001? They're losing 100,000 in active duty personnel. Surely some will go from the front lines to unemployment lines as a result.
>
> […]Military leaders have suggested that taking on Syrian President Bashar al-Assad and his Third World army would be an operation of "many, many months." The so-called "pivot" to Asia is being mimed with fewer ships on longer deployments and a shrinking, aging air force. We're ignoring a wholesale Chinese power grab in the South China Sea and watching the nuclearization of Iran.

In another article on AOL Defense, she focuses in on the cuts to the U.S. Air Force. (Full text also here on the AEI web site)

Excerpt:

> Between the existing reduction of $487 billion and sequestration's additional half-trillion dollar cut, the Pentagon faces a very profound strategic turning point — one entirely different than that articulated by Secretary Panetta. Instead of prudently posturing for future successes, America's armed forces are headed for a crash.
>
> These pressures are perhaps best illustrated within the Air Force. The service absorbed 90 percent of the cuts levied on the Department of Defense in the 2013 budget — $4.8 billion of $5.2 billion. The effects have been immediate and pronounced: nearly 10,000 airmen are being cut; 227 aircraft are being prematurely retired; and critical capability shortfalls are on the rise.
>
> […]These budget cuts would not present such dire effects if the Air Force had been able to use the past decade to recapitalize its fleet and overarching infrastructure. At the end of World War Two, the Korean War, Vietnam, and the Cold War, the service was able to weather post-war budget downturns precisely because it had reset the majority of its capabilities during wartime.
>
> Circumstances were different this past decade. The Air Force, already stretched thin by the 1990s procurement holiday, actually saw its percentage of the defense budget decline by one-third during the wars in Iraq and Afghanistan. The service canceled or delayed the vast majority of its modernization portfolio to sustain wartime operational demands.
>
> So 20 years of underfunding has given us an Air Force on the brink. Its aircraft average a quarter of a century in age-with many dating back to the Eisenhower Administration. The wings of Carter-era A-10 ground attack airplanes are riddled with structural cracks. Airmen learning to fly are strapping into T-38s over twice their age. B-52s, all of which pre-date the Cuban missile crisis, are spending up to a year in depot-level maintenance. In light of the F-22 shortage, the Air Force is now extending the lifespan of its 28 year-old F-15s to 18,000 hours — more than three times their original design life.
>
> The Air Force also spent the last decade retiring nearly a quarter of its bombers, fighters, and cargo aircraft in an attempt to free up money for immediate priorities. While helpful on a budget spreadsheet in the near-term, this has stretched the remaining tails even thinner. Shrinking the fleet makes little sense when the mission demand is constant. Aircraft availability rates and maintenance statistics clearly illustrate the rising costs associated with this decision.

Obama is also in favor of the complete disarmament of the United States with respect to nuclear weapons.

The Wall Street Journal explains:

> The White House and Pentagon are considering several proposals that would deeply cut the nation's stockpile of nuclear weapons, potentially to as low as 300 warheads under one such plan, according to a U.S. official.

> The proposals haven't been presented to President Barack Obama but are being debated by lower-level officials on the national-security staff and in the Pentagon.
>
> The U.S. official said the government isn't considering a unilateral cut to the nation's nuclear arsenal. Instead, the different proposals represent arsenal levels that could be negotiated with Russia in a future round of arms-control talks.
>
> Nonetheless, the prospect of nuclear-arsenal cuts during a hard-fought presidential campaign is certain to stoke political controversy.
>
> Under current treaty obligations, the U.S. must reduce its nuclear arsenal to 1,550 warheads by 2018 from just below 1,800 now. One of the new proposals would cut the arsenal to between 1,000 and 1,100; another proposes an arsenal of between 700 to 800; and the most drastic proposal would cut the arsenal to between 300 and 400, according to the official.

The fact of the matter is that there are hot spots and threats all over the world. If we want to work towards peace and protect the weak, then we need a large, capable military force. This is the doctrine of peace through strength. Talk is cheap, and disarmament only emboldens evildoers to be aggressive. If we want to stop war, we have to make it costly for aggressors and tyrants. They have to know that there is a cost.

N.T. Wright lectures on the resurrection of Jesus: did Jesus rise from the dead?

August 9, 2012 | by Wintery Knight | Link | Original Link

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's the video:

For those who cannot see the video, here is a written version of the lecture that Wright gave on the resurrection. And please note that I do not endorse anything that N.T. Wright says on any topic outside of history. History is his field of expertise, and I think he has no authority outside of the field of history.

N.T. Wright's historical case for the bodily resurrection of Jesus

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable*apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the

> future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).
5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an invented exaltation was already available to do the job.
3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.

5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

Democrats join Republicans in demanding probe into Delphi pension scandal

August 10, 2012 | by Wintery Knight | Link | Original Link

From the Daily Caller.

Excerpt:

> Twelve lawmakers wrote to House oversight committee Chairman Rep. Darrell Issa and Senate Homeland Security and Governmental Affairs Committee Chairman Sen. Joe Lieberman asking that they expand current probes into a Department of Treasury scandal that left 20,000 non-union Delphi retirees without their pensions after the 2009 General Motors bailout.
>
> The members — Sens. Rob Portman of Ohio, Thad Cochran of Mississippi and Roger Wicker of Mississippi, and Reps. Pat Tiberi of Ohio, Steve Stivers of Ohio, Mike Kelly of Pennsylvania, Dan Burton of Indiana, Bill Johnson of Ohio, Paul Gosar of Arizona, Marcy Kaptur of Ohio and Gregg Harper of Mississippi — are led by Ohio Republican Rep. Mike Turner.
>
> "We are writing to request that the committees which you chair submit additional requests for documents from the Department of the Treasury and the Pension Benefit Guaranty Corporation (PBGC) on matters pertaining to the unjust termination of Delphi salaried retiree pensions in the federal government's bailout of General Motors," the lawmakers wrote. "As you may know, the pensions of Delphi salaried retirees were significantly reduced in the aftermath of the bailout, while their union counterparts were made whole. These retirees, regardless of labor affiliation or not, spent their careers working alongside one another and should not be treated differently in their retirement. This decision of the Auto Task Force, Treasury, and the PBGC continues to affect roughly 20,000 current and future retirees across the nation."
>
> The bipartisan support for this renewed investigation call — Kaptur is a Democrat — undercuts the Obama campaign's accusations that his GOP rival, Mitt Romney, and Turner are trying to "politicize" this scandal.
>
> Portman, who's widely considered to be on Romney's short list of potential vice presidential candidates, said in a statement that he has "met with these hard-working Ohioans who lost a significant portion of their pension benefits while other retirees from the same company received far better treatment."
>
> "The idea that the administration played politics with their pensions is beyond disappointing, and it deserves answers," Portman said. "The administration's decisions have caused pain and loss to thousands of workers and their families as a result of their reduced benefits. This matter deserves continued scrutiny from Congress, and the administration must be called upon to account for its

> decisions.”

Remember way back in 2009 about how the auto bailouts favored the unions over the private sector creditors who would normally be paid more of whatever could be saved? This isn’t the first time that the private sector – which funds the government – was screwed by the government. But “the private sector is fine”.

Hawaii federal judge strikes down bid to redefine marriage

August 10, 2012 | by Wintery Knight | Link | Original Link

From Life Site News.

Excerpt:

> A federal court Wednesday upheld Hawaii's definition of marriage as one man and one woman, rejecting a lawsuit to tear down both the definition as well as Hawaii's constitutional amendment giving the legislature the power to maintain it.
>
> Alliance Defending Freedom attorneys defended the law and the amendment on behalf of Hawaii Family Forum, which the court allowed to intervene in the case in April.
>
> "This ruling affirms that protecting and strengthening marriage as the union of one man and one woman is legitimate, reasonable, and good for society," said Legal Counsel Dale Schowengerdt. "The people of Hawaii adopted a constitutional amendment to uphold marriage, and the court rightly concluded that the democratic process shouldn't be short-circuited by judicial decree."
>
> **The three individuals who filed the suit asked the court to declare the state's constitutional amendment on marriage and the state's law defining marriage as the union of one man and one woman unconstitutional. The lawsuit also assailed Hawaii's "civil unions" law, which became effective Jan 1, saying that equal rights would only be fulfilled by redefining marriage itself.**
>
> But in its order, the U.S. District Court for the District of Hawaii concluded, "Throughout history and societies, marriage has been connected with procreation and childrearing…. It follows that it is not beyond rational speculation to conclude that fundamentally altering the definition of marriage to include same-sex unions might result in undermining the societal understanding of the link between marriage, procreation, and family structure."
>
> "In this situation," the court continued, "to suddenly constitutionalize the issue of same-sex marriage 'would short-circuit' the legislative actions that have been taking place in Hawaii…. Accordingly, because Hawaii's marriage laws are rationally related to legitimate government interests, they do not violate the federal Constitution."
>
> [Democrat] **Gov. Neil Abercrombie stated both publicly and in the lawsuit that he would not defend the state's marriage law.** His attacks on the law's constitutionality prompted Hawaii Family Forum to ask the court to allow it to intervene in defense of marriage in the state.

See, that’s interesting. Hawaii legalized same-sex civil unions, but that wasn’t enough. Even with legalized same-sex unions, the gay activists pushed for gay marriage. An even their constitutional amendment wasn’t safe – imagine if they had a different judge who went the other way.

On wargames, history and heroes: “this story shall the good man teach his son”

August 10, 2012 | by Wintery Knight | Link | Original Link

Memoir ’44: Pegasus Bridge setup

Last night, I played through the Pegasus Bridge scenario from the Memoir ’44 wargame with Dina a few times. We actually played the online version of the game, using Steam. She was very gracious to play a wargame with me, which I don’t think is necessarily the first thing on most women’s lists of things to do on a Thursday night! I appreciated her agreeing to learn how to play and then playing with me several times. I think that Christians need to plan and execute more “together” activities like that – activities that involve interaction, co-operation, communication and engagement. We try to avoid doing things where we are both spectators. Playing wargames is not the only thing we do – we also do Bible study and cooking lessons (for me), for example.

Anyway, the point of this post is to express the deeper meaning behind playing wargames. I think that it is important to recognize and celebrate those who have demonstrated good character, whether it be now, or in the past. I think that it is important for us to search out the best role models ourselves, so that they will influence the way we act in our own lives. The second world war was a clear example of good versus evil. Anyone on the Allied side who demonstrated bravery and courage should be celebrated for safeguarding the security, liberty and prosperity that we enjoy today. In the case of Pegasus bridge, the hero is Major John Howard of the British paratroops.

Here is a quick re-cap of his exploits that day from the New York Times:

> Maj. John Howard, the commander of glider-borne British infantrymen who seized the strategically vital Pegasus Bridge in the first battle of the D-Day invasion of Normandy, died Wednesday in a hospital in Surrey, England. He was 86 and had lived in Burford, near Oxford.
>
> Under cover of night on June 6, 1944, six gliders carrying 181 officers and men of the Second Oxfordshire and Buckinghamshire Light Infantry landed on the

> eastern flank of a 60-mile invasion front on the northern coast of France. The regiment had a heritage going back to the battles of Bunker Hill and New Orleans, to Waterloo and to World War I. Now its soldiers were in the vanguard of the invasion of Hitler's Europe.
>
> Major Howard's D Company was ordered to seize two bridges, one over the Caen Canal and the other spanning the parallel Orne River. If the Germans held on to those bridges, panzer units could move across them in a counterattack isolating 10,000 British paratroopers jumping behind the British invasion beach known as Sword, where infantry forces would arrive at daybreak. And Major Howard's men sought to strike swiftly to prevent the Germans from blowing up the bridges if they were overwhelmed; the British needed those bridges to resupply their airborne units.
>
> [image]British Halifax bombers towed the gliders over the English Channel, then cut them loose.

> Major Howard's lead glider landed at 12:16 A.M., only 50 yards from the Caen Canal bridge, but the glider's nose collapsed on impact, knocking everybody aboard unconscious for a few seconds. The soldiers quickly emerged, and over the next five minutes the men directly under Major Howard killed the surprised German defenders.
>
> The nearby Orne River bridge was captured by other troops in Major Howard's unit, and soon the words "Ham and Jam," signifying mission accomplished, were radioed to the airborne.
>
> Two British soldiers were killed and 14 wounded in the operation.
>
> Over the next 12 hours, British paratroopers and commandos reinforced Major Howard's men, and British forces were able to move toward the city of Caen, their flank having been protected by the capture of the bridges.
>
> On July 16, Major Howard received the Distinguished Service Order, Britain's second-highest award for valor. On the 10th anniversary of D-Day, he received the Croix de Guerre Avec Palme from the French Government, which had renamed the Caen Canal span Pegasus Bridge, for the flying horse symbolizing the British airborne. The road crossing the bridge was later renamed Esplanade Major John Howard.

Why is this important? Well, it's important to think on the things that are excellent. There are so many things in the culture that are not excellent that we are confronted with every day. We have to make it our business to do things together where goodness is celebrated. Especially when manly virtues like courage are celebrated. We don't do that much anymore. And I think there's a connection between wargames and Christian apologetics that we need to *deliberately* encourage.

Here's an excellent passage from Shakespeare's "Henry V" that makes the point:

> This day is called the feast of Crispian:
> He that outlives this day and comes safe home,
> Will stand a tip-toe when this day is named,
> And rouse him at the name of Crispian.
> He that shall live this day, and see old age,
> Will yearly on the vigil feast his neighbours,
> And say, 'To-morrow is Saint Crispian:'
> Then will he strip his sleeve and show his scars,
> And say, 'These wounds I had on Crispin's day.'
> Old men forget: yet all shall be forgot,
> But he'll remember with advantages
> What feats he did that day. Then shall our names,
> Familiar in his mouth as household words,
> Harry the King, Bedford and Exeter,
> Warwick and Talbot, Salisbury and Gloucester,
> Be in their flowing cups freshly remembered.
> **This story shall the good man teach his son;**
> And Crispin Crispian shall ne'er go by,
> From this day to the ending of the world,
> But we in it shall be rememberèd;
> We few, we happy few, we band of brothers;
> For he to-day that sheds his blood with me
> Shall be my brother; be he ne'er so vile
> This day shall gentle his condition:
> And gentlemen in England, now a-bed
> Shall think themselves accursed they were not here,
> And hold their manhoods cheap whiles any speaks
> That fought with us upon Saint Crispin's day. (4.3.43)

This is from the famous speech in which King Henry charges his men to fight well before the famous Battle of Agincourt.

You can read more about the history of the British Airborne division and Pegasus bridge. The famous historian of the second world war Stephen E. Ambrose also wrote a history of the Pegasus bridge battle, called "Pegasus Bridge: June 6, 1944". You won't find many military historians better than Stephen E. Ambrose!

You might be surprised how many men are interested in military history and wargames, precisely because men instinctively look up to men like John Howard who embody qualities like bravery and courage. We have a dearth of moral character in this society. And we don't do much to teach young men about manly virtues, even in the church. I think that it is important for us to think of creative ways for us to present good character to our young men. Young women should also learn about good character, because they must separate out the good men from the bad when they are courting.

Thanks to Dina for helping me to edit this post!

Friday night movie: The Great Escape (1963)

August 10, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [8.3/10]

IMDB median rating: [9/10]

Description:

> Based on a true story, a group of allied escape artist type prisoners of war are all put in an 'escape proof' camp. Their leader decides to try to take out several hundred all at once. The first half of the film is played for comedy as the prisoners mostly outwit their jailers to dig the escape tunnel. The second half is high adventure as they use boats and trains and planes to get out of occupied Europe.

Happy Friday!

A summary of Dr. Laura's Proper Care and Feeding of Husbands

August 11, 2012 | by Wintery Knight | Link | Original Link

Sue Bohlin of Probe Ministries read "The Proper Care and Feeding of Husbands", and her assessment is here.

Excerpt:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.*{1} We need this book because millions of wives either don't know how to love their husbands wisely and well, or they're too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, "with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families."{2} While the women's movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.{3}
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God.{4} *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

She talks about men's needs for direct communication, respect, appreciation, support, and sex.

And ends with this:

> I can't recommend *The Proper Care and Feeding of Husbands* highly enough. In fact, I gave a copy to my new daughter-in-law! Let me close with one more piece of wisdom from Dr. Laura: "[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration and approval of a woman. . . Women need to better appreciate the magnitude of their power and influence over men, and not misuse or abuse it."{25} Amen!

And here's another summary of the book that I found.

Full text:

> Dr. Laura Schlessinger has written another book that deserves a place on the best seller list with six of her other books, such as Ten Stupid Things Women Do to Mess Up Their Lives and Ten Stupid Things Men Do to Mess Up Their Lives. The Proper Care and Feeding of Husbands, from this unmarried man's perspective, is

an excellent manual for women on how to get want they want from men and marriage and, generally, how to be happy. Dr. Laura makes a number of important, practical points, based on her experience in private practice, from advising her radio callers, and from literally hundreds of letters and emails she received from men and women while she was writing the book. Here are the points that struck this writer, together with commentary:

1. **Men Need Women, and This Need Gives Women Huge Influence**. Dr. Laura states the point as follows: "[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration, and approval from a woman." Women have great power and influence over men, and wives in particular have tremendous power over their husbands. How they use this power essentially controls the relationship, because women are the masters of most relationships and marriages. That's why Dr. Laura says that she probably won't write The Proper Care and Feeding of Wives: wives already have most of the power and their marriages depend, for the most part, on them.

2. **Women Err in Favoring Children Over Husband**. A friend once told this writer that once a woman has children, her husband is relegated to the moral equivalence of a piece of furniture. How sad if this is true in many marriages. Here's how Dr. Laura puts it: "Once wives became mothers, they had no time to be wives. The men would even compliment their wives on being great mothers, but expressed considerable pain over not being shown love, affection, or sexual interest. The typical reply from a wife challenged with this was 'I only have time to take care of one person, and our child is that person. I'm just too tired for you.' This puts fathers in the ugly and uncomfortable position of feeling competitive with and resentful of their children, whom they love so much."

3. **Men and Women Are Different**. That men and women are deeply different ought not to be notable, but for the fact that it is so often challenged today. Dr. Laura says that society tries to make both men and women "unisex." But men are happiest being men, and women are happiest being women, with few exceptions. The differences start to manifest themselves very early. In one study Dr. Laura mentions, a barrier was placed between 1 year-old babies and their mothers. What did the little boys do? They attempted to get around the barrier or knock it down. The little girls? They cried until their mothers' picked them up. Men tend to respond to things physically, women verbally. In fact, the two sexes are just right for each other.

4. **Not Every Thought and Feeling Needs to be Said**. Women tend to be so verbal, so expressive, that they can tire out men easily unless they exercise some restraint. Dr. Laura reports that wives generally overwhelm their husbands with communication. "Husbands imagine (so foolishly) that their wives are telling

them something they actually need to know because they're supposed to do something about it. Otherwise, men can't imagine why the 'communication' is happening at all. It confuses them, frustrates them, and their response is to turn off. That's when they unfairly become labeled insensitive." Husbands and fiances are not girlfriends or psychologists, and women who want attention should adjust their communication style accordingly when speaking with them.

5. **Men Are Not Mind-Readers**. Most men are not very intuitive compared to most women. Many women "get caught up in the absurdly romanticized notion that 'if he loved me, he'd just know what I'm thinking, what I'd like, what he should say.'" If a woman wants her man to do something, she should just ask him plainly, without nagging, and show appreciation when he does it. To act otherwise, as many women do, shows arrogance and lack of respect for the husband's difference, and it leads to unhappiness in the marriage and in the family.

6. **Man Is an Embodied Soul**. No, Dr. Laura didn't put it that way; "embodied soul" is a Catholic concept. But that concept is what underlies her discussion of how important it is to a man that his wife try to keep up her appearance. What does it mean that we are embodied souls? It means that our bodies are integral parts of who we are. We are not just souls. Our bodies are not like clothing that we can take on or off. There was no time during which we had only souls and not bodies, and in eternity as well we will have bodies. It is through our bodies, in fact, that we communicate to our loved ones and to the rest of the world. One thinks of the beautiful line from the old Anglican marriage rite: bride and groom pledge to each other "with my body I thee worship." It is ironic, but in many cases men–sex-crazed pigs in the minds of many women–actually have a truer understanding of the beauty of the body and the meaning of the marital embrace than their wives do. "Objectification" may come as much or more from the woman's side as from the husband's if the woman sees her own body as being separate from rather than an integral part of herself. Dr. Laura writes: "In reading all the letters from men, I was struck by their depth of senstivity about the issue of women's appearance. It wasn't an impersonal, animal reaction (as it is with women the men don't personally know), it was a deeply personal one. The wife's comfort with and appreciation of her own body and femininity, and her willingness to share that with her husband, actually fed his sense of well-being, his feeling of being loved as a husband and valued as a 'man.'"

7. **Infidelity by Omission**. Brides and grooms make a number of vows, not only of sexual fidelity. Marital vows include and imply words like love, honor, protect, and care for. "[W]hen one breaches those vows by neglect, is that also not a form of infidelity? Perhaps we should start looking at the act of intentionally depriving a spouse of legitimate needs as infidelity, too, because it stems from being unfaithful to the intent of the vows."

> 8. **In the Bedroom**. To her credit, Dr. Laura gives due place to the importance for marriage of the marital act: “The bedroom is the foundation of marriage and family.” St. Josemaria Escriva, founder of Opus Dei, that supposedly conservative institution within the Church, put it this way: “The marriage bed is an altar.” Enough said?

> 9. **Women Should Appreciate Men’s Masculinity**. Dr. Laura relates a trip she made recently to a swimming pool. A mom and a dad were wading with their infant child. Mom held the child against her chest, cooed to him, and swooped him up and down. She passed the baby to dad. He turned the baby’s face outward and swooshed him forward and up into the air. “Mom equals protection and nurturance. Dad equals autonomy and adventure. It is the perfect balance that helps produce a functional, secure human being.” Too many women, though, act like Alice Kramdens, constantly belitting their husbands, shooting down their aspirations, treating them like children. Dr. Laura writes: “When a wife treats her man like he’s one of her children, when she puts him down or thwarts his need for autonomy, adventure, risk, competition, challenge, and conquest, she ends up with a sullen, unooperative, unloving, hostile lump.”

> 10. **Thou Shalt Not Covet**. Dr. Laura contributes a novel (to this writer) and insightful contemporary application of the commandment, “thou shal not covet.” Specifically, she understands it as a rebuke to people who want it all, especially feminists. “Perhaps the feminist notions about women having power if they do it all has obstructed too many women’s ability to realize that in real life we all make choices, and that the true joy and meaning of life is not in how many things we have or do, but in the sacrifice and commitment we make to others within the context of the choices we’ve made. The Tenth Commandment, about coveting, reminds us that none of us can have everything there is nor everything we want. Without enjoying and appreciating our gifts and blessings, we create a hell on earth for ourselves and for those who love us.”

PCF Husbands is the best basic book on marriage. Easy to read, tons of wisdom.

Who is Paul Ryan? What are his political views and positions?

August 11, 2012 | by Wintery Knight | Link | Original Link

Let's see whether Paul Ryan has what it takes to push the Tea Party agenda in a debate situation.

Paul Ryan vs Barack Obama:

Paul Ryan vs Debbie Wasserman-Schultz:

Paul Ryan vs Tim Geithner:

Paul Ryan against MSNBC leftist Chris Matthews:

Paul Ryan can really debate economic issues – he is the Chair of House Budge Committee, after all. The focus of this election will now be on the economy, where it belongs, and the Democrats will be forced to discuss specifics.

Not only can he debate, but he explains our economic situation well:

He can explain this stuff *to you and I.* He can explain this stuff *to Democrats and Independents.*

By the way, Paul Ryan has a perfect score on the pro-life issue, and he has even written about his pro-life views on his Congressional web site.

Here is an excerpt in which he contrasts the Supreme Court decision on abortion with the Supreme Court decision with racial discrimination:

> Twice in the past the U.S. Supreme Court—charged with being the guardian of rights—has failed so drastically in making this crucial determination that it "disqualified" a whole category of human beings, with profoundly tragic results.
>
> The first time was in the 1857 case, Dred Scott v. Sandford. The Court held, absurdly, that Africans and their American descendants, whether slave or free, could not be citizens with a right to go to court to enforce contracts or rights or for any other reason. Why? Because "among the whole human race," the Court declared, "the enslaved African race were not intended to be included…[T]hey had no rights which the white man was bound to respect." In other words, persons of African origin did not "qualify" as human beings for purposes of protecting their natural rights. It was held that, since the white man did not recognize them as having such rights, they didn't have them. The implication was that Africans were property—things that white persons could choose to buy and sell. In contrast, whites did "qualify," so government protected their natural rights.
>
> Every person in this country was wounded the day this dreadful opinion was handed down by this nation's highest tribunal. It made a mockery of the American idea that human equality and rights were given by God and recognized

> by government, not constructed by governments or ethnic groups by consensus vote. The abhorrent decision directly led to terrible bloodshed and opened up a racial gap that has never been completely overcome. The second time the Court failed in a case regarding the definition of "human" was in Roe v. Wade in 1973, when the Supreme Court made virtually the identical mistake. At what point in time does a human being exist, the state of Texas asked. The Court refused to answer: "We need not resolve the difficult question of when life begins. When those trained in the respective disciplines of medicine, philosophy, and theology are unable to arrive at any consensus, the judiciary, at this point in the development of man's knowledge, is not in a position to speculate as to the answer." In other words, the Court would not "qualify" unborn children as living persons whose human rights must be guaranteed.

Who wrote that? Scott Klusendorf? No – Paul Ryan!

He actually opposes focusing only on fiscal issues at the expense of social issues – this man is a man who social conservatives can get behind.

He is also solid on national defense.

Excerpt:

> Rep. Paul Ryan (R-Wis.) gave a speech Thursday to the Alexander Hamilton Society in Washington. If one is looking for clues as to Ryan's interests beyond chairing the House Budget Committee, a speech, as he put it, to "a room full of national security experts about American foreign policy" would merit attention.
>
> …Ryan delivered an above-the-fray talk on the subject of American uniqueness (a less loaded term) and the myth that American decline in inevitable. He posited, "Our fiscal policy and our foreign policy are on a collision course; and if we fail to put our budget on a sustainable path, then we are choosing decline as a world power."
>
> Ryan contends that the debt crisis is not a bookkeeping problem or even simply a domestic problem; it is about maintaining our status as a superpower and about American values.
>
> […]He plainly is not with the cut-and-run set on Afghanistan. "Although the war has been long and the human costs high, failure would be a blow to American prestige and would reinvigorate al-Qaeda, which is reeling from the death of its leader. Now is the time to lock in the success that is within reach." Nor can he be accused of wanting to "go it alone." "The Obama administration has taken our allies for granted and accepted too willingly the decline of their capacity for international action. Our alliances were vital to our victory in the Cold War, and they need to be revitalized to see us through the 21st century."
>
> As for China, he bats down the idea that we should go along to get along… He's clear that China has "very different values and interests from our own."
>
> And finally on defense spending, he rejects the sort of penny-pinching

> isolationism of Jon Huntsman or Rep. Ron Paul (R-Tex.).

I have blogged about Paul Ryan continuously over the life of this blog – probably second only to Michele Bachmann. Definitely more than my other favorites Marco Rubio and Bobby Jindal. I think it's telling that Romney chose one of my 4 favorites.

So we are basically getting a full spectrum conservative (social, fiscal, defense) who can debate calmly and confidently, and with the support of evidence. Ryan also has a solidly middle-class background. I now predict a Romney-Ryan victory in November.

Christopher Hitchens debates William Lane Craig about God's existence

August 12, 2012 | by Wintery Knight | Link | Original Link

Here's the full debate on video. Hugh Hewitt is the moderator.

Now I think most people are familiar with Christopher Hitchens and his arguments – he was widely regarded as the top atheist debater in the world, and has written bestselling books on atheism. So below is a little more about the Christian debater William Lane Craig. Craig is regarded as the top defender of Christianity in the world, although many people are unfamiliar with his arguments. Here is a written explanation of the five arguments he uses in the debate with Hitchens, if you want to follow along. This is a good debate for any of you who have never seen a debate on God's existence before.

About William Lane Craig

Let's review William Lane Craig's qualifications:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

Here is a partial list of his past debates against the top atheist scholars. Many of those have audio and video. His best recent debate was against the British philosopher Peter Millican. Recommended for advanced students only. For a more basic debate against a very poorly prepared opponent, you can watch the Craig-Atkins debate. Atkins is a retired professor of chemistry from Oxford.

Peter Robinson interviews Paul Ryan on fixing Washington

August 12, 2012 | by Wintery Knight | Link | Original Link

Here's a 47-minute interview with the Republican candidate for Vice President.

Topics:

- health care reform
- patient-centered health care
- patient choice
- price and quality competition
- reducing costs
- empowering states
- education reform
- separate health care from the employer and attach it to the worker
- the root cause of rising health costs
- the moral hazard caused by government spending "makers vs. takers"
- fixing dependency on the government by changing incentives
- how Republicans can get votes from Democrats and Independents
- how far is America from becoming Greece?
- is the debt crisis avoidable?
- the importance of the 2012 election
- reforming Social Security

Best quote: "we need to kick this thing upstairs to the American people" (on letting the people decide instead of government).

H/T Rocking With Hawking.

Paul Ryan teams up with Democrat Ron Wyden to push Medicare reform plan

August 12, 2012 | by Wintery Knight | Link | Original Link

Rep. Paul Ryan
From Investors Business Daily.

Excerpt:

> Pity the poor Democrats. Here they were counting on scaring seniors about GOP plans to "destroy" Medicare when Rep. Paul Ryan teams up with a prominent Senate Democrat to offer a compromise reform.
>
> From the White House on down, Democrats were wringing their hands this week about the bi-partisan Medicare reform plan offered up by Ryan and Sen. Ron Wyden, D-Ore.
>
> Their plan would shift Medicare from an open-ended health benefit to one in which the government provides a set amount of money for insurance. Seniors could choose from a variety of private, approved plans, as well as the traditional government-run Medicare.
>
> The subsidy would be based on the second cheapest plan in an area, and if seniors wanted more expansive coverage, they'd have to pay the difference out of their own pockets. The reform would also cap the growth in Medicare.
>
> […]As one Democratic congressional aide told the New York Times, "this plan gives bipartisan political cover to Ryan and other Republicans against whom we have been waging a very successful political offensive."
>
> […]While we prefer Ryan's original proposal to his current one, it's to his credit

> that he realized the political need to produce a bi-partisan compromise. Wyden, too, deserves credit for his willingness to buck his party and sacrifice short-term political gain for much needed long-term reforms.

I took a look at Wyden's ACU ratings, and he has a 9.23 out 100. I have no idea how Ryan got this guy on board. It's magic.

Analyzing Romney's choice of Paul Ryan for VP

August 13, 2012 | by Wintery Knight | Link | Original Link

The Wall Street Journal says that Romney wanted to pair up criticism of the Obama economy with Paul Ryan's reform plan.

Excerpt:

> Mr. Romney is signaling that he realizes he needs a mandate if he is elected, which means putting his reform ideas before the American people for a clear endorsement. He is treating the public like grown-ups, in contrast to President Obama's focus on divisive and personal character attacks.
>
> The Ryan choice also suggests that Mr. Romney understands that to defeat Mr. Obama he'll have to do more than highlight the President's economic failures. He must also show Americans that he has a tangible, specific reform agenda that will produce faster growth and rising incomes.
>
> Mr. Ryan is well equipped to help him promote such an agenda. The seven-term Congressman grew up in the GOP's growth wing and supply-side ranks as a protege of Jack Kemp. Far from being a typical House Republican, he was a dissenter from the Tom DeLay do-little Congress in the last decade. He began talking about his reform blueprint in the George W. Bush years when everyone said he was committing political suicide.
>
> […]**In Mr. Ryan, [Democrats] face a conservative advocate who knows the facts and philosophy of his arguments.** He is well-liked and makes his case with a cheerful sincerity that can't easily be caricatured as extreme. He carries his swing Wisconsin district easily though it often supports Democrats for President.
>
> This may be why, in his meetings with House Republicans, Mr. Obama has always shied away from directly debating Mr. Ryan on health care and spending. He changed the subject or moved on to someone else. **The President knows that Mr. Ryan knows more about the budget and taxes than he does, and that the young Republican can argue the issues in equally moral terms.**

In moral terms, just like Arthur Brooks of the AEI urges conservatives to do.

The conclusion of the article explains Romney's strategy:

> In his remarks on Saturday in Norfolk, Mr. Ryan also hit on what is likely to be an emerging Romney theme: leadership that tells Americans the truth. "We will honor you, our fellow citizens, by giving you the right and opportunity to make the choice," he said. "What kind of country do we want to have? What kind of people do we want to be?"
>
> **The underlying assumption is that at this moment of declining real incomes and national self-doubt, Americans won't fall for the same old**

> **easy demagoguery. They want to hear serious ideas debated seriously. The contrast couldn't be greater with a President who won't run on his record and has offered not a single idea for a second term.**
>
> In choosing Mr. Ryan, Mr. Romney is betting that Americans know how much trouble their country is in, and that they will reward the candidate who pays them the compliment of offering solutions that match the magnitude of the problems.

Another editorial in the WSJ agrees that Ryan is there to provide a positive agenda.

Excerpt:

> Mr. Ryan provides the crucial shift in emphasis, the opportunity to go on offense. We will now have a focus on, and explanation of, the choice between stagnation and renewal. This is what Mr. Ryan excels at—not just crafting ideas, but explaining them in a positive and serious way. This ability is why the congressman—despite his supposedly extremist reform blueprint and budget (says the left)—has continued to win a district that in 2010 went for Mr. Obama.
>
> […]The first pitch to… voters came with Mr. Romney's introduction of Mr. Ryan on Saturday, in which the campaign made clear it intends to use this pick as a way of underlining the intellectual poverty of the Obama campaign. Mr. Romney spoke of Mr. Ryan's "integrity," his "seriousness," his "intellectual leadership," and his refusal to "demonize his opponents"—traits for which Mr. Ryan is well-known.
>
> The introduction was designed to highlight the Obama campaign's own relentless smear attacks, and its focus on the trivial. This is the first sign of Mr. Ryan's influence, since the strategy is clearly modeled on the congressman's own history of winning on ideas against opponents who resort to cheap attack.

My own view of this pick of Ryan is that he is exactly what the country needs. When you contrast Paul Ryan with a typical Democrat like that Georgetown feminist student who demanded that the taxpayers provide her with free contraceptives, then we win.

My previous post on Paul Ryan has some clips of him engaging with Democrats. He's very, very good at it.

Free “Indivisible” booklet explains fiscal and social conservatism

August 13, 2012 | by Wintery Knight | Link | Original Link

Are you a fusionist? I am. A fusionist is someone who thinks that social conservatism and fiscal conservatism go together hand in hand. You can’t be just one or the other – you have to be both. Because if you want to achieve one goal, you’ll achieve it better by also working on the other goal in parallel.

Here’s how the new VP Paul Ryan explains it during a June 2009 the Hudson Institute conference speech:

> A “libertarian” who wants limited government should embrace the means to his freedom: thriving mediating institutions that create the moral preconditions for economic markets and choice. A “social issues” conservative with a zeal for righteousness should insist on a free market economy to supply the material needs for families, schools, and churches that inspire moral and spiritual life. In a nutshell, the notion of separating the social from the economic issues is a false choice. They stem from the same root.

Now here is a nice booklet about fusionism put out by the Heritage Foundation, my favorite think tank. The booklet is called “Indivisible” and the book chapters are all available as individual PDFs.

Here’s the booklet description:

> What do marriage, family, and religion have to do with property, free exchange, and profit? Washington policy circles may separate these into so-called “social” and “economic” issue sets, but for millions of Americans the dividing lines fade away in the reality of everyday life. Together these core social and economic ideas form the foundation of American liberty. Indivisible is a unique set of essays by well-known social and economic conservatives—each writing from the other’s perspective—to show the interdependence of these principles in advancing freedom and human dignity.

So the social conservatives are writing about fiscal issues, and the fiscal conservatives are writing about social issues.

Here’s the list of people and topics:

Civil Society	**Wages**

And Jay Richards gave the introduction.

My two favorite chapters are Jennifer Roback Morse and Michele Bachmann, of course. I have the actual printed booklet, and it's all wrinkled on the edges because I read it while doing post-workout cardio. The essays are just 4-6 pages long.

William Lane Craig debates James Crossley on the resurrection of Jesus

August 13, 2012 | by Wintery Knight | Link | Original Link

This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

William Lane Craig's opening speech

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin
  - the burial is probable because shows an enemy of the church doing right
  - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
  - the site of Jesus' grave was known
  - the disciples could not proclaim a resurrection if the body were still in it
  - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
  - it's mentioned explicitly in Mark
  - it's in the separate sources used by Matthew and John
  - it's in the early sermons documented in Acts
  - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing

- The empty tomb was discovered by women
    - the testimony of women of women was not normally allowed in courts of law
    - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

James Crossley's opening speech

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

William Lane Craig's first rebuttal

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't

undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age
- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

James Crossley's first rebuttal

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women – Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

William Lane Craig's second rebuttal

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

James Crossley's second rebuttal

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling

- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I've read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for

that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

William Lane Craig's conclusion

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

James Crossley's conclusion

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don’t have any earlier sources, so we just don’t know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn’t check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

New CBO study: lifting drilling restrictions would increase U.S. energy reserves by 30%

August 14, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> A report from the Congressional Budget Office (CBO) estimates that lifting the ban on federal oil drilling in certain areas could increase U.S. petroleum reserves by 30 percent, including an estimated 8 billion barrels of oil in the Alaska National Wildlife Refuge (ANWR).
>
> Using estimates from the Department of the Interior (DOI), CBO said that lifting federal drilling restrictions could bring billions more barrels of oil and gas to market.
>
> "CBO estimates that about 175 billion barrels of oil equivalent (BOE) exists in undiscovered oil and gas reserves on federal lands (excluding most of the natural gas reserves in Alaska)—nearly half of it in the central and western parts of the Gulf of Mexico," CBO said.
>
> "About 70 percent of the undiscovered oil and gas is under federal control on lands that are currently open to leasing; thus, additional receipts would come from opening the other 30 percent to leasing and production."
>
> Thus, by lifting federal drilling bans in place in areas like ANWR and areas of the Outer Continental Shelf, oil-producing companies could gain access to an additional 30 percent of U.S. reserves – 52.5 billion barrels.
>
> While the reserves are technically recoverable – meaning oil companies could extract the oil and gas — legal restrictions and current administration policies prohibit oil companies from doing so.
>
> CBO excluded most of Alaska's gas reserves because there is no infrastructure in place to transport the gas to market, a fact CBO said made them unlikely to be tapped.
>
> The figures come from an August 9 CBO report examining the benefits the federal government would receive if it lifted all current drilling bans on federal lands, including ANWAR.

All that oil would create a lot of jobs, too. But we know from the last four years that the Obama administration has no interest in either producing more energy or creating jobs. Otherwise, they would have built the Keystone XL pipeline and lifted these restrictions on drilling.

Middle class tax rate set to rise to nearly 50% in January 2013

August 14, 2012 | by Wintery Knight | Link | Original Link

From the Heritage Foundation's Foundry blog.

Excerpt:

> A middle-class taxpayer's income is subject to a 25 percent federal income tax. Then there is the federal Social Security and Medicare payroll tax of 13.3 percent in 2012—5.65 percent of that is removed from the employee's paycheck, and the remaining 7.65 percent is paid by the employer. (In reality, the employee pays the entire 13.3 percent, because the employer's portion of the tax does not affect the cost of labor: The employer would pay the employee 7.65 percent more if there were no employer's portion of the payroll tax.)
>
> So the 25 percent federal income tax plus 13.3 Social Security and Medicare payroll taxes equals 38.3 percent going to federal taxes in 2012.
>
> And then there are state taxes. According to the Tax Foundation, the average state's income tax rate for the middle-class taxpayer is 4.82 percent, which brings the total to 43.12 percent in federal and state taxes. And it's going higher, thanks to the nearly $500 billion in tax increases for 2013 that some have called Taxmageddon. In January of next year, the federal income tax rate for middle-class taxpayers is scheduled to rise from 25 percent to 28 percent, and the payroll tax is scheduled to rise from 13.3 percent to 15.3 percent. This drives the marginal tax rate based on the aforementioned three taxes to 48.12 percent. Add in state and local property, corporate, excise, and other state and local taxes, and the percentage of each additional dollar that is taxed hovers around 50 percent.
>
> When half of each additional dollar earned is taxed away, taxpayers experience a disincentive to start businesses or expand existing ones. This leads to fewer jobs being created.
>
> It is outrageous that any dollar earned by a middle-class taxpayer would go as much to taxes as to supporting the taxpayer's family. The government didn't earn the taxpayer's paycheck and shouldn't be entitled to it.

People like me really do think about things like this – about getting up and going to work every day to earn half of what I am worth. Of giving up half my salary so that the Georgetown University student can have free contraception paid for by me. I am one of those people who pays about 45% of my income (federal, state and local) in taxes. If I had more of my own money, I could be following my own dreams – maybe to do a Ph.D and teach, or start a business, or become a minister. But those things can't happen, because people keep voting for more and more benefits for themselves on my back – so

that they don’t have to be burdened to make the decisions that it takes to take care of themselves and their families.

That’s what being a Democrat means – it means persisting in perpetual adolescence at the expense of people like me. It means taking away my dreams so that they can have my standard of living without having to work or play by the rules. Being a Democrat means piling up trillions of dollars of debt onto people who haven’t even been born – so that feminists can have free contraceptives. That’s what a Democrat is.

Shandon Guthrie lectures on the hiddenness of God

August 14, 2012 | by Wintery Knight | Link | Original Link

About the speaker:

> Guthrie is currently pursuing his doctoral work in philosophy at the University of Wales, Trinity Saint David. He is currently visiting lecturer of philosophy at the University of Nevada, Las Vegas and an affiliate faculty professor of philosophy at Regis University and co-leader and teacher for the local college ministry Converge (housed at Living Grace Church). He is a member of the Society of Christian Philosophers, the Evangelical Philosophical Society, and the Golden Key International Honour Society in recognition of his academic achievements.

The lecture:

This guy is a very good speaker. The talk contains philosophical reasoning as well as references to the teachings of the Bible on the problem of divine hiddenness. What I like about this lecture is that it helps you to see the goals and alternatives that God has in trying to get people to freely respond to him out of love. It’s an interesting problem.

Paul Ryan speaks at the Ronald Reagan Presidential Foundation in May 2012

August 15, 2012 | by Wintery Knight | Link | Original Link

Since he's the VP, I thought I'd post a recent long form video of Paul Ryan discussing economic policy. The introductions end at 6:30.

I recent blogged a few clips of Paul Ryan engaging with Democrats, in case you want to see him in action, as well

Redistribution of wealth: 2362 millionaires collecting unemployment

August 15, 2012 | by Wintery Knight | Link | Original Link

How well does government redistribute the money that they take from job creators and workers?

From CNS News.

Excerpt:

> There were 2,362 people who earned a million dollars or more in taxable income in 2009 and who also received federal unemployment benefits that year, according to a report by the Congressional Research Service.
>
> In fact, these millionaires collectively raked in more than $20 million in unemployment benefits.
>
> The Congressional Research Service report–*Receipt of Unemployment Insurance by Higher-Income Unemployed Workers ("Millionaires")*–was published on Aug. 2 and was based on the most recent data available from the Internal Revenue Service.
>
> **"Among tax filers with AGI [Adjusted Gross Income] of $1 million or more, 2,840 reported receipt of unemployment benefit income in 2008 and 2,362 tax filers reported receipt of unemployment benefit income in 2009," the CRS reported.**
>
> **The CRS reported that millionaires received $20.8 million in federal unemployment benefits in 2009, up from $18.6 million in 2008. That averages out to $8,806 in unemployment benefits per millionaire.**
>
> Unemployment insurance is a joint federal-state program and is funded by a payroll tax assessed against all workers. In the four years preceding 2012,according to the Tax Foundation, the unemployment insurance system was in the red. "Between 2008 and 2011, $174 billion was paid in unemployment taxes while $450 billion was paid out in benefits, a gap of $276 billion," the Tax Foundation said.
>
> […]In addition to the 2,362 people with adjusted gross incomes of $1 million or more who got unemployment benefits in 2009, there were also 8,335 people with incomes between $500,000 and $1 million who received benefits and 120,227 with incomes between $200,000 and $500,000 who received benefits.

The money that is paid out for unemployed people is taxed from all workers. That means that my unemployed insurance payments are funding unemployed millionaires. I've also had to pay Social Security, Medicaid and Medicare, and I've never taken a dollar back from that.

According to this Senate report, millionaires collected $9 billion in Social Security payments from the government from 2004-2009. I'll never collect a dime of Social Security, but I'm paying for theirs. There is no reason for me to be paying into Social Security – it's not a good deal for younger workers.

Russian attack submarine operates undetected in Gulf of Mexico for a month

August 15, 2012 | by Wintery Knight | Link | Original Link

From the Washington Free Beacon.

Excerpt:

> A Russian nuclear-powered attack submarine armed with long-range cruise missiles operated undetected in the Gulf of Mexico for several weeks and its travel in strategic U.S. waters was only confirmed after it left the region, the *Washington Free Beacon* has learned.
>
> It is only the second time since 2009 that a Russian attack submarine has patrolled so close to U.S. shores.
>
> The stealth underwater incursion in the Gulf took place at the same time Russian strategic bombers made incursions into restricted U.S. airspace near Alaska and California in June and July, and highlights a growing military assertiveness by Moscow.
>
> The submarine patrol also exposed what U.S. officials said were deficiencies in U.S. anti-submarine warfare capabilities—forces that are facing cuts under the Obama administration's plan to reduce defense spending by $487 billion over the next 10 years.
>
> The Navy is in charge of detecting submarines, especially those that sail near U.S. nuclear missile submarines, and uses undersea sensors and satellites to locate and track them.
>
> The fact that the Akula was not detected in the Gulf is cause for concern, U.S. officials said.
>
> The officials who are familiar with reports of the submarine patrol in the Gulf of Mexico said the vessel was a nuclear-powered Akula-class attack submarine, one of Russia's quietest submarines.
>
> […]Submarine warfare specialists say the Akula remains the core of the Russian attack submarine force.
>
> The submarines can fire both cruise missiles and torpedoes, and are equipped with the SSN-21 and SSN-27 submarine-launched cruise missiles, as well as SSN-15 anti-submarine-warfare missiles. The submarines also can lay mines.
>
> The SSN-21 has a range of up to 1,860 miles.

Why is this happening? Well, it might be because of Obama's policy of unilateral disarmament, appeasement and retreat.

> The Navy is facing sharp cuts in forces needed to detect and counter such

> submarine activity.
>
> The Obama administration's defense budget proposal in February cut $1.3 billion from Navy shipbuilding projects, which will result in scrapping plans to build 16 new warships through 2017.
>
> The budget also called for cutting plans to buy 10 advanced P-8 anti-submarine warfare jets needed for submarine detection.
>
> In June, Russian strategic nuclear bombers and support aircraft conducted a large-scale nuclear bomber exercise in the arctic. The exercise included simulated strikes on "enemy" strategic sites that defense officials say likely included notional attacks on U.S. missile defenses in Alaska.
>
> Under the terms of the 2010 New START arms accord, such exercises require 14-day advanced notice of strategic bomber drills, and notification after the drills end. No such notification was given.
>
> A second, alarming air incursion took place July 4 on the West Coast when a Bear H strategic bomber flew into U.S. airspace near California and was met by U.S. interceptor jets.
>
> That incursion was said to have been a bomber incursion that has not been seen since before the Soviet Union collapsed in 1991.

Is Obama really cutting defense? Consider this article from Investors Business Daily.

Excerpt:

> The administration announces a leaner version of our military involving the cutting of tens of thousands of ground troops as a leading defense contractor closes a major plant due to budget cuts.
>
> In an unusual appearance at the Pentagon on Thursday, President Obama laid out his plans for a "leaner" military based on the need "to renew our economic strength here at home, which is the foundation of our strength in the world."
>
> In other words, failed domestic policies require us to cut our military in a dangerous world.
>
> […]**Defense cuts are already having a domestic effect. Boeing Co. announced Wednesday it will close its defense plant in Wichita, Kan., by the end of 2013, moving future aircraft maintenance, modification and support to other facilities.**
>
> **The closure, prompted by defense cuts, will cost 2,160 workers their jobs.**
>
> […]**A 14-page analysis by the Republican majority staff of the House Armed Services Committee says the cumulative cuts will result in the Army and Marines losing 200,000 troops.**
>
> **The Navy will shrink to 238 vessels from today's 300 and would lose two carrier battle groups needed to project American power and influence.**

> **Strategic bombers will fall from 153 to 101. Air Force fighters would drop by more than half, from 3,602 aircraft to 1,512 planes.**

I blogged more about the Obama administration's cuts to defense last week.

Shooting at Family Research Council being investigated as domestic terrorism

August 15, 2012 | by Wintery Knight | Link | Original Link

One report says that the shooter was carrying 30 rounds of ammunition and multiple firearms. (UPDATE: He had two 15 round magazines and a 50 round box of ammunition. This was an attempted mass murder)

From Fox News.

Excerpt:

> A security guard at the Family Research Council's headquarters in Washington, D.C. is being hailed as a hero after he stopped a gunman posing as an intern, taking a bullet in the arm before wrestling the suspect to the ground.
>
> The gunman, identified as Floyd Lee Corkins II, 28, entered the lobby of the organization's Chinatown headquarters around 10:45 and expressed disagreement with the conservative group's policy positions, Fox News has learned. When the guard, who was not identified, asked him where he was going, he opened fire, according to police.
>
> "The security guard here is a hero, as far as I'm concerned," D.C. Police Chief Cathy Lanier said. "He did his job. The person never made it past the front."
>
> The guard, who was not identified, was shot in the arm and was conscious after the shooting and was in stable condition. Corkins was being questioned by the FBI, sources said. Sources said he lives in Herndon, Va.
>
> The suspect "made statements regarding their policies, and then opened fire with a gun striking a security guard," a source told Fox News. WJLA-TV7 reported the suspect was also shot.
>
> Sources also said the gunman may have been carrying a bag from Chick-fil-A, the embattled fast-food restaurant whose president came under fire from gay activists after he said he did not agree with same-sex marriage.
>
> Sources told Fox News that after guard took away his gun, the suspect said, "Don't shoot me, it was not about you, it was what this place stands for."
>
> Authorities were treating the attack as a case of domestic terrorism, although James McJunkin, the head of the FBI's Washington Field Office, said authorities do not yet know the gunman's motive.

The Washington Post has more on what the shooter said before opening fire.

Excerpt:

> A law enforcement official says a suspected gunman made a negative reference about the work of a conservative Christian lobbying group before shooting a

> security guard.
>
> The reference was made in a confrontation in the lobby of the Family Research Council in Washington Wednesday morning. The official said the suspect was not specific. The official would only speak on condition of anonymity because the investigation is ongoing.
>
> […]The Family Research Council strongly opposes gay marriage and abortion and says it advocates "faith, family and freedom in public policy and public opinion."

Let's re-cap a few recent incidents of violence and vandalism from the gay left, shall we?

Examples of violence committed by gay activists

From the liberal Washington Post.

Excerpt:

> A satellite church affiliated with controversial Seattle pastor Mark Driscoll was vandalized early Tuesday (April 24) and a group calling itself the "Angry Queers" has reportedly taken responsibility.
>
> Stained glass and other windows were broken at the Mars Hill Church, according to a post on the Facebook page of Pastor Tim Smith.
>
> "Neighbors of the church reported seeing several young adults in black masks throwing large rocks into the windows," a church news release said. "Police stated that a bank in the area was also vandalized in the same way and that they believe the vandalism was planned ahead of time, most likely by an activist group."
>
> On Tuesday, KPTV FOX 12 reported it had received an email from someone using the name "Angry Queers" and claiming responsibility.
>
> Mars Hill Portland opened last October. During the first service, protesters gathered in front of the church and yelled obscenities at worshipers to speak out against the church's stance on homosexuality.

Here are some things from the e-mails sent by the gay activist group that performed the attack:

> The group that allegedly smashed up a Portland church hopes its "small act of vengeance will strike fear into the hearts of" Christian leaders who teach traditional sexual morality, according to an e-mail message the group released to the public.
>
> A group calling itself "Angry Queers" has claimed responsibility for throwing baseball-sized rocks through nine church windows in Portland's Mars Hill Church, including two 100-year-old stained glass panes.
>
> Two versions of the e-mail have been sent to the media, one longer and slightly more incendiary than the other, but both apparently originating from the same group. In the longer version, the LGBT activists state they destroyed church

> property in the names of several local transgender people who have died, and "all other trans women" whose deaths they blame on "this cissexist, femmephobic, racist, andtransmisogynistic society."
>
> "Churches are a major contributor to the culture that deems trans women of color to be disposable, as not worth keeping alive," the statement read.
>
> The "brand of Christianity" taught by Mark Driscoll, pastor of the largest Mars Hill Church in Seattle, "crusades against the 'feminization' of Jesus," the e-mail stated. "We angry queers are not fans of Jesus, but we have a problem with anyone who has a problem with femmes."
>
> The e-mail, which is peppered with foul language, berates the Q Center, a local LGBT activist organization, for engaging in a dialogue with the Mars Hill's leadership. "What we have to say to the Q Center is this: F—K YOU, you don't represent us. You are disgusting traitors who prioritize social peace and the bourgeois aspirations of rich white cis gay people over the more pressing survival needs of more marginalized queers."
>
> "F—k dialog with people who want us dead," the e-mail read. "The only dialog we need with scum like Mars Hill is hammers through their windows."
>
> "We hope this small act of vengeance will strike some fear into the hearts of all of Mars Hill's pastors, and warm the hearts of our friends and comrades (known or unknown). It may not get better, but we can certainly get even," it concludes.
>
> […][A] commenter calling himself "Angry Queer" on a local homosexual website incited further vandalism, writing: "I hope some sexy, angry queers (like myself) smashed this s**t up and will continue to until Mars Hill cannot exist peacefully in Portland. There is no peace for queers — we are murdered, bashed and ridiculed every f**king day. To have some windows of a huge INSTITUTION THAT PERPETUATES AND BREEDS THE HELL WE LIVE IN EVERY DAY smashed is a small victory and a boost in morale."

This sort of thing also happened recently in Australia, as well.

From the Newcastle Herald (Australia).

Excerpt:

> Vandals attacked Wallsend Presbyterian Church last night in response to a message criticising same-sex marriage displayed on the building's outside notice board.
>
> The church on Nelson Street had updated its message board last week to read "Even tradies know you need both male and female joints to make a marriage".
>
> The front of the 1867 building, which recently received a $12,000 makeover, was defaced with messages such as ''sexuality is not a choice'' and ''love thy neighbour not hate gays''.
>
> Reverend Dr Ian Copland said the sign was a play on words and he wanted

> people to talk about the issue being raised in federal parliament.
>
> He said he has no regrets despite the outcome.
>
> ‘‘This is not going to stop me,’’ he said.
>
> Two bills to legalise same-sex marriage were introduced in Federal Parliament this week.
>
> ‘‘It’s obviously a reaction to the sign but I have no malice towards the vandals,’’ Rev Copland said.
>
> ‘‘It only takes one or two cowards you can’t blame the whole homosexual community. That would be wrong.’’
>
> This is not the first time the church has been attacked regarding its stance on same-sex marriage.
>
> The signboard was vandalised about six months ago when the reverend posted a similar message.

How often does it happen? Is it common?

Here’s what happened to pro-marriage donors in California.

Excerpt:

> Gay rights supporters, dressed in pink and black, stormed a Lansing, Mich., church during its services Nov. 9 throwing condoms, pulling the fire alarm and yelling such things as “It’s okay to be gay” and “Jesus was a homo.”
>
> One media account said two lesbians then went to the pulpit at Mount Hope Church where they began making out in front of the congregants, which included children.
>
> Police were called and the demonstration, sponsored by a group called Bash Back, ceased. The group is described as pro-homosexual and pro-anarchist. The group’s blog promoted its actions saying it was “targeting a well known anti-queer, anti-choice, radical right-wing establishment.”
>
> […]The incident is one of dozens reported in California and across the country in the aftermath of the passage of Proposition 8, which has prompted passionate protests nationwide. In California, cases of violence were reported even before the election. Post-election, the Mormon church has been a major target because its members donated millions to the cause.
>
> Catholics, including the Knights of Columbus, have also been targeted for their support.
>
> […]Mormon temples in Los Angeles and Salt Lake City, as well as the Knights of Columbus headquarters in New Haven, Conn., were sent suspicious looking white powder, reminiscent of the 2001 anthrax attacks and scares.
>
> At least eight Mormon buildings in Salt Lake have been vandalized with spray-painted epithets criticizing the church’s support of Proposition 8.

A group of young Christians with the Justice House of Prayer— meeting on a sidewalk for their weekly prayer session in San Francisco's Castro district—had to be escorted out of the area by police, some in riot gear, as an angry mob turned on them shouting, "Shame on You," blowing whistles and screaming profanities.

Marjorie Christoffersen, daughter of the owners of the Los Angeles restaurant El Coyote, left town after hundreds of protesters targeted her parent's eatery because she made a personal $100 contribution to the Yes on 8 fund. Police in riot gear were called to restore order. Gay rights activists also began a campaign to post negative restaurant reviews online. The restaurant employs several gays and lesbians who said they were taken aback by the protests.

A Palm Springs news crew captured an unruly protest group ripping an oversized cross from a woman's hands and then stomping on it. A reporter trying to interview the woman, Phyllis Burgess, about the incident had to move the woman to safety as the crowd encircled them while shouting.

Numerous blog sites reported that gay African-American men were the subject of racial slurs while trying to join the crowd in an anti-Proposition 8 protest. The men were targeted because exit polls showed a large amount of African-Americans supported Proposition 8. In one case a black man was warned to stay out of West Hollywood "if they knew what was best for them."

The artistic director of a Sacramento theater was forced to resign his post after donors, ticket holders and others protested outside the theater because the man, Scott Eckern, a 25-year employee of the venue donated $1,000 in his personal money to the Yes on 8 campaign. In a separate case reported at press time, the director for the Los Angeles Film Festival resigned under pressure from gay activists for donating $1,500 to Yes on 8. Richard Raddon, who tried unsuccessfully to resign several days earlier but was blocked by his supportive festival board, resubmitted his resignation when the berating calls and e-mails failed to cease.

[…]A Carlsbad man was arrested Nov. 3 for punching two elderly neighbors in the face after they confronted him about trespassing on their property to place a No on 8 sign in front of their Yes on 8 sign.

On election morning, a Carlsbad jogger was also attacked and bitten by a dog when he tried to stop two men from stealing a Yes on 8 sign. Several weeks ago police in that same city arrested at least two people for stealing Yes on 8 signs.

In Fresno, a prominent pastor, who had campaigned publicly for Proposition 8, received credible death threats that also targeted the mayor, another traditional marriage supporter. The threats were deemed credible enough for the police department to assign officers to protect the men. The church was also targeted for vandalism.

In Modesto, a Protect Marriage volunteer received 16 stitches under his eye after a man tried to steal his Yes on 8 signs outside a local church where he was

> waiting to distribute them after Mass.
>
> A week before the election, a San Jose couple, who posted a Yes on 8 sign in their front lawn, discovered that someone spray-painted “No on 8” on their car, their garage and the garage of their neighbor.
>
> Also in San Jose, vandals painted the back window of an SUV with the words “Bigot Live Here,” with an arrow pointing to a house boasting a Yes on 8 sign.
>
> In other areas of the state, cars were keyed, signs defaced and a block was thrown through the window of an elderly couple who displayed a Yes on 8 sign in their yard.

I have previously written about how the Human Rights Campaign gay rights group leaked the names and addresses of pro-marriage donors to the Huffington Post. In that post, I also list the corporations that support the Human Rights Campaign.

My secular case against same-sex marriage offered three reasons why people should oppose gay marriage apart from any religion. One of those reasons was the danger that gay activism poses to religious liberty and freedom of speech. I never in my life thought that it would go as far as what happened at the Family Research Council.

Which companies might think that the Family Research Council is a “hate group”?

August 16, 2012 | by Wintery Knight | Link | Original Link

The Human Rights Campaign calls the Family Research Council a “hate group”.

I found a list of companies on the Human Rights Campaign web site that are also strongly oppose traditional marriage, such as advocated by the Family Research Council, which was recently shot up by a man who volunteers at a gay community center.

Platinum Partners:

- American Airlines
- Citi
- Microsoft
- Nationwide Insurance
- VPI Pet Insurance

Gold Partners:

- Bank of America
- Deloitte
- Ernst & Young LLP
- Lexus
- Mitchell Gold + Bob Williams
- Prudential

Silver Partners:

- Beaulieu Vineyard
- BP
- Caesars Entertainment
- Chevron
- Google
- MGM Mirage
- Nike

Bronze Partners:

- Chase
- Cox Enterprises
- Cunard
- Dell
- Goldman Sachs
- IBM

- Macy’s Inc.
- MetLife
- Morgan Stanley
- Orbitz
- Paul Hastings
- PwC
- Replacements, Ltd.
- Shell
- Starbucks
- TD Bank
- Tylenol PM

And you can find the full listing of companies that promote discrimination against traditional marriage on the Human Rights Campaign web site. I notice that they have about 1 million people who like them on Facebook and 85 thousand Twitter followers.

Human Rights Campaign calls the Family Research Council "hate group"

August 16, 2012 | by Wintery Knight | Link | Original Link

From Red State, an e-mail from the Human Rights Campaign, the leading gay activist group in the nation. This e-mail is from after the shooting.

The e-mail says: (in full)

> I have a great deal of admiration for you and like watching you on CNN. These Tweets are beneath you.
>
> It's really unseemly to insinuate — in any way — that HRC had anything to do with the violence that occurred today at FRC.
>
> **FRC IS a hate group.** It's not HRC that calls them that; it's the Southern Poverty Law Center that has classified them as such – years ago. Have you seen the things that FRC says about gay people? I think if you did you wouldn't be so quick to associate yourself with them:
>
> http://www.glaad.org/cap/tony-perkins
>
> http://www.glaad.org/cap/peter-sprigg
>
> I'm more than happy to have a dialogue with you on the issue but would ask that you not make irresponsible connections that are completely illogical.

And now we have a shooting by a far-left activist at the Family Research Council.

Should the Human Rights Campaign be charged, under the Obama administrations new hate speech laws, with inciting violence against the Family Research Council? Would the Obama administration make such a charge? What exactly does the rhetoric of the Human Rights Campaign about tolerance amount to, anyway?

My secular case against same-sex marriage offered three reasons why people should oppose gay marriage apart from any religion. One of those reasons was the danger that gay activism poses to religious liberty and freedom of speech. I never in my life thought that it would go as far as what happened at the Family Research Council.

Southern Poverty Law Center called the Family Research Council “hate group”

August 16, 2012 | by Wintery Knight | Link | Original Link

From CBN News.

Excerpt:

> Wednesday’s shooting at the headquarters of the Family Research Council, a group known for standing for conservative and Christian values, is raising debate about the rhetoric surrounding hot topic issues like gay marriage.
>
> In 2010, the Southern Poverty Law Center labeled the Family Research Council a ‘hate group,’ alongside neo-Nazis, Ku Klux Klan members, black separatists, and others.
>
> The SPLC said it put the conservative group on the list not because the FRC believes homosexuality is wrong, but for “the propagation of known falsehoods in an effort to defame gay people.”
>
> “I don’t expect everyone to agree with some of the things that we assert about the homosexual lifestyle, but we do present evidence in support of those assertions, and they are certainly not falsehoods or fabrications,” FRC Senior Fellow for Policy Studies Peter Sprigg said in defense.
>
> “If somebody is labeled a hate group, it means that you not only are saying that what they argue is wrong, but you are claiming to know their motives,” he continued.

And now we have a shooting by a far-left activist at the Family Research Council.

Should the Southern Poverty Law Center be charged, under the Obama administrations new hate speech laws, with inciting violence against the Family Research Council? Would the Obama administration make such a charge? What exactly does the rhetoric of the Southern Poverty Law Center about tolerance amount to, anyway?

My secular case against same-sex marriage offered three reasons why people should oppose gay marriage apart from any religion. One of those reasons was the danger that gay activism poses to religious liberty and freedom of speech. I never in my life thought that it would go as far as what happened at the Family Research Council.

White House and left-wing media take hours to comment on FRC shooting

August 16, 2012 | by Wintery Knight | Link | Original Link

From Life News. (H/T Wes)

Excerpt:

> The White House is coming under criticism from pro-life advocates for not issuing a condemnation of the shooting of a security guard at the offices of the Family Research Council, a pro-life group.
>
> UPDATE: Not until after 6:30 p.m. ET did the White House respond. Obama finally commented, saying "this type of violence has no place in our society."
>
> Meanwhile, CNN took hours to finally issue a report on the shooting and it provided no live coverage of it as other television networks did. Hours later, CNN tweeted, "Shooting wounds guard at Family Research Council. on.cnn.com/OYEXq9."
>
> Several conservatives bemoaned the late coverage, as Twitchy noted: "Disgusting…FYI It's not breaking news two hours later" and "Oh? Look who decided to "break" some news."
>
> Conservative writer Mary Katherine Ham writes: "There is no mention of the shooting on either CNN's Twitter feed or its website as of 1:52 p.m. EST. The bullpen at Townhall.com has been watching CNN coverage since the time of the shooting and has seen no mention of it. The shooting news is on MSNBC's website."

Wes also sent me this comparison of the FRC shooting coverage by Fox News with the coverage of MSNBC.

This isn't the first time that the left-wing news media has done this.

Excerpt:

> According to published reports, when Larry Brinkin was arrested two weeks ago, the police found… [CENSORED BY WK]. Yet the media has barely reported this terribly disturbing incident.
>
> But, you ask, who was Larry Brinkin? He was "a central figure in the gay rights movement," a man who was so influential that, "The San Francisco board of supervisors actually gave a 'Larry Brinkin Week' in February 2010 upon his retirement." It was Brinkin who first used the term "domestic partnerships" in a legal dispute, marking a watershed moment in gay activist history, yet news of his alleged crimes against infants and children, not to mention his alleged White Supremacist leanings, has received very little media attention.
>
> Is there a double standard here? Imagine what the media would be doing if

> Brinkin had been a conservative Christian leader.
>
> When evangelical leader Ted Haggard fell, the media was quick to pounce, suggesting that this exposed the corrupt nature of evangelical Christianity as a whole. And media leaders have done this repeatedly whenever there has been a scandal connected to an evangelical (or Catholic) leader, and the news is blared from the headlines. But where, I ask you, is the outrage or the front page news when a gay leader commits atrocities such as those allegedly committed by Larry Brinkin? And why isn't the media claiming that Brinkin's transgressions expose the corrupt nature of gay activism as a whole?
>
> The failure of a Christian leader is considered endemic and representative; the failure of a gay leader is considered an aberrant exception. Why the unequal treatment?
>
> […]The answer is that Brinkin's arrest has received relatively little media attention because he was a gay activist leader, not a conservative Christian leader, and there is no hiding the mainstream media's pro-gay, anti-conservative Christian bias. And because Brinkin's arrest has not been widely reported, the general public has not been confronted afresh with the horrors of child pornography.
>
> […]Brinkin, for his part, was no smalltime player, with the San Francisco Examiner describing him as an "iconic San Francisco gay activist who brought the nation's first domestic partnership lawsuit in 1982." And he was, after all, a respected, long-term leader within the Human Rights Campaign, the world's largest gay activist organization. Why hasn't the HRC been tarred and feathered the way evangelicals (or Catholics) are after one of their leaders falls? Why the inconsistency?

I reported on the Larry Brinkin scandal in a previous post.

We expect the left-wing media to be biased. Studies and surveys have shown that they cannot be trusted to tell the truth about the news. But the Obama administration? Aren't they supposed to represent all the people.

Consider this article from Hans Bader, at the Competitive Enterprise Institute.

Excerpt:

> Discrimination and politically-correct blinders can be deadly. It was obvious in the aftermath of the Fort Hood shootings that the killer was inspired by Islamic extremism. Obvious, that is, to anyone but officials in the Obama administration, who continue to cling tightly to a culture of political correctness and preferential treatment that helped make the shootings possible.
>
> Nidal Hasan shot dead 12 soldiers and a civilian at Fort Hood, while shouting "Allahu Akbar." But the Obama administration's inquiry into the shootings falsely suggested Islamic extremism was not a factor in the shootings. Its report on the Fort Hood massacre did not even "mention the words 'Islam' or 'Muslim' once,"

> referring to the killer simply as the "alleged perpetrator." Instead, it claimed the tragedy resulted from "bureaucratic shortcomings" in the "sharing of information."
>
> […]The shooter's Islamic extremism was obvious. Prior to the shooting, he had said that Muslims should rise up against the military, "repeatedly expressed sympathy for suicide bombers," was pleased by the terrorist murder of an army recruiter, and engaged in hate-speech against non-Muslims, publicly calling for the beheading or burning of non-Muslims, and talking "about how if you're a nonbeliever the Koran says you should have your head cut off, you should have oil poured down your throat, you should be set on fire." "In addition, Hasan openly had suggested revenge as a defense for the 9/11 attacks, defended Osama bin Laden, and said his allegiance to his religion was greater than his allegiance to the constitution."
>
> But the military did nothing to remove him from a position where he could harm others. Although his views were common knowledge, "a fear of appearing discriminatory . . . kept officers from filing a formal written complaint," the Associated Press noted. Moreover, "a key official on a review committee reportedly asked how it might look to terminate a key resident who happened to be a Muslim," as NPR noted. Instead, the military effectively exempted Hasan from rules of conduct that apply to everyone else, in order to promote its conception of "diversity."
>
> As military attorney Thomas Kenniff notes, there was a climate of "obsessive political correctness" in the military. As Major Shawn Keller pointed out, in a column entitled "An Officer's Outrage Over Fort Hood." "There was no shortage of warning signs that Hasan identified more with Islamic Jihadists than he did with the US Army. . .But just like September 11, those agencies and individuals charged with keeping America and Americans safe failed to connect the dots that would have saved lives. Jihadist rhetoric espoused by Hasan was categorically dismissed out of submissiveness to the concepts of tolerance and diversity. . . . the leaders in Hasan's chain-of-command failed to act . . . out of fear of being labeled anti-Muslim and receiving a negative evaluation report."
>
> Indeed, even after the shootings, government officials worried more about the fate of "diversity" than about the lives of their troops: "Our diversity, not only in our Army, but in our country, is a strength," Army Chief of Staff George Casey told NBC's Meet the Press. "And as horrific as this tragedy was, if our diversity becomes a casualty, I think that's worse," Casey said.

My secular case against same-sex marriage offered three reasons why people should oppose gay marriage apart from any religion. One of those reasons was the danger that gay activism poses to religious liberty and freedom of speech. I never in my life thought that it would go as far as what happened at the Family Research Council.

Family Research Council shooting suspect volunteered at gay community center

August 16, 2012 | by Wintery Knight | Link | Original Link

From the Associated Press. (H/T Legal Insurrection)

Excerpt:

> A man suspected of shooting and wounding a security guard at the headquarters of a Christian lobbying group on Wednesday made a negative reference about the organization's work before opening fire, a law enforcement official said.
>
> Police said the man entered the front lobby of the Family Research Council in Washington around 10:45 a.m. Wednesday, began arguing with a security guard and then shot him in the arm. The gunman was subdued by the guard and others and taken into custody but had not been charged as of Wednesday evening.
>
> Another law enforcement official identified the suspect as Floyd Corkins II, and authorities were interviewing Corkins' neighbors in Herndon, Va., near Washington. Both officials spoke on the condition of anonymity because they were not authorized to discuss an ongoing investigation.
>
> Corkins, 28, had been volunteering recently at a community center for lesbian, gay, bisexual and transgender people.
>
> The Family Research Council strongly opposes gay marriage and abortion and says it advocates "faith, family and freedom in public policy and public opinion."
>
> Corkins made a negative comment about the organization before the shooting, but the reference was not specific, one of the law enforcement officials said.
>
> […]Corkins had been volunteering for about the past 6 months at The DC Center for the LGBT Community, said David Mariner, executive director of the community center, which is in Northwest Washington. He usually staffed the center's front desk on Saturdays, and his most recent shift was about two weeks ago.
>
> […]"Today's attack is the clearest sign we've seen that labeling pro-marriage groups as 'hateful' must end," Brian Brown, the president of the National Organization for Marriage, said in a statement.

In my previous post on the shooting, I listed some examples of the violence and vandalism committed by gay activists against those who believe that every child should have a mother and a father to take care of them as they grow up. (That's "hate speech", according to many gay activists) I also pointed out in that post that the Human Rights Campaign leaked the names of pro-family donors to the Huffington Post. Incidentally, the Human Rights Campaign labels the Family Research Council as a "hate group". The Southern Poverty Law Center says that the Family Research Council is a "hate group". I

wonder if Floyd Corkins II also agrees with them that the Family Research Council is a "hate group"?

My secular case against same-sex marriage offered three reasons why people should oppose gay marriage apart from any religion. One of those reasons was the danger that gay activism poses to religious liberty and freedom of speech. I never in my life thought that it would go as far as what happened at the Family Research Council.

The mainstream media's biased coverage of the Family Research Council shooting

August 16, 2012 | by Wintery Knight | Link | Original Link

From Newsbusters.

Excerpt:

> ABC was the only broadcast network that offered a full story on the FRC office shooting on Wednesday night. They led with the story and gave it two and a half minutes. None of the network newscasts reported the breaking detail that shooter Floyd Corkins volunteered for six months at the D.C. Center for the LGBT Community, adding depth to his political motivation.
>
> On NBC Nightly News, Brian Williams gave the story just 17 seconds: "In Washington today, police say a man with a gun walked into the offices of the conservative lobbying group the Family Research Council, and opened fire. He never made it past the lobby. He shot a security guard in the arm before the guard was able to subdue him."
>
> On CBS Evening News, substitute anchor Bob Schieffer offered 20 seconds: "A gunman opened fire today at the Washington headquarters of the Family Research Council, a conservative Christian lobbying group. The man shot a security guard in the arm before that guard and others tackled him, and he was arrested. Police say that the suspect made negative comment about the council's work just before the shooting."
>
> […]On both NBC and CBS, the FRC brief was followed by a full story promoting President Obama's new deferral program for illegal alien "Dream Act" students. NBC gave that two minutes, CBS two minutes and fifty seconds.

I think the lesson here is that you shouldn't let the mainstream media be your only source of news. It would be interesting to compare their views of the Family Research Council to the views of the shooter, to see how much difference there really is between them.

Even after Family Research Council shooting, leftists continue “hate” rhetoric

August 16, 2012 | by Wintery Knight | Link | Original Link

Here’s an excellent post from Sooper Mexican, one of my new favorite blogs – he looks at what the Daily Kos and leftists on Twitter are saying about social conservatives in the wake of the shooting. (H/T Bad Blue)

Excerpt:

> If we applied the same principle they apply to shootings to the left, we’d no doubt find plenty to blame, including the headline above at Daily Kos, the leftwing hate group that calls the Tea Party the **“American Taliban”** on a regular basis, even though, they probably believe Christians and Tea Partiers are **much worse** than the Taliban.
>
> Here are some inflammatory sections from the article [emphasis added]:
>
> Well, it’s a radical country where a guy can put his head on another guy’s shoulder on a trolley for two seconds and **not face public execution for it,** which sounds pretty good to me. I understand some people are working to change that, though.
>
> Accusing the FRC of wanting gays to be **publicly executed.**
>
> All of those people, though, are people whose mere presence pisses Tony Perkins off. His branding would be more like “America: We won’t **stone you for having different beliefs,**but trust me, we’re working on it.” And trust me, they’re working on it.
>
> They refer to Muslims and Hindus, so they accuse the FRC of wanting Muslims and Hindus to be stoned. Amazingly, they don’t have much anger over people in the Middle East who are actually doing such things. Only those they imagine to be advocating such when they’re not.
>
> […]Doesn’t take much to think someone could read this kind of rhetoric and believe the FRC so evil that they need to be **taught a lesson.** But that would be jumping to conclusions, and that only works when it’s against Christians and the Tea Party.
>
> Don’t believe me? Newsbusters documents how Huffington Post continued to smear the Family Research Council by calling it a hate group **3 hours after the shooting.**

If you can stomach it, click on through and read some of the tweets on Twitter from people on the left.

Floyd Lee Corkins II is a left-winger, admired atheist philosopher Nietzche

August 16, 2012 | by Wintery Knight | Link | Original Link

More details of the Family Research Council shooting from Life Site News.

Excerpt:

> The suspect, a 28-year-old male from Virginia named Floyd Lee Corkins II, said, "Don't shoot me, it was not about you, it was what this place stands for." AP later confirmed that Corkins is a liberal activist who volunteers with a left-wing group in the D.C. area.
>
> Now, Corkins has been charged with assault with intent to kill and with bringing a firearm across state lines. According to an FBI affidavit, Corkins allegedly said words to the effect of "I don't like your politics" when he encountered Johnson.
>
> "The FBI said Corkins had 15 Chick-fil-A sandwiches, a Sig Sauer 9mm pistol, two additional magazines loaded with ammunition and an additional box of 50 rounds of ammunition when he came into the building," according to a report on the FBI intel. "His parents told the FBI that Corkins "has strong opinions with respect to those he believes do not treat homosexuals in a fair manner."
>
> Corkins definitely comes from the left side of the political spectrum.
>
> According to the Washington Post: "Allan P. Chan, 28, a former George Mason student, said he met Corkins at a campus gym about six years ago. They worked out together, lifting weights, and began to socialize and watch television together. Chan described Corkins as secretive and somewhat odd. Corkins's Facebook page included no photos, not even his own, and he displayed an intense interest in the 19th-century German philosopher Friedrich Nietzsche."

Militant atheism may also be a factor in the shooter's motives. Nietzsche is the well-known atheist philosopher who decried the "slave morality" of Christianity and proclaimed "God is dead". The shooter in the Garielle Giffords case (Jared Lee Loughner) was a militant atheist. Militant atheists like Richard Dawkins and the American Atheists group have even called for the eradication of Christianity. But the vast majority of atheists are not violent.

On the other hand, aggressive violence is forbidden to authentic Bible-believing Christians because Jesus did not shed anyone's blood. Authentic Christians debate and persuade using evidence, because that's what Jesus did. The most we could do is participate in a just war like the Korean War or the Gulf War. Christians stopped slavery. Christians save unborn babies. We're for strict non-violence.

American Power Blog has more on the left's continued smearing of the Family Research Council as a "hate group":

> More from Kerry Picket, "Human Rights Campaign posted Ryan would speak at 'hate group's annual conference' day before shooting at FRC." And At Twitchy, "Dangerous: Left screeched about Ryan speaking at 'hate group' FRC; HuffPo labels FRC hate group again." And, "Shooting at Family Research Council, suspect in custody; Update: Bomb squad enters building; Update: Mitt Romney issues statement; Update: Shooter ID'd."
>
> More at Legal Insurrection, "HuffPo attacks Family Research Council just hours after shooting."

At this point, I think that anyone who uses the word "hate" to describe supporters of traditional marriage should be careful that they are not inciting anyone to violence. We have to do more to promote tolerance and oppose anti-Christian / anti-conservative bigotry on the extreme left. Almost no one on the right calls people who disagree with them names like "hater". We need to stop with the name-calling and just discuss things civilly and agree to disagree. Every person deserves respect no matter what they think.

Liberal media bias: what the studies and surveys tell us

August 16, 2012 | by Wintery Knight | Link | Original Link

In the wake of the Family Research Council shooting, I thought it was important to review the evidence we have about media bias in the mainstream media.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44%

> positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

And more from a study done by the radically leftist MSNBC.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004 through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the

> left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

And here's a bit from that same article about The New Yorker:

> The last bulwark against bias's slipping into The New Yorker is the copy department, whose chief editor, Ann Goldstein, gave $500 in October to MoveOn.org, which campaigns for Democrats and against President Bush. "That's just me as a private citizen," she said. As for whether donations are allowed, Goldstein said she hadn't considered it. "I've never thought of myself as working for a news organization."

Those are the facts.

So what?

Now consider this column from Brent Bozell, which explains the difference media bias makes to political intelligence.

Excerpt:

> The Republican presidential contest is picking up steam. Obama is consistently polling under 50 percent. This one's a toss-up, and in the thick of it is the Fox News Channel. It's not just their role in hosting and vetting the candidates. It's their role as the chief villain in the eyes of liberal Democrats struggling to push their version of the "truth" about Obama.
>
> Jon Stewart rhetorically asked Chris Wallace about Fox on "Fox News Sunday, because he thought he knew the answer: "Who are the most consistently misinformed media viewers? The most consistently misinformed? Fox, Fox viewers, consistently, every poll."
>
> In the real world – outside Stewart's smug bubble – this is garbage. A 2008 survey by the Pew Research Center asked media consumers three questions: which party was in control of Congress (Democrats), who was the secretary of state (Condi Rice) and who was the prime minister of Britain (Gordon Brown).
>
> Let's document how the viewers of "Hannity &Colmes" were better informed than Stewart's "Daily Show" gigglers on basic political facts. Hannity viewers beat Stewart's on the Democratic majority (84 percent to 65 percent correct answers), Condi Rice (a dramatic 73 percent to 48 percent gap) and Gordon Brown (49 percent to 36). Overall, as a percentage getting all three questions

> right, Hannity won 42-30.

Just keep that in mind when you are watching the mainstream media news shows. A very good site to bookmark and read is Newsbusters, which documents mainstream media bias daily. I even have an RSS feed of their latest stories on the front page on this blog.

UPDATE: New York Times cites abortion advocates as neutral sources.

William Lane Craig debates Peter Atkins: Does God Exist?

August 17, 2012 | by Wintery Knight | Link | Original Link

I noticed that Apologetics 315 posted the video of a debate from the Reasonable Faith speaking tour in the UK:

This is a must-see debate. You will love this debate. LOVE IT. I LOVED THIS DEBATE.

Details:

> On Wednesday 26th October 2011 William Lane Craig debated Peter Atkins on the topic: *Does God Exist?* This debate took place at the University of Manchester as part of the UK Reasonable Faith Tour with William Lane Craig. The debate was chaired by Christopher Whitehead, Head of Chemistry School at the University. Post-debate discussion was moderated by Peter S Williams, Philosopher in Residence at the Damaris Trust, UK.

Dr. William Lane Craig:

> **William Lane Craig** (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich in 1984.

Dr. Peter Atkins:

> **Peter William Atkins** (born 10 August 1940) is a British chemist and former Professor of Chemistry at the University of Oxford and a Fellow of Lincoln College. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, *Inorganic Chemistry*, and *Molecular Quantum Mechanics*. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.
>
> Atkins studied chemistry at the University of Leicester, obtaining a bachelor's

> degree in chemistry, and – in 1964 – a PhD for research into electron spin resonance spectroscopy, and other aspects of theoretical chemistry. Atkins then took a postdoctoral position at the UCLA as aHarkness Fellow of the Commonwealth fund. He returned to Oxford in 1965 as fellow and tutor of Lincoln College, and lecturer in physical chemistry (later, professor of physical chemistry).

You can get the audio of the debate here, along with links to their previous debate from 1998. This debate is accessible and understandable to novice-level Christians.

I am happy when debates like this come out. I have friends who are Christians who doubt the importance of apologetics in evangelism, because they don't think that apologists can prove anything or win arguments. I have friends who are skeptical of using arguments that assume a 14-billion year old universe, because they think that the Big Bang is compatible with atheism (!). I have friends who think that philosophical arguments have no persuasive force. I have friends who think that nothing can be proven from history, beyond a reasonable doubt. I have co-workers who ask me whether anyone wins these debates. I think that this debate answers all of those questions.

This debate clearly shows why Christians should not shy away from studying science, philosophy and history. We will not discover anything that harms Christian theism by thinking logically and by looking at the evidence. To the contrary, it is the atheist who makes war on the progress of science, and who is forced to resist the clear experimental evidence, and to resort to baseless speculations and blind faith. If you want to see a good debate with an intelligent atheist, I recommend watching the debate between William Lane Craig and Peter Millican instead. But if you want to see a really, really overwhelming defeat for atheism, watch this debate. It is very clear at the end of this debate why Richard Dawkins refused to debate William Lane Craig at Oxford.

SUMMARY OF THE OPENING SPEECHES

I only had time to summarize the first two speeches. Keep in mind that Dr. Craig always shines in his rebuttals, and this debate is no different. So you'll want to watch those rebuttals. Dr. Atkins *literally* says in this debate in his first rebuttal "There was nothing here originally. There is nothing here now. But it is an interesting form of nothing which seems to be something." And the audience laughs nervously. This debate is like that. You will see a clear winner and clear loser in this debate. This fight is decided by knockout.

William Lane Craig opening speech:

1. the origin of the universe
2. the moral argument
3. the resurrection of Jesus

Peter Atkins opening speech:

1. Dr. Craig is stupid, lazy and evil:
– Dr. Craig's arguments are old: from the 11th century! Old arguments can't be true
– Dr. Craig is just asserting that "God did it" because he is lazy

– Dr. Craig feels pressured to agree with the theistic majority
– Dr. Craig needs a psychological crutch to comfort him
– Dr. Craig is fearful of death
– Dr. Craig is just wishing for an eternal life of bliss
– Dr. Craig is driven by his heart, and not by his head

2. Origin of the universe:
– Maybe the universe is eternal and has no beginning – we don't know
– Maybe mommy universes can give birth to daughter universes
– It is naive to think that a cause is needed to cause the creation of the universe from nothing
– Science is just about to show how it is possible that something appears out of nothing without cause
– Some scientists have already begun to speculate about about how something can come into being out of nothing
– Maybe nothing is not really nothing, but it is actually something
– It would be admitting defeat to say that God created the universe out of nothing

3. Fine-Tuning:
– It could be the case that the fundamental constants are not variable
– It could be the case that the fine-tuning of the cosmic constants is a happy accident
– It could be the case that there are billions of billions of unobservable universes that are not fine tuned
– It could be the case that the cosmic constants in these billions and billions of unobservable universes are all random so that some are fine-tuned
– Anyone who infers that an intelligence is the best explanation of a finely-tuned set of life-permitting cosmic constants is lazy

4. Purpose:
– Philosophers and theologians are stupid
– I don't think that there is purpose in the universe
– I think that the universe is more grand if there is no purpose, so there is no purpose

5. Miracles:
– I don't think that miracles happen
– The resurrection is a fabrication
– It could be the case that Jesus didn't exist
– It could be the case that Jesus wasn't really crucified
– It could be the case that Jesus didn't really die after being crucified
– It could be the case that the disciples stole his body
– It could be the case that the women went to the wrong hole in the ground
– the gospels are political propaganda written long after the events they are reporting on

6. Theodicy:
– God has no morally sufficient reason for allowing humans to perform actions that result in suffering

– God has no morally sufficient reason for allowing nature to cause suffering

7. Morality:

– customs and conventions emerges arbitrarily in different times and places based on an awareness of the consequences of actions, as well as various anecdotes and experiences

– these customs and conventions are decided based on the goal for survival, in much the same way as politeness and manners emerge for decorum and to avoid offense

– it is childish to presume that there is an umpire God who decides moral values and duties

8. Religious believers are stupid, lazy and evil:

– the notion of God has arisen because people are stupid and want to be comforted

– there are no arguments or evidences for belief in God

– people who believe in God do not think, but instead take refuge in incomprehensible nonsense

Arizona governor Jan Brewer blocks welfare payments for illegal immigrants

August 17, 2012 | by Wintery Knight | Link | Original Link

From The Blaze.

Excerpt:

> Arizona Gov. Jan Brewer on Wednesday ordered state agencies to deny driver's licenses and other public benefits to young illegal immigrants who obtain work authorizations under a new Obama administration policy.
>
> In an executive order, Brewer said she was reaffirming the intent of current Arizona law denying taxpayer-funded public benefits and state identification to illegal immigrants.
>
> Young illegal immigrants around the nation on Wednesday began the process of applying for federal work permits under the Obama administration's Deferred Action for Childhood Arrivals.
>
> The federal policy defers deportations for that group if they meet certain criteria, including arrival in the United States before they turned 16 and no convictions for certain crimes.
>
> After President Barack Obama announced the policy change in June, Brewer labeled it "backdoor amnesty" and political pandering by the Democratic president.

The governor's action is a response to the Obama administration declaration of amnesty for 1.8 million illegal immigrants under the so called "DREAM Act". The declaration of amnesty is a transparent attempt to buy votes from Hispanic voters while passing the costs on to the law-abiding taxpayers.

I favor more green cards for skilled legal immigrants with marketable skills who are able to avoid crime for a period of a few years.

Guillermo Gonzalez lectures at UC Davis on the requirements for life

August 17, 2012 | by Wintery Knight | Link | Original Link

The 5 video clips that make up the full lecture.

The playlist for all 5 clips is here.

About the speaker

> Guillermo Gonzalez is an Associate Professor of Physics at Grove City College. He received his Ph.D. in Astronomy in 1993 from the University of Washington. He has done post-doctoral work at the University of Texas, Austin and at the University of Washington and has received fellowships, grants and awards from such institutions as NASA, the University of Washington, the Templeton Foundation, Sigma Xi (scientific research society) and the National Science Foundation.

Learn more about the speaker here.

The lecture

Here's part 1 of 5:

Habitability topics:

- What is the Copernican Principle?
- Is the Earth's suitability for hosting life rare in the universe?
- Does the Earth have to be the center of the universe to be special?
- How similar to the Earth does a planet have to be to support life?
- What is the definition of life?
- What are the three minimal requirements for life of any kind?
- Requirement 1: A molecule that can store information (carbon)
- Requirement 2: A medium in which chemicals can interact (liquid water)
- Requirement 3: A diverse set of chemical elements
- What is the best environment for life to exist?
- Our place in the solar system: the circumstellar habitable zone
- Our place in the galaxy: the galactic habitable zones
- Our time in the universe's history: the cosmic habitable age
- Other habitability requirements (e.g. – metal-rich star, massive moon, etc.)
- The orchestration needed to create a habitable planet
- How different factors depend on one another through time
- How tweaking one factor can adversely affect other factors
- How many possible places are there in the universe where life could emerge?
- Given these probabilistic resources, should we expect that there is life elsewhere?
- How to calculate probabilities using the "Product Rule"

- Can we infer that there is a Designer just because life is rare? Or do we need more?

The corelation between habitability and measurability.

- Are the habitable places in the universe also the best places to do science?
- Do the factors that make Earth habitable also make it good for doing science?
- Some places and times in the history of the universe are more habitable than others
- Those exact places and times also allow us to make scientific discoveries
- Observing solar eclipses and structure of our star, the Sun
- Observing stars and galaxies
- Observing the cosmic microwave background radiation
- Observing the acceleration of the universe caused by dark matter and energy
- Observing the abundances of light elements like helium of hydrogen
- These observations support the big bang and fine-tuning arguments for God's existence
- It is exactly like placing observatories on the tops of mountains
- There are observers existing in the best places to observe things
- This is EXACTLY how the universe has been *designed for making scientific discoveries*

This lecture was delivered by Guillermo Gonzalez in 2007 at the University of California at Davis.

What is intelligent design?

Dr. Stephen C. Meyer explains the concept of intelligent design in a lecture, with lots of visual aids.

He is also the author of "Signature in the Cell", the best book on intelligent design. (A Times Literary Supplement Book of the Year selection)

Related DVDs

Illustra also made two other great DVDs on intelligent design. The first two DVDs "Unlocking the Mystery of Life" and "The Privileged Planet" are must-buys, but you can watch them on youtube if you want, for free.

Here are the 2 playlists:

- Unlocking the Mystery of Life (12 videos in a playlist)
- The Privileged Planet (12 videos in a playlist)

I also recommend "Darwin's Dilemma". All three of these are on sale from Amazon.com.

Friday night movie: The Crossing (2000)

August 17, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.7/10]

IMDB median rating: [8/10]

Description:

> The drama is about George Washington crossing the Delaware River and the Battle of Trenton during the American Revolutionary War. The film opens with the retreat of the Continental Army across New Jersey after repeated losses and defeats during the campaign of 1776.
>
> After the army narrowly escapes across the river to the Pennsylvania shore, Washington, realizing that something must be done or the Revolution will collapse, conceives a plan to cross the river and conduct a surprise attack on the Hessian garrison at Trenton.
>
> Despite their own fatigue and the winter weather, Washington manages to lift his weary soldiers' spirits, allowing the army to cross the river on Christmas night. The crossing is done in one night, allowing the troops to attack Trenton at eight o' clock on December 26, 1776.

I own the DVD of this movie.

If anyone reading this blog wants to understand the true character of America, a very good thing to do is to read the book "1776" by David McCullough. It covers all of the events leading up to the crucial turning point of the American Revolution: the Battle of Trenton on December 26, 1776. I really recommend the audio version of the book. David McCullough also wrote the famous biography of John Adams which was shown on HBO, then turned into a DVD series.

Here's a quick history of the American Revolution preceding the Battle of Trenton:

> **September 1774**: Delegates from each colony met in Philadelphia, Pennsylvania in order to form the First Continental Congress. It was designed to discuss colonial grievances.
>
> **April 1775**: Battles of Lexington and Concord: An organized Massachusetts militia ("Minutemen") defended colonial munitions and forced British regulars to retreat back to Boston. Mother England was stunned.
>
> **May 1775**: The Second Continental Congress convened in Philadelphia, Pennsylvania.
>
> **June 1775**: The Continental Congress appointed George Washington as commander-in-chief of its newly established Continental Army. Soon after, British troops achieved victory at the Battle of Bunker (Breed's) Hill but suffered severe

casualties during three assaults against the determined colonial troops.

March 1776: Washington commanded the American siege that eventually forced the British to evacuate Boston. The British departed by sea for Halifax.

April 1776: The Continental Army left Boston and moved south to take a defensive position in New York anticipating a British landing. Washington had hoped to keep the British from occupying this locale. New York was a familiar base of operations from the French and Indian War. The colony of New York also had a strong Loyalist population. Additionally, the force which occupied New York would be centrally located and therefore able to keep New England cut off from the south.

July 1776: The Declaration of Independence, adopted by the Second Continental Congress, officially severed American ties to Great Britain.

Summer of 1776: Though the American were successful at making a worthy stand at Lexington and Concord as well as in Boston, they soon discovered that this was only the beginning as 30,000 British troops (including their Hessians allies) arrived in New York harbor. The next few months were filled with disastrous defeats and demoralizing retreats.

August 27-30 1776: The British win the Battle of Long Island (Battle of Brooklyn)

September 15, 1776: The British occupy New York City

September 16, 1776: The British win the Battle of Harlem Heights

October 28, 1776: The American army retreats at the Battle of White Plains

November 16, 1776: The British capture Fort Washington, NY

November 20, 1776: Fort Lee, NJ falls to the British

December 1, 1776: Washington's troops retreated past New Brunswick, New Jersey and headed toward Princeton with the British following closely behind.

December 7-8, 1776: Washington's army crossed into Pennsylvania from Trenton. They were deployed to guard the River for a 25 miles stretch. All boats remained with Washington's army, making it impossible for the British to follow.

December 9, 1776: "All shops ordered to be shut; the militia to march into the Jerseys; all in hurry and confusion; news that General Howe is on his march…." Washington ordered, "Spare no pains or expense to get intelligence about the enemy's motions and intentions."

December 12, 1776: The Continental Congress abandons Philadelphia as they fear the British approaching.

December 13, 1776: Washington received the news that General Charles Lee was taken prisoner by the British at White's Tavern in Basking Ridge, New Jersey. Lee's troops were slowly marching to meet Washington when Lee made a personal side trip which caused his capture. With the loss of Lee, some assumed

> that America would be forced into complete surrender as he was considered a highly valuable soldier.
>
> [British commander] Howe announced that his campaigning season was over and he intended to winter in New York. Cornwallis intended to return to England for the winter, and, like Howe, he departed from the troops.
>
> **December 14, 1776**: Col. Johann Rall's (known as the Hessian Lion) regiment was left in Trenton as one of a loosely connected string of outposts which was to guard the king's subjects in New Jersey and keep watch against an American raid. 1500 troops were stationed at this location while the bulk of the British army wintered in New York.
>
> **December 19, 1776**: "The American Crisis" was published in Philadelphia. Thomas Paine wrote… *These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis shrink from the service of his country; but he that stands it NOW deserves the love and thanks of man and woman*.
>
> This essay rekindled the American people's desire for independence and renewed the spirit of the troops.
>
> **December 20-22, 1776**: Taking Lee's place as commander, General John Sullivan delivered Lee's remaining troops to Washington in Pennsylvania.
>
> **December 21, 1776**: The Hessians thought little of the Americans, but they thought even less of their strategic position in Trenton. Thought criticized for not constructing defensive works, Rall felt Trenton was next to impossible to defend. He stated his concerns about his position as well as his troops fatigue to his British Commanders.
>
> Rall's regiment remained alert and concerned as to their tenuous position. They intended not to remain in Trenton but rather wait for the Delaware River to freeze allowing the Hessian troops to march across the frozen river and directly toward Philadelphia.

As you can see from the timeline, Washington has been losing battle after battle leading up to Christmas of 1776. His troops are tired, ill-equipped, sick and they must be released at the beginning of 1777 when their contract is up. Many have deserted already. What will George Washington do? Is this the end of the American Revolution? Watch the movie, and find out. Then read David McCullough's book!

Happy Friday!

Iran’s dictator Ahmadinejad: Israel’s existence is an “insult to all humanity”

August 18, 2012 | by Wintery Knight | Link | Original Link

Map of the Middle East
From the UK Telegraph.

Excerpt:

> Mahmoud Ahmadinejad said confronting Israel is an effort to “protect the dignity of all human beings”.

> “The existence of the Zionist regime is an insult to all humanity,” Ahmadinejad said. He was addressing worshippers at Tehran University after nationwide pro-Palestinian rallies, an annual event marking Quds (Jerusalem) Day on the last Friday of the holy month of Ramadan.

> Israel considers Iran an existential threat because of its nuclear and missile programs, support for radical anti-Israel groups on its borders and repeated references by Iranian leaders to Israel’s destruction. Ahmadinejad himself has repeatedly made such calls, as has Iran’s Supreme Leader Ayatollah Ali Khamenei.
>
> […]Ahmadinejad called Israel “a corrupt, anti-human organized minority group standing up to all divine values”.
>
> “Today, confronting the existence of the fabricated Zionist regime is in fact protecting the rights and dignity of all human beings,” said Ahmadinejad, with a black and white scarf many Palestinians wear around his neck.
>
> Demonstrators in Tehran set U.S. and Israeli flags on fire and chanted “Death to the US” and “Death to Israel” during their pro-Palestinian rally.

> Iran and Israel have been bitter enemies for decades. Khamenei has called Israel a “cancerous tumor” that must be wiped out.
>
> Tensions between Iran and Israel have intensified since 2005, when Ahmadinejad said in a speech that Israel will one day be “wiped off the map.” The Iranian president has also described the Holocaust, when 6 million Jews were killed by German Nazis and their collaborators during World War II, as a “myth”.

Do you think that Barack Obama is going to do anything about this? He has done nothing whatsoever to protect Israel in four years. And more, he’s actually acted to embolden Iran. When he had the chance to speak out in favor of pro-democracy movements in Iran, he chose the Iranian theocrats instead. Defense analysts have speculated that the Obama administration leaked Israel’s plan to strike the Iranian nuclear facilities.

Mark Levin interviewed a former Marine strike planner who had this to say about the leak:

> I just want to comment on this revelation by the State Department regarding this Israel-Azerbaijan connection. A few years ago, I was writing an article and studying how Israel might go about attacking Iran with the assets we knew they had…
>
> I’ve got experience as a Marine F-4 Phantom Radar Interceptor Officer. I’ve planned strike missions. I’ve got a thousand hours in the Phantom. So I’m familiar with the problems strike planners have in attacking a target or multiple targets like Iran. And as I looked at the map, I thought: ‘Boy, oh, boy, if the Israelis had an alliance with Azerbaijan, that would be the perfect place to launch a strike.
>
> They’ve got this beautiful, 10,000-foot concrete runway in Baku. You take off, you come right out over the Caspian Sea. The pilots flip on their radar altimeters, drop down 25-feet off the deck, and they just race in a straight line.
>
> They pop up over some hills, and they’re in Tehran before the Iranians even know what hit them. They could then go hit the other targets. It reduces the distance for this strike by, oh, six, seven hundred miles. It might alleviate the need for tankers. Or, if they do need tanker support, you could put them over the Caspian Sea…
>
> …The beauty of Baku is that the Caspian Sea is right at the end of the runway. It’s a straight shot, maybe 300 miles, from that base to Tehran. A good radar altimeter will get an F-4, F-16, F-15 strike fighter maybe 25 feet off the water. Going in at that altitude, you’re not going to be picked up by radar.
>
> But there’s something even more important here. **The Iranians are not expecting an attack from the north**. Now, with the revelation of this relationship, *they are*. And that has a lot of implications beyond the tactical.
>
> Think of it this way. Prior to this revelation, the Iranians — although they noticed some connections between Israel and Azerbaijan — didn’t know how deep that connection was.
>
> **Now the Iranians can start bullying the Azerbaijanis**. They can send a

> diplomat up to Baku and say, basically, 'if any Israeli plane hits us from the north, *when* we get our nuke, we are going to test it on Baku. Of course that will all happen behind the scenes, but the threat will be made.
>
> Now, I want you to consider this: there are many ways to attack Iran. You can go for the nuke sites. **Or you can go for a decapitation strike**. A decapitation strike is a much easier operation if you're coming from Azerbaijan.
>
> Think of it this way: every once in a while, the Iranians have a little get-together. **They bring all of the Mullahs together in one place**… Why not? They'd be doing us and the world a tremendous favor if they did that.
>
> And it's not going to happen now.
>
> I can guarantee that all of those new Soviet anti-aircraft missiles that the Iranians bought are all going up north now, pointed and waiting for something there. In fact, they'll probably put radars on the Caspian from the mountaintops there, just to see if there's anything come up off the water.
>
> **Strategic, tactical surprise: gone**.
>
> You have to ask for the motivation behind the leak. I mean, if the Israelis can do this operation, it's to our benefit! From a diplomatic standpoint, if you wanted to tell the Iranians that the Israelis did this, it's without our permission. And then try to butter up the Iranians after the strike, so they don't close the Strait of Hormuz, that's one thing.
>
> **But giving away all of the secrets of an ally? When you're doing that, you have to ask whether we still have Israel as an ally. We are not acting like an ally. In fact, if you ask me, based on the amount of time I expect the Israelis put in this relationship with Azerbaijan, I would start viewing this administration as an existential threat to Israel**.

Recall that there have been accusations that the Obama administration has been infiltrated by the Muslim Brotherhood – the same Muslim Brotherhood that is reported to be crucifying their political opponents following the Egyptian elections. The Muslim Brotherhood that took power after Obama helped them to overthrow the Egyptian government. The Muslim Brotherhood that got $1.5 billion dollars from Obama, who bypassed Congress in order to do it. The Muslim Brotherhood whose leader was invited to the White House by Obama. Not only that, but the Obama administration has done nothing about the sale of weapons to Iran from China – weapons that are then transferred to Hezbollah to be used to sink Israeli ships.

On the other hand, Mitt Romney has come out in favor of defending Israel.

Sarah Geis provides pointers for constructive debate and disagreement

August 18, 2012 | by Wintery Knight | Link | Original Link

From Sarah's Think on These Things blog, a post about how to NOT argue contructively. If you don't do any of the bad things on her list, you'll be an excellent person to debate with. Consider this post your Saturday fun!

Excerpt:

> **1. Foster the conviction that all with whom you disagree are personally attacking you.**
> Even if the individual doesn't know you, your ideas are your identity. Never mind the fact that this introduces all sorts of strange problems for understanding personal identity. That stuff is not important. What *is* important is that your very person, and all you hold dear, are being assaulted.
>
> **2. Don't accept the author or speaker's own definitions of his terms.**
> For instance, if someone is using the term "idealist" to mean a person who has lofty goals, you could show off your philosophical prowess and point out that he has gotten philosophical idealism (something else entirely) all wrong. It would also be fun to attack a Lutheran who believes in Christian orthodoxy (small "o") for being a closet Orthodox Christian!
>
> **3. Embrace category confusion.**
> Here is a time-tested example: If the argument is about economics, you may wish to respond by claiming that the author is just racist. You get bonus points here, as this tactic also functions as an ad hominem and as a red herring fallacy (look them up if you are curious).
>
> **4. Ignore all qualifiers.**
> This most often takes the form of responding with a counterexample to an admitted generalization. Example: Your interlocutor is evaluating the drawbacks to social media, and then says "interactions on social media tend to encourage more rudeness than would be likely in person." You can fire back a response like this: "I'm always nice on Facebook! See? You're wrong." Or, "Uncle Joe uses Facebook to encourage invalids connecting to the world via laptop," etc. You don't want your counterexample to actually work. So, avoid using the skill in situations where the author has clearly made a universal statement such as, "There are no black swans." Then, those who are still slaves to logic could refute the universal statement by saying– truthfully– that "Uncle Joe has a black swan."

These are the things that happen to me daily in dealing with commenters like Sarah stone on this blog. If only Sarah had read this nice list!

I think #2 is the funniest.

The list contains 17 items. If you know someone who would benefit from it, please forward it along!

Can a materialist question Darwinism without having his career ruined?

August 19, 2012 | by Wintery Knight | Link | Original Link

From Uncommon Descent, the abstract of a paper by Alex Rosenberg, warning *even materialists* not to question Darwinism.

Excerpt:

> Abstract
>
> There is only one physically possible process that builds and operates purposive systems in nature: natural selection. What it does is build and operate systems that look to us purposive, goal directed, teleological. There really are not any purposes in nature and no purposive processes ether. It is just one vast network of linked causal chains. Darwinian natural selection is the only process that could produce the appearance of purpose. That is why natural selection must have built and must continually shape the intentional causes of purposive behavior. Fodor's argument against Darwinian theory involves a biologist's modus tollens which is a cognitive scientist's modus ponens. Assuming his argument is valid, the right conclusion is not that Darwin's theory is mistaken but that Fodor's and any other non-Darwinian approaches to the mind are wrong. It shows how getting things wrong in the philosophy of biology leads to mistaken conclusions with the potential to damage the acceptance of a theory with harmful consequences for human well-being. Fodor has shown that the real consequence of rejecting a Darwinian approach to the mind is to reject a Darwinian theory of phylogenetic evolution. This forces us to take seriously a notion that otherwise would not have much of a chance: that when it comes to the nature of mental states, indeterminacy rules. This is an insight that should have the most beneficial impact on freeing cognitive neuroscience from demands on the adequacy of its theories that it could never meet.

This might have been written by a Catholic Inquisitor at the height of the Spanish Inquisition. "Don't demand that our theory be empirically adequate, or you'll be sorry". We have only to look at the stories documented in the movie "Expelled" to see how sorry. You can watch it on Youtube here, in full.

And more from a later post by Casey Luskin, on Uncommon Descent.

Excerpt:

> the true purpose of Rosenberg's piece is to warn people not to challenge Darwin or they'll suffer the same castigation as Darwin-critic (and atheist) Jerry Fodor. Rosenberg writes: "When a philosopher advances a purely a priori argument to show that a well-established scientific theory is fatally defective, it is usually safe to assume that the problem is the philosopher's and not the theory's."

> Translation: If you question Darwin, expect trouble–and the trouble will come from me and other defenders of Darwinism. Given the logic we see being used to defend Darwinian theory, perhaps the philosopher isn't the problem after all.

> And of course, a major part of Rosenberg's warning is to claim that Fodor's arguments against Darwinism lead to "damage with harmful consequences for human well being." And just what is that damage? Well, as Rosenberg puts it, it is lending support for religion (though he can't bring himself to put it that nicely).
>
> […]In any case, this tarring and feathering of Fodor is just the latest frustrated attempt by hardline Darwinians to discourage people from using design terminology. It's a hopeless effort, because try as they might to impose speech codes on each another, they can't change the fact that nature is infused with purpose, which readily lends itself to, as Rosenberg calls it "teleosemantics."

And finally, a word from the master of Darwinish debate-avoidance, Richard Dawkins:

> "My argument will be that Darwinism is the only known theory that is in principle capable of explaining certain aspects of life. If I am right it means that, even if there were no actual evidence in favour of the Darwinian theory (there is, of course) we should still be justified in preferring it over all rival theories." — p. 287, Blind Watchmaker" (1986)

Again, these are the words of a fundamentalist. You better agree with his theory, whether the evidence is for it or not.

Here is Richard Dawkins in a video clip explaining that even if life were designed, then he knows without any evidence that aliens *who evolved by Darwinian processes* are the ones who did the designing:

How does he know that the aliens evolved without being able to see their fossil record and run experiments on their genetic coding? Because when it comes to Darwinism, no evidence is needed. And if you don't buy into his little religion, then he'll "destroy" you. And he doesn't mean destroy you by debating, because we know that the coward refuses to debate his religion in public.

And what about Darwinist Richard Lewontin: (and by "science" he means "naturalistic science")

> "Our willingness to accept [naturalistic] scientific claims that are against common sense is the key to an understanding of the real struggle between science and the supernatural. We take the side of science *in spite of* the patent absurdity of some of its constructs, *in spite of* its failure to fulfill many of its extravagant promises of health and life, *in spite of* the tolerance of the scientific community for unsubstantiated just-so stories, because we have a prior commitment, a commitment to materialism. It is not that the methods and institutions of science somehow compel us to accept a material explanation of the phenomenal world but, on the contrary, that we are forced by our own a

> priori adherence to material causes to create an apparatus of investigation and a set of concepts that produce material explanations, not matter how counterintuitive, no matter how mystifying to the uninitiated. Moreover, that materialism is absolute, for we cannot allow a divine foot in the door." (Richard Lewontin in *New York Review of Books*, January 9, 1997, p. 28)

This is what Darwinism really amounts to: a faith commitment. A fundamentalist faith commitment, that allows no dissent. It is absolute.

Darwinism beyond the level of simple micro-evolution has never been observed or tested experimentally. And what's more – the proponents of Darwinism do not want their theory to be subjected to criticism or testing. It fulfills a religious purpose, and therefore they are very concerned that it not be taken away from them. They are fighting against having to care what God thinks, and they will strangle any good experimental science that shows that their religion is wrong. You can see the same fundamentalism at work in the atheistic war against the experimental science that confirms the Big Bang theory, which describes the origin of the universe out of nothing.

Paul Ryan and his mother explain their commitment to Medicare

August 20, 2012 | by Wintery Knight | Link | Original Link

From Washington Times.

Excerpt:

> Paul Ryan, making his first campaign appearance in Florida since becoming Mitt Romney's running mate a week ago, told a supportive crowd of senior citizens Saturday that President Obama is raidingMedicare to fund his health care reforms.
>
> "One out of six of our hospitals and our nursing homes will go out of business," as a result of the changes to Medicare under the president's signature legislative accomplishment, the Affordable Care Act, Mr. Ryansaid in an event at The Villages, the sprawling retirement community near Orlando.
>
> Appearing on stage with his mother, 78-year-old Betty Ryan Douglas, the Republican vice-presidential candidate said he and Mr. Romneywould protect Medicare benefits for the current generation of retirees and save the entitlement program for the future.
>
> "She is why I am here. She and her grandchildren — that's why I'm here," he said. "It's what my mom relies on.
>
> "Medicare will not be used as a piggy bank for Obamacare," Mr. Ryan said.
>
> The 42-year-old Wisconsin congressman talked about his mom starting her own business after her husband died when Mr. Ryan was a teen.
>
> "And mom — you did build that," he said, taking a dig at the president's earlier remarks on small businesses and drawing cheers from the crowd and a fist pump from his mother, a part-time resident of Florida.

The bottom line is that there will be no changes to Medicare to the coverage of seniors over 55. The program will not be solvent for younger people and that's why it needs to be reformed for Americans under 55.

U.S. unemployment rate lower in only 2 of 50 states

August 20, 2012 | by Wintery Knight | Link | Original Link

From Bloomberg News.

Excerpt:

> The jobless rate climbed in 44 U.S. states in July, showing last month's increase in unemployment was broad based.
>
> Alabama and Alaska registered the worst performance, with joblessness advancing by 0.5 percentage point in each, figures from the Labor Department showed today in Washington. Payrolls grew in 31 states last month, led by California and Michigan.
>
> […]North Dakota had the lowest unemployment rate in the nation, even as it rose to 3 percent from 2.9 percent the prior month.
>
> Two states, Idaho and Rhode Island, showed a drop in their unemployment rates. Joblessness was unchanged in four states.
>
> New Jersey's jobless rate jumped to a 35-year high of 9.8 percent in July from 9.6 percent in June. The state lost 12,000 positions, including cuts in manufacturing, construction, and professional and business services, according to figures released by New Jersey officials yesterday.
>
> Unemployment in New York rose to 9.1 percent, the highest since 1983, and payrolls dropped by 3,700 workers.
>
> The figures reflect the cutbacks at financial firms, which are trimming jobs as revenue softens. Morgan Stanley has said its headcount will drop by about 700 in the second half, bringing total 2012 reductions to 4,000. Credit Suisse Group AG planned to eliminate 138 positions in New York starting this month. Deutsche Bank AG will cut about 1,900 jobs by year-end, mostly outside Germany.

Not only is unemployment rising, but the real unemployment rate is being masked because more and more people are going onto to federal disability.

Left-wing Newsweek's cover story recommends dumping Barack Obama

August 20, 2012 | by Wintery Knight | Link | Original Link

Epic Budget Fail

From the radically left-wing Newsweek, of all places. (H/T Defeating Obama)

Excerpt:

> [T]he total number of private-sector jobs is still 4.3 million below the January 2008 peak. Meanwhile, since 2008, a staggering 3.6 million Americans have been added to Social Security's disability insurance program. This is one of many ways unemployment is being concealed.
>
> In his fiscal year 2010 budget—the first he presented—the president envisaged growth of 3.2 percent in 2010, 4.0 percent in 2011, 4.6 percent in 2012. The actual numbers were 2.4 percent in 2010 and 1.8 percent in 2011; few forecasters now expect it to be much above 2.3 percent this year.
>
> Unemployment was supposed to be 6 percent by now. It has averaged 8.2 percent this year so far. Meanwhile real median annual household income has dropped more than 5 percent since June 2009. Nearly 110 million individuals received a welfare benefit in 2011, mostly Medicaid or food stamps.
>
> Welcome to Obama's America: nearly half the population is not represented on a taxable return—almost exactly the same proportion that lives in a household where at least one member receives some type of government benefit. We are becoming the 50–50 nation—half of us paying the taxes, the other half receiving

the benefits.

And all this despite a far bigger hike in the federal debt than we were promised. According to the 2010 budget, the debt in public hands was supposed to fall in relation to GDP from 67 percent in 2010 to less than 66 percent this year. If only. By the end of this year, according to the Congressional Budget Office (CBO), it will reach 70 percent of GDP. These figures significantly understate the debt problem, however. The ratio that matters is debt to revenue. That number has leapt upward from 165 percent in 2008 to 262 percent this year, according to figures from the International Monetary Fund. Among developed economies, only Ireland and Spain have seen a bigger deterioration.

Not only did the initial fiscal stimulus fade after the sugar rush of 2009, but the president has done absolutely nothing to close the long-term gap between spending and revenue.

His much-vaunted health-care reform will not prevent spending on health programs growing from more than 5 percent of GDP today to almost 10 percent in 2037. Add the projected increase in the costs of Social Security and you are looking at a total bill of 16 percent of GDP 25 years from now. That is only slightly less than the average cost of all federal programs and activities, apart from net interest payments, over the past 40 years. Under this president's policies, the debt is on course to approach 200 percent of GDP in 2037—a mountain of debt that is bound to reduce growth even further.

And even that figure understates the real debt burden. The most recent estimate for the difference between the net present value of federal government liabilities and the net present value of future federal revenues—what economist Larry Kotlikoff calls the true "fiscal gap"—is $222 trillion.

[…][T]he Patient Protection and Affordable Care Act (ACA) of 2010 did nothing to address the core defects of the system: the long-run explosion of Medicare costs as the baby boomers retire, the "fee for service" model that drives health-care inflation, the link from employment to insurance that explains why so many Americans lack coverage, and the excessive costs of the liability insurance that our doctors need to protect them from our lawyers.

[…]The president pledged that health-care reform would not add a cent to the deficit. But the CBO and the Joint Committee on Taxation now estimate that the insurance-coverage provisions of the ACA will have a net cost of close to $1.2 trillion over the 2012–22 period.

The president just kept ducking the fiscal issue. Having set up a bipartisan National Commission on Fiscal Responsibility and Reform, headed by retired Wyoming Republican senator Alan Simpson and former Clinton chief of staff Erskine Bowles, Obama effectively sidelined its recommendations of approximately $3 trillion in cuts and $1 trillion in added revenues over the coming decade. As a result there was no "grand bargain" with the House

> Republicans—which means that, barring some miracle, the country will hit a fiscal cliff on Jan. 1 as the Bush tax cuts expire and the first of $1.2 trillion of automatic, across-the-board spending cuts are imposed. The CBO estimates the net effect could be a 4 percent reduction in output.
>
> The failures of leadership on economic and fiscal policy over the past four years have had geopolitical consequences. The World Bank expects the U.S. to grow by just 2 percent in 2012. China will grow four times faster than that; India three times faster. By 2017, the International Monetary Fund predicts, the GDP of China will overtake that of the United States.

This is a must-read article, and please share it with your friends, as well. It does cover Obama's disastrous foreign policy as well, but the focus is on fiscal policy. The article ends with an assessment of Paul Ryan's ability to fix the economic crisis that Obama created.

UPDATE: Niall Ferguson responds to a critique of this piece by Paul Krugman.

UPDATE: Niall Ferguson responds to critiques by shrill-shrieking left-wing bloggers.

New study finds that less religious states are less charitable than more religious states

August 20, 2012 | by Wintery Knight | Link | Original Link

From the Boston Globe. (H/T J Warner Wallace on Twitter)

Excerpt:

> States with the least religious residents are also the stingiest about giving money to charity, a new study on the generosity of Americans suggests.
>
> The study, released Monday by the Chronicle of Philanthropy, found that residents in states where religious participation is higher than the rest of the nation, particularly in the South, gave the greatest percentage of their discretionary income to charity.
>
> The Northeast, with lower religious participation, was the least generous to charities, with the six New England states filling the last six slots among the 50 states.
>
> […]The most generous state was Utah, where residents gave 10.6 percent of their discretionary income to charity. Next were Mississippi, Alabama, Tennessee and South Carolina. The least generous was New Hampshire, at 2.5 percent, followed by Maine, Vermont, Massachusetts and Rhode Island.
>
> […]The study found that in the Northeast region, including New England, Pennsylvania, New Jersey and New York, people gave 4.1 percent of their discretionary income to charity. The percentage was 5.2 percent in the Southern states, a region from Texas east to Delaware and Florida, and including most of the so-called Bible Belt.

> […]The study was based on Internal Revenue Service records of people who itemized deductions in 2008, the most recent year statistics were available. The data allowed researchers to detail charitable giving down to the ZIP code.
>
> To ensure that states with differing costs of living were judged by the same standard, researchers calculated each state's median discretionary income — the money remaining per household after variable but essential costs such as housing, child care and food are paid for. They then looked at the percentage of discretionary income that the typical household in each state gave to charity.
>
> […]Of the 10 least generous states, nine voted for Democrat Barack Obama for president in the last election. By contrast, of the 10 most generous states, eight voted for Republican John McCain.

This is interesting because it shows how disconnected atheistic rhetoric is from their actions. Atheists want to deny God. This is means that they deny that there is any Designer of the universe who defines how humans ought to be, and to whom they are

accountable. Here is what atheists believe about morality, as a consequence of jettisoning the moral Lawgiver:

> The universe we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference. As that unhappy poet A.E. Housman put it: 'For Nature, heartless, witless Nature Will neither care nor know.' DNA neither cares nor knows. DNA just is. And we dance to its music.
> — Richard Dawkins, "River out of Eden" (1995), p.133.

Now, do people who think that they are machines made out of meat accountable to no external standard have a rational basis for self-sacrificial moral actions? Hell, no. And that's why what we see in this study. When you don't have a reason to put yourself second, and someone else first, then you only do it when you feel good. But people who really are good do good when it doesn't feel good. They do it as a way of honoring the will of the Person who made them – it's working on the relationship, putting God's values above our own. I do think that atheists can act morally in a universe made by God – by complying with the objective moral duties that God has designed them for. But I think it is harder to do that when they cannot rationally ground being good on their atheism.

How do prostitutes stay in business in an era of hook-up sex?

August 21, 2012 | by Wintery Knight | Link | Original Link

WARNING: This is one of those posts that feminists and egalitarians should just not read. Stay away from this post, it will offend you. Also, if you read it, then know that when I talk about "women", it is a shorthand way of saying "women who accept the tenets of third-wave gender feminism". I don't mean all women, I mean third-wave gender feminists. If you are a married woman, or if you are a chaste single woman who is prepared to care for and support her future husband, then I don't mean you.

From Stuart Schneiderman, a reversal of expectations.

The sexual revolution pushed by feminists encouraged women to abandon traditional female goals (marriage and children) and traditional men (provider, protector, moral and spiritual leader) and to instead prefer anonymous hook-up sex fueled by binge-drinking – so that they can pursue careers.

He writes:

> Here's a question for the behavioral economists: How do prostitutes stay in business?
>
> With the sexual revolution and the hookup culture and young women making love like porn stars, how can a hooker make a living?
>
> If you are charging money for something that people can get for free, eventually it will impact your business.
>
> In the old days nice girls didn't. Without specifying what nice girls wouldn't do, men who wanted "it" sought out prostitutes.
>
> Nowadays, there is precious little that nice girls don't do. Thanks to a certain social movement nice girls are liberated. They will do just about anything, and will refuse to allow a man to pay for them.
>
> Many of them won't even want to see him in the morning.
>
> Free love has come to mean giving it away for free. No one knows how prevalent the practice is, but nice girls are marrying later and are avoiding encumbering alliances. If we assume that they are sexually active during their twenties, then clearly they have crowded the market in non-committal sex.
>
> Young women who are out making their way in the world today will avoid relationships, but they will happily engage in all kinds of sexual gymnastics… They do not want to be tied down, just yet. (At least not in the metaphorical sense.) No man's man's emotional demands will get in the way of their career advancement.
>
> […]**The marketplace being what it is, prostitutes have now adapted.**

> **They continue to offer something that nice girls no longer offer, but it isn't kinky sex. It is emotional attachment: love, romance and a maybe even a relationship, with a little sex on the side.**
>
> **Nowadays it's called the girlfriend experience. It's the ultimate in sex work, considerably more difficult and better paid than common fellatio.**
>
> **Strange as it seems, if you are a young man today you often have to pay a woman to act like she's your girlfriend.**
>
> **Even the term "escort" which is commonly taken to be a euphemism for prostitute, has traditionally referred to a woman who would accompany a man to a social or cultural event. She was a stand-in girlfriend.**
>
> **In the old days prostitutes used to know how to do things that nice girls had never even heard of. Today, prostitutes know how to do things that nice girls do not know how to do: that is to conduct relationships.**
>
> **Young women today are proficient at being sex kittens. Many of them become expert in the art of dating. Fewer know how to conduct a relationship with a man.**

I grew up with a non-Christian mother who was very distant and focused on her career, wealth and health. So, I always expected a lot more from women in terms of affection, attention and approval. I knew perfectly well that what I wanted in a woman was someone to be involved with my education, career and hobbies, and most important of all, with my Christian faith. That is what I missed growing up as a visible minority in a predominantly white city. That's probably one of several reasons why I am chaste. Sex is not the primary thing that I am looking for from a woman. Instead, I want to be the traditional man who is needed as a provider, protector and moral/spiritual leader, and who gets affection, attention and approval for fulfilling those roles (and only those roles).

There were a lot of times when I was growing up when it would have been easy for me, having hit six figures of net worth at age 26, to focus on getting sex in the quickest way possible. All I would have had to do was to stop being an open and authentic Christian. If I had stopped talking about objective morality and exclusive theological claims, and just made no demands on any women to grow into the roles of wife and mother, it would have been easy. But that would not scratch the itch that I have. I get a lot of joy from seeing a woman learn about my plan and my goals. I enjoy *providing* her with books, debates and lectures to learn about the things that I care about. I enjoy *protecting* her from lies and labor by building up her knowledge and character and performing acts of service for her. I enjoy *leading* her – through study and persuasion – to grow in her understanding of moral, theological and apologetic issues. And I enjoy when a woman makes an effort to be a supportive helper and a companion. Nothing is better than seeing a woman accept your goals as her own, preparing to achieve those goals and then achieving them. I would rather be a leader – that's what men really want.

Women today use sex as a way of pacifying men who want them to grow into the roles of wife and mother. They want to focus on their careers, on playing the field and on having a

good time. Marriage is something they fall back on much later, when they are in their 30s. In order to get marriage-minded men to pay attention to them during their 20s without having to commit, women offer men sex. Men take the sex, and they stop trying to perform the traditional male roles, especially the role of being the moral and spiritual leader. And it's a very easy thing to see. Just take a typical woman and ask her to read "The Proper Care and Feeding of Husbands" and "Stupid Things Parents Do To Mess Up Their Kids", or similar books. They won't do it, because they have been taught by third-wave feminism to be selfish and to avoid caring about others in relationships. But you can have all the recreational sex with them that you want (especially after they get drunk, so that they don't feel responsible) as long as you are good-looking and fun. They have been told that they must always be having a good time, and to not prepare to care for men or children. They think that they can live happily ever after by pursuing their own happiness at every moment.

Everyone complains that men are no longer interested in marriage, but the truth is that there are very few marriage-capable women left to marry. Most women today are just not ready for marriage, because they are often neither chaste nor supportive. Men and women have to be chaste, because it is a guarantee that you offer to your spouse that you can be faithful. So, marriage-minded men are being forced to choose between selfish, promiscuous feminists and prostitutes. That's no choice at all. And that's why men who start out with noble aims of life-long married love and self-sacrificial commitment quickly learn to settle for recreational sex from a series of temporary partners – and sometimes very temporary partners in the case of hook-ups on college campuses. Marriage is just not there for us to achieve anymore, because most women haven't made the right decisions that will allow them to be supportive and faithful to their husbands. They aren't ready to step into the roles of wife and mother.

Are claims about religion and morality objective or subjective?

August 21, 2012 | by Wintery Knight | Link | Original Link

Here's an article from J. Warner Wallace, the host of the Please Convince Me podcast. He starts the article by explaining the difference between objective truth claims and subjective truth claims.

He writes:

> As an example, we offer the proposition, "Jim's car is a Hyundai". Is this an objective claim or a subjective claim? It is clearly objective. My car is either a Hyundai or it is not, and my personal opinion will not change this fact. The truth is rooted in the nature of the object, the Hyundai automobile, and it is not dependent upon my subjective opinion. Now let's examine another claim: "Hyundai's are the coolest (hippest) cars". This second claim is highly personal depending on what each of us considers "hip" or "cool". Our opinion about this is rooted in each of us as subjects who hold varying opinions about "hipness" or "coolness". See the difference? "1+1=2" is an objective truth statement; "Math is fun" is a subjective claim.

Then he asks the question: are claims about God's existence and character objective truth claims or subjective truth claims? What about moral claims? You might be surprised what answers you get from Christians who have attended church all their lives.

He writes:

> But it seems to get trickier for people when they begin to move away from physical realities or math facts. Consider the following claim: "God exists". Surprisingly, many Christian groups I work with struggle to define this statement as objective. But the existence of God is either a true reality or it is not, and our personal opinion is not going to change this reality. It is something we can either acknowledge or reject, but doing so does not change the reality of God's existence. Does that make sense? Spiritual truth claims about the existence of God are objective, they are rooted in the object under consideration: God. He either exists or He does not; my opinion won't change that fact.
>
> At some point toward the end of our "Truth Test," Brett and I will begin to post moral claims such as, "Premarital sex is morally wrong." Now things usually get interesting as the Christians in our groups struggle to decide if there are such things as objective moral claims. Some are very uncomfortable identifying this statement as an objective truth claim. It's one thing to say that we, as Christians, might believe this statement to be true, but some Christians hesitate to say this is a truth claim that transcends those who don't accept our Christian values. The culture has effectively eroded our confidence in objective moral truth claims. The

> new cultural definition of “tolerance” obliges us to embrace all truth claims as equally valid or true. This is an important re-definition, because classic “tolerance” acknowledges disagreement and allows each person to hold an opposing view without having to embrace the other view as equally true. Classic tolerance requires us to endure and respect the people who hold opposing views, even as we resist these views themselves.

If you’d like to listen to Jim talk about this essay, I noticed that it was the topic of his opening monologue in his most recent Please Convince Me podcast. I think this post is interesting, because we just had a commenter who didn’t think that statements about God and morality were objective, but that these statements were true *for the person making them*. That would mean that if a person said “I believe that the Earth is flat”, then that statement would be true for that person. Or, if a person said “It’s wrong to murder people just for the fun of it”, then that statement would be true for them. I think it’s pretty clear that as Christians, we defend statements about God and statements about morality as objective statements. These statements are not just true for us, they are true, period.

Richard Dawkins defends the moral goodness of infanticide and adultery

August 21, 2012 | by Wintery Knight | Link | Original Link

Here's the latest moral wisdom from atheist Richard Dawkins, courtesy of Uncommon Descent.

Excerpt:

> I want to raise another question that interests me. Why are we so obsessed with monogamous fidelity in the first place?
>
> […]The underlying presumption — that a human being has some kind of property rights over another human being's body — is unspoken because it is assumed to be obvious. But with what justification?
>
> In one of the most disgusting stories to hit the British newspapers last year, the wife of a well-known television personality, Chris Tarrant, hired a private detective to spy on him. The detective reported evidence of adultery and Tarrant's wife divorced him, in unusually vicious style. But what shocked me was the way public opinion sided with Tarrant's horrible wife. Far from despising, as I do, anybody who would stoop so low as to hire a detective for such a purpose, large numbers of people, including even Mr. Tarrant himself, seemed to think she was fully justified. Far from concluding, as I would, that he was well rid of her, he was covered with contrition and his unfortunate mistress was ejected, covered with odium. The explanation of all these anomalous behavior patterns is the ingrained assumption of the deep rightness and appropriateness of sexual jealousy. It is manifest all the way from Othello to the French "crime passionnel" law, down to the "love rat" language of tabloid newspapers.
>
> […]Why should you deny your loved one the pleasure of sexual encounters with others, if he or she is that way inclined?
>
> I, for one, feel drawn to the idea that there is something noble and virtuous in rising above nature in this way.
>
> […]And why don't we all admire — as I increasingly do — those rare free spirits confident enough to rise above jealousy, stop fretting about who is "cheating on" whom,

Here's a little snippet about Richard Dawkins' ability to stay married:

> In 1984, Dawkins divorced his wife of 17 years, Marian Stamp; later that same year, he married Eve Barham. Dawkins also divorced Barham, though the precise circumstances of this divorce are unclear. He married science fiction actress Lalla Ward in 1992; at present, the two are still married.

I have been advised that the full article featuring Dawkins' views is far, far worse that

what was excerpted by UD.

What does atheist morality amount to, in practice? It amounts to the strong acting selfishly and allowing the weak to suffer for it. That's why atheists are almost entirely for abortion and sexual permissiveness – the children are the first to be screwed by the moral relativism of the adults. That's where abortion, no-fault divorce, fatherlessness, etc. come from – they are crimes committed by selfish adults against vulnerable children – because they can. It's the strong abusing the weak, exactly as Darwinism would have them do. There are no human rights on atheism, and there is no reason for self-sacrificial moral behavior, either. Do what you want, and don't get caught. Get them, before they can get you. Don't let anyone diminish your happiness with their moral rules. That's "atheist morality".

This isn't the first time that we've caught a glimpse of Dawkins' atheist perspective on morality, either.

Morality according to atheist Richard Dawkins

Rev. George Pitcher writes about an interview of Christopher Hitchens conducted by Richard Dawkins. (H/T Thinking Christian)

Excerpt:

> But the centrepiece of this Christmas edition is the main coup for the New Statesman – an interview by Prof. Dawkins with Christopher Hitchens, the great polymath who today lost his fight against cancer. It's a fascinating read over three double-page spreads. Not least because Prof. Dawkins reveals a charming humility, allowing Hitchens to show his intellectual superiority at his own expense. Hitchens is thoughtful about CS Lewis and Christianity and rather leaves Prof. Dawkins floundering in his wake, occasionally interjecting little assents to show that he's still there, as he struggles to keep up.
>
> But one of these interjections is most revealing. About half-way through, the Prof gets this in edgeways: 'Do you ever worry that if we win and, so to speak, destroy Christianity, that vacuum would be filled by Islam?'
>
> So, 'if we win…and destroy Christianity'. True, there's a 'so to speak' in there, but it doesn't do much. Try 'If we win and, so to speak, kill all the Jews' as an alternative. Doesn't really work, does it? And Prof Dawkins can hardly claim that he was misquoted or taken out of context. He was editing the magazine, after all – there's even a picture of him doing so, pen poised masterfully over page proofs.

Now you might think that Dawkins intends to destroy Christianity in debates, and not in the wars and purges of atheism that occurred last century in North Korea, Cambodia, China, the Soviet Union, and so on. Those atheist regimes caused the deaths of 100 million people, according to Harvard University Press. But Dawkins has refused to debate William Lane Craig on more than one occasion. So whatever he means by "destroy Christianity", he doesn't mean "defeat them in rational debate, using superior arguments and evidence". He had his chance to do that, and he passed on it. So, he must mean

something else by “destroying Christianity” other than persuasion.

Let’s find out what Richard Dawkins thinks about morality. Dawkins has previously written this:

> The total amount of suffering per year in the natural world is beyond all decent contemplation. During the minute that it takes me to compose this sentence, thousands of animals are being eaten alive, many others are running for their lives, whimpering with fear, others are slowly being devoured from within by rasping parasites, thousands of all kinds are dying of starvation, thirst, and disease. It must be so. If there ever is a time of plenty, this very fact will automatically lead to an increase in the population until the natural state of starvation and misery is restored. In a universe of electrons and selfish genes, blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won’t find any rhyme or reason in it, nor any justice. **The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but pitiless indifference.**
>
> (“God’s Utility Function,” *Scientific American*, November, 1995, p. 85)

Dawkins’ view is that nothing is really good or bad objectively. Cultures just evolve certain conventions, and those conventions vary arbitrarily by time and place. I think we need to interpret his goal of destroying Christianity against the backdrop of his nihilism. 50 million unborn children have been killed in the United States since 1973 alone. That’s 50 million people with distinct genetic codes different from their mothers or their fathers, who will never grow up to achieve their potential.

Dawkins himself is in favor of infanticide:

So what might destroying Christianity look like to an atheist?

Here it what destroying Christianity means in North Korea, the most atheistic country on the planet.

Excerpt:

> A Christian woman accused of distributing the Bible, a book banned in communist North Korea, was publicly executed last month for the crime, South Korean activists said Friday.
>
> The 33-year-old mother of three, Ri Hyon Ok, also was accused of spying for South Korea and the United States, and of organizing dissidents, a rights group said in Seoul, citing documents obtained from the North.
>
> The Investigative Commission on Crime Against Humanity report included a copy of Ri’s government-issued photo ID and said her husband, children and parents were sent to a political prison the day after her June 16 execution.

That’s what Kim Jong Il means by “destroy Christianity”. What does Dawkins mean by it?

FLASHBACK: American Atheists calls for the eradication of Christianity.

New study finds that Christians who regularly attend church divorce less

August 21, 2012 | by Wintery Knight | Link | Original Link

Note: This post is to contrast with Richard Dawkins' atheist view of marriage posted earlier today.

From Citizen Link. (H/T Andrew)

Excerpt:

> It's a number that is trumpeted from the rooftops — and the pulpit: Half of marriages among Christians and non-Christians alike end in divorce.
>
> But the reality is that Christians who attend church regularly get divorced at a much lower rate.
>
> Professor Bradley Wright, a sociologist at the University of Connecticut, found that among people who identify as Christians but rarely attend church, 60 percent have been divorced. Of those who attend church regularly, 38 percent have been divorced.
>
> W. Bradford Wilcox, a leading sociologist at the University of Virginia and director of the National Marriage Project, found a nearly identical spread between "active conservative Protestants" who regularly attend church and people with no religious affiliation.
>
> Professor Scott Stanley from the University of Denver, who is working on the Oklahoma Marriage Initiative, said couples with a vibrant religious faith have more and higher levels of the qualities that marriages need to avoid divorce.
>
> "Whether young or old, male or female, low-income or not, those who said that they were more religious reported higher average levels of commitment to their partners, higher levels of marital satisfaction, less thinking and talking about divorce and lower levels of negative interaction," he said. "These patterns held true when controlling for such important variables as income, education and age at first marriage."

I think this is another good example of means-end reasoning in marriage. I often criticize women for choosing the wrong men to marry because they don't define typical marriage scenarios and then select men who have prepared for those scenarios. Going to church is an antidote for the moral relativism that ails us, and it transports us outside of our hedonism to a place where we can think about bigger and better things. Women need to choose men who have a habit of attending church. Basically, young people need to study research to find out what works (chastity, pre-marital counseling, church attendance, etc.) and then demand that prospective mates demonstrate those skills – if they expect the marriage to last.

I say this as someone who struggles enormously with the feminized church, but you can't argue with the data. I personally think that church attendance is less important than a good knowledge of philosophical theology and apologetics, and the habit of debating about those things. (Especially science apologetics) I've been to my friend Andrew's church, and if I lived near him, I would attend regularly. They have excellent apologetics events, world-reknown apologetics speakers and classes on apologetics. They have shown William Lane Craig debates, taught Greg Koukl and Lee Strobel books, and they even did "The Truth Project", which features Stephen C. Meyer. They actually believe what they claim to believe, and they have actually studied why they ought to believe it. I would attend a church like that regularly.

Michael Behe and Keith Fox debate theistic evolution vs intelligent design

August 21, 2012 | by Wintery Knight | Link | Original Link

Michael Behe and Keith Fox debate evolution and intelligent design. (See below for link to MP3 file)

Details:

> Michael Behe is professor of biochemistry at Lehigh University, Pennsylvania and the founder of the modern Intelligent Design movement. His book "Darwin's Black Box" ignited the controversy 14 years ago when it claimed that certain molecular machines and biological processes are "irreducibly complex" and cannot be explained by Darwinian evolution.
>
> His new book "The Edge of Evolution" takes his conclusions further, arguing that the Darwinian processes of random mutation and natural selection are incapable of producing the variation and complexity we see in most of life.
>
> So can we conclude that life was intelligently designed by a creator?
>
> Keith Fox is Professor of biochemistry at the University of Southampton and chairman of Christians in Science. As a theistic evolutionist he believes that Evolution is the best explanation going for the complexity we see and that ID is a blind scientific alley and theologically unappealing to boot.
>
> They debate whether micromachines in the cell such as the "bacterial flagellum" could have evolved by a Darwinian process of evolution. When inference to design is and isn't acceptable in science. Whether random mutation can mathematically stack up to complex life, and whether God is reduced to a divine "tinkerer" by ID.

I get the impression that Fox learned everything he knows about ID by reading Darwinists.

The MP3 file is here.

The summary below is rated VERY SNARKY.

Summary

Michael Behe:

- ID is not Biblical creationism
- ID is not religion
- ID is a scientific research program
- People refuse to discuss ID because of personal philosophical assumptions
- ID is like the Big Bang – it is based on evidence, but it has broad religious implications

Keith Fox:

- ID is not Biblical creationism, but it isn't science

Michael Behe:

- ID is compatible with common descent
- ID is only opposed to unplanned, unguided evolution (Darwinism)
- ID is not necessarily opposed to long periods of time

Behe's first book – the bacterial flagellum

Keith Fox:

- Here are a couple of papers that show how parts of the flagellum evolved
- They are possible pathways

Michael Behe

- No, those are studies that show that there are similarities between bacterial flagella in multiple organisms
- Similarities of proteins between different organisms do not necessarily imply a developmental pathway
- The problem of having the instructions to BUILD the flagellum still remains

Keith Fox:

- Maybe parts of the flagellum had other functions before they were used in the flagellum
- Maybe you can use the parts of the flagellum for other purposes
- Maybe, one can imagine, it's possible that!

Michael Behe:

- No, parts have to be modified and re-purposed in order to be used for other functions

Keith Fox:

- But maybe the proteins can be used in other systems for other things
- I re-purpose parts from of designed things to other purposes in my house when I do maintenance

Michael Behe

- Uh, yeah – but aren't you an intelligent designer? What does your home maintenance have to do with Darwinian evolution?

Is ID another God-of-the-gaps argument?

Michael Behe:

- Well consider the Big Bang… there was a build-up of scientific evidence for that theory
- Just because a theory has religious implications, doesn't mean that it isn't true
- You really have to look at the specific evidence for a theory, and not decide in advance

Keith Fox: (I'm paraphrasing/inventing/mocking from now on)

- But the Big Bang is based on discoveries, and intelligent design is based on gaps in our scientific knowledge
- What if I did have evidence of a step by step pathway (which I don't right now)? Then I would win the argument – what would you do then?

Michael Behe:

- Well, if tomorrow you do manage to find expiremental evidence of a pathway, which you don't have today, then I would be wrong
- ID is falsifiable by experimental evidence
- But what about your your view? Is that falsifiable by experimental evidence?
- What if someone goes into a lab (someone like Scott Minnich?) and performs gene knockout experiments, and publishes the results
- You knock out a gene from the bacterial flagellum, you wait for a large number of generations, and it never develops the missing gene
- You repeat this with every one of the 50 genes in the bacterial flagellum and it never recovers for any of the 50 genes
- There is no pathway to build up even one of the 50 genes – according to actual experiments
- What do Darwinists do with experimental evidence that falsifies Darwinism?

Keith Fox:

- No, I would not accept that experimental evidence could falsify Darwinism
- Just because known published experimental evidence that we have today falsifies Darwinism, it doesn't mean Darwinism is false because it's not falsifiable
- We don't know how Darwinism even works – it happened so long ago, and it's not repeatable or testable, so how could lab ,experiments falsify it?
- Darwinism is science and intelligent design is faith, though

Which side has the experimental evidence?

Michael Behe:

- Consider the largest longest-running lab experiment of evolution, Richard Lenski's

experiments on e. coli
- Lenski has presided over 50,000 generations, (millions of years of evolution)
- The bacterium *did evolve* and they *did get better* but not by *evolving* features, but by *disabling* features

Keith Fox:

- But those are just LAB EXPERIMENTS! What do lab experiments prove?
- What if? What if? What if? You don't know, it happened so long ago, and you weren't there! You weren't there!
- (clutches Flying Spaghetti Monster idol tighter and sobs pitifully)

Michael Behe:

- See, the thing is that I have actual experiements, and here's some more evidence that just got published last week
- So I've got evidence and then some more evidence and them some other evidence – experimental evidence
- And all the evidence shows that adaptation is done *losing traits* not by *gaining traits*
- And the published observations are what we see in nature as well

Keith Fox:

- But doesn't Darwinism explain some things that we observe?

Michael Behe:

- Well, I am not saying that micro-evolution doesn't explain *some things* – it explains bacterial resistance, and other micro-evolution
- it just doesn't explain macro-evolution, and that's what the experiments show

Keith Fox:

- But ID is a science stopper! It stops science! You can't produce *experimental evidence* to falsify Darwinism – that would stop science!

Michael Behe:

- Well, you have to understand that the Big Bang postulated a non-material cause to the entire physical universe and yet the experimental evidence was allowed to stand because it was testable and verifiable evidence, even if the theory does have religious implications
- All explanations in science are design to settle a question and it stops rival explanations that are not as good at explaining the observations
- Finding the best explanation stops further study because it is better than rival explanations

Keith Fox:

- Well you have to come up with a materialist explanation because that's the only kind that a functional atheist like me will allow

Michael Behe:

- Well, what if the best explanation for an observed effect in nature is non-material, as with the Big Bang?

Keith Fox:

- But I have to have a material explanation because I am a functional atheist! (i.e. – a theistic evolutionist = functional atheist)

Michael Behe:

- Well what about the cosmic fine-tuning argument? Do you accept that?
- That's an inference to design based on the latest scientific discoveries

Keith Fox:

- Well I do accept that argument, but I don't accept design in biology
- When you apply it to biology, somehow it's bad and you can't do that or you losing research money and get fired
- Anyway, your argument is based on a gap in our current knowledge

Michael Behe:

- No, back in Darwin's time we had a gap in our knowledge – we didn't know what the cell was – we thought it was jello
- Now, we know what the cell is *really* like, it's irreducibly complex, and you can't build up those molecular machines in a step-wise manner
- The inference to design is based on the progress of science revealing the increasing levels of complexity
- In experiments, Darwinian mechanisms cannot build anything useful, instead genes are disabled or dropped
- You guys don't have the evidence to prove your view that naturalistic mechanisms can do the creating
- You keep issuing promissory notes

Keith Fox:

- Well, you're just seeing design subjectively, because you are a non-scientist
- I'm being objective when I tell you that we will discover a materialist explanation later on – really really soon now, maybe even tomorrow, yeah

- You won't accept my speculations and you insist on these published experiments
- You're subjective and I'm objective
- Just give me more research money so I can hide the decline better

Michael Behe:

- Uh, you're the one who is subjective – I cited evidence, and you are the one who is speculating
- You have arguments from credulity, and I've got the lab experiments
- You refuse to be skeptical, I am the one who is being skeptical

Keith Fox:

- Maybe, maybe, maybe! Maybe tomorrow! Maybe in a parallel universe! Maybe aliens from Planet X!
- Who knows! I certainly don't know! And that somehow means you don't know either! See?

Michael Behe:

- Well, to prove me wrong, go into the lab, and run experiments and evolve some new genes (using Darwinian mechanisms) that have new useful functionality

Are there limits to what evolution can do?

Michael Behe:

- You need multiple changes in the genome to get a new helpful feature (let's say two specific mutations)
- One specific change is possible
- the odds are against getting multiple beneficial changes are really really small – you need two SPECIFIC changes to occur in order

Keith Fox:

- Well, lots of things are really unlikely – any permutation of dice rolls is as unlikely as any other

Michael Behe:

- Well, we are talking about TWO SPECIFIC mutations that are needed to get a beneficial function – lots of other mutations are possible, but we are looking for a specific outcome that requires two SPECIFIC mutations out of the whole genome
- You aren't going to get useful outcomes unless you direct the mutations

Keith Fox:

- *But then why does God allow evil!!!!1!1!!one!!!*

Douglas Groothuis' 752-page Christian apologetics book is now under $22

August 22, 2012 | by Wintery Knight | Link | Original Link

Christian Apologetics

Looking for a good textbook on apologetics that covers everything you need to know? Check out Dr. Groothuis' book. It's now under $22 on Amazon.

Here are the chapters:

> Part I: Apologetic Preliminaries
> 1 Introduction: Hope, Despair and Knowing Reality
> 2 The Biblical Basis for Apologetics
> 3 Apologetic Method: Evaluating Worldviews
> 4 The Christian Worldview
> 5 Distortions of the Christian Worldview–or the God I Don't Believe In
> 6 Truth Defined and Defended
> 7 Why Truth Matters Most: Searching for Truth in Postmodern Times
> 8 Faith, Risk and Rationality: The Prudential Incentives to Christian Faith
>
> Part II: The Case for Christian Theism
> 9 In Defense of Theistic Arguments
> 10 The Ontological Argument
> 11 Cosmological Arguments: A Cause for the Cosmos
> 12 The Design Argument: Cosmic Fine-Tuning
> 13 Origins, Design and Darwinism
> 14 Evidence for Intelligent Design
> 15 The Moral Argument for God
> 16 The Argument from Religious Experience
> 17 The Uniqueness of Humanity: Consciousness and Cognition
> 18 Deposed Royalty: Pascal's Anthropological Argument
> 19 Jesus of Nazareth: How Historians Can Know Him and Why It Matters by Craig L. Bloomberg
> 20 The Claims, Credentials and Achievements of Jesus Christ
> 21 Defending the Incarnation
> 22 The Resurrection of Jesus

> Part III: Objections to Christian Theism
> 23 Religious Pluralism: Many Religions, One Truth
> 24 Apologetics and the Challenge of Islam
> 25 The Problem of Evil: Dead Ends and the Christian Answer
> 26 Conclusion: Take It to the Streets
>
> Appendix 1 Hell on Trial
> Appendix 2 Apologetic Issues in the Old Testament by Richard S. Hess

Here's a review of the book by Michael D. Stark.

Introduction:

> Contemporary Christians interested in apologetics can now turn to another text that is bound to become one of the most-used textbooks in apologetics. Douglas Groothuis' Christian Apologetics: A Comprehensive Case for the Biblical Faith (InterVarsity, 2011) may have more breadth both in content and wisdom than any apologetics text to date. The subtitle is justified as the book, over 700 pages and 26 chapters long (not including two appendixes), presents the need for apologetics and explores the main philosophical arguments for the existence of God. Unlike other apologetics texts, Groothuis includes chapters examining truth in postmodern society, religious pluralism, and a tactful approach to dealing with Islam. Furthermore, biblical scholars (and Denver Seminary colleagues) Richard Hess and Craig Blomberg build on an already strong text by writing chapters on apologetics in the Old Testament (Appendix 2) and a historical approach to the person of Christ and the gospels, respectively.

Here's a snip from the review:

> The chapter on cosmological arguments is superb and only further qualifies Groothuis as a proficient thinker. This chapter without question is the chapter I learned the most from. Groothuis engages very difficult scientific and philosophical concepts and communicates them in a way that even the beginner will be able to grasp. Though there are many different versions of the cosmological argument, the chapter hones in on the kalam cosmological argument as put forth by William Lane Craig. The kalam argument is superior to other cosmological arguments in that it supposedly secures the theistic doctrine of ex nihilo if the arguments proves successful (note: a minor quibble of this chapter is that Groothuis purports that the Thomistic cosmological argument does not endorse ex nihilo. I believe this to be false). This specific chapter was sensational – however I was left disappointed that no time was given to addressing the cosmological argument posited by Aquinas. In some respects, the Thomistic cosmological argument is the simplest form for people new to apologetics. The Thomistic version does not get into the technical issues of the metaphysics of time and Big Bang cosmology that the kalam version uses, nor does it require knowledge of the principle of sufficient reason that the Leibnizian

> version necessitates. While the kalam and Leibnizian versions are logical and sound arguments, they may confusing to people new to apologetics. Because of this, beginners ought to take the time to read this chapter slowly and more than once because of the finer technical details.
>
> Chapters 12-14 are devoted to the design argument and issues relating to it. Groothuis opposes macroevolution and thus goes to great extent to battle Darwinism. Those interested in the philosophy of science will be drawn to these chapters. The chapter focused on intelligent design relies heavily on the work of William Dembski and Michael Behe. These chapters serve as a valuable introduction for those new to discussion between Christian and naturalistic sciences.
>
> Chapter 15 is perhaps the most successful chapter of the entire book as it deals with the moral argument. It is my belief that the moral argument is the most successful argument for the existence of God as it appeals to everyone, Christian, atheist, and non-Christian religious persons. Ethical theory may perhaps be the most widely debated philosophical topic throughout history and thus Groothuis could have taken many approaches when discussing the moral argument. The way he structured his chapter, however, is nearly flawless. Building off his chapter examining truth in the postmodern culture (chapter 7), Groothuis correlates the denial of objective truth to the ridding of objective moral value. He unmercifully attacks moral relativism and brilliantly shows its dangers. He states that cultural relativism reduces to individual relativism, which, in turn, ultimately rests on nihilism. The setup of this reductio ad absurdum points the reader to a moral system that does not reduce to nihilism. Thus, a worldview that embraces objective moral truths must be embraced. Groothuis makes the claim that the source of objective moral truths is found in the absolute Being – God. Groothuis puts for the notion that God is the source of all perfect moral code because he himself is incapable of an evil act as it would be a contradiction of God's Being.

I think that the big advantage you get from Doug Groothuis is his worldview. He has the most fully-integrated worldview of any Christian scholar I know.

I bought one copy of Dr. Groothuis' book, but I gave it away. So I got myself another one. It's a must have. My favorite four apologetics books are this one, "Philosophical Foundations for a Christian Worldview" by William Lane Craig and J.P. Moreland, Michael Licona's "The Resurrection of Jesus" and Stephen C. Meyer's "Signature in the Cell". I think that if you add Wayne Grudem's "Politics According to the Bible" to that list, then that's a very practical set of tools.

526 economists, including 5 Nobel prize winners, grade Romney and Obama plans

August 22, 2012 | by Wintery Knight | Link | Original Link

Labor Force Participation Rate

From the Daily Caller:

> The 526 economists — including Nobel laureates Gary Becker, Robert Lucas, Robert Mundell, Edward Prescott, and Myron Scholes — point to six facets of Romney's economic approach that they see as beneficial to future economic success.
>
> - *Reduce marginal tax rates on business and wage incomes and broaden the tax base to increase investment, jobs, and living standards.*
> - *End the exploding federal debt by controlling the growth of spending so federal spending does not exceed 20 percent of the economy.*
> - *Restructure regulation to end "too big to fail," improve credit availability to entrepreneurs and small businesses, and increase regulatory accountability, and ensure that all regulations pass rigorous benefit-cost tests.*
> - *Improve our Social Security and Medicare programs by reducing their growth to sustainable levels, ensuring their viability over the long term, and protecting those in or near retirement.*
> - *Reform our healthcare system to harness market forces and thereby reduce costs and increase quality, empowering patients and doctors, rather than the federal bureaucracy.*
> - *Promote energy policies that increase domestic production, enlarge the use of all western hemisphere resources, encourage the use of new technologies, end wasteful subsidies, and rely more on market forces and less on government planners.*

> Seven of the signatories are from Harvard University and five from Columbia University — two of President Barack Obama's alma maters.
>
> The economists' statement of support pillories Obama's economic record, claiming that his expansion of the federal government has resulted in "anemic economic recovery and high unemployment," which will continue if his future plans are implemented.
>
> Among the Obama policies with which the 526 economists take issue include:
>
> - *Relied on short-term "stimulus" programs, which provided little sustainable lift to the economy, and enacted and proposed significant tax increases for all Americans.*
> - *Offered no plan to reduce federal spending and stop the growth of the debt-to-GDP ratio.*
> - *Failed to propose Social Security reform and offered a Medicare proposal that relies on a panel of bureaucrats to set prices, quantities, and qualities of healthcare services.*
> - *Favored a large expansion of economic regulation across many sectors, with little regard for proper cost-benefit analysis and with a disturbing degree of favoritism toward special interests.*
> - *Enacted health care legislation that centralizes health care decisions and increases the power of the federal bureaucracy to impose one-size-fits-all solutions on patients and doctors, and creates greater incentives for waste.*
> - *Favored expansion of one-size-fits-all federal rulemaking, with an erosion of the ability of state and local governments to make decisions appropriate for their particular circumstances.*

We can't afford four more years of incompetence and failure. We need to ask ourselves what economists like Thomas Sowell and Walter Williams would do. And they wouldn't give Obama four more years. We need a change.

Coward Richard Dawkins flees from yet another debate, this time in Scotland

August 22, 2012 | by Wintery Knight | Link | Original Link

Will this fundamentalist charlatan ever debate?
(Image from Glenn Peoples)

Richard Dawkins has decided to visit Scotland, and the Free Church of Scotland (the so-called "Wee Frees") decided to challenge him to a debate. (H/T Dina)

Excerpt:

> The Free Church of Scotland has challenged Richard Dawkins, the world-famous atheist, to a debate on his next visit to the Outer Hebrides.
>
> Professor Dawkins is headlining Faclan, the Hebridean Book Festival, on the Isle of Lewis where he is scheduled to promote his book the God Delusion on Friday 2 November.
>
> Despite calls of a boycott from a member of the Lord's Day Observance Society, Stornoway Free Church minister Reverend Iver Martin *(pictured below)*, who is minister of one of the biggest congregations on the island, said he welcomed the visit as an opportunity for debate.
>
> […]"The Free Church of Scotland endorses freedom of discussion and the exchange of argument.
>
> "However, with Richard Dawkins presenting a particularly one-sided narrative, I would hope that there would be opportunity for fair, even handed, reasoned

> debate at which both sides of the theistic argument can be heard."

Would Richard Dawkins, champion of militant fundamentalist atheism, rise to the challenge of debating his views in a public forum?

Of course not: (H/T Dina)

> A Scottish Church leader has labeled evolutionary biologist and famed atheist Richard Dawkins a "snob" over his decision to turn down a debate on religion. Dawkins has refused a debate invitation for the faith-themed Faclan Hebridean Book Festival in Scotland in November.
>
> The Rev David Robertson, a Free Church minister in Dundee, responded to Dawkins' decision to avoid debate by saying that he does not believe the atheist to be a "coward," but sees him as a "elitist snob, who once told me he would consider debating with me if I was the Archbishop of Canterbury, the Pope or Chief Rabbi."
>
> Robertson added: "Dawkins considers, like so many of his fellow new atheists, that there is no debate and they, and they alone, have the truth. Ironically, such arrogance and intolerance of others is the very definition of the fundamentalism that Dawkins professes to hate. I suspect that Richard Dawkins' problem is that he is not a good debater."

Yes, that's it exactly. He cannot bear to hear other viewpoints other than his own. He is not intelligent enough to prove what he asserts in private to a skeptical audience in public. That's why he doesn't debate in public. He would prefer to preach in private to those who accept his dogma, and to receive their praise and adulation – and their money!

If Dawkins did agree to have his ideas tested in a debate, it would be a good thing if whoever was doing the testing asked him why he affirms the moral goodness of adultery and infanticide, as well as asking him what he means by his desire to "destroy Christianity", especially given that he refuses to debate with Christians like William Lane Craig. Does he mean something similar to what his fellow atheists like Stalin and Mao meant, i.e. – mass murder? Or does he mean something else? It would be a good question to ask, anyway.

I don't want anyone to think that atheism is some sort of immature, non-cognitive tantrum that consists largely of insulting Christians and giggling like children who have discovered a new curse word. There are serious atheistic scholars, and they do debate. Richard Dawkins is not a serious scholar, and he does not debate his views. He is therefore very much like those sweating, foam-flecked televangelists you see bloviating on the telly on Sunday mornings. All bluster, no substance.

Is Medicare in a debt crisis? Does Medicare need to be reformed?

August 22, 2012 | by Wintery Knight | Link | Original Link

Medicare is a social program that pays for the health care and prescription drugs of seniors. Forbes magazine explains the basic facts of the Medicare funding situation.

First, the facts:

> Often lost in the campaign rhetoric and obscured by the opinionated news dominating the television and print media are the following background facts about Medicare, America's most burdensome entitlement program given both the demographics and the growth expected in health care costs:
>
> • **Medicare is a taxpayer funded, government-run insurance program that is financially unsustainable in its current form**. By all estimates, Medicare is spiraling into bankruptcy, with an unfunded liability of almost $38 trillion and a hospital insurance trust fund that will become insolvent in 2024, according to the 2012 Medicare Trustees Report.
>
> • **Medicare was *already* the single insurance program most likely to reject a claim, compared to all of the eight comparable *private* insurance plans studied** in the AMA 2008 National Health Insurance Report Card. This rejection rate was double that of the private insurers' average – those very same insurance companies vilified by President Obama as denying coverage to Americans.
>
> • **An increasing proportion of doctors are *already* not accepting Medicare patients.** A 2008 report by the Medicare Payment Advisory Commission, an independent federal panel, said that 29 percent of its beneficiaries who were looking for a primary care doctor had a problem finding one. A 2008 survey by the Texas Medical Association that found that only 58 percent of the state's doctors accepted new Medicare patients, and only 38 percent of primary care doctors did, a number shrinking due to government-decreed payment that is lower than cost. In the 2008 HSC national tracking survey, more than 20 percent of primary care doctors accepted no new Medicare patients (only 4.5 percent accepted no new privately insured patients) and about 40 percent of primary care doctors and 20 percent of specialists refused most new Medicare patients.

The rest of the article compares the Obama and Ryan plans for reforming Medicare.

Here's a snippet:

> President Obama's plan for Medicare will not simply reduce access to doctors. According to the Medicare Trustees, Medicare payment reductions under the new law will cause hospitals, nursing facilities, and home health agencies to

> operate *at a loss* – 15 percent lose money by 2019, 25 percent by 2030, and 40 percent by 2050. The Trustees Report concluded the obvious – health care providers "would have to withdraw from serving Medicare beneficiaries, or shift substantial portions of Medicare costs to their non-Medicare, non-Medicaid payers." Can American families with private insurance who already pay almost $1,800 per year – extra – for the underpayment by Medicare and Medicaid, subsidizing public insurance by more than $88 billion dollars per year, afford to add even more because of the president's law?
>
> Signed into law by President Obama is another nefarious method of reducing Medicare payments. A wholly unaccountable, government appointed 15-member Independent Payment Advisory Board, the IPAB, does not just "recommend" changes to reimbursements. It has unprecedented power to reduce (but not to increase) payments to doctors that the Secretary of Health and Human Services is *required* to implement. To be sure, the IPAB acts independently of the people, immune from Congressional oversight, and even beyond control of the judiciary – ensured in language within the law that isolates it from repeal.

The Paul Ryan plan changes nothing about Medicare for Americans 55 and older. Those who are younger than 55 will be given the option of choosing a private plan and then paying for it with a voucher provided by the government.

GAO study: EPA regulations will kill coal plant jobs and raise energy prices

August 23, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> New regulations issued by the Environmental Protection Agency will lead to the closure of older, coal-fired power plants and boost electricity prices in some parts of the country, according to a new report from the Government Accountability Office.
>
> The GAO, at the behest of Sen. Jay Rockefeller (D-W.Va.), reviewed a host of information from government sources such as the EPA and Energy Information Agency (EIA) as well as private energy-sector forecasters to determine the likely impact of four new EPA regulations aimed at coal-fired power plants.
>
> […]GAO found that as many as 12 percent of coal-fired power plants may be closed because the EPA regulations make it too expensive for power companies to operate them, despite coal being one of world's cheapest fuels.
>
> "It is uncertain how power companies may respond to four key Environmental Protection Agency (EPA) regulations, but available information suggests companies may retrofit most coal-fueled generating units with controls to reduce pollution, and that 2 to 12 percent of coal-fueled capacity may be retired," GAO said.
>
> These changes – either installing expensive retrofits or closing power plants – will drive up electricity prices by as much as 13.5 percent in some areas of the country.
>
> "Available information suggests these actions would likely increase electricity prices in some regions," GAO said. "Regarding prices, the studies GAO reviewed estimated that increases could vary across the country, with one study projecting a range of increases from 0.1 percent in the Northwest to an increase of 13.5 percent in parts of the South more dependent on electricity generated from coal."
>
> Coal is the country's single-largest source of electricity, accounting for 42 percent of power generation in 2011, GAO reported.
>
> […]The regulations at issue were all put in place by President Obama's EPA to deal with power plant emissions and industrial waste called coal ash, the byproduct of burning coal.

This is another issue to communicate to everyone who will be voting in November. We already have price inflation from rising gas prices due to insufficient energy production at

home, as well as currency inflation from several rounds of money printing and debt monetization. If we have to add to that higher electricity costs, then we really will be in trouble.

CBO: If Bush tax cuts are not renewed, America is headed for another recession

August 23, 2012 | by Wintery Knight | Link | Original Link

From the Heritage Foundation.

Excerpt:

> About 1.6 million American jobs hang in the balance. That is the clear implication of analysis contained in the annual budget update by the Congressional Budget Office (CBO).
>
> Along with all manner of dire and dreary budget data reflecting President Obama's budget and economic policies to date, CBO provides its assessment of what would happen if the President and Congress sit on their respective hands and fail to defuse the threats of Taxmageddon and the fiscal cliff. The answer is fairly simple: recession.
>
> As CBO so diplomatically put it, "such fiscal tightening will lead to economic conditions in 2013 that will probably be considered a recession."
>
> Taxmageddon is the $500 billion tax hike slated to take effect on January 1, while the fiscal cliff consists of Taxmageddon plus various spending reductions—among them the sequestration left over from the disastrous negotiations that led to the Budget Control Act in 2011.
>
> According to CBO's analysis, if Congress defuses Taxmageddon and the fiscal cliff, then the economy will grow at a tepid 1.7 percent in 2013 and the unemployment rate will remain stuck around 8 percent. But if President Obama and Congress play chicken with Taxmageddon and fail to act, then the economy will contract by about 0.5 percent and the unemployment rate will shoot up to 9.1 percent, about halfway back to the peak from the past recession.
>
> Forget percentages—what does this mean in actual jobs lost if President Obama and Congress fail to act? It means roughly 1.6 million more Americans will be out of work—on top of the 12.8 million who already want to work but can't find jobs.
>
> Just about every relevant school of economics, from the President's pure Keynesianism to supply-side and neoclassical persuasions, tells much the same tale on net: Raising tax rates on a weak economy produces a weaker economy. It's not terribly complicated.

Here's my advice: This time, let's elect someone with someone with experience in business administration and economics.

Atheist Thomas Nagel defends the scientific value of intelligent design

August 23, 2012 | by Wintery Knight | Link | Original Link

From Evolution News.

Excerpt:

> In September, Oxford University Press officially releases the hardcover version of a new book by renowned philosopher Thomas Nagel at New York University. It's a bombshell.
>
> Already available on Kindle, Nagel's book carries the provocative title *Mind and Cosmos: Why the Materialist Neo-Darwinian Conception of Nature Is Almost Certainly False*. You read that right: The book's subtitle declares that "the Materialist Neo-Darwinian Conception of Nature Is **Almost Certainly False**." Nagel is an atheist who is not convinced by the positive case for intelligent design. But he clearly finds the evidence for modern Darwinian theory wanting.

Nagel writes:

> In thinking about these questions I have been stimulated by criticisms of the prevailing scientific world picture… by the defenders of intelligent design. Even though writers like Michael Behe and Stephen Meyer are motivated at least in part by their religious beliefs, the empirical arguments they offer against the likelihood that the origin of life and its evolutionary history can be fully explained by physics and chemistry are of great interest in themselves. Another skeptic, David Berlinski, has brought out these problems vividly without reference to the design inference. Even if one is not drawn to the alternative of an explanation by the actions of a designer, the problems that these iconoclasts pose for the orthodox scientific consensus should be taken seriously. They do not deserve the scorn with which they are commonly met. It is manifestly unfair.

Read the rest here. Thomas Nagel previously named Stephen C. Meyer's "Signature in the Cell" a Times Literary Supplement Book of the Year. He is a very independent thinker, and very honest about his motivations and the evidence.

Eight tips for talking to non-Christians about Christianity

August 23, 2012 | by Wintery Knight | Link | Original Link

From Stand to Reason – some excellent tactical advice from a master apologist.

Here's the setup:

> I overheard a conversation on the airplane coming back from my vacation in Wisconsin. A Christian gentleman was vigorously sharing his faith with a gentleman in the seat directly behind me. There are some things we can learn, both good and bad, from what I overheard and take his effort—which was a good one—and channel it in a little bit more constructive direction.
>
> So I am going to give you eight points of application.

And here are my favorites from his list:

> **3. Try to stay away from religious language, terminology, and religious affect.** This person was very religious in his whole approach. I think this is hard for us as Christians because we are brought up in a Christian environment and it's natural for us to talk this way, but it sounds weird to people outside of that environment. I think there are a lot of people who may be, in principle, interested in a bona fide, genuine relationship with God through Jesus Christ but who are not interested in the Christian religion as they perceive it. This is where I think a lot of the emergent guys have a legitimate bone to pick with Evangelicalism. Let's try not to sound like Bible-thumping fundamentalists if we can avoid it, even if that's what we are, because there's no need to sound that way if it puts people off. Find another way to communicate the message. Just talk in a straightforward manner. Be conscious of using religious language the other person may not understand or may think is strange. Avoid all of that so they can hear the message you're trying to communicate.
>
> **4. Focus on the truth, not personal benefits of Christianity.** I appreciated the gentleman's approach in that he kept talking about truth. One person he was talking to said he liked reincarnation. The Christian man said that even if he liked reincarnation that that didn't make it true if it's not true. Liking something is not going to change reality. That's a great point. He was focusing on the truth claims of Jesus. He wasn't giving a bunch of promises. He wasn't saying, "Jesus is my ice cream. He's a great flavor. Try him to see if you like him, too." Or, "Try Jesus because he'll make your life so wonderful." Focus on truth and not personal benefits.
>
> **5. Give evidence.** This gentleman was giving all kinds of evidence for his seatmates to consider. Good for him! You should too. You know why? Because people in the Bible did, too. Jesus, Paul, Peter, all the Apostles. If you look at the

> details of how they communicated their faith they gave evidence for the truth of what they were saying about Jesus. In fact, if you want to get the content of the Gospel, one of the most famous passages for the articulation of the Gospel is the beginning of 1 Corinthian 15. Paul gives all kinds of evidence. It's all right there as he is explaining the Gospel. We see that all through the New Testament. So give evidences. It's appropriate. People do respond to that even in a postmodern age.

I remember that I was once working in Chicago, and after a particular good apologetics discussion with a team of engineers, I apologized to them all for being so exclusive and a fundamentalist. These guys all had MS and PhD degrees in computer science from top schools like Stanford, Purdue, U of I, NIU and Northwestern. They said "you're not a fundamentalist". And I said, "but I am ultra-conservative in my theology!". And they said "That's ok – as long as you have considered different points of view and you have objective evidence, then somehow it doesn't sound fundamentalist".

I think that's something that we need to work on. When Christianity is about truth, it's open to investigation using public evidence. At work, I have explained the structure of DNA molecules in the office and had people rolling their chairs out of their cubicles to come and see me draw amino acid chains on a white board, and calculate the probabilities with a calculator. You can be a fundamentalist, without sounding like a fundamentalist. You just have to focus on public, testable evidence.

Look here:

Make religion about truth – not personal preferences. They respect that way of talking – as long as you bring the science and the history.

Mitt Romney unveils detailed energy plan to create jobs and lower gas prices

August 24, 2012 | by Wintery Knight | Link | Original Link

From Yahoo News.

Excerpt:

> Mitt Romney unveiled an energy plan Thursday that would give states the power to determine whether drilling and mining should occur on federal lands within their borders as part of a larger effort to increase domestic oil, coal and natural gas production and achieve energy independence by 2020.
>
> […]**Under current law, the federal government controls oil, coal and gas permits for federal lands. But Romney argued determination should be up to state officials, insisting individual states are in a better position to "develop, adopt and enforce regulations" on local basis than the federal government–which his campaign says has been unduly influenced by Washington politics.**

This is going to get him some votes in North Dakota, Montana, Ohio, Pennsylvania, West Virginia, Alaska, etc. We have a lot of energy just waiting to be extracted from the Bakken an Shale and the Marcellus Shale, for example. Just keep the federal government out it and get on with getting the price of gas back under $2. Put people back to work, too.

> A policy paper released ahead of the candidate's speech by the Romney campaign argues President Barack Obama "has intentionally sought to shut down oil, gas and coal production in pursuit of his own alternative energy agenda."
>
> Romney said that loosening regulations on the energy industry will benefit taxpayers by lowering gas costs and reducing the cost of consumer goods, which have increased as companies pay higher energy prices. He'll argue that allowing more federal drilling would not only bring money back into the nation's budget but would result in lower energy prices that could create jobs, lower the trade deficit and increase the nation's security.
>
> "Three million jobs come back to this country by taking advantage of something we have right underneath our feet. That's oil, and gas, and coal. We're going to make it happen. We're going to create those jobs," Romney said Thursday. "Let me tell you what else it does. It adds $500 billion to the size of our economy. That is more good wages. That's an opportunity for more Americans to have a bright and prosperous future."
>
> The push is part of what Romney touted as an effort to achieve energy independence by 2020, a plan that also includes expanding offshore energy development along the coast of Virginia and North and South Carolina as well as

> approval of the Keystone energy pipeline linking Canada to the United States.

I think that Romney is doing a good job now of articulating specific policies that will fix the economy.

Graduate students with non-STEM degrees increasingly dependent on welfare programs

August 24, 2012 | by Wintery Knight | Link | Original Link

From the Chronicle of Higher Education.

Excerpt:

> Melissa Bruninga-Matteau, a medieval-history Ph.D. and adjunct professor who gets food stamps: "I've been able to make enough to live on. Until now."
>
> "I am not a welfare queen," says Melissa Bruninga-Matteau.
>
> That's how she feels compelled to start a conversation about how she, a white woman with a Ph.D. in medieval history and an adjunct professor, came to rely on food stamps and Medicaid. **Ms. Bruninga-Matteau, a 43-year-old single mother** who teaches two humanities courses at Yavapai College, in Prescott, Ariz., says the stereotype of the people receiving such aid does not reflect reality. Recipients include growing numbers of people like her, the highly educated, whose advanced degrees have not insulated them from financial hardship.
>
> "I find it horrifying that someone who stands in front of college classes and teaches is on welfare," she says.
>
> Ms. Bruninga-Matteau grew up in an upper-middle class family in Montana that valued hard work and saw educational achievement as the pathway to a successful career and a prosperous life. She entered graduate school at the University of California at Irvine in 2002, idealistic about landing a tenure-track job in her field. She never imagined that she'd end up trying to eke out a living, teaching college for poverty wages, with no benefits or job security.
>
> Ms. Bruninga-Matteau always wanted to teach. She started working as an adjunct in graduate school. This semester she is working 20 hours each week, prepping, teaching, advising, and grading papers for two courses at Yavapai, a community college with campuses in Chino Valley, Clarkdale, Prescott, Prescott Valley, and Sedona. Her take-home pay is $900 a month, of which $750 goes to rent. Each week, she spends $40 on gas to get her to the campus; she lives 43 miles away, where housing is cheaper.
>
> **Ms. Bruninga-Matteau does not blame Yavapai College for her situation but rather the "systematic defunding of higher education."** In Arizona last year, Gov. Jan Brewer, a Republican, signed a budget that cut the state's allocation to Yavapai's operating budget from $4.3-million to $900,000, which represented a 7.6 percent reduction in the college's operating budget. The cut led to an 18,000-hour reduction in the use of part-time faculty like Ms. Bruninga-Matteau.
>
> "The media gives us this image that people who are on public assistance are

> dropouts, on drugs or alcohol, and are irresponsible," she says. **"I'm not irresponsible. I'm highly educated.** I have a whole lot of skills besides knowing about medieval history, and I've had other jobs. I've never made a lot of money, but I've been able to make enough to live on. Until now."

She's irresponsible, because she expects the people who choose to study rather difficult and unpleasant subjects like nursing and computer science and economics to pay for her lifestyle through taxation and "higher education funding". I do think it's important to point out that the main driver of higher tuition is increasing government funding of education, and that this increasing funding of higher education is nothing but corporate welfare.

Excerpt:

> The most obvious way that colleges might capture federal student aid is by raising tuition. Research to date has been inconclusive, but Stephanie Riegg Cellini of George Washington University and Claudia Goldin of Harvard have provided compelling new analysis. Cellini and Goldin looked at for-profit colleges, utilizing the key distinction that only some for-profit schools are eligible for federal aid. Riegg and Goldin find that that aid-eligible institutions "charge much higher tuition … across all states, samples, and specifications," even when controlling for the content and quality of courses. The 75 percent difference in tuition between aid-eligible and ineligible for-profit colleges — an amount comparable to average per-student federal assistance — suggests that "institutions may indeed raise tuition to capture the maximum grant aid available."

Here are some of the comments that I posted in a Facebook discussion about the CHE story:

> I know that some may disagree with me, but this is why people need to focus on STEM fields and stay away from artsy stuff and Ph.Ds in general. We are in a recession. Trade school and STEM degrees only until things improve.
>
> Also, no single motherhood by choice. Get married before you have children, and make sure you vet the husband carefully for his ability to protect, provide, commit and lead on moral and spiritual issues. This woman is not a victim. She chose her life, and the rest of us are paying for it. Nice tattoos by the way – that will really help when she's looking for a job.
>
> I am actually better at English than computer science, but I find myself with a BS and MS in computer science. We don't get to do what we like. We do what we have to in order to be effective as Christians. According to the Bible, men have an obligation to not engage in premarital sex, and to marry before having children, and to provide for their families, or they have denied the faith. I would like to have studied English, but the Bible says no way.
>
> I have no problem with people who can make a career out of the arts, like a

> Robert George or a William Lane Craig. But you can't just go crazy. And I think men have a lot less freedom than women to choose their major, we have the obligation to be providers and we have to be selected by women based on whether we can fulfill that role (among other roles).
>
> Women have more freedom because they are not saddled with the provider role like men are. However, I think that the times now are different than before. There is more discrimination against conservatives on campus in non-STEM fields and fewer non-STEM jobs in a competitive global economy. The safest fields are things like petroleum engineering, software engineering, etc.
>
> If [people who major in the humanities] can make a living and support a family without relying on government-controlled redistribution of wealth, then I salute and encourage you. If you rely on the government, know that this money is being taken away from those who are doing things they don't like at all in order to be independent and self-reliant. It is never good to be dependent on government. That money comes from people like me.

In response to an artsy challenger:

> I am happy to be scorned by those who make poor choices so long as I can have my money back from them so that I can pursue my dreams. I didn't see any of these artsy people in the lab at 4 AM completing their operating system class assignments, nor do I see them here working overtime on the weekend in the office. They can say anything and feel anything they want, and write plays and poetry all about their feelings, too. Just give me the money I earned back first. It's not their money. They have no right to it.

One person asked why I was "always winter, never Christmas, and I replied:

> It is Christmas for the Christians who I send books and DVDs to, as well as for the Christian scholars I support, and the Christian conferences, debates and lectures I underwrite across the world. Unfortunately, every dollar taken from me is a dollar less for that Ph.D tuition of a Christian debater, a dollar less for the flight of that Christian apologetics speaker, a dollar less for that textbook for that Christian biology student, and a dollar less for the flowers being sent to that post-abortive woman who I counseled who is now in law school. I have a need for the money I earn, and when it's sent to Planned Parenthood to pay for abortions by the government, my plan to serve God suffers. And finally, should I ever get married, I would like my wife to have the option of staying home with the children and even homeschooling them. That costs money. Somehow, I feel that given the choice between my homeschooling wife and the public school unions, the government will choose to give my money to the unions. Just a hunch.

I think that people should go into the humanities when they are serious about making a career of it and can get the highest grades. But if they are coasting and only getting Bs and Cs and not paying attention in class, then drop out and go to trade school. Don't

complain later when you can’t find a job. STEM careers pay the most.

15 top-earning degrees

1	Petroleum engineering	$83,121
2	Chemical engineering	$64,902
3	Mining engineering	$64,404
4	Computer engineering	$61,738
5	Computer science	$61,407
6	Electrical engineering	$60,125
7	Mechanical engineering	$58,766
8	Industrial engineering	$58,358
9	Systems engineering	$57,438
10	Engineering technology	$56,447
11	Actuarial science	$56,320
12	Aeronautical engineering	$56,311
13	Agricultural engineering	$54,352
14	Biomedical engineering	$54,158
15	Construction management	$53,199

NATIONAL ASSOCIATION OF COLLEGES AND EMPLOYERS

Top-earning degrees / college majors

Here’s my previous post on the woman who accumulated $185,000 of student debt studying the humanities and is likewise demanding handouts and claiming not to be responsible.

Looking for a good movie this weekend? Try Dinesh D'Souza's "2016"

August 24, 2012 | by Wintery Knight | Link | Original Link

A review of the movie"2016: Obama's America" – a project of Indian-American Christian apologist Dinesh D'Souza.

Excerpt:

> My wife and I went to see a showing of the film at the Regal theater in Winter Park Village. It was about three-quarters full. We didn't go with a group but noticed that many in the audience came in groups of more than just a single couple. There were also examples of grandparents, parents and children. At the end of the film, the audience broke into loud and spontaneous applause. Was this only due to the film "playing to the choir"?
>
> In part perhaps, but in the next few weeks I predict it will reach the audience we most need to reach -young voters -and are the most avid movie goers and the least likely to be reached by more traditional methods.
>
> […]Dinesh D'Souza is an engaging, attractive dark skinned immigrant from India whose life and career follows in parallel with Obama's – born and married in the same years and able to judge American institutions and values from a third world perspective.
>
> The film does not accept any of the more controversial attacks on Obama's biography but seeks to explain how his own words and thoughts cited continually throughout the film from the President's autobiography 'Dreams From My Father' are a thread running through his policies and are at the core of what motivates him and makes him intent on downsizing, disarming, and apologizing for America, abandoning out allies such as Great Britain, Israel and Poland, fawning and bowing before Muslim despots, and seeking to create a society where individual initiative, ambition and self-reliance are replaced by the collectivist goals that have failed all over the world.
>
> […]*2016* examines Barack Obama's relationship with his absent father who was an activist in the anti-colonial struggle against the British, and following independence became part of that elite clique who fostered a one party bureaucratic, socialist state in Kenya that crushed all local government and free initiative resulting in a downward spiral of economic stagnation and poverty shared by Obama's half-brother in the slums of Nairobi.
>
> […]We follow the President's life in where his mother remarries a local Indonesian man (also a Muslim, Lolo Soteiro), who eventually becomes a successful businessman and in so doing, alienates Obama and his mother who believe they are betraying the socialist and collectivist legacy of Barack Obama

> Senior.
>
> This psychological portrait is one that makes sense and can be understood and appreciated by many young people who are themselves the product of homes in which there is divorce and remarriage.
>
> The President's endorsement of the "Occupy Wall Street" movement extends to the world stage in which the antagonists are portrayed as the 99% – the occupied and the exploitative 1 % – the occupiers.
>
> Obama emotionally sympathizes with all those he places in the category of the victims of the colonialist white European nations (the one-percenters), returning the bust of Churchill, the gift of the British government, praising Islam as a progressive force while denying its oppression of women, children, non-Muslim minorities, his policies towards third world nations such as Mexico and Brazil whom his policies have encouraged to develop their oil industries while retarding our own, secretly supporting Argentina in its attempt to seize the Falkland Islands from Britain by force, pressuring Israel (regarded too as "occupiers") to retreat from defensible borders, total passivity in failing to support the millions of demonstrators in the street against the tyrannical regime of the mullahs in Iran, etc.
>
> Most damning of all are the close associations of the President and his most important mentors ignored by the media and Senator John McCain's campaign in 2004 – convicted terrorist Bill Ayers, the "Reverend Wright (God Damn America and its "Liberation Theology" church in Chicago) and long-time Communist party member Frank Marshall Davis.
>
> This is a powerful film that will exert a profound influence. As the billboards and advertisements on television proclaim… Love Him or Hate Him, you need to see this film.

Does that sound good or what? There's a lot of talk about how this election needs to be about grown up ideas. I think that these long form arguments elevate, rather than lower, the debate. We need to have adult conversations about who Obama is and what his policies are intended to achieve – what is his end game?

Trailer 1 of 3:

Trailer 2 of 3:

Trailer 3 of 3:

Here's Dinesh explaining what his movie is about at CPAC 2012:

Keep in mind that Dinesh is a Christian apologist and has debated people like Christopher Hitchens. This is his newest project.

Go see it!

Friday night movie: Sink the Bismarck! (1960)

August 24, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.4/10]

IMDB median rating: [7/10]

Description:

> In 1939, the Nazi Germany's largest and most powerful battleship, *Bismarck*, is launched in a ceremony at Hamburg with Adolf Hitler attending. The launching of the hull is seen as the beginning of an era of German sea power. Two years later, in 1941,British convoys are being ravaged by U-boats and surface raider attacks which cut off supplies which Britain needs to continue the war. In May, British intelligence discovers the *Bismarck* and the heavy cruiser *Prinz Eugen* are about to break into theNorth Atlantic to attack convoys.
>
> The man assigned to coordinate the hunt is the Admiralty's chief of operations, Captain Jonathan Shepard (Kenneth More), who has been distraught over the death of his wife in an air raid and the sinking of his ship by German ships commanded by Admiral Günther Lütjens (Karel Štěpánek). Upon receiving his new post, Shepard discovers Lütjens is the fleet commander on the *Bismarck*. Shepard's experience of conflict with the German Navy and his understanding of Lütjens allow him to predict the*Bismarck*'s movements. Shepard is aggressive to his staff but comes increasingly to rely on the coolness and skill of his assistant, WREN Second Officer Anne Davis (Dana Wynter).

Below are the combatants.

The German battleship Bismarck:

The Bismarck (click for larger image)

The aircraft carrier HMS Ark Royal:

HMS Ark Royal (click for larger image)

I had some fun on Thursday night watching military documentaries, which is one of my favorite things to do. In addition to watching a documentary about my beloved Challenger 2 tank and a clip on reactive armor, I found this documentary on battleship evolution from World War 1 to World War 2, and this documentary on the sinking of the German battleship Bismarck and this documentary on the German battleship Tirpitz. The documentary on battleship evolution even mentioned Army Air Service Brig. Gen. Billy Mitchell, the air force pioneer who warned American military planners that battleships were being eclipsed by aircraft carriers. And he was right about that, though no one listened to him. No one, that is, except one Douglas MacArthur! If you watch nothing else, click through and read the story of Billy Mitchell and how he bravely spoke out in favor of air power, and took his lumps for it.

So why did battleships become extinct? Well, you can get a lot more range and striking power out of several squadrons of bombers and torpedo bombers than you can out of 16 or even 18 inch guns. In fact, you'll see the torpedo bombers of the HMS Ark Royal face off against the Bismarck in the movie. Today, naval warfare is conducted with surface-to-surface missiles like the Tomahawk and the SS-N-27 Sizzler, etc. as well as air-to-surface missiles fired from land and carrier based strike aircraft. The range of these missiles is far greater than the range of the deck guns on any battleship. However, there is work being done on rail guns which may force a return to conventional deck guns, especially for operations like shore bombardments where you want to use cheaper munitions!

Happy Friday!

John Hawkins: 40 reasons to not re-elect Barack Obama

August 25, 2012 | by Wintery Knight | Link | Original Link

On Townhall.com. Don't worry, I linked to the printable version.

Excerpt:

> 2) Barack Obama's stimulus plan cost more than the **Marshall Plan, the Louisiana Purchase, and putting a man on the moon — combined** and it was a complete and utter failure — more than 800 billion dollars that accomplished nothing of significance.
>
> 3) If Barack Obama is re-elected, Obamacare will go into effect in 2014. This will lead to huge doctor shortages, exploding health care costs, companies dropping insurance, death panels, much longer waits to see a doctor, and a dramatic deterioration in the quality of American medical care.
>
> 4) Do you believe that your taxes should go up in the next four years? Well, Barack Obama does,
>
> "Nobody's looking to raise taxes right now. We're talking about potentially 2013 and the out years." — **Barack Obama**
>
> 5) Even the left-wingers at *Politifact* admit that Obama broke his **promise to cut the deficit in half by the end of his first term**.
>
> 6) America lost its **AAA credit rating** for the first time since 1917 on Obama's watch.
>
> 8) Barack Obama called George Bush *"unpatriotic"* for adding so much to the debt. Yet, Obama added more debt in **3 years and 2 months** than Bush did in both terms.

I was going to write a post like this myself! But this one will do.

Explosion at government-run Amuay refinery, nationalized by Venezuela in 1976

August 25, 2012 | by Wintery Knight | Link | Original Link

Are Barack Obama and Hugo Chavez very different?

In the United States, we've been seeing some efforts by the Marxist Obama administration to nationalize the auto industry and health care, too. This is what communists favor as the alternative to the free-market system. It makes sense, then, to look at how well the nationalization of assets, especially those owned by foreign-owned private companies, works out in the real world.

Let's see:

> The **Creole Petroleum Corporation** was an American oil company, formed in 1920 to produce fields on Lake Maracaibo, Venezuela.[1] The company was acquired by Standard Oil of New Jerseyin 1928. Until 1951 Creole Petroleum was the world's number one oil producer.[2]
>
> In 1950, Creole opened its refinery at Amuay.[3] This is now a part of the Paraguaná Refinery Complex.
>
> The Venezuelan assets of Creole Petroleum Corporation were nationalized along with those of other foreign oil firms on January 1, 1976, becoming part of Lagoven, a Venezuelan government-owned operating company.[4]

And here is the latest triumph of Marxist economics in Venezuela:

> A huge explosion rocked Venezuela's biggest oil refinery early Saturday, killing at least 24 people and injuring more than 80 others in the deadliest disaster in memory for the country's key oil industry.
>
> Balls of fire rose over the Amuay refinery, one of the largest in the world, in video posted on the Internet by people who were nearby at the time.

> At least 86 people were injured, nine of them seriously, Health Minister Eugenia Sader said at a hospital where the wounded were taken. She said 77 people suffered light injuries and were released from the hospital.
>
> Officials said those killed included a 10-year-old boy, but that most of the victims were National Guard troops stationed at the refinery.

Filthy capitalist dogs! Making money on the backs of the poor workers! Making them work in filthy, unsafe – oh, wait. When workers are left free to take their skills to a number of private employers, then those employers are pressured to provide them with better working conditions, wages and benefits. Otherwise the employees leave for better companies. The only problem is that it doesn't work if all the industries are state-run monopolies. Then, you just get KA-BOOM!

All you have to do to understand economic systems is to compare capitalist Chile with communist Venezuela. The people are the same, and both started out poor. One embraced free trade and privatization, and now that one is rich. The other one gets Chernobyl explosions because they elected a Marxist.

Venezuela's economic policy is the same economic policy that Barack Obama wants to force on us with his takeover of General Motors, his frequent bailouts, his give-aways to campaign fundraisers, his blocking of free trade deals, his heavy-handed anti-business regulations, and his other intrusions into the private sector. Our entire economy is going KA-BOOM right now because of Marxism.

U.S. government persecutes pastor for helping bio-mom escape with daughter

August 26, 2012 | by Wintery Knight | Link | Original Link

Dr. Lydia McGrew writes about it on What's Wrong With The World blog.

Excerpt:

> Several years ago I blogged here about the case of Lisa Miller. Brief background summary: Lisa Miller entered into a lesbian civil union in Vermont with Janet Jenkins. During this civil union, Miller conceived and bore a child by using a sperm donor. The little girl, Isabella, was only eighteen months old when Miller left the relationship and formally broke it up legally. Miller converted to Christianity, left the homosexual lifestyle behind her, and fled to Virginia to keep her child away from Jenkins, who represented all that she had repented of and was now leaving behind. Jenkins, let us bear in mind, is not in any way related to Isabella and has not lived with her since she was eighteen months old.
>
> Vermont courts, to whom the custody decision was ultimately given, treated the unrelated lesbian Jenkins as Isabella's "other mother" and insisted on unsupervised visitation, even though Jenkins was, from Isabella's perspective, a stranger. Isabella made some of these visits but was so upset by them (and alleged that Jenkins had bathed with her naked) that Miller refused to allow any more such visits with Jenkins, who had neither any natural claim on Isabella whatsoever nor any relationship with her. Eventually the custody judge decided to punish Miller for her intransigence concerning the unsupervised visits and ordered that Miller *give Isabella over* entirely, full custody, to live in Vermont with Jenkins. Late in 2009, Miller fled with her daughter, then age seven.

So, the courts gave full custody of the daughter to the *partner of the biological mother*. A woman who has no biological connection to the child, over the wishes of the child's biological mother. This is the stuff that Dr. Jennifer Roback Morse is always warning us about. She wasn't kidding.

And now, here's the latest news about that story, from that same post:

> Lisa Miller and Isabella got away successfully to Nicaragua, which does not have an extradition agreement with the United States for cases of kidnapping, or as in this case, "kidnapping." Here, the "kidnapping" involves a mother trying to save her own child from being turned over to an entirely unrelated female sodomite to be raised.
>
> As it turns out, though, the federal government joined in the fray. They have now caught and convicted Mennonite Pastor Kenneth Miller (no relation) of helping Lisa Miller in her escape. It sounds to my ears like there could be more trials and convictions on the horizon as well. Meanwhile, Jenkins has filed civil suit against

> the pastor and at least one other person who helped Lisa Miller to escape. Even if Jenkins never gets her trophy-child, her quest for revenge will not cease until she has destroyed the lives of all those who helped to thwart her pursuit of Lisa Miller and Isabella.

Dr. Jennifer Roback Morse has argued that far from getting the government out of marriage, government's decision to equate same-sex unions with opposite sex unions would open all kinds of government intervention into families.

Contrasting two approaches to religion: truth vs crutch

August 26, 2012 | by Wintery Knight | Link | Original Link

I went to church today and we got a sermon from a guest speaker who espouses the standard felt needs / mysticism / Bible-verses-as-incantation-with-magical-powers view of evangelism.

I just thought that I would write it down while it was fresh in my mind. So below I'll contrast my view of evangelism with what I will call the felt needs view of evangelism.

1) Who is to be evangelized?

> My view: anyone, with an emphasis on people who are willing to listen to your evidence and change their mind on that basis
>
> Felt needs view: People who are poor, ignorant, sick or who are grieving a recent death in the family, people who do not make decisions based on truth and evidence, but on emotions and superstition

2) What is the central issue in evangelism?

> My view: the truth of the propositions, e.g. – does God exist, did Jesus rise from the dead
>
> Felt needs view: making people feel good by telling them pleasing things that they have no basis for believing

3) How is the gospel preached?

> My view: you explain the truth claims of the Christian faith then appeal to objective evidence, especially from science and history
>
> Felt needs view: you knock on stranger's doors and tell them how you used to be bad and unhappy and now you're good and happy and you achieved this by reading the Bible, singing songs, attending church and believing things that you are not able to give an answer for

4) Why should we adopt your view of evangelism?

> My view: Because this is the same view of decision-making that is used in the business world, the scientific world, or any other human endeavor where we must make careful decisions about things that matter. And what's more, this method is Biblical – preparing a defense and presenting evidence IS the Biblical method of evangelism.
>
> Felt needs view: once upon a time some Muslims had a death in their family and I baked them a cake and then they were all in my church 2 weeks later – all 13 of them! That really happened! Oh oh, and there was an old woman on a bus and

> she converted the bus driver when he annoyed at a red light by telling him that Jesus would turn the light green if he believed in Jesus, and then the whole busload of people converted, too! That really happened! You just have to "share" your faith with people who have an emotional need and tell children Bible stories when they are 6 and 7!

I work with a lot of people that I meet through my blog on their skills and evangelism. One of them had a message waiting for me in my inbox when I got home talking about how she had had a discussion with an annoying atheist who disapproved of her spiritual life. She used the following arguments on him: kalam, fine-tuning, moral, intelligent design, resurrection. He responded with no arguments. She was very excited about it and very comfortable in her faith, and he went away without an excuse. Whether he has a need or not, he knows that ought to adopt Christianity because it is true. She presented it as true and his emotional state was irrelevant to the discussion.

In contrast, consider where the felt needs approach to evangelism leads:

> **Schuller:** Tell me, what do you think is the future of Christianity?
>
> **Graham:** Well, Christianity and being a true believer–you know, I think there's the Body of Christ. This comes from all the Christian groups around the world, outside the Christian groups. I think everybody that loves Christ, or knows Christ, **whether they're conscious of it or not**, they're members of the Body of Christ. And I don't think that we're going to see a great sweeping revival, that will turn the whole world to Christ at any time. I think James answered that, the Apostle James in the first council in Jerusalem, when he said that God's purpose for this age is to call out a people for His name.
>
> And that's what God is doing today, He's calling people out of the world for His name, whether they come from the Muslim world, or the Buddhist world, or the Christian world or the non-believing world, they are members of the Body of Christ because they've been called by God. **They may not even know the name of Jesus but they know in their hearts that they need something that they don't have**, and they turn to the only light that they have, and I think that they are saved, and that they're going to be with us in heaven.
>
> **Schuller:** What, what I hear you saying that it's possible for Jesus Christ to come into human hearts and soul and life, even if they've been born in darkness **and have never had exposure to the Bible**. Is that a correct interpretation of what you're saying?
>
> **Graham: Yes**, it is, because I believe that. I've met people in various parts of the world in tribal situations, that they have never seen a Bible or heard about a Bible, and never heard of Jesus, but they've believed in their hearts that there was a God, and they've tried to live a life that was quite apart from the surrounding community in which they lived.
>
> **Schuller:** I'm so thrilled to hear you say this. There's a wideness in God's mercy.

> **Graham:** There is. There definitely is.

If you don't think that the gospel is about sin, and a man dying on a cross for those sins and then rising from the dead, then you think it's about people's feelings, and all that's needed is for them to "believe" things that they have no reasons to believe, so that they will feel better about their need. Or, maybe they just have an emotional experience without believing anything about Christianity and that emotional experience helps their need. Being saved means having your needs met through belief in things you haven't investigated. This is the approach of evangelism used by many today – even by some guest speakers in my church. Read comforting words, tell comforting stories, believe in things you can't test or prove. Feel better. Avoid discussions and debates with people who have no needs and sufferings for you to exploit. If someone doesn't have a need to believe things that are true, then you have nothing to say to them. Do you know where atheists get the idea that Christians believe nonsense because they need a crutch in order to feel better about their weaknesses? They get it from us. We tell them that. We do.

One thing this annoying sermon did do was to cause me to pray about legitimate obstacles to evangelism. For example, I prayed that the laws that encourage people to silence and coerced Christians would be repealed. I prayed that people would be less insular about their own religions and be willing to listen to others from outside their faith. I prayed that people would choose their religion on the basis of truth and evidence, and not because of where they are born and what their families and communities require. I prayed that people stopped identifying religion with nationalism, race and culture. I prayed that people would dedicate more of their time to investigating what is really true using logic, science and history. I prayed that people would investigate whether anyone made the universe for a purpose, what happens when they die, and what Jesus claimed about such things when he was here among us. I prayed that the schools and the culture would not spread lies about behaviors and speculative theories that encourage people to get into sinful lifestyles before they have had the opportunity to investigate religion on the merits. And I prayed that the New Atheist caricature of faith as blind belief in order to address felt needs would not be adopted by Christians, and even by charismatic visiting Christian speakers speaking in my church.

Mark Steyn: the Democrat debt war on children

August 27, 2012 | by Wintery Knight | Link | Original Link

From National Review.

Excerpt:

> China becoming the world's biggest economy, another American downgrade, total U.S. liabilities equivalent to about three times the entire planet's GDP. A "non-partisan" Pew Research study says the American middle class faces its "worst decade in modern history" — and the first bump down starts on January 1: The equally "non-partisan" Congressional Budget Office now says that the tax and budget changes due to take effect at the beginning of 2013 will put the country back in recession and increase unemployment. This is a revision of their prediction earlier this year that in 2013 the economy would contract by 1.3 percent. Now they say 2.9 percent. These days, CBO revisions only go one way — down. They're gonna need steeper graph paper. In a global economy, atrophy goes around like syphilis in the Gay Nineties: A moribund U.S. economy further mires Europe, and both slow growth in China, which means fewer orders for resource-rich nations. . . . Four wheels spinning in the mud, and none with a firm-enough grip to pull the vehicle back on to solid ground.
>
> […]But don't worry, Obamacare will "lower costs." Since passage of the bill in 2010, the CBO has revised its estimate of Obamacare's gross costs over ten years. Can you guess in which direction, boys and girls? Yes, up from $944 billion to $1.856 trillion. That's some "revision." I wonder where it'll be in another two years.
>
> Well, I'm not the CBO, but I'll take a wild guess: Obamacare is going to be expensive on a scale unknown to European health systems. Look around you. Americans are not Swedes. Obesity rate in the United States: 36 percent; Sweden: 9.7 percent; Japan: 3.2 percent; China: 2.9 percent; India: 0.7 percent. Ours is a country where 78 million people (or about the entire population of Germany) are classified by the Centers for Disease Control as "obese" — including over 40 million women. If 40 million women have it, isn't that a "women's health" issue? Perhaps even a bigger "women's health" issue than the right of thirtysomething students to free contraception? It's the first thing the average American of, say, 1950 would notice if you catapulted him forward from his mid-century Main Street to today: not how amazing all these computer gizmos are, but how large and sick today's Americans look.
>
> […]So we can't fight a war in Afghanistan, but we can fight a "war on women" that only exists in upscale liberal feminists' heads. We can't do anything about exploding rates of childhood obesity, diabetes, and heart disease, but, if you define "health care" as forcing a Catholic institution to buy $8 contraception for

> the scions of wealth and privilege, we're right on top of it. And above all, we're doing it for the children, if by "doing it" you mean leaving them with a transgenerational bill unknown to human history — or engaging in what Boston University's Larry Kotlikoff, speaking at the International Institute of Public Finance in Dresden last week, called "child fiscal abuse."
>
> If that sounds a trifle overheated, how about . . . hmm, "legitimate fiscal rape"? No? Then let's call it a "war on children." Unlike the "war on women," it's real.

Are you a young person living with your parents with student loans and no job? Are you worried about how you will have to pay for ballooning entitlements for the elderly out of your future earnings? Then stop voting for Democrats.

Stuart Schneiderman: what do radical feminists want women to want?

August 27, 2012 | by Wintery Knight | Link | Original Link

Stuart Schneiderman on the message sent to young women by radical third-wave feminists.

Excerpt:

> If you yourself are wondering what women want, feminist author Hanna Rosin has the answer: women want to hook up.
>
> Rosin believes that hookups advance the cause of feminism. Women who hook up are more likely to be immune to the siren song of husband, home and family.
>
> If we ask what feminists want women to want, the answer is clear: feminists want women to repress their feminine mystique, the better to be good feminists.
>
> They do not just want women to adhere to feminist ideology, but they want women to live their lives as feminists want them to live their lives.
>
> Women's liberation seems merely to be a way for feminists to run women's lives. Having thrown off the shackles of the feminine mystique women are supposed to do what their feminist masters tell them to do.
>
> Young women are more willing to submit to random sexual encounters with men they barely know because feminism told them to do so.
>
> If these women are exposing themselves to repeated sexual traumas, then clearly the hookup culture is throwing women off of the family track and putting them squarely on the career track.
>
> Rosin states it clearly:
>
> To put it crudely, feminist progress right now largely depends on the existence of the hookup culture. And to a surprising degree, it is women—not men—who are perpetuating the culture, especially in school, cannily manipulating it to make space for their success, always keeping their own ends in mind. For college girls these days, an overly serious suitor fills the same role an accidental pregnancy did in the 19th century: a danger to be avoided at all costs, lest it get in the way of a promising future.
>
> Rosin would have been more accurate if she said that it is feminists like her who are perpetuating this culture.
>
> By warning women against serious suitors feminism is telling them to choose between hooking up or dating bad boys who will never cut it as husband material.
>
> Like most of the Pied Pipers of feminism Rosin sees a "promising future" only in career. She is not against eventual marriage but she is fantasizing when she

> claims that women who have spent their twenties in a relationship daze will wake up one day and jump right into a wonderful relationship with a wonderful man.
>
> In so saying, she is lying to young women.
>
> If a woman has developed the skills necessary to navigate the hook up culture she will not be developing the skills necessary to conduct a relationship, no less a marriage. Better yet, if she had learned that suitable suitors are toxic she will not suddenly decide that she wants one of them to ravish her.
>
> The psychic malformation she has suffered by living the feminist nightmare will preclude that kind of happy ending.

Read the second half of the post to see how young women who are taking this advice feel about it. They are doing it, but is it satisfying them?

Here is an article written by an academic feminist in the New York Times. (H/T Stuart Schneiderman)

Stuart exegetes the article:

> In Bauer's words: "If there's anything that feminism has bequeathed to young women of means, it's that power is their birthright. Visit an American college campus on a Monday morning and you'll find any number of amazingly ambitious and talented young women wielding their brain power, determined not to let anything– including a relationship with some needy, dependent man– get in their way. Come back on party night, and you'll find many of these same girls… wielding their sexual power, dressed as provocatively as they dare, matching guys drink for drink– and then hook up for hook up."
>
> Given the relatively lesser body mass of women compared with that of men, matching men drink for drink is a fool's errand. Anyone who glorifies such behavior has completely lost touch with reality.
>
> And why should Bauer be in awe of the fact that these girls can match men, hook up for hook up? If these women are so desirous of becoming unique individual self-creations, why should they be trying to emulate male behavior?
>
> And let's not overlook the piece of undisguised contempt for "some needy, dependent man" with whom these women might have relationships. The latest wave of feminism prefers hooking up to relationships.
>
> According to Bauer, the party ends with said liberated empowered inebriated woman down on her knees. As Bauer so nicely expresses it: "When they're on their knees in front of a worked-up guy they just met at a party, they genuinely feel powerful– sadistic even."

Sometimes we get commenters who question whether feminism has anything to do with the behavior of women that we see today in college campuses. And to find out the truth, you have to read the elite feminists at the modern universities who have been grading the papers of women for the last 40 years. Was this alcohol-drenched hook-up culture

unexpected by these elite academic feminists? On the contrary. It was their goal.

Feminists wanted to abolish the distinctions between men and women. They decided to achieve this by encouraging women to act like men. And the men they chose to emulate were alpha-male bad boys, since these are the men that women who don't like marriage seem to really admire. Academic feminists like Bauer believe that women are happier now than they ever have been, with all this hooking up and being raised without fathers. They think they've won.

I think that women should go to college and work a couple of years before marrying and having children. I think that mothers should stay home with children younger than 6, at least, and maybe even stay home until the children are working. I am curious to know if any of my female readers were ever told by older women not to focus on finding a man in their 20s. Are young women really being told by older women to play the field and to have a good time and to not marry too soon? Because that's bad advice. Men are most interested in marriage in their 20s once they get a marketable degree and a good-paying job that they've been in a few years straight.

Atheist Massimo Pigliucci gives helpful advice on how to be a skeptic

August 27, 2012 | by Wintery Knight | Link | Original Link

From Rationally Speaking blog, some good tips from a skeptic named Massimo Pigliucci on how to be skeptical. (H/T Ratio Christi Ohio State University via J Warner Wallace)

Excerpt:

> I have been an active member of the self-described Community of Reason since about 1997. By that term I mean the broad set encompassing skeptics, atheists and secular humanists (and all the assorted synonyms thereof: freethinkers, rationalists, and even brights). The date is easily explainable: in 1996 I had moved from Brown University — where I did my postdoc — to the University of Tennessee, were I was appointed assistant professor in the Departments of Botany and of Ecology & Evolutionary Biology. A few months after my arrival in Knoxville, the extremely (to this day) unenlightened TN legislature began discussing a billthat would have allowed school boards to fire teachers who presented evolution as a fact rather than a theory (it is both, of course). The bill died in committee (though a more recent one did pass, go Volunteers!), in part because of the efforts of colleagues and graduate students throughout the State.
>
> It was because of my local visibility during that episode (and then shortly thereafter because I began organizing Darwin Day events on campus, which are still going strong) that I was approached by some members of a group called "The Fellowship of Reason" (now the Rationalists of East Tennessee). They told me that we had much in common, and wouldn't I want to join them in their efforts? My first thought was that an outlet with that name must be run by cuckoos, and at any rate I had a lab to take care of and tenure to think about, thank you very much.
>
> But in fact it took only a couple more polite attempts on their part before I joined the group and, by proxy, the broader Community of Reason (henceforth, CoR). It has been one of the most meaningful and exhilarating decisions of my life, some consequences of which include four books on science and philosophy for the general public (counting the one coming out in September); columns and articles for Skeptic, Skeptical Inquirer, Free Inquiry, The Philosopher's Magazine and Philosophy Now, among others; and of course this blog and its associated podcast. I made many friends within the CoR, beginning with Carl Ledendecker of Knoxville, TN (the guy who originally approached me about the Fellowship of Reason), and of course including the editor and writers of Rationally Speaking.
>
> But… yes, there is a "but," and it's beginning to loom large in my consciousness, so I need to get it out there and discuss it (this blog is just as much a way for me

> to clarify my own ideas through writing and the feedback of others as it is a channel for outreach as an academic interested in making some difference in the world). The problem is that my experience (anecdotal, yes, but ample and varied) has been that there is quite a bit of un-reason within the CoR.

He's got a little list, he's got a little list:

> The list, incidentally, features topics in no particular order, and it would surely be nice if a sociology student were to conduct a systematic research on this for a thesis…

Click this link and read the full list. You will find yourself in agreement with *much* of what he says. In fact, this observation that skeptics can believe weird things was even highlighted in the Wall Street Journal a while back, and I wrote about it.

Just look at some of the items:

> Philosophy is useless armchair speculation. So is math. And logic. And all theoretical science.
>
> The notion of anthropogenic global warming has not been scientifically established, something loudly proclaimed by people who — to the best of my knowledge — are not atmospheric physicists and do not understand anything about the complex data analysis and modeling that goes into climate change research.
>
> Science can answer moral questions. No, science can *inform* moral questions, but moral reasoning is a form of philosophical reasoning. The is/ought divide may not be absolute, but it is there nonetheless.
>
> Science has established that there is no consciousness or free will (and therefore no moral responsibility). No, it hasn't, as serious cognitive scientists freely admit.
>
> Feminism is a form of unnecessary and oppressive liberal political correctness. Oh please, and yet, rather shockingly, I have heard this "opinion" from several fellow CoRers.
>
> Feminists are right by default and every attempt to question them is the result of oppressive male chauvinism (even when done by women). These are people who clearly are not up on readings in actual feminism (did you know that there have been several waves of it? With which do you best connect?).
>
> All religious education is child abuse, period. This is a really bizarre notion, I think. Not only does it turn 90% of the planet into child abusers, but people "thinking" (I use the term loosely) along these lines don't seem to have considered exactly what religious education might mean (there is a huge variety of it), or — for that matter — why a secular education wouldn't be open to the same charge, if done as indoctrination (and if it isn't, are you really positive that there are no religious families out there who teach doubt? You'd be surprised!).

About the author:

> **Massimo Pigliucci** (born January 16, 1964) is the chair of the Department of Philosophy at CUNY-Lehman College.[1] He is also the editor in chief for the journal Philosophy & Theory in Biology. Pigliucci was born in Monrovia, Liberia, although he was raised in Rome, Italy. He has a doctorate in genetics from the University of Ferrara, Italy, a Ph.D. in botany from the University of Connecticut, and a Ph.D. in philosophy of science from the University of Tennessee. He is a fellow of the American Association for the Advancement of Science and of the Committee for Skeptical Inquiry.

Massimo Pigliucci even debated William Lane Craig in 2001 at the University of Georgia:

Here's the review of their previous 1998 debate from Common Sense Atheism:

> **Craig vs. Pigliucci**
> Another typical debate in which Craig's skills totally smash his opponent. Atheists seem to think they need not prepare for a debate with Craig because he is just another wacko with an invisible friend who grants him magical wishes. I think they are all surprised by how plausible Craig can make such an absurd idea sound.

If you can't see the video, read the debate transcript at Leadership University or download the MP3 from Apologetics 315 (where else?). I would *love* to have such an intelligent skeptic as my friend, and you will too after you read his post. This is a must-read. You MUST READ IT. It is a great joy to have skeptics like Dr. Pigliucci out there, and I think that we should respect them and pray for them. These are the ones like Anthony Flew who interact with us in debates, and they can be persuaded if we have the right evidence and arguments to convince them.

New study: Children exposed to sex in films have sex earlier and have more partners

August 28, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this story from the UK Daily Mail.

Excerpt:

> Children who watch films with a high sexual content tend to lose their virginity earlier and have more partners, a study has found.
>
> Not only are they more promiscuous, they are also more likely to engage in risky sex by not using condoms.
>
> The six-year study of more than 1,200 teens refers to sexual content in films.
>
> […]The study on the effect on younger teenagers of sex in films was published in Psychological Science, the peer-reviewed journal of the Association for Psychological Science.
>
> Researchers from Dartmouth College, an Ivy League university in the US, surveyed 684 top-grossing movies from 1998 to 2004, and then coded them for sexual content.
>
> A film such as Eyes Wide Shut would be coded highly, while Lord Of The Rings: The Return Of The King would get a low coding. Although some of the films had 18-ratings, they could have been seen by younger children on DVDs at home.
>
> The researchers then recruited 1,228 youngsters aged between 12 and 14, and each was asked which films on the list they had seen from a number of different collections of 50 that were randomly selected.
>
> Six years later the same participants were surveyed to find out how old they were when they became sexually active and how risky their sexual behaviour might have been.
>
> The results indicated that exposure to sexual content in movies at an early age is likely to influence adolescents' sexual behaviour.

Previously, I have argued that early premarital sex and a high number of premarital sex partners are independent risk factors for marital instability. Parents should therefore be careful about what their children are exposed to in films, if they want their children to have a happy marriage.

Brian Auten interviews philosopher Robin Collins on the fine-tuning argument

August 28, 2012 | by Wintery Knight | Link | Original Link

Here's a must-listen interview from Apologetics 315.

Details:

> Today's interview is with Robin Collins, professor of philosophy at Messiah College. His training is in physics and in philosophy and he is a leading advocate for using the fine-tuning of the universe as a design argument for theism. He talks about his background and training, the fine-tuning argument, the different types of fine-tuning with examples and illustrations (laws, constants and initial conditions), two different ways of presenting the fine-tuning argument, answering common objections to the argument, the uniqueness of life, variations of the multiverse hypothesis, the failure of multiverse theory to explain away fine-tuning, objections to Victor Stenger, upcoming books, simplifying the fine-tuning argument for practical use, common mistakes when presenting the argument, the most common objection (*who designed God?*), and more.

Get the MP3 file from Apologetics 315.

Dr. Collins is extremely cautious and circumspect in his assessment of the fine-tuning argument. He takes the objections to the argument, like the multiverse, seriously and that comes across in the interview. He is familiar with criticisms of the argument and he has engaged with skeptics like Victor Stenger in his published work. I highly recommend it. It is a little more suited to intermediate-level Christians, but not so advanced that it's impossible for non-math beginners to follow the broad thrust of what's being said.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered

> Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

You can read Robin Collins' testimony here.

The fine-tuning argument

Here's a short article where Collins gives TWO examples of the fine-tuning. He is very modest in his argument, merely asserting that the fine-tuning is more compatible with theism than it is with atheism.

Excerpt:

> Science is commonly thought to have undercut belief in God. As Nobel Prize winning physicist Steven Weinberg famously remarked, "the more we find out about the universe, the more meaningless it all seems." Yet, the discoveries of modern physics and cosmology in the last 50 years have shown that the structure of the universe is set in an extraordinarily precise way for the existence of life; if its structure were slightly different, even by an extraordinarily small degree, life would not be possible. In many people's minds, the most straightforward explanation of this remarkable fine-tuning is some sort of divine purpose behind our universe.

> This fine-tuning falls into three categories: the fine-tuning of the laws of nature, the fine-tuning of the constants of physics, and the fine-tuning of the initial conditions of the universe. "Fine-tuning of the laws of nature" refers to the fact that if the universe did not have precisely the right combination of laws, complex intelligent life would be impossible. If there were no universal attractive force (law of gravity), for example, matter would be dispersed throughout the universe and the energy sources (such as stars) needed for life would not exist. Without the strong nuclear force that binds protons and neutrons together in the nucleus, there would not be any atoms with an atomic number greater than hydrogen, and hence no complex molecules needed for life. And without the Pauli-exclusion principle, all electrons would fall to the lowest orbital of an atom, undercutting the kind of complex chemistry that life requires.

> Some fundamental physical numbers governing the structure of the universe—called the constants of physics—also must fall into an exceedingly narrow range for life to exist. For example, many have estimated that the cosmological constant—a fundamental number that governs the expansion rate of empty space—must be precisely set to one part in 10^{120} in order for life to occur; if it were too large, the universe would have expanded too rapidly for galaxies and stars to form, and if it were too small, the universe would have collapsed back on itself. As Stephen Hawking wrote in his book A Brief History of Time, "The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life." Finally, the initial distribution of mass energy at the time of the big bang must have an enormously special configuration for life to

> occur, which Cambridge University mathematical physicist Roger Penrose has calculated to be on the order of one part in $10^{10^{123}}$. This is an unimaginably small number.

I know what you're thinking: How do we know that non-Christian scientists acknowledge the fine-tuning of gravity in the way that Collins describes?

Well, the New Scientist actually talks about the fine-tuning of the force of gravity. And they're not Christians.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in 10^{15}at 1 second after the big bang, allows life to form.**

Here's a very long paper by Collins on the fine-tuning argument, where he answers several objections to the argument, including the multiverse/many-universe hypothesis.

If you want a longer response to the multiverse argument, but you don't want to shell out big bucks for Collins' chapter in the "Blackwell Companion to Natural Theology", then you can just get James Sinclair's essay in "Contending With Christianity's Critics".

William Lane Craig debates Victor Stenger: Does God Exist?

August 28, 2012 | by Wintery Knight | Link | Original Link

Here are the details of the debate that I got from Cloud of Witnesses:

> The OSU [Oregon State University] Socratic Club will sponsor a public dialogue entitled, "Two Philosophers Debate the Existence of God," on Monday, March 1, at 7 p.m. in the LaSells Stewart Center on the OSU campus. William Lane Craig will argue for the Christian view that a personal God exists and Victor J. Stenger the atheist position that there is no God.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here is the MP3 file for the audio.

Here's the video of the debate:

Dr. Craig's opening speech:

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

Dr. Stenger's opening speech:

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic

- It’s theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are “our inventions”
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn’t really nothing, it is “the total chaos that we project existed just before the big bang”
- If something has no structure, then “it is as much nothing as nothing can be”
- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

Dr. Craig’s first rebuttal:

Stenger’s argument that there is no objective evidence for God’s existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger’s argument that the balance of energy is zero so “nothing” exists:

- if you have the same amount of assets and liabilities, it doesn’t mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger’s argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

Dr. Stenger’s first rebuttal:

Craig’s cosmological argument:

- Craig’s premise is “everything has a cause”, but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- “I don’t know of a single working cosmologist today who believes there was a singularity prior to the Big Bang”
- “If there wasn’t a singularity then there’s no basis for arguing that time began at that point”
- “There’s no reason from cosmology that we know of that the universe can’t be eternal”
- “When I talk about an eternal universe, I mean a universe that has no beginning or end”
- The Hartle-Hawking model doesn’t have a beginning
- “There was no violation of energy conservation by having a universe coming from nothing”
- “The universe *could have* come from a previous universe for example or even just from a region of chaos”
- The paper by Vilenkin is counteracted by other papers (he doesn’t specify which ones)

Craig’s moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that’s objective
- Dr. Craig has too little respect for the human intellect
- I don’t need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists
- Morality just evolved naturally as an aid to survival

Craig’s resurrection argument:

- No Roman historians wrote about the execution of Jesus but none of them did
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

Dr. Craig’s second rebuttal:

Craig’s cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible

- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal
- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

Dr. Stenger's second rebuttal:

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)
- Just because people are willing to die for a cause, does not make their leader God,

e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

Dr. Craig's conclusion:

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

Dr. Stenger's conclusion

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"

- The transition from a vapor to a liquid to ice shows how something could come from nothing
- “It cannot be proven that the universe had a beginning”

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think
- “Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women” (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don’t see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

New study: time spent with father increases teen's self-esteem

August 29, 2012 | by Wintery Knight | Link | Original Link

Surprisingly, this story is from the radically left-wing, anti-marriage CNN.

Excerpt:

> The time teens spend specifically with their dads may have critical benefits, the study from Pennsylvania State University found. The more time spent alone with their fathers, the higher their self-esteem; the more time with their dads in a group setting, the better their social skills.
>
> "The stereotype that teenagers spend all their time holed up in their rooms or hanging out with friends is, indeed, just a stereotype," said Susan McHale, director of the Social Science Research Institute at Penn State. "Our research shows that, well into the adolescent years, teens continue to spend time with their parents and that this shared time, especially shared time with fathers, has important implications for adolescents' psychological and social adjustment."
>
> Researchers studied families with at least two children over a period of seven years.
>
> […]The study, published in the journal Child Development, found that kids spend less and less time with their parents in group settings as they go through their preteen and teenage years. But one-on-one time increases up until about age 12 and then stays relatively flat before starting to decline a bit around age 15, says Crouter.
>
> Parents spend roughly seven to eight hours a week in group settings with their kids ages 8 to 15, the study found. Mothers get in about an hour and 15 minutes alone with their firstborn kids and more than an hour and a half with second-born kids each week. Dads get in just over an hour of one-on-one time with first- and second-born kids each week.
>
> Numerous other studies have found benefits for kids who spend more time with their families, such as fewer delinquent behaviors and less likelihood to give in to peer pressure, the study notes.
>
> In this study, the findings about fathers proved to be very interesting, Crouter said.
>
> While increased time with Dad showed key benefits for self-esteem and "social competence," time with Mom did not show the same correlations.

Surprisingly, people today seem to be very much in favor of relaxing all rules around sex and marriage, so that it becomes less and less likely that children will grow up with a father. Make no mistake – the more people push for "non-judgementalism" about sexual

boundaries and marital roles, the more children will grow up fatherless. If we really cared about children, we would encourage people to do what works: chastity and fidelity.

New study: smoking marijuana/cannabis permanently lowers IQ

August 29, 2012 | by Wintery Knight | Link | Original Link

From the UK Telegraph.

Excerpt:

> Teenagers who regularly smoke cannabis are putting themselves at risk of permanently damaging their intelligence, according to a landmark study.
>
> Researchers found persistent users of the drug, who started smoking it at school, had lower IQ scores as adults.
>
> They were also significantly more likely to have attention and memory problems in later life, than their peers who abstained.
>
> Furthermore, those who started as teenagers and used it heavily, but quit as adults, did not regain their full mental powers, found academics at King's College London and Duke University in the US.
>
> They looked at data from over 1,000 people from Dunedin in New Zealand, who have been followed through their lives since being born in 1972 or 1973.
>
> Participants were asked about cannabis usage when they were 18, 21, 26, 32 and 38. Their IQ was tested at 13 and 38. In addition, each nominated a close friend or family member, who was asked about attention and memory problems.
>
> About one in 20 admitted to starting cannabis use before the age of 18, while a further one in 10 took up the habit in the early or mid 20s.
>
> Professor Terrie Moffitt, of KCL's Institute of Psychiatry, who contributed to the study, published in the journal *Proceedings of the National Academy of Sciences*, said "persistent users" who started as teenagers suffered a drop of eight IQ points at the age of 38, compared to when they were 13.

The truth is that permissive drug policies have been tried and they have *failed*.

Excerpt:

> Amsterdam authorities say they are to halve the number of brothels and marijuana shops in the city's "red light" district and surrounding area

> The city announced plans to clean up the area a year ago and since then 109 sex "windows", from which prostitutes attract customers, have been closed. The new measures aim to reduce the number of windows to 243 from 482 last year, a city spokesman said.
>
> Amsterdam also wants to close half of the 76 cannabis shops in the city centre.
>
> "Money laundering, extortion and human trafficking are things you do not see on the surface but they are hurting people and the city. We want to fight this,"

> deputy mayor of Amsterdam Lodewijk Asscher told Reuters.
>
> “We can still have sex and drugs but in a way that shows the city is in control.”
>
> Prostitution was legalised in the Netherlands in 2000 and its soft drug policy, one of the most liberal in Europe, allows the sale of marijuana and possession of less than 5 grams (0.18 oz).

> But Amsterdam’s toughening line is part of a wider trend in Holland.
>
> Two Dutch cities near the Belgian border want to close all their cannabis shops to combat drug tourism and crime.
>
> The 800-year-old red light district needs to diversify and showcase the city’s history, Mr Asscher said.
>
> “This is a nice, old part of town. We can attract different groups of tourists. You should be able to have a beer at the old church square, watch fashion, and visit Chinatown,” he added.

The Family Research Council explains how permissive drug policies don’t actually work as advertised anywhere they’ve been tried.

Excerpt:

> Legalizers believe most black market and organized syndicate involvement in the drug business would die and that drug-induced crime would decrease with drug legalization. But these assertions are not supported by the facts. The United States experimented with legalization and it failed. From 1919 to 1922, government-sponsored clinics handed out free drugs to addicts in hopes of controlling their behavior. The effort failed. Society’s revulsion against drugs, combined with enforcement, successfully eradicated the menace at that time.[32]
>
> California decriminalized marijuana in 1976, and, within the first six months, arrests for driving under the influence of drugs rose 46 percent for adults and 71.4 percent for juveniles.[33] Decriminalizing marijuana in Alaska and Oregon in the 1970s resulted in the doubling of use.[34] Patrick Murphy, a court-appointed lawyer for 31,000 abused and neglected children in Chicago, says that more than 80 percent of the cases of physical and sexual abuse of children now involve drugs. There is no evidence that legalizing drugs will reduce these crimes, and there is evidence that suggests it would worsen the problem.[35]
>
> Legalization would decrease drug distribution crime because most of those activities would become lawful. But would legalization necessarily reduce other drug-related crime like robbery, rape, and assault? Presumably legalization would reduce the cost of drugs and thus addicts might commit fewer crimes to pay for their habits. But less expensive drugs might also feed their habit better, and more drugs means more side effects like paranoia, irritability and violence. Suggestions that crime can somehow be eliminated by redefining it are spurious.

> Free drugs or legalizing bad drugs would not make criminal addicts into productive citizens. Dr. Mitchell S. Rosenthal, expert on drugs and adolescents and president of Phoenix House, a resident treatment center in New York, said, “If you give somebody free drugs you don’t turn him into a responsible employee, husband, or father.”[36] The Justice Department reports that most inmates (77.4 percent male and 83.6 percent female) have a drug history and the majority were under the influence of drugs or alcohol at the time of their current offense. And a surprisingly large number of convicted felons admit their crime motive was to get money for drugs. For example, 12 percent of all violent offenses and 24.4 percent of all property offenses were drug-money motivated.[37]
>
> […]The extent to which individuals commit “drug-related crimes only” is overstated. Most incarcerated “drug”offenders violated other laws as well. Princeton University professor John Dilulio found that only 2 percent — i.e., 700 — of those in federal prisons were convicted of pure drug possession. They generally committed other and violent crimes to earn a sentence.[40]
>
> However, 70 percent of current inmates were on illegal drugs when arrested and, if drugs become cheaper, violent crime could reasonably be expected to increase.[41]

How well did permissive drug laws work in other countries?

> History provides evidence that legalization of drugs in foreign nations has not been successful. For example, opium was legalized in China earlier this century. That decision resulted in 90 million addicts and it took a half-century to repair the damage.[59]
>
> Egypt allowed unrestricted trade of cocaine and heroin in the 1920s. An epidemic of addiction resulted. Even in Iran and Thailand, countries where drugs are readily available, the prevalence of addiction continues to soar.[60]
>
> Modern-day Netherlands is often cited as a country which has successfully legalized drugs. Marijuana is sold over the counter and police seldom arrest cocaine and heroin users. But official tolerance has led to significant increases in addiction. Amsterdam’s officials blame the significant rise in crime on the liberal drug policy. The city’s 7,000 addicts are blamed for 80 percent of all property crime and Amsterdam’s rate of burglary is now twice that of Newark, New Jersey.[61] Drug problems have forced the city to increase the size of the police force and the city fathers are now rethinking the drug policy.[62]
>
> Dr. K. F. Gunning, president of the Dutch National Committee on Drug Prevention, cites some revealing statistics about drug abuse and crime. Cannabis use among students increased 250 percent from 1984 to 1992. During the same period, shootings rose 40 percent, car thefts increased 62 percent, and hold-ups rose 69 percent.[63]

> Sweden legalized doctor prescriptions of amphetamines in 1965. During the first year of legalization, the number of intravenous"speed" addicts rose 88.5 percent. A study of men arrested during the legalization period showed a high correlation between intravenous use and a variety of crimes.[64]
>
> Dr. Nils Bejorot, director of the Swedish Carnegie Institute and professor of social medicine at the Karolinska Institute in Stockholm, believes the solution to the growing drug problem is consistent social and legal harassment of both users and dealers.[65]
>
> Great Britain experimented with controlled distribution of heroin between 1959 and 1968. According to the British Medical Journal, the number of heroin addicts doubled every sixteen months and the increase in addicts was accompanied by an increase in criminal activity as well.[66] And British authorities found that heroin addicts have a very good chance of dying prematurely. On the crime front, Scotland Yard had to increase its narcotics squad 100 percent to combat the crime caused by the "legal" addicts.[67]
>
> The Swiss opened a "legalized drug" area in Zurich seven years ago and local addicts were given drugs, clean needles, and emergency medical care. Unfortunately, the liberal policy backfired and the number of addicts surged to 3,500; violence surged, too. "Needle Park," as it came to be known, was a place of open warfare among rival gangs, and even police faced gunfire. Their cars were attacked and overturned. In February 1995, officials ended the experiment, conceding that it had evolved into a grotesque spectacle.[68]

Why does legalizing drugs increase crime? Because drugs are addictive and they cost money to obtain. Addiction reduces the ability to hold down a job, which is a legal way of getting money. Therefore, addicts will resort to crime in order to get the money to buy their drugs, since their addiction impairs their ability to hold down a job.

Richard Bauckham and James Crossley debate the reliability of the gospels

August 29, 2012 | by Wintery Knight | Link | Original Link

A leading New Testament scholar from Cambridge, Dr. Richard Bauckham, was recently on the radio program 'Unbelievable?' which is on the Premier Christian Radio network.

Bauckham was arguing that the Gospels are based on eyewitness accounts and therefore should be regarded as fundamentally trustworthy.

Joining him was New Testament historian Dr. James Crossley, discussing the implications of Bauckham's work and whether the Gospel of John was written by the disciple John himself, as Bauckham claims. Dr. Crossley is one of my favorite atheist debaters. He is a professor at the University of Sheffield.

It is well worth the listen.

Part 1 – (1 hr 20 mins)
Part 2 – (1 hr 20 mins)

Crossley debated against William Lane Craig before here and he debated against Michael Bird as well (part 1, part 2).

NDP scandal: New Democrat Party forced to return $344,000 of illegal donations

August 30, 2012 | by Wintery Knight | Link | Original Link

Political map of Canada

Ezra Levant writing on Brian Lilley's Lilley Pad blog.

Excerpt:

> The largest case of illegal elections financing in Canadian history was revealed this week — $344,000 illegally funnelled to the NDP by big Canadian labour unions.
>
> In Canada it is against the law for corporations or unions to give any money to political parties. Only individuals are allowed to, and that amount is capped at about $1,100 a person.
>
> But the NDP set up a scheme to dodge the law. They sold extremely expensive "sponsorships" at their big convention to labour unions, $344,000 worth.
>
> […]Here's the thing, it's all illegal. You can be fined $5,000 or even sentenced to five years in jail. But that didn't happen. Elections Canada didn't prosecute under the law. It didn't take the NDP or the unions to court. It didn't demand penalties or convictions. It just let the NDP and the unions go — a freebie.
>
> And the media? Crickets. Where are the calls for prosecution — not just of the NDP, but of the unions? Where are the screaming headlines, the in-depth mini-documentaries, the front-page stories? The biggest case of election financing fraud in Canadian history — and not a single front page?

I think that if the Republicans ever get into power down here again, the first thing they

should do is ban all campaign contributions by large corporations and unions. Large corporations and most unions give almost exclusively to the political left. We should shut them down here.

Video and transcript of the Paul Ryan speech at the GOP 2012 convention

August 30, 2012 | by Wintery Knight | Link | Original Link

Remarks by Vice Presidential candidate Paul Ryan at the 2012 GOP Convention in Tampa, Florida.

Part 1 of 3:

Part 2 of 3:

Part 3 of 3:

Full text is here.

First excerpt on Obama's stimulus waste:

> Right now, 23 million men and women are struggling to find work. Twenty-three million people, unemployed or underemployed. Nearly one in six Americans is living in poverty. Millions of young Americans have graduated from college during the Obama presidency, ready to use their gifts and get moving in life. Half of them can't find the work they studied for, or any work at all.
>
> So here's the question: Without a change in leadership, why would the next four years be any different from the last four years?
>
> The first troubling sign came with the stimulus. It was President Obama's first and best shot at fixing the economy, at a time when he got everything he wanted under one-party rule. It cost $831 billion – the largest one-time expenditure ever by our federal government.
>
> It went to companies like Solyndra, with their gold-plated connections, subsidized jobs, and make-believe markets. The stimulus was a case of political patronage, corporate welfare, and cronyism at their worst. You, the working men and women of this country, were cut out of the deal.
>
> What did the taxpayers get out of the Obama stimulus? More debt. That money wasn't just spent and wasted – it was *borrowed*, spent, and wasted.
>
> Maybe the greatest waste of all was time. Here we were, faced with a massive job crisis – so deep that if everyone out of work stood in single file, that unemployment line would stretch the length of the entire American continent. You would think that any president, whatever his party, would make job creation, and nothing else, his first order of economic business.
>
> But this president didn't do that. Instead, we got a long, divisive, all-or-nothing attempt to put the federal government in charge of health care.
>
> Obamacare comes to more than two thousand pages of rules, mandates, taxes, fees, and fines that have no place in a free country.
>
> The president has declared that the debate over government-controlled health

> care is over. That will come as news to the millions of Americans who will elect Mitt Romney so we can repeal Obamacare.
>
> And the biggest, coldest power play of all in Obamacare came at the expense of the elderly.
>
> You see, even with all the hidden taxes to pay for the health care takeover, even with new taxes on nearly a million small businesses, the planners in Washington still didn't have enough money. They needed more. They needed hundreds of billions more. So, they just took it all away from Medicare. Seven hundred and sixteen billion dollars, funneled out of Medicare by President Obama. An obligation we have to our parents and grandparents is being sacrificed, all to pay for a new entitlement we didn't even ask for. The greatest threat to Medicare is Obamacare, and we're going to stop it.

And another on Obama's spending and debt:

> Obamacare, as much as anything else, explains why a presidency that began with such anticipation now comes to such a disappointing close.
>
> It began with a financial crisis; it ends with a job crisis.
>
> It began with a housing crisis they alone didn't cause; it ends with a housing crisis they didn't correct.
>
> It began with a perfect Triple-A credit rating for the United States; it ends with a downgraded America.
>
> It all started off with stirring speeches, Greek columns, the thrill of something new. Now all that's left is a presidency adrift, surviving on slogans that already seem tired, grasping at a moment that has already passed, like a ship trying to sail on yesterday's wind.
>
> President Obama was asked not long ago to reflect on any mistakes he might have made. He said, well, "I haven't communicated enough." He said his job is to "tell a story to the American people" – as if *that's* the whole problem here? He needs to talk more, and *we*need to be better listeners?
>
> Ladies and gentlemen, these past four years we have suffered no shortage of words in the White House. What's missing is leadership in the White House. And the story that Barack Obama does tell, forever shifting blame to the last administration, is getting old. The man assumed office almost four years ago – isn't it about time he assumed responsibility?
>
> In this generation, a defining responsibility of government is to steer our nation clear of a debt crisis while there is still time. Back in 2008, candidate Obama called a $10 trillion national debt "unpatriotic" – serious talk from what looked to be a serious reformer.
>
> Yet by his own decisions, President Obama has added more debt than any other president before him, and more than all the troubled governments of Europe

> combined. One president, one term, $5 trillion in new debt.
>
> He created a bipartisan debt commission. They came back with an urgent report. He thanked them, sent them on their way, and then did exactly nothing.
>
> Republicans stepped up with good-faith reforms and solutions equal to the problems. How did the president respond? By doing nothing – nothing except to dodge and demagogue the issue.
>
> So here we are, $16 trillion in debt and still he does nothing. In Europe, massive debts have put entire governments at risk of collapse, and still he does nothing. And all we have heard from this president and his team are attacks on anyone who dares to point out the obvious.
>
> They have no answer to this simple reality: We need to stop spending money we don't have.

And one more on Obama's assault on job creators:

> After four years of government trying to divide up the wealth, we will get America creating wealth again. With tax fairness and regulatory reform, we'll put government back on the side of the men and women who create jobs, and the men and women who need jobs.
>
> My Mom started a small business, and I've seen what it takes. Mom was 50 when my Dad died. She got on a bus every weekday for years, and rode 40 miles each morning to Madison. She earned a new degree and learned new skills to start her small business. It wasn't just a new livelihood. It was a new life. And it transformed my Mom from a widow in grief to a small businesswoman whose happiness wasn't just in the past. Her work gave her hope. It made our family proud. And to this day, my Mom is my role model.
>
> **Behind every small business, there's a story worth knowing. All the corner shops in our towns and cities, the restaurants, cleaners, gyms, hair salons, hardware stores – these didn't come out of nowhere. A lot of heart goes into each one. And if small businesspeople say they made it on their own, all they are saying is that nobody else worked seven days a week in their place. Nobody showed up in their place to open the door at five in the morning. Nobody did their thinking, and worrying, and sweating for them. After all that work, and in a bad economy, it sure doesn't help to hear from their president that government gets the credit. What they deserve to hear is the truth: Yes, you did build that.**
>
> We have a plan for a stronger middle class, with the goal of generating 12 million new jobs over the next four years.
>
> In a clean break from the Obama years, and frankly from the years before this president, we will keep federal spending at 20 percent of GDP, or less. That is enough. The choice is whether to put hard limits on economic growth, or hard

> limits on the size of government, and we choose to limit government.

And one more on liberty and personal responsibility:

> College graduates should not have to live out their 20s in their childhood bedrooms, staring up at fading Obama posters and wondering when they can move out and get going with life. Everyone who feels stuck in the Obama economy is right to focus on the here and now. And I hope you understand this too, if you're feeling left out or passed by: You have not failed, your leaders have failed you.
>
> **None of us have to settle for the best this administration offers – a dull, adventureless journey from one entitlement to the next, a government-planned life, a country where everything is free but us.**
>
> **Listen to the way we're spoken to already, as if everyone is stuck in some class or station in life, victims of circumstances beyond our control, with government there to help us cope with our fate.**
>
> **It's the exact opposite of everything I learned growing up in Wisconsin, or at college in Ohio. When I was waiting tables, washing dishes, or mowing lawns for money, I never thought of myself as stuck in some station in life. I was on my own path, my own journey, an American journey where I could think for myself, decide for myself, define happiness for myself. That's what we do in this country. That's the American Dream. That's freedom, and I'll take it any day over the supervision and sanctimony of the central planners.**

This was the speech of the convention, which is why I am blogging on it. Don't miss it.

New study: Obama’s new automobile regulations will raise car prices by $4,800

August 30, 2012 | by Wintery Knight | Link | Original Link

From the Daily Caller.

Excerpt:

> Obama’s astonishing takeover of the automobile industry, unlike his health care takeover, occurred without even a vote of Congress. Yesterday, to much fanfare, the administration announced its astonishing ratcheting up of vehicle fuel economy standards to 54.5 miles per gallon by 2025. These regulations — I call them “ObamaCar” — were accomplished not through open debate in Congress, but through corrupt backroom deals in which our elected officials had no voice.
>
> ObamaCar will, according to the administration’s own estimates, add over $2,900 to the price of a new car. This low-ball estimate was created by using a brand-new cost-estimating methodology that uses arbitrary factors to produce a cost estimate for a vehicle considerably lower than the total cost of its individual parts.
>
> An analysis by the National Automobile Dealers Association (NADA), which followed the government’s usual methodology, found the cost impact would be $4,800 per vehicle. But NADA also found that even the usual methodology has historically underestimated the actual cost impact by an enormous factor. NADA suggests a worst-case scenario of a $12,349-per-vehicle price jump.
>
> Even using the EPA’s official low-ball estimate, NADA’s analysis found that “6.8 million licensed drivers will no longer qualify for a loan on that least expensive new vehicle.” So people will buy used cars, or drive their old cars longer. There will be less efficient, dirtier vehicles on the road, and reliable, affordable transportation will be much less accessible.
>
> And if you can afford a car under ObamaCar, will it actually be a car you want to drive? Even the vaunted hybrids only get around 35 to 40 miles per gallon — if you’re light on the gas. Cato scholar Pat Michaels has observed that the third-generation Prius maxes out at 50 miles per gallon, but its vehicle weight is too heavy to get much more than that. At 54.5 miles per gallon, cars will be smaller, lighter, less crash-worthy, less powerful, and less comfortable than you can even imagine. A nice-sized family vehicle? Good luck.

Obama is trying to save the environment. So what if your cars cost more? So what if lighter cars don’t protect you as well as a heavier car? You peasants shouldn’t be driving a car at all – cars are only for your betters in government! It’s Obamanomics.

Paul Ryan fact check: Was the GM plant in Janesville closed in 2008 or 2009?

August 30, 2012 | by Wintery Knight | Link | Original Link

CNS News sets the record straight.

Excerpt:

> In his speech accepting the Republican nomination for vice president, Rep. Paul Ryan (R-Wisc.) told the story of a General Motors factory in his hometown of Janesville, Wisconsin, accusing President Obama of failing to keep a campaign promise to keep the plant open.
>
> "My home state voted for President Obama. When he talked about change, many people liked the sound of it, especially in Janesville, where we were about to lose a major factory," Ryan said Wednesday.
>
> "Right there at that plant, candidate Obama said: 'I believe that if our government is there to support you … this plant will be here for another hundred years.' That's what he said in 2008. Well, as it turned out, that plant didn't last another year. It is locked up and empty to this day. And that's how it is in so many towns today, where the recovery that was promised is nowhere in sight."
>
> Ryan's claims received widespread criticism from the Obama campaign and many liberal media outlets.
>
> "He even dishonestly attacked Barack Obama for the closing of a GM plant in his hometown of Janesville, Wisconsin — a plant that closed in December 2008 under George W. Bush," Obama campaign manager Jim Messina said in an email to supporters Thursday.
>
> The Washington Post official 'fact-checker' also attacked Ryan's claims as false, using the same line about the plant closing in 2008:
>
> "That's not true. The plant was closed in December 2008, before Obama was sworn in," Post fact-checker Glenn Kessler wrote Wednesday. "Obama gave his speech in February 2008, and he did say those words. But Ryan's phrasing, referring to the fact the plant did not last another year, certainly suggests it closed in 2009, when Obama was president."
>
> But Ryan is in fact correct. The Janesville GM factory stopped production of SUVs in December 2008 and closed its doors for good in 2009 – less than one year after Obama promised to keep it open for another hundred years.
>
> In his speech in Janesville, then-Sen. Obama said that if elected, he would support retooling the Janesville plant to make energy efficient vehicles. Despite his administration's carefully shepherding of GM through bankruptcy, the Janesville plant has not been retooled to make anything.
>
> […]"Full-size sport utility vehicle production has ended at the local General

> Motors plant, but medium-duty truck production is continuing—not starting—in Janesville. And it likely will continue into May, when the lights finally go off in the facility that has been producing vehicles since 1923" the paper reported February 2, 2009.
>
> In fact, a GM press release confirms that the automaker had placed the Janesville plant on "standby capacity" – an auto industry term for a factory no longer producing vehicles – in May of 2009.
>
> "Janesville was placed on standby capacity in May 2009 and will remain in that status," GM said in a June 26, 2009 press release.
>
> In sum, the Janesville plant shut down the majority of its production in December 2008, laying off all but 50 of its approximately 1,200 employees. Those 50 employees remained at the plant making Isuzu trucks for several more months as the plant's operations wound down.
>
> As a candidate, President Obama promised to support re-tooling the factory to make more fuel-efficient vehicles and keep the plant open for a century. The plant, however, remains closed.

It's amazing how the left-wing media just flat out lies in order to protect the incompetence of this community organizer President. Recall also that the economy started to decline when the massive spending started under the new Pelosi-Reid plan in January of 2007. Deficits went from $160 billion to about $600 billion as soon as the Democrats took over, and then well over a trillion in 2009 when Democrats controlled the House, Senate and Presidency.

More responses to criticisms of the speech at the liberal Washington Post.

How to respond to postmodernism, relativism, subjectivism, pluralism and skepticism

August 30, 2012 | by Wintery Knight | Link | Original Link

Four articles from Paul Copan over at the UK site "BeThinking". Each article responds to a different slogan that you might hear if you're dealing with non-Christians on the street.

"That's just your interpretation!"

Some of his possible responses:

- Gently ask, 'Do you mean that your interpretation should be preferred over mine? If so, I'd like to know why you have chosen your interpretation over mine. You must have a good reason.'
- Remind your friend that you are willing to give reasons for your position and that you are not simply taking a particular viewpoint arbitrarily.
- Try to discern if people toss out this slogan because they don't like your interpretation. Remind them that there are many truths we have to accept even if we don't like them.
- 'There are no facts, only interpretations' is a statement that is presented as a fact. If it is just an interpretation, then there is no reason to take it seriously.

More responses are here.

"You Christians are intolerant!"

Some of his possible responses:

- If you say that the Christian view is bad because it is exclusive, then you are also at that exact moment doing the very thing that you are saying is bad. You have to be exclusive to say that something is bad, since you exclude it from being good by calling it bad.
- There is a difference, a clear difference between tolerance and truth. They are often confused. We should hold to what we believe with integrity but also support the rights of others to disagree with our viewpoint.
- Sincerely believing something doesn't make it true. You can be sincere, but sincerely wrong. If I get onto a plane and sincerely believe that it won't crash then it does, then my sincerity is quite hopeless. It won't change the facts. Our beliefs, regardless of how deeply they are held, have no effect on reality.

More responses are here.

"That's true for you, but not for me!"

Some of his possible responses:

- If my belief is only true for *me*, then why isn't your belief only true for you? Aren't

you saying you want me to believe the same thing you do?
- You say that no belief is true for everyone, but you want everyone to believe what you do.
- You're making universal claims that relativism is *true* and absolutism is *false*. You can't in the same breath say, 'Nothing is universally true' *and* 'My view is universally true.' Relativism falsifies itself. It claims there is *one* position that is true – *relativism!*

More responses are here.

"If you were born in India, you'd be a Hindu!"

Some of his possible responses:

- Just because there are many different religious answers and systems doesn't automatically mean pluralism is correct.
- If we are culturally conditioned regarding our religious beliefs, then why should the religious pluralist think his view is *less* arbitrary or conditioned than the exclusivist's?
- If the Christian needs to justify Christianity's claims, the pluralist's views need just as much substantiation.

More responses are here.

And a bonus: "How do you know you're not wrong?".

Being a Christian is fun because you get to think about things at the same deep level that you think about anything else in life. Christianity isn't about rituals, community and feelings. It's about truth.

In case you want to see this in action with yours truly, check this out.

When a feminist says she wants to get married, does she really want marriage?

August 31, 2012 | by Wintery Knight | Link | Original Link

Here's an interesting article about marriage from the Sydney Morning Herald.

Excerpt:

> Where different promises are made, the man undertakes great responsibility and this is also the wording of the book, as it has always been. The biblical teaching is that the promise made voluntarily by the bride to submit to her husband is matched by the even more onerous obligation which the husband must undertake to act towards his wife as Christ has loved the church. The Bible says that this obligation is ultimately measured by the self-sacrifice of Christ in dying on the cross.
>
> This is not an invitation to bossiness, let alone abuse. A husband who uses the wife's promise in this way stands condemned for betraying his own sworn obligations. The husband is to take responsibility for his wife and family in a Christ-like way. Her "submission" is her voluntary acceptance of this pattern of living together, her glad recognition that this is what he intends to bring to the marriage and that it is for her good, his good and the good of children born to them. She is going to accept him as a man who has chosen the self-discipline and commitment of marriage for her sake and for their children. At a time when women rightly complain that they cannot get men to commit, here is a pattern which demands real commitment all the way.
>
> Secular views of marriage are driven by a destructive individualism and libertarianism. This philosophy is inconsistent with the reality of long-term relationships such as marriage and family life.
>
> Referring to "partners" rather than husband or wife gives no special challenge to the man to demonstrate the masculine qualities which he brings to a marriage.
>
> Men have to accept the limitations imposed by a commitment to marry. Both husband and wife must exercise self-control and the acceptance of boundaries, although in ways which are somewhat distinctive. My greatest interest in the draft service the diocese has prepared is the high standard being proposed for men.
>
> When a husband promises to love his wife as Christ loved the church and give himself up for her, he is declaring his intention to be a man of strength and self-control for her benefit and for the benefit of any children born to them. Such qualities, properly exercised in the spirit of self-sacrifice, enhance the feminine and personal qualities of his wife.
>
> Each marriage and each era will work this out differently. It is in this context and

> this alone that the revised marriage service enables a woman to promise submission.
>
> Her submission rises out of his submission to Christ.
>
> It is a pity that the present discussion has been so overtly political. Instead of mocking or acting horrified, we should engage in a serious and respectful debate about marriage and about the responsibilities of the men and women who become husbands and wives. The Bible contains great wisdom on this fundamental relationship.
>
> The rush to embrace libertarian and individualistic philosophy means that we miss some of the key relational elements of being human, elements which make for our wellbeing and happiness. It's time to rethink marriage from first principles. It really matters.

I'm happy with only having to do my male roles and not having to worry too much about being fun, non-judgmental and passive. I am a male, and that means setting out a plan, protecting, providing and building people up on moral and spiritual things. I want a woman who takes seriously her obligations to me as a woman, too. To nurture, affirm and support me by doing the things that she is better at. I want her to listen to me and be willing to do the things I ask her to do, because I need her to help me. I wouldn't want a marriage between "partners". I want a husband-and-wife marriage.

I wonder if young men realize how small and insignificant physical beauty and premarital sex are compared to seeing a woman listening to you and then achieving your goals using tactics you had never imagined. What men should value is intelligence and submissiveness. *Men are alone in the world, and sex with a girl who refuses to follow your lead and support you emotionally isn't going to fix that loneliness.* Men need to feel like leaders, and the more talented and intelligent the woman is in following her man, the happier that man will be. A man comes with very specific needs from a woman and marriage is set up in a way that those needs are met so that he can fulfill his roles and take responsibility for his family.

The real happiness from women comes from when they take you seriously as a man and care about the things that you care about enough to do something about it, even if it means having to study hard things and working to achieve your goals. That's what really makes a woman good. A man needs a partner he can depend on to support him.

Armed bystander stops stabbing outside school

August 31, 2012 | by Wintery Knight | Link | Original Link

From ABC News. (H/T All American Blogger)

> A woman is in critical condition after she was stabbed outside her child's school Tuesday morning.
>
> The attack happened around 10:00 a.m. Tuesday outside the Bonham Academy on St. Mary's Street. Teresa Barron, 38, had just dropped off her child at the school when the child's father showed up, and the two got into an argument. The child's father, 38-year-old Roberto Barron allegedly then stabbed the woman several times in the upper body and neck area.
>
> Police say a bystander who happened to be a concealed handgun license holder pulled his weapon and ordered Barron to drop the knife. Barron surrendered and was taken into custody by the bystander and a school district officer.
>
> The woman was taken to San Antonio Military Medical Center.
>
> Barron was arrested for aggravated assault, and is in jail on a $150,000 bond.

It's a good thing it was outside the school, because I would think that defensive handgun use is prohibited inside the school, and the stabbing would not have been prevented there.

2016 is the top conservative political documentary of all time

August 31, 2012 | by Wintery Knight | Link | Original Link

From liberal web site The Blaze.

Excerpt:

> The Dinesh D'Souza Obama documentary exploring the president's alleged anti-colonialist roots has become a top 10 movie in America.
>
> Movie theaters across the country reported their box office numbers on Monday. Those numbers spelled good news for "2016: Obama's America." How good? The movie is now the #7 film in the country, in front of highly-rated "Premium Rush" and "Hope Springs," starring Meryl Streep.
>
> But the news gets even better. According to Filmfans.com, the documentary is now "the highest-earning conservative political documentary ever."
>
> But wait, there's more. According to the Washington Post, the film is also the sixth-most popular documentary of any kind:
>
> This *was* the second-lowest-grossing weekend of the year, but the film's $9.3 million seven-week haul is still enough to make it the most successful conservative political documentary of all time, as defined and ranked by Box Office Mojo. It's also the sixth-highest-grossing all-around political documentary, ranking behind four Michael Moore films and "An Inconvenient Truth," which starred Al Gore and glaciers.

A review of the movie"2016: Obama's America" – a project of Indian-American Christian apologist Dinesh D'Souza.

Excerpt:

> My wife and I went to see a showing of the film at the Regal theater in Winter Park Village. It was about three-quarters full. We didn't go with a group but noticed that many in the audience came in groups of more than just a single couple. There were also examples of grandparents, parents and children. At the end of the film, the audience broke into loud and spontaneous applause. Was this only due to the film "playing to the choir"?
>
> In part perhaps, but in the next few weeks I predict it will reach the audience we most need to reach -young voters -and are the most avid movie goers and the least likely to be reached by more traditional methods.
>
> […]Dinesh D'Souza is an engaging, attractive dark skinned immigrant from India whose life and career follows in parallel with Obama's – born and married in the same years and able to judge American institutions and values from a third world perspective.

The film does not accept any of the more controversial attacks on Obama's biography but seeks to explain how his own words and thoughts cited continually throughout the film from the President's autobiography 'Dreams From My Father' are a thread running through his policies and are at the core of what motivates him and makes him intent on downsizing, disarming, and apologizing for America, abandoning out allies such as Great Britain, Israel and Poland, fawning and bowing before Muslim despots, and seeking to create a society where individual initiative, ambition and self-reliance are replaced by the collectivist goals that have failed all over the world.

[…]*2016* examines Barack Obama's relationship with his absent father who was an activist in the anti-colonial struggle against the British, and following independence became part of that elite clique who fostered a one party bureaucratic, socialist state in Kenya that crushed all local government and free initiative resulting in a downward spiral of economic stagnation and poverty shared by Obama's half-brother in the slums of Nairobi.

[…]We follow the President's life in where his mother remarries a local Indonesian man (also a Muslim, Lolo Soteiro), who eventually becomes a successful businessman and in so doing, alienates Obama and his mother who believe they are betraying the socialist and collectivist legacy of Barack Obama Senior.

This psychological portrait is one that makes sense and can be understood and appreciated by many young people who are themselves the product of homes in which there is divorce and remarriage.

The President's endorsement of the "Occupy Wall Street" movement extends to the world stage in which the antagonists are portrayed as the 99% – the occupied and the exploitative 1 % – the occupiers.

Obama emotionally sympathizes with all those he places in the category of the victims of the colonialist white European nations (the one-percenters), returning the bust of Churchill, the gift of the British government, praising Islam as a progressive force while denying its oppression of women, children, non-Muslim minorities, his policies towards third world nations such as Mexico and Brazil whom his policies have encouraged to develop their oil industries while retarding our own, secretly supporting Argentina in its attempt to seize the Falkland Islands from Britain by force, pressuring Israel (regarded too as "occupiers") to retreat from defensible borders, total passivity in failing to support the millions of demonstrators in the street against the tyrannical regime of the mullahs in Iran, etc.

Most damning of all are the close associations of the President and his most important mentors ignored by the media and Senator John McCain's campaign in 2004 – convicted terrorist Bill Ayers, the "Reverend Wright (God Damn America and its "Liberation Theology" church in Chicago) and long-time Communist party

> member Frank Marshall Davis.
>
> This is a powerful film that will exert a profound influence. As the billboards and advertisements on television proclaim… Love Him or Hate Him, you need to see this film.

Does that sound good or what? There's a lot of talk about how this election needs to be about grown up ideas. I think that these long form arguments elevate, rather than lower, the debate. We need to have adult conversations about who Obama is and what his policies are intended to achieve – what is his end game?

Trailer 1 of 3:

Trailer 2 of 3:

Trailer 3 of 3:

Here's Dinesh explaining what his movie is about at CPAC 2012:

Keep in mind that Dinesh is a Christian apologist and has debated people like Christopher Hitchens. This is his newest project.

Go see it!

Friday night movie: The Dam Busters (1955)

August 31, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.6/10]

IMDB median rating: [8/10]

Description:

> The Dam Busters is a 1955 British Second World War war film starring Michael Redgrave and Richard Todd and directed by Michael Anderson. The film recreates the true story of Operation Chastise when in 1943 the RAF's 617 Squadron attacked the Möhne, Eder and Sorpe dams in Germany with Wallis's "bouncing bomb". The film was based on the books The Dam Busters (1951) by Paul Brickhill and Enemy Coast Ahead (1946) by Guy Gibson.
>
> The film falls into two parts. The first part involves Wallis struggling to develop a means of attacking Germany's dams in the hope of crippling German heavy industry. Working for the Ministry of Aircraft Production, as well as doing his own job at Vickers, he works feverishly to make practical his theory of a bouncing bomb which would skip over the water to avoid protective torpedo nets. When it came into contact with the dam, it would sink before exploding, making it much more destructive.

WARNING: the Lancaster pilots have a dog for their mascot and the dog has a name that may be offensive to some viewers. (It's the n-word). So, don't watch the movie if you can't handle that. But this is a World War 2 classic.

The Lancaster bomber:

AVRO Lancaster Heavy Bomber
AVRO Lancaster specifications:

> General
>
> - Length: 69 ft. 5 in.
> - Wingspan: 102 ft.
> - Height: 19 ft. 7 in.
> - Wing Area: 1,300 sq. ft.
> - Empty Weight: 36,828 lbs.
> - Loaded Weight: 63,000 lbs.
> - Crew: 7
>
> Performance
>
> - 4 × Rolls-Royce Merlin XX V12 engines, 1,280 hp each
> - Range: 3,000 miles
> - Max Speed: 280 mph
> - Ceiling: 23,500 ft.
>
> Armament
>
> - Guns: 8 × .30 in (7.7 mm) machine guns
> - Bombs: 14,000 lbs. depending on range, 1 x 22,000-lb. Grand Slam bomb

It's one of my favorite war movies about the best-regarded heavy bomber of the war, on either side. (The B-17 is a close second)

Mark Regnerus's research vindicated by University of Texas at Austin

September 1, 2012 | by Wintery Knight | Link | Original Link

From Focus on the Family.

Excerpt:

> The University of Texas at Austin announced Wednesday that a sociologist who has been excoriated by some in the media over a study showing that parents' homosexual relationships can have negative effects on children is innocent of academic misconduct
>
> Dr. Mark Regnerus made headlines in June, when his study was published in the widely respected journal Social Science Research. According to his findings, children raised by homosexual parents are more likely than those raised by married heterosexual parents to suffer from poor impulse control, depression and suicidal thoughts, require mental health therapy; identify themselves as homosexual; choose cohabitation; be unfaithful to partners; contract sexually transmitted diseases; be sexually molested; have lower income levels; drink to get drunk; and smoke tobacco and marijuana.
>
> As a result, a gay-activist blogger accused Regnerus of academic fraud, demanding in July that the university release all his research material and emails with fellow sociologists.
>
> Administrators conducted an exhaustive pre-investigation to determine whether a more comprehensive one would be necessary — including hiring a consultant who formerly ran the Office of Research Integrity at the U.S. Department of Health and Human Services to oversee the process.
>
> After sequestering all of Regnerus's correspondence and conducting both written and oral interviews with him and his accuser, Scott Rosensweig, Research Integrity Officer Robert Peterson wrote in an Aug. 24 memorandum to administrators, "None of the allegations of scientific misconduct put forth … were substantiated either by physical data, written materials, or by information provided during the interviews.
>
> "Since no evidence was provided to indicate that the behavior at issue rose to a level of scientific misconduct, no formal investigation is warranted."

There was not even enough evidence of misconduct for an investigation. Regnerus was very thorough and conscientious in the conduct of research – it was original, quality work. And this is in liberal Austin, no less! But will this be reported in the media as much as the accusations were? Not bloody likely.

Gay activist who vandalized Chick-Fil-A restaurant will not be charged

September 1, 2012 | by Wintery Knight | Link | Original Link

From the radically left-wing Los Angeles Times.

Excerpt:

> A West Hollywood artist who allegedly painted the words "Tastes like hate" on the side of a Chick-fil-A restaurant because of the company president's stand against gay marraige won't be criminally charged by the L.A. County district attorney's office.
>
> Prosecutors announced Wednesday they were declining to press charges after Torrance police submitted a case.
>
> […]The graffiti — accompanied by a representation of a cow holding a paint brush — appeared during a week of demonstrations at Chick-fil-A restaurants nationwide sparked by company President Dan Cathy's public denunciation of same-sex marriage.
>
> Discovered about 6:40 a.m. Friday at the Hawthorne Boulevard restaurant, the vandalism coincided with "National Same-Sex Kiss Day," when gay rights supporters asked couples to take photos of themselves kissing at Chick-fil-A locations.
>
> Castro took credit for the graffiti in an interview with the Huffington Post.
>
> "Everybody is entitled to free speech, but it seems like for the gay tribe, this is more of an issue of equal rights — human rights," he said. "I'm against what these people stand for, what this company stands for. They're trying to take away what little rights we already have."
>
> A day before he was taken into custody, Castro made another statement to the Huffington Post, telling his critics the act was "meant to further a discussion about tolerance and acceptance."

> "I didn't use violence. I used paint. Artists for centuries have expressed their opinions through this medium and I am no different," he said. "I am happy to pay for the costs of repainting the wall, but I am not — nor will I ever be — happy to sit quietly at the back of the bus."

The left-wing media thinks that a crime can only be a hate crime when the right kind of people are victimized. Oh, oh, and Christians aren't being persecuted for their faith in places like the Sudan, China or North Korea, either. Only secular leftist people can be victims, don't you know? And if you disagree with this double standard then you're a racist bigot, so there.

Republican platform adds resolution to audit the Federal Reserve

September 2, 2012 | by Wintery Knight | Link | Original Link

From San Francisco Chronicle.

Excerpt:

> The Republican Party platform promises to replace what it criticizes as President Barack Obama's debt-swollen entitlement society with "a roaring job market to match a roaring economy."
>
> The platform reflects the influence of presidential candidate Mitt Romney, offering as the remedy for the nation's economic ills a familiar recipe of low taxes, light regulation, expanded oil drilling and free enterprise. It vows to reduce personal and corporate taxes, repeal Obama's health-care law, promote small businesses and avoid taxpayer bailouts of troubled financial institutions.
>
> The 62-page roadmap, approved by a voice vote of the delegates yesterday at the party's national convention in Tampa, Florida, promotes expanded trade and accuses the Obama administration of "a virtual surrender" to commercial rival China. The Asian country is stealing American trade secrets, manipulating its currency to make its exports cheaper, and hampering U.S. firms trying to sell to Chinese customers, the Republicans say.
>
> Republicans call for banks to be "well-capitalized" and pledge to repeal the 2010 Dodd-Frank financial-regulation law.
>
> Along with major economic policy shifts, the Republicans vow to transform the size and scope of government. Trillion- dollar annual budget deficits and mounting debt are harming job growth, they say. "The massive federal government is structurally and financially broken," the platform says.
>
> […]**Echoing a longtime demand of libertarian Representative Ron Paul of Texas, the platform calls for an annual audit of the Federal Reserve. And it proposes a commission to investigate "possible ways to set a fixed value for the dollar," a reference to a potential revival of the gold standard.**
>
> **The campaign document labels Fannie Mae and Freddie Mac, government-sponsored mortgage financiers, as "a primary cause of the housing crisis because their implicit government guarantee allowed them to avoid market discipline and make risky investments."**
>
> **That view, though widely held among conservatives, has been rejected by the Federal Reserve and three of the four Republicans on the government commission that investigated the 2008 financial meltdown.**

Note that both Mitt Romney and Paul Ryan support auditing the Federal Reserve.

> Presumptive Republican nominee Mitt Romney called for increased transparency at the Federal Reserve Monday, voicing his strongest support yet for an audit of the country's central banking system.
>
> **"The answer is yes to that, very plain and simple," Romney responded, when asked by a supporter at a New Hampshire town hall whether it was time to audit the Fed. "The Federal Reserve should be accountable. We should see what they're doing."**
>
> The mark aligns Romney with a growing cadre of conservatives championing an audit of the Federal Reserve, a group led by Romney's primary opponent Ron Paul and his acolytes. Earlier this month,Paul's "Audit The Fed" bill passed the House of Representatives with overwhelming bipartisan support.
>
> **After taking a more measured stance on the issue during the Republican primaries, Romney has slowly moved to embrace a Federal Reserve audit as support for the issue grows with voters across the political spectrum. Romney's new running mate, Wisconsin Congressman Paul Ryan, has been a vocal critic of the central banking system, and is listed as one of 268 co-sponsors of Paul's bill.**

Romney has also said that he will not reappoint Ben Bernanke if he is elected. I think that Ron Paul supporters should be able to decide who to support in the general election based on this information.

Who pays the bill for handing out $2.2 trillion of entitlements per year?

September 2, 2012 | by Wintery Knight | Link | Original Link

This article by Nicholas Eberstadt is the most popular article on the Wall Street Journal right now. I found it through Doug Ross' links.

First, a quick review of the entitlement situation:

> What is monumentally new about the American state today is the vast empire of entitlement payments that it protects, manages and finances. Within living memory, the federal government has become an entitlements machine. As a day-to-day operation, it devotes more attention and resources to the public transfer of money, goods and services to individual citizens than to any other objective, spending more than for all other ends combined.
>
> The growth of entitlement payments over the past half-century has been breathtaking. In 1960, U.S. government transfers to individuals totaled about $24 billion in current dollars, according to the Bureau of Economic Analysis. By 2010 that total was almost 100 times as large. Even after adjusting for inflation and population growth, entitlement transfers to individuals have grown 727% over the past half-century, rising at an average rate of about 4% a year.
>
> **In 2010 alone, government at all levels oversaw a transfer of over $2.2 trillion in money, goods and services. The burden of these entitlements came to slightly more than $7,200 for every person in America. Scaled against a notional family of four, the average entitlements burden for that year alone approached $29,000.**

Government's job used to be to handle responsibilities like roads and bridges or like defending us at home and to defending our national interests abroad. But now government seems to be more interested in redistributing money taken from job creating businesses and their workers to those don't create jobs and those who don't work. What happens when you punish people for trying to succeed and reward people who don't even try?

This is the result of wealth redistribution:

> **The proud self-reliance that struck Alexis de Tocqueville in his visit to the U.S. in the early 1830s extended to personal finances. The American "individualism" about which he wrote did not exclude social cooperation—the young nation was a hotbed of civic associations and voluntary organizations. But in an environment bursting with opportunity, American men and women viewed themselves as accountable for their own situation through their own achievements—a novel outlook at that time, markedly different from the prevailing**

> **attitudes of the Old World (or at least the Continent).**
>
> **The corollaries of this American ethos were, on the one hand, an affinity for personal enterprise and industry and, on the other, a horror of dependency and contempt for anything that smacked of a mendicant mentality. Although many Americans in earlier times were poor, even people in fairly desperate circumstances were known to refuse help or handouts as an affront to their dignity and independence. People who subsisted on public resources were known as "paupers," and provision for them was a local undertaking. Neither beneficiaries nor recipients held the condition of pauperism in high regard.**
>
> Overcoming America's historic cultural resistance to government entitlements has been a long and formidable endeavor. But as we know today, this resistance did not ultimately prove an insurmountable obstacle to establishing mass public entitlements and normalizing the entitlement lifestyle. The U.S. is now on the verge of a symbolic threshold: the point at which more than half of all American households receive and accept transfer benefits from the government. From cradle to grave, a treasure chest of government-supplied benefits is there for the taking for every American citizen—and exercising one's legal rights to these many blandishments is now part of the American way of life.
>
> **As Americans opt to reward themselves ever more lavishly with entitlement benefits, the question of how to pay for these government transfers inescapably comes to the fore. Citizens have become ever more broad-minded about the propriety of tapping new sources of finance for supporting their appetite for more entitlements. The taker mentality has thus ineluctably gravitated toward taking from a pool of citizens who can offer no resistance to such schemes: the unborn descendants of today's entitlement-seeking population.**

We used to want to earn our own success. Now we want to live on the backs of children not yet born. Slavery is a horrible crime, no matter where it is practiced. Isn't it a kind of slavery to live it up now and then pass the bill for it on to generations not even born yet? It strikes me as a kind of slavery – taking an unfair portion of the income of others so that we can live at a higher standard than what we can afford through our own choices and labor.

Couple arrested for using legally-owned gun to defend home from burglars

September 3, 2012 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail, which I found very disturbing.

Excerpt:

> - Police received 999 call from a man who said he had opened fire on four intruders
> - Man, 35, fired shotgun at gang who broke into his isolated cottage in Melton Mowbray, Leicestershire
> - He and his wife, 43, called police immediately after shooting
> - Couple arrested on suspicion of GBH and four men detained on suspicion of aggravated burglary
>
> The couple arrested after two suspected burglars were shot during a midnight break-in at their remote rural home had been robbed three or four times already, it has been reported.
>
> Police descended on the farm cottage in Melton Mowbray, Leicestershire after receiving a 999 call from a man who said he had opened fire on four intruders.
>
> The homeowners, who have been named as 35-year-old Andy Ferrie and his wife Tracey, 43, were understood to have called police immediately after the shooting, at 12.26am yesterday morning.
>
> Mr Ferrie's mother Susan Spilner told the Sun newspaper: 'This is not the first time they have been broken into. They have been robbed three or four times. One of them was quite nasty."
>
> […]The man who dialed 999 told officers he had fired his shotgun, which is licensed and legally held, and the intruders fled.
>
> Minutes later, ambulance paramedics were called to treat a man with shotgun injuries. The 999 call was understood to have been made by one of the suspected burglars.
>
> A second man was treated for shotgun injuries after he walked into Leicester Royal Infirmary, around ten miles from the cottage.
>
> Neither of the men's injuries were said to be serious.
>
> **The householder and his wife were arrested on suspicion of causing grievous bodily harm.**
>
> **He is thought to be a farm worker who kept the shotgun legally as part of his job. Four men in their 20s and 30s were also arrested on suspicion of aggravated burglary.**

I checked the population of their city and it's 25,000 people. That is just scary to me.

The UK took a hard turn to the left over the last couple of decades under the Labor Party. They believed that disarming law-abiding citizens in order to protect criminals would reduce crime. In addition to arresting law-abiding citizens, the UK also has strict gun control that prevents law-abiding citizens from defending themselves from criminals. For example, in 1997, the UK banned handguns. The result of that policy was that violent crime more than doubled in the four years following the ban. So not only is there this initiative on the secular left to coddle criminals with lighter sentences, but there is also the effort by the secular left to disarm law-abiding citizens.

Men in particular are meant to use force against criminals. But that distinctive male role is not OK with the UK Labor Party, who do not like distinctions of good and evil in any case. This inability to protect their families is stressful for men. Many men are not interested in getting married because of this stress. The whole point of marriage for a man is that there will be respect for his male roles from his family as well as from the state. The refusal of the government to punish criminals is not reassuring to men. And the government's tendency to not let men do what needs to be done and use their judgment in cases like this just makes marriage seem less attractive to us.

Democrats resort to busing in people to fill up DNC convention

September 4, 2012 | by Wintery Knight | Link | Original Link

Note: Romney's March total includes RNC money, even though he hadn't joined forces with the committee yet due to the GOP primary.

Romney vs. Obama: campaign fundraising
Fox News reports.

Excerpt:

> College students from across North Carolina will arrive in Charlotte by the busload. Same with members of predominantly black churches in neighboring South Carolina.
>
> Their goal: help fill a 74,000-seat outdoor stadium to capacity when President Obama accepts the Democratic nomination Thursday night.
>
> […]Democrats have been fretting for months over whether the president can draw a capacity crowd at Bank of America Stadium. Polls show voter enthusiasm is down, as are Obama's crowds for his battleground state campaign rallies.
>
> […]Thursday's event is certain to draw comparisons to 2008, when Obama accepted the Democratic nomination before a capacity crowd at an 84,000-seat stadium in Denver. There was little concern back then over whether Obama would fill the stadium, in part because he was easily attracting tens of thousands of people to his campaign rallies across the country.
>
> This time around, Obama's crowds are far smaller. He drew his biggest audience at his campaign kick-off rally in May, a 14,000-person crowd at Ohio State University. About 13,000 people attended Obama's rally at the University of Colorado in Boulder Sunday.

Not surprising, given that Obama kicked-off his re-election campaign in a half-empty stadium. The only people who are going to vote for this guy are the people who are

dependent on federal government welfare and spending.

And look, Obama is losing badly in the fundraising, too: (links removed)

> Mitt Romney has extended his lead over President Obama in this election cycle's race for campaign cash.
>
> The Republican had almost $186 million in cash on hand at the end of July, compared to $124 million for Obama — figures that include donations made to the campaigns, party committees and joint fundraising efforts.
>
> […]In 2008, Obama shattered all previous fundraising records by bringing in an excess of $750 million — far more than John McCain.
>
> But Romney has dashed any hopes Obama might have harbored for continued dominance in 2012. The past two months have been particularly fruitful for the Republican challenger, as Romney's team produced a haul of more than $200 million in June and July.
>
> Over the same time period, Obama's campaign mustered a comparatively modest $147 million.
>
> And the gap between the candidates may be widening. The Romney campaign has said its fundraising totals have increased in recent days after the addition of Rep. Paul Ryan to the ticket.
>
> Republicans have an even bigger money advantage when spending by super PACs and other outside groups is included.
>
> According to the latest data from the Center for Responsive Politics, outside conservative groups have spent $221.5 million this cycle, while liberal groups have spent $55.6 million.

Romney wasn't my first, second, or third choice for the Republican nomination, but he sure knows how to raise money. We'll see whether he is able to hold his own in debates with Obama. I think that given the choice between four years of disastrous economic failures and four years of flip-flops, America will take the flip-flops.

UPDATE: Looks like the busing in wasn't enough: Obama is moving his speech from the 74,000 capacity venue to a 20,000 capacity venue. Well, that's one way to get a packed house.

What does the Bible say about the death penalty?

September 4, 2012 | by Wintery Knight | Link | Original Link

Note: This post has a twin post which talks about the evidence against capital punishment from science.

First, let's take a look at what the Bible says in general about capital punishment, using this lecture featuring eminent theologian Wayne Grudem.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

A PDF sermon outline is here.

Topics:

- what kinds of crimes might require CP?
- what did God say to Noah about CP?
- what does it mean that man is made in the image of God?
- is CP just about taking revenge?
- what does CP say about the value of human life?
- does CP apply to animals, too?
- could the statements supporting CP be understood as symbolic?
- one purpose of CP is to protecting the public
- another purpose of CP is to deter further wrongdoing
- but the Biblical purpose of CP is to achieve justice by retribution
- does the Pope make a good argument against CP?
- what is the role of civil government in achieving retribution?
- do people in Heaven who are sinless desire God to judge sinners?
- should crimes involving property alone be subject to CP?

- is the Mosaic law relevant for deciding which crimes are capital today?
- should violent crimes where no one dies be subject to CP?
- is CP widespread in the world? why or why not?
- what are some objections to CP from the Bible?
- how do you respond to those objections to CP?
- should civil government also turn the other cheek for all crimes?
- what is the "whole life ethic" and is it Biblical?
- what do academic studies show about the deterrence effect of CP?
- how often have innocent people been executed in the USA?
- should there be a higher burden of proof for CP convictions?

You can find more talks by Wayne Grudem here.

What about the woman caught in adultery?

Some people like to bring up the woman caught in adultery as proof that Jesus opposed capital punishment. But that passage of the Bible was added much later after the canon was decided.

Daniel B. Wallace is an eminent New Testament scholar who also teaches at Dallas Theological Seminary, an extremely conservative seminary.

About Dr. Wallace:

> Dr. Daniel B. Wallace
>
> - Professor of New Testament Studies
> - B.A., Biola University, 1975; Th.M., Dallas Theological Seminary, 1979; Ph.D., 1995.

> Dr. Wallace influences students across the country through his textbook on intermediate Greek grammar. It is used in more than two-thirds of the nation's schools that teach that subject. He is the senior New Testament editor of the *NET Bible* and coeditor of the *NET-Nestle Greek-English diglot*. Recently his scholarship has shifted from syntactical and text-critical issues to more specific work in John, Mark, and nascent Christology. However he still works extensively in textual criticism, and has founded The Center for the Study of New Testament Manuscripts, an institute with an initial purpose to preserve Scripture by taking digital photographs of all known Greek New Testament manuscripts. His postdoctoral work includes work on Greek grammar at Tyndale House in Cambridge and textual criticism studies at the Institut für Neutestamentliche Textforschung in Münster.

And Dr. Wallace writes about the passage in John on Bible.org.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of

Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that “a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God’s testimony.” He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort’s view has not had nearly the impact that Alford’s did.

For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John’s Gospel (P66 and P75) lack these verses. They skip from John 7:52 to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing).The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance. He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).

When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.

[…]It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it

> not being an authentic part of John's Gospel is rock solid.But textual criticism is not based on external evidence alone; there is also the internal evidence to consider. This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written; *transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

As this debate between Peter Williams and Bart Ehrman shows, there are only TWO disputed passages in the entire NT that are theologically significant. The long ending of Mark and this adultery passage. A good case can be made for the long ending of Mark, but it's best not to assume it in a debate. The adultery passage is practically impossible to defend as authentic. Dr. Wallace talks about both passages in this Parchment & Pen article. Wallace has also debated Bart Ehrman in the Greer-Heard Forum. What that debate showed is that the New Testament text is actually quite reliable except for those two passages, but it's important to be honest about the two places that are not well supported.

Thomas Sowell and the New York Times agree on why Obama fails

September 4, 2012 | by Wintery Knight | Link | Original Link

Thomas Sowell

An editorial by famous economist Thomas Sowell at Right Wing News. (H/T Doug Ross' links)

Excerpt:

> After reading Barack Obama's book "Dreams from My Father," it became painfully clear that he has not been searching for the truth, because he assumed from an early age that he had already found the truth — and now it was just a question of filling in the details and deciding how to change things.
>
> Obama did not simply happen to encounter a lot of people on the far left fringe during his life. As he spells out in his book, he actively sought out such people. There is no hint of the slightest curiosity on his part about other visions of the world that might be weighed against the vision he had seized upon.
>
> As Professor Richard Epstein of the University of Chicago Law School has pointed out, Obama made no effort to take part in the marketplace of ideas with other faculty members when he was teaching a law course there. What would be the point, if he already knew the truth and knew that they were wrong?
>
> This would be a remarkable position to take, even for a learned scholar who had already spent decades canvassing a vast amount of information and views on many subjects. But Obama was already doctrinaire at a very early age — and ill-informed or misinformed on both history and economics.
>
> […]Barack Obama is one of those people who are often wrong but never in doubt. When he burst upon the national political scene as a presidential candidate in 2008, even some conservatives were impressed by his confidence.
>
> But confident ignorance is one of the most dangerous qualities in a leader of a nation. If he has the rhetorical skills to inspire the same confidence in himself by

> others, then you have the ingredients for national disaster.

He gives a few examples, but he's not the only person to have noticed this. Consider the following article from the radically left-wing New York Times, of all places. (H/T Forbes)

Excerpt:

> But even those loyal to Mr. Obama say that his quest for excellence can bleed into cockiness and that he tends to overestimate his capabilities. The cloistered nature of the White House amplifies those tendencies, said Matthew Dowd, a former adviser to President George W. Bush, adding that the same thing happened to his former boss. "There's a reinforcing quality," he said, a tendency for presidents to think, I'm the best at this.
>
> […]He may not always be as good at everything as he thinks, including politics. While Mr. Obama has given himself high grades for his tenure in the White House — including a "solid B-plus" for his first year — many voters don't agree, citing everything from his handling of the economy to his unfulfilled pledge that he would be able to unite Washington to his claim that he would achieve Israeli-Palestinian peace.
>
> Those were not the only times Mr. Obama may have overestimated himself: he has also had a habit of warning new hires that he would be able to do their jobs better than they could.
>
> "I think that I'm a better speechwriter than my speechwriters," Mr. Obama told Patrick Gaspard, his political director, at the start of the 2008 campaign, according to The New Yorker. "I know more about policies on any particular issue than my policy directors. And I'll tell you right now that I'm going to think I'm a better political director than my political director."
>
> Though he never ran a large organization before becoming president, he initially dismissed internal concerns about management and ended up with a factionalized White House and a fuzzier decision-making process than many top aides wanted.

What you have in Barack Obama is a man who governs based on his own intuitions and sense of superiority. He's not grounded in facts, and he's not willing to listen to anyone else's view if it disagrees with those intuitions. He wants to be praised without having achieved anything praiseworthy. Where did this attitude of ignorance coupled with arrogance come from? Would you hire a person like that to work with you?

UPDATE: Stuart Schneiderman answers the question I asked about where this attitude comes from:

> Obsessed with perfection and fixated on his own prowess Obama is suffering from vainglorious self-puffery, self-esteem to the nth power.
>
> **He is the reductio ad absurdum of a culture of self-esteem that does not reward achievement but that teaches people to keep telling themselves**

> **that they are the best, regardless.**
>
> When the most powerful leader of the free world needs to compete and win at making chili or playing pool he is trying to find a sliver of evidence that would protect him against the encroaching suspicion that his greatness is just a bunch of media-drive hype.

Angus Menuge’s ontological argument against naturalism

September 4, 2012 | by Wintery Knight | Link | Original Link

Dr. Angus Menuge

Here’s some information about Dr. Menuge:

> Dr. Angus Menuge joined Concordia University Wisconsin in 1991. He earned his BA from the University of Warwick, England, and his MA and Ph.D. degrees from the University of Wisconsin-Madison, where he studied philosophy, computer science and psychology. Menuge’s dissertation was on the philosophy of action explanation, and his current research interests include philosophy of mind, philosophy of science and Christian apologetics.
>
> In 2003, Menuge earned a Diploma in Christian Apologetics from the International Academy of Apologetics, Evangelism and Human Rights, which meets each July in Strasbourg, France. His thesis, a critique of scientific materialism, went on to become the book *Agents Under Fire: Materialism and the Rationality of Science* (Lanham, MD: Rowman and Littlefield, 2004).
>
> Menuge has also edited volumes on C. S. Lewis, Christ and culture and the vocation of scientist, and has written several Bible studies. He is currently working with Joel Heck (Concordia Texas) on a collection of essays defining Lutheran education for the 21st century, entitled *Learning at the Foot of the Cross* (Concordia University Press, forthcoming).
>
> A frequent speaker, Menuge has given presentations on Christianity and culture, science and vocation, philosophy of mind, C. S. Lewis, Intelligent Design and the case against scientific materialism. He is a member of the Evangelical Philosophical Society.

Dr. Menuge presented a paper at the real Evangelical Philosophical Society conference for students and professors of philosophy, and you can download the paper here in Word

format. (here's a PDF version I made)

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is awesome for those of you looking for some good discussion of one of the issues in the area of philosophy of mind. The thing you need to know about Dr. Menuge is that he is quite strong and forceful in his writing and presentation, and to me, that is an excellent thing for a scholar to be. He reminds me of Doug Geivett, Paul Copan and William Lane Craig. Very direct, and very confrontational. You can even read an account of his debate with that radical atheist nutcase P.Z. Myers in 2008 here.

By the way, the epistemological argument from reason (P(R) on N & E is low) is the argument made by the famous Christian philosopher Alvin Plantinga. I blogged about that argument before here. You need to know BOTH of these arguments. Plantinga also spoke at the EPS apologetics conference, explaining exactly this argument.

Powerpoint slideshow

But there is more than just the paper! At the EPS apologetics conference, which is meant for lay people as well as scholars, he presented this Powerpoint slideshow, (here's a PDF version I made) . The slides are easier to understand than the paper, but the paper is not too bad.

And here is another article by Dr. Menuge on intelligent design.

Federal judge approves sex change for convicted murderer

September 5, 2012 | by Wintery Knight | Link | Original Link

Wes from Reason to Stand send me this disturbing story from ABC News.

Excerpt: (links removed)

> A federal judge ordered Massachusetts prison officials today to providesexual reassignment surgery for a convicted murderer, calling it the only way to correct the "prolonged violation" of the inmate's Constitutional right against cruel and unusual punishment.
>
> Michelle Kosilek, who was born Robert, had filed a lawsuit against the Massachusetts Department of Corrections, seeking an injunction that would require prison officials to grant her the sexual reassignment surgery that was recommended by prison doctors as treatment for her gender identity disorder. Robert Kosilek was convicted in the 1990 strangulation death of his wife, Cheryl.
>
> U.S. District Judge Mark Wolf ruled that Michelle Kosilek, who lives as a woman in a male prison facility, had experienced "intense mental anguish," and said there was a "serious medical need" for her to have the procedure.
>
> "It has long been well-established that it is cruel for prison officials to permit an inmate to suffer unnecessarily from a serious medical need," the judge wrote in his 128-page decision.
>
> He called it "unusual" to treat a prisoner with gender identity disorder differently "than the numerous inmates suffering from more familiar forms of mental illness."
>
> […]**Kosilek first sued the Department of Corrections in 2000. Two years later, Wolf ruled she should receive treatment for gender identity disorder, which included hormones. Kosilek sued again in 2005, again asking for gender reassignment surgery.**
>
> Frances Cohen, an attorney for Kosilek, told the Associated Press the judge made a courageous and thoughtful ruling.

I wonder if Frances Cohen and the judge are going to be paying for the surgery? No – that's for the taxpayers to handle, I guess.

This tomfoolery is actually not unprecedented. Sex changes are taxpayer-funded in Ontario, Canada – where they have single-payer health care. And criminals are all eligible for sex changes in the UK under their NHS socialized medicine system. Here's a recent case from last year, where a convicted killer is getting a sex change, courtesy of the NHS. (Which means the UK taxpayer)

Democrat platform supports subsidizing abortions with taxpayer dollars

September 5, 2012 | by Wintery Knight | Link | Original Link

From the Weekly Standard.

Excerpt:

> **The 2012 Democratic party will officially adopt an extreme position on the issue of abortion on Tuesday. According to a copy of the party platform, which was released online just before midnight on Monday, "The Democratic Party strongly and unequivocally supports *Roe* v. *Wade* and a woman's right to make decisions regarding her pregnancy, including a safe and legal abortion, regardless of ability to pay."**
>
> **That last part–"regardless of ability to pay"–is an endorsement of taxpayer-funded abortions, a policy that President Obama has personally endorsed. Obama wants Medicaid to pay directly for elective abortions, and Obamacare will allow beneficiaries to use federal subsidies to purchase health care plans that cover elective abortions.**
>
> […]The 2012 Democratic party also endorses an unrestricted right to abortion-on-demand. According to the platform, on the issue of abortion "there is no place for politicians or government to get in the way." In 2003, Obama was asked if he was pro-choice on abortion "in all situations including the late-term thing." Obama replied: "I'm pro-choice."
>
> In 1992, then-Democratic presidential candidate Bill Clinton tried to soften the party's image on abortion by expressing his desire to make abortion "safe, legal, and rare." Although the Democratic party platforms in 2000 and 2004 stated the party's goal is to make abortion "rare," the 2012 platform makes no such claim. "In 2000, the Democratic platform said the party's goal was 'to make abortion less necessary and more rare,'" Jeff Jacoby wrote in the *Boston Globe* last week. "The 2004 platform declared, 'Abortion should be safe, legal, and rare.' But even calling for abortion to be 'rare' is now too much for the Democrats' platform committee, which deleted the word in 2008." The word "rare" did not make a comeback in 2012.

Surprise! The Democrats want pro-life taxpayers to subsidize abortions. And what happens to the frequency of an action when people are paid to do it? You get more of it. The Democrats aren't "pro-choice", they're pro-abortion. They want more abortion. And why not? The largest provider of abortions in America, Planned Parenthood, will be getting these taxpayer subsidies, and they'll just turn around and give political contributions back to the Democrats. Everybody wins! Well, everybody except the babies

and the taxpayers.

We are in a recession. Is this really the time to be sending women a message that if they are irresponsible with sex, that they will get a bailout from taxpayers who are already struggling to pay their own bills? How is that fair? People have to stop taking risks that are likely to incur costs – costs that may be passed on to their more responsible neighbors. We need to encourage people to take responsibility for their own actions and to make wise choices.

Does the death penalty deter crime?

September 5, 2012 | by Wintery Knight | Link | Original Link

This post has a twin post which talks about the evidence against capital punishment from the Bible.

Why do people support the death penalty? Because research conducted by multiple teams of scholars at multiple universities have shown that capital punishment deters crime.

Excerpt:

> "Science does really draw a conclusion. It did. There is no question about it," said Naci Mocan, an economics professor at the University of Colorado at Denver. "The conclusion is there is a deterrent effect."
>
> A 2003 study he co-authored, and a 2006 study that re-examined the data, found that each execution results in five fewer homicides, and commuting a death sentence means five more homicides. "The results are robust, they don't really go away," he said. "I oppose the death penalty. But my results show that the death penalty (deters) — what am I going to do, hide them?"
>
> Statistical studies like his are among a dozen papers since 2001 that capital punishment has deterrent effects. They all explore the same basic theory — if the cost of something (be it the purchase of an apple or the act of killing someone) becomes too high, people will change their behavior (forego apples or shy from murder).

And specifically:

> • Each execution deters an average of 18 murders, according to a 2003 nationwide study by professors at Emory University. (Other studies have estimated the deterred murders per execution at three, five and 14).
>
> • The Illinois moratorium on executions in 2000 led to 150 additional homicides over four years following, according to a 2006 study by professors at the University of Houston.
>
> • Speeding up executions would strengthen the deterrent effect. For every 2.75 years cut from time spent on death row, one murder would be prevented, according to a 2004 study by an Emory University professor.

In case anyone is wondering what sort of crimes are deterred by the death penalty, you can read this graphic description of a recent death-penalty crime.

What sort of crimes are eligible for the death penalty?

Here's an example of a dealth-penalty eligible crime from the Hartford Courant. (WARNING: graphic!)

Excerpt:

> A Superior Court jury today sentenced Steven Hayes to death for the murders of Jennifer Hawke-Petit and her daughters, Hayley and Michaela, during a seven-hour home invasion, robbery and arson at their Cheshire home in July 2007.
>
> Outside the courthouse after the verdicts, Hawke-Petit's father, the Rev. Richard Hawke, said "There are some people who do not deserve to live in God's world."
>
> Asked what he had in his heart, Dr. William Petit Jr. struggled with his answer. "….Probably many of you have kids," he said, pausing to choke back tears. "Michaela was an 11-year-old little girl…tortured and killed in her own bedroom, surrounded by her stuffed animals…."
>
> Petit then talked about his daughter Hayley's bright future and her strength and the children that his wife, Jennifer, helped.
>
> "So, I was really thinking of the tremendous loss" during the verdict, Petit said, adding that he was pleased with it, but "mostly I was sad for the loss we have all suffered."
>
> Asked if he thought there'd be closure now, Petit said, "There's never closure. There's a hole…. with jagged edges…that may smooth out with time, but the hole in your heart and the hole in your soul" remains.
>
> "This isn't about revenge," Petit said. "Vengeance belongs to the Lord. This is about justice."
>
> […]The jury sentenced Hayes to death on six counts: killing Hawke-Petit and Michaela and Hayley in the course of a single action; killing a child under the age of 16; killing Hawke-Petit in the course of a kidnapping; killing Hayley in the course of a kidnapping; killing Michaela in the course of a kidnapping; and killing Hawke-Petit in the course of a sexual assault.
>
> […]Hayes, 47, of Winsted, was convicted Oct. 5 of breaking into the Petit home, beating Petit, tying up and torturing the family as Hayes and another man ransacked the home for cash and valuables and tortured the family for seven hours. Testimony during Hayes' trial showed that at one point in the break-in, Hayes forced Hawke-Petit to go to the bank to withdraw money. During that time, according to testimony, Komisarjevsky sexually assaulted Michaela Petit, 11.
>
> When Hawke-Petit and Hayes returned from the bank, Hayes raped and strangled Hawke-Petit. The house was doused with gasoline and set on fire as the intruders fled, testimony showed. Hayley, 17, and Michaela died of smoke inhalation.
>
> […]Prosecutors used the words of Hayes' younger brother Matthew to counter testimony that home-invasion crime was an aberration in Hayes otherwise troubled but basically nonviolent life.
>
> Matthew Hayes portrayed his brother as a conniving, sadistic, violent thief who saw Matthew take countless beatings from his brutal father for Steven Hayes' misdeeds. At one point, Steven Hayes held a gun to Matthew's head, according

> to the statement, which was given to state police after the home invasion.
>
> Examples of Hayes' sadistic behavior toward his brother included hooking Matthew to the garage door by his belt and raising the door up and down, and holding Matthew's hand to a red-hot burner. Matthew said his brother's life of crime was not a result of bad parenting or poor childhood. He said Hayes never learned to take responsibility for his actions.

Sometimes, I think that we have stopped judging others *because* we do not want to be judged *ourselves*. We hope that by not judging anyone, that we will somehow escape being judged by anyone – especially by God himself. The opposition to punishing the guilty is, I think, really just a way of expressing our desire to do away with punishment entirely. We would rather have the freedom to sin with impunity than to protect the victims of sinfulness from harm. We want to escape responsibility for anything we do that harms others.

Dennis Prager has a neat expression from Rabbinical literature that describes the problem with people who are anti-death-penalty: "those who are kind to the cruel, will be cruel to the kind".

I actually consider the death penalty to be an important test of whether a person is a Christian or not, because it shows what they think about the serious of moral crimes, and whether they accept what research says, and what the Bible says, instead of valuing peer approval more than justice. It tells you how seriously a person feels about their own sinfulness. Death penalty supporters don't view sinners as victims – they view victims as victims, and they believe that evil people need to be punished. It's hard for me to see how someone can claim to be a Christian and oppose justice.

Alvin Plantinga’s evolutionary argument against naturalism

September 5, 2012 | by Wintery Knight | Link | Original Link

Here’s the link at First Things. (H/T ECM)

Excerpt:

> Although Darwin admits he wasn’t much of an abstract thinker, he could not shake the “inward conviction” that “the Universe is not the result of chance.” Unlike many who followed after him, he appears to have intuitively understood the paradox of combining naturalism with evolutionary theory: If evolution is a non-teleological process, it undercuts our ability to trust that we can form true beliefs and convictions.
>
> To have trustworthy convictions, we have to have properly functioning noetic equipment (i.e., a brain, spinal cord, sensory apparatus, etc., that recognize reality). But can a strictly materialistic, non-teleological, evolutionary process produce such reliable equipment? The philosopher Alvin Plantinga, one of the greatest thinkers of our era, thinks the answer is “no.” Although his argument is too complex and tightly argued to be adequately summarized, the basic outline of his case shows his point to be all but incontrovertible.
>
> Plantinga claims, not that evolution is untrue, but that the truth of evolution is incompatible with the truth of naturalism. “As far as I can see, God certainly could have used Darwinian processes to create the living world and direct it as he wanted to go,” he argues. “Hence evolution as such does not imply that there is no direction in the history of life.”
>
> What does imply that life is not directed, he adds, is not evolutionary theory itself, but the theory of *unguided* evolution: the idea that “neither God nor any other person has taken a hand in guiding, directing, or orchestrating the course of evolution.” For our purposes, we’ll call this view “evolutionary naturalism.”
>
> Evolutionary naturalism assumes that our noetic equipment developed as it did because it had some survival value or reproductive advantage. Unguided evolution does not select for belief except insofar as the belief improves the chances of survival. The truth of a belief is irrelevant, as long as it produces an evolutionary advantage.

If you want to hear Plantinga giving a lecture on this same argument live on a university campus, click here.

Summary:

> In a talk given at The Veritas Forum at Oregon State University in January 1996, Professor Alvin Plantinga presents an evolutionary argument *against* naturalism.

> In a complex, but important philosophical argument, he argues that it is not rational to accept belief in naturalism and evolution, because such beliefs provide no rational basis for trusting our cognitive faculties.

Or you can watch the videos that I posted a while back.

The argument first appeared in his book "Warrant and Proper Function", published by Oxford University Press in 1993. It should be noted that Plantinga is a Calvinist, a supporter of middle knowledge, and has lent some support to intelligent design. In his latter years, he has turned feisty, and writes snarky things to confound atheists.

Edmonton man drives in front of a speeding car to protect four children

September 6, 2012 | by Wintery Knight | Link | Original Link

Map of Canada with cities
From Sun News, Canada's conservative news source.

Excerpt:

> Darrell Krushelnicki didn't think twice when he pulled his Hummer in front of a speeding car in order to prevent four children crossing the street from being mowed down.
>
> The 46-year-old from Taber, AB, was in Edmonton on Friday visiting his parents and had just dropped off his girlfriend at Bonnie Doon Mall. He was stopped at an intersection around 4:30 p.m. when he noticed four kids, ranging in age from three to 16, crossing the street at a marked crosswalk with overhead amber lights.
>
> All the vehicles on the road had stopped, except for a car whizzing up in the far lane. Krushelnicki noticed the car travelling at high speed so he crept into the intersection with his 2006 Hummer.
>
> "I could just tell it was a bad scenario that was going to take place," said Krushelnicki, who works in the oilpatch in northern BC "The driver did not see the crosswalk, the amber light flashing, nor the posted speed limit and he appeared to be on a hand-held device of some sort
> talking."
>
> In order to prevent a disaster, Krushelnicki drove his vehicle in front of the speeding car, which hit the front end of his passenger side, pushing in the

> bumper and grill.
>
> Aside from a loose tooth, Krushelnicki wasn’t injured in the collision. He immediately jumped out of his vehicle to make sure the shaken kids — who watched the crash occur within about 15 or 20 feet of them — were okay.
>
> “They were all shaken up. I couldn’t see any visual injuries. I asked them to go sit on the lawn of the church on the corner,” said Krushelnicki, noting some of the kids were crying.

The driver of the speeding car has been charged with dangerous driving.

Democrats boo as God and Jerusalem are put back in their party platform

September 6, 2012 | by Wintery Knight | Link | Original Link

The leftist Washington post explains.

Excerpt:

> President Barack Obama personally intervened to order Democrats to change language in their party platform to add a mention of God and declare that Jerusalem is the capital of Israel, campaign officials said Wednesday.
>
> Scrambling to end the furor, Democrats abruptly changed the platform early Wednesday evening to reinstate language from the 2008 platform that said "we need a government that stands up for the hopes, values and interests of working people and gives everyone willing to work hard the chance to make the most of their God-given potential." Mitt Romney and other Republicans had seized on the omission to criticize the Democrats.
>
> Democrats also restored 2008 language on Jerusalem, declaring the city "is and will remain the capital of Israel. The parties have agreed that Jerusalem is a matter for final status negotiations. It should remain an undivided city accessible to people of all faiths."
>
> […]The platform changes did not sit well with some Democratic delegates gathered in Charlotte, N.C., for the party's three-day convention. Many in the audience booed after the convention chairman, Los Angeles Mayor Antonio Villaraigosa, ruled that the amendments had been approved despite the fact that a large group of delegates had objected. He called for a vote three times before ruling.
>
> The revisions came as Obama struggles to win support from white working-class voters, many of whom have strong religious beliefs, and as Republicans try to woo Jewish voters and contributors away from the Democratic Party. Republicans claimed the platform omissions suggested Obama was weak in his defense of Israel and out of touch with mainstream Americans.

Democrats support abortion and gay marriage. And they haven't done enough to protect Israel from Iran. But they have to pretend that they are moral people and good allies of Israel in order to get elected, even if their hearts are elsewhere. I understand that.

New peer-reviewed paper in Nature falsifies Darwinian junk DNA prediction

September 6, 2012 | by Wintery Knight | Link | Original Link

First, let's see what Darwinian evolutionists say about junk DNA, before we look at what the experiments show.

Here's biologist John Timmer to explain the orthodox Darwinian view of DNA from 2007:

> Personally, I fall into the "it's all junk" end of the spectrum. If almost all of these sequences are not conserved by evolution, and we haven't found a function for any of them yet, it's hard to see how the "none of it's junk" view can be maintained. There's also an absence of support for the intervening view, again because of a lack of evidence for actual utility. The genomes of closely related species have revealed very few genes added from non-coding DNA, and all of the structural RNA we've found has very specific sequence requirements. The all-junk view, in contrast, is consistent with current data.

Got that? According to Darwinists, DNA is almost entirely junk – this is what is consistent with the view that creatures have evolved through a process of random mutation and selection. The estimates that I've seen from evolutionary biologists range from 95% to 99% junk. Now let's compare the religion with the lab experiments and separate myth from fact.

Now let's compare that with intelligent design theorist William Dembski's view of "junk" DNA, from 1998:

> Even if we have a reliable criterion for detecting design, and even if that criterion tells us that biological systems are designed, it seems that determining a biological system to be designed is akin to shrugging our shoulders and saying God did it. The fear is that admitting design as an explanation will stifle scientific inquiry, that scientists will stop investigating difficult problems because they have a sufficient explanation already.
>
> But design is not a science stopper. Indeed, design can foster inquiry where traditional evolutionary approaches obstruct it. Consider the term "junk DNA." Implicit in this term is the view that because the genome of an organism has been cobbled together through a long, undirected evolutionary process, the genome is a patchwork of which only limited portions are essential to the organism. **Thus on an evolutionary view we expect a lot of useless DNA. If, on the other hand, organisms are designed, we expect DNA, as much as possible, to exhibit function. And indeed, the most recent findings suggest that designating DNA as "junk" merely cloaks our current lack of knowledge about function… Design encourages scientists to look for function where evolution discourages it.**

Now let's look at the experimental evidence and see whose prediction was right.

Evolution News reports on a new peer-reviewed paper published in Nature, the top peer-reviewed science journal. (H/T ECM)

Excerpt:

> A groundbreaking paper in *Nature* reports the results of the Encyclopedia of DNA Elements (ENCODE) project, which has detected evidence of function for the "vast majority" of the human genome. Titled "An integrated encyclopedia of DNA elements in the human genome," the paper finds an "unprecedented number of functional elements," where "a surprisingly large amount of the human genome" appears functional. Based upon current knowledge, the paper concludes that at least 80% of the human genome is now known to be functional:
>
> The Encyclopedia of DNA Elements (ENCODE) project has systematically mapped regions of transcription, transcription factor association, chromatin structure and histone modification. **These data enabled us to assign biochemical functions for 80% of the genome**, in particular outside of the well-studied protein-coding regions. Many discovered candidate regulatory elements are physically associated with one another and with expressed genes, providing new insights into the mechanisms of gene regulation.
>
> (The ENCODE Project Consortium, "An integrated encyclopedia of DNA elements in the human genome," *Nature*, Vol. 489:57-74 (September 6, 2012) (emphasis added))

If you doubt Evolution News, we can always turn the ultra-leftist Los Angeles Times, reporting on the same study. (H/T Wes from Reason to Stand)

Excerpt:

> The $123-million effort involved more than 400 scientists and more than 1,600 experiments during five years of work. If presented graphically, the data generated so far would cover a poster 30 kilometers wide and 16 meters high, Birney has estimated.
>
> This is still just a start — akin to "grainy images beamed back to Earth by the first satellite," said Dr. Eric Green, director of the National Human Genome Research Institute, which funded ENCODE. But already, it's throwing up surprises.
>
> **Strikingly, the data overturn old ideas that the bulk of DNA in our cells is useless — albeit inoffensive — junk just carried along for the evolutionary ride. Back in 2003 when the human genome was published, scientists estimated that less than 2% of it carries instructions for making proteins, and many of them thought the rest didn't do very much.**
>
> **But the new analysis shows that more than 80% of the human genome is active in at least one biological process that the ENCODE team**

> **measured. Nearly every part of it could end up being active when the data are more complete.**

Here's the ultra-left-wing New York Times, confirming the statement I made earlier about the dogma of the Darwinians:

> The discoveries were published on Wednesday in six papers in the journal Nature and in 24 papers in Genome Research and Genome Biology. In addition, The Journal of Biological Chemistry is publishing six review articles, and Science is publishing yet another article.
>
> […]**The thought before the start of the project, said Thomas Gingeras, an Encode researcher from Cold Spring Harbor Laboratory, was that only 5 to 10 percent of the DNA in a human being was actually being used.**
>
> **The big surprise was not only that almost all of the DNA is used but also that a large proportion of it is gene switches. Before Encode, said Dr. John Stamatoyannopoulos, a University of Washington scientist who was part of the project, "if you had said half of the genome and probably more has instructions for turning genes on and off, I don't think people would have believed you."**

It's just another prediction of Darwinian orthodoxy falsified by experimental evidence published in the top scientific peer-reviewed journal. Will this cause Darwinians to revise their theory to fit the evidence? Not likely. Their motivations for clinging to naturalism, the religion that undergirds Darwinism, are entirely beyond correction by evidence.

I wonder what people like P.Z. Myers and Larry Moran do when their religion comes into conflict with scientific evidence from lab experiments? Do they bitterly cling to their mythology from the 19th century? Or do they adjust their worldview to be in line with the progress of science?

Let Richard Dawkins explain evolution and the role of evidence:

> "My argument will be that Darwinism is the only known theory that is in principle capable of explaining certain aspects of life. If I am right it means that, even if there were no actual evidence in favour of the Darwinian theory (there is, of course) we should still be justified in preferring it over all rival theories." — p. 287, Blind Watchmaker" (1986)

Or Richard Lewontin:

> "Our willingness to accept [naturalistic] scientific claims that are against common sense is the key to an understanding of the real struggle between science and the supernatural. We take the side of science *in spite of* the patent absurdity of some of its constructs, *in spite of* its failure to fulfill many of its extravagant promises of health and life, *in spite of* the tolerance of the scientific community for unsubstantiated just-so stories, because we have a prior

> commitment, a commitment to materialism. It is not that the methods and institutions of science somehow compel us to accept a material explanation of the phenomenal world but, on the contrary, that we are forced by our own a priori adherence to material causes to create an apparatus of investigation and a set of concepts that produce material explanations, not matter how counterintuitive, no matter how mystifying to the uninitiated. Moreover, that materialism is absolute, for we cannot allow a divine foot in the door." (Richard Lewontin in *New York Review of Books*, January 9, 1997, p. 28)

Junk DNA isn't the only battle in the long war between atheism and scientific evidence. Naturalists fought the Big Bang tooth and nail, trying to save their eternal universe from the progress of science. Naturalists invented the now discredited oscillating model of the universe in order to "explain" the evidence for a cosmic beginning. Naturalists invented the unobservable, untestable multiverse to "explain" the cosmic fine-tuning. Aliens are posited in order to "explain" the origin of life. Precursor fossils are invented without evidence in order to "explain" the Cambrian era explosion in complexity. And so on.

Evidence doesn't matter to people who are motivated by naturalistic faith. Like belief in a flat-Earth, the delusion of naturalism is not accountable to scientific evidence. They believe what they want to believe. It's not up for debate. For some people like Richard Dawkins, a prior lifestyle commitment makes theism (and the moral law!) an impossibility *a priori*. But rational people know that believing something just so that your actions are "justified" doesn't make what you believe *true*.

For the intelligent design take on junk DNA, check out this article. To see who was right about predicting whether "vestigial organs" like the appendix have function, check out this post. You can find more predictions that follow from intelligent design right here.

New study: marriage drops probability of child poverty by 82%

September 6, 2012 | by Wintery Knight | Link | Original Link

From the Heritage Foundation.

Excerpt: (links removed)

> The collapse of marriage, along with a dramatic rise in births to single women, is the most important cause of childhood poverty—but government policy doesn't reflect that reality, according to a special report released today by The Heritage Foundation.
>
> Nearly three out of four poor families with children in America are headed by single parents. When a child's father is married to his mother, however, the probability of the child's living in poverty drops by 82 percent.
>
> Robert Rector, Heritage's senior research fellow in domestic policy, provides a brief overview of each state with unique data and 14 charts per state, while also updating his years of related research in the special report titled "Marriage: America's Greatest Weapon Against Child Poverty." Heritage's study, including a national charts slideshow, arrives a week before the Census Bureau's annual report on poverty, which is expected to show another increase.
>
> "Policymakers on the state and national levels recognize that education reduces poverty, but they're largely unaware that marriage is an equally strong anti-poverty weapon," says Rector, a nationally recognized authority on the U.S. welfare system.
>
> In Florida, for example, white families headed by single parents are five times more likely to be poor than those headed by married couples. In Illinois, the poverty rate for a single mother with only a high school diploma is 39.5 percent, compared with 8 percent for a married couple with the same education.
>
> The rate of births to unmarried women—now four out of every 10 babies overall, five out of 10 for Hispanics, and seven out of 10 for blacks—has soared since the mid-1960s, when President Lyndon Johnson launched the War on Poverty. Births outside marriage are mostly to less-educated women—sadly, those with the least ability to support children.
>
> While more Americans grow dependent on welfare, government fails to communicate the benefits of marriage even as it warns young people not to smoke, do drugs, have "unsafe" sex, or drop out of school. Rector calls this "tragic."

If we as a society were really serious about solving poverty, we would stop focusing on redistributing wealth and employing unionized drones, and start focusing on promoting marriage. But that's not politically correct, since feminists don't like marriage. And that's

why it doesn’t happen. If women have to work to be like men, then they need free contraceptives and abortion, and they have to be taught to have sex early, so that they don’t aspire to marriage and parenting. So what if this causes a lot of premarital sex and the occasional baby? Children don’t matter – *feminism* matters.

CBO: Unemployment rises to 9.1% in 2013, health care spending doubles by 2022

September 7, 2012 | by Wintery Knight | Link | Original Link

Here are the raw numbers from the non-partisan Congressional Budget Office, as reported by CNS News:

> The Congressional Budget Office (CBO) is projecting that if changes in federal taxing-and-spending policies already enacted and set to take effect at the beginning of next year do in fact take place, the unemployment rate will climb to 9.1 percent.
>
> In a report released on Aug. 22, An Update to the Budget and Economic Outlook: Fiscal Years 2012 to 2022, CBO's baseline projections show that by the fourth quarter of 2013 the national unemployment rate will be 9.1 percent.
>
> […]Widely referred to as the "fiscal cliff," the expiration of the Bush tax cuts and over $1 trillion in automatic defense and discretionary cuts as a result of last year's failed budget deal are set to take effect in January 2013.
>
> […]If no action is taken by Congress, current CBO projections show that unemployment will not return to pre-recession levels until 2017.

And more CBO: federal health care spending will exceed all discretionary spending by 2016:

> Under current law, federal health care spending is on pace to exceed all discretionary spending by 2016, according to the Congressional Budget Office (CBO).
>
> The change is due to large increases in Medicare and Medicaid spending and added spending under the Affordable Care Act (Obamacare) over the next decade, a feat the Tax Foundation calls a "truly unprecedented and scary" scenario.
>
> The nonpartisan tax research group analyzed recent CBO projections of the budget for 2012 to 2022, finding that over the next decade Medicare spending will increase from $550 billion to $1.064 trillion, while Medicaid would more than double from $253 billion to $592 billion.
>
> In addition, new exchanges and subsidies under Obamacare will force mandatory healthcare expenditures to grow from $25 billion to $181 billion in 2022.
>
> "In total, healthcare entitlement spending is due to more than double, from $828 billion this year to $1.837 trillion in 2022," according to the Tax Foundation.
>
> "This means healthcare spending will overtake all discretionary spending in 2016 – Obama's last year in office if reelected," the group said.

And more CBO: taxes will shoot up by more than 30% between 2012 and 2014:

> The amount of money the federal government takes out of the U.S. economy in taxes will increase by more than 30 percent between 2012 and 2014, according to the Budget and Economic Outlook published today by the CBO.
>
> At the same time, according to CBO, the economy will remain sluggish, partly because of higher taxes.
>
> "In particular, between 2012 and 2014, revenues in CBO's baseline shoot up by more than 30 percent," said CBO, "mostly because of the recent or scheduled expirations of tax provisions, such as those that lower income tax rates and limit the reach of the alternative minimum tax (AMT), and the imposition of new taxes, fees, and penalties that are scheduled to go into effect."
>
> The U.S. economy, CBO projects, will perform "below its potential" for another six years and unemployment will remain above 7 percent for another three.

And the GAO reports that the Obama administration has waived work requirements for welfare programs, which reduces revenues from employee income taxes and increases spending on welfare programs.

Now you might expect that the Democrats would have some bold plan to tackle unemployment, spending and high taxes. And they do!

Bold policy ideas at the Democrat National Convention

Take a look at this video on bold, innovative tax policy from the DNC convention:

That will fix unemployment for sure.

And they want to augment that tax policy with some reasonable pro-growth regulations:

If you don't think that this is a good plan to solve our economic problems, then Democrats will say that you're a racist homophobic Islamophobic sexist bigot.

UK government lawyers want Christians to behave like atheists in public

September 7, 2012 | by Wintery Knight | Link | Original Link

From the UK Telegraph. (H/T Dina)

Excerpt:

> Landmark cases, brought by four British Christians, including two workers forced out of their jobs after visibly wearing crosses, were heard on Tuesday at the European Court of Human Rights, a judgement will follow at a later.
>
> Despite previous pledges by David Cameron, the Prime Minister, that he would change the law to protect religious expression at work, government lawyers insisted that there was a "difference between the professional and private sphere".
>
> James Eadie QC, acting for the government, told the European court that the refusal to allow an NHS nurse and a British Airways worker to visibly wear a crucifix at work "did not prevent either of them practicing religion in private", which would be protected by human rights law.
>
> […]The QC also told the court that, unlike the Muslim headscarf for women, wearing a cross is not a "generally recognised" act of Christian worship and is not required by scripture. "A great many Christians do not insist on wearing crosses at all, still less visibly," he said.
>
> […]Shirley Chaplin, from Exeter, was moved away from nursing to a clerical role by the Royal Devon and Exeter NHS Trust in Devon after refusing to remove a necklace bearing a crucifix. She has since lost her job after 30 years of nursing.
>
> Mrs Chaplin told The Daily Telegraph that she felt "insulted" by the argument that Christians who are told by their employer that they cannot wear a cross at work can always find another job.
>
> "It is insulting, humiliating and degrading.My Christian faith isn't something that you put on and then take off to go to work," she said.
>
> "We are treated differently. Britain is a very tolerant country but we seem to be more tolerant to some groups than others and at the moment we're not at all tolerant to Christians. You can have faith but not demonstrate it."
>
> James Dingemans QC, acting for Mrs Eweida, questioned the value of having a right to religious belief if it could not be applied at work, where people spend 80 per cent of their adult lives.
>
> "What value is a right that stops when cross the threshold of work," he said.

I guess that these secularist lawyers simply don't understand that there is a requirement for Christians to be public and evangelistic about their faith, and to ask them to act like

atheists is to ask them *not to be authentic Christians.* It's the most intolerant thing to do to a Christian – to issue a Christian with orders that override their obligations to Jesus Christ. This is not an undue burden on employers and clients – it's just being allowed to (quietly) be who you are and to signal to others who you are.

Let me illustrate from the Bible exactly what is expected of Christians.

Matthew 10:32-33:

32 "Whoever acknowledges me before men, I will also acknowledge him before my Father in heaven.

33 But whoever disowns me before men, I will disown him before my Father in heaven.

1 Corinthians 4:1-2:

1 So then, men ought to regard us as servants of Christ and as those entrusted with the secret things of God.

2 Now it is required that those who have been given a trust must prove faithful.

Deuteronomy 6:4-9:

4 Hear, O Israel: The Lord our God, the Lord is one.

5 Love the Lord your God with all your heart and with all your soul and with all your strength.

6 These commandments that I give you today are to be on your hearts.

7 Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

8 Tie them as symbols on your hands and bind them on your foreheads.

9 Write them on the doorframes of your houses and on your gates.

That's what's at stake here. These are just a couple of examples, there are many more. What gives these left-wing atheists the chutzpah to run around telling other people how to practice their religion? Let each person practice what they believe, and let's all tolerate the differences. There is a right to practice what you believe, there is *no right* to control what others believe and to take away their basic human rights just because you are offended. Only people on the left are fascistic like that, and it's got to stop.

People on the left should reflect and understand what it is exactly that they are doing by marginalizing Christianity and trying to stop people from believing it by shaming and intimidating Christians, and leading people into sin. If Christianity is true, then actions like that are probably *the absolute worst thing you can do.* It's particularly nasty when you realize that the reason that secular leftists try to suppress Christians from being authentic Christians is because of *their feelings.* Secular leftists feel that they have a right to suppress the freedoms of others by force of law, on the grounds that *they feel offended by someone else's religious beliefs and practice.*

Let's double-check that with the Bible and make sure.

Matthew 18:6-14:

[6] “If anyone causes one of these little ones—those who believe in me—to stumble, it would be better for them to have a large millstone hung around their neck and to be drowned in the depths of the sea.

[7] Woe to the world because of the things that cause people to stumble! Such things must come, but woe to the person through whom they come!

[8] If your hand or your foot causes you to stumble, cut it off and throw it away. It is better for you to enter life maimed or crippled than to have two hands or two feet and be thrown into eternal fire.

[9] And if your eye causes you to stumble, gouge it out and throw it away. It is better for you to enter life with one eye than to have two eyes and be thrown into the fire of hell.

[10] “See that you do not despise one of these little ones. For I tell you that their angels in heaven always see the face of my Father in heaven.

[12] “What do you think? If a man owns a hundred sheep, and one of them wanders away, will he not leave the ninety-nine on the hills and go to look for the one that wandered off?

[13] And if he finds it, truly I tell you, he is happier about that one sheep than about the ninety-nine that did not wander off.

[14] In the same way your Father in heaven is not willing that any of these little ones should perish.

Trying to persuade a Christian that they are wrong is fine, but using the power of the state to take away a faithful Christian’s job, which discourages them from being Christian, is something else. In my view, it’s worse than murder. I think that this sort of heavy-handed, intimidating secular fascism masquerading as “tolerance” is *worse than murder*. You do not intimidate someone away from an authentic relationship with God as he really is, *just because of your feelings of discomfort at public expressions of religious faith.* The right of each person to express their religion in public is a basic right, but there is no right not to be offended by someone else’s use of liberty to just be themselves. No one is asking for non-Christians to be forced to convert to Christianity or to be forced to celebrate and affirm Christianity by the power of the state. We’re just asking to be who we are without losing our jobs.

2016 movie reveals some of the radical influences on Barack Obama

September 7, 2012 | by Wintery Knight | Link | Original Link

This is the most popular editorial at Investors Business Daily right now. It goes over what we know about Barack Obama influences and background.

Excerpt:

> Obama's father was so anti-West that British intelligence warned the U.S. not to grant him and a group of Kenyan students visas to study in the U.S. They were flagged in a 1959 diplomatic cable as radicals with an "anti-American and anti-white" political agenda.
>
> When Obama Sr. returned to Kenya with a Harvard economics degree, he joined the newly independent Kenyan government as a Marxian economist. AP never mentions the July 1965 policy paper he wrote advising Nairobi to wring all vestiges of Western "neocolonialism" out of the Kenyan economy and replace them with Soviet-style communism, including industrial nationalization.
>
> In the eight-page tract, he proposed economic tonics strikingly similar to ones now being pushed by his son, including: taxing the "rich" to "redistribute economic gains" and "economic power," funding public works projects and other government "investments," and forcing "people to do things they would not do otherwise," such as joining government-run cooperatives to discourage "individual" choices not in the "public interest." He railed against "free enterprise," arguing it creates wealth "disparities" and benefits "only a few individuals."

And more:

> It's plain from Obama's memoir that he worshipped his father. Obama devotes more than 130 pages, or roughly a third, of "Dreams" to covering his father's life and his colonized ancestry in Kenya. This is purposeful. Obama sympathizes with the idea that "neocolonial wealth," held even by Asian business owners in Nairobi, should be "redistributed to the people." (Neocolonialism is the alleged economic exploitation that remains even after political independence.)
>
> Obama says he realized who he is and what he really cares about when he visited his father's grave. He describes breaking down and weeping, whereupon he reflects: "The pain that I felt was my father's pain."
>
> D'Souza says Obama sought out paternal surrogates who shared his father's anti-colonial, anti-capitalist beliefs, including:
>
> Frank Marshall Davis, a Communist Party member investigated by the FBI for un-American activities. As a teenager, Obama sat at Davis' knee in his Waikiki

> bungalow, where he was brainwashed into hating America while romanticizing Soviet Russia. Interestingly, Davis put Churchill at the center of Anglo-American "imperialism."
>
> Rev. Jeremiah Wright, moreover, baptized Obama into "liberation theology," which emerged from the communist movement in Central America. Wright's church "stood in solidarity" with the Sandinista dictators of Nicaragua while Obama attended there.
>
> Not surprisingly, Obama protested U.S. support for the Contra rebels. Wright also lionized Hamas and called for divestment in Israel, which he accused of having "illegally occupied Palestinian territories" for decades.
>
> Derrick Bell, the late Harvard law professor, taught Obama "critical race theory" and "postcolonial theory," which argues that Western imperialism is the highest stage of capitalism. Obama remained close to Bell until his death last year.
>
> All three of these surrogate fathers of Obama, along with Obama Sr. himself, were heavily influenced by Frantz Fanon, a Marxist revolutionary who didn't look or sound like one. Rarely seen without a suit and tie, the handsome and cerebral Fanon nonetheless described capitalists as "wretched" and the United States as "a monster."
>
> He called for "a planned economy, for outlawing profiteers," and for wringing neocolonialism and capitalism out of every institution of society. In "The Wretched of the Earth," the late Fanon wrote, "What matters today is the need for a redistribution of wealth," adding "humanity will have to address this question, no matter how devastating the consequences may be."

If you've never heard about any of the facts from Obama's background, then I really recommend you go and check out "2016: Obama's America" in theaters now.

Friday night movie: Animal Farm (1954)

September 7, 2012 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.3/10]

IMDB median rating: [7/10]

Description:

> Britain's first animated feature, which, despite the title and Disney-esque animal animation, is in fact a no-holds-barred adaptation of George Orwell's classic satire on Stalinism, with the animals taking over their farm by means of a revolutionary coup, but then discovering that although all animals are supposed to be equal, some are more equal than others.

I chose this movie because of the DNC convention and Barack Obama's new campaign slogan "Forward", which appears in this movie.

Here's the background on that slogan from Washington Times:

> The Obama campaign apparently didn't look backwards into history when selecting its new campaign slogan, "Forward" — a word with a long and rich association with European Marxism.
>
> Many Communist and radical publications and entities throughout the 19th and 20th centuries had the name "Forward!" or its foreign cognates. Wikipedia has an entire section called "Forward (generic name of socialist publications)."
>
> "The name Forward carries a special meaning in socialist political terminology. It has been frequently used as a name for socialist, communist and other left-wing newspapers and publications," the online encyclopedia explains.
>
> The slogan "Forward!" reflected the conviction of European Marxists and radicals that their movements reflected the march of history, which would move forward past capitalism and into socialism and communism.
>
> […]There have been at least two radical-left publications named "Vorwaerts" (the German word for "Forward"). One was the daily newspaper of the Social Democratic Party of Germany whose writers included Friedrich Engels and Leon Trotsky. It still publishes as the organ of Germany's SDP, though that party has changed considerably since World War II. Another was the 1844 biweekly reader of the Communist League. Karl Marx, Engels and Mikhail Bakunin are among the names associated with that publication.
>
> East Germany named its Army soccer club ASK Vorwaerts Berlin (later FC Vorwaerts Frankfort).
>
> Vladimir Lenin founded the publication "Vpered" (the Russian word for "forward") in 1905. Soviet propaganda film-maker Dziga Vertov made a documentary whose

> title is sometimes translated as “Forward, Soviet” (though also and more literally as “Stride, Soviet”).
>
> Conservative critics of the Obama administration have noted numerous ties to radicalism and socialists throughout Mr. Obama’s history, from his first political campaign being launched from the living room of two former Weather Underground members, to appointing as green jobs czar Van Jones, a self-described communist.

When you watch the movie, pay close attention to the communist pig Napoleon, whose slogan is also “forward”. What does the communist pig mean by “forward”?

Happy Friday!

Labor force participation at 31-year low: record number of Americans out of work

September 8, 2012 | by Wintery Knight | Link | Original Link

CNS News reports.

Full text:

> The number of Americans whom the U.S. Department of Labor counted as "not in the civilian labor force" in August hit a record high of 88,921,000.
>
> The Labor Department counts a person as not in the civilian labor force if they are at least 16 years old, are not in the military or an institution such as a prison, mental hospital or nursing home, and have not actively looked for a job in the last four weeks. The department counts a person as in "the civilian labor force" if they are at least 16, are not in the military or an institution such as a prison, mental hospital or nursing home, and either do have a job or have actively looked for one in the last four weeks.
>
> In July, there were 155,013,000 in the U.S. civilian labor force. In August that dropped to 154,645,000—meaning that on net 368,000 people simply dropped out of the labor force last month and did not even look for a job.
>
> There were also 119,000 fewer Americans employed in August than there were in July. In July, according to the Bureau of Labor Statistics, there were 142,220,000 Americans working. But, in August, there were only 142,101,000 Americans working.
>
> Despite the fact that fewer Americans were employed in August than July, the unemployment rate ticked down from 8.3 in July to 8.1. That is because so many people dropped out of the labor force and stopped looking for work. The unemployment rate is the percentage of people in the labor force (meaning they had a job or were actively looking for one) who did not have a job.
>
> The Bureau of Labor Statistic also reported that in August the labor force participation rate (the percentage of the people in the civilian non-institutionalized population who either had a job or were actively looking for one) dropped to a 30-year low of 63.5 percent, down from 63.7 percent in July. The last time the labor force participation rate was as low as 63.5 percent was in September 1981.

Let's see how things are going for Obama's biggest supporters – the young people who have been brainwashed by public schools to hate corporations , entrepreneurship and free market capitalism.

CNN Money reports:

> The drop in the unemployment rate in August isn't particularly good news for the

> economy — it's driven mostly by nearly 400,000 people dropping out of the labor force, rather than more people finding jobs.
>
> But those dropping out aren't so much the discouraged 30-, 40- or 50-year olds. In fact, the Labor Department said there was a modest decline in the overall number of discouraged job seekers.
>
> The drop is because so many young adults, aged 16 to 24, are no longer looking for work.
>
> **There were 453,000 fewer young adults with jobs in August than in July. But despite that plunge, only 27,000 more young people were looking for new jobs. Most apparently stopped looking and left the labor force. And those numbers take into account seasonal factors such as younger workers returning to school.**
>
> **As a result, the percentage of young people who are counted in the labor force fell to its lowest level since 1955.**

But there is one sector of the economy that is still doing fine – the parasitic public sector is doing fine.

CNS News reports:

> There was good news for American workers in August—if government was their employer.
>
> The unemployment rate for government wage and salaries workers dropped from 5.7 percent in July to 5.1 percent in August. At the same time, the number of government wage and salary workers counted as unemployed dropped by 123,000 people from 1,182,000 in July to 1,059,000 in August.
>
> […]Answering questions from reporters on June 8, President Obama said that the private sector was "doing fine" and that the "weaknesses" in the economy were in government.
>
> **"The private sector is doing fine," said Obama. "Where we're seeing weaknesses in our economy have to do with state and local government, oftentimes cuts initiated by, you know, governors or mayors who are not getting the kind of help that they have in the past from the federal government and who don't have the same kind of flexibility as the federal government in dealing with fewer revenues coming in."**

Government workers live off of the money confiscated from businesses, who have to please customers by trading them valuable goods and services in order to make money.

This is not unexpected. Socialism is the destroyer of prosperity. In 2008, we elected an unqualified Marxist ideologue as President. He wrecked the economy because he doesn't understand economics. He's put us on the path to becoming Greece. In November, I hope that we'll get it right for a change.

Does the Bible mention unicorns?

September 8, 2012 | by Wintery Knight | Link | Original Link

Michael Shermer, who appears in the video, asks Christians to explain why there are unicorns in the Bible. (H/T Letitia) The Bible certainly mentions the word unicorn. But does it refer to the mythical horse-like creature, like Shermer seems to think?

Once you go back to the original language, it turns out that the *unicorn* that is mentioned is really a *rhinoceros*.

You can read a debate between Greg Koukl and Michael Shermer here. This debate was moderated by radio show host Hugh Hewitt, and presumably transcribed by his much-maligned producer Duane Patterson. Hewitt also moderated the famous debate at Biola University, featuring William Lane Craig and Christopher Hitchens.

Does the Bible teach a flat Earth?

September 9, 2012 | by Wintery Knight | Link | Original Link

Here's an article from Jeffrey Burton Russell.

Excerpt:

> It must first be reiterated that with extraordinary few exceptions **no** educated person in the history of Western Civilization from the third century B.C. onward believed that the earth was flat.
>
> A round earth appears at least as early as the sixth century BC with Pythagoras, who was followed by Aristotle, Euclid, and Aristarchus, among others in observing that the earth was a sphere. Although there were a few dissenters–Leukippos and Demokritos for example–by the time of Eratosthenes (3 c. BC), followed by Crates(2 c. BC), Strabo (3 c. BC), and Ptolemy (first c. AD), the sphericity of the earth was accepted by all educated Greeks and Romans.
>
> Nor did this situation change with the advent of Christianity. A few–at least two and at most five–early Christian fathers denied the sphericity of earth by mistakenly taking passages such as Ps. 104:2-3 as geographical rather than metaphorical statements. On the other side tens of thousands of Christian theologians, poets, artists, and scientists took the spherical view throughout the early, medieval, and modern church. The point is that no educated person believed otherwise.
>
> Historians of science have been proving this point for at least 70 years (most recently Edward Grant, David Lindberg, Daniel Woodward, and Robert S. Westman), without making notable headway against the error. Schoolchildren in the US, Europe, and Japan are for the most part being taught the same old nonsense. How and why did this nonsense emerge?
>
> In my research, I looked to see how old the idea was that medieval Christians believed the earth was flat. I obviously did not find it among medieval Christians. Nor among anti-Catholic Protestant reformers. Nor in Copernicus or Galileo or their followers, who had to demonstrate the superiority of a heliocentric system, but not of a spherical earth. I was sure I would find it among the eighteenth-century philosophes, among all their vitriolic sneers at Christianity, but not a word. I am still amazed at where it first appears.
>
> No one before the 1830s believed that medieval people thought that the earth was flat.
>
> The idea was established, almost contemporaneously, by a Frenchman and an American, between whom I have not been able to establish a connection, though they were both in Paris at the same time. One was Antoine-Jean Letronne (1787-1848), an academic of strong antireligious prejudices who had studied both geography and patristics and who cleverly drew upon both to misrepresent

> the church fathers and their medieval successors as believing in a flat earth, in his *On the Cosmographical Ideas of the Church Fathers* (1834). The American was no other than our beloved storyteller Washington Irving (1783-1859), who loved to write historical fiction under the guise of history. His misrepresentations of the history of early New York City and of the life of Washington were topped by his history of Christopher Columbus (1828). It was he who invented the indelible picture of the young Columbus, a "simple mariner," appearing before a dark crowd of benighted inquisitors and hooded theologians at a council of Salamanca, all of whom believed, according to Irving, that the earth was flat like a plate. Well, yes, there was a meeting at Salamanca in 1491, but Irving's version of it, to quote a distinguished modern historian of Columbus, was "pure moonshine. Washington Irving, scenting his opportunity for a picturesque and moving scene," created a fictitious account of this "nonexistent university council" and "let his imagination go completely…the whole story is misleading and mischievous nonsense."
>
> But now, why did the false accounts of Letronne and Irving become melded and then, as early as the 1860s, begin to be served up in schools and in schoolbooks as the solemn truth?
>
> The answer is that the falsehood about the spherical earth became a colorful and unforgettable part of a larger falsehood: the falsehood of the eternal war between science (good) and religion (bad) throughout Western history. This vast web of falsehood was invented and propagated by the influential historian John Draper (1811-1882) and many prestigious followers, such as Andrew Dickson White (1832-1918), the president of Cornell University, who made sure that the false account was perpetrated in texts, encyclopedias, and even allegedly serious scholarship, down to the present day. A lively current version of the lie can be found in Daniel Boorstin's *The Discoverers,* found in any bookshop or library.
>
> The reason for promoting both the specific lie about the sphericity of the earth and the general lie that religion and science are in natural and eternal conflict in Western society, is to defend Darwinism. The answer is really only slightly more complicated than that bald statement. The flat-earth lie was ammunition against the creationists. The argument was simple and powerful, if not elegant: "Look how stupid these Christians are. They are always getting in the way of science and progress. These people who deny evolution today are exactly the same sort of people as those idiots who for at least a thousand years denied that the earth was round. How stupid can you get?"
>
> But that is not the truth.

What's scary about this is that I have actually debated with atheists who have cited Bugs Bunny cartoons showing the Columbus flat-Earth scene as an authority for this persistent myth. I think it's safer to stick with a historian. Dr. Russell has written a book about "The Myth of the Flat Earth" and he has also been published by Oxford University Press and

Cornell University Press and Princeton University Press – unlike the Bugs Bunny cartoon artists.

Studies show HIV infection rates still rising among gay men (MSM)

September 9, 2012 | by Wintery Knight | Link | Original Link

From left-leaning Time magazine.

Excerpt:

> As the world's leading AIDS researchers gather for the International AIDS Conference in Washington, D.C., scientists report that despite gains in controlling the spread of HIV, the disease has continued to spread at an alarming rate in the very population in which it first appeared — gay men.
>
> In a series of papers in the *Lancet* dedicated to the dynamics of HIV among gay men — a group epidemiologists define as men who have sex with men (MSM) — scientists say that the continued burden of AIDS in this group is due to a combination of lifestyle and biological factors that put these men at higher risk. Rates are rising in all countries around the world.
>
> In one study, led by Chris Beyrer, of the Center for Public Health and Human Rights at the Johns Hopkins Bloomberg School of Public Health, researchers analyzed surveillance reports and studies of HIV among MSM, including data that were part of routine United Nations reporting from member nations. Rates of HIV among gay men ranged from 3% in the Middle East to 25% in the Caribbean. In all reporting nations, rates were on the rise, even in developed nations like the U.S., Australia and the U.K. where HIV is declining overall.
>
> In fact, says Beyrer, income does not seem to matter when it comes to HIV trends among MSM. In the U.S., for example, infection rates among gay men have been increasing by 8% each year since 2001, contributing to a 15% prevalence rate and putting the U.S. on par with countries like Thailand, Malaysia and some African and Caribbean nations where neither awareness of HIV/AIDS nor drug treatments are as widespread. HIV prevalence rates among MSM in Brazil, Canada, Italy and India range between 11% and 15%, while many western European countries have lower rates of around 6%.
>
> […]HIV has always been more common among gay men, but Beyrer and his colleagues say the traditional risk factors may not entirely explain the surge in many cases. Traditionally, HIV experts have pointed to high-risk behaviors such as unprotected sex, having multiple partners, injection drug use and drug use in general for making gay men more vulnerable to infection. But there may be biological reasons for the enhanced risk as well. For example, there is an 18 times greater risk of HIV transmission through anal sex than through vaginal sex, which may explain why the virus continues to thrive in gay men, despite the fact that they still receive the bulk of HIV awareness and treatment public-health

> messages.

I took a look at one of the research papers mentioned on PLOS Medicine and it looks pretty solid. That's peer-reviewed literature, and Johns Hopkins is a good school for medicine. My impression of this research is that we should not be encouraging anyone to get into this lifestyle. We should not be subsidizing it. We should not be celebrating it. It's not good for the gay men themselves that we continue to push this lifestyle onto them as normal. We wouldn't push cigarette smoking onto people, whether there are biological factors that predispose them to it or not. I would not want to be responsible for encouraging anyone to prefer harmful behaviors. The article makes it clear that the problem isn't "acceptance of gays" or reducing "bullying". The problem is the promiscuity of the lifestyle itself, as well as the mechanics of anal sex. This problem cannot be solved by persuading everyone that the gay lifestyle is normal and praiseworthy. It's a problem rooted in reality, not in people's opinions. And we are all paying for this HIV research and HIV treatment at a time when we as a society cannot afford to be voluntarily incurring the costs of one group's risky choices.

Police threatened to charge man who defended his wife with attempted murder

September 10, 2012 | by Wintery Knight | Link | Original Link

---

From the UK Daily Mail, the latest on the story about the couple who was arrested for wounding four burglars who invaded their home with a legally-owned shotgun. (H/T Dina)

Excerpt:

> The couple held by police over the shooting of two intruders at their isolated cottage spoke yesterday of their 'living nightmare'.
>
> Andy Ferrie said he 'plumbed the depths of despair' when police told him he could face a charge of attempted murder.
>
> Tracey Ferrie said being kept in a police cell away from her husband had 'petrified' her and she was haunted by the 'stomach-churning' experience.
>
> Mr Ferrie, 35, and his 43-year-old wife were arrested on suspicion of causing grievous bodily harm after he called police to report that he had discharged a shotgun, hitting two of four men who had broken into their home.
>
> They were held in separate cells and handcuffed for a court appearance where detectives sought more time to hold them for questioning.
>
> Mrs Ferrie, a saleswoman, said: 'I was completely petrified. Being locked up in a police cell just yards from my husband, but banned from talking to him, was agony.
>
> 'When I can get some sleep now I wake up with a start and think I'm back in the cell. It's mortifying and stomach churning.'
>
> She said their cottage at Welby, near Melton Mowbray, Leicestershire, looked like 'something out of CSI' as police swarmed around the hamlet following the incident early last Sunday.
>
> Mr Ferrie, who runs a mobile home repair business, said being told he could ultimately face an attempted murder charge had left him too anxious to eat during almost three days and nights in custody.
>
> […]**'I was petrified, scared stiff,' Mr Ferrie told The Sun. 'I only did what any other bloke would have done given the situation. I'm no hero or hard man. I did what I did to protect my precious, lovely wife.**
>
> **'I was only a few feet away, I could have shot to kill but I didn't. I was relieved later when I was told the injuries I had caused were not life-threatening. The events of the last few days have scarred us for life.'**
>
> **Mr Ferrie, who plans to emigrate to Australia with his wife next year, said that during his time in custody he was 'told my case had been upgraded to attempted murder'.**

> **He added: ‘I just crumpled. I saw myself being sent to prison for a long, long time. I was offered food but didn’t eat for the whole 66 hours we were held.’**
>
> **Last week, a court heard how the couple were woken by the sound of banging and breaking glass as the intruders forced their way inside just after midnight. Mr Ferrie confronted one of the alleged raiders in their bedroom.**

If there were any justice in the world, the police and Crown lawyers responsible for this tragedy would all be sacked, right up to the top of the police force. A civil suit by the victims of the crime would make a nice end to it. Too bad the liberal pro-criminal politicians who criminalized self-defense in the UK won’t be forced to spend a few years in jail. That wouldn’t even be enough to punish them for what they did to those law-abiding citizens right after they were traumatized by a home break-in.

We have to be very careful in this country about politicians on the left who oppose property rights, gun ownership and self-defense. Politicians on the left are always moaning about the rights of criminals and the need to ban guns and prohibit self-defense. This story from the UK shows what their plan does to ordinary people. Why would any man get married and start a family in a country run by feminist leftists who put a man in jail for taking up the role of protector of his family and his home?

William Lane Craig answers questions from Reasonable Faith readers

September 10, 2012 | by Wintery Knight | Link | Original Link

---

A pot-pourri of questions for Dr. Craig from visitors his Reasonable Faith web site.

The MP3 file is here. (30 minutes)

Questions:

1. Is the view that God doesn't know the future compatible with the Bible?
2. What is natural evil, (as opposed to human-caused evil)?
3. What is postmodernism? Is it compatible with Christianity?
4. What is the static, B-theory view of time? Is it compatible with the concept of now?
5. Dating advice for a Christian man who is dating a woman who is New Age?
6. How is philosophy related to theology and the Bible?
7. Why isn't the Bible more detailed about science and other areas of knowledge?

More questions and answers on the Reasonable Faith web site.

The top 10 foreign policy failures of the Obama administration

September 10, 2012 | by Wintery Knight | Link | Original Link

---

This well-footnoted list of Obama's top 10 foreign policy blunders is from the Romney/Ryan campaign.

The list:

1. No Results In Slowing Or Stopping Iran's Nuclear Weapons Program
2. Endangering Our Mission In Afghanistan And Weakening Our Relationship With Pakistan
3. "Unconscionable" Leaks Of Classified Counterterror Information From The White House That Have Been "Devastating"
4. "Devastating" Defense Cuts That Will Cede Our Status As A "Global Power"
5. A Damaged Relationship With Israel And A Moribund Peace Process
6. No Coherent Policy To Stem The Humanitarian And Strategic Disaster In Syria
7. A "Reset" With Russia That Has Compromised U.S. Interests & Values
8. Emboldening The Castros, Chávez & Their Cohorts In Latin America
9. Getting Beaten Badly By Competitors On Trade
10. Putting Our Interests At Risk By Mismanaging The Transition In Iraq

Each of these would devastating to Obama's re-election effort on their own. Taken together, you have to wonder whose side he is really on.

Here's my favorite:

> ### Failure #1: No Results In Slowing Or Stopping Iran's Nuclear Weapons Program
>
> Today, Iran is on the cusp of nuclear weapons capability. Such a capability in the hands of the world's top terrorist sponsoring state poses the greatest threat facing the United States and our friends and allies, and it risks sparking a nuclear arms race across the Middle East.
>
> Despite promising to "do everything in his power" to stop Iran, four years of President Obama's irresolute policies have failed to slow the progress of Iran's program. In fact, that progress has sped up:
>
> - Fastest Rate Of Enrichment Ever. In 2009, Iran's enrichment rate of low-enriched uranium was 56 kilograms per month. That jumped to 116 kilograms per month from November 2011 to February 2012. The enrichment rate now stands at 158 kilograms per month, the fastest rate ever.[1]
> - More Spinning Centrifuges. The total number of spinning centrifuges has

gone from 3,936 to 10,477 during Obama's term. The growth rate of spinning centrifuges went from 112 centrifuges per month before Obama came into office to 152 centrifuges per month during his term.[2]
- Fordow Underground Enrichment Facility Nearing Completion. The fortified underground facility is 70 percent complete. The number of centrifuges installed has gone from 1,064 in May to 2,140 today. The facility's limit is 3,000 centrifuges.[3]

The Iranian program has gotten to this point because President Obama has squandered all credibility with the ayatollahs:

- A Failed Engagement Policy. President Obama offered the ayatollahs "no preconditions" talks, which were rebuffed. The latest round of multilateral talks has produced no results.
- Refrained From Supporting The Green Movement. When asked during a press conference, President Obama shamefully refused to voice support for Iranian dissidents in 2009 as they were being killed in the streets, saying he did not want to "meddle" in Iran's affairs.
- A Weak Sanctions Policy. President Obama opposed and sought to water down crippling sanctions on Iran's Central Bank until he was forced into them by Congress and our European partners.[4] He then undermined those sanctions by issuing waivers to 20 of the top importers of Iranian oil, including China.[5]
- Abandoned Missile Defense. He abandoned a European missile defense system meant to protect against Iranian missiles.
- Undermined The Credibility Of The Military Option. His administration has given the Iranians no reason to believe it is serious about a military option. The administration has repeatedly talked down the effectiveness and advisability of the military option, and seems to have devoted more energy toward preventing an Israeli strike on Iran than toward preventing an Iranian nuclear weapons capability. Obama officials leaked that the administration has focused its efforts on explaining to Israel "the dangers of an Israeli attack" on Iran and has attempted to "make the decision to attack as hard as possible for Israel."[6] And the President himself, after boldly stating to AIPAC that the United States "has Israel's back," changed his tune two days later by saying his statement was "not a military doctrine."

In the face of such irresolution, the ayatollahs are pressing forward toward nuclear weapons capability without fear of repercussion because they do not believe we are serious.

And another:

Failure #3: “Unconscionable” Leaks Of Classified Counterterror Information From The White House That Have Been “Devastating”

The Obama White House has released a torrent of leaks of classified counterterror information that has compromised our national security by revealing covert sources and methods. The pace of the leaks quickened as the November election drew nearer, raising the question of whether they were politically motivated. But whether the leaks were politically motivated and intentional or the result of bad management and sloppiness in neither here nor there. Either case is unacceptable and injurious to the intelligence operatives and uniformed men and women in the field.

Criticism of the leaks has been bipartisan:

- John Brennan, President Obama’s own counterterror chief and Deputy National Security Adviser, has called the leaks “unconscionable,” “damaging,” and “devastating.”[10]
- Senator Dianne Feinstein, the Democratic Chairman of the Senate Select Committee on Intelligence, has criticized the leaks and stated that they are coming from the White House. She said, “Each disclosure puts American lives at risk, makes it more difficult to recruit assets, strains the trust of our partners, and threatens imminent and irreparable damage to our national security in the face of urgent and rapidly adapting threats worldwide.”[11]

Despite the damage done, President Obama has refused to support the appointment of a special counsel to investigate these leaks and hold those responsible accountable. The special counsel mechanism is designed for just such circumstances where the impartiality of normal prosecutors may be compromised because someone in the high chain of command in the White House may be implicated.

The damaging leaks include:

- Operational details about the Osama Bin Laden raid.
- Existence of a Pakistani doctor who assisted the United States in finding Bin Laden and who was later arrested and jailed in Pakistan.
- Revelation of a covert joint U.S.-Israeli cyber operation to undermine Iran’s nuclear weapons program.
- The existence of a double-agent who was key to unraveling the second underwear bomb.
- The White House’s process for determining the targets of drone strikes.

And one last one:

Failure #7: A “Reset” With Russia That Has Compromised U.S. Interests & Values

Mere months after Russia invaded its neighbor Georgia, the Obama Administration came into office vowing to “reset” relations with Russia, saying it would lead to more cooperation on Iran, North Korea, and Afghanistan. That reset has garnered little improvement in our relationship with Russia and no new meaningful cooperation.

Among President Obama’s concessions to Russia were:

- Abandoning A European Missile Defense System. The unilateral abandonment of a missile defense system to be based in Poland and the Czech Republic and completed by 2013 was a sop to Russia, which had sought to intimidate our allies and discourage them from agreeing to the system in the first place. They agreed to it despite the pressure. To add insult to injury, he announced his decision on September 17, 2009—the 70th anniversary of Russia’s invasion of Poland.
- New START. President Obama’s signing of the New START treaty compromised U.S. interests in two respects. First, it linked U.S. missile defense systems to reductions in our nations’ respective nuclear arsenals. This linkage jeopardizes our ability to deploy missile defense systems. Second, the limits it sets on the number of Russian launchers and warheads *were above what Russia possessed in its nuclear arsenal at the time*.[22] In other words, New START gave Russia room to expand its arsenal while requiring the United States to reduce its arsenal.
- “Flexibility” After The Election. In a hot mic moment, President Obama promised Russia’s leaders even more “flexibility” on missile defense and other issues in exchange for more “space” prior to the November election. It was a telling moment of weakness, one that has shaken our allies and raised the persistent question of what President Obama is planning to do post-election that he can’t tell the American people now.
- Kid Gloves For Russia’s Human Rights and Democracy Problems. President Obama has soft-pedaled Russia’s backsliding on democracy and human rights. The Obama Administration has opposed the Magnitsky Bill that would sanction human rights abusers in Russia, preferring to grant Russia permanent normal trade relations free from any new human rights measures. President Obama even congratulated Vladimir Putin in a phone call from Air Force One on winning a corrupt election.

In return for these concessions, Russia has given little save for obstruction at the U.N., support for rogue regimes, and bellicose behavior.

- Obstruction On Syria. Three times, Russia has wielded its veto power along with China to block U.N. Security Council Resolutions aimed at stopping the

> violence in Syria and sanctioning the Assad regime.
> - Arms To Syrian Regime. Russia has supplied arms to the Syrian Army during its brutal crackdown on Syrian civilians.
> - Obstruction On Iran. Russia succeeded in watering down a 2010 set of U.N. sanctions on Iran, preventing the inclusion of sanctions on Iran's Central Bank. Since that time, Russia has successful blocked binding U.N. sanctions on the Central Bank and has criticized individual nations' sanctions on the Central Bank, calling such efforts "unacceptable."
> - Push To Close U.S. Airbase Vital To Mission In Afghanistan. Instead of helping American efforts in Afghanistan, Russia urged Kyrgyzstan to close down a U.S. military base that is a vital transit point for troops and supplies moving in and out of Afghanistan. It is the only such transit base the United States has in Central Asia.[23]
> - Cozying To Chávez. Closer relations between Moscow and Hugo Chávez's Venezuela, including new deals on nuclear power cooperation, increased arms sales, and a $4 billion loan agreement.
> - Continued Abuses Of Political And Human Rights. Putin's re-election as President came on the wings of a corrupt election. And he has continued to consolidate power, sending dissidents and even punk rockers who dare criticize him to jail on trumped up charges.
> - Return Of Cold War Rhetoric. Since announcing plans to resume his former office, Putin has employed the harshest anti-American rhetoric seen since the Cold War and has stepped up harassment of U.S. officials on Russia soil.

I really recommend reviewing these and please send them along to your friends who can vote. These are not things you see reported in the mainstream media, who seem to be more concerned about whether a 30-year-old law student gets taxpayers to pay $3000 per student for contraceptives.

Chicago teacher strike: average pay $71K, 80% of 8th graders not proficient at math

September 11, 2012 | by Wintery Knight | Link | Original Link

---

CBS News reports:

> Thousands of teachers, parents and supporters marched through downtown Chicago on the first day of a school strike.
>
> The crowd Monday afternoon stretched for several blocks and was expected to swell through the early evening and into the city's rush hour. Some protesters carried signs that said "Chicago Teachers United" and "Fair Contract Now." Others waved red pom-poms and chanted. Earlier in the day, thousands of teachers picketed around neighborhood schools.
>
> […]**The city's public school teachers make an average of $71,000 a year. Both sides said they were close to an agreement on wages. What apparently remains are issues involving teacher performance and accountability, which the union saw as a threat to job security.**

They don't want to be held accountable for failing to provide outcomes for their customers, the children.

Why do you think they might fear being held accountable? Are they doing a poor job of teaching? Is that why they fear being accountable? Let's see.

CNS News explains:

> Chicago public school teachers went on strike on Monday and one of the major issues behind the strike is a new system Chicago plans to use for evaluating public school teachers in which student improvement on standardized tests will count for 40 percent of a teacher's evaluation. Until now, the evaluations of Chicago public school teachers have been based on what a Chicago Sun Times editorial called a "meaningless checklist."
>
> […]In 2011, the U.S. Department of Education administered National Assessment of Educational Progress (NAEP) tests in reading and math to students around the country, including in the Chicago Public Schools. The tests were scored on a scale of 0 to 500, with 500 being the best possible score. Based on their scores, the U.S. Department of Education rated students' skills in reading and math as either "below basic," "basic," "proficient" or "advanced."
>
> […]**79 percent of Chicago public school 8th graders were not grade-level proficient in reading**. According to the U.S. Department of Education, this included 43 percent who rated "basic" and 36 percent who rated "below basic."
>
> […]**80 percent of Chicago public school 8th graders were not grade-level proficient in math.** According to the U.S. Department of Education, this

> included 40 percent who rated “basic” in math and 40 percent who rated “below basic.”

Fire them all. Abolish the federal Department of Education. Make teacher unions illegal.

Obama is skipping over half of his daily intelligence briefings (PDBs)

September 11, 2012 | by Wintery Knight | Link | Original Link

---

From the liberal Washington Post:

> President Obama is touting his foreign policy experience on the campaign trail, but startling new statistics suggest that national security has not necessarily been the personal priority the president makes it out to be. It turns out that more than half the time, the commander in chief does not attend his daily intelligence meeting.
>
> The Government Accountability Institute, a new conservative investigative research organization, examined President Obama's schedule from the day he took office until mid-June 2012, to see how often he attended his Presidential Daily Brief (PDB) — the meeting at which he is briefed on the most critical intelligence threats to the country. During his first 1,225 days in office, Obama attended his PDB just 536 times — or 43.8 percent of the time. During 2011 and the first half of 2012, his attendance became even less frequent — falling to just over 38 percent. By contrast, Obama's predecessor, George W. Bush almost never missed his daily intelligence meeting.
>
> I asked National Security Council spokesman Tommy Vietor about the findings, and whether there were any instances where the president attended the intelligence meeting that were not on his public schedule. Vietor did not dispute the numbers, but said the fact that the president, during a time of war, does not attend his daily intelligence meeting on a daily basis is "not particularly interesting or useful."

Please see my previous post on Obama's top 10 foreign policy failures.

Let's review the most important one:

> **Failure #1: No Results In Slowing Or Stopping Iran's Nuclear Weapons Program**
>
> Today, Iran is on the cusp of nuclear weapons capability. Such a capability in the hands of the world's top terrorist sponsoring state poses the greatest threat facing the United States and our friends and allies, and it risks sparking a nuclear arms race across the Middle East.
>
> Despite promising to "do everything in his power" to stop Iran, four years of President Obama's irresolute policies have failed to slow the progress of Iran's program. In fact, that progress has sped up:
>
> - Fastest Rate Of Enrichment Ever. In 2009, Iran's enrichment rate of low-enriched uranium was 56 kilograms per month. That jumped to 116

kilograms per month from November 2011 to February 2012. The enrichment rate now stands at 158 kilograms per month, the fastest rate ever.[1]
- More Spinning Centrifuges. The total number of spinning centrifuges has gone from 3,936 to 10,477 during Obama's term. The growth rate of spinning centrifuges went from 112 centrifuges per month before Obama came into office to 152 centrifuges per month during his term.[2]
- Fordow Underground Enrichment Facility Nearing Completion. The fortified underground facility is 70 percent complete. The number of centrifuges installed has gone from 1,064 in May to 2,140 today. The facility's limit is 3,000 centrifuges.[3]

The Iranian program has gotten to this point because President Obama has squandered all credibility with the ayatollahs:

- A Failed Engagement Policy. President Obama offered the ayatollahs "no preconditions" talks, which were rebuffed. The latest round of multilateral talks has produced no results.
- Refrained From Supporting The Green Movement. When asked during a press conference, President Obama shamefully refused to voice support for Iranian dissidents in 2009 as they were being killed in the streets, saying he did not want to "meddle" in Iran's affairs.
- A Weak Sanctions Policy. President Obama opposed and sought to water down crippling sanctions on Iran's Central Bank until he was forced into them by Congress and our European partners.[4] He then undermined those sanctions by issuing waivers to 20 of the top importers of Iranian oil, including China.[5]
- Abandoned Missile Defense. He abandoned a European missile defense system meant to protect against Iranian missiles.
- Undermined The Credibility Of The Military Option. His administration has given the Iranians no reason to believe it is serious about a military option. The administration has repeatedly talked down the effectiveness and advisability of the military option, and seems to have devoted more energy toward preventing an Israeli strike on Iran than toward preventing an Iranian nuclear weapons capability. Obama officials leaked that the administration has focused its efforts on explaining to Israel "the dangers of an Israeli attack" on Iran and has attempted to "make the decision to attack as hard as possible for Israel."[6] And the President himself, after boldly stating to AIPAC that the United States "has Israel's back," changed his tune two days later by saying his statement was "not a military doctrine."

In the face of such irresolution, the ayatollahs are pressing forward toward nuclear weapons capability without fear of repercussion because they do not

> believe we are serious.

And now we know why. He’s played golf over a 100 times. He’s in over his head.

New studies shed light on the expected outcomes of sexual behavior

September 11, 2012 | by Wintery Knight | Link | Original Link

---

This is a guest post by Mathetes entitled "Reasonable expectations of risky sexual behavior".

One of the enlightening, and sobering, aspects of being an informed Christian is knowing how the world works, and then seeing a world that behaves oppositely. It is like watching an accident as it occurs, knowing how it happened, what objects collided, who was at fault, and yet being unable to stop the carnage.

In our country the social carnage is most often carnal. We see the lives of others being disordered because of stupid sexual choices. And the consequences of these choices can be known by those who are willing to step back and examine the evidence.

Case in point. Risky sexual behavior is present in most places where feminism and the sexual revolution has taken a firm footing. A study in New Zealand highlighted the sexual behavior of students.

The study found that students aged 17 to 24 displayed "low condom use, multiple sexual partners and unintended pregnancies."

Our intrepid researcher is Rebecca Psutka, and she informs us that: "Sexual health is an integral, but often neglected component of overall wellbeing, but if there is very little information it is difficult to set priorities for improvement and to monitor progress."

Oh Rebecca, if only you knew. She operates out of a mindset where more information will supposedly change behavior. But this behavior that she decries is not a result of too little information. If there's one thing the students know, it's how to know one another.

> Of the 2922 students who responded, 69 per cent said they were sexually active. The average age they lost their virginity was 17.
>
> One in five said they had three or more sexual partners in the past year and almost one-third said they had been drinking the last time they had sex.

And what message does the student welfare vice-president, Rory McCourt, have to say to this eminently useless waste of a college education. Not much, besides the normal platitudes that one would expect from a college administrator. Rory's solution is one that would make every educator proud. He and his ilk have tried their best to make sure that "messages on safe sex and drinking responsibly were circulated around campus."

So yeah, the adults are particularly clueless about the whole sexual education business. Rory tells us that "There's literally thousands of stories out there about it. It's something that we have to tackle."

So, they have to tackle the problem of unsafe sex by making sure the thousands of stories that are already out there will somehow become more noticeable. What's that

definition of insanity again? Oh, yeah, doing the same thing over and over and expecting a different outcome.

I know what you're thinking. The solution is easy. Say it with me: more condoms!

> Ms Edmond said there had not been a major public campaign on condoms or contraception for many years. 'We obviously have some sexual education happening in schools, though that's a bit haphazard and inconsistent. As a country, New Zealand doesn't have an up-to-date sexual and reproductive health strategy, and that's something we'd like to see.'

Yeah, that's the reason. Students don't know enough about sex and how to stop pregnancies. Sure. Unfortunately there's that annoying fact that the students do indeed know how to stop unplanned pregnancies:

> The study found one in 20 students had, or had contributed to, at least one unintended pregnancy.
>
> Of those pregnancies, 74 per cent of women and 72 per cent of men reported that it was aborted, while a further 19 per cent of men did not know the outcome.

What about that mysterious 19 per cent? Well, unless the girl moved away, or she was placed in an underground dungeon, and the guy never saw her again, we can guess the outcome … adoption, right?

So actually, the students know all about birth control, and how to get rid of a pregnancy.

Now, given that this might be classified as bad behavior, perhaps the students realize what's happening and will try to end these coital escapades. Not likely.

> "No-one has sex unless they're drunk," said Stella Blake-Kelly, 21.
>
> "The university can ply them with as many brochures about sexual health as they want – drinking the way that young people do, a lot of your common sense just goes out the window," Ms Blake-Kelly said.
>
> Harry Evans, 20, agreed. "I know very few people who haven't had a dumb, alcohol-fuelled sexual experience."
>
> Molly McCarthy, 21, said students were more likely to have unprotected sex when they were "wasted".
>
> "When else do you think it's appropriate to go home with someone you've just met?"
>
> First-year students living in halls of residence were particularly likely to take risks, she said.
>
> "You're in such close confines. You've gone out drinking together, you come home together – all the ingredients are there."

And there we are. The students know what's going. We see what's going. Our educators are dim-witted enablers. And the behavior goes on.

Seeing that these casual encounters are taking place, what effect are they likely to have on adult relationships? Or put another way, what's going to happen to all these students as they search and try to maintain adult relationships?

A US study "found those who waited to have sex were happier in the long-run."

"Women particularly benefited from not leaping into bed at the first opportunity. Marriage also seemed to make them happier than co-habiting."

The researchers note that:

> "Courtship is a time for exploration and decision-making about the relationship, when partners assess compatibility, make commitments and build on emotional and physical intimacy."
>
> "The rapid entry into sexual relationships may, however, cut short this process, setting the stage for "sliding" rather than "deciding" to enter co-habiting unions."
>
> "Around a third of the men and women said they'd had sex within the first month of dating, while about 28 per cent waited at least six months, the Journal of Marriage and Family reported."
>
> "Analysis of the data clearly showed the women who had waited to have sex to be happier. And those who waited at least six months scored more highly in every category measured than those who got intimate within the first month. Even their sex lives were better."
>
> "The link was weaker for men. However, those who waited to get physically involved had fewer rows.

The researchers said couples may benefit from taking things slowly.

> 'A strong sexual desire may thwart the development of other key ingredients of a healthy relationship such as commitment, mutual understanding or shared values,' the report said. 'Good sex is sometimes confused with love; some couples overlook problematic aspects of their relationship that ultimately matter more in the long run.'"

So we see the end result of the risky student behavior. The students are setting themselves up for long term relationship pain and failure. And this goes along with what we know about biological bonding – the more sexual partners you have, the more difficult it is for you (especially the woman) to bond with your mate. In practical terms, studies have shown that the more sexual partners you have the more likely you are to divorce.

So our bright students are doing the exact things that will set themselves up for future relationship failures.

I work with my church's youth group quite often, and I've always dreamed of giving a Sunday school lesson titled: "Your worst life now and forever: how to fail at life". Joel Osteen might not preach it, since it wouldn't sell well, but it would make for a good talk.

First step: sleep with random people, when you're young, while you are drunk, so that

your conscience and biology will be dulled and you'll be more likely to have casual encounters as you get older.

Further steps would include: don't use birth control, abort your pregnancies (to ensure an increased risk of breast cancer and moral guilt and anguish), have children out of wedlock, and divorce your mate.

It's a perfect plan – for disaster. And it's one that students have already mastered.

CBO: Obama administration's budget deficit is $1.17 trillion so far this fiscal year

September 11, 2012 | by Wintery Knight | Link | Original Link

Democrats control the House and Senate in 2007
From CNS News:

> The federal deficit topped $1 trillion in the first 11 months of fiscal year 2012, according to the Congressional Budget Office, reaching $1.17 trillion, exceeding CBO's August projections.
>
> "CBO estimates that the Treasury Department will report a deficit of $1.17 trillion for the first 11 months of fiscal year 2012," CBO said Monday.
>
> CBO estimated that the government ran a $192 billion deficit during the month of August, up from the $70 billion deficit it ran in July.
>
> In its updated projections, CBO estimated that the government will run a $1.13 trillion deficit in fiscal year 2012, which ends on Sept. 30 of this year. In order to hit that target, the government will actually have to run a surplus during September of $40 billion.
>
> The government ran a $1.3 trillion deficit in fiscal year 2011, a figure the government could once again reach if its September deficit is as large as its August deficit.

I think it's a safe bet that we'll hit $1.3 trillion again for fiscal year 2012.

Recall that the last Republic budget, when Republicans still held the House and Senate, was $160 billion. Then Nancy Pelosi and Harry Reid came to power, and we are now in debt nearly $8 trillion more since the Democrats took over the budget in January of 2007. They have not submitted a new budget in almost 3 years – we are locked in to the high spending from their last massive budget.

New study: relationship quality diminished by early sexual activity, especially for women

September 12, 2012 | by Wintery Knight | Link | Original Link

---

Regarding the studies on the consequences of sexual activity that Mathetes wrote about before on this blog, I had something to add.

I thought these comments from Stuart Schneiderman about those studies were interesting. He writes about the response of feminists to the paper's finding that women are more affected by early sexual activity, (the paper calls it "relationship tempo"), than men.

Excerpt:

> As you might have guessed, feminists are torqued by this study. Witness the bilge offered by Amanda Hessat the DoubleX blog.
>
> To her confused mind, a woman who has a happy marriage might, in her heart of hearts be unhappy. Because it does not satisfy her personhood!
>
> In her words:
>
> *What the Daily Mail doesn't say is that half-year stretches of celibacy may make a woman more satisfied in a long-term relationship, but they don't necessarily make her a more satisfied person.*
> In the feminist life plan women are supposed to find happiness on their jobs, not in their relationships. This is convenient for feminists since an ideological commitment to their cause tends to be a relationship killer.
>
> Hess points out, correctly, that not all women want long term relationships. Some don't even want to get married.
>
> If she is suggesting that women who sleep around are perfectly contented with their love lives, she is, as I see it, deluded.
>
> Besides, if women are being pressured into having sex before they want to—which is a main reason why women have sex too early—then one reason is that a sufficient number of their sisters have been giving it away for free, thus skewing the marketplace.
>
> Why don't writers like Amanda Hess recommend that the women who are giving it away for free change their ways? Why do they always assume that women who want to get married need to act in a way that is not going to help them achieve their goals?

Feminism is the denial of gender differences. What follows from women thinking that they are no different from men when it comes to sex? Pain. Just so everyone knows, I was appalled that everyone was having sex so early according to that study. I'm in my mid-thirties and have not so much as kissed a girl on the lips. The research just doesn't

support rushed physical intimacy as a legitimate pathway to marital stability and a high quality relationship. That's my goal, so I don't rush physical intimacy. We should all make an effort to make relationships more about communication and co-operation. If we care about the next generation, then we will do what it takes to provide them with a stable environment in which to grow up.

9 reasons why the economy is not moving “forward” under Barack Obama

September 12, 2012 | by Wintery Knight | Link | Original Link

---

From the American Enterprise Institute.

Here’s the summary of the list of 9 items:

1. Unemployment rate
2. Declining U.S. labor force (structural unemployment/government dependency)
3. Labor force participation rate
4. Unemployment/population ratio
5. Average hourly earnings of workers
6. GDP growth
7. Economic competitiveness
8. Federal debt crisis
9. Risk of renewed recession

And here’s the detail of one that I haven’t mentioned much before on this blog:

> 5. Average hourly earnings were unchanged in the August jobs report, and are up just 1.7% over the past year. **Not only does that match the slowest pace on record, but one you account for inflation, wages are flat to down.**

The graph:

Average hourly earnings for workers way down under Obama

According to Forbes magazine: (H/T Gateway Pundit)

> New income data from the Census Bureau reveal what a great job Barack Obama has done for the middle class as President. During his entire tenure in the oval office, median household income has declined by 7.3%.
>
> In January, 2009, the month he entered office, median household income was $54,983. By June, 2012, it had spiraled down to $50,964. That's a loss of $4,019 per family, the equivalent of losing a little less than one month's income a year, every year. And on our current course that is only going to get worse not better…
>
> […]Three years into the Obama recovery, median family income had declined nearly 5% by June, 2012 as compared to June, 2009. That is nearly twice the decline of 2.6% that occurred during the recession from December, 2007 until June, 2009. As the Wall Street Journal summarized in its August 25-26 weekend edition, "For household income, in other words, the Obama recovery has been worse than the Bush recession."
>
> […]Obama has failed the poor as well as the middle class. Last year, the Census Bureau reported more Americans in poverty than ever before in the more than 50 years that Census has been tracking poverty. Now The Huffington Post reports that the poverty rate is on track to rise to the highest level since 1965, before the War on Poverty began. A July 22 story by Hope Yen reports that when the new poverty rates are released in September, "even a 0.1 percentage point increase would put poverty at the highest level since 1965."

Gateway Pundit adds:

> Barack Obama is not just the food stamp president.
> A record **one in seven Americans** is on food stamps today thanks to Barack Obama.
>
> **Barack Obama is also the poverty and pain president.**
> Under Obama, 6.4 million Americans are living below the poverty line and there is a record number of Americans living in deep poverty.

Meanwhile, Moody's is threatening a credit downgrade:

> Moody's Investors Service said Tuesday that it would probably cut its triple-A rating on U.S. government debt by a notch unless congressional leaders can strike a budget deal in the coming months to bring down the deficit.
>
> "If those negotiations lead to specific policies that produce a stabilization and then downward trend in the ratio of federal debt to GDP over the medium term, the rating will likely be affirmed," Moody's said in a press release Tuesday. "If those negotiations fail to produce such policies, however, Moody's would expect to lower the rating, probably to Aa1."
>
> The threat comes after one of the other big three ratings firms, Standard & Poor's, downgraded the U.S. last year following the brawl in Washington over the

> debt ceiling.

This would be the second credit downgrade – both occurred because of Obama's Marxist policies of "spreading the wealth around" to punish job creators and their employees.

Are you better off now than you were four years ago?

Some supporters of gay marriage favor normalizing pedophilia and incest

September 12, 2012 | by Wintery Knight | Link | Original Link

---

Three data points. The first two from John Hawkins of Right Wing News.

Excerpt:

> The first was an article **talking up pedophilia in Gawker**.
>
> Van Gjiseghem says what he and his colleagues mean by sexual orientation is a person's inborn and unalterable sexual preference, irrespective of whether that preference is harmful to others or not.
>
> …Imagine a world in which admitting your attraction to busty women or tall men led to alienation, jail time, or your murder.
>
> …The old adage is that the true mark of a society is how it treats the weakest in its ranks. Blacks, women, Latinos, gays and lesbians, and others are still in no way on wholly equal footing in America. But they're also not nearly as lowly and cursed as men attracted to children. One imagines that if Jesus ever came to Earth, he'd embrace the poor, the blind, the lepers, and, yes, the pedophile.
>
> Then, there are **these comments in favor of incest** from the director of *The Notebook*.
>
> "I have no experience with incest…You know what? This whole movie is about judgment, and lack of it, and doing what you want," he said.
>
> "Who gives a sh-t if people judge you? I'm not saying this is an absolute but in a way, if you're not having kids – who gives a damn? Love who you want. Isn't that what we say? Gay marriage – love who you want? If it's your brother or sister it's super-weird, but if you look at it, you're not hurting anybody except every single person who freaks out because you're in love with one another."

And the third from Dr. Jennifer Roback Morse at the Public Discourse.

Excerpt:

> Can a child have three parents? If California State Senator Mark Leno has his way, children in California will be able to have three legal parents. Before we dismiss SB 1476 as another example of California Weird, we had best look into it more closely. After all, the bill has passed both houses of the California Assembly and is awaiting Governor Brown's signature or veto.
>
> I believe this development was inevitable, more inevitable in fact than the much-vaunted inevitability of gay marriage. Once we started trying to normalize parenting by same-sex couples and redefine marriage to remove the dual-gender requirement, we had to end up with triple-parenting.

> […]It all sounds very nice and agreeable to allow people to make any parenting agreements they want on the front end of their relationships. But when a relationship breaks down, the long arm of the law will end up involved in the life of the family, on the back end, to resolve disputes. We are replacing the natural pre-political concept of biological parenthood with an artificial, government-created concept of parenthood that is entirely socially constructed. Instead of the government simply recognizing and recording the pre-political reality of biological parenthood, we are giving agents of the state the authority to construct parenthood, all in the best interests of the child, of course.

Gay marriage advocates can't object to any of these practices. Their view is that people should be able to "marry" whoever they "love". And that means pedophilia, incest and polygamy. It's not broadening the definition of marriage – it's destroying marriage. Marriage used to be the union of a man and a woman in order to have a stable environment to contain sexual attraction and to raise children to whom both parents are biologically related. Marriage put moral boundaries on the sexual act for the benefit of children, and consequently, for the benefit of society.

A parent’s guide to intelligent design and science education

September 12, 2012 | by Wintery Knight | Link | Original Link

---

An excellent PDF report prepared by the Discovery Institute’s Center for Science and Culture.

Here are the contents:

Introduction

- Part 1: What Is Intelligent Design?
- Part 2: What Is Evolution?
- Part 3: What are the Scientific Problems with Neo-Darwinian Evolution?
- Part 4: How Can Parents Influence Evolution-Education in Local Schools?
- Part 5: What is Theistic Evolution?
- Part 6: What Can Parents do to Support Intelligent Design?
- Part 7: Basic Tips for Parents and Students
- Part 8: Recommended Resources

First, there’s a definition of intelligent design: (the thing that people in the news media never define correctly!)

> Intelligent design (“ID”) is a scientific theory which holds that some features of the universe and living things are best explained by an intelligent cause rather than an undirected process such as natural selection. ID theorists argue that design can be inferred by studying the informational properties of natural objects to determine if they bear the type of information that, in our experience, arises from an intelligent cause.
>
> Proponents of neo-Darwinian evolution contend that the information in life arose via purposeless, blind, and unguided processes. ID proponents contend that the information in life arose via purposeful, intelligently guided processes. Both claims are scientifically testable using scientific methods employed by standard historical sciences. ID is based upon the claim that there are “telltale features of living systems and the universe which are best explained by an intelligent cause.”
>
> Scientists investigating ID compare observations of how intelligent agents design things to observations of phenomena whose origin is unknown. Human intelligent agents provide a large dataset for studying the products of the action of intelligent agents. Mathematician and philosopher William Dembski observes that “[t]he principal characteristic of intelligent agency is directed contingency, or what we call choice.” When “an intelligent agent acts, it chooses from a range of competing possibilities” to create some complex and specified event. Dembski

> calls ID “a theory of information” where “information becomes a reliable indicator of design as well as as a proper object for scientific investigation.” ID seeks to find in nature the types of information which are known to be produced by intelligent agents, thus inferring a prior action of intelligence.
>
> The type of information which indicates design is generally called “specified complexity” or “complex and specified information” (CSI). Dembski suggests that design can be detected when one finds a rare or highly unlikely event (making it complex) that conforms to an independently derived pattern (making it specified).

Intelligent design looks at features of nature, like cosmic fine-tuning and DNA, and infers an intelligent cause because of the nature of the effect. Information is best explained by an intelligence. Computer programs are best explained by an intelligence. Blog posts are best explained by an intelligence. Cross stitched art is best explained by an intelligence. Intelligence can create complex things that are composed of simple parts that are sequenced together in such a way that they have meaning and purpose that is independent of the properties of the components themselves.

Here’s a good video explaining intelligent design applied to biological information in proteins and DNA: (suitable for complete beginners)

For anyone who is looking for a good basic book on intelligent design, I recommend “The Politically Incorrect Guide to Darwinism and Intelligent Design” by Johnathan Wells. He holds a Ph.D in biology from the University of California at Berkeley. The best intermediate book on intelligent design is Stephen Meyer’s “Signature in the Cell“. He has a Ph.D in the philosophy of science from Cambridge University. The best advanced book is Michael Behe’s “The Edge of Evolution“. He has a Ph.D in biochemistry from the University of Pennsylvania. For Christians looking to understand the relationship between science, evolution and monotheism, I recommend “God and Evolution” edited by Jay Richards. He has a Ph.D in philosophy and theology from Princeton University.

Self-refuting statements defined and some common examples

September 13, 2012 | by Wintery Knight | Link | Original Link

---

A fine article by Aaron, who writes at Please Convince Me.

Excerpt:

> A self-defeating (or self-refuting) statement is one that fails to meet its own standard. In other words, it is a statement that cannot live up to its own criteria. Imagine if I were to say,
>
> I cannot speak a word in English.
>
> You intuitively see a problem here. I told you in English that I cannot speak a word in English. This statement is self-refuting. It does not meet its own standard or criteria. It self-destructs.
>
> The important thing to remember with self-defeating statements is that they are necessarily false. In other words, there is no possible way for them to be true. This is because they violate a very fundamental law of logic, the law of non-contradiction. This law states that A and non-A cannot both be true at the same time and in the same sense. For example, it is not possible for God to exist and not exist at the same time and in the same sense. This would violate the law of non-contradiction. So if I were to say, "God told me He doesn't exist" you would see intuitively the obvious self-refuting nature of this statement.

Aaron goes on to explain how to deal with self-refuting statements in the article.

Here are 20 examples of self-refutation, just to encourage you to click through and read it:

> 1. There is no truth.
> 2. You can't know truth.
> 3. No one has the truth.
> 4. All truth is relative.
> 5. It's true for you but not for me.
> 6. There are no absolutes.
> 7. No one can know any truth about religion.
> 8. You can't know anything for sure.
> 9. You should doubt everything.
> 10. Only science can give us truth.
> 11. You can only know truth through experience.
> 12. All truth depends on your perspective.

> 13. You shouldn’t judge.
> 14. You shouldn’t force your morality on people.
> 15. You should live and let live.
> 16. God doesn’t take sides.
> 17. You shouldn’t try to convert people.
> 18. That’s just your view.
> 19. You should be tolerant of all views.
> 20. It is arrogant to claim to have the truth.

Aaron explains how to respond to each of those! Read them all – it’s important to know, because you hear these all the time. Like from that Susan Stone person who comments here.

By the way, anyone with a Twitter account, the best person to follow on Twitter is J Warner Wallace (@plsconvinceme). He tweets about 10-15 apologetics items *per day*.

Al Qaeda chief suspect in Libya terrorist attack, Obama flies to Las Vegas fundraiser

September 13, 2012 | by Wintery Knight | Link | Original Link

---

From CNN. (H/T Bad Blue)

Excerpt:

> A pro-al Qaeda group responsible for a previous armed assault on the U.S. Consulate in Benghazi is the chief suspect in Tuesday's attack that killed the U.S. ambassador to Libya, sources tracking militant Islamist groups in eastern Libya say.
>
> They also note that the attack immediately followed a call from al Qaeda leader Ayman al-Zawahiri for revenge for the death in June of a senior Libyan member of the terror group Abu Yahya al-Libi.
>
> The group suspected to be behind the assault — the Imprisoned Omar Abdul Rahman Brigades — first surfaced in May when it claimed responsibility for an attack on the International Red Cross office in Benghazi. The following month the group claimed responsibility for detonating an explosive device outside the U.S. Consulate and later released a video of that attack.
>
> Noman Benotman, once a leading member of the Libyan Islamic Fighting Group and now based at the Quilliam Foundation in London told CNN, "An attack like this would likely have required preparation. This would not seem to be merely a protest which escalated."
>
> "According to our sources, the attack was the work of roughly 20 militants, prepared for a military assault; it is rare that an RPG7 is present at a peaceful protest," Benotman said.
>
> "According to our sources, the attack against the consulate had two waves. The first attack led to U.S. officials being evacuated from the consulate by Libyan security forces, only for the second wave to be launched against U.S. officials after they were kept in a secure location."
>
> That analysis is supported by U.S. sources who say the attack on the consulate is believed to have been pre-planned. The sources say the attackers used the protest as a diversion to launch the attack, although the sources could not say if the attackers instigated the protest or merely took advantage of it.

I wrote before about he's been skipping more than half his daily intelligence briefings. Well guess what? He skipped every intelligence briefing this week. That Obama would bungle our national security doesn't surprise me one bit. He's a Democrat. He's like Jimmy Carter and Bill Clinton. They don't do anything about terrorism – they are afraid to offend terrorists.

Back to Obama: where is our master of foreign policy and national security now?

He has flown to Las Vegas to do some campaign fundraising:

> On the day after the U.S. Ambassador to Libya and three other Americans were killed in Benghazi, the White House on Wednesday morning released a schedule showing that President Obama would continue with his planned campaign trip to Las Vegas.

You can read the full list of Obama's ten worst foreign policy blunders. Obama's weak foreign policy (bowing to tyrants and hugging dictators) caused this attack. He's too busy playing golf to think about national security and counter-terrorism.

New study: multiple abortions increase risk of maternal death

September 13, 2012 | by Wintery Knight | Link | Original Link

---

The study was published in Oxford University's European Journal of Public Health, and the abstract is posted on the US National Library of Medicine National Institutes of Health (aka PubMed).

Here's the abstract:

> **BACKGROUND:**
>
> Inconsistent definitions and incomplete data have left society largely in the dark regarding mortality risks generally associated with pregnancy and with particular outcomes, immediately after resolution and over the long-term. Population-based record-linkage studies provide an accurate means for deriving maternal mortality rate data.
>
> **METHOD:**
>
> In this Danish population-based study, records of women born between 1962 and 1993 (n = 1 001 266) were examined to identify associations between patterns of pregnancy resolution and mortality rates across 25 years.
>
> **RESULTS:**
>
> With statistical controls for number of pregnancies, birth year and age at last pregnancy, the combination of induced abortion(s) and natural loss(es) was associated with more than three times higher mortality rate than only birth(s). Moderate risks were identified with only induced abortion, only natural loss and having experienced all outcomes compared with only birth(s). Risk of death was more than six times greater among women who had never been pregnant compared with those who only had birth(s). Increased risks of death were 45%, 114% and 191% for 1, 2 and 3 abortions, respectively, compared with no abortions after controlling for other reproductive outcomes and last pregnancy age. Increased risks of death were equal to 44%, 86% and 150% for 1, 2 and 3 natural losses, respectively, compared with none after including statistical controls. Finally, decreased mortality risks were observed for women who had experienced two and three or more births compared with no births.

Life Site News adds more:

> A single induced abortion increases the risk of maternal death by 45 percent compared to women with no history of abortion, according to a new study of all women of reproductive age in Denmark over a 25 year period.
>
> The study found that each additional abortion is associated with an even higher death rate. Women who had two abortions were 114 percent more likely to die

> during the period examined, and women had three or more abortions had a 192 percent increased risk of death.
>
> Elevated rates of death were also observed among women who experienced miscarriages, ectopic pregnancies or other natural losses. Among women with a history of multiple pregnancies, women with a history of both abortions and natural losses, but no live births, had the highest mortality rate.
>
> Women who had never been pregnant had the highest mortality rate overall.
>
> However, women with a history of successful deliveries were the least likely to die during the 25 years examined.
>
> The study is the second record linkage analysis of Danish mortality data to be published this month.
>
> The earlier study was limited to comparing mortality rates following only the first pregnancy outcome. It found that abortion of a first pregnancy was associated with a higher rate of death compared to death rates among women who delivered a first pregnancy. The higher death rate among women who had abortions persisted for each of the first ten years following the first pregnancy outcome.
>
> […]Dr. Reardon is the director of the Elliot Institute, which funds research related to abortion. He believes further research is needed to explore how the outcomes observed in this latest study may be influenced by abortion's impact on natural pregnancy losses. A new population study from Finland, for example, has found that abortion is associated with higher rates of preterm delivery, low birth weight delivery, and perinatal deaths in subsequent pregnancies.
>
> "We knew from our previous studies of low income women in California that women who have multiple pregnancy outcomes, such as having a history of both abortion and miscarriage, have significantly different mortality rates," Reardon said.
>
> "But this new study is the first to examine how each experience with abortion or miscarriage contributes to higher mortality rates," Reardon observed.
>
> "This is called a 'dose effect' because each exposure, or 'dose,' is seen to produce more of the same effect, which is what one would expect if there is a cause-effect relationship," he said.
>
> Reardon believes that a truer picture of the benefits of childbirth and the risks of abortion and pregnancy loss is now emerging because of a shift to more reliable record linkage studies. Such studies have been conducted in Finland, Denmark and the United States.

Is this the only bad effect of abortion on women's health?

Let's see the studies and then we'll decide.

From Life News.

Excerpt:

> A new study published in the *Asian Pacific Journal of Cancer Prevention* in February reported a very statistically significant increased risk of breast cancer for women with previous abortions as opposed to women who have never had one.
>
> The study, consisting of 1,351 women and led by researcher Ai-Ren Jiang, reported a statistically significant 1.52-fold elevation in risk for women with induced abortions and a "significant dose-response relationship between (the risk) for breast cancer and number of induced abortions," meaning the risk climbed with a higher number of previous abortions.
>
> For premenopausal women who have had abortions, the numbers were relatively small, and the observed 16% risk elevation was not statistically significant. However, for those with three or more abortions, the risk climbed to a statistically significant 1.55-fold elevation.
>
> "The results have revealed that induced abortion was related to increased risk of breast caner. Premenopausal women who had ≥3 times of induced abortion were at increased crude odds ratio (OR) (2.41, 95%CI: 1.09-5.42) and adjusted-OR (1.55, 95%CI: 1.15-5.68)," they wrote. "Postmenopausal women with a previous induced abortion were at increased crude OR (2.04, 95%CI: 1.48-2.81) and adjusted-OR (1.82, 95%CI: 1.30-2.54), and there was a significant increase trend in OR with number of induced abortions (p for trend: 0.0001)."
>
> […][A] Chinese study in 1995 by L. Bu and colleagues, including Janet Daling of the Fred Hutchinson Cancer Research Center, reported a statistically significant 4.5-fold elevated risk among women with previous induced abortions who developed breast cancer at or before age 35, compared to older women (who experienced a statistically significant 2.5-fold elevated risk)

Here's the latest study from the Journal of the American Medical Association (JAMA), showing that excessive consumption of alcohol is a rish factor for breast cancer.

Excerpt:

> Consumption of 3 to 6 alcoholic drinks per week is associated with a small increase in the risk of breast cancer, and consumption in both earlier and later adult life is also associated with an increased risk, according to a study in the November 2 issue of JAMA.
>
> "In many studies, higher consumption of alcohol has been associated with an increased risk of breast cancer. However, the effect of low levels of drinking as is common in the United States has not been well quantified," according to background information in the article. "In addition, the role of drinking patterns (i.e., frequency of drinking and 'binge' drinking) and consumption at different times of adult life are not well understood."

> Wendy Y. Chen, M.D., M.P.H., of Brigham and Women's Hospital and Harvard Medical School, Boston, and colleagues examined the association of breast cancer with alcohol consumption during adult life, including quantity, frequency, and age at consumption. The study included 105,986 women enrolled in the Nurses' Health Study who were followed up from 1980 until 2008 with an early adult alcohol assessment and 8 updated alcohol assessments. The primary outcome the researchers measured was the risk of developing invasive breast cancer.
>
> During the follow-up period, there were 7,690 cases of invasive breast cancer diagnosed among the study participants. Analyses of data indicated that a low level of alcohol consumption (5.0 to 9.9 grams per day, equivalent to 3-6 glasses of wine per week) was modestly but statistically significantly associated with a 15 percent increased risk of breast cancer. In addition, women who consumed at least 30 grams of alcohol daily on average (at least 2 drinks per day) had a 51 percent increased risk of breast cancer compared with women who never consumed alcohol.
>
> The researchers also found that when examined separately, alcohol consumption levels at ages 18 to 40 years and after age 40 years were both strongly associated with breast cancer risk. The association with drinking in early adult life still persisted even after controlling for alcohol intake after age 40 years.
>
> Binge drinking, but not frequency of drinking, was also associated with breast cancer risk after controlling for cumulative alcohol intake.

Now let's take a look at some other factors that raise the risk of breast cancer.

Abortion and breast cancer

Many studies show a link between abortion and breast cancer.

Study 1: (September 2010)

> Based on the expression of estrogen receptor (ER), progesterone receptor (PR) and HER2/neu (HER2), breast cancer is classified into several subtypes: luminal A (ER+ and/or PR+, HER2-), luminal B (ER+ and/or PR+, HER2+), HER2-overexpressing (ER-, PR-, and HER2+) and triple-negative (ER-, PR-, and HER2-). The aim of this case-control study is to determine reproductive factors associated with breast cancer subtypes in Chinese women. A total of 1,417 patients diagnosed with breast cancer in the First Affiliated Hospital, China Medical University, Shenyang, China between 2001 and 2009 and 1,587 matched controls without a prior breast cancer were enrolled.
>
> […]Postmenopause and spontaneous abortion were inversely associated with the risk of luminal tumors. By contrast, multiparity, family history of breast cancer and **induced abortion increased the risk of breast cancer**.

Study 2: (March 2010)

> OBJECTIVE: To explore the risk factors of breast cancer for better control and prevention of the malignancy.
>
> METHODS: The clinical data of 232 patients with pathologically established breast cancer were investigated in this 1:1 case-control study to identify the risk factors of breast cancer.
>
> RESULTS: The history of benign breast diseases, family history of carcinoma and**multiple abortions were the statistically significant risk factors of breast cancer**, while breast feeding was the protective factor.
>
> CONCLUSION: A history of benign breast diseases, family history of carcinoma and multiple abortions are all risk factors of breast cancer.

But wait, there's more.

Birth control pills

Many studies showed that taking birth control pills caused an increased risk of breast cancer.

Study 1: (March 2003)

> RESULTS: Among the youngest age group (<35 years, n = 545), significant predictors of risk included African-American race (RR = 2.66: 95% CI 1.4-4.9) and **recent use of oral contraceptives** (RR = 2.26; 95% CI 1.4-3.6). Although these relationships were strongest for estrogen receptor-negative (ER-) tumors (RRs of 3.30 for race and 3.56 for recent oral contraceptive use), these associations were also apparent for young women with ER+ tumors. Delayed childbearing was a risk factor for ER+ tumors among the older premenopausal women (Ptrend < 0.01), but not for women <35 years in whom early childbearing was associated with an increased risk, reflecting a short-term increase in risk immediately following a birth.

Study 2: (October 2008)

> **Oral contraceptive use ≥1 year was associated with a 2.5-fold increased risk for triple-negative breast cancer** (95% confidence interval, 1.4-4.3) and no significantly increased risk for non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.008). Furthermore, the risk among oral contraceptive users conferred by longer oral contraceptive duration and by more recent use was significantly greater for triple-negative breast cancer than non-triple-negative breast cancer ($P_{heterogeneity}$ = 0.02 and 0.01, respectively).

Where did all of this birth control pill usage and aborting unborn children coming from? Why are women doing it so often?

Why are these risk factors so prevalent today?

Look at this New York Times article by feminist professor Nancy Bauer.

Excerpt:

> If there's anything that feminism has bequeathed to young women of means, it's that power is their birthright. Visit an American college campus on a Monday morning and you'll find any number of amazingly ambitious and talented young women wielding their brain power, determined not to let anything — including a relationship with some needy, dependent man — get in their way. **Come back on a party night, and you'll find many of these same girls (they stopped calling themselves "women" years ago) wielding their sexual power, dressed as provocatively as they dare, matching the guys drink for drink — and then hook-up for hook-up.**

The article was written by:

> *Nancy Bauer is associate professor and chair of philosophy at Tufts University. She is the author of "Simone de Beauvoir, Philosophy, and Feminism," and is currently completing a new book, "How to Do Things With Pornography."*

Do you think that her attitude to sex would cause women to have more abortions, or less abortions, when compared to chastity before marriage, followed by lifelong married love? I think her plan results in *more* abortions. And now we know what harm that causes to women.

The total cost for breast cancer treatment, which raises medical insurance premiums (private health care) or taxes (single-payer health care), has been estimated to be between $1.8 billion and $3.8 billion dollars. In addition, the government spends billions of dollars each year on breast cancer research. All of this spending is costing taxpayers a lot of money, as people demand more and more government funding of breast cancer research and breast cancer treatment (with either private or single-payer health care). Furthermore, a recent study found that the annual cost of the breakdown of marriage and family was $112 billion a year. Don't tell me that feminism was good for society. It's a disaster. And we are all paying for it.

Do naturalistic theories account for the minimal facts about Jesus' resurrection?

September 13, 2012 | by Wintery Knight | Link | Original Link

---

Here's a neat post from Ichtus77 on her blog of the same name. She lists 12 facts that are admitted by the majority of New Testament scholars across the broad spectrum of worldviews, including atheistic scholars.

Excerpt:

> I am studying "the twelve facts" and want to get down what I've got so far. After the facts are displayed, we're going to turn the whole thing into a logic puzzle.
>
> Here are the 12 Facts:
>
> 1. Jesus died by Roman crucifixion.
> 2. He was buried, most likely in a private tomb.
> 3. Soon afterwards the disciples were discouraged, bereaved and despondent, having lost hope.
> 4. Jesus' tomb was found empty very soon after his interment.
> 5. The disciples had experiences that they believed were the actual appearances of the risen Christ.
> 6. Due to these experiences, the disciples lives were thoroughly transformed. They were even willing to die for their belief.
> 7. The proclamation of the Resurrection took place very early, from the beginning of church history.
> 8. The disciple's public testimony and preaching of the Resurrection took place in the city of Jerusalem, where Jesus had been crucified and buried shortly before.
> 9. The gospel message centered on the preaching of the death and resurrection of Jesus.
> 10. Sunday was the primary day of worshiping and gathering.
> 11. James, the brother of Jesus and a skeptic before this time, became a follower of Jesus when he believed he also saw the risen Jesus.
> 12. Just a few years later, Paul became a believer, due to an experience that he also believed was an appearance of the risen Jesus.

These are the facts that you see admitted in debates by atheistic historians, like in the debate between James Crossley and William Lane Craig. These facts are admitted even by most atheist historians because they pass standard historical criteria, like early dating, embarrassing to the author, appears in multiple sources, and so on. Secular historians don't accept everything that the Bible says as historical, but they will give you a minimum list of facts that pass their historical tests.

The resurrection puzzle is like a Sherlock Holmes mystery. People deduce what happened from the evidence that is considered to be unimpeachable. The “minimal facts” that EVERYONE accepts. You can even see secular historians assenting to these facts in academic debates like the one I linked above.

So the approach is like this:

1) Use historical tests to get a small number of undeniable historical facts
2) Try to explain the undeniable historical facts with a hypothesis that accounts for all of them

Like Sherlock Holmes says: “…when you have eliminated the impossible, whatever remains, however improbable, must be the truth.”

It’s the Sherlock Holmes method of doing history.

So, Ichtus77 lists the minimal facts, and in the rest of the post she surveys the following naturalistic hypotheses to see how well they can account for the minimal facts listed above.

Here are the naturalistic theories:

- The Unknown Tomb theory
- The Wrong Tomb theory
- The Twin theory
- The Hallucination theory
- The Existential Resurrection and the Spiritual Resurrection theories
- The Disciples Stole Body theory
- The Authorities Hid Body theory
- The Swoon theory
- The Passover Plot theory

The main way that scholars argue for the resurrection is to list the minimal facts, and defend them on historical grounds, then show that there is no naturalistic hypothesis that explains them all. The naturalistic theories are impossible. Once you have eliminated them because they don’t account for the minimal facts, you are left with the resurrection hypothesis. Elementary, Watson, elementary.

Greg Koukl debates Michael Shermer on God, atheism, meaning and morality

September 14, 2012 | by Wintery Knight | Link | Original Link

---

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

HH = Hugh Hewitt
GK = Greg Koukl
MS = Michael Shermer

Here is a 32-page PDF with the full debate transcript.

And here's an excerpt:

GK: Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative?

And if they're relative, then how can we make moral judgments that are meaningful on other people?

HH: Michael Shermer?

MS: Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong, and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

HH: Greg?

GK: Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process, and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's

to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

HH: One minute to the break, Michael Shermer.

MS: I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

HH: Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

MS: Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends, honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

HH: Greg Koukl?

GK: Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

HH: Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

MS: Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

HH: Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you

can.

MS: Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

GK: Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me.

I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

MS: But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

GK: Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic evolution, and from outside terms, neither is better than the other. Why should we do that, Michael?

MS: Yeah, well I don't see how entering God into the equation changes that problem at all.

GK: Well, that's the next step. What I'm trying to show is that the should comes from the outside, and if we can demonstrate that, then we can ask…

QE3: Obama ushers in hyperinflation with more "quantitative easing"

September 14, 2012 | by Wintery Knight | Link | Original Link

---

Investors Business Daily explains Obama's latest desperate ploy to cover up his economic failures.

Excerpt:

> The Federal Reserve announced a third round of quantitative easing Thursday afternoon, and it is big: A net $40 billion a month in additional purchases of mortgage-backed securities. And policymakers said additional accommodation will continue "for a considerable time after the economic recovery strengthens."
>
> […]Ordinary Americans can expect to see higher gasoline prices. Quantitative easing also pushes up commodity prices — both by boosting demand for financial assets and by weakening the dollar.
>
> Crude oil prices have been trending higher, and were up $1 to nearly $98 a barrel in mid-afternoon trade.
>
> That will quickly filter down to gasoline prices at the pump. Gas prices moved back to $3.847 a gallon last week, the highest since April. They've risen for 10 straight weeks in part on anticipation that QE3 was coming. Gas prices could once again threaten the $4 level — it's already well over that mark in California. And that's with no major supply issues or feared disruptions around the world.
>
> Higher oil and gas prices also could push food prices higher, by encouraging more corn burning to produce ethanol, as IBD's Jed Graham recently noted. Corn prices are near record highs due to this summer's historic drought.
>
> The producer price index shot up 1.7% in August — the biggest jump in three years — on higher food and energy costs. Gasoline prices at the wholesale level exploded 13.6%. Food costs rose 0.9%, the most in nine months.
>
> With job growth and wage gains so weak, higher food and gas prices will cut into consumers' buying power on everything else. That will offset much of the modest QE3 benefits.

First and second round of quantitative easing:

Third round of quantitative easing:

It means they are going to print the money. There really is no difference between Barack Obama and Robert Mugabe when it comes to economic policy. The only thing stopping him is the Republican House and the conservative alternative media.

Missouri Republicans override governor’s veto to protect conscience rights and religious liberty

September 14, 2012 | by Wintery Knight | Link | Original Link

---

From Life Site News.

Excerpt:

> Missouri Republicans override governor’s veto to protect conscience rights and religious liberty
>
> Individuals, employees and employers in the state of Missouri, by the passage of this law, will not be required to participate in, provide, pay for, or provide referrals for any health plans or services or services that cover those services, nor will it be lawful for such persons to be discriminated against or penalized by any government agency.
>
> The bill was vetoed by Governor Nixon on July 12, which surprised some in light of his record of allowing previous pro-life bills to pass without his signature by allowing the 45-day veto period to elapse. It was in this way that Missouri’s late term abortion ban became law just last year.
>
> In yesterday’s special veto session, the Senate voted 26-6 and the House 109-45 in defense of the bill, which was written in response to the federal HHS mandate issued by Secretary Kathleen Sebelius that took effect in August. The narrow religious exemptions in the mandate left individuals and non-religiously-affiliated employers outside its purview and subject to complying with its controversial requirements. Individual conscientious objectors, whether employer or employee in the state of Missouri, are now protected from the mandate unless possible federal court decisions rule otherwise.

Missouri governor Jay Nixon is, of course, a Democrat, and therefore opposes doctors and nurses having conscience rights. He also wants to force Christian businesses to subsidize abortion-causing drugs. He lost this time because the Republicans were there in force to stop his secular leftist fascism.

Dinesh D'Souza draws inept response from Obama for his 2016 documentary

September 14, 2012 | by Wintery Knight | Link | Original Link

---

Dinesh responds to some ineffectual bleating from President Airhead. (H/T Reformed Seth)

Excerpt:

> For weeks the President tried to ignore the film, no doubt hoping that it would go away. Unfortunately for Obama, the film has continued to gain momentum. It has been seen by more than 2 million people, earned more than $27 million, and become the second biggest political documentary of all time. So now he has decided to come out with guns blazing.
>
> Yet what a clumsy, ill-aimed and misleading blast this is. It begins with a quotation deploring "smear journalism". We read that this quotation is from the "*Columbia Journalism Review* on*2016: Obama's America*." Yet the *Columbia Journalism Review* article was published in September 2010, nearly two years before the film came out! It turns out that the magazine was critiquing one of my earlier books *The Roots of Obama's Rage*.
>
> Apparently relying on a range of left-wing discredited sources, Obama lists what it takes to be four "flat-out falsehoods". Let me list and address them in turn.
>
> - First, "D'Souza falsely claimed that President Obama said he didn't believe in American exceptionalism."
>
> Oh really? Obama was asked in 2009 whether he believed in American exceptionalism. He replied that he did, just as the Brits believe in British exceptionalism and the Greeks in Greek exceptionalism. The clear implication of Obama's remarks is that if everyone thinks they are exceptional, no one really is.
>
> Read President Obama's remarks about US, British and Greek exceptionalism here.
>
> - Second, "D'Souza falsely asserted that President Obama funded $2 billion in Brazilian oil exploration." The Obama team claims that Obama had "nothing to do with the loan."
>
> Well, the undisputed fact is that the Export-Import Bank awarded more than $2 billion in loans and loan guarantees to Brazil. The Export-Import Bank is a U.S. government agency and policy for the agency is set by the Obama administration. So how can the Obama administration escape responsibility for its own policies?
>
> Moreover, we know that Obama himself approves of the policy. In 2011, Obama

> went to Brazil, a country where, as he put it, "the legacy of colonialism is still fresh." There, on March 19, 2011, he reminded the Brazilians of American support for Brazilian oil exploration and added, "We want to help with technology and support to develop these oil reserves safely, and when you're ready to start selling, we want to be one of your best customers."
>
> Moreover, Obama's Brazil subsidy is not an isolated case; the Obama administration has—again through the Export-Import Bank—awarded billions to Mexico and Colombia for oil drilling and refining in those countries.
>
> Read President Obama's remarks in Brazil here.

A review of the movie"2016: Obama's America" – a project of Indian-American Christian apologist Dinesh D'Souza.

Excerpt:

> My wife and I went to see a showing of the film at the Regal theater in Winter Park Village. It was about three-quarters full. We didn't go with a group but noticed that many in the audience came in groups of more than just a single couple. There were also examples of grandparents, parents and children. At the end of the film, the audience broke into loud and spontaneous applause. Was this only due to the film "playing to the choir"?
>
> In part perhaps, but in the next few weeks I predict it will reach the audience we most need to reach -young voters -and are the most avid movie goers and the least likely to be reached by more traditional methods.
>
> […]Dinesh D'Souza is an engaging, attractive dark skinned immigrant from India whose life and career follows in parallel with Obama's – born and married in the same years and able to judge American institutions and values from a third world perspective.
>
> The film does not accept any of the more controversial attacks on Obama's biography but seeks to explain how his own words and thoughts cited continually throughout the film from the President's autobiography 'Dreams From My Father' are a thread running through his policies and are at the core of what motivates him and makes him intent on downsizing, disarming, and apologizing for America, abandoning out allies such as Great Britain, Israel and Poland, fawning and bowing before Muslim despots, and seeking to create a society where individual initiative, ambition and self-reliance are replaced by the collectivist goals that have failed all over the world.
>
> […]*2016* examines Barack Obama's relationship with his absent father who was an activist in the anti-colonial struggle against the British, and following independence became part of that elite clique who fostered a one party bureaucratic, socialist state in Kenya that crushed all local government and free initiative resulting in a downward spiral of economic stagnation and poverty shared by Obama's half-brother in the slums of Nairobi.

> […]We follow the President's life in where his mother remarries a local Indonesian man (also a Muslim, Lolo Soteiro), who eventually becomes a successful businessman and in so doing, alienates Obama and his mother who believe they are betraying the socialist and collectivist legacy of Barack Obama Senior.
>
> This psychological portrait is one that makes sense and can be understood and appreciated by many young people who are themselves the product of homes in which there is divorce and remarriage.
>
> The President's endorsement of the "Occupy Wall Street" movement extends to the world stage in which the antagonists are portrayed as the 99% – the occupied and the exploitative 1 % – the occupiers.
>
> Obama emotionally sympathizes with all those he places in the category of the victims of the colonialist white European nations (the one-percenters), returning the bust of Churchill, the gift of the British government, praising Islam as a progressive force while denying its oppression of women, children, non-Muslim minorities, his policies towards third world nations such as Mexico and Brazil whom his policies have encouraged to develop their oil industries while retarding our own, secretly supporting Argentina in its attempt to seize the Falkland Islands from Britain by force, pressuring Israel (regarded too as "occupiers") to retreat from defensible borders, total passivity in failing to support the millions of demonstrators in the street against the tyrannical regime of the mullahs in Iran, etc.
>
> Most damning of all are the close associations of the President and his most important mentors ignored by the media and Senator John McCain's campaign in 2004 – convicted terrorist Bill Ayers, the "Reverend Wright (God Damn America and its "Liberation Theology" church in Chicago) and long-time Communist party member Frank Marshall Davis.
>
> This is a powerful film that will exert a profound influence. As the billboards and advertisements on television proclaim… Love Him or Hate Him, you need to see this film.

Does that sound good or what? There's a lot of talk about how this election needs to be about grown up ideas. I think that these long form arguments elevate, rather than lower, the debate. We need to have adult conversations about who Obama is and what his policies are intended to achieve – what is his end game?

Trailer 1 of 3:

Trailer 2 of 3:

Trailer 3 of 3:

Here's Dinesh explaining what his movie is about at CPAC 2012:

Keep in mind that Dinesh is a Christian apologist and has debated people like Christopher Hitchens. This is his newest project.

Go see it!

UPDATE: Reformed Seth sent me this interview with Dinesh D'Souza. He's being interviewed by Stanley Fish.

Friday night soldiers: two episodes of Combat!

September 14, 2012 | by Wintery Knight | Link | Original Link

---

Tonight we have two episodes of the hit TV show Combat! from the 1960s.

Episode 1: Finest Hour

Part 1 of 3:

Part 2 of 3:

Part 3 of 3:

IMDB mean rating: [9.1/10]

IMDB median rating: [9.5/10]

Description:

> While on a scouting mission, Lt. Hanley, Caje, and another GI run into a German machine gun nest. Lt. Hanley is wounded. A local Frenchman takes them to the château of Count and Countess De Roy. The good news is the Countess had medical experience treating wounded in WW1; the bad news is the Chateau is occupied by the Germans. The Countess can treat the wounded Hanley, but it has to be done without the Germans knowing.

Episode 1 features more dialog and suspense.

Episode 2: The Leader

Part 1 of 3:

Part 2 of 3:

Part 3 of 3:

IMDB mean rating: [8.8/10]

IMDB median rating: [9/10]

Description:

> Kirby, who is given command of the squad in Saunders's absence, learns a lesson in leadership.

Episode 2 has more fighting and action.

Happy Friday!

UK Independent: “America ‘was warned of embassy attack but did nothing'”

September 15, 2012 | by Wintery Knight | Link | Original Link

---

From the left-leaning UK Independent.

Excerpt:

> The killings of the US ambassador to Libya and three of his staff were likely to have been the result of a serious and continuing security breach, *The Independent* can reveal.

> American officials believe **the attack** was planned, but Chris Stevens had been back in the country only a short while and the details of his visit to Benghazi, where he and his staff died, were meant to be confidential.
>
> **The US administration** is now facing a crisis in Libya. Sensitive documents have gone missing from the consulate in Benghazi and the supposedly secret location of the “safe house” in the city, where the staff had retreated, came under sustained mortar attack. Other such refuges across the country are no longer deemed “safe”.
>
> Some of the missing papers from the consulate are said to list names of Libyans who are working with Americans, putting them potentially at risk from extremist groups, while some of the other documents are said to relate to oil contracts.
>
> **According to senior diplomatic sources, the US State Department had credible information 48 hours before mobs charged the consulate in Benghazi, and the embassy in Cairo, that American missions may be targeted, but no warnings were given for diplomats to go on high alert and “lockdown”, under which movement is severely restricted.**
>
> **Mr Stevens had been on a visit to Germany, Austria and Sweden and had just returned to Libya when the Benghazi trip took place with the US embassy’s security staff deciding that the trip could be undertaken safely.**

Recall that foreign policy and counter-terrorism are not as important to Obama as campaign fundraising and playing golf. And why not be a slacker? The American news media is there to cover for him. The only thing you’ve heard about the embassy attack in the news is that Romney “committed a gaffe”. That’s all you need to know, according to the mainstream media.

Read the full list of Obama’s top 10 foreign policy disasters.

Egan Jones cuts U.S. credit rating again, this time from AA to AA-

September 15, 2012 | by Wintery Knight | Link | Original Link

---

Story from CNBC.

Excerpt:

> Ratings firm **Egan-Jones** cut its credit rating on the U.S. government to "AA-" from "AA," citing its opinion that quantitative easing from the Federal Reserve would hurt the U.S. economy and the country's credit quality.
>
> The Fed on Thursday said it would pump $40 billion into the U.S. economy each month until it saw a sustained upturn in the weak jobs market.
>
> In its downgrade, the firm said that issuing more currency and depressing interest rates through purchasing mortgage-backed securities does little to raise the U.S.'s real gross domestic product, but reduces the value of the dollar.
>
> In turn, this increases the cost of commodities, which will pressure the profitability of businesses and increase the costs of consumers thereby reducing consumer purchasing power, the firm said.
>
> In April, Egan-Jones cuts the U.S. credit rating to "AA" from "AA+" with a negative watch, citing a lack of progress in cutting the mounting federal debt.
>
> **Moody's Investors Service** currently rates the United States Aaa, Fitch rates the country AAA, and Standard & Poor's rates the country AA-plus. All three of those ratings have a negative outlook.

Could this have anything to do with the decision to print $40 billion a month to "stimulate" the economy? Once you've given up on letting businesses create jobs by lowering their taxes and removing burdensome regulations, then printing money is all you have left. But no one mistakes that for economic growth, least of all credit rating agencies.

Does atheism mean “a lack of belief in God”?

September 15, 2012 | by Wintery Knight | Link | Original Link

---

First, let’s see check with the Stanford University Encyclopedia of Philosophy.

Excerpt:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God.
> What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position,

and the theist bears a special burden of proof with regard to his belief that God exists.

So understood, such an alleged presumption is clearly mistaken. **For the assertion that "There is no God" is just as much a claim to knowledge as is the assertion that "There is a God." Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God's existence. He confesses that he doesn't know whether there is a God or whether there is no God.**

But when you look more closely at how protagonists of the presumption of atheism used the term "atheist," you discover that they were defining the word in a non-standard way, synonymous with "non-theist." So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists). As Antony Flew confesses,

the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)

Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.

One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.

So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of

> atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, “So is there a God or not?”

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these “subjective atheists”?

Dealing with subjective atheists

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says “I lack a belief in the gravitational force!”. When you engage in serious discussions with people about God’s existence, you only care about what people know and what they can show to be true. We don’t care about a person’s psychology.

Dealing with persistent subjective atheists

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over “I lack a belief in God, I lack a belief in God”? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: “I lack a belief in cupcakes! I lack a belief in icebergs!” What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: “Wintery Knight won’t listen to me! I lack a belief in crickets!”. I think at this point you have to give up and stop talking to such a person.

And that’s why I moderate and filter comments on this blog. There are uneducated people out there with access to the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don’t *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I’m not obligated to engage in discussions with them, either.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information

- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument

Teacher fired for giving 0 to student for missed assignment

September 16, 2012 | by Wintery Knight | Link | Original Link

---

From CANOE.

Excerpt:

> An Edmonton high school teacher suspended for giving zeros was officially given the axe Friday in a letter from the Edmonton Public School Board.
>
> […]The Ross Sheppard physics teacher — suspended last spring after he gave a student a zero for not handing in an assignment — now plans to seek legal council and file an appeal.
>
> […]Despite the months of uncertainty and scrutiny over his controversial teaching decisions, Dorval says he doesn't regret his actions.
>
> "I keep saying I will never regret it," he said. "If students don't do the work, they don't deserve the mark and I stand by that."
>
> It's important for children to learn when they are young and the stakes are low that there are consequences for choices. Punishing teachers who try to teach this to children early does no favors to the children. The world is a tough place, and it's better to learn that when it's relatively easy.

The public school board made a mistake by firing this teacher. It says a lot that teachers can do almost anything wrong and not be fired, but that they can be fired for doing the right thing. That's another reason why the public school monopoly needs to be broken up.

Jim Wallace and the case-making Christian

September 16, 2012 | by Wintery Knight | Link | Original Link

To make a good case, you need to be prepared

I found an interesting post by Jim Wallace of Please Convince Me. (H/T The Poached Egg)

Wallace responds to the alarming statistics of Christians abandoning their faith as soon as they get to university, often because of intellectual doubts. He also notes that many young Christians who don't fall away don't really have a Biblical worldview at all.

Here's the problem:

> Many students are walking away from Christianity because they no longer believe it is true. In a survey conducted by sociologists Christian Smith and Melinda Denton and recorded in their book, "Soul Searching: The Religious and Spiritual Lives of American Teenagers" (Oxford University Press, 2005), 32% of former believers said they left because of intellectual skepticism…
>
> The young Christians who were surveyed said that they believed in the existence of a God who created and ordered the world and watches over human life here on earth. They also believe that this God wants people to be good, nice, and fair to each other, (as they claimed the Bible teaches, and as most other world religions also teach). They said that the central goal of life is to be happy and to feel good about oneself. They did not believe that God needed to be involved in one's life except when He is required to solve a problem, and they said that good people go to heaven when they die. Not much of this version of "Christianity" resonates with the classic, orthodox truth of the Christian Worldview, does it?

And here's his solution, passionately argued:

> When asked what it means to be a Christian, few of us would respond that being a Christian means becoming a 'defender of the faith'. Most of us shy away from challengers and those who hold opposing beliefs; many of us are uncomfortable

> with the potential confrontation. But being a Christian demands that we become proficient "case makers". Think about it for a minute. We would all agree that our salvation does not depend on our ability to defend what we believe. After all, we are saved when we trust Jesus for our salvation and recognize that we are fallen, sinful creatures in need of a Savior. When we recognize that Jesus is God incarnate and paid the penalty that we deserve, we begin to embrace the promise of God to rescue us from ourselves! This trust in Christ as Lord and Savior is what saves us.
>
> But we need to recognize that our Christian life is more than one of trust. It is also a life of knowledge and expression. God has called us to think about what we believe and defend it to those who might challenge us or simply ask questions (more on that HERE). Christian "case makers" who have accepted this challenge are often called "apologists". The word "apologist" comes from the Greek word "apologia" which simply means "speaking a defense". The term does have some liability, however, for a couple of reasons. First, the related term, "apology" leaves many with the impression that Christians think they have something to apologize for when they engage in "apologetics". Nothing, of course, could be further from the truth. Secondly, our present culture has a tendency to view apologists as professional speakers of one kind or another. Even Christians tend to think of apologetics as something to be done by professionals, rather than an important responsibility to be embraced by each and every Christian. It's time to recognize the fact that all Christians are called to be a Christian "case makers"; the situation couldn't be more urgent.
>
> […]There's a reason why God calls us to worship Him with our minds, understand the value of evidence, examine our beliefs until we are convinced, and then become Christian "case makers" (more on that HERE)! While it is our faith and trust in Christ that saves us, it is our ability to make the case for Christ that protects us and transforms our world. We need to become "case makers" just as Paul was a "tent maker". "Case making" needs to be a part of our Christian identity, and all of us need to be apologists for the Christian Worldview. We cannot continue to delegate this responsibility to well known apologists and Christian authors. We don't need one 'million dollar apologist'; we need a million 'one dollar apologists'. All of us can be equipped to defend our faith; it doesn't require a master's degree in apologetics; it doesn't require a library full of books, or a radio show, or a podcast. It simply requires the personal commitment to learn the truth and defend it to others.

This article is pretty long, but it has a lot of information based on his experience as a cold case police detective.

Here's a snippet that should get you to read the whole thing:

> Call Witnesses Selectively
>
> Once the Opening Statements have been made, it's time to begin presenting the

> evidence to the jury. Much of this evidence will simply be the testimony of important expert witnesses. The attorneys have to select these witnesses carefully and judiciously. Each case is different and will require specific types of experts. Some cases require DNA experts, others require experts in material evidence; some cases require coroners or doctors, others require weapons specialists. The attorneys have the burden of deciding which types of experts will be needed to best make the case.
>
> As a Christian…
>
> I've got to do something very similar if I want to be a "Case Making" Christian. While I may be very familiar with the scientific or philosophical work that has been done on a particular topic, I have to be careful not to overload the conversation with the opinions of too many "expert witnesses". I have to be specific and targeted in the way that I bring experts into the conversation. I also need to be well versed in the work that these experts have done so that I can accurately quote them.
>
> A "Case Making" Tip:
>
> Become a specialist. It's important to have a broad understanding of a number of apologetic issues, but I know there are some places where I am weak, and some places where I am stronger. I try to focus on those areas that are off special interest to me and it's in these areas that I am most familiar with the experts in the field. See yourself as the foreman on a jury. You and I don't have to BE expert witnesses; we simply need to be able to reiterate what the expert witnesses have said once we get back in the jury room with the other jurors.

This is point #3 in his list of 7 points. He's basically saying that you have to be able to represent the work of the experts intelligently, instead of just reading what they've written out loud, which could take forever. You need to read the experts, and then support your case with relevant quotes from the experts, showing how they support arguments that you understand – because you made them. And this preparation and specialization is not based on what is easy for you, or based on what you like, but is instead based on what is effective for your audience. If your audience finds science appealing, then to science you will go. Hint: most men like science, math and computers. Whatever you choose, logic, science, history – it has to be focused on demonstrating the truth of Christianity – NOT Christianity as life-enhancement.

[image]Call Witnesses Selectively

Once the Opening Statements have been made, it's time to begin presenting the evidence to the jury. Much of this evidence will simply be the testimony of important expert witnesses. The attorneys have to select these witnesses carefully and judiciously. Each case is different and will require specific types of experts. Congressman Allen West gives the Republican weekly radio address

September 17, 2012 | by Wintery Knight | Link | Original Link

---

It's about time that Allen West be allowed to give the official GOP weekly radio address. His topic is the automatic spending cuts to the defense budget that are scheduled to occur soon.

Description:

> In this week's address, Congressman Allen West, a Retired U.S. Army Lieutenant Colonel, discusses the deadline for the sequester, and the White House's devastating inaction on what was originally their idea. The Republican-led House has proposed responsible replacements to the sequester's historically crippling across-the-board cuts to our nation's military. The recent vicious attacks on embassies in the Middle East underscore the need to preserve our military strength. The president and Senate Democrats must put aside partisan politics to work with us to preserve our military and replace the sequester.

For those who can't see the video, here is a report from the radically leftist CNN:

> Rep. Allen West of Florida cited his military experience on Saturday in the Republican weekly address, where he called for action from the Senate and White House on the sequester set to begin in January.
>
> "I spent 22 years in active duty in the United States Army and served in several combat zones," the retired lieutenant colonel said. "I can not understate the amount of damage these cuts would do to our military. They would essentially hollow out our armed forces."
>
> "Mr. President, for you, the Commander in Chief of our armed forces, to sit idle and do nothing while this dark cloud hangs over our military – it is shameful, it is irresponsible, and it is wrong," he said.
>
> Included in the cuts – which would reduce the federal deficit by approximately $1 trillion over the next decade – are reductions in defense spending, as well as nearly every other area. On Friday, a White House report found the cuts "would have a devastating impact on important defense and nondefense programs."
>
> While House Republicans have acted to find alternatives to these cuts, the Democrat-controlled Senate and White House have not, he said.
>
> "The president himself has opposed or disregarded every attempt we've made to work with him on a solution," West said. "Dodging his responsibility is how the 'sequester' came about, so it is no surprise the president is doing the exact same thing now."
>
> West called to mind violence in the Arab world this week – including that which

> led to the death of four Americans at a U.S. consulate in Libya – as a sign of "how critical it is that the United States projects strength," including military strength.
>
> "It is because of these threats that America must continue to fund its military and support its armed forces to the fullest extent," West said. "The lives of all Americans depend on it, as do the memories of Ambassador Chris Stevens and the public servants who perished with him."

West says this in his address: "Mr. President: for you — the Commander-in-Chief of our Armed Forces — to sit idle and do nothing while this dark cloud hangs over our military, it is shameful, it is irresponsible, and it is wrong. It is dead wrong."

Recent polls by the mainstream skew sample towards Democrat voters

September 17, 2012 | by Wintery Knight | Link | Original Link

---

Here's an excellent analysis from Da Tech Guy.

Excerpt:

> For the last two weeks we have been treated to the narrative that Barack Obama is surging at the polls, Mitt Romney is in trouble and unless there is a massive change in direction it is all over.
>
> Simply put **this is a lie**.
>
> Of all the polls you have seen, there is one poll that has gotten no attention, it is a poll that has been taken monthly, it is a poll that Doug Ross spotted and promoted on his site. It is the Rasmussen Poll of party identification.
>
> They have party identification results online dating back to 2004.

Here are the recent numbers:

	August 31, 2012				
	Republican	Democrat	Other	R - D	Quarterly
2012					
Aug	37.6%	33.3%	29.2%	4.3%	
Jul	34.9%	34.0%	31.1%	0.9%	
Jun	35.4%	34.0%	30.5%	1.4%	1.8%
May	35.7%	33.8%	30.5%	1.9%	
Apr	35.1%	33.1%	31.8%	2.0%	
Mar	36.4%	33.4%	30.2%	3.0%	3.3%
Feb	36.0%	32.4%	31.6%	3.6%	
Jan	35.9%	32.5%	31.6%	3.4%	

Voter identification by party
It's a 3-4 point advantage for Republicans.

Da Tech Guy continues:

> At no time during the year do the Democrats have a registration advantage vs republicans, the gap closes in July & re-separates in August. The low point for the GOP was July for 34.9 and the high August at 37.6 For democrats the high was 34.0 in June & July the low was 32.4 in Feb
>
> What does this mean for November? **It means a lot.**
>
> The Democrats won 2 election in this period 2006 & 2008 with a 6.9 advantage in 2006 & a 7.6 advantage in 2008.
>
> There is no example of the Democrats winning since 2004 with an advantage less that 6.9.
>
> The GOP won two elections in this period 2004 with a -1.6 disadvantage & 2010

> with a 1.3 advantage. This means the GOP has proven it can win with not only a small lead but with an *actual disadvantage*. Additionally with an advantage of only 1.3 they pulled off the biggest house swing in my lifetime.
>
> Can these number change? Well the biggest 1 month swing I've seen is 4.2 Oct-Nov in 2010 the biggest 3 month swing was Dec 2007-Feb 2008 6.9 in favor of Democrats at the rise of Obama.
>
> Tell me with the economy in the tank, and the new trouble in the Middle East, what is the prospect of a swing of that size to the Democrats happening again right now? *Moreover even if that record registration swing repeated itself right now this would give democrats an advantage of only 2.6 points.*
>
> I've covered a lot of national polls on this site over the last year and all those polls ABC, CBS, NBC, FOX have one thing in common.
>
> Not a single one of those polls had a sample with a GOP advantage.

And here's what the mainstream media have been doing with their polls:

Mainstream media oversampling Democrat voters
Only the Rasmussen Reports poll is accurately sampling voters based on party identification.

That's why Obama looks like he's winning. He's not.

Read the full analysis here.

UPDATE: CBS/NYT Poll Weights Registered Voters Dems 35%, Republicans 22%.

Does God pose an authority problem for you?

September 17, 2012 | by Wintery Knight | Link | Original Link

I'm going to steal this entire post from Tough Questions Answered to get a conversation started:

> Many of the people I know who reject God or who have crafted a God that makes no demands on them have a fundamental problem with authority. They don't want anybody telling them what to do.
>
> For a person who wants complete autonomy, who chafes at the thought of anyone having authority over them, a creator God who makes demands is way inconvenient.
>
> Many people who believe in God, but also have this authority hang-up, create their own version of God. This God gives them what they want when they want it. He approves of everything they do, as long as they are just trying to be happy. He encourages them to follow their desires, wherever they lead. C. S. Lewis compared this God to a senile, old grandfather who never says "no" to his grandchildren. You want chocolate for breakfast, lunch, and dinner? No problem!
>
> Is this the Christian God? Philosopher Paul Moser answers the question:
>
> It would be a strange, defective God who didn't pose a serious cosmic authority problem for humans. Part of the status of being God, after all, is that God has a unique authority, or lordship, over humans. Since we humans aren't God, the true God would have authority over us and would seek to correct our profoundly selfish ways.
>
> If you are "worshiping" a God who makes no demands on you, you're worshiping no God at all. You're just trying to find a deity to make you feel good about your selfish choices. What's the point?

I'm posting this because I'm looking for comments. Do you know anyone like this? I'll help by getting you started with some sample atheists.

Famous atheists agree: God is not the boss of them

Consider the words of Thomas Nagel, a famous atheist philosopher:

> "In speaking of the fear of religion, I don't mean to refer to the entirely reasonable hostility toward certain established religions and religious institutions, in virtue of their objectionable moral doctrines, social policies, and political influence. Nor am I referring to the association of many religious beliefs with superstition and the acceptance of evident empirical falsehoods. I am talking about something much deeper–namely, the fear of religion itself. I speak from experience, being strongly subject to this fear myself: I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-

> informed people I know are religious believers.
>
> I want atheism to be true and am made uneasy by the fact that some of the most intelligent and well-informed people I know are religious believers. It isn't just that I don't believe in God and, naturally, hope that I'm right in my belief. It's that I hope there is no God! I don't want there to be a God; I don't want the universe to be like that."("The Last Word" by Thomas Nagel, Oxford University Press: 1997)"

He is a widely respected atheist. He once named Stephen C. Meyer's Signature in the Cell as one of the Times Literary Supplement's best books of the year.

And what about atheist Richard Lewontin: (and by "science" he means "naturalistic science")

> "Our willingness to accept scientific claims that are against common sense is the key to an understanding of the real struggle between science and the supernatural. We take the side of science *in spite of* the patent absurdity of some of its constructs, *in spite of* its failure to fulfill many of its extravagant promises of health and life, *in spite of* the tolerance of the scientific community for unsubstantiated just-so stories, because we have a prior commitment, a commitment to materialism. It is not that the methods and institutions of science somehow compel us to accept a material explanation of the phenomenal world but, on the contrary, that we are forced by our own a priori adherence to material causes to create an apparatus of investigation and a set of concepts that produce material explanations, not matter how counterintuitive, no matter how mystifying to the uninitiated. Moreover, that materialism is absolute, for we cannot allow a divine foot in the door." (Richard Lewontin in *New York Review of Books*, January 9, 1997, p. 28)

Interesting. He's willing to tell people lies to keep the Divine Foot outside the door.

And one last one from Aldous Huxley:

> "I had motives for not wanting the world to have a meaning; consequently assumed that it had none, and was able without any difficulty to find satisfying reasons for this assumption. The philosopher who finds no meaning in the world is not concerned exclusively with a problem in metaphysics, he is also concerned to prove that there is no valid reason why he personally should not do as he wants to do, or why his friends should not seize political power and govern in the way that they find most advantegous to themselves… For myself, the philosophy of meaningless was essentially an instrument of liberation, sexual and political." — Aldous Huxley in Ends and Means, 1937

So this is pretty widespread among famous atheists. How about among ordinary atheists?

Survey says

Additionally, atheists are not as charitable as religious people:

Arthur Brooks' survey showed that atheists certainly give less in charity and do less community service as religious people on the right and left.

Quote:

> Drawing on some ten data sets, Brooks finds that religiosity is among the best predictors of charitable giving. Religious Americans are not only much more likely to give money and volunteer their time to religious and secular institutions, they are also more likely to provide aid to family members, return incorrect change, help a homeless person, and donate blood. In fact, despite expecting to find just the opposite, Brooks concluded: "I have never found a measurable way in which secularists are more charitable than religious people."
>
> Consider some examples. Religious citizens who make $49,000 gave away about 3.5 times as much money as secular citizens with the same income. They also volunteered twice as often, are 57 percent more likely to help homeless persons, and two-thirds more likely to give blood at their workplace. Meanwhile, those who insist that "beliefs don't matter as long as you're a good person" are not as good as those who do think beliefs matter. The former group gave and volunteered at much lower rates.
>
> Yet even these findings tend to obscure the impact of religion on charity. This is because some of the survey respondents that Brooks classified as secular are indirectly affected by religion if they were raised in a religious household.

Atheists also divorce more than committed Christians:

Quote:

> It's a number that is trumpeted from the rooftops — and the pulpit: Half of marriages among Christians and non-Christians alike end in divorce.
>
> But the reality is that Christians who attend church regularly get divorced at a much lower rate.
>
> Professor Bradley Wright, a sociologist at the University of Connecticut, found that among people who identify as Christians but rarely attend church, 60 percent have been divorced. Of those who attend church regularly, 38 percent have been divorced.
>
> W. Bradford Wilcox, a leading sociologist at the University of Virginia and director of the National Marriage Project, found a nearly identical spread between "active conservative Protestants" who regularly attend church and people with no religious affiliation.
>
> Professor Scott Stanley from the University of Denver, who is working on the Oklahoma Marriage Initiative, said couples with a vibrant religious faith have more and higher levels of the qualities that marriages need to avoid divorce.
>
> "Whether young or old, male or female, low-income or not, those who said that they were more religious reported higher average levels of commitment to their

> partners, higher levels of marital satisfaction, less thinking and talking about divorce and lower levels of negative interaction," he said. "These patterns held true when controlling for such important variables as income, education and age at first marriage."

My survey of atheists

I like to find out what atheists are really thinking. So a while back, I did this massive survey of the atheists in my life, and this fear of authority (and morality) seemed to be *the* central belief animating atheism.

Here's Question 11:

> What is your purpose in life, and why did you choose that purpose? Is it just yours, or for everyone else too?

And these were the responses:

- Mine is to feel good about myself and to feel respected by others.
- Mine is to enjoy it. I'd hope that I go about it in a way that doesn't interfere with others enjoyment and that when it does we can compromise.
- Mine is to relieve inordinate suffering, while leaving room for constructive suffering that lead to creativity and progress. Based on empathy.
- Mine is to help the species survive by having lots of children, because that lasts after you die
- Each person decides for themselves. My purpose is to have happy feelings
- My purpose is to have happy feelings by doing what most of the other people are doing and avoiding social disapproval
- I have no "objective" purpose. I do what I can to be happy, all things considered.
- To live as contented as possible. To find answers to big questions. To prepare my children for adulthood. I chose these things because that's what I like. I don't care what another's purpose is as long as they don't harm anyone.
- My purpose is to seek happiness while doing no harm (or as little harm as is it may be possible to do) for as long as I'm alive. Of course it's just my own purpose – I can't presume to choose another's purpose. That being said, I do presume everyone has more or less the same goal of happiness and fulfillment, but the precise methods of going about it are always going to vary from person to person.
- I want to be happy. I generally like other people, and I want them to be happy too.

Here's Question 12:

> Suppose Jesus appeared to us right now and addressed you directly with the following words: "I'm really here and you need to *follow me* in order to flourish and achieve the goal for which I created you". He then glares suspiciously at me, snatches a few fries from *my* plate, eats them, and then disappears. Later on, the Ghostbusters show up and confirm that Jesus was no ghost, but really God stepping into history. And everyone in the restaurant saw and heard exactly what

> you and I saw and heard. How would you proceed? How would you find out what to do? (i.e. – the atheist now knows Christianity is true, and I want to see what they think they should do in order to act like a Christian)

And these were the responses:

- I have no idea
- I would not follow. My own goals are all that I have, and all that I would continue to have in that unlikely situation. I would not yield my autonomy to anyone no matter what their authority to command me
- I would not follow, because God doesn't want humans to act any particular way, and he doesn't care what we do
- I would not follow. Head is spinning. Would go to physician to find out if hallucinating.
- If I found there was no trickery? I'd have to change my mind wouldn't I! Not really likely though is it?
- I would keep doing what I am doing now, acting morally. That's what all religions want anyway. (In response to my triumphant scribbling, he realized he had fallen into a trap and changed his answer to the right answer) Oh, wait. I would try to try to find out what Jesus wanted and then try to do that.
- I hope I would be courageous enough to dedicate my life to rebellion against God.
- I would not have to change anything unless forced to and all that would change is my actions not my values. I would certainly balk at someone trying to force me to change my behavior as would you if you were at the mercy of a moral objectivist who felt that all moral goodness is codified in the Koran.
- He would have to convince me that what he wants for me is what I want for me.

Here's Question 13:

> What would be the most difficult thing about becoming a Christian for you? Would it be the moral demands? The demands on your time? The unpopularity, humiliation and persecution that you would face? How would you feel about publicly declaring your allegiance for Christ and facing the consequences? (i.e. – they have become a Christian, what is the most difficult adjustment from your current life?)

And these were the responses:

- I don't know
- It would not be that big of a change for me. I already act morally, I'm already public about my beliefs, and I don't care what people think about what I believe. I don't mind disagreeing with people and being unpopular for it. I think the 10 commandments are good. I could find out what to do and start doing those things.
- I would not be able to believe in miracles, so there would be cognitive dissonance
- Sacrificing my personal moral standards to take up a standard from a book that is

very old and outdated
- The most difficult would be the fact that I believe something without good evidence.
- I work many hours a week for institutions and organizations that are charitable. I'm certainly not going to swap those for hours for "prayer time" and waste them.
- I would certainly balk at someone trying to force me to change my behavior as would you if you were at the mercy of a moral objectivist who felt that all moral goodness is codified in the Koran. Obviously, it is possible that if I became a Christian, then I would have different values then I have now.
- The most difficult thing would be trying to believe the ridiculous claims of Christianity. As for what a Christian finds difficult, how would I know?
- I could never obey God from gratitude and love, only from servility inspired by fear and cowardice. I do not see myself as servile, fearful or cowardly, and to behave in such a manner would injure my self-esteem and self-image.

So you might be surprised to know that even if Christianity were true, atheists have no intention of changing the way they live. That's the real issue – and that should be scary for any atheist to realize. If they just cracked open a Bible and read Romans 1, that should be enough to scare the crap out of them – because it's pretty obvious what is going on with humans – all of us have an authority problem. And a lot of the learning and striving that atheists do is just an effort to get people to think that they are so great and successful after they've dumped their relationship with God.

I hope that more atheists look in the mirror and are honest with themselves about what's really going on. Is it really such a terrible thing to have a relationship with the person who cares the most about you and wants the best for you? Is fun really that important that people have to push away a real, significant, eternal relationship just because it requires self-denial? If I didn't embrace chastity, as God wishes, where would I get to time to do the really heroic things I do – and how could I concern myself with a woman's real moral and spiritual needs if I got into the habit of using them selfishly? You can't experience imitating God when you shut him out. And that's what we are all here to do – to know him, to be his friend, to act in a way that allows us to feel what he feels, and to have sympathy with him.

Is Christianity false or is it just mean and judgmental?

September 18, 2012 | by Wintery Knight | Link | Original Link

---

Have you noticed lately that there is a decided lack of atheists who argue against Christianity on factual grounds? Instead of constructing arguments against Christian theism, what I am seeing more and more of is that people try to say that Christianity makes some group feel bad, and therefore Christianity is not worthy of pursuit and engagement.

Here's how it works. You have a person who has some sinful habit or other that they don't want to give up, and they notice that people are judging them and saying that what they are doing is wrong. And they feel bad. And they decide to attack Christianity to make the Christians stop judging them. So how do they do it? Do they argue that the concept of God is logically incoherent? No… Do they argue that some instances of evil and suffering are gratuitous? No… Do they argue that the universe is eternal so that it had no Creator? No…

What do they do?

What they do is pick on some statement by a conservative Christian that makes them feel bad, and then claim that they are victims of meanness. And apparently, making someone feel bad is some sort of disproof of Christian theism. Why is that? It's because we have decided as a culture that the purpose of religion is to make people feel good about themselves and to be "nice" to other people. And by "nice", we mean not making other people feel bad about the sinfulness of their behavior. So people are making Christianity irrelevant just by *assuming* that the purpose of life is happiness, and that any religion that makes people unhappy can be dismissed.

Before, people thought about Christianity as something that you investigated, and that was either true or false. People understood that Christianity made claims about the external world that were either true or false. For example, Christianity claims that the universe had a beginning in the finite past. And the people who disagreed with Christianity would try to produce arguments and evidence that the universe was eternal, as with the steady-state theory or the oscillating model of the universe. And people were willing to change their behavior to match what was true, even when it made them feel less happy. But not any more.

I think somehow, as a society, we have internalized the following beliefs:

- God wants me to have happy feelings
- the purpose of religion is to give me happy feelings
- God's moral will for me is that I be "nice" to others
- being nice to others means accepting whatever they want to do as "good"
- accepting whatever anyone does makes them like me

- when people like me, I feel happy, which is what God wants
- there is no need for me to study God's existence
- God exists when I want to be comforted, and doesn't exist when I want to sin
- there is no need for me to study God's character
- God's character is pretty much like my character, whatever I want is fine with God
- there are no moral rules or obligations from God that apply to me
- religions are all the same, I choose the one that makes me feel happy

So you can see that someone who believes things like this can claim to be a Christian, but would actually attack real Christians who hold to the old view of exclusive factual claims and moral judgments. The real Christians are people who have studied these questions, who know that God exists, and what he is like, and accept the Bible's moral teachings as authoritative. So you could have a famous pastor who defends the Bible's prohibition on sex before marriage, and have someone *feel bad about being judged*, and then a bunch of these "the purpose of life is happiness" people will appear and chastise that pastor for making people feel bad. And many of them will claim to be Christians, and attend church, too.

Now notice that this mob of happy-feelings people are not going argue against the pastor using the Bible, because the Bible is pretty clearly against fornication. What they'll do instead is they'll pick out some piece of the Bible that seems unfair, like the slaughter of some group of child-sacrificing pagans, and they'll rail against that Bible passage in order to discredit the Bible's authority on moral questions. And then the good conservative pastor is made to feel bad because he has broken those unwritten laws – he made someone feel bad using this evil book.

No factual claims about God's existence were made. No historical arguments were made. No evidence was presented. The mere fact that the Bible is mean to talk about killing the poor Canaanites is used to prove that the Bible has no moral authority at all, on any issue. "It's mean" entails that *it's false*. And you can have people who read the Bible for devotions, who sing in church, and who lead worship, who think that the Bible is false because it's mean, and it's mean because it can be used to judge people and make them feel bad.

An example

Now consider single motherhood, as in this case.

Excerpt:

> She tells her children to do as she says and not as she does.
>
> But the words of mother of 14 Joanne Watson – who receives more than £2,000 a month in state handouts – have fallen on deaf ears.
>
> Her 15-year-old daughter Mariah is pregnant, the father has 'left the scene', and the youngster is about to start living off benefits.
>
> Mrs Watson, 40, is raising her giant brood alone after parting from her husband John, 46, three years ago, and breaking up with subsequent partner Craig le

> Sauvage, 35, last year.
>
> Despite this, she has still managed to squirrel away enough cash for a £1,600 breast enhancement and a sunbed. She claims she has always encouraged her daughters to use contraception – but, inevitably, it seems they would rather follow the family tradition.
>
> Mariah's pregnancy comes after Mrs Watson's oldest daughter Natasha, 22, got pregnant with her son Branford, now six, when she was 16. Her second eldest daughter Shanice, 19, also got pregnant at 16 with her 22-month-old son Marley.
>
> Mariah says she has no concerns about becoming a teenage mother, as it seems the most natural thing in the world. Initially, she and her child will be supported by the taxpayer.
>
> She is expected to move into a housing complex for single mothers and will receive supplementary benefit and child allowance for her baby.
>
> The youngster, who is due to have a boy, said: 'I'm not nervous. I've been around babies my whole life so I know what to expect and that I can handle it. The father isn't involved and I don't want him to be either. I'm really excited and think I will be a great mum.'

Now there are two responses to this from people who profess to be Christians. The first response, my response, is to make a general argument against having sex before marriage, using the latest statistics to show the harm that fatherlessness causes to children, and more evidence besides. My response is not to pick on any one person, but to set moral boundaries, to make moral judgments against the selfishness of parents, and to not celebrate and subsidize anything that will harm innocent children. I don't want to make anyone person feel bad, I just want to say what the evidence is. However, even a general argument using evidence does make some people feel bad, so I am judged as "mean" for giving my opinion and backing it up with evidence.

But there is another response. This response comes from someone who professes to be a Christian, but they are actually a "God wants me to be happy and to be nice to people so they will like me and then we'll all be happy" person. They would never dream of judging anyone for anything they do. And they are very angry with me for getting my moral rules out of that horrible Bible, and for using facts and evidence to make people feel bad. They believe in *compassion*, which is the idea that says that the moral boundaries of the Bible are false, and that we have to celebrate and subsidize any and every variation on the traditional family, regardless of the harm caused, so that the selfish adults don't feel bad about their destructive choices.

And what do we make of a person who feels that saying "it's wrong" is mean, because it makes a guilty person feel bad? Well, here is the truth. A person who argues against the Bible based on the happy-feelings model is no friend of God, and no friend of the victims of selfish actions. They may think that they are being a good person by affirming people who make bad decisions, but really it just encourages people to get into trouble.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument

Hard and soft transitional forms in the fossil record

September 18, 2012 | by Wintery Knight | Link | Original Link

---

Casey Luskin writes about it at Evolution News. (I removed all his links from the excerpts)

Excerpt:

> Another good example is what the principal blogger covering human origins at BioLogos, Dr. James Kidder, did last year did in a series on human origins. His series is a good read and quite a competent presentation of the standard Darwinian evolutionary view of human origins — which no doubt reflects Dr. Kidder's extensive training and experience with this issue. But it accedes 100% to the standard Darwinian story of human origins with essentially no critical analysis whatsoever. But how solid is the evidence behind Dr. Kidder's view, and are there credible paleoanthropologists who doubt key parts of the orthodox story?

Here's ONE of the problems that Luskin writes about:

> Dr. Kidder's BioLogos post tried to argue that I misunderstand the meaning of "transitional fossil." This is a common and characteristically unfounded charge from Darwinian evolutionary biologists. They make the accusation because it takes the focus off the problems the fossil evidence poses for Darwinian evolution, and puts it on Darwin-critics. Advocates of Darwinian evolution also redefine what counts as "transitional," so that the term becomes nearly meaningless. Here's what's going on:
>
> We see that the phrase "transitional form" is used in two different ways. The "soft" definition of "transitional" implies that an organism merely needs to bear features that are representative of a potential intermediate — even if the fossil itself was not a direct transitional form. Under the hard definition of "transitional form," a stronger claim is made that this organism actually was a real-life lineal intermediate between two taxa, a direct transitional form.
>
> As evidence that this soft/hard distinction is used, for example, when some early tetrapod tracks were first reported in early 2010, *Nature*'s Editor's Summary said: "The finds suggests that the elpistostegids that we know were late-surviving relics rather than *direct transitional forms*, and they highlight just how little we know of the earliest history of land vertebrates" (emphasis added). The qualified term "direct transitional form" is a nod to the writer's understanding that there is in fact a "hard" definition of a transitional form, and a "soft" definition, and that some fossils don't meet the hard definition. What some people call a "transitional form" isn't necessarily a "direct transitional form."

So are there *direct* transitional forms in the hominid fossil record?

If you define “transitional form” in a soft enough way, so that neither temporal placement nor phylogenetic relationship matters any more, then it becomes very difficult to disprove claims that a fossil was “transitional.” It’s a wily rhetorical tactic, designed to make Darwin-skeptics look ignorant while simultaneously taking the focus off the lack of *actual* (e.g. hard) transitional forms in the fossil record. Dr. Kidder complains that ID proponents define such forms “in such a way that none could ever be found,” when in reality it’s Darwinian evolutionists who define transitional fossils so that they must, by definition, be found in abundance–even if they weren’t necessarily part of an evolutionary transition. Thus we see the *Nature* blogger quoted above saying absurd things like “every newly discovered fossil of a creature we didn’t know of before IS a missing link.” Or, we see Dr. Kidder making the less-absurd (though similarly inspired) claim that “[t]he human fossil record, in fact, is replete with transitional forms” as well as:

Transitional fossils in the human fossil record are distinguished at both the genus and species level. This group includes the extinct genera *Ardipithecus* and*Australopithecus* and the current genus Homo.

Kidder would have no troubling finding some authorities who agree with him. But there are also credible authorities who disagree — especially with regard to those specific fossils. For example, in my series we’ve seen there are credible authorities who believe that “one of the most critical” areas of the human fossil record lacks transitional forms–specifically, “the transition from*Australopithecus* to *Homo*.”

Likewise, my series has also cited authorities who would disagree with Dr. Kidder’s claim that Ardi “was advanced in the human direction,” in the sense of developing bipedal locomotion, and who would sharply dispute his assertion that Ardi represents “a phenomenal example of a transitional form in the human fossil record.” Other experts would dispute the claim advanced by Kidder that the australopithecines show clearly “transitional characteristics.” In particular, many doubt theclaim that Lucy’s morphology was “perfectly intermediate between the ape position and the human position.”

Indeed, even Kidder admits: “Unfortunately, the path from *Australopithecus* to early *Homo* is shrouded in mystery, with no clear hominin form considered decisively to be the progenitor.” True! But then why does Kidder feel the need to so completely capitulate to the view that humans evolved from *Australopithecus*? He claims that ID proponents take it as an “article of faith” that transitional forms don’t exist, but it seems that some Darwinian evolutionary scientists take it as an “article of faith” that they do exist, and that the standard Darwinian story of human origins is true.

My point is not that Dr. Kidder is unequivocally wrong or that he’s uninformed. Hardly. He’s welcome to hold and express his opinion, and his series is a highly

> competent presentation of the standard Darwinian evolutionary account of human origins. Rather, I want to note that the standard story of human evolution — to which BioLogos's principle blogger on this topic fully capitulates — is not the only scientifically credible position out there. When you dig into the technical literature, many parts of the standard story turn out to be based upon very weak evidence. In short, there are strong scientific reasons to dispute the claim that humans evolved from ape-like precursors. Is it acceptable to point this out?

It seems to me that whoever makes a claim about how we got here has the burden of proof. Both sides are making claims, so both sides have to shoulder the burden of proof. Our side had made claims about what would be found in the human genome for years, and we were vindicated recently with research published in *Nature*. Can the other side do that?

I recommend reading the whole article. There are good links in there to other things that Luskin has written on this topic, and links to the research he uses in his arguments as well. There's also a new book out now on human origins that presents more evidence on both sides of this debate.

Lawrence Krauss debates “A Universe From Nothing” with an astrophysicist

September 18, 2012 | by Wintery Knight | Link | Original Link

---

Dina sent me news of Saturday’s episode of Unbelievable, which features Lawrence Krauss, who debated William Lane Craig. Krauss’ book was also reviewed in the New York Times.

The MP3 file is here.

Details:

> Lawrence Krauss is a Cosmologist at Arizona State University who describes himself as an “anti-theist”. His latest book “A Universe From Nothing” has received both acclaim and criticism for its attempt to answer the question “Why is there something rather than nothing?” Debating the issue with Krauss is Rodney Holder, Course director at the Faraday Institute, Cambridge. An astrophysicist and priest by background. In a lively exchange they debate whether Krauss’ “nothing” is “nothing”, fine tuning and multiverses, scientific knowledge, miracles and the usefulness of theology and philosophy.

This debate is quite entertaining, and do not be intimidated if your don’t understand science. You can understand pretty easily who is arguing based on facts and who is speculating about unobservable, untestable entities. At one point, Krauss actually denies that there is any fine-tuning in the universe, so please see this link to refute that claim as well as this podcast which explains some examples of fine-tuning. Krauss gets a bit angry at the beginning, but calms down.

Quotation marks are for direct quotes, italics is for made-up snark. See below the summary for more posts that are related to this one.

Summary of the discussion: (picked up at 9:30 when they start talking about the book)

Brierley:

- explain your theory of how the universe can come into being from nothing

Krauss:

- the nothing that preceded the universe is “no space, no time, no universe”
- theists say that God is responsible for creating the universe out of this nothing
- but the laws of nature can create the universe uncaused out of nothing

Holder:

- Krauss sometimes writes that the nothing is really a quantum vacuum, but that is

not nothing
- He even acknowledges in his book that a quantum vacuum is not nothing
- He thinks that the nothing has properties, even though it has no being
- It has the property of being unstable
- It has the property of being acted on by quantum fields
- It has the property of being acted on by gravity

Krauss:

- But nothing can have the potential to do things inside it
- For example suppose you have an electron, *which is not nothing*
- If it jumps from one level to another, it emits light
- There was no potential for the light in the electron, but it was there as part of atomic structure

Holder:

- But in cases like that, there is something physical that has the potential

Krauss:

- Well, how did God makes the universe then if it had no potential?

Holder:

- God existed, and the potential for creating the universe in himself

Brierley:

- Consider the critical review of your book in the New York Times

Krauss:

- It was written by a philosopher, so I dismissed it

Brierley:

- Consider the critical review of your book in the Scientific American

Krauss:

- These book reviewers have not even read my book!

Krauss:

- Science will be able to figure out how to make something from nothing in the future
- We are even now speculating about interesting questions, like is there a multiverse?

Brierley:

- Consider the critical review of your book in the New York Times
- The author of the review claims that you equivocate on the term “nothing”
- In order to get things to pop into being, you have to make “nothing” mean “something”
- Reviewer: none of Krauss’ theories explain how something can come from actual nothingness

Krauss:

- In physics, something and nothing are not that different
- The reviewer doesn’t understand the physics
- He doesn’t understand quantum field theory
- You could call a quantum vacuum “nothing”, *(this is the vacuum fluctuation model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*
- Maybe there is an eternally existing multiverse that we can’t observe or test scientifically
- Maybe it has laws that we don’t know about which allow our universe to pop into being
- Maybe this popping into being is uncaused
- (alarmed) Who made God? Who made God?

Holder:

- God is eternal and necessary

Krauss:

- (interrupting, angry) What does it mean for something to be necessary?

Holder:

- Basically, you have to decide whether there is more evidence that the necessary being God or a multiverse

Brierley:

- So Dr. Krauss are you willing to say that the universe is a brute fact, in some sense, and requires no explanation

Krauss:

- (angry) Religious people are stupid because they just assume brute facts, *not like me and my unobservable, untestable multiverse*
- (angry) Religious people are against the progress of science, they don’t want to figure out how things work

Brierley:

- But isn't it possible that naturalists can be opposed to the progress of science?
- What about the way the Fred Hoyle opposed the Big Bang because he wanted an eternal universe

Krauss:

- (angry) But naturalists like me let the facts determine our beliefs, *like the facts about the eternal unobservable, untestable multiverse*
- (angry, shouting) Philosophers are stupid, they know nothing!

=== Break ===

Brierley:

- Do you see any evidence of purpose in the universe?

Krauss:

- Well maybe I would believe if the stars lined up to spell out a message from God

Brierley:

- Actually no, that wouldn't be evidence for God on your multiverse view
- if there an infinite number of universes existing for an infinite amount of time, then anything can happen no matter how unlikely it is
- therefore, no evidence could convince you that God exists, since the unobservable, untestable, eternal multiverse can make anything it wants

Krauss:

- That's a true statement, *and very convenient for atheists who don't want to be accountable to God, don't you think?*

Brierley:

- Back to the multiverse, how does it solve the fine-tuning?

Krauss:

- "We have no idea if the universe is fine-tuned for life", *even though the atheist Martin Rees who endorsed Krauss' book wrote his own book about the fine-tuning of the universe called "Just Six Numbers"*
- Inflationary theory does suggest a way to create multiple universes, *(this is the chaotic inflationary model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*

Brierley:

- But this theory is still very much a hypothesis, isn't it? We can't observe *or test* this hypothesis can we?

Krauss:

- "No, and that is really important to state"
- "I'm an empiricist, so if you can't falsify it and if you can't test it then it's not science"
- In my book, I speculate about a way that we could test the multiverse theory

Holder:

- Yes, in principle, the multiverse would be scientific if you could test it through other theories like inflationary theory
- There are a lot of speculations about multiverse theory, but no evidence from predictions that were validated in the lab

Krauss:

- "I agree completely with everything you just said"

Brierley:

- Roger Penrose agrees with Holder that the multiverse theory is too speculative
- (To Holder) Isn't the multiverse theory better than positing a completely different kind of being, which is God?

Holder:

- The multiverse theory is extremely speculative
- Even if the multiverse were true, you would still need to explain the multiverse

Krauss:

- People don't oppose my book because it's full of self-contradictory speculations
- People oppose my book because they are stupid and ignorant

Holder:

- There are things that exist that science cannot measure, like objective morality
- It's possible to give explanations for moral behavior by appealing to evolution
- But that does not ground self-sacrificial morality, such as what occurs in the Christian life

Brierley:

- Dawkins says there is no purpose or morality in in the universe, do you agree?

Krauss:

- “There is certainly no evidence of any of that”

Brierley:

- In the book, you talk about how we live in a special time in the universe’s history to be able to do science, *(i.e. – The Privileged Planet hypothesis)*
- You also write about how all the discoveries were are making will not be communicated to anyone in other places in the universe
- So what is the meaning of doing science on your view? And why are you sad at the knowledge that will not be available to people in the future?
- Are you longing for some kind of purpose?

Krauss:

- No, I just get enjoyment from studying the universe with science to gain understanding

Holder:

- What do you make of Einstein’s statement about the unexpected comprehensibility of the universe
- Theists would say that this is because God wanted us to study and understand and gain knowledge

Krauss:

- “It is remarkable that the universe is comprehensible”

Brierley:

- Why is the universe comprehensible?

Krauss:

- Well, maybe the universe just has to be that way

Brierley:

- What do you make of the heat death of the universe, when all life in the universe will die out?

Krauss:

- That’s the way the universe is

=== BREAK ===
Krauss:

- I wouldn't want to live in a universe where there was a God
- God is a cosmic Saddam Hussein
- "Religious people turn their minds off" and believe in God for consolation

Holder:

- First, Jesus is the revelation of God and he is no Saddam Hussein
- Second, the Christian life is anything but easy, we are facing some persecution already in the UK
- Third, there is also the problem of being accountable to God when we die
- It's very much like science – Christianity is the way it is, not the way we want it to be

Krauss:

- "If you don't believe in him, you don't get any of the benefits, so you have to believe"
- "And then if you've done something wrong, you're going to be judged for it"
- "So I don't want to be judged by God, I want to be… that's the bottom line"

Holder:

- Well, Jesus has died to pay the price for those things we've done wrong
- Although we will have to face the charges for what we've done, believers will ultimately be forgiven

UPDATE: Peter Sean Bradley note that Krauss is now walking back his rhetoric in response to criticisms from people like atheist John Horgan.

William Lane Craig debates Lawrence Krauss: Does God Exist?

September 18, 2012 | by Wintery Knight | Link | Original Link

---

Audio of the William Lane Craig vs. Lawrence Krauss debate at North Carolina State University has now been posted at Apologetics 315.

And I also posted some background information on Craig's arguments.

William Lane Craig's case

William Lane Craig made 5 arguments for the existence of God:

- the contingency argument
- theargument from the origin of the universe (kalam)
- the argument from cosmic fine-tuning
- the moral argument
- the argument from the miracle of the resurrection

These arguments went unrefuted during the debate.

Lawrence Krauss's case

Lawrence Krauss made the following arguments in his first speech:

- Dr. Craig is a professional debater
- Dr. Craig is not a scientist
- Dr. Craig is a philosopher
- Disproving God's is a waste of my valuable time
- Dr. Craig has the burden of proof to show evidence
- My job is not to present any evidence
- I think that "extraordinary claims require extraordinary evidence" is a nice slogan, but I have no evidence for it
- I don't like that God doesn't appear on Youtube, therefore he doesn't exist
- I don't like that God didn't appear to humans until recently, therefore he doesn't exist
- I don't like that the stars didn't come together to spell "I am here", therefore God doesn't exist
- Dr. Craig has to supply extraordinary evidence, because my favorite slogan says he has to
- Dr. Craig talks about logic, but the universe is not logical
- Dr. Craig doesn't have any arguments, just things he doesn't like
- Dr. Craig doesn't like infinity, and that's why he believes in the Big Bang cosmology
- Dr. Craig doesn't like chance, and that's why he believes in cosmic fine-tuning
- Dr. Craig doesn't like rape, and that's why he believes in the ontological foundations of morality

- If people believe in logic, then they can't do science
- The things that science discovers contradict the laws of logic
- For example, Dr. Craig doesn't like infinity, so he believes in the experimental measurements of the cosmic microwave background radiation
- For example, Dr. Craig doesn't like chance, so he believes in the fine-tuning of the gravitational constant for the formation of stable stars
- Quantum mechanics shows that the universe is stranger than you think, therefore all of Craig's arguments are false
- My t-shirt says 2 + 2 = 5, therefore all of Craig's arguments are false
- Atheism may look ridiculous, but it's true, and if you don't like it, too bad – because the universe is very strange
- Accidents happen all the time, so that explains the cosmic fine-tuning
- We all have to convince ourselves of 10 impossible things before breakfast, and atheism is impossible, so you need to convince yourself of it
- I don't know about the Big Bang, so Dr. Craig cannot use the Big Bang to to prove the universe began to exist
- I don't know about the cosmic fine-tuning, so Dr. Craig cannot use the fine-tuning of cosmological constants to prove the fine-tuning
- I don't know anything about science, so Dr. Craig cannot use science in his arguments
- Dr. Craig says that the universe is contingent because it began to exist 13.7 billion years ago based on the state-of-the-art scientific evidence for the Big Bang creation out of nothing from 1) red-shift of light from distant galaxies, 2) cosmic microwave background radiation, 3) helium-hydrogen abundances, 4) experimental confirmation of general relativity, 5) the second law of thermodynamics, 6) radioactive element abundances, etc., but how does he know that? I don't know that
- It's fine not to know the answer to scientific questions like whether the universe began to exist, it's more exciting
- Thinking that the universe began to exist based on 6 pieces of scientific evidence is the "God-of-the-Gaps" fallacy, it's intellectual laziness
- But all kidding aside, the universe actually did begin to exist 13.72 billion years ago, exactly like Craig says in his argument
- I could argue that God created the universe 4.5 seconds ago with all of us sitting believing that we heard Dr. Craig, and how could you prove me wrong? It's not falsifiable
- Universes can spontaneously appear out of nothing, and in fact they have to appear out of nothing
- *Nothing is unstable*, and space and time can come into existence out of nothing, so that's not a problem
- Our universe could have appeared out of a multiverse, an unobservable, untestable multiverse that I have no way of observing or testing
- The universe is not fine-tuned for life, and no scientist says so, especially not Martin Rees, the atheist Astronomer Royal, and every other scientist

- What if God decided that rape was OK, would it be OK? God can change his moral nature arbitrarily, can't he?

Here are the arguments in Krauss' second speech:

- We don't understand the beginning of the universe
- We don't understand whether the universe had a cause
- Steven Weinberg says that science makes it possible to be an atheist, so therefore the universe didn't begin and didn't have a cause
- It's just intellectual laziness to say that the universe came into being 13.7 billion years ago, and that things that come into being of nothing have a cause
- Dr. Craig is an expert on nothing, ha ha ha!
- There are multiple versions of nothing, there's nothing, and then there is something, which is also nothing if I want it to be
- There was no space, there was no time, and then the space create the empty space
- I'm going to give Dr. Craig a break
- At least in the nothing there were laws like *F=ma*, and those laws created the empty space, because *descriptions of matter that does not even exist yet* can create space out of nothing
- Alan Guth and Alexander Vilenkin are good friends of mine and I talk to them all the time, unlike Dr. Craig
- Alan Guth and Alexander Vilenkin don't mention God in their scientific papers, therefore the universe didn't begin and didn't have a cause
- Maybe there is a multiverse that cannot be observed or tested? And my unscientific speculations are a refutation of Craig's scientific evidence for the fine-tuning
- Dr. Craig just doesn't like my speculations about the unobservable, untestable multiverse, and that's why he believes in the Big Bang cosmology
- And if you let me speculate about an unobservable, untestable multiverse, then maybe the inanimate invisible universes reproduce and compete for food and mutate like animals and then there is natural selection so that the finely-tuned universes survive and now we're in one!
- My cool animation of blue goo mutating proves that the multiverse is real! Empty space is not empty!
- Darwinism, which is a theory about the origin of species, explains the cosmic fine-tuning that occurred at the moment of creation
- The unobservable, untestable multiverse universes all have different laws, I believe
- We don't know what the right answer is, but we are willing to look at any possibility, as long as the possibilities we look at are not supernatural possibilities
- The discovery of the origin of the universe could be an accident, I don't know if the universe began to exist or not, maybe all the six scientific evidences are wrong because if I don't like the evidence we have, so I'll just wait for new evidence to overturn the evidence we have which I don't like
- Maybe there are other forms of life that are unobservable and untestable that are

compatible with a universe that has no stable stars, no planets, no elements heavier than hydrogen, no hydrogen, no carbon, etc.

Here are the arguments in Krauss' third speech:

- Dr. Craig is stupid
- Why should we even care about Dr. Craig's arguments and evidence, we can just count the number of scientists who are atheists and decide whether God exists that way – I decided everything based on what my teachers told me to believe
- I actually know general relativity, not like Dr. Craig who co-wrote a book on general relativity published by Oxford University Press
- What quantum mechanics shows is that virtual particles come into being in a quantum vacuum, and then go out of existence almost immediately – and that is exactly like how a 13.7 billion year old universe came into being in a quantum vacuum, and we're going to disappear *very soon*
- Space and the laws of physics can be created, possibly, if you accept my speculations about an unobservable, untestable multiverse
- I don't like the God of the Old Testament, therefore he doesn't exist
- Groups of people can decide what they think is good and evil, like the Nazis and slave-owners did, and then that becomes good for them in that time and place, and that's what I mean by morality
- Here's something I studied that wasn't fine-tuned, therefore there is no fine-tuning of the universe
- Not knowing things is really exciting! Dr. Craig is not really exciting because he knows things – phooey!

Here are the arguments in Krauss' fourth speech:

- If you will just grant me an observable, untestable multiverse, then there must be some universe where intelligent life exists
- Infinite numbers of things exist everywhere in nature, you can see lots of infinite collections of things, like jelly beans and bumblebees and invisible pink unicorns
- I don't like the fine-tuning, but if my speculations about the multiverse are proven true, then I won't have to learn to live with the fine-tuning
- Inflation, the rapid expansion of the universe which occurs at some time after the the origin of the universe ($t = 0$), explains the absolute origin of time, space, matter and energy out of nothing that occurred at $t = 0$
- Physical processes that develop subsequent to the creation of the universe at $t > 0$ can explain the fine-tuning of quantities that are set at $t = 0$
- Morality is just a bunch of arbitrary conventions decided by groups of people in different times and places by an accidental process of biological and social evolution, but *that* practice over there by *those* people is *objectively* wrong!
- 1 Cor 15:3-7, which most scholars, even atheists like James Crossley, admit is dated to within 3 years of the death of Jesus, is actually dated to 50 years after the death

of Jesus
- The historical case for the resurrection made by people like N.T. Wright in their multi-volume academic works is on par with the story of Mohammed ascending to Heaven on a horse

Natalie Wolchover: Will science one day rule out the possibility of atheism?

September 19, 2012 | by Wintery Knight | Link | Original Link

---

Here's an article by Natalie Wolchover on Live Science. (And note that I engaged with people in the comments to that article)

She writes:

> Over the past few centuries, science can be said to have gradually chipped away at the traditional grounds for believing in God. Much of what once seemed mysterious — the existence of humanity, the life-bearing perfection of Earth, the workings of the universe — can now be explained by biology, astronomy, physics and other domains of science.

I find this statement odd. We theists think about evidence that has emerged relatively recently that supports theism and we are wondering why anyone is still an atheist in view of the progress of science.

Here is some of the evidence we theists are looking at:

- the cosmic microwave background radiation
- the helium/hydrogen abundance predictions
- the redshift of light from distant galaxies
- the cosmic fine tuning (constants)
- the cosmic fine tuning (quantities)
- the construction of amino acids on the early earth
- biological information in proteins and DNA
- sudden origin of phyla Cambrian explosion
- biological convergence
- galactic fine-tuning (e.g. – GHZ)
- circumstellar fine-tuning (e.g. – CHZ)
- irreducible complexity of molecular machines like the cilium
- natural limits to biological change (i.e. – the Lenski experiments)
- genome functionality now rated at 80% or more

We use that evidence to support premises in our arguments. We think that science is moving towards belief in a Creator and Designer. But not our staff writer Natalie Wolchover. She has found a way to save atheism from the progress of science.

The evidence for a beginning of the universe

Let's take a closer look at what atheists say about the universe:

> Gobs of evidence have been collected in favor of the Big Bang model of cosmology, or the notion that the universe expanded from a hot, infinitely dense

> state to its current cooler, more expansive state over the course of 13.7 billion years. Cosmologists can model what happened from 10^-43 seconds after the Big Bang until now, but the split-second before that remains murky. Some theologians have tried to equate the moment of the Big Bang with the description of the creation of the world found in the Bible and other religious texts; they argue that something — i.e., God — must have initiated the explosive event.
>
> However, in Carroll's opinion, progress in cosmology will eventually eliminate any perceived need for a Big Bang trigger-puller.
>
> As he explained in a recent article in the "Blackwell Companion to Science and Christianity" (Wiley-Blackwell, 2012), a foremost goal of modern physics is to formulate a working theory that describes the entire universe, from subatomic to astronomical scales, within a single framework. Such a theory, called "quantum gravity," will necessarily account for what happened at the moment of the Big Bang. Some versions of quantum gravity theory that have been proposed by cosmologists predict that the Big Bang, rather than being the starting point of time, was just "a transitional stage in an eternal universe," in Carroll's words. For example, one model holds that the universe acts like a balloon that inflates and deflates over and over under its own steam. If, in fact, time had no beginning, this shuts the book on Genesis.

A speculative quantum gravity model?

Let's see what the peer-reviewed research says:

> At the close of their analysis of Linde's Chaotic Inflationary Model, Borde and Vilenkin say with respect to Linde's metaphysical question, "The most promising way to deal with this problem is probably to treat the Universe quantum mechanically and describe it by a wave function rather than by a classical spacetime."{37} They thereby allude to the last class of models attempting to avoid the initial cosmological singularity which we shall consider, namely, Quantum Gravity Models. Vilenkin and, more famously, James Hartle and Stephen Hawking have proposed models of the universe which Vilenkin candidly calls exercises in "metaphysical cosmology."{38}In his best-selling popularization of his theory, Hawking even reveals an explicitly theological orientation. He concedes that on the Standard Model one could legitimately identify the Big Bang singularity as the instant at which God created the universe.{39} Indeed, he thinks that a number of attempts to avoid the Big Bang were probably motivated by the feeling that a beginning of time "smacks of divine intervention."{40} He sees his own model as preferable to the Standard Model because there would be no edge of space-time at which one "would have to appeal to God or some new law."{41}
>
> […]The question which arises for this construal of the model is whether such an interpretation is meant to be taken realistically or instrumentally. On this score,

> there can be little doubt that the use of imaginary quantities for time is a mere mathematical device without ontological significance. Barrow observes, "physicists have often carried out this 'change time into space' procedure as a useful trick for doing certain problems in ordinary quantum mechanics, although they did not imagine that time was *really* like space. At the end of the calculation, they just swop [*sic*] back into the usual interpretation of there being one dimension of time and three . . . dimensions of . . . space."{48} In his model, Hawking simply declines to re-convert to real numbers. If we do, then the singularity re-appears. Hawking admits, "Only if we could picture the universe in terms of imaginary time would there be no singularities . . . . When one goes back to the real time in which we live, however, there will still appear to be singularities."{49} Hawking's model is thus a way of re-describing a universe with a singular beginning point in such a way that that singularity is transformed away; but such a re-description is not realist in character.

Quantum gravity is a theoretical model that uses imaginary time. When translated back into the real world, the singularity re-appears, and the need for a cause of the universe coming into being is re-asserted.

Natalie explains how strong her speculation really is:

> Another way to put it is that contemporary physics theories, though still under development and awaiting future experimental testing, are turning out to be capable of explaining why Big Bangs occur, without the need for a supernatural jumpstart. As Alex Filippenko, an astrophysicist at the University of California, Berkeley, said in a conference talk earlier this year, "The Big Bang could've occurred as a result of just the laws of physics being there. With the laws of physics, you can get universes."

See? Their view is "just because theists have all the experimental data for a creation out of nothing *today*, that doesn't mean that these speculative theories won't replace that hard evidence tomorrow". But physical laws are descriptions of how matter behaves – they don't bring matter into being out of nothing. Physical laws can't explain the origin of the universe because they don't even exist until there is matter created for them to describe. Even the New York Times knows that. But that what atheists are reduced to – they deny what you can test in a lab, and hope for things to emerge that have never been tested in a lab. That's atheism.

The evidence for a finely-tuned universe

What does she make of the fine-tuning evidence? Well, she has a speculation to answer the experimental evidence there as well.

She writes:

> But there are other potential grounds for God. Physicists have observed that many of the physical constants that define our universe, from the mass of the electron to the density of dark energy, are eerily perfect for supporting life. Alter

> one of these constants by a hair, and the universe becomes unrecognizable. "For example, if the mass of the neutron were a bit larger (in comparison to the mass of the proton) than its actual value, hydrogen would not fuse into deuterium and conventional stars would be impossible," Carroll said. And thus, so would life as we know it.
>
> Theologians often seize upon the so-called "fine-tuning" of the physical constants as evidence that God must have had a hand in them; it seems he chose the constants just for us. But contemporary physics explains our seemingly supernatural good luck in a different way.
>
> Some versions of quantum gravity theory, including string theory, predict that our life-giving universe is but one of an infinite number of universes that altogether make up the multiverse. Among these infinite universes, the full range of values of all the physical constants are represented, and only some of the universes have values for the constants that enable the formation of stars, planets and life as we know it. We find ourselves in one of the lucky universes (because where else?).

A speculative multiverse? Why should we take a speculative multiverse over one observable, knowable experimentally-testable universe?

Let's see what the peer-reviewed science says:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe's birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in 10^{15} at 1 second after the big bang, allows life to form.**

That's what the science says. That's what we know from experiments.

An MIT physicist Alan Lightman explains how much evidence there is for the multiverse:

> The… conjecture that there are many other worlds… [T]here is no way they can prove this conjecture. That same uncertainty disturbs many physicists who are

> adjusting to the idea of the multiverse. Not only must we accept that basic properties of our universe are accidental and uncalculable. In addition, we must believe in the existence of many other universes. But we have no conceivable way of observing these other universes and cannot prove their existence. Thus, to explain what we see in the world and in our mental deductions, we must believe in what we cannot prove.
>
> Sound familiar? Theologians are accustomed to taking some beliefs on faith. Scientists are not. All we can do is hope that the same theories that predict the multiverse also produce many other predictions that we can test here in our own universe. But the other universes themselves will almost certainly remain a conjecture.

This is a non-theistic scientist telling us this. There is no evidence for the multiverse, just like there is no evidence for Santa Claus, just like there is no evidence for the Tooth Fairy. Yet atheists are driven to speculate about whether Santa Claus and the Tooth Fairy might be real, in order to escape the fine-tuning. And atheism just goes on and on and on like this – from the origin of life's building blocks, to junk DNA, to the Cambrian explosion, to protein synthesis, to galactic habitability, to DNA sequences, and so on – it's madness stacked on top of delusion stacked on top of insanity. It's just speculative nonsense and the denial of today's cutting-edge peer-reviewed experimental evidence.

What is causing them to do this? What is their motivation for wanting atheism to be true?

UPDATE: A response from Uncommon Descent.

Do non-coding segments of the genome provide evidence for common ancestry?

September 19, 2012 | by Wintery Knight | Link | Original Link

---

From Evolution News.

Excerpt:

> Darwin's tree of life might be visible in DNA, if DNA didn't conspire to scramble the signal.

> Now that quite a few genomes have been published, a team from Australia and France went on a Darwin fishing trip in the gene pool. In the largest study of its kind to date, they examined microsatellite markers (tandem-repeated DNA motifs of 1-6 base pairs) that are widespread in eukaryotic genomes. If neo-Darwinism is correct, these non-coding stretches of DNA should reflect the tree of common ancestry by showing similar mutational patterns in related groups.
>
> Well, they don't. The paper by Meglecz, Neve, Biffin and Gardner in *PLoS ONE* is titled, "Breakdown of Phylogenetic Signal: A Survey of Microsatellite Densities in 454 Shotgun Sequences from 154 Non Model Eukaryote Species." What went wrong?
>
> As the title implies, the team checked 154 "non-model" species. Darwinian evolutionists tend to focus on the model species, like a particular roundworm, the fruit fly *Drosophila melanogaster*, and a species of watercress, because their genomes are complete and most researchers use them in experiments. Problem: they may or may not be representative:

> Although information for model species is accumulating rapidly, it is insufficient due to a lack of species depth, thus intragroup variation is necessarily ignored. As such, apparent differences between groups may be overinflated and generalizations cannot be inferred until an analysis of the variation that exists within groupshas been conducted. In this study, we examined microsatellite coverage and motif patterns from 454 shotgun sequences of 154 Eukaryote species from eight distantly related phyla (Cnidaria, Arthropoda, Onychophora, Bryozoa, Mollusca, Echinodermata, Chordata and Streptophyta) to test if a consistent phylogenetic pattern emerges from the microsatellite composition of these species.

> Sounds like a good test. After all, scientists shouldn't generalize on overinflated signals, right? The team expected to find nicely behaved data interpolated between the model species. It wasn't to be:

> It is clear from our results that data from model species provide incomplete information regarding the existing microsatellite variability within the

> Eukaryotes. A very strong heterogeneity of microsatellite composition was found within most phyla, classes and even orders. Autocorrelation analyses indicated that while microsatellite contents of species within clades more recent than 200 Mya tend to be similar, the autocorrelation breaks down and becomes negative or non-significant with increasing divergence time. Therefore, the age of the taxon seems to be a primary factor in degrading the phylogenetic pattern present among related groups. The most recent classes or orders of Chordates still retain the pattern of their common ancestor. However, within older groups, such as classes of Arthropods, the phylogenetic pattern has been scrambled by the long independent evolution of the lineages.

> There are two ways to interpret this anomaly. One is that microsatellites mutate too fast to maintain the phylogenetic signal. (This is known as a “post hoc rationalization.”)

> The other is that Darwin was wrong. Data do not show a phylogenetic pattern; they show common design with some variation.

Read the rest here. I’m a skeptic on common ancestry, but not for religious reasons. I just don’t think that it’s compatible with the progress of science.

Rejecting Christian theism because it’s just too much work

September 19, 2012 | by Wintery Knight | Link | Original Link

---

On J Warner Wallace’s Please Convince Me site, I saw that Al Serrato was discussing the possibility of eternal life with an atheist, and I thought some of her response were very helpful to understand why some people are atheists.

Al asks whether it is worth her time to investigate the God question.

She replies:

> “**No, I don’t think it’s worth my investigation. I also don’t think I should spend my time investigating UFO’s, zombies, or Big Foot. I hate things that require lots of time and thought where you are virtually guaranteed not to accomplish anything or get a definitive answer.**“

Al asks her why she is coming to conclusions before examining the evidence.

She replies:

> “Well,” she said, “you are assuming people meet god; that’s a pretty big leap too. Who do you know who has met him? **And I think most believers do so blindly; I don’t believe most of those people do any scholarly inquiry and draw conclusions based on evidence. They believe what they raised on, like me, or what they want to believe.**“

That’s the genetic fallacy, discredit a belief because of the origin of that belief, instead of whether the belief is true or false.

Al then writes this:

> “The fact that people believe what they were raised to believe,” I countered, “does not amount to a real argument. It’s a variant of the genetic fallacy. You’re trying to prove why believers might be wrong – they just were raised that way – without first proving that they are wrong. So, if I told you that I believed the earth was flat, and I was raised that way, you wouldn’t just shrug your shoulders and say I’m entitled to that belief. You would show me evidence that the earth is round and expect me to use reason to conform my view to the evidence. If I told you that you were entitled to that belief but you just believed it because you were raised by some round earthers and you never saw the whole earth so you couldn’t really know, then… you’d start to see how I feel.”
>
> “One last analogy. Let’s say this was 50 years ago, and when I saw you, you were chain smoking cigarettes with your kids always nearby. I know where medical science is headed, so I tell you that you are hurting yourself, and your kids. You respond that no one can really know those things; after all, you can point to doctors who advertise cigarettes and smoke them themselves, and you feel fine

> when you smoke. I point to other doctors who think that its really bad for you. You respond, 'see, it's a tie, so stop bothering me. Each believes what they were raised to believe. Plus, other things can kill me too, so why should I worry about cigarettes? Or, maybe you say that even if I am right, you'll be one of the lucky ones who won't be hurt by it.
>
> Do you see that the conflict between the doctors should not lead you to conclude that neither is right, or that the answer is not knowable? As a friend, should I keep trying to bring you back to the truth about cigarettes, or should I let you persist in believing something that is, in the end, hurting you and your loved ones?"

And here is her response:

> "**Have you ever noticed how so many things are bad/wrong only at certain points in a cycle?** Eat eggs, don't eat eggs; give your kids soy, soy is bad; babies should sleep on their backs, no their stomachs, no their sides, no their backs etc., etc. When my daughter was born I would put her on her back to sleep and when I left the room my mother would put her on her side and when my mother left the room my grandmother would put her on her stomach. **Over time the answer comes full circle**. **Why go around and around with it? What I am saying is not just throw up your hands and quit; what I am saying is that I do what feels right to me and that is the best I can do**. Sometimes I listen to friends (and doctors) and sometimes I don't. **I think the 'answer' to many of these things is unknowable**. At one time it would have been totally unacceptable to all of society for a mother to work and put a child in daycare 10 hours a day. Now, 10 hours of daycare is the norm. I get that most people think that daycare schedule is fine, but I don't. **I make up my own mind by doing what feels right**. **Have you ever considered that the answer doesn't matter? Maybe the search is the whole point and maybe I am done already and you're just slow**.
>
> **I don't think you can prove God like you can prove that the world is round**. To prove the world was really round and have everyone believe, we needed real-time pictures from space. Bring me a picture of god and we'll talk."

Al then replies to her.

So what do we get from this? Well, here are the five reasons she gave. 1) she knows in advance, before investigating, that there is no definitive answer to the question of whether God exists, 2) people believe what they are raised to believe and want to believe, including her, so your beliefs aren't under the control of evidence anyway, 3) facts change all the time so it's pointless to try reasoning about what is true on the basis of what the facts are today – so I don't really care what anyone in authority says since they all change their minds the next day anyway, 4) I don't think anyone can construct an argument for God's existence based on evidence, 5) the burden of proof is on others to

show me the evidence for God, I don't have to look into myself, my job is to do what feels right to me, and I don't conduct any inquiries into the evidence that might override what feels right to me.

How can you know in advance of inquiry that there is no definitive answer? You can only *assume* that there is no definitive answer, since you admit that you haven't looked into it yourself. And this person seems to have made the decision without evidence that there is no definite answer, and that looking into it is not worth her time and effort. What I am trying to emphasize is that those are decisions. And you can be held responsible for making decisions. Notice how she is able to get around the authority of someone who talks about the origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, just by saying that expert opinions change all the time, so no expert *has to be listened to,* (unless it feels right to her). In fact, she is not even aware of these arguments, but she has already pre-judged them as less authoritative than her feelings.

So often, we Christians get caught in the trap of judging atheists based on whether they do good deeds, by which we mean, they make other people feel good – they are nice. We neglect to ask whether they are *being good to God* – by puzzling about his existence and character, and by regularly dialoging with believers to see if they might not be mistaken. Heaven is for people who desire God, and who spend time studying the evidence so that they can make an informed decision about his existence and character. Heaven is not for people who are content doing what feels right to them without any desire to know what God thinks about it, because they just don't think his existence and character is important at all. To me this is just another way of saying, I want to do what feels good and learning that there is another person there might override my right to do what feels good, so I don't want to know whether there is another person there.

When you see atheists like Lawrence Krauss, Sam Harris and Christopher Hitchens get that deer in the headlights look the first time they hear William Lane Craig's arguments in a debate, and his citing of peer-reviewed scientific evidence to support his premises, it becomes immediately clear that these people are not atheists because they know God doesn't exist, but because they *don't want God to exist.* And avoiding the arguments for Christian theism is an important part of keeping God, and his moral demands on us, at a safe distance.

What does the Bible say? Look at the words of Jesus in Matthew 22:36-40:

36 "Teacher, which is the greatest commandment in the Law?"

37 Jesus replied: "'Love the Lord your God with all your heart and with all your soul and with all your mind.'

38 This is the first and greatest commandment.

39 And the second is like it: 'Love your neighbor as yourself.'

40 All the Law and the Prophets hang on these two commandments."

I think that the first part of loving God if you are not sure he is there is to have an open mind about his existence and character, and a willingness to re-prioritize your life in case

he is there and has a personality different from yours. People have a rational obligation to conduct an inquiry without pre-judging what the outcome will be. If God exists and Jesus rose from the dead, then people ought to care what Jesus thought about things.

I think that non-Christians understand what Christianity would require of them if it were true – radical abandonment to God's calling on their lives. And they turn away from investigating the existence of God and the resurrection of Jesus precisely in order to keep their freedom to do what they feel is right, without having to care about conforming their will to an objective state of affairs where there is another person there that they have to care about. Whatever guilty feelings they have for doing this can be dealt with by adopting a new moral standard, maybe involving recycling, vegetarianism, animal rights activism and yoga. Whatever it takes to make the people around them call them "good", so that they feel good. Do what feels right, don't worry about what is true – that's too much work and we don't want to find out anything that's going to take away our ability to do what feels right – *to us*.

Read Theodore Dalrymple's "Life at the Bottom" online for free

September 19, 2012 | by Wintery Knight | Link | Original Link

---

I want to recommend that you read a book that is available online for free.

The author is a psychiatrist in a British hospital that deals with a lot of criminals and victims of crime. So he gets to see the worldview of the "underclass" up close, and to understand how the policies of the compassionate secular left are really working at the street level. The theme of the book is that the left advances policies in order to feel good about themselves, even though the policies actually hurt the poor and vulnerable far more than they help them. And the solution of the elites is more of the same.

The whole book is available ONLINE for free! From City Journal!

Table of Contents

The Knife Went In 5
Goodbye, Cruel World 15
Reader, She Married Him–Alas 26
Tough Love 36
It Hurts, Therefore I Am 48
Festivity, and Menace 58
We Don't Want No Education 68
Uncouth Chic 78
The Heart of a Heartless World 89
There's No Damned Merit in It 102
Choosing to Fail 114
Free to Choose 124
What Is Poverty? 134
Do Sties Make Pigs? 144
Lost in the Ghetto 155
And Dying Thus Around Us Every Day 167
The Rush from Judgment 181
What Causes Crime? 195
How Criminologists Foster Crime 208
Policemen in Wonderland 221
Zero Intolerance 233
Seeing Is Not Believing 244

Lots more essays are here, all from City Journal.

My favorite passage

The only bad thing about reading it online is that you miss one of the best quotes from the introduction. But I'll type it out for you.

> The disastrous pattern of human relationships that exists in the underclass is also becoming common higher up the social scale. With increasing frequency I am consulted by nurses, who for the most part come from and were themselves traditionally members of (at least after Florence Nightingale) the respectable lower middle class, who have illegitimate children by men who first abuse and then abandon them. This abuse and later abandonment is usually all too predictable from the man's previous history and character; but the nurses who have been treated in this way say they refrained from making a judgment about him because it is wrong to make judgments. But if they do not make a judgment about the man with whom they are going to live and by whom they are going to have a child, about what are they ever going to make a judgment?
>
> "It just didn't work out," they say, the "it" in question being the relationship that they conceive of having an existence independent of the two people who form it, and that exerts an influence on their on their lives rather like an astral projection. Life is fate.

This is something I run into myself. I think that young people today prefer moral relativists as mates, because they are afraid of being judged and rejected by people who are too serious about religion and morality. The problem is that if you choose someone who doesn't take religion and morality seriously, then you can't rely on them to behave morally and exercise spiritual leadership when raising children. And being sexually involved with someone who doesn't take morality seriously causes a lot of damage.

An excerpt

Here's one of my favorite passages from "Tough Love", in which he describes how easily he can detect whether a particular man has violent tendencies on sight, whereas female victims of domestic violence – and even the hospital nurses – *will not* recognize the same signs.

> All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.
>
> This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious

> young egotist to whom I would give a wide berth in the broadest daylight.
>
> Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.
>
> This failure of recognition is almost universal among my violently abused women patients, but its function for them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.
>
> Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.
>
> At first, of course, my female patients deny that the violence of their men was foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how* they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

Report: Iran shipping arms and personnel to Syria through Iraq

September 20, 2012 | by Wintery Knight | Link | Original Link

---

From left-leaning Reuters.

Excerpt:

> Iran has been using civilian aircraft to fly military personnel and large quantities of weapons across Iraqi airspace to Syria to aid President Bashar al-Assad in his attempt to crush an 18-month uprising against his government, according to a Western intelligence report seen by Reuters.
>
> Earlier this month, U.S. officials said they were questioning Iraq about Iranian flights in Iraqi airspace suspected of ferrying arms to Assad, a staunch Iranian ally. On Wednesday, U.S. Senator John Kerry threatened to review U.S. aid to Baghdad if it does not halt such overflights.
>
> Iraq says it does not allow the passage of any weapons through its airspace. But the intelligence report obtained by Reuters says Iranian weapons have been flowing into Syria via Iraq in large quantities. Such transfers, the report says, are organized by the Islamic Revolutionary Guard Corps.
>
> "This is part of a revised Iranian modus operandi that U.S. officials have only recently addressed publicly, following previous statements to the contrary," said the report, a copy of which was provided by a U.N. diplomatic source.
>
> "It also flies in the face of declarations by Iraqi officials," it said. "Planes are flying from Iran to Syria via Iraq on an almost daily basis, carrying IRGC (Iranian Revolutionary Guard Corps) personnel and tens of tons of weapons to arm the Syrian security forces and militias fighting against the rebels."
>
> It added that Iran was also "continuing to assist the regime in Damascus by sending trucks overland via Iraq" to Syria.

I was recently having a conversation with someone who was all in favor of regime change in the Middle East, but thought that the best way to achieve that was by abandoning our military involvement in Afghanistan and Iraq. I didn't say anything to him about it, but I do think it's important to understand that any kind of intelligence gathering, covert operations, interdiction, espionage, etc. depends on having military bases nearby to support such operations. In particular, covert operations often require military support. You can't wish the Middle East well, and then pull out of Afghanistan and Iraq. We need to be there to stabilize the region, just like we did in Japan, South Korea, etc. after other wars.

Female superintendent and ACLU fascists ban father-daughter school dances

September 20, 2012 | by Wintery Knight | Link | Original Link

---

From the radically left-wing Los Angeles Times. (H/T Captain Capitalism via The Elusive Wapiti)

Excerpt:

> Father-daughter dances and mother-son ballgames — those cherished hallmarks of Americana — have been banned in a Rhode Island school district after they were targeted by the American Civil Liberties Union.
>
> The ACLU, the self-proclaimed guardian of the nation's liberty, says such events violate the state's gender-discrimination law. The organization challenged their existence following a complaint from a single mom who said her daughter was prevented from attending a father-daughter dance in the Cranston Public Schools district.
>
> […]For its part, the ACLU scoffed at the uproar, calling the change "old news" and defending its legal position in a statement laced with a touch of snark. Here it is, in part:
>
> "The controversy that has suddenly arisen in a political campaign over father-daughter dances in Cranston is old news — the matter was amicably resolved with school officials over four months ago. And it was resolved for a simple reason: the school district recognized that in the 21st Century, public schools have no business fostering the notion that girls prefer to go to formal dances while boys prefer baseball games.
>
> "This type of gender stereotyping only perpetuates outdated notions of 'girl' and 'boy' activities and is contrary to federal law.
>
> "[Parent-teacher organizations] remain free to hold family dances and other events, but the time has long since passed for public school resources to encourage stereotyping from the days of Ozzie and Harriet. Not every girl today is interested in growing up to be Cinderella — not even in Cranston. In fact, one of them might make a great major league baseball player someday.
>
> "We commend the school district for its resolution of the matter, and are sorry to see some people turning it into a political football — a game that they may think only boys should be interested in."

It's a well-known fact that daughters growing up without fathers are far more prone to a whole host of behavioral disorders and tragedies. It's also well-known, among men, that one the major reasons for a man to get married is because of the social respect of being a provider, protector and moral/spiritual leader. When society, under the influence of moral relativism and feminist ideology, decides to denigrate and marginalize fatherhood,

we should expect to see the next generation of girls suffering from it. Girls need their fathers. The more we allow our policy to be made by leftists, the more we cheat young women out of their fathers, and the more we leave them open to tragedy.

UK socialism in action: patients waiting on trolleys for over 50 hours

September 20, 2012 | by Wintery Knight | Link | Original Link

---

From the UK Daily Mail. (H/T Dina)

Excerpt:

> Being rushed to hospital or taking your loved one to A&E can be a frightening experience. However, experts have recently highlighted a disturbing trend that will only make it worse.
>
> They say hospitals are bursting at the seams, and a combination of poor out-of-hours GP services, budget cuts and a shortage of beds mean many patients are being parked on trolleys in A&E corridors and side rooms like left luggage.
>
> Indeed, Department of Health figures, revealed last month by the Nursing Times, suggest nearly 67,000 patients waited up to 12 hours on a trolley in the first half of this year.
>
> And this may simply be the tip of the iceberg, as NHS analysts say clever number-crunching by hospitals may be hiding the true extent of the problem.
>
> As this Good Health investigation reveals, more than a quarter of hospitals have reported cases where patients have been left on trolleys for 12 hours or more — up to 50 hours in one case. In most NHS hospital trusts, patients waited less than three hours for a bed on a ward (the average was one hour 36 minutes). However, in six (7 per cent) of hospitals the average wait on a trolley was three hours or more.

Think that's an anomaly? Consider this.

From the UK Daily Mail:

> NHS doctors are prematurely ending the lives of thousands of elderly hospital patients because they are difficult to manage or to free up beds, a senior consultant claimed yesterday.
>
> Professor Patrick Pullicino said doctors had turned the use of a controversial 'death pathway' into the equivalent of euthanasia of the elderly.
>
> He claimed there was often a lack of clear evidence for initiating the Liverpool Care Pathway, a method of looking after terminally ill patients that is used in hospitals across the country.
>
> It is designed to come into force when doctors believe it is impossible for a patient to recover and death is imminent.
>
> It can include withdrawal of treatment – including the provision of water and nourishment by tube – and on average brings a patient to death in 33 hours.

> There are around 450,000 deaths in Britain each year of people who are in hospital or under NHS care. Around 29 per cent – 130,000 – are of patients who were on the LCP.

More from a different UK Daily Mail article:

> The health service 'looks like a supertanker heading for an iceberg', the head of the NHS Confederation has warned.
>
> His comment came as a survey revealed the squeeze on NHS finances is so serious that almost half of its leaders think it will reduce quality of care for patients over the next year.
>
> The research, carried out before the confederation's annual conference in Manchester, shows that NHS leaders fear that growing financial pressures will mean treatment rationing and longer waiting times.
>
> Of the 252 chief executives and chairs of NHS organisations questioned, almost half believe the financial burden on the health service is 'very serious' and 47 per cent say this means quality of care will reduce over the next 12 months.
>
> Mike Farrar, chief executive of the confederation which represents organisations providing NHS services, said: 'Despite huge efforts to maintain standards of patient care in the current financial year, healthcare leaders are deeply concerned about the storm clouds that are gathering around the NHS.
>
> 'Our survey shows that many NHS leaders see finances getting worse and that this is already having a growing impact on their patients. In response, they are cutting costs in the short term but they know that much more radical solutions are the only answer in the long run.
>
> […]**Mr Farrar added that politicians had 'consistently failed' to put the long-term interests of the population's health above their short-term electoral interests.**
>
> […]Katherine Murphy, chief executive of the Patients Association said: 'This survey confirms what everybody inside the health and social care system is already saying – the next decade is likely to be the most challenging one in the history of the NHS.
>
> **'Treatments are being rationed, waiting times for elective procedures are going up and patients continue to be treated poorly on our hospital wards.**

Where does the money go in a socialist system? Well, the NHS spends £1 million a week on repeat abortions. So if you like having abortions, those are free – and you can have as many as you want. It's "health care". You can also have free taxpayer-funded IVF, which is especially valuable for men. Or you can have treatment for AIDS, which is especially useful for married people and chaste people. Or you can have free breast enlargements and free sex changes – even if you are a convicted murderer. That's government-run

health care in a socialist feminist welfare state. Pay up, sucka.

Of course, if you need a drink of water, you're out of luck.

In a government-run system, whether you get treatment or not depends on a bureaucrat, whose only desire is to be re-elected. Sometimes, killing you is the best way for them to get re-elected, as seen in the euthanasia numbers. But, in a private health care system, it makes no sense to kill patients, because then the money stops coming in. Doctors actually care about you in a for profit system. They want to help you, and they want you to live.

Antarctic sea ice now at the highest level ever recorded

September 20, 2012 | by Wintery Knight | Link | Original Link

---

From Forbes magazine.

Excerpt:

> Antarctic sea ice set another record this past week, with the most amount of ice ever recorded on day 256 of the calendar year (September 12 of this leap year). Please, nobody tell the mainstream media or they might have to retract some stories and admit they are misrepresenting scientific data.

Here's the raw data from UIUC.

Now back to the Forbes article:

> National Public Radio (NPR) published an article on its website last month claiming, "Ten years ago, a piece of ice the size of Rhode Island disintegrated and melted in the waters off Antarctica. Two other massive ice shelves along the Antarctic Peninsula had suffered similar fates a few years before. The events became poster children for the effects of global warming. … There's no question that unusually warm air triggered the final demise of these huge chunks of ice."
>
> NPR failed to mention anywhere in its article that Antarctic sea ice has been growing since satellites first began measuring the ice 33 years ago and the sea ice has been above the 33-year average throughout 2012.
>
> Indeed, none of the mainstream media are covering this important story.
> A Google News search of the terms Antarctic, sea ice and record turns up not a single article on the Antarctic sea ice record. Amusingly, page after page of Google News results for Antarctic sea ice record show links to news articles breathlessly spreading fear and warning of calamity because Arctic sea ice recently set a 33-year low.
>
> Sea ice around one pole is shrinking while sea ice around another pole is growing. This sure sounds like a global warming crisis to me.

But that only accounts for "melting" polar ice caps – what about those cute little polar bears who have no ice to stand on and who are in danger of falling into the water and going extinct, because polar bears can't swim???!!1?!1!ELEVENTY-ONE!?

From the Globe and Mail. (H/T Neil)

Excerpt:

> The debate about climate change and its impact on polar bears has intensified with the release of a survey that shows the bear population in a key part of northern Canada is far larger than many scientists thought, and might be

> growing.
>
> The number of bears along the western shore of Hudson Bay, believed to be among the most threatened bear subpopulations, stands at 1,013 and could be even higher, according to the results of an aerial survey released Wednesday by the Government of Nunavut. That's 66 per cent higher than estimates by other researchers who forecasted the numbers would fall to as low as 610 because of warming temperatures that melt ice faster and ruin bears' ability to hunt. The Hudson Bay region, which straddles Nunavut and Manitoba, is critical because it's considered a bellwether for how polar bears are doing elsewhere in the Arctic.
>
> The study shows that "the bear population is not in crisis as people believed," said Drikus Gissing, Nunavut's director of wildlife management. "There is no doom and gloom."
>
> […]The debate over the polar-bear population has been raging for years, frequently pitting scientists against Inuit. In 2004, Environment Canada researchers concluded that the numbers in the region had dropped by 22 per cent since 1984, to 935. They also estimated that by 2011, the population would decrease to about 610. That sparked worldwide concern about the future of the bears and prompted the Canadian and American governments to introduce legislation to protect them.
>
> But many Inuit communities said the researchers were wrong. They said the bear population was increasing and they cited reports from hunters who kept seeing more bears.

So the ice isn't melting on one of the poles, and the polar bears aren't going extinct from drowning. Hmmmn.

Actually, if this data can be spun as a *global cooling* crisis, and then the socialists can continue pushing for more government regulation of the free market, more abortions and higher gas prices. All that has to be done is for the media to explain that it was *always* global cooling that we needed to fear. Like in that George Orwell novel "1984", with the continuous war in Eastasia or Eurasia. Only this time, it could be real.

Economist Thomas Sowell explains why wealth redistribution doesn't work

September 21, 2012 | by Wintery Knight | Link | Original Link

Thomas Sowell, an economist for the people

A whole slew of people are linking to this article by famous economist Thomas Sowell.

Excerpt:

> The history of the 20th century is full of examples of countries that set out to redistribute wealth and ended up redistributing poverty. The communist nations were a classic example, but by no means the only example.
>
> In theory, confiscating the wealth of the more successful people ought to make the rest of the society more prosperous. But when the Soviet Union confiscated the wealth of successful farmers, food became scarce. As many people died of starvation under Stalin in the 1930s as died in Hitler's Holocaust in the 1940s. [Professor Sowell is referring to the forced collectivization of the Ukraine. If you want to inform yourself of the horrors thereof, I recommend Robert Conquest, The Harvest of Sorrow: Soviet Collectivization and the Terror-Famine, Oxford UP, 1986.]
>
> How can that be? It is not complicated. You can only confiscate the wealth that exists at a given moment. You cannot confiscate future wealth — and that future wealth is less likely to be produced when people see that it is going to be confiscated. Farmers in the Soviet Union cut back on how much time and effort they invested in growing their crops, when they realized that the government was going to take a big part of the harvest. They slaughtered and ate young farm animals that they would normally keep tending and feeding while raising them to

> maturity.
>
> […]Among the most valuable assets in any nation are the knowledge, skills, and productive experience that economists call "human capital." When successful people with much human capital leave the country, either voluntarily or because of hostile governments or hostile mobs whipped up by demagogues exploiting envy, lasting damage can be done to the economy they leave behind.
>
> Fidel Castro's confiscatory policies drove successful Cubans to flee to Florida, often leaving much of their physical wealth behind. But poverty-stricken refugees rose to prosperity again in Florida, while the wealth they left behind in Cuba did not prevent the people there from being poverty-stricken under Castro. The lasting wealth the refugees took with them was their human capital.

Stuart Schneiderman had this to say about the piece:

> If the productive members of society are no longer working for themselves and their progeny they are going to be less productive. They have less incentive to produce when more of what they produce, or more of the profit, is going to be taxed or confiscated.
>
> Besides, when you confiscate wealth people will resist and will spend more of their time and energy trying to keep what they have earned. This time and energy could be used for more productive activities.
>
> Since wealth exists in assets whose value is determined in a market, a regime that confiscates assets will force the wealthy to liquidate their assets, thus lowering the value of everyone's assets and making it far more difficult to attract investment capital.

I was happy to receive the 4th edition of Thomas Sowell's "Basic Economics" textbook from one of our readers in New York city. (Thanks Tom!) If you are a Christian who is interested in economics, I really recommend that you pick up "Intellectuals and Society", which is a great introduction to his thought.

I once was courting a young homeschooled lady who was skeptical of university degrees. She read one Thomas Sowell book, then read 5 more – all within a 6 week period. She then went on to do a B.A. in economics. If you are a Christian looking to branch out into economics, Thomas Sowell is your man. You can't read just one of his books. It's absolutely impossible.

Canada's "free" single-payer health care system costs each family $11,000 per year

September 21, 2012 | by Wintery Knight | Link | Original Link

---

From the Vancouver Sun.

Excerpt:

> The true cost of Canada's health care system is more than $11,000 in taxes each year for an average family, according to Vancouver-based think tank The Fraser Institute.
>
> The institute's report calculates the amount of taxes the average family pays to all levels of government in a year and the percentage of the total tax bill that goes towards public health care insurance.
>
> A family of two parents with an average income of $113,226 and two children will pay $11,401 for public health care insurance, the report says.
>
> […]Institute senior fellow Nadeem Esmail said in a news release sent out this morning: "There's a widespread belief that health care is free in Canada. It's not; our tax dollars cover the cost of it. But the way we pay for health care disguises exactly how much public health care insurance costs Canadian families and how that cost is increasing over time."
>
> The release noted that since 2002, the cost of health care insurance for the average Canadian family increased by 59.8 per cent before inflation.
>
> "By way of comparison, the cost of public health care increased more than twice as fast as the cost of shelter, roughly four times as fast as the cost of food, and more than five times as fast as the cost of clothing," the release said.

This is the system that Obamacare is trying to force onto us by eliminating private sector health care. But proponents of single payer health care tell us that it's better for patients than the American free enterprise system. Is it? Let's take a look at the numbers.

A defense of American health care

Story from the Hoover Institute at Stanford University.

The article compares American health care to health care in other places like Canada, the UK and Europe.

The full article. I almost never cite the full article, but this is a must read.

> MEDICINE AND HEALTH:
> Here's a Second Opinion
>
> By Scott W. Atlas
>
> *Ten reasons why America's health care system is in better condition than you might suppose. By**Scott W. Atlas.***

Medical care in the United States is derided as miserable compared to health care systems in the rest of the developed world. Economists, government officials, insurers, and academics beat the drum for a far larger government role in health care. Much of the public assumes that their arguments are sound because the calls for change are so ubiquitous and the topic so complex. Before we turn to government as the solution, however, we should consider some unheralded facts about America's health care system.

1. Americans have better survival rates than Europeans for common cancers. Breast cancer mortality is 52 percent higher in Germany than in the United States and 88 percent higher in the United Kingdom. Prostate cancer mortality is 604 percent higher in the United Kingdom and 457 percent higher in Norway. The mortality rate for colorectal cancer among British men and women is about 40 percent higher.

2. Americans have lower cancer mortality rates than Canadians. Breast cancer mortality in Canada is 9 percent higher than in the United States, prostate cancer is 184 percent higher, and colon cancer among men is about 10 percent higher.

3. Americans have better access to treatment for chronic diseases than patients in other developed countries. Some 56 percent of Americans who could benefit from statin drugs, which reduce cholesterol and protect against heart disease, are taking them. By comparison, of those patients who could benefit from these drugs, only 36 percent of the Dutch, 29 percent of the Swiss, 26 percent of Germans, 23 percent of Britons, and 17 percent of Italians receive them.

4. Americans have better access to preventive cancer screening than Canadians. Take the proportion of the appropriate-age population groups who have received recommended tests for breast, cervical, prostate, and colon cancer:

- Nine out of ten middle-aged American women (89 percent) have had a mammogram, compared to fewer than three-fourths of Canadians (72 percent).
- Nearly all American women (96 percent) have had a Pap smear, compared to fewer than 90 percent of Canadians.
- More than half of American men (54 percent) have had a prostatespecific antigen (PSA) test, compared to fewer than one in six Canadians (16 percent).
- Nearly one-third of Americans (30 percent) have had a colonoscopy, compared with fewer than one in twenty Canadians (5 percent).

5. Lower-income Americans are in better health than comparable Canadians. Twice as many American seniors with below-median incomes self-

report “excellent” health (11.7 percent) compared to Canadian seniors (5.8 percent). Conversely, white, young Canadian adults with below-median incomes are 20 percent more likely than lower-income Americans to describe their health as “fair or poor.”

6. Americans spend less time waiting for care than patients in Canada and the United Kingdom. Canadian and British patients wait about twice as long—sometimes more than a year—to see a specialist, have elective surgery such as hip replacements, or get radiation treatment for cancer. All told, 827,429 people are waiting for some type of procedure in Canada. In Britain, nearly 1.8 million people are waiting for a hospital admission or outpatient treatment.

7. People in countries with more government control of health care are highly dissatisfied and believe reform is needed. More than 70 percent of German, Canadian, Australian, New Zealand, and British adults say their health system needs either “fundamental change” or “complete rebuilding.”

8. Americans are more satisfied with the care they receive than Canadians. When asked about their own health care instead of the “health care system,” more than half of Americans (51.3 percent) are very satisfied with their health care services, compared with only 41.5 percent of Canadians; a lower proportion of Americans are dissatisfied (6.8 percent) than Canadians (8.5 percent).

9. Americans have better access to important new technologies such as medical imaging than do patients in Canada or Britain. An overwhelming majority of leading American physicians identify computerized tomography (CT) and magnetic resonance imaging (MRI) as the most important medical innovations for improving patient care during the previous decade—even as economists and policy makers unfamiliar with actual medical practice decry these techniques as wasteful. The United States has thirty-four CT scanners per million Americans, compared to twelve in Canada and eight in Britain. The United States has almost twenty-seven MRI machines per million people compared to about six per million in Canada and Britain.

10. Americans are responsible for the vast majority of all health care innovations. The top five U.S. hospitals conduct more clinical trials than all the hospitals in any other developed country. Since the mid- 1970s, the Nobel Prize in medicine or physiology has gone to U.S. residents more often than recipients from all other countries combined. In only five of the past thirty-four years did a scientist living in the United States not win or share in the prize. Most important recent medical innovations were developed in the United States.

Despite serious challenges, such as escalating costs and care for the uninsured, the U.S. health care system compares favorably to those in other developed countries.

> This essay appeared on the website of the National Center for Policy Analysis on March 24, 2009. An earlier version was published in the*Washington Times.*
>
> Available from the Hoover Press is *Power to the Patient: Selected Health Care Issues and Policy Solutions,* edited by Scott W. Atlas. To order, call 800.935.2882 or visitwww.hooverpress.org.
>
> Scott W. Atlas is a senior fellow at the Hoover Institution and a professor of radiology and chief of neuroradiology at Stanford University Medical School.

Note that the author is a professor of radiology and chief of neuroradiology at Stanford University Medical School. Stanford and Harvard are generally regarded as the two best universities in the United States.

Study explains why college women abandon courtship for hook-ups

September 21, 2012 | by Wintery Knight | Link | Original Link

---

This study is from the Institute for American Values. It was done by Elizabeth Marquardt.

The PDF of study is here.

If you download the 88 page PDF, the first few pages are an executive summary.

I'd been exposed to this research before when I read Dr. Miriam Grossmann's book "Unprotected". (Boundless review here) I just got Dr. Miriam Grossmann's new book "You're Teaching My Child What?" and I also got Elizabeth Marquardt's new book "Between Two Worlds: The Inner Lives of Children of Divorce". I don't think either of them is conservative, but I like their research anyway.

There are a couple of things that really struck me about this IAV study on hooking-up.

First, this one from p. 15:

> A notable feature of hook ups is that they almost always occur when both participants are drinking or drunk.
>
> A Rutgers University student observed, "You always hear people say, oh my gosh, I was so drunk, I hooked up with so and so…" Perhaps not surprisingly, many noted that being drunk helped to loosen one's inhibitions and make it easier to hook up. A number of students noted that being drunk could later serve as your excuse for the hook up. A Yale University student said, "Some people like hook up because they're drunk or use being drunk as an excuse to hook up." A New York University student observed, "[Alcohol is] just part of an excuse, so that you can say, oh, well, I was drinking."
>
> A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."
>
> Other women observed that being drunk gives a woman license to act sexually interested in public in ways that would not be tolerated if she were sober. For instance, a University of Michigan student said, "Girls are actually allowed to be a lot more sexual when they are drunk…"
>
> A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."
>
> Some reported that drinking had led them to do things they later regretted. A University of Virginia student said, "My last random hook up was last October and it was bad. I was drunk and I just regretted it very much."

And this one from p. 30 on the effects of hooking-up on their future commitments:

> A few women did see an unambiguous connection between present relationships and future marriage.
>
> […]Many women either saw little or no connection between present and future relationships, or their understanding of this connection was curiously flat. A student at New York University said, "[The present and the future are] connected because I will still have the same values and principles that I have now, but I just won't be single anymore."A number of women said that the present and the future are connected because whatever heartache or confusion they experience now gives them lessons for the future.
>
> A University of Michigan student said, "Early relationships prepare you for marriage because it's like, oh, what type of person do I want to be with? Oh, I've had these bad experiences. Or, I've learned from this relationship that I should do this and I shouldn't do this."
>
> A sophomore at Howard University said that "I am kind of learning from a lot of the mistakes that I have made." At a further extreme, some women saw their future marriage as the reason to experiment widely in the present. A Rutgers University student said,"I think hooking up with different people and seeing what you like and don't like is a good idea. Because eventually you're going to have to… marry someone and I'd just like to know that I experienced everything."
>
> Although it is admirable to take risks and learn from one's mistakes, these women would probably find it difficult to explain how having your heart broken a few or even many times in your early years — or trying to separate sex from feeling, as in hooking up — is good preparation for a trusting and happy marriage later on.

And on p. 42, we learn what women think marriage is and isn't for:

> For instance, in the on-campus interviews one student complained, "[With] marriage…you have to debate everything… Why do you need a piece of paper to bond a person to you? …But I know if I don't get married I'll probably feel like… [a] lonely old woman… If anything, I'd get married [because of] that."
>
> This student went on to say that she would be satisfied to live with a man, but added that, if the man was committed to her, he would offer to marry her, and that this was the kind of commitment that she wanted. A student at the University of Washington said,"I don't want to get married right after I graduate from college. I just think that would stunt my growth in every way that there is. I would like to be in a very steady, committed relationship with a guy."

And on p. 44, we learn that they like co-habitation, which increases the risk of divorce by about 50% (but they don't know *that*):

> In the national survey, 58 percent of the respondents agreed that "It is a good

> idea to live with someone before deciding to marry him." This belief often coexists with a strong desire to marry, because it was embraced by 49 percent of the respondents who strongly agreed that marriage was a very important goal for them.
>
> […]Women we interviewed on campus reflected a similar range of attitudes about cohabitation. Some women thought that cohabitation was a good way to test whether one could spend a lifetime with a potential partner. In such cases, women often cited fears of divorce as the reason for trying cohabitation first. A senior at the University of Washington said, "I kind of don't really see marriages work ever, so I want to make sure that everything's all right before [we get married]. I don't see how people can get married without living together because I know like I have a best friend and I live with her and we want to kill each other, like, every few months."
>
> Other women felt that, in an age of divorce, cohabitation was a preferable alternative to marriage. A student at New York University said, "You see so [many] people getting divorces… I just don't see the necessity [of marriage]." She went on to say, "I think that I don't have to be married to [the] person that I'm with…. You know like… Goldie Hawn [and Kurt Russell]? They're not married."

But let's get back to the drinking and the hook-up sex…

Once a woman abandons femininity for feminism, then sex is all that she can use to get noticed by a man. Men are like hiring managers, and courting is like a job interview for the job of marriage and mothering. If a woman tries to get the job by having sex with the interviewer, he isn't going to hire her since sex has nothing to do with the job. There are children involved, you know – he has to think of them when he makes the hiring decision. But women have been taught to think bad things about men (they're rapists) and marriage (it's slavery) by feminists – so they don't even try to understand men, or to respect men, or prepare their character for being a wife and mother. Feminists just don't understand that hard work is needed to understand men and prepare for marriage.

In a previous post, I explained how feminists wanted to get women to drink like men, have sex like men, and to abolish courtship and marriage. Under the influence of feminism and Hollywood celebrities, women began to choose men to have sex with without any consideration of morality, religion, marriage, etc. They thought that sex was an easy way to trick a man into committing to them without having to treat him like a real person, or to take the demands of marriage and parenting seriously. (They have been taught to value education and careers over husbands and children, you understand). This results in a cycle of binge-drinking, one-night-stands, cheating, co-habitating, breaking-up, stalking, aborting, etc., until the woman's ability to trust and love anyone but herself is completely destroyed. And yet these college women somehow believe this is "adventurous", that it makes them feel "sexy", and that the experience of being selfish and seeing the worst kind of men acting in the worst possible ways, point blank, somehow prepares them for marriage and motherhood.

Often, a young unmarried woman’s biological father was NOT selected by her mother based on his ability to make commitments and moral judgments. Many feminists prefer men who do not judge women morally, nor impose his religion on her. But those very things that young unmarried women today seem to dislike most about men, because they fear rejection on moral and religious grounds, are exactly the things that make men good husbands and fathers. They don’t want to be judged or led spiritually, so they choose immoral, non-religious men. Men who are not firm on morality and religion do cannot be counted on to act morally and self-sacrificially. And when they fail, and the marriages break up, the children grow up fatherless and may develop negative views of men.

Every young unmarried woman who chooses a bad man, and then has a bad experience with him is pushing away marriage with both hands. The more she destroys her ability to trust, love and care for others, the less she is able to be happy and effective in a marriage.

Friday night detectives: one episode of Hercule Poirot

September 21, 2012 | by Wintery Knight | Link | Original Link

---

Tonight, I've found us "The ABC Murders" – an Agatha Christie mystery with detective Hercule Poirot.

IMDB mean rating: [8.6/10]

IMDB median rating: [9/10]

Description:

> Hastings returns to Britain after a long absence to find Poirot anxious for a new case which will challenge his gray cells. Poirot quickly gets his wish in the form of taunting letters from a serial killer who has dubbed himself ABC and who leaves an ABC railroad schedule at the scene of each crime. The victims as well as the crime scenes appear to be chosen randomly, but maintain an obsessive adherence to alphabetical order.

This is the highest-rated Hercule Poirot episode – the series ran for about 10 years. Don't miss it!

Happy Friday!

What conditions support the minimum requirements for complex life?

September 22, 2012 | by Wintery Knight | Link | Original Link

---

The Circumstellar Habitable Zone (CHZ)

What do you need in order to have a planet that supports complex life? First, you need liquid water at the surface of the planet. But there is only a narrow range of temperatures that can support liquid water. It turns out that the size of the star that your planet orbits around has a lot to do with whether you get liquid water or not. A heavy, metal-rich star allows you to have a habitable planet far enough from the star so the planet can support liquid water on the planet's surface while still being able to spin on its axis. The zone where a planet can have liquid water at the surface is called the circumstellar habitable zone (CHZ). A metal-rich star like our Sun is very massive, which moves the habitable zone out further away from the star. If our star were smaller, we would have to orbit much closer to the star in order to have liquid water at the surface. Unfortunately, if you go too close to the star, then your planet becomes tidally locked, like the moon is tidally locked to Earth. Tidally locked planets are inhospitable to life.

Circumstellar Habitable Zone

Here, watch a clip from The Privileged Planet: (Clip 4 of 12, full playlist here)

But there's more.

The Galactic Habitable Zone (GHZ)

So, where do you get the heavy elements you need for your heavy metal-rich star?

You have to get the heavy elements for your star from supernova explosions – explosions that occur when certain types of stars die. That's where heavy elements come from. But you can't be TOO CLOSE to the dying stars, because you will get hit by nasty radiation and explosions. So to get the heavy elements from the dying stars, your solar system needs to be in the galactic habitable zone (GHZ) – the zone where you can pickup the heavy elements you need but not get hit by radiation and explosions. The GHZ lies

between the spiral arms of a spiral galaxy. Not only do you have to be in between the arms of the spiral galaxy, but you also cannot be too close to the center of the galaxy. The center of the galaxy is too dense and you will get hit with massive radiation that will break down your life chemistry. But you also can't be too far from the center, because you won't get enough heavy elements because there are fewer dying stars the further out you go. You need to be in between the spiral arms, a medium distance from the center of the galaxy.

Like this:

Galactic Habitable Zone and Solar Habitable Zone

Here, watch a clip from The Privileged Planet: (Clip 10 of 12, full playlist here)

The GHZ is based on a discovery made by astronomer Guillermo Gonzalez, which made the front cover of Scientific American in 2001. That's right, the cover of Scientific American. I actually stole the image above of the GHZ and CHZ (aka solar habitable zone) from his Scientific American article (linked above).

These are just a few of the things you need in order to get a planet that supports life.

Here are a few of the more well-known ones:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.

- planetary neighbors must have non-eccentric orbits

By the way, you can watch a lecture with Guillermo Gonzalez explaining his ideas further. This lecture was delivered at UC Davis in 2007. That link has a link to the playlist of the lecture, a bio of the speaker, and a summary of all the topics he discussed in the lecture. An excellent place to learn the requirements for a suitable habitat for life.

Does it makes sense to be good on atheism? Scholars debate atheism and morality

September 22, 2012 | by Wintery Knight | Link | Original Link

---

This was the question debated by two scholars Sean McDowell and James Corbett. The audio was posted on Apologetics 315.

The debaters

Sean McDowell: Head of the Bible Department at *Capistrano Valley Christian Schools*, where he teaches the courses on Philosophy, Theology, and Apologetics. He graduated summa cum laude from Talbot Theological Seminary with a double Master's degree in Theology and Philosophy. He is pursuing a Ph.D. in Apologetics and Worldview Studies from Southern Baptist Theological Seminary. Sean received the "Educator of the Year" for San Juan Capistrano, California in 2008.

Dr. James Corbett: Dr. James Corbett is a popular history teach in Capistrano Valley High School. On April 30, 2010 US District Court Judge James Selna ruled that he had violated the First Amendment by disparaging Christians during a classroom lecture. His reference to religion as "superstitious nonsense" was recorded by a student, Chris Farnan, who subsequently filed the lawsuit. He has a Ph.D. in communication-journalism from Ohio State University; master's from San Diego State University; bachelor's from Syracuse University.

Here is the MP3 file of the debate.

Sean's case is similar to the one I make, but he only has 3 minimal requirements for morality.

First, he explains the difference between objective and subjective truth claims, and points out that statements of a moral nature are meaningless unless morality is objective. Then he states 3 things that are needed in order to ground objective morality.

1. an objective moral standard
2. free will
3. objective moral value of humans

The question of the foundations of morality is without a doubt the easiest issue for beginning apologists to discuss with their neighbor. If you're new, then you need to *at least* listen to his opening speech. He's an excellent speaker, and his rebuttals are very, very smooth. The citations of atheist philosophers like Walter Sinnott-Armstrong, e.g. – to show that "religious" wars had *nothing* to do with religion, really hurt his opponent. He seems to cite prominent atheists like Thomas Nagel, Richard Taylor, Michael Shermer, etc., constantly in order to get support for his assertions. That took preparation. I can't believe that McDowell is this calm in a debate situation.

When I listen to Frank Turek, he seems to struggle in his rebuttals. McDowell sounds like

he foreknew exactly what his opponent would say and pre-wrote responses. He even had powerpoint slides made *in advance* for his rebuttals! I am not making this up – Corbett even remarked on it.

For those of you who want to understand how these things work, listen to the debate. There is a period of cross-examination if you like that sort of thing. I do!

Daniel B. Wallace responds to the “Jesus had a wife” media sensationalism

September 22, 2012 | by Wintery Knight | Link | Original Link

---

On his blog.

Excerpt:

> **The Possibilities**:
>
> 1. This manuscript is a fake. Dr. Christian Askeland, in attendance at the International Association of Coptic Studies conference in Rome, noted that about two thirds of those in attendance were very skeptical of its authenticity, while one third were “essentially convinced that the fragment is a fake.” Askeland said he did not meet anyone at the conference who thought it was authentic (posted at the evangelical textual criticism website on Wednesday, 19 September 2012). This presumably does not include Professor King. A number of noted coptologists have pronounced it a fake or have expressed strong reservations, including Alin Suciu of the University of Hamburg, Stephen Emmel of the University of Münster, Wolf-Peter Funk of l’Université Laval in Quebec, Hany Sadak the director general of the Coptic Museum in Cairo, Scott Carroll, Senior Scholar at the Oxford Manuscript Research Group, and David Gill of the University of Suffolk.
>
> 2. If genuine, the text is either (a) not Gnostic (since it contradicts the basic Gnostic view of the material world); (b) Gnostic though with an interpretation of marriage as other than the physical bond between a man and a woman (in the *Gospel of Philip* “the relationship between Jesus and Mary [Magdalene] is an allegory of the soul’s meeting with God in the bridal chamber, i.e. salvation” ; similarly, the *Gospel of Mary* [Simon Gathercole of Cambridge University, interviewed on the Tyndale House [Cambridge] website, on Wednesday, 19 September 2012]); (c) orthodox but metaphorically referring to the church as the wife of Jesus (a view already attested in the New Testament—implicit in Eph 5.23–27 and explicit in Rev 19.7); (d) a derivative Christian group that gave some push-back against the growing asceticism of the orthodox in the late second century, when marriage was somewhat frowned upon; or (e) parabolic or metaphorical with some other referent in mind.
>
> 3. Even Professor King did not suggest that this fragment means that Jesus had a wife (and she is not known for her conservative views!): “its possible date of composition in the second half of the second century argues against its value as evidence for the life of the historical Jesus.” If it goes back to a second-century tradition, we must keep in mind that there is a world of difference between first-century, apostolic Christianity and the various spin-off groups that rose after that early period.

Also, I wonder if any people in the news media are familiar with the church being the Bride of Christ metaphor? It's in the real 1st century New Testament. Maybe we should be looking for information about Jesus in the earliest sources instead of 4th century sources that were written hundreds of miles away, and not by eyewitnesses.

UPDATE: J. W. Wartick has linked to a whole bunch of responses on his blog. He's got J. Warner Wallace, Darrell Bock, Glenn Peoples, and others.

UPDATE: Professor Francis Watson at the University of Durham in England is calling the fragment a forgery and Harvard is holding on on publishing it.

American job creators struggling to find qualified applicants for basic jobs

September 23, 2012 | by Wintery Knight | Link | Original Link

---

From the Wall Street Journal.

Excerpt:

> More than 600,000 jobs in manufacturing went unfilled in 2011 due to a skills shortage, according to a survey conducted by the consultancy Deloitte.
>
> The problem seems soluble: Equip workers with the skills they need to match them with employers who are hiring. That explains the emphasis that policy makers of both parties place on science, technology, engineering and math degrees—it is such a mantra that they're known by shorthand as STEM degrees.
>
> American manufacturing has become more advanced, we're told, and requires computer aptitude, intricate problem solving, and greater dexterity with complex tasks. Surely if Americans were getting STEM education, they would have the skills they need to get jobs in our modern, high-tech economy.
>
> But considerable evidence suggests that many employers would be happy just to find job applicants who have the sort of "soft" skills that used to be almost taken for granted. In the Manpower Group's 2012 Talent Shortage Survey, nearly 20% of employers cited a lack of soft skills as a key reason they couldn't hire needed employees. "Interpersonal skills and enthusiasm/motivation" were among the most commonly identified soft skills that employers found lacking.
>
> Employers also mention a lack of elementary command of the English language. A survey in April of human-resources professionals conducted by the Society for Human Resource Management and the AARP compared the skills gap between older workers who were nearing retirement and younger workers coming into the labor pool. More than half of the organizations surveyed reported that simple grammar and spelling were the top "basic" skills among older workers that are not readily present among younger workers.
>
> The SHRM/AARP survey also found that "professionalism" or "work ethic" is the top "applied" skill that younger workers lack. This finding is bolstered by the Empire Manufacturing Survey for April, published by the Federal Reserve Bank of New York. It said that manufacturers were finding it harder to find punctual, reliable workers today than in 2007, "an interesting result given that New York State's unemployment rate was more than 4 percentage points lower in early 2007 than in early 2012."

Stuart Schneiderman blames the focus on equality and self-esteem over competition and achievement:

> The American school system has failed America's students. It has especially failed to teach the skills required to do the kinds of high tech jobs that are increasingly available.
> American children are deficient in science, technology, engineering and math, in what are now known as the STEM subjects.
> It should surprise no one. A pedagogical policy promoting self-esteem over achievement must diminish the best students in order to make the worst students feel good about themselves. The result: a large cohort of undereducated underachievers who are proud of their incompetence.
> In STEM subjects there are right and wrong answers. When these subjects are taught correctly, you will find that some children are markedly better than others.
> Children improve because they emulate their betters. They strive to get better because they want to be as good as someone else.
> If the best students are rewarded other children will want to emulate them. If the best students are demeaned no one will want to emulate them.
> If you refuse to call on them in class, if you refuse to hold them up as exemplary, if you turn math exercises into storytelling and feeling sharing you are going to drag everyone down.
> If you say that no one is better than anyone else, you are saying that no child should strive for greater achievements.

Stuart didn't say it, so I will. It's important to be careful about handing your children off to any school, especially the feminized public school system. The public school system from administration to the classroom is not welcoming to values like competition and individual achievement – which are more often (but not exclusively) associated with men. Unfortunately, there just aren't many men in public school classrooms. Public schools favor security and equality of outcomes. These goals are best achieved by growing government to minimize individual achievement and to maximize the "safety net", so that individual striving doesn't matter. Another goal of the public school system is to increase the amount of money they are paid. They want higher taxes and more government spending, so that they are paid more. Their job is not to get your children skills so they can be independent of government. They want more government. They want more security. They want less personal responsibility. They want less individual achievement.

I think that teachers should have to work in a field related to what they want to teach in for at least 5 years before being admitted to teacher's college. That requirement alone would improve education drastically.

Report: Obamacare regulations will cost taxpayers and businesses $1.8 trillion

September 23, 2012 | by Wintery Knight | Link | Original Link

---

The Washington Examiner explains.

Excerpt:

> Current federal regulations plus those coming under Obamacare will cost American taxpayers and businesses $1.8 trillion annually, more than twenty times the $88 billion the administration estimates, according to a new roundup provided to Secrets from the libertarian Competitive Enterprise Institute.
>
> And it could grow, warned the author of the report, Clyde Wayne Crews, a CEI vice president.
>
> […]"While OMB officially reports amounts of only up to $88.6 billion in 2010 dollars," said Crews, "the non-tax cost of government intervention in the economy, without performing a sweeping survey, appears to total up to $1.806 trillion annually."
>
> But, he added, "according to back of the envelope surveys and roundups, with gaps big enough to fit the beltway through, that up to $1.806 trillion annually and in many categories perhaps even considerably more, is a defensible assessment of the annual impact on the economy."
>
> His estimate is close to the $1.7 trillion estimate from the Small Business Administration which the White House distanced itself from. For comparison, the total U.S. GDP is $15 trillion.

How might higher taxes and heavier regulations affect those who want to start businesses or expand them?

Breitbart reports on a new report from the Hudson Institute:

> Startup businesses represent the heart of the American economy, but a new report by the Hudson Institute shows the rate of startup jobs during the last two years has been at a record low.
>
> According to the report, Under President George H.W. Bush, who essentially won Ronald Reagan's third term, there were 11.3 startup jobs per 1000 Americans. Under President Bill Clinton, there were 11.2. Under George W. Bush, there were 10.8. But under President Barack Obama, there have been 7.8 startup jobs per 1000 Americans.
>
> The study "documents a disturbing weakness in startup job creation," but "does not explain the cause of decline," even though "there is anecdotal evidence that the U.S. policy environment has become inadvertently hostile to entrepreneurial employment."

> The American Enterprise Institute highlighted four key findings of the report.
>
> First, the report found that “at the federal level, high taxes and higher uncertainty about taxes are undoubtedly inhibiting entrepreneurship, but to what degree is unknown.”
>
> Second, Obamacare created a “sweeping alteration of the regulatory environment that directly changes how employers engage their workforces.” The report notes it will take time until employers and scholars understand those changes.
>
> Third, since 2009, the Internal Revenue Service has engaged in more vigorous crackdowns on “U.S. employers that hire U.S. workers as independent contractors rather than employees, raising the question of mandatory benefits.” This directly impacts startup businesses and potentially has a chilling effect on those thinking about beginning new business ventures.
>
> Fourth, the report cites barriers to entry at the local levels, including “the rise of occupational licensing” that “is destroying startup opportunities for poor and middle class Americans.”
>
> “The state of entrepreneurship in the United States is, sadly, weaker than ever,” the report concludes.

What happens when we burden our employers with huge tax increases and costly regulations? They stop hiring us and they ship their businesses out of the United States. Obama is doing everything he can to discourage businesses from starting up, hiring and expanding here at home.

Durham University professor calls the “Jesus had a wife” manuscript fragment a forgery

September 23, 2012 | by Wintery Knight | Link | Original Link

---

The radically left-wing UK Guardian has the story.

Excerpt:

> A New Testament scholar claims to have found evidence suggesting that the Gospel of Jesus’s Wife is a modern forgery.
>
> Professor Francis Watson, of Durham University, says the papyrus fragment, which caused a worldwide sensation when it appeared earlier this week because it appeared to refer to Jesus’s wife, is a patchwork of texts from the genuine Coptic-language Gospel of Thomas, which have been copied and reassembled out of order to make a suggestive new whole.
>
> In a paper published online, Watson argues that all of the sentence fragments found on the papyrus fragment have been copied, sometimes with small alterations, from printed editions of the Gospel of Thomas.
>
> The discovery has already sparked fierce debate among academics, but Watson believes his new research may prove conclusive.
>
> “I think it is more or less indisputable that I have shown how the thing was composed,” he said. “I would be very surprised if it were not a modern forgery, although it is possible that it was composed in this way in the fourth century.”
>
> His paper claims the work was assembled by someone who was not a native speaker of Coptic, which is a polite way of saying that it is modern.
>
> He does not directly criticise Professor Karen King, of Harvard, who presented the fragment at a conference in Rome this week. He says she has done a very good job of presenting the evidence and images of the disputed fragment. He believes the papyrus itself may well date from the fourth century, but the words, he says, clearly show the influence of modern printed books.
>
> In particular, there is a line break in the middle of one word that appears to have been lifted directly from modern editions of the Gospel of Thomas, a genuine Gnostic or early Christian text.
>
> It is common for words to be broken in the middle in ancient scripts, like Coptic, which were written without hyphens, he says. But it is most uncommon for the same break to appear in the same work in two different manuscripts.

You can read an introduction to the find by Dr. Watson on Mark Goodacre’s web site.

Excerpt:

> On 18 September, Dr Karen King of Harvard University announced the discovery

> of a controversial new gospel-fragment at a Vatican-sponsored conference in Rome. Dr King believes that the papyrus fragment comes from a 4th century copy of an unknown gospel that may itself go back to the 2nd century. While only a few incomplete lines have survived, the fragment has become instantly famous on account of line 4, where we read: And Jesus said to them, "My wife…" This gives the text its proposed title: The Gospel of Jesus' Wife (GJW). According to Dr King, the reference to Jesus' marital status is probably not an item of genuine historical information; rather, it takes us into the world of his later followers and their debates about issues of sexuality and gender.
>
> The GJW fragment is written in Coptic, a later form of the language of ancient Egypt. In translation it runs as follows:
>
> 1 "… [can]not be my [disciple]. My mother gave me life…"
> 2 … The disciples said to Jesus, "…
> 3 … deny. Mary is not worthy of it…
> 4 …" Jesus said to them, "My wife…
> 5 … she can be my disciple…
> 6 … Let the evil man swell up…
> 7 … I am with her, so as to…
> 8 … an image…"
>
> On the reverse side of the papyrus fragment, only a few individual words and letters have been preserved.
>
> The papyrus fragment itself may well be very old. The question is whether the ink is also old. If chemical tests are carried out to establish the composition of the ink, these might show that a modern ink has been used and so prove the text to be a modern forgery. Whether tests could reliably show that an ink compatible with ancient origin is actually ancient is less certain. Meanwhile, it's important to look very closely at the text itself – and especially to investigate how it was put together.
>
> In my article, I argue that the GJW fragment may be a modern fake. Most of its individual phrases are taken directly from the Coptic version of the Gospel of Thomas – the best-known and most complete of the ancient gospel texts that have come to light over the past century or so. The author has used a kind of "collage" technique to assemble the items selected from Thomas into a new composition. While this seems an unlikely way for an ancient author to compose a text, it's what might be expected of a modern forger with limited facility in the Coptic language.

Basically, Dr. Francis Watson is looking at which works the fragment seems to quote from in order to date it and judge its historical reliability. If it quotes from the late Gnostic Gospel of Thomas, then it's not early, and not reliable. But if it includes line breaking from the modern translations of the Gospel of Thomas, then it's a fraud. I would say that right now, it looks like a fraud, and we will just have to wait for the dating on the materials (ink

and papyrus) to be sure.

In fact, Harvard University is making the publication of the find conditional on this sort of scientific testing.

Excerpt:

> Harvard University says it hasn't committed to publishing research that purportedly shows some early Christians believed Jesus had a wife even though its divinity school touted the research during a publicity blitz this week.
>
> The research centers on a fourth-century papyrus fragment containing Coptic text in which Jesus uses the words "my wife." On Tuesday, Harvard Divinity School professor Karen King announced at an international conference that the fragment was the only existing ancient text in which Jesus explicitly talks of having a wife.
>
> Harvard also said King's research was scheduled to be published in the Harvard Theological Review in January and noted the journal was peer-reviewed, which implied the research had been fully vetted.
>
> But on Friday, the review's co-editor Kevin Madigan said he and his co-editor had only "provisionally" committed to a January publication, pending the results of the ongoing studies. In an email, Madigan said the added studies include "scientific dating and further reports from Coptic papyrologists and grammarians."
>
> After Tuesday's announcement, The Associated Press raised questions about the fragment's authenticity and provenance, quoting scholars at the international congress on Coptic studies in Rome, where King delivered the paper. The scholars said the fragment's grammar, form and content raised several red flags. Alin Suciu, a papyrologist at the University of Hamburg, flatly called it a "forgery."
>
> Boston University archaeologist Ricardo Elia said Friday that the Harvard Theological Review should delay publication until the fragment's owner and origins are more clearly documented.

You can also check out this 6-page report by Dr. Watson, featuring a line-by-line analysis of the Coptic phrases. Mark Goodacre is a tenured professor of New Testament at Duke University, which has one of the best New Testament programs, in my opinion. So don't be put off by the site that is hosting it.

Hoaxes and political agendas

Dr. Watson notes in the 6-page report that this is not the first time that fake manuscripts have surfaced that promote left-wing politics. Morton Smith, a homosexual, passed of a forged gospel called the "Secret Gospel of Mark" which promoted a homosexual view of Jesus. This 20th century hoax was accepted by the gullible mainstream media, until it was disproved as a forgery in the peer-reviewed literature, and in academic books. The debunking of Secret Gospel of Mark is so thorough that it is even accept by Robert M.

Price, who is on the far left fringe of New Testament scholarship. It should be noted that Karen King is a member of the liberal naturalistic Jesus Seminar. They presuppose atheism and their politics are hard left – that's what they assume before they begin doing scholarship. Karen King specializes in "women's roles in the church" and Gnosticism. I expect that she would be very happy if this Jesus-had-a-wife fragment were used to bash traditional notions of women's roles in the church.

The mainstream media

Now why isn't the mainstream media taking a cautious approach to this find? Here's my answer – they want as many people as possible to avoid Christianity. The more they can get people to avoid acting like Christians and voting like Christians, the fewer moral restrictions there will be on their desires. For example, people on the secular left are particularly fascinated with recreational sex followed by abortion, as well as the undermining of chastity and traditional marriage, and even fiscal policies like the free market and private property. All of this is offensive to them. So whenever they get the chance to bash Christianity with hoaxes, they will do it. Media bias has been well-documented by a number of published studies from top universities. It's a bad thing to let personal immorality cause you to lie to others so that they miss their chance of knowing God and entering into fellowship with him. But that's what the mainstream news media does every day.

Further study

J. W. Wartick has linked to a whole bunch of responses on his blog. He's got Daniel Wallace, Darrell Bock and other well-known New Testament scholars. But I think that the response by Dr. Watson is decisive, and should be your first stop.

New study: more Americans dying from suicide than from car crashes

September 24, 2012 | by Wintery Knight | Link | Original Link

---

From the UK Daily Mail.

Excerpt:

> Suicide is the cause of more deaths than car crashes, according to an alarming new study.
>
> The number of people who commit suicide in the U.S. has drastically increased while deaths from car accidents have dropped, making suicide the leading cause of injury death.
>
> Suicides via falls or poisoning have risen significantly and experts fear that there could be many more unaccounted for, particularly in cases of overdose.
>
> The results were compiled using National Center for Health Statistics data gathered from 2000 to 2009.
>
> Researchers noted a 25 per cent decrease in fatal car accidents, medicalxpress.com reported, while deaths from falls rose 71 per cent, poisoning 128 per cent and from suicide 15 per cent. […]Previous research has suggested that suicide rates go up during recessions and times of economic crisis.'Economic problems can impact how people feel about themselves and their futures as well as their relationships with family and friends,' Feijun Luo of CDC's Division of Violence Prevention told Bloomberg.
>
> 'Prevention strategies can focus on individuals, families, neighborhoods or entire communities to reduce risk factors.'
>
> Suicide is now the most frequent cause of injury deaths, followed by car crashes, poisoning, falls and murder.
>
> The study also looked at gender and race, concluding that fewer women died from the four main causes than men.

Men especially are the hardest hit, because in a recession, they have a lot of anxiety about their provider role.

NBC News explains:

> Middle-aged men from disadvantaged backgrounds are 10 times more likely to commit suicide, often because they have lost a sense of identity and masculine pride, researchers said on Thursday.
>
> In a report commissioned by the British helpline charity the Samaritans, health experts explored why men in their 30s, 40s and 50s are at such a substantially higher risk of ending their own lives.

> The findings suggest suicide is not simply a mental health problem, the researchers said, but also one of men's place in societies and of societies' inability to adapt to men's needs when trying to deal with depression, anxiety and other problems.
>
> […]"The changing nature of the labour market over the last 60 years has affected working class men," it said. "With the decline of traditional male industries, they have lost not only their jobs but also a source of masculine pride and identity."
>
> The World Health Organisation estimates that every year, almost a million people commit suicide – a rate of 16 per 100,000, or one every 40 seconds. It also estimates that for every suicide, there are up to 20 attempted ones.
>
> Men are more likely to commit suicide than women in almost every country in the world, and the WHO says the main risk factors are mental illness – primarily depression – and alcohol abuse, as well as violence, loss, abuse and pressures from cultural and social backgrounds.
>
> The Samaritans study found that in Britain on average about 3,000 middle-aged men from disadvantaged backgrounds kill themselves each year.

I can't speak for everyone, but it seems obvious to me that a lot of people, especially young people who have college debt and can't find jobs, need to be asking themselves an important question: are you better off now than you were four years ago?

To marry and have children, it's important to make a realistic plan

September 24, 2012 | by Wintery Knight | Link | Original Link

---

This is a guest post by Mathetes entitled "The Road That Was Taken". You can find his last post here.

The Daily Mail is the gift that keeps on giving. And usually the gifts are a witness to the outcomes of bad choices. Previously, we discussed how to live your worst life. Unfortunately, some people serve as stark examples. Enter Megan, and her story that is told in "It's NOT my fault that I missed the chance to become a mother".

The story is familiar: a gal lamenting that she has no man or children. But in a world where women have the ability to define and achieve any of their goals, where does this lament come from?

Playing with her nieces one day, Megan burst into tears because "I couldn't bring myself to articulate the truth — that, at the age of 38, I realised I'd probably never watch my own child doing somersaults on a summer's day."

But how did this come about for someone with children as a goal?

"I wasn't childless for medical reasons, or out of choice. The right man had just never come along.

As a writer living in London, with a fulfilling career and a great social life, I was a doting aunt to Harry, Jack, Emily and Freya."

This sounds so strange. In a world where women are go-getters, here we have a lady who just sat around waiting for a man to mysteriously "come along". I don't believe the incongruence struck her – she has a career in which she is fulfilled, but she probably didn't devote as much time to finding her man as she did to getting her career in order.

We come to the problem a little later on:

"I'd just assumed I'd address the subject of having children when I met the right partner with whom to confront it later in life. But I never did."

Wintery often states that it's important to have a plan for your life. This unfortunate lass didn't have one, and the result is typical.

Or maybe she did have a plan. Because a plan is a restricted range of choices that is meant to lead you to a particular goal. So how did Megan's choices influence her life? We read:

"I lived with a long-term boyfriend throughout my 20s, but we were young, and parenthood seemed a long way away. In my early 30s, I entered into a relationship that was so unstable, I knew we would never have children. He was a commitment-phobic poet, and while my friends urged me to finish the relationship and find one in which children might be an option, I didn't long for a family enough to give him up. At 35, I finally accepted that we were never going to work out. Other relationships came and

went, but none turned into something more permanent."

So here was Megan's plan:

- Step 1: Live with boyfriend throughout her 20's
- Step 2: Enter an unstable relationship in her early 30's, where she knew she'd never have children
- Step 3: After a few year break up with a man who was unsuitable material for a husband

So Megan's goal was to find a mate and have kids. And her plan was constructed to achieve the exact opposite result.

Maybe after her mid-30's Megan figured this out. With age comes wisdom, so they say. So what did Megan set about to do:

"I began to think more about having children when I was in my late 30s, but didn't start sizing up potential fathers on first dates because I didn't want to rush into having children with someone I wasn't certain about. "

So let's add another step.

- Step 4: Date men but don't evaluate them for spousal quality

Though Megan made some bad choices, she does see what's necessary for a child, and she should be commended for this:

"Nor did I want to become a single parent by choice. I'd seen how hard it was to bring up children even with a partner, thanks to my sisters, and I'd witnessed at first hand the struggles of a close friend who had unexpectedly become a single parent.

I just didn't think I could tough it out by myself. I wanted to share parenting, and never dreamed of becoming 'accidentally' pregnant. I wasn't going to trick anyone, or short-change myself."

This is to be commended, and I mean this in all seriousness.

But getting back to her choices, Megan was warned:

"A friend who had been ambivalent about children until she was 39, and became a mother at 41, warned me that I would go through a grieving process if I didn't become a mother. I laughed it off, but my friend was right."

And here we read the unfortunate result when dreams and aspirations collide with the harsh wall of reality.

"… it dawned on me that I was fast approaching 40 — the age at which it seemed that if I hadn't had my own child, I probably never would. My feelings of panic grew."

"Feelings of resentment began to build inside me when, in the space of a year, five of my closest girlfriends told me they were pregnant. I felt happy for them, and increasingly sad for myself."

"I tried to hide my feelings. I bought baby gifts and picked up newborns with a smile fixed

on my face, even as my heart sank when I thought of the children I might never have."

"Panic flooded over me every time I read a celebrity talking about how their little Petula/Tommy/Isabella was the best thing that had ever happened to them."

"More and more, I felt weighed down by all the judgments — some proffered, some unspoken — about single and childless women. From being too picky to be satisfied by a partner, to just too career-orientated and selfish, the judgments are endless. In my experience, they're generally inaccurate, too."

This is an object lesson in the internal psychic dissonance that takes place when one's goals collide with their choices.

Perhaps enlightenment at this stage is the best that can be hoped for. Mature adults come to accept that the choices they've made have resulted in the position they are in. Thus, we are able reflect and see where we went wrong and how to grow from this. Perhaps Megan will take responsibility for her choices and her current situation.

Not entirely.

"When I analysed the reasons why they and I were in this position, I came to one conclusion: bad luck, bad choices or bad timing. Not selfishness."

Her choices she can control. But luck and timing? Perhaps, but not as likely, given her focus on career and relationships. And her choices? Doesn't that imply that she is choosing?

And why blame luck or timing at all?

The reason for this is simple: it's very hard to realize that you are responsible for your position. This isn't a hard rule, but you usually got where you're at because you followed your own path.

And she's not alone. Other women share her plight:

"'One of them is that more and more women are childless through circumstance. They are grieving for something few people acknowledge they have the right to grieve for, and many of them don't even realise that's what's happening to them.

'Some of them are losing some of the most powerful and productive years of their lives as they get stuck in their grief.'

I know what you're thinking. Now, at last, maybe Megan realizes the way out. She can decide to make sure she dates in the right way. That she won't waste time on things that take away from her goal. Even if she can't have kids, she should still be able to find a mate and adopt. So there are possibilities for her.

The question is: where does she go from here?

And the answer is:

Morocco!

"I was determined not to lose some of the best years of my life in this way. I'd written eight books, had a life full of friends and family, and yet I felt like a failure. I had to do something.

So I did. I bought a plane ticket to Marrakesh in Morocco — a place I'd visited just once for a long weekend."

"If I wasn't going to have the rhythms and responsibilities of parenthood, I could make the most of my freedom."

Megan is educated and has a successful career. She's enjoying her freedom. But there's still her life-long goal of having children. How do these diverging paths reconcile with each other?

And here we come to the end. The need to rationalize, and downplay what others have, so that one's situation is more palatable.

"I'd spent months thinking that motherhood was the answer, but I now began to realise that it wasn't an instant passport to growth. Just look at the one-track minds some mothers have about their children."

"You have to be open to change, and that's possible with or without being a mother. Each side of the coin loses and gains."

"For all I'd envied about the lives of mothers I knew, they'd envied what I had — freedom, time and the ability to nurture other relationships in a way I never would if I was a parent."

"More importantly, I realised I wasn't childless. I had my sisters' children, my godchildren and a gaggle of girlfriends who were all generous with theirs."

"For now I am splitting my time between England and Morocco, enjoying the best of both worlds. I no longer feel weighed down in England, just happy to visit.

"And while our lives might be different to the ones we envisaged when we were young, they are just as complete."

And so Megan's rationalization takes us full circle. Megan actually is a mother. She is completely free. She can do what she wants with her life. Her friends with children envy her. She is more open than her friends, who have one-track minds. And she, of course, realizes that motherhood was never the answer. It wasn't a passport to growth. Her life is complete.

As I walked the halls of my work a few months ago I found a notice on a door that showed someone in an uncomfortable situation. The caption said: Sometimes the purpose of someone's life is to be a lesson to others.

Megan, of course, may never be able to grapple with the repercussions of the feminist lies she bought into. She followed them, despite consciously knowing her choices were not leading her to the life she wanted.

But we can observe and know how to act. Let her story be a lesson to you if you are contemplating her path. Find out what you want, and live with this in mind.

Stephen C. Meyer: does the Big Bang cosmology support God or atheism?

September 24, 2012 | by Wintery Knight | Link | Original Link

---

Here's the 66-minute video featuring Dr. Stephen C. Meyer, who holds the Ph.D in philosophy of science from Cambridge University, and other degrees in the hard sciences. (H/T UK Apologetics)

The lecture starts really, really slowly. You can just fast-forward to the 12 minute mark, or you might die of boredom.

Topics:

- Up until the the last 100 years or so, everyone agreed that the universe was eternal
- This is at odds with the traditional Christian view that God created the universe
- Materialism, the view that matter is all there is, requires eternally existing matter
- Discovery #1: Hubble discovers that the universe is expanding (redshift observation)
- The expanding universe was resisted by proponents of the eternal universe, like Einstein
- Some naturalists even proposed speculative static models like the steady-state model
- However, not of the speculative models fit with observations and experimental results
- Discovery #2: Penzias and Wilson discover the cosmic microwave background radiation
- Measurements of this background radiation confirmed a prediction of the Big Bang theory
- The steady-state theory was falsified of by the discovery of this background radiation
- The oscillating model was proposed to prevent the need for an absolute beginning
- But the oscillating model is not eternal, it loses energy on each "bounce"
- A paper by Alan Guth and Marc Sher from 1982 proved that our universe will not bounce
- In addition, experiments reveal that the universe will expand forever, and not contract
- The beginning of the universe is more at home in a theistic worldview than an atheistic one
- The beginning of the universe fits in well with the Bible, e.g. – Genesis 1, Titus 1, etc.

In case you are wondering about what the evidence is for the Big Bang, here are 3 of the evidences that are most commonly offered:

> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

This is a good article to send to atheists who are not comfortable with what the progress of science has revealed about the beginning of the universe, and of time itself. If you look in agnostic astronomer Robert Jastrow's book "God and the Astronomers" (2nd edition), you'll find 6 evidences.

By the way, Dr. Meyer also does a great job of explaining the problem of proteins, DNA and the origin of life in this lecture. And you can hear him defend his views in this debate podcast with Keith Fox and in this debate podcast with Peter Atkins. He does a great job in these debates.

NYC Department of Education to hand out Plan B to high school students

September 25, 2012 | by Wintery Knight | Link | Original Link

---

From the New York Post. (H/T Strange Herring)

Excerpt:

> The Department of Education is giving morning-after pills and other birth-control drugs to students at 13 high schools, The Post has learned.
>
> School nurse offices stocked with the contraceptives can dispense "Plan B" emergency contraception and other oral or injectable birth control to girls without telling their parents — unless parents opt out after getting a school informational letter about the new program.
>
> CATCH — Connecting Adolescents To Comprehensive Health — is part of a citywide attack against the epidemic of teen pregnancy, which spurs many girls — most of them poor — to drop out of school.
>
> While Big Apple high schools have long supplied free condoms to sexually active teens, this is the first time city schools have dispensed hormonal birth control and Plan B, which can prevent pregnancy if taken up to 72 hours after unprotected sex.
>
> […]Parents at the 14 schools were sent letters informing them about CATCH. Parents may bar their kids from getting pregnancy tests or contraceptives if they sign and return an opt-out statement.
>
> If they do not, schools can confidentially give the contraception without permission.

Does handing children contraceptives make them less likely to get pregnant?

Here's the article from Life Site News.

Excerpt:

> Abortion advocates often promote contraception by claiming that as contraception use increases, the number of "unwanted" pregnancies and therefore abortions will decrease. But a new study out of Spain has found the exact opposite, suggesting that contraception actually increases abortion rates.
>
> The authors, who published their findings in the January 2011 issue of the journal *Contraception*, conducted surveys of about 2,000 Spanish women aged 15 to 49 every two years from 1997 to 2007. They found that over this period the number of women using contraceptives increased from 49.1% to 79.9%.
>
> Yet they noted that in the same time frame the country's abortion rate more than doubled from 5.52 per 1,000 women to 11.49.

Does this Plan B cause an abortion?

Consider this story from Life Site News about the morning after pill.

Excerpt:

> A poll has shown that as many as one fifth of all young women in the UK have used the morning after pill (MAP) in the past year after "unprotected sex."
>
> A Co-Operative Pharmacy survey of 3000 people found that 20 percent of women aged 18 to 35 took the "emergency contraceptive" pill last year. The same group said they had typically used the drug, which only acts as a genuine contraceptive in some cases, when they had had sex after using drugs and/or alcohol.
>
> The poll further found that up to 250,000 women had used the drug two or more times during the year. One in fifty 18-21 year-olds said they used the MAP as their normal form of contraception. One sixth of the women surveyed said they had contracted a sexually transmitted disease.
>
> While a National Health Service spokesman warned that the MAP fails to protect women from sexually transmitted diseases, the Society for the Protection of Unborn Children (SPUC) has long warned that the medical community is simply not telling women what MAP really is, or what it does.
>
> The morning after pill, a large dose of the same hormones used in contraceptive pills, can either prevent ovulation or prevent the implantation of an existing embryo in the uterine lining.
>
> "Very few women will know precisely when they ovulate," SPUC said, "so, if they take the morning-after pill, they will not know whether it has prevented conception or caused an abortion."

This is what happens when you are forced to fund public schools. They don't get paid more for pleasing you and they don't get paid less for not pleasing you. They get paid regardless of performance. They get paid by lobbying politicians and influencing elections. They go to work every day and their main goal is getting more money by influencing elections. They don't get paid more to teach your children better. What they would really like to do is turn your children into little leftists who will vote them higher salaries and better benefits. That's what they really do all day.

Unemployment rate is 10.5%, counting those who have stopped job-hunting

September 25, 2012 | by Wintery Knight | Link | Original Link

---

From Reuters.

> Economists, analyzing government data, estimate about 4 million fewer people are in the labor force than in December 2007, primarily due to a lack of jobs rather than the normal aging of America's population. The size of the shift underscores the severity of the jobs crisis.
>
> If all those so-called discouraged jobseekers had remained in the labor force, August's jobless rate of 8.1 percent would have been 10.5 percent.
>
> […]The labor force participation rate, or the proportion of working-age Americans who have a job or are looking for one has fallen by an unprecedented 2.5 percentage points since December 2007, slumping to a 31-year low of 63.5 percent.
>
> "We never had a drop like that before in other recessions. The economy is worse off than people realize when people just look at the unemployment rate," said Keith Hall, senior research fellow at the Mercatus Center at George Mason University in Arlington, Virginia.
>
> […]The economy lost 8.7 million jobs in the 2007-09 recession and has so far recouped a little more than half of them.
>
> […]Americans of all ages are leaving the workforce, but the problem is most acute in the 20-24 age group, where the participation rate has plunged by 4.4 percentage points since December 2007.
>
> […]"Because of delays to their career, the skills set accumulation that normally happens in the first or third job is not happening," said Paul Conway, president of Generation Opportunity in Washington, a non-profit, non-partisan organization that works with 18- to 29-year-olds on economic issues.
>
> Last month, the proportion of 20- to 24-year-olds in the labor force was its lowest since 1972. Other age categories are faring little better. The 25-54 age group has seen a decline of 1.8 percentage points since December 2007.

Meanwhile, from the radically left-wing Newsweek, of all places. (H/T Defeating Obama)

Excerpt:

> [T]he total number of private-sector jobs is still 4.3 million below the January 2008 peak. Meanwhile, since 2008, a staggering 3.6 million Americans have been added to Social Security's disability insurance program. This is one of many ways unemployment is being concealed.

Can anyone look at numbers like this and explain to me why anyone – especially young people – would vote for this man?

After legalizing gay marriage, France set to ban ‘mother’ and ‘father’ from official documents

September 25, 2012 | by Wintery Knight | Link | Original Link

---

From the UK Telegraph.

Excerpt:

> France is set to ban the words “mother” and “father” from all official documents under controversial plans to legalise gay marriage.
>
> The move… means only the word “parents” would be used in identical marriage ceremonies for all heterosexual and same-sex couples.
>
> The draft law states that “marriage is a union of two people, of different or the same gender”.
>
> It says all references to “mothers and fathers” in the civil code – which enshrines French law – will be swapped for simply “parents”.
>
> The law would also give equal adoption rights to homosexual and heterosexual couples.

> […]President Francois Hollande pledged in his manifesto to legalise gay marriage. The draft law will be presented to his cabinet for approval on October 31.

Hollande is a socialist, just like Barack Obama, who also favors gay marriage, and infanticide, too. Not just abortion, *infanticide*.

This is not surprising – the same thing has been done in other countries, like Spain:

> Ironically, the Socialist government claims that although it pushed through legislation to benefit a small minority of the population – and in the process changed the definition of marriage – that this could in no way be construed as an attack on the traditional family. Indeed, the government claims that it is in truth pro-family.
>
> So now, jump fast forward to last Friday.
>
> That’s when the Spanish government announced a ministerial order that new births would have to be registered at the State Civil Registries in the Family Book under the headings of Parent (progenitor) A, and Parent (progenitor) B.
>
> In other words, the terms “Father” and “Mother” were to be no longer used.
>
> In Spain, marriages, births and deaths are all recorded at Civil Registries, with most of those actions being noted in a Family Book (Libro de Familia). While the example isn’t perfect, think of the Family Book as an extended birth certificate.
>
> Juan Fernando López Aguilar, Spanish Minister of Justice, excused the ministerial order by claiming since the government modified “the status of civil marriages,

> to allow the union of same-sex couples, it was necessary for a new format for the Family Book (Libro de Familia) and one that used terms such as "Parent A" and "Parent B" instead of "Father" and "Mother."
>
> That's right. To match up it's same-sex marriage legislation to the Civil Registry, the government deemed that Spaniards could no longer qualify themselves as either "Fathers" or "Mothers" of their children.

Canada does the same thing:

> In Canada, they've already done this. Following the passing of the Civil Marriage Act, all official documentation and legislation was amended, erasing "husbands" and "wives". And because same-sex couples primarily use reproductive technology to procreate, some Canadian legislation has been amended to replace the term "natural parent" with "legal parent". As one report describes it: "In short, the adoption exception – that who is a child's parent is established by legal fiat, not biological connection – becomes the norm for all children." Most strikingly, on birth certificates some Canadian provinces have replaced the term "father" and "mother" with "Parent 1" and "Parent 2".

That policy was put in place by the Liberal party, which is the socialist party in Canada, and with the full support of the communist party of Canada, the New Democrat Party.

It's important to understand what effects these leftist, anti-family, anti-marriage policies have, especially on children. This is what Barack Obama and his socialist friends in other countries want. Leftists are anti-marriage and anti-family. They don't like mothers and fathers raising children. They want the children to be alone in the world, and shuffled around to various people, and eventually raised by the state and brainwashed to serve the state. Feminism has so poisoned people against the traditional family – and especially the traditional male roles of protector, provider and moral/spiritual leader – that no one is willing to resist the push by socialists to destroy marriage and family.

Imagine being a child and growing up with no access to your biological mother or your biological father, or *both of them.* This is the horror that the left unleashes on little children, assuming they don't murder you in the womb. As if it isn't bad enough to push feminist policies like no-fault divorce and subsidized single motherhood, now they have to go even further. Let me be clear. We should be putting into place policies that promote the nuclear family – a mother and a father being chaste, marrying once for life, and having children who grow up in a loving, stable environment. We should not be promoting recreational sex and promiscuity as equivalent to marriage. Children deserve better.

How to apologize effectively: responsibility, restitution, repentance

September 25, 2012 | by Wintery Knight | Link | Original Link

---

One of my friends recommended this book "Things I Wish I'd Known Before We Got Married" by Gary Chapman, so I got it and read it this weekend. The book re-capped one of his other books about the 5 languages of apologies or something.

Here's a re-cap of his five languages of apologies.

Here are the two that I want to emphasize:

Apology Language #3: Making Restitution

In the public arena, our emphasis upon restitution is based upon our sense of justice. The one who commits the crime should pay for the wrongdoing. In contrast, in the private sphere of family and other close relationships, our desire for restitution is almost always based upon our need for love. After being hurt deeply, we need the reassurance that the person who hurt us still loves us.

"How could they love me and do that?" is the question that lingers in our minds. The words "I'm sorry; I was wrong" may not be enough.

For some people, restitution is their primary apology language. For them the statement, "It is not right for me to have treated you that way," must be followed with "What can I do to show you that I still care about you?" Without this effort at restitution, this person will question the sincerity of the apology. They will continue to feel unloved even though you may have said, "I am sorry; I was wrong." They wait for the reassurance that you genuinely love them.

The question, then, is how do we make restitution in the most effective way? Since the heart of restitution is reassuring the spouse or family member that you genuinely love him or her, it is essential to express restitution in the love language of the other person.

[…]If restitution is the primary apology language of an individual, then this becomes the most important part of the apology. "I'm sorry; I was wrong" will never be taken as sincere if these words are not accompanied by a sincere effort at restitution. They wait for the assurance that you still genuinely love them. Without your effort to make amends, the apology will not have the desired results of forgiveness.

Apology Language #4: Genuinely Repenting

The word repentance means "to turn around" or "to change one's mind." In the context of an apology, it means that an individual realizes that his or her present behavior is destructive. The person regrets the pain he or she is causing the other person, and he chooses to change his behavior.

Without genuine repentance, the other languages of apology may fall on deaf ears. What people who've been hurt want to know is, "Do you intend to change, or will this happen again next week?"

How then do we speak the language of repentance?

> - **It begins with an expression of intent to change.** When we share our intention to change with the person we have offended, we are communicating to them what is going on inside of us. They get a glimpse of our heart—and this often is the language that convinces them we mean what we say.
> - **The second step down the road of repentance is developing a plan for implementing change.**Often apologies fail to be successful in restoring the relationship because there is no plan for making positive change.
> - **The third step down the road of repentance is implementing the plan.** Following through with the plan gives evidence to the offended party that your apology was sincere.

Most people do not expect perfection after an apology, but they do expect to see effort.

Thus, expressing your desire to change and coming up with a plan is an extremely important part of an apology to this person. Inviting the offended person to help you come up with a plan for change is perhaps the best way to effectively show repentance.

I think this is somewhat useful, but I wanted to add some of my own thoughts to make it more practical.

Here are some practical tips that I recommend to someone who has done something morally wrong and who wants to apologize.

To fix the problem you need more than talk

To me, the only thing that needs an apology is breaking a moral rule – you can't beat someone up for just making a mistake. Whenever someone breaks a moral rule with me, like disrespecting me or being selfish, then I pick out a book for them to read and ask them to read it and then write something about how what they learned in the book applies to what they did to me. I don't pick very long books! But I do this for a very important reason.

The very important reason is that I don't trust people who just agree with me. I don't trust people's words. If someone is really sorry about something, then I want them to read something that describes the moral rule that they broke, and explains what place the moral rule has in some plan for achieving some greater goal. Let me give an example.

Suppose that I am friends with a young lady who wants me to help her to get her atheist uncle, who has a degree in physics, to consider whether Christian theism might not be true. I accept her quest and begin to negotiate with Dr. Michael Strauss, a particle physicist who does research on the top quark at Fermilab, and also teaches physics at the University of Oklahoma – Norman. I contact Dr. Strauss, and contact Lawrence Krauss, the atheist physicist, and I set up a debate between them at the local university. I notify her of my plan, and she promises to bring her uncle to the debate.

The day of the debate comes and it goes off without a hitch – Strauss demolishes Krauss, and Krauss cries for his mommy. The audience laughs at Krauss and he runs away sobbing into the night, clutching his Darwin doll tightly. I beam with delight at a plan perfectly executed, and then look around for the young lady and her uncle, so that we can all go out for a late dinner with Dr. Strauss. But she and her uncle are nowhere to be found! I rush around the auditorium frantically, but to no avail. Finally, in desperation, I call her cell phone.

She answers. I say "where are you? where is your evil uncle Dawkins? The debate is over and we won!". She says "Oh, I totally forgot. The worship leader at the local mega church had a better idea anyway. She invited me over to her church with my uncle to try snake-handling instead." Me: "You did *what???!!!"* She (excited): "Yes, this is a lot more fun than a stuffy debate, and my uncle is about to play patty-cake with a harmless rattlesnake, and… uh oh". Me: "Oh no…" She: "Um, I'll call you back. I need to make a call *right now.*". Click.

Wow, that's pretty awful.

So here's what I would expect from her by way of apology.

1. Read something on science apologetics as a make-up assignment. Something like Edgar Andrews' "Who Made God?".
2. Listen to Dr. Michael Strauss' lecture on science apologetics, which he delivered at Stanford University.
3. Go back to the uncle and sit down with him and watch Dr. Michael Strauss' lecture on science apologetics from Stanford University, which is up on Youtube.
4. When the lecture is over, talk with the uncle about his remaining questions, and be available should he think of any more questions.

This would make up for all the work I put into the event because it fixes the problem, and it makes sure that it will never happen again.

The goals of this apology is not just to hear the words "I'm sorry". It's not even just about making me feel better. I think the real customer of a mistake like this is God, who is not well served by ineffective Christians. My goal is to prepare her for future evangelism, and for future nurturing of any children she might have. The only way to convince someone to take the right course of action the next time is to change their mind between the time they failed and the next time they try again. There is no way to change how a person behaves unless they convince themselves by reading about the issues, on their own time, through their own effort.

For more on how beliefs change, see this lecture by J.P. Moreland, entitled "Love Your God With All Your Mind".

Health insurance premiums up $3,000 since Obama was elected

September 26, 2012 | by Wintery Knight | Link | Original Link

---

From Investors Business Daily.

Excerpt:

> During his first run for president, Barack Obama made one very specific promise to voters: He would cut health insurance premiums for families by $2,500, and do so in his first term.
>
> But it turns out that family premiums have increased by more than $3,000 since Obama's vow, according to the latest annual Kaiser Family Foundation employee health benefits survey.
>
> Premiums for employer-provided family coverage rose $3,065 — 24% — from 2008 to 2012, the Kaiser survey found. Even if you start counting in 2009, premiums have climbed $2,370.
>
> What's more, premiums climbed faster in Obama's four years than they did in the previous four under President Bush, the survey data show.
>
> There's no question about what Obama was promising the country, since he repeated it constantly during his 2008 campaign.
>
> In a debate with Sen. John McCain, for example, Obama said "the only thing we're going to try to do is lower costs so that those cost savings are passed onto you. And we estimate we can cut the average family's premium by about $2,500 per year."
>
> At a campaign stop in Columbus, Ohio, in February 2008, Obama promised that "We are going to work with you to lower your premiums by $2,500. We will not wait 20 years from now to do it, or 10 years from now to do it. We will do it by the end of my first term as president."

But are Obama's policies *responsible* for the increase?

> the health reform law Obama signed in March 2010 has pushed up insurance costs.
>
> In 2011, premiums spiked 9.5%, and many in the industry blame ObamaCare for at least part of it. Premiums climbed another 4.5% in 2012, Kaiser found.
>
> And ObamaCare will continue to fuel health premium inflation.
>
> First, the law piles on new coverage mandates. It requires insurance companies to provide 100% coverage for various types of preventive care, bans lifetime coverage limits, extends parents' coverage to offspring up to 26 years old, and requires plans to meet certain "medical loss ratios." Coming up are rules on

> "essential standard benefits," limits on deductibles, bans on annual spending caps, and much more.
>
> The experience with state mandates show that they only tend to grow over time, and get more expensive. The Council for Affordable Health Insurance found more than 2,200 state benefit mandates, which add from 10% to 50% to the cost of coverage.
>
> "One of the biggest cost drivers in our health care system is the steady proliferation of federal and state-based coverage mandates," noted CAHI's Victoria Craig Bunce.
>
> Meanwhile, ObamaCare's insurance reforms — guaranteed issue and community rating — will likely raise premiums, too.

More regulation of health care companies means higher premiums. The more coverages that are mandatory, the higher premiums will go. If abortions have to be covered, then premiums go up.

Here are a few articles that I have been using lately to inform people about the problems with Obamacare:

- Heritage Foundation: Obamacare Raises Taxes on 3 Million Middle-Class Americans
- Cato Institute: ObamaCare's Cost Could Top $6 Trillion in first 10 years
- Life News: Obamacare is pro-abortion and pro-government controlled rationing
- Heritage Foundation: The 3 Biggest Ways Obamacare Kills Jobs
- Investors Business Daily: Obama's Broken Health-Premium Savings Promise
- Reason: Obamacare will lead to longer wait times and crowded emergency rooms
- Doctor Patient Medical Association: 83% of doctors contemplating quitting over Obamacare

It's important to understand that people who oppose this law don't oppose because we are just being contrary. Obama's health care plan has the goal of destroying private medicine and putting everyone into a single-payer system like Canada's. It's not good for us to be waiting in line for MRIs for months and months, or even years and years. NO.

Romney gave 1,000 times as much to charity in one year as Biden gave in a decade

September 26, 2012 | by Wintery Knight | Link | Original Link

---

From the Weekly Standard:

> The release of Mitt Romney's 2011 tax returns shows that he freely gave away more than $4 million to charity last year (about 30 percent of his income). In comparison, when Joe Biden was first running for vice president, his tax returns showed that he had given away just $3,690 to charity over the previous ten years (about 0.2 percent of his income). In other words, Romney gave away a thousand times as much to charity in one year as Biden gave in a decade.
>
> That's despite the fact that the Bidens earned well over $2 million over that decade. In fact, their income was $320,000 in 2008, thereby putting them comfortably over the $250,000-a-year line that marks the entry point for "millionaires and billionaires" in Obama-speak.
>
> Last year, Romney freely gave away more than $10,000 a day to charity — an impressive sum by nearly any standard. Of course, it's not too hard to beat Biden's tally. Over the span of that decade, or 3,650 days, he gave away $3,690 — an average of $1.01 a day.

Should we be surprised by this lack of charity from leftists? Well, Democrats are typically non-religious, as you might expect of people who support killing unborn children. In fact, Obama leads Romney 69% to 23% among non-religious people. So do people of no religion typically give a lot to charity, like the religious Romney, or are they mostly opposed to giving charity, like the pro-abortion secularist Joe Biden?

Consider this article from the Boston Globe.

Excerpt:

> States with the least religious residents are also the stingiest about giving money to charity, a new study on the generosity of Americans suggests.
>
> The study, released Monday by the Chronicle of Philanthropy, found that residents in states where religious participation is higher than the rest of the nation, particularly in the South, gave the greatest percentage of their discretionary income to charity.
>
> The Northeast, with lower religious participation, was the least generous to charities, with the six New England states filling the last six slots among the 50 states.
>
> […]The most generous state was Utah, where residents gave 10.6 percent of their discretionary income to charity. Next were Mississippi, Alabama, Tennessee and South Carolina. The least generous was New Hampshire, at 2.5 percent,

> followed by Maine, Vermont, Massachusetts and Rhode Island.
>
> […]The study found that in the Northeast region, including New England, Pennsylvania, New Jersey and New York, people gave 4.1 percent of their discretionary income to charity. The percentage was 5.2 percent in the Southern states, a region from Texas east to Delaware and Florida, and including most of the so-called Bible Belt.

> […]The study was based on Internal Revenue Service records of people who itemized deductions in 2008, the most recent year statistics were available. The data allowed researchers to detail charitable giving down to the ZIP code.
>
> To ensure that states with differing costs of living were judged by the same standard, researchers calculated each state's median discretionary income — the money remaining per household after variable but essential costs such as housing, child care and food are paid for. They then looked at the percentage of discretionary income that the typical household in each state gave to charity.
>
> […]Of the 10 least generous states, nine voted for Democrat Barack Obama for president in the last election. By contrast, of the 10 most generous states, eight voted for Republican John McCain.

If you think that this is the only life you have, and there is no one out there to hold you accountable, then it's easy to be self-centered. Unless charity makes you feel good, there is no reason to do it on atheism. And when you don't have a reason to be moral, then you often won't be.

Can you forgive someone who refuses to confess their guilt?

September 26, 2012 | by Wintery Knight | Link | Original Link

---

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's Jesus Through Middle Eastern Eyes (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's his response in full, copied with permission from his Facebook note:

> Regarding Bailey's comments on Matthew 6:12, he errs by not considering the theological context of this statement and fails to consider any implied biblical conditions for forgiveness inherent in the statement. The text simply does not mean what he says it means. He is reading too much into the statement.
> Bailey states, "Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when there is no confession of guilt…"
>
> Bailey errs. Here, Jesus is giving a model for prayer commensurate with the way His Kingdom works. Jesus teaches them to pray: "Forgive us our debts, as we also have forgiven our debtors." This is a statement of the objective, "forgiveness," without a discussion of any express or implied conditions to accomplish the objective. It is also a statement of the proper attitude of the Christian, that is, that we must have a demeanor of being willing to forgive, just as God was willing to forgive us. Bailey's assertion that there is no "confession of guilt" or repentance is merely an unwarranted assumption.
>
> Moreover, the use of "as" (Grk. hos) in the passage introduces a comparison between the way we forgive and the way God forgives. This comparative phraseology is employed elsewhere on the subject of forgiveness. For example, Ephesians 4:32 states that we should be "forgiving each other just as God in Christ also has forgiven" us. Here, the comparative "just as" (Grk. kathos) is employed and indicates our forgiveness is to be just like God's forgiveness of us, which flows from a loving disposition. So in the same manner that God forgives, we must forgive. We are to be "imitators of God" (Eph. 5:1). See also Matthew

5:48 and Luke 6:36 for exhortations to imitate God.

To ascertain whether the Scriptures describe any conditions for forgiveness, one must search elsewhere in the Scriptures for comment. This is the nature of systematic theology. We need to examine what the entire Bible says on a given topic, such as forgiveness. And the Bible contains ample support for the notion that there are conditions for forgiveness.

First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.

Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, “unless you repent, you will all likewise perish.” In Mark 1:15 John the Baptist commands that we must “repent and believe the Gospel.” The connection between repentance and forgiveness of sins (i.e. “salvation”) is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.

So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other’s sins. It does.

Jesus stated in Luke 17:3, “If your brother sins, rebuke him; and if he repents, forgive him.” Here, the meaning is clear. The word “if” (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.

This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word “reprove” is used rather than “rebuke” and the word “listen” is employed rather than “repent,” but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. “listen”). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).
These passages in Luke and Matthew give us the connection between sin, rebuke, repentance and forgiveness. Other biblical texts that merely mention “forgiveness” as a concept or an objective do not necessarily proffer every

aspect of the doctrine of forgiveness. As such, they must be read in light of the clear conditions expressed in other passages.

Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.
Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot "walk together" in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer's soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).

Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.

Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

Psychological problems arise from many issues other than lack of forgiveness. For example, a lack of trust in God that He has a particular instance of evil under His sovereign control can cause undue anxiety in one's life. Also, if a counselee's self worth is grounded in the shifting sand of how others treat him (i.e., badly) rather than being grounded in the fact that he is a divine image bearer and inherently valuable no matter how badly anyone treats him, he will likely fall into anxiety, depression, and other sorts of psychological maladies. Changing the biblical doctrine of forgiveness will not truly help a counselee. It only makes it

> worse.
>
> Soli Deo Gloria

I agree with Dr. Lewis, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

William Lane Craig assesses Sam Harris' attempt to ground morality on atheism

September 26, 2012 | by Wintery Knight | Link | Original Link

---

This Reasonable Faith article is worth a read.

First, objective moral values:

> So how does Sam Harris propose to solve the "value problem"? The trick he proposes is simply to*redefine* what he means by "good" and "evil" in *non*moral terms.9 He says we should "define 'good' as that which supports [the] well-being" of conscious creatures."10 He states, "Good and evil need only consist in this: misery versus well-being."11 Or again: "In speaking of 'moral truth,' I am saying that there must be facts regarding human and animal well-being."12
>
> So, he says, "Questions about values … are really questions about the well-being of conscious creatures."13 Therefore, he concludes, "It makes no sense … to ask whether maximizing well-being is 'good'."14 Why not? Because he's redefined the word "good" to *mean* the well-being of conscious creatures. So to ask, "Why is maximizing creatures' well-being good?" is on his definition the same as asking, "Why does maximizing creatures' well-being maximize creatures' well-being?" It is simply a tautology — talking in a circle. Thus, Harris has "solved" his problem simply by redefining his terms. It is mere word play.

Second, objective moral duties:

> Does atheism provide a sound foundation for objective moral duties? Duty has to do with moral obligation and prohibition, what I ought or ought not to do. Here reviewers of *The Moral Landscape* have been merciless in pounding Harris' attempt to provide a naturalistic account of moral obligation. Two problems stand out.
>
> Natural science tells us only what *is*, not what *ought* to be, the case. As philosopher Jerry Fodor has written, "Science is about facts, not norms; it might tell us how we are, but it wouldn't tell us what is wrong with how we are."17 In particular it cannot tell us that we have a moral obligation to take actions that are conducive to human flourishing.
>
> […]Second, "ought" implies "can." A person is not morally responsible for an action he is unable to avoid. For example, if somebody shoves you into another person, you are not to blame for bumping into this person. You had no choice. But Harris believes that *all* of our actions are causally determined and that there is no free will.20 Harris rejects not only libertarian accounts of freedom but also compatibilistic accounts of freedom. But if there is no free will, no one is morally responsible for anything. In the end, Harris admits this, though it's tucked away in his endnotes. Moral responsibility, he says, "is a social construct," not an

> objective reality: “in neuroscientific terms no person is more or less responsible than any other” for the actions they perform.21 His thoroughgoing determinism spells the end of any hope or possibility of objective moral duties on his worldview because we have no control over what we do.

If you missed the debate between William Lane and Sam Harris, here is the video:

And you can read a summary of the debate, written by me. There’s audio in that post, as well.

Survey of small businesses: Obamacare is the biggest challenge to new hiring

September 27, 2012 | by Wintery Knight | Link | Original Link

---

From CNS News:

> More than one in five businesses (21%) are considering dropping employee health insurance due to Obamacare, and 59% are considering changing the coverage they offer, a new industry survey shows.
>
> Two-thirds (67%) of small businesses and manufacturers say Obamacare will increase their health care costs, the survey of owners and top decision-makers by the National Federation of Independent Business (NFIB) and National Association of Manufacturers (NAM) shows.
>
> Of those providing health insurance to their employees, 38% fear Obamacare will cause them increase the amount employees have to pay for coverage.
>
> Small business owners and manufacturers see Obamacare as one of the most daunting problems facing their businesses today. Fully 56% rate Obamacare a major challenge, well above other issues like regulatory costs (36%), energy costs (39%) – and more than twice the threat of foreign competition (25%).
>
> The cost of health care is the top problem facing small businesses today, a separate 2012 NFIB survey of small business concerns shows, with 52.3% of small businesses rating rising health care costs the most “critical” problem today.
>
> NFIB analysis also shows that Obamacare’s health insurance tax (HIT) could cost up to a quarter million (249,000) private sector jobs.

There is a reason why we have a 10.5% unemployment rate if we count people who have given up on looking for a job as unemployed. Businesses don’t like the policies of this President, and they are going to wait him out.

Are young people really leaving Christianity?

September 27, 2012 | by Wintery Knight | Link | Original Link

---

J Warner Wallace of Please Convince Me summarizes the research by citing a number of sources.

Here's one:

> **Soul Searching: The Religious and Spiritual Lives of American Teenagers**
> Christian Smith and Melinda Lundquist Denton, Oxford University Press, 2005
> **Book Findings**: The majority of teenagers are incredibly inarticulate about their faith, religious beliefs and practices, and its place in their lives. The de facto dominant religion among contemporary U.S. teenagers is what they call 'Moralistic Therapeutic Deism': A God exists who created and orders the world and watches over human life on earth; God wants people to be good, nice, and fair to each other, as taught in the Bible and by most world religions; the central goal of life is to be happy and to feel good about oneself; God does not need to be particularly involved in one's life except when God is needed to resolve a problem; and good people go to heaven when they die.

And another:

> **Southern Baptist Convention Data**
> Pinkney, T.C., Remarks to the Southern Baptist Convention Executive Committee, Nashville, Tennessee (2001)
> **Study Findings**: Data from the Southern Baptist Convention indicates that they are currently losing 70-88% of their youth after their freshman year in college. 70% of teenagers involved in church youth groups stop attending church within two years of their high school graduation.

And another:

> **Soul Searching: The Religious and Spiritual Lives of American Teenagers**
> Christian Smith and Melinda Lundquist Denton, Oxford University Press (2005)
> **Book Findings**: Students leave faith behind primarily because of intellectual doubt and skepticism (page 89). "Why did they fall away from the faith in which they were raised?" This was an open-ended question there were no multiple-choice answers. 32% said they left faith behind because of intellectual skepticism or doubt. ("It didn't make any sense anymore." "Some stuff is too far-fetched for me to believe." "I think scientifically and there is no real proof." "Too many questions that can't be answered.")

And one more:

> **Lost in Transition: The Dark Side of Emerging Adulthood**
> Christian Smith with Kari Christoffersen, Hilary Davidson and Patricia Snell Herzog

> Oxford University Press (2011)
> **Book Findings**: Young adults are unable to think coherently about moral beliefs and problems. Young adults have an excessive focus on consumption and materialism as the good life. The prevalent lifestyle of young adults includes routine intoxication and drug usage. The sexual encounters of young adults are not practiced in an environment of physical, mental, or emotional health. Young adults appear to have an inability to care about, invest in, and hope for the larger world through civic and political participation.

He concludes:

> There you have it; a short summary of some of the research being done on the exodus of young people from the Church and some of the reasons they give for their departure. Can a case be made that young Christians are leaving the Church in record numbers? Yes. Can a case be made that many of these young people are leaving because the culture around them has impacted them deeply and caused them to question the truth claims of Christianity? Yes, again.

He finishes the post with a cliff-hanger ending, in which he promises to give us a plan for dealing with this problem. Stay tuned!

Did the divinity of Jesus emerge slowly after many years of embellishments?

September 27, 2012 | by Wintery Knight | Link | Original Link

---

How early is the doctrine of the divinity of Jesus?

When I answer this question, I only want to use the earliest, most reliable sources – so I can defend them *on historical grounds* using the standard rules of historiography.

The 4 sources that I would use are as follows:

- The early creed in 1 Corinthians 15:3-8, and 1 Corinthians 1
- A passage in Philippians 2
- Two passages from Mark, the earliest gospel
- A passage from Q, which is an early source of Matthew and Luke

So let's see the passages.

1 Corinthians

I've written before about the early creed in 1 Corinthians 15:3-8, which skeptical scholars date to 1-3 years after the death of Jesus, for a variety of reasons I covered in the previous post. Here's the creed which definitely makes Jesus out to be more than an ordinary man. Ordinary men don't get resurrection bodies after they die.

Here's the passage: (1 Cor 15:3-8)

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Additionally, 1 Corinthians 1:21-25 talks about Jesus being "the power of God and the wisdom of God". Paul is identifying Jesus with the divine.

[21]For since in the wisdom of God the world through its wisdom did not know him, God was pleased through the foolishness of what was preached to save those who believe.

[22]Jews demand miraculous signs and Greeks look for wisdom,

[23]but we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles,

[24]but to those whom God has called, both Jews and Greeks, Christ the power of God and the wisdom of God.

[25]For the foolishness of God is wiser than man's wisdom, and the weakness of God is

stronger than man's strength.

But it gets even stronger! You all probably already know that the most important passages in the Old Testament for Jews is the famous "Shema", which is found in Deuteronomy 6:4-9. The Shema is a strong statement of Jewish monotheism.

Here's the passage:

4 Hear, O Israel: The LORD our God, the LORD is one.

5 Love the LORD your God with all your heart and with all your soul and with all your strength.

6 These commandments that I give you today are to be upon your hearts.

7 Impress them on your children. Talk about them when you sit at home and when you walk along the road, when you lie down and when you get up.

8 Tie them as symbols on your hands and bind them on your foreheads.

9 Write them on the doorframes of your houses and on your gates.

So how does Paul fit Jesus in with this strong statement of Jewish monotheism?

Paul alludes to the Shema in 1 Corinthians 8:4-6.

4So then, about eating food sacrificed to idols: We know that an idol is nothing at all in the world and that there is no God but one.

5For even if there are so-called gods, whether in heaven or on earth (as indeed there are many "gods" and many "lords"),

6yet for us there is but one God, the Father, from whom all things came and for whom we live; and there is but one Lord, Jesus Christ, through whom all things came and through whom we live.

Holy mackerel! How did that get in there? Paul is splitting the roles of God in the the Shema and identifying Jesus in one of the divine roles! Jesus is not an ordinary man. That passage "through whom all things came" foreshadows John identifying Jesus as "the Word of God", which "became flesh and dwelt among us". Holy snark – did you guys know that was all in here so early?

The date for 1 Corinthians is 55 AD. It should be noted that skeptical scholars like James Crossley accept these passages, and you can check it out in the debate audio yourself.

Philippians

Check out Philippians 2:5-11.

5Your attitude should be the same as that of Christ Jesus:

6Who, being in very nature God, did not consider equality with God something to be grasped,

7but made himself nothing, taking the very nature of a servant, being made in human likeness.

8And being found in appearance as a man, he humbled himself and became obedient to death— even death on a cross!

[9]Therefore God exalted him to the highest place and gave him the name that is above every name,

[10]that at the name of Jesus every knee should bow, in heaven and on earth and under the earth,

[11]and every tongue confess that Jesus Christ is Lord, to the glory of God the Father.

The date for Philippians is 60-61 AD. Still within the lifetime of the eyewitnesses, and written by an eyewitness who was in contact with the other eyewitnesses, like Peter and James, whom Paul spoke with numerous times on his journeys to Jerusalem.

Mark's gospel

Mark's gospel is the earliest and atheists like James Crossley date it to less than 40 AD, which is 10 years after the death of Jesus at most. When you read the gospel of Mark, you are getting the earliest and best information available about the historical Jesus, along with Paul's epistles. So what does Mark say about Jesus? Is Jesus just a man, or is he something more?

Check out Mark 12:1-9:

[1]He then began to speak to them in parables: "A man planted a vineyard. He put a wall around it, dug a pit for the winepress and built a watchtower. Then he rented the vineyard to some farmers and went away on a journey.

[2]At harvest time he sent a servant to the tenants to collect from them some of the fruit of the vineyard.

[3]But they seized him, beat him and sent him away empty-handed.

[4]Then he sent another servant to them; they struck this man on the head and treated him shamefully.

[5]He sent still another, and that one they killed. He sent many others; some of them they beat, others they killed.

[6]"He had one left to send, a son, whom he loved. He sent him last of all, saying, 'They will respect my son.'

[7]"But the tenants said to one another, 'This is the heir. Come, let's kill him, and the inheritance will be ours.'

[8]So they took him and killed him, and threw him out of the vineyard.

[9]"What then will the owner of the vineyard do? He will come and kill those tenants and give the vineyard to others.

And Mark 13:32, talking about the date of the final judgment.

[32]"No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father.

And again, this passage is establishing a hierarchy such that Jesus is being exalted above all men and the angels, too. And the passage is embarrassing to the early church, because it makes Jesus look ignorant of something, so they would not have made this

passage up. Jesus is not an ordinary man, he is *above* the angels – God's *unique* Son.

The "Q" source for Matthew and Luke

Here's Matthew 11:27, which is echoed in Luke 10:22:

[27]"All things have been committed to me by my Father. No one knows the Son except the Father, and no one knows the Father except the Son and those to whom the Son chooses to reveal him.

[22]"All things have been committed to me by my Father. No one knows who the Son is except the Father, and no one knows who the Father is except the Son and those to whom the Son chooses to reveal him."

Since this passage is in both of Matthew and Luke, but not in Mark, scholars believe that it is in the earlier "Q" source used by both Matthew and Luke. Q predates both Matthew and Luke, and so it is also fairly early (maybe 67-68), although not as early as Mark and Paul. Bill Craig writes that this passage is also embarrassing because it says that *no one* knows Jesus.

Learn more

You can learn more about the early belief in the divinity of Jesus by listening to a lecture by William Lane Craig and reading the related paper, and by listening to the debate between Richard Bauckham and James Crossley on that topic. The first link contains other scholarly debates on Jesus.

Obama justifies censorship by blaming a Youtube clip for a planned terrorist attack

September 28, 2012 | by Wintery Knight | Link | Original Link

---

From Hans Bader of the Competitive Enterprise Institute. (links removed)

Excerpt:

> In the aftermath of a terrorist attack in Libya that killed our ambassador and three other Americans, the Obama administration was quick to scapegoat a film called "The Innocence of Muslims" for the attack, claiming that the film caused the attack. But in reality, the attack was pre-planned, and within 24 hours, the administration knew it was a terrorist attack, not a "spontaneous" eruption of outrage over the film, as it later repeatedly claimed on TV:
>
> U.S. intelligence officials knew within 24 hours of the assault on the U.S. Consulate in Libya that it was a terrorist attack and suspected Al Qaeda-tied elements were involved, sources told Fox News — though it took the administration a week to acknowledge it.
>
> The account conflicts with claims on the Sunday after the attack by U.S. Ambassador to the United Nations Susan Rice that the administration believed the strike was a "spontaneous" event triggered by protests in Egypt over an anti-Islam film.
>
> Two senior U.S. officials said the Obama administration internally labeled the attack terrorism from the first day in order to unlock and mobilize certain resources to respond, and that officials were looking for one specific suspect.
>
> Yet, "four days later, the White House sent U.N. Ambassador Susan Rice to five different Sunday talk shows to claim that the sacking and assassination sprang from a 'spontaneous' demonstration. That no longer can be explained as initial confusion over conflicting reports; it is now clearly a lie told by the White House." (The fact that terrorists, rather than demonstrators, overran the "poorly-secured" American consulate may have helped make it a "catastrophic intelligence loss.")
>
> This false claim resulted in a vast number of people calling for censorship or prosecution of the filmmaker.

Did you all hear about what Obama said about speech critical of Islam at the United Nations?

Look:

> Banning speech because someone reacts violently to it sets a terrible precedent. It gives the most violent or angry members of society a veto over free speech and what issues are discussed. It is always possible to blame the victim of violence for inciting aggression by an angry person through expression of views

> that offended that person. (For example, when a security guard working for a conservative group was shot by a critic of the group, some people blamed the group's rhetoric for supposedly creating a "climate of hate" that led the outraged shooter to react by attacking it, and said it must "share" the "blame" for the "growth of" such "violent acts.")
>
> The Obama administration has not advocated criminalizing speech against Islam. But at the United Nations, it has argued in favor of civil liability for speech that incites "discrimination" or "hostility" to Islam, based on the false assumption that civil liability is less subject to First Amendment limits. (The Supreme Court's *Hess* and *Brandenburg* decisions protect even speech that incites violence or legal violations unless the speech *intends and is likely* to cause *imminent* lawless action. The Administration is apparently unaware of, or does not agree with, federal appeals court rulings that apply those decisions to bar civil liability for speech that incites "discrimination.") As the National Review notes, the much-criticized statement by the U.S. Embassy in Egypt deploring the "abuse" of free speech in America…
>
> perfectly reflects the views of the United States government under Obama's stewardship. . . In 2009, the Obama State Department ceremoniously joined with Muslim governments to propose a United Nations resolution that, as legal commentator Stuart Taylor observed, was "all-too-friendly to censoring speech that some religions and races find offensive." . . .The sharia countries were happy with the compromise, though, because it also would have made unlawful speech that incites mere "discrimination" and "hostility" toward religion. Secretary Clinton's feint was that this passed constitutional muster because such speech would not be made *criminally* unlawful. Yet the First Amendment says "make no law," not "make no *criminal* law," restricting speech. The First Amendment permits us to criticize in a way that may provoke hostility — it would be unconstitutional to suppress that regardless of whether the law purporting to do so was civil, as opposed to criminal.

What does it mean that the President of the United States would lie to the American people in order to justify cracking down on free speech? We know he doesn't like religious liberty or private property or firearm ownership or the free market – must he also go against free speech now?

We must make the moral argument against dependence on government

September 28, 2012 | by Wintery Knight | Link | Original Link

Consider this article by Jackie Gingrich Cushman.

Full text:

> The Obama administration's policies are bad. Bad in the sense that the policies are morally corrupting. They take money and control away from people and give them to government bureaucrats, who then decide what should be done. The policies encourage people to be less responsible personally and to rely more on the government.
>
> Former British Prime Minister Margaret Thatcher argued that "socialism itself — in all its incarnations, wherever and however it was applied — was morally corrupting," Claire Berlinski wrote in "There Is No Alternative: Why Margaret Thatcher Matters" (Basic Books, 2008). "Socialism turned good citizens into bad ones; it turned strong nations into weak ones; it promoted vice and discouraged virtue … transformed formerly hardworking and self-reliant men and women into whining, weak and flabby loafers."
>
> Sound familiar?
>
> Republicans are currently debating the surface arguments about the Obama administration's programs — they cost too much, they are not paid for and there is too much government intervention.
>
> The core of the matter is the same today as it was in Great Britain in the 1970s.
>
> The system President Obama is championing is morally wrong.
>
> In order to win in November, Republican nominee Mitt Romney must win the argument, and thereby win the vote.
>
> The argument is that the system Obama is promoting is bad and that it creates a weak society. Romney needs to articulate what it is to be an American; why we must defend America's core values; why they are good values.
>
> Romney's speech this week at the Clinton Global Initiative reverberated with these themes.
>
> He talked about "the incomparable dignity of work."
>
> "Free enterprise," he said, "has done more to bless humanity than any other economic system not only because it is the only system that creates a prosperous middle class, but also because it is the only system where the individual enjoys the freedom to guide and build his or her own life. Free enterprise cannot only make us better off financially, it can make us better people."

> Romney recounted the story of Muhammed Bouazizi of Tunisia. “He was just 26 years old. He had provided for his family since he was a young boy. He worked a small fruit stand, selling to passers-by. The regular harassment by corrupt bureaucrats was elevated one day when they took crates of his fruit and his weighing scales away from him.
>
> “On the day of his protest, witnesses say that an officer slapped Bouazizi and he cried out: ‘Why are you doing this to me? I’m a simple person, and I just want to work.'”
>
> “I just want to work,” Romney repeated.
>
> “Work. That must be at the heart of our effort to help people build economies that can create jobs for people, young and old alike. Work builds self-esteem,” he continued. “It transforms minds from fantasy and fanaticism to reality and grounding. Work will not long tolerate corruption nor quietly endure the brazen theft by government of the product of hardworking men and women.”
>
> He linked free enterprise to freedom. “The most successful countries shared something in common,” he said. “They were the freest. They protected the rights of the individual. They enforced the rule of law. And they encouraged free enterprise. They understood that economic freedom is the only force in history that has consistently lifted people out of poverty — and kept people out of poverty.”
>
> The next step is for Romney to lay out this argument not only for other countries, but for our own. It works here as well as abroad. There are 12.5 million unemployed Americans; 8 million more are working part-time when they want to work full time; 2.6 million people are so discouraged that they have given up looking for work and are no longer counted as unemployed.
>
> More than 23 million Americans understand the statement, “I just want to work.”
>
> These people and those around them understand that there is great dignity in work, and want to work — but cannot find a job.
>
> In order to win the vote in November, we must first win the argument. America works best when Americans are working. The way to get more Americans to work is to promote freedom, ingenuity and free enterprise. While government programs and subsidies might provide temporary relief, the only proven way to long-term prosperity is to create more jobs, thereby allowing people to lift themselves up, providing not only their monetary needs, but also dignity of purpose.

My biggest concern about socialism is how it makes it harder for men to be providers, and easier for women to do without a man – *even having children without a man*. I really oppose that – fatherlessness is not good for children.

Voting for Democrats means voting for bigger government which means voting for higher taxes to pay for it all. Higher taxes means that there is less money in the pockets of job

creators, and that means fewer jobs. But it also that a married man can no longer retain enough of his earnings to support a family. And that means his wife has to work and won’t be able to take care of young children or her husband. Instead of learning the values of the parents, children will learn what the government schools decide they should learn. It’s a disaster. And it’s immoral. It’s immoral to take the provider role away from men and give it to a parasitical secular government. It destroys marriage and it destroys family.

Seven stories about Mitt Romney that you won't hear from the liberal media

September 28, 2012 | by Wintery Knight | Link | Original Link

---

Mr. Hawkins wrote a column entitled "7 Incredible Personal Stories About Mitt Romney That You May Not Know".

Here's my favorite:

> **2) Mitt Romney gave milk to a V.A. hospital:** This is the kind of thing **Mitt Romney has done for people in need who cross his path**.
>
> He shared a story of a V.A. hospital in Boston that Mitt Romney stopped at while on the campaign trail running against Ted Kennedy. Ted Kennedy had made a thirty minute stop at the same location a couple of weeks prior.After touring the V.A. hospital, Mitt asked to look at their books. After he spent forty minutes going through their books, he told them, "You run a very good place, very tight. Very good." Romney asked to go on another tour of the hospital, and after spending an hour and forty minutes there, the last question he asked was, "So what… what do you — what are you lacking? What do you need help with?"
>
> The response? "Milk."
>
> Since the press was around, snapping photos and asking questions, Glenn explained that Romney did a really awkward joke where he said, "maybe we should teach everyone here how to milk a cow."
>
> Of course, that's all the press cared to hear and ran with a story that claims "Mitt Romney says veterans should have to milk cows."
>
> "This is where it gets good," Glenn started. "Romney calls him up the next morning."
>
> Romney first apologizes to the man who runs the hospital for any problems the attention from the press jumping on his words brought to the hospital. He next offers to help with the milk situation.
>
> "Friday comes, and the milkman comes," Glenn continues. "This is what the vets needed – they needed 7,000 pints of milk a week. Milkman shows up, 7,000 pints. The head of the V.A. hospital asks, 'Where did all this come from?' He [the milkman] said 'an anonymous donor.' Now, the guy didn't put it together."
>
> Glenn explains that when the next week rolled around, the milkman shows up again, and continued to show up every week for two years. After two years of delivering 7,000 pints of milk a week to the hospital, as the milkman is retiring, the man finally gets him to reveal the anonymous donor.
>
> It's Mitt Romney.
>
> "Mitt Romney was writing a personal check and didn't want anybody to know for

> two years and provided the vets with all of their milk in Boston," Glenn explained to listeners this morning.
>
> When Romney became governor, he sent a bill through to help the V.A. hospital – it was down to the dollar.

Read the other six.

Meanwhile, taxpayers spent $1.4 billion on Barack Obama and his family.

Mr. Hawkins and I share the view that Romney was not the most conservative candidate in the Republican primary. I wanted Michele Bachmann first, then Rick Santorum when she dropped out. John wanted Newt Gingrich. But we would both rather have Romney, than Obama. At least now we know that there are some good things about Mitt Romney as a man, even if I don't agree with him on policy.

Friday night movie: The Mark of Zorro (1940)

September 28, 2012 | by Wintery Knight | Link | Original Link

---

Here's tonight's movie:

IMDB mean rating: [7.7/10]

IMDB median rating: [8/10]

Description:

> The film is based on the story *The Curse of Capistrano* written by Johnston McCulley, originally published in 1919, which introduced the masked hero Zorro. The story is set in Southern California during the early 19th century. The plot deals with Don Diego Vega (Tyrone Power), the apparently foppish son of wealthy ranchero Don Alejandro Vega (Montagu Love), who returns to California after his education in Spain. He is horrified at the way the common people are mistreated by alcalde Luis Quintero (J. Edward Bromberg). Don Diego adopts the guise of El Zorro ("the fox"), a masked outlaw who becomes the defender of the common people.

Now I don't want to give anything away, but the phrase "the finest swordfight in cinema" is often applied to this movie. Don't miss it!

Happy Friday!

Obama wants to send $1 billion of aid to Muslim Brotherhood in Egypt

September 29, 2012 | by Wintery Knight | Link | Original Link

---

From the radically left-wing New York Times.

Excerpt:

> The Obama administration notified Congress on Friday that it would provide Egypt's new government an emergency cash infusion of $450 million, but the aid immediately encountered resistance from a prominent lawmaker wary of foreign aid and Egypt's new course under the leadership of the Muslim Brotherhood.
>
> […]The aid is part of the $1 billion in assistance that the Obama administration has pledged to Egypt to bolster its transition to democracy after the overthrow last year of the former president, Hosni Mubarak. Its fate, however, was clouded by concerns over the new government's policies and, more recently, the protests that damaged the American Embassy in Cairo.
>
> […]Secretary of State Hillary Rodham Clinton, speaking at a meeting of the Group of 8 nations in New York, said on Friday that the world needed to do more to support the governments that have emerged from the Arab Spring uprisings, including those in Egypt, Libya and Tunisia.
>
> "The recent riots and protests throughout the region have brought the challenge of transition into sharp relief," Mrs. Clinton said, without mentioning the assistance to Egypt specifically. "Extremists are clearly determined to hijack these wars and revolutions to further their agendas and ideology, so our partnership must empower those who would see their nations emerge as true democracies."
>
> The debate comes as the issue of foreign aid in general made an unexpected appearance in the presidential campaign.
>
> In a speech in New York on Tuesday, Mr. Obama's Republican challenger, Mitt Romney, called for revamping assistance to focus more on investments in the private sector than on direct aid… While Mr. Romney did not address aid to Egypt directly, he cited Mr. Morsi's membership in the Muslim Brotherhood as one of the alarming developments in the Middle East, along with the war in Syria, Iran's pursuit of nuclear weapons and the killing of the American ambassador to Libya.
>
> […]The assistance outlined in letters to Congress on Friday would be contingent on Egypt's setting in motion economic and budgetary changes that the International Monetary Fund is now negotiating as part of a $4.8 billion loan.
>
> The administration has also thrown its support behind that loan, and officials said they hoped it would be completed before the end of the year.

Is the economy doing so well than we have money to spare to send to foreign governments that don’t like us very much? Whatever need we have to strengthen diplomatic ties with nations like Egypt would best be met by foreign investment, where we get something back, rather than foreign aid, where we get nothing back.

J. Warner Wallace's surprising advice to stop apostasy among young Christians

September 29, 2012 | by Wintery Knight | Link | Original Link

---

J. Warner Wallace has posted his recommended plan to halt the exodus of young Christians from Christianity during college. It's all up at Please Convince Me.

Excerpt:

> In my last post, I summarized the studies and publications that describe the flight of young people from the Church. A compelling cumulative circumstantial case can be made to support the fact that young college aged Christians are walking away from Christianity in record numbers. What can we do about it? What *can* be done? Whenever people ask me this question, I always say the same thing. STOP TEACHING YOUNG CHRISTIANS. Just stop it. Whatever Christendom is doing in its effort to teach it's young, the effort appears to largely be a failure. In fact, Ken Ham (in his book, *Already Gone:Why Your Kids Will Quit Church and What You Can Do To Stop It*) found that young Christians who faithfully attended Bible classes were actually more likely to question the authority of Scripture, more likely to defend the legality of abortion, same-sex marriage, and premarital sex, and more likely to leave the church! What's going on here? I think I know. It's time to stop teaching our young people; it's time to start training them.
>
> There's a difference between teaching and training. Training is teaching in preparation for a battle. Boxers train for upcoming fights. In fact, boxers are sometimes known to get fat and lazy until the next fight is scheduled. Once the date has been signed, fighters begin to train in earnest. Why? Because they know that they are going to eventually get in the ring and face an aggressive opponent. We train when we know we are about to encounter a battle. Imagine for a moment that you are enrolled in an algebra class. If the teacher assured you that you would never, ever be required to take a test, and that you would pass the class regardless of your level of understanding, how hard do you think you would study? How deeply do you think you would come to understand the material? How committed do you think you would be to the material?
>
> […]Years ago, as a youth pastor, I started taking annual trips to Salt Lake City and Berkeley. Why? I was scheduling theological and philosophical battles to help prepare my young Christians for the larger looming battle they would someday face on their own. If you want to teach your young people theology, there is no better method than to put them in direct contact with people who believe in a very sophisticated heresy. Mormons use the same terminology as Christians but deny the basic tenants of our faith. In order to dialogue with Mormons effectively, we first have to understand what *we* believe. When we train young people in preparation for an evangelism trip to Salt Lake City, we give meaning and

> purpose to the content of our teaching. In a similar way, our evangelistic trips to Berkeley (where we contact notable atheist speakers and atheist groups on campus) require us to prepare ourselves to answer the myriad of atheistic objections we will inevitably encounter. Once again, the content of our teaching in preparation for this trip takes on purpose and meaning when we know the level of our understanding will eventually be tested.

Read the whole thing. Mr. Wallace has experience working with young people, and lecturing on apologetics here at home and abroad. He understands young people because he has had to deal with them. Even if you don't agree with them, it's an interesting view. Would the church really turn away from being inward-focused and rooted in blind faith and emotional singing, and re-invent their approach so that it takes the other side seriously?

By the way, this is something I like to use in my mentoring of young people and in courting women as well. If I am trying to choose someone to work on, my first questions are always about what they do for a living, what they've studied, who in their lives is a non-Christian. I am always looking for people who have some opposition to Christianity in their lives, because it's those people who have a motivation to learn. I am always surprised how naive pastors and worship leaders and youth pastors are about the opposition to Christianity in the world. They seem to be in their own little happy bubbles, never coming out to deal with people who disagree with them. I think the problem is that they often think that Christianity is not about truth but about feelings, and so no work needs to be done to defend any truth claims.

I was having a conversation last night with a friend who is curious about Christianity and he told me about his encounter with a "Christian" girl from the Deep South who told him about her eating disorder and how God saved her from it. He asked her if she knew who William Lane Craig was and she said no. He asked her if she knew how to defend the existence of God or the resurrection, and she said no. She had been taught but not trained. Her education was in dancing and the performing arts, as well. All of the the fields that are of interest to Christians who want to make truth claims – physics, philosophy, biochemistry, history, etc. – were foreign to her. So you are left with the odd situation of people being raised in a Christian culture who have "experiences" with God making them happy. Their faith is all about *them* and nothing to do with anything in the real world out there.

I think that this woman is a very good example of what the church produces, by focusing on teaching, preaching, singing and never, ever taking seriously doubts and questions. What the church approach produces is faith as a personal preference – faith for the benefit of my feelings. But Christianity isn't a subjective experience, it's a set of objective claims that its adherents believe and have reasons and evidence to support that belief. And with that knowledge of those truth claims, we then proceed to have experiences in the world informed by a relationship with God. It is very confusing to jump right into having experiences, many of which are just subjective experiences, and having nothing to

say to an honest questioner who wants to see the evidence. But I would suspect that most pastors and church leaders are like the eating-disorder girl, and they just aren’t trained.

Obama administration warns contractors to delay layoffs to after election

This is currently the top story at Fox News.

Excerpt:

> The Obama administration has doubled down on its plea to defense contractors not to warn employees about possible layoffs due to looming budget cuts — going so far as to offer to cover legal fees in compensation challenges.
>
> The move drew a stern rebuke Friday from South Dakota Republican Sen. John Thune, since federal law requires employers to give notice if mass layoffs are likely.
>
> "For the second time, the Obama administration has now encouraged government contractors to ignore the WARN Act and hold off on warning employees about possible layoffs due to the looming sequestration cuts," Thune, lead author of the Sequestration Transparency Act, said Friday.
>
> The offer to pay the legal fees was included in a memorandum issued by the administration Friday that also restated the Labor Department's position from July that contractors should not issue written notices to employees because of the "uncertainty" over the across-the-board cuts to the defense budget and other federal spending that will occur Jan. 2 unless Congress reaches a new deal.
>
> The notices are required under the Worker Adjustment and Retraining Notification Act and generally require employers with more than 100 employees to provide 60-day notices of "mass layoffs if they are reasonably foreseeable."
>
> […]Rep. John Kline, chairman of the House Committee on Education and the Workforce, suggested last week that the Labor Department is trying to conceal the full impact of the cuts.
>
> "The Labor Department is trying to hide the consequences of sequestration from workers," Kline, R-Minn., said in a letter to Labor Secretary Hilda Solis.

So the administration is more concerned about being re-elected than with the cuts to an already weakened defense industry. The focus is always on rhetoric and perception with these Democrats, never on substance and doing what's right.

New study: huge decline in Democrat voter registration in key swing states

September 30, 2012 | by Wintery Knight | Link | Original Link

---

From Fox News, some very bad news for the Democrats.

Excerpt:

> Voter registration in the Buckeye State is down by 490,000 people from four years ago. Of that reduction, 44 percent is in Cleveland and surrounding Cuyahoga County, where Democrats outnumber Republicans more than two to one.
>
> "I think what we're seeing is a lot of spin and hype on the part of the Obama campaign to try to make it appear that they're going to cruise to victory in Ohio," Cuyahoga County Republican Chairman Rob Frost said. "It's not just Cuyahoga County. Nearly 350,000 of those voters are the decrease in the rolls in the three largest counties, Cuyahoga, Hamilton and Franklin."
>
> Frost points out that those three counties all contain urban centers, where the largest Democrat vote traditionally has been.
>
> Ohio is not alone. An August study by the left-leaning think tank Third Way showed that the Democratic voter registration decline in eight key swing states outnumbered the Republican decline by a 10-to-one ratio. In Florida, Democratic registration is down 4.9 percent, in Iowa down 9.5 percent. And in New Hampshire, it's down down 19.7 percent.
>
> […]The Third Way study, which was conducted in August, indicates the Democrats' drop in registered voters coincides with a gain in independent voters.
>
> "There are about half a million more independents now than there were just for years ago," Diggles said.

Meanwhile, the mainstream media continues to trumpet polls that oversample Democrats, even though Democrat registration continues to plunge.

How apologetics relies on a sound understanding of the gospel

September 30, 2012 | by Wintery Knight | Link | Original Link

---

Eric posted an article linking theology and apologetics at the Ratio Christi Ohio State University blog.

Excerpt:

> Many of us in the apologetic endeavor have lamented over the fact that there is still a lot of apathy among churches about the need to defend the faith in the public square. I am convinced that one of the problems is that we are preaching a very weak Gospel. And if anything, it is a pragmatic Gospel. In other words, the Gospel is more about what Jesus can do for me. This can lead to a very self-centered Christian life rather than a mission centered Christian life. Don't get me wrong: I know churches send their people on short- term mission trips. This is done to try to get people to break Christians out of their narcissistic attitudes.
>
> […]To make Jesus as Lord of one's life is a lifelong process. It is a call to daily surrender. It certainly means we are under NEW MANAGEMENT. We are called to yield our time, bodies, goals and gifts to His Lordship. Is it easy? No, not at all. I struggle with this quite a bit. But we do have a Helper to give us the grace to do it (hint: study the ministry of the Holy Spirit). So in other words, we say '"Lord Jesus, have your way with me. I am relying on the work of the Holy Spirit to yield myself to you on a daily basis."
>
> There is no doubt that in a world that wants instant results, self- sacrifice is tough sell. As I said, part of the problem is that churches preach a Gospel that promises that Jesus will fix all our problems. And when things get tough, many people bail out. A long-term commitment to our Lord which involves self-denial (Luke 9:23) is hard to swallow for those that have been told The American Dream is the way of happiness.

I remember when I was growing up in youth group, my interest in apologetics was always looked at with suspicion by the other Christians and the church leaders. They all assumed nasty motives for me, like "pride" and having doubts about my faith. I think that churches need to get their act together and realize that apologetics is simply what Christians do when they 1) understand the gospel, and the importance of self-sacrifice and self-denial, and 2) understand that in today's world, people have intellectual objections to faith that require careful reasoning and objective evidence. Apologetics is not second-class Christianity, it's first-class Christianity. A person who does apologetics has clearly understood the what it means to take up his cross and follow Jesus.

Details of another Fast and Furious massacre to be revealed by Univision

October 1, 2012 | by Wintery Knight | Link | Original Link

From the Daily Caller, more news about the Obama administration's plan to facilitate the sale of assault weapons to Mexican drug cartels.

Excerpt:

> Spanish-language television network Univision plans to air a television special that it said reveals more violence than previously known, as well as the stories of how many more Operation Fast and Furious victims were killed, the network announced in a Friday release.
>
> "The consequences of the controversial 'Fast and Furious' undercover operation put in place by the U.S. Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) in 2009 have been deadlier than what has been made public to date," the network said. "The exclusive, in-depth investigation by Univision News' award-winning Investigative Unit — Univision Investiga — has found that the guns that crossed the border as part of Operation Fast and Furious caused dozens of deaths inside Mexico."
>
> Among other groups of Fast and Furious victim stories Univision says it will tell in the special to air Sunday evening at 7 p.m., is one about how "16 young people attending a party in a residential area of Ciudad Juárez in January of 2010″ were gunned down with weapons the Obama administration gave to drug cartel criminals through Fast and Furious.
>
> "Univision News' Investigative Unit was also able to identify additional guns that escaped the control of ATF agents and were used in different types of crimes throughout Mexico," the network added. "Furthermore, some of these guns — none of which were reported by congressional investigators — were put in the hands of drug traffickers in Honduras, Puerto Rico, and Colombia. A person familiar with the recent congressional hearings called Univision's findings 'the holy grail' that Congress had been searching for."
>
> A video preview published on Friday shows a number of the bodies of people killed with Fast and Furious weapons, as well as victims' family members pleading with outgoing Mexican President Felipe Calderon for justice.

Vice Presidential candidate Paul Ryan has now become the 131st Congressman to call for the resignation of Attorney General Eric Holder.

Excerpt:

> Republican vice presidential candidate Paul Ryan agrees with presidential candidate Mitt Romney's call for Attorney General Eric Holder to resign, or for

> President Barack Obama to fire him, over Operation Fast and Furious, a Ryan spokesman told The Daily Caller.
>
> "The congressman agrees with the governor," Ryan spokesman Brendan Buck told TheDC on Sunday, referring to Mitt Romney's call for Holder's resignation or termination over the gunwalking scandal last December.
>
> "Either Mr. Holder himself should resign, or the president should ask for his resignation or remove him," Romney said in December 2011. "It's unacceptable for him to continue in that position now given the fact that he has misled Congress and entirely botched the investigation of the Fast and Furious program."
>
> Ryan's call for Holder's ouster over Fast and Furious comes a day after he told a sportsmen's group that gun owners should be worried about Obama trying to infringe on their Second Amendment rights if he is re-elected. Speaking about Fast and Furious specifically, Ryan said at the Saturday event that such an operation "would never occur under a Romney-Ryan administration," according to CBS News.
>
> […]Fast and Furious was a program of the Bureau of Alcohol, Tobacco, Firearms and Explosives, overseen by Holder's Department of Justice. It sent thousands of weapons to Mexican drug cartels via straw purchasers — people who purchased guns in the United States with the known intention of illegally trafficking them somewhere else.
>
> Fast and Furious guns were used to kill U.S. Border Patrol Agent Brian Terry on Dec. 14, 2010, in Peck Canyon, Ariz.

Wouldn't it be neat if this were to come up in an election debate?

Eric Holder participated in takeover of ROTC office at Columbia University

October 1, 2012 | by Wintery Knight | Link | Original Link

Bombshell story in the Daily Caller.

Excerpt: (links removed)

> **As a freshman at Columbia University in 1970, future Attorney General Eric Holder participated in a five-day occupation of an abandoned Naval Reserve Officer Training Corps (ROTC) headquarters with a group of black students later described by the university's Black Students' Organization as "armed," The Daily Caller has learned.**
>
> Department of Justice spokeswoman Tracy Schmaler has not responded to questions from The Daily Caller about whether Holder himself was armed — and if so, with what sort of weapon.
>
> Holder was then among the leaders of the Student Afro-American Society (SAAS), which demanded that the former ROTC office be renamed the "Malcolm X Lounge." The change, the group insisted, was to be made "in honor of a man who recognized the importance of territory as a basis for nationhood."
>
> Black radicals from the same group also occupied the office of Dean of Freshman Henry Coleman until their demands were met. Holder has publicly acknowledged being a part of that action.
>
> The details of the student-led occupation, including the claim that the raiders were "armed," come from a deleted Web page of the Black Students' Organization (BSO) at Columbia, a successor group to the SAAS. Contemporary newspaper accounts in The Columbia Daily Spectator, a student newspaper, did not mention weapons.
>
> Holder, now the United States' highest-ranking law enforcement official, has given conflicting accounts of this episode during college commencement addresses at Columbia, but both the BSO's website and the Daily Spectator have published facts that conflict with his version of events.
>
> Holder has bragged about his involvement in the "rise of black consciousness" protests at Columbia.
>
> "I was among a large group of students who felt strongly about the way we thought the world should be, and we weren't afraid to make our opinions heard," he said during Columbia's 2009 commencement exercises. "I did not take a final exam until my junior year at Columbia — we were on strike every time finals seemed to roll around — but we ran out of issues by that third year."
>
> Though then-Dean Carl Hovde declared the occupation of the Naval ROTC office illegal and said it violated university policy, the college declined to prosecute any

> of the students involved. This decision may have been made to avoid a repeat of violent Columbia campus confrontations between police and members of Students for a Democratic Society (SDS) in 1968.
>
> The ROTC headquarters was ultimately renamed the Malcolm X lounge as the SAAS organization demanded. It later became a hang-out spot for another future U.S. leader, Barack Obama, according to David Maraniss' best-selling "Barack Obama: The Story."

"Armed"? Is this why Attorney General Eric Holder involved in scandals like Fast and Furious? Maybe he thinks that it is a good idea for dug cartels to have assault weapons? Maybe because he has never had any respect for law and order at all.

Philip E. Johnson lectures on science, evolution and religion

October 1, 2012 | by Wintery Knight | Link | Original Link

I found this fun lecture by the grandfather of the big-tent intelligent design movement, Berkeley law professor Philip E. Johnson.

I'll bet you guys have all heard of him, but you've never heard him speak, right? Well, I was a young man, I used to listen to Phil's lectures and his debates with Eugenie Scott quite a bit. This is one of my favorite lectures. Very easy to understand, and boilerplate for anything else in the origins debate. This is a great lecture – funny, engaging and useful. You will definitely listen to this lecture several times if you listen to it once.

The MP3 is here. (91 minutes, 62 megabytes)

The Inherit the Wind stereotype

- Many people get their understanding of origins by watching movies like "Inherit the Wind" (or reading science fiction)
- The actual events of the Scopes trial are nothing like what the movie portrays
- The law forbidding the teaching of evolution was symbolic, not meant to be enforced
- The actual Scopes trial was a publicity stunt to attract attention to Dayton, TN to bring business to the town
- The ACLU advertised for a teacher who would be willing to be sued
- They found a substitute physical education teacher who would be willing to "break" the law
- The movie is nothing like the actual events the movie is a morality play
- The religious people are evil and stupid and ignorant and bigoted
- The scientists and lawyers are all intelligent, romantic, and honest seekers of the truth
- The religious people think that the Bible trumps science and science is not as reliable as the Bible
- The movie argues that the reason why there is ANY dissent to evolution is because of Biblical fundamentalism
- The movie presents the idea that there are no scientific problems with evolution
- The movie says that ONLY Biblical fundamentalists who believe in 6 day, 24-hour creation doubt evolution
- The movie says that Biblical fundamentalism are close-minded, and not open to scientific truth
- The movie says that people who read the Bible as making factual claims are misinterpreting the Bible
- The movie says that smart people read the Bible for comfort and feelings and arbitrary values, not for truth

Guided evolution and methodological naturalism

- What scientists mean by evolution is that fully naturalistic, unguided, materialistic mechanisms caused the diversity of life
- Scientists do not allow that God had any real objective effect on how life was created
- Scientists think that nature did all the creating, and any mention of God is unnecessary opinion – God didn't DO ANYTHING
- Scientists operate with one overriding rule – you can only explain the physical world with physical and material causes
- Scientists DO NOT allow that God could have done anything detectable by the sciences
- Scientists WILL NOT consider the idea that natural, material processes might be INSUFFICIENT for explaining everything in nature
- You cannot even ask the question about whether natural laws, matter and chance can explain something in nature
- Intelligent causes can NEVER be the explanation for anything in nature, and you can't even test experimentally to check that
- Scientists ASSUME that everything can be explained with natural laws, matter and chance – no questioning of natural causes is allowed
- Where no natural explanation of a natural phenomenon is available, scientists SPECULATE about undiscovered natural explanations
- The assumption of naturalistic sufficiency is called "methodological naturalism"
- To question the assumptions that natural is all there is, and that nature has to do its own creating, makes you an "enemy of science"
- But Johnson says that *naturalists* are the enemies of science, because they are like the Biblical fundamentalists
- Naturalists have a presumption that prevents them from being willing to follow the evidence where it is leading
- Experiments are not even needed, because the presumption of naturalism overrides any experimental finding that falsifies the sufficiency of natural causes to explain some natural phenomenon

What can natural selection and mutation actually do?

- what evolution has actually been observed to do is explain changing populations of moths and finches
- finches with smaller or larger beaks are observed to have differential survival rates when there are droughts or floods
- no new body plan or new organ type has been observed to emerge from these environmental pressures
- the only kind of evolution that has been observed is evolution *within types* – no new genetic instructions are created

- in textbooks, only confirming examples are presented – but what is required is a broad pattern of gradual development of species
- if you look at the fossil record, what you see in most cases is variation within types based on changing environments
- the real question is: can natural law and chance *be observed* to be doing any creating of body plans and organ types?

What kind of effect requires an intelligent cause?

- the thing to be explained in the history of life is the functional information sequences
- you need to have a sequence of symbols or characters that is sufficiently long
- your long sequence of characters has to be sequenced in the right order to have biological function
- the only thing that can create long sequences of functional information is an intelligent cause
- intelligent design people accept micro-evolution – changes within types – because that's been observed
- the real thing to be explained is the first living cell's functional information, and the creation of new function information

Critical response

The next 15 minutes of the lecture contain a critical response from a philosophy professor who thinks that there have been no developments in design arguments since Aquinas and Paley. He basically confirms the stereotypes that Johnson outlined in the first part of the lecture. I recommend listening to this, because it shows how weak the counter arguments are, and how these pseudo-intellectuals mislead unprepared students to question their Christian faith – especially dangerous since they have the power of the grading pen. Notice especially how he never mentions any arguments that Christians actually use, nor does he mention any actual science. Everything is "words, words, words" as Hamlet might say – no talking about experiments.

Here's what he says:

1) Don't take the Bible literally, even if the genre is literal.

- all opposition to evolution is based on an ignorant, fundamentalist, literal reading of the Bible
- Christians need to reinterpret the Bible so that it is basically relaying personal preferences, and not factual information, regardless of the genre intended
- the Bible really doesn't communicate anything about the way the world really is
- the Bible is just meant to suggest certain opinions and experiences which you may find fetching, or not, depending on your feelings and community
- if Christians would just interpret the Bible as myths and opinions on par with other personal preferences, then evolution is no threat to religious belief

2) As long as you treat the design argument as divorced from evidence, it's not very effective

- the latest and best version of the design argument is Paley's argument which involves no experimental data, so I'll critique that
- this 200-year old argument which doesn't rely on science has serious problems, and unnamed Christians agree with me!
- Christians should NOT try to prove God's existence using evidence from the natural world (as Romans 1 says), and in fact it's "Pelagianism" to even try
- Christians should divorce their faith from logic and evidence even though the Bible says that Jesus performed miracles to supply evidence for his claims
- Christians should not tie their faith to the best science available today, because science is always changing – what happens if we discover that the universe is eternal tomorrow?
- What if! What if! Just because you guys have the facts on your side today, tomorrow science might prove that the universe is eternal! What would you do then?
- It's a good idea for me to critique the arguments of 1000-year old people who did not know anything about the cosmic fine-tuning argument – that's fair!
- I find it very useful to tell people that the argument from design is false without mentioning any scientific evidence of design from things like DNA and fine-tuning
- We need to assume that the natural world is explainable using only natural causes
- We should assume that natural causes create all life, and then rule out all experimental evidence for intelligent causes that we have today
- As long as you accept that God is a personal opinion that has nothing to do with reality, then you can do science
- The non-Christian process theologian Teilhard de Chardin is actually a Christian, and he accepts evolution, so quit complaining you ignorant fundies!
- Remember when theists said God caused thunder because he was bowling in the clouds and then we found out he didn't? Yeah well – maybe tomorrow we'll find out that functional sequences of amino acids and proteins have natural causes! What would you do then?

3) What the Bible really says is that you should be a political liberal

Q&A time

The lecture concludes with 13 minutes of questions.

Presidential debate schedule kicks off this Wednesday: live streaming available

October 2, 2012 | by Wintery Knight | Link | Original Link

Here's the debate schedule:

> **First presidential candidates' debate between President Barack Obama, former Mass. Gov. Mitt Romney**
>
> - Topic: Domestic policy
> - Date: Wednesday, Oct. 3
> - Time: 9 – 10:30 p.m. EDT
> - Location: University of Denver, Denver, Colo.
> - Moderator: Jim Lehrer, executive editor of PBS's "NewsHour"
> - Format: "The debate will focus on domestic policy and be divided into six time segments of approximately 15 minutes each on topics to be selected by the moderator and announced several weeks before the debate," according to the Commission on Presidential Debates. "The moderator will open each segment with a question, after which each candidate will have two minutes to respond. The moderator will use the balance of the time in the segment for a discussion of the topic."
>
> **Vice presidential candidates' debate between Vice President Joe Biden, Wis. Rep. Paul Ryan**
>
> - Topic: Foreign and domestic topics
> - Date: Thursday, Oct. 11
> - Time: 9 – 10:30 p.m. EDT
> - Location: Centre College, Danville, Ky.
> - Moderator: Martha Raddatz, senior foreign affairs correspondent, ABC News
> - Format: "The debate will cover both foreign and domestic topics and be divided into nine time segments of approximately 10 minutes each. The moderator will ask an opening question, after which each candidate will have two minutes to respond. The moderator will use the balance of the time in the segment for a discussion of the question."
>
> **Second presidential candidates' debate between Obama, Romney**
>
> - Topic: Foreign and domestic issues
> - Date: Tuesday, Oct. 16
> - Time: 9 – 10:30 p.m. EDT
> - Location: Hofstra University, Hempstead, N.Y.
> - Moderator: Candy Crowley, chief political correspondent, CNN, and anchor,

> CNN's "State of the Union"
> - Format: "The second presidential debate will take the form of a town meeting, in which citizens will ask questions of the candidates on foreign and domestic issues. Candidates each will have two minutes to respond, and an additional minute for the moderator to facilitate a discussion. The town meeting participants will be undecided voters selected by the Gallup Organization."
>
> **Third presidential candidates' debate between Obama, Romney**
>
> - Topic: Foreign policy
> - Date: Monday, Oct. 22
> - Time: 9 – 10:30 p.m. EDT
> - Location: Lynn University, Boca Raton, Fla.
> - Moderator: Bob Schieffer, chief Washington correspondent, CBS News, and moderator, "Face the Nation"
> - Format: "The format for the debate will be identical to the first presidential debate and will focus on foreign policy."

My take: This debate schedule really worries me. It's only 4 debates, and they are really late in the game. Voting has already started. None of the debates are with Fox News, so they will all feature biased questions about banning contraception and prayer in schools. Academic studies have all shown that the mainstream news media is largely biased to the left, so I just don't expect that these debates will be fair. Why do Republicans agree to debates moderated by leftists, with topics chosen by leftists? I will never understand. We need more debates, and we need them to have longer speeches and fair and balanced moderators.

I'm expecting that Fox News Live will offer streaming of the debates as they occur, otherwise I will be watching the biased coverage of ABC News via Youtube.

New study: higher risk of divorce when men do housework

October 2, 2012 | by Wintery Knight | Link | Original Link

Atheist commenter Jerry sent me this story about a Norwegian study that affirms traditional roles within the marriage.

Excerpt:

> Couples who share housework duties run a higher risk of divorce than couples where the woman does most of the chores, a Norwegian study sure to get tongues wagging has shown.
>
> The divorce rate among couples who shared housework equally was around 50 per cent higher than among those where the woman did most of the work.
>
> "The more a man does in the home, the higher the divorce rate," Thomas Hansen, co-author of the study entitled Equality in the Home, said.
>
> Researchers found no, or very little, cause-and-effect. Rather, they saw in the correlation a sign of "modern" attitudes.
>
> "Modern couples are just that, both in the way they divide up the chores and in their perception of marriage" as being less sacred, Mr Hansen said, stressing it was all about values.
>
> "In these modern couples, women also have a high level of education and a well-paid job, which makes them less dependent on their spouse financially. They can manage much easier if they divorce," he said.
>
> There were only some marginal aspects where researchers said there may be cause-and-effect.
>
> "Maybe it's sometimes seen as a good thing to have very clear roles with lots of clarity … where one person is not stepping on the other's toes," Mr Hansen suggested.
>
> "There could be less quarrels, since you can easily get into squabbles if both have the same roles and one has the feeling that the other is not pulling his or her own weight," he added.

I think that this article is basically correct – men like having clearly defined roles. A man has the traditional roles of protector, provider and moral/spiritual leader. He has the responsibility to lead in those areas. He doesn't want to have the woman's role, he doesn't want to be forced to perform it. Men don't like to be nagged. He doesn't want to be micromanaged. He doesn't want the government telling him how to do his roles, either. I think that one of the reasons why men are so unwilling to marry is because they sense that they could be dominated by their wives and by the state – a state that is not very interested in promoting the interests of men.

In my case, I am a bachelor, so I have to do all my own cleaning, cooking and nurturing. I like learning more about cooking and cleaning and anything else practical. But I hope that if I did get married, then my wife would take the lead in those areas, and push me to be better at my special male roles. I would also hope that she would vote to protect my ability to perform my roles. For example, lower taxes and less regulation, so that I can easily find a job to provide for the family. And concealed carry, so that I can always protect my family. And school choice, so that the schools do not undermine our values and teaching. I think that women should be focused on supporting their husbands, and raising effective, influential children. Once the children are old enough, she can focus having an influence outside the home through engagement in the church, the university and in the political sphere. I think someone like Michele Bachmann has done everything right at the right times, for example.

Benghazi attack was a massive failure of Obama's security policy

October 2, 2012 | by Wintery Knight | Link | Original Link

Doug Groothuis tweeted this article from the Wall Street Journal.

Excerpt:

> In his United Nations speech on Tuesday, President Obama talked about the September 11 attack on the U.S. consulate in Libya and declared that "there should be no doubt that we will be relentless in tracking down the killers and bringing them to justice." What he didn't say is how relentless he'll be in tracking down the security lapses and intelligence failures that contributed to the murders. Let's say there's some doubt about that.
>
> None of the initial explanations offered by the White House and State Department since the assault on the Benghazi consulate has held up. First the Administration blamed protests provoked by an amateurish anti-Islam clip posted on YouTube. Cue Susan Rice, the U.N. Ambassador and leading candidate for Secretary of State in a second Obama term: "What happened initially was that it was a spontaneous reaction . . . as a consequence of the video, that people gathered outside the embassy and then it grew very violent."
>
> Administration officials also maintained that the diplomatic missions in Libya and Egypt, the site of the first attacks this September 11, were properly defended and that the U.S. had no reason to prepare for any attack. "The office of the director of National Intelligence has said we have no actionable intelligence that an attack on our post in Benghazi was planned or imminent," Secretary of State Hillary Clinton said last week, calling the security measures in place there "robust."
>
> Cell phone video footage and witness testimony from Benghazi soon undercut the Administration trope of an angry march "hijacked" by a few bad people. As it turned out, the assault was well-coordinated, with fighters armed with guns, RPGs and diesel canisters, which were used to set the buildings on fire. Ambassador Chris Stevens died of smoke inhalation. Briefing Congress, the Administration changed its story and said the attacks were pre-planned and linked to al Qaeda.
>
> You'd think this admission would focus attention on why the compound was so vulnerable to begin with. But the Administration wants to avoid this conversation. The removal of all staff from Benghazi, including a large component of intelligence officers, would also seem to hinder their ability to investigate the attacks and bring the killers to justice.
>
> […]On April 10, for example, an explosive device was thrown at a convoy

> carrying U.N. envoy Ian Martin. On June 6, an improvised explosive device exploded outside the U.S. consulate. In late August, State warned American citizens who were planning to travel to Libya about the threat of assassinations and car bombings.
>
> Despite all this, U.S. diplomatic missions had minimal security. Officials told the Journal that the Administration put too much faith in weak Libyan police and military forces. The night of the Benghazi attack, four lightly armed Libyans and five American security officers were on duty. The complex lacked smoke-protection masks and fire extinguishers. Neither the consulate in Benghazi nor the embassy in Tripoli were guarded by U.S. Marines, whose deployment to Libya wasn't a priority.
>
> Rummaging through the Benghazi compound, a CNN reporter found a seven-page notebook belonging to Ambassador Stevens. According to the network, the diary said he was concerned about the "never-ending" security threats in Benghazi and wrote that he was on an al Qaeda hit list. In deference to the family's wishes, CNN didn't quote directly from the diary and didn't divulge any private information in it.
>
> His worries are newsworthy, however, and can inform America's response. But Mrs. Clinton's long-time and closest media adviser chose to attack CNN. Deputy Assistant Secretary of State Philippe Reines called the network's conduct "disgusting." He then deployed words not fit for a family newspaper in an exchange with a reporter for the Web site BuzzFeed. Mr. Reines may wish to protect his boss's legacy for her 2016 Presidential run, but that won't be enhanced by the appearance of a cover-up.

Lack of preparation, lack of seriousness, blame-shifting and finger-pointing.

Bret Stephens has an article in the Wall Street Journal that added to that list of failures.

Excerpt:

> The hour is 5 p.m., Sept. 11, Washington time, and the scene is an Oval Office meeting among President Obama, the secretary of defense, the national security adviser and the chairman of the Joint Chiefs of Staff. The U.S. diplomatic mission in Benghazi has been under assault for roughly 90 minutes. Some 30 U.S. citizens are at mortal risk. The whereabouts of Ambassador Stevens are unknown.
>
> What is uppermost on the minds of the president and his advisers? The safety of Americans, no doubt. So what are they prepared to do about it? Here is The Wall Street Journal's account of the meeting:
>
> "There was no serious consideration at that hour of intervention with military force, officials said. Doing so without Libya's permission could represent a violation of sovereignty and inflame the situation, they said. Instead, the State Department reached out to the Libyan government to get reinforcements to the scene."

> So it did. Yet the attack was far from over. After leaving the principal U.S. compound, the Americans retreated to a second, supposedly secret facility, which soon came under deadly mortar fire. Time to call in the troops?
>
> "Some officials said the U.S. could also have sent aircraft to the scene as a 'show of force' to scare off the attackers," the Journal reported, noting that there's a U.S. air base just 450 miles away in Sicily. "State Department officials dismissed the suggestions as unrealistic. 'They would not have gotten there in two hours, four hours or six hours.'"
>
> The U.S. security detail only left Washington at 8 a.m. on Sept. 12, more than 10 hours after the attacks began. A commercial jet liner can fly from D.C. to Benghazi in about the same time.

450 miles? An F-15 Eagle can reach speeds of up to 1,600 miles an hour at high altitude. What is this two hour garbage?

I have said it before and I'll say it again. You cannot entrust national security and foreign policy to Democrats. They just aren't serious about these issues. All they can do is pull out of wars, cut defense budgets, hamstring the CIA, set up the Muslim Brotherhood in power, undercut our allies, and praise our enemies. They only care about winning the election, and after their failures are exposed, they play the blame game.

New study: women economists more likely to support higher taxes and bigger government

October 2, 2012 | by Wintery Knight | Link | Original Link

From liberal USA Today.

Excerpt:

> A lot depends on whether the economist is a man or a woman. A new study shows a large gender gap on economic policy among the nation's professional economists, a divide similar — and in some cases bigger — than the gender divide found in the general public.
>
> […]Female economists tend to favor a bigger role for government while male economists have greater faith in business and the marketplace. Is the U.S. economy excessively regulated? Sixty-five percent of female economists said "no" — 24 percentage points higher than male economists.
>
> […]The genders are most divorced from each other on the question of equality for women. Male economists overwhelmingly think the wage gap between men and women is largely the result of individuals' skills, experience and voluntary choices. Female economists overwhelmingly disagree by a margin of 4-to-1.

More findings:

- Health insurance. Female economists thought employers should be required to provide health insurance for full-time workers: 40% in favor to 37% against, with the rest offering no opinion. By contrast, men were strongly against the idea: 21% in favor and 52% against.
- Education. Females narrowly opposed taxpayer-funded vouchers that parents could use for tuition at a public or private school of their choice. Male economists love the idea: 61% to 14%.
- Labor standards. Females believe 48% to 33% that trade policy should be linked to labor standards in foreign counties. Males disagreed: 60% to 23%.

According to a recent research paper, single women tend to vote for bigger government in order to have security.

Excerpt:

> Giving women the right to vote significantly changed American politics from the very beginning. Despite claims to the contrary, the gender gap is not something that has arisen since the 1970s. Suffrage coincided with immediate increases in state government expenditures and revenue, and these effects continued growing as more women took advantage of the franchise. Similar changes occurred at the federal level as female suffrage led to more liberal voting records

> for the state's U.S. House and Senate delegations. In the Senate, suffrage changed voting behavior by an amount equal to almost 20 percent of the difference between Republican and Democratic senators. Suffrage also coincided with changes in the probability that prohibition would be enacted and changes in divorce laws.
>
> […]More work remains to be done on why women vote so differently, but our initial work provides scant evidence that it is due to self-interest arising from their employment by government.**The only evidence that we found indicated that the gender gap in part arises from women's fear that they are being left to raise children on their own (Lott and Kenny 1997).** If this result is true, the continued breakdown of the family and higher divorce rates imply growing political conflicts between the sexes. 19

A recent New York Times poll found that Obama led Romney by 29 points among single women, whereas Romney has a slight edge with married women.

I think one of the reasons why single women are so willing to look to big government as a substitute for a husband is because lately they seem to be struggling with 1) the ability to choose a good man by evaluating him rationally and objectively, and 2) the willingness to sacrifice and compromise in order to keep a good man. In my experience, single women today seem to be concerned that men might somehow place obligations on them that might limit their automomy with respect to the pursuit of happiness. That is why they often (but not always!) delay marriage and focus on their careers, and often vote for bigger government to provide them with a safety net. I think that women spend their 20s trying to drift into marriage by working on their careers and by having a good time with the wrong sort of men – men who don't perform the traditional male roles. Single women vote for bigger government because deep down they know that the binge drinking and the hook-up sex are not likely to find a good man and produce a lasting marriage. But they just can't stop themselves from having "fun" – big government is their safety net for their own choices with men.

I was having a conversation with a Christian woman on the weekend about Christian women and the men they choose to pursue. She said that divorce was not something that she was worried about because she had undertaken a careful study of men and marriage and she knew how to choose the right man for the job. She said that she was very clear on what men are supposed to do in a marriage, and that she had confidence in her ability to assess men for those duties. Secondly, she said that she knew what her responsibilities were as a woman in a marriage towards a man, and that she had complete confidence in her ability to perform those duties, based on careful, study, planning and training. I was impressed because she was taking responsibility to make good decisions and to perform her duties, and she had confidence that this would reduce and even eliminate the risk of divorce. But I doubt that she would say that she learned these things from the secular culture, and probably not even in the church.

Atheist professor strips naked in classroom, shouts "There Is No F–king God"

October 2, 2012 | by Wintery Knight | Link | Original Link

From Michigan Live. (H/T Newsbusters)

Excerpt:

> Professor John McCarthy has always seemed a bit odd to Kyle Hillman, but nothing could have prepared the Michigan State University freshman for what happened Monday afternoon.
>
> McCarthy was walking his Calculus I class through a practice problem about 1 p.m., finding a particular derivative, when he asked his students whether a potential solution he found was correct.
>
> "Someone said it looked right, so (McCarthy) said, 'Thanks, I need some reassurance sometimes,'" Hillman recounted. "'Math is all about questions and answers. And Steve Jobs invented the computer, but what do computers do? They ask questions and we answer them.'"
>
> McCarthy pronounced Jobs' surname as if it rhymed with robes, Hillman said. That kind of deviation from the subject matter was not out of the ordinary.
>
> "He always goes on tangents like this that don't really make sense to the math that we're learning," Hillman said. "He said this four times in a row. That's what he does."
>
> But what happened next was out of the ordinary.
>
> "He started talking about his colleagues and how they're all actors," Hillman said. "He said, 'It's all an act and none of it's real.' Then he ran out of the classroom."
>
> Hillman, 17, said McCarthy pressed his face against the window to the classroom from the hallway, saying, "I'm not yelling. See, I'm not yelling." Then he ran back into the classroom, put his head in his hands and began crying.
>
> "He said, 'It's all just an act, we're all acting,'" Hillman recollected.
>
> McCarthy then began shouting and swearing about God and religion, Hillman said. The professor pulled out his wallet and removed a $1 bill, waving it around. After that, he ran out of the classroom again.
>
> Hillman said he and about half of his 30 classmates left after that.
>
> "He ran out of the classroom and some people walked by — they didn't seem to be part of anything — and said, 'Class is dismissed, you can leave,'" Hillman said, noting he had never seen the group before.
>
> "I left at that point, because it was pretty terrifying."
>
> Hillman said McCarthy remained clothed as half of the class exited. Within minutes, however, the professor had stripped down and continued his rant down

> the halls of MSU's Engineering Building, according to multiple witness accounts.

I'm not sure if this person is a good representative of atheism, but… HA HA HA! See the related posts below for some more atheists behaving badly.

October surprise: video from 2007 shows Obama engaging in racism

October 3, 2012 | by Wintery Knight | Link | Original Link

Click here to watch the video from the Daily Caller. (H/T ECM)

Here's an excerpt from the accompanying article:

> In a video obtained exclusively by The Daily Caller, then-presidential candidate Barack Obama tells an audience of black ministers, including the Rev. Jeremiah Wright, that the U.S. government shortchanged Hurricane Katrina victims because of racism.
>
> […]The racially charged and at times angry speech undermines Obama's carefully-crafted image as a leader eager to build bridges between ethnic groups. For nearly 40 minutes, using an accent he almost never adopts in public, Obama describes a racist, zero-sum society, in which the white majority profits by exploiting black America. The mostly black audience shouts in agreement. The effect is closer to an Al Sharpton rally than a conventional campaign event.
>
> […]Obama begins his address with "a special shout out" to Jeremiah Wright, the Chicago pastor who nearly derailed Obama's campaign months later when his sermons attacking Israel and America and accusing the U.S. government of "inventing the HIV virus as a means of genocide against people of color" became public. To the audience at Hampton, Obama describes Wright as, "my pastor, the guy who puts up with me, counsels me, listens to my wife complain about me. He's a friend and a great leader. Not just in Chicago, but all across the country."
>
> […]As the speech continues, Obama makes repeated and all-but-explicit appeals to racial solidarity, referring to "our" people and "our neighborhoods," as distinct from the white majority. At one point, he suggests that black people were excluded from rebuilding contracts after the storm: "We should have had our young people trained to rebuild the homes down in the Gulf. We don't need Halliburton doing it. We can have the people who were displaced doing that work. Our God is big enough to do that."
>
> This theme — that black Americans suffer while others profit — is a national problem, Obama continues: "We need additional federal public transportation dollars flowing to the highest need communities. We don't need to build more highways out in the suburbs," where, the implication is, the rich white people live. Instead, Obama says, federal money should flow to "our neighborhoods": "We should be investing in minority-owned businesses, in our neighborhoods, so people don't have to travel from miles away."
>
> […]In the prepared version distributed to reporters, Obama's speech ends this way:

> “America is going to survive. We won’t forget where we came from. We won’t forget what happened 19 months ago, 15 years ago, thousands of years ago.”
>
> That’s not what he actually said. Before the audience at Hampton, Obama ends his speech this way:
>
> “America will survive. Just like black folks will survive. We won’t forget where we came from. We won’t forget what happened 19 months ago, or 15 years ago, or 300 years ago.”
>
> Three hundred years ago. It’s a reference the audience understood.

I’m a person of color myself. I actually have darker skin than Obama. On the way home from work today, before I knew about this video, I found myself reflecting on what advice I would give to people like me who want to advance in the world – to be successful. My advice would be this – don’t make anything out of your skin color. Don’t define yourself by it. Don’t associate with people just because they have the same skin color as you. Don’t blame people of a different skin color for your problems. Don’t let the past hold you back from making the right choices today.

Obama isn’t doing people like me any favors by encouraging us to hate people of a different skin color and blame people of a different skin color. That just holds us back. I personally find it shocking that people of color would vote for someone who attacks their employers, who forces them into failing public schools, who gives money to abortion providers who perform abortions against people of color more than on whites, who forces them into dependence on government handouts, and so on. It’s wrong.

Survey: doctors prefer Romney over Obama

October 3, 2012 | by Wintery Knight | Link | Original Link

From the Daily Caller.

Excerpt:

> A new survey shows Mitt Romney with a commanding lead over President Barack Obama among doctors, with Obamacare helping to sway their votes.
>
> If the election were held today, 55 percent of physicians reported they would vote for Romney while just 36 percent support Obama, according to a survey released by Jackson & Coker, a division of Jackson Healthcare, the third largest health care staffing company in the United States
>
> Fifteen percent of respondents said they were switching their vote from Obama in 2008 to Romney in 2012. The top reasons cited for this change was the Affordable Care Act and the failure to address tort reform.
>
> Leadership style, failure to follow through on campaign promises, unemployment and the general state of the economy were also factors.
>
> […]**The survey found that physicians that support Romney were more likely to own their own practice or "who had a stake in their own practice". Obama supporting physicians were more likely to be women, or employed by hospitals or health systems.**

Here are a few articles that I have been using lately to inform people about the problems with Obamacare:

- Heritage Foundation: Obamacare Raises Taxes on 3 Million Middle-Class Americans
- Cato Institute: ObamaCare's Cost Could Top $6 Trillion in first 10 years
- Life News: Obamacare is pro-abortion and pro-government controlled rationing
- Heritage Foundation: The 3 Biggest Ways Obamacare Kills Jobs
- Investors Business Daily: Obama's Broken Health-Premium Savings Promise
- Reason: Obamacare will lead to longer wait times and crowded emergency rooms
- Doctor Patient Medical Association: 83% of doctors contemplating quitting over Obamacare

It's important to understand that just because Obama can dress a few people in white coats for a pro-Obamacare photo-op, that *doesn't* mean that doctors support a government takeover of health care.

Obama increased foreign aid spending by 80%

October 3, 2012 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> From fiscal 2008 to fiscal 2011, according to the U.S. Treasury, the federal government increased spending on foreign aid by 80 percent and, in fiscal 2011, spent 76 percent more on foreign aid than it did securing the borders of the United States.
>
> **In fiscal 2008, the government spent a total of $11.427 billion in international assistance programs, according to the Monthly Treasury Statement. In fiscal 2011, according to the statement, it spent $20.599 billion—an increase of $9.172 billion, or 80 percent, from 2008.**
>
> Prior to President Obama taking office, international assistance spending had been trending down for three years, according to the Treasury. In fiscal 2005, it was $14.787 billion. In fiscal 2006, it dropped to $13.914 billion. In fiscal 2007, it dropped again to $12.764 billion. And, in fiscal 2008, it dropped yet again to $11.427 billion.
>
> Since 2008, international assistance spending has increased each year. In fiscal 2009, it climbed to $14.827 billion. In fiscal 2010, it jumped to $20.038 billion. And, in fiscal 2011, it climbed again to $20.599 billion.
>
> By the end of August, after the first eleven months of fiscal 2012, the federal government had already spent $20.058 on foreign aid in that fiscal year. That was well ahead of the $18.439 billion the federal government had spent on foreign aid through August of last year. The Treasury has not yet published the final amount that was spent on foreign aid in fiscal 2012, which ended on Sunday.

That money comes out of the pockets and taxpayers and job creators. Why is he doing this during a recession? Could it be that he really means it when he says “you didn’t build that”?

Mike Licona debates Bart Ehrman on the Unbelievable radio show

October 3, 2012 | by Wintery Knight | Link | Original Link

Note: Don't forget that tonight is the first Republican presidential debate between Mitt Romney and Barack Obama! It runs from 9:00 PM to 10:30 PM Eastern time. I'm expecting that Fox News Live will offer streaming of the debates as they occur, otherwise I will be watching the biased coverage of ABC News via Youtube. But here is another debate to listen to before it starts!

From the Unbelievable radio show.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here.

Snarky summary of the radio debate: (items with * are my made-up paraphrases/clarifications)

Ehrman:
– Bart's new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible
– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts

– there is no naturalistic explanation of these three facts
– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:
– all historians would accept these three facts, except for maybe the group appearances
– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem

appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3 years
– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization
– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story
– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians

– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:
– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:
– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole Bible
* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so

* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus' name!
* "one angel vs two angels" proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn't die on the cross

Licona:
– but you don't deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don't know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian
* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:

– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:
– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one
* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:
– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:

– so it’s not bias you are concerned about, it’s that you don’t want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I’m not really interested in butting heads with professors – it’s easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:
– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is “weird” but that doesn’t prove that God created the universe out of nothing
* if it’s a miracle then I’m going to have to not sin, and maybe even go to Hell, and we can’t have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism
– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it’s not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar

accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

Debates

- Craig Evans and Bart Ehrman
- Mike Licona and Bart Ehrman
- William Lane Craig and Bart Ehrman (transcript here)

A lecture on Bart Ehrman by William Lane Craig.

Romney wins first debate: spanks dazed and confused Obama like a foolish child

October 4, 2012 | by Wintery Knight | Link | Original Link

The debate was the worst ass-kicking in a Presidential debate that I have ever seen.

The transcript is here. And here's the story on what went down.

Excerpt:

> GOP presidential challenger Mitt Romney tonight charged that President Barack Obama's jobs plan is a failure, with millions out of work and looking for help.
>
> "My plan is to put people back to work in America," Romney said tonight at the first of three presidential debates scheduled for the 2012 presidential election season.
>
> "Look at the history of the past four years. We have 23 million people unemployed. Keeping with the status quo is not going to work for the American people."
>
> Obama returned to his oft-repeated theme of blaming George W. Bush, asserting the taxation approach Romney was proposing was nothing more than a return to the "trickle-down" economy of the Republican plan.
>
> Obama began the debate by reciting familiar campaign themes, suggesting once again that his administration inherited from Bush one of the worst economies in the history of the United States.
>
> But Romney struck a theme of energy independence and advancing small business as keys to getting the U.S. economy growing again. He accused Obama of proposing "trickle-down government," represented by more government regulation and more taxation.
>
> Romney disputed Obama's assertion he was locked into a tax cut, charging that under the Obama administration the middle class has been pressed by reduced income, diminished job opportunities and increased food and energy costs.
>
> From the first moments of the debate, Romney looked Obama directly in the eye, took exception to president's assertions about Romney's policies, and gave more precise answers.
>
> Obama pressed that Romney's economic plan called for $5 trillion in tax cuts and $2 trillion in military budget increases, a program Obama asserted would demand tax increases on middle-income earners.
>
> "Look, I've got five boys and I'm used to somebody saying something that's not true and hoping that by repeating it I'm going to believe it," Romney countered, asserting that everything Obama said about his tax program was inaccurate.
>
> Obama insisted Romney's tax-reduction plan of necessity would either increase

> the deficit or demand tax increases for the middle class, charging that under Romney's definition Donald Trump would be a small business.
>
> Objecting to Jim Lehrer's interruption that the first segment was exceeding the 15-minute limit, Romney charged that Obama would increase taxes on small businesses at the cost of 700,000 jobs.
>
> As the discussion advanced to the nation's deficit, Obama reiterated his statement that he inherited a massive deficit, and appeared on the defensive.
>
> "You have been president for four years, you said you would cut the deficit in half and you have run $1 trillion in deficits each of the four years," Romney attacked. "That does not get the job done."
>
> Romney pointed out that when the economy was growing as slowly as it is now, more slowly than when Obama took office, this is no time to increase taxes.
>
> "You never balance the budget by increasing taxes," Romney insisted. "I don't want to go down the path of Spain."

And:

> Romney said "ignoring the 10th Amendment is not the way to have a vibrant economy."
>
> Romney said the key to education is great teachers, and he raised a reference to the U.S. Constitution regarding citizen rights.
>
> "I interpret our founding documents as providing a responsibility for religious freedom – to pursue happiness by taking care of the less fortunate – but massive government involvement limits freedom – the path we are taking is not working with 23 million Americans unemployed and 50 million on food stamps."
>
> Obama said the responsibility of the federal government was important in improving the educational system in America.
>
> "Budgets reflect choices. If we cut taxes to benefit people like Gov. Romney and me, it makes a difference," Obama. He again demanded specifics of the GOP plans.
>
> "When it comes to making college affordable, whether it be two years or four years, we cut out the middleman and eliminated banks from making a profit in student loans. Gov. Romney believes in education but he tells kids to borrow from their parents to go to college."
>
> Romney responded, "Mr. President, you are entitled to your own airplane and your own house – but not to your own facts."
>
> Romney said Obama put $90 billion into green jobs, but half of the recipients went bankrupt and others were owned by contributors to your campaign, and questioned the number of teachers that would have hired.
>
> Romney proposed grading schools to know which were succeeding and which

> were failing.
>
> "Massachusetts schools are ranked No. 1 in education because I care for education for all our children," Romney said.

It was so bad that even gay activist and radical leftist Andrew Sullivan called it for Romney: (H/T Hot Air)

> Look: you know how much I love the guy, and you know how much of a high information viewer I am, and I can see the logic of some of Obama's meandering, weak, professorial arguments. But this was a disaster for the president for the key people he needs to reach, and his effete, wonkish lectures may have jolted a lot of independents into giving Romney a second look…
>
> The person with authority on that stage was Romney – offered it by one of the lamest moderators ever, and seized with relish. This was Romney the salesman. And my gut tells me he sold a few voters on a change tonight. It's beyond depressing. But it's true.

A post-debate poll from left-wing CNN found that an astonishing 67% of registered voters thought that Romney won the debate.

Even the radically left-wing National Journal says:

> Call it the curse of incumbency. Like many of his predecessors, President Obama fell victim Wednesday night to high expectations, a short fuse, and a hungry challenger.
>
> If Republican presidential candidate Mitt Romney didn't win the first of three presidential debates outright, he more than covered the spread. He was personable, funny, and relentlessly on the attack against a heavily favored Obama.
>
> The president looked peeved and flat as he carried a conversation, for the first time in four years, with somebody telling him he's wrong.

This debate was a blowout – and that's just the reaction of the left.

Left-wing reactions on Twitter

Bill Maher: (HBO)

Bill Maher says Romney defeated Obama
Peter Beinart (The New Republic)

Peter Beinart says Romney defeated Obama
Piers Morgan: (CNN)

Piers Morgan says Romney defeated Obama
And CHRIS MATTHEWS too:

Something else ran down his leg tonight, and it wasn’t a tingle, it was a tinkle.

Romney leading by 4 points in swing states

The latest poll of swings states from the left-wing Politico shows Romney leading Obama by 4 points, *even with a 2 point oversampling of Democrats.*

Breitbart explains: (links removed)

> This week, *Politico* released its latest Battleground pollof the presidential race. Despite coming from the left-wing news site, the poll is one of my favorites. Its put together by respected pollsters from both parties, makes available its full cross-tabs and uses a very modest and reasonable turnout model for its sample. Including leaners, the sample in the poll is D+2. Nationally, Obama leads by 2-3 points, but, in the critical swing states, Romney now has the edge.
>
> Each candidate leads in states considered "safe" for their party. In safe GOP states, Romney leads by 8. In safe Democrat states, Obama leads by a massive 22 points. But, in the more numerous and more important "toss up" states, Romney leads by 4, hitting the critical 50% threshold.
>
> In the slightly different category of "battleground" states identified by Politico, Romney leads by 2, 49-47. Romney's lead over Obama is powered primarily by his edge with independents. Romney leads Obama by 4 among the important swing voters. By 11 points, these voters think Romney would do better on the economy than Obama, 51-40.
>
> Romney also has a big edge with middle class families, who prefer him over Obama by 15 points, 56-41.

My prediction for this election remains Romney 52, Obama 47.

Romney won the presidential debate – according to left-wing MSNBC hosts

October 4, 2012 | by Wintery Knight | Link | Original Link

From the left-wing Politico, no less.

Excerpt: (links removed)

> Left-leaning commentators hit President Barack Obama hard on TV and the Internet after the first presidential debate in Denver on Wednesday night, saying GOP presidential nominee Mitt Romney handily defeated his more experienced opponent.
>
> MSNBC hosts were "stunned" by Obama's performance, suggesting the president was rusty for not having debated in four years.
>
> "I don't think he explained himself very well on the economy. I think he was off his game. I was absolutely stunned tonight," Ed Schultz said.
>
> "Where was Obama tonight?" Chris Matthews asked.
>
> Matthews said Romney addressed Obama "like the prey. He did it just right. I'm coming at an incumbent. I've got to beat him. You gotta beat the champ, and I'm gonna beat him tonight. And I don't care what this guy moderator, whatever he thinks he is, because I'm going to ignore him. What was Romney doing? He was winning."
>
> "It does remind you that the last debate Mitt Romney had was seven months ago and the last debate that Barack Obama had was four years ago," said Maddow.
>
> The Daily Beast's Andrew Sullivan called Obama "tired," "bored" and wrote that he might have even lost the election.
>
> "He choked. He lost. He may even have lost the election tonight," Sullivan wrote, later adding, "Obama looked tired, even bored; he kept looking down; he had no crisp statements of passion or argument; he wasn't *there*. He was entirely defensive, which may have been the strategy. But it was the wrong strategy. At the wrong moment."
>
> Sullivan, an Obama supporter, was even more vicious on Twitter, calling Obama's performance "terrible" and "political malpractice."
>
> "This is a rolling calamity for Obama. He's boring, abstract, and less human-seeming than Romney!" he wrote. "He's throwing the debate away."
>
> Another Obama supporter, liberal comedian Bill Maher, went on a similar Twitter rant, firing off such comments as, "Obama made a lot of great points tonight. Unfortunately, most of them were for Romney."

A post-debate CNN poll found that:

> According to a CNN/ORC International survey conducted right after the debate, 67% of debate watchers questioned said that the Republican nominee won the faceoff, with one in four saying that President Barack Obama was victorious.
>
> “No presidential candidate has topped 60% in that question since it was first asked in 1984,” says CNN Polling Director Keating Holland.
>
> While nearly half of debate watchers said the showdown didn’t make them more likely to vote for either candidate, 35% said the debate made them more likely to vote for Romney while only 18% said the faceoff made them more likely to vote to re-elect the president.
>
> More than six in ten said that president did worse than expected, with one in five saying that Obama performed better than expected. Compare that to the 82% who said that Romney performed better than expected. Only one in ten felt that the former Massachusetts governor performed worse than expected.
>
> […]The sample of debate-watchers in the poll was 37% Democratic and 33% Republican.
>
> […]Debate watchers thought Romney was more aggressive. Fifty-three percent said Romney spent more time attacking his opponent. Only three in ten thought Obama spent more time taking it to Romney. By a 58%-37% margin, debate watchers thought Romney appeared to be the stronger leader.

The problem with Obama is that he had four years to run the economy, and he ran it into the ground. You can’t defend failure like that by shifting blame and pointing fingers. He failed because his ideas are wrong. We need new ideas – a different approach. But that doesn’t explain why Obama performed so poorly. Obama performed poorly because he has been totally isolated from any disagreement or critical evaluation for the last 4 years. In his mind, it’s not just the private sector that’s fine. The unemployment rate is fine, the national debt is fine, the budget deficit is fine, the terrorist attack in Libya is fine, socialized health care is fine, poor education outcomes is fine, taxpayer-funded abortion is fine, Iran having nuclear weapons is fine, and gay marriage is fine. He just has complete and utter contempt for anyone who disagrees with him – he has been indoctrinated to think that anyone who disagrees with him is not just wrong, but evil. And maybe even that all disagreement with him is motivated by racism. He came across as a whiny, petulant child, because of his ideological rigidity and lack of humility.

The mask came off Wednesday night, and it was all Jeremiah Wright and Bill Ayers underneath. The media and the teleprompter could not protect him from his real self.

Do conservative policies or liberal policies cause outsourcing? The case of California

October 4, 2012 | by Wintery Knight | Link | Original Link

Here's an interesting article about a new paper published by the centrist Manhattan Institute about California, a state that is controlled from top to bottom by Democrats. Have the liberal economic policies of the Democrats caused a decrease or an increase in outsourcing?

Let's see:

> For decades after World War II, California was a destination for Americans in search of a better life. In many people's minds, it was the state with more jobs, more space, more sunlight, and more opportunity. They voted with their feet, and California grew spectacularly (its population increased by 137 percent between 1960 and 2010). However, this golden age of migration into the state is over. For the past two decades, California has been sending more people to other American states than it receives from them. Since 1990, the state has lost nearly 3.4 million residents through this migration.
>
> This study describes the great ongoing California exodus, using data from the Census, the Internal Revenue Service, the state's Department of Finance, the Bureau of Labor Statistics, the Federal Housing Finance Agency, and other sources. We map in detail where in California the migrants come from, and where they go when they leave the state. We then analyze the data to determine the likely causes of California's decline and the lessons that its decline holds for other states.
>
> The data show a pattern of movement over the past decade from California mainly to states in the western and southern U.S.: Texas, Nevada, and Arizona, in that order, are the top magnet states. Oregon, Washington, Colorado, Idaho, and Utah follow. Rounding out the top ten are two southern states: Georgia and South Carolina.
>
> A finer-grained regional analysis reveals that the main current of migration out of California in the past decade has flowed eastward across the Colorado River, reversing the storied passages of the Dust Bowl era. Southern California had about 55 percent of the state's population in 2000 but accounted for about 65 percent of the net out-migration in the decade that followed. More than 70 percent of the state's net migration to Texas came from California's south.
>
> **What has caused California's transformation from a "pull in" to a "push out" state? The data have revealed several crucial drivers. One is chronic economic adversity (in most years, California unemployment is above the national average). Another is density: the Los Angeles and Orange County region now has a population density of 6,999.3 per**

> **square mile—well ahead of New York or Chicago. Dense coastal areas are a source of internal migration, as people seek more space in California's interior, as well as migration to other states. A third factor is state and local governments' constant fiscal instability, which sends at least two discouraging messages to businesses and individuals. One is that they cannot count on state and local governments to provide essential services—much less, tax breaks or other incentives. Second, chronically out-of-balance budgets can be seen as tax hikes waiting to happen.**
>
> **The data also reveal the motives that drive individuals and businesses to leave California. One of these, of course, is work. States with low unemployment rates, such as Texas, are drawing people from California, whose rate is above the national average. Taxation also appears to be a factor, especially as it contributes to the business climate and, in turn, jobs. Most of the destination states favored by Californians have lower taxes. States that have gained the most at California's expense are rated as having better business climates. The data suggest that many cost drivers—taxes, regulations, the high price of housing and commercial real estate, costly electricity, union power, and high labor costs—are prompting businesses to locate outside California, thus helping to drive the exodus.**
>
> Population change, along with the migration patterns that shape it, are important indicators of fiscal and political health. Migration choices reveal an important truth: some states understand how to get richer, while others seem to have lost the touch. California is a state in the latter group, but it can be put back on track. All it takes is the political will.

Also, California is absolutely *dominated* by corrupt public sector labor unions and teacher unions, who regularly interfere in elections to make sure that economic policy is very, very liberal.

What's true of California is becoming true of the United States as a whole, under our socialist President Barack Obama. The more that Obama enacts left-wing economic policies that threaten job creators and investors with higher taxes and more burdensome regulations and wasteful spending and massive deficits, the more they will leave for other countries or expand to other countries. It turns out that the "greedy" businessmen and investors who advocate for lower taxes and less burdensome regulation are the real champions of low unemployment, economic growth and prosperity.

Two great podcasts from J. Warner Wallace of Please Convince Me

October 4, 2012 | by Wintery Knight | Link | Original Link

J Warner Wallace and Please Convince Me

Please Convince Me is my absolute favorite podcast. The host, J. Warner Wallace, is a cold case homicide detective. He has a real job! And he talks about Christian things like you might expect a detective to talk – everything is logic, case-making and evidence. Very cool.

Why Being Respected Is Better Than Being Liked

The MP3 file is here.

The most interesting segment starts at 8 minutes and ends at 21 minutes in.

Topics

- humans have an innate desire to be liked and to fit in with their peers
- there are times when our desire to do what is right will conflict with the desire to be liked and to fit in
- 1 Peter talks about how Christian living in the world will often have these conflicts
- Christians have a different standard and that creates conflicts with the surrounding culture
- at times like this, it is important for us to be RESPECTED rather than LIKED
- being a Christian conflicts with the goal of being popular
- two ways for us to proceed: 1) agree with others, 2) be who you are and let others agree with you
- James also says that there is a conflict between being friends with the world and

friends with God
- you cannot have both friendship with the world and friendship with God
- even non-believers understand that there is a conflict between morality and the hedonistic culture\
- courage is needed in order to resist the pressure to embrace the beliefs of others in order to be liked
- courage is needed in order to point others to the truth so that they change to match what is true
- politicians often change their positions in order to appeal to the culture
- politicians seem to shy away from trying to argue through why others should accept their positions
- we should seek to influence others by explaining why others should accept what we believe
- we should have the courage to make the case for what we believe
- even if people do not accept our beliefs, they will still respect the way we can make the case
- they will respect our courage in being willing to prepare a case and make the case in public
- they will respect that we have not formed our beliefs based on feelings
- we need to get better at knowing more stuff and communicating that knowledge better
- wanting to be popular is too easy
- we should take the harder path and desire to be respected instead of liked

Other topics from listeners:

- the interpretation of "thou shalt not kill" in the Bible
- can a person still be a Christian if they are not doing works, like tithing or serving in the church?
- theistic evolution and the presumption of naturalism in science

And here's another good podcast – it's on the same topic as the PCM post I linked before.

Stop Teaching Young Christians About Their Faith

The MP3 is here.

Topics:

- our nation is becoming more and more secular
- secularism makes it harder for us to defend our faith and values in public and influence the culture
- why is secularism happening? it's because young people are walking away from the faith
- young Christians are leaving the faith in high school and college
- this is where the real battleground is – and that's where apologists need to focus

- we need to be focused especially on junior high school and high school, and to a lesser degree college
- it’s good that we have lots scholars working physics, philosophy and biology
- but what we really need is ordinary Christians to get serious about apologetics and work on young people
- some people believe that there is no great youth exodus problem: are they right to doubt the statistics
- it’s undeniable that young people are inarticulate about their faith – that much is certain
- what young people in church actually believ is not Christianity, but moralistic therapeutic deism
- young people: life is about feeling good, being liked, and nice people of all religions are saved
- young people think that there is so little substance to Christianity that it can’t even be discussed
- the focus among young people today is not on true beliefs, but on being kinds to others
- even in churches, there is higher respect for helping others than on having knowledge and evidence
- instead of focusing on the worldview that grounds good works, the focus is on good works
- young people have learned to minimize discussions about specifics of theology
- teachers and college professors are hostile to public expressions of evangelical Christianity
- television is also hostile and much less Christian than it used to be
- even if young people come back to the church, they come back for the wrong reasons
- the adults come back for tradition and comfort but they don’t really believe Christianity is true
- they want to pick and choose what they believe based on what they like, like going to a buffet
- they return to church when they have kids so that their kids will absorb values – but not truth
- that’s what we have sitting in the pews: people who think Christianity is false, but “useful”
- and that’s why so many christians are so liberal on social values (abortion, same-sex marriage)
- they don’t really accept the Bible as authoritative, they pick and choose what they like and don’t like
- if Christianity is taught as “useful” then they will dump it when they find something more “useful”
- people who leave the church are exposed to Christianity, but it doesn’t stick
- young people lose their faith before college, and then when they escape the nest,

they act it out
- the disconnecting from the faith occurs in high school, but it only becomes public after they leave home
- young people are becoming more focused on redefining “the good life” with consumption and materialism
- the typical experience of young adults involves alcohol use, drug use, and recreational sex
- young people actually want more than niceness – they want real answers to serious questions
- young people have doubts and questions, but no one in the church or home is equipped to answer them
- adults have to be involved in the education of young people
- parents who are engaged in teaching their children Christian truths see much better retention rates
- we need to stop teaching people (one-way preaching) and start training them (two-way interactive)
- when you give a young person a definite goal – a fight with a date certain – then they will be engaged
- when people know that they will fail unless they can perform, then they will be more engaged in learning
- church needs to be in the business of scheduling battles, and then training young people for the battles
- there is no sense of urgency, risk and purpose in young people, so the teaching is not effective

I’m absolutely sure you will love these podcasts. Give them a listen! I’m pretty sure that he will put me in jail if you don’t listen to them. So, um… please do!

Henry F. Schaefer: Stephen Hawking, the Big Bang and God

October 5, 2012 | by Wintery Knight | Link | Original Link

This lecture was delivered to an audience of students and faculty at Western Kentucky University in 2009.

Here's part of a biography of Henry F. Schaefer III:

> Henry F. Schaefer III was born in Grand Rapids, Michigan in 1944. He attended public schools in Syracuse (New York), Menlo Park (California), and Grand Rapids (Michigan), graduating from East Grand Rapids High School in 1962. He received his B.S. degree in chemical physics from the Massachusetts Institute of Technology (1966) and Ph.D. degree in chemical physics from Stanford University (1969). For 18 years (1969-1987) he served as a professor of chemistry at the University of California, Berkeley. During the 1979-1980 academic year he was also Wilfred T. Doherty Professor of Chemistry and inaugural Director of the Institute for Theoretical Chemistry at the University of Texas, Austin.
>
> Since 1987 Dr. Schaefer has been Graham Perdue Professor of Chemistry and Director of the Center for Computational Chemistry at the University of Georgia. In 2004 he became Professor of Chemistry, Emeritus, at the University of California at Berkeley. His other academic appointments include Professeur d'Echange at the University of Paris (1977), Gastprofessur at the Eidgenossische Technische Hochshule (ETH), Zurich (1994, 1995, 1997, 2000, 2002, 2004, 2006), and David P. Craig Visiting Professor at the Australian National University (1999). He is the author of more than 1150 scientific publications, the majority appearing in the *Journal of Chemical Physics* or the *Journal of the American Chemical Society*.
>
> In February 2004, a total of 300 scientists from 35 countries gathered in Gyeongju, Korea for a six-day conference. The conference was titled "Theory and Applications of Computational Chemistry: A Celebration of 1000 Papers of Professor Henry F. Schaefer III".

And here are some versions of the MP3:

- Lecture and QA (52 MB)
- Lecture only (37 MB)

And here's a written version of the lecture.

Excerpt:

> Stephen Hawking's bestseller *A Brief History of Time* is the most popular book about cosmology ever written. The questions cosmology addresses are

> scientifically and theologically profound. Hawking's book covers both of these implications.
>
> Cosmology is the study of the universe as a whole–it's structure, origin and development. I won't answer all the questions Hawking raises concerning cosmology, but I will try to make comments on many of them. I caution here that you should not confuse cosmology with cosmetology, the art of beautifying the hair, skin, and nails!
>
> Here are some of the questions cosmology seeks to answer (As elsewhere in this lecture, I borrow heavily from astrophysicist Hugh Ross' excellent books *The Fingerprint of God* and *The Creator and the Cosmos*.):
>
> 1. Is the universe finite or infinite in extent and content?
> 2. Is it eternal or does it have a beginning?
> 3. Was it created? If not, how did it get here? If so, how was this creation accomplished and what can we learn about the agent and events of creation?
> 4. Who or what governs the laws and constants of physics? Are such laws the product of chance or have they been designed? How do they relate to the support and development of life?
> 5. Is there any knowable existence beyond the known dimensions of the universe?
> 6. Is the universe running down irreversibly or will it bounce back?

It's nice to see that lots of the most famous scientists may not be as antagonistic to theism – and even Christianity! – as we have been led to believe by our know-nothing unionized public school teachers. Yes, *real* scientists are aware of the implications of the Big Bang and the fine-tuning, and yes, *real* scientists do adjust their worldviews to account for what science is telling them.

A critical evaluation of Obama's economic narrative, using evidence

October 5, 2012 | by Wintery Knight | Link | Original Link

This article is currently the most popular one on Investors Business Daily.

Excerpt:

> In making his case for re-election in the face of historically high unemployment and sluggish growth, President Obama has a simple and straightforward argument.
>
> Things were terrible when I arrived, he says, thanks to Bush-era policies of tax cuts and deregulation. We stopped the decline, but the ditch was so deep that it will take time to get out. Still, we are making progress, even if it isn't as fast as everyone would like.
>
> So the last thing we want to do is return to the failed Bush policies that, he says, drove us into the ditch.
>
> That argument appears to be working. More people continue to blame Bush than Obama for the current poor state of affairs, and some surveys show that consumer confidence has recently increased.
>
> But each part of Obama's argument is based on claims that are not accurate…

The article lists 5 claims made by Obama, and assesses each claim against the evidence.

Here are the 5 claims:

1. Bush tax cuts and deregulation caused the recession.
2. I stopped a second Great Depression.
3. My policies are working.
4. A slow recovery was inevitable.
5. Nobody could have done any better.

And here's the critique of point number one: (links removed)

> At a campaign rally, Obama said Romney is "just churning out the same ideas that we saw in the decade before I took office . . . the same tax cuts and deregulation agenda that helped get us into this mess in the first place."
>
> It's a standard Obama talking point. But it's not true. Bush's tax cuts did not cause the last recession.
>
> In fact, once they were fully in effect in 2003, they sparked stronger growth — generating more than 8 million new jobs over the next four years, and GDP growth averaging close to 3%.
>
> Those tax cuts didn't explode the deficit, either, as Obama frequently claims.

> Deficits steadily declined after 2003, until the recession hit.
>
> Nor was Bush a deregulator. Conservative Heritage Foundation's regulation expert James Gattuso concluded, after reviewing Bush's record, that "regulation grew substantially during the Bush years."
>
> Even the Washington Post's fact-checker, Glenn Kessler, gave Obama's claim three out of four "Pinocchios," saying "it is time for the Obama campaign to retire this talking point, no matter how much it seems to resonate with voters."
>
> What did cause the economic crisis? The housing bubble. And that, in turn, was the result of a determined federal effort to boost homeownership by, among other things, pressuring banks to lower lending standards.

Now I know that some people (like Jerry) who get their policy news from the Comedy Channel think that the Bush tax cuts made the deficits explode, but of course, deficits were shrinking until the two spendthrifts Nancy Pelosi and Harry Reid got hold of the purse strings after taking the House and Senate in 2007.

Look:

Barack Obama: Budget Deficits – last GOP budget was 2007

Similarly, Obama clowns on the Comedy Channel and MSNBC also think that the Bush tax cuts made revenues go *down.*

Ooops:

Did the Bush tax cuts make revenues decrease? No!

You can tune into MSNBC and the Comedy Channel on any given night and see the clowns there claiming that Bush's $160 billion deficit in 2007 is actually higher than the $450 billion deficit in 2004, *after* the 2.2 trillion of tax cuts were passed.

Read the whole thing, it will help you to be persuasive when discussing Obama's rhetoric. People aren't saying that Romney won the debate because he had "zingers". People are saying that Romney won the debate because he had *facts and evidence.*

My prescription for voters in this election is more economics, and cut back on the Comedy Channel. Democrats must all buy Thomas Sowell's "Basic Economics" and read that all the way through. I know that graphs aren't as entertaining as Rachel Madclown, but we all must make an effort for the sake of the prosperity of our children, and our children's children.

Teen mother charged with dumping her 3-week-old daughter in remote area

October 5, 2012 | by Wintery Knight | Link | Original Link

The latest news in the glorious march of feminism to *full equality*.

Excerpt:

> Illinois authorities arrested a 19-year-old woman after she allegedly admitted to dumping her 3-week-old daughter in a remote area.
>
> Kendra Meaker, of Toulon, a city located about 30 miles northwest of Peoria, was charged in Stark County Circuit Court on Friday, with obstruction of justice and endangering the life or health of a child. Meaker, who also has an 11-month-old daughter, is being held on a $10,000 bond.
>
> Meaker came to the attention of police on Sept. 27, when she reported someone had abducted her baby from the back seat of her car while she was mailing a package at a local post office. Illinois State Police immediately issued an Amber Alert for the missing toddler.
>
> According to Stark County Sheriff Jimmie Dison, investigators were suspicious of Meaker's story.
>
> "I didn't believe her," Dison said in Stark County Circuit Court Friday.
>
> When the FBI joined the search they questioned Meaker and she allegedly admitted she had abandoned her infant daughter along a rural roadside outside of town.
>
> At 8 p.m., nearly 12 hours after the infant was placed alongside the road, a pair of search volunteers found the baby. She was alive and crying when they located her. The infant was transported to a local hospital for medical attention and is reportedly doing well.

Do you know who would agree with her?

Barack Obama voted for infanticide several times.

There really is no difference between abortion and what this woman tried to do to her baby. It's the exact same thing. In both cases, it's a strong person killing a weak person in order to avoid having their pursuit of happiness impacted by that other person's needs. Babies don't suddenly gain moral value because they change locations, or change size, or change how developed they are or change how dependent they are. A person is a person no matter how small. And abortion takes the life of an innocent human person.

Friday night spies: two episodes of Secret Agent

October 5, 2012 | by Wintery Knight | Link | Original Link

My favorite espionage TV show is “Danger Man” with Patrick McGoohan, which later morphed into “Secret Agent”. The show takes place during the 1960s, right at the height of the Cold War.

The actor, Patrick McGoohan, refused to perform romantic scenes on camera because of his religious beliefs. He turned down the roles of James Bond and Simon Templar because of these moral concerns (see below). And that dedication to moral excellence shines through in every frame of “Danger Man” and “Secret Agent”.

Here’s a description of Patrick McGoohan.

Excerpt:

> Main character John Drake worked for NATO as a special security agent and was free to travel the world working on special problems for free world governments. The story lines set an early precedent for non-violence, preferring to have Drake use his wits and his fists rather than a gun. McGoohan influenced the program from the start.
>
> The themes of morality and individuality fit in with his personal philosophy as well as his vision of what the character John Drake was supposed to be.
>
> As both a moral and opinionated man, McGoohan held strong views and was forceful about seeing that they were carried out. He had insisted at the very first meeting on the script for the first episode that the bedroom scene be cut out. In fact, he stipulated that romantic involvements would have to be eliminated if he were to play the role, and consequently none appeared in either this series or the ‘Secret Agent’ series that followed.

> […]It should come as no surprise that when McGoohan was offered the role as the first James Bond, he turned it down – several times – as being incompatible with the type of role he wanted to play. He says it was a decision he has never regretted.

> […]As an actor, McGoohan had now carved out a voice all his own…. John Drake was a loner, an individual, and a moral character.

From the UK Telegraph:

> [H]e was offered the roles of James Bond and Simon Templar (The Saint). He turned both down.
>
> He once recalled: “When we started Danger Man the producer wanted me to carry a gun and to have an affair with a different girl each week. I refused. I am not against romance on television, but sex is the antithesis of romance. Television is a gargantuan master that all sorts of people watch at all sorts of

> time, and it has a moral obligation towards its audience."

Here's tonight's first episode: **Colony Three**

Description:

> Behind the Iron Curtain, the Soviets have established a top-secret spy school set up to resemble a British village. Drake goes undercover to infiltrate the facility and discover its secrets.

IMDB mean rating: [8.9/10]

IMDB median rating: [9/10]

TV Guide rating: [9.4/10]

Here's tonight's second episode: **Fish on the Hook**

Description:

> Drake travels undercover to the Middle East where he must locate and extract a brilliant spymaster code-named "The Fish", whose network of spies has been discovered by the authorities.

IMDB mean rating: [8.4/10]

IMDB median rating: [8.5/10]

TV Guide rating: [8.8/10]

Three ways that the progress of science conflicts with naturalistic speculations

October 6, 2012 | by Wintery Knight | Link | Original Link

I just got into a debate with some atheists recently on whether the progress of science is more compatible with theism or atheism. (People who have friended me on Facebook got to see me in action)

I offered the Facebook atheists 3 arguments:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the argument from information in the first replicator (origin of life)

These arguments are all supported by scientific evidence:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning (there at least 40 examples of cosmic fine-tuning), (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)

They replied to my 3 arguments with 3 points of their own:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes

Ever heard any of these?

Below I list some resources to help you to respond to the 3 points from the Facebook atheists.

1) The Big Crunch/Bounce has been disproved theoretically and experimentally.

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA

> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces. We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its

expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists. Leave no doubt.

2) The multiverse has not been tested experimentally, it's pure speculation.

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.
>
> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: "Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities."
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. Leave no doubt.

3) Naturalistic theories for the origin of life have two problems: can't make the amino acids in an oxydized atmosphere and can't make protein and DNA sequences by chance in the time available.

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth's atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth's interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don't have a way to build the Scrabble letters needed for life, and they don't have a way to form the Scrabble letters into words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them. Leave no doubt.

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see too much G. K. Chesterton and other postmodern stuff. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand "Who Made God?" by Edgar Andrews – start with that! Then get Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works.

You don’t want to be anti-science like atheists are.

Bill Maher: Obama looked like he spent all of my million-dollar donation on weed

October 6, 2012 | by Wintery Knight | Link | Original Link

Was Obama resuming his childhood habits this week?
Here's the story from Newsbusters:

> BILL MAHER: I'm sorry, but if you missed it, I don't know if you heard what happened this week, but his wedding anniversary was Wednesday, and that was the same day as the debate. He apparently had the sex first and was completely spent, had nothing left, and it wound up Romney looked like the big winner and he looked like the Big Lebowski. What the f–k happened there? No, I was fascinated to watch these two men, I mean the contrast in their demeanor. Now we know what Romney looks like when he's all charged up, and now we know what Michael Jackson looked like when he was on the diprivan.
>
> [Laughter, applause, boos]
>
> You f–king liberals, let me tell you something, you got to get on the reality page! I'm sorry. He sucked. He looked tired. He had trouble getting his answers out. It looks like he took my million and spent it all on weed.

Actually, Obama used much harder drugs earlier in his life, like cocaine. He admits it in his book. I assume he kept it up through university, as well, and the professors just kept passing him because of affirmative action.

What's shocking about this line from Maher is that he gave Obama a one million dollar donation for his campaign. That's a lot of money. It shows a lot of support for Obama. If Maher is disappointed with Obama, that's a bad thing. It means that Obama REALLY messed up in that debate. Bill Maher is a fairly famous person here in America – he has a show on HBO. A lot of people were watching him say that.

Video here. WARNING: Contains very bad language. The F-word is used multiple times.

Let's take a look at the latest poll: (some links removed)

> Republican challenger Mitt Romney has shot ahead of President Barack Obama in polls taken since Wednesday night's debate. In the debate, Mr. Romney won handily over Mr. Obama, who looked irritated and confused at times.
>
> Not only have new polls shown Mr. Romney now leading President Obama nationally, but the Republican has also taken the lead in key swing states. This comes after Mr. Obama was leading in all polls prior to the debate.
>
> In Colorado, both Gravis Marketing and McLaughlin & Associates, Mr. Romney now leads. Gravis's poll shows the GOP candidate with a 49.4-45.9% lead. McLaughlin shows a 50-46% lead for Mr. Romney.
>
> In Florida, WeAskAmerica and Rasmussen Reports show Mr. Romney with a multiple-point lead. According to Rasmussen, Romney leads 49-47%. WeAskAmerica has the numbers at 49-46%.
>
> In Virginia, again, WeAskAmerica and Rasmussen Reports show Mr. Romney in the lead. Rasmussen has Romney leading 49-48% over President Obama. WeAskAmerica shows Mr. Romney with a 48-45% lead.
>
> Finally, WeAskAmerica has Mr. Romney leading Mr. Obama by one point in Ohio. Their poll shows a 47-46% lead for the challenger; and this percent comes even though WeAskAmerica polled 4% more Democrats than Republicans in Ohio.
>
> Both Rasmussen and National Journal polls have Mr. Romney now leading nationally.

I posted the video and transcript of the debate previously here.

Younger evangelicals put happiness and popularity over morality

October 7, 2012 | by Wintery Knight | Link | Original Link

Here's an interesting post by Mark Tooley in the American Spectator.

Excerpt:

> A new generation of evangelical elites is imploring evangelicals to step back from the culture wars. Mostly they want to escape polarizing strong stances on same-sex marriage and abortion, and perhaps also contentious church-state issues, like the Obamacare contraceptive mandate.
>
> Purportedly the evangelical church is failing to reach young, upwardly mobile professionals because evangelicals, who now broadly comprise perhaps one third of all Americans, are seen as reactionary and hateful. On their college campuses, at their coffee shops, and in their yoga classes, among other venues, some outspoken hip young evangelicals want a new public image for their faith.
>
> […]A popular young evangelical blogger echoing Merritt's theme is Rachel Evans, who conveniently grew up in the Tennessee small town famous for the Scopes Monkey Trial. Her 2010 book was *Evolving in Monkey Town: How a Girl Who Knew All the Answers Learned to Ask the Questions.* "We are tired of the culture wars," she explained in a recent interview. "We are tired of politics." Lamenting the church's preoccupation with "shame and guilt," she urged evangelicals to reconsider their opposition to same-sex unions.

The post has a nice history of how evangelicals have always been involved in moral and political issues, and it's worth reading. But I want to make a different point below.

What's at the root of this movement to back away from moral issues? Here's what I think is the problem. When you advocate for moral causes like protecting the unborn, or school choice, or freeing the slaves, a bunch of people are not going to like you. Christians in the time of Jesus knew that being bold about their Christian convictions would make a lot of people think bad things about them – they expected it. But young evangelicals have gotten the idea that being a Christian should not involve any sort of unhappiness and unpopularity. They wouldn't have learned this from the Bible, because the Bible emphasizes suffering and unpopularity as part of the normal Christian life. It is their experience of church (and the hedonistic culture around them) that is likely to reinforce that view.

What young evangelicals learn in many churches is that religion is something that is centered on the Bible and the church building – it is not something that flows into real life. They learn that you can't find out anything about God from the Big Bang, the DNA, the fossil record, or even from the peer-reviewed research on abortion, divorce, or gay marriage. They learn from the Bible that helping the poor is good, but then they never

pick up an economic textbook to see *which economic system really helps the poor.* What you learn about in church is that religion is private and has no connection to reality whatsoever. This fits in with their view that Christianity should make them happy, because they've learned that it doesn't involve any studying to connect the Bible to the real world.

What follows from having a view that Christianity only lives in the Bible and church, and not out there in the real world of telescopes and microscopes? Well, most young evangelicals interpret what their pastor is telling them as "our flavor of ice cream" or "our cultural preference". They don't link Christianity to the real world, they don't think that it's true for everyone. They think that you just accept what the Bible says on faith, and that's all. No reasons can be given to non-Christians outside of just asking them to accept the Bible. Younger evangelicals believe that there are no facts that confirm or disprove Christianity – it's just a blind belief. Young evangelicals think that their faith doesn't have to be complemented with careful study of how things work in the real world.

What is the result of this anti-intellectual compartmentalization of faith? The result is that young evangelicals will balk at the idea of telling someone that they are going to Hell if they don't believe in Jesus. They will balk at the idea that feminism is to blame for the destruction of the family. They will balk at the idea that the best way to help the poor is to push for free market capitalism. They will balk at the idea that it is wrong to kill unborn children. They will balk at the idea that disarmament and pacifism embolden terrorists and tyrants to attack peace-loving people. They will balk at the idea that traditional marriage is better for society and children. They will balk at the idea that man-made catastrophic global warming is not supported by science. *They lack courage because they first lack knowledge*. They don't know how to make the case using hard evidence. They don't learn that hard evidence is important in church.

If the purpose of religion is to have happy feelings and be liked, then studying the real world to find out whether the Bible is true is bad religion. If religion is divorced from reality, then it's just a personal preference influenced by how a person was raised. No young evangelical is going to lift a finger to take bold moral stands if they think their worldview is just one option among many – like the flavors of ice cream in the frozen section of the grocery store. They have to know that what they are saying is true – then they will be bold. An example: there was a time when people believed that God did not create the first living cell, because it was just a simple lump of protoplasm that could easily come about by accident. Now we know better, and we can boldly make the case for intelligent design based on hard evidence – if we put in the time to study the evidence. And it is the same for everything – from theological claims, to moral claims, to social claims, to economic claims, to foreign policy claims. It doesn't matter if people call you names when you have the facts to support unpopular claims, *and that's why public, authentic Christianity is built on facts.* Non-Christians being offended by your claims doesn't change the way the world is.

We have to turn away from our own ignorance, laziness and cowardice if we hope to have the ability to stand up for our beliefs in public. Christianity is not about being happy and

feeling good and being liked by others. In a society that is increasingly secular and relativistic, studying outside the Bible necessarily precedes an authentic Christian life. There is no shortcut. We might have been able to get away with fideism 50 years ago, but not anymore. Not now.

Polls show voters swinging to Romney after decisive debate victory

October 7, 2012 | by Wintery Knight | Link | Original Link

Robert Stacy McCain reports on the latest post-debate polls, but urges us to be cautious about believing them now, just because they are in our favor.

He writes: (links removed)

> Nevertheless, for several months, I had been saying that I thought the outcome of the election would hinge on the debates, and the one-sided ass-whupping Romney put on Obama may have triggered a decisive shift that the polls are already beginning to detect.
>
> If you check the Real Clear Politics national average, you see that Sept. 26/Oct. 1, Obama held a lead of four or more points after having been tied with Romney just a month earlier. According to Gallup's tracking poll, Obama had led by 6 points most of the way from Sept. 19/Oct. 2. Both of these key indicators now show a trend toward Romney, who has closed the gap to 3 points in Gallup and 1.6 points in the RCP, which is mirrored in recent state-by-state results for Florida, Ohio, Colorado andWisconsin.
>
> However, to emphasize again, polls are a lagging indicator. What is important in studying election polls is to follow the trendline, and we don't yet have enough results from different firms to be able to say (on Oct. 7) that Romney's looking like a definite winner for Nov. 6.

And McCain also links to this story about one of the bluest counties in the United States: (links removed)

> You'd have to reckon that our president's handlers thought that he would be safe visiting Cleveland, Ohio, a place that helped him win Ohio four years ago. Cuyahoga County yields the majority of Democratic votes from our state. But there's trouble for Team Obama there today, in a dearth of Democrat registrations.
>
> Here was how Mr. Obama was greeted at a local market:
>
> An Ohio market vendor told President Barack Obama on Friday that his business has been going "terrible" since the president's arrival, according to media reports.
>
> Obama was greeting different vendors at Cleveland's West Side Market when he came upon the proprietor of Rolston Poultry.
>
> According to the White House pool report, Obama asked the man how business was going.
>
> **"Terrible since you got here," he replied.**

> […]That small business owner summed up the sentiments of many Ohioans, reflected in the new Rasmussen poll, also cited in the PJ Media piece on Obama's Buckeye state woes.
>
> So, there's a problem with registering Dems in Cuyahoga County? That's according to analysis by Clinton Cooper of Election Insights, who has been involved in local and regional government and politics for the last 10 years, including at The Ohio State University and in a policy advisory role for several government agencies and consulting firms in Ohio. Mr. Cooper claims that his data shows that the changes in voter registration in Cuyahoga County have made it extremely difficult for Obama to win Ohio.

Remember, the Paul Ryan vs Joe Biden VP debate is on Thursday night this week.

When pastors get it right: Pulpit Freedom Sunday 2012

October 7, 2012 | by Wintery Knight | Link | Original Link

My favorite pastor Wayne Grudem, the best pastor on the face of the planet, explains why he participated in Pulpit Freedom Sunday 2012. (H/T Jeremy)

Excerpt:

> This Sunday I have agreed to join nearly 1,500 pastors nationwide and participate in Pulpit Freedom Sunday, sponsored by Alliance Defending Freedom. In my sermon, I plan to recommend that people vote for one presidential candidate and one political party that I will name. We will then all send our sermons to the IRS.
>
> This action is in violation of the 1954 "Johnson Amendment" to the Internal Revenue Code, which prohibits tax-exempt organizations like churches from endorsing any candidate by name. But in our nation, a higher law than the IRS code is the Constitution, which forbids laws "abridging freedom of speech" or "prohibiting the free exercise" of religion (First Amendment).
>
> I fully understand that many pastors might never want to endorse a candidate from the pulpit (I have never done so before and I might never do so again). But that should be the decision of the pastors and their churches, just as it was in 1860 when many pastors (rightly) decided they had to tell citizens to vote for Abraham Lincoln in order to end the horrible evil of slavery. When the government censors what pastors can preach, I think it is an unconstitutional violation of freedom of religion and freedom of speech.
>
> […]I have compiled a list of 24 differences between the two parties on issues with a moral component. Here are some of them where the parties differ:
>
> The rule of law (vs. judges who change the original meaning of the Constitution), freedom of religion in public expression (vs. freedom of worship in private), protection of life (vs. glorying in unrestricted abortion rights), the preservation of marriage (vs. promoting same-sex relationships as "marriage"), the limitation of federal power (vs. an unconstrained federal government), parental choice in education for children of all income levels and all races (vs. protecting a government-regulated monopoly on schools), turning back government overspending and avoiding debt that we cannot repay (vs. reckless spending that threatens to bankrupt our children and our nation), caring for the poor by reducing taxes to leave more money in the job-creating private sector (vs. ever-increasing taxes that drain money from job-creating businesses), a strong military to protect us and the many small democracies that look to us for protection (vs. damaging defense cutbacks that leave smaller nations, the world's sea lanes, and our own nation increasingly vulnerable), and a

> commitment to stand by Israel (vs. snubbing its leaders and demanding that it make ever-greater concessions).

You can read 5 reasons why pastors ought to have participated in Pulpit Freedom Sunday 2012 here.

Here's one of their reasons:

> **1. The issues the country is facing are biblical issues**. Pastors, more than many others, are uniquely suited to speak to the issues confronting the country in this election season. Issues such as life, marriage, the family, the economy, the poor, and many others are addressed specifically in scripture. The effect of the Johnson Amendment has been to make these biblical issues "political," as if slapping a "political" label on an issue somehow removes it from the purview of scripture. For example, a pastor preaching a sermon thirty years ago that abortion is wrong was just being biblical. But that same sermon today is labeled as political and, as a result, the pastor is sidelined into silence. It's not that the church is somehow becoming "political." It's that politics is invading the realm of the church.

We need more pastors to connect what the Bible says to policy and events in the real world. We need to take positions that are in accord with what God's Word says, and we need to be ready to defend our positions in public using public arguments and public evidence – especially scientific research – that will be persuasive to non-Christians who do not accept the Bible. That's the only way to stop the cultural decline caused by the secular left.

The best introductory book on the interface between Christianity and politics is "Indivisible: Restoring Faith, Family, and Freedom Before It's Too Late", co-authored by Jay Wesley Richards. The Kindle edition is $9.99. Richards' Ph.D is from Princeton University.

The best comprehensive book is "Politics – According to the Bible: A Comprehensive Resource for Understanding Modern Political Issues in Light of Scripture" by Wayne Grudem. The Kindle edition of that one is $4.99. Grudem's is from Cambridge University. First-rate Christian scholarship on practical Christianity.

And you can listen to Grudem delivering Sunday school training at his church on every single chapter of that book right here. All free, and no ads. Be sure and scroll through all the previous years to get all the topics! Ethics, social policy, fiscal policy, foreign policy and more!

NYC's largest abortion clinic stops operations due to pro-life protests

October 7, 2012 | by Wintery Knight | Link | Original Link

Good news in the New York Daily News, although the article is hopelessly biased against pro-lifers.

Excerpt:

> A Sunset Park abortion clinic has shut down after Catholic protesters drove away doctors and patients, according to the owner of the clinic.
>
> The Ambulatory Specialty Surgery Center of Brooklyn on 43rd St., closed earlier this month and will reopen in October as a new medical center providing outpatient surgeries, but not abortion.
>
> Catholic leaders claimed the clinic's closure after 22 years as a victory for their anti-abortion effort. Abortion advocates said they had never heard of a clinic in the city closing under pressure from protesters.
>
> […]Julie Kirshner, president of the Brooklyn and Queens chapter of the National Organization for Women, said she was shocked abortions were no longer offered at the medical center.
>
> "It's really a shame. I feel very badly and I'm disappointed about it," said Kirshner. "This means that women will have to be inconvenienced to get their health care. If [the clinic on 43rd St.] closed down, this could mean future closings and that's very disappointing."

Life Site News adds:

> This clinic was apparently a very big, deadly fish. According to The Tablet:
>
> "This was the oldest and largest abortion clinic in New York City and for many years, in the United States," said Msgr. Reilly. "I believe more than a quarter of a million unborn children lost their lives there."

A quarter of a million dead. Those numbers remind me of the tens of millions killed by atheists like Stalin, Mao and others like them.

Now contrast that peaceful pro-life approach to change with the approach used by pro-abortion advocates:

> An elderly pro-life activist was shot multiple times and killed this morning in front of Owosso High School in Michigan while he was peacefully protesting abortion with a sign depicting a baby and the word "Life," according to local police cited in the Flint Journal newspaper.
>
> Locals say that the victim, James Pouillon of Owosso, was well-known in the area for his pro-life activities.

> […]Reports indicate that a second individual was shot and killed in a different area of the city earlier in the day, and the two shootings are believed to be related, according to Shiawassee County sheriff George Braidwood. According to M-live.com, the second victim has now been identified as Mike Fuoss, 61, the owner of a local gravel pit. Fuoss was found dead in his office.
>
> Police have confirmed that a suspect – a 33-year-old Owosso man – was taken into custody at the suspect's home shortly after the 7:30 a.m. shooting. After being taken into custody he confessed to the second killing as well.

The pro-abortion side had nothing to say about that violence in the days after the tragedy, too. But are all pro-abortion advocates really so ghoulish?

Remember this case:

> A doctor who gave abortions to minorities, immigrants and poor women in a "house of horrors" clinic was charged with eight counts of murder in the deaths of a patient and seven babies who were born alive and then killed with scissors, prosecutors said Wednesday.
>
> Dr. Kermit Gosnell, 69, made millions of dollars over 30 years, performing as many illegal, late-term abortions as he could, prosecutors said. State regulators ignored complaints about him and failed to inspect his clinic since 1993, but no charges were warranted against them given time limits and existing law, District Attorney Seth Williams said. Nine of Gosnell's employees also were charged.
>
> Gosnell "induced labor, forced the live birth of viable babies in the sixth, seventh, eighth month of pregnancy and then killed those babies by cutting into the back of the neck with scissors and severing their spinal cord," Williams said.
>
> […]Bags and bottles holding aborted fetuses "were scattered throughout the building," Williams said. "There were jars, lining shelves, with severed feet that he kept for no medical purpose."
>
> […]Gosnell has been named in at least 46 malpractice suits, including one over the death of a 22-year-old mother who died of sepsis and a perforated uterus in 2000. Many others also involve perforated uteruses. Gosnell sometimes sewed up the injury without telling women their uteruses had been perforated, prosecutors said.
>
> Gosnell charged $325 for first-trimester abortions and $1,600 to $3,000 for abortions up to 30 weeks.

When a person supports the murder of innocent little babies for profit, then anything is possible – even forcing pro-lifers to subsidize the massacre. That's exactly what the Obama administration is always pushing for. Recall that Obama not only supports the murder of unborn babies, but also of born babies. He voted in favor of infanticide several times.

This is election in November is a chance for pro-lifers to roll back some of the pro-abortion

measures introduced by the Obama administration. We all need to do what we can before election day.

Sherrod Brown delinquent at paying his own taxes

EVOLVING WISDOM AND ORIGINAL POLITICAL REPORTING

National Journal's Vote Rankings: The Top 10

February 26, 2010 | 9:15 AM

Share

From this year's National Journal Vote Rankings:

The 10 Most Liberal Senate Dems	Most Conservative Senate GOPers
1. Sherrod Brown (D-OH)	1. Jim Inhofe (R-OK)
1. Roland Burris (D-IL)	2. Jim DeMint (R-SC)
1. Ben Cardin (D-MD)	3. Jim Bunning (R-KY)
1. Jack Reed (D-RI)	4. Tom Coburn (R-OK)
1. Sheldon Whitehouse (D-RI)	5. Jim Risch (R-ID)
6. John Kerry (D-MA)	6. John Thune (R-SD)
6. Frank Lautenberg (D-NJ)	7. John Ensign (R-NV)
8. Barbara Mikulski (D-MD)	8. Mitch McConnell (R-KY)
9. Chris Dodd (D-CT)	9. Richard Burr (R-NC)
9. Dick Durbin (D-IL)	10. Jeff Sessions (R-AL)

Sherrod Brown: the most liberal senator in the U.S. Senate

From Cleveland.com, a horrifying tale of liberal hypocrisy in one of the bluest cities in the country. (H/T Doug Ross @ Journal)

Excerpt:

> Ohio Democratic U.S. Sen. Sherrod Brown was more than four months delinquent in paying taxes on his Washington, D.C., apartment and had to pay a penalty and interest last week.
>
> This was not the first time, records show.
>
> Brown also was delinquent in 2006 and 2007 and paid penalties and interest, according to tax records from the District of Columbia.
>
> "I was late," he said on a conference call with reporters when asked about the recent delinquency. "I misplaced the bill and I paid it as soon as I found out. I paid a penalty for being late, and it won't happen again."
>
> When a reporter noted that it also happened five and six years ago, Brown said: "I misplaced it then. This is a small apartment. I'm not in D.C. nearly every week, I'm here when the Senate's in session, I'm here three or four nights a week.

Actually, a lot of Democrats get into trouble for not paying their taxes:

> A new report just out from the Internal Revenue Service reveals that 36 of President Obama's executive office staff owe the country $833,970 in back taxes. These people working for Mr. Fair Share apparently haven't paid any share, let

> alone their fair share.
>
> Previous reports have shown how well-paid Obama's White House staff is, with 457 aides pulling down more than $37 million last year. That's up seven workers and nearly $4 million from the Bush administration's last year.
>
> Nearly one-third of Obama's aides make more than $100,000 with 21 being paid the top White House salary of $172,200, each.
>
> The IRS' 2010 delinquent tax revelations come as part of a required annual agency report on federal employees' tax compliance. Turns out, an awful lot of folks being paid by taxpayers are not paying their own income taxes.
>
> The report finds that thousands of federal employees owe the country more than $3.4 billion in back taxes. That's up 3% in the past year.
>
> That scale of delinquency could annoy voters, hard-pressed by their own costs, fears and stubbornly high unemployment despite Joe Biden's many promises.
>
> The tax offenders include employees of the U.S. Senate who help write the laws imposed on everyone else. They owe $2.1 million. Workers in the House of Representatives owe $8.5 million, Department of Education employees owe $4.3 million and over at Homeland Security, 4,697 workers owe about $37 million. Active duty military members owe more than $100 million.
>
> The Treasury Department, where Obama nominee Tim Geithner had to pay up $42,000 in his own back taxes before being confirmed as secretary, has 1,181 other employees with delinquent taxes totaling $9.3 million.
>
> As usual, the Postal Service, with more than 600,000 workers, has the most offenders (25,640), who also owe the most — almost $270 million. Veterans Affairs has 11,659 workers owing the IRS $151 million while the Energy Department that was so quick to dish out more than $500 million to the Solyndra folks has 322 employees owing $5 million.
>
> The country's chief law enforcement agency, the Department of Justice, has 2,069 employees who are nearly $17 million behind in taxes.

Even Warren Buffet's company is in a dispute with the IRS over unpaid taxes:

> Two weeks ago, when billionaire Warren Buffett called for higher taxes on rich people like him, the liberal media predictably gushed and fawned.
>
> Yet when Americans for Limited Government revealed last week that Buffett's company Berkshire Hathaway has been in an almost decade-long dispute with the IRS over how much taxes it owes, these same press members couldn't care less:
>
> According to Berkshire Hathaway's own annual report — see Note 15 on pp. 54-56 — the company has been in a years-long dispute over its federal tax bills.
>
> According to the report, "We anticipate that we will resolve all adjustments proposed by the U.S. Internal Revenue Service ('IRS') for the 2002 through 2004

> tax years at the IRS Appeals Division within the next 12 months. The IRS has completed its examination of our consolidated U.S. federal income tax returns for the 2005 and 2006 tax years and the proposed adjustments are currently being reviewed by the IRS Appeals Division process. The IRS is currently auditing our consolidated U.S. federal income tax returns for the 2007 through 2009 tax years."
>
> Americans for Limited Government researcher Richard McCarty, who was alerted to the controversy by a federal government lawyer, said, "The company has been short-changing the tax collection agency for much of the past decade. Mr. Buffett's company has not fully settled its tax bills from 2002-2009. Yet he says he'd happily pay more. Except the IRS has apparently been asking him to pay more going on nine years."

I wrote an entire post about hypocrisy on the left. It's worth a read so that you know what to make about the "compassion" rhetoric of the left.

Joe Biden takes 6 days off from campaigning to cram for debate with Paul Ryan

October 8, 2012 | by Wintery Knight | Link | Original Link

From the Weekly Standard. (H/T Bad Blue – the best conservative news aggregator on the Internet!)

Excerpt:

> With just about a month until Election Day, Vice President Joe Biden is in the middle of taking nearly a week off the campaign trail. He will return to doing campaign events on Thursday, when he will debate Rep. Paul Ryan in the vice presidential debate.
>
> On Friday, October 5, according to the White House, Biden spent the day working. In the morning, he was scheduled to attend the presidential daily briefing in the Oval Office, with President Obama. That afternoon Biden was to "meet with senior advisors," according to the White House.
>
> For this weekend, the White House provided the following guidance: "The Vice President will be in Wilmington, Delaware. There are no public events scheduled."
>
> As for the next three days, Biden will remain in Delaware. "On Monday through Wednesday, the Vice President will be in Wilmington, Delaware. There are no public events scheduled."
>
> Meanwhile, Thursday, October 11, is a big day for Biden. "On Thursday, the Vice President and Dr. Jill Biden will travel to Danville, Kentucky. In the evening, the Vice President will participate in the Vice Presidential Debate at Centre College. Dr. Biden will also attend. This event is open to pre-credentialed media."
>
> So while Biden is taking 6 days off the campaign trail at a crucial time in the presidential campaign, it's likely that he isn't completely off. He is said to be spending time with David Axelrod and other campaign advisers preparing for Thursday's debate.

Mark these future debates on your calendar: (live streaming via Fox News should be available)

> **Vice presidential candidates' debate between Vice President Joe Biden, Wis. Rep. Paul Ryan**
>
> - Topic: Foreign and domestic topics
> - Date: Thursday, Oct. 11
> - Time: 9 – 10:30 p.m. EDT
> - Location: Centre College, Danville, Ky.
> - Moderator: Martha Raddatz, senior foreign affairs correspondent, ABC News

- Format: “The debate will cover both foreign and domestic topics and be divided into nine time segments of approximately 10 minutes each. The moderator will ask an opening question, after which each candidate will have two minutes to respond. The moderator will use the balance of the time in the segment for a discussion of the question.”

Second presidential candidates’ debate between Obama, Romney

- Topic: Foreign and domestic issues
- Date: Tuesday, Oct. 16
- Time: 9 – 10:30 p.m. EDT
- Location: Hofstra University, Hempstead, N.Y.
- Moderator: Candy Crowley, chief political correspondent, CNN, and anchor, CNN’s “State of the Union”
- Format: “The second presidential debate will take the form of a town meeting, in which citizens will ask questions of the candidates on foreign and domestic issues. Candidates each will have two minutes to respond, and an additional minute for the moderator to facilitate a discussion. The town meeting participants will be undecided voters selected by the Gallup Organization.”

Third presidential candidates’ debate between Obama, Romney

- Topic: Foreign policy
- Date: Monday, Oct. 22
- Time: 9 – 10:30 p.m. EDT
- Location: Lynn University, Boca Raton, Fla.
- Moderator: Bob Schieffer, chief Washington correspondent, CBS News, and moderator, “Face the Nation”
- Format: “The format for the debate will be identical to the first presidential debate and will focus on foreign policy.”

If you missed the first debate, then you really to watch it or read the transcript.

Gas prices hit all-time high – again – in Obama-supporting California

October 8, 2012 | by Wintery Knight | Link | Original Link

From liberal USA Today.

Excerpt:

> Gasoline prices in California rose to another all-time high on Sunday after passing a four-year high a day earlier, according to AAA.
>
> The four-cent-per-gallon jump Sunday was even bigger than Saturday's jump, which was just a fraction of a penny.
>
> AAA reported in its latest update on Sunday that the statewide average price for a gallon of regular unleaded gasoline is $4.655. Saturday's average of $4.6140 was the highest since June 19, 2008, when it was $4.6096.
>
> Sunday's price, like Saturday's, was the highest in the nation, with the Golden State leapfrogging Hawaii this week as the state with the most expensive fuel due to a temporary reduction in supply.
>
> Californians are paying 24 cents per gallon more than motorists in Hawaii, according to the AAA report. In some locations, fuming motorists paid $5 or more per gallon while station owners had to shut down pumps in others.
>
> […]A web of refinery and transmission problems is to blame, analysts said. **The situation is compounded by a California pollution law that requires a special blend of cleaner-burning gasoline from April to October, said Denton Cinquegrana, executive editor of the Oil Price Information Service, which helps AAA compile its price survey.**

The radically leftist New York Times explains why this is happening:

Excerpt:

> **California typically has substantially higher gasoline prices than most of the country because of its tough environmental regulations and high taxes. Gasoline supplies are traditionally tight this time of year as refiners do maintenance work to switch from summer to fall gasoline blends mandated by the California pollution-reduction regulations. But this year, energy experts say, the local gasoline market is particularly chaotic because of the refinery shutdowns.**
>
> […]**"California requires a specific blend of gasoline that only the refineries on the West Coast make," said Bill Day, a spokesman for Valero. "So when there is a shortage of that blend, you can't just send supplies from somewhere else."**

Wow, even a stopped clock is right twice a day.

Here's a more full explanation from Ken Green of the American Enterprise Institute. (links removed)

First reason is limited supply with higher demand, which has been made worse by Obama:

> The primary reason for high gasoline prices, as any economist will tell you, is very simple: world demand for oil is strong, and the supply is limited. The cost of crude oil dominates the price of gas: in January 2012, it represented 76 percent of the price.

Second reason is Middle East tensions, which has been made worse by Obama:

> Risk also influences the world price of oil. Unrest in the Middle East is a perennial cause of worry over world oil supplies, and explicit threats by Iran to close the Straits of Hormuz can't be promoting confidence in oil consumer markets.

Third reason is blocking domestic energy production, which has been made worse by Obama:

> Another source of supply uncertainty is the moratorium that the Obama administration has slapped on U.S. development of domestic oil production in the last two years. Since the *Deepwater Horizon*oil rig disaster in 2010, U.S. domestic oil production has slowed significantly, especially in the Gulf of Mexico.
> The permitting slowdown as a result of the spill is estimated to have cost the United States $4.4 billion in output costs, 19,000 jobs, $1.1 billion in wages, and over $500 million in federal, state, and local government lost tax revenues.

Fourth reason is higher taxes on gasoline, which has been made worse by lots of Democrats:

> The tax bite in a gallon of gasoline is nearly equal to the costs of refining, distribution, and marketing combined. That fluctuates, of course, because most gas taxes are percentage based. At $3.79/gallon, taxes account for about 53 cents.

Fifth reason is global warming hysteria, which is the Democrat religion:

> In order to fulfill air pollution reduction plans in states and localities across the country, gasoline sold in the United States has been fractionated into about 17 different boutique fuels sold in dozens of discrete markets. With three grades of gasoline per fuel, refiners are producing over 50 separate blends. Such boutique fuel requirements both increase price volatility and the height of price spikes as a function of the distance-to-market of boutique fuel producers and consumers, according to the Energy Information Administration. Boutique fuel requirements also increase the absolute price of gasoline sold in boutique

> markets, according to the U.S. Government Accountability Office.

Sixth reason is denial of refinery permits, which has been made worse by Obama:

> Another factor contributing to the increased price of gasoline is the reduction in the number of operating refineries in the United States over the last 30 years. The number and capacity of U.S. refineries peaked in 1981, and, since then, 171 plants have closed, although the remaining plants have increased output to offset a loss of production. Though most of this reduction has been caused by the low profit potential of refineries, but others see a significant cause in "extremely tight environmental restrictions, not-in-my-back-yard community opposition, and the high cost of new construction." Refinery profit margins have played a role in recent gasoline price hikes. TheEIA suggests that "The sizable jump in retail prices this year reflects not only the higher average cost of crude oil compared to previous years, but also an increase in U.S. refining margins on gasoline (the difference between refinery wholesale gasoline prices and the average cost of crude oil) from an average of $0.34 per gallon in 2010 to $0.45 per gallon in 2011 and $0.42 per gallon in 2012."

Seventh reason is three rounds of quantitative easing, which causes inflation and a weak dollar, which has been made worse by Obama:

> In recent congressional testimony, Robert Murphy, of the Institute for Energy Research observed: that: "From its peak in March 2009, the dollar has fallen 17 percent against other major currencies. Therefore, holding everything else constant, the dollar depreciation alone from early 2009 can explain a 20.5 percent increase in oil prices (quoted in dollars)….It is on the basis of such calculations that a recent Joint Economic Committee report estimated that Federal Reserve policies have added almost 57 cents to the price of a gallon of gasoline for American motorists.

The article also debunks the leftist myth that "speculators" are the cause of high gas prices.

It's election time – make sure you have the facts so you can make the case.

UPDATE: Stuart Schneiderman links to a Wall Street Journal article that discusses California's cap-and-trade (carbon tax) policy, and their restrictions on pipeline construction – both of which raise gas prices for consumers.

Gay marriage debate: a secular case against same-sex marriage

October 8, 2012 | by Wintery Knight | Link | Original Link

Note: this post has a twin! Its companion post on a secular case against abortion rights is here.

I can't possible cover everything, but I will make three arguments.

1. Same-sex marriage is bad for children
2. Same-sex marriage is bad for civil society and business
3. Same-sex marriage is bad for public health

Let's look at these in order.

1. SSM is bad for children

Traditional marriage is beneficial for children for 4 reasons:

- traditional marriages last longer than same-sex unions
- traditional marriages are more peaceful than same-sex unions
- traditional marriages offer children male and female influences
- traditional marriages model life-long love between men and women

Space permits me to only discuss the first two, using this paper from the Family Research Council, which cites data from mainstream sources like the Department of Justice, peer-reviewed studies, etc.

That research paper compares same-sex couples and heterosexual married couples, in the following ways:

- relationship duration
- monogamy vs. promiscuity
- relationship commitment

- number of children being raised
- health risks
- rates of intimate partner violence

It turns out that same-sex unions are not as good for children as traditional marriage, on those measures.

Relationship duration

Claim: about 58% of traditional marriages last longer than 20 years.

Source: National Center for Health Statistics, Centers for Disease Control and Prevention (2001)

Claim: about 5% of same-sex unions last longer than 20 years.

Source: 2003-2004 Gay/Lesbian Consumer Online Census

Monogamy vs Promiscuity

Claim: 85% of married women and 75.5% of married men report being faithful to their spouses. For homosexual males, the number is 4.5%

Sources: Laumann, The Social Organization of Sexuality, 216; McWhirter and Mattison, The Male Couple: How Relationships Develop (1984): 252-253; Wiederman, "Extramarital Sex," 170.

Rates of intimate partner violence

Married men and women experience significantly less intimate partner violence than do homosexual men and women.

Sources: "Extent, Nature, and Consequences of Intimate Partner Violence," U.S. Department of Justice: Office of Justice Programs: 30; "Intimate Partner Violence," Bureau of Justice Statistics Special Report:11.

There is a lot more evidence cited in the research paper. Read the whole thing.

Consider this article by Dr. Trayce Hansen about which family configuration is best for children. The title is "Same-Sex Marriage: Not in the Best Interest of Children".

Excerpt:

> Only mother-father families afford children the opportunity to develop

> relationships with a parent of the same, as well as the opposite sex. Relationships with both sexes early in life make it easier and more comfortable for a child to relate to both sexes later in life. Overall, having a relationship with both a male and female parent increases the likelihood that a child will have successful social and romantic relationships during his or her life.[5]
>
> Moreover, existing research on children reared by homosexuals is not only scientifically flawed and extremely limited [6,7,8] but some of it actually indicates that those children are at increased risk for a variety of negative outcomes.[6] Other studies find that homosexually parented children are more likely to experiment sexually, experience sexual confusion, and engage in homosexual and bisexual behavior themselves.[5,6,9] And for those children who later engage in non-heterosexual behavior, extensive research reveals they are more likely to suffer from psychiatric disorders, abuse alcohol and drugs, [10] attempt suicide, [11] experience domestic violence and sexual assault, [12] and are at increased risk for chronic diseases, AIDS, and shortened life spans.[13,14,15]
>
> It shouldn't be surprising that studies find children reared by homosexuals are more likely to engage in homosexual behavior themselves [16,9,17] since extensive worldwide research reveals homosexuality is primarily environmentally induced. Specifically, social and/or family factors, as well as permissive environments which affirm homosexuality, play major environmental roles in the development of homosexual behavior.[18,19,20,21]

The rest of the article, with references, is here.

Research from the Heritage Foundation shows that traditional marriage is the safest place for women and children – women and children are much less likely to be the victims of domestic violence or violent crime when they are in a married home. Another Heritage Foundation research paper shows that child poverty is greatly reduced when children grow up in a married home.

So what do we learn from this? The evidence is clear: traditional marriage is better for children than same-sex marriage.

2. SSM is bad for civil society and business

SSM will *increase* the power of the state to regulate civil society and business. Let me quickly summarize the evidence for this to give you an idea how it would work, using Dr. Jennifer Roback Morse's testimony to the Rhode Island legislature.

Excerpt:

> Far from limiting the power of the state, your version of equality has become a tool for the hostile takeover of civil society by the state. Churches are already under attack for daring to dissent from the new state-imposed Orthodoxy that marriage is whatever the government says it is.7

> Parents are losing the right to direct the education of their own children.8 Foster parents in the UK must submit to the state's views about marriage.9 Reputable adoption agencies have been put out of business.
>
> And the pettiness of some of the complaints brought by same sex couples is simply staggering. Christian bed and breakfast owners have been sued for not allowing unmarried couples to stay in double rooms. They would have gladly rented them separate rooms, but that was not good enough for the thought police.10 Same sex couples have brought legal complaints against wedding photographers, as if there were a constitutional right to have your picture taken by the person of your choice.11

The details of the events she is describing can be found in the references for her speech.

Here are a few more examples of this infringement on civil society and business:

- Gay manager at Cisco Systems gets Dr. Frank Turek fired
- Law firm that agreed to defend marriage pressured by gay groups
- California Democrats mandate gay history in public schools
- Brown University students attack pro-marriage sign at demonstration
- Queen's University feminist professor says that polygamy should be permitted
- Christianity under fire from secular governments in San Francisco and Quebec
- Christians forced to perform same-sex marriages
- UK Equalities Minister introduces law allowing gays to marry in churches
- Christian business owners found guilty for disagreeing with homosexuality
- Belgian archbishop targeted by gay activists over AIDS remarks
- Christian couple barred from having foster children
- Christian student loses case with Eastern Michigan University
- Ireland considers bill to criminalize dissent from same-sex civil unions
- Catholic Charities closes adoption agency due to same-sex marriage law
- The persecution of a Catholic Bishop (at Blazing Cat Fur)
- The persecution of Rev. Stephen Boissoin (at Ezra Levant)
- The persecution of Catholic Insight magazine (at Ezra Levant)
- The persecution of Christian businessman Scott Brockie (at The Interim)

Notice how same-sex marriage impacts businesses, clergy, non-profits, etc. and even leads to polygamy. Once you decide that marriage is not about putting guidelines around sex and producing and nurturing the next generation, but about letting consenting adults do whatever they want, then there are no rules.

Now consider this article about how the breakdown of marriage changes society and government, written by Dr. Frank Turek.

Excerpt:

> The law is a great teacher, and same sex marriage will teach future generations that marriage is not about children but about coupling. When marriage becomes

> nothing more than coupling, fewer people will get married to have children.
>
> So what? People will still have children, of course, but many more of them out-of wedlock. That's a disaster for everyone. Children will be hurt because illegitimate *parents* (there are no illegitimate children) often never form a family, and those that "shack up" break up at a rate two to three times that of married parents. Society will be hurt because illegitimacy starts a chain of negative effects that fall like dominoes—illegitimacy leads to poverty, crime, and higher welfare costs which lead to bigger government, higher taxes, and a slower economy.
>
> Are these just the hysterical cries of an alarmist? No. We can see the connection between same-sex marriage and illegitimacy in Scandinavian countries. Norway, for example, has had de-facto same-sex marriage since the early nineties. In Nordland,the most liberal county of Norway, where they fly "gay" rainbow flags over their churches, out-of-wedlock births have soared—more than 80percent of women giving birth for the first time, and nearly 70 percent of *all* children, are born out of wedlock! Across all of Norway, illegitimacy rose from 39 percent to 50 percent in the first decade of same-sex marriage.
>
> Anthropologist Stanley Kurtz writes,"When we look at Nordland and Nord-Troendelag — the Vermont and Massachusetts of Norway — we are peering as far as we can into the future of marriage in a world where gay marriage is almost totally accepted. What we see is a place where marriage itself has almost totally disappeared." He asserts that "Scandinavian gay marriage has driven home the message that marriage itself is outdated, and that virtually any family form, including out-of-wedlock parenthood, is acceptable." But it's not just Norway. Blankenhorn reports this same trend in other countries. International surveys show that same-sex marriage and the erosion of traditional marriage tend to go together. *Traditional marriage is weakest and illegitimacy strongest wherever same-sex marriage is legal.*
>
> You might say, "Correlation doesn't always indicate causation!" Yes, but often it does. Is there any doubt that liberalizing marriage laws impacts society for the worse? You need look no further than the last 40 years of no-fault divorce laws in the United States (family disintegration destroys lives and now costs taxpayers $112 billion per year!).
>
> No-fault divorce laws began in one state, California, and then spread to rest of the country. Those liberalized divorce laws helped change our attitudes and behaviors about the *permanence* of marriage. There's no question that liberalized marriage laws will help change our attitudes and behaviors about the *purpose* of marriage. The law is a great teacher, and if same-sex marriage advocates have their way, children will be expelled from the lesson on marriage.

So there are financial and social costs to the breakdown of marriage. The more government has to spend to deal with the problems SSM creates, the higher taxes will go,

and the less money is left in the hands of working families to accomplish their own plans.

To be fair, I think that sex education and no-fault divorce are worse threats to marriage than same-sex marriage. I would like to see more research to persuade people that chastity before marriage is important, like this research , so that we could see our way clear to push for policies that encourage young people to wait longer before having sex. And I would like to see other measures taken to strengthen marriage from no-fault divorce, such as a shared parenting laws. But SSM is the current topic, so I'll stick with that here.

3. SSM is bad for public health

Now we come to the sensitive part. We should not be encouraging SSM because it normalizes homosexuality and the homosexual lifestyle is associated with harmful behaviors.

Consider this recent Centers for Disease Control study. Life Site News discusses the findings in this article.

Excerpt:

> Students who report being gay or bisexual are more likely than heterosexual students to engage in unhealthy risk behaviors such as tobacco use, alcohol and other drug use, sexual risk behaviors, suicidal behaviors, and violence, according to a study by the Centers for Disease Control and Prevention (CDC).
>
> The study reported: "the prevalence among gay or lesbian students was higher than the prevalence among heterosexual students for a median of 63.8% of all the risk behaviors measured, and the prevalence among bisexual students was higher than the prevalence among heterosexual students for a median of 76.0% of all the risk behaviors measured."
>
> Specifically, gay or lesbian students had higher rates for seven of the 10 health risk categories (behaviors that contribute to violence, behaviors related to attempted suicide, tobacco use, alcohol use, other drug use, sexual behaviors, and weight management).
>
> The study also found that only 1.3% of students self-identified as gay or lesbian at the eight sites where they were asked their "sexual identity." A median of 3.7% said they were bisexual.
>
> Researchers analyzed data from Youth Risk Behavior Surveys conducted during 2001–2009 in seven states and six large urban school districts. These sites collected data on high school students' sexual identity (heterosexual, gay or lesbian, bisexual, or unsure), sex of sexual contacts (sexual contact with the opposite sex only, with the same sex only, or with both sexes), or both.
>
> The study, "Sexual Identity, Sex of Sexual Contacts, and Health Risk Behaviors Among Students in Grades 9–12 in Selected Sites—Youth Risk Behavior Surveillance, United States, 2001–2009," was published as a Morbidity and

> Mortality Weekly Report Surveillance Summary.

Dr. Trayce Hansen summarizes some of the previously published research on the health care effects of the gay lifestyle.

Excerpt:

> Non-heterosexual behavior leads to increased risk of psychological and physical disorders
>
> Sadly, the research is also clear that individuals who adopt non-heterosexual lifestyles are more likely to suffer from a host of negative outcomes including psychiatric disorders, alcohol and drug abuse, suicide attempts, domestic violence and sexual assault, and increased risk for chronic diseases, AIDS, and shortened lifespan. Schools should not affirm and thereby encourage young people to adopt lifestyles more likely to lead to such devastation. (To review these specific studies see references 5-10 below).

The footnotes she mentions are in the original article. That article also debunks the "gay gene" myth using identical twin studies, which show that only 10-11% of identical twins have the same sexual orientation.

Consider how society treats the practice of cigarette smoking. Certainly, we don't want to coerce people into not smoking – we want them to have the choice. But we should definitely not lie to people about the health effects of smoking. It does no good to tell people that dangerous things are not really dangerous. I would rather hurt someone's feelings gently by telling them the truth than see them suffer real harm after telling them lies.

Conclusion

In conclusion, we have seen three reasons why we should not legalize same-sex marriage:

1. Same-sex marriage is bad for children
2. Same-sex marriage is bad for civil society and business
3. Same-sex marriage is bad for public health

Notice that there are no arguments in this post that require a religious worldview or belief in the inerrancy of the Bible.

Further study

For a more academic case against SSM, see this peer-reviewed paper on traditional marriage and same-sex marriage, authored by two guys from Princeton University and one guy from the University of Notredame. One of those guys is the famous Robert P. George. For some simple, practical tips on defending traditional marriage, check out this

tip sheet from the National Organization for Marriage. Here's another good peer-reviewed paper in the Harvard University Journal of Law and Public Policy. And of course there are the two recent large-scale studies on gay parenting outcomes, and responses to the criticisms of those studies.

You can also watch the videos from a formal academic debate on same-sex marriage held at the University of Central Florida, featuring Dr. Michael Brown. Dr. Jennifer Roback Morse also debated same-sex marriage at Columbia University in a formal academic debate. You can see her give a lecture on same-sex marriage at Houston Baptist University here, as well.

Security personnel removed from Libya before terrorist attack, despite victim's objections

October 9, 2012 | by Wintery Knight | Link | Original Link

This is from Guy Benson at Townhall. (I linked to the printable version)

He first mentions the last shocking development on the Benghazi attack:

> House investigators warned Secretary of State Hillary Clinton to expect a hearing into their finding that that American staff at the U.S. Embassy in Libya had their request for additional security denied by Washington officials.
>
> "Based on information provided to the Committee by individuals with direct knowledge of events in Libya, the attack that claimed the ambassador's life was the latest in a long line of attacks on Western diplomats and officials in Libya in the months leading up to September 11, 2012," House Oversight and Government Reform Committee chairman Darrell Issa, R-Calif., and subcommittee chairman Jason Chaffetz, R-Utah, wrote Clinton today. They dismissed out-of-hand the suggestion that the attack ever could have been regarded as a spontaneous protest gone awry.
>
> **"In addition, multiple U.S. federal government officials have confirmed to the Committee that, prior to the September 11 attack, the U.S. mission in Libya made repeated requests for increased security in Benghazi," Issa and Chaffetz added (my emphasis). "The mission in Libya, however, was denied these resources by officials in Washington."**
>
> **The committee noted 13 "security threats" in Benghazi, including an attempt to assassinate the British ambassador to Libya.**

And now here's the latest development from CBS News:

> **The former head of a Special Forces "Site Security Team" in Libya tells CBS News that in spite of multiple pleas from himself and other U.S. security officials on the ground for "more, not less" security personnel, the State Department removed as many as 34 people from the country in the six months before the terrorist attack in Benghazi that killed Ambassador Chris Stevens and three others.**
>
> Lt. Col. Andy Wood will appear this week at a House Oversight Committee hearing that will examine security decisions leading up to the Sept. 11 terrorist attack on the U.S. compound in Benghazi.
>
> Speaking to CBS News correspondent Sharyl Attkisson, Wood said when he found out that his own 16-member team and a six-member State Department elite force were being pulled from Tripoli in August – about a month before the assault in Benghazi – he felt, "like we were being asked to play the piano with two

> fingers. There was concern amongst the entire embassy staff."

According to ABC News, Stevens actually wanted the security teams to remain in Libya:

> U.S. Ambassador to Libya Chris Stevens wanted a Security Support Team, made up of 16 special operations soldiers, to stay with him in Libya after their deployment was scheduled to end in August, the commander of that security team told ABC News. The embassy staff's "first choice was for us to stay," Lt. Col. Andrew Wood, 55, told ABC News in an interview. "That would have been the choice of the embassy people in Tripoli." **But a senior State Department official told ABC News that the embassy's Regional Security Officer never specifically requested that the SST's tour be extended past August, and the official maintained there was no net loss of security personnel**…

You'll recall that the Obama administration spread false information about the terrorist attack, saying that it was a spontaneous eruption caused by a Youtube video, and not a planned terrorist attack. This is how incompetent and deceptive they are, and yet the media is only now correcting the initial reports. This scandal should be enough to sink Obama, but as Neil Simpson points out, Democrats are not the best at following the news.

How are voters responding to Obama's weakness on foreign policy? The new Pew Research has Romney ahead by 4 points with likely voters, 49 – 45.
