> Schumm concluded that children of lesbian parents identified themselves as gay 31 percent of the time; children of gay men had gay children 19 percent of the time, and children of a lesbian mother and gay father had at least one gay child 25 percent of the time.
>
> Furthermore, when the study restricted the results so that they included only children in their 20s — presumably after they'd been able to work out any adolescent confusion or experimentation — 58 percent of the children of lesbians called themselves gay, and 33 percent of the children of gay men called themselves gay. (About 5 to 10 percent of the children of straight parents call themselves gay, Schumm says.)
>
> Schumm next went macro, poring over an anthropological study of various cultures' acceptance of homosexuality. He found that when communities welcome gays and lesbians, "89 percent feature higher rates of homosexual behavior."
>
> Finally, Schumm looked at the existing academic studies… In all there are 26 such studies. Schumm ran the numbers from them and concluded that, surprisingly, 20 percent of the kids of gay parents were gay themselves. When children only 17 or older were included in the analysis, 28 percent were gay.

Here's the paper entitled "Children of homosexuals more apt to be homosexuals?". It appeared in the Journal of Biosocial Science.

Abstract:

> Ten narrative studies involving family histories of 262 children of gay fathers and lesbian mothers were evaluated statistically in response to Morrison's (2007) concerns about Cameron's (2006) research that had involved three narrative studies. Despite numerous attempts to bias the results in favour of the null hypothesis and allowing for up to 20 (of 63, 32%) coding errors, Cameron's (2006) hypothesis that gay and lesbian parents would be more likely to have gay, lesbian, bisexual or unsure (of sexual orientation) sons and daughters was confirmed. Percentages of children of gay and lesbian parents who adopted non-heterosexual identities ranged between 16% and 57%, with odds ratios of 1.7 to 12.1, depending on the mix of child and parent genders. Daughters of lesbian mothers were most likely (33% to 57%; odds ratios from 4.5 to 12.1) to report non-heterosexual identities. Data from ethnographic sources and from previous studies on gay and lesbian parenting were re-examined and found to support the hypothesis that social and parental influences may influence the expression of non-heterosexual identities and/or behaviour. Thus, evidence is presented from three different sources, contrary to most previous scientific opinion, even most previous scientific consensus, that suggests intergenerational transfer of sexual orientation can occur at statistically significant and substantial rates, especially for female parents or female children. In some analyses for sons, intergenerational transfer was not significant. Further research is needed with respect to pathways by which intergenerational transfer of sexual orientation may occur. The results confirm an evolving tendency among scholars to cite the possibility of some degree of intergenerational crossover of sexual orientation.

Please exercise caution when commenting, we do not want to be Brendan Eich'd by the Obama administration.

Jay Richards: How to end poverty in 10 tough steps

April 15, 2014 | by Wintery Knight | Link | Original Link

I saw that Stand to Reason's Amy Hall blogged about a new lecture by Jay Richards, a Christian expert in economics. Amy linked to this post by Justin Taylor which summarizes the talk (above).

Summary:

1. Establish and maintain the rule of law.
2. Focus the jurisdiction of government on maintaining the rule of law, and limit its jurisdiction over the economy and the institutions of civil society.
3. Implement a formal property system with consistent and accessible means for securing a clear title to property one owns.
4. Encourage economic freedom: Allow people to trade goods and services unencumbered by tariffs, subsidies, price controls, undue regulation, and restrictive immigration policies.
5. Encourage stable families and other important private institutions that mediate between the individual and the state.
6. Encourage belief in the truth that the universe is purposeful and makes sense.
7. Encourage the right cultural mores—orientation to the future and the belief that progress but not utopia is possible in this life; willingness to save and delay gratification; willingness to risk, to respect the rights and property of others, to be diligent, to be thrifty.
8. Instill a proper understanding of the nature of wealth and poverty—that wealth is created, that free trade is win-win, that risk is essential to enterprise, that trade-offs are unavoidable, that the success of others need not come at your expense, and that you can pursue legitimate self-interest and the common good at the same time.
9. Focus on your comparative advantage rather than protecting what used to be your competitive advantage.
10. Work hard.

I'm currently working my way through Money, Greed and God with a friend, and we are going through it chapter by chapter. If you don't have the book, it's a perfect introduction to economics and how it relates to the Christian worldview. I always encourage Christians to move beyond good intentions to good results by studying economics. We are supposed to be helping the poor, but how should we do it? Economics is the science that allows us to understand which policies we should support to do that.

Obama-appointed judge orders Ohio to recognize out-of-state same-sex marriages

April 16, 2014 | by Wintery Knight | Link | Original Link

From the Toledo Blade.

Excerpt:

> Ohio must recognize same-sex marriages legally performed elsewhere despite the state's own ban on such marriages in its constitution, a federal judge in Cincinnati officially ruled today.
>
> Attorney General Mike DeWine has said he will appeal the decision as he already has another by U.S. District Judge Timothy Black that required the state to recognize same-sex marriages on death certificates.
>
> The latest ruling, promised by Judge Black more than a week ago, does not mean that same-sex couples may be wed in Ohio. But it strikes a blow against another portion of the constitutional amendment Ohioans adopted in 2004 that prohibits government from extending rights approximating those of marriage to same-sex and unmarried couples.
>
> The case before Judge Black initially dealt solely with the issue of having the names of same-sex couples legally married in another state on the birth certificates of children born here. But Judge Black, a 2010 appointee by President Obama, went a step further by ordering the state to recognize all such marriages performed legally.
>
> […]The case was brought by four couples married in California, New York, and Massachusetts who have had or soon expect to have children in Ohio. Three are female couples in which one spouse was impregnated through artificial insemination while the fourth is a male couple who adopted a child born here.
>
> […]Ohio is just one of a number of states with same-sex marriage cases in the appeals pipeline with at least one likely to work its way up to the U.S. Supreme Court.

The Christian News Network reported on the Obama-appointee's previous related decision.

Excerpt:

> As previously reported, Black similarly issued a ruling in December that required state officials to recognize same-sex "marriages" on death certificates. He rejected the state's sovereignty argument at that time as well.
>
> […]Consequently, Rep. John Becker (R-Union Township), a born-again Christian, is seeking to have Black impeached as he believes that the judge is rather trampling the state and federal constitutions.

> “[Judge Black] persists in allowing his personal political bias to supersede jurisprudence,” he wrote in a recent statement.
>
> Becker has submitted an impeachment resolution to the state assembly, but it has not yet come up for a hearing.

I wonder if the many people who claimed to believe in traditional marriage yet voted for Obama will stop voting for Democrats? One can hope that will be the case, now that *everyone* can see what people like me were warning about before the election. We warned back then, but were told that our concerns were silly and that Obama was just as much a Christian as George W. Bush. Now we know different. And so many people still claim to be pro-life and pro-marriage while voting for the most pro-abortion and anti-marriage President we have ever had. I suppose in 2016, they’ll vote for Democrats again, and be *shocked* when the Democrats push even more for expansions abortion and gay rights. When will we learn?

Islamists kidnap 100 schoolgirls who face living hell as sex slaves

April 16, 2014 | by Wintery Knight | Link | Original Link

From the New York Post. (H/T Answering Muslims)

Excerpt:

> Heavily armed Islamic extremists abducted at least 100 female students from a school in northeast Nigeria before dawn Tuesday, but some of the teens managed to escape from the back of an open truck, officials said.
>
> The tragedy came one day after a bombing killed more than 70 people in the city of Abuja.
>
> The girls were seized after midnight from a school in Chibok, on the edge of the Sambisa Forest, an insurgent hideout, said Borno state police commissioner Tanko Lawan.
>
> Gunmen killed a soldier and police officer guarding the school, then took off with at least 100 students, a State Security Service official said.
>
> Witnesses said the gunmen arrived in trucks and motorcycles and may have grabbed as many as 200 girls.
>
> […]Islamic extremists have been abducting girls to use as cooks and sex slaves.
>
> Insurgents from the Boko Haram terrorist network are blamed for attacks that have killed more than 1,500 people this year.
>
> […]Boko Haram is also accused of Monday morning's explosion at a busy bus station in Nigeria's capital that killed at least 75 people and wounded 141.

Answering Muslims notes that the Qur'an allows Muslims to take captured women as sex slaves. It's a far cry from the courtly love of Christians, isn't it?

Boko Haram is, of course, an Islamic terrorist group. But don't tell the Obama administration that, it's "workplace violence caused by a Youtube video" if you ask them.

New study: regular churchgoers and married people most satisfied with their love life

April 16, 2014 | by Wintery Knight | Link | Original Link

This article from Science Daily was tweeted by Fazale Rana of Reasons to Believe.

Excerpt:

> Regular churchgoers, married people or those who enjoy harmonious social ties are most satisfied with their love life. This also goes for people who are currently in love or who experience the commitment and sexual desire of their partners, says Félix Neto and Maria da Conceição Pinto of the Universidade do Porto in Portugal. Their findings, published in an article in Springer's journal *Applied Research in Quality of Life,* look at the influences on love life satisfaction throughout one's adult life.

> The researchers associate love with the desire to enter into, maintain, or expand a close, connected, and ongoing relationship with another person. In turn, love life satisfaction is a purely subjective, overall measurement of someone's actual enjoyment of love. To investigate the factors that influence this across various age groups, 1,284 adult Portuguese women and men ranging between 18 and 90 years old were asked to evaluate and weigh specific facets of their own love lives by using the Satisfaction With Love Life Scale.
>
> […]**While education does not impact a person's love life satisfaction, religious involvement does. The finding that believers and regular churchgoers are positive about their love lives is in line with previous studies that associate religious involvement with better mental health and greater satisfaction with life and sexual relationships in general.**

Previously, I blogged about a study reported in USA Today, which showed that people who attend church have lower divorce rates than those who don't attend church.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.
>
> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> […]The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> **Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among**

> **religiously unaffiliated Americans is 50%.**
>
> **When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.**
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Whenever I talk to atheists about marital satisfaction and marital stability, they always tell me these myths about how atheists divorce less and are happier in their marriages than religious people. But when I ask them for studies, they don't have any, or they start to talk about the Discovery Channel or Star Trek or something. It's like they believe things without any evidence at all. Meanwhile, one also has to note that atheists have much lower rates of marriage than church-attending believers.

Now clearly, there are going to be atheists with great marriages that never break up. But individual cases do not overturn peer-reviewed research studies. The fact is that marriage is an institution that is soaked through with moral values and moral obligations. If you think that morality is just arbitrary customs and conventions that vary by time and place, as is logically consistent with atheism, then the odds are that you won't be able to stay married for long – if you even get married at all.

New study: even casual use of marijuana / cannabis alters brain

April 17, 2014 | by Wintery Knight | Link | Original Link

Reported by the UK Telegraph.

Excerpt:

> Experimenting with cannabis on a casual basis damages the brain permanently, research has found.

> It is far from being a “safe” drug and no one under the age of 30 should ever use it, experts said.
>
> People who had only used cannabis once or twice a week for a matter of months were found to have changes in the brain that govern emotion, motivation and addiction.
>
> Researchers from Harvard Medical School in America carried out detailed 3D scans on the brains of students who used cannabis casually and were not addicted and compared them with those who had never used it.

> Two major sections of the brain were found to be affected.
>
> The scientists found that the more cannabis the 40 subjects had used, the greater the abnormalities.
>
> Around 10 million people in Britain, almost a third of the population, have used illegal drugs, with cannabis the most popular. The research author, Dr Hans Breiter, professor of psychiatry and behavioural sciences at Northwestern University Feinberg School of Medicine, said: “This study raises a strong challenge to the idea that casual marijuana use isn’t associated with bad consequences. Some people only used marijuana to get high once or twice a week.
>
> “People think a little recreational use shouldn’t cause a problem, if someone is doing OK with work or school. Our data directly says this is not the case.
>
> […]Mark Winstanley, chief executive of Rethink Mental Illness, said: “For too long cannabis has been seen as a safe drug, but as this study suggests, it can have a really serious impact on your mental health.
>
> “Research also shows that when people smoke cannabis before the age of 15, it quadruples their chance of developing psychosis. But very few people are aware of the risks involved.”

I troubled by this study because I know people who act as if smoking marijuana were as much a right as free speech.

What I would really like to see is that people who insist on engaging in irresponsible

behaviors then go on bear the consequences of that behavior. The problem is that it's not only these people who are affected, it's the innocent people around them. There are the innocent victims of car accidents or theft or the children who suffer because their parents want to "alter their brains". Those are the people I am worried about.

How early are the doctrines of the Incarnation and the Trinity?

April 17, 2014 | by Wintery Knight | Link | Original Link

Here's a great post from Tough Questions Answered.

The post describes evidence for the Incarnation and the Trinity in the writings of Ignatius, who was the third Bishop of Antioch from 70 AD to 107 AD.

Here's the raw quote from Ignatius' "Epistle to the Ephesians":

> But our Physician is the only true God, the Father and Begetter of the only-begotten Son. We have also as a Physician the Lord our God, Jesus the Christ, the only-begotten Son and Word, before time began, but who afterwards became also man, of Mary the virgin. For "the Word was made flesh." Being incorporeal, He was in a body; being impassible, He was in a passible body; being immortal, He was in a mortal body; being life, He became subject to corruption, that He might free our souls from death and corruption, and heal them, and might restore them to health, when they were diseased with ungodliness and wicked lusts.

And TQA discusses the passage:

> There are several aspects of this passage which demonstrate that Saint Ignatius held beliefs consistent with the Doctrines of the Trinity and the Dual Nature of Christ. First, he refers to two separate Persons, God the Father and Jesus Christ, yet he calls both of them God.
>
> […]Second, Ignatius refers to Jesus Christ as begotten "before time began". This is almost word for word identical to the Nicene Creed, which says, "I believe in. . . one Lord, Jesus Christ, the Son of God, the only-begotten, begotten of the Father before all ages. . ." Some today claim that the Early Church believed Christ's being "begotten" of the Father was in relation to His birth from Mary (specifically, this is an LDS claim). However, Ignatius' comment here demonstrates that the Early Church's understanding of Christ's nature as "only-begotten" was a relationship with the Father that was "before time began" and has nothing to do with His earthly incarnation. It is interesting to note that the Greek word translated as "only-begotten" both here and in the New Testament is "monogenes". Monogenes literally means "one of a kind," and to the Church Fathers it connoted Christ being of the same nature as the Father. . . something that was entirely unique to Him.
>
> In addition to calling Christ God and claiming Him to be the "only-begotten" of the Father "before time began", Ignatius tells us that "afterwards" Christ "became man". Ignatius then goes on to point out some aspects that Christ's becoming man added to His nature. He says that although Christ

> was incorporeal, He was in a body; although He was impassible, He was in a passible body; although He was immortal, He was in a mortal body; although He was life, He became subject to corruption. These differing aspects of Christ's nature, aspects that are polar opposites to one another, speak to Christ having two natures, one as God and one as man, and demonstrate that Saint Ignatius understood Christ in this manner. As God, Christ was incorporeal, impassible, immortal, and life itself. However, as man He was corporeal, passible, mortal, and subject to corruption.

Now I think you can pull the Incarnation and the Trinity right out the Bible, but it's still nice to see such a prominent church father writing about it decades after the events.

J. Warner Wallace: Leading people to Christ requires good leadership

April 17, 2014 | by Wintery Knight | Link | Original Link

The latest episode of the Cold Case Christianity podcast is a must-listen, especially from about 9:20 to 30:33. I listened to it twice, and shared it with a friend who I am mentoring. She liked it as well, and it caused both of us to think deeply.

You can grab the MP3 file here. (39 MB)

Here is is his summary:

> In this podcast, J. Warner talks about the importance of leadership for those of us who hope to share the truth about Jesus. When most of us think about evangelism, we think of the importance of apologetics or understanding how to articulate the Gospel. We often overlook the role of good leadership. But if you hope to lead someone to Christ, you'll need to become a good leader.

Topics:

- Excellence at what you do is the *minimum requirement* for being a good leader, but it's not enough
- First thing: you need to have the respect of the people you are trying to lead (e.g. – good character, courage, concern for others, etc.)
- Second thing: you need to gain the trust of the people you are trying to lead, and that means performing consistently over time
- Third thing: you need to gain a hearing from the people you are trying to lead, but that means being willing to speak to them, too
- An example of good leadership: Jim's father leading everyone to a cabin in the woods

The key insight I pulled out of this is that in order to lead someone, you have to gain their respect, gain their trust, and gain their ear. The podcast features a very practical application of the principles he describes.

William Lane Craig explains the doctrine of penal substitutionary atonement

April 18, 2014 | by Wintery Knight | Link | Original Link

Probably one of the most common questions that you hear from people who don't fully understand Christianity is this question: "why did Jesus have to die?". The answer that most Christians seem to hold to is that 1) humans are rebelling against God, 2) Humans deserve punishment for their rebellion, 3) Humans cannot escape the punishment for their rebellion on their own, 4) Jesus was punished in the place of the rebellious humans, 5) Those who accept this sacrifice are forgiven for their rebelling.

Are humans rebellious?

Some people think that humans are not really rebellious at all, but it's actually easy to see. You can see it just by looking at how people spend their time. Some of us have no time for God at all, and instead try to fill our lives with material possessions and experiences in order to have happy feelings. Some of us embrace just the parts of God that make us feel happy, like church and singing and feelings of comfort, while avoiding the hard parts of that vertical relationship; reading, thinking and disagreeing with people who don't believe the truth about God. And so on.

This condition of being in rebellion is universal, and all of us are guilty of breaking the law at some point. All of us deserve to be separated from God's goodness and love. Even if we wanted to stop rebelling, we would not be able to make up for the times where we do rebel by being good at other times, any more than we could get out of a speeding ticket by appealing to the times when we drove at the speed limit, (something that I never do, in any case).

This is not to say that all sinners are punished equally – the degree of punishment is proportional to the sins a person commits. However, the standard is perfection. And worse than that, the most important moral obligation is a *vertical* moral obligation. You can't satisfy the demands of the moral law just by making your neighbor happy, while treating God like a pariah. The first commandment is to love God, the second is to love your neighbor. Even loving your neighbor requires you to tell your neighbor the truth – not just to make them feel good. The *vertical* relationship is more important than the *horizontal* one, and we've all screwed up the vertical relationship. We all don't want God to be there, telling us what's best for us, interfering with our fun. We don't want to relate to a loving God if it means having to care what he thinks about anything that we are doing.

Who is going to pay for our rebellion?

The Christian answer to the problem of our rebellion is that Jesus takes the punishment we deserve in our place.

However, I've noticed that on some atheist blogs, they don't like the idea that someone else can take our punishment for us to exonerate us for crimes that we've committed. So

I'll quote from this post by the great William Lane Craig, to respond to that objection. Excerpt:

> The central problem of the Penal Theory is, as you point out, understanding how punishing a person other than the perpetrator of the wrong can meet the demands of justice. Indeed, we might even say that it would be wrong to punish some innocent person for the crimes I commit!
>
> It seems to me, however, that in other aspects of human life we do recognize this practice. I remember once sharing the Gospel with a businessman. When I explained that Christ had died to pay the penalty for our sins, he responded, "Oh, yes, that's imputation." I was stunned, as I never expected this theological concept to be familiar to this non-Christian businessman. When I asked him how he came to be familiar with this idea, he replied, "Oh, we use imputation all the time in the insurance business." He explained to me that certain sorts of insurance policy are written so that, for example, if someone else drives my car and gets in an accident, the responsibility is imputed to me rather than to the driver. Even though the driver behaved recklessly, I am the one held liable; it is just as if I had done it.
>
> Now this is parallel to substitutionary atonement. Normally I would be liable for the misdeeds I have done. But through my faith in Christ, I am, as it were, covered by his divine insurance policy, whereby he assumes the liability for my actions. My sin is imputed to him, and he pays its penalty. The demands of justice are fulfilled, just as they are in mundane affairs in which someone pays the penalty for something imputed to him. This is as literal a transaction as those that transpire regularly in the insurance industry.

So, it turns out that the doctrine of substitionary atonement is not as mysterious or as objectionable as everyone seems to think it is.

Jennifer Roback Morse lectures on sex and sexuality at Harvard University

April 18, 2014 | by Wintery Knight | Link | Original Link

Dr. Jennifer Roback Morse

Dr. Morse delivers a talk based on her book "Smart Sex" at Harvard University.

The MP3 file is here. (30 Mb)

Topics:

- the hook-up culture and its effects on men and women
- cohabitation and its effect on marriage stability
- balancing marriage, family and career
- single motherhood by choice and IVF
- donor-conceived children
- modern sex: a sterile, recreation activity
- the real purposes of sex: procreation and spousal unity
- the hormone oxytocin: when it is secreted and what it does
- the hormone vassopressin: when it is secreted and what it does
- the sexual revolution and the commoditization of sex
- the consumer view of sex vs the organic view of sex
- fatherlessness and multi-partner fertility
- how the "sex-without-relationship" view harms children

52 minutes of lecture, 33 minutes of Q&A from the Harvard students. The Q&A is worth listening to – the first question is from a gay student, and Dr. Morse pulls a William Lane Craig to defeat her objection. It was awesome! I never get tired of listening to her talk, and especially on the topics of marriage and family.

William Lane Craig offers advice to Christians considering marriage

April 18, 2014 | by Wintery Knight | Link | Original Link

This post is a 3 in one: one lecture, one question and answer, and another lecture – all on different topics. My friend Neil S. requested this so I'm posting it.

I got this lecture from the Reasonable Faith web site.

Dr. William Lane Craig is the top living Christian apologist and debater in the world today, and has 2 Masters degrees and 2 Ph.Ds. He also has scores of academic publications including books from Oxford University Press, etc.

The MP3 file is here. (14.5 Mb, about 41 minutes)

Topics:

- the stresses of ministry on marriages
- the Christian position on divorce
- balancing marriage with academic pursuits
- the importance of marrying the right person
- Dr. Craig's politically incorrect advice for choosing a spouse
- Advice for men: Marry someone who believes in you and who supports you in your calling
- Advice for women: Be the kind of person who can commit to being a helper and supporter
- Advice for men: Beware of the career woman who will put their career over supporting you in your calling
- Advice for women: Be careful about marrying if you think that your goals are more important than your husband's goals
- Advice: Don't try to find the right person *for you* but instead focus on learning about marriage and preparing for marriage
- Advice: Flee youthful lusts and pursue righteousness, love and peace
- Advice: God intends for sex to be within the bounds of marriage, so you need to guard yourself against unchastity
- Advice for men: be careful what images and movies you see with the goal of keeping your chastity
- Advice: your highest responsibility after your relationship with God is your spouse, and your studies are third
- Advice: it's better to drop classes or give up your graduate studies entirely rather than destroy your marriage
- Advice for women: understand that you have to work at the marriage in order to help your man finish his studies
- Advice: set aside a period of the day for communicating and bonding with your

spouse
- Advice: cultivate the ability to talk with your spouse on a personal level, and maintain eye contact
- Advice for men: do not break eye contact with your wife, and also hold her hand when communicating
- Advice: do not be embarrassed to seek out a marriage counselor, but make it a good counselor
- Advice: don't just be doing stuff for your mate, but also be vulnerable and transparent with your mate
- How your relationship with your wife helps you with your relationship with God
- How do you handle the rebellion of children without being overbearing and authoritarian?

There is a period of Q&A at the end. There is another piece of advice that comes out in the Q&A for women: take an interest in your spouse's work even if you don't care about it, and ask him about it every day and try to understand it. Go to the man's workplace and see what he does. Go to his presentations. Get involved in the man's ministry and help him in practical ways. Another piece of advice is to not paper over the differences – it's good to argue, because it means that problems are being confronted and worked through. Husbands should have a good male friend to talk to, and wives should have a good female friend to talk to.

I like how Dr. Craig has thought about how to have a successful marriage, how to choose the right woman, and how to love his wife. I like how he calls out men on the chastity thing. I think that chastity is more important for men than for women, because it's the men who take the lead in choosing and pursuing the right woman for their plan.

Secondly, here is my previous post on Dr. Craig's advice for married couples, where he gives 5 points of advice for married couples.

Here are the main pieces of advice Dr. Craig gives:

1. *Resolve that there will be no divorce*
2. *Delay having children*
3. *Confront problems honestly*
4. *Seek marital counseling*
5. *Take steps to build intimacy in your relationship*

And here's the controversial one (#2):

> 2. *Delay having children.* The first years of marriage are difficult enough on their own without introducing the complication of children. Once children come, the wife's attention is necessarily diverted, and huge stresses come upon you both. Spend the first several years of marriage getting to know each other, working through your issues, having fun together, and enjoying that intimate love relationship between just the two of you. Jan and I waited ten years before having

> our first child Charity, which allowed me the finish graduate school, get our feet on the ground financially, establish some roots, and enjoy and build our love relationship until we were really ready to take on the responsibilities of parenthood. The qualifier here is that if the wife desperately wants children now, then the husband should accede to her wish to become a mother, rather than withhold that from her. Her verdict should be decisive. But if you both can agree to wait, things will probably be much easier.

Third and finally, here is a previous post on Dr. Craig's advice for choosing a good spouse, with illustrations from his own marriage.

For example, Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

If you want to hear another Christian husband talk about how his wife supports him, listen to this lecture called "Giants in the Land" with Dr. Walter Bradley. It's actually my favorite lecture. I also really like his testimony lecture. If you're looking for guidance, these are some of the people I would recommend.

Mike Licona and Bart Ehrman debate the resurrection of Jesus

April 19, 2014 | by Wintery Knight | Link | Original Link

From the Unbelievable radio show.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here.

Snarky summary of the radio debate: (items with * are my made-up paraphrases/clarifications)

This has got to be one of my silliest summaries, but Ehrman makes me so annoyed.

Ehrman:
– my new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible
– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts
– there is no naturalistic explanation of these three facts
– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:

– all historians would accept these three facts, except for maybe the group appearances
– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3

years
– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization
– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story
– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians
– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:

– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:
– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole Bible
* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so
* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at

all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus' name!
* "one angel vs two angels" proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn't die on the cross

Licona:
– but you don't deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don't know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian
* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:
– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:
– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one

* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:
– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:
– so it's not bias you are concerned about, it's that you don't want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I'm not really interested in butting heads with professors – it's easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:
– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is "weird" but that doesn't prove that God created the universe out of nothing
* if it's a miracle then I'm going to have to not sin, and maybe even go to Hell, and we can't have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism
– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it's not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

Are you speaking Christianese to non-Christians? Here are ten translations to use instead

April 19, 2014 | by Wintery Knight | Link | Original Link

I found this article by J. Warner Wallace in Pastor Matt's "Three Things You Need to Read This Week" round-up.

First, the list of Christianese: (not his term)

- **#1. "God has put you (or something) on my heart. / God told me."**
- **#2. "Be 'born again.' / Have a spiritual rebirth."**
- **#3. "You need to come to repentance. / Experience a conversion."**
- **#4. "Deal with your sin."**
- **#5. "Invite Jesus into your heart."**
- **#6. "Make Jesus the Lord of your life."**
- **#7. "Have faith."**
- **#8. "Be saved."**
- **#9. "Be washed by the blood of the Lamb."**
- **#10. "Be Sanctified."**
- **Bonus Expression #11. "Enjoy fellowship."**

This article is pretty funny, but it ought to be because I think we really need to shame church Christians when they talk like this.

Here's the one I liked best:

> **#5. "Invite Jesus into your heart."**
> You mean like a boyfriend? What exactly does that mean to have "Jesus in my heart?" I'm not an emotional kind of guy, so please don't ask me to sing songs or hold hands with Jesus, especially in public. Do I have to emasculate myself to become a Christian? If so, thanks for reminding me why I'm not a Christian.
>
> **Try this instead**: "When we admit our imperfections, believe Jesus died on the cross to pay the price for our mistakes, and accept His sacrifice, we can start a new relationship with God."

LOL! Oh my gosh it's a wonder that any rough men become Christians after what they find in church.

He concludes:

> I understand the importance of our theologically rich Christian language, and as a Christian I often use similar words when talking with Christians. But when I'm talking with unbelievers, I try to think about how I used to hear and interpret these words before I became a Christian. How do I share what I believe? I take the time to translate important Christian concepts for those who might be willing

> to entertain the ideas if only I was willing to speak their language.

I have been mentoring a friend lately in Christian apologetics, and one of the things I've been doing related to this is to have lunches with all of my non-Christian co-workers so that we could have some *real* non-Christians to talk about. And then afterwards, I send her the after action reports so she can see how I was able to turn the conversation to the things we are studying. There is almost no Christianese during these lunch meetings, because I am talking to non-Christians. On Friday, I had lunch with a Muslim-raised atheist from India, and naturally we were talking about Easter and other stuff like the Protestant Reformation. But I didn't use any weird terminology with him. I am used to that, because my whole family is non-Christian.

I think that there is a real need for churches to train Christians in how to bring up topics that are of interest to Christians in public. The approach I've always taken is to have a broad worldview, including areas like economics and policy, so that I wouldn't just sit there silent while other people are talking. You have to show that you have knowledge in real-world areas before anyone will listen to you about other things. That's my approach anyway. You really have to establish your credentials before you start to speak about spiritual things.

Six reasons why you should believe in non-physical souls

April 20, 2014 | by Wintery Knight | Link | Original Link

(Podcast uploaded, with permission, by ReligioPolitical Talk)

This podcast is a must-listen. Please take the time to download this podcast and listen to it. I guarantee that you will love this podcast. I even recommended it to my *Dad* and I almost never do that.

Details:

> In this podcast, J. Warner examines the evidence for the existence of the mind (and inferentially, the soul) as he looks at six classic philosophical arguments. Jim also briefly discusses Thomas Nagel's book, Mind and Cosmos and discusses the limitations of physicalism.

The MP3 file is here. (67 MB, 72 minutes)

Topics:

- Atheist Thomas Nagel's latest book "Mind and Cosmos" makes the case that materialism cannot account for the evidence of mental phenomena
- Nagel writes in this recent New York Times article that materialism cannot account for the reality of consciousness, meaning, intention and purpose
- Quote from the Nagel article:

> Even though the theistic outlook, in some versions, is consistent with the available scientific evidence, I don't believe it, and am drawn instead to a naturalistic, though non-materialist, alternative. Mind, I suspect, is not an inexplicable accident or a divine and anomalous gift but a basic aspect of nature that we will not understand until we transcend the built-in limits of contemporary scientific orthodoxy.

- When looking at this question, it's important to not have our conclusions pre-determined by presupposing materialism or atheism
- If your mind/soul doesn't exist and you are a purely physical being then that is a defeater for Christianity, so we need to respond
- Traditionally, Christians have been committed to a view of human nature called "dualism" – human beings are souls who *have* bodies
- The best way* to argue for the existence of the soul is using philosophical arguments

The case:

- The law of identity says that if A = B' if A and B have the exact same properties

- If A = the mind and B = the brain, then is A identical to B?
- Wallace will present 6 arguments to show that A is not identical to B because they have different properties

Not everyone of the arguments below might make sense to you, but you will probably find one or two that strike you as correct. Some of the points are more illustrative than persuasive, like #2. However, I do find #3, #5 and #6 persuasive.

1) First-person access to mental properties

- Thought experiment: Imagine your dream car, and picture it clearly in your mind
- If we invited an artist to come and sketch out your dream car, then we could see your dream car's shape on paper
- This concept of your dream car is not something that people can see by looking at your brain structure
- Physical properties can be physically accessed, but the properties of your dream care and privately accessed

2) Our experience of consciousness implies that we are not our bodies

- Common sense notion of personhood is that we own our bodies, but we are not our bodies

3) Persistent self-identity through time

- Thought experiment: replacing a new car with an old car one piece at a time
- When you change even the smallest part of a physical object, it changes the identity of that object
- Similarly, your body is undergoing changes constantly over time
- Every cell in your body is different from the body you had 10 years ago
- Even your brain cells undergo changes (see this from New Scientist – WK)
- If you are the same person you were 10 years ago, then you are not your physical body

4) Mental properties cannot be measured like physical objects

- Physical objects can be measured (e.g. – use physical measurements to measure weight, size, etc.)
- Mental properties cannot be measured

5) Intentionality or About-ness

- Mental entities can refer to realities that are physical, something outside of themselves
- A tree is not about anything, it just is a physical object
- But you can have thoughts about the tree out there in the garden that needs water

6) Free will and personal responsibility

- If humans are purely physical, then all our actions are determined by sensory inputs and genetic programming
- Biological determinism is not compatible with free will, and free will is required for personal responsibility
- Our experience of moral choices and moral responsibility requires free will, and free will requires minds/souls

He spends the last 10 minutes of the podcast responding to naturalistic objections to the mind/soul hypothesis.

*Now in the podcast, Wallace does say that scientific evidence is not the best kind of evidence to use when discussing this issue of body/soul and mind/brain. But I did blog yesterday about two pieces of evidence that I think are relevant to this discussion: corroborated near-death experiences and mental effort.

You might remember that Dr. Craig brought up the issue of substance dualism, and the argument from intentionality ("aboutness"), in his debate with the naturalist philosopher Alex Rosenberg, so this argument about dualism is battle-ready. You can add it to your list of arguments for Christian theism along with all the other arguments like the Big Bang, the fine-tuning, the origin of life, stellar habitability, galactic habitability, irreducible complexity, molecular machines, the Cambrian explosion, the moral argument, the resurrection, biological convergence, and so on.

What does the concept of resurrection mean to Jewish theologians?

April 20, 2014 | by Wintery Knight | Link | Original Link

Here's a helpful post from Eric Chabot talks about this and other interesting topics related to the resurrection.

Excerpt:

> **Where do we see resurrection in the Hebrew Bible?**
>
> As just stated, belief in a resurrection of persons from the dead are seen in eight passages: (Job 19:26; Ps. 17:15; 49:15; 73:24; Is. 26:19; 53:10; Dn. 12:2;12:13). The resurrection terminology is seen in two places (Ezek. 37:1-14; Hos. 6:2) to show a national and spiritual restoration brought about by the return from the exile. As far as the nature of the future bodily resurrection, it may involve a corpse or the receipt of a material body comparable to the present physical body (Job 19:26; Is. 26:19), or it may be a matter of transformation (Dn. 12:2-3 and perhaps 12:13); or glorification after reanimation, in the case of the righteous.
>
> As far as the function of the resurrection, it may be personal vindication (Is. 26:16; 53:10-12). Resurrection may also have a function in relation to reward or punishment (Dn. 12:2; 12:13), an assumption to heaven and enriched fellowship with God (Ps. 49:15; 73:24,26), or preface to the beatific vision of God (Ps. 17:15 and possibly Job 19:26). (1)
>
> The Greek word for resurrection is "anatasis" which means "a raising up" or "rising." There are resuscitations in the Tanakh such as the example of Elijah and Elisha raising a person from death (1 Kings 17-23; 2 Kings 4:34-35). While these figures may have been raised in a resurrection sense, they were not raised immortal in the same way Jesus was.
>
> **Extra-Biblical Passages on Resurrection**
>
> There are also extra-biblical passages that speak about the resurrection (Enoch 92:2; 4 Ezra 7:32; Enoch 91:10; 2 Maccabees 7:9; 14; 28-29). Even the The Messiah Apocalypse, which is dated between 100 and 80 B.C.E mentions resurrection: "He [God] frees the captives, makes the blind see, and makes the bent over stand straight…for he will heal the sick, revive the dead, and give good news to the humble and the poor he will satisfy, the abandoned he will lead, and the hungry he will make rich." (2)
>
> In the Rabbinical literature there are explicit teachings on the resurrection. It says in the Mishnah 10.1, it says, "All Israelites have a share in the world to come; … and these are they that have no share in the world to come: he that says that there is no resurrection of the dead prescribed in the Law." Moses Maimonides, a Jewish rabbi and a medieval Jewish philosopher who has forever

> influenced the Jewish and non-Jewish world said:
>
> ” The resurrection of the dead is one of the cardinal principles established by Moses our teacher. A person who does not believe this principle has no real religion, certainly not Judaism. However, resurrection is for the righteous. This is the earning of the statement in Breshit Rabbah, which declares: “the creative power of rain is both for the righteous and the wicked, but the resurrection of the dead is only for the righteous.” Our sages taught the wicked are called dead even when they are still alive; the righteous are alive even when they are dead” (Bab. Talmud Brakhot 18 b).
>
> 3 points are made here: 1. Resurrection is a cardinal principle taught in the Torah which all Jews must believe 2. It is for the righteous alone 3. All men must die and their bodies decompose. (3)

It’s important to understand that the concept of resurrection had a meaning before Christianity ever started. And it’s interesting to ask why the early Christians applied the notion of resurrection to Jesus. What is the best explanation for their decision to do such a strange thing? Why not just give up on him and deny that he was the Messiah when he was killed by the Romans?

Nancy Pelosi’s brother-in-law gets $737M of taxpayers’ money to build solar plant

April 21, 2014 | by Wintery Knight | Link | Original Link

From the UK Daily Mail.

Excerpt:

> Nancy Pelosi is facing accusations of cronyism after a solar energy project, which her brother-in-law has a stake in, landed a $737 million loan guarantee from the Department of Energy, despite the growing Solyndra scandal.
>
> The massive loan agreement is raising new concerns about the use of taxpayers’ money as vast sums are invested in technology similar to that of the doomed energy project.
>
> The investment has intensified the debate over the effectiveness of solar energy as a major power source.
>
> The SolarReserve project is backed by an energy investment fund where the Minority Leader’s brother-in-law Ronald Pelosi is second in command.
>
> PCG Clean Energy & Technology Fund (East) LLC is listed as one of the investors in the project that has been given the staggering loan, which even dwarfs that given to failed company Solyndra.
>
> Other investors include one of the major investors in Solyndra, which is run by one of the directors of Solyndra.
>
> Steve Mitchell, who served on the board of directors at the bankrupt energy company, is also managing director of Argonaut Private Equity, which has invested in the latest project.
>
> Since Solyndra has filed for bankruptcy has been asked to testify about the goings on at the firm by two members of the House and ‘asked to provide documents to Congress’.
>
> […]The project approval came as part of $1 billion in new loans to green energy companies yesterday.

Did they learn anything from Solyndra? No:

> ‘The administration’s flagship project Solyndra is bankrupt and being investigated by the FBI, the promised jobs never materialised, and now the Department of Energy is preparing to rush out nearly $5 billion in loans in the final 48 hours before stimulus funds expire — that’s nearly $105 million every hour that must be finalised until the deadline,’ said Florida representative Cliff Stearns, who is chairman of the investigations subcommittee of the House Committee on Energy and Commerce.

Since Nancy Pelosi took over federal spending in January 2007, the national debt has increased from $8.5 trillion to about $17.5 trillion. That’s NINE TRILLION dollars in new spending. And much of it just handed off to the people and groups who got the Democrats elected 2008 and 2012.

Those who complain about “income inequality” should not ignore single motherhood

April 21, 2014 | by Wintery Knight | Link | Original Link

From the Wall Street Journal of all places.

Excerpt:

> The two-parent family has declined rapidly in recent decades. In 1960, more than 76% of African-Americans and nearly 97% of whites were born to married couples. Today the percentage is 30% for blacks and 70% for whites. The out-of-wedlock birthrate for Hispanics surpassed 50% in 2006. This trend, coupled with high divorce rates, means that roughly 25% of American children now live in single-parent homes, twice the percentage in Europe (12%). Roughly a third of American children live apart from their fathers.
>
> Does it matter? Yes, it does.
>
> […]In an essay for the Institute for Family Studies last December, called “Even for Rich Kids, Marriage Matters,” University of Virginia sociologist W. Bradford Wilcox reported that children in high-income households who experienced family breakups don’t fare as well emotionally, psychologically, educationally or, in the end, economically as their two-parent-family peers.
>
> Abuse, behavioral problems and psychological issues of all kinds, such as developmental behavior problems or concentration issues, are less common for children of married couples than for cohabiting or single parents, according to a 2003 Centers for Disease Control study of children’s health. The causal pathways are about as clear as those from smoking to cancer.
>
> More than 20% of children in single-parent families live in poverty long-term, compared with 2% of those raised in two-parent families, according to education-policy analyst Mitch Pearlstein’s 2011 book “From Family Collapse to America’s Decline.” The poverty rate would be 25% lower if today’s family structure resembled that of 1970, according to the 2009 report “Creating an Opportunity Society” from Brookings Institution analysts Ron Haskins and Isabel Sawhill. A 2006 article in the journal Demography by Penn State sociologist Molly Martin estimates that 41% of the economic inequality created between 1976-2000 was the result of changed family structure.
>
> Earlier this year, a team of researchers led by Harvard economist Raj Chetty reported that communities with a high percentage of single-parent families are less likely to experience upward mobility. The researchers’ report—”Where Is the Land of Opportunity?”—received considerable media attention. Yet mainstream news outlets tended to ignore the study’s message about family structure, focusing instead on variables with far less statistical impact, such as residential

> segregation.

So where does single motherhood by choice come from? The libertarian Cato Institute explains:

> [T]he evidence of a link between the availability of welfare and out-of-wedlock births is overwhelming. There have been 13 major studies of the relationship between the availability of welfare benefits and out-of-wedlock birth. Of these, 11 found a statistically significant correlation. Among the best of these studies is the work done by June O'Neill for the U.S. Department of Health and Human Services. Holding constant a wide range of variables, including income, education, and urban vs. suburban setting, the study found that a 50 percent increase in the value of AFDC and foodstamp payments led to a 43 percent increase in the number of out-of-wedlock births.(7) Likewise, research by Shelley Lundberg and Robert Plotnick of the University of Washington showed that an increase in welfare benefits of $200 per month per family increased the rate of out-of-wedlock births among teenagers by 150 percent.(8)
>
> The same results can be seen from welfare systems in other countries. For example, a recent study of the impact of Canada's social-welfare system on family structure concluded that "providing additional benefits to single parents encourages births of children to unwed women."(9)
>
> […]Until teenage girls, particularly those living in relative poverty, can be made to see real consequences from pregnancy, it will be impossible to gain control over the problem of out-of- wedlock births. By disguising those consequences, welfare makes it easier for these girls to make the decisions that will lead to unwed motherhood.

So, if the Democrats opposed income inequality, they would oppose single motherhood by choice, and they would oppose the welfare that causes single motherhood by choice.

But of course the Democrats oppose none of those things, and they have worked to undermine the 1996 Welfare Reform bill while at the same time expanding the welfare payments that make single motherhood easier.

China on course to become ‘world’s most Christian nation’ within 15 years

April 21, 2014 | by Wintery Knight | Link | Original Link

Story from the UK Telegraph.

Excerpt:

> Officially, the People’s Republic of China is an atheist country but that is changing fast as many of its 1.3 billion citizens seek meaning and spiritual comfort that neither communism nor capitalism seem to have supplied.
>
> Christian congregations in particular have skyrocketed since churches began reopening when Chairman Mao’s death in 1976 signalled the end of the Cultural Revolution.
>
> Less than four decades later, some believe China is now poised to become not just the world’s number one economy but also its most numerous Christian nation.
>
> “By my calculations China is destined to become the largest Christian country in the world very soon,” said Fenggang Yang, a professor of sociology at Purdue University and author of Religion in China: Survival and Revival under Communist Rule.
>
> “It is going to be less than a generation. Not many people are prepared for this dramatic change.”
>
> China’s Protestant community, which had just one million members in 1949, has already overtaken those of countries more commonly associated with an evangelical boom. In 2010 there were more than 58 million Protestants in China compared to 40 million in Brazil and 36 million in South Africa, according to the Pew Research Centre’s Forum on Religion and Public Life.
>
> Prof Yang, a leading expert on religion in China, believes that number will swell to around 160 million by 2025. That would likely put China ahead even of the United States, which **had around 159 million Protestants in 2010 but whose congregations are in decline**.
>
> By 2030, China’s total Christian population, including Catholics, would exceed 247 million, placing it above Mexico, Brazil and the United States as the largest Christian congregation in the world, he predicted.
>
> “Mao thought he could eliminate religion. He thought he had accomplished this,” Prof Yang said. “It’s ironic – they didn’t. They actually failed completely.”

Previously, I had blogged about how the Christians in China were rebelling against the Chinese authorities to prevent them from demolishing their churches. It’s not a perfect country at all, but at least there is some good news there.

Josie Cunningham case shows real reasons some women choose abortion

April 22, 2014 | by Wintery Knight | Link | Original Link

The UK Daily Mirror reports.

Excerpt:

> Wannabe celebrity Josie Cunningham last night confessed the chance of appearing on TV's Big Brother was worth more than her unborn child's life.
>
> Puffing on a cigarette and rubbing her baby bump, the controversial model and call girl – who will have her abortion at a clinic this week – said: "I'm finally on the verge of becoming famous and I'm not going to ruin it now.
>
> "An abortion will further my career. This time next year I won't have a baby. Instead, I'll be famous, driving a bright pink Range Rover and buying a big house. Nothing will get in my way."
>
> Josie, 23, is already 18 weeks pregnant by either an escort agency client or a Premier League footballer.
>
> […]Josie – who caused outrage in 2013 when she demanded a £4,800 boob job on the NHS to become a glamour model – said: "Channel 5 were keen to shortlist me then they found out I was pregnant.

She's used to taking money from the NHS:

> "Suddenly I was pregnant and I could get free dental work on the NHS, so I got a tooth straightened for cosmetic reasons, and it all seemed great.
>
> […]"It's not ideal situation and I wish I had never fallen pregnant. I'm not on the Pill and in December the condom split when I was sleeping with a client.
>
> "Then I had sex with a footballer and didn't use contraception at all. I'd known him for years and we'd had sex before. I didn't even think about the morning after pill."
>
> The footballer and the client – who is a high-flying surgeon – both offered to support Josie financially if she had the baby. But she said no.
>
> So the footballer agreed to pay for the abortion at a London private clinic.
>
> […]Josie – already mum to boys Harley, six, and Frankie, three – said: "I've had five miscarriages so the one good thing about the pregnancy is that it has shown me I can still carry beyond 12 weeks.
>
> "I'm a good mum but this is something I have wanted for so long. I can't give up my big break for anything."

Later in the article, she is quoted saying that she is "a good mother" in spite of the fact that she is "still smoking up to 10 cigarettes a day and drinking" with an unborn child

whom she intends to murder.

Daniel Rodger, who writes at the LTI blog, thinks he knows why this sort of thing is happening more often.

Excerpt:

> The way in which Josie talks about her unborn child as if they are something disposable and fickle exposes how successful the dehumanising of the unborn has been in the UK. The maternal relationship is now seen as something tentative and conditional. The unborn must meet societies standards of normalcy before they are allowed to continue their existence, that is providing they come at the right time.
>
> Francis Schaeffer once said that the two values of middle-class America were affluence and personal peace and I think they're also applicable in the UK, and you can see these values reflected in Josies' reasoning. By affluence Schaeffer meant the acquisition of things and more things, that's why Josie wants her pink Range Rover and big house, if her unborn baby gets in her way to achieving those ends (utilitarian reasoning) its the unborn baby who loses. Personal peace simply means wanting your own lifestyle undisturbed regardless of the effects on others and in this case the unborn functions as a disturbance to her personal peace.

Abortion is definitely very much at home in a secular worldview where it's OK for the strong to mistreat the weak. I would suggest that we all examine ourselves and decide whether our own personal affluence and happiness is more important than someone else's life – and especially of our own children's life. That little child didn't ask to be made by that woman, but her decision to have sex did make him, and now she is responsible. Single motherhood is a terrible thing, but it's a worse thing to kill a child. The best policy is to not have sex until both people are ready to welcome a child into the world.

Large-scale UK study confirms the importance of fathers to children

April 22, 2014 | by Wintery Knight | Link | Original Link

Dina sent me this article from the UK Daily Mail.

Excerpt:

> A father's love is as important to a child's emotional development as a mother's, a large-scale study has confirmed.
>
> Examining the cases of more than 10,000 sons and daughters revealed how a cold or distant father can damage a child's life, sometimes for decades to come.
>
> The review of 36 studies from around the world concluded that his love is at least as important to youngsters as that of their mothers.
>
> Researcher Professor Ronald Rohner said that fatherly love is key to development and hopes his findings will motivate more men to become involved in caring for their offspring.
>
> 'In the US, Great Britain and Europe, we have assumed for the past 300 years that all children need for normal healthy development is a loving relationship with their mother,' he said.
>
> 'And that dads are there as support for the mother and to support the family financially but are not required for the healthy development of the children.
>
> 'But that belief is fundamentally wrong. We have to start getting away from that idea and realise the dad's influence is as great, and sometimes greater, than the mother's.'
>
> His conclusions came after he examined data from studies in which children and adults were asked how loving their parents were.
>
> Questions included if they were made to feel wanted or needed, if their parents went out of their way to hurt their feelings and if they felt loved.
>
> Those taking part also answered questions about their personality. These ranged from 'I think about fighting or being mean' to 'I think the world is a good, happy place'.
>
> Tallying the results showed that those rejected in childhood felt more anxious and insecure as well as hostile and aggressive.
>
> Many of the problems carried over into adulthood, reported the study published in the journal Personality and Social Psychology Review.
>
> Crucially, a father's love was often just as important as a mother's. In some cases, it was even more so. One reason for this may be that rejection is more painful when it comes from the parent the child regards as more powerful or respected.

You can read more about how fatherlessness damages children here.

I think the first question we should ask the people who want to redefine marriage is this: “which parent to do you think that a child can do without? the mother or the father?”. We must do everything we can as a society to keep both of a child’s natural parents in the home while the child grows up. If we really care about children, then we should prefer to meet their needs, even if the grown-ups have to be a bit more responsible in their decision making. if the conflict is between innocent children and selfish grown-ups, then the children should win.

We need laws and policies that promote traditional marriage, not laws and policies that break it down and destroy it. Repealing no-fault divorce, lowering subsidies for single motherhood, and making shared parenting the default position, would all help solve the problem. Policies like school choice and lower corporate tax rates helps men to be able to perform in their role as provider. We have to be practical and ask: “what makes men capable of marriage and parenting?” If we want strong fathers, then it makes sense to ask how to make fatherhood more reasonable: what do men need in order to do what we want them to do?

Christians should be especially concerned about the presence of fathers, given the evidence I blogged about before showing how the presence of quality fathers is essential for passing Christian beliefs on to children. Churches need to ask themselves tough questions: Are we teaching women how to choose men based on practical concerns and proven abilities in our churches? And are we doing a good job of attracting men to churches by promoting the masculine, practical aspects of Christianity that men like – like science, apologetics debates, economics and foreign policy?

Survey: Christian mothers value family over their relationship with Jesus

April 22, 2014 | by Wintery Knight | Link | Original Link

My deist friend ECM sent me this shocking article from Church for Men blog. Please read, then read my comments below.

Excerpt:

> When forced to choose their top priority in life, Christian women overwhelmingly pick family over faith, according to a survey from Barna Research. Five times more women chose "being a mother or parent" than chose "being a follower of Christ," as their most important role in life.
>
> These stunning survey results give us a clue as to why Christianity is so rapidly changing into a family-centered faith; why Christian culture is feminizing; and why the gender gap in many denominations continues to grow.
>
> The researchers wrote:
>
> [Women's] spiritual lives are rarely their most important source of identity. That role is taken up by the strong priority Christian women place on family.
>
> The preeminence of family was most overt for Christian women when it came to naming the highest priority in their lives. More than half (53%) says their highest priority in life is family. By contrast, only one third as many women (16%) rate faith as their top priority, which is less than the cumulative total of women who say their health (9%), career performance (5%) or comfortable lifestyle (5%) are top on their list of life objectives.
>
> Despite the characterization of women as intricately connected to their peers, only 3% of Christian women say their friends are their top priority, equal to those who place finances (2%) and leisure (1%) at the top.
>
> Women's sense of identity very closely follows their priorities, with 62% of women saying their most important role in life is as a mother or parent. Jesus came next: 13% of Christian women believe their most important role in life is as a follower of Christ. In third place is their role as wife (11%).
>
> Any other roles women identify with came in at similarly low rankings and far below that of a parent, including that of employee or executive (3%), that of church member (2%) and that of friend or neighbor (2%). American citizen, teacher and caregiver all rank with one percent each.
>
> The researchers continue:
>
> Perhaps not surprisingly given where they place their identity, Christian women also point to family-related objectives as their most important goal in life. Raising their children well is the highest goal for Christian women (36%). While, roughly one quarter of Christian women identify faith-oriented goals as most important

> (26%).
>
> Though women consider themselves family-driven, their marriages may be suffering from a lack of intentionality: only 2% of Christian women say their most important goal in life is to enhance their relationship with their significant other. Marriage comes in below several other goals, including health (6%), career (5%), lifestyle (4%), personal growth (4%), morality (4%) and financial objectives (3%). Only goals related to personal appearance, relationships outside the home and travel come in lower than marital goals.

And I will include one paragraph from the author of the post:

> While the Bible certainly endorses interpersonal harmony, Scripture is not chock-full of happy relationship advice. When Jesus spoke of relationships he usually predicted their demise (Matt. 10:34-35), or promised rewards for people who abandoned their loved ones (Luke 18:29-30). God takes no delight in dysfunctional relationships, but neither did he send his son so you could be at peace with your kids.

I have to quote that because I rebelled against both my parents in order to become an evangelical Protestant. First one in the family.

Now I have something to say about this survey data.

I get a lot of flak for my 10 courting questions that are designed to evaluate a woman's worldview prior to any commitment being made. Men and women alike often tell me to lower my standards. The idea that the marriage is supposed to serve God has no traction with most young evangelicals today. Everything is about emotions and appearances and peer approval and complying with the secular culture. You choose a person who will improve your self-esteem and impress your friends. Who cares what their worldview is? The main things in life are happiness, health and wealth, right?

The 10 courting questions are designed to help a Christian man make sure that his wife is going to support him in serving God and making the relationship count for God. They are also designed to make sure that his wife will do everything possible to guarantee that his children remain Christians throughout their lives. The simple fact of the matter is that men are away at work most of the time doing stuff to make money. The man's wife is the one who is going to be at home doing the more important work of making sure that his children learn about God, and can resist the culture.

The danger you want to avoid is a situation where your wife is not able to explain to the children how Christianity is rooted in reason and evidence. Your wife needs to be informed and passionate about Christian apologetics, public knowledge related to the Christian worldview and public policies that affect the execution of a Christian life plan. If she divorces Christianity from truth, then she will not be able to answer the questions of your children, or deal with their doubts, or anticipate threats to their faith (e.g. – the pluralism/relativism at the university), or help them to resist secular popular culture, or explain non-Biblical reasons for various Christian views now unpopular with the culture,

e.g. – premarital sex, gay marriage, global warming socialism. And so on.

If your children are raised to think that Christianity is an arbitrary set of rules that cannot be debated or questioned, all in the name of family happiness and respectability, then as soon as they get to university, they will rebel. So the first priority can never be "family" – the first priority has to be truth. Christianity is not a tool to achieve happiness in the home, or respectability with the neighbors. Having family as a priority can cause questions and doubts about Christian truth claims to be swept under the rug. That works for a while, but as soon as the kids hit university, they will drop their Christian faith like a hot potato. A better idea is to focus more on truth and open discussion, and let all the doubts and questions and discomfort about being different come out in the open while the kids are growing up.

Christian men, choose your wife wisely. She has to be a thinker. She has to be a fighter. And you have to lead her during the courtship to take Christian worldview and apologetics seriously.

UPDATE: This survey made me think of this phone call – listen carefully to the mother's response to her son's atheism: "How dare you embarrass the family, what will the neighbors think?". Have a listen – does this response ring true to you?

It's all about family (and how the family is perceived in the community), and nothing about truth. Nothing about knowledge.

UPDATE: Got an anonymous response from a husband:

> I recently read your post on women choosing family over faith and I fear that I may have a wife that falls into that category. We got married when I was a very young Christian and while I am maturing in my faith, I see little to no passion or growth in her to follow after Christ (though she goes to church with me, prays multiple times a day and sings praise songs often). I have tried to gently lead her to a more intimate relationship with Christ, but nothing I do seems to help much.

He wanted advice for men in this situation, but that would be another post for another time. In the meantime, bring it up during the courting, and expect to every wife candidate demonstrate initiative and interest in bringing apologetics into the church and university – as well as mentoring co-workers and neighbors.

Canada surpasses USA to lead the world in median income after taxes

April 23, 2014 | by Wintery Knight | Link | Original Link

From the radically leftist New York Times, of all places.

Excerpt:

> The American middle class, long the most affluent in the world, has lost that distinction.
>
> While the wealthiest Americans are outpacing many of their global peers, a New York Times analysis shows that across the lower- and middle-income tiers, citizens of other advanced countries have received considerably larger raises over the last three decades.
>
> After-tax middle-class incomes in Canada — substantially behind in 2000 — now appear to be higher than in the United States. The poor in much of Europe earn more than poor Americans.
>
> The numbers, based on surveys conducted over the past 35 years, offer some of the most detailed publicly available comparisons for different income groups in different countries over time. They suggest that most American families are paying a steep price for high and rising income inequality.
>
> Although economic growth in the United States continues to be as strong as in many other countries, or stronger, a small percentage of American households is fully benefiting from it. Median income in Canada pulled into a tie with median United States income in 2010 and has most likely surpassed it since then. Median incomes in Western European countries still trail those in the United States, but the gap in several — including Britain, the Netherlands and Sweden — is much smaller than it was a decade ago.
>
> In European countries hit hardest by recent financial crises, such as Greece and Portugal, incomes have of course fallen sharply in recent years.
>
> […]The struggles of the poor in the United States are even starker than those of the middle class. A family at the 20th percentile of the income distribution in this country makes significantly less money than a similar family in Canada, Sweden, Norway, Finland or the Netherlands. Thirty-five years ago, the reverse was true.

Thanks Obama! Canada is doing very well with their conservative prime minister, but things are not so good down here.

New study: Teens with involved fathers more likely to graduate from college

April 23, 2014 | by Wintery Knight | Link | Original Link

Here's an article by W. Bradford Wilcox from the American Enterprise Institute.

Excerpt:

> Family scholars from sociologist Sara McLanahan to psychologist Ross Parke have long observed that fathers typically play an important role in advancing the welfare of their children.[2] Focusing on the impact of family structure, McLanahan has found that, compared to children from single-parent homes, children who live with both their mother and father have significantly lower rates of nonmarital childbearing and incarceration and higher rates of high school and college graduation.[3] Examining the extent and style of paternal involvement, Parke notes, for instance, that engaged fathers play an important role in "helping sons and daughters achieve independent and distinct identities" and that this independence often translates into educational and occupational success.[4]
>
> Likewise, a US Department of Education study found that among children living with both biological parents, those with highly involved fathers were 42 percent more likely to earn As and 33 percent less likely to be held back a year in school than children whose dads had low levels of involvement.[5] But little research has examined the association between paternal involvement per se and college graduation.
>
> I investigated that association by using data from the National Longitudinal Study of Adolescent Health (Add Health), a study of a nationally representative sample of adolescents who were in grades 7–12 in the 1994–95 school year.[6] The Add Health data indicate that young adults who had involved fathers when they were in high school are significantly more likely to graduate from college.
>
> […]Compared to teens who reported that their fathers were not involved, teens with involved fathers were 98 percent more likely to graduate from college, and teens with very involved fathers were 105 percent more likely to graduate from college (see figure 1, which adjusts for socioeconomic background).[7] Clearly, young women and men with more engaged fathers are more likely to acquire a college diploma than their peers without such a father.

I would think that fathers are helpful for keeping children out of trouble, warning them away from threats, helping them to do their homework and get jobs, and showing them the value of work and frugality. I think that in general, fathers have a concern that their children will not be able to provide for themselves and will starve. They tend to try to push their kids into harder subject areas that pay more, instead of letting the kids decide what makes them happy. And it's good for kids that fathers do those roles – it makes a

difference.

Videos from the Tactical Faith Resurrection Weekend 2014

April 23, 2014 | by Wintery Knight | Link | Original Link

All 9 videos from the Tactical Faith conference last weekend have now been posted on Youtube:

- "What was the crucifixion like?" – Mike Licona 48:21
- "The New Testament: Text, Translation, Canon" – Mike Licona 46:51
- Logos Bible Software presentation – Greg Monette 17:13
- "The Burial of Jesus" – Greg Monette 49:08
- "iWitness: Evangelism and the Cross" – Doug Powell 42:14
- "Why are there differences in the gospels?" – Mike Licona 1:06:38
- Shroud of Turin – Dave Glander 52:58
- "Resurrection: A Creedal Defense" – Shawn White 50:37
- "Did Jesus Rise from the Dead?" – Mike Licona 39:13

Here's the last one in that list, which I watched and liked:

A very impressive line-up of scholars from Tactical Faith.

DOJ announces plan to release prisoners convicted of drug offenses

April 24, 2014 | by Wintery Knight | Link | Original Link

Story from Fox News.

Excerpt:

> The Justice Department moved Wednesday to significantly expand the number of people eligible for clemency, issuing new guidelines allowing certain prisoners who already have served at least 10 years behind bars to apply for release.
>
> The initiative is part of a broader Obama administration effort to ease sentences for nonviolent drug offenders.
>
> […]DOJ leaders… argue that the new clemency changes are meant to address inconsistencies in sentences over time. The announcement is aimed primarily at drug prisoners, especially those sentenced under old guidelines that resulted in significantly harsher penalties for people caught with crack cocaine than for those who possessed the powder form of the drug. But it also applies to federal inmates imprisoned for other crimes, provided they meet the same criteria for clemency.

Keep in mind that this is the same DOJ that oversaw the sale of assault weapons to Mexican drug cartels. At least one of which was later used to kill a Border Patrol officer. So no one should be surprised where they come down when the rights of the law-abiding conflict with the rights of criminals.

It would be nice if criminals who are released would only commit future crimes against the people who are making the decision to release them. But unfortunately that's not what happens. Instead, the people who are released will go to the poorest communities and commit more crimes there. It's the poorest people who have to bear the consequences for this "compassion".

Everyone celebrate diversity: three married lesbians set to raise fatherless children

April 24, 2014 | by Wintery Knight | Link | Original Link

Dina tweeted this UK Daily Mail article about three Massachusetts (where else?) lesbians.

Excerpt:

> The world's only 'married' lesbian threesome are expecting their first child.
>
> Doll, Kitten and Brynn, from Massachusetts, were joined together in a marriage-style ceremony last August and are expecting a daughter in July.
>
> Kitten, 27, is pregnant after undergoing IVF treatment using an anonymous sperm donor, and the trioeventually plan to have three children – one for each of them.
>
> […]Doll, Kitten and Brynn Young married in a ceremony in August 2013, when each of their fathers walked them down the aisle. All three women wore white wedding gowns and exchanged rings.

All three of the women will be so happy, and what's the harm? Children don't need fathers. Well, maybe they do, since that's what the research says. BUT who cares what children need? They are just objects to amuse the adults anyway, am I right? Of course I am. I'm sure that child, when he grows up, is going to be so thankful to these women for her conception by anonymous sperm donor. That's not going to cause any problems at all, will it? Young women do so well without fathers.

J. Warner Wallace's surprising advice to stop apostasy among young Christians

April 24, 2014 | by Wintery Knight | Link | Original Link

J. Warner Wallace has posted his recommended plan to halt the exodus of young Christians from Christianity during college.

It's all up at Cold Case Christianity.

Excerpt:

> In my last post, I summarized the studies and publications that describe the flight of young people from the Church. A compelling cumulative circumstantial case can be made to support the fact that young college aged Christians are walking away from Christianity in record numbers. What can we do about it? What *can* be done? Whenever people ask me this question, I always say the same thing. STOP TEACHING YOUNG CHRISTIANS. Just stop it. Whatever Christendom is doing in its effort to teach it's young, the effort appears to largely be a failure. In fact, Ken Ham (in his book, *Already Gone:Why Your Kids Will Quit Church and What You Can Do To Stop It*) found that young Christians who faithfully attended Bible classes were actually more likely to question the authority of Scripture, more likely to defend the legality of abortion, same-sex marriage, and premarital sex, and more likely to leave the church! What's going on here? I think I know. It's time to stop teaching our young people; it's time to start training them.
>
> There's a difference between teaching and training. Training is teaching in preparation for a battle. Boxers train for upcoming fights. In fact, boxers are sometimes known to get fat and lazy until the next fight is scheduled. Once the date has been signed, fighters begin to train in earnest. Why? Because they know that they are going to eventually get in the ring and face an aggressive opponent. We train when we know we are about to encounter a battle. Imagine for a moment that you are enrolled in an algebra class. If the teacher assured you that you would never, ever be required to take a test, and that you would pass the class regardless of your level of understanding, how hard do you think you would study? How deeply do you think you would come to understand the material? How committed do you think you would be to the material?
>
> […]Years ago, as a youth pastor, I started taking annual trips to Salt Lake City and Berkeley. Why? I was scheduling theological and philosophical battles to help prepare my young Christians for the larger looming battle they would someday face on their own. If you want to teach your young people theology, there is no better method than to put them in direct contact with people who believe in a very sophisticated heresy. Mormons use the same terminology as Christians but deny the basic tenants of our faith. In order to dialogue with Mormons effectively, we first have to understand what *we* believe. When we train young people in

> preparation for an evangelism trip to Salt Lake City, we give meaning and purpose to the content of our teaching. In a similar way, our evangelistic trips to Berkeley (where we contact notable atheist speakers and atheist groups on campus) require us to prepare ourselves to answer the myriad of atheistic objections we will inevitably encounter. Once again, the content of our teaching in preparation for this trip takes on purpose and meaning when we know the level of our understanding will eventually be tested.

Read the whole thing. Wallace has experience working with young people, and lecturing on apologetics here at home and abroad. He understands young people because he has had to deal with them. Even if you don't agree with them, it's an interesting view. Would the church really turn away from being inward-focused and rooted in blind faith and emotional singing, and re-invent their approach so that it takes the other side seriously?

By the way, this is something I like to use in my mentoring of young people and in courting women as well. If I am trying to choose someone to work on, my first questions are always about what they do for a living, what they've studied, who in their lives is a non-Christian. I am always looking for people who have some opposition to Christianity in their lives, because it's those people who have a motivation to learn. I am always surprised how naive pastors and worship leaders and youth pastors are about the opposition to Christianity in the world. They seem to be in their own little happy bubbles, never coming out to deal with people who disagree with them. I think the problem is that they often think that Christianity is not about truth but about feelings, and so no work needs to be done to defend any truth claims.

Ontario Law Society bans graduates of Christian university from practicing law

April 25, 2014 | by Wintery Knight | Link | Original Link

Political map of Canada

The government-run leftist CBC reports. (H/T Kevin)

Excerpt:

> The Law Society of Upper Canada has voted 28 to 21 against the accreditation of Trinity Western University's proposed new law school in B.C.
>
> The vote means graduates from the B.C. university would not be able to practise in Ontario.
>
> "Benchers took this issue very seriously, and did not find it easy to reach a decision," said the Law Society of Upper Canada's treasurer, in a written statement.
>
> "As members of the legal profession, we recognize the entrenched values of Canada's Charter of Rights and Freedoms, and Ontario's Human Rights Code, including the right of equality and the right to freedom of religion, and the foundational nature of those rights to our democracy."
>
> Trinity Western University students must sign a strict Christian covenant governing behaviour, including abstaining from sexual intimacy "that violates the sacredness of marriage between a man and a woman."
>
> Critics say the covenant essentially bans anyone in a gay relationship from enrolling in the school.
>
> Earlier this month, the West Coast Legal Education Action Fund, a non-profit

> organization founded to ensure women’s equality rights under the law, argued against the university law school’s accreditation in B.C.

It’s important to note that Canada was one of the first countries to legalize same-sex marriage, so they are a sort of crystal ball for us to see what happens when a country does that. In my opinion, when people say “I am for same-sex marriage”, what they really mean is that if you disagree with them on that, then you need to be forced to agree with them, or else. That is what happens when the definition of marriage in society changes and dissent becomes a crime. Just ask Frank Turek or Brendan Eich how tolerant the gay left is of different views.

Marrying a non-Christian: does the Bible allow it?

April 25, 2014 | by Wintery Knight | Link | Original Link

I think that the best way to answer the question, “should I marry a non-Christian?”, is to ask whether it makes any difference if your spouse is on board with your plans for your ministry and with your marriage. So let’s take a look at a case where someone famous who chose a Christian wife, and we’ll see how much that decision affected his ministry and his marriage.

I want to draw your attention to a talk on “Vision in Life” given by Dr. William Lane Craig. Dr. Craig is the ablest defender of the Christian faith operating today. He has done formal academic debates with all of the best known atheists on major university campuses in front of *thousands* of university students. This list of atheists and agnostics includes people like Christopher Hitchens and Victor Stenger. The Hitchens debate took place in an auditorium filled with 5000 students, and many thousands more were watching at churches all over the world. How did Dr. Craig get these opportunities to evangelize on secular university campuses?

Well, he owes a lot of his success to his amazing wife Jan, as we shall see in the summary of his talk on that topic.

The MP3 file is here. (32 minutes)

This talk was Dr. Craig’s chapel address to Biola University students, and he is introduced by his son, John, a Biola University grad.

In the talk, it becomes clear that Bill’s wife Jan plays an *enormous* role in his success. Indeed, you will see that if it were not for her, he never would have gotten *either* of his doctorates, or even his second Masters degree. Why was she so supportive of his plans? Because she had the same broad goal of evangelism through scholarship. Let’s see how she encouraged him.

Here is a quotation that occurs about 11 minutes into the talk, as Bill describes the completion of his Bachelor’s degree at Wheaton:

> And it was at Wheaton that my vision began to focus on presenting the gospel in the context of giving an intellectual defense of the faith, to appeal not only to the heart but also to the head, as well. And so I determined that I would go on to seminary for further training.
>
> But, my senior year, in chapel, we heard a speaker who challenged us, before going on to further education, to take a couple of years out, and to wring out the sponge, so to speak, that had been soaking up all that knowledge, and to work with university students while we were still about the same age.
>
> And so I joined the staff of Campus Crusade for Christ for 2 years, and was assigned to Northern Illinois University. And that was where I met my wife Jan. She was a graduate of the University of North Dakota where she had come to

> faith in Christ. And she had a similar vision for her life of evangelism and discipleship.
>
> And as we worked at NIU together, she with gals and I with the guys, leading students to Christ and discipling them to walk with the Lord, we fell in love. And we decided that we would be more effective if we joined forces and became a team.

It is at this point in the talk where Bill begins to explain just how Jan molded him into the lean, mean debating machine that travels the world striking terror into the hearts of atheists.

Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

In an article on his web site, he talks about how Jan encouraged him to do his first Ph.D:

> As graduation from Trinity neared, Jan and I were sitting one evening at the supper table in our little campus apartment, talking about what to do after graduation. Neither of us had any clear leading or inclination of what we should do next.
>
> So Jan said to me, "Well, if money were no object, what would you really like to do next?"
>
> I replied, "If money were no object, what I'd really like to do is go to England and do a doctorate under John Hick."
>
> "Who's he?" she asked.
>
> "Oh, he's this famous British philosopher who's written extensively on arguments for the existence of God," I explained. "If I could study with him, I could develop a cosmological argument for God's existence."
>
> But it hardly seemed a realistic idea.

> The next evening at supper Jan handed me a slip of paper with John Hick's address on it. "I went to the library today and found out that he's at the University of Birmingham in England," she said. "Why don't you write him a letter and ask him if you can do a doctoral thesis under him on the cosmological argument?"
>
> What a woman! So I did, and to our amazement and delight Professor Hick wrote back saying he'd be very pleased to supervise my doctoral work on that subject. So it was an open door!

And in the same article, he explains how Jan encouraged him to get his second Ph.D:

> As Jan and I neared the completion of my doctoral studies in Birmingham, our future path was again unclear to us. I had sent out a number of applications for teaching positions in philosophy at American universities but had received no bites. We didn't know what to do.
>
> I remember it like yesterday. We were sitting at the supper table in our little house outside Birmingham, and Jan suddenly said to me, "Well, if money were no object, what would you really *like* to do next?"
>
> I laughed because I remembered how the Lord had used her question to guide us in the past. I had no trouble answering the question. "If money were no object, what I'd really like to do is go to Germany and study under Wolfhart Pannenberg."
>
> "Who's he?"
>
> "Oh, he's this famous German theologian who's defended the resurrection of Christ historically," I explained. "If I could study with him, I could develop a historical apologetic for the resurrection of Jesus."
>
> Our conversation drifted to other subjects, but Jan later told me that my remark had just lit a fire under her. The next day while I was at the university, she slipped away to the library and began to research grants-in-aid for study at German universities. Most of the leads proved to be defunct or otherwise inapplicable to our situation. But there were two grants she found that were possibilities. You can imagine how surprised I was when she sprung them on me!

Both of these Ph.D experiences are also described in the talk. And the talk concludes as follows:

> I am so thankful to be married to a woman who is tremendously resourceful, tremendously talented and energetic, who could have pursued an independent career in any number of areas, but instead, she has chose to wed her aspirations to mine, and to make it her goal to make me the most effective person I can be, for Christ. And she has been like my right arm in ministry over these many years. And it is a tremendous privilege to be a team with a person like that.
>
> And you young men, I would encourage you, if you marry, to find a gal who

> shares your vision, not some independent vision, but who is interested in aligning herself with you, and pursuing together a common vision and goal that will draw you [together], so that you will avoid the growing separateness that so often creeps into marriages.

And now you know the rest of Bill's story. *The person you marry will have an enormous influence on the impact you will have for Christ and his Kingdom.* It is up to you to decide whether that influence is going to be positive or negative, by deciding if you will marry, and if you do marry, by deciding whom you will marry. If you marry a non-Christian, you cannot expect to achieve the same things for God as you can with someone who accepts your core convictions and is willing to sacrifice their happiness so that God can be made happier.

You may also be interested in this talk given by William Lane Craig, entitled "Healthy Relationships" (National Faculty Leadership Conf. 2008) (audio here) In that talk, he offers advice to Christians who want to have a marriage that is consistent with their Christian faith.

Can a person be a committed Christian while ignoring apologetics?

April 26, 2014 | by Wintery Knight | Link | Original Link

I would like to describe a situation that arises frequently that concerns me. The situation I describe below brings out a flaw I see in the way that rank-and-file Christians respond to criticisms of Christianity in the public square.

Here is the situation

Eve is busy programming away at her desk, rushing to check in her unit tests so she can spend her lunch hour reading the latest Stephenie Meyer novel, or check on the schedule for her local sports team, "the Vicariouses" (she has tickets for Thursday). Suddenly Eve hears Alice talking to Bob on the other side of her cubicle. She stops typing to listen to the following unencrypted conversation.

Alice: I was watching a documentary on the Discovery Channel last night that said that the universe has always existed, so there is no God!

Bob: I was watching a documentary on PBS last night showing simulations of how the first life started on Earth! God didn't do it!

Alice: I saw "Inherit the Spin" on the weekend! The only reason people oppose evolution is because of the Bible! Not because of science!

Bob: I'm going to see "The Va Dinci Code" this weekend! It says that the Gospels are unreliable and that Jesus didn't even die on the cross!

Alice: I just bought the latest Dichard Rawkins book "Christians Should Be Fed to Lions and the Bible Should Be Burned"!

Bob: I will read that as soon as I finish Histopher Chritchens' book "Why God is the Evilest, Stupidest Person in the World"!

Eve double-majored in business and computer science at the Indian Institute of Technology, and has an MBA from the London School of Economics. She has spent a ton of time, effort and money studying very difficult subjects for her job, and she even publishes research papers. She works full-time and runs her own business part-time, and teaches night classes for a well-known university. She earns about 200K per year. She lives in a huge house, drives an expensive car, and goes on vacation abroad to all the best vacation spots.

Eve thinks she is a Christian. She has attended church since childhood, her husband is a church elder and she sings in the church choir. She reads the Bible and prays every night, because it helps her to get sleepy before bed. She gives lots of money to the poor. She teaches Sunday school to very small children. She has even read all of the Narnia novels *five times*! She even has a calendar filled with nature scenes and itsy-bitsy, teeny-weeny Bible verses posted on her office wall at work! Judging from all of these facts, you might expect Eve to get in on that conversation with Alice and Bob, and set them

straight.

But she won't. Why not?

Why won't Eve stand?

I am wondering if anyone can explain to me why it is that most church Christians are not able or not willing to make a public defense when God's reputation is called into question. It seems to me that there are two bad effects that follow from Eve's unwillingness to stand up and invite Alice and Bob to lunch so that she can address their questions and concerns.

1. God's reputation is being trashed by Alice and Bob on the basis of lies they've swallowed from pop culture. These lies about God's existence and character could be easily corrected with a minimal amount of study, which Eve is capable of – she is a genius and has amazing entrepreneurial skills. If someone said similar lies about her husband or children, she *would* speak up, but she won't speak up for God.
2. Alice and Bob are bound for Hell unless someone cares enough to correct their mistaken beliefs, which, along with their sinfulness, is what is keeping them from a relationship with God that would go on in Heaven. If Eve's husband or children were mistakenly about to drink poison thinking it was Aspirin, then Eve *would* speak up. But to save her co-workers from Hell, she won't speak up.

Eve is capable of studying to defend the faith, because of her great success in other areas where so much time and effort were required to master difficult material. So why has she not applied herself to answering public challenges to her Christian faith from her professors, teachers, actors, the media, politicians, scientists, historians, etc.? She's heard these questions about God's existence and character all through high school and into university and then now in her career. Doesn't she believe the Bible when it says to prepare a defense? Doesn't she believe the Bible when it says to acknowledge God before men? Doesn't she believe the Bible when it says that all authentic believers in Jesus will suffer a little for their faith?

It seems to me that if she did spend some time studying, and then made her defense to her co-workers, then two good things would follow:

1. Eve would be demonstrating her love for God and her friendship with God by protecting his reputation when it is called into question by unbelievers in public settings. That's what friends do – if Eve wanted to be God's friend, she would care that no one believed lies about him and told lies about him in public settings.
2. Eve would be demonstrating her love for her neighbor if she was able to correct some of these false beliefs, such as that the universe is eternal, or that a historical case cannot be made for the resurrection, or that evil is not compatible with theism. It's important for Alice and Bob to know that Christianity is not stupid.

So why is it that Eve is able to go to church for 20 years, sing in the choir, read the Bible, read the Narnia stories, pray on her knees, and yet still be unwilling to do the best thing

for God and the best thing for her neighbor?

Questions for my readers

Can anyone help me to understand why Christians are willing to accept this? Why is this not being addressed by churches?

Do you have an experience where a Christian group stifled apologetics? Tell me about that, and why do you think they would do that, in view of the situation I outlined above? My experience is that atheists (as much as I tease them) are FAR more interested in apologetics than church Christians – they are the ones who borrow books and debates, and try to get their atheist wives to go to church after they becomes interested in going to church. Why is that?

I'm not saying we all have to be geniuses. I am just saying that we should put as much effort into learning apologetics as we put into learning school stuff and work stuff.

Note: I picked these names because there is a running gag in computer network security where these names are used to describe the actors. Eve is the eavesdropping hacker, get it?

520 million year old shrimp heart is more complex than those of today

April 27, 2014 | by Wintery Knight | Link | Original Link

First, the straight story on the scientific discovery, as reported in Bioscience Technology. Excerpt:

> 520 million years ago, the first known animal heart was formed.
>
> It was the heart of an ancient shrimp, and quite a heart it was. For it, and its vascular system, have been found to be more complex than that of modern shrimp, researchers reported in a recent *Nature Communications*. Its cardiovascular system was apparently one of evolution's first templates for modern cardiovascular systems. Significant streamlining has occurred since.
>
> The find comes on the heels of an equally important one by the same group: that of a stunningly intact nervous system from the same breed of primordial shrimp: *Fuxianhuia protensa.*
>
> "This is only the second case of the description of a cardiovascular system in a Cambrian arthropod, the first one being that of the inch-long *Marrella* from Burgess Shale," emailed Diego Garcia-Bellido of the University of Adelaide, who co-discovered that first arthropod while at the University of Cambridge. Garcia-Bellido was not involved in the new study. "This new finding of a cardiovascular system in a larger animal (*Fuxianhuia* is about two to three times as large, thus more detail), together with a fantastically preserved, and very complex, nervous system, unknown in *Marrella*, and the gut, make it probably the most complete arthropod internal anatomy known in the fossil record."
>
> The main conclusion drawn, said Garcia-Bellido: "The level of complexity of the *Fuxianhuia* was extremely high, considering that we are studying some of the oldest animals on Earth."

Now, if you're like me, you're skeptical that soft tissues can be preserved in the fossil record, but:

> Said the paleontologist via email: "As we know, most soft tissue of animals tends to decay away once the animals died, so often only the hard parts of animal body (bones, shells, teeth, etc.) are preserved in fossils. However, under very exceptional circumstances, soft tissue and anatomical organ system can also be preserved in fossils."

Keep in mind that 520 mya is right after the Cambrian explosion that intelligent design people like me love to talk about. I mean you are going from single-celled life to complex organ types in a few million years. Fine if you are an ID proponent, but devastating if you are a Darwinian naturalist.

The Cambrian Explosion: the origin of phyla

If you are a naturalist, then you need the fossil record to go from simple to complex. The trouble is that all the simple to complex in that image is pure speculation at this point – and not for lack of trying, either.

You know, I am writing this on Saturday night, and in a happier world, this discovery would be discussed tomorrow in every Christian church in the land. This is the kind of data that Christians should be familiar with to check the presupposition of naturalism which is lethal to rational thought. If only we were more focused on truth than on signing and feelings in church. If only we were not so scared of traditional dating of fossils. Maybe then we would be getting somewhere in the culture wars.

Dr. William Lane Craig answers a question about homosexuality and the Bible

April 27, 2014 | by Wintery Knight | Link | Original Link

The question is "why should anyone care about Paul's view on homosexuality, since Paul never met Jesus?"

Here is the answer:

Dr. Craig's answer is two-fold. First, he said that Jesus was a Jew and had the same views on this question as Jews normally did. Second, he cited Jesus' teaching about marriage being the union of one man and one woman in Mark 10:7-9 and Matthew 19:5. I heard this same verse presented when I was listening to the "It takes a Family" 2013 lectures, in the lecture by Dr. Robert Gagnon, who is an expert on what Jesus says about homosexuality.

Here are the relevant links, if you want to get yourself ready:

- "Jesus and Marriage" ~ Dr. Robert Gagnon @ ITAF '13
- Jesus and Marriage Q&A ~ Dr. Robert Gagnon @ ITAF '13
- "Paul and Homosexual Practice" ~ Dr. Robert Gagnon @ ITAF '13
- "Paul and Homosexual Practice" Q&A ~ Dr. Robert Gagnon @ ITAF '13

I think the important thing about Dr. Craig's answer is that we have to be ready for tough questions like this and to have an answer. That's what it means to be an apologist. To prepare in advance, not to wait until you are asked to think about it for the first time.

J. Warner Wallace recently wrote a post about what it takes to be a Christian apologist.

He had 3 points:

> **Accept Your Identification**
> Peter tells us in 1 Peter 3:15 that *all* of us have a duty to be ever-ready to make the case for our hope in Jesus. This isn't an option reserved for a few well-trained professionals; all of us, regardless of position or vocation, are tasked with this honor. As I wrote in *Cold Case Christianity*, when we, as Christians, live without embracing this aspect of our identity, we are living an *abbreviated* Christian life. The sooner you accept this aspect of your Christian character and identify yourself as an apologist, the more likely you are going to take it seriously. Start calling yourself a Christian Case Maker ("apologist") today.
>
> **Accept Your Obligation**
> Although every Christian is called to be a Case Maker, some are definitely better than others. Once you begin to identify yourself in this way, you'll sense your own inadequacies as you engage others. As a result, you'll likely begin to train yourself (formally or informally) to meet the challenge. You may find yourself in a certification or advanced education program, but you may not. Some of the best

> and most effective apologists are not formally trained in apologetics. The two best-selling apologetics authors in America, Josh McDowell and Lee Strobel, have no formal training in the area of apologetics or philosophy. It's clear, however, that both of these men take their obligation as Christian Case Makers seriously and have studied their worldview and practiced their craft.
>
> **Accept Your Location**
> While many of us would love to leave our "day jobs" to work as vocational apologists, let me encourage you to stay wherever God has already placed you. I am a "one dollar apologist"; a Christian Case Maker who still derives 90% of my income from my career as a detective. I have always equated my life as a Christian with my life as a Christian Case Maker. For this reason, I could no more call myself a vocational Christian apologist than I could call myself a vocational Christian. God has given me this set of investigative skills so I can share them with others, and He's placed me in this career, at this time and place, as part of the larger Christian family.

I don't think anyone sees the battlefield as well as J. Warner Wallace does. This is where we need to be.

Study: the early Earth's atmosphere contained oxygen

April 28, 2014 | by Wintery Knight | Link | Original Link

Here's a paper published in the prestigious peer-reviewed science journal *Nature*, entitled "The oxidation state of Hadean magmas and implications for early Earth's atmosphere". This paper is significant because it undermines naturalistic scenarios for the origin of life.

Evolution News explains what the paper is about.

Excerpt:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Miller and Urey conducted experiments to show that under certain atmospheric conditions and with the right kind of electrical charge, several amino acids could form from inorganic compounds such as methane, ammonia, and water. Several experiments have been done using various inorganic starting materials, all yielding a few amino acids; however, one key aspect of all of these experiments was the lack of oxygen.
>
> If the atmosphere has oxygen (or other oxidants) in it, then it is an oxidizing atmosphere. If the atmosphere lacks oxygen, then it is either inert or a reducing atmosphere. Think of a metal that has been left outside, maybe a piece of iron. That metal will eventually rust. Rusting is the result of the metal being oxidized. With organic reactions, such as the ones that produce amino acids, it is very important that no oxygen be present, or it will quench the reaction. Scientists, therefore, concluded that the early Earth must have been a reducing environment when life first formed (or the building blocks of life first formed) because that was the best environment for producing amino acids. The atmosphere eventually accumulated oxygen, but life did not form in an oxidative environment.
>
> The problem with this hypothesis is that it is based on the assumption that organic life must have formed from inorganic materials. That is why the early Earth must have been a reducing atmosphere. Research has been accumulating for more than thirty years, however, suggesting that the early Earth likely did have oxygen present.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen

> was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

So here's where we stand. If you are a materialist, then you need a reducing environment on the early Earth in order to get organic building blocks (amino acids) from inorganic materials. However, the production of these organic building blocks (amino acids) *requires* that the early Earth atmosphere be oxygen-free. And the problem with this new research, which confirms previous research, is that the early Earth contained huge amounts of oxygen – the same amount of oxygen as we have today. This is lethal to naturalistic scenarios for creating the building blocks of life on the Earth's surface.

Other problems

If you would like to read a helpful overview of the problems with a naturalistic scenario for the origin of life, check out this article by Casey Luskin.

Excerpt:

> The "origin of life" (OOL) is best described as the chemical and physical processes that brought into existence the first self-replicating molecule. It differs from the "evolution of life" because Darwinian evolution employs mutation and natural selection to change organisms, which requires reproduction. Since there was no reproduction before the first life, no "mutation – selection" mechanism was operating to build complexity. Hence, OOL theories cannot rely upon natural selection to increase complexity and must create the first life using only the laws of chemistry and physics.
>
> There are so many problems with purely natural explanations for the chemical origin of life on earth that many scientists have already abandoned all hopes that life had a natural origin on earth. Skeptical scientists include Francis Crick (solved the 3-dimensional structure of DNA) and Fred Hoyle (famous British cosmologist and mathematician), who, in an attempt to retain their atheistic worldviews, then propose outrageously untestable cosmological models or easily falsifiable extra-terrestrial-origin-of-life / panspermia scenarios which still do not account for the natural origin of life. So drastic is the evidence that Scientific American editor John Horgan wrote, "[i]f I were a creationist, I would cease attacking the theory of evolution … and focus instead on the origin of life. This is by far the weakest strut of the chassis of modern biology."[3]

The article goes over the standard problems with naturalistic scenarios of the origin of

life: wrong atmosphere, harmful UV radiation, interfering cross-reactions, oxygen levels, meteorite impacts, chirality, etc.

Most people who are talking about intelligent design at the origin of life talk about the information problem – how do you get the amino acids to form proteins and how do you get nucleotide bases to code for amino acids? But the starting point for solving the sequencing problem is the construction of the amino acids – there has to be a plausible naturalistic scenario to form them.

The downside of the soul mate / fairy tale view of relationships

April 28, 2014 | by Wintery Knight | Link | Original Link

Do relationships take work (e.g. – killing orcs together) to build?
Astonishing article from the leftist Huffington Post, of all places. (links removed)

Excerpt:

> As millennial women, we were groomed for a white knight fantasy. From childhood favorites such as *Snow White* to adult rom-com staples such as *How to Lose a Guy in Ten Days* or *Sleepless in Seattle*, the media perpetuates a romantic storyline in which compatibility and lasting romance is something effortless, built on chance, sustained by good looks, fun dates and electric sexual chemistry. These story lines shape our expectations for romantic happiness. It is not enough to find someone with whom we are mostly compatible, who would make a good parent, with whom we could learn and grow wrinkly; now, we expect a perfect fit and an easy, instantaneous "connection." In short, we want a soul mate. But it is this desire for a soul mate that is actually the undoing of our happy ending.
>
> A "soul mate" is defined as one who is ideally suited to us, perfectly completes us, one with whom the relationship feels easy and natural. With them, a relationship is just "meant to be"… A survey of young adults conducted by the National Marriage Project found that while 84% of young adults report finding a marriage partner "very important," a full 94% of young adults say they would like to marry a soul mate, and 73% of people ages 18 – 29 believe that there is a soul mate out there for them.

Wow. That doesn't sound like a good approach to me. My approach has always been to pick the girl who was most willing to learn new things. And then to explain to her my vision for marriage and see if I could get her to work independently on that plan before I married her. I don't favor this soul mate approach at all.

Does the "soul mate" approach work?

> We heard that those who get married later and possess a college degree have fewer divorces and more stable marriages. So we spend our twenties trying to find ourselves through travel, accumulating degrees and building a career. Marriage will be the capstone of our achievements, and nothing less than tying the knot with a soul mate will suffice. But the tragic irony is that soul mate thinking makes us increasingly likely to divorce. A study of 1,400 married men and women shows that people who hold soul mate orientations are 150% more likely to end up divorced than those who do not.
>
> **The widespread cultural belief in "soul mate ideology" undermines our chances at happiness because it makes us passive receivers of idyllic romantic expectations. Further, it fosters self-centeredness; one rarely longs to be a soul mate for someone *else*, which would require effort. For this reason, believing in soul mates is one of the most dis-empowering belief systems we can adopt. As millennials, we pride ourselves on actively pursuing the life we want to live, rather than simply accepting whatever hand we are dealt. We are innovative, passionate, proactive and not afraid to take risks. Yet, there is a disconnect when it comes to our desire for lasting love. Though there are prospects around us, we forgo taking the concrete steps needed to build happy compatible relationships because we do not "feel a spark." We are passively waiting on the sidelines for love to "happen," and then wonder why it is so difficult.**

I've always felt that the soul mate approach was like the evil villain in opposition to my noble plan-based approach. My approach is to pick a woman who wants to learn and work hard. Explain your marriage plan to her, and how your marriage plan serves God. My marriage plan accomplishes four goals, for example. 1) Influence the university with apologetics, 2) influence the church with apologetics, 3) provide a model of a good marriage to people in the community, including co-workers, college students and neighbors, and 4) raise effective, influential children who will have an impact for God. Now if you are a Christian woman raised in a church that affirms the soul mate / fairy tale view of marriage with this "God has a wonderful plan for your life" stuff, then a specific, non-emotional plan from a man is the last thing you want to hear about.

Their solution is for people to work at compatibility:

> Compatibility is something co-created through intentionality and conscious choice. It involves mutual sacrifice, effort and commitment for the sake of the other's benefit. A recent study found that of the couples who demonstrate above average daily generosity, 50% of them report being "very happy" in marriage; among the low generosity scores, only 14% can say the same. As studies indicate, selflessness is required to create mutual compatibility. It is not instantaneous, nor does it usually begin with true love's kiss.
>
> We both know from experience that there are some you naturally connect with

> and others you do not. This is not a call towards forced attraction or companionship. But, our romantic futures should not be placed in the hands of blind chance. It is time we roll up our sleeves and shift our expectations from unattainable perfection to realistic romance, one that accounts for imperfection. We must understand that work in a relationship is a necessary key to success, rather than an indication of imminent failure. We will be letting go of a tired plot line that sets us up for disappointment and embracing an active role in our own unique story.
>
> How refreshing to know that we do not have to be perfect to be lovable, and that our romantic success is not solely dependent on finding the “right” fit, but instead built through cultivating daily moments of generosity, sacrifice and conscious coupling.

So in my case, I am looking for a woman who listens to the plan, develops the skills for the plan and then independently engages in activities to achieve the goals of the plan. In the past, I have had women listen to the plan carefully, including my motivations and experiences that caused me to choose this plan. And they have been willing to read books, listen to lectures, watch debates, to gain the skills needed to make a difference. And they have even engaged independently with activities like public speaking, teaching classes, and so forth. But none of the women who had done that accepted the soul mate / fairy tale view of marriage. They all wanted to hear a good plan, learn useful skills and then get to work. Big difference.

William Lane Craig discusses reason and faith with university students

April 28, 2014 | by Wintery Knight | Link | Original Link

This is an interview of Dr. William Lane Craig before college students at the University of Central Florida. (95 minutes)

You can get an MP3 of the lecture here. (33 MB)

Questions from the interviewer: (40 minutes)

- What started you on his journey of studying faith and reason?
- How would you define the word "faith"?
- Are faith and reason compatible? How are they related?
- How can reasonable faith help us to avoid the two extremes of superstition and nihilism?
- Who makes the best arguments against the Christian faith?
- Why are angry atheists like Dawkins and Hitchens more well known than better-informed academic atheists?
- Does the Bible require Christians to give the unbeliever reasons for their faith?
- How does faith spur Christians to think carefully about the big questions in life?
- Should the American church prod churchgoers to develop their minds so they can engage the secular culture?
- When talking about Christianity intellectually, is there a risk of neglecting the experience of being a Christian?
- Which Christian apologist has shaped your thinking the most?
- Which Christian philosopher has shaped your thinking the most?
- Does the confidence that comes from apologetics undermine humility and reverence?
- If you had to sketch out a 5 minute case for Christianity, what would you present?
- Can non-Christians use their reason to arrive at truth?
- Are there cases where atheists must affirm irrational things in order to remain atheists?
- Can the universe have existed eternal, so that there is no need to explain who created it?
- Even if you persuade someone that Christianity is true, does that mean they will live it out?

There is also a long period of questions, many of them hostile, from the audience of students (55 minutes).

- Haven't you said nasty things about some atheists? Aren't you a meany?
- What do you make of the presuppositional approach to apologetics?
- Can a person stop being a Christian because of the chances that happen to them as

they age?
- Why did God wait so long after humans appeared to reveal himself to people through Jesus?
- Can a person be saved by faith without have any intellectual assent to truth?
- How do you find time for regular things like marriage when you have to study and speak so much?
- How would you respond to Zeitgeist and parallels to Christianity in Greek/Roman mythology?
- Do Christians have to assume that the Bible is inerrant and inspired in order to evangelize?
- If the universe has a beginning, then why doesn't God have a beginning?
- Can you name some philosophical resources on abstract objects, Platonism and nominalism?
- How can you know that Christianity more right than other religions?
- Should we respond to the problem of evil by saying that our moral notions are different from God's?
- Define the A and B theories of time. Explain how they relate to the kalam cosmological argument.
- How can Christians claim that their view is true in the face of so many world religions?
- What is the role of emotions in Christian belief and thought?
- Can evolution be reconciled with Christian beliefs and the Bible?
- When witnessing person-to-person, should you balance apologetics with personal testimony?
- Is there a good analogy for the trinity that can help people to understand it? [Note: HE HAS ONE!]
- How can Christians reconcile God's omniscience, God's sovereignty and human free will?

This is a nice introductory lecture that is sure to get Christians to become interested in apologetics. As you watch or listen to it, imagine what the world would be like if *every* Christian could answer the questions of skeptical college students and professors like Dr. Craig. What would non-Christians think about Christianity if *every* Christian had studied these issues like Dr. Craig? Why aren't we making an effort to study these things *so that* we can answer these questions?

It is really fun to see him fielding the questions from the skeptical university students. My favorite question was from the physics student who sounds really foreign, (at 1:19:00), then you realize that he is a Christian. I do think that Dr. Craig went a little far in accommodating evolution, but I put that down to the venue, and not wanting to get into a peripheral issue. I'm also surprised that no one asked him why God allows humans to suffer and commit acts of evil.

If you are looking for a good basic book on apologetics, then I would choose "Is God Just a

Human Invention?" by Sean McDowell and Jonathan Morrow. And you can even be part of a reading group that Brian Auten of Apologetics 315 just announced, that I will be participating in. We will all be reading the book together, chapter by chapter, and lots of people will be available to answer your questions.

Who is William Lane Craig?

About William Lane Craig:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

William Lane Craig is, without a doubt, the top living defender of Christianity. He has debated all of the most famous atheists, including Christopher Hitchens, Sam Harris, etc. as well as academic atheists like Quentin Smith, Peter Millican, etc. if you search this blog, you'll find many debates posted here, sometimes even with snarky summaries.

Toyota moves thousands of jobs from socialist California to capitalist Texas

April 29, 2014 | by Wintery Knight | Link | Original Link

California is a liberal hell of regulations and high taxes. So, a story like this one from the ultra-leftist Los Angeles Times should come as no surprise. (H/T ECM)

Excerpt:

> Toyota Motor Corp. plans to move large numbers of jobs from its sales and marketing headquarters in Torrance to suburban Dallas, according to a person familiar with the automaker's plans.

> The move, creating a new North American headquarters, would put management of Toyota's U.S. business close to where it builds most cars for this market.
>
> North American Chief Executive Jim Lentz is expected to brief employees Monday, said the person, who was not authorized to speak publicly. Toyota declined to detail its plans. About 5,300 people work at Toyota's Torrance complex. It is unclear how many workers will be asked to move to Texas. The move is expected to take several years.
>
> [T]oday, about 75% of the Toyota branded vehicles sold in the U.S. are built in America — many of them at plants in Texas, Mississippi and Kentucky.

Why is this happening? Here's why:

> Frank Scotto, Torrance's mayor, said he had no warning of Toyota's decision. He said he did know that the automaker planned a corporate announcement for Monday.
>
> "When any major corporation is courted by another state, it's very difficult to combat that," Scotto said. "We don't have the tools we need to keep major corporations here."
>
> **The mayor said businesses bear higher costs in California for workers' compensation and liability insurance, among other expenses.**
>
> "A company can easily see where it would benefit by relocating someplace else," Scotto said.

Think that this is an exception? Think again:

> Occidental Petroleum Corp. said in February that it was relocating from Los Angeles to Houston, making it one of around 60 companies that have moved to Texas since July 2012, according to Texas Gov. Rick Perry.
>
> Perry last month visited California to recruit companies. The group Americans for Economic Freedom also recently launched a $300,000 advertising campaign in

> which Perry contends 50 California companies have plans to expand or relocate in Texas because it offers a better business climate.
>
> Like these other companies, Toyota could also save money in an environment of lower business taxes, real estate prices and cost of living.
>
> […]Toyota isn't the first automaker to leave Southern California. In late 2005, Nissan announced it was moving its North American headquarters from Gardena to Franklin, Tenn., just outside of Nashville. About 550 employees left for Tennessee; an additional 750 left jobs at Nissan to stay in Southern California.
>
> "The costs of doing business in Southern California are much higher than the costs of doing business in Tennessee," Nissan Chief Executive Carlos Ghosn said at the time. He cited cheaper real estate and lower business taxes as key reasons for the move.

I know a lot of people like to write books about how bad companies like Wal-Mart and Exxon Mobil are. Young people have been trained to believe that we should raise corporate taxes, raise the minimum wage and burden businesses with other costs, like health coverage for condoms. That's what young people learn in school from government employees. But in the real world, companies respond to incentives.

China’s atheist government demolishes Christian church

April 29, 2014 | by Wintery Knight | Link | Original Link

From the UK Telegraph.

Excerpt:

> Demolition teams began destroying parts of a Chinese church that has become a symbol of resistance to the Communist Party’s draconian clutch on religion, activists and witnesses said on Monday.

> Sanjiang church in Wenzhou, a wealthy coastal city known as the “Jerusalem of the East”, made headlines earlier this month when thousands of Christians formed a human shield around its entrance after plans for its demolition were announced.
>
> Church members accused Communist leaders in Zhejiang province of ordering an anti-church crackdown and claimed there were plans to completely or partially demolish at least 10 places of worship.
>
> Officials rejected those accusations, alleging the church had violated building codes.

> After mounting their high-profile occupation in early April, many protesters withdrew from Sanjiang church after its leaders appeared to have negotiated a compromise with the government.
>
> However, that deal appears to have broken down in recent days with reports that some church leaders and worshippers had been harassed and detained by security agents and officials.
>
> On Monday morning demolition teams began tearing down parts of the church in Wenzhou, a city around 230 miles south of Shanghai that has one of the country’s largest congregations.
>
> […]In a recent interview Fenggang Yang, a leading expert on religion in China, said he believed the Asian country could overtake Brazil, Mexico and the United States to become the world’s most numerous Christian congregation by 2030.
>
> However, Prof. Yang warned that Chinese Christians should brace themselves for growing interference as the Communist Party fought to stunt the Church’s growth.

This is the same church that I blogged about before where Christians were blocking bulldozers with their bodies. It is interesting to see how atheists get on when they are dominant and in control of government. In an accidental universe, who’s to say what is right and wrong? And certainly there is no right to religious liberty or free exercise of

religion.

Income inequality: men who work full-time earn less than 40 years ago

April 29, 2014 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> The real median income of American men who work full-time, year-round peaked forty years ago in 1973, according to data published by the U.S. Census Bureau.
>
> In 1973, median earnings for men who worked full-time, year-round were $51,670 in inflation-adjusted 2012 dollars. The median earnings of men who work full-time year-round have never been that high again.
>
> […]Ny "earnings," the Census Bureau means money someone earns as an employee, which "includes wages, salary, armed forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions are made for items such as taxes, bonds, pensions, and union dues." It also includes "net income" from self-employment.

And in another CNS News article, we learn something worse.

Excerpt:

> In 20 percent of American families in 2013, according to new data released by the Bureau of Labor Statistics (BLS), not one member of the family worked.
>
> A family, as defined by the BLS, is a group of two or more people who live together and who are related by birth, adoption or marriage. In 2013, there were 80,445,000 families in the United States and in 16,127,000—or 20 percent–no one had a job.

The most troubling thing about these two findings for me is that I believe that a man's authority to lead in the home comes from his special role as provider. It is because he works to fund the family operations that the wife and kids respect him. But what if we have policies that are more focused on making women work, and men's salaries decline or go to zero? Well, in that household, it will be a lot more difficult for men to lead on moral and spiritual issues. Men should work, and they should earn enough to provide for a family.

E-mails: Susan Rice prepped to lie about Benghazi by White House

April 30, 2014 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> Newly obtained emails on Benghazi show then-U.N. Ambassador Susan Rice was coached by a key White House aide to lie and ignore the facts known and reported on the ground to make the administration look good.
>
> The fish rots from the head, as the saying goes, and no further proof is needed than a Sept. 14, 2012, email from Ben Rhodes, an assistant to the president and deputy national security adviser for strategic communications, contained in more than 100 pages of documents released by Judicial Watch and obtained in a Freedom of Information Act request.
>
> That email, with the subject line: "RE: PREP Call with Susan: Saturday at 4:00 p.m. ET," was sent to other key White House staffers such as then-Communications Director David Plouffe and Press Secretary Jay Carney the day before now-National Security Adviser Susan Rice made her whirlwind tour on five Sunday news show appearances to specifically and emphatically blame an Internet video for the Sept. 11, 2012, attack on the American diplomatic mission in Benghazi, Libya, in which U.S. Ambassador Christopher Stevens and three other nationals were killed.
>
> **One of the goals listed in the emails was the need for Rice "to underscore that these protests are rooted in an Internet video, and not a broader failure or policy." She was also to "reinforce the President and Administration's strength and steadiness in dealing with difficult challenges." Her job was not to tell the truth, but to put lipstick on the Obama administration's Benghazi pig.**
>
> The documents include a Sept. 12, 2012, email from Payton Knopf, a former deputy spokesman at the U.S. Mission to the United Nations, in which Knopf informs Rice that senior officials had already dubbed the Benghazi attack "complex" and planned in advance. Yet Rice would still insist on her TV tour that the Benghazi terrorist attacks were "spontaneous."
>
> In early April, former deputy CIA director Michael Morell, who was heavily involved in editing the now infamous talking points, told lawmakers it was Rice, on the Sunday shows, who linked the video to the Benghazi attack and that the video was not part of the CIA analysis.
>
> The Rhodes email was not part of the 100 pages of emails released by the administration last May, and we can see why. As we noted at the time, that email

> package showed a successive pattern of edits with White House involvement designed to remove any hint of terrorist involvement to fit the administration's campaign narrative that the war on terror was over and won.
>
> Those emails show that Rhodes and National Security Council spokesman Tommy Vietor were alerted that the intelligence community was drafting talking points that as late as 3:04 p.m. on Friday, Sept. 14, still included references to extremists tied to al-Qaida and an "attack."
>
> The terms "al-Qaida" and "attack" were stripped out by 4:42 p.m., and shortly afterward Vietor thanked colleagues for revisions and said they would be vetted "here," as in the White House. He then forwarded "edits" from John Brennan, the current CIA chief who then was a White House counterterrorism adviser.
>
> **In a White House meeting on Saturday morning, Sept. 15, the CIA, at the direction of the State Department and White House, drafted the final version of the talking points from which all references to al-Qaida and security warnings in Benghazi before the attack were deleted.**
>
> The question of how the video story was concocted out of whole cloth, by whom and why, and why it was trumpeted by Rice, then-Secretary of State Hillary Clinton and President Obama himself with such fervor at the United Nations has remained unanswered until now.

I was talking to my Dad on Skype when this came out, and I told him about it. He said "that's it for Hillary Clinton". But I really wonder about that. After all, we knew a lot of things about Obama's past before he was elected – like his votes against a born alive infant protection bill. But that didn't stop people from voting for him. I am not sure if truth still matters to the American people. In a different time, this cover-up by the White House would be an impeachable offense. But all of his scandals – IRS targeting Tea Party groups, Fast & Furious gunrunning to drug cartels, NSA wire-tapping, Benghazi cover-up, etc. – seem to have just rolled off him.

UK woman who had 4 abortions breaks silence to warn other women

April 30, 2014 | by Wintery Knight | Link | Original Link

From Life Site News.

Excerpt:

> A 23-year-old London woman has opened up to the BBC about the four abortions she had between the ages of 18 and 22, in the hopes that she will convince other young women to think twice before having their own abortions.
>
> "Lisa," a pseudonym given by the BBC, had her first abortion at 18, her second at 21, and two more abortions at 22. At 20, she became pregnant but decided to keep the baby, and is now raising her one surviving daughter.
>
> Lisa told the BBC she believes abortion is morally wrong, but had the abortions anyway because she couldn't bear the thought of having four children, each with a different father.
>
> "I was really careless. I can't blame anyone else," Lisa told the BBC. "I should have been more responsible, because I've killed a life now. And it wasn't that baby's fault."
>
> Lisa said that she was terrified the first time she went to have an abortionist end her baby's life, but that time and repetition changed her and made her more callous.
>
> "It does get easier with the more you have," she told the BBC. "I know that sounds really bad, but that is just how it is."
>
> She said that by sharing her own experience of being changed by abortion, she hoped to convince other women to make better choices.
>
> **"I thought that if I could tell my story, maybe young women would think twice about having sex without contraception, or sleeping with guys they don't really know," Lisa said. "I want to tell other women that abortions aren't just something you should do. It could change your life."**

"Lisa" also warns about the effectiveness of contraceptions:

> Even though Lisa echoes the abortion industry line about contraceptives preventing abortion, she admits she was using contraception during each and every one of her conceptions – everything from the pill to semi-permanent solutions like the IUD.
>
> "I've tried the pill, the patch, the injection, the coil and the implant. And they didn't work," Lisa said. "I bled continuously while I was on them. And the coil

> gave me pains, so I had to take that out after a month."
>
> She added, "No one wants to keep on having terminations – so I have tried different methods of contraception but they don't seem to work for me."
>
> Lisa is far from alone. A telephone study of former clients by the Marie Stopes UK abortionist group found that 57 percent of those who sought repeat abortions were active users of contraception who nonetheless became pregnant anyway.
>
> "Our research shows all sorts of women of all ages can experience repeat unwanted pregnancy," Genevieve Edwards, Marie Stopes UK's director of policy, told the BBC. "In the past we've failed to tackle this, because we didn't want to stigmatize women."
>
> Edwards admits that contraceptives, particularly the short-term kind, are not as effective as many people think, and when they fail, many women look to abortion as a backup plan.

I guess in my own case, I stay clear of premarital sex for personal reasons but also because I do not want to be responsible for killing another human being *just because I was looking for a good time*. I think that the possible risks outweigh the pleasure I might gain. It's important for me to foresee the consequences of my choices and avoid harming others.

Why are young evangelicals reluctant to defend Biblical Christianity in public?

April 30, 2014 | by Wintery Knight | Link | Original Link

Here's an interesting post by Mark Tooley in the American Spectator.

Excerpt:

> A new generation of evangelical elites is imploring evangelicals to step back from the culture wars. Mostly they want to escape polarizing strong stances on same-sex marriage and abortion, and perhaps also contentious church-state issues, like the Obamacare contraceptive mandate.
>
> Purportedly the evangelical church is failing to reach young, upwardly mobile professionals because evangelicals, who now broadly comprise perhaps one third of all Americans, are seen as reactionary and hateful. On their college campuses, at their coffee shops, and in their yoga classes, among other venues, some outspoken hip young evangelicals want a new public image for their faith.
>
> […]A popular young evangelical blogger echoing Merritt's theme is Rachel Evans, who conveniently grew up in the Tennessee small town famous for the Scopes Monkey Trial. Her 2010 book was *Evolving in Monkey Town: How a Girl Who Knew All the Answers Learned to Ask the Questions.* "We are tired of the culture wars," she explained in a recent interview. "We are tired of politics." Lamenting the church's preoccupation with "shame and guilt," she urged evangelicals to reconsider their opposition to same-sex unions.

The post has a nice history of how evangelicals have always been involved in moral and political issues, and it's worth reading. But I want to make a different point below.

Compartmentalization of faith

What's at the root of this movement to back away from moral issues? Here's what I think is the problem. When you advocate for moral causes like protecting the unborn, or school choice, or freeing the slaves, a bunch of people are not going to like you. Christians in the time of Jesus knew that being bold about their Christian convictions would make a lot of people think bad things about them – they expected it. But young evangelicals have gotten the idea that being a Christian should not involve any sort of unhappiness and unpopularity. They wouldn't have learned this from the Bible, because the Bible emphasizes suffering and unpopularity as part of the normal Christian life. It is their experience of church (and the hedonistic culture around them) that is likely to reinforce that view.

What young evangelicals learn in many churches is that religion is something that is centered on the Bible and the church building – it is not something that flows into real life. They learn that you can't find out anything about God from the Big Bang, the DNA, the fossil record, or even from the peer-reviewed research on abortion, divorce, or gay

marriage. They learn from the Bible that helping the poor is good, but then they never pick up an economic textbook to see *which economic system really helps the poor.* What you learn about in church is that religion is private and has no connection to reality whatsoever. This fits in with their view that Christianity should make them happy, because they've learned that it doesn't involve any studying to connect the Bible to the real world.

What follows from having a view that Christianity only lives in the Bible and church, and not out there in the real world of telescopes and microscopes? Well, most young evangelicals interpret what their pastor is telling them as "our flavor of ice cream" or "our cultural preference". They don't link Christianity to the real world, they don't think that it's true for everyone. They think that you just accept what the Bible says on faith, and that's all. No reasons can be given to non-Christians outside of just asking them to accept the Bible. Younger evangelicals believe that there are no facts that confirm or disprove Christianity – it's just a blind belief. Young evangelicals think that their faith doesn't have to be complemented with careful study of how things work in the real world.

What is the result of this anti-intellectual compartmentalization of faith? The result is that young evangelicals will balk at the idea of telling someone that they are going to Hell if they don't believe in Jesus. They will balk at the idea that feminism is to blame for the destruction of the family. They will balk at the idea that the best way to help the poor is to push for free market capitalism. They will balk at the idea that it is wrong to kill unborn children. They will balk at the idea that disarmament and pacifism embolden terrorists and tyrants to attack peace-loving people. They will balk at the idea that traditional marriage is better for society and children. They will balk at the idea that man-made catastrophic global warming is not supported by science. *They lack courage to take Biblical positions, because they first lack knowledge*. They don't know how to make the case using evidence that their opponents will accept – mainstream evidence from publicly accessible sources.

Christianity is a knowledge tradition

If the purpose of religion is to have happy feelings and be liked, then studying the real world to find out whether the Bible is true is bad religion. If religion is divorced from reality, then it's just a personal preference influenced by how a person was raised. No young evangelical is going to lift a finger to take bold moral stands if they think their worldview is just one option among many – like the flavors of ice cream in the frozen section of the grocery store. They have to know that what they are saying is true – then they will be bold. An example: there was a time when people believed that God did not create the first living cell, because it was just a simple lump of protoplasm that could easily come about by accident. Now we know better, and we can boldly make the case for intelligent design based on hard evidence – if we put in the time to study the evidence.

And it is the same for everything – from theological claims, to moral claims, to social claims, to economic claims, to foreign policy claims. It doesn't matter if people call you names when you have the facts to support unpopular claims, *and that's why public,*

authentic Christianity is built on knowledge of facts. Non-Christians being offended by your claims doesn’t change the way the world is.

House Committee: only 67 percent of Obamacare enrollees have paid premiums

May 1, 2014 | by Wintery Knight | Link | Original Link

From The Weekly Standard.

Excerpt:

> Only two-thirds of the eight million enrollees into new health insurance plans as mandated by the Affordable Care Act have paid their first month's premium as of April 15, according to a report from the House Energy and Commerce committee.
>
> Here's an excerpt from the committee's statement:
>
> Data provided to the committee by every insurance provider in the health care law's Federally Facilitated Marketplace (FFM) shows that, as of April 15, 2014, only 67 percent of individuals and families that had selected a health plan in the federally facilitated marketplace had paid their first month's premium and therefore completed the enrollment process. Nationwide, only 25 percent of paid enrollees are ages 18 to 34. The Subcommittee on Oversight and Investigations today invited the leaders of some of the nation's largest insurance providers and their trade groups to testify at a hearing, "PPACA Enrollment and the Insurance Industry," on Wednesday, May 7, 2014, at 10:15 a.m. in room 2123 Rayburn House Office Building.
>
> House Energy and Commerce Committee members sent letters requesting specific enrollment data, including the number of individuals who have paid their first month's premium and demographic breakdowns. The committee has compiled the data that provides a snapshot of the true enrollment picture as of April 15, 2014, after the official end of the open enrollment period. Due to the administration's repeated and unilateral extensions and changes, as well as the fact that many insurers have reported that individuals will still have time to pay their first month's premium, the committee plans to ask the insurers in the federally facilitated marketplace to provide an enrollment update by May 20, 2014.

Now, remember when Obama went out in front of the eager mainstream media and bragged about how 8 million people signed up? Not one journalist asked him how many people had actually paid for a health care plan. And now we know the truth. But how many of the low-information voters who vote Democrat will read a story like this? They may be struggling with the new health care law, but they'll think that it's working for most people because of the mainstream media and the 8-million enrollments claim.

How do doctors feel about the federal government's regulation of their profession?

May 1, 2014 | by Wintery Knight | Link | Original Link

In the Wall Street Journal, a doctor speaks out about government control of health care. Excerpt:

> In my 23 years as a practicing physician, I've learned that the only thing that matters is the doctor-patient relationship. How we interact and treat our patients is the practice of medicine. I acknowledge that there is a problem with the rising cost of health care, but there is also a problem when the individual physician in the trenches does not have a voice in the debate and is being told what to do and how to do it.
>
> […]The Centers for Medicare and Medicaid Services dictates that we must use an electronic health record (EHR) or be penalized with lower reimbursements in the future. There are "meaningful use" criteria whereby the Centers for Medicare and Medicaid Services tells us as physicians what we need to include in the electronic health record or we will not be subsidized the cost of converting to the electronic system and we will be penalized by lower reimbursements. Across the country, doctors waste precious time filling in unnecessary electronic-record fields just to satisfy a regulatory measure. I personally spend two hours a day dictating and documenting electronic health records just so I can be paid and not face a government audit. Is that the best use of time for a highly trained surgical specialist?
>
> This is not a unique complaint. A study commissioned by the American Medical Association last year and conducted by the RAND Corp. found that "Poor EHR usability, time-consuming data entry, interference with face-to-face patient care, inefficient and less fulfilling work content, inability to exchange health information between EHR products, and degradation of clinical documentation were prominent sources of professional dissatisfaction."
>
> In addition to the burden of mandated electronic-record entry, doctors also face board recertification in the various medical specialties that has become time-consuming, expensive, imposing and a convenient method for our specialty societies and boards to make money.
>
> Meanwhile, our Medicare and Medicaid reimbursements have significantly declined, let alone kept up with inflation. In orthopedic surgery, for example, Medicare reimbursement for a total knee replacement decreased by about 68% between 1992 and 2010, based on the value of 1992 dollars. How can this be? Don't doctors have control over what they charge for their services? For the most part, no. Our medical documentation is pored over and insurers and government

> then determine the appropriate level of reimbursement.
>
> I don’t know about other physicians but I am tired—tired of the mandates, tired of outside interference, tired of anything that unnecessarily interferes with the way I practice medicine. No other profession would put up with this kind of scrutiny and coercion from outside forces. The legal profession would not. The labor unions would not. We as physicians continue to plod along and take care of our patients while those on the outside continue to intrude and interfere with the practice of medicine.
>
> We could change the paradigm. We could as a group elect not to take any insurance, not to accept Medicare—many doctors are already taking these steps—and not to roll over time and time again. We have let nearly everyone trespass on the practice of medicine. Are we better for it? Has it improved quality? Do we have more of a voice at the table or less? Are we as physicians happier or more disgruntled then two years ago? Five years ago? Ten years ago?

Doctors certainly provide a lot more value to me than unions, lawyers and government workers of all sorts. I wish we had more doctors, and fewer unions, lawyers and government workers. Anything that doctors can do to push back against their tormentors would be welcome in my opinion.

J. P. Moreland explains the meaning of happiness in the Christian worldview

May 1, 2014 | by Wintery Knight | Link | Original Link

From happiness expert and Christian philosopher J.P. Moreland.

Excerpt:

> According to ancient thought, happiness is a life well lived, a life that manifests wisdom, kindness and goodness. For the ancients, the happy life — the life we should dream about — is a life of virtue and character. Not only did Plato, Aristotle, the Church Fathers and medieval theologians embrace this definition, but Moses, Solomon and (most importantly) Jesus did, too. Sadly their understanding is widely displaced by the contemporary understanding of happiness defined as pleasure and satisfaction, a subjective emotional state associated with fleeting, egocentric feelings.
>
> Consider the differences:

Contemporary Understanding	**Classical Understanding**
Happiness is:	Happiness is:
1. Pleasure and satisfaction	**1.** Virtue and character
2. An intense feeling	**2.** A settled tone
3. Dependent on external circumstances	**3.** Depends on internal state; springs from within
4. Transitory and fleeting	**4.** Fixed and stable
5. Addictive and enslaving	**5.** Empowering and liberating
6. Irrelevant to one's identity, doesn't color the rest of life and creates false/empty self	**6.** Integrated with one's identity, colors rest of life and creates true/fulfilled self
7. Achieved by self-absorbed narcissism; success produces a celebrity	**7.** Achieved by self-denying apprenticeship to Jesus; success produces a hero

> How can we be certain Jesus is inviting us to a classical understanding of happiness in Matthew 16:24-26? He isn't talking about going to heaven rather than hell, nor is He telling his followers how to avoid premature death. Where Matthew writes, "what will a man be profited, if he gains the whole world, and forfeits *his soul*" (emphasis added), Luke clarifies Jesus' teaching by replacing "his soul" with the word "himself" (Luke 9:25). The issue is finding one's self vs. losing one's self. More specifically, to find one's self is to find out how life *ought* to look like and learn to live that way; it's to become like Jesus, with character that manifests the fruit of the Spirit and the radical nature of Kingdom living; it's to find out God's purposes for one's life and to fulfill those purposes in a Christ-honoring way.

I like that “success produces a hero”. Who doesn’t want to be a hero? I certainly do.

In one of his lectures, Dr. Moreland says, and I quote: “Happiness is the freedom to do what we ought to do”. That’s right. When a person is free to comply with God’s design for human flourishing, then he/she is happy. My biggest source of unhappiness is the feeling that I cannot be who I want to be as a Christian. It’s getting even worse when I think about how the government is now using force to prevent me from spending what I earn the way I want, and saying what I want about the issues of the day, regardless of who is offended. I am becoming increasingly thankful for the time I spend with other dedicated Christians. That’s when I can be myself and not worry about what anyone is going to think of me. This is no small source of happiness.

GOP senators introduce bill to arm Ukraine

May 2, 2014 | by Wintery Knight | Link | Original Link

Great news in the Wall Street Journal.

Excerpt:

> Frustrated with President Barack Obama's reaction to Russian action in Ukraine, a group of Republican senators said Wednesday they will introduce legislation outlining a more muscular response.
>
> "What we've seen from the administration is a lot of rhetoric," Sen. Bob Corker of Tennessee, the top Republican on the Foreign Relations Committee, said on the Senate floor Wednesday morning. The White House has been dealing "with the situation after something bad has already occurred," he said.
>
> […]The GOP senators' bill would map out a more assertive plan for keeping Russian President Vladimir Putin in check, Mr. Corker said, including by implementing new sanctions on Russian banks, energy companies and a major Russian arms dealer.
>
> Some of the sanctions would go into effect immediately, while others would kick in if Russian armed forces cross further into Ukraine or if Russia further annexes any new area. The goal is "so that we actually do something that affects the Russian economy until such a time that they pull those troops from the border," Mr. Corker said.
>
> The bill also seeks to build support for NATO allies by requiring Mr. Obama to increase support for the armed forces of Poland, Estonia, Lithuania and Latvia and facilitate access to military equipment for Ukraine, Moldova and Georgia. Up to $100 million of direct military assistance to Ukraine would also be authorized, including anti-tank and anti-aircraft weapons and small arms.
>
> The White House did not have an immediate response to the GOP bill.

It's too much of a provocation to send American troops into Ukraine, but arming the Ukrainians will do a lot do deter Russian aggression. It will certainly do a lot more to deter the Russians from taking more ground than "mobilizing the international community" or sending food. Food doesn't stop Russian tanks, and it doesn't shoot down Russian aircraft.

Is there any evidence for Jesus outside the New Testament?

May 2, 2014 | by Wintery Knight | Link | Original Link

From Cold Case Christianity blog.

I'll excerpt a few of them:

Tacitus (56-120AD):

Cornelius Tacitus was known for his analysis and examination of historical documents and is among the most trusted of ancient historians. He was a senator under Emperor Vespasian and was also proconsul of Asia. In his "Annals' of 116AD, he describes Emperor Nero's response to the great fire in Rome and Nero's claim that the Christians were to blame:

"Consequently, to get rid of the report, Nero fastened the guilt and inflicted the most exquisite tortures on a class hated for their abominations, called Christians by the populace. Christus, from whom the name had its origin, suffered the extreme penalty during the reign of Tiberius at the hands of one of our procurators, Pontius Pilatus, and a most mischievous superstition, thus checked for the moment, again broke out not only in Judea, the first source of the evil, but even in Rome, where all things hideous and shameful from every part of the world find their centre and become popular."

In this account, Tacitus confirms several historical elements of the Biblical narrative: *Jesus lived in Judea, was crucified under Pontius Pilate, and had followers who were persecuted for their faith in Christ.*

Pliny the Younger (61-113AD):

Early Christians were also described in early, non-Christian history. Pliny the Younger, in a letter to the Roman emperor Trajan, describes the lifestyles of early Christians:

"They (the Christians) were in the habit of meeting on a certain fixed day before it was light, when they sang in alternate verses a hymn to Christ, as to a god, and bound themselves by a solemn oath, not to any wicked deeds, but never to commit any fraud, theft or adultery, never to falsify their word, nor deny a trust when they should be called upon to deliver it up; after which it was their custom to separate, and then reassemble to partake of food—but food of an ordinary and innocent kind."

This early description of the first Christians documents several facts: *the first Christians believed Jesus was GOD, the first Christians upheld a high moral code, and these early followers met regularly to worship Jesus.*

Suetonius (69-140AD):

Suetonius was a Roman historian and annalist of the Imperial House under the Emperor Hadrian. His writings about Christians describe their treatment under the Emperor Claudius (41-54AD):

"Because the Jews at Rome caused constant disturbances at the instigation of Chrestus

(Christ), he (Claudius) expelled them from the city (Rome).” (Life of Claudius, 25:4)

This expulsion took place in 49AD, and in another work, Suetonius wrote about the fire which destroyed Rome in 64 A.D. under the reign of Nero. Nero blamed the Christians for this fire and he punished Christians severely as a result:

“Nero inflicted punishment on the Christians, a sect given to a new and mischievous religious belief.” (Lives of the Caesars, 26.2)

There is much we can learn from Suetonius as it is related to the life of early Christians. From this account, we know Jesus had an immediate impact on His followers: *They were committed to their belief Jesus was God and withstood the torment and punishment of the Roman Empire. Jesus had a curious and immediate impact on His followers, empowering them to die courageously for what they knew to be true.*

Pastor Matt: What happens when you die?

May 2, 2014 | by Wintery Knight | Link | Original Link

This post is from Pastor Matt's blog.

Excerpt:

> Michael Bird breaks it all down as follows:
>
> 1. Prior to Christ's ascension, all who died descended to Sheol/Hades, which was divided into two parts, one for the wicked and one for the righteous.
>
> 2. At Christ's ascension, he went into heaven and took with him all of the saints in the paradisal part of Sheol/Hades, while the wicked remain in Sheol/Hades, waiting for judgment.
>
> 3. Upon death new covenant believers go to be with Christ in heaven ahead of the general resurrection, while the wicked descend to Sheol/Hades waiting for judgment.
>
> 4. Eventually Sheol/Hades will be thrown into hell and all believers will share in the new heavens and new earth.
>
> See Evangelical Theology p. 323.

I've featured some debates with Michael Bird before, he is a famous evangelical historian.

It's important to understand that the Christian view of humans is that we have a material part and a non-material part. When you die, the material part goes into a tomb. The non-material part goes on to be with God, until the day when you get a new resurrection body.

Earlier, I blogged about some philosophical arguments for the existence of souls and some scientific evidence for the existence of souls, and it's worth looking over in order to move beyond mere opinions. Like it or not, this is the way we are! Not just bodies, but souls.

Is it “brilliant” to accumulate $185,000 of debt studying the humanities?

May 3, 2014 | by Wintery Knight | Link | Original Link

From the Des Moines Register, an article by Ms. Rehha Basu.

Excerpt:

> Sixteen years ago, Patricia (P.J.) Johnston of Des Moines made the front page of this paper for collecting her diploma from Drake University at just 19. “Johnston was reading books on French existentialism while others her age were still buying comic books,” wrote reporter Tom Alex of the young woman who majored in religion and philosophy, dabbled in music and astronomy and found time to take part in online discussions on the Bible.
>
> **“I think I’m probably meant to be an academic,” Johnston was quoted as saying. And she has been, getting a master’s in one institution, going to seminary at another, doing field research in India in her area of interest — Indian Catholicism — and currently working toward a Ph.D in religious studies at the University of Iowa.**
>
> President Barack Obama came through Johnston’s university on Wednesday, where he said there is no greater predictor of success than a good education. “This country has always made a commitment to put a good education within the reach of everybody who’s willing to work for it,” Obama said. “That’s part of what made us special. … That’s a commitment that we need to reaffirm today.”
>
> He talked about the untenable debt that’s limiting options for today’s college-goers — $25,000 on average — because tuition and fees have more than doubled since they were born.
>
> Johnston didn’t get to hear him since she was teaching a class on Buddhism. But she knows a lot about educational debt. **She has $185,000 in student loans to repay.**
>
> As it is, she sleeps on her office floor on the days she has to be in Iowa City, **riding the Greyhound bus in from Des Moines**. She helps support her mother with the approximately $16,000 she earns as a teaching assistant. But she is in danger of dropping out before getting her doctorate because she has hit her limit on loans, and most likely won’t be able to get a teaching assistant position next year because of cuts in undergraduate programs.
>
> If that happens, she wrote me, she would be this far along, “facing the job market in my mid-30s with no marketable job skills of any kind.”
>
> **Johnston grew up on welfare and other forms of public assistance. Her divorced mother was unable to hold down a job for reasons that were never diagnosed. Johnston got through college with scholarships,**

> **grants, some help from her late grandmother, and only $18,000 in debt.**

Student loans should not be connected to the government as they are now – they should be privatized. That way, taxpayers are not stuck with the bill if the person cannot make a career out of what they are studing. What is this person doing going abroad in India? What is she doing riding on Grayhounds? It makes no sense. If she had to go to a for-profit bank, then she would never get a student loan, because they know they would never get the money back. We have to have a system where people pay their own way, so that they can't take risks with anyone else's money but their own (or their loan guarantor's). No taxpayer money should be available to them, and no taxpayer money should be given to subsidize universities, either – it just raises the cost of tuition. Once the number of students applying to the humanities is reduced because no loans are available, then tuition will come down for those who *really intend to make a go of it.*

I think a lot of the problem here comes from growing up without a father. Fathers teach their children to be practical because they worry more than mothers about the children not being able to be independent and fend for themselves.

UPDATE: The Captain comments on this story here.

UPDATE: This is from the woman's Facebook page:

> I have never asked anybody to pay my student loan debt for me, and I will pay it down someday, even if I have to eat ramen noodles for the rest of my life. I was willing to undertake my studies at any cost and at any degree of personal risk because I believe in God and I am convinced that I am doing what God is calling me to do. If you read the New Testament, you will find a great deal about how people are called to give up everything they own – houses and wealth and family and respectibility and everything else – to do whatever it is that God calls them to do. I am not brave and no longer optimistic, but I have tried to take God at his word.
>
> I am not financing education entirely through student loan debt. I held work study jobs as an undergraduate, and have usually held some kind of on-campus employment. I have been a TA for the university for the last seven years. The fact is, government support of higher education is down and the cost of tuition has outpaced salaries to such a great degree in this country that virtually nobody is able to afford an education on their own wages without taking on a substantial burden of student loan debt. The vast majority of the anecdotes to the contrary concern degrees earned twenty or thirty years ago, before major structural changes in the financing of higher education – in the post-war years, government funding allowed the vast majority of expense for education to be met through Pell grants and scholarships, making it possible for many people to work themselves through school. That hasn't been possible for most people in most degree programs for at least thirty years, and these nostalgic memories of an entirely different time and set of circumstances are not doing the debate on

> higher education financing in this country any good at all.
>
> I am not a “professional student” nor am I taking an especially long time to pursue my degree – this is simply how long humanities education takes. http://chronicle.com/article/In-Humanities-10-Years-May/16231
>
> If you only see value in STEM disciplines, I probably will not convince you that humanities education is valuable. There used to be a sense in this country that certain things had value and meaning in their own right, not simply because they produced nice technological gadgets or made bundles of money for businesses. Even conservatives such as Allan Bloom used to realize that it impoverishes us spiritually when we turn away from the humanities, the cultural legacy of Western society. Would that their political descendants had as much grace or wisdom.

She’s not being forced into this course of action. She’s choosing it deliberately, and she wants other people to pay to make her impractical flight from reality financially sound.

William Lane Craig asks: should Christians embrace postmodernism?

May 3, 2014 | by Wintery Knight | Link | Original Link

Here's a short clip:

Dr. Craig thinks that Christianity does a lot better when it is commended to others using logic and evidence. He thinks that postmodernism undermines logic and evidence.

Sean McDowell has more on what this means for Christians:

> In Postmodern Youth Ministry, for example, Tony Jones argues that postmodernity is the most important culture shift of the past 500 years, upending our theology, philosophy, epistemology (how we know things), and church practice. It is an "earthquake that has changed the landscape of academia and is currently rocking Western culture." (p. 11). Thus, to be relevant in ministry today, according to Jones and other postmodernists, we must shed our modern tendencies and embrace the postmodern shift.
>
> For the longest time I simply accepted that we inhabit a postmodern world and that we must completely transform our approach to ministry to be effective today. But that all changed when I had the opportunity of hearing philosopher William Lane Craig speak at an apologetics conference not too long ago. "This sort of [postmodern] thinking," says Craig, "is guilty of a disastrous misdiagnosis of contemporary culture." ("God is Not Dead Yet," Christianity Today, July 2008, p. 26). He argues that the idea that we live in a postmodern world is a myth. This may strike you as awfully bold. How can he make such a claim?
>
> For one thing, says Craig, postmodernism is unlivable and contradictory: "Nobody is a postmodernist when it comes to reading the labels on a medicine bottle versus a box of rat poison. If you've got a headache, you'd better believe that texts have objective meaning!" (Reasonable Faith, 2008, p. 18) Craig speaks to tens of thousands of (mostly non-Christian) college students around the world every year and his conclusion is that we live in a cultural milieu that is deeply modernist. Reason, logic, and evidence are as important today as ever (although he's careful not to overstate their importance, too).
>
> Postmodernism and Apologetics
>
> But this is not all Craig has to say! In the introduction to Reasonable Faith, Craig provocatively claims, "Indeed, I think that getting people to believe that we live in a postmodern culture is one of the craftiest deceptions that Satan has yet devised" (p. 18). Accordingly, we ought to stop emphasizing argumentation and apologetics and just share our narrative. Craig develops this idea further:
>
> And so Satan deceives us into voluntarily laying aside our best weapons of logic and evidence, thereby ensuring unawares modernism's triumph over us. If we

> adopt this suicidal course of action, the consequences for the church in the next generation will be catastrophic. Christianity will be reduced to but another voice in a cacophony of competing voices, each sharing its own narrative and none commending itself as the objective truth about reality, while scientific naturalism shapes our culture's view of how the world really is (p. 18-19).
>
> **In a personal email, Craig relayed to me that he believes postmodernism is largely being propagated in our church by misguided youth pastors.** While he meant the comment more to elicit a smile than to be taken as a stab in the back, I can't help but wonder if he is right.
>
> If our culture were so profoundly postmodernist, why have the "New Atheists," as Wired magazine dubbed them, been so influential? Popular writers such as Christopher Hitchens, Sam Harris, and Richard Dawkins have recently written bestselling books attacking the scientific, historic, and philosophical credibility of religion in general and Christianity in particular. Their writings have wreaked havoc on many unprepared Christians. If our culture were postmodern their challenges should have fallen on deaf ears.

This is my experience as well. When I was an undergraduate student, I attended IVCF and the woman running it (Jill) was a feminist who pushed postmodernism and feminism hard. Every week brought another testimony emphasizing love and forgiveness while minimizing or denying theology, science, history and logic. She turned down all the efforts of the men to bring in professors to speak about the cosmological argument or the resurrection, etc.. It was testimonies and prayer walks and praise hymns every week. When I questioned the people she chose to give their testimonies (mostly women), I found that none had any reasons for thinking that what they were talking about really was true. As a consequence of that, they were soft on doctrine – regularly throwing out Bible verses that did "resonate" with their "intuitions". The same thing happened to me again with Campus Crusade as a graduate student. Personal testimonies of changed lives, divorced from any search for truth, every week.

One girl in particular that I knew at that time named Kerry was fond of bashing the laws of logic and the use of evidence. When I questioned her about it, she cited the influence of a charismatic youth pastor named Drew. A little more probing revealed that she denied the reality of Hell, and was a universalist. She eventually married a friend of mine and to this day has never read a single book on apologetics all the way through. Her beliefs are very much focused on the here and now, making friends and feeling good about herself. She never shook the habit of dismissing any argument, no matter how well-supported, that contradicted her intuitions.

Wall Street Journal: how the “Jesus wife” hoax fell apart

May 4, 2014 | by Wintery Knight | Link | Original Link

The Christian Apologetics Alliance tweeted this story from the Wall Street Journal.

Excerpt:

> In September 2012, Harvard Divinity School professor Karen King announced the discovery of a Coptic (ancient Egyptian) gospel text on a papyrus fragment that contained the phrase “Jesus said to them, ‘My wife . . .’ ” The world took notice. The possibility that Jesus was married would prompt a radical reconsideration of the New Testament and biblical scholarship.
>
> Yet now it appears almost certain that the Jesus-was-married story line was divorced from reality. On April 24, Christian Askeland—a Coptic specialist at Indiana Wesleyan University and my colleague at the Green Scholars Initiative—revealed that the “Gospel of Jesus’ Wife,” as the fragment is known, was a match for a papyrus fragment that is clearly a forgery.
>
> Almost from the moment Ms. King made her announcement two years ago, critics attacked the Gospel of Jesus’ Wife as a forgery. One line of criticism said that the fragment had been sloppily reworked from a 2002 online PDF of the Coptic Gospel of Thomas and even repeated a typographical error.
>
> […]Then last week the story began to crumble faster than an ancient papyrus exposed in the windy Sudan. Mr. Askeland found, among the online links that Harvard used as part of its publicity push, images of another fragment, of the Gospel of John, that turned out to share many similarities—including the handwriting, ink and writing instrument used—with the “wife” fragment. The Gospel of John text, he discovered, had been directly copied from a 1924 publication.
>
> “Two factors immediately indicated that this was a forgery,” Mr. Askeland tells me. “First, the fragment shared the same line breaks as the 1924 publication. Second, the fragment contained a peculiar dialect of Coptic called Lycopolitan, which fell out of use during or before the sixth century.” Ms. King had done two radiometric tests, he noted, and “concluded that the papyrus plants used for this fragment had been harvested in the seventh to ninth centuries.” In other words, the fragment that came from the same material as the “Jesus’ wife” fragment was written in a dialect that didn’t exist when the papyrus it appears on was made.
>
> Mark Goodacre, a New Testament professor and Coptic expert at Duke University, wrote on his NT Blog on April 25 about the Gospel of John discovery: “It is beyond reasonable doubt that this is a fake, and this conclusion means that

> the Jesus' Wife Fragment is a fake too." Alin Suciu, a research associate at the University of Hamburg and a Coptic manuscript specialist, wrote online on April 26: "Given that the evidence of the forgery is now overwhelming, I consider the polemic surrounding the Gospel of Jesus' Wife papyrus over."

Tim McGrew linked to this interview featuring one of the scholars who provided the "smoking gun".

Excerpt:

> ### Why do you consider it to be a forgery?
>
> **Askeland:** Essentially all specialists in ancient Egyptian material culture concluded that the so-called 'Gospel of Jesus's Wife' was a forgery back in 2012. Francis Watson, Alin Suciu, Hugo Lundhaug and Andrew Bernhard all contributed to a web-based discussion, which explained a string of grammatical anomalies in the fragment, appealing to an internet-based PDF of the Gospel of Thomas (the only surviving version of the Gospel of Thomas is in the Coptic language). With *The Gospel of Jesus's Wife* the forger had cut and pasted sections from the Gospel of Thomas, and in doing so created several grammatically impossible phrases. In particular, the forger unwittingly included a typo, which marked the particular source. The idea that both texts could include the exact same typographical error (and this kind of typographical error) is statistically highly improbable. Although the peculiarities of the scribal hand, which had no parallel among other ancient manuscripts, were damning enough, the textual source theory essentially settled the issue.

And:

> ### What is your key insight? Why have you been credited with finding 'the smoking gun'?
>
> **Askeland:** I remember sitting at my desk in Tyndale House one day in 2010, finishing my dissertation on the Coptic versions of John, and encountering an old note concerning *Codex Qau*, the main Lycopolitan witness to John's gospel; Lycopolitan is a dialect of Coptic. This manuscript was kept down the street at the Cambridge University Library, to which I went immediately. Fast-forward to the present. Remember, *The Gospel of Jesus's Wife* was one of several fragments which were announced by Karen King. There was also in this group of fragments a fragment of the Gospel of John in Coptic. Just recently, when I gazed upon Karen King's Coptic John fragment, what I saw was immediately clear. Not only were the writing tool, ink and hand exactly the same as those of the *Gospel of Jesus's Wife* fragment, but also the method of composition was the same. As I looked at Karen King's Gospel of John fragment, I finally saw that it was clearly copied (by the forger) from Herbert Thompson's 1924 edition of *Codex Qau*.

> Indeed, the Gospel of John fragment had exactly the same line breaks as *Codex Qau* – a statistical improbability if it were genuine.

This is not the first time that fake manuscripts have surfaced that promote left-wing politics. Morton Smith, a homosexual, passed of a forged gospel called the "Secret Gospel of Mark" which promoted a homosexual view of Jesus. This 20th century hoax was accepted by the gullible mainstream media, until it was disproved as a forgery in the peer-reviewed literature, and in academic books. The Secret Gospel of Mark is so debunked that even Robert M. Price, who is on the far left fringe of New Testament scholarship, rejects it.

It should be noted that Karen King is a member of the liberal naturalistic Jesus Seminar. They presuppose atheism and their politics are hard left – that's what they assume before they begin doing scholarship. Karen King specializes in "women's roles in the church" and Gnosticism. I expect that she would be very happy if this Jesus-had-a-wife fragment were used to bash traditional notions of women's roles in the church. And so would her allies in the secular leftist media.

Psychologist recommends Darwinian storytelling to suppress design intuitions

May 4, 2014 | by Wintery Knight | Link | Original Link

Amy Hall of Stand to Reason linked to this post by David Klinghoffer on Evolution News. Excerpt:

> The *Wall Street Journal* salutes the research of Boston University psychologist Deborah Kelemen. She has discovered that it's possible with Darwinian storytelling to *suppress* common sense in children of the kind that leads them to recognize artifacts of intelligent design in nature.
>
> The *Journal* notes that quite apart from religious instruction, kids are primed to see life as reflecting "intentional design." It's intuitive. The corrective is to catch them at an early age and train them to see things in a Darwinian light.

> By elementary-school age, children start to invoke an ultimate God-like designer to explain the complexity of the world around them — even children brought up as atheists. Kids aged 6 to 10 have developed their own coherent "folk biological" theories. …
>
> Dr. Kelemen and her colleagues thought that they might be able to get young children to understand the mechanism of natural selection before the alternative intentional-design theory had become too entrenched. They gave 5- to 8-year-olds 10-page picture books that illustrated an example of natural selection. The "pilosas," for example, are fictional mammals who eat insects. Some of them had thick trunks, and some had thin ones. A sudden change in the climate drove the insects into narrow underground tunnels. The thin-trunked pilosas could still eat the insects, but the ones with thick trunks died. So the next generation all had thin trunks.
>
> Before the children heard the story, the experimenters asked them to explain why a different group of fictional animals had a particular trait. Most of the children gave explanations based on intentional design. But after the children heard the story, they answered similar questions very differently: They had genuinely begun to understand evolution by natural selection. That understanding persisted when the experimenters went back three months later.
>
> One picture book, of course, won't solve all the problems of science education. But these results do suggest that simple story books like these could be powerful intellectual tools. The secret may be to reach children with the right theory before the wrong one is too firmly in place.

> There are a number of interesting points here. First, that the example of natural selection is fictional. The mammalian order Pilosa (anteaters and sloths) is real, but "pilosas" are not. Second, it is decidedly in the micro-evolutionary realm — a

> kind of evolution that no one disputes, certainly not advocates of the theory of intelligent design. There's no reason to think that the "pilosas" are on their way to true speciation, of the kind that evolutionary theory is really challenged to account for, any more than Darwin's finches. The extrapolation from such a trivial thing into the origin of all species and all biological complexity by unguided natural processes is a cheat.
>
> Most enlightening is that Dr. Kelemen and her colleagues would, to begin with, seek to talk children out of their intuitive response. Among ID researchers, the approach would be to *test* that intuition, objectively weighing the empirical evidence without preconceptions. Dr. Kelemen would "suppress" it: her own word!

The abstract of her research publication calls the Darwinian storytelling "interventions".

I do think it's important for parents to counter what these educators are interested in doing to their children.

First, it's important for parents to consider whether teachers are paid for their work (by parents who use privates schools) or whether their salary is coming from the government (parents are forced by law to pay taxes for government-run "public" schools), which has other purposes for children than parents have. Second, it's important for parents to decide how they intend to explain to their children the difference between macroevolution and microevolution, lest naturalistic educators use evidence for microevolution as a way of persuading children to accept macroevolution. Third, parents have to decide how to teach their children about the the standard cosmology, cosmic fine-tuning, the origin of life and the Cambrian explosion – each of which is lethal to naturalism, and each of which is more rooted in experimental science than clumsy storytelling. Unfortunately, the good evidence that modern science offers is largely unknown to most parents, who still trust teachers to teach children truth and practical skills.

I do think it's important for parents to have some sort of plan for dealing with this, and money to fund their plan. The BU professor is obviously not capable of winning an argument about Darwinism with a grown-up with a good knowledge of the facts, but that's not her purpose. She is a psychologist in Boston – it's unlikely she is familiar with actual experimental science related to origins. She's not interested in debating William Lane Craig or Stephen C. Meyer – *she's never even heard of them*. She doesn't want to talk about the details of experimental science with someone who has an awareness of it, she just wants to pass her own religion (naturalism) on to your children when they are too young to know how to resist her. And I'm sure that she'd like the assistance of a secular government to accomplish that. And believe me, there are powerful people who are very interested in helping her, and in making sure that no parent can stop her from indoctrinating their children.

How the green movement makes war on jobs and the poorest Americans

May 5, 2014 | by Wintery Knight | Link | Original Link

This article by Stephen Moore from Investors Business Daily is important, because it shows that there is a cost to environmentalist advocacy.

Excerpt:

> Last month we saw firsthand one impact of Big Green on our economy with the White House announcement that the Keystone XL pipeline won't be built for at least six more months.
>
> Ten thousand blue collar jobs, almost all paying more than $50,000 a year, down the drain.
>
> It's a project that polls show almost all Americans want, except for the deep-pocketed green elite in Hollywood, Silicon Valley and Wall Street.
>
> Then the Los Angeles Times recently warned that electricity prices could be driven upward in California and other states due in part to renewable energy mandates that cause electric power shortages and spike prices paid by homeowners.
>
> Meanwhile, around the country, from Seattle to Bangor, Maine, property owners are locked into fights with green groups preventing people from building on their land in responsible and productive ways.
>
> Out West, the Endangered Species Act has become an Endanger the Oil and Gas Industry Act, as energy companies confront higher regulatory hurdles and bans on development on potentially tens of millions of acres.
>
> Whole communities that depend on natural resource development are being wiped out.
>
> Big Green is already fast at work wiping out America's coal industry, with entire mining towns nearly shut down in states like Kentucky and West Virginia, thanks to the left's war on coal. These are small towns where the median household income is often less than $40,000 a year. Liberals used to pretend to care about these people.
>
> […]In fact, the environmental movement's entire agenda — stop fracking, stop coal development, stop pipelines, stop nuclear energy, stop drilling on federal lands, require expensive "renewable energy," enact cap-and-trade schemes, impose carbon taxes, and on and on — victimize poor and middle-class Americans the most. Rich donors to the Sierra Club get hardly a scratch from these policies to save the planet.

If you ask most Americans whether they are more worried about global warming or

having a job, they'll say having a job is more important. Paying less for electricity is more important. Paying less for gas for their car is more important. The only people who don't care are the rich. But not just any rich – the Hollywood rich. The people who have no idea how the economy works. If only young people and the middle class could realize what the real price tag is for all this fine environmentalist rhetoric. Maybe we should be telling them how environmental policies affect their day-to-day lives.

Boehner announces select committee to investigate the Benghazi cover-up

May 5, 2014 | by Wintery Knight | Link | Original Link

From the Daily Caller.

Excerpt:

> South Carolina Republican congressman Trey Gowdy claimed he has evidence of "a systematic, intentional decision to withhold certain documents from Congress" about the Benghazi attacks and alleged White House cover-up.
>
> Gowdy spoke with Fox News' Greta van Susteren about Speaker of the House John Boehner's Friday decision to form a select committee on Benghazi. The congressman explained that the committee will allow a more complete investigation into the issue, unburdened by the jurisdictional restraints that often plague other committees.
>
> "If you want to have Greg Hicks and the station chief from Tripoli and Hillary Clinton all sitting at the same table, you need to have a committee that has the power to do that," Gowdy said. "And a select committee would have that power."
>
> Gowdy — widely viewed as a frontrunner to chair the new committee — later told Susteren he supports Congress' subpoena of Secretary of State John Kerry in order to get documents they have long awaited from the State Department.
>
> He then added he has proof that documents relating to Benghazi and the alleged Obama administration cover-up have been deliberately withheld from Congress.
>
> "Well, I have evidence that not only are they hiding it, there is an intent to hide it," he claimed. "I can't disclose that evidence yet, but I have evidence that there was a systematic, intentional decision to withhold certain documents from Congress."

And guess what? Boehner has now announced the formation of a special committee. And Gowdy is one of the candidates to lead it.

Excerpt:

> House Republicans moved on two fronts Friday to dig for answers on Benghazi, with Speaker John Boehner announcing a special committee to investigate and a key panel subpoenaing Secretary of State John Kerry to testify.
>
> In a significant shift, Boehner announced that the House will vote on establishing a select committee to investigate, on the heels of newly released emails that raised additional questions about the White House's response.
>
> […]The committee is expected to be bipartisan, and Fox News is told Rep. Trey Gowdy, R-S.C., is among those being considered to lead it.

Gowdy should be picked to lead it. It is a former prosecutor and he knows how to cut through the baloney.

In addition, Darrell Issa has sub-poena'd John Kerry to explain why documents the GOP has requested have not been received:

> On the heels of those documents, the House Oversight and Government Reform Committee also announced Friday that it has issued the subpoena for Kerry to testify at a May 21 hearing. The chairman of that committee has accused the administration of hiding records following an earlier subpoena.
>
> "The State Department's response to the congressional investigation of the Benghazi attack has shown a disturbing disregard for the Department's legal obligations to Congress," Chairman Rep. Darrell Issa, R-Calif., wrote in a letter to Kerry.
>
> He added: "Compliance with a subpoena for documents is not a game. Because your Department is failing to meet its legal obligations, I am issuing a new subpoena to compel you to appear before the Committee to answer questions about your agency's response to the congressional investigation of the Benghazi attack."

So we are going to finally get some answers. This recent shift from Boehner comes as a result of the e-mails that surfaced last week, implicating the White House in the Benghazi cover-up. I would like to know exactly who was responsible for inventing the YouTube video story.

First openly gay Episcopal bishop to divorce same-sex partner

May 5, 2014 | by Wintery Knight | Link | Original Link

This is an Associated Press article, so it is extremely liberal and sympathetic to the gay bishop. (H/T Tom)

Excerpt:

> The first openly gay Episcopal bishop, who became a symbol for gay rights far beyond the church while deeply dividing the world's Anglicans, plans to divorce his husband.
>
> […]Robinson, 66, had been married to a woman and had two children before he and his wife divorced. He and Andrew had been partners for more than a decade when Robinson was elected to lead the New Hampshire Diocese. The two men were joined in a 2008 civil union in New Hampshire, which became a legal marriage when the state recognized gay marriage two years later.
>
> […]Robinson was… widely celebrated as a pioneer for gay rights, became an advocate for gay marriage and was the subject of several books and a documentary about Christianity, the Bible and same-sex relationships. He delivered the benediction at the opening 2009 inaugural event for President Barack Obama and, after retirement, became a senior fellow at the Center for American Progress, a Democratic think tank with close ties to the White House.

The interesting thing about this is that although Americans have been fed a steady diet of propaganda from Hollywood to make us think that gay relationships are stable, the reality is that they are NOT stable.

Let's take a look at the data

Consider this post from The Public Discourse which explains that there are few stable, long-lived gay relationships – even the ones with children.

Excerpt:

> The [NFSS] study found that the children who were raised by a gay or lesbian parent as little as 15 years ago were usually conceived within a heterosexual marriage, which then underwent divorce or separation, leaving the child with a single parent. That parent then had at least one same-sex romantic relationship, sometimes outside of the child's home, sometimes within it. **To be more specific, among the respondents who said their mother had a same-sex romantic relationship, a minority, 23%, said they had spent at least three years living in the same household with both their mother and her romantic partner. Only 2 out of the 15,000 screened spent a span of 18 years with the same two mothers. Among those who said their father**

> **had had a same-sex relationship, 1.1% of children reported spending at least three years together with both men.**
>
> This strongly suggests that the parents' same-sex relationships were often short-lived, a finding consistent with the broader research on elevated levels of instability among same-sex romantic partners. For example, a recent 2012 study of same-sex couples in Great Britain finds that gay and lesbian cohabiting couples are more likely to separate than heterosexual couples. A 2006 study of same sex marriages in Norway and Sweden found that "divorce risk levels are considerably higher in same-sex marriages" such that Swedish lesbian couples are more than three times as likely to divorce as heterosexual couples, and Swedish gay couples are 1.35 times more likely to divorce (net of controls). Timothy Biblarz and Judith Stacey, two of the most outspoken advocates for same-sex marriage in the U.S. academy, acknowledge that there is more instability among lesbian parents.
>
> **Therefore, while critics of the NFSS have faulted it for lacking comparisons between children of IBFs and the children of committed and intact gay or lesbian couples, this was attempted, but was not feasible. Despite drawing from a large, representative sample of the U.S. population, and despite using screening tactics designed to boost the number of respondents who reported having had a parent in a same-sex relationship, a very small segment reported having been parented by the same two women or two men for a minimum of three years. Although there is much speculation that today there are large numbers of same-sex couples in the U.S. who are providing a stable, long-term parenting relationship for their children, *no studies* based upon large, random samples of the U.S. population have been published that show this to be true, and the above-cited studies of different nations show that on average, same-sex couple relationships are more short-lived than those of opposite-sex couples.**

I think this is an important point to make – and it's consistent with the research from previous studies. The bottom line is that gay marriage is another step on the path towards making marriage about the needs and feelings of adults. In natural marriage, parents are concerned about how breaking up will affect their children – so thy have a reason to stay together and work conflicts out. The needs of the adults are secondary to the needs of the children. But in gay marriage, there is no such constraint. The children are not related biologically to both partners, and so that protection is not in place.

Public school teacher bans Bible reading in her class

May 6, 2014 | by Wintery Knight | Link | Original Link

From CBS local news.

Excerpt:

> A Broward County boy said he was banned from reading "The Good Book" during free-reading time in school. The boy and his father have hired an attorney, calling this a violation of the boy's Constitutional rights. Meanwhile, the Broward County School District says this is all a big misunderstanding.
>
> "I first started reading a little bit (of the Bible,)" says Rubeo. "Little by little, it started becoming my favorite book to read.
>
> Giovanni Rubeo says the Bible was given to him as a gift from his church, Calvary Chapel Fort Lauderdale, over Christmas.
>
> The Park Lakes Elementary fifth grader said he started reading it during free-reading time in his first-period class. That's when the boy's attorney claims his teacher, Swornia Thomas, stepped in.
>
> Rubeo's attorney shared a voicemail the teacher left for Giovanni's dad.
>
> "Good morning, Mr. Rubeo," says a woman. "Giovanni called you because I asked him to. I noticed that he had a book, a religious book, in the classroom. He's not permitted to read those books in my classroom. He said if I told him to put it away, you said not to do that. So please give me a call. I need to have some understanding on direction to him about the book he's reading opposed to the curriculum for public school. Ms. S. Thomas. Thank you. Have a wonderful day. Bye, bye."
>
> Giovanni and his lawyer claim Giovanni was told on multiple occasions that he couldn't read the Bible during free-reading time.
>
> […]The district wouldn't comment on what, if any, consequences the teacher might face. Giovanni says there has been no free-reading time, recently, so he hasn't been reading his Bible at school.
>
> CBS4′s Gaby Fleischman stopped by Mrs. Thomas' home. Her husband told us she was not there and asked: "What the [expletive] do you want?"
>
> Gaby responded that we want to speak to Mrs. Thomas' to hear her side of the story.
>
> "She ain't got nothing to say to you, she ain't got nothing to say," responded her husband. "Get me on camera, get the [expletive] out of my yard."

Note that this student's parents (and all of you reading) pay taxes to fund these public schools. Public school teachers are unionized, and they support bigger government and higher taxes. We are funding a system that is hostile to our beliefs. The only way to fix

this is to detach the money from the public school and put it in the hands of the parents, who can then decide which school they would like to partner with – or maybe no school at all, in the case of homeschooling. That's the fastest way to end the bullying of Christians and conservatives that goes on in public schools. Attach the money to the parent, and suddenly these public school teachers will remember who their customers are.

Casey Luskin: useful resources to have when debating intelligent design

May 6, 2014 | by Wintery Knight | Link | Original Link

Casey Luskin replies to an e-mail at Evolution News from someone seeking help defending ID.

There are 6 questions asked:

> 1) Can you give me half a dozen (or more) examples of where ID or Creationists have been intimidated for their views? Whether they were fired, threat of firing, demoted, sued, threat of suit, or publicly humiliated by the Scientific Community and/or Atheist and/or ACLU. In cases of a firing, I would much appreciate examples where a lawsuit ensued because that tends to shows the serious nature of the offense…
>
> 2) Can you provide half a dozen (or more) examples where any scientists who publicly raised a challenge to evolution or evolution theory was also intimidated? I would appreciate it, if you could provide a few examples of people who actually supported evolution who then realized their research tended to disprove evolution. You can also provide a few examples where those in academia were intimidated.
>
> 3) Can you tell me how many states now have laws that protect teachers in allowing them to give both evidence supporting evolution as well as evidence disproving evolution? I would especially appreciate examples where the evolutionists or ACLU attempted to block those legislative attempts.
>
> 4) Can you give me examples of where evolutionists tried to deceive the public or scientific community?
>
> 5) *** As I've read and researched, there has never been an example of "evolution" actually occurring; yet Wikipedia makes the bold statement that implies there are examples and then lists bacteria as one…
>
> "Typically, observable instances of evolution are examples of microevolution; for example, bacterial strains that have antibiotic resistance…."
>
> I believe I recently read that in fact bacteria haven't been observed "evolving" and that evolutionists themselves note this is a real challenge, because they should be able to make it change but it never does. It simply reverts back. Isn't it true that bacteria, as referenced in Wikipedia, aren't evolving but are simply developing an immunity to the antibiotics?
>
> 6) Lastly, can you give me four or five major things that disprove evolution….

Do those sound useful to you? If so, click through, and bookmark the page for later. You might also find this video lecture by Dr. Stephen C. Meyer an excellent introduction to

intelligent design in the origin of life.

Pastor Matt: Christian apologists should care about the loss of religious liberty

May 6, 2014 | by Wintery Knight | Link | Original Link

From Pastor Matt Rawlings' blog. First he summarizes a couple of religious liberty cases – Brendan Eich and Elane Photography.

Excerpt:

> […][F]ew seemed to pause and ask about the ramifications of a nation incrementally losing the religious freedom it has long enjoyed. I would argue this is an issue that committed Christian thinkers should take very seriously.
>
> First of all, the loss of religious freedom (along with the growth of centralized government) is historically dangerous for all people. The loss of one freedom often serves as the domino for the loss of others. We are a people called to love our neighbors (Matt. 22:37-40) and standing by while persecution may be inching toward many certainly does not count.
>
> Second, some have argued that if we lose our freedom it will help the church grow or at least "separate the men from the boys." This is a romantic notion that persecution is good for the church but it too is a failure to love our neighbors and is not entirely accurate. For example, see Acts 9:31, which reads, "Then the church throughout Judea, Galilee and Samaria enjoyed a time of peace and was strengthened. Living in the fear of the Lord and encouraged by the Holy Spirit, it increased in numbers." Moreover, great revivals like the First and Second Great Awakening and the immediate post World War II boom took place in times of religious freedom.
>
> Third, true rational discourse in true marketplace of ideas depends on true religious freedom. One cannot arbitrarily exclude certain ideas from public debate because it strikes certain segments of the culture as offensive. If any person believes that open dialogue is a key to truth then that person should fight for any voice to have his or her say.

I'll skip to his conclusion:

> So, we need to graciously and intelligently contend for our freedom by supporting Christian legal groups like Alliance Defending Freedom and, of course praying for God's continued grace. We also need to train ourselves in public and practical apologetics including why it is that traditional marriage is good for a country (and it is). In the meantime, be sure to go to Speak Up Church and gather resources on how to help protect your church from the current attacks on religious freedom.

Read the whole thing. This is a great post, and one you ought to click through and read.

Now before my remarks, I wanted to produce the biography of one of the ADF lawyers I heard in a recent podcast.

Douglas Napier bio:

> Douglas H. Napier serves as Senior Vice-President-Legal for Alliance Defending Freedom at its headquarters in Scottsdale, Arizona, where he leads a litigation team of approximately 40 attorneys and legal support staff at offices in District of Colombia, Arizona, Kansas, California, Georgia, and Tennessee. Before joining Alliance Defending Freedom in 2007, Napier practiced civil trial law in Iowa for 16 years. He earned his J.D. from the University of Iowa College, with distinction, and is a fellow of the Iowa Academy of Trial Lawyers. Napier is admitted to the bar in Iowa, the U.S. District Court for the Southern District of Iowa, and the U.S. Supreme Court, and has been admitted pro hac vice to several federal courts across the nation.

I'm glad that some Christians are making the plans to get these law degrees that allow them to do something about threats like this.

My thoughts

When I posted this on Facebook earlier on Monday, I was surprised to see a bunch of people posting Bible verses and talking about how persecution might not be such a bad thing. And this always annoys me, because I wonder if these people really understand what persecution looks like, in different times and places. It looks like murder, torture, imprisonment, fines, trials, sickness, disease, loneliness and despair. It's not something you wish for. It's certainly not something you want for others. We have a threat to religious liberty. That threat should be met with law degrees from prestigious universities – and life plans that allow you to get those degrees. We need to be making life plans to either get the degrees that can counter the threat, or to support those (financially) who are getting them or who already have them. I'm in the latter group.

Father arrested for challenging public school on assigned book containing graphic sex

May 7, 2014 | by Wintery Knight | Link | Original Link

Story from the Blaze.

Excerpt:

> A New Hampshire parent was arrested at a Monday night school board meeting after he voiced outrage his ninth grade daughter was assigned a book that contains a page detailing a graphic sexual encounter.
>
> Gilford school officials claim the book, “Nineteen Minutes” by Jodi Picoult, contains important themes about a school shooting. But some parents believe a scene described in the book is inappropriate for their children.
>
> According to WCVB-TV, the book contains a graphic description of rough sex between two teenagers, which parents were unaware of until the book had already been distributed to their kids.
>
> “I was shocked when I read the passage and not much shocks me anymore,” William Baer told EAG News. “My wife was stunned by the increasingly graphic nature of the sexual content of the scene and the imagery it evoked.”
>
> He went to the school board meeting to express his objections.
>
> “It’s absurd,” he told the school board.
>
> “Sir, would you please be respectful of the other people?” a school board member responded.
>
> “Like you’re respectful of my daughter, right? And my children?” he countered.
>
> A police officer then arrived at the scene, instructing Baer to leave with him.
>
> “You are going to arrest me because I violated the two-minute rule?” the father said. “I guess you are going to have to arrest me.”
>
> **Moments later, Baer was escorted outside and placed in handcuffs. According to WMUR-TV, he was charged with disorderly conduct because he did not immediately leave when asked by an officer.**

When it comes to public schools indoctrinating your children, parents are the enemy. The teachers have a leftist agenda, and parents just get in the way.

New study: only 7% of journalists are Republicans

May 7, 2014 | by Wintery Knight | Link | Original Link

Story in the left-wing Washington Post.

Excerpt:

> A majority of American journalists identify themselves as political independents although among those who choose a side Democrats outnumber Republicans four to one, according to a new study of the media conducted by two Indiana University professors.
>
> Write Lars Wilnat and David Weaver, professors of journalism at Indiana, of their findings:

> Compared with 2002, the percentage of full-time U.S. journalists who claim to be Democrats has dropped 8 percentage points in 2013 to about 28 percent, moving this figure closer to the overall population percentage of 30 percent, according to a December 12-15, 2013, ABC News/Washington Post national poll of 1,005 adults. This is the lowest percentage of journalists saying they are Democrats since 1971. An even larger drop was observed among journalists who said they were Republicans in 2013 (7.1 percent) than in 2002 (18 percent), but the 2013 figure is still notably lower than the percentage of U.S. adults who identified with the Republican Party (24 percent according to the poll mentioned above).
>
> Over the last several decades, three things have happened: 1) The number of Democratic-identifying reporters increased steadily prior to a significant drop in the latest survey 2) The number of Republicans has steadily shrunk with that number dipping into single digits for the first time ever in the new survey c) more and more reporters are identifying as independents. What seems to be happening — at least in the last decade – -is that journalists are leaving both parties, finding themselves more comfortable as unaffiliateds.

I wonder if people really realize how left-wing the mainstream media is – it's really just an extension of the Democrat party. And this study isn't an outlier, either.

Let's take a look at some other peer-reviewed studies on media bias.

Peer-reviewed academic studies of media bias

Let's take a look at peer-reviewed academic studies of media bias, and see if they confirm or falsify what Pew Research found.

Here's a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS' "Evening News," The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.

> Only Fox News' "Special Report With Brit Hume" and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the "NewsHour With Jim Lehrer." CNN's "NewsNight With Aaron Brown" and ABC's "Good Morning America" were a close second and third.
>
> "Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill," Groseclose said. "If these newscasters weren't centrist, staffers for one of the campaign teams would have objected and insisted on other moderators."
>
> The fourth most centrist outlet was "Special Report With Brit Hume" on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC's "World News Tonight" and NBC's "Nightly News" to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> "If viewers spent an equal amount of time watching Fox's 'Special Report' as ABC's 'World News' and NBC's 'Nightly News,' then they would receive a nearly perfectly balanced version of the news," said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia."

Here's a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.
>
> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

And more from a study reported by NBC News.

Excerpt:

> MSNBC.com identified 143 journalists who made political contributions from 2004

> through the start of the 2008 campaign, according to the public records of the Federal Election Commission. Most of the newsroom checkbooks leaned to the left: 125 journalists gave to Democrats and liberal causes. Only 16 gave to Republicans. Two gave to both parties.
>
> The donors include CNN's Guy Raz, now covering the Pentagon for NPR, who gave to Kerry the same month he was embedded with U.S. troops in Iraq; New Yorker war correspondent George Packer; a producer for Bill O'Reilly at Fox; MSNBC TV host Joe Scarborough; political writers at Vanity Fair; the editor of The Wall Street Journal's weekend edition; local TV anchors in Washington, Minneapolis, Memphis and Wichita; the ethics columnist at The New York Times; and even MTV's former presidential campaign correspondent.

Those are the facts.

Liberal feminist celebrates decline of traditional marriage norms

May 7, 2014 | by Wintery Knight | Link | Original Link

Here's an article from the radically left-wing New Republic by Helen Croydon, in which she explains why marital norms have got to go.

She needs to keep her freedom and fulfill her different needs at different times:

> […]I… would rather retain my single status with a few rewarding lovers to fulfill different needs at different times of my life. Relationships can be a nice addition to contentment but they no longer have to be the main ingredient.

Science shows that we're all just monkeys anyway:

> Liberal social attitudes mean monogamy for the sake of it is but a moral trinket. Fine if you're in the early throes of romantic love and only have eyes for each other. I've been there many times and what a wonderful feeling it is. But it's no secret that romantic infatuation doesn't last. In fact anthropologists now distinguish between different states of attraction. There is romantic love, where you are flooded with dopamine, get the butterflies and want to spend every moment together. Then there is attachment, where you are flooded with the hormone oxytocin and feel a deep sense of trust, familiarity and love for your partner but little passion. In the former you probably find monogamy agreeable. I certainly do. By the time you've been together for long enough to not close the bathroom door to trim your toenails, you're likely to find your eyes and fantasies wander occasionally. But of course you will rein them in because the modern conventions of relationships dictate that's what you should do.

A lot of people are doing it, so that makes it morally permissible:

> There are now 3.5 million people over the age of 45 living alone in the UK, an increase of more than 50 percent since the mid-1990s. Domestic conveniences like vacuum cleaners, modern compact apartments and supermarket deliveries make it all very easy. In researching my book I interviewed married couples who live apart. One couple were on the verge of separating when they rented the house next door as a trial separation. Without the domestic minutiae overshadowing their "romantic" relationship, they thrived, so they made it permanent. The wife told me in glee: "I can invite people back and have parties. I could never do that before because he's such a miserable anti-social thing." So common is this new trend that the Office for National Statistics has created a term for it—LAT (living apart together). It estimates there are currently two million LAT couples in the UK. More people choose to live alone because they can.

This is the part that is really interesting:

> **If you think life-long commitment is still needed to start a family, a replacement for that has been found too. Earlier this month it was reported that the number of single women seeking artificial insemination with a sperm donor has doubled in five years. This is more significant if you consider that as late as the 1950s single motherhood was deplored so much that they could be locked away in a mental asylum.**

So she's saying "lots of people are having fatherless children, so that makes it right". This is how liberal feminists decide. You don't have to look at studies to see what fatherlessness does to a child – you just have to see if your friends will judge you for it. If they don't judge you, then you're fine to do anything you want.

And now I'm going to tell you exactly why this woman wrote this article. She wrote it because she made poor choices with men, and now she is trying to get younger women to make the same poor choices, so she doesn't feel alone in their failure. That's the whole point of this. Don't judge me. Don't disapprove of me. I didn't hurt anyone. I didn't do anything wrong. Everything is going exactly as planned. I'm a big success, and my married friends who have children are not any better than me. I can have children any time I want. My career is as fulfilling as a family. Everyone is cheating on everyone anyway, so why even try?

This is not a safe woman to marry.

House Republicans vote to hold Lois Lerner in contempt of Congress

May 8, 2014 | by Wintery Knight | Link | Original Link

From CBS News.

Excerpt:

> The Republican-led House voted Wednesday to hold former Internal Revenue Service official Lois Lerner in contempt of Congress for refusing to answer questions related to the agency's undue scrutiny of certain tax-exempt groups.
>
> The vote to hold Lerner in contempt of Congress was 231-187, with all Republicans voting in favor and all but a few Democrats voting against.
>
> It's now up to a local U.S. attorney to consider criminal charges against Lerner. The Justice Department, however, has ignored past contempt charges against executive branch officials, including contempt charges against Attorney General Eric Holder.
>
> […]Republicans maintain they are determined to get to the bottom of the scandal and find out why IRS officials, starting in 2010, unfairly targeted groups for their political activity.
>
> […]In addition to holding Lerner in contempt, the House also voted 250-168 to approve a resolution calling on Holder to appoint a special counsel to investigate the IRS targeting.

According to Hot Air, "Lerner could face fines up to $100,000 and even a up to a year of jail time".

In other news, Trey Gowdy, who is heading the new select committee on Benghazi, is kicking some serious ass.

Transcript fragment:

> **MEGYN KELLY**: I know you said you intend to subpoena her, that you want her to appear before your committee. However, and I say this respectfully, the last time she appeared before Congress what we had was a series of speeches from the lawmakers, without that many probing questions. I hear that from my viewers often when we look back on those hearings. What would be different this time?
>
> **TREY GOWDY**: Well, what will be different is I'm not necessarily committing to hearing. I'm committing to the getting the answers and may be in the form of a deposition, which, as you know, Megyn, as a very good attorney, which you once were, that is the route that is most conducive with eliciting the truth. It's not five minutes of pounding your chest in a committee room. It's a deposition.
>
> **MEGYN KELLY**: Can she get out of that?

> **TREY GOWDY**: Well, if she can get out of a subpoena, she can get out of it. But I don't send invitations to cocktail parties. We're going to send subpoenas and we're going to expect her to comply and if you don't comply, she'll suffer the same panoply of consequences that any of your viewers who don't comply with a subpoena would suffer.

I was hoping they were going to pick him to lead the committee, and I believe we are finally going to get some answers on this scandal.

Homeschooled sixteen-year-old graduates college and high school in the same week

May 8, 2014 | by Wintery Knight | Link | Original Link

ABC News:

CBS News:

CBS local news reports on this amazing story.

Full text:

> It's that time of year when students all across the country will be celebrating high school and college graduations. One South Florida girl will get a diploma from both in the same week and she is only 16-years old.
>
> Grace Bush already has her bachelor's degree from college but she doesn't have a high school diploma yet.
>
> "It's kind of weird that I graduated college before high school," said Grace Bush.
>
> The teen from Hollywood earned her bachelor's degree in criminal justice Friday morning from Florida Atlantic University.
>
> She did it with a 3.8 grade point average and completed the four-year degree in just three years.
>
> "I started when I was 13 at Broward College and I also took my classes throughout the summer, so I was able to finish it before four years," said Grace Bush.
>
> The institution's dual enrollment program allows high performing high school students to earn credit for the same courses towards their college degree and save thousands of dollars in tuition at the same time.
>
> Grace's parents wanted their nine children to earn college credit in high school because they can't afford to send all of their kids to college. **Their mother, who home schooled all the kids** knew early on, Grace had a knack for learning.
>
> "At two years old, she was already reading and I was totally shocked," said Grace's mother, Gisla Bush.
>
> Grace is the third oldest in the Bush family.
>
> "My two older sisters are doing it and I'm the third to do it. My oldest sister already graduated and my second oldest sister is graduating in the summer," said Grace Bush.
>
> The new college graduate said she'll be pursuing a master's degree this fall, and then going to law school.
>
> "I would eventually like to become chief justice of the United States," said Grace Bush.

> During her spare time she plays the flute in two orchestras and that keeps her busy but she says she will finally take a little break during the summer.
>
> "To study for the LSAT, so I can get as high a score as possible, so hopefully I can get a full ride into a good school, law school," said Grace Bush.

Looking at the two videos above, I saw several interesting things. This young lady did not attend public school, she was home-schooled. She had a father who was proud of her and believed in her, which affects the graduation rates of children according to a recent study. She was filmed speaking in her home in front of a little plaque with a verse from the Bible.

Another example of convergence found in human and squid eye genes

May 8, 2014 | by Wintery Knight | Link | Original Link

We have to start this post with the definition of convergence in biology.

> In evolutionary biology, convergent evolution is the process whereby organisms not closely related (not monophyletic), independently evolve similar traits as a result of having to adapt to similar environments or ecological niches.
>
> It is the opposite of divergent evolution, where related species evolve different traits.
>
> On a molecular level, this can happen due to random mutation unrelated to adaptive changes; see long branch attraction. In cultural evolution, convergent evolution is the development of similar cultural adaptations to similar environmental conditions by different peoples with different ancestral cultures. An example of convergent evolution is the similar nature of the flight/wings of insects, birds, pterosaurs, and bats.
>
> All four serve the same function and are similar in structure, but each evolved independently.

With that being said, here is an article from Real Clear Science with me. (H/T Melissa from Science, Faith and Reason)

Excerpt:

> Eyes and wings are among the most stunning innovations evolution has created. Remarkably these features have evolved multiple times in different lineages of animals. For instance, the avian ancestors of birds and the mammalian ancestors of bats both evolved wings independently, in an example of convergent evolution. The same happened for the eyes of squid and humans. Exactly how such convergent evolution arises is not always clear.
>
> In a new study, published in *Nature Scientific Reports*, researchers have found that, **despite belonging to completely different lineages, humans and squid evolved through tweaks to the same gene.**
>
> Like all organs, the eye is the product of many genes working together. The majority of those genes provide information about how to make part of the eye. For example, one gene provides information to construct a light-sensitive pigment. Another gene provides information to make a lens.
>
> Most of the genes involved in making the eye read like a parts list – this gene makes this, and that gene makes that. But some genes orchestrate the construction of the eye. Rather than providing instructions to make an eye part, these genes provide information about where and when parts need to be

> constructed and assembled. In keeping with their role in controlling the process of eye formation, these genes are called “master control genes”.
>
> The most important of master control genes implicated in making eyes is called *Pax6*. The ancestral *Pax6* gene probably orchestrated the formation of a very simple eye – merely a collection of light-sensing cells working together to inform a primitive organism of when it was out in the open versus in the dark, or in the shade.
>
> **Today the legacy of that early *Pax6* gene lives on in an incredible diversity of organisms, from birds and bees, to shellfish and whales, from squid to you and me. This means the *Pax6* gene predates the evolutionary diversification of these lineages – during the Cambrian period, some 500m years ago.**

I asked Melissa if this was another example of “convergence”, and she said it was. That’s because the gene is present in animals that DO NOT SHARE A COMMON ANCESTOR. In short, this is exactly identical to the case where a computer programmer reuses the same library of functions in two completely different programs. For example, using the Apache CXF web service library to create two completely different REST-like web services with two completely different clients. (Which is what I am doing at work right now!).

This example of convergence makes no sense on naturalistic evolution – you can evolve the same gene so many times in animals with no common ancestry. It screams out design. See the related posts below for more examples of convergence, and remember that the more we know about science, the more difficult the problem becomes for a naturalist.

Six ways for women to stamp out the risk of divorce

May 9, 2014 | by Wintery Knight | Link | Original Link

From the liberal Huffington Post, of all places.

First, here's the list of skills for women to develop to avoid divorce:

- Skill #1: Do at Least Three Things a Day for Your Own Pleasure
- Skill #2: Relinquish Control of People You Can't Control
- Skill #3: Receive Gifts, Compliments and Help Graciously
- Skill #4: Respect The Man You Chose
- Skill #5: Express Gratitude Three Times Daily
- Skill #6: Strive to be Vulnerable

And here's the detail on one that I think is the most important:

> Skill #4: Respect The Man You Chose
>
> Being respectful will resurrect the man you fell in love with. You're too smart to have married a dumb guy, so if he seems dumb now, it's because you're focused on his shortcomings. It's not that you made a mistake in marrying him, it's that you've been *focused* on his mistakes *since* you married him. A man who feels respected by the woman who knows him best also feels self-respect, which is far more attractive than cowering and hostility.
>
> Lack of respect causes more divorces than cheating does because for men, respect is like oxygen. They need it more than sex. Respect means that you don't dismiss, criticize, contradict or try to teach him anything. Of course he won't do things the same way you do; for that, you could have just married yourself. But with your respect, he will once again do the things that amazed and delighted you to begin with — so much so that you married him.

And here's the detail on the one that I think is the most neglected:

> Skill #6: Strive to be Vulnerable
>
> Intimacy and vulnerability are directly connected. If you want intimacy, then you'll need to take the risk of admitting that you're lonely, embarrassed or hurt. This is not the same as weakness; it actually requires great strength.
>
> When you're vulnerable you don't care about being right, you're just open and trusting enough to say "I miss you" instead of "you never spend time with me." It means you simply say, "ouch!" when he's insensitive instead of retaliating. That vulnerability completely changes the way he responds to you.
>
> Vulnerability is not only attractive, it's the only way to get to that incredible feeling of being loved just the way you are by someone who knows you well. There's nothing like the joy of intimacy that results from vulnerability. It really is

> worth dropping the burden of being an efficient, overscheduled superwoman to have it.

Before I get started, a piece of advice for men. I really, really recommend that single men take the time to read ALL the comments by the women underneath that post before they even think about getting married. It's important for single men to realize that your old-fashioned ideas about marriage and what women should do in a marriage are often not accepted by modern women – even modern *Christian* women. Most churches don't emphasize the things in the list above, because they are trying to make women feel good, and not to tell them what needs doing and how to do it. When you read the comments by women blaming men and attacking the 6 points, that will help you to see what you should be looking for, so you know how to make sound judgments about who to marry and whether to marry at all.

Right. Let's begin with the 6 points.

From that list above, the ones I have personally encountered are #1, #3, #4, #5 and #6.

For #1, many unmarried women think that relationships are more about being happy than achieving things. If the woman gets into a relationship for happiness, and is not happy, then she may blame the man for failing to make her happy. The solution is to have a more realistic balance between happiness and self-sacrificial service. An unmarried women should focus on finding out what the man's plans and goals are, and why he needs her. She has to focus on showing him that she wants to be informed and engaged in helping him. That is the best way for her to learn how to balance the need for happiness with the need to handle her relationship obligations (to children, as well as her spouse). Another way to lower the need for happiness provided by the man is for the woman to have her own interests. For example, my favorite single woman likes to spend time in the evening decompressing with stuff like cross-stitching, reading, playing with her cat, etc. before we do stuff together. She has her own sources of happiness and that means that I am not overburdened every day as the sole source of happiness. That can be overwhelming on days where she is stressed out from work.

For #3 and #5, I have to tell a funny story about what I have been doing lately with my favorite single woman. I have been busy trying to get her to tell me all about what her life is like from day to day and then buying her small things to help her out with her daily struggles. For example, I bought her an ice scraper so that she wouldn't have to scrape ice off her windshield with her gloves. I bought her kitchen shears so that she wouldn't have to fuss with raw chicken. I got her a new corded hand-vacuum for Christmas because she had to lug her heavy one up and down the stairs to clean them. Why am I fussing so much about this woman? Because she is the most grateful woman I know. Whenever I do anything for her, she tells everyone about it and I hear about how helpful I've been every time she uses whatever I bought her. Women, get it clear: men prefer to help grateful women.

For #4, I think the scariest thing for a woman is thinking that she will have to respect a bad men, even when he is bad. But women like that are looking at marriage wrong. The

respect is *non-negotiable*. You will respect your husband or you will be cheated on or divorced. So with that in mind, *choose a man who you do respect*. That's the solution – test the men carefully and effectively and choose one who is easy to respect and then marry that man. Make the respectability of the man the main criteria. The time to make the decision is before the marriage, because divorce is out of the question. And women really need to work at this, in my experience, because they typically let feelings dominate their decision-making, instead of being practical about finding the right man to do the work that men do in a marriage. The appearance of the man tends to be their only criteria, these days. Instead of choosing on appearances, women should test men out during the courtship to see if they like the way he leads, persuades and makes decisions. Instead of letting feelings and peer-approval decide, just think of what a man does and prefer men who can do those things.

For #6, I think that women really need to realize the power of vulnerability. My view, which is controversial, is that the reason why women are focusing so much on their appearance and sexuality is because feminism has made it illegal for them to attract men with traditional femininity. Vulnerability, trust, modesty, nurturing, care, concern, attention, support, etc. are all viewed by unmarried women as prohibited by feminism – even though they work on men very well. Men treat women nicely when they see how sensitive women are to good treatment and bad treatment. Men are motivated by the desire to make a difference and to be appreciated by a woman who needs them. Women need to practice being vulnerable, and to protect their ability to *be vulnerable* by avoiding premarital sex and messy breakups. Women need to learn to control their feelings and not batter themselves up on a sequence of men who are not ready for marriage. The most common thing I am seeing with women these days, including Christian women, is that their ability to trust a man, and to let a good man lead them, have been completely wrecked because they've dashed themselves to pieces over and over on men who looked good and impressed their friends, but who were not qualified for marriage. Marriage, for a man, is a faithful, life-long self-sacrificial commitment to provide for and serve a spouse and to train up children. *Pick the right man for that job.*

John Lennox and Paul Davies discuss aliens and the origin of life

May 9, 2014 | by Wintery Knight | Link | Original Link

An amazing debate about the origin of life and the cosmic fine-tuning between a Christian and a materialist agnostic. John Lennox is AWESOME in this debate, and he only talks for a tiny part of the debate. He's very gracious, and focused the discussion on the areas that we care about. Paul Davies is an EXCELLENT scientist and well aware of what Christians believe. This is a great debate, very easy to listen to. Justin, the moderator, does a great job controlling a fantastic discussion.

The MP3 file is here.

Details

What does it take for life to get going in our universe? Is there intelligence in the stars or right under our nose? Renowned astrophysicist Paul Davies chats to Oxford Professor of Mathematics John Lennox.

A popular science author, Davies is also the Chair of the SETI post detection task force. His latest book "The Eerie Silence" which marks SETI's 50th anniversary examines the likelihood of the universe producing life elsewhere.

John Lennox is a Christian Mathematician and philosopher. He is the author of "God's Undertaker: has science buried God?" and has debated Richard Dawkins on several occasions.

Davies' work on the fine tuning of the universe for life has been sympathetic to theism. In this programme Lennox challenges Davies to look to design not just in cosmology but in the cell. They also chat about what the discovery of ET would mean for Christian theology.

Summary

Justin:

- Is there meaning in the universe?

Paul:

- We have no evidence for or against intelligent life elsewhere in the universe
- The vastness of the universe makes me think there is life elsewhere
- Humans are capable of observing and understanding the universe
- It seems the universe has the ability to create observers to understand it
- If one species has this ability, then we should expect others to do it

John:

- The fact that we can observe the universe and do science has cosmic significance

- Our rare habitable planet and our ability to do science is suggestive of purpose
- So science itself points to an extra-terrestrial intelligence: GOD
- The complexity of life and consciousness itself points away from atheism
- Monotheism gave birth to science
- Human minds capable of doing science are not compatible with atheistic materialism

Justin:

- Why do you say that either we are the only life or there are many different kinds of life?

Paul:

- There are lots of factors that have to be met to have a site for simple life
- These are related to the fine-tuning of cosmic constants, e.g. gravitational force
- But there are also factors that have to be met for originating intelligent life
- Things like convergence, self-organization, etc.
- So the cosmic requirements and evolutionary requirements are different
- Darwinian evolution doesn't solve the problem of the origin of life
- 50 years ago, skepticism about alien life existing anywhere was excessive
- Today, credulity about alien life exiting everywhere is excessive
- The naturalist is searching for a process that creates life easily

John:

- Paul agrees that there is no theory for a naturalistic origin of life
- This is fatal for the idea that life can emerge elsewhere in the universe
- We have not discovered any law that produces life without an intelligence
- Consider the method used by SETI used to detect an alien intelligence
- Why can't this method be applied to the origin of life on Earth?
- Why can't an intelligence created specified complexity (functional information)?
- Why can't an intelligence created epigenetics and protein folding?

Paul:

- Darwinian evolution can add new biological information after life begins

John:

- Darwinian evolution assumes a mutating replicating life form to act on

Paul:

- You can't generate specified complexity by using physical laws
- You can't generate specified complexity by chance

- At this point we are guessing as to how life might have formed

John:

- Why do we have to rule out an intelligent cause a priori
- If you can recognize an intelligence in outer space, why not in living systems?

Paul:

- I don't mind the word "intelligence", it's the word "signal"
- I oppose the idea that God or aliens manipulated physical stuff to create life
- It's an "ugly explanation and very unappealing both theologically and scientifically"
- I prefer the idea that the universe has processes to self-organize and create complexity
- When it comes to supernatural meddling by God, "I don't want that"
- If I were God, I would create the universe so that I would not have to intervene
- I think God would be more clever if he did not have to intervene
- My preferences about what is "clever" determines what scientific conclusions are allowed

John:

- Humans already have experience with their non-material minds to move atoms (matter)
- If God is a mind, then there is no reason why he cannot move atoms (matter)

Paul:

- My mind is physical, so are you saying that God is physical?
- If God intervenes in the universe, then what is he doing now?

John:

- There is a distinction between acts of creation and providential upholding the universe
- God is also speaking to people and drawing humans toward him
- God is spirit, not material

Paul:

- How can a non-physical entity cause effects on the physical world?

John:

- What science reveals that there is information needed for the origin of life
- Information requires an intelligence to create it, just as with human who write books
- That's not God of the gaps – it's an inference based on what we know today

Paul:

- We may be able to explain the origin of life later, using matter, law and chance
- What you're saying is that God tinkers with the genome
- If you say that God intervened once, then he intervenes all the time, everywhere!
- I don't want a God who tinkers in the genome
- if God could intervene in the universe that would remove its intelligibility

John:

- Look at the cover of this book – when I read words, I infer an intelligence
- There are bad gaps that the progress of science closes
- There are good gaps that science opens, showing the need for intelligence
- On the one hand, you say we have no theory of the origin of life
- On the other hand, you know that an intelligent designer wasn't involved
- If we don't know how life began, why do you rule God out a priori?

Paul:

- What scientists want to do is to explain the universe without involving God
- naturalists want to use science to discover only materialist explanations
- The purpose of SETI is to prove that there is other life in the universe
- This would then show that there is a naturalistic way of making life
- I agree that information in living systems is real hard to explain materialistically
- I believe in the power of emergence
- We might discover laws that prove that complexity can emerge without intelligence
- The discovery of alien life would help to show that no intelligence is needed to make life

Justin:

- What sort of cosmic fine-tuning is needed at the Big Bang for life to occur?

Paul:

- It's true that the universe appears extremely fine-tuned for life to exist
- The typical answer from naturalists is that there is a multiverse
- But the multiverse "falls far short" of providing a good answer to the fine-tuning
- It's irrational to appeal to massive numbers of unseen universes to explain fine-tuning
- The design and purpose seen in the universe may be due to God or it may be emergent

John:

- The fine-tuning is real and the multiverse is a desperate attempt to evade the

creator
- Sir Martin Rees (an atheist) says he “prefers” the multiverse to a designer
- Scientists are not supposed to prefer anything except what is true

Justin:

- Would the discovery of aliens hurt Christianity, because of the belief in the uniqueness of humans?

Paul:

- Christians believe that Jesus came to save HUMANS specifically, not animals or aliens
- If we were to discover intelligent aliens, it would challenge traditional religions
- What will God do with alien races? Multiple incarnations? Or just preach the gospel to them?

John:

- We don’t know if the aliens exist, first of all – it’s speculative
- The Bible teaches that humans bear the image of God
- We just don’t know whether alien species are also made in God’s image

Why should a man refuse a woman's offer of casual sex?

May 10, 2014 | by Wintery Knight | Link | Original Link

I've been having some conversations recently with a good male friend of mine who is not a Christian. I like to talk to him about women because we disagree about women, and Lord knows I love to disagree with people. Anyway, he's read my rules for chastity, courtship, etc., and he considers them, and me, quite weird. He is coming from the position of having a *great deal* of sexual experience with women, whereas I strictly avoid sexual activity for a variety of reasons. And what we disagree about is this: I think it's wrong to have casual sex with women who offer themselves to a man before marriage, and he thinks it's permissible as long as he warns them that the relationship is going nowhere afterwards.

First, let me talk about where we agree. Both of us agree that most women today have lost the art of making a man like them without using sex appeal. We are in broad agreement that the right way for a woman to make a man like her is by being feminine. And we agree on what that means – showing the ability to be a wife and mother. If a woman talks to a man about his day at work, studies hard things to be more skilled, listens to his life plan, and tries to contribute to the causes he cares about, then he will like her (because he needs her and appreciates her). Also, it's important that she have a plan of her own that he can help with, and she should let him help. Men like to give gifts to women, and we like to see how our gifts help women grow.

Now where do we disagree? Well, I think it's a bad idea for a man to submit to casual sex with a woman who is unable or unwilling to set boundaries and have a Christian goal for the relationship. I think that casual sex is an inappropriate technique that a woman uses to make a man love her without demonstrating that she really understands him or wants to help him. Sometimes this is done inadvertently because the woman has never learned how to deal with men appropriately, but sometimes it's done deliberately in order to get attention without have to care about or help the man.

Here are three reasons why men should not accept an offer of casual sex:

Reduced courting capability

A lot of men spend a lot of time and money and the best years of their lives pursuing a lot of different women for sexual gratification. But the pursuit of casual sex takes away from the goal of having a helpful wife and effective Christian children, (e.g. – children like Stephen C. Meyer, Jay Richards or WLC). It takes up time and resources that are better spent on building up teachable responsive girl friends. Chasing non-marriageable women also detracts from learning apologetics and theology, which are needed in order to impress the tiny minority of women who want a man who can be an involved, nurturing provider and mentor. There is no way to assess a woman's fitness for marriage and mothering through casual sex. It has no value whatsoever when it comes to courting,

because it removes the self-control needed for objective evaluation. Casual sex doesn't show women that you can lead your future children, either.

Reduced vulnerability and romantic capability

I would not be able have sex and break up with that person without suffering serious emotional damage. I subscribe to the velcro theory of sexuality – the more you attach and separate, the less well you can attach the next time. I simply do not believe that men who do intimate physical things with women can be as vulnerable and susceptible as when they remain chaste. Casual sex kills the man's ability to love a woman as if he has never been hurt before. If you want to be a knight, you have to be capable of chivalry and romance. If a man has casual sex with enough women, he will likely develop a low opinion of of the trustworthiness, wife-capability and mother-capability of women. He becomes cynical and predatorial. The binge-drinking hook-up culture does not build up faith in the opposite sex.

Causes women to doubt God's existence

Every woman was made for a relationship with God. When a woman uses sex to try to get a man to pay attention to her, to love her and to commit to her long-term, it usually fails, causing her pain and suffering. Sex doesn't make a man who doesn't want to marry suddenly want to marry. Without a Christian worldview, the woman may not realize how to tell a good man from a bad man, and how to drive a relationship through to marriage. If a woman has sex with enough men, she may develop a low opinion of the goodness and reliability of men. She may think that she is handling men correctly and that the relationship should work out. But the trauma from failed relationships with unreliable men can cause her to suffer emotionally, and even to doubt God's existence or goodness. Christian men should therefore avoid casual sex so that they don't push women away from relationships with God. Don't be part of a process that drags women away from God. We need women to serve God, and we are not so long on resources that we can just throw them away to the other side. Every single one counts.

Conclusion

Now I haven't actually experienced this problem of women throwing themselves at me to make me "love" them, but if someone finally did offer me drunken hook-up sex, I hope that I would remember my little list.

But I might also remember something else.

Consider this passage from "A Man For All Seasons", a play by Robert Bolt. The lead character Sir Thomas More has refused to compromise with King Henry VIII over the legality of divorce, and now the King wants to have his head chopped off. More's daughter Meg tries to convince to take the oath supporting the divorce in order to save his own life.

Meg: Then say the words of the oath and in your heart think otherwise.

More: What is an oath then, but words we say to God? Listen, Meg.
When a man takes an oath, he's holding his own self in his own hands… …like water.

And if he opens his fingers then, he needn't hope to find himself again.
Some men aren't capable of this, but I'd be loathed to think your father one of them.

That's how men should try to be with their chastity. I agree that it is almost impossible not to see things and to think things that are unchaste – but I am talking about *doing* something unchaste. Men need to avoid that, at least. The problem is that men don't realize what they are giving up by being unchaste, because they don't study these issues to know the costs, the lost capabilities to love unselfishly, or the virtues that give them honor with God. No one tells us. Instead of reading "A Man for All Seasons" or "The Faerie Queene", we pick our role models off the bottom shelf of Hollywood or other crap in the culture. The schools are no help at all, most parents are busy, and the church just orders people around without any arguments or evidence. We are on our own, and by the time we realize who we want to be to a woman, we are often already in a hole.

But my main point is that even if there wasn't a woman left in the world who believed in chastity, courting, marriage and family, that would still not be a justification for a Christian man to give up on his ideal of chastity. It's better to be a hero and be alone than to make peace with the world as it is. Go down fighting, never give in just to fit in.

An apologetics reading plan for beginners

May 10, 2014 | by Wintery Knight | Link | Original Link

Would you like to have as much fun defending your faith as the Wintery Knight does?

Here is a post from Apologetics 315 that lists 10 basic apologetics books for brand new Christian apologists – and they are in a sensible order, too.

Here are my favorite 4:

> 2. ***The Case for a Creator*** by Lee Strobel
>
> This book is just as readable as *The Case for Christ*, but this one delves into the evidence for the Creator. Another thing that makes this good reading for the beginner is this: whatever areas you find particularly interesting can be pursued further by reading the sources interviewed in the book.
>
> 6. ***Tactics: A Game Plan for Discussing Your Christian Convictions*** by Greg Koukl
>
> Information without application results in stagnation when it comes to apologetics. That's why it's time for a good dose of *Tactics*, which will train you not only to *use* apologetic content in everyday life, but it will also *train* you to be a better, more critical thinker. This is another "must read" book, and mastering its contents early in your apologetic studies will put feet to your faith.
>
> 7. ***The Case for the Resurrection of Jesus*** by Mike Licona & Gary Habermas
>
> The resurrection of Jesus is central to Christianity. This book equips you to understand and defend the resurrection from an historical perspective. Not only does the book have useful diagrams, summaries, and an accessible style, but it also comes with a CD-ROM with interactive software for teaching you the material. This is an essential book for the apologist.
>
> 8. ***Is God Just a Human Invention? And Seventeen Other Questions Raised by the New Atheists*** by Sean McDowell and Jonathan Morrow
>
> Now it's time to look at some of the most common objections that have come against Christianity since the rise of the new atheism. There's no better book at dealing with these in a concise yet dense way, while providing additional reading suggestions and introducing some of the key apologists that deal with these questions. If you really want to master this material, consider taking part in the Read Along project for this book.

I've read 8 of them, and I have given 6 of them to my Dad (he's just an ordinary Dad) and he really liked all 6. These are meant for all ages.

I have been giving away books like this to friends, and even to potential Mrs. Wintery Knights, for many years. And what I've found in that time is that Christians have a very different experience in their relationships with God when they are prepared to defend his

existence and character in public. Instead of treating Christianity as a private set of beliefs which are mainly for feeling happy and getting along with family at holidays, they instead treat Christianity as *true*, and they have very interesting discussions with their friends about many topics related to Christianity. Instead of being frightened to speak up, they become bold and confident – that's what happens when Christians study and prepare.

Jesus doesn't want his followers to feel intimidated by non-Christians and non-Christian culture. He doesn't want us hiding what we believe. When we take the time to read books like this, it becomes possible for us to get into conversations that turn our relationships with God through Christ into a public activity. Instead of just taking, taking, taking from God, now we are in a position to give back. If you ask any experienced apologist, they will tell you what it feels like to work through questions with a non-Christian. It is a way of feeling closer to God, and a way of being faithful in our two-way friendship with him. You do not want to miss out on that experience – it is an important part of being a Christian.

My disagreements with a trendy, hip pastor on missions and witnessing

May 11, 2014 | by Wintery Knight | Link | Original Link

So I am visiting my parents and my pet bird today in the city I grew up in, and I went to church as usual. The church in my hometown just got a new senior pastor who is one of those hip, trendy pastors. So far, my friends and I who attend this church have some concerns about him.

So the pastor two points in this sermon today: 1) we should be concerned with world missions and 2) we should be "witnessing" in non-cognitive ways. You'll see what he means by these in a minute.

Missions

Now to be fair to the pastor, I don't really know his full philosophy on missions. He was giving a sermon, and he had time for one example. His example of missions was that "wealthy" Christians in the West should give money to groups like World Vision that provide for the immediate physical needs of poor people in other countries. So his target for evangelism is not a wealthy Western professional who lives next door to him and isn't impressed with food. His target for evangelism is someone who is starving in another country, who is at a disadvantage when it comes to education and poverty. And his preferred missionary is not someone who has studied to know how to persuade using knowledge, it's someone nice and kind who is bringing food to starving people and then presenting the gospel to them through an interpreter as they eat the food.

Witnessing

The example the pastor gave for witnessing to non-Christians was to pray with them. He said that there would be less room for "hate" (his actual word) if Christians spent more time praying with non-Christians. The first thing I thought of when he said this was Mormon missionaries establishing the truth of their religion with people by praying for a "burning in the bosom". Regarding his mention of "hate", he didn't mention gay marriage specifically, but I think that is the most reasonable context for the word "hate" in this culture. If we prayed with people and started caring for them and being nice to them (no mention of sin and repentance, note), then our "hate" for them would decrease.

So I want to make some basic points about what was said and what was left out.

Truth

At no point in this sermon or any any other sermon I have seen delivered by this pastor has the issue of how we know truth, or how we demonstrate that something is true, ever been addressed. I have not ever heard this pastor give a sermon on how he knows that God exists, how he knows that the Bible is reliable, and how he knows who Jesus is.

Persuasion

I was very careful today to pay attention to how the pastor was getting the audience on

board with what he is saying. And I think I've hit on his method of persuading. It's not to make arguments and to supply evidence, or even to quote the Bible in context. He relied a lot on hipness and emotional resonance with his audience. I think he expects us to accept what he is saying because he is able to 1) share illustrations from his life experiences (farming, this time), or 2) name rock bands like "Cold Play". So his approach is more like "I'm just like you, so you should believe what I'm telling you".

Evangelism

His two strategies for evangelism above seemed to be 1) giving money to Christian groups who can then travel to other countries to discuss Christianity with people who are receiving gifts from them and 2) offering to pray with non-Christians. I do not think that merely expressing theological opinions and then handing someone food or clothing is a good strategy for evangelism. I think it is permissible, it's just not the way I see it being done in the Bible. I realize that there are going to be cases where someone accepts Jesus on the basis of this sort of evangelism, and in the best case, they might even go on to become a great Christian scholar who understands the truth of these matters so well that they can present it to non-Christians with authority. That would be the ideal case. But I think when I read the New Testament, the appeal to non-Christians in evangelism is an appeal to truth, based on the historical event of the resurrection, for example. I asked a friend of mine who knows the Bible well, about whether giving charity to people is ever a method of evangelism, and he said he couldn't think of any. His preference for this evangelism-by-charity makes me wonder about people who have non-Christians living right next to them in the West, or even in secular Europe, who nevertheless choose to go to places where they can use the leverage of financial goods to get into conversations with people about spiritual things. It's easy to go to a foreign country and talk to someone uneducated who can't challenge you because they want the food you brought. It's harder to evangelize your neighbor who is an atheist and a medical doctor – you would have to read books, and demonstrate the truth of things. Maybe that's why so many people prefer the former to the latter – it's easier.

His second method of evangelism (praying with non-Christians) seems to me to be impractical. It seems to me that it would work on people who do not have questions, and who are looking to decide theological / spiritual claims by their emotions. Prayer is not able to establish the historical fact of the resurrection in a debate situation, for example. You should pray before and after making a case for the resurrection, but you should at least know how to make the case for the resurrection to a non-Christian. Again, I am not familiar with a case in the New Testament in which a non-Christian, non-theist was ever approached with prayer alone. I know that Paul reasons from the Scriptures with people (Acts 16-17), and Peter appeals to the resurrection (Acts 2). His approach is more like what Mormons do, because they can't demonstrate truth using arguments and facts. If this guy can only use Mormon techniques, that's disturbing – like he has reduced Christianity to a flavor of ice cream that you either like or not, depending on your feelings or whether people are nice to you. Prayer is not used to demonstrate the truth of anything in any other context in real-life. Why is he trying to use it with Christianity? Is

Christianity not the same as any other area of knowledge?

Economics

Now, I sense that this pastor has a concern for the poor, and I agree with him that charity is Biblical, and even that we can give money to big organizations like World Vision to help the poor in other countries, (although I don't like World Vision). But I think where I get annoyed is that this is his only stated method of helping the poor. But I prefer a different method of helping the poor, namely the method that you see in countries like Hong Kong or Chile. That method is free market capitalism. And all you need to do to push that method is to sit with an economics book, learn what policies drive economic growth, and then push them in the public square. I'm being frank here. I think it can be demonstrated that foreign aid, for example, accomplishes little or nothing to help the poor, and often hurts the poor. What we need to do is to trade with these countries, promote economic growth in these countries, in the same sustainable, organic way that growth occurred in countries like Hong Kong and Chile. But what I get from this pastor is a kind of naive "Michael Moore" anti-corporation vibe. I think I can say without being proved wrong that we will never here any presentation from him that addresses the need to learn economics in order to promote the policies that will drive organic, sustainable economic growth in these counties, (e.g. – micro-loans, free trade, etc.). I do think it's important to give to charity, though.

Advice for this pastor

If he read this post, then my advice to this pastor would be to take a two-pronged approach. If his concern is evangelism, then I recommend that he speak to some non-Christians in *this* country, and then when he sees that they have questions about God's existence, gay marriage, the resurrection, abortion, sexual ethics, religious pluralism, miracles, evolution, creation, the reliability of the NT documents, etc., then he can do something different than Mormons do – he can embrace apologetics. Then he will be able to do missionary work right here in the West, with the educated professionals that God providentially placed right next door to him and right next door to his flock, too. Also, instead of worrying about how much we "hate" others, maybe he can offer Christians some advice on how to explain and defend religious liberty, which is under attack from the very groups he implies, in my opinion, that we are "hating" Also, it might be good for him to bash McDonald's chicken nuggets less, and to defend the unborn more, in his sermons.

Second, if his other concern is to help the poor, then I recommend that he focus on promoting economic growth and individual charity. I think the big problem I have with this guy is that everything he says is so childish and simplistic. I agree we should want to help the poor, and that we should be charitable. But I think that when you are talking about poverty in other countries, then we should do everything possible. And everything possible certainly includes becoming educated about economics and the policies that are known to lift poor nations out of poverty. This is what people who are really interested in solving the problem would focus on. If you're going to talk about poverty, then talk about

it based on knowledge. Don’t leave it at a kindergarten level.

State Department ignored Boko Haram for two years, under Hillary Clinton

May 12, 2014 | by Wintery Knight | Link | Original Link

Investors Business Daily takes a look at Hillary's record.

Excerpt:

> When the Global Terrorism Database of the University of Maryland's National Consortium for the Study of Terrorism and Responses to Terrorism compiled its list of terrorist organizations and ranked them by the number of their terror acts in 2012, Afghanistan's Taliban came in first. Boko Haram was not far behind.
>
> The world's attention is now focused on the kidnapping of some 300 girls from the Chibok Government Girls Secondary School in Lagos, Nigeria.
>
> "I abducted your girls," a man claiming to be Abubakar Shekau, the group's leader, said in a video seen by the Guardian newspaper. "I will sell them in the market, by Allah. I will sell them off and marry them off. There is a market for selling humans."
>
> Former Secretary of State Hillary Clinton has joined the campaign to free the girls, expressing her concern in a May 4 tweet with the hashtag "BringBackOurGirls." On Wednesday, she called the abduction "abominable" and "criminal."
>
> "It's an act of terrorism," she said, "and it really merits the fullest response possible, first and foremost from the government of Nigeria."
>
> Yet for two years, the State Department refused to acknowledge the growing threat and barbarism of Boko Haram. As Josh Rogin at The Daily Beast reports, the Clinton State Department "refused to place Boko Haram on the list of foreign terrorist organizations in 2011" after the group bombed the United Nations headquarters in Abuja, Nigeria.
>
> "The one thing she could have done, the one tool she had at her disposal, she didn't use. And nobody can say she wasn't urged to do it. It's gross hypocrisy," wrote Rogin, quoting a former senior U.S. official who was involved in the debate.
>
> It's been reported that the State Department was urged to act by the CIA, the FBI and yes, even the Justice Department. Not until November 2013 — 10 months after Clinton left State — did the U.S. finally list Boko Haram as a terrorist group after another round of church bombings.
>
> In June 2012, Gen. Carter Ham, chief of U.S. Africa Command and the man who could have directed a Benghazi rescue attempt if so ordered, warned that Boko Haram provided a "safe haven" for al-Qaida in the Islamic Maghreb (northern Africa) and was likely sharing explosives and funds with the group.
>
> Yet Clinton's State Department, as in the case of Benghazi, was unmoved by

> warnings of terrorist activity.
>
> Rep. Patrick Meehan, R-Pa., chairman of the Subcommittee on Counterterrorism and Intelligence, was one of many members of Congress who wrote “letter after letter” to the State Department since 2011 demanding action on Boko Haram.
>
> “We lost two years of increased scrutiny,” Meehan says, noting that the response he got from the administration was eerily familiar to statements made about Benghazi. “They were saying al-Qaida was on the run, and our argument was contrary to that. It has metastasized and it is actually in many ways a growing threat, and this is a stark example of that.”

So, you might be thinking what I’m thinking right now… what was Hillary focused on when she was Secretary of State?

The American Spectator explains, in this 2011 article.

Excerpt:

> In an address earlier this week in Geneva, Hillary announced that the imposition of the gay agenda on foreign governments now forms “a priority of our foreign policy.”
>
> […]”In our embassies, our diplomats are raising concerns about specific cases and laws, and working with a range of partners to strengthen human rights protections for all,” she said. “In Washington, we have created a task force at the State Department to support and coordinate this work. And in the coming months, we will provide every embassy with a toolkit to help improve their efforts. And we have created a program that offers emergency support to defenders of human rights for LGBT people.”
>
> The American taxpayer will also have to pay for a gay rights propaganda fund Hillary has set up:
>
> “I am also pleased to announce that we are launching a new Global Equality Fund that will support the work of civil society organizations working on these issues around the world. This fund will help them record facts so they can target their advocacy, learn how to use the law as a tool, manage their budgets, train their staffs, and forge partnerships with women’s organizations and other human rights groups. We have committed more than $3 million to start this fund, and we have hope that others will join us in supporting it.”
>
> Thus will the State Department make the world safe for sex-change operations and gay marriage.

What’s more important? Gay rights, or Boko Haram? Hillary had two years to decide, and we know what her answer was.

Greg Koukl explains how to be a consistent moral relativist

May 12, 2014 | by Wintery Knight | Link | Original Link

The absolute easiest way to get into a good apologetics conversation with someone is to ask them what makes something right or wrong on their view.

Just ask the person you want to engage two questions:

1. Is it it wrong to treat people badly just because of their skin color?
2. What makes it wrong?

Now, as I see it, there are only 3 possible answers to this question.

1. I personally prefer not to do that – it is wrong *for me.*
2. Our culture has evolved a set of customs that apply for us in this time and place, and that set of customs says that members of the society ought not to do that. It is wrong *for us, here and now.*
3. Humans are designed to act in a certain way, and part of that design is that we ought not to do that. Acting in line with our design allows us to flourish, (Aristotle's *eudaimonia*).

Response #1, is called "moral relativism". Response #2 is called "cultural relativism". Response #3 is my view: moral realism. I believe in a hierarchy of moral absolutes that exist objectively, because they are part of God's design for us and the universe.

I wanted to go over a paper by Greg Koukl from Stand to Reason, in which he critiques moral relativism. His paper is called "Seven Things You Can't Do as a Moral Relativist". First, let's see the list of seven things.

1. You can't make moral judgments about other people's moral choices
2. You can't complain about God allowing evil and suffering
3. You can't blame people or praise people for their moral choices
4. You can't claim that any situation is unfair or unjust
5. You can't improve your morality
6. You can't have meaningful discussions about morality
7. You can't promote the obligation to be tolerant

You'll have to read the paper to see how he argues for these, but I wanted to say a brief word about number 1.

> **Rule #1: Relativists Can't Accuse Others of Wrong-Doing**
>
> Relativism makes it impossible to criticize the behavior of others, because relativism ultimately denies that there is such a thing as wrong- doing. In other words, if you believe that morality is a matter of personal definition, then you

> can’t ever again judge the actions of others. Relativists can’t even object on moral grounds to racism. After all, what sense can be made of the judgment “apartheid is wrong” when spoken by someone who doesn’t believe in right and wrong? What justification is there to intervene? Certainly not human rights, for there are no such things as rights. Relativism is the ultimate pro-choice position because it accepts every personal choice—even the choice to be racist.

In moral relativism, what you ought to do is totally up to you. Morality is just like a lunch buffet – you pick what you like based on your personal preferences.

I remember one particular discussion I had with a non-Christian co-worker. Both she and her live-in boyfriend were moral relativists. They were fighting because she was angry about his not having (or wanting) a job, and he was angry because when he asked her for space, she immediately ran out and cheated on him.

What’s interesting is that both of these people chose the other in order to escape being judged themselves. I think this happens a lot in relationships today. Both people don’t want to be judged by the other person, but they both want to the other person to treat them well and to honor moral obligations. Isn’t that interesting? I don’t think that you can have something like marriage work when neither person takes moral obligations to the other person seriously.

Christian philosopher (Craig) vs atheist scientist (Atkins) debate: Does God Exist?

May 12, 2014 | by Wintery Knight | Link | Original Link

Apologetics 315 posted the video of a debate from the Reasonable Faith speaking tour in the UK:

This is a must-see debate. It was extremely fun to watch.

Details:

> On Wednesday 26th October 2011 William Lane Craig debated Peter Atkins on the topic: *Does God Exist?* This debate took place at the University of Manchester as part of the UK Reasonable Faith Tour with William Lane Craig. The debate was chaired by Christopher Whitehead, Head of Chemistry School at the University. Post-debate discussion was moderated by Peter S Williams, Philosopher in Residence at the Damaris Trust, UK.

Dr. William Lane Craig:

> **William Lane Craig** (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich in 1984.

Dr. Peter Atkins:

> **Peter William Atkins** (born 10 August 1940) is a British chemist and former Professor of Chemistry at the University of Oxford and a Fellow of Lincoln College. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, *Inorganic Chemistry*, and *Molecular Quantum Mechanics*. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.
>
> Atkins studied chemistry at the University of Leicester, obtaining a bachelor's

> degree in chemistry, and – in 1964 – a PhD for research into electron spin resonance spectroscopy, and other aspects of theoretical chemistry. Atkins then took a postdoctoral position at the UCLA as aHarkness Fellow of the Commonwealth fund. He returned to Oxford in 1965 as fellow and tutor of Lincoln College, and lecturer in physical chemistry (later, professor of physical chemistry).

You can get the audio of the debate here, along with links to their previous debate from 1998. This debate is accessible and understandable to novice-level Christians.

I am happy when debates like this come out. I have friends who are Christians who doubt the importance of apologetics in evangelism, because they don't think that apologists can prove anything or win arguments. I have friends who are skeptical of using arguments that assume a 14-billion year old universe, because they think that the Big Bang is compatible with atheism (!). I have friends who think that philosophical arguments have no persuasive force. I have friends who think that nothing can be proven from history, beyond a reasonable doubt. I have co-workers who ask me whether anyone wins these debates. I think that this debate answers all of those questions.

This debate clearly shows why Christians should not shy away from studying science, philosophy and history. We will not discover anything that harms Christian theism by thinking logically and by looking at the evidence. To the contrary, it is the atheist who makes war on the progress of science, and who is forced to resist the clear experimental evidence, and to resort to baseless speculations and blind faith. If you want to see a good debate with an intelligent atheist, I recommend watching the debate between William Lane Craig and Peter Millican instead. But if you want to see a really, really overwhelming defeat for atheism, watch this debate. It is very clear at the end of this debate why Richard Dawkins refused to debate William Lane Craig at Oxford.

SUMMARY OF THE OPENING SPEECHES

I only had time to summarize the first two speeches. Keep in mind that Dr. Craig always shines in his rebuttals, and this debate is no different. So you'll want to watch those rebuttals. Dr. Atkins *literally* says in this debate in his first rebuttal "There was nothing here originally. There is nothing here now. But it is an interesting form of nothing which seems to be something." And the audience laughs nervously. This debate is like that. You will see a clear winner and clear loser in this debate. This fight is decided by knockout.

William Lane Craig opening speech:

1. the origin of the universe
2. the moral argument
3. the resurrection of Jesus

Peter Atkins opening speech:

1. Dr. Craig is stupid, lazy and evil:
– Dr. Craig's arguments are old: from the 11th century! Old arguments can't be true
– Dr. Craig is just asserting that "God did it" because he is lazy

– Dr. Craig feels pressured to agree with the theistic majority
– Dr. Craig needs a psychological crutch to comfort him
– Dr. Craig is fearful of death
– Dr. Craig is just wishing for an eternal life of bliss
– Dr. Craig is driven by his heart, and not by his head

2. Origin of the universe:
– Maybe the universe is eternal and has no beginning – we don't know
– Maybe mommy universes can give birth to daughter universes
– It is naive to think that a cause is needed to cause the creation of the universe from nothing
– Science is just about to show how it is possible that something appears out of nothing without cause
– Some scientists have already begun to speculate about about how something can come into being out of nothing
– Maybe nothing is not really nothing, but it is actually something
– It would be admitting defeat to say that God created the universe out of nothing

3. Fine-Tuning:
– It could be the case that the fundamental constants are not variable
– It could be the case that the fine-tuning of the cosmic constants is a happy accident
– It could be the case that there are billions of billions of unobservable universes that are not fine tuned
– It could be the case that the cosmic constants in these billions and billions of unobservable universes are all random so that some are fine-tuned
– Anyone who infers that an intelligence is the best explanation of a finely-tuned set of life-permitting cosmic constants is lazy

4. Purpose:
– Philosophers and theologians are stupid
– I don't think that there is purpose in the universe
– I think that the universe is more grand if there is no purpose, so there is no purpose

5. Miracles:
– I don't think that miracles happen
– The resurrection is a fabrication
– It could be the case that Jesus didn't exist
– It could be the case that Jesus wasn't really crucified
– It could be the case that Jesus didn't really die after being crucified
– It could be the case that the disciples stole his body
– It could be the case that the women went to the wrong hole in the ground
– the gospels are political propaganda written long after the events they are reporting on

6. Theodicy:
– God has no morally sufficient reason for allowing humans to perform actions that result in suffering

– God has no morally sufficient reason for allowing nature to cause suffering

7. Morality:

– customs and conventions emerges arbitrarily in different times and places based on an awareness of the consequences of actions, as well as various anecdotes and experiences

– these customs and conventions are decided based on the goal for survival, in much the same way as politeness and manners emerge for decorum and to avoid offense

– it is childish to presume that there is an umpire God who decides moral values and duties

8. Religious believers are stupid, lazy and evil:

– the notion of God has arisen because people are stupid and want to be comforted

– there are no arguments or evidences for belief in God

– people who believe in God do not think, but instead take refuge in incomprehensible nonsense

NFL player fined and banned from team activities for disapproving of homosexuality

May 13, 2014 | by Wintery Knight | Link | Original Link

From the Miami Herald.

Excerpt:

> The Dolphins swiftly and publicly reprimanded Don Jones late Sunday for his Twitter remarks critical of Michael Sam, fining him and barring him from team activities until he undergoes sensitivity training.
>
> In a statement released by the team, Jones apologized for tweeting "omg" and "horrible" after seeing Sam sharing a celebratory kiss with his partner on national TV Saturday evening. Sam had just been drafted by the St. Louis Rams in the seventh round, becoming the first openly gay player selected by an NFL team.

> […]Although the Dolphins did not disclose the amount of the fine, the fact that they made the punishment public was significant. Dolphins coach Joe Philbin rarely discusses internal discipline with reporters but made it a point to condemn Jones' words on official team letterhead Sunday night."We were disappointed to read Don's tweets during the NFL Draft," Philbin said. "They were inappropriate and unacceptable, and we regret the negative impact these comments had on such an important weekend for the NFL. We met with Don [Sunday] about respect, discrimination and judgment. These comments are not consistent with the values and standards of our program. We will continue to emphasize and educate our players that these statements will not be tolerated."

So, if you are Tim Tebow, everyone can insult you and make fun of you for being a Christian and for being chaste before marriage. But if you're gay, then no one can even disagree with you on sexual issues.

This is why I have an alias. I am very conscious of the fact that the way I earn a living is something that the other side would love to take away from me. If anyone who did not tolerate my statements on certain controversial issues ever found out who I was or where I worked, I'd be out of a job. I am happy to say what I think about controversial issues, (not with tweets, but by citing studies), while I can still do it. But I have no doubt that the secular left will one day make it their business to find out who disagrees with them on matters like sexual ethics, and make sure we are properly corrected about our bad ideas. They seem to have tremendous difficulty letting other people have different views than they do, and not punishing them for those different views. "These statements will not be tolerated" the coach says.

New CDC study: children raised by mom and dad experience fewer traumatic events

May 13, 2014 | by Wintery Knight | Link | Original Link

From Christian Post.

Excerpt:

> Children who are not raised by both of their biological mother and father are more likely to have experienced traumatic events, according to a report released Thursday by the U.S. Department of Health and Human Services' Centers for Disease Control and Prevention.
>
> Children in foster care had, by far, the worst outcomes. Those raised by one biological family member and those living with relatives fell between those with two biological parents and no biological parents. Adopted children were not included in the sample.
>
> The study looked at nine adverse experiences: 1) divorce or separation of parents or guardians, 2) death of a parent or guardian, 3) incarceration of a parent or guardian, 4) lived with someone who was mentally ill, suicidal or severely depressed, 5) lived with someone who had an alcohol or drug problem, 6) witnessed violence in the household, 7) was the victim of violence or witnessed violence in the neighborhood, 8) suffered racial discrimination, and 9) caregiver had often found it hard to get by on the family's income.
>
> Seventy percent of children raised by their biological mother and father had no adverse family experiences compared to only 21.7 percent of those raised by one biological parent and 18.7 percent of those raised by no biological parents.
>
> […]The data comes from the 2011-2012 National Survey of Children's Health, a nationally representative phone survey of households with children. 95,677 interviews were conducted for the survey.

There seems to be a conflict in our society now between the traditionalists, who favor chastity, courtship and natural marriage, and the "anything goes" secular relativists. The secular relativists seem to be winning, but at what cost? The data seems to be pretty clear – when you lift moral restrictions on the sexual behaviors of adults, then children suffer. We should be more articulate in saying how children are affected whenever these discussions come up.

CDC report: syphilis resurgence among gay men a “major public health concern”

May 13, 2014 | by Wintery Knight | Link | Original Link

Breitbart reports on a new CDC study.

Excerpt:

> The sometimes-deadly disease syphilis is exploding in the United States, with most of the increase since 1995 among men who have sex with men (MSM), according to a new report from the Atlanta-based Center for Disease Control (CDC).
>
> As recently as 2000, researchers believed the total elimination of syphilis was within reach. The recent dramatic increases in infections, coupled with the observation that syphilis closely tracks with other diseases like AIDS, have the medical and scientific community deeply concerned. The CDC report considers “the increase in syphilis among MSM is a major public health concern.”
>
> According to the report, “During 2005-2013, the number of primary and secondary syphilis cases reported each year in the United States nearly doubled, from 8,724 to 16,663; the annual rate increased from 2.9 to 5.3 cases per 100,000 population.”
>
> The report also says that “men contributed an increasing proportion of cases, accounting for 91.1% of all primary and secondary syphilis cases in 2013.” Most of the increases came from men who have sex with men, which were responsible for 77% of cases in 2009 but 83.9% in 2012, what the report calls “the vast majority of male… syphilis cases.”
>
> The report warns that the numbers in the new report are likely far less than the true number because only 34 states and the District of Columbia fully report sex of sex partners.
>
> The report raises a particular concern about what it calls “co-infection rates.” “There are reported rates of 50%-70% HIV co-infection among MSM infected with primary or secondary syphilis…”

I really recommend reading that whole post, there are some really striking pieces of data in it.

When we are discussing what to promote and what to disagree with, this CDC data should be on the table. And remember, the closer we move to the single-payer system desired by the political left, the more people who don’t engage in risky behaviors will be taxed to pay for those that do choose to engage in risky behaviors. It’s fine for those who are not ambitious, but if you expect to earn enough to support a family, then you might find it’s much harder than it used to be before we were celebrating things the sexual revolution, which goes far beyond the problems the CDC outlined, into the costs of no-fault divorce,

fatherlessness, etc.

We really ought not be celebrating the homosexual lifestyle / orientation. We should be treating this like smoking or obesity, if we really cared about the health of people with these same-sex attractions. It’s possible to express disagreement and to tell the truth about risks and consequences without hurting anyone’s feelings. I like to know what will happen to me if I make certain choices. It’s good to have the facts before you decide what to do.

McDonald’s prepares for minimum wage hike by hiring 7,000 touch-screen cashiers

May 14, 2014 | by Wintery Knight | Link | Original Link

CNet reports.

Excerpt:

> “Welcome to McDonald’s . My name is HAL 9000. May I take your order?”
>
> McDonalds recently went on a hiring binge in the U.S., adding 62,000 employees to its roster. The hiring picture doesn’t look quite so rosy for Europe, where the fast food chain is drafting 7,000 touch-screen kiosks to handle cashiering duties.
>
> The move is designed to boost efficiency and make ordering more convenient for customers. In an interview with the Financial Times, McDonald’s Europe President Steve Easterbrook notes that the new system will also open up a goldmine of data. McDonald’s could potentially track every Big Mac, McNugget, and large shake you order. A calorie account tally at the end of the year could be a real shocker.
>
> The touch screens will only accept debit or credit cards, adding to the slow death knell of cash and coins. This all goes along with an overall revamp of McDonald’s restaurants worldwide aimed at projecting a modern image as opposed to the old-fashioned golden arches with a slightly creepy (to my taste anyway) clown guy hanging around the french fries.
>
> This puts McDonald’s one step closer to opening up its first Alphaville location. At least our new computer overlords will be nice enough to serve us a Filet-o-Fish. Maybe they’ll even throw in an iPadwith the Happy Meal one of these days.

I hope the people who lose their jobs to automation voted for Obama, because I would hate to think that a conservative would have to suffer from these policies.

Dennis Prager: why the left doesn’t care about bad economic news

May 14, 2014 | by Wintery Knight | Link | Original Link

This was posted last night on Investors Business Daily.

Excerpt:

> Almost everywhere the left is in control — in California, for example — the economic news is awful. But this has no effect on the ruling Democrats, the Los Angeles Times editorial page, New York Times economics columnist Paul Krugman or others on the left.
>
> There is one overriding philosophical reason and one political reason for this.

He lists a number of the economic problems in California – a state that is controlled top to bottom by Democrats.

Why doesn’t it bother Democrats that economies decline when they are in control?

He writes:

> Why do these state-crushing economic statistics — nearly every one of which is the result of left-wing policies — have no effect on California’s Democrats, the Los Angeles Times editorial page, New York Times economics columnist Paul Krugman or almost anyone else on the left?
>
> The answer is that they don’t care.
>
> Yes, of course, as individuals with a heart, most people, right and left, care about people losing their jobs.
>
> But in terms of what matters to the left and the policies they pursue, they don’t care. The left and the political party it controls do not care if their policies force companies to leave the state (or the country).
>
> They don’t care about the coming high inflation caused by quantitative easing (printing money) — Krugman calls it the inflation obsession — or the job-depressing effects of high taxes or energy prices that hurt the middle class or compelling businesses to leave.
>
> They don’t care because the left is not interested in prosperity; the left is interested in inequality and in the environment.
>
> Furthermore, the worse the economic situation, the more voters are likely to vote Democrat. The worse the economic situation, the greater the number of people receiving government assistance; the greater the number of people receiving government assistance, the greater the number of people who will vote Democrat.
>
> Therefore, both philosophically and politically, the left has no reason to be

> troubled by bad economic news. And it isn't. It is troubled by inequality and carbon emissions.

He could have done the same analysis in Detroit, where Democrats govern unopposed by Republicans, and have for years.

The main problem of the left is "inequality". If they put in place policies that make everyone earn minimum wage, regardless of what they do, that would be a great victory for them. If the price of prosperity is "economic inequality", then so much the worse for prosperity. If you tax people who produce more value than a minimum wage worker so that they make the same as a minimum wage worker, you can forget about the kinds of businesses that produce cars, computers and appliances. People invent these things and start businesses in order to make a profit. That's why they spend their savings and take the risk to start a business. But if everything they earn is taxed away, then we will have to do without new products and services. This is understood in the private sector, but not by the government, nor by the low-information voters who vote for bigger government.

We have to stop allowing the Left to pain themselves as saints because they talk about the poor. What they don't like about the poor is the rich. If everyone were poor, they wouldn't talk about the poor – because everyone would be equal. That's their goal.

Former abortion clinic owner: we created demand for abortion by pushing sex education

May 14, 2014 | by Wintery Knight | Link | Original Link

From Life Site News.

Excerpt:

> "How do you sell an abortion? In the US it's very simple: You do it through sex education," former abortion clinic owner Carol Everett told participants at the Rose Dinner following the National March for Life on Thursday in Ottawa.
>
> Everett, who ran a chain of four abortion clinics in Texas from 1977-1983 — where an estimated 35,000 unborn children were aborted before her dramatic conversion and departure from the industry — told about 430 participants at the dinner that she had a goal of becoming a millionaire by selling abortions to teenage girls.
>
> "We had a goal of 3-5 abortions from every girl between the ages of 13 and 18, because we all work on a straight commission inside the abortion industry," she said. With every customer, Everett became a little richer.
>
> But in order to reach her financial goal, Everett said she first had to create a "market for abortions." That meant convincing young people from the earliest age possible to see sexuality in an entirely different way than previous generations.
>
> "We started in kindergarten. In kindergarten you put the children in a circle and you go around the room and you ask them all the same question: 'What do your parents call your private parts?'"
>
> "You know and I know that every family in this room has a different name for the private parts. So by the time you reach the third or fourth child it is clear to those children that parents simply do not know what they have. But we did. We said: 'Boys this is what you have and girls this is what you have and don't be ashamed of your private parts.'"
>
> Everett explained how sex education at the earliest ages aimed at eroding in the children what she called "natural modesty." Everything was calculated to "separate the children from their values and their parents."
>
> […]"My goal was to get them sexually active on a low dose birth control pill that we knew they would get pregnant on. How do you do that? You give them a low dose birth control pill that, in order to provide any level of protection, has to be taken accurately at the same time every single day. And you know and I know, there's not a teen in the world who does everything the same time every day."
>
> Everett said that a girl on the pill who thought she was 'safe' typically had sex more frequently than those not on the pill.

> “That pill did not work, and we could accomplish our goal of 3-5 abortions between the ages of 13 and 18,” she said.

Something to think about if you send your children to public schools.

Republican National Committee adopts resolution to ban all third-trimester abortions

May 15, 2014 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> The Republican National Committee approved today a resolution supporting all federal, state and local legislation to stop abortion after 20 weeks, more than halfway through pregnancy.
>
> […]Marjorie Dannenfelser, president of the national pro-life group the Susan B. Anthony List praised the RNC saying:
>
> "Americans are united in their support for commonsense legislation to stop abortion more than halfway through pregnancy. We thank the Republican committeemen and women for affirming all efforts to end barbaric late abortions nationwide and urge Democrats to do the same. In state legislatures across the county, Democrats are bucking pressure from their national leaders to support this compassionate legislation that is already popular with their constituents."
>
> This week Senator Kelly Ayotte (R-NH) circulated a letter signed by more than 30 U.S. Senators including Minority Leader Mitch McConnell (R-KY) to Senate Majority Leader Harry Reid (D-NV), urging him to bring the Pain-Capable Unborn Child Protection Act for a floor vote.
>
> "A federal law is long overdue," continued Dannenfelser. "The United States is only one of seven countries to allow abortion on demand at such a late stage of pregnancy. The U.S. Senate should follow the RNC's lead and go on record on this important issue."
>
> Author and chief sponsor of the resolution RNC Committeewoman Ellen Barrosse said:
>
> "The Republican Party is proudly pro-life and this resolution shows our support for this straightforward, simple pro-life initiative. Children capable of feeling intense pain, as well as their mothers, should be protected from abortion at such a very late stage of gestation.

Still all political parties are the same? On the pro-life issue, Republicans are united. It's a good reason for social conservatives to vote for them at election time.

New study: Asian students outperform whites because they work harder

May 15, 2014 | by Wintery Knight | Link | Original Link

This is from Science, one of the top peer-reviewed journals. (H/T Nancy P.)

Excerpt:

> When it comes to academic achievement, Asian-Americans outclass every other ethnic group, with more than half over age 25 holding a bachelor's degree—well above the national average of 28%. To find what gives Asian-Americans a leg up, a team of sociologists scoured two long-term surveys covering more than 5000 U.S. Asian and white students. After crunching test scores, GPAs, teacher evaluations, and social factors such as immigration status, the team reports a simple explanation online today in the *Proceedings of the National Academy of Sciences*: Asian-American students work harder.
>
> The team found that students from all Asian ethnic groups put greater importance on effort than on natural ability. This outlook, the team argues, causes students to respond to challenges by trying harder and has a greater impact on Asian-Americans' academic achievement than does cognitive ability or socioeconomic status. However, the team says Asian-American students reported lower self-esteem, more conflict with their parents, and less time spent with friends compared with their white peers. The team suspects the high academic expectations or their "outsider" status in American society could be to blame.

You know, a lot of people blame racism when some minorities underperform at school. But if that were so, then why aren't Asians affected? The answer is that underperforming at school has nothing to do with race or racism. It's all about strong marriages, strong families and hard work. Discipline.

The soft bigotry of low expectations

In other news, judges at a debate tournament gave the first prize to two black students who used vulgar language in their speeches.

The College Fix reports.

Excerpt:

> This year's debate question centered on the Presidential War Powers. But Towson, reports The Atlantic, took a different approach:
>
> On March 24, 2014, at the Cross Examination Debate Association (CEDA) Championships at Indiana University, two Towson University students, Ameena Ruffin and Korey Johnson, became the first African-American women to win a national college debate tournament, for which the resolution asked whether the U.S. president's war powers should be restricted.

> Rather than address the resolution straight on, Ruffin and Johnson, along with other teams of African-Americans, attacked its premise. The more pressing issue, they argued, is how the U.S. government is at war with poor black communities.
>
> And how did Towson plead its case? Here's a censored excerpt provided by Pundit Press:
>
> They say the n*****s always already qu***, that's exactly the point! It means the impact is that the that the is the impact term, uh, to the afraid, uh, the, that it is a case term to the affirmative because, we, uh, we're saying that qu*** bodies are not able to survive the necessarily means of the body. Uh, uh, the n***** is not able to survive.
>
> Perhaps I am missing the finer nuances of college debate, but assuming I understand cross-examination debate correctly, this form of incoherent chaos is unacceptable, unprofessional, and in many ways, nonsensical.

For the record, I'm not white. I'm writing about this as one of those overperforming brown-skinned people.

Is belief in the Jesus of the Bible needed in order to be rightly related to God?

May 15, 2014 | by Wintery Knight | Link | Original Link

Here's a good introductory lecture on the topic by Chad Gross, who blogs at Truthbomb Apologetics.

You can see the footnotes for his article on his blog.

The one criticism I have is that he seems to be quoting from John a lot, and he should have some sort of case for John being reliable. I would maybe cite the scholarly work of someone like Richard Bauckham, who thinks that John is not only based on eyewitness testimony, but was actually written by a disciple of Jesus named John. John is my favorite gospel, but skeptical NT critics critics are pretty hard on it. Of course, Chad was speaking in a church, so it's understandable why he might not take the time to do that.

For those who don't want to watch the video, here's a good thought from J. Warner Wallace at Please Convince Me.

Excerpt:

> A "just" God does justice, which means to punish or reward appropriately. In the Western tradition, we punish people for the actions they commit, but the extent of punishment is dependent also on the person's mental state, and a person's mental state is reflective of his or her beliefs. Premeditated murder is worse than manslaughter, and is punished more severely, and a hate crime is a sentencing enhancement that adds more punishment to the underlying crime. In both examples, a person's beliefs are at play: the premeditated murderer has reflected on his choices and wants the victim dead; a hate crime reflects a belief that the rights of a member of the protected group are especially unworthy of respect. So, considering a person's beliefs may well be relevant, especially if those beliefs have motivated the criminal behavior.
>
> But the challenger's mistake is even more fundamental. He is wrong to assert that people are condemned for not accepting the gospel. Christians believe that people are condemned for their sinful behavior – the "wages of sin is death" – not for what they fail to do. The quoted challenge is like saying that the sick man died of "not going to the doctor." No, the person died of a specific condition – perhaps cancer or a heart attack – which a doctor might have been able to cure. So too with eternal punishment. No one is condemned for refusing to believe in Jesus. While Jesus can – and does – provide salvation for those who seek it, there is nothing unjust about not providing salvation to those who refuse to seek it. After all, we don't normally feel obliged to help someone who has not asked for, and does not want, our assistance. So too the Creator has the right to withhold a gift – i.e. eternity spent in His presence – from those who would

> trample on the gift, and on the gift-giver.
>
> The quoted assertion also demonstrates an unspoken belief that we can impress God with our “kind” or “generous” behavior. This fails to grasp what God is – a perfect being. We cannot impress Him. What we do right we should do. We don’t drag people into court and reward them for not committing crimes. This is expected of them. They can’t commit a murder and then claim that punishment is unfair, because they had been kind and generous in the past. When a person gets his mind around the idea of what perfection entails, trying to impress a perfect Creator with our “basic goodness” no longer seems like such a good option.

If you want to hear a debate featuring exclusivists versus pluralists, I’ve got a podcast and a summary of a good debate on this issue between Chris Sinkinson and John Hick. You can’t find a more prominent pluralist than John Hick, except for maybe Paul Knitter, who is featured in a debate with Harold Netland in the new “Debating Christian Theism” book that is just out with Oxford University Press.

Christian child care worker fired after being harassed by lesbian co-worker

May 16, 2014 | by Wintery Knight | Link | Original Link

Story from the UK Telegraph.

Excerpt:

> A Christian nursery worker is taking her former employers to court claiming she was sacked for her beliefs after refusing to read stories about gay couples to children.

> Sarah Mbuyi says she was dismissed due to religious discrimination, having also been accused of "harassing" a lesbian colleague to whom she gave a Bible when she was recovering from an accident.

> The case, lodged at an employment tribunal, comes amid growing concerns among some Christians that religious beliefs are being "outlawed" in the workplace. A Christian group backing the case says it is an example of believers being "robbed" of the freedom to express views.
>
> […]Miss Mbuyi, 30, who lives in north London, carries a Bible. She started work for Newpark Childcare, a London-based group of four nurseries, last April, before being taken on full-time in one of the schools in September.
>
> The same month a lesbian worker also joined the nursery, in Shepherd's Bush, west London. After discovering that Miss Mbuyi was Christian she repeatedly asked her about her beliefs, the tribunal will be told.
>
> Miss Mbuyi, now working at another nursery, will claim her colleague sought to provoke her. In December the co-worker spent time in hospital having had an accident at work and Miss Mbuyi gave her a Bible on her return.
>
> The present, Miss Mbuyi says, was as a result of the interest she had shown in her faith. It was received well, she insists.
>
> The following month, however, Miss Mbuyi, a Belgian national who came to Britain six years ago, says her colleague told her she had received abuse about her sexuality from religious people in the past.
>
> During the discussion, Miss Mbuyi says she told the woman that "if I tell you that God is OK with that I am lying to you".
>
> At a disciplinary meeting, her employers accused Miss Mbuyi of "harassing" her co-worker, saying such behaviour amounted to "gross misconduct". The co-worker could not be reached for comment.

Already, we see workers in particular fields like nursing and child care being grilled by their co-workers and supervisors about their beliefs. Mandatory sensitivity training has

been the rule in much of corporate America. It’s getting to the point where you can’t even be a Christian and keep your beliefs to yourself, as in the Brendan Eich or Frank Turek terminations. Even if you say nothing at all at the office, gay activists are apparently digging through your private life to dig up dirt on you in order to force you into celebrating their lifestyle. OR ELSE.

When I started this blog in 2009, I always knew that there would come a time with the immoral secular left would figure out who I was and make me unemployable. I have tried to keep clear of them so I could use the freedom I still have to make a difference for what I believe. But I have no doubt that the goal of the secular leftists is to make impossible to both be a Christian and earn a living.

This is something we need to fight now, while there is still time. It’s not just our religious liberty that is on the line – it’s everyone’s religious liberty. What I would really like to see is for the church to get serious about motivating all the people in church to see these threats and then be thoughtful about what they are studying in school, and where they are going to work. It’s important for us to study hard things and earn a lot of money so we can find back effectively against these threats. Not everyone can do hard degrees and make a lot of money, but everyone who can should. And everyone should be focused like a laser beam on these threats. We are not facing a threat from the poor, so we should not be focusing our main effort on helping the poor. We are facing a threat from the secular elites – that’s where the battle lies here and now.

Pentagon provides sex-change to traitor, as war veterans die waiting for treatment

May 16, 2014 | by Wintery Knight | Link | Original Link

Investors Business Daily reports.

Excerpt:

> The Pentagon tries to transfer convicted national security leaker Bradley Manning to a civilian prison to treat a gender disorder while veterans suffer and die waiting in vain on phony Veterans Administration lists.
>
> Or should we say Pvt. Chelsea Manning, the name chosen by the convicted leaker of sensitive classified documents to anti-secrecy website WikiLeaks. Manning has asked for hormone therapy and to be able to live as a woman and the Pentagon is trying to help.
>
> Defense Secretary Chuck Hagel last month gave the Army approval to try to work out a transfer plan with the Federal Bureau of Prisons, which, unlike the Defense Department, does provide such treatment to inmates, two Pentagon officials not authorized to speak on the record told the CBS affiliate in Washington, D.C.
>
> The name change from Bradley to Chelsea was approved last month by a Leavenworth County District Judge, a request the Pentagon did not oppose.
>
> Manning has been diagnosed by military doctors multiple times, including last fall after arriving at the Fort Leavenworth, Kan., prison,with gender dysphoria, the sense of being a woman in a man's body.
>
> […]Meanwhile, the medical needs of veterans who have not betrayed their country but rather served it honorably fall victim to wait-list fraud in at least seven Veterans Administration facilities around the country, a very real scandal that has reached President Obama's home state of Illinois at the Hines VA Medical Center just outside his hometown of Chicago.
>
> Germaine Clarno, a VA social worker and employee representative in Chicago, told CBS News that at the Illinois facility there were multiple secret waiting lists designed to hide the fact that veterans were not receiving timely medical care and sometimes not at all.
>
> Clarno says the purpose of the lists was "to make numbers look better for their own recognition and for bonuses."
>
> Her story mirrors those at other VA facilities, including the one in Phoenix, where Dr. Sam Foote revealed the scandal in which up to 40 veterans may have died. Sally Barnes-Breen told Sen. John McCain at a recent town hall meeting how her 71-year-old father-in-law, a Navy veteran, died while awaiting an appointment at the Phoenix VA. Thomas Francis Breen had bladder cancer and died Nov. 30.
>
> This neglect has apparently been going on for some time. As Betsy McCaughey

> has written in these pages, on Jan. 30, it was disclosed that at least 19 veterans at VA facilities in Columbia, S.C., and Augusta, Ga., died in 2010 and 2011 because they were forced to wait too long for colonoscopies and endoscopies that could have diagnosed their cancers while they were still treatable.

Wow. So Bradley Manning leaks information that cost American lives and undermined our national security, and he gets a sex change while in prison. Meanwhile, war veterans die while waiting for treatment in VA hospitals. I guess this is what we should expect when we elect anti-Americans to run our government. Heck, the Democrats probably believe that they are doing the right thing by preferring traitors to veterans.

This is what my taxpayer money is going for – not to help wounded vets who protected me by risking their lives for me, but to provide traitors with sex changes. It’s appalling. I have less freedom to pursue my dreams with the money I earned, because a traitor needs a sex change.

Pro-life debater Scott Klusendorf discusses pro-life apologetics

May 16, 2014 | by Wintery Knight | Link | Original Link

Did you know that the pro-life issue is an area where you can learn arguments and use evidence to be persuasive? Here's a podcast that shows you how.

Details:

> Scott Klusendorf, President of Life Training Institute, is a pro-life rockstar. Listen in as host Brian Fisher attempts to unsuccessfully "stump the apologist" with some of the most difficult pro-abortion questions of our day.

The MP3 file is here. (36 minutes)

Questions:

- How did Scott get interested in the abortion issue?
- Do you need a special calling in order to learn how to defend the unborn?
- What is the history of the pro-life movement, and how have they shifted tactics?
- What is moral relativism? How is it relevant to the abortion debate?
- Why is moral relativism so widely accepted?
- How do you deal with someone who says abortion is wrong, but she has no choice?
- How do you deal with the rape and incest exceptions argument?
- What about unborn children who are not "viable"?
- But isn't the foetus part of the woman's body?
- Abortion is necessary to reduce poverty, crime, overpopulation, etc.

It's Friday night, and listening to a smart pro-lifer is awesome. His answer to the abortion is necessary to alleviate poverty is just awesome – the man is widely read outside his field.

New study: a single episode of binge drinking can adversely affect health

May 17, 2014 | by Wintery Knight | Link | Original Link

An interesting discovery in the prestigious peer-reviewed journal PLOS ONE, reported by Science Daily. (H/T William B.)

Excerpt:

> It only takes one time. That's the message of a new study by scientists at the University of Massachusetts Medical School on binge drinking. Their research found that a single episode of binge drinking can have significant negative health effects resulting in bacteria leaking from the gut, leading to increased levels of toxins in the blood. Published online in *PLOS ONE*, the study showed that these bacterial toxins, called endotoxins, caused the body to produce immune cells involved in fever, inflammation, and tissue destruction.

> "We found that a single alcohol binge can elicit an immune response, potentially impacting the health of an otherwise healthy individual," said lead author Gyongyi Szabo, MD, PhD, professor of medicine, vice chair of the Department of Medicine and associate dean for clinical and translational sciences at UMMS. "Our observations suggest that an alcohol binge is more dangerous than previously thought."
>
> Binge drinking is defined by National Institute on Alcohol Abuse and Alcoholism (NIAAA) as a pattern of drinking alcohol that brings blood alcohol concentration (BAC) to 0.08g/dL or above. For a typical adult, this corresponds with consuming five or more drinks for men, or four or more drinks for women, in about two hours, depending on body weight.
>
> Binge drinking is known to pose safety risks associated with car crashes and injuries. Over the long term, binge drinking can damage the liver and other organs, but this [study] is key evidence that a single alcohol binge can cause damaging health effects such as bacterial leakage from the gut into the blood stream, according to a statement released by George Koob, PhD, director of the NIAAA.

I've never been drunk, thank goodness – mostly because I like putting money into bank accounts more than giving it to other people for entertainment related products and services. Scheming works better with money, and I love to scheme and plan and achieve. Not only that, but drunkenness is forbidden in Gal 5:21 and Eph 5:18. So there is the Bible and the stewardship of money. Two good reasons to not drink excessively.

I made my way through high school and college without drinking once (except maybe Kahlua with milk, or something like that, at holidays with the family, I don't remember).

My first beer was when I graduated and had my first full-time job. It was the height of the dot-com bubble, we all had good jobs and were making money. So when we went out as a team, I had one beer with the team, and then they would feel comfortable talking to me about spiritual things. Since then, I've averaged about a beer a year. It's just not something I can afford to spend money on regularly. You don't get rich by spending money, and we all ought to be very worried about our future prosperity, at this point, given what's going on in Washington.

I think my bigger concern though is that with non-Christians, I don't let my guard down. I am always "on duty" and ready to answer their questions. Can't afford to do anything that is going to compromise my ability to reason well and make good decisions in front of them. I know enough people who have had alcoholic parents or been harmed by alcohol that I find it easy to just avoid it completely. The tragedy of drunk driving is one of the things that really pushed me away from alcohol entirely when I was younger. The idea that some drunk person can kill or seriously injure an innocent person doesn't sit well with me.

Narendra Modi (BJP) election win good for Indian economy, but scary for Christian minority

May 17, 2014 | by Wintery Knight | Link | Original Link

Map of India – Modi was the leader in Gujarat state
From Asia News.

Excerpt:

> "The electoral result, declared so far, indicates a landslide win for the BJP, which should propel the stock markets to new heights," said Clifton Desilva, director of Altina Securities Pvt Ltd, as he spoke to *AsiaNews* about India's election results and the BJP victory.
>
> According to the latest projections, Modi's party has 277 seats out of 543. The BJP and its coalition partners together now hold 336 seats. However, "Now that the BJP is likely to attain a sweeping mandate it does not have to depend on allies as was the case with the UPA government," Desilva said. The UPA or United Progressive Alliance was the Indian Congress Party-led coalition that lost the election.
>
> What is more, the BJP "has the reputation of being a business-oriented party," Desilva noted. Thus, "all the big reforms that the UPA could not implement it is hoped that the BJP will implement them. [. . .] In fact the last five to six years we have seen the stock market sliding to new lows with the GDP [growth] slipping from 9.5 per cent to 4.5 per cent".
>
> Under a BJP administration, "it is expected that the investment cycle, which was

> stalled for various reasons, will get a kick start." As a result, "projects worth over Rs 6 trillion (US$ 100 billion) that were stalled are likely to be revived, which will have a positive impact on reviving the growth of the Indian economy", especially in terms of infrastructure, capital goods and banking sectors.
>
> As soon as the BJP victory appeared to be a foregone conclusion, foreign governments rushed to congratulate the new leader.

But, Religious Freedom Coalition reports a concern.

Excerpt:

> Advocacy officials say policies of the influential Bharatiya Janata Party (BJP) has contributed to an atmosphere of hatred towards Christians. The BJP is the ruling party in three of the five Indian states with laws that forbid forced religious conversions.
>
> The legislation is frequently used to shut down churches or intimidate Christians who speak about their faith, according to rights activists.
>
> The party has proposed stiffer penalties in one of those states, Madhya Pradesh, India's second-largest.
>
> Narendra Modi, chief minister of Gujarat, another BJP-ruled state with anti-conversion laws on the books, is "the poster child for India's failure to punish the violent," said Katrina Lantos Swett, vice chairwoman of the U.S. Commission on International Religious Freedom, and Commissioner Mary Ann Glendon in a joint November opinion column.
>
> While under BJP rule, Karnataka state had the country's highest rate of attacks against Christians from 2010 through 2012, according to Christian estimates.
>
> […]National parliamentary elections are scheduled for May, and Narendra Modi is the BJP's candidate for prime minister.
>
> Hindu militants have expressed anger over the spread of Christianity in India, a predominantly Hindu nation of over 1 billion people.
>
> In a reaction, the World Evangelical Alliance (WEA) made clear it was closely monitoring the situation saying it had urged believers to "Pray for God's protection over all Christians living in Andhra Pradesh" especially "for pastors and Christian workers…that they would continue to place their trust in the Lord and engage in missions in spite of the present situation."
>
> It was also important to "Pray that the Lord would grant repentance to those who are instigating violence against Christians," stressed the WEA, which claims to represent some 600 million evangelical Christians in 128 countries.

I want India to do well, and Modi's pro-business record in Gujarat cannot be questioned. However, I am worried about his Hindu Nationalism and the price that Christians might pay for evangelizing, which is a normal part of the Christian faith. Hinduism is a non-cognitive religion, so they are not used to arguments and evidence. It's a

community/family/culture thing. So they don’t understand how a person can evangelize except by non-cognitive means, e.g. – bribes. I am worried especially for the Dalits and other low-caste Indians in this environment.

Please pray for Christians in India. Do it now.

Just the thing to fix our 0.1% GDP growth: a massive hike to electricity prices

May 18, 2014 | by Wintery Knight | Link | Original Link

From the leftist Poitico.

Excerpt:

> The EPA will launch the most dramatic anti-pollution regulation in a generation early next month, a sweeping crackdown on carbon that offers President Barack Obama his last real shot at a legacy on climate change — while causing significant political peril for red-state Democrats.
>
> The move could produce a dramatic makeover of the power industry, shifting it away from coal-burning plants toward natural gas, solar and wind. While this is the big move environmentalists have been yearning for, it also has major political implications in November for a president already under fire for what the GOP is branding a job-killing "War on Coal," and promises to be an election issue in energy-producing states such as West Virginia, Kentucky and Louisiana.
>
> […]But for coal country, the rule is yet another indignity for an industry already facing a wave of power plant shutdowns amid hostile market forces and a series of separate EPA air regulations. Coal-state Democrats like West Virginia Sen. Joe Manchin have joined the criticism, echoing industry warnings that the fossil fuel was crucial to keeping the lights on in much of the U.S. during this past brutal winter.
>
> "You have another polar vortex next year, how many people will lose their lives?" Manchin asked at a POLITICO energy policy forum Tuesday.
>
> […]It's not just the coal industry that's losing sleep over the rule. Manufacturers and industries like oil refining have been eyeing the power plant regulations as the starting gun for a process that will eventually lead to greenhouse gas limits for a wide variety of businesses.
>
> "These regulations could reduce the diversity of our energy supply, increase electricity and compliance costs for American businesses and shrink our competitiveness," said Ross Eisenberg, vice president for energy and resources policy at the National Association of Manufacturers. "We can't sit by silently while that happens."

The EPA's rule proposal is supposed to go live on June 2nd. Plenty of time for people in red and purple states to decide whether they prefer gay marriage to low electricity bills. I would say that the chances of the Republicans taking the Senate now is up near 75%.

An excerpt from Dr. Laura's "The Proper Care and Feeding of Marriage"

May 18, 2014 | by Wintery Knight | Link | Original Link

This is from chapter 1 of the book "The Proper Care and Feeding of Marriage".

Is there really ever such a thing as a perfect marriage? The answer to that question is, "YES." I know you're stunned. Stay with me here: "perfect" doesn't mean that everything goes right, or your way for that matter, or that you're feeling romantically perky all the time. There are just too many unpredictable events, challenges, and tragedies in life for any of us to feel content and satisfied for any prolonged period of time. Yet, even in the midst of misery, you can still feel and believe that your marriage is perfect if you have the right attitude; and I don't mean that you think positively – I do mean that you think outwardly. When you do so, married life becomes perfect no matter what difficulties you're going through.

I took a call from Michelle, a seventeen-year-old high-school student, which will clarify:

Michelle: Hi, Dr. Laura! It's a pleasure to speak with you. My question is this: this Saturday is my boyfriend's and mine senior prom. As it turns out, we have a conflict because it is also his championship lacrosse game, at the same time as the dance. He has told me that I could decide which one we should do.

Dr L: Really? So, what's your decision?

Michelle: Well, personally, I want to go to the prom because it's our senior prom and it's our last dance together, it's meaningful, you know? But it's also his major opportunity because scouts will be at this game for college recruitment. So, for him the best choice would be for the game but I want to go to prom… selfishly.

Dr L: Do you love him?

Michelle: Of course. Yes.

Dr L: Do you imagine you're going to marry him? I'm asking you that because I just want to know the depth of your compassion and caring for him.

Michelle: I can see it. I can definitely see it working, but I'm only seventeen… Yes, I care for him a lot.

Dr L: Well then, I guess he's going to his lacrosse tournament.

Michelle: (sounding deflated) Okay.

Dr L: **Because that's what we do when we're in love – we give them gifts… that doesn't mean you go to the store and buy something. It means you give up something that's very important to you to give them something that's very important to them.** O'Henry wrote a short story called, The Gift of the Magi. There was a young couple, very poor, married, and very much in love with each other. Christmas is coming and there is no money to buy gifts for one another. Her prized possession was her long, lovely hair which she had grown since childhood. His prized possession was his solid

gold pocket watch – an heirloom, passed down from generation to generation.

Come Christmas morning, she hands her beloved a package. It is a solid gold chain for his pocket watch. He hands his beloved a package. It is a bejeweled comb to hold her beautiful hair in a bun on top of her head. They both cried with joy… even though… he no longer had the pocket watch, as he had sold it to buy her the jeweled comb… and she no longer had long hair, as she had sold it to buy him the gold chain.

Neither could use the gift the other had given them from a store – but look at the gift they truly got from the other.

Michelle: WOW!

Dr L: So, when you love somebody you give them what they really need – and your boyfriend needs you to be supportive of the fact that this game is important to his college career – for scholarships. If you do get married, you'll be dancing together for the rest of your lives.

Michelle: That's true. Well, I guess he'll be playing this game and I'll be sitting on the sidelines cheering.

Dr L: Good for you! That's the kind of woman a man should marry.

Michelle: Thank you so much, Dr. Laura.

Oh, wait a minute, friends! The story does not end there. A few days later I received this email from Michelle:

"A few days ago I called in with a dilemma I had with prom because my boyfriend's championship lacrosse game (with college scouts) was the same night. You told me the story of the Gift of the Magi, and that if you really loved someone you would be willing to give up whatever was most important to you – which for me was the prom. I took your advice and called up my boyfriend telling him that we would be going to his lacrosse game instead of senior prom. He explained to me that he knew I would decide to go to his game, so he went ahead and bought our prom tickets so we would go to the prom.

So, basically, I was willing to give up senior prom for him, and he was willing to give up what was most important to him, his championship game – proving the story of the Gift of the Magi…

But hold on! The story gets better! Yesterday we found out that because of some unknown factor, his championship game was changed from 7 o'clock to 3 o'clock in the afternoon. Is this a God thing? I think so! Now we not only get to go to prom and his lacrosse game, but we have the knowledge that we are both willing to sacrifice what is most important to us because our love is stronger.

I know that I am only 17, but I think I found a keeper!! Thank you so much for your wonderful advice to let my MAN know how important he is to me. This experience not only made me grow as a person, but is strengthening our relationship as well."

Now, dear friends, even some seventeen year olds can understand the beauty and meaning of having somebody care enough about you to put themselves aside for you – that beats every prom and game imaginable. And when you are living this scenario, no

matter what grunge is going on in your life, your marriage is PERFECT!

Emphasis mine. The point of getting married is to give self-sacrificially to someone else. Just like Jesus.

Here is my previous post on her earlier book, The Proper Care and Feeding of Husbands.

Recommended books on marriage

A friend of mine is getting married soon, and he asked me for books that he should read. I said he should read “The Five Love Languages” by Gary Chapman and “The Proper Care and Feeding of Husbands”. He had read both of those, so he got the audio book of Tim Keller’s “The Meaning of Marriage”. I am not a Tim Keller fan, but that book is really good, so I got it as well!

I started an FB thread on this topic and we got these books:

- Reforming Marriage by Douglas Wilson
- Theology of the Body for Beginners by Christoper West
- Boundaries by Henry Cloud and John Townsend
- Boundaries in Marriage by Henry Cloud and John Townsend
- The Fruit of Her Hands by Nancy Wilson
- The Act of Marriage by Tim and Bev Lahaye
- Love and Respect by Emerson Eggerichs
- Sacred Marriage by Gary Thomas
- The Four Loves by C.S. Lewis
- The Seven Principles for Making Marriage Work by John Gottman
- Saving Your Marriage Before It Starts by Lee and Leslie Parrott
- What Did You Expect? by Paul Tripp

Leave your recommendation for him in the comments.

Higher education spending produced no improvement on standardized tests

May 19, 2014 | by Wintery Knight | Link | Original Link

Education spending has tripled since 1970

The Heritage Foundation reports.

Excerpt:

> The U.S. Department of Education recently released the 2013 results of math and reading achievement for 12th graders on the National Assessment of Educational Progress. It's hard to say what's been achieved.
>
> According to the NAEP—a standardized test often referred to as the nation's "report card"—just 26 percent of the country's 12th graders are proficient in math. Only 38 percent are proficient in reading. Those numbers are entirely unchanged since 2009, when the NAEP was last administered.
>
> Notably, reading achievement was significantly *higher* overall in 1992 when the NAEP exam was first administered in reading. Forty percent of students were proficient in reading in 1992. The new NAEP scores confirm the outcomes found on the NAEP long-term-trend assessment, which has assessed reading achievement since 1971 and math achievement since 1973. Twelfth graders today perform no better in reading than high school seniors of the early 1970s.

So is spending on education the same today as it was in the 1970s?

Let's see:

> Since the 1970s alone, inflation-adjusted federal per-pupil spending (part of the goal of which was to narrow achievement gaps) has nearly tripled.
>
> The behemoth federal Department of Education filters all of this taxpayer money through more than 100 federal education programs, many of which are

> duplicative, most of which are ineffective. It’s no surprise then that this administration’s policies, which seem designed to increase program count and spending, haven’t moved the needle on achievement either.

The article has a graph showing that the biggest reason for this increase in costs is “Non-Teaching Staff”. I think that might be a problem. Maybe the task of education should be pushed down to the states or even local governments, where they can be more responsive to the needs of the customers?

“Sex without love isn’t worth it” 18-year old UK student defends his virginity

May 19, 2014 | by Wintery Knight | Link | Original Link

Dina tweeted this article from the UK Daily Mail. I don’t really have much sympathy for student, since my rule is NO SEX BEFORE MARRIAGE, and I’m twice his age and still a virgin. Still, the article had some interesting things in it.

Excerpt:

> A teenager at one of the country’s most prestigious private schools has outed himself as a virgin and is encouraging his classmates to employ the same restraint to avoid getting their hearts broken.
>
> Phin Lyman, 18, a sixth former at Wellington College, Berkshire, wrote an article in his school magazine warning peers that ‘casual sex never works in the long term’.
>
> Mr Lyman – a pupil at the £30,000-per year school which counts author Sebastian Faulks and broadcaster Peter Snow among its alumni – described sex as ‘the glue’ which connects two people ‘physically and emotionally’.

And now the interesting parts:

> The pupil’s comment comes just days after it emerged nearly one in ten students at British universities admit they first had sex at the age of 14 or younger.
>
> The shocking survey of more than 6,000 students at 100 universities, carried out by Student Beans, found nine per cent of students admitted they lost their virginity before they reached their 15th birthday, with two per cent saying they had sex before they turned 14.
>
> By the time they reached 16 – the legal age of consent – that figure had risen to almost one in four.
>
> The survey also found that more than half have had unprotected sex while 61 per cent used camera phones to send explicit pictures or videos of themselves to partners, known as ‘sexting’.
>
> After starting university, more than half admitted to having one-night stands and six per cent said they had already had more than 20 partners. Just eight per cent said they were still virgins.
>
> Norman Wells from the Family Education Trust, which promotes traditional moral values, said: ‘The survey underlines the failure of contraceptive-based sex education to prepare young people for lifelong marriages.
>
> ‘Contrary to the claims of those who assert that marriage is an outdated institution, the overwhelming majority of students expect to get married, with

> only six per cent saying they do not wish to marry.
>
> ‘Yet the casual attitudes towards sex suggested by high levels of one night stands and multiple sexual partners indicate that students are ignorant of the character qualities they will need.’
>
> Meanwhile, the latest figures from the NHS published in 2011 show 27 per cent of men aged between 15 and 24 had not had sex, compared with 22 per cent in 2001.
>
> Those who admitted drinking alcohol in the previous week had also dropped by a quarter in that same ten-year period.
>
> Of those aged 11 to 15, one in eight said they had drunk the week before, according to the 2011 NHS figures.

In my case, I am concerned about sex simply because I more interested in love, romance and a lifelong commitment. I believe that one of the best (and most risky) ways for me to make an impact for God would be to have a marriage that can be used as a base of operations from impacting the public square. A married couple united in purpose is able to work together to impact the church and the university, and raise influential and effective children. But to do that the bond has to be tight. I believe that refraining from premarital sex is my way of giving my future wife the gift of security in the marriage. Whatever happens, she will always know that I am not the kind of person who thinks that sexual activity is an appropriate form of communication between people who do not know each other, are not committed to each other, are not committed to their children and do not share a common purpose of serving God over the long-term.

I have no regrets about not being married yet, because you can train hard, save a lot of money and do a lot of good as a single person. But my chastity expresses the hope that one day the right girl will come along to know me and my plan, and want to participate in it in a self-sacrificial, submissive way. Until then, I’ll keep serving God in a disciplined, focused way and keep waiting for her to commit to me.

The meaning of marriage: a lecture at Google by Tim Keller

May 19, 2014 | by Wintery Knight | Link | Original Link

Disclaimer: I have reservations about Tim Keller. I consider him to be too liberal for my tastes, especially on scientific (intelligent design) and political/economic issues. However, I think he did a good job explaining marriage in the lecture below.

Here's the the video:

Details:

> Timothy Keller visits Google's New York, NY office to discuss his book "The Meaning of Marriage." This event took place on November 14, 2011, as part of the Authors@Google series.
>
> Timothy J. Keller is an American author, speaker, preacher, and the founding pastor of Redeemer Presbyterian Church in New York City. He is the author of several books, including "The Reason for God: Belief in an Age of Skepticism."
>
> "The Meaning of Marriage" touches on topics that all readers can relate to, starting with the role of marriage in our culture, its history and the pessimism that is often associated with it. The Kellers also discuss the feelings of and acts of love, romantic relationships, gender roles, singleness, and the role of sex in a marriage.

I saw a lot of things in his lecture that echo my own views. One point where we agree is on not just looking for traits and virtues in the other person, but in seeing how they handle conflict and solve problems with you. You have to give the other person things to do and see if they make progress and work cooperatively with you. Wes, who linked me the lecture, introduced the link by saying that this is the way that Christians should explain marriage to non-Christians. I agree, and I've added the book to my cart.

Here's an article entitled "You Never Marry the Right Person", that discusses one of the points in the lecture.

Excerpt:

> In generations past, there was far less talk about "compatibility" and finding the ideal soul-mate. Today we are looking for someone who accepts us as we are *and* fulfills our desires, and this creates an unrealistic set of expectations that frustrates both the searchers and the searched for.
>
> […]The Bible explains why the quest for compatibility seems to be so impossible. As a pastor I have spoken to thousands of couples, some working on marriage-seeking, some working on marriage-sustaining and some working on marriage-saving. I've heard them say over and over, "Love shouldn't be this hard, it should come naturally." In response I always say something like: "Why believe that?

> Would someone who wants to play professional baseball say, ‘It shouldn’t be so hard to hit a fastball’? Would someone who wants to write the greatest American novel of her generation say, ‘It shouldn’t be hard to create believable characters and compelling narrative’?” The understandable retort is: “But this is not baseball or literature. This is love. Love should just come naturally if two people are compatible, if they are truly soul-mates. “
>
> The Christian answer to this is that no two people are compatible. Duke University Ethics professor Stanley Hauerwas has famously made this point:
>
> Destructive to marriage is the self-fulfillment ethic that assumes marriage and the family are primarily institutions of personal fulfillment, necessary for us to become “whole” and happy. The assumption is that there is someone just right for us to marry and that if we look closely enough we will find the right person. This moral assumption overlooks a crucial aspect to marriage. It fails to appreciate the fact that we always marry the wrong person.We never know whom we marry; we just think we do. Or even if we first marry the right person, just give it a while and he or she will change. For marriage, being [the enormous thing it is] means we are not the same person after we have entered it. The primary challenge of marriage is learning how to love and care for the stranger to whom you find yourself married.
>
> Hauerwas gives us the first reason that no two people are compatible for marriage, namely, that marriage profoundly changes us. But there is another reason. Any two people who enter into marriage are spiritually broken by sin, which among other things means to be self-centered—living life*incurvatus in se*. As author Denis de Rougemont said, “Why should neurotic, selfish, immature people suddenly become angels when they fall in love … ?” That is why a good marriage is more painfully hard to achieve than athletic or artistic prowess. Raw, natural talent does not enable you to play baseball as a pro or write great literature without enduring discipline and enormous work. Why would it be easy to live lovingly and well with another human being in light of what is profoundly wrong within our human nature? Indeed, many people who have mastered athletics and art have failed miserably at marriage. So the biblical doctrine of sin explains why marriage—more than anything else that is good and important in this fallen world—is so painful and hard.

When you are courting, don’t worry about appearances and feelings and passion so much, because that is all subject to change over time, and those things won’t help you with the real challenges you’ll face in a marriage. Worry about whether they are the kind of person who can make commitments and love other people self-sacrificially – even if they are unlovable. In the long run, their ability to read and understand issues, to care for others and serve them, to keep promises, to be respectful and supportive, to argue respectfully and reasonably, and to solve problems constructively, will all be far more important than appearances and feelings and passion.

And let me be clear again: give them things to do that challenge them during the courtship and see how they handle being given responsibilities – giving a person hard things to do is a much better way to test a person than recreational nights out with recreational drinking, recreational dancing and recreational sex. Marriage means commitment and hard work, not recreation. And that's what you should test for – the ability to work hard at the relationship and to keep promises and commitments and to communicate reasonably and to work through difficulties fairly.

Democrats refusing to comply with Freedom of Information Act requests

May 20, 2014 | by Wintery Knight | Link | Original Link

Katie Pavlich at Townhall breaks the story.

Excerpt:

> On May 21, 2013 the National Republican Senatorial Committee sent the IRS a Freedom of Information Act request asking for "any and all documents or records, including but not limited to electronic documents, e-mails, paper documents, photographs (electronic or hard copy), or audio files," related to correspondence from January 1, 2009 and May 21, 2013 between thirteen different Democrat members of Congress and top IRS officials.
>
> […]Since that request was received by the IRS nearly one year ago, IRS Tax Law Specialists Robert Thomas and Denise Higley have asked for more time to fulfill the request six times.
>
> "I am responding to your Freedom of Information Act (FOIA) request dated May 21, 2013, and received in our office on May 30, 2013," Higley wrote in a letter to NRSC Attorney Megan Sowards last year. "I am unable to send the information requested by June 27, 2013, which is the 20 business day period allowed by law. I apologize for any inconvenience this delay may cause."
>
> Thomas and Higley have sent six letters with the same language and different dates to Sowards requesting more time to locate information in order to fulfill the FOIA request. Most recently, the IRS has asked for a deadline of August 1, 2014 to produce information.
>
> Earlier this week Judicial Watch released documents showing Democratic Michigan Senator Carl Levin was in contact with former Deputy IRS Commissioner Steven Miller repeatedly throughout 2012 and was working with the agency on how conservative groups, specifically those working against his reelection, could be targeted through IRS rules and regulations. Last month we learned the staff of Ranking Member of the House Oversight Committee Elijah Cummings had been in touch with the IRS about voter fraud prevention group True the Vote, despite direct denials from Cummings any contact with the IRS had ever occurred.

I think that the Democrat cover-up of this IRS scandal is so egregious, and their refusal to be accountable to harmful, that the only solution is to abolish/dismantle the IRS and go with a flat tax or fair tax system. Government agencies are not supposed to be politicized like this, and if they are, then they need to go.

College of the Ozarks offers students tuition-free degrees – if they work part-time

May 20, 2014 | by Wintery Knight | Link | Original Link

This article from the Wall Street Journal has been the #1 editorial for much of the last four days.

Excerpt:

> Looking for the biggest bargain in higher education? I think I found it in this rural Missouri town, 40 miles south of Springfield, nestled in the foothills of the Ozark Mountains. The school is College of the Ozarks, and it operates on an education model that could overturn the perverse method of financing college education that is turning this generation of young adults into a permanent debtor class.
>
> At this college the tuition is nowhere near the $150,000 to $200,000 for a four-year degree that the elite top-tier universities are charging. At College of the Ozarks, tuition is free. That's right. The school's nearly 1,400 students don't pay a dime in tuition during their time there.
>
> So what's the catch? All the college's students—without exception—pay for their education by working 15 hours a week on campus. The jobs are plentiful because this school—just a few miles from Branson, a popular tourist destination—operates its own mill, a power plant, fire station, four-star restaurant and lodge, museum and dairy farm.
>
> Some students from low-income homes also spend 12 weeks of summer on campus working to cover their room and board. Part of the students' grade point average is determined by how they do on the job and those who shirk their work duties are tossed out. The jobs range from campus security to cooking and cleaning hotel rooms, tending the hundreds of cattle, building new dorms and buildings, to operating the power plant.
>
> […]"We don't do debt here," [School President Jerry C.] Davis says. "The kids graduate debt free and the school is debt free too." Operating expenses are paid out of a $400 million endowment. Seeing the success of College of the Ozarks, one wonders why presidents of schools with far bigger endowments don't use them to make their colleges more affordable. This is one of the great derelictions of duty of college trustees as they allow universities to become massive storehouses of wealth as tuitions rise year after year.
>
> In an era when patriotism on progressive college campuses is uncool or even denigrated as endorsing American imperialism, College of the Ozarks actually offers what it calls a "patriotic education." "There's value in teaching kids about the sacrifices previous generations have made," Mr. Davis says. "Kids should know there are things worth fighting for."

> He says a dozen or so students will be taking a pilgrimage to Normandy in June to commemorate the 70-year anniversary of D-Day and the former College of the Ozarks students buried there. Amazingly, four of the school's graduates served as generals in the U.S. military during the Vietnam War.
>
> […]Nearly 90% of graduates land jobs—an impressive figure, given the economy's slow-motion recovery.
>
> "If I were an employer, I'd take our graduates over those at most any other schools," says Mr. Davis. "The kids at these East Coast colleges strike me as being a little spoiled. Our graduates don't expect to come into the company as the CEO." But they certainly join a company knowing the value of work.

I am always encouraging young people to steer themselves to STEM degrees, and away from debt. If you did a STEM degree at College of the Ozarks, then you would really have a leg up on life. It's not a good time now to follow your heart and do what you like. Now is the time to dig in and do what you have to do to pay your own way later on. It's going to get a lot harder to have even the same standard of living as what your parents had.

Is it possible to have a civil, productive debate about abortion?

May 20, 2014 | by Wintery Knight | Link | Original Link

I saw this post on Josh Brahm's blog and had to blog on it. It shows the kind of relationship that leads to a changed mind.

Excerpt:

> I want to bring relational apologetics to the pro-life movement. I've written and spoken previously about my dear friend Deanna Young. I'd encourage you to check out one of those two links to get the beginning of the story that I'm going to continue here. I'm so excited to tell you why Deanna now calls herself pro-life.
>
> In case you didn't click either of those links, Deanna was a pro-choice, atheist lesbian in Canada who befriended me in February 2013, through a YouTube message. Deanna was one of the most intelligent pro-choice bloggers I'd ever read. We exchanged nearly 120 philosophical emails, then started Skyping together.
>
> I'm eager to share with you how my relationship with Deanna has progressed and the ways that her thinking has changed, but there's a danger in this. It's possible that some people would read this and interpret it as me telling you about a project of mine. It's very important to me that you know that Deanna is not an object to me, a mind to be changed so that I can get another notch on my pro-life belt.
>
> I have no shame in telling you that I love Deanna.
>
> […]When I say that I love Deanna, I mean what Jason Lepojärvi means when he defined love this way:
>
> Love says that it is good that you exist and insofar as I am able I will contribute to your happiness, your existence, your flourishing.
>
> Some of my pro-choice friends have not changed their thinking about abortion very much, but Deanna has. I want to share with you some of the changes in her thinking. Don't read these as the reasons I'm friends with Deanna. Deanna will always be my friend, regardless of her views on abortion, her religion or her sexuality.
>
> […]Deanna would tell you that two things were necessary conditions for her conversion: rigorous philosophical arguments and a loving friendship with someone on the other side. The intellectual arguments were very important. I haven't written very much about our initial email exchanges yet, but we got very philosophical, going back and forth on issues like bodily rights arguments, rape, the concept of intrinsic human value, concepts of harm and taking away the dignity of people in temporary comas, moral objectivism, utilitarianism, stem cell

> research, the “after-birth abortion” paper, and the use of graphic pictures.
>
> It was through those lengthy emails that Deanna and I first became close. And after Deanna believed that most of her philosophical arguments had been defeated by better arguments, she completed her conversion upon realizing that a pro-life person loved her, even while she was an actively pro-choice blogger. I took my cue from Jesus, who, while I was yet a sinner, loved me anyway, and adopted me. (Romans 5:8.)

In the rest of the article he talks about their conversations about various arguments like the Judith Jarvis Thomson violinist argument.

I don’t think this would work with just any pro-choice person, you would need someone smart to argue her view strongly and have it answered strongly. I think when you get two smart people together for a long period of time, and there is mutual respect being built up, that’s when changing a person’s mind becomes possible.

I believe in one-on-one mentoring of people who are engaged in finding the truth about the issues that divide us. But I don’t know if I would be brave enough to form a loving friendship with someone so far on the other side. I would like to be able to do that, but it’s just really scary unless you are sure the other person can tolerate your honest views. I do believe in his definition of love, but it’s hard to find someone same who is very different from me. I think it’s easier with men than women, for a man.

Activist judge Jones strikes down traditional marriage in Pennsylvania

May 21, 2014 | by Wintery Knight | Link | Original Link

The leftist New York Times celebrates the decision by a judge to overturn the will of the people.

Excerpt:

> Continuing a rush of rulings that have struck down marriage limits across the country, a federal judge in Pennsylvania on Tuesday declared the state's ban on same-sex marriage to be unconstitutional.
>
> "We are a better people than what these laws represent, and it is time to discard them into the ash heap of history," wrote Judge John E. Jones III of Federal District Court in a decision posted on Tuesday afternoon.
>
> Pennsylvania is the last of the Northeast states with a ban on same-sex marriage, and if Tuesday's ruling is not successfully challenged, it will become the 19th state to permit gay and lesbian couples to marry.
>
> […]**In the last few months, judges have struck down marriage limits in several states: Arkansas, Idaho, Oklahoma, Texas, Virginia and, on Monday,Oregon. Courts elsewhere have said that states must recognize same-sex marriages performed outside their borders.**
>
> In most of the cases, courts have delayed the carrying out of the rulings until appeals can be argued in federal circuit courts and, perhaps, the Supreme Court. But in Oregon, state officials said they would not appeal, and the opening of marriage to same-sex couples appeared to be settled.

Yes, it seems like activist judges are overturning the will of the people in lots of states, and liberals are so happy with this new method of deciding what the laws will be.

You might remember Judge Jones as the judge who decided the Dover ID case by copying almost verbatim from a briefing prepared by the ACLU:

> The key section of the widely-noted court decision on intelligent design issued a year ago on December 20 was copied nearly verbatim from a document written by ACLU lawyers, according to a study released today by scholars affiliated with the Discovery Institute.
>
> "Judge John Jones copied verbatim or virtually verbatim 90.9% of his 6,004-word section on whether intelligent design is science from the ACLU's proposed 'Findings of Fact and Conclusions of Law' submitted to him nearly a month before his ruling," said Dr. John West, Vice President for Public Policy and Legal Affairs at Discovery Institute's Center for Science and Culture.

> “Ironically, Judge Jones has been hailed as ‘an outstanding thinker’ for his ‘masterful’ ruling, and even honored by Time magazine as one of the world’s ‘most influential people’ in the category of ‘scientists and thinkers,’” said West. “But Jones’ analysis of the scientific status of intelligent design contains virtually nothing written by Jones himself. This finding seriously undercuts the credibility of a central part of the ruling.”
>
> **The study notes that, while judges routinely make use of proposed findings of fact, “the extent to which Judge Jones simply copied the language submitted to him by the ACLU is stunning. For all practical purposes, Jones allowed ACLU attorneys to write nearly the entire section of his opinion analyzing whether intelligent design is science. As a result, this central part of Judge Jones’ ruling reflected essentially no original deliberative activity or independent examination of the record on Jones’ part.”**
>
> Jones’ copying was so uncritical that he even reprinted a number of factual errors originally made by ACLU attorneys.
>
> For example, Jones claimed that biochemist Michael Behe, when asked about articles purporting to explain the evolution of the immune system, responded that the articles were “not ‘good enough.’” Behe actually said the exact opposite: “it’s not that they aren’t good enough. It’s simply that they are addressed to a different subject.” Jones’ misrepresentation of Behe came directly from the ACLU’s “Findings of Fact.”
>
> Again copying from the ACLU, Jones insisted that “ID is not supported by any peer-reviewed… publications.” But, in fact, the court record contained evidence of several such publications.

I guess these scientific discussions are too complicated for a judge to decide, so he just copied his answer from a group of atheist lawyers. And that was good (for him), because he was able to receive an award from an atheistic group later on for his fine copying skills. Judging is hard work, it’s better to just decide what you want to be true beforehand and then copy reasons for your decision from other people. Then collect an award with the time you save by not having to think too hard. And if you have more time left over from not thinking for yourself, then you can compose insults to mock the people who believe that children deserve a mother and father.

Paul Copan explains some responses to postmodernism

May 21, 2014 | by Wintery Knight | Link | Original Link

Four articles from Paul Copan over at the UK site "BeThinking". Each article responds to a different slogan that you might hear if you're dealing with non-Christians on the street.

"That's just your interpretation!"

Some of his possible responses:

- Gently ask, 'Do you mean that your interpretation should be preferred over mine? If so, I'd like to know why you have chosen your interpretation over mine. You must have a good reason.'
- Remind your friend that you are willing to give reasons for your position and that you are not simply taking a particular viewpoint arbitrarily.
- Try to discern if people toss out this slogan because they don't like your interpretation. Remind them that there are many truths we have to accept even if we don't like them.
- 'There are no facts, only interpretations' is a statement that is presented as a fact. If it is just an interpretation, then there is no reason to take it seriously.

More responses are here.

"You Christians are intolerant!"

Some of his possible responses:

- If you say that the Christian view is bad because it is exclusive, then you are also at that exact moment doing the very thing that you are saying is bad. You have to be exclusive to say that something is bad, since you exclude it from being good by calling it bad.
- There is a difference, a clear difference between tolerance and truth. They are often confused. We should hold to what we believe with integrity but also support the rights of others to disagree with our viewpoint.
- Sincerely believing something doesn't make it true. You can be sincere, but sincerely wrong. If I get onto a plane and sincerely believe that it won't crash then it does, then my sincerity is quite hopeless. It won't change the facts. Our beliefs, regardless of how deeply they are held, have no effect on reality.

More responses are here.

"That's true for you, but not for me!"

Some of his possible responses:

- If my belief is only true for *me*, then why isn't your belief only true for you? Aren't

you saying you want me to believe the same thing you do?
- You say that no belief is true for everyone, but you want everyone to believe what you do.
- You're making universal claims that relativism is *true* and absolutism is *false*. You can't in the same breath say, 'Nothing is universally true' *and* 'My view is universally true.' Relativism falsifies itself. It claims there is *one* position that is true – *relativism!*

More responses are here.

"If you were born in India, you'd be a Hindu!"

Some of his possible responses:

- Just because there are many different religious answers and systems doesn't automatically mean pluralism is correct.
- If we are culturally conditioned regarding our religious beliefs, then why should the religious pluralist think his view is *less* arbitrary or conditioned than the exclusivist's?
- If the Christian needs to justify Christianity's claims, the pluralist's views need just as much substantiation.

More responses are here.

And a bonus: "How do you know you're not wrong?".

William Lane Craig lectures on the postmodern challenge to belief in God

May 21, 2014 | by Wintery Knight | Link | Original Link

In a lecture entitled “Are there Objective Truths About God?”, philosopher William Lane Craig responds to postmodern challenges to the idea of truth, and specifically to the idea that religion is about objective truth.

Here’s the link to a page containing the lecture audio. (H/T Be Thinking)

The MP3 file is here.

So what questions does Bill answer in the lecture?

What is a self-refuting statement?

The main concept in the lecture is self-refutation. A self-refuting sentence is a sentence that, if true, makes itself false or meaningless. For example, suppose someone said to you: “there are no sentences longer than 5 words” then that would be self-refuting since it falsifies itself. Bill argues that objections to the idea that there are objective truths about God are all self-refuting.

What is truth?

Craig holds that “truth” is a property of a proposition such that a proposition is true if it corresponds to the external world. For example, if I claim that there is a crocodile in your closet and we find a crocodile in your closet, then my statement was true. If there is no crocodile in your closet then my statement was false. The real objective world out there is what makes propositional claims true or false – these are not claims about an individual’s preferences, they are claims about the world. Bill is concerned with truth claims about God that are objective – whether there are propositions about God that are true regardless of what anyone thinks.

Are there objective truths about God?

Bill discusses 3 objections to the idea that there are objective truths about God. Each objection seeks to make religion subjective, (true for each person, like food preferences or clothing fashion).

Objection #1:The Challenge of Verificationism

The first challenge is that religious claims cannot be verified using the 5 senses, and therefore religious statements are objectively meaningless.

Consider the statement “Only propositions that can be verified with the 5 senses are meaningful”. That statement cannot be verified with the 5 senses. If the statement is true, it makes itself meaningless. It’s self-refuting.

Objection #2: The Challenge of Mystical Anti-Realism

The second challenge is that religious claims, and claims about God, are neither true nor false.

Consider the statement “Propositions about God cannot be true or false”. Craig asks – why should we accept that? Any reason given would have to assert something about God that is true or false, and those reasons would contradict the original statement. For example, “God is too great to be grasped by human categories of thought” is a proposition about God that the speaker thinks is true, which contradicts the original assertion.

Objection #3: The Challenge of Radical Pluralism

The third challenge is that each person invents an entire reality of their own, and that there is no mind-independent objective world shared by individuals.

Consider the statement “There is no objective reality shared by all individuals”. That statement is a statement that applies to all individuals, regardless of what they think. It’s self-refuting.

Conclusion

Craig ends the lecture by arguing that it is OK for Christians to think that other people’s views are false. It does not follow that just because someone thinks other people’s views are wrong that they am going to mistreat other people. In fact, in Christianity it is objectively true that it is good for Christians to love their enemies. It is objectively true that all human beings have value, because human beings are made by God. So even if Christians disagree with others, they still treat them well, because they think that there are moral truths that they have to conform to.

My thoughts

Sometimes, non-Christians think that it is dangerous to hold beliefs too strongly. But I think what really matters is the content of the belief – some beliefs are false and some are true – you want to believe the true beliefs as strongly as you can, as long as the evidence warrants it. In Christianity, I am absolutely obligated to treat people with whom I disagree with respect and gentleness (1 Pet 3:15-16). The more convinced I am about *that* belief, the *better* my opponents will be treated. A *stronger* belief in Christianity means *more* tolerance for those who disagree.

Why do non-Christians get so offended when Christians claim to be right about there being only one way to be rightly related to God? Well, for many it’s because their worldview is a personal preference, and they feel uncomfortable having to defend it rationally and evidentially. Christianity is different – we are used to having to defend our truth claims using evidence, because that is the core of the religion, and the example of the founder and his closest followers.

For most people, religion is just their cultural preference – like cooking style, or favorite sport, or clothing style. That’s why they respond to your truth claims with name-calling like “you’re intolerant” and “you’re judgemental” and “you’re arrogant”. These are just shorthand ways of saying, “I’m offended that you think that what you believe is true and you think that what I believe is false”. They would never say that in a math classroom or a chemistry lab, where truth matters. But because they are coming to the discussion with the presupposition that religion is like clothing and diet preferences, they take everything

personally instead of treating religion as something objective, just like any other area of knowledge.

This problem of being offended by truth claims is especially common with people who are raised to think that their religion is a racial, national or cultural identity. They haven't thought anything through, or considered any alternatives, and they think that if you tell them they are wrong *on matters of fact* that somehow this amounts to some sort of racism, intolerance or prejudice. You make factual claims, and they hear discrimination. But that's not how Christians think of religion – we only care if it's true or not – just like we care whether the claims of history or science are true or not. For many non-Christians, religion is not about truth at all but about personal preferences – and they cannot understand why Christians say that they have to go to Hell for having the wrong personal preferences. You have to *tell them* that religion is about truth, and that people displease God because they don't know what is true, and they don't want to know what is true. Then they understand why you are disagreeing with them and you can have a conversation about what is true.

Would Hollywood environmentalists take Middle East oil profits to oppose fracking?

May 22, 2014 | by Wintery Knight | Link | Original Link

Well, before you answer, you can watch this new video from Project Veritas.

And read this article from the liberal Hollywood Reporter about the sting.

Excerpt:

> James O'Keefe says he duped Ed Begley Jr. and Mariel Hemingway into agreeing to get involved with an anti-fracking movie while hiding that its funding comes from Middle Eastern oil interests.
>
> Journalist James O'Keefe, known for his controversial undercover sting operations aimed usually at liberals — is set to unveil at the Cannes Film Festival on Wednesday the first of a group of videos that he says will reveal hypocrisy among Hollywood environmentalists.
> In the video, obtained exclusively by The Hollywood Reporter and embedded below, actors Ed Begley Jr. and Mariel Hemingway are duped by a man named "Muhammad," who is looking to make an anti-fracking movie while hiding that its funding is coming from Middle Eastern oil interests.

> Muhammad, accompanied by a man pretending to be an ad executive, seemingly has the two actors agreeing to participate in the scheme, even after he acknowledges that his goal is to keep America from becoming energy independent. The meeting, which appears to have been secretly recorded, took place a few months ago at the Beverly Hills Hotel.

> But the real target of the sting operation appears to be Josh and Rebecca Tickell, a husband and wife team known for their environmental movies, such as 2008's Fuel, which won an award at Sundance and was later screened at the White House for members of President Obama's administration.
>
> Begley tells THR that if it looks like he's agreeing with faux Muhammad about anything, it's because the Tickells asked him to be polite so that they'd get their funding for a movie they're making calledFracked, a film that will argue a technique for extracting natural gas called fracking is bad for the environment. Also, Begley says that he is hard of hearing and couldn't understand everything Muhammad was saying.
>
> The video also includes some audio from phone conversations between the fake Muhammad's representatives and the Tickells. "We're confident that we can keep this zip-locked. You know, tight. Tight. Air-tight forever," Josh Tickell is heard saying. "If we don't protect who is kind of funding this thing … if we have to disclose that or that becomes a necessary part of it, the whole enterprise will

> not work."
>
> Rebecca Tickell adds: "Because if people think the film is funded by Middle Eastern oil it will, it will not have that credibility," and Josh Tickell says, "It's money, so in that sense we have no moral issue."

I always marvel at how liberals in Hollywood were able to get so much money from Americans at a time when we were a much more conservative, Christian nation. When you give money to Hollywood, you have to understand that you are transferring wealth to immoral, anti-American people. Is your entertainment worth that? How will you explain that to God when he asks you about your stewardship of what he entrusted you with? Your money is your voice in a culture war. Don't let someone else speak for you.

I watch maybe one movie a year in the theaters, and I don't have a TV, cable, or Netflix. If I buy anything, it will be some DVD like the BBC's "North and South" or the complete "Danger Man" with Patrick McGoohan. Why would I give some of the most immoral people in the world my money? How does that help?

Three cases where liberal tinkering with sexual ethics and marriage hurt children

May 22, 2014 | by Wintery Knight | Link | Original Link

This post by "Jane Galt" on Right Wing News highlights three cases where social liberals change the cultural rules around sex and marriage, and it ended up back-firing to hurt children. I will talk about one case below.

The case I want to talk about is the case of changing welfare laws.

Excerpt:

> To sketch a brief history of welfare, it emerged in the nineteenth century as "Widows and orphans pensions", which were paid by the state to destitute families whose breadwinner had passed away. They were often not available to blacks; they were *never* available to unwed mothers. Though public services expanded in the first half of the twentieth century, that mentality was very much the same: public services were about supporting unfortunate *families*, not unwed mothers. Unwed mothers could not, in most cases, obtain welfare; they were not allowed in public housing (which was supposed to be–and was–a way station for young, struggling families on the way to homeownership, not a permanent abode); they were otherwise discriminated against by social services. The help you could expect from society was a home for wayward girls, in which you would give birth and then put the baby up for adoption.
>
> […]Now, in the late fifties, a debate began over whether to extend benefits to the unmarried. **It was unfair to stigmatise unwed mothers.** Why shouldn't they be able to avail themselves of the benefits available to other citizens? The brutal societal prejudice against illegitimacy was old fashioned, bigoted, irrational.
>
> But if you give unmarried mothers money, said the critics, you will get more unmarried mothers.
>
> *"Ridiculous"*, said the proponents of the change. "B*eing an unmarried mother is a brutal, thankless task. What kind of idiot would have a baby out of wedlock just because the state was willing to give her paltry welfare benefits?"*
>
> People do all sorts of idiotic things, said the critics. If you pay for something, you usually get more of it.
>
> *"C'mon"* said the activists. "*That's just silly. I just can't imagine anyone deciding to get pregnant out of wedlock simply because there are welfare benefits available."*
>
> Oooops.
>
> Of course, change didn't happen overnight. But the marginal cases did have children out of wedlock, which made it more acceptable for the next marginal case to do so. Meanwhile, women who wanted to get married essentially found

> themselves in competition for young men with women who were willing to have sex, and bear children, without forcing the men to take any responsibility. This is a pretty attractive proposition for most young men. So despite the fact that the sixties brought us the biggest advance in birth control *ever*, illegitimacy exploded. In the early 1960s, a black illegitimacy rate of roughly 25 percent caused Daniel Patrick Moynihan to write a tract warning of a crisis in "the negro family" (a tract for which he was eviscerated by many of those selfsame activists.)
>
> By 1990, that rate was over 70 percent. This, despite the fact that the inner city, where the illegitimacy problem was biggest, only accounts for a fraction of the black population.
>
> But in that inner city, marriage had been *destroyed*. It had literally ceased to exist in any meaningful way.

So what went wrong? Why did people with some good intentions achieve such bad results?

This went wrong:

> Why would a woman choose such a hard road? It seemed self-evident that the only unwed mothers claiming benefits would be the ones pushed there by terrible circumstance.
>
> This argument is compelling and logical. I would never become an unwed welfare mother, even if benefits were a great deal higher than they are now. It seems crazy to even suggest that one would bear a child out of wedlock for $567 a month. Indeed, to this day, I find the reformist side much more persuasive than the conservative side, except for one thing, which is that the conservatives turned out to be right. In fact, they turned out to be even more right than they suspected; they were predicting upticks in illegitimacy that were much more modest than what actually occurred–they expected marriage rates to suffer, not collapse.
>
> How did people go so badly wrong? Well, to start with, they fell into the basic fallacy that economists are so well acquainted with: they thought about themselves instead of the marginal case. For another, they completely failed to realise that each additional illegitimate birth would, in effect, slightly destigmatise the next one. They assigned men very little agency, failing to predict that women willing to forgo marriage would essentially become unwelcome competition for women who weren't, and that as the numbers changed, that competition might push the marriage market towards unwelcome outcomes. They failed to forsee the confounding effect that the birth control pill would have on sexual mores.
>
> But I think the core problems are two. The first is that they looked only at individuals, and took instititutions as a given. That is, they looked at all the

> cultural pressure to marry, and assumed that that would be a countervailing force powerful enough to overcome the new financial incentives for out-of-wedlock births. They failed to see the institution as dynamic. It wasn't a simple matter of two forces: cultural pressure to marry, financial freedom not to, arrayed against eachother; those forces had a complex interplay, and when you changed one, you changed the other.
>
> The second is that they didn't assign any cultural reason for, or value to, the stigma on illegitimacy. They saw it as an outmoded vestige of a repressive Victorial values system, based on an unnatural fear of sexuality. But the stigma attached to unwed motherhood has quite logical, and important, foundations: having a child without a husband is bad for children, and bad for mothers, and thus bad for the rest of us. So our culture made it very costly for the mother to do. Lower the cost, and you raise the incidence. As an economist would say, incentives matter.

Incentives matter. We don't want to encourage people to do harmful, costly things and hurt children in the name of "compassion".

But let's get back to the bigger issue.

When you hear a person arguing for "compassion" for people who make immoral decisions, you should understand that they are arguing that moral boundaries on costly behavior be lifted. The costs that result from bad behavior are shifted from those who sin to those who don't. The compassion crowd likes to cite one or two cases where someone is a genuine victim – but that is not the issue. The issue is the general case, and the incentives created that cause people on the margins to change their behavior. The word compassion should really be understood to mean "the act of saying that wrong is right, and covering up the damage for wrong actions with someone else's money, taken from them by force". That's compassion, and it is celebrated in the feminized church as *very* Biblical. It's nothing of the kind. This is not about judging people, it's about helping people to avoid making mistakes that impoverish us all and harm the most vulnerable among us. We should not be encouraging irresponsible, selfish, immoral behavior and calling it "compassion".

Marriage is a good thing that protects children, who are very much in need of protection. We shouldn't be messing with it just so that we grown-ups can do things that make us feel good. Children are more important, because they are more vulnerable.

Darrell Bock interviews the leaders of Princeton's largest Christian campus group

May 22, 2014 | by Wintery Knight | Link | Original Link

I really like this really nice 31-minute video podcast because it echoes the problems I hear from young people who lost their faith after going off to college. This is definitely something that is on my mind and part of my life-plan – the troubles that college students face on campus when trying to live out authentic Christian lives.

Details:

> In this episode, Dr. Darrell Bock, Matt Bennett and Tim Adhikari discuss cultural engagement on college campuses, focusing on the ministry of Christian Union and intellectual challenges facing Christian students at Princeton University.
>
> 00:13 The growth of Christian Union?s ministry at Princeton
> 05:13 The importance of Christian students connecting each other
> 07:22 Advice for parents and pastors preparing students to enter college
> 11:27 Introducing students to challenges before they arrive on campus
> 14:32 Key challenges: Sexual ethics, Historical Jesus and the Resurrection
> 15:52 What is the nature of the "Faith buster" course at Princeton?
> 21:56 Religious Pluralism and the New Atheism at Princeton
> 25:51 Personal autonomy and sexual pressures at Princeton

The key point is that students need to land in a Christian group at campus where they can work out the issues they will face. And the second point is for parents to ENSURE that the kids are prepared for the questions and pressures they will face in college. Probably one of the most important things to prepare a child with is a vision for their own marriage and how to get there. Not just "the Bible says" but a serious engagement with the research on the hook-up culture, divorce, fatherlessness, homosexuality and so on. It's not *just* apologetics. It's the whole worldview – including things like climate change, economics, and so on.

Jay Richards: why should Christians learn about economics?

May 22, 2014 | by Wintery Knight | Link | Original Link

Here’s a good basic introduction to the free enterprise system by Dr. Jay Richards:

In this lecture, Dr. Richards covers the following topics:

- the piety myth – thinking that good intentions matter more than good results
- the greed myth – thinking that capitalism is about greed instead of about innovation and serving others
- the zero sum game myth – thinking that voluntary exchanges between buyers and sellers result in win-lose outcomes
- the materialist myth – thinking that there is only a set amount of wealth to be divided by competition

It turns out that the best system for lifting the poor out of poverty – by work or charity – is the economic system that creates wealth through human ingenuity and hard work. That system is the free enterprise system.

Libertarian blogger endorses Wisconsin Governor Scott Walker in 2016

May 23, 2014 | by Wintery Knight | Link | Original Link

Wisconsin Governor Scott Walker

Here's the post from Liberty Without Apologies blog. (H/T Well Spent Journey)

Excerpt:

> I believe Scott Walker is the best possible candidate for the Republican 2016 election. I have believed this since before I moved to Wisconsin, and living here has solidified that belief.
>
> I understand that Rand Paul is by far the most popular candidate for libertarians. I lived in Kentucky during Rand Paul's primary fight against McConnell toady Trey Greyson, although I stayed home, as he was dominating in the polls. I did vote for him for Senate. I'm proud of my former Senator (I have since moved to Wisconsin, which has a conservative Tea Partier and a Marxist lesbian in the Senate) and think he's doing a fine job.

He lists five reasons why he likes Walker.

Here are the first three:

> 1. Competence matters as much as ideology. I remember when Democrats enthusiastically elected a charismatic, ideological liberal with almost no real experience running anything. He then proceeded to screw up one of the most important left-wing issues so badly that Democrats barely even want to say the word "healthcare" anymore, let alone make you extravagant promises about it. Obama's self-defeating hubris is the only reason we have a chance in 2016. If Obamacare had been a smartly devised system of creeping bribes like Medicare was, the fight would be over. Ideologically, I like Rand Paul, but I have simply no reason whatsoever to believe he would be a competent executive. He's a risky unknown, and the Presidency is too important. If he turns out to be incompetent, four years of an incompetent executive ensures the liberty movement will be

> finished for years as a voice in the Republican Party and in American politics as a whole. **Scott Walker's proven he can establish the kind of record that makes limited government more popular, not less. We're not talking about Chris Christie's progressive Republicanism. We're talking about a guy whose signature accomplishments are cutting off public employee unions and balancing the budget.**
>
> 2. Institutions matter. **If there's one thing that characterizes Scott Walker's tenure as governor, it's disarming, defanging, and throttling institutions that serve as the source and foundation of left-wing power. We don't just need someone who likes capitalism and freedom in the White House. We need someone who understands how the institution of government has been turned into a tool for destroying the right and creating reliable, government-worshiping, Democrat voters. I know Scott Walker understands this, because he's made it central to his agenda while governor. And I know he doesn't just understand it, he knows how to do it.**
>
> 3. The federal bureaucracy has metastasized. Scott Walker has an army of boring, pudgy, bespectacled guys quietly doing everything they can to undermine and confound the progressive agenda at state bureaucracies. He knows who to get the right people doing the grunt work of reforming government. **The greatest enemies a Republican President will face are the permanent employees in executive branch agencies, not Congressional Democrats. The petty functionaries that weaponized the IRS are smart, they are vicious, and they will fight. I know Walker knows they need to be fought, and I know that he knows how to win, because he's winning his fights here in Wisconsin.** I'd have more faith in Rand Paul if he'd been the governor of Kentucky and successfully fought the public school establishment or something, but he hasn't been, so I don't have it. Making speeches on the Senate floor is important, but it's not the same as going through the laborious grind of cleaning out a bureaucracy that's metastasized and is feeding on the body politic. Paul is probably more ideologically libertarian than Walker, but Walker's won as many battles against government as you could hope to get out of any governor.

I think that in 2016 we should be looking at candidates who will take the fight to the Democrats. We don't need another Mitt Romney. I want to see a candidate who sticks his neck out for what he believes in and comes out on top. Real accomplishments, this time. Not rhetoric. Why do we always have to care what our opponents think of us? Why not just beat them up and then be magnanimous in victory? If he runs for President on the platform of zeroing out manufacturing income tax, he will win. Every union worker will vote for him.

During the Christmas vacation, I read governor Walker's new book, which was a

Christmas present from my friend ECM. If you want to learn more about governor Walker, I recommend picking that up. I actually got the audio version, and it's read by governor Walker himself.

Frankly, there is only one person running in 2016 right now who destroys government, and it's Walker. I want to see them out of a job, or with their salaries and benefits chopped. No mercy. Walker is the man who can do it, because he's done it. Over and over and over again.

Should pro-marriage activists give up in the face of judicial activism?

May 23, 2014 | by Wintery Knight | Link | Original Link

This article from Ryan T. Anderson in National Review provides leadership.

Excerpt:

> In the short run, the legal battle over the definition of marriage may be an uphill struggle. But in the long run, those who defend marriage as the union of a man and woman will prove to be prophetic. First, because when people do hear a compelling case for marriage, they respond accordingly. And second, because the logic of marriage redefinition ultimately leads to the dissolution of marriage into nothing more than a social mess of consenting adult love of manifold sizes and shapes.
>
> Those who defend — and live out — the truth about marriage should redouble their efforts to witness to the truth about marriage while there is still time to steer clear of that chaos. Here are six ways to do that.

I just chose one way of his six ways to quote in this post.

Here is way #3: make the case for marriage:

> These religious-liberty protections are more likely to be respected if the underlying view about marriage is at least understood. Much of the opposition to Arizona's recent religious-liberty legislation wasn't directed at religious liberty per se but at misunderstood — sadly, at times intentionally misrepresented — concerns about being forced to celebrate same-sex relationships as marriages.
>
> We will be most successful in protecting our rights to free speech, contract, association, and exercise of religion if we also make the reasonable case for marriage. Even if the Court or political powers force the redefinition of marriage, much of the future hinges on public opinion.
>
> The key question is whether those who favor marriage redefinition will view — and thus treat — their dissenting fellow citizens as, in the words of Justice Scalia, "enemies of the human race," or instead treat us as they do the pro-life movement. While liberal elites disagree with the pro-life position, they can at least understand it. And they can understand why a pro-life citizen holds the views she does and why government thus shouldn't coerce citizens into performing or subsidizing abortions.
>
> We therefore must do the work to make our fellow citizens at least understand why we believe what we do about marriage. Even if they continue steadfast in their convictions, they may at least see the reasonableness of ours. For too many of our neighbors, our beliefs about marriage are equated with the late Fred

Phelps of Westboro Baptist infamy. If he's the only voice they've heard on the issue, it's hard to blame them. We must work harder so that they hear our voices.

All of us must be engaged in making the case for marriage. Roughly two years ago, Sherif Girgis, Robby George, and I finished working on the book that Alito cited, *What Is Marriage? Man and Woman: A Defense*. In that book we argued that there were two competing views of *what marriage is* that were in play in our national debates, and we made a philosophical argument that the conjugal view of marriage was correct, and the revisionist view false.

The *conjugal* view of marriage, we argued, has long informed the law — along with the literature, art, philosophy, religion, and social practice — of our civilization. So understood, marriage is a comprehensive union. It unites spouses at all levels of their being: hearts, minds, and bodies, where man and woman form a two-in-one-flesh union. It is based on the anthropological truth that men and women are distinct and complementary, on the biological fact that reproduction requires a man and a woman, and on the sociological reality that children benefit from having a mother and a father. As the act that unites spouses can also create new life, marriage is especially apt for procreation and family life. Uniting spouses in these all-encompassing ways, marriage calls for all-encompassing commitment: permanent and exclusive.

The state cares about marriage because of marriage's connection with children and its ability to unite children with their mother and father. After all, whenever a baby is born, there is always a mother nearby: That is a fact of reproductive biology. The question for law and culture is whether a father will be involved in the life of that child and, if so, for how long. Marriage increases the odds that a man will be committed both to the children that he helps create and to the woman with whom he does so. Marriage, rightly understood, brings together the two halves of humanity (male and female) in a monogamous relationship. Husband and wife pledge to each other to be faithful by vows of permanence and exclusivity. Marriage provides children with a relationship with the man and the woman who made them.

The *revisionist* view, on the other hand, has informed certain marriage-policy changes of the past several decades and is embodied in much of Hollywood's productions. On the revisionist understanding, marriage is essentially an emotional union, accompanied by any consensual sexual activity the partners may desire. Such romantic unions are seen as valuable while the emotion lasts. The revisionist view informs some male-female bonds, not just same-sex ones, as both involve intense emotional bonding, so both can (on this view) make a marriage.

But comprehensive union, we argue, is something only a man and woman can form. For this reason, enacting same-sex marriage would not expand the institution of marriage, but redefine it. Finishing what policies like “no-fault” divorce began, and thus entrenching them, it would finally replace the conjugal view with the revisionist emotion-based account. This would multiply the marriage revolution’s moral and cultural spoils, and make them harder than ever to recover.

Most Americans are unaware that there are two competing visions of marriage on offer in this debate, but my experience on dozens of college campuses during the past year suggests there is hope here. On almost every campus I visited, including such elite law schools as Stanford and NYU, students came up to me afterward to say that they had never heard a rational case for marriage. Christians would say that they always knew marriage was between a man and a woman, but never knew how to defend it as a policy and legal matter — that they knew what the Bible revealed and the church taught, but lacked a vocabulary for articulating what God had written on the heart. Now they could better explain how faith and reason went together; how theology and philosophy, the Bible and social science all pointed to the same truth.

Reassuring these students is crucially important. Simply preventing those who do affirm that marriage is the union of a man and a woman from internalizing doubt, from cowering in shame in the face of aggressive opposition, or ultimately from caving is essential.

So, too, is helping those who haven’t made up their minds see that this is a debate with competing reasonable positions. Some are genuinely on the fence, and we should do what we can to keep them from coming down on the wrong side. Indeed, my co-authors and I have received dozens of notes over the past year from people who decided to come down on the right side because of some aspect of our case for marriage.

While we may not be able to convert the committed advocates for same-sex marriage, we should seek to soften their resolve to eliminate us from polite society. Indeed, on campus after campus, students who identified as liberal would admit that this was the first time they had heard a rational case for marriage. They would tell me that they respected the argument — and frequently weren’t sure why it was wrong, even when they continued to insist that it was wrong. Winning over these students so that they will at least respect our religious-liberty rights is essential. We do that, in part, by explaining the reasons for our beliefs about marriage.

And yet there are naysayers who claim that rational arguments never convince anyone. There is something perverse in conservatives’ thinking that ideas have

> consequences but that good ideas can’t persuade. They can, if only we are willing to present them in a winsome manner. In the long run truth wins out.

It’s a long post, but if you are serious about doing something on this issue, then it’s worth a read. Anderson is one of the most articulate, prolific defenders of marriage operating today.

Chris Sinkinson debates John Hick on religious pluralism and salvation

May 23, 2014 | by Wintery Knight | Link | Original Link

Looks like Justin Brierley on the Unbelievable radio show found a pastor with a Ph.D in philosophy, and he can really whip some ass. And that's a good thing, because he is taking on one of the two leading proponents of religious pluralism, in my opinion, (the other being Paul Knitter).

The players:

> John Hick is a noted philosopher and theologian who is a proponent of a pluralist view of religion – that there is one light (God) but many lampshades (religious expressions).
>
> Chris Sinkinson is a pastor and Bible tutor who has critiqued Hick's work. He says that pluralism empties Christianity of any content and in its own way disrespects other religions more than his own exclusivist stance.

The MP3 file is here.

Justin does a great job as moderator of this debate. He said what I was thinking of saying a number of times during the debate.

Anyway, here is my snarky summary. I creatively paraphrase some of the things that Hick says to make it more clear. And funny.

—-

Hick:
– had an experience looking at the buildings of other religions
– other religions have buildings, so all religions are equal
– I spent some time in the East, and met nice Eastern people
– since Eastern people are nice that means all religions are equal

Justin:
– isn't Jesus' claim to be the exclusive path to salvation offensive?

Sinkinson:
– all religions that are exclusive and have to deal with religious pluralism
– even John Hick writes polemically in favor of his own view
– even John Hick thinks that religions that are exclusive are false

Justin:
– what about the blind man and the elephant?
– the story seems to say that other people have a partial grasp?
– but the story-teller himself has the privileged view
– so isn't the religious pluralist just as arrogant as exclusivists?

Hick:

– well, it’s not arrogant to claim to have the right answer
– Jesus never made the claim to be God incarnate
– Jesus never made the claim to be the exclusive path to God
– historians don’t think that John’s gospel is reliable because it is late
– the proclamation of exclusivity was added by evangelists much later

Sinkinson:
– the historians who doubt the high Christology are radical skeptics
– the mainstream of historical scholarship accepts a high Christology
– the EARLIEST history about Jesus has the highest Christology

Hick:
– the moderate scholars do think Jesus was divine but that he didn’t think he was divine
– the phrase “Son of God” was used to describe any remarkable person
– only later did the early church turn the generic term into “God the Son”

Sinkinson:
– there is reflection on Jesus’ identity and developments, but not invention
– Jesus and his followers were in trouble precisely for linking him to deity
– why else would Jesus get into trouble and get crucified?

Hick:
– the Romans crucified him because people were saying he was the Messiah
– but the Messiah was not identified as being divine, but political
– and that’s why the Romans crucified him

Justin:
– do you (Sinkinson) think that people in other religions can be saved?

Sinkinson:
– the traditional view is exclusivism
– the other world religions are logically contradictory with Christianity
– you have to respect their differences – they are not the same as Christianity
– exclusivists allow that people can be saved by responding to natural theology
– and there are also other cases where non-Christians are saved, like old testament saints and babies who die in infancy

Hick:
– but people’s religions are based on where they are born
– so it’s not fair for God to expect people to be saved in one religion only

Sinkinson:
– the plurality of religions grouped by location doesn’t make christianity false
– that would be the genetic fallacy – rejecting an idea because of its origin
– the real question to consider is whether it is true
– and even the objection assumes that God is a God of love, who should be fair
– but how do you know that God is loving? that is an exclusive view
– how can the “blob” ultimate of religious pluralism be “loving” and “fair”

Hick:

– the ultimate reality is loving or not loving depending on each person's religion

Sinkinson:
– but some religions and theistic and some are atheistic
– how can those God exist and not exist?

Hick:
– God is beyond everyone's understanding, except mine
– God is beyond all definitions, except mine
– God is beyond all human understanding, except mine
– i'm not contradicting myself, it's a mystery! a mystery!
– as long as you don't look to closely, they're all the same!
– allow me to tell you about God, which no one can do but me

Justin:
– doesn't your religious pluralism mean that Christianity is false?

Hick:
– well, Christianity can't be true, because it disagrees with other religions
– Christianity can't falsify other religions, that would be mean to them
– other religions are just as "profound" as Christianity – and that's what matters – not whether a religion makes true claims
– some religions are older than Christianity, that means they can't be disagreed with
– we can't let Christianity be true, because then some people will feel bad
– if people feel bad, then they don't like me and then I feel bad
– if there's one thing I know about the unknowable ultimate reality, it's that it wants me to be liked by lots of people

Sinkinson:
– your view seems to be agnosticism – that nothing can be known about the "ultimate real"
– if we can't express in words what God is like, then why are you saying what God is like?

Hick:
– the indescribable ultimate is described (falsely, but interestingly) by various tradition

Sinkinson:
– does the "ultimate real" exist?

Hick:
– no

Justin:
– are all the exclusive religions wrong, and only you are right?

Hick:
– all propositions about God in all the religions are false
– the experience of being deluded and having feelings about your delusions is "valid" in all religions
– all religions are equally good ways to believe false things and to have feelings about

your false beliefs
– only my propositions about God are true
– everyone who disagrees with me is wrong

Sinkinson:
– so all the propositions of all the religions are wrong
– but all the experiences and feelings are “right”

Hick:
– yes
– all propositions about God are humanly constructed, and so false
– except mine – mine are true!

Sinkinson:
– so everything distinctive about Christianity are literally false?

Hick:
– yes, Christian doctrines are all false
– because if they were true, other religions would be false, and they would feel bad
– and we can’t have that, because everyone has to like me
– only things that don’t offend people in other religions can be true

Sinkinson:
– so do we have to then treat all religions as non-propositional?

Hick:
– well just don’t ask people about the content of their beliefs
– just treat their religion as non-cognitive rituals, feelings and experiences
– don’t inquire too deeply into it, because all religions are all nonsense
– i’m very respectful and tolerant of different religions!

Sinkinson:
– but Muslims, for example, think their religion is making truth claims

Hick:
– but there can be tolerance as long as you treat religions as non-propositional nonsense

Sinkinson:
– um, I have a higher respect for religions than you do
– I actually consider that the claims of other religions could be true
– I think that other religions make truth claims and not nonsense claims

Hick:
– well they are all useful because they are all false
– I don’t emphasize beliefs, I emphasize living, experiences and feelings
– as long as everyone accepts my view and rejects their religion, we’ll all be tolerant

Justin:
– erm, isn’t that an exclusive claim?
– you’re trying to say that your view of what religion is is right, and everyone else is wrong

Hick:
– I'm not arrogant, I just think that all the religions of the worlds are false
– only my statements about religion are true – everyone else is wrong
– I'm tolerant, and Christians are arrogant

Justin:
– but you think Sinkinson's view is wrong
– why should we accept your view and deny his view?

Hick:
– His view of salvation is false, and mine is true

Sinkinson:
– you use words with set meanings, but you mean completely different things
– when I say salvation, I mean deliverance from sins through Jesus

Hick:
– I get to decide what salvation means for everyone, you intolerant bigot

Sinkinson:
– but that word has a specific meaning that has held true in all of Christian history
– but what you mean by salvation is people having subjective delusions that are not true

Hick:
– I don't like using the word salvation

Sinkinson:
– but you just used it!
– and you think that it is present in different world religions, but it isn't

Hick:
– God is unknowable and indescribable
– God isn't a wrathful God though
– and the Christian description of God is false
– Evangelical Christians are mean
– I had experiences with people of other faiths
– and these experiences taught me that religions that think that the universe is eternal are true
– as long as you reduce religion to behaviors and not truth, then religions are all good at producing behaviors
– if you just treat all religions as clothing fashion and food customs, they are all valid
– the main point of religion is for people to agree on cultural conventions and stick to them
– never mind the propositional statements of religions… who cares about truth? not me!
– but Christianity is definitely false

Sinkinson:
– the Judeo-Christian God is different – he reveals himself to humans
– he is distinct from the other religions

– he is personal, and is loving but also angry at sin

Hick:
– But God isn’t a person, and he isn’t a non-person
– I can’t say what he is – I’ll offend someone if I say anything at all!
– except Christians – I can offend them because they are arrogant bigots
– I’m also very spiritual – I meditate on my breathing

Sinkinson:
– you can’t assess a religion by the experiences that people have
– people who have weird experiences do all kinds of evil things
– so the real question has to be about truth – is the New Testament reliable?, etc.

William Lane Craig: churches should focus on apologetics to attract more men

May 24, 2014 | by Wintery Knight | Link | Original Link

I saw that Triablogue quoted this passage from William Lane Craig's April 2013 newsletter, which made me very excited and happy.

Here it is:

> One overwhelming impression of these engagements is the way in which the intellectual defense of Christian faith attracts men. Both at Texas A&M and again at Miami every single student who got up to ask a question was a guy! I wondered if the girls are just shy. But then I remembered a lengthy clip Jan and I watched of cast members of Downton Abbey doing a Q&A with an audience in New York. Almost every person who came to the microphone at that event was a woman! It wasn't until late into the evening that a man finally asked a question, which was remarked by all the cast members. Why the difference between that session and the ones I experienced?—simply because the Downton Abbey program is highly relational, which is more appealing to women, whereas my talks were principally intellectually oriented, which is more appealing to men.
>
> Churches have difficulty attracting men, and the church is becoming increasingly feminized. I believe that apologetics is a key to attracting large numbers of men (as well as women) to church and to Christ. By presenting rational arguments and historical evidences for the truth of the Gospel, by appealing to the mind as well as the heart, we can bring a great influx of men into the Kingdom. I'm so pleased that the church in Canada seems to be awakening to this challenge! I'm convinced that we have the opportunity to revolutionize Western Christianity by reclaiming our intellectual heritage.

I could tell you many, many stories of what it was like for me being shut down by churches who were overly sensitive to the desires of women. In college, I and the other male students had *every attempt* to bring in scholars to lecture or debate *shut down* by female leadership. Every single week it was prayer walks, testimonies, hymn sings… over and over. Eventually, the more manly Christians just quit going. Later on, I witnessed apologetics being shut down in the church from the top down and from the bottom up, as well.

I remember one week an excited male friend invited me to his church because his male pastor was giving sermons using Hugh Ross and Gerald Shroeder books. He was trying to tie in the existence of God to cosmology. Well, I showed up the next Sunday to hear, and was disappointed. I could tell that the pastor wanted to go back to that subject, but he never really did. Later on, we found out that a female parishioner had complained that too much science and evidence had ruined her experience of feeling good and being

comforted.

I could go on and on and on telling stories like this. To this day, I cannot stand being in a church unless that church has organized things like apologetic training classes, public lectures, public debates or public conferences. But that's the minority of churches. The fact is that churches are attended far more by women than by men, and pastors are catering to women more than men. Not only will apologetics not be mentioned, but elements of feminism will creep into doctrine (egalitarianism) and all political issues will be avoided. Church has become a place to have good feelings, and it is far divorced from anything like evidence or politics which might be viewed as judgmental and divisive.

Commenters on Triablogue think that Dr. Craig will draw flak for his comment, but he's not going to draw flak from mature Christians. What he said is correct. Mature Christians are right behind him on this point. Christian men who have tried to act to defend God's reputation in public know that there is something wrong in the churches. And eventually, men just tune out of church because we know that there is nothing there for us. If women want men to come back to church, then they have to change the church away from what it is now.

William Lane Craig on the feminization of Christianity

May 24, 2014 | by Wintery Knight | Link | Original Link

Look, here is a question on the Reasonable Faith web site from a feminist from Canada who objects to the idea of sex differences:

> Dear Dr. Craig,
>
> I have usually found your words to be a source of information and reassurance in my Christian faith, and have often sought out your writings and videos in times of doubt or questioning.
>
> So I was really disappointed, almost shocked, when I read your newsletter of April of this year in which you casually stereotypes men and women, and complain that the church is becoming increasingly feminized, and has difficulties in attracting men.
>
> Your compared the audiences at a couple of your speaking engagements to the audience from a clip of a Downton Abbey Q&A at another location – concluding that they were all men at the former and almost all women at the latter "simply because the Downton Abbey program is highly relational, which is more appealing to women, whereas my talks were principally intellectually oriented, which is more appealing to men."
>
> I believe that you are using stereotypes here, which you justify by making a ridiculous comparison that holds zero statistical significance. Not only is your statement unreasonable, it is potentially damaging – especially when made so carelessly. Stereotypes are shortcuts in classifying people. They can, and often do, limit and distort the way we perceive others and the world. Stereotypes are a lazy way of thinking that can lead to discrimination, and their use should not be encouraged.
>
> I'm also a little disturbed by your claim regarding the feminisation of the church. What do you mean by that, and how do you support that statement?
>
> I'm curious because the church has historically been a largely male-dominated institution (sometimes criminally so), and the bible's instructions to and about women are often difficult to swallow. If anything, the church has had difficulty in attracting women. And if we are truly seeing more women in leadership roles at the church (I have to assume this is what you meant by feminizing), I believe this is not something to fear and resist. It would be a welcome change, and has every opportunity to challenge how we think about each other – allowing us to love each other better and see each other more clearly.
>
> This newsletter called your expertise in some areas into question for me. Could you help to rebuild some of the faith I've lost in your words? I would very much

> appreciate it.
>
> Sincerely,
>
> Alexandra (Canada)

Canadians are sooooo liberal, especially on social issues like feminism, abortion and marriage. I'm sure this woman has been influenced by feminist ideology so much that she just can't deal with the fact that men are women are very different.

Anyway, here's a snip of Dr. Craig's response:

> Third is my claim that the church is becoming increasingly feminized. What I mean by this is that church services and programs are increasingly based on emotional and relational factors that appeal more to women than to men. The problem of the church's lack of appeal to men has been recognized by men's movements like Promise Keepers and books like John Eldredge's *Wild at Heart*. Nowhere is this feminization more evident than in contemporary worship music. Someone aptly remarked that if you were to replace references to God in many praise songs with "Baby," they would sound just like romantic songs between a man and a woman! This is not true of classic hymns like "A Mighty Fortress" or "And Can It be?" Talking with young men, I find that many of them are just turned off by these touchy-feely worship services and would rather not go.
>
> We see this same feminization though relational factors in network coverage of sports, traditionally a male bastion. Coverage of Olympic Games has deliberately targeted women in order to increase viewership by the addition of personal stories about athletes' lives, rather than simply televising the events themselves. In professional sports have you noticed how in recent years television networks have engaged female reporters to go down on the field and interview baseball or football players, usually about how they *felt* about this or that? Jan and I had to laugh when, following the Broncos' recent blowout of the Ravens, the female reporter asked Peyton Manning, "Didn't you feel bad for the other team when you looked up at the scoreboard?" Uh, I don't think so!
>
> You're right that the predominance of women in Christianity is a relatively new phenomenon. It is only over the last 200 years that Christianity has become increasingly female in its demographics. I'm very worried that the church is on a course that will end in relatively few men's being active Christians.
>
> Fourth is my claim that apologetics is a key to making the church and Christian faith relevant to men once more. People think that by having sports programs or men's barbecues the church will draw in more men. But I'm convinced that the best kept secret to drawing in men is apologetics. Men need to see that Jesus of Nazareth was not only a tough guy but a smart guy. I never suspected that apologetics would have this special effect on men. I had no intention of ministering particularly to men in this ministry. But the appeal of apologetics to men is just undeniable. In my Defenders class we've got guys who don't even

> attend church but who regularly come for my lectures on Christian doctrine and apologetics. One woman in the class told me, “I don’t understand a lot of what you say. But I’m glad to come because this is the only spiritual activity that my husband will participate in with me.” Wow!

Wow, indeed. Apologetics gets men to engage more in Christianity, and the church should leverage that to bring men in. That’s a fact. So, I’m glad Dr Craig didn’t give an inch to this fact-averse feminist from Canada.

My own post critical of the feminized church can be read here. Keep in mind that this is from two months after I started blogging – very raw stuff.

Christian woman tells Congress how Boko Haram murdered her father and brother

May 25, 2014 | by Wintery Knight | Link | Original Link

This is from the International Business Times. (H/T David Wood)

Excerpt:

> Her father and brother were martyrs for the Christian faith, a Nigerian girl who survived the Boko Haram slaughter of her family told members of the House Foreign Affairs Committee Wednesday. Deborah Peter, 15, recounted surviving a 2011 attack on her hometown by Boko Haram terrorists.
>
> Peter is from Chibok, the northeast Nigerian town where close to 300 schoolgirls were taken captive in April by Boko Haram. She told U.S. House lawmakers how her brother and father were shot in front of her and the attackers put her between their dead bodies, threatening to kill her if she did not keep quiet.

There is a link to her statement before Congress, where you get the details:

> "At 7:30 p.m., three men knocked on the door. My brother answered the door because he recognized one of the men as a Muslim in our community. The men asked where my dad was and I told them that he was in the shower.
>
> The men waited. After three minutes, they went into the bathroom and dragged my dad into the main room. They said that my dad was wasting their time and that they did not have time to wait on him.
> The men told my dad that he should deny his Christian faith. My dad told them that he would not deny his faith. They said that if he did not deny his faith they were going to kill him. My dad refused, saying that Jesus said whoever acknowledges Him in front of man, He will acknowledge in front of God; and whoever denies Him in front of man, He will deny in front of God in heaven.
> My dad said that he would rather die than go to hellfire. After he told the men that, the men shot him three times in his chest.
>
> My brother was in shock. He started demanding, 'What did my dad do to you? Why did you shoot him?'
> The men told him to be quiet or else they were going to shoot him too. Then, the men discussed whether they should kill my brother. One of the Boko Harams said they should kill Caleb, my brother. The second man said that he was just a boy and that he was too young to kill. But the third man said that they should make an exception in this case because Caleb will only grow up to be a Christian pastor. Caleb asked me to plead with them for his life but they told me to shut up or they would kill me too.
>
> The leader agreed that they should kill him and shot my brother two times. My

> dad had still been breathing but when he saw them shoot Caleb, he died.

Now previously, the Obama administration had actually *blocked* the designation of Boko Haram as a terrorist group. Not just blocked, but fought hard to block, according to the leftist Daily Beast.

Look:

> The State Department under Hillary Clinton fought hard against placing the al Qaeda-linked militant group Boko Haram on its official list of foreign terrorist organizations for two years. And now, lawmakers and former U.S. officials are saying that the decision may have hampered the American government's ability to confront the Nigerian group that shocked the world by abducting hundreds of innocent girls.
>
> […]What Clinton didn't mention was that her own State Department refused to place Boko Haram on the list of foreign terrorist organizations in 2011, after the group bombed the U.N. headquarters in Abuja. The refusal came despite the urging of the Justice Department, the FBI, the CIA, and over a dozen senators and congressmen.
>
> "The one thing she could have done, the one tool she had at her disposal, she didn't use. And nobody can say she wasn't urged to do it. It's gross hypocrisy," said a former senior U.S. official who was involved in the debate. "The FBI, the CIA, and the Justice Department really wanted Boko Haram designated, they wanted the authorities that would provide to go after them, and they voiced that repeatedly to elected officials."
>
> In May 2012, then-Justice Department official Lisa Monaco (now at the White House) wrote to the State Department to urge Clinton to designate Boko Haram as a terrorist organization. The following month, Gen. Carter Ham, the chief of U.S. Africa Command, said that Boko Haram "are likely sharing funds, training, and explosive materials" with al-Qaeda in the Islamic Maghreb. And yet, Hillary Clinton's State Department still declined to place Boko Haram on its official terrorist roster.

I guess Hillary was too busy pushing gay rights and abortion to notice threats of terrorism.

Previously, president Obama has spoken out in favor of Islam, as the Hindustan Times reported.

Excerpt:

> Islam is a great religion but there is a need to isolate those who have distorted its vision, US President Barack Obama told a gathering of college students, in Mumbai on Sunday.
>
> "Well, the phrase jehad has a lot of meanings within Islam. It is subject to lot of different interpretations. But I will say that first Islam is one of the world's great

> religions and over a billion people practice Islam," Obama said at the packed forecourt of St. Xavier's College here.

You can read more about the great religion of peace in this story of a woman who is 8 months pregnant and shackled in a jail cell for the crime of being a Christian.

Her imprisonment is happening because of the Muslim government of Sudan. This pregnant Christian woman is scheduled to be executed by the Sudanese government for not being a Muslim, which they think she ought to be. I honestly do not understand how you can look at a pregnant woman who has a husband and another child and want to take her life. Just because she has different beliefs than you do. To me, it's not possible to do that, morally speaking. But to the mainstream adherents of the religion of peace in the Sudanese government, it somehow makes a lot of sense.

Are biological fathers or unrelated men more dangerous for children?

May 25, 2014 | by Wintery Knight | Link | Original Link

This article from the Weekly Standard answers the question.

Excerpt:

> A March 1996 study by the Bureau of Justice Statistics contains some interesting findings that indicate just how widespread the problem may be. In a nationally representative survey of state prisoners jailed for assaults against or murders of children, fully one-half of respondents reported the victim was a friend, acquaintance, or relative other than offspring. (All but 3 percent of those who committed violent crimes against children were men.) A close relationship between victim and victimizer is also suggested by the fact that three-quarters of all the crimes occurred in either the perpetrator's home or the victim's.
>
> A 1994 paper published in the Journal of Comparative Family Studies looked at 32,000 documented cases of child abuse. Of the victims, only 28 percent lived with both biological parents (far fewer than the 68 percent of all children who live with both parents); 44 percent lived with their mother only (as do 25 percent of all children); and 18 percent lived with their mother and an unrelated adult (double the 9 percent of all children who live with their mother and an unrelated adult).
>
> These findings mirror a 1993 British study by the Family Education Trust, which meticulously explored the relationship between family structure and child abuse. Using data on documented cases of abuse in Britain between 1982 and 1988, the report found a high correlation between child abuse and the marital status of the parents.
>
> Specifically, the British study found that the incidence of abuse was an astounding 33 times higher in homes where the mother was cohabiting with an unrelated boyfriend than in stable nuclear families. Even when the boyfriend was the children's biological father, the chances of abuse were twice as high.
>
> These findings are consonant with those published a year earlier by Leslie Margolin of the University of Iowa in the journal Child Abuse and Neglect. Prof. Margolin found that boyfriends were 27 times more likely than natural parents to abuse a child. The next-riskiest group, siblings, were only twice as likely as parents to abuse a child.
>
> More recently, a report by Dr. Michael Stiffman presented at the latest meeting of the American Academy of Pediatrics, in October, studied the 175 Missouri children under the age of 5 who were murdered between 1992 and 1994. It found that the risk of a child's dying at the hands of an adult living in the child's own

> household was eight times higher if the adult was biologically unrelated.
>
> The Heritage Foundation's Patrick Fagan discovered that the number of child-abuse cases appeared to rise in the 1980s along with the general societal acceptance of cohabitation before, or instead of, marriage. That runs counter to the radical-feminist view, which holds that marriage is an oppressive male institution of which violence is an integral feature. If that were true, then child abuse and domestic violence should have decreased along with the rise in cohabitation.
>
> Heritage also found that in the case of very poor children (those in households earning less than $ 15,000 per year), 75 percent lived in a household where the biological father was absent. And 50 percent of adults with less than a high-school education lived in cohabitation arrangements. "This mix — poverty, lack of education, children, and cohabitation — is an incubator for violence," Fagan says.
>
> Why, then, do we ignore the problem? Fagan has a theory: "It is extremely politically incorrect to suggest that living together might not be the best living arrangement."

The moral of the story is that it is a lot safer for children if we promote marriage as a way of attaching mothers and fathers to their children. Fathers who have a biological connection to children are a lot less likely to harm them. And a lot of social problems like child poverty, promiscuity and violence cannot be solved by replacing a father with a check from the government. We need to support fathers by empowering them in their traditional roles. Let the men lead.

Why celebrate Memorial Day? Why is Memorial Day important?

May 26, 2014 | by Wintery Knight | Link | Original Link

Arlington National Cemetary

What is Memorial Day? It's the day that we remember all those brave men and women who have sacrificed to protect our liberties and our lives so that we could be safe from harm.

This video may help you to understand.

From Hot Air, a quote from Ronald Reagan.

> Memorial Day is an occasion of special importance to all Americans, because it is a day sacred to the memory of all those Americans who made the supreme sacrifice for the liberties we enjoy. We will never forget or fail to honor these heroes to whom we owe so much. We honor them best when we resolve to cherish and defend the liberties for which they gave their lives. Let us resolve to do all in our power to assure the survival and the success of liberty so that our children and their children for generations to come can live in an America in which freedom's light continues to shine.
>
> The Congress, in establishing Memorial Day, called for it to be a day of tribute to America's fallen, and also a day of national prayer for lasting peace. This Nation has always sought true peace. We seek it still. Our goal is peace in which the highest aspirations of our people, and people everywhere, are secure: peace with freedom, with justice, and with opportunity for human development. This is the permanent peace for which we pray, not only for ourselves but for all generations.
>
> The defense of peace, like the defense of liberty, requires more than lip service. It requires vigilance, military strength, and the willingness to take risks and to

> make sacrifices. The surest guarantor of both peace and liberty is our unflinching resolve to defend that which has been purchased for us by our fallen heroes.
>
> On Memorial Day, let us pray for peace — not only for ourselves, but for all those who seek freedom and justice.

Does the Bible say that you should forgive someone who does not repent?

May 26, 2014 | by Wintery Knight | Link | Original Link

Kevin Lewis, a professor of Theology and Law at the conservative Biola University, was asked this question:

> Recently, I was reading Dr. Kenneth Bailey's "Jesus Through Middle Eastern Eyes" (IVP press 2008). When commenting on Matthew 6:12-13, he writes,
>
> "It is a common human assumption that the violator of the rights of others must ask for forgiveness before the wronged party can be expected to accept the apology and grant forgiveness…But Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when when there is no confession of guilt… There is a voice from the cross that echoes across history to all saying 'Father forgive them for they know not what they do.' Neither Pilate nor the high priest nor the centurion offered any apology to Jesus, yet he prayed for divine forgiveness…(p.125)"

And here's his response in full, copied with permission from his Facebook note:

> Regarding Bailey's comments on Matthew 6:12, he errs by not considering the theological context of this statement and fails to consider any implied biblical conditions for forgiveness inherent in the statement. The text simply does not mean what he says it means. He is reading too much into the statement.
> Bailey states, "Jesus here asks the person wronged to forgive the one responsible for the wrongdoing when there is no confession of guilt…"
>
> Bailey errs. Here, Jesus is giving a model for prayer commensurate with the way His Kingdom works. Jesus teaches them to pray: "Forgive us our debts, as we also have forgiven our debtors." This is a statement of the objective, "forgiveness," without a discussion of any express or implied conditions to accomplish the objective. It is also a statement of the proper attitude of the Christian, that is, that we must have a demeanor of being willing to forgive, just as God was willing to forgive us. Bailey's assertion that there is no "confession of guilt" or repentance is merely an unwarranted assumption.
>
> Moreover, the use of "as" (Grk. hos) in the passage introduces a comparison between the way we forgive and the way God forgives. This comparative phraseology is employed elsewhere on the subject of forgiveness. For example, Ephesians 4:32 states that we should be "forgiving each other just as God in Christ also has forgiven" us. Here, the comparative "just as" (Grk. kathos) is employed and indicates our forgiveness is to be just like God's forgiveness of us, which flows from a loving disposition. So in the same manner that God forgives, we must forgive. We are to be "imitators of God" (Eph. 5:1). See also Matthew

5:48 and Luke 6:36 for exhortations to imitate God.

To ascertain whether the Scriptures describe any conditions for forgiveness, one must search elsewhere in the Scriptures for comment. This is the nature of systematic theology. We need to examine what the entire Bible says on a given topic, such as forgiveness. And the Bible contains ample support for the notion that there are conditions for forgiveness.

First, regarding God and His forgiveness, it is undisputed in orthodox Christian theology that God does not forgive everyone. The doctrine of Hell is a sufficient proof of the lack of universal forgiveness by God.

Next, it is clear that God does not forgive without repentance. This doctrine is taught in a number of texts. For example, in Luke 13:3 Jesus says, “unless you repent, you will all likewise perish.” In Mark 1:15 John the Baptist commands that we must “repent and believe the Gospel.” The connection between repentance and forgiveness of sins (i.e. “salvation”) is seen throughout the Scriptures. For example, in Acts 2:38 repentance is directly connected as a condition for the remission of sins. For additional examples of this connection see Matthew 11:20-24; Luke 24:45-49; Acts 3:19; 8:22; 17:30-31; Romans 2:4-5; II Corinthians 7:10; II Tim. 2:25-26.

So since we are to be imitators of God and forgive in the same way God forgives, we would expect the Scriptures to be consistent, stating that the condition of repentance is required to be fulfilled before believers are required to forgive each other’s sins. It does.

Jesus stated in Luke 17:3, “If your brother sins, rebuke him; and if he repents, forgive him.” Here, the meaning is clear. The word “if” (Grk. ean) introduces the condition for a rebuke and for granting forgiveness. If (subjunctive) a person sins, we must (imperative) rebuke him, and if (subjunctive) he repents, we must (imperative) forgive him. This is as clear a statement as you will find on the subject. Forgiveness is conditioned upon repentance—and this is one of the same criteria that God requires before He forgives sin.

This principle of permitting believers to withhold forgiveness unless the condition of repentance is satisfied is also explicitly seen in Matthew 18:15-17. Compared with the Luke 17:3 text above, the situation is the same. If a brother sins, reprove him; if he listens to you, you have won your brother. Here, the word “reprove” is used rather than “rebuke” and the word “listen” is employed rather than “repent,” but the meaning is virtually identical to Luke 17:3. What we see in Matthew 18 is an escalation of the issue and the result if the person fails to repent (i.e. “listen”). If the person fails to repent, we are to shun him in all appropriate ways (v. 17).

These passages in Luke and Matthew give us the connection between sin, rebuke, repentance and forgiveness. Other biblical texts that merely mention “forgiveness” as a concept or an objective do not necessarily proffer every

aspect of the doctrine of forgiveness. As such, they must be read in light of the clear conditions expressed in other passages.

Finally, I would make the case that it is harmful to a person to forgive him without requiring repentance. As seen above, the Bible is clear that sin requires a rebuke. Ignoring sin teaches sinners that sin does not bring consequences. This is harmful to their souls. Continuing to have the benefit of a righteous relationship with another and yet remain in sin against that person results in fostering a habituation of sinful inclinations in their soul, which God says brings about suffering and death.

Moreover, since the ultimate purpose of forgiveness is reconciliation, it is meaningless and harmful to forgive when no reconciliation may be had with the sinner. We cannot “walk together” in a biblical manner in righteous peace when the unrepentant sinner walks in unrighteousness. Necessarily, there is a conflict and a want of shalom. Their soul is headed in a different direction than the believer’s soul; they are walking away from God and we cannot have fellowship with darkness. God has no intimate fellowship with unrepentant people, and that is the model for Christians as well (See Matt. 18).

Regarding personal anger issues commonly raised by Christian psychologists, these types of psychologists unbiblically make unconditional forgiveness a part of therapy. By contrast, however, if a counselee will not forgive after the offending party has truly repented, the counselee sins, and this kind of unforgiveness may be one of the causes of his or her problems. But this is a separate issue from universal and unconditional forgiveness raised above.

Human beings in the image of God may be angry in appropriate ways (Eph.4:26, 31). There is a time to love and a time to hate (Ecclesiastes 3:8). The notion that Christians cannot ever hate, be angry, or lack forgiveness is an unbiblical concept. God Himself is eternally angry with sin, but He is certainly not a psychological basket case. He loves, hates, and is angry in appropriate ways. Our task as believers is to imitate this. Be angry with and hate sin appropriately (Rom. 12:9) and love what good appropriately. For example, righteous anger can evolve beyond the biblical limits to become malice, slander, and bitterness while, to give another example, an appropriate love of food can evolve beyond the biblical limits into gluttony.

Psychological problems arise from many issues other than lack of forgiveness. For example, a lack of trust in God that He has a particular instance of evil under His sovereign control can cause undue anxiety in one’s life. Also, if a counselee’s self worth is grounded in the shifting sand of how others treat him (i.e., badly) rather than being grounded in the fact that he is a divine image bearer and inherently valuable no matter how badly anyone treats him, he will likely fall into anxiety, depression, and other sorts of psychological maladies. Changing the biblical doctrine of forgiveness will not truly help a counselee. It only makes it

> worse.
>
> Soli Deo Gloria

I agree with Kevin, and I think it is a helpful tool for people to insist on seeing some sort of repentance and restitution from someone who wrongs you before you trust them again. If they are not even sorry for what they've done, and they refuse to explain why what they did is wrong, then they can't be forgiven, and you can't trust them again.

I think this is the key passage – Luke 17:3-4:

Luke 17:3-4:

3 Be on your guard! If your brother sins, rebuke him; and if he repents, forgive him.

4 And if he sins against you seven times a day, and returns to you seven times, saying, 'I repent,' forgive him."

That's Jesus speaking, there.

Also, I was having a debate with someone who disagrees with all this, and while debating with her, I thought of another example.

Luke 18:9-14:

9 And He also told this parable to some people who trusted in themselves that they were righteous, and viewed others with contempt:

10 "Two men went up into the temple to pray, one a Pharisee and the other a tax collector.

11 The Pharisee stood and was praying this to himself: 'God, I thank You that I am not like other people: swindlers, unjust, adulterers, or even like this tax collector.

12 I fast twice a week; I pay tithes of all that I get.'

13 But the tax collector,standing some distance away, was even unwilling to lift up his eyes to heaven, but was beating his breast, saying, 'God, be merciful to me, the sinner!'

14 I tell you, this man went to his house justified rather than the other; for everyone who exalts himself will be humbled, but he who humbles himself will be exalted."

So again, no forgiveness without repentance.

Forgiveness is what happens when someone who is sinned against treats the sinner as if he had never sinned. It is not on the balance sheet. It is not brought to mind. It is not held against them in the future. The forgiver trusts the sinner again as if the previous sin had never happened.

In divine (vertical) forgiveness, there is no forgiveness without repentance. There are Bible verses above to show that.

My argument is twofold. First, there is a clear teaching of Jesus explaining the sequence of sin and forgiveness. Repentance precedes forgiveness, between humans (Luke 17:3). The verses cited by the forgive without repentance crowd don't show the mechanics of how to forgive, they are making the point that if you want God to forgive you, you should forgive others. The parable in Luke 18:9-14 affirms this again – repentance always

precedes forgiveness.

Second, we have an obligation to imitate God, and that means imitating the way he forgives those who sin against him. When I raise that with the unconditional forgiveness crowd, they want to insist that there is a difference, that the word “forgive” means different things. I’m not convinced.

Finally, I do think that forgiving someone is obligatory if they sincerely repent, and even if they screw up again and again. So long as the repentance is sincere, (like if there is restitution and a genuine effort to show an understanding how the sin affected the wronged party in writing), then forgiveness should be automatic. Depending on how bad the sin is, there maybe be more to do than just say “I’m sorry”. If the repentance is genuine, then I think the person who is sinned against must forgive, if they expect to be forgiven by God for the things they repent of.

UPDATE: Alan E. Kurschner comments (below) and I reproduce it here:

> Hi Wintery,
>
> Thanks for your article. I have a couple of comments.
>
> Luke 23:34a is often a trump card for the unconditional forgiveness crowd. However, there is serious textual doubt to its originality. I will have a forthcoming journal article on this textual variant, but you can read a synopsis of the argument that I made here:
>
> http://www.aomin.org/aoblog/index.php/2013/03/16/from-the-lips-of-jesus-or-a-scribal-hand-father-forgive-them-for-they-do-not-know-what-they-are-doing-2/
>
> I do not know if Lewis is aware of this textual variant. I would encourage him to look into it.
>
> Second, on Matt 6:15, this is what I have to say. Notice the then-clause: “neither will your Father forgive your sins.” This would require universalism on the Father’s part according to the unconditional interpretation given the first half: “But if you do not forgive others their sins.” Since everyone has wronged the Father is the Father required to forgive everyone even if they are not seeking forgiveness?
>
> I hope that helps,

How to apologize effectively: responsibility, restitution, repentance

May 26, 2014 | by Wintery Knight | Link | Original Link

I guess everyone already knows about Gary Chapman and his 5 Love Languages. But have you heard of his 5 Love Languages of apologies?

Here's a re-cap of his five languages of apologies.

Here are the two that I want to emphasize:

Apology Language #3: Making Restitution

In the public arena, our emphasis upon restitution is based upon our sense of justice. The one who commits the crime should pay for the wrongdoing. In contrast, in the private sphere of family and other close relationships, our desire for restitution is almost always based upon our need for love. After being hurt deeply, we need the reassurance that the person who hurt us still loves us.

"How could they love me and do that?" is the question that lingers in our minds. The words "I'm sorry; I was wrong" may not be enough.

For some people, restitution is their primary apology language. For them the statement, "It is not right for me to have treated you that way," must be followed with "What can I do to show you that I still care about you?" Without this effort at restitution, this person will question the sincerity of the apology. They will continue to feel unloved even though you may have said, "I am sorry; I was wrong." They wait for the reassurance that you genuinely love them.

The question, then, is how do we make restitution in the most effective way? Since the heart of restitution is reassuring the spouse or family member that you genuinely love him or her, it is essential to express restitution in the love language of the other person.

[…]If restitution is the primary apology language of an individual, then this becomes the most important part of the apology. "I'm sorry; I was wrong" will never be taken as sincere if these words are not accompanied by a sincere effort at restitution. They wait for the assurance that you still genuinely love them. Without your effort to make amends, the apology will not have the desired results of forgiveness.

Apology Language #4: Genuinely Repenting

The word repentance means "to turn around" or "to change one's mind." In the context of an apology, it means that an individual realizes that his or her present behavior is destructive. The person regrets the pain he or she is causing the other person, and he chooses to change his behavior.

Without genuine repentance, the other languages of apology may fall on deaf ears. What people who've been hurt want to know is, "Do you intend to change, or will this happen again next week?"

How then do we speak the language of repentance?

> - **It begins with an expression of intent to change.** When we share our intention to change with the person we have offended, we are communicating to them what is going on inside of us. They get a glimpse of our heart—and this often is the language that convinces them we mean what we say.
> - **The second step down the road of repentance is developing a plan for implementing change.**Often apologies fail to be successful in restoring the relationship because there is no plan for making positive change.
> - **The third step down the road of repentance is implementing the plan.** Following through with the plan gives evidence to the offended party that your apology was sincere.

Most people do not expect perfection after an apology, but they do expect to see effort.

Thus, expressing your desire to change and coming up with a plan is an extremely important part of an apology to this person. Inviting the offended person to help you come up with a plan for change is perhaps the best way to effectively show repentance.

I think this is somewhat useful, but I wanted to add some of my own thoughts to make it more practical.

Here are some practical tips that I recommend to someone who has done something morally wrong and who wants to apologize.

To fix the problem you need more than talk

To me, the only thing that needs an apology is breaking a moral rule – you can't beat someone up for just making a mistake. Whenever someone breaks a moral rule with me, like disrespecting me or being selfish, then I pick out a book for them to read and ask them to read it and then write something about how what they learned in the book applies to what they did to me. I don't pick very long books! But I do this for a very important reason.

The very important reason is that I don't trust people who just agree with me. I don't trust people's words. If someone is really sorry about something, then I want them to read something that describes the moral rule that they broke, and to be willing to listen to the feelings of the person they harmed by breaking that rule. That goes a long way in my mind.

HIV/AIDS researcher fired for accurate but politically incorrect testimony

May 27, 2014 | by Wintery Knight | Link | Original Link

Legal Insurrection provides the background.

Excerpt:

> The background is that the Belize Supreme Court is considering a court case seeking to overturn Section 53 of the criminal code, which bans some forms of homosexual behavior, specifically male-on-male sodomy. Argument was held in May 2013 but there has been no decision as of this writing.
>
> The highly charged nature of the case pits a coalition of international gay rights activists against some Christian churches and groups.
>
> Enter Dr. Brendan Bain, who retired as a Professor in 2013 from the University of West Indies. While still a professor, in 2012 Dr. Bain submitted testimony in the form of an Expert Report in the case (embedded in full at the bottom of this post).
>
> […]The general thesis of the Expert Report was as follows, in part:

> This report shows that the relative risk of contracting HIV is significantly higher among men who have sex with other men (MSM) in Belize than in the general population. This is also true in several other countries for which data are available, including countries that have repealed the law that criminalizes anal sex and countries where the law still applies.

So did the report contain false information? No.

From the Jamaica Observer.

Excerpt:

> The National AIDS Committee (NAC) early Thursday issued a statement saying that "it takes no issue with, and has no objection to the actual content of the report of Professor Brendan Bain to the Court in Belize".
>
> Bain was fired from his post as director of the Regional Co-ordinating Unit of the Caribbean HIV/AIDS Regional Training Network (CHART) by the University of the West Indies for statements regarding men who have sex with men that he made as an expert witness in a Belize court case.
>
> But according to the NAC, "there is nothing in that report which is contrary to, or offensive to the work of the National AIDS Committee."
>
> The NAC is a non- government organisation established in 1988 "to facilitate multi-sectoral collaboration to reduce the negative impact of HIV/AIDS on the Jamaican society and promote an informed, supportive and caring environment

> that empowers persons living with and affected by HIV/AIDS."
>
> […]In his report, Professor Bain highlighted for the court that homosexual men were at higher risk of contracting HIV and other sexual transmitted infections and that a supportive environment is needed at the community and governmental levels to enable high risk groups to access and practice safe sex.

What's wrong with saying that men who have sex with men are at a higher risk of contracting HIV / AIDS? It's not politically correct, so he had to go.

I'm sure his numbers were similar to those of the Center for Disease Control (CDC), which makes the same point about men who have sex with men.

CDC numbers were also recently reported in the Washington Times.

Excerpt:

> Teens and young adults now account for more than a quarter of the new cases of HIV identified in the United States annually, and a clear majority of those cases involve young gay or bisexual men, the federal government said in a major new survey Tuesday.
>
> Of the nearly 48,000 new HIV cases identified in the United States in 2010, the latest year for which complete data are available, more than 12,000 involved teens and young adults, the Centers for Disease Control (CDC) found in its latest report.
>
> About 72 percent of these new HIV cases in younger adults occurred in young men who are gay or bisexual, according to the CDC report.
>
> […]According to the CDC figures, black youths accounted for the largest share of new HIV cases, with Hispanic youths and white youths accounting for about 20 percent each.
>
> About 1.1 million people are estimated to be living with HIV in the United States. Some 47,129 new HIV cases were identified in 2010.
>
> The CDC's new report, "Vital Signs: HIV Infection, Testing, Risk Behaviors Among Youths, United States," estimated that youths aged 13 to 24 accounted for 12,200, or 26 percent, of new HIV infections in 2010.
>
> Of these new cases, 7,000 were among black youths, 2,390 were among Hispanics, and 2,380 were among whites.
>
> About 8,800 cases were attributed to male-to-male sexual contact.
>
> HIV/AIDS is incurable, and an estimated 17,774 people with AIDS died in 2009. Some 619,000 persons have died of AIDS in the United States since the epidemic began in the early 1980s, according to the CDC.

I'm really not sure why people who insist on suppressing numbers like this think they are doing good. If something is dangerous, the good thing to do is to tell other people the danger. Not to fire people who tell other people the danger. That's wrong.

J. Warner Wallace: I am not a Christian because it works for me

May 27, 2014 | by Wintery Knight | Link | Original Link

Here's a must-read post from Cold-Case Christianity author J. Warner Wallace.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true. Truth doesn't necessarily make you happy, though. Truth can impose intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning.

Winning in Christianity doesn't mean making lots of money, or being famous, or winning human competitions, or being approved of by lots of people. Winning for a Christian might involve things like building relationships with people and leading them to know that God exists and who Jesus is. That has no cash value, and it's not going to make you famous. Actually, it will probably cost you money and time, and make you unpopular with a lot of people.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness in order to make God happy, by serving his interests. Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on God's character and his design for you. And although you might be

very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement.

Tim McGrew debates Peter "Bogo the Clown" Boghossian on the definition of faith

May 27, 2014 | by Wintery Knight | Link | Original Link

I have tried very hard to avoid writing about Peter Boghossian because I kept hoping that someone would speak to him and set him straight before he went too far.

Basically, when you listen to the debate, below, you'll find that Boghossian redefines the word faith so that it basically means "stupidity", and then he tries to get people of faith to accept that they are stupid according to his new definition of faith. The new definition is not found in any dictionary, and it's not used commonly, either.

Anyway, here are the details:

> This Week on Unbelievable : Peter Boghossian vs Tim McGrew – debate on 'A Manual For Creating Atheists"
>
> Peter Boghossian teaches philosophy and is the author of 'A Manual for Creating Atheists'. He believes that faith is a 'false epistemology' (way of knowing things) and even describes it as a 'virus of the mind'. Tim McGrew is a Christian philosophy professor specialising in epistemology. He contests Boghossian's definition of faith and debates the merits of his recent book. To cast your vote on the definition of faith visit www.facebook.com/unbelievablejb.

The MP3 file is here.

Topics: (I reserve the right to satirize Bogo in this – he is a clown after all. Listen to the audio if you want his exact words)

- PB: My book tries to avoid the "obfuscations" of reputable, credentialed Christian scholars and discusses faith at my intellectual level
- PB: The goal of the book is to help people abandon the dictionary definition of the word "faith" and accept the definition I invented
- TM: Defining the word "faith" in the wrong way is not the right way to start an authentic, respectful conversation
- TM: Faith does not mean "pretending to know things you don't know" – that is not a standard definition
- TM: the only people who accept your definition of faith are you and the people who follow you online
- TM: your whole book is predicated on on a wrong definition of faith
- PB: that is my definition of faith based on my experience of talking to lots of people
- TM: He says this is how billions of people define faith – but not in my experience, maybe satirists like Ambrose Bierce and Mark Twain do
- TM: Your definition of faith is not in the Oxford English Dictionary and that definition is based on common usage of the word faith

- TM: The New Testament definition of faith “pistis” means trust
- PB: There are 50-100 people who use the term that way, and only in academia
- TM: How about “The Good Atheist” who interviewed you? He is not an academic or a theist, but he didn’t accept your definition
- PB: You are “extraordinarily isolated” from the real definition of faith
- TM: Faith is not belief without evidence, it is trust based on at least some evidence
- PB: Christian leaders use the word according my definition, I won’t name any or quote any, though
- JB: So you are basically saying that Christians are lying when they express their faith, since they know what they are saying isn’t true but they say it anyway
- PB: What percentage of Christians use the word faith to mean “belief without evidence”
- TM: Well below 1%. It may be the case that their evidence is not very good, but they do rest their beliefs on evidence
- TM: Faith is trusting, holding to, and acting on what one has good reasons to believe is true in the face of difficulties
- PB: That’s not what people mean by faith, they mean my definition
- JB: What do you mean when you say that faith is a “virus of the mind”, and a “mental illness”? School programs to remove faith?
- PB: Think about how atheists feel when they are told they will go Hell
- PB: Christians are hurting people, so that means they have a mental disorder that needs to be cured in a systematic way
- PB: Faith is an epistemic virus that hijacks the reasoning process

At that point I quit summarizing, because it became clear to me that he was delusional and not worth paying attention to.

He is clearly not aware of how even basic Christian apologetics books that are bestsellers cover evidences like the Big Bang, the cosmic fine-tuning, the origin of life, the Cambrian explosion, galactic habitability, stellar habitability, New Testament reliability, historical Jesus, philosophical arguments for theism, and so on. This is the bottom-shelf of Christian apologetics, widely read by rank-and-file Christians, but Bogo the Clown seems to be completely unaware of it. He needs to get out more and talk to people outside his little clique of atheist comedians. Maybe Bogo the Clown needs to pick up a serious book like “Debating Christian Theism” and read it before he opens his mouth on topics he knows nothing about. But he is an excellent clown – I laughed at him. He did make me laugh.

But that’s not all. As, I explained before, the concept of faith presented in the Bible agrees with what Dr. McGrew said – faith is trust based on evidence. That is the Biblical view.

And finally, this:

John 10:37-38: [NASB]

37 If I do not do the works of My Father, do not believe Me;

38 but if I do them, though you do not believe Me, believe the works, so that you may know and understand that the Father is in Me, and I in the Father."

The words of Jesus – he is saying: believe me because of the evidence I provide from miracles that you can see with your own eyes. Period. End of discussion.

So Bogo the Clown's view of faith is nowhere except in his own mind. Not in the apologetics literature. Not in the writings of any reputable Christian scholar. Not in the Bible. Not in the words of Jesus. It's enough to make me think that this talk about "mental disorders" and "viruses of the mind" is just self-descriptive. Maybe a cry for help from a sick, delusional mind.

Vote in the poll

Please vote in this poll:

You can see Justin Brierley's poll here, which basically shows that almost no one accepts Boghossian's view of faith, except his own crowd. I think their view of faith is largely projection. They are describing their own views, but attributing them to people like McGrew, who can just wipe the floor with them in a debate, without even breaking a sweat.

Disgusting: Pakistani woman murdered just for marrying the man she loved

May 28, 2014 | by Wintery Knight | Link | Original Link

From ABC News, a story to chill you and anger you.

Excerpt:

> A pregnant woman was stoned to death Tuesday by her own family outside a courthouse in the Pakistani city of Lahore for marrying the man she loved.
>
> The woman was killed while on her way to court to contest an abduction case her family had filed against her husband. Her father was promptly arrested on murder charges, police investigator Rana Mujahid said, adding that police were working to apprehend all those who participated in this "heinous crime."
>
> Arranged marriages are the norm among conservative Pakistanis, and hundreds of women are murdered every year in so-called honor killings carried out by husbands or relatives as a punishment for alleged adultery or other illicit sexual behavior.
>
> Stonings in public settings, however, are extremely rare. Tuesday's attack took place in front of a crowd of onlookers in broad daylight. The courthouse is located on a main downtown thoroughfare.
>
> A police officer, Naseem Butt, identified the slain woman as Farzana Parveen, 25, and said she had married Mohammad Iqbal, 45, against her family's wishes after being engaged to him for years.
>
> Her father, Mohammad Azeem, had filed an abduction case against Iqbal, which the couple was contesting, said her lawyer, Mustafa Kharal. He said she was three months pregnant.
>
> Nearly 20 members of Parveen's extended family, including her father and brothers, had waited outside the building that houses the high court of Lahore. As the couple walked up to the main gate, the relatives fired shots in the air and tried to snatch her from Iqbal, her lawyer said.
>
> When she resisted, her father, brothers and other relatives started beating her, eventually pelting her with bricks from a nearby construction site, according to Mujahid and Iqbal, the slain woman's husband.

One of these days I am going to write a post contrasting the Christian view of courtship and marriage, where the man has to PROVE that he is trained and ready to love the woman, provide for her needs and raise the children to be moral and spiritual, and the Islamic view.

Meanwhile, there was this horrible story about the pregnant woman in Sudan who is in chains in jail just because she is a Christian, not a Muslim.

Excerpt:

> A doctor who is facing execution in Sudan for marrying a Christian gave birth to a baby girl in prison today.
>
> Meriam Ibrahim, who has spent the past four months shackled to the floor in a disease-ridden jail, gave birth five days early.
>
> The baby was born in the hospital wing at Omdurman Federal Women's Prison in North Khartoum and is said to be healthy.
>
> Speaking exclusively to MailOnline, her lawyer Mohaned Mustafa Elnour said: 'This is some good news in what has been a terrible ordeal for Meriam.
>
> 'I am planning to visit her with her husband Daniel later today. I think they are going to call the baby Maya.'
>
> Meriam, 27, was sentenced to death by hanging earlier this month after being found guilty of converting from Islam to Christianity and marrying a Christian man, U.S. citizen Daniel Wani, who lives in Manchester, New Hampshire.
>
> She will receive 100 lashes before she is executed – sometime in the next two years.
>
> Before the birth, Meriam made the defiant claim that she would rather die than give up her faith.
>
> In a heart-wrenching conversation with her husband during a rare prison visit, Meriam told him: 'If they want to execute me then they should go ahead and do it because I'm not going to change my faith.'
>
> An Islamic Sharia judge said she could be spared the death penalty if she publicly renounced her faith and becomes a Muslim once more.
>
> Meriam insists she has always been a Christian and told her husband she could not 'pretend to be a Muslim' just to spare her life.

Another areas where Christianity is in sharp contrast to Islam is the area of evangelism. We don't have to respond to people changing their minds, because in Christianity, the truth stands clear from error. Each person should decide for themselves – there is no compulsion in Christianity. But Islam is conversion by the sword, or by the threat of the sword.

Robin Collins explains two kinds of cosmic fine-tuning

May 28, 2014 | by Wintery Knight | Link | Original Link

I was busy working my way through "Debating Christian Theism", a book published by Oxford University Press in August 2013. It features about 20 different topics from science, to philosophy, to history. For each topic, there is an essay by a world-class scholar in favor, and one opposed. So you get both sides of many interesting issues, at a very advanced level. The section on cosmic fine-tuning features a chapter written by Dr. Robin Collins.

About Robin Collins:

> Robin Collins (PhD, University of Notre Dame, 1993), is professor of philosophy at Messiah College, Grantham, PA specializing in the area of science and religion. He has written over twenty-five articles and book chapters on a wide range of topics, such as the fine-tuning of the cosmos as evidence for the existence of God, evolution and original sin, the Doctrine of Atonement, Asian religions and Christianity, and Bohm's theory of quantum mechanics. Some of his most recent articles/book chapters are "Philosophy of Science and Religion" in The Oxford Handbook of Science and Religion, "Divine Action and Evolution" in The Oxford Handbook of Philosophical Theology (2009) "The Multiverse Hypothesis: A Theistic Perspective," in Universe or Multiverse? (Cambridge University Press), and "God and the Laws of Nature," in Theism or Naturalism: New Philosophical Perspectives (Oxford University Press, forthcoming). He recently received a grant from the John Templeton Foundation to finish a book that presents the case for design based on physics and cosmology, tentatively entitled The Well-Tempered Universe: God, Cosmic Fine-tuning, and the Laws of Nature.

The fine-tuning argument

Here's a short article where Collins gives TWO examples of the fine-tuning. He is very modest in his argument, merely asserting that the fine-tuning is more compatible with theism than it is with atheism.

Excerpt:

> Science is commonly thought to have undercut belief in God. As Nobel Prize winning physicist Steven Weinberg famously remarked, "the more we find out about the universe, the more meaningless it all seems." Yet, the discoveries of modern physics and cosmology in the last 50 years have shown that the structure of the universe is set in an extraordinarily precise way for the existence of life; if its structure were slightly different, even by an extraordinarily small degree, life would not be possible. In many people's minds, the most straightforward explanation of this remarkable fine-tuning is some sort of divine

> purpose behind our universe.

> This fine-tuning falls into three categories: the fine-tuning of the laws of nature, the fine-tuning of the constants of physics, and the fine-tuning of the initial conditions of the universe. “Fine-tuning of the laws of nature” refers to the fact that if the universe did not have precisely the right combination of laws, complex intelligent life would be impossible. If there were no universal attractive force (law of gravity), for example, matter would be dispersed throughout the universe and the energy sources (such as stars) needed for life would not exist. Without the strong nuclear force that binds protons and neutrons together in the nucleus, there would not be any atoms with an atomic number greater than hydrogen, and hence no complex molecules needed for life. And without the Pauli-exclusion principle, all electrons would fall to the lowest orbital of an atom, undercutting the kind of complex chemistry that life requires.

> Some fundamental physical numbers governing the structure of the universe—called the constants of physics—also must fall into an exceedingly narrow range for life to exist. For example, many have estimated that the cosmological constant—a fundamental number that governs the expansion rate of empty space—must be precisely set to one part in 10^{120} in order for life to occur; if it were too large, the universe would have expanded too rapidly for galaxies and stars to form, and if it were too small, the universe would have collapsed back on itself. As Stephen Hawking wrote in his book A Brief History of Time, “The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life.” Finally, the initial distribution of mass energy at the time of the big bang must have an enormously special configuration for life to occur, which Cambridge University mathematical physicist Roger Penrose has calculated to be on the order of one part in $10^{10^{123}}$. This is an unimaginably small number.

I know what you’re thinking: How do we know that non-Christian scientists acknowledge the fine-tuning of gravity in the way that Collins describes?

Well, the New Scientist actually talks about the fine-tuning of the force of gravity. And they’re not Christians.

Excerpt:

> The feebleness of gravity is something we should be grateful for. If it were a tiny bit stronger, none of us would be here to scoff at its puny nature.
>
> The moment of the universe‘s birth created both matter and an expanding space-time in which this matter could exist. While gravity pulled the matter together, the expansion of space drew particles of matter apart – and the further apart they drifted, the weaker their mutual attraction became.
>
> It turns out that the struggle between these two was balanced on a knife-edge. If

> the expansion of space had overwhelmed the pull of gravity in the newborn universe, stars, galaxies and humans would never have been able to form. If, on the other hand, gravity had been much stronger, stars and galaxies might have formed, but they would have quickly collapsed in on themselves and each other. What's more, the gravitational distortion of space-time would have folded up the universe in a big crunch. Our cosmic history could have been over by now.
>
> **Only the middle ground, where the expansion and the gravitational strength balance to within 1 part in 10^{15} at 1 second after the big bang, allows life to form.**

Here's a very long paper by Collins on the fine-tuning argument, where he answers several objections to the argument, including the multiverse/many-universe hypothesis. I normally make fun of the multiverse, (= the Flying Spaghetti Monster), but it actually does deserve a reasonable, fair response. (Unless Jerry asks, then it's Flying Spaghetti Monster all the way).

Video, audio and summary of William Lane Craig vs Peter Millican debate

May 28, 2014 | by Wintery Knight | Link | Original Link

Since I made you listen to the Bogo the Clown debate yesterday, I thought today we should hear from an intelligent atheist instead.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any errors. There is about 30 minutes of Q&A time at the end.

Dr. Craig's opening speech:

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It’s not just that the settings are unlikely, it’s that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a “herd morality” that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this

evolved “herd morality”. However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God’s existence by pointing to the “evil” in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God’s existence.

Dr. Millican’s opening speech:

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it

leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It's possible that there could be something outside our universe that is eternal.

It's also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans

believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

Dr. Craig's first rebuttal:

I do not have the only burden of proof. The topic is "Does God Exist?". If Dr. Millican answers "no" then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God's existence that the 5 arguments that I already presented – something that we should expect to see that we don't see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

Dr. Millican's first rebuttal:

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just

happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to nothing.

We don't have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can't be an abstract object because they don't cause effects, so it must be a mind. But there are all sorts of things we've never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have "algorithmic properties" as well as physical properties, it doesn't mean that computers have minds.

Dr. Craig's second rebuttal:

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that's not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God's goal is not just to convince people that he exists. God's goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can't translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can't be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can't be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don't permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

Dr. Millican's second rebuttal:

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

Dr. Craig's final rebuttal:

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties

that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

Dr. Millican's final rebuttal:

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3 minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

VA socialized medicine: bonuses awarded as customers died on waiting lists

May 29, 2014 | by Wintery Knight | Link | Original Link

In the private sector, bonuses are paid to people who can offer customers the best products and services at the lowest price. That's how a firm like Apple or Amazon makes a profit. By pleasing customers. But government-run firms make money a different way – by killing customers.

Stephen Moore explains in Investors Business Daily.

Excerpt:

> The Veterans Affairs Department health care scandal has deepened in recent days, with new revelations of incompetent management and misplaced spending priorities, including millions of dollars paid out in bonuses at the very hospitals where services were the worst.
>
> […]Freedom of Information Act requests by Illinois-based watchdog group Open the Books reveal that the VA spent millions on bonuses during the last three years at Hines.
>
> Worse, in 2013, only about one-in-four of Hines' 4,230 employees were those providing the actual primary care: doctors (309) or nurses (about 800), Open the Books found.
>
> Five veterans died waiting for care at Hines.
>
> As far back as 1999, the VA had found systemic quality-of-care problems at Hines with little done to correct them. A VA study concluded that "Hines has the most inefficient physical plant for inpatient care and the most significant compliance issues with patient privacy."
>
> In 2005, a VA study rated Chicago the worst regional office in the country. Now the man in charge at Hines, Murawsky, has been elevated to oversight of the entire VA system.

Democrats have been trying to say that the problem is that they were not able to spend even more money, because the national debt at 17.5 trillion is not high enough.

Moore notes that the problem is misspending:

> The revelations of bonuses suggest that misspending may be the biggest problem.
>
> The VA's own budget numbers indicate a more-than doubling of the agency's expenditures to $57 billion from $28 billion since 2003. The patient load is up only about one-third over the decade.
>
> So the VA has more money than ever per patient, even after adjusting for

> inflation.
>
> As far as mismanagement, the problem of "performance" bonuses at the VA appears to have been systemic. An Open the Books investigation has found:
>
> - One in five employees at the Phoenix VA received bonuses in 2013, with some receiving extra pay of $5,000 or more. The total bonus payouts were $337,885.
> - As many as 40 veterans may have died awaiting care at this hospital system and about 1,300 waited more than six months for care.
> - In 2013, Phoenix VA Director Sharon Helman received the No. 1 bonus out of 3,170 employees (at Phoenix): $9,345. The number of avoidable deaths was higher than at nearly any other hospital.
> - In Chicago, $1 billion in salaries were supplemented with $4 million in bonuses over a three-year period.
> - At the seven most troubled VA facilities, almost $9 million in bonuses were paid out to 13,000 employees.

This might remind you of the National Health Service's "Liverpool Care Pathway" program, in which doctors were awarded bonuses for freeing up hospital beds by transferring patients to terminal care.

Paul Krugman approves

Supporters of more government-run health care like Paul Krugman had previously praised the VA system as "huge policy success story, which offers important lessons for future health reform."

Ben Shapiro has a full quote from Krugman:

> Paul Krugman in 2011 wrote of the VA's "huge success story":
>
> > Multiple surveys have found the VHA providing better care than most Americans receive, even as the agency has held cost increases well below those facing Medicare and private insurers…the VHA is an integrated system, which provides health care as well as paying for it. So it's free from the perverse incentives created when doctors and hospitals profit from expensive tests and procedures, whether or not those procedures actually make medical sense.
>
> > Krugman added, "Yes, this is 'socialized medicine'…But it works, and suggests what it will take to solve the troubles of US health care more broadly."

This is what people on the left wanted. The VA system is even WORSE than single-payer. At least in a single-payer system, only the payment is government-run. But the VA system is *completely* government-run. And the outcomes we are seeing in the system is exactly what you would expect when the people running the system are paid *regardless of whether the customer is served*. Or whether the customer even lives! At least in the private sector system, you have to serve the customer to make money – otherwise they

will take their money to a competitor. Not so in the VA system, and that’s the problem. They don’t have to make a profit to survive, so they don’t care about winning business from customers in a competitive market.

Catholic doctors in the UK advised to emigrate

May 29, 2014 | by Wintery Knight | Link | Original Link

From The Tablet. (H/T Jay Richards)

Excerpt:

> Catholic doctors who follow church teaching on sexual ethics cannot work as gynaecologists in Britain, the Catholic Medical Association (CMA) conference was told.
>
> Charlie O'Donnell, a consultant in emergency and intensive care medicine, said the best advice he could give to an "orthodox" Catholic wishing to specialise in obstetrics and gynaecology would be to "emigrate".
>
> Dr O'Donnell told the conference at Ealing Abbey, west London, on 17 May that a Catholic training to be a consultant in obstetrics and gynaecology would soon find he or she had conscientious objections to such tasks as prescribing artificial contraceptives, giving unmarried couples fertility treatment or Viagra to gay couples.
>
> He said that supervising consultants do not have the backup to allow trainees to opt out if they have moral objections to such work. However, conscientious objection to abortion is allowed because of specific provision in the 1967 Abortion Act.
>
> "To be a sound Catholic regarding sexual ethics it is not possible to train as a consultant obstetrician and gynaecologist but this is not because of discrimination against Catholics. There is a total conflict of culture of what is good sex, a dichotomy of belief between what we as Christians believe is good overall for the individual and what secular society believes," said Dr O'Donnell.
>
> Last week the president of the CMA, Dr Robert Hardie sought clarification concerning reports that doctors and nurses with conscientious objections would be barred from obtaining a diploma from the Faculty of Sexual and Reproductive Health (FSRH). Medical staff normally need the diploma to work in sexual and reproductive healthcare.

The Catholic Church is an interesting case. Although some Catholics are economically conservative, by and large Catholics tend to vote for bigger government, higher taxes and more regulations. Many now think that the point of their religion is to help the poor, and there is generally less emphasis on truth, theology and apologetics than in Protestantism. Well, what happens when lay Catholics begin to think their faith is about spreading the wealth around? They vote for secular politicians who promise to do that. As the secular government grows larger and larger, there is less room for faith commitments in the public square. The very Catholics who voted for Labour and the Liberal Democrats to "help the poor" are the ones running into problems now. I wonder if they have learned

their lesson.

Maine demands that pro-marriage group reveal donor names

May 29, 2014 | by Wintery Knight | Link | Original Link

ABC News reports.

Excerpt:

> Maine's ethics panel fined a national anti-gay marriage group more than $50,000 on Wednesday and ordered it to reveal the donors who backed its efforts to repeal the state's gay marriage law.
>
> The Maine Commission on Governmental Ethics and Election Practices found that the National Organization for Marriage violated campaign finance laws by failing to properly register as a ballot question committee and file financial reports in the 2009 referendum that struck down gay marriage. Same-sex unions were legalized by voters in 2012.
>
> The commission also ruled that the organization must file a campaign finance report, which would force it to disclose the names of its donors. The National Organization for Marriage has fought for years to keep its donor list secret, saying doing so would put its contributors at risk for harassment and intimidation.
>
> […]"We didn't create a scheme, we tried to follow the law," Brian Brown, president of the Washington, D.C.-based organization, told the four-member panel on Wednesday.
>
> Brown, who served as executive director of the National Organization for Marriage in 2009, was one of three members of the committee that led the Stand for Marriage Maine PAC.
>
> Commissioners said his dual role and the fact that the national group controlled a majority of the PAC's funds was problematic for its argument that the funds weren't raised to influence the Maine campaign.
>
> The group says that it's being targeted because of its stance on gay marriage and that groups on the other side of the issue — such as the Human Rights Campaign — followed the same guidelines.
>
> State investigators said that its examination of the National Organization for Marriage actions was brought by a specific complaint and that the organization could have sought a similar investigation into the Human Rights Campaign.
>
> John Eastman, a National Organization for Marriage lawyer, said that it intends to file a complaint against HRC in addition to filing an appeal.

The Human Rights Campaign mentioned in the article called the Family Research Council a "hate group". The FRC was the target of an act of domestic terrorism by a gay

activist who also thought that the Family Research Council was a “hate group”. The Human Rights Campaign was also implicated in the IRS leak of NOM donors.

What will gay activists do with the list of donor names? Ask Brendan Eich what they will do with it.

Republican governor Mary Fallin signs incremental pro-life law in Oklahoma

May 30, 2014 | by Wintery Knight | Link | Original Link

Oklahoma Governor Mary Fallin (R)

A story from Life Site News on one of my favorite Republican governors!

Excerpt:

> Oklahoma Gov. Mary Fallin signed the nation's newest admitting privileges law for abortion doctors on Wednesday.
>
> The law, which passed the state Senate 34-9 and the state House 60-8, specifies that while abortions are being performed, abortion facilities must have a physician on its premises with admitting privileges at a hospital within 30 miles.
>
> The law also requires the State Board of Health to create equipment, training, and other standards for abortion clinics. Clinics must also report any injured abortion patients to the Board of Health and "appropriate licensing and regulatory boards" in writing, as well as if any "born-alive" children are injured.
>
> For abortion clinic owners, violations of the Board of Health's standards bear legal and financial burdens. "The operation of an unlicensed facility will be considered a felony, and any reckless violation of the measure or its standards will be considered a felony. Any violation of the measure may result in a civil penalty or a fine not to exceed $25,000," the law states.
>
> […]Fallin's administration has overseen passage of numerous pro-life laws, including two restricting the use of RU-486. Her state joins nearby Texas and Missouri in requiring the admitting privileges. Similar laws have been enacted in Kansas, North Dakota, Tennessee, Texas, and Utah, and have been blocked in Alabama, Mississippi, and Wisconsin while courts hear challenges. Louisiana Gov. Bobby Jindal is expected to sign a similar law this week.
>
> The Texas law has been particularly successful in closing abortion clinics, with at least one-third of the state's abortion centers closing since the law was enacted.

Hard to say right now which state, Oklahoma or Texas, is doing a better job at reducing the number of abortions and protecting women who choose to abort. Every time you cut into the profits that people collect for killing babies, fewer people are going to want to do it. Republicans have been doing a good job since 2010 of really slamming out tons and tons of pro-life bills – at least in red states. It's not surprising to me that clinics are closing in these states and the number of abortions is going down as a result. It's not as profitable as it used to be.

Now if we could just win a presidential election and cut off the flow of taxpayer dollars to Planned Parenthood, we'd see a lot fewer abortions.

Millenials voted for Obama and now they'll have to live with less than their parents

May 30, 2014 | by Wintery Knight | Link | Original Link

Moderate conservative George Will writes about in Investors Business Daily. This is a good review of what's happening in the economy.

Excerpt:

> The reason why unemployment fell by four-tenths of a point (to 6.3%) in April while growth stalled is that 806,000 people left the labor force.
>
> The labor-force participation rate fell by four-tenths of a point to a level reached in 1978, which was during the Carter-era stagflation and early in the surge of women into the workforce.
>
> There are about 14.5 million more Americans than before the recession but nearly 300,000 fewer jobs, and household income remains below the pre-recession peak.
>
> […]The more than $1.1 trillion of student loan debt — the fastest-growing debt category, larger than credit-card or auto-loan debt — is restraining consumption, as is the retirement of baby boomers. In 2012, more than 70% of college graduates had student loan debts averaging about $30,000.
>
> This commencement season's diploma recipients enter an economy where more than 40% of recent graduates are either unemployed or in jobs that do not require a college degree. This is understandable, given that 44% of the job growth since the recession ended has been in food services, retail clerking or other low-wage jobs.
>
> In April, the number of persons under 25 in the workforce declined by 484,000. Unsurprisingly, almost one in three (31%) persons 18 to 34 are living with their parents, including 25% who have jobs.
>
> […]There is, however, something new under the sun. The Pew Research Center reports that Americans 25 to 32 — "millennials" — constitute the first age cohort since World War II with higher unemployment or a greater portion living in poverty than their parents at this age.

Now it's not just that the young people are having trouble paying off their loans and leaving the nest, it's that they also are going to inherit a debit that has more than doubled since they elected Obama the first time. This is serious, now. If you are a young person, you'd better have a plan to be borrowing as little as possible, working as much as possible, saving as much as possible, and studying only what can get you a job. Things have changed since the time of your parents. You will have to work harder to achieve less. You voted for it.

Bible study: the importance of truth in religion

May 30, 2014 | by Wintery Knight | Link | Original Link

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me the dream, and I will know that you can interpret it for me."

[10] The astrologers answered the king, "There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans."

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king's guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king's officer, "Why did the king issue such a harsh decree?" Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

"Praise be to the name of God for ever and ever;
wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king."

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, "Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him."

[25] Arioch took Daniel to the king at once and said, "I have found a man among the exiles from Judah who can tell the king what his dream means."

[26] The king asked Daniel (also called Belteshazzar), "Are you able to tell me what I saw in my dream and interpret it?"

[27] Daniel replied, "No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] "As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King's wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: "The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.". The King replies: "Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery."

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God's miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won't always be the case, but it is the case for some people.

What are Christian men looking for in a woman?

May 31, 2014 | by Wintery Knight | Link | Original Link

Here's a Bible verse that explains the number one thing that men are looking for from a potential wife.

Ephesians 5:21-33:

[21] Submit to one another out of reverence for Christ.

[22] Wives, submit yourselves to your own husbands as you do to the Lord.

[23] For the husband is the head of the wife as Christ is the head of the church, his body, of which he is the Savior.

[24] Now as the church submits to Christ, so also wives should submit to their husbands in everything.

[25] Husbands, love your wives, just as Christ loved the church and gave himself up for her

[26] to make her holy,cleansing her by the washing with water through the word,

[27] and to present her to himself as a radiant church, without stain or wrinkle or any other blemish, but holy and blameless.

[28] In this same way, husbands ought to love their wives as their own bodies. He who loves his wife loves himself.

[29] After all, no one ever hated their own body, but they feed and care for their body, just as Christ does the church—

[30] for we are members of his body.

[31] "For this reason a man will leave his father and mother and be united to his wife, and the two will become one flesh."

[32] This is a profound mystery—but I am talking about Christ and the church.

[33] However, each one of you also must love his wife as he loves himself, **and the wife must respect her husband.**

The Bible sometimes sets out rules and goals for expected behaviors, which become moral obligations for anyone for follows Christ. It is up to us to convince ourselves through study that the Bible has authority to speak to us. And it is also up to us to decide the most effective way to achieve the goals that the Bible sets out. This post proposes some tips for women who want to learn how to respect men, based on my experiences of what makes me feel respected as a man. I think this is beneficial for single women, as well, because it allows them to arouse the interest of a man *by performing good actions*.

Things that women can do to make men feel respected

Here are some things that signal "respect" to me.

1. Listen

The first thing that really works is listening. I really feel respected when a woman listens

to me explain my thoughts and feelings. This is especially true when I am talking about my work and my work day. When it comes to my work, I feel respected when a woman listens to me explain what I am doing at work. The more she understands software engineering (what I do for money), the more supported I will feel. I like it when a woman is nearby when I am working, and asking about my progress. I know Dr. Craig also talks to his wife about his work as well. I feel a lot better making sacrifices (studying hard things, working weekends, volunteering at work) when those sacrifices are understood, encouraged and supported. That's why I think that women need take care to have a broad understanding of the way the world works, and never drop out of quantitative subjects like math, science, engineering and technology. The more you know about what a man is talking about, the better. Knowing more about politics, economics, science, etc. is always a good thing for women. I think that women definitely need to work full time for at least a couple of years to develop a sympathetic understanding of what men do in an office in order to provide for a family.

2. Plan

Another area that is important to talk about is my plan. I like it when I can tell a woman the specific experiences that I had that cause me to have the plan that I have. For example, my struggles getting apologetics into the churches that I've attended have really soured me on church leaders. Another thing I like to talk about are the Christian scholars who are my role models, and how I try to emulate them, and I want my children to emulate them, too. One lady I was speaking to has been studying areas that I care about on her own through books, lectures and debates and then going out into the world and engaging with the people around her. Sometimes just a few people, and sometimes with large groups. Recently she told me that she would like to start a group in her church to study useful books with them. This made me feel very respected. My goals matter to her, and she is trying to help with them on her own initiative, and with her own strategies. Note that women who want to respect men may find that it is useful to learn certain skills in order to be more effective at helping men with their plans. For example, she might study science apologetics and then engage her co-workers and friends with scientific arguments for Christian theism. She should find out what areas matter to him with respect to serving God and then come alongside him and help him. I have a homeschooling mom friend who is busy doing a degree in nursing, which is a very useful skill set to have. Her children are able to see her struggling with hard subjects like chemistry, and that is good for them to see. It's valuable to a man to have a wife who has practical skills and who can shepherd the children through school and into careers. This same lady is reading Thomas Sowell's Basic Economics, as well.

3. Roles

A final area that is important is my roles as a man. According to the Bible, men are supposed to be the main provider for their families. So, I made the decision early in my life to prefer work to academics – so I have actually been earning money since the time I was 12 years old. My grades were As (and some Bs), but I was always working part-time, and in the summers. The money I earned went straight into investments, so that I would

be able to afford two degrees in computer science (BS and MS) and have a nest egg saved for marriage. I had $9,000 before undergraduate school and $16,000 after, with no debts and a current model year used car. I chose computer science over English literature, because I knew that computer science was a more reliable way to earn a living. Marriages run more smoothly when money isn't a concern, so I did these things in order to make sure that the money to run the marriage would be there.

I think that women should *prefer men who take the provider obligation seriously*. I feel very respected when a woman takes the time to ask me about my education, research, work history, and investments. Our culture today doesn't value men taking their provider roles seriously. Instead, many women prefer *attractive, entertaining* men over men who can provide. I see a lot of Christian women going after men who don't have the ability to finance a marriage. That is disrespectful of the provider role, and I believe it stems from the desire to not acknowledge male leadership. I believe that some women (ones who struggle with trust issues) prefer men who don't earn a lot of money, so that the man will not have the authority in the home that comes from the provider role. But when a woman chooses a man with an inadequate education and resume, it also makes it much harder for her to respect him, which is what a man needs a woman to do.

To respect a man acting as a provider also requires voting for policies that support a man's ability to work (e.g. – less regulation on business, lower corporate taxes) to keep what he earns (lower income tax, lower inflation) and to spend it the way he sees fit (privatization of health care, education, etc.) – and these issues need to be studied, not checked off on a checklist as "we agree". Studying economics and politics in depth, and being political active, are ways for women to respect men in their provider role by promoting policies that help him to perform that provider role. Women should not be supporting policies that promote the redistribution of wealth via taxes. Women should not vote to reward irresponsibility and dependence, either. It is disrespectful to the man's provider role to vote for leftist fiscal policy. If you want big government, then you get men who can't afford to marry. Women need to vote for laws and policies that create more of the hard-working, high-earning men they want to marry.

The provider role is not the only role a man plays, he also has to be experienced at leading others on moral and spiritual issues. In order to evaluate a man's ability in these areas, women must study these exact same issues so that they are able to prefer evaluate a man's ability in these areas. Christianity is not a checkbox. Bible reading and church attendance alone do not train a man to engage a secular culture on moral and spiritual issues. Bible reading and church attendance alone do not enable a man to intelligently apply the Bible to areas like economics and foreign policy, either. Yet economics and foreign policy issues do affect families (e.g. Obamacare or border security) , and that's why men need to be tested to see if they know those things. Marriage requires certain behaviors from men, and those behaviors require knowledge and experience. It's just like picking a man for a job in a workplace. In order to pick well, you need to know what the job is and what it requires.

Stephen C. Meyer debates Peter D. Ward on intelligent design and evolution

May 31, 2014 | by Wintery Knight | Link | Original Link

The speakers

Stephen C. Meyer is director of the Discovery Institute's Center for Science and Culture (CSC) and a founder both of the intelligent design movement and of the CSC, intelligent design's primary intellectual and scientific headquarters. Dr. Meyer is a Cambridge University-trained philosopher of science, the author of peer-reviewed publications in technical, scientific, philosophical and other books and journals. His signal contribution to ID theory is given most fully in *Signature in the Cell: DNA and the Evidence for Intelligent Design*, published by HarperOne in June 2009.

Graduating from Whitworth College in Spokane, Washington, in 1981 with a degree in physics and earth science, he later became a geophysicist with Atlantic Richfield Company (ARCO) in Dallas, Texas. From 1981 to 1985, he worked for ARCO in digital signal processing and seismic survey interpretation. As a Rotary International Scholar, he received his training in the history and philosophy of science at Cambridge University, earning a PhD in 1991. His thesis offered a methodological interpretation of origin-of-life research.

Peter D. Ward, Ph.D., is a paleontologist and professor in the Departments of Geology and Biology at the University of Washington in Seattle. He also serves as an adjunct professor of zoology and astronomy. His research specialties include the Cretaceous–Tertiary extinction event and mass extinctions generally. His books include the best-selling "Rare Earth: Why Complex Life Is Uncommon in the Universe" (co-author Donald Brownlee, 2000), "Under a Green Sky: Global Warming, the Mass Extinctions of the Past, and What They Can Tell Us About Our Future" (2007), and "The Medea Hypothesis: Is Life on Earth Ultimately Self-Destructive?" (2009).

The debate

Here's the video of the debate:

The debate itself starts at around 8:19, after all the moderators have spoken.

The debate is focused on disagreements about scientific evidence.

Even though Peter Ward is an atheist, he has co-written a fabulous book that I own and have read called "Rare Earth: Why Complex Life is Uncommon in the Universe". I really recommend getting this book, as it is a great book by two non-theists on the habitability argument. It's sort of a secular precursor to Jay Richards' and Guillermo Gonzalez's "The Privileged Planet: How Our Place in the Cosmos is Designed for Discovery". The habitability argument is a really neglected argument, but it's a good one.

Is the Bible's definition of faith opposed to logic and evidence?

June 1, 2014 | by Wintery Knight | Link | Original Link

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

What is faith according to the Bible?

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they take the roof off and let the paralytic down through the roof. Jesus said, "Your sins are forgiven." And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What's harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I'll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, "In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home." And he got up and he got out. Notice the phrase "In order that you may know". Same message, right?
3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous

tongues and the miraculous manifestation of being able to speak in a language you don't know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It's really great. Acts 2:36. I've been a Christian 20 years and I didn't see this until about a year ago. This is for all of those who think that if you can know it for sure, you can't exercise faith in it. Here is what Peter said. Acts 2:36, "Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified." There it is again. "Know for certain."

What is faith according to Bible-based theologians?

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia** – This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition "Christ rose from the grave," for example, is a necessary information base that Christians must have.
2. **assensus** – This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, "I am persuaded to believe that Christ rose from the grave."
3. **fiducia** – This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

How do beliefs form, according to Christian philosophers?

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

Michael Strauss lectures on scientific evidence for a Creator at UT Dallas

June 1, 2014 | by Wintery Knight | Link | Original Link

The lecture: (from 2013)

Note: there is a period of 19 minutes of Q&A at the end of the lecture.

About the speaker:

His full biography is here. (I removed his links from my excerpt text below)

Excerpt:

> I had an interest in science and theology, so in 1977 I chose to go to Biola University where I could study both subjects in detail. I thoroughly enjoyed college and participated in intramural sports, was elected to student government, served as a resident assistant, competed in forensics, and studied a lot. As I neared college graduation my dual interest continued so I applied to seminary and to graduate school. After graduating *summa cum laude* from Biola, I decided to pursue a graduate degree in physics at UCLA.
>
> During my first few years of graduate school, I developed an increased interest in quantum mechanics and subatomic physics and decided to do research in a field that dealt with these subjects. I joined a High Energy Physics experimental group doing research at the Stanford Linear Accelerator Center (SLAC) and moved to the San Francisco Bay Area to actively participate in research at SLAC. I graduated in 1988 with my Ph.D in High Energy Physics (a.k.a. Elementary Particle Physics). If you would like to know more about High Energy Physics, the Particle Data Group at Lawrence Berkeley Laboratory has a very nice interactive adventure that teaches you all about the subject. My research advisor was professor Charles Buchanan and my disertation was titled "A Study of Lambda Polarization and Phi Spin Alignment in Electron-Positron Annihilation at 29 GeV as a Probe of Color Field Behavior."
>
> After graduation, I accepted a post-doctoral research position with the University of Massachusetts at Amherst. I continued to do research at SLAC where I joined the SLD experiment. My research interests centered on the SLD silicon pixel vertex detector. I wrote most of the offline software for this device, and did physics analysis which used the vertex detector, including tagging *b* quark events for flavor specific QCD (Quantum Chromodynamics) analysis. In the seven years I was employed by UMASS, I only spent 3 days on the Amherst campus. The rest of the time was spent in California.
>
> […]In August 1995, I accepted a job as an Assistant Professor of Physics at the University of Oklahoma (OU) in Norman, Oklahoma. The University of Oklahoma has a vibrant high energy physics research group involved in experiments at the

> Fermi National Accelerator Center (Fermilab), and CERN. I joined the DØ experiment at Fermilab where I continue to do research in elementary particle physics. As a member of the DØ collaboration I have made contributions to the testing of silicon sensors for the upgraded vertex detector, to the track finding algorithms, to a measurement of the photon production cross section which probes the gluon content of protons, and to other QCD measurements. I am currently studying properties of*B* mesons that contain a *b*-quark, the production cross section of jets coming from quarks and gluons, and other QCD analyses. At CERN, I am a collaborator on the ATLAS detector.
>
> I received tenure in 2001 and was promoted to the rank of Professor in the summer of 2010. Most of the time at OU I have taught introductory physics classes to physics majors, engineers, and life science majors. In these classes I have used a number of interactive techniques to facilitate student participation and learning. I have been privileged to win a few awards for my teaching. In 1999, the Associated Students selected me as the Outstanding Professor in the College of Arts and Science, and in 2000 I was awarded the BP AMOCO Foundation Good Teaching Award. In 2002, I was given the Regents Award for Superior Teaching. I received the Carlisle Mabrey and Lurine Mabrey Presidential Professorship in 2006 which is given to "faculty members who excel in all their professional activities and who relate those activities to the students they teach and mentor."

He seems to have done a fine job of integrating his faith with a solid career in physics research.

Summary:

- It used to be true that most of the great scientists were believers in God
- But now science has advanced and we have better instruments – is it still true?
- Today, many people believe that science has shows that the universe and Earth are not special
- We used to believe that the Earth was the center of the universe, and Darwin showed we are not designed
- The problem with this view is that it is based on old science, not modern science
- Three topics: origin of the universe, fine-tuning of the universe, the Rare Earth hypothesis

Experimental evidence for the origin of the universe:

- #1: Hubble discovered that the universe expands because of redshifting of light from distant galaxies
- #2: Measurements of the cosmic microwave background radiation show the universe had a beginnning
- #3: Measurements of the light element (hydrogen and helium) abundances confirm

an origin of the universe
- The best explanation for an absolute origin of space, time, matter and energy is a supernatural cause

Experimental evidence for the design of the universe:

- #1: The amount of matter: a bit less = no stars and galaxies, a bit more = universe recollapses
- #2: The strong force: a bit more = only hydrogen, a bit more = little or no hydrogen
- #3: Carbon resonance level: a bit higher = no carbon, a bit lower = no carbon

Experimental evidence for galactic, stellar and planetary habitability:

- #1: Galaxy: produces high number of heavy elements and low radiation
- #2: Star: long stable lifetime, burns bright, bachelor star, third generation star (10 billion years must elapsed),
- #3: Planet: mass of planet, stable orbit, liquid water, tectonic activity, tilt, moon

Naturalistic explanations:

- Humans evolve to the point where they reach back in time and create finely-tuned universe
- Eternally existing multiverse

Hawking and Mlodinow response to Rare Earth:

- There are lots of planets so one must support life
- Odds of a planet that supports life are low even with 10^22 planets

Hawking and Mlodinow proposal of M-theory multiverse:

- There is no experimental evidence for M-theory being true
- M-theory is not testable now and is not likely to be testable in the future
- But science is about making testable predictions, not about blind speculation

Hawking and Mlodinow no-boundary proposal:

- This theory requires the laws of physics to exist prior to the universe
- But where do you get laws of physics before there is any physical world?
- There is no experimental evidence for no-boundary proposal
- All the evidence we have now (redshift, CMBR, H-He abundances) is for Big Bang

What science has revealed provide abundant evidence for a transcendent Creator and Designer

EPA proposes 30% reduction in carbon dioxide emissions

June 2, 2014 | by Wintery Knight | Link | Original Link

The Wall Street Journal reports.

Excerpt:

> The Environmental Protection Agency will propose a draft rule on Monday seeking a 30% reduction in carbon-dioxide emissions by 2030 from existing power plants based on emission levels from 2005, according to two people who have been briefed on the rule, setting in motion the main piece of President Barack Obama's climate-change agenda.
>
> The rule, scheduled to be completed one year from now, will give flexibility to the states, which must implement the rules and submit compliance plans to EPA by June 2016. States can decide how to meet the reductions, including joining or creating new cap-and-trade programs, deploying more renewable energy or ramping up energy-efficiency technologies.
>
> Each state will have different percent reduction standards, and the national average will be 25% by 2020 and 30% by 2030, these people said.
>
> The proposed rule will regulate carbon emissions from hundreds of fossil-fuel power plants across the U.S., including about 600 coal plants, which will be hit hardest by the standard.
>
> "EPA will release its proposed carbon pollution reduction rule on Monday," EPA spokesman Tom Reynolds said. "Until then the agency will not comment on any information that may or may not be in the proposal."

So let's work out what follows next. If emissions are cut, then production will be reduced. It's a law of economics that when supply goes down, and demand stays the same, then prices will rise. Either that or the power plants will have to become more efficient, which also costs more money. Are you ready for higher electricity prices?

Update: Republicans say EPA regulation will up to 800, 000 jobs.

Why does God let people suffer? Why is there so much evil in the world?

June 2, 2014 | by Wintery Knight | Link | Original Link

I just wanted to draw your attention to this 4 page essay by Joe Manzari, which is the best darn summary of the state of the art on the problems of evil and suffering I have seen. The problem of evil is an objection to the existence of God based on the presence of evil or suffering in the world. The arguments basically infer that if God is all-good and all-powerful, then there should not *be* any evil or suffering.

There are two kinds of problem of evil.

The Logical/Deductive Problem of Evil:

The first kind is called "the deductive problem of evil" or "the logical problem of evil". An exampel of evil would be Saddam Hussein murdering some journalist who told the truth about him. This version of the problem of evil tries to introduce a logical contradiction between the attributes of God and the presence of evil, like this:

(1) God exists.
(2) God is omnipotent.
(3) God is omniscient.
(4) God is omni-benevolent.
(5) Evil exists.
(6) A good being always eliminates evil as far as it can.
(7) There are no limits to what an omnipotent being can do.

In order to avoid a contradiction, we need to explain how there could still be evil, since the conclusion of this argument is that there should not be any evil!So how are we going to get out of this mess? The solution is to attack premises 6 and 7.

Premise 6 is false because in order to eliminate human evil, you would have to eliminate free will. But eliminating free will is worse than allowing it, because good things like love are impossible without free will.

> It is in response to this proposition that the Free Will Theodicy of G. W. Leibniz applies. God, valuing man's freedom, decided to provide him with a will that was free to choose good over evil, rather than constraining his will, allowing him to choose only good.

Premise 7 is false because there *are* limits on what an omnipotent being can do. God *cannot* perform contradictory things, because contradictory things are impossible. God cannot make a married bachelor. Similarly, God cannot force free creatures to do his will.

> In the same manner that God cannot create a square circle, he cannot make someone freely choose to do something. Thus, if God grants people genuine freedom, then it is impossible for him to determine what they will do. All that God

> can do is create the circumstances in which a person can make free choices and then stand back and let them make the choices.

One last point. In order to solve the problem of natural evil for this argument, you can point out that free will requires predictable and regular natural laws in order to make free will meaningful. Natural laws mean that individuals can predict what will happen when they act, allowing for moral responsibility. More on that next time.

Inductive/Probabilistic Problem of Evil

There is a second version of the problem of evil, though, which is more dangerous than the first. This is the one you see being argued in debates, whereas the first version is not used because it has been defused as seen above. Here is the second one:

(1) If God exists, gratuitous evil does not exist.
(2) Gratuitous evil exists.
(3) Therefore, God does not exist.

This argument tries to argue that while God may have some reason for allowing free will, there are other evils in the world that are not the result of human action that God has *no reason* for permitting. Theists usually like to argue that God has morally-sufficient reasons for allowing some evil in the world, in order for the character of humans to develop through suffering and endurance. But what about gratuitous evil, which doesn't have any point?

Consider the case of a fawn running in the forest, who falls and breaks his leg. Ouch! Then a forest fire starts and the poor fawn suffocates to death in the smoke. Why would God allow this poor small animal suffer like that? And notice that there is no morally sufficient reason for allowing it, because no human knows about this and so no human's character or relationship with God is impacted by it.

The solution to this problem is to deny premise 2. (You can also deny 1 if you want). The problem with premise 2 is that the atheist is claiming to know that some instance of evil really is gratuitous. But since they are making the claim *to know*, they have to be able *to show* that God's permission of that evil achieves nothing. But how do they know 2 is true?

The problem with 2 is that the atheist is not in a position to know that the permission of some evil X really doesn't achieve anything. This is because the atheist cannot look forward into the future, or see into other places, in order to know for certain that there is no morally sufficient reason for allowing God's allowing evil X to occur. But since the atheist argues based on premise 2, he must be able to show that premise 2 is more probable than not.

Manzari's article also argues why apparently gratuitous evil is less problematic for Christians in particular, because of certain Christian doctrines. He lists four doctrines that make the apparently gratuitous evil that we observe more compatible with an all-good, all-powerful God.

1. The chief purpose of life is not happiness, but the knowledge of God.

Some of the things that we experience may wreck our feelings of contentment, but we need to remember that God may be permitting those troubles in order to remind us not to get too comfortable with life on earth, and to think ahead to the after-life. And remember, even Jesus learned endurance through suffering. His suffering was not pointless and neither is ours.

2. Mankind is in a state of rebellion against God and God's purposes.
   We humans seem to be on a dead run away from God, trying to keep our autonomy by knowing as little about him as possible. Part of knowing God is knowing what he designed us to do – to love him and to love others. And so, the less we know about God, the more we stray from his design for our lives.
3. God's purpose is not restricted to this life but spills over beyond the grave into eternity.
   Sometimes it seems as if our sufferings really are catastrophic, but when you realize that you are offered eternal life without any suffering after you die, the sufferings of this life are a lot less upsetting than they would be if this life was all we had.
4. The knowledge of God is an incommensurable good.
   This one is the biggest for me. Knowing God and knowing his actual character by studying the historical Jesus is a wonderful counterbalance for all the problems and sufferings of this life. A little bit of historical study reveals that Jesus was not spared the worst kind of suffering in his life, making it is a lot easier for us to bear with whatever God allows us to face.

In section 3, Manzari shows how you can also argue against this version of the problem by supplying evidence for God, such as from the big bang, the fine-tuning, the origin of life, the origin of free will, the origin of the first living organism, the origin of the mind, the sudden emergence of phyla in the fossil record, molecular machines, irreducible complexity, the resurrection miracle, and the objective morality argument.

The argument goes like this:

(1) If God exists, gratuitous evil does not exist.
(2) God exists.
(3) Therefore, gratuitous evil does not exist.

Just support 2 with some evidence, and you win, especially when they can't support their claim to know that gratuitous evil exists.

The Argument for God from Evil

In the paper, Manzari actually makes an argument for God from evil. That's right. Far from disproving God, the presence of evil (a departure from the way things out to be), actually affirms God's existence. How?

(1) If God does not exist, then objective moral values do not exist.
(2) Evil exists.
(3) Therefore, objective moral values do exist.
(4) Therefore, God exists.

That’s right. If evil exists in any sense such that it is not a personal or cultural preference, then objective morality exists. If objective morality exists, then there is an objective moral lawgiver. Game over. If the atheist backtracks and says that the existence of evil is just his opinion or his cultural preference, then this standard does not apply to God, and you win again. Game over again. More on this argument for God’s existence *from evil* here.

So, although the problems of evil look pretty tough, they are actually easy. The toughest part of evil and suffering is the emotional problem. I could tell you stories about what I’ve been through… but then, that’s why the arguments matter. You can hold your position under tremendous fire when you have the arguments and evidence to ground you.

For more on the problem of evil, listen to this lecture by Douglas Geivett, professor of philosophy at Biola University. Then you *must listen* to this debate between William Lane Craig and Walter Sinnott-Armstrong (with summary by me). Another debate transcript is here, with William Lane Craig and Kai Nielsen. Here’s a book debate between William Lane Craig and Walter Sinnott-Armstrong, published by Oxford University Press, 2004.

Philip E. Johnson lectures on science, evolution and religion

June 2, 2014 | by Wintery Knight | Link | Original Link

I found this fun lecture by the grandfather of the big-tent intelligent design movement, Berkeley law professor Philip E. Johnson.

I'll bet you guys have all heard of him, but you've never heard him speak, right? Well, I was a young man, I used to listen to Phil's lectures and his debates with Eugenie Scott quite a bit. This is one of my favorite lectures. Very easy to understand, and boilerplate for anything else in the origins debate. This is a great lecture – funny, engaging and useful. You will definitely listen to this lecture several times if you listen to it once.

The MP3 is here. (91 minutes, 62 megabytes)

The Inherit the Wind stereotype

- Many people get their understanding of origins by watching movies like "Inherit the Wind" (or reading science fiction)
- The actual events of the Scopes trial are nothing like what the movie portrays
- The law forbidding the teaching of evolution was symbolic, not meant to be enforced
- The actual Scopes trial was a publicity stunt to attract attention to Dayton, TN to bring business to the town
- The ACLU advertised for a teacher who would be willing to be sued
- They found a substitute physical education teacher who would be willing to "break" the law
- The movie is nothing like the actual events the movie is a morality play
- The religious people are evil and stupid and ignorant and bigoted
- The scientists and lawyers are all intelligent, romantic, and honest seekers of the truth
- The religious people think that the Bible trumps science and science is not as reliable as the Bible
- The movie argues that the reason why there is ANY dissent to evolution is because of Biblical fundamentalism
- The movie presents the idea that there are no scientific problems with evolution
- The movie says that ONLY Biblical fundamentalists who believe in 6 day, 24-hour creation doubt evolution
- The movie says that Biblical fundamentalism are close-minded, and not open to scientific truth
- The movie says that people who read the Bible as making factual claims are misinterpreting the Bible
- The movie says that smart people read the Bible for comfort and feelings and arbitrary values, not for truth

Guided evolution and methodological naturalism

- What scientists mean by evolution is that fully naturalistic, unguided, materialistic mechanisms caused the diversity of life
- Scientists do not allow that God had any real objective effect on how life was created
- Scientists think that nature did all the creating, and any mention of God is unnecessary opinion – God didn't DO ANYTHING
- Scientists operate with one overriding rule – you can only explain the physical world with physical and material causes
- Scientists DO NOT allow that God could have done anything detectable by the sciences
- Scientists WILL NOT consider the idea that natural, material processes might be INSUFFICIENT for explaining everything in nature
- You cannot even ask the question about whether natural laws, matter and chance can explain something in nature
- Intelligent causes can NEVER be the explanation for anything in nature, and you can't even test experimentally to check that
- Scientists ASSUME that everything can be explained with natural laws, matter and chance – no questioning of natural causes is allowed
- Where no natural explanation of a natural phenomenon is available, scientists SPECULATE about undiscovered natural explanations
- The assumption of naturalistic sufficiency is called "methodological naturalism"
- To question the assumptions that natural is all there is, and that nature has to do its own creating, makes you an "enemy of science"
- But Johnson says that *naturalists* are the enemies of science, because they are like the Biblical fundamentalists
- Naturalists have a presumption that prevents them from being willing to follow the evidence where it is leading
- Experiments are not even needed, because the presumption of naturalism overrides any experimental finding that falsifies the sufficiency of natural causes to explain some natural phenomenon

What can natural selection and mutation actually do?

- what evolution has actually been observed to do is explain changing populations of moths and finches
- finches with smaller or larger beaks are observed to have differential survival rates when there are droughts or floods
- no new body plan or new organ type has been observed to emerge from these environmental pressures
- the only kind of evolution that has been observed is evolution *within types* – no new genetic instructions are created

- in textbooks, only confirming examples are presented – but what is required is a broad pattern of gradual development of species
- if you look at the fossil record, what you see in most cases is variation within types based on changing environments
- the real question is: can natural law and chance *be observed* to be doing any creating of body plans and organ types?

What kind of effect requires an intelligent cause?

- the thing to be explained in the history of life is the functional information sequences
- you need to have a sequence of symbols or characters that is sufficiently long
- your long sequence of characters has to be sequenced in the right order to have biological function
- the only thing that can create long sequences of functional information is an intelligent cause
- intelligent design people accept micro-evolution – changes within types – because that's been observed
- the real thing to be explained is the first living cell's functional information, and the creation of new functional information

Critical response

The next 15 minutes of the lecture contain a critical response from a philosophy professor who thinks that there have been no developments in design arguments since Aquinas and Paley. He basically confirms the stereotypes that Johnson outlined in the first part of the lecture. I recommend listening to this to see what opposition to intelligent design really looks like. It's not concerned with answering scientific questions – they want to talk about God, the Bible and Noah's ark. It's our job to get people like this critic to focus on the science.

Here's my snarky rendition of what he said:

1) Don't take the Bible literally, even if the genre is literal.

- all opposition to evolution is based on an ignorant, fundamentalist, literal reading of the Bible
- the Bible really doesn't communicate anything about the way the world really is
- the Bible is just meant to suggest certain opinions and experiences which you may find fetching, or not, depending on your feelings and community
- if Christians would just interpret the Bible as myths and opinions on par with other personal preferences, then evolution is no threat to religious belief

2) As long as you treat the design argument as divorced from evidence, it's not very effective

- the latest and best version of the design argument is the old Paley argument which

involves no experimental data, so I'll critique that
- this 200-year old argument which doesn't rely on science has serious problems, and unnamed Christians agree with me!
- Christians should NOT try to prove God's existence using evidence from the natural world (as Romans 1 says), and in fact it's "Pelagianism" to even try
- Christians should divorce their faith from logic and evidence even though the Bible presents faith as being rooted in reason and evidence
- Christians should not tie their faith to the science of today, because science is always changing and the theism-friendly evidence of today might be overturned tomorrow
- It's a good idea for me to critique the arguments of 1000-year old people who did not know anything about the cosmic fine-tuning argument – that's fair!
- I find it very useful to tell people that the argument from design is false without mentioning any design arguments from DNA or cosmic fine-tuning
- We need to assume that the natural world is explainable using only natural causes before we look at any evidence
- We should assume that natural causes create all life, and then rule out all experimental evidence for intelligent causes that we have today
- As long as you accept that God is a personal opinion that has nothing to do with reality, then you can do science
- The non-Christian process theologian Teilhard de Chardin accepts evolution, and therefore so should you
- Remember when theists said God caused thunder because he was bowling in the clouds and then we found out he didn't? Yeah well – maybe tomorrow we'll find out that functional sequences of amino acids and proteins have natural causes! What would you do then?

3) What the Bible really says is that you should be a political liberal

Q&A time

The lecture concludes with 13 minutes of questions.

Obama trades five senior Taliban commanders for an American soldier who deserted

June 3, 2014 | by Wintery Knight | Link | Original Link

The Weekly Standard reports on a prisoner exchange that only a traitor could approve of.

Excerpt:

> The Obama administration is facing mounting questions about the controversial prisoner swap that freed Army Sgt. Bowe Bergdahl from jihadists in Pakistan in exchange for the transfer and ultimate release of five senior Taliban commanders previously held in Guantanamo Bay, Cuba.
>
> Lawmakers are questioning the wisdom and legality of the move. Intelligence officials are expressing deep concerns about its ramifications. And those who served with Bergdahl—or took risks in the efforts to rescue him—are directly challenging the Obama administration's characterization of the former captive and his actions.
>
> In an appearance on ABC's *This Week* on Sunday, National Security Adviser Susan Rice claimed that Bergdahl "wasn't simply a hostage, he was an American prisoner of war, taken on the battlefield." She added: "He served the United States with honor and distinction."
>
> "That's not true," says Specialist Cody Full, who served in the same platoon as Bergdahl, and whose tweets over the weekend as @CodyFNfootball offered an early firsthand account of Bergdahl's departure. "He was not a hero. What he did was not honorable. He knowingly deserted and put thousands of people in danger because he did. We swore to an oath and we upheld ours. He did not."
>
> "He walked off—and 'walked off' is a nice way to put it," says Specialist Josh Cornelison, the medic in Bergdahl's platoon. "He was accounted for late that afternoon. He very specifically planned to walk out in the middle of the night."
>
> "He was a deserter," says Specialist Full. "There's no question in the minds of anyone in our platoon."

But Susan Rice says this 5 for 1 trade is a good deal. Should we take her word over the word of the soldiers who served with Bergdahl? I think we shouldn't, because we know she lied about the Benghazi terrorist attack being a "protest" caused by a Youtube video.

The Washington Times points out that other soldiers lost their lives trying to search for the deserter.

Excerpt:

> At least six soldiers died while searching for Sgt. Bowe Bergdhal in hostile Taliban territory when he went missing in Afghanistan five years ago.
>
> And now, those who served with those six say Mr. Bergdhal is at fault for their

> deaths because he abandoned his military post, the New York Post reported.
>
> “I was pissed off then and I am even more so now with everything going on,” said former Sgt. Matt Vierkant, a member of Mr. Bergdahl’s platoon, to CNN. “Bowe Bergdahl deserted during a time of war and his fellow Americans lost their lives searching for him.”

I think the release of 5 Taliban commanders is probably going to cost even more American lives than the 6 already lost. But judging from the administration’s actions with the VA scandal and Benghazi, we seem to be more concerned with helping our enemies than with helping our own soldiers and diplomats. And I’m sure on the left they would think that this was a good thing, somehow. I don’t think it’s a good thing.

Are bad or sub-optimal designs in nature supportive of atheism?

June 3, 2014 | by Wintery Knight | Link | Original Link

Engineer Bill Pratt explains why "bad design" is not supportive of atheism at Tough Questions Answered.

Excerpt:

> The other day I heard an atheist say that the fact that he sees poor design in the natural world leads him to the conclusion that the Christian God does not exist. Here is the argument:
>
> 1. An omnipotent, omniscient, omnibenevolent creator God would create orga nisms that have optimal design.
> 2. Organisms have features that are sub-optimal.
> 3. Therefore, God either did not create these organisms or is not omnipotent, omniscient, and omnibenevolent.
>
> There are several things wrong with this argument, but I want to focus on premise 2 – *organisms have features that are sub-optimal*.
>
> I am an electrical engineer who has been designing integrated circuits (IC) for 20 years, either personally or through managing other engineers. I am extremely familiar with IC design. Over the years, I have often heard young engineers, who did not design a particular IC, criticize the design of that IC by saying it is sub-optimal, that they could do a better job. I have then seen these same engineers eat crow when they finally talk to the original designer and discover the *constraints* that original engineer was under when he designed the IC and the *purposes* for which he designed the IC.
>
> It is *impossible* to judge a design as optimal or sub-optimal without knowing the *purposes of the designer* and without knowing the *constraints* the designer faced during the design. Young engineers just assume that they know both when they look at somebody else's design. After being embarrassed a few times, they usually drop this approach and gain some humility.

Engineers know that designs are always a balance between competing NFRs – non-functional requirements. Many of the the NFRs are often opposed to each other, like speed and memory. If you want something fast, it often requires more memory. If you want something cheap, you sacrifice memory and your program runs slower because there is more disk access.

Even more than that, atheists assume that if God designed organisms, then he should have designed it for our benefit – to make us happy, healthy and long-lived. But that is not God's purpose for making us. He doesn't want us to be happy (apart from him), he

wants us to know him. And there is nothing to say that designs that are “bad” for happiness are also bad for knowing God.

Can atheists have meaning and purpose in life?

June 3, 2014 | by Wintery Knight | Link | Original Link

Here's a post about it from Aaron Brake, writing on Please Convince Me blog.

Excerpt:

> The question of God's existence is the most important question we can seek to answer. If God does not exist and we do not survive the death of our bodies, life is ultimately absurd. J.P. Moreland provides an illustration which helps bring this truth home:
>
> Suppose I invited you over to my house to play a game of Monopoly. When you arrive I announce that the game is going to be a bit different. Before us is the Monopoly board, a set of jacks, a coin, the television remote, and a refrigerator in the corner of the room. I grant you the first turn, and puzzlingly, inform you that you may do anything you want: fill the board with hotels, throw the coin in the air, toss a few jacks, fix a sandwich, or turn on the television. You respond by putting hotels all over the board and smugly sit back as I take my turn. I respond by dumping the board upside down and tossing the coin in the air. Somewhat annoyed, you right the board and replenish it with hotels. I turn on the television and dump the board over again.
>
> Now it wouldn't take too many cycles of this nonsense to recognize that it didn't really matter what you did with your turn, and here's why. There is no goal, no purpose to the game we are playing. Our successive turns form a series of one meaningless event after another. Why? Because if the game as a whole has no purpose, the individual moves within the game are pointless. Conversely, only a game's actual purpose according to its inventor can give the individual moves significance.[1]
>
> As Moreland articulates, if the game of Monopoly as a whole has no purpose, the individual moves within the game have no meaning or value. The only way your moves within the game of Monopoly have significance is if you discover the purpose of the game and you align yourself with that purpose.
>
> As it is with Monopoly, so it is with life. Like the game of Monopoly, the only way our individual lives have any ultimate meaning or value is if life has purpose behind it, and real purpose requires both God and life after death.

My experience with atheists is that they are not really concerned about letting their life be accountable to facts. In atheism, the desire for happiness comes first, and the facts have to be massaged to justify it. For example, if there is a fine-tuning argument, they invent the multiverse. If there is a cosmological argument, they invent the eternal universe. If the origin of life is a problem, they invent aliens to seed the Earth with life. If the resurrection is a problem, then Jesus never existed. The main thing is that no God is

there to suggest any other purpose to the atheist than what he wants to do himself. Brake explains:

> Some atheists object at this point: "But I *do* have purpose in life. I *do* have meaning." In a 2010 debate entitled "*Does the Universe Have a Purpose*?" skeptic Michael Shermer offers four things that allow people to feel more happy, fulfilled, and purposeful in life, regardless of whether or not God exists:[7]
>
> 1. Deep love and family commitment
> 2. Meaningful work and career
> 3. Social and political involvement
> 4. A sense of transcendency
>
> Later in the debate, Shermer goes on to say,
>
> Don't you think even if there isn't a God that you should find some purpose?…Maybe there's a God, maybe there's not. Either way, don't you think you ought to roll up your sleeves and see if you can figure out some useful things to do to give yourself purpose outside of God? Don't you think that's worthwhile?…Shouldn't I be doing these nice things for other people? Shouldn't I be finding love and commitment to somebody, a meaningful career, helping my social community and being involved in politics, trying to transcend myself and do something outside of myself? Shouldn't I be doing those things anyway?
>
> But notice that Shermer here completely misses the point, which is this: if there is no God, then there is no ultimate, *objective* meaning, value, and purpose in life. Sure, you can create *subjective* meaning and purpose if you so desire. You can live for any personal, *subjective* cause or reason that makes you happy. You can even do *nice* things regardless of whether or not God exists. But Shermer offers no account or explanation as to *why* if there is no God any of these things are *objectively* good, or why any of these things are *objectively* meaningful, valuable or purposeful, or why we should pursue *these* ends as opposed to others that may make us more fulfilled and happy. In the end, it makes no difference, objectively speaking, whether or not you pursue these goals or not because in the end, everything winds up the same anyway: you die, I die, the universe dies, and that's just all there is to it. Christian theist William Lane Craig offered this rejoinder both to Shermer and Richard Dawkins in the debate:
>
> There has been a major shift in the last two speeches in this debate. Did you see what it was? We've argued tonight first of all that if God does not exist, then the universe has no purpose. Our atheist colleagues admit that. But now what they've been claiming is, "But look, we can construct a purpose for our lives," in Richard Dawkins' words, or in Michael Shermer's words, "We can develop ways to make us *feel* better, *feeling like* we have a purpose." Now you see this just is to say that we can *pretend* that the universe exists for some purpose, and this is just make-believe. This is the subjective *illusion* of purpose, but there is on this

> view no *objective*purpose for the universe. And we of course would never deny that you can't develop *subjective* purposes for your life. The point is on atheism they're all illusory…But you cannot live as though your life were purposeless and meaninglessness and therefore you adopt subjective *illusions* of purpose to make your live livable. And that's why I think atheism is not only irrational, it is profoundly unlivable. You cannot live consistently and purposefully within the context of an atheistic worldview.

The problem with atheism is that they can't prefer Stalin's purpose to William Wilberforce's purpose, on their view, because people just choose their own purpose and everyone's purpose is as valid as anyone else's. On their view, BOTH Stalin and Wilberforce's purposes are equally rational to choose because the criterion for choosing is happiness and satisfaction in this life. An atheist can claim that such and such is "meaningful" or "good", to try to sound reasonable in front of a Judeo-Christian crowd. But the problem is that on their view, any purpose that anyone might choose for themselves is equally justified because they are all SUBJECTIVE. If there are no rules to the game, then any arbitrary choice of how to play it is as justified as any other.

What you find when talking to atheists is that they tend to very much favor the rights of the strong over responsibilities to the weak. You won't find too many atheists in favor of chastity, right to life or natural marriage. Chastity, right to life and natural marriage exist to provide children (who are less powerful) with what they need, at the expense of selfish adults. How would you ground that in an atheistic universe. Give up my sexual rights for some weak child? No way. What Shermer says sounds so good until you think it through a little more and realize that he is pushing for relativism.

Court forces baker to make gay wedding cakes and undergo sensitivity training

June 4, 2014 | by Wintery Knight | Link | Original Link

Todd Starnes covers the story at Fox News.

Excerpt:

> A family owned bakery has been ordered to make wedding cakes for gay couples and guarantee that its staff be given comprehensive training on Colorado's anti-discrimination laws after the state's Civil Rights Commission determined the Christian baker violated the law by refusing to bake a wedding cake for a same-sex couple.
>
> Jack Phillips, the owner of Masterpiece Cakeshop, in Lakewood, Colorado was directed to change his store policies immediately and force his staff to attend the training sessions. For the next two years, Phillips will also be required to submit quarterly reports to the commission to confirm that he has not turned away customers based on their sexual orientation.
>
> […]Nicolle Martin, an attorney with Alliance Defending Freedom, called the ruling Orwellian and said they are considering an appeal.
>
> "They are turning people of faith into religious refugees," Martin told me. "Is this the society that we want to live in – where people of faith are driven out of business?"
>
> Martin said it was "truly frightening" that Phillips will be forced to submit quarterly reports to the government disclosing whether he turned away any wedding cake business.
> "There will be some reporting requirements so that Jack can demonstrate that he doesn't exercise his belief system anymore – that he has divested himself of his beliefs," she said.
> He will also be required to create new policies and procedures for his staff.
>
> "We consider this reporting to be aimed at rehabilitating Jack so that he has the right thoughts," Martin said. "That's offensive to everything America stands for."
>
> Phillips, who is celebrating his 40th year in business this week, told me he's not going to create any new policies.
>
> "My old ones are pretty adequate as far as I'm concerned," he said. "I don't plan on giving up my faith and changing because of that."
>
> The controversy started in 2012 when a gay couple asked Phillips to make their wedding cake. Phillips politely declined, saying he could not make a cake promoting a same-sex ceremony because of his faith. He offered to make them any other baked item they wanted.
>
> Charlie Craig and David Mullins filed a complaint with the Colorado Civil Rights

> Commission alleging they were discriminated against because of their sexual orientation. For the record, same-sex marriage is against the law in Colorado.
>
> The commission affirmed a civil court's ruling that the bakery cannot discriminate against persons in a public place based on sexual orientation.
>
> "You can have your beliefs, but you can't hurt other people at the same time," Commission Chairwoman Katina Banks told The Denver Channel.
>
> ACLU attorney Amanda Goad, who heads up the organization's LBGT group, heralded the ruling.
>
> "Religious freedom is undoubtedly an important American value, but so is the right to be treated equally under the law free from discrimination," she said in a statement.
>
> […]"Jack doesn't turn people away," Martin told me. "There are just some events that he won't lend his artistry to."
>
> […]Martin said the Alliance Defending Freedom will "continue to stand with Jack against overreach and tyranny by the state."
>
> "Jack has gone out on a limb and taken this stand – and not capitulated to the government's demands," she said. "That speaks volumes about him."
>
> And should the highest court in the land force Jack to do the bidding of homosexuals?
>
> "There's civil disobedience," Phillips told me. "We'll see what happens. I'm not giving up my faith. Too many people have died for this faith to give it up that easily."
>
> Meanwhile, the bullying tactics of the militant gay rights community have not hampered the bakery's bottom line. They've gotten so much business from the sales of cookies and brownies, they've temporarily stopped making wedding cakes.
>
> "Obey Christ rather than worry about what man can do to you," Phillips said.
>
> There you have it, folks. In Colorado, you can't have your cake and religious beliefs, too.

The most alarming thing that I see in the culture is the astonishing speed at which religious liberty is being crushed by the government in order to force everyone to promote gay rights. I don't mind that people have a different sexuality than I do, but I don't want to be forced to participate in a celebration of it.

Midwife refused employment because she refuses to perform abortions

June 4, 2014 | by Wintery Knight | Link | Original Link

Life News has the story.

Excerpt:

> Ruth Nordstrom of Scandinavian Human Rights Lawyers, reports that a lawsuit has been filed against the Swedish Government on the right to freedom of conscience and religion for a midwife who has been refused employment because of her conscientious objection to abortion.
>
> Jönköping County Council's decisions constitute an interference with the exercise of Mrs. Ellinor Grimmarks right to freedom of conscience and religion under the European Convention on Human Rights, says Ruth Nordstrom, Legal Counsel and President of Scandinavian Human Rights Lawyers. – The County Council has supported the withdrawals of offered job positions as a midwife at three different hospitals, and set up an obligation to perform abortions as a condition for employment as a midwife. This is a requirement that puts persons of a certain religion or other beliefs in a discriminatory position.
>
> […]Roger Kiska, Senior Legal Counsel, Alliance Defending Freedom Europe, says "in a civil society, in this day and age, it is shocking that we are denying one of the most fundamental of human rights, the right to conscience. A society has truly lost its way when it excludes someone from the healthcare profession merely because they want to bring human life into the world rather than destroying it. We are confident that the Swedish courts will rule in Mrs. Grimmark's favour, in favour of decency, and in favour of human rights."

Meanwhile, in the UK, this UK Daily Mail article from Dina.

Excerpt:

> Midwives have been given the green light to take the main role in performing abortions.
>
> New Department of Health rules say for the first time that midwives and nurses may 'participate in the termination'. The controversial guidelines were last night condemned by MPs and anti-abortion campaigners.
>
> Crossbench peer Lord Alton said: 'It is particularly perverse that midwives, who do the beautiful work of helping babies into the world, will now be called upon to end the lives of children they might otherwise work to save.'
>
> […]Under previous guidelines, midwives and nurses could undertake 'certain actions' in helping to terminate unwanted pregnancies.
>
> But the new rules go much further and state clearly that a 'nurse or midwife may

> administer the drugs used for medical abortions'.
>
> […]Dr Michael Scott, a consultant psychologist and critic of abortion law, believes the new guidance is designed to free up funds in the NHS. 'Nurses would be cheaper than doctors,' he said. 'One can see that from a purely economic point of view, the Government is moving in that direction.'
>
> Dr Tony Cole, chairman of the Medical Ethics Alliance, added: 'Midwifery is one of the most life-enhancing fields in the whole of medicine and to ask midwives to carry out these death sentences is obscene. It is a betrayal of what midwives are for.'

It will be interesting to see if the UK follows Sweden in forcing midwives to perform abortions or lose their jobs, rather than just "allowing" them to perform them. I think it will quickly go from permission, to pressure, to mandatory assistance – or else.

J. Warner Wallace explains and defends the doctrine of Hell in five podcasts

June 4, 2014 | by Wintery Knight | Link | Original Link

Straight talk on the doctrine of Hell from cold case homicide detective J. Warner Wallace.

Number 1:

> *In the wake of Rob Bell's new book, "Love Wins," many people are beginning to question the nature and existence of Hell and how exactly God decides who must go there. For many,* the idea that our temporal, finite sin on earth should deserve an eternal punishment of infinite torment in hell is ridiculously inequitable. Why would God torture infinitely those who have only sinned finitely? *Jim addresses this objection and answers listener email.*
>
> The MP3 file is here.

Number 2:

> *A loving God would never create a place like Hell, would He? Any God that would send people to a place of punishment and torment is unloving by definition, right? In this podcast, Jim responds to these foundational objections to the existence of Hell. In addition, Jim comments on the Harris / Craig debate and answers listener email related to hearing God's voice.*
>
> The MP3 file is here.

Number 3:

> *In this podcast, Jim answers the objection that God would send people like Gandhi to Hell (simply because they are not Christians) alongside people like Hitler (who have committed unspeakable atrocities). How can a reasonable and just God be the source of such inequitable punishment? Also Jim answers listener email related to the power of prayer, the importance of evidential apologetics and the grounding for objective morality.*
>
> The MP3 file is here.

Number 4:

> Isn't it unfair for God to penalize people who are otherwise good, just because they haven't heard about Jesus? A good God would not send good people to Hell. Jim responds to this objection and answers listener email related to the Craig/Harris debate, pre-existing mythologies that are similar to Jesus, and the difficult, exclusive nature of "election".
>
> The MP3 file is here.

Number 5:

> If God is all-loving, why doesn't he "reform" people rather than simply "punish" them in Hell? Skeptics sometimes argue that a God who simply punishes his children in Hell is a sadistic and vengeful God, unworthy of our worship. Jim responds to this objection and answers listener email related to the nature of "election", the evidence for "annihilationism", and a political quote related to same sex marriage.
>
> The MP3 file is here.

Good listening to help you defend a doctrine that is very unpopular with people who think God should be their cosmic butler.

Army told soldiers who served with Bergdahl told to lie about his desertion

June 5, 2014 | by Wintery Knight | Link | Original Link

Left-wing Mediaite reports.

Excerpt:

> In an appearance on Fox & Friends on Wednesday, retired Army Spc. Josh Fuller, a soldier who served with Sgt. Bowe Bergdahlsince 2008, said that the military informed him and other soldiers that the "narrative" they should maintain is that Bergdahl was captured by the Taliban rather than that he intentionally left his base. When asked if he believed he was told not to "tell the truth" about Bergdahl by military authorities, Fuller said that he did.
>
> "The sentiment that everybody knew was that he walked off the base in the middle of the night, left all his gear there, and went – just walked off the post," Fuller said. "So, we had all known that it was — that he had deserted his post, and there was never anything about him getting captured or POW until a little while later whenever it came down from the chain of command that we needed to keep quiet and not say anything."
>
> "We're going with the narrative that he was captured," Fuller said of the military's position on Bergdahl's alleged desertion.
>
> "So, they basically told you not to tell the truth," Fox host Brian Kilmeade said.
>
> "Yes, sir," Fuller replied.
>
> Fuller concluded by corroborating the claims of Bergdahl's former team leader, Sgt. Evan Buetow,who told CNN on Tuesday that the Taliban's attacks became more directed after Bergdahl was captured.
>
> "The ambushes we use, the certain tactics we use, the Taliban was picking up on those things," Fuller said. "You could tell it was from somebody on the inside that had that info."

Wow. So we gave away five Taliban commanders not just for a deserter, but for a traitor. Is this supposed to make us safer?

What do fathers contribute to the development of their children?

June 5, 2014 | by Wintery Knight | Link | Original Link

Dina tweeted this article from the New York Post.

Excerpt:

> Fathers, it turns out, contribute far more to their children than many of us realize.
>
> Those contributions begin during pregnancy, before fathers and their children have even met. Studies show that the death rate of infants whose fathers were not around during pregnancy is nearly four times that of those with engaged dads. And depression in fathers during their partners' pregnancies — which is more common than most people realize — can increase the child's lifelong risk of depression.
>
> After birth, children whose fathers play with them, read to them, take them on outings, and care for them have fewer behavioral problems during their early school years. And they have a lower risk of delinquency or criminal behavior as adolescents.
>
> Some of fathers' contributions are surprising. One might guess, for example, that mothers have more influence than fathers on their children's language development. Despite the growing number of women in the workforce, mothers still spend more time with children in many families than fathers do.
>
> But that turns out not to be the case. Lynne Vernon-Feagans of the University of North Carolina, who studies language development, has found that when it comes to vocabulary, fathers matter more than mothers.
>
> In middle-class families, she found that parents' overall level of education — and the quality of child care — were both related to children's language development. But fathers made unique contributions to children's language development that went beyond the contributions of education and child care.
>
> When fathers used more words with their children during play, children had more advanced language skills a year later. And that is likely also linked with later success in school.
>
> And when Vernon-Feagans looked at poor families, she found much the same thing. She visited families when a child was 6 months old, 15 months old and 3 years old. She found that fathers' education and their use of vocabulary when reading picture books to their children at 6 months of age were significantly related to the children's expressiveness at 15 months and use of advanced language at age 3.
>
> This held true no matter what the mother's educational level was or how she spoke to the children.

> “I do think our children see it as very special when they do book reading with their fathers,” Vernon-Feagans says. “They may listen more and acquire language in a special way.”
>
> Several studies suggest that fathers also have a powerful influence on their daughters’ sexual behavior during adolescence.
>
> This became clear in 2011 when Frayser High School in Memphis, Tenn., attracted national attention for its high pregnancy rate: About one in five of its female students was either pregnant or had recently given birth.
>
> One local official blamed the high pregnancy rate on television shows such as MTV’s “16 and Pregnant” and “Teen Mom.” The official worried that these shows were encouraging Frayser’s female students to have unprotected sex earlier and more often.
>
> That explanation seemed to make sense. But when psychologist Sarah E. Hill of Texas Christian University examined the situation, she noticed another striking fact: One in four households was headed by a single mother. Studies have revealed “a robust association between father absence — both physical and psychological — and accelerated reproductive development and sexual risk-taking in daughters,” she wrote.
>
> The fathers’ absence in so many families was likely more important than what their daughters watched on television.
>
> These are just a few of the many, many studies in recent years that have demonstrated a powerful link between fathers and their children.

It’s a good summary of the research. We all know that research clearly shows that single motherhood is bad for children, generally. The harm is different depending on whether the child is a boy or a girl, but both sexes are harmed by father absence. So then why do we think that same-sex marriage will be good for children? Either the child will be lacking their biological mother or father. In the case of two lesbians, the child they raise will be facing all the problems described in the research on children raised without their fathers. Why is it a good thing to screw over children just so that adults can be more free to be selfish and destructive?

Ronald Reagan's 40th anniversary D-Day speech: the boys of Pointe du Hoc

June 6, 2014 | by Wintery Knight | Link | Original Link

June 6, 1944 D-Day Normandy Invasion Map

It's June 6th, today, and it's the anniversary of D-Day: the Allied invasion of northern France – the beginning of the end of World War 2. One of the most pivotal events of that day was the assault on German gun emplacements by members of the Army Rangers at a fortified position called "Pointe du Hoc".

President Ronald Reagan recognized the soldiers who attacked Pointe du Hoc back in 1984:

You can read the full transcript of that speech here.

Ronald Reagan also made the case for gratitude and vigilance:

Here's the hymn that starts to play at the end:

The Boys of Pointe du Hoc

Here's a summary of the Pointe du Hoc mission:

> [Lt. Col. James Earl] Rudder took part in the D-Day landings as Commanding Officer of the United States Army's 2nd Ranger Battalion. His U.S. Army Rangers stormed the beach at Pointe du Hoc and, under constant enemy fire, scaled 100-foot (30 meter) cliffs to reach and destroy German gun batteries. The battalion's casualty rate for this perilous mission was greater than 50 percent. Rudder himself was wounded twice during the course of the fighting. In spite of this, they dug in and fought off German counter-attacks for two days until relieved. He and his men helped to successfully establish a beachhead for the Allied forces.

You can watch a three-clip documentary on it, too: part 1, part 2, part 3.

Although initially, the Rangers did not find the guns where they had expected them, they did find them further back behind the cliffs and destroyed them there, removing a threat to the forces that would be landing later.

What does D-Day mean to Christians in particular?

A Christian friend asked me what she should be thinking about when I sent her one of the videos above, and so I wrote her this to explain why I sent her the video:

> To make you close your eyes and think in a more practical way about what it means for someone to sacrifice their lives to save you, of course. What it means to look up cliffs at machine guns, barbed wire and mortars raining death on you and to take a rope in your hands and to climb up a sheer cliff, under heavy fire, in order to save generations yet unborn and freedom itself.
>
> To think about a concrete example helps us to be able to appreciate what Christ did for us in giving his life for us so that we could be free of sin, as well.
>
> This is the insight that drives my entire interest in war and military history, in fact.
>
> What does this mean: "Greater love has no man than this, that a man lay down his life for his friends."
>
> The more you know about D-Day, the more fearful what Jesus did appears, and the more you can be grateful.
>
> Bullets and shrapnel are scary… and so are nails and lashes. Why on Earth would anyone endure either for me? And what should my response be to it?
>
> I think it is helpful to explain Christianity to those who are not yet Christian, and for Christians to fully appreciate what Christianity is all about.
>
> We were in peril. And now we have been saved. But at a cost.

I think that it's important for Christians to look to history, art, poetry and music to help them to reflect and comprehend the sacrifice that Christ made for us in dying on the cross to protect us from peril. What must the cross have looked like to Jesus? It must have been something like what the Omaha beach looked like to the Americans landing in Normandy. Jesus saw whips, thorns and nails, and the heroes of Normandy saw 88 mm AT guns, 81 mm mortars and MG42 machine guns. How should you feel about people who face death on your behalf? Think about it.

Darwinist Karl Giberson uses photo-shopped image of baby with tail in evolution debate

June 6, 2014 | by Wintery Knight | Link | Original Link

Evolution News reports.

Excerpt:

> OK, if there was any doubt that Karl Giberson's tailed-baby photo is a Photoshop creation, that doubt is now dispelled. I emailed the creator of the image, photographer Larry Dunstan, to make sure I hadn't misunderstood. Yes, confirmed the helpful and candid Mr. Dunstan, it was created with Photoshop using a photo of a tail-free two-week-old baby. The tail is not genuine. It was generated by a computer, not by, as Giberson thought, a "gene for tails."
>
> The reader who found the source image on the Internet for me, over at Science Photo Library, works in graphic design and 3D modeling. Says reader Ryan, what made him leery was "the lack of shadow from the tail," and the "framing and composition," which don't match what you'd expect from "a photo intended to document a mutation."
>
> Right. Casey and I had that same gut reaction, but it's good to have our response confirmed by professionals — again.
>
> […]Why do I keep harping on this? Only because human origins is an ultimate question and using human "tails" as evidence for common descent is a mainstay of Darwin defenders.
>
> Theistic evolutionist Dr. Giberson is noted for having criticized and broken with other Evangelical Christians over issues having to do with, according to his characterization, intellectual and scientific integrity. See his book *The Anointed: Evangelical Truth in a Secular Age*.
>
> Is Giberson right to be up on a high horse that way? I'm not a Christian so I don't have his personal stake in the question. But Giberson, after complaining that my querying his use of this photo was "ad hominem" — which it obviously isn't — characterizes me (and Casey Luskin) in a way that clearly is ad hominem.

Lest you think I am tricking you about this being used as evidence for evolution, here is Giberson in the Daily Beast reflecting on his debate performance.

Excerpt:

> I showed pictures of otherwise healthy humans who had been born with webbed feet and tails. I asked the challenging question: "Why does the human genome contain instructions for the production of features we don't use?" The scientific explanation is that we inherited these instructions from our tailed ancestors but the instructions for producing them have been shut off in our genomes, which is

> why Shallow Hal is the only person most people know who has a tail. **Sometimes the "ignore these genes" message gets lost in fetal development, however, and babies are born with perfectly formed, even functional tails.**

Is he right about any of this?

Evolution News explains that he is not:

> For now, here's a crucial fact: **even such so-called "tails" aren't anything like those found in tailed mammals. That is for the simple reason that *"true tails" in humans entirely lack vertebrae — or any kind of bone, cartilage, notochord, or spinal cord.*** As the aforementioned paper in the *Journal of Neurosurgery* explains:
>
> In all reported cases, the vestigial human tail lacks bone, cartilage, notochord, and spinal cord. It is unique in this feature.[2]
>
> Other prominent medical research journals agree:
>
> - A 2013 paper in the *Journal of Child Neurology* states: "**True tails are boneless**, midline protrusion usually attached to the skin of the sacrococcygeal region and capable of spontaneous or reflex motion. They consist of normal skin, connective tissue, muscle, vessels, and nerves and are covered by skin. **Bone, cartilage, notochord, and spinal cord are lacking**."[3]
> - A paper from the *Journal of Pediatric Surgery* states: "**The human vestigial tail lacks bone, cartilage, notochord, and spinal cord**. It contains a central core of mature fatty tissue divided into small lobules by thin fibrous septa. Small blood vessels and nerve fibers are scattered throughout. Bundles of striated muscle fibers, sometimes degenerated, tend to aggregate in the center."[4]
> - An article in the *British Journal of Neurosurgery* explains: "A true tail in humans is vestigial and **never contains vertebrae in contrast to other vertebrate animals**."[5]
> - Most striking of all, perhaps, are the words of a famous paper on tails in *The New England Journal of Medicine*: "When the caudal appendage is critically examined, however, it is evident that **there are major morphologic differences between the caudal appendage and the tails of other vertebrates**. First of all, the caudal appendage does not contain even rudimentary vertebral structures. There are no well-documented cases of caudal appendages containing caudal vertebrae or an increased number of vertebrae in the medical literature, and **there is no zoological precedent for a vertebral tail without caudal vertebrae**."[6]
> - Finally, an article in *Human Pathology* explains: "**In humans a true tail, is vestigial, however, and never contains vertebrae. … Bona-fide**

> **cases of human tails containing bone have not been documented**."[7]
>
> These observations certainly don't make it sound like humans can have "perfectly formed, even functional tails." In fact, it's difficult to argue that any tail could be called "bona fide" if it isn't "bone-fied."

Where did Giberson find the image? In the humor magazine "Cracked". That's… chutzpah. I wonder if he used Dilbert comics as evidence in his PhD thesis?

Standard Operating Procedure

I think it's a bad idea to use images from humor magazines as evidence for your point of view, but I think it's par for the course with Darwinists, who are still using things like Haeckel's embryos in science textbooks as evidence of evolution.

Who says? One of the top peer-reviewed science journals "Science":

> Using modern techniques, a British researcher has photographed embryos like those pictured in the famous, century-old drawings by Ernst Haeckel–proving that Haeckel's images were falsified. Haeckel once admitted to his peers that he doctored the drawings, but that confession was forgotten.

Still used in textbooks, though. It's "fake, but accurate".

Lawrence Krauss debates “A Universe From Nothing” with an astrophysicist

June 6, 2014 | by Wintery Knight | Link | Original Link

Dina sent me news of Saturday’s episode of Unbelievable, which features Lawrence Krauss, who debated William Lane Craig. Krauss’ book was also reviewed in the New York Times.

The MP3 file is here.

Details:

> Lawrence Krauss is a Cosmologist at Arizona State University who describes himself as an “anti-theist”. His latest book “A Universe From Nothing” has received both acclaim and criticism for its attempt to answer the question “Why is there something rather than nothing?” Debating the issue with Krauss is Rodney Holder, Course director at the Faraday Institute, Cambridge. An astrophysicist and priest by background. In a lively exchange they debate whether Krauss’ “nothing” is “nothing”, fine tuning and multiverses, scientific knowledge, miracles and the usefulness of theology and philosophy.

This debate is quite entertaining, and do not be intimidated if your don’t understand science. You can understand pretty easily who is arguing based on facts and who is speculating about unobservable, untestable entities. At one point, Krauss actually denies that there is any fine-tuning in the universe, so please see this link to refute that claim as well as this podcast which explains some examples of fine-tuning. Krauss gets a bit angry at the beginning, but calms down.

Quotation marks are for direct quotes, italics is for made-up snark. See below the summary for more posts that are related to this one.

Summary of the discussion: (picked up at 9:30 when they start talking about the book)

Brierley:

- explain your theory of how the universe can come into being from nothing

Krauss:

- the nothing that preceded the universe is “no space, no time, no universe”
- theists say that God is responsible for creating the universe out of this nothing
- but the laws of nature can create the universe uncaused out of nothing

Holder:

- Krauss sometimes writes that the nothing is really a quantum vacuum, but that is

not nothing
- He even acknowledges in his book that a quantum vacuum is not nothing
- He thinks that the nothing has properties, even though it has no being
- It has the property of being unstable
- It has the property of being acted on by quantum fields
- It has the property of being acted on by gravity

Krauss:

- But nothing can have the potential to do things inside it
- For example suppose you have an electron, *which is not nothing*
- If it jumps from one level to another, it emits light
- There was no potential for the light in the electron, but it was there as part of atomic structure

Holder:

- But in cases like that, there is something physical that has the potential

Krauss:

- Well, how did God makes the universe then if it had no potential?

Holder:

- God existed, and the potential for creating the universe in himself

Brierley:

- Consider the critical review of your book in the New York Times

Krauss:

- It was written by a philosopher, so I dismissed it

Brierley:

- Consider the critical review of your book in the Scientific American

Krauss:

- These book reviewers have not even read my book!

Krauss:

- Science will be able to figure out how to make something from nothing in the future
- We are even now speculating about interesting questions, like is there a multiverse?

Brierley:

- Consider the critical review of your book in the New York Times
- The author of the review claims that you equivocate on the term “nothing”
- In order to get things to pop into being, you have to make “nothing” mean “something”
- Reviewer: none of Krauss’ theories explain how something can come from actual nothingness

Krauss:

- In physics, something and nothing are not that different
- The reviewer doesn’t understand the physics
- He doesn’t understand quantum field theory
- You could call a quantum vacuum “nothing”, *(this is the vacuum fluctuation model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*
- Maybe there is an eternally existing multiverse that we can’t observe or test scientifically
- Maybe it has laws that we don’t know about which allow our universe to pop into being
- Maybe this popping into being is uncaused
- (alarmed) Who made God? Who made God?

Holder:

- God is eternal and necessary

Krauss:

- (interrupting, angry) What does it mean for something to be necessary?

Holder:

- Basically, you have to decide whether there is more evidence that the necessary being God or a multiverse

Brierley:

- So Dr. Krauss are you willing to say that the universe is a brute fact, in some sense, and requires no explanation

Krauss:

- (angry) Religious people are stupid because they just assume brute facts, *not like me and my unobservable, untestable multiverse*
- (angry) Religious people are against the progress of science, they don’t want to figure out how things work

Brierley:

- But isn't it possible that naturalists can be opposed to the progress of science?
- What about the way the Fred Hoyle opposed the Big Bang because he wanted an eternal universe

Krauss:

- (angry) But naturalists like me let the facts determine our beliefs, *like the facts about the eternal unobservable, untestable multiverse*
- (angry, shouting) Philosophers are stupid, they know nothing!

=== Break ===

Brierley:

- Do you see any evidence of purpose in the universe?

Krauss:

- Well maybe I would believe if the stars lined up to spell out a message from God

Brierley:

- Actually no, that wouldn't be evidence for God on your multiverse view
- if there an infinite number of universes existing for an infinite amount of time, then anything can happen no matter how unlikely it is
- therefore, no evidence could convince you that God exists, since the unobservable, untestable, eternal multiverse can make anything it wants

Krauss:

- That's a true statement, *and very convenient for atheists who don't want to be accountable to God, don't you think?*

Brierley:

- Back to the multiverse, how does it solve the fine-tuning?

Krauss:

- "We have no idea if the universe is fine-tuned for life", *even though the atheist Martin Rees who endorsed Krauss' book wrote his own book about the fine-tuning of the universe called "Just Six Numbers"*
- Inflationary theory does suggest a way to create multiple universes, *(this is the chaotic inflationary model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*

Brierley:

- But this theory is still very much a hypothesis, isn't it? We can't observe *or test* this hypothesis can we?

Krauss:

- "No, and that is really important to state"
- "I'm an empiricist, so if you can't falsify it and if you can't test it then it's not science"
- In my book, I speculate about a way that we could test the multiverse theory

Holder:

- Yes, in principle, the multiverse would be scientific if you could test it through other theories like inflationary theory
- There are a lot of speculations about multiverse theory, but no evidence from predictions that were validated in the lab

Krauss:

- "I agree completely with everything you just said"

Brierley:

- Roger Penrose agrees with Holder that the multiverse theory is too speculative
- (To Holder) Isn't the multiverse theory better than positing a completely different kind of being, which is God?

Holder:

- The multiverse theory is extremely speculative
- Even if the multiverse were true, you would still need to explain the multiverse

Krauss:

- People don't oppose my book because it's full of self-contradictory speculations
- People oppose my book because they are stupid and ignorant

Holder:

- There are things that exist that science cannot measure, like objective morality
- It's possible to give explanations for moral behavior by appealing to evolution
- But that does not ground self-sacrificial morality, such as what occurs in the Christian life

Brierley:

- Dawkins says there is no purpose or morality in in the universe, do you agree?

Krauss:

- “There is certainly no evidence of any of that”

Brierley:

- In the book, you talk about how we live in a special time in the universe’s history to be able to do science, *(i.e. – The Privileged Planet hypothesis)*
- You also write about how all the discoveries were are making will not be communicated to anyone in other places in the universe
- So what is the meaning of doing science on your view? And why are you sad at the knowledge that will not be available to people in the future?
- Are you longing for some kind of purpose?

Krauss:

- No, I just get enjoyment from studying the universe with science to gain understanding

Holder:

- What do you make of Einstein’s statement about the unexpected comprehensibility of the universe
- Theists would say that this is because God wanted us to study and understand and gain knowledge

Krauss:

- “It is remarkable that the universe is comprehensible”

Brierley:

- Why is the universe comprehensible?

Krauss:

- Well, maybe the universe just has to be that way

Brierley:

- What do you make of the heat death of the universe, when all life in the universe will die out?

Krauss:

- That’s the way the universe is

=== BREAK ===
Krauss:

- I wouldn't want to live in a universe where there was a God
- God is a cosmic Saddam Hussein
- "Religious people turn their minds off" and believe in God for consolation

Holder:

- First, Jesus is the revelation of God and he is no Saddam Hussein
- Second, the Christian life is anything but easy, we are facing some persecution already in the UK
- Third, there is also the problem of being accountable to God when we die
- It's very much like science – Christianity is the way it is, not the way we want it to be

Krauss:

- "If you don't believe in him, you don't get any of the benefits, so you have to believe"
- "And then if you've done something wrong, you're going to be judged for it"
- "So I don't want to be judged by God, I want to be… that's the bottom line"

Holder:

- Well, Jesus has died to pay the price for those things we've done wrong
- Although we will have to face the charges for what we've done, believers will ultimately be forgiven

UPDATE: Peter Sean Bradley note that Krauss is now walking back his rhetoric in response to criticisms from people like atheist John Horgan.

Evangelical student wins free speech case against Thomas Nelson Community College

June 7, 2014 | by Wintery Knight | Link | Original Link

Campus Reform has the story:

> Virginia taxpayers are footing a $25,000 bill after a public community college stopped a student from preaching on campus.
>
> According to Christian Parks, who identifies as an evangelical Christian, campus police officers at Thomas Nelson Community College stopped him from preaching in a central courtyard on **two separate occasions last semester**. Campus police cited a policy from 1968 which said that only organizations which were recognized by the college would be allowed to demonstrate on campus. These groups would also be restricted to designated areas.
>
> However, last week in a U.S. District Court, a judge ruled that the Virginia Community College System designates outdoor areas on campus as "venues for free expression," thus ruling in favor of Parks. The 23 community college campuses that make up the system are therefore not allowed to place limits on free speech.
>
> The Virginia Community College System will have to pay $1 in nominal damages and $24,999 in legal fees to the **Alliance Defending Freedom** (ADF), a Christian conservative nonprofit organization, which **sued Thomas Nelson Community College** on Parks's behalf.
>
> "Students at 23 community college campuses have greater free speech," Travis Barham, the lawyer on the case, told *Campus Reform*. "Because one student took a stand at Thomas Nelson [Community College], students at 23 difference campuses have greater free speech as a result."
>
> According to Barham, the Virginia Community College System served as a prime example of colleges and college systems should work to make their policies better benefit students.
>
> "The folks at Virginia Community College System really serve as a model of what colleges should do," Barham said, praising the system for having "pleasant and fruitful" conversations with ADF.
>
> The lawsuit, filed in March, took only three months to resolve.

Alliance Defending Freedom is where you turn for help when you face free speech violations on campus.

Does holding to liberal social views automatically make you tolerant?

June 7, 2014 | by Wintery Knight | Link | Original Link

WARNING: This post contains strong language taken from actual messages sent by angry people. Reader discretion is advised.

I just want to quote some of the insults and death threats that social conservative Matt Walsh received. (H/T Melissa)

Excerpt:

To my leftwing friends:

Last night, someone sent me an email threatening to murder me because they disagree with my opinions. It read, in part:

*"F*ck you… I will find a way to kill you. Make no god d*mn mistake, you filth."*

Concise. Eloquent. And now on file with the state police.

After I reported the threat to law enforcement, I didn't pay it much mind. But then, a few minutes ago, I received this message from someone else:

"Matt, you are so filled with hate in everything you write. You are part of the reason why conservative teabaggers in this country are nothing but hate mongers and bigots. Do you want to know why I'm a "liberal"? ***Because liberals know how to make a point without being hateful and spiteful***."(Emphasis mine).

I laughed quite heartily when I read that. Perfect timing. Mere hours after someone called me 'filth' and announced their plan to end my existence all because of my beliefs, I'm informed that these are precisely the people who 'know how to make a point without being hateful and spiteful.'

At first I dismissed this claim and concluded, as I often do, that the person who said it couldn't possibly be serious. Does he really not notice the hate and hostility pouring like sewage out of his own ideological camp? Does he really think that hate is somehow a 'conservative' thing? No, I thought. Nobody is that oblivious.

Actually, kids on college campuses are being educated in such a one-sided way so that this kind of philosophical fail is not only common but almost universal. Brendan Eich lost his job for making a tiny pro-marriage donation. Pro-abortion terrorists vandalize pro-life displays in the name of "free speech". Sometimes the pro-abortion activists go as far as assaulting you. Sometimes the gay activists just try to murder you outright – *with guns*. Many people on the left have been indoctrinated to believe this sort of intolerance of others is logically consistent and even virtuous. They shout down any attempt to engage them with any view that is not their own.

More Matt:

*"Matt, f*ck you. I seriously hope you die."*

*F*ck you and your entire website you f*cking douche. I have known I am transgender for a long time… You are very sick in the head and I hope you rot in hell. I will pray Lucifer himself finds you.*

"Hey f*ck you. Die. That's all."

"You're a f*cking bigot piece of sh*t…"

"I've decided that I'm going to block any friend who reposts your trash on Facebook. You are the worst human being on the planet and the world would be better if you weren't part of it."

"Dear Matt, you're horrible. Kill yourself."

"Oh, like you don't already know you're a piece of sh*t. F*ck you."

"Matt, I saw a Tweet that said you're a flaming bag of dogsh*t on the doorstep of the internet. I thought it was great but kind of insulting to dog sh*t."

"Matt, shut the f*ck up with your hate and homophobia. You are the biggest assh*le I've ever seen. Go crawl into a f*cking hole somewhere and die."

"Anytime someone retweets or shares your posts I die a little inside. Your like a cancer on the internet. You're an embarrassment bro. Seriously, you're the worst."

Look, see? Hatred.

Loathing, despising, detesting, hating.

Not just hatred of my ideas or my actions, but hatred of me personally. A boiling, ungodly rage. A yearning to see me burn in Hell for all eternity. Malicious feelings targeted at me, the human being. A desire to see me dead, hurt, dehumanized. A wish to kill me because of my ideology.

Hatred. Let me assure you that it is a huge problem in the liberal ranks. I experience it everyday. Before you spend another minute lamenting the perceived 'hatred' of conservative bloggers and media personalities, I suggest you look into your own souls. I have seen and felt the cold, stinging hatred that lives there, and it is surely the nastiest and most brutal sort.

Personally, I think that this is part and parcel of the embrace of secularism. Look, let's call a spade a spade. If you think there is no God, then you can't ground morality rationally, you can't ground moral duties rationally, you can't ground human rights rationally, you can't ground human dignity rationally. Your purpose in life is to have a good time. If someone tells you that you are doing wrong and harming others, then there are no restraints – within the worldview of atheism – on what you can do to stop them from even disapproving of your selfish, destructive behavior.

Matt offers this conclusion about his real motives for standing tall for traditional moral boundaries:

> Sometimes I get very angry at the legions of progressive nihilists who stand as staunch advocates for some of the greatest evils mankind has ever witnessed (like abortion, for instance), but beyond anger I always feel pity. I believe that

> you'll destroy yourself with your philosophy before you destroy anyone else, and I sincerely wish for you to avoid that fate.
>
> If I truly think that my views are correct, and that the rejection of neo-liberal cultural dogma will lead you to greater joy and fulfillment in life, ultimately bringing you out of the darkness and into the light of truth, why would I try to help you in that process if I hated you?
>
> I wouldn't. I'd let you drown and die. I'd watch and relish the sight.
>
> That's how a hateful person would handle the situation. He'd keep his opinions to himself. He wouldn't bother. He'd let society run headfirst over the cliff, and he wouldn't care as long as he personally remains standing at the top. The real hateful conservatives and Christians are the ones who say nothing. They see the same truth that I do, and that so many others do, yet they have no interest in opening anyone else's eyes to it. In fact, they are examples of something worse than hate: indifference.
>
> […]Indeed, just because someone voices a disagreement with you doesn't mean they hate you. Often, it means the exact opposite.

What we are seeing now is the resurgence of a worldview of selfishness that will lead to barbarism against the weak. You can see it in the acceptance of abortion, no-fault divorce, gay marriage, and so on. There is no reason to think that it will slow down unless those of us who have *rationally grounded* beliefs in human rights and objective morality speak out now, while there is still time. This is not a game for the timid, though, so buckle up. Innocent lives, born and unborn, are depending on you to *succeed*. When you go out to defend the truth, make sure you've prepared your arguments and evidence with excellence, at the highest level. Make sure there is love for your enemy in in your heart and the sounds of your prayers for them still echoing around you.

UPDATE: I recognize that there are some secular pro-life people. Here is a good post from Secular Pro-Life. (H/T Well Spent Journey) But they are in the minority – most secularists support abortion, which is, I think just morally and rationally indefensible. If moral goodness means anything, it means protecting the weak from selfish destructiveness. We have to give up our hedonism for the benefit of little defenseless children in the womb. That's just Morality 101. If you can go all the way, and not engage in sexual activity that puts unborn children at risk, do that. I'm a virgin, and I value love and romance above recreational sex. Follow me.

Can atheists condemn slavery as immoral? Do atheists believe that slavery is wrong?

June 8, 2014 | by Wintery Knight | Link | Original Link

Note: For a Christian response to the complaint that the Bible doesn't condemn slavery, see this article and this article for slavery in the Old Testament, and this article for slavery in the New Testament. These are all by Christian philosopher Paul Copan. You can watch a lecture with Paul Copan on the slavery challenge here, and buy a book where he answers the challenge in more detail. There is also a good debate on whether the Bible condones slavery here, featuring David Instone-Brewer and Robert Price. My post is not a formal logical essay on this issue, it is more that I am outraged that atheists, who cannot even rationally ground objective morality, insist on criticizing the morality of the Bible. I think that atheists who are serious about finding the truth about these issues should check out those links, if they are interested in getting to the truth of these matters.

In other posts, I've argued that without an objective moral standard of what is right and wrong, any judgments about right and wrong are just individual opinions. So, when an atheist says slavery is wrong, what he really means is that he thinks slavery is wrong *for him*, in the same way that he thinks that,say, that chocolate ice cream is right *for him*. He isn't saying what is wrong *objectively*, because on atheism there are no objective moral rules or duties. He is speaking for himself: "I wouldn't own a slave, just like I wouldn't eat broccoli – because it's yucky!". But he has no rational argument against other people owning slaves in other times and places, because their justification for owning slaves is the same as his justification for not owning slaves : personal preference.

So do atheists oppose slavery? Do they believe in an objective human right to liberty? Well, there are no objective human rights of any kind on atheism. Human beings are just accidents in an accidental universe, and collections of atoms do not mysteriously accrue "rights". There is no natural right to liberty on atheism. Now consider abortion, which is arguably very similar to slavery. Most atheists do favor abortion in this time and place. Like slavery, abortion declares an entire class of weaker people as non-persons in order to justify preserving their own happiness and prosperity by means of violence. That's exactly what slavery does, except abortion is worse than slavery, because you actually kill the person you are declaring as a non-person instead of just imprisoning them.

So how many atheists have this pro-abortion view that it is OK to declare unborn children as non-persons so they can kill them?

Well, according to Gallup, the "non-religious" are the group most likely to support abortion. In fact, 68% favor legalized abortion, compared to only 19% who oppose it.

Take a look at the Gallup poll data from 2012:

Americans' Abortion Views, by Education and Religion

With respect to the abortion issue, would you consider yourself to be pro-choice or pro-life?

	"Pro-choice"	"Pro-life"
	%	%
National adults	41	50
No religion	68	19
Catholic	38	54
Protestant/Other Christian	33	57
Postgraduate	58	37
College graduate only	45	53
Some college	41	49
High school graduate or less	33	53

May 3-6, 2012

GALLUP

Most atheists are OK with the strong killing the weak

The Gallup numbers might actually be low, because "No religion" might include people who are spiritual, but not religious. But what about atheists alone?

As a group, atheists tend to be among the most radical supporters of legalized abortion. The Secular Census of 2012 found that 97% of atheists vote for abortion. There are almost no pro-life atheists. Why is it that atheists look at unborn children and think it's OK to kill them? Well, let's see what atheists scholars think about morality, and we'll find out why they think abortion is OK.

Atheist scholars think morality is nonsense

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Source: http://www.arn.org/docs/orpages/or161/161main.htm

Atheists Michael Ruse says atheists have no objective moral standards:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I

> appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory.(Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

Atheist Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

Let's take a closer look at Richard Dawkins.

Richard Dawkins and morality

Here's how far Dawkins takes his view that there is no evil and no good:

Richard Dawkins explains morality on atheism
But wait! He goes even further than mere abortion:

So, looking at Dawkins, what kind of ethic can you get from Darwinism and atheism? Survival of the fittest. The strong kill the weak.

Richard Dawkins even advocates for adultery.

Now atheists may feign morality in order to get along with other people in a society that is still anchored in Judeo-Christian values, but they tend to vote for liberal social policies, and they oppose political action by those who still hold to objective morality. So what they are working toward, generally, is less and less influence in politics by those who favor objective human rights, objective moral values and objective moral duties.

So do atheists oppose slavery, or don't they?

I actually don't think that atheists think slavery is morally wrong, although they might personally not want to own slaves in this time and place because slavery is illegal – thanks to Judeo-Christian values. But in other areas, like abortion, we can see that atheists are willing to use violence against the weak to augment their happiness and prosperity. Unborn babies are weak, like slaves. Atheists are willing to kill the weak unborn babies who stop them from pursuing pleasure and prosperity. I don't see how they would have any objections to enslaving other people if they had the strength to do so. In fact, unjust imprisonment and forced labor are happening in atheistic North Korea right now.

But do you know who does oppose slavery enough to do something about it?

Dinesh D'Souza explains:

> Slavery was mostly eradicated from Western civilization–then called Christendom–between the fourth and the tenth century. The Greco-Roman institution of slavery gave way to serfdom. Now serfdom has its problems but at least the serf is not a "human tool" and cannot be bought and sold like property. So slavery was ended twice in Western civilization, first in the medieval era and then again in the modern era.
>
> In the American South, Christianity proved to be the solace of the oppressed. As historian Eugene Genovese documents in Roll, Jordan, Roll, when black slaves sought to find dignity during the dark night of slavery, they didn't turn to Marcus Aurelius or David Hume; they turned to the Bible. When they sought hope and inspiration for liberation, they found it not in Voltaire or D'Holbach but in the Book of Exodus.
>
> The anti-slavery movements led by Wilberforce in England and abolitionists in America were dominated by Christians. These believers reasoned that since we are all created equal in the eyes of God, no one has the right to rule another without consent. This is the moral basis not only of anti-slavery but also of democracy.

And, in fact, you can see Christians pushing the culture hard against abortion today, just as we did with slavery. Defending the weak is what we do. Meanwhile, most atheists think that an unborn child has as much of a right to legal protection as a cockroach.

Is cohabitation a better way to prepare for marriage than courting?

June 8, 2014 | by Wintery Knight | Link | Original Link

Matt from Well Spent Journey sent me this assessment of cohabitation from the liberal New York Times.

Excerpt:

> AT 32, one of my clients (I'll call her Jennifer) had a lavish wine-country wedding. By then, Jennifer and her boyfriend had lived together for more than four years. The event was attended by the couple's friends, families and two dogs.
>
> When Jennifer started therapy with me less than a year later, she was looking for a divorce lawyer. "I spent more time planning my wedding than I spent happily married," she sobbed. Most disheartening to Jennifer was that she'd tried to do everything right. "My parents got married young so, of course, they got divorced. We lived together! How did this happen?"
>
> Cohabitation in the United States has increased by more than 1,500 percent in the past half century. In 1960, about 450,000 unmarried couples lived together. Now the number is more than 7.5 million. The majority of young adults in their 20s will live with a romantic partner at least once, and more than half of all marriages will be preceded by cohabitation. This shift has been attributed to the sexual revolution and the availability of birth control, and in our current economy, sharing the bills makes cohabiting appealing. But when you talk to people in their 20s, you also hear about something else: cohabitation as prophylaxis.
>
> In a nationwide survey conducted in 2001 by the National Marriage Project, then at Rutgers and now at the University of Virginia, nearly half of 20-somethings agreed with the statement, "You would only marry someone if he or she agreed to live together with you first, so that you could find out whether you really get along." About two-thirds said they believed that moving in together before marriage was a good way to avoid divorce.

That's a nice idea – wanting protection against divorce. But I think these hopeful attitudes that young people have about cohabitation and the utility / harmlessness of premarital sex, is so much whistling past the graveyard. The fact is that cohabitation does not improve marital stability. Young people believe it because they want to believe it. Let's look at the evidence to see why.

Cohabitation is a bad idea because what it says is that sex is not to be confined to marriage, but it is instead for recreational purposes outside of marriage. If men and women cannot demonstrate that they are capable of self-control prior to marrying by functioning in a relationship based on commitment and not based on pleasure, then they

are not qualified for marriage. Cohabitation is associated with *higher risks of divorce* because it works to undermine the need for quality communication during courting and the need for commitment that is based on discipline, instead of pleasure.

Research has shown that pre-marital chastity produces more stable and higher quality marriages. And that's because chastity helps people to focus on *conversations and obligations* instead of the *recreational sex* which clouds the judgment and glosses over the seriousness of marriage. Premarital sex rushes the relationship to the point where it is harder to break it off because of the sunk costs of sex and the pain of the break-up. Courtship is the time to discuss the things that break up marriages, like finances and division of labor. It is also the time to demonstrate self-control and fidelity.

More:

> Couples who cohabit before marriage (and especially before an engagement or an otherwise clear commitment) tend to be less satisfied with their marriages — and more likely to divorce — than couples who do not. These negative outcomes are called the cohabitation effect.
>
> Researchers originally attributed the cohabitation effect to selection, or the idea that cohabitors were less conventional about marriage and thus more open to divorce. As cohabitation has become a norm, however, studies have shown that the effect is not entirely explained by individual characteristics like religion, education or politics. Research suggests that at least some of the risks may lie in cohabitation itself.
>
> As Jennifer and I worked to answer her question, "How did this happen?" we talked about how she and her boyfriend went from dating to cohabiting. Her response was consistent with studies reporting that most couples say it "just happened."
>
> "We were sleeping over at each other's places all the time," she said. "We liked to be together, so it was cheaper and more convenient. It was a quick decision but if it didn't work out there was a quick exit."
>
> She was talking about what researchers call "sliding, not deciding." Moving from dating to sleeping over to sleeping over a lot to cohabitation can be a gradual slope, one not marked by rings or ceremonies or sometimes even a conversation. Couples bypass talking about why they want to live together and what it will mean.

The problem with young people today is that they want marriage as "a blissful state where I will get whatever I want without having to do anything, and where I am free from the consequences of my own selfishness". They don't want marriage as commitment, moral obligations, serving others and self-sacrifice. By avoiding conversations about who will do what, and what needs doing, they can fool themselves by thinking that happy sex and happy drinking and happy dancing will naturally turn into happy marriage. But marriage isn't about feeling happy, it's about being a sinful person who now has to learn

to love another sinful person and has to train and lead selfish, rebellious children so they are able to serve God and others.

If you asked me, I would tell you that courting is protection against a bad marriage. And the aim of courting is to interview the other person so that you can see whether they understand the demands of the marriage and whether they can perform their duties to their spouse and children. In particular, men should investigate whether the woman has prepared (or is willing to prepare now) to perform her roles as wife and mother, and women should investigate whether the man has prepared to perform his roles as protector, provider and moral/spiritual leader (or is willing to prepare now). Courting is not designed to be fun, although it can be fun. It is not meant to make people feel happy, it is mean to prepare them for marriage. And this is because you cannot translate fun and happy into marriage, because marriage is about well-defined roles, self-sacrifice and commitment. Marriage is about following through for the other person, whether you get what you want or not.

And that’s why I encourage men to very gently and subtly guide the relationship in a way that will allow both the woman and himself to practice their expected marital duties, see how they feel about their duties and get better at being able to perform them.

New study: relationship problems, not family rejection, leading cause of higher gay suicides

June 9, 2014 | by Wintery Knight | Link | Original Link

Life Site News reports.

Excerpt: (links removed)

> While many assume that family rejection is the leading cause of depression among LBGTI individuals, a new study has found that in fact the problem appears to stem predominantly from the higher incidence of relationship problems among homosexuals.
>
> Dr. Delaney Skerrett led a team of researchers from the Australian Institute for Suicide Research and Prevention (AISRAP) in studying suicides in Queensland. He found that a leading cause of suicide among "lesbian, gay, bisexual, transgender, and intersex" (LGBTI) people is stress from their romantic partners.
>
> "We tend to assume that the psychological distress LGBTI people are often going through is due to family rejection. But it seems that's not so much the case. The conflict seems to be largely related to relationship problems, with partners," Dr. Skerrett said.
>
> In fact, he said, "The numbers are telling us there's a general acceptance at the family level," something he said is "great" and "really heartening!"
>
> Instead, the study, which was published on April 2 in *Asia Pacific Psychiatry*, found that "LGBT individuals experienced relationship problems more often" than heterosexuals, "with relationship conflict also being more frequent than in non-LGBT cases."
>
> That confirms previous studies finding that homosexuals also face higher rates of intimate partner violence than heterosexuals. A 2007 study in the *Journal of Urban Health*, which is published by the New York Academy of Medicine, found that 32 percent of homosexuals have been abused by at least one partner during their lifetime.
>
> The researchers with AISRAP also found that a higher percentage of homosexuals took their lives of despondency, rather than other psychological illnesses. While one-eighth of all Queensland suicide victims had been diagnosed with a psychosis that impaired their judgment, Skerrett reports "there were no such diagnoses among LGBT individuals." The conclusion adds to the consensus that depression disproportionately besets active homosexuals.

Previously, I blogged about a gay activist who thought that disagreement with gay rights caused gays to commit suicide. I wonder what he would do with a study like this? I also blogged previously about the "epidemic" of domestic violence among gays, and the

article I linked to for that was from the left-leaning Atlantic Monthly.

But there's more to say – let's look at an individual case now, which will put some meat on the bones of the studies.

Here's an article from the liberal New York Times.

Here's the set up:

> BOB BERGERON was so relentlessly cheery that people sometimes found it off-putting. If you ran into him at the David Barton Gym on West 23rd Street, where he worked out nearly ever morning at 7, and you complained about the rain, he would smile and say you'd be better off focusing on a problem you could fix.
>
> That's how Mr. Bergeron was as a therapist as well, always upbeat, somewhat less focused on getting to the root of his clients' feelings than altering behavior patterns that were detrimental to them: therapy from the outside-in.
>
> Over the last decade, he built a thriving private practice, treating well-to-do gay men for everything from anxiety to coping with H.I.V. Mr. Bergeron had also begun work as a motivational speaker, giving talks at gay and lesbian centers in Los Angeles and Chicago. In February, Magnus Books, a publisher specializing in gay literature, was scheduled to print a self-help guide he had written, "The Right Side of Forty: The Complete Guide to Happiness for Gay Men at Midlife and Beyond."
>
> It was a topic he knew something about. Having come out as gay in the mid-1980s, Mr. Bergeron, 49, had witnessed the worst years of the AIDS epidemic and emerged on the other side. He had also seen how few public examples there were of gay men growing older gracefully.
>
> He resolved to rewrite the script, and provide a toolbox for better living.
>
> "I've got a concise picture of what being over 40 is about and it's a great perspective filled with happiness, feeling sexy, possessing comfort relating to other men and taking good care of ourselves," Mr. Bergeron said on his Web site. "This picture will get you results that flourish long-term."
>
> But right around New Year's Eve, something went horribly wrong. On Jan. 5, Mr. Bergeron was found dead in his apartment, the result of a suicide that has left his family, his friends and his clients shocked and heartbroken as they attempt to figure out how he could have been so helpful to others and so unable to find help himself.

Look:

> To his friends, Mr. Bergeron maintained a positive tone. He went on vacation, dated some, visited museums.
>
> Still, he privately expressed misgivings about what the future held. Olivier Van Doorne, a patient of Mr. Bergeron and the creative director of SelectNY, a fashion advertising firm, recalled Mr. Bergeron telling him that every gay man peaks at

> one point in his life.
>
> “He said a number of times: ‘I peaked when I was 30 or 35. I was super-successful, everyone looked at me, and I felt extremely cool in my sexuality.’ ”
>
> Mr. Siegel, the therapist who supervised Mr. Bergeron in the early days of his career, said: “Bob was a very beautiful younger man, and we talked a lot about how that shapes and creates a life. The thesis of his book is based very much on his own personal experience with that. And the book also emphasized what to do when you’re not attractive or you no longer have the appeal you once had. The idea was to transcend that and expand your sexual possibilities.”

And:

> With the book about to be printed, Mr. Bergeron became convinced that he’d written too much about the shame and isolation involved with hooking up online; that people weren’t even really doing that anymore, now that phone apps like Grindr and Scruff had come along.
>
> His book, he felt, had become antiquated before it even came out.
>
> […]Though some of his friends, Mr. Rappaport among them, wondered whether drugs were involved, leading to a crash Mr. Bergeron did not anticipate, the suicide seemed to have been carried out with methodical precision. On an island in the kitchen, Mr. Bergeron had meticulously laid out his papers. There was a pile of folders with detailed instructions on top about whom to call regarding his finances and his mortgage. Across from that he placed the title page of his book, on which he also wrote his suicide note. In it he told Mr. Sackheim and Mr. Rappaport that he loved them and his family, but that he was “done.”
>
> As his father remembered it, Mr. Bergeron also wrote, “It’s a lie based on bad information.”
>
> An arrow pointed up to the name of the book.
>
> The inference was clear. As Mr. Bergeron saw it at the end of his life, the only right side of 40 was the side that came before it.

I think that the problem is that in the gay lifestyle, you have a typically male emphasis on physical appearance, sex and pleasure. There is none of the moderating influence of women, which tends to push men into commitments, responsibility and stability.

If you really love a person, then you don’t tell them that the dangerous thing they want to do is not dangerous. That’s not love. It’s easier for you to approve of them and be liked by everyone, but it’s not love.

Walt Russell explains how to read the Bible effectively

June 9, 2014 | by Wintery Knight | Link | Original Link

Dr. Walt Russell's book on the subject of interpreting the Bible is called "Playing With Fire: How the Bible Ignites Change in Your Soul". I like that book, but I found four articles that summarize the main points of the book so people can understand how to read the Bible at a high livel.

Here is part one which talks about how postmodern relativism is at odds with discovering the original intent of an author.

Excerpt:

> Twenty-four year-old "Janet" (not her real name) was angry at my emphasis on seeking to discover authors' intentions when we read their texts. She was an evangelical Christian and a second grade teacher in a public school. She prided herself in helping her 20 students learn to love literature. She would read them a story as they gathered around her, and then ask each child, "What does the story mean to you?" She prodded them to come up with their own unique meanings. With such strong encouragement, the class of 20 would eventually have 20 different meanings for the one story. Janet sensed that I was a naysayer about such "love of literature." Pouring a little emotional gasoline on the fire, I said, "Janet, you're certainly doing your part to insure that these 7 year-olds will never recover from a radically relativistic view of meaning!" Now I had her full attention.

Here is part two which talks about the importance of knowing the genre of a text before you try to interpret it.

Excerpt:

> "INDIANS SLAY TIGERS!" — the newspaper headline virtually screams out at you. The thought of something being slain is repulsive. You're gripped by a mental image of southern India's Bengal tiger. You imagine its beautiful face, its stripes and piercing eyes. Then your image is shattered by the sudden blast of a high-powered rifle. You see the exquisite creature writhe in pain, fall gracelessly in its tracks and die. Having read no further than the headline, you feel sick, as if you've witnessed something tragic.
>
> But *should* you feel this way? The slaughter of an endangered species — especially one as magnificent as the Bengal tiger — is horrifying, no doubt. But suppose you failed to notice that the headline "INDIANS SLAY TIGERS!" appeared in the *sports page* of the morning paper. Clearly enough, it now refers to different Indians, different Tigers and a different manner of slaying than you originally thought. And is it really that tragic that the Cleveland Indians badly beat the

> Detroit Tigers in a major league baseball game last night? Not unless you're a long-suffering Detroit Tigers' baseball fan. But how do you now know that the headline is about baseball and not tiger-slaying in India? You look at the words "INDIANS SLAY TIGERS" and you know exactly what each word means. When you combine these words, how can they not mean exactly what you first thought they did — that *Indians slay tigers*? Answer: because their meanings are communicated (as the meanings of *all* words are) through *genres*!

Here is part three which talks about the importance of reading the context of a verse before you try to interpret it.

Excerpt:

> "Never Read a Bible Verse!" That's the title of a little booklet my friend and Christian radio personality, Gregory Koukl, has written to help people read the Bible well. What great advice. "That's right, never read a Bible verse. Instead, always read a paragraph — at least." But the current is flowing the other way in our popular sound-bite culture. Not to be left out (or left behind!), the Church has its own version of sound-bite culture: *verse-bite culture*. In verse-bite culture we take a sentence or sentence-fragment from a biblical paragraph, memorize it out of context, write it on a little card, put it on a billboard, a plaque, a rock, etc. Somehow we think that just because this little chunk of Scripture has a verse number in front of it, it was meant to be a free-standing unit of thought. Nothing could be further from the truth.
>
> Apart from the fact that chapter and verse divisions weren't added to the New Testament text until 1560 — long after the New Testament's inspired authorship — there is a more important reason for never reading just a Bible verse, and instead reading at least the paragraph that contains it.

Here is part four which talks about the importance of applying the words of the Bible to your life.

One verse that is often misinterpreted is missing from the articles, but present in the STR lecture. It's Philippians 1:6 that says "6 being confident of this, that he who began a good work in you will carry it on to completion until the day of Christ Jesus". Russell says in the lecture that this promise is specifically intended for the church in Philippi, to whom Paul is writing, not necessarily to all Christians. He is giving them a promise just after directly referring to their good work in supporting him in his ministry. Some verses are just not meant for us, and the context reveals it.

The Weekly Standard podcasts on Democrats' terrorists for traitor swap

June 9, 2014 | by Wintery Knight | Link | Original Link

I listened to these 4 podcasts on the weekend, and I thought there was a lot in there that I had not heard in the news. The Weekly Standard is my favorite political podcast.

June 2nd:

THE WEEKLY STANDARD Podcast with senior writer Stephen F. Hayes on Sgt. Bowe Bergdahl, who was recently traded for five Taliban prisoners from terrorist captivity.

The MP3 file is here.

June 3rd:

THE WEEKLY STANDARD Podcast with Thomas Joscelyn, Senior Fellow at the Foundation for Defense of Democracies and frequent contributor on why the Bergdahl swap is a terrible deal for American Security.

The MP3 file is here.

June 4th:

THE WEEKLY STANDARD Podcast with editor William Kristol on the Obama administration's changing explanations of the Bergdahl prisoner swap.

The MP3 file is here.

June 6th:

THE WEEKLY STANDARD Podcast with senior writer Stephen F. Hayes on Sgt. Bowe Bergdahl, who was recently traded for five Taliban prisoners from terrorist captivity.

The MP3 file is here.

June 9th:

The WEEKLY STANDARD podcast with senior writer Stephen F. Hayes on his recent story about how many White House statements about the Bergdahl/Taliban 5 swap have been contradicted either by facts or by testimony.

The MP3 file is here.

I recommend listening to all of them. The VA scandal was bad, because it was basically the Democrats killing off wounded soldiers. But the release of these 5 terrorist commanders goes beyond that – endangering our men and women in the military and just encouraging our enemies to kidnap more Americans and bargain with them. If you want the bad guys to stop being bad, you kill them. You don't reward them. That just makes them act more badly.

J. Warner Wallace's experience as a youth pastor

June 10, 2014 | by Wintery Knight | Link | Original Link

If you are a regular listener to Wallace's podcast, as I am, you'll have heard him talk about his experience as a youth pastor before. But if not, give this article a read.

Excerpt:

> My first year as a youth pastor was a challenging year of self-evaluation. When I was initially offered the job, I wasn't sure I could lead or teach high-schoolers; I'd been working with younger students and my own children were not yet teenagers. But I was ambitious and eager, so I accepted the position. I spent several months trying to decide what the teaching focus should be for my group. I surveyed some of the key seniors who had been in the ministry to see what they thought. We ended up doing a series on James and Ecclesiastes, and most of my energy that first year was expended on designing the Sunday service. I was concerned about "relevance" and spent a lot of time trying to understand how to communicate to this age group. I thought *experience* was as important as *content*. Actually, I thought experience was *more important* than content. My students got their money's worth every Sunday. It was a musical, visual smorgasbord of video, images, interactive eclecticism and burning candles. It was ridiculous.
>
> At the end of the first school year I could tell something was amiss. Most of my key seniors seemed disconnected and disinterested. I got through that first summer and the first semester of the next school year, striving continually to capture the imagination and attention of my student congregation. At Christmas break that year I had an epiphany. One of my key seniors from the prior year returned from Sonoma State where she had been attending her first year as a College freshman and announced to her parents that she was no longer a Christian. I got the call from her mother. I met with this student and she told me about her new life as an atheist. While I was frustrated and didn't seem to be able to persuade her otherwise, I also wondered if she was the exception or the rule. I did some research on my other graduating seniors from the prior year. All but one had left Christianity, and they were only in their first semester as freshmen!

Don't worry – the post has a happy ending. I wish more Christian leaders would allow themselves to accept that what they are doing now – avoiding apologetics because it is "divisive" and "prideful" – would learn from J. Warner Wallace. We need this. It works. What we are doing with young people now is *not working*.

Kevin DeYoung's article opposing gay marriage has broad appeal

June 10, 2014 | by Wintery Knight | Link | Original Link

Marriage and family

In my own secular case against gay marriage from a while back, I argued for 3 points:

- same-sex marriage is bad for liberty, especially religious liberty
- same-sex marriage is bad for children
- same-sex marriage is bad for public health

My hope when I wrote that was that pastors and other Christian leaders would learn to argue for what the Bible says by using evidence from *outside* the Bible, so that they would be able to appeal to *more* people instead of only appealing to the minority of people who accept the Bible. I think that Christians who argue for their views by citing the Bible only will only be convincing to people who already accept the Bible. But there is not a majority of people who do accept the Bible as an authority, so I think that pastors have to make another plan. They need to argue using the Bible to those who accept the Bible, and without the Bible to those who don't accept it.

Now with that said, take a look at this article by pastor Kevin DeYoung that Dina sent me. It's from earlier this week. The article makes the same exact three points as I made in my article last year. Let's take a look at how Kevin does that.

My first point was liberty, especially religious liberty. He writes:

> [I]n the long run, the triumph of gay marriage (should it triumph as a cultural and legal reality) will mean the restriction of freedoms for millions of Americans.
>
> This will happen in obvious ways at first–by ostracizing those who disagree, by bullying with political correctness, and by trampling on religious liberty. Surely, Christians must realize that no matter how many caveats we issue, not matter how much we nuance our stance, no matter how much we encourage or show compassion for homosexuals, it will not be enough to ward off the charges of

> hatred and homophobia.
>
> [G]ay marriage will challenge our freedoms in others way too. It's not just Evangelicals, traditional Catholics, and Mormons who will be threatened. Once the government gains new powers, it rarely relinquishes them. There will be a soft tyranny that grows as the power of the state increases, a growth that is intrinsic to the notion of gay marriage itself.

My second point was bad for children. He writes:

> [T]he state has an interest in promoting the familial arrangement which has a mother and a father raising the children that came from their union. The state has been in the marriage business for the common good and for the well-being of the society it is supposed to protect. Kids do better with a mom and a dad. Communities do better when husbands and wives stay together. Hundreds of studies confirm both of these statements (though we all can think of individual exceptions I'm sure). Gay marriage assumes that marriage is re-definable and the moving parts replaceable.

My third point was bad for public health. He writes:

> The unspoken secret, however, is that homosexual behavior is not harmless. Homosexuals are at a far greater risk for diseases like syphilis, HIV/AIDS, hepatitis, gonorrhea, HPV, and gay bowel syndrome. The high rate of these diseases is due both to widespread promiscuity in the gay community and the nature of anal and oral intercourse itself. Homosexual relationships are usually portrayed as a slight variation on the traditional "norm" of husband-wife monogamy. But monogamy is much less common among homosexual relationships, and even for those who value monogamy the definition of fidelity is much looser.

He also talks about the definition of marriage, and more.

I've criticized pastors before for dealing with social issues by only citing the Bible, like John Piper does. That approach won't work on enough people to change society, because not enough people consider the Bible to be an authority in their decision-making. We have to use evidence from outside the Bible – like Wayne Grudem does in his "Politics According to the Bible".

I think that pastor Kevin's article is quality work, because it follows the pattern of taking an all-of-the-above approach to persuasion. He uses all means to persuade so that he might win some over to his side. I hope that many more pastors will do the same thing on this issue of marriage and other issues – even fiscal issues. Fiscal issues do have an impact on moral issues – think of how abortion subsidies and single mother welfare lower the penalties of recreational premarital sex. We can do this, we just have to do what works, instead of what makes us feel "holier-than-thou".

Has Christianity held back the progress of science? What about Galileo?

June 10, 2014 | by Wintery Knight | Link | Original Link

First, here's an article from the peer-reviewed journal Nature, probably the best peer-reviewed journal on science in the world.

The article is written by James Hannam. He has a PhD in the History and Philosophy of Science from the University of Cambridge and is the author of The Genesis of Science: How the Christian Middle Ages Launched the Scientific Revolution (published in the UK as God's Philosophers: How the Medieval World Laid the Foundations of Modern Science).

Excerpt:

> Few topics are as open to misunderstanding as the relationship between faith and reason. The ongoing clash of creationism with evolution obscures the fact that Christianity has actually had a far more positive role to play in the history of science than commonly believed. Indeed, many of the alleged examples of religion holding back scientific progress turn out to be bogus. For instance, the Church has never taught that the Earth is flat and, in the Middle Ages, no one thought so anyway. Popes haven't tried to ban zero, human dissection or lightening rods, let alone excommunicate Halley's Comet. No one, I am pleased to say, was ever burnt at the stake for scientific ideas. Yet, all these stories are still regularly trotted out as examples of clerical intransigence in the face of scientific progress.
>
> Admittedly, Galileo was put on trial for claiming it is a fact that the Earth goes around the sun, rather than just a hypothesis as the Catholic Church demanded. Still, historians have found that even his trial was as much a case of papal egotism as scientific conservatism. It hardly deserves to overshadow all the support that the Church has given to scientific investigation over the centuries.
>
> That support took several forms. One was simply financial. Until the French Revolution, the Catholic Church was the leading sponsor of scientific research. Starting in the Middle Ages, it paid for priests, monks and friars to study at the universities. The church even insisted that science and mathematics should be a compulsory part of the syllabus. And after some debate, it accepted that Greek and Arabic natural philosophy were essential tools for defending the faith. By the seventeenth century, the Jesuit order had become the leading scientific organisation in Europe, publishing thousands of papers and spreading new discoveries around the world. The cathedrals themselves were designed to double up as astronomical observatories to allow ever more accurate determination of the calendar. And of course, modern genetics was founded by a future abbot growing peas in the monastic garden.
>
> But religious support for science took deeper forms as well. It was only during the

> nineteenth century that science began to have any practical applications. Technology had ploughed its own furrow up until the 1830s when the German chemical industry started to employ their first PhDs. Before then, the only reason to study science was curiosity or religious piety. Christians believed that God created the universe and ordained the laws of nature. To study the natural world was to admire the work of God. This could be a religious duty and inspire science when there were few other reasons to bother with it. It was faith that led Copernicus to reject the ugly Ptolemaic universe; that drove Johannes Kepler to discover the constitution of the solar system; and that convinced James Clerk Maxwell he could reduce electromagnetism to a set of equations so elegant they take the breathe away.
>
> Given that the Church has not been an enemy to science, it is less surprising to find that the era which was most dominated by Christian faith, the Middle Ages, was a time of innovation and progress. Inventions like the mechanical clock, glasses, printing and accountancy all burst onto the scene in the late medieval period. In the field of physics, scholars have now found medieval theories about accelerated motion, the rotation of the earth and inertia embedded in the works of Copernicus and Galileo. Even the so-called "dark ages" from 500AD to 1000AD were actually a time of advance after the trough that followed the fall of Rome. Agricultural productivity soared with the use of heavy ploughs, horse collars, crop rotation and watermills, leading to a rapid increase in population.

I hope this will set the record straight – Judeo-Christian monotheism created the enterprise of experimental science.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

Bowdoin College bans Christian student groups on campus

June 11, 2014 | by Wintery Knight | Link | Original Link

From the radically leftist New York Times. (H/T Nancy P.)

Excerpt:

> For 40 years, evangelicals at Bowdoin College have gathered periodically to study the Bible together, to pray and to worship. They are a tiny minority on the liberal arts college campus, but they have been a part of the school's community, gathering in the chapel, the dining center, the dorms.
>
> After this summer, the Bowdoin Christian Fellowship will no longer be recognized by the college. Already, the college has disabled the electronic key cards of the group's longtime volunteer advisers.
>
> In a collision between religious freedom and antidiscrimination policies, the student group, and its advisers, have refused to agree to the college's demand that any student, regardless of his or her religious beliefs, should be able to run for election as a leader of any group, including the Christian association.
>
> Similar conflicts are playing out on a handful of campuses around the country, driven by the universities' desire to rid their campuses of bias, particularly against gay men and lesbians, but also, in the eyes of evangelicals, fueled by a discomfort in academia with conservative forms of Christianity. The universities have been emboldened to regulate religious groups by a Supreme Court ruling in 2010 that found it was constitutional for a public law school in California to deny recognition to a Christian student group that excluded gays.
>
> At Cal State, the nation's largest university system with nearly 450,000 students on 23 campuses, the chancellor is preparing this summer to withdraw official recognition from evangelical groups that are refusing to pledge not to discriminate on the basis of religion in the selection of their leaders. And at Vanderbilt, more than a dozen groups, most of them evangelical but one of them Catholic, have already lost their official standing over the same issue; one Christian group balked after a university official asked the students to cut the words "personal commitment to Jesus Christ" from their list of qualifications for leadership.
>
> […]The evangelical groups say they, too, welcome anyone to participate in their activities, including gay men and lesbians, as well as nonbelievers, seekers and adherents of other faiths. But they insist that, in choosing leaders, who often oversee Bible study and prayer services, it is only reasonable that they be allowed to require some basic Christian faith — in most cases, an explicit agreement that Jesus was divine and rose from the dead, and often an implicit

> expectation that unmarried student leaders, gay or straight, will abstain from sex.
>
> “It would compromise our ability to be who we are as Christians if we can’t hold our leaders to some sort of doctrinal standard,” said Zackary Suhr, 23, who has just graduated from Bowdoin, where he was a leader of the Bowdoin Christian Fellowship.
>
> The consequences for evangelical groups that refuse to agree to the nondiscrimination policies, and therefore lose their official standing, vary by campus. The students can still meet informally on campus, but in most cases their groups lose access to student activity fee money as well as first claim to low-cost or free university spaces for meetings and worship; they also lose access to standard on-campus recruiting tools, such as activities fairs and bulletin boards, and may lose the right to use the universities’ names.

Not sure how you are supposed to have a Christian student group, if the leaders don’t accept the authority of the Bible. But maybe that’s a feature, not a bug, from the point of view of these secular administrators and their allies in the judiciary. The really sad thing about this is that Christian taxpayers are paying these secular authorities to curtail their basic rights. It’s only open season on Bible-believing Christians.

How likely is it for blind forces to sequence a functional protein by chance?

June 11, 2014 | by Wintery Knight | Link | Original Link

How likely is it that you could swish together amino acids randomly and come up with a sequence that would fold up into a functional protein?

Evolution News reports on research performed by Doug Axe at Cambridge University, and published in the peer-reviewed Journal of Molecular Biology.

Excerpt:

> Doug Axe's research likewise studies genes that it turns out show great evidence of design. Axe studied the sensitivities of protein function to mutations. In these "mutational sensitivity" tests, Dr. Axe mutated certain amino acids in various proteins, or studied the differences between similar proteins, to see how mutations or changes affected their ability to function properly.[10] He found that protein function was highly sensitive to mutation, and that proteins are not very tolerant to changes in their amino acid sequences. In other words, when you mutate, tweak, or change these proteins slightly, they stopped working. In one of his papers, he thus concludes that "functional folds require highly extraordinary sequences," and that functional protein folds "may be as low as 1 in 10^77."[11] The extreme unlikelihood of finding functional proteins has important implications for intelligent design.

Just so you know, those footnotes say this:

> [10.] Douglas D. Axe, "Estimating the Prevalence of Protein Sequences Adopting Functional Enzyme Folds," *Journal of Molecular Biology*, 1-21 (2004); Douglas D. Axe, "Extreme Functional Sensitivity to Conservative Amino Acid Changes on Enzyme Exteriors," *Journal of Molecular Biology*, Vol. 301:585-595 (2000).
>
> [11.] Douglas D. Axe, "Estimating the Prevalence of Protein Sequences Adopting Functional Enzyme Folds," *Journal of Molecular Biology*, 1-21 (2004).

And remember, you need a lot more than just 1 protein in order to create even the simplest living system. Can you generate that many proteins in the short time between when the Earth cools and the first living cells appear? Even if we spot the naturalist a prebiotic soup as big as the universe, and try to make sequences as fast as possible, it's unlikely to generate even one protein in the time before first life appears.

Here's Doug Axe to explain his research:

If you are building a protein for the FIRST TIME, you have to get it right all at once – not by building up to it gradually using supposed Darwinian mechanisms. That's because there is no replication before you have the first replicator. The first replicator cannot rely on explanations that require replication to already be in place.

St. Louis couple uses guns to defend their daughter against two criminals

June 12, 2014 | by Wintery Knight | Link | Original Link

The Blaze explains who no one in the mainstream media (or the White House) seems to understand: Guns Save Lives.

Excerpt:

> Two armed criminals reportedly put a gun to a 17-year-old girl's head on Monday night as she was outside retrieving something from a car. The man, whose intentions still aren't entirely clear, then ordered the teenager to take them into her house — a decision that would prove to have deadly consequences.
>
> Peering out the window of the St. Louis home were the girl's mother and father, each prepared to protect their daughter with deadly force. There was also a 5-year-old boy in the house, though his relationship to the family wasn't known on Tuesday.
>
> The girl's father, a 34-year-old man, reportedly observed the men walking towards his home while holding a gun to his daughter's head, a sight that no father ever wants to see. He quickly retrieved his firearm and his wife did the same.
>
> The brave dad then confronted the two criminals and opened fire, hitting both suspects with accurate shots. The girl's mother also fired off some rounds, but failed to hit either suspect.
>
> One of the men was reportedly pronounced dead at the scene while the second suspect escaped only to later be arrested after calling his brother to take him to the hospital because he had been shot.
>
> "Police identify the suspect who was killed as 31-year-old Terrell Johnson from north St. Louis,"KTVI-TV reports. "The second suspect- a 33-year-old man- is hospitalized in critical but stable condition with gunshot wounds to his chest and both thighs. Police say he will face charges."
>
> No one other than the suspected criminals were injured in the incident.

So, now might be a good time to review the science on guns and self-defense.

A quick refresher on why people own guns

People own guns so that they deter criminals and reduce the crime rate in their communities. The more guns there are in the hands of law-abiding citizens, the lower the crime rate goes, because criminals don't like being shot at by their crime victims.

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England‟s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people.

A more recent study – from 2014

A new study that was in the news just last week confirms these findings. Newsmax reported on it.

Excerpt:

> A recent study showing a reverse correlation between concealed weapons and murder rates has renewed the contentious national debate about the effect of gun controls on violent crime.
>
> Reason magazine reported last week on economist Mark Gius' study of gun controls, published in the journal Applied Economics Letters showing states with restrictions on concealed weapons had higher gun-related murder rates than other states.
>
> The study looked at the effects on murder rates of both state-level assault weapons bans and concealed weapons restrictions from 1980 to 2009.
>
> […]The findings come as A 2007 study has been also getting a new look from those who dispute gun control efforts aimed at stemming gun violence, Boston magazine reported last summer.
>
> In research first published in Harvard's Journal of Public Law and Policy, criminologists Don Kates and Gary Mauser looked at the correlation between gun laws and death rates.
>
> "International evidence and comparisons have long been offered as proof of the mantra that more guns mean more deaths and that fewer guns, therefore, mean fewer deaths," the pair wrote in their introduction. "Unfortunately, such discussions [have] all too often been afflicted by misconceptions and factual error and focus on comparisons that are unrepresentative."
>
> The pair found "correlations that nations with stringent gun controls tend to have much higher murder rates than nations that allow guns."

It's not a reasonable position to think that disarming law-abiding citizens will reduce crime rates. The evidence is against it.

Don’t like violence against women and children? Then you should promote marriage

June 12, 2014 | by Wintery Knight | Link | Original Link

Brad Wilcox writes about what research shows about marriage and domestic violence, in the leftist Washington Post.

Excerpt:

> Married women are notably safer than their unmarried peers, and girls raised in a home with their married father are markedly less likely to be abused or assaulted than children living without their own father.
>
> Start with the threat that girls face from men. One of the most comprehensive portraits of sexual and physical abuse of girls (and boys) comes from the Fourth National Incidence Study of Child Abuse and Neglect. As the figure above indicates, children are more likely to be abused when they do not live in a home with their married father. What’s more: girls and boys are significantly more likely to be abused when they are living in a cohabiting household with an unrelated adult—usually their mother’s boyfriend. Indeed, the report notes that “only 0.7 per 1,000 children living with two married biological parents were sexually abused, compared to 12.1 per 1,000 children living with a single parent who had an unmarried partner.” The results from this federal study are consistent with academic research (see here and here, as well) that indicates that “girls who are victimized are … more likely to have lived without their natural fathers,” and that the risk is especially high when a boyfriend or stepfather is in the picture.
>
> The risk of physical abuse also increases when a child lives without her father, once again, particularly when an unrelated boyfriend is in the home. A 2005 study published in *Pediatrics* found that “[c]hildren residing in households with unrelated adults were nearly 50 times as likely to die of inflicted injuries than children residing with 2 biological parents.”
>
> Women are also safer in married homes. As the figure above (derived from a recent Department of Justice study) indicates, married women are the least likely to be victimized by an intimate partner. They are also less likelyto be the victims of violent crime in general. Overall, another U.S. Department of Justice study found that never-married women are nearly four times more likely to be victims of violent crime, compared to married women. The bottom line is that married women are less likely to be raped, assaulted, or robbed than their unmarried peers.
>
> What’s going on here? Why are women safer when married and children safer when living with their married biological parents? For girls, the research tells us that marriage provides a measure of stability and commitment to the adults’

> relationship, that married biological fathers are more likely to be attentive and engaged with their children because they expect the relationship to be enduring. As a consequence, unrelated males are less likely to have sustained interaction with children of the family when dad has a day-in-day-out presence in the home. More generally, the “emotional support and the supervision” that engaged fathers provide to their children can limit their vulnerability to potential predators, as David Finkelhor, director of the University of New Hampshire Crimes Against Children Research Center, has observed.

Stephen C. Meyer: does the Big Bang cosmology support the existence of God?

June 12, 2014 | by Wintery Knight | Link | Original Link

Here's the 66-minute video featuring Dr. Stephen C. Meyer, who holds the Ph.D in philosophy of science from Cambridge University, and other degrees in the hard sciences.

The lecture starts really, really slowly. You can just fast-forward to the 12 minute mark, or you might die of boredom.

Topics:

- Up until the the last 100 years or so, everyone agreed that the universe was eternal
- This is at odds with the traditional Christian view that God created the universe
- Materialism, the view that matter is all there is, requires eternally existing matter
- Discovery #1: Hubble discovers that the universe is expanding (redshift observation)
- The expanding universe was resisted by proponents of the eternal universe, like Einstein
- Some naturalists even proposed speculative static models like the steady-state model
- However, not of the speculative models fit with observations and experimental results
- Discovery #2: Penzias and Wilson discover the cosmic microwave background radiation
- Measurements of this background radiation confirmed a prediction of the Big Bang theory
- The steady-state theory was falsified of by the discovery of this background radiation
- The oscillating model was proposed to prevent the need for an absolute beginning
- But the oscillating model is not eternal, it loses energy on each "bounce"
- A paper by Alan Guth and Marc Sher from 1982 proved that our universe will not bounce
- In addition, experiments reveal that the universe will expand forever, and not contract
- The beginning of the universe is more at home in a theistic worldview than an atheistic one
- The beginning of the universe fits in well with the Bible, e.g. – Genesis 1, Titus 1, etc.

In case you are wondering about what the evidence is for the Big Bang, here are 3 of the evidences that are most commonly offered:

> Three main observational results over the past century led astronomers to

> become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

This is a good article to send to atheists who are not comfortable with what the progress of science has revealed about the beginning of the universe, and of time itself. If you look in agnostic astronomer Robert Jastrow's book "God and the Astronomers" (2nd edition), you'll find 6 evidences.

By the way, Dr. Meyer also does a great job of explaining the problem of proteins, DNA and the origin of life in this lecture. And you can hear him defend his views in this debate podcast with Keith Fox and in this debate podcast with Peter Atkins. He does a great job in these debates.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

After Obama's retreat of U.S. armed forces, Iraq plunges into bloody civil war

June 13, 2014 | by Wintery Knight | Link | Original Link

In 2008 and 2012, Americans voted for a "fundamental transformation" of our peace through strength foreign policy. And we got it. What does it look like?

ABC News reports:

> Hundreds of Iraqi men, women and children crammed into vehicles have fled their homes, fearing clashes, kidnapping and rape after Islamic militants seized large swaths of northern Iraq.
>
> The families and fleeing soldiers who arrived Thursday at a checkpoint at the northern frontier of this largely autonomous Kurdish region in Iraq were among some half-million people who have fled their homes since Monday, according to a U.N. estimate.
>
> Workers were busily extending the Khazer checkpoint in the frontier area known as Kalak, where displaced women hungrily munched on sandwiches distributed by aid workers and soldiers rushed to process people.
>
> The exodus began after fighters of the al-Qaida breakaway group, the Islamic State of Iraq and the Levant, seized the northern city of Mosul in a stunning assault Monday. Since then, the militants have moved southward toward the capital, Baghdad, in the biggest crisis to face Iraq in years.
>
> "Masked men came to our house and they threatened us: 'We will get to you.' So we fled," said Abed, a laborer who abandoned his home on the edge of Mosul Thursday. "They kidnapped other people. They took away some people for interrogation."
>
> The young man said rumors were quickly spreading that Islamic State fighters — as well as masked bandits taking advantage of the chaos — were seizing young women for rape or forced marriage.

It looks like a civil war.

More from the Wall Street Journal:

> The Sunni insurgents' lightning offensive in the past three days has sparked the biggest crisis Iraq has faced since it plunged into sectarian violence following the U.S.-led invasion in 2003.
>
> ISIS overran Tikrit, the birthplace of former dictator Saddam Hussein, on Wednesday. But early Thursday government forces fought back, said Ali Muhammad, an official in Sunni-dominated Salah Al Din province, where the city is located.
>
> […]The group aims to set up a state in a continuous stretch of territory from

> Sunni-dominated Anbar province in Iraq to Raqqa province in northeast Syria. Since capturing Iraq's second-largest city, Mosul, on Tuesday it has advanced south along the Tigris River toward Baghdad.
>
> In another indication of the increasingly sectarian contours of Iraq's turmoil, ISIS on Thursday issued a threat against Baghdad as well as Karbala and Najaf. The latter two cities, along with Mecca and Medina in Saudi Arabia, are considered sacred to Shiites, who make up 60% of Iraq's population.
>
> […]U.S.-armed and trained Iraqi security forces put up almost no fight throughout the militants' rout, witnesses said.

Who is to blame for this? Did it all happen by accident?

The UK Telegraph explains:

> The takeover of large swathes of Iraq by Islamist militants should be seen as a damning indictment of Obama's ill-judged decision to abandon the country to its fate so early in his presidency.
>
> Throughout his tenure at the White House Mr Obama has made much political capital out of his claim to be an anti-war president: the man who brought America's decade of war in Iraq and Afghanistan to an end.
>
> But in his desperation to distance himself from the Bush administration, Mr Obama made no real effort to understand the implications of authorising a wholesale American withdrawal from Iraq three years ago.
>
> There were many Americans – including many prominent Democrats – who took the view that, after the terrible cost that the US had paid for ridding the country of Saddam Hussein and establishing Iraq's first democratic constitution, the White House owed it to the American people to make sure Iraq continued to develop as a functioning democratic state.
>
> But for that to happen, Washington needed to make a commitment to maintain a residual military presence in Baghdad to ensure that Nouri al-Maliki's government did not renege on his commitment to reconcile his political differences with the country's Kurdish and Sunni minorities.
>
> But after Mr Obama lost patience with Mr al-Maliki, and ordered a unilateral withdrawal of American forces three years ago, Mr al-Maliki felt he was no longer under any obligation to honour his commitments. Instead, he cultivated deeper ties with neighbouring Iran, thereby further inflaming Sunni tribal leaders who felt increasingly disfranchised in post-Saddam Iraq.
>
> The result is the current crisis, which has seen the radical Islamist group, the Islamic State of Iraq and al-Sham (ISIS), seize control of large areas of the country, including Mosul – the country's second largest city – and Saddam's hometown of Tikrit.

For a more pessimistic commentary on these events, see this Investors Business Daily

editorial, which tries to predict where this will all end. It’s not a good prediction, if you like freedom and peace.

DCF social workers reverse their support for kidnapping of Justina Pelletier

June 13, 2014 | by Wintery Knight | Link | Original Link

The UK Daily Mail reports.

Excerpt:

> A Connecticut teenager is closer to being returned to her parents after the Massachusetts Department of Children and Families decided she was better off in the care of her family than the state.
>
> The final decision now rests with Judge Joseph Johnston who gave the state permanent custody of Justina Pelletier in March.
>
> The move came after a highly publicized battle involving differing diagnoses from doctors at Boston Children's Hospital and Tufts Medical Center and allegations of medical child abuse against her parents.
>
> The 16-year-old made an impassioned plea to go home earlier this week, and DCF has removed its longstanding opposition to the idea. DCF now claims that Lou and Linda Pelletier have met the conditions asked of them in order to get their child back.
>
> They will all now be looking to see if the judge agrees.
>
> […]The Pelletiers' trying ordeal began 16 months ago when they submitted their daughter for evaluation at Tufts University hospital.
>
> Justina's case has gained attention after a diagnostic dispute between her doctors at Tufts Medical Center and at Boston Children's Hospital over whether her deteriorating condition was primarily a physical or a psychiatric problem.
>
> She was being treated at Tufts for more than a year for mitochondrial disease, a group of genetic disorders that affect how cells produce energy, often causing problems with the gut, brain, muscles, and heart.
>
> However, doctors at Children's hospital took a different view and concluded that her physical symptoms were primarily caused by psychological disorders.
>
> After the conflicting diagnosis, doctors allegedly gave Justina's parents the bewildering and heart-breaking news that they wouldn't be able to take their daughter home.
>
> Justina's parents refused to accept that her condition was psychological in nature and tried to discharge her and bringing her back to Tufts.
>
> Speaking of the moment their daughter was taken away from her, the teenager's mother said: "They came in, and they said we cannot take Justina out of the hospital.
>
> 'They called DCF (Department for Children and Families).

> ‘They said Justina had ‘somatoform disorder,’ a form of mental illness that is characterized by physical symptoms.’
>
> Linda and Lou Pelletier were escorted out of the hospital by security, and within the short space of four days they had lost custody of their beloved daughter.

In my previous post on this story, I noted that parental visits were conducted *under armed guard*. That’s what the state did to these parents.

I hope we will see a close to this story soon. I would like to see DCF social workers and the medical personnel at the Boston Children’s Hospital charged and tried in a criminal court for what they did. Maybe the charges could be something like child abuse or kidnapping. I hope that the people who made the decisions that took the girl away from her parents will see significant jail time. Then parents might start to have faith in their hospitals and social workers – which they are paying for. But then again, this is Massachusetts. It’s probably too much to hope for common sense there.

New book “Counting to God” discusses seven arguments against atheism from science

June 13, 2014 | by Wintery Knight | Link | Original Link

Evolution News has a summary of the book – they recommend it.

Excerpt:

> A lot of books — many of them very good — have been written about the debate over intelligent design. But rarely does one come along that combines a compelling story of the author’s personal journey to faith with a well-written, comprehensive, easy-to-read presentation of the scientific evidence. Lee Strobel’s 2004 *Case for a Creator* comes to mind, but that is now ten years old and it’s never too soon for an update. As a result, I’m pleased to recommend an outstanding new book: *Counting to God: A Personal Journey through Science to Belief*, by Douglas Ell.
>
> Doug Ell is an attorney in Washington, D.C., with an undergraduate degree in math and physics from MIT, and a master’s degree from the University of Maryland in theoretical math. You’ll have to read the book to learn Doug’s entire story. He was born into a religious home, but by the time he started college, he had drifted away from his upbringing, which he came to see as outdated superstition. As an undergraduate student, he embraced scientism — the view that scientific investigation is the only means of discovering real truth. Sometime later, however, Doug was introduced to the scientific theory of intelligent design, and everything began to change.
>
> *Counting to God* tells Doug’s story, but it also recounts key lines of evidence that support the theory of intelligent design and challenge materialist explanations of cosmic and biological origins. Ell presents what he calls the “seven wonders” of science of the new millennium:
>
> - The universe had a beginning, and a first cause, some 14 billion years ago.
> - The universe is finely tuned for life.
> - The complexity of life could not arise through unguided processes.
> - DNA contains information and biological machines.
> - New species appear suddenly in the fossil record.
> - Earth is a special planet, uniquely suited to life.
> - Quantum physics points to a reality outside of space and time.
>
> Ell surveys the evidence in each of these areas, discussing other intriguing topics along the way, including the multiverse, junk DNA, irreducible complexity, orphan genes, and near-death experiences.

I think we’ve discussed all seven of those arguments on this blog before, depending on

what he means by them.

The hardcover is a lot more expensive than the Kindle edition, but I felt that this was one book I wanted to put on my desk. So I took a chance and ordered it. I hope it's as good as this review says it is!

William Lane Craig debates Lawrence Krauss in Melbourne, Australia: Does God Exist?

June 14, 2014 | by Wintery Knight | Link | Original Link

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

Summary

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

Dr. Craig's opening speech. (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
    - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
    - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
    - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
    - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
    - The underlying structure of nature is mathematical – mathematics is *applicable* to nature

    - Mathematical objects can either be abstract objects or useful fiction
    - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
    - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
    - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
    - These constants and quantities have to be set within a narrow range in order to permit intelligent life
    - There are three explanations for this observation: law, chance or design
    - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter
    - Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
    - We do not observe what the world ensemble hypothesis predicts that we should observe
    - Design is the best explanation for finely-tuned constants and quantities
4. The existence of objective moral values and duties
    - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
    - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
    - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
    - The best explanation for the existence of objective moral values and duties is that God exists
5. The historicity of the resurrection of Jesus
    - There are three widely-accepted facts that are best explained by the resurrection hypothesis
    - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
    - Naturalistic attempts to explain these 3 boilerplate facts fail
    - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
    - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

Dr. Krauss' opening speech. (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I

    - There have been lots of different gods created by people through history
    - We've gotten rid of all of them by understanding how the universe works by doing science
    - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
    - Newtonian physics refutes the idea that angels push planets around
    - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
    - Biochemistry hasn't explained how life originated, but we will have the solution soon
    - Physics shows us that matter can be created and destroyed without need a God
    - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
    - Since we have been able to disprove all the gods we've invented, why hang on to the last one
    - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
    - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
    - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
    - Peasants had a very low level of knowledge about the world and they believed in God
    - But our level of knowledge has increased over time, so we shouldn't believe in God now
    - Peasants thought that the Earth orbited the Sun, but this is now known to be false
    - The Scriptures said that the Earth orbited the Sun, but now we know that's false from science
7. Christianity plagiarizes from other religions I
    - There is nothing new or special about Jesus
    - He's just as unpleasant as all the other gods
    - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
    - I'll bet most Catholics don't really believe in transubstantiation
    - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
    - Dionysus, Osiris, etc.

10. There is no evidence for the resurrection
    - The stories about Jesus were written “decades or hundreds of years after the fact”
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That’s like saying that all alien abductions experts agree that alien abductions happened
    - It’s unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume’s argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn’t demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense
14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who “uses the exact same arguments” that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms “is that morally wrong? I can’t say it is frankly” (37:24)
16. Dr. Craig is irrational
    - “I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan”
    - “Any argument that validates God is reasonable to him”

    - “And any argument against it is not only unreasonable but wrong and worth distorting”
    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments
    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

Discussion: (44:35)

I will not be summarizing everything that was said, just a few main points.

The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see. Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the

universe are probably wrong, he quietens down and can't even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don't work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don't have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) "All the evidence suggests that the universe had a beginning but WE DON'T KNOW!!!!!!!" (raising his voice)
- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this: (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is

highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early

creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

Audience Q and A: (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

Islamic terrorist group taking over northern Iraq scores $425 million from bank

June 14, 2014 | by Wintery Knight | Link | Original Link

The leftist Washington Post reports.

Excerpt:

> Of the many stunning revelations to emerge out of the wreckage of Mosul on Wednesday — 500,000 fleeing residents, thousands of freed prisoners, unconfirmed reports of "mass beheadings" — the one that may have the most lasting impact as Iraq descends into a possible civil war is that the Islamic State of Iraq and Syria just got extremely rich.
>
> As insurgents rolled past the largest city in northern Iraq, an oil hub at the vital intersection of Syria, Iraq and Turkey, and into Tikrit, several gunmen stopped at Mosul's central bank. An incredible amount of cash was reportedly on hand, and the group made off with 500 billion Iraqi dinars — $425 million.
>
> The provincial governor of Nineveh, Atheel al-Nujaifi, said that the radical Islamists had lifted additional millions from numerous banks across Mosul, as well as a "large quantity of gold bullion," according to the International Business Times, which called ISIS the "World's Richest Terror Force."
>
> […]The Taliban, the New York Times reported, had a one-time annual operating budget of somewhere between $70 million and $400 million. Hezbollah was working with between $200 million and $500 million. FARC in Colombia had annual revenues of $80 million to $350 million. Al-Shabab in Somalia had between $70 million and $100 million socked away. **And Al-Qaeda, meanwhile, was working with a $30 million operating budget at the time of the Sept. 11, 2001, attacks, according to the Council on Foreign Relations.**
>
> […]For a terrorist group that operates more and more like a de facto state governing a huge swath of land spilling across Syria and Iraq, the potential impact could be huge. By nearly every measure, Iraq is embroiled in civil war. With lightning speed, not deterred by Iraqi soldiers running scared, the insurgency on Wednesday moved within 70 miles of Baghdad, which analysts say is "definitely vulnerable," according to The Washington Post's Liz Sly and Loveday Morris.
>
> […]Complicating that call to action, however, is ISIS's money. It will "buy a whole lot of Jihad," regional analyst Brown Moses wrote on Twitter. "For example, with $425 million, ISIS could pay 60,000 fighters around $600 a month for a year."

Regarding the beheadings, we have this from the leftist Washington Post.

> The first thing you hear is the music. It lilts and sways. Then you see the Islamist militants. They're knocking at a policeman's door. It's the middle of the night, but the cop soon answers. He's blindfolded and cuffed. They take him to the bedroom. And then, reports say, they decapitate him with a knife.
>
> Another video captures militants with the Islamic State of Iraq and Syria (ISIS) herding hundreds of boys and Iraqi soldiers down a highway to an unknown fate. "Repent," ISIS told inhabitants of its newly conquered territory on Thursday. "But anyone who insists upon apostasy faces death."
>
> […]The stories, the videos, the acts of unfathomable brutality have become a defining aspect of ISIS, which controls a nation-size tract of land and has now pushed Iraq to the precipice of dissolution. Its adherents kill with such abandon that even the leader of al-Qaeda has disavowed them. "Clearly, [leader Ayman] al-Zawahiri believes that ISIS is a liability to the al-Qaeda brand," Aaron Zelin, who analyzes jihadist movements for the Washington Institute for Near East Policy, told The Washington Post's Liz Sly earlier this year.
>
> But in terms of impact, the acts of terror have been wildly successful. From beheadings to summary executions to amputations to crucifixions, the terrorist group has become the most feared organization in the Middle East. That fear, evidenced in fleeing Iraqi soldiers and 500,000 Mosul residents, has played a vital role in the group's march toward Baghdad. In many cases, police and soldiers literally ran, shedding their uniforms as they went, abandoning large caches of weapons.

So now we know what happens next after the U.S. military pulls out of the Middle East. A civil war happens. Terrorists steal hundreds of millions of dollars. Innocent people are directly targeted by terrorists who seize power by brutal violence. That's what the anti-war movement wanted, and that's what we've got.

Basically, this is going to end with Syria AND Iraq under the control of Iran. That's not good for the Middle East, and it's not good for us either. Iran has been sponsoring terrorist attacks against our forces abroad (Quds force operating in Iraq), and even here at home (the ambassador assassination attempt in New York). We need a foreign policy that recognizes evil as evil, instead of focusing on exporting abortion and gay marriage. Foreign policy is about

How fathers teach children to work hard and believe in God

June 15, 2014 | by Wintery Knight | Link | Original Link

Here's a good article for Father's Day from Arthur Brooks in the radically leftist New York Times, of all places.

Excerpt:

> The data confirm that hard work is correlated with well-being. The University of Michigan's Panel Study of Income Dynamics polls thousands of American families, and its 2009 results show that people who feel good about themselves work more than those who don't. It asks how often the respondents felt so sad that nothing could cheer them up. My analysis of the study showed that people who felt that way "none of the time" worked 10 percent more hours per week than those who felt that way "most of the time." This holds true when we eliminate people who worked zero hours, so it is not merely that unemployed people are miserable. This doesn't prove that extra work hours chase away sadness, but it weakens any argument that the cure for the blues is a French workweek.
>
> So vocation is crucial to leading a satisfying life. Who teaches this truth to children? Many traditions emphasize the role of fathers. Jesus defended himself to the Pharisees for working on the Sabbath by saying, "my Father is always at his work to this very day, and I, too, am working." And the Talmud instructs us, "For a man not to teach his son a trade or profession is equivalent to teaching him to steal."
>
> The best way for a father to teach this is by example. This explains why a child's ability to grow up to be a productive adult is so strongly predicted by the presence of a working father in the home. The Princeton sociologist Sara McLanahan has for decades studied what happens to sons and daughters when their fathers are absent. She finds that after controlling for demographics, children in fatherless families are roughly twice as likely to drop out of high school as kids in intact homes. Even after controlling for student talent via standardized test scores, a sharp decline in grades and attendance persists. And young men who grow up without a father are 1.5 times more likely to be idle — that is, neither in the work force nor in school — than those with a father in the home. And this brings us to a particularly serious issue this Father's Day: Our growing national jobs deficit. In 1953, just 14 percent of adult American men were neither working nor seeking work. Today, that rate has more than doubled, to 30 percent. And this doesn't only reflect an aging population with more retired men: Just after World War II, 8 percent of noninstitutionalized males ages 25 to 54 were not working. Today, 17 percent of that same group of men are idle.

So fathers are important for teaching children to work, which is how they become independent and able to share with others in need. That's valuable. And that was certainly true for me – my father took me to work all the time and on weekends even. And when I was in high school, he encouraged me to work in the summers and take a job in the evenings year-round. Looking back, this is definitely one the things that went right in my story.

But there's more that fathers can do. Take a look at this statistical evidence on fathers and religious belief of children.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If

> his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an enormously difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary.

You can learn even more about the importance of fathers by looking at these statistics on fatherlessness.

An atheist explains the implications of adopting an atheistic worldview

June 15, 2014 | by Wintery Knight | Link | Original Link

If you love to listen to the Please Convince Me podcast, as I do, then you know that in a recent episode, J. Warner Wallace mentioned a blog post on an atheistic blog that clearly delineated the implications of an atheistic worldview. He promised he was going to write about it and link to the post, and he has now done so.

Here is the whole the whole thing that the atheist posted:

> "[To] all my Atheist friends.
>
> Let us stop sugar coating it. I know, it's hard to come out and be blunt with the friendly Theists who frequent sites like this. However in your efforts to "play nice" and "be civil" you actually do them a great disservice.
>
> We are Atheists. We believe that the Universe is a great uncaused, random accident. All life in the Universe past and future are the results of random chance acting on itself. While we acknowledge concepts like morality, politeness, civility seem to exist, we know they do not. Our highly evolved brains imagine that these things have a cause or a use, and they have in the past, they've allowed life to continue on this planet for a short blip of time. But make no mistake: all our dreams, loves, opinions, and desires are figments of our primordial imagination. They are fleeting electrical signals that fire across our synapses for a moment in time. They served some purpose in the past. They got us here. That's it. All human achievement and plans for the future are the result of some ancient, evolved brain and accompanying chemical reactions that once served a survival purpose. Ex: I'll marry and nurture children because my genes demand reproduction, I'll create because creativity served a survival advantage to my ancient ape ancestors, I'll build cities and laws because this allowed my ape grandfather time and peace to reproduce and protect his genes. My only directive is to obey my genes. Eat, sleep, reproduce, die. That is our bible.
>
> We deride the Theists for having created myths and holy books. We imagine ourselves superior. But we too imagine there are reasons to obey laws, be polite, protect the weak etc. Rubbish. We are nurturing a new religion, one where we imagine that such conventions have any basis in reality. Have they allowed life to exist? Absolutely. But who cares? Outside of my greedy little gene's need to reproduce, there is nothing in my world that stops me from killing you and reproducing with your wife. Only the fear that I might be incarcerated and thus be deprived of the opportunity to do the same with the next guy's wife stops me. Some of my Atheist friends have fooled themselves into acting like the general population. They live in suburban homes, drive Toyota Camrys, attend school plays. But underneath they know the truth. They are a bag of DNA whose only

> purpose is to make more of themselves. So be nice if you want. Be involved, have polite conversations, be a model citizen. Just be aware that while technically an Atheist, you are an inferior one. You're just a little bit less evolved, that's all. When you are ready to join me, let me know, I'll be reproducing with your wife.
>
> I know it's not PC to speak so bluntly about the ramifications of our beliefs, but in our discussions with Theists we sometimes tip toe around what we really know to be factual. Maybe it's time we Atheists were a little more truthful and let the chips fall where they may. At least that's what my genes are telling me to say."

In his post, Wallace comments on the statement above, but for more, you should listen to the podcast.

This fellow is essentially expanding on what Richard Dawkins has said about atheism:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

And Cornell University atheist William Provine agrees: (this is taken from his debate with Phillip E. Johnson)

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin's views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That's the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

And what about Florida State University atheist Michael Ruse:

> "The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory." (Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

I see a lot of atheists these days thinking that they can help themselves to a robust notion of consciousness, to real libertarian free will, to objective moral values and duties, to objective human rights, and to objective meaning in life, without giving credit to theism. It's not rational to do this. As Frank Turek said on the latest episode of "Cross Examined", atheists have to sit in God's lap to slap his face. We should be calling them out on it. I think it's particularly important not to let atheists utter a word of moral judgment on any topic, since they cannot ground an objective standard that allows them to make statements of morality. Further, I think that they should have every immorality ever committed presented to them, and then they should be told "your worldview does not allow you to condemn this as wrong". They can't praise anything as right, either. This is not to say that we should go all presuppositional on them, but if the opportunity arises to point out how they are borrowing from theism in order to attack it, we should do that *in addition* to presenting good scientific and historical evidence.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

After a year of stalling, IRS blames loss of e-mails on “hard drive crash”

June 16, 2014 | by Wintery Knight | Link | Original Link

Most ethical administration in history not a smidgeon of corruption

Sharryl Atkisson (formerly of CBS News) is has questions for the IRS about lost e-mails..

Excerpt:

> According to the House Ways and Means Committee, the IRS reports having “lost” former IRS manager Lois Lerner’s emails to and from other IRS employees sent between January of 2009 and April of 2011 due to a ‘computer crash.’
>
> In light of the disclosure, these are some of the logical requests that should be made of the IRS:
>
> - Please provide a timeline of the crash and documentation covering when it was first discovered and by whom; when, how and by whom it was learned that materials were lost; the official documentation reporting the crash and federal data loss; documentation reflecting all attempts to recover the materials; and the remediation records documenting the fix. This material should include the names of all officials and technicians involved, as well as all internal communications about the matter.
> - Please provide all documents and emails that refer to the crash from the time that it happened through the IRS’ disclosure to Congress Friday that it had occurred.

> - Please provide the documents that show the computer crash and lost data were appropriately reported to the required entities including any contractor servicing the IRS. If the incident was not reported, please explain why.
> - Please provide a list summarizing what other data was irretrievably lost in the computer crash. If the loss involved any personal data, was the loss disclosed to those impacted? If not, why?
> - Please provide documentation reflecting any security analyses done to assess the impact of the crash and lost materials. If such analyses were not performed, why not?
> - Please provide documentation showing the steps taken to recover the material, and the names of all technicians who attempted the recovery.
> - **Please explain why redundancies required for federal systems were either not used or were not effective in restoring the lost materials, and provide documentation showing how this shortfall has been remediated.**
> - Please provide any documents reflecting an investigation into how the crash resulted in the irretrievable loss of federal data and what factors were found to be responsible for the existence of this situation.
> - I would also ask for those who discovered and reported the crash to testify under oath, as well as any officials who reported the materials as having been irretrievably lost.
>
> The Committee had requested the Lerner emails as part of its investigation into to the targeting of conservative non-profits by the IRS. The Obama administration has denied any corruption or intentional wrongdoing. Lerner took the Fifth when asked to testify to Congress. The House of Representatives subsequently held her in contempt. The lost materials are said to include any communications that may have occurred between Lerner and outside agencies or groups such as the White House, the Treasury Department, the Department of Justice, the Federal Elections Commission and the offices of Democrats.
>
> House and Ways Committee Chairman Dave Camp (R-Mich.) says that along with providing news of the emails that have been lost, the IRS suggested in the same letter to Congress that it end its investigation.

The leftist Washington Post explains that the Democrats' excuse of "computer crash" makes no sense, since e-mails are not stored on individual computers, but on servers that are protected from disasters.

Excerpt: (links removed)

> On Friday afternoon, the IRS apparently informed the House Ways and Means Committee that it cannot produce any e-mail correspondence from January 2009 to April 2011 between Lois Lerner and anyone outside the IRS – e.g., the White

> House, the Department of Justice, the FEC or Democratic congressional offices. According to the IRS, these 28 months of e-mails were wiped out by a "computer crash."
>
> Here is the commissioner of the IRS, testifying before Congress in March that the e-mails of employees such as Lerner are "stored in servers." Here is a PowerLine post arguing that the "computer crash" excuse is "implausible to anyone who understands how email systems work." And here is House Ways and Means Committee Chairman Dave Camp (R-Mich.) calling for "an immediate investigation and forensic audit by Department of Justice as well as the Inspector General."

The IRS is blaming a "hard drive" crash for the loss – as it the e-mails were stored on Lois Lerner's computer. But as an IT professional with 15 years experience, this is a joke – on the order of the blaming of a terrorist attack on a Youtube video.

In enterprise IT systems, critical data (including e-mails) are replicated across multiple server clusters in multiple geographic locations. Large companies typically have disaster recovery exercises in order to ensure that even catastrophic situations will not result in data loss. You would think that the Democrats could have come up with a better story to cover up who was responsible for the persecution of Tea Party groups in order to win the 2012 election, but alas, no. We truly have been governed by clowns since January 2009.

Are you training your replacement?

June 16, 2014 | by Wintery Knight | Link | Original Link

I saw this post on Pastor Matt's blog (H/T Truthbomb Apologetics), in which he talked about how William Lane Craig, the foremost Christian evangelist today, was inspiring a generation of young Christians to study hard subjects and to have an influence.

Pastor Matt then describes his own efforts with the Alliance Defense Fund, where he serves as Director of Development.

He writes:

> My primary job is to serve the Christian legal ministry Alliance Defending Freedom. Other than winning approximately 80% of our cases, we have committed to training the next generation of Christian lawyers (yes, there is such a thing). Alliance Defending Freedom (or ADF) instituted The Blackstone Legal Fellowship to impact future generations. We pick the top Christian law students from across the country, train them and place them in a paid internship with attorneys already fighting everyday for life, marriage and religious liberty across the globe. The results have been tremendous. After all, think about the impact an Ivy League law student committed to following Christ would have if properly trained in Constitutional law and given real world experience in defending the 1st Amendment? Such students go on to become federal law clerks, U.S Attorneys and federal judges.
>
> The Blackstone program inspired me to think about applying the same to rising Christian apologists. After all, if we lost significant ground in the culture war because we ceded academia to the left, what would happen if we identified the best and brightest committed Christians studying philosophy or science and helped them to rise to the top of their fields via a training program including internships and networking opportunities?
>
> For example, let's say a grad student at Houston Baptist University or the Talbot School of Theology has been accepted to study philosophy of science at Cambridge or physics at Cal Tech. Wouldn't it make a difference if he or she were given a chance over their summer break to spend time learning about the latest in New Testament studies from N.T. Wright and intelligent design from Stephen Meyer followed by a paid internship with the Discovery Institute or RZIM? Then think of the possibilities of linking all of these men and women through an online network and regular get togethers where they could support one another through prayer and commenting on each others' writings. The benefits could be not only better writing but friendships that help avoid unnecessary divisions as well as maintaining the momentum Dr. Craig and others have initiated.

I'm definitely a huge fan of the ADF and Blackstone Legal Fellowship, but I have my own

plan to train my replacements.

For some time now, I have been getting to know young Christians who want to make a difference for Christ and his Kingdom, and I have been encouraging them. Sometimes, that encouragement means sending money, sometimes it means sending books, sometimes it means sending care and encouragement, sometimes it means picking college courses and sometimes it means helping with homework or technical issues. Sometimes it means listening as they get through a bad break-up or deal with doubts. Sometimes it means giving them advice on courting and marriage. It could mean anything – but the goal is to build them up to have an influence.

I am a single man and have been careful to study difficult subjects and move around as necessary to find good-paying work. That leaves me in a position where I am able to spend my free time caring for these younger Christians as they grow their skills, build their resumes and get their ministries set up. I expect them all to surpass me in their achievements and influence. So although I have been able to escape my upbringing and reach some measure of success, my hope for them is that they will reach even higher than I was able to. But that’s not going to happen unless they have a vision for their lives and are supplied in order to reach their goals.

So, do you have a plan to develop influential and effective Christians who will replace you?

William Lane Craig posts full Vilenkin e-mail misrepresented by Krauss in their debate

June 16, 2014 | by Wintery Knight | Link | Original Link

First, Dr. Craig posted the e-mail from Vilenkin to Krauss, which Krauss used in his debate with Craig, with the parts Krauss omitted in bold:

> Hi Lawrence,
>
> Any theorem is only as good as its assumptions. The BGV theorem says that if the universe is on average expanding along a given worldline, this worldline cannot be infinite to the past.
>
> A possible loophole is that there might be an epoch of contraction prior to the expansion. Models of this sort have been discussed by Aguirre & Gratton and by Carroll & Chen. **They had to assume though that the minimum of entropy was reached at the bounce and offered no mechanism to enforce this condition. It seems to me that it is essentially equivalent to a beginning.**
>
> **On the other hand,** Jaume Garriga and I are now exploring a picture of the multiverse where the BGV theorem may not apply. In bubbles of negative vacuum energy, expansion is followed by cocntraction, **and it is usually assumed that this ends in a big crunch singularity.** However, it is conceivable (and many people think likely) that singularities will be resolved in the theory of quantum gravity, so the internal collapse of the bubbles will be followed by an expansion. In this scenario, **a typical worldline will go through a succession of expanding and contracting regions, and** it is not at all clear that the BGV assumption (expansion on average) will be satisfied.
>
> **I suspect that the theorem can be extended to this case, maybe with some additional assumptions. But** of course there is no such thing as absolute certainty in science, especially in matters like the creation of the universe. Note for example that the BGV theorem uses a classical picture of spacetime. In the regime where gravity becomes essentially quantum, we may not even know the right questions to ask.
>
> Alex

Now recall that Krauss excuses the selective editing of the e-mail in the debate by saying that it was “too technical” to include. Judge for yourself if the omitted lines are “too technical” or whether they were omitted in order to mislead people about the evidence for the beginning of the universe.

Dr. Craig comments:

> Whoa! That puts a very different face on the matter, doesn’t it? Why didn’t

> Krauss read the sentence, “It seems to me that it is essentially equivalent to a beginning”? Because it was too technical? Is this the transparency, honesty, and forthrightness that Krauss extols? (By the way, Vilenkin’s criticism of these models is the same one that Vilenkin makes in his Cambridge paper: far from showing an eternal past, these models actually feature a universe with a common beginning point for two arrows of time.)
>
> And why did Krauss delete Vilenkin’s caveat that the BGV theorem can, in his estimation, be extended to cover the case of an expanding and contracting model such as Garriga and Vilenkin are exploring? And why delete the remark that such a model is usually assumed to be incorrect? It’s evident that Vilenkin’s email was selectively edited to give it the spin Krauss wanted.

Some people told me that they thought that Dr. Craig needed to be a little less gracious with Krauss in the debate, but that comment takes Krauss on directly. Too bad most of the people who watch the debate will never know unless they see the original e-mail from Vilenkin that Craig posted.

Dr. Craig then wrote to Dr. Vilenkin about this misrepresentation and here is part of the reply:

> The Aguirre-Gratton model can avoide singularities by postulating a small “initial” closed universe and then allowing it to evolve in both directions of time. I put “initial” in quotation marks, because Aguirre and Gratton do not think of it that way. But this model requires that a very special condition is enforced at some moment in the history of the universe. At that moment, the universe should be very small and have very low entropy. Aguirre and Gratton do not specify a physical mechanism that could enforce such a condition.
>
> Carroll and Chen claim that the universe did not have to be small at that special moment. But in my recent paper I show that in this case singularities are unavoidable.
>
> […]I think you represented what I wrote about the BGV theorem in my papers and to you personally very accurately.

Now I don’t want anyone to get the idea that all atheists are like Krauss. I distinctly remember another atheist named Anthony Flew debating Dr. Craig and a questioner from the audience asked him why not prefer speculative cosmologies like the eternally oscillating model. Dr. Flew (unlike Dr. Krauss) was honest – he said that we have to accept the science we have today based on the evidence we have today. Dr. Krauss is not willing to accept the science we have today and the evidence we have today. That’s the difference. This is a failing of Dr. Krauss’ will and intellect. He simply cannot bring himself to accept what science has shown, if it impacts his autonomy in any way. He would rather mislead himself and others with speculations rather than face reality.

Watch the whole debate – see for yourself

I’ll re-state the relevant part of my Craig-Krauss debate summary below. The summary

has the full video.

The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see. Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can't even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don't work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don't have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) "All the evidence suggests that the universe had a beginning but WE DON'T KNOW!!!!!!!" (raising his voice)
- Craig: I'm not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"

- Craig: “I wonder what you deleted from the original letter”
- Krauss: (agitated and interrupting) “I just told you!”
- Craig: “Now wait. Could it have been something like this: (reads a quote from Vilenkin) ‘You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.’
- Craig: “That’s Vilenkin.”
- Krauss: “In this paper, that’s absolutely right”
- Krauss: But it’s ok for theories to assume things that we know are wrong – they are still good theories – it’s unknown
- (Craig turns away and looks through his papers)
- Craig: “Isn’t it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?”
- Krauss: “No”
- Craig: “Well, can you give us one then”
- Krauss: (talks about a variety of possible eternal models) “In my experience in science, all of them are probably wrong”
- Krauss: “You know most theories are wrong, which is why, you know, it’s hard”
- Craig: “Right”

Krauss accused Dr. Craig of misrepresenting science many times in his three Australia debates, but now we know the truth about who misrepresented science.

UPDATE: This whole episode made me think of a lecture by famous physicist Richard Feynman.

Excerpt:

> The first principle is that you must not fool yourself–and you are the easiest person to fool. So you have to be very careful about that. After you’ve not fooled yourself, it’s easy not to fool other scientists. You just have to be honest in a conventional way after that.
>
> I would like to add something that’s not essential to the science, but something I kind of believe, which is that you should not fool the layman when you’re talking as a scientist. I am not trying to tell you what to do about cheating on your wife, or fooling your girlfriend, or something like that, when you’re not trying to be a scientist, but just trying to be an ordinary human being. We’ll leave those problems up to you and your rabbi. I’m talking about a specific, extra type of integrity that is not lying, but bending over backwards to show how you are maybe wrong, that you ought to have when acting as a scientist. And this is our responsibility as scientists, certainly to other scientists, and I think to laymen.

Now given what Krauss did in the debate, it seems to me that he is not in agreement with

Feynman.

UPDATE: Dr. Craig reports that Dr. Krauss refused to let the organizers live-stream the three Australia debates, as well as refusing to let the Australian Broadcasting Corporation live-broadcast the three debates.

Psychiatrist Paul McHugh explains the troubles with transgender activism

June 17, 2014 | by Wintery Knight | Link | Original Link

In the Wall Street Journal.

Excerpt:

> The transgendered suffer a disorder of "assumption" like those in other disorders familiar to psychiatrists. With the transgendered, the disordered assumption is that the individual differs from what seems given in nature—namely one's maleness or femaleness. Other kinds of disordered assumptions are held by those who suffer from anorexia and bulimia nervosa, where the assumption that departs from physical reality is the belief by the dangerously thin that they are overweight.
>
> With body dysmorphic disorder, an often socially crippling condition, the individual is consumed by the assumption "I'm ugly." These disorders occur in subjects who have come to believe that some of their psycho-social conflicts or problems will be resolved if they can change the way that they appear to others. Such ideas work like ruling passions in their subjects' minds and tend to be accompanied by a solipsistic argument.
>
> For the transgendered, this argument holds that one's feeling of "gender" is a conscious, subjective sense that, being in one's mind, cannot be questioned by others. The individual often seeks not just society's tolerance of this "personal truth" but affirmation of it. Here rests the support for "transgender equality," the demands for government payment for medical and surgical treatments, and for access to all sex-based public roles and privileges.
>
> With this argument, advocates for the transgendered have persuaded several states—including California, New Jersey and Massachusetts—to pass laws barring psychiatrists, even with parental permission, from striving to restore natural gender feelings to a transgender minor. That government can intrude into parents' rights to seek help in guiding their children indicates how powerful these advocates have become.
>
> How to respond? Psychiatrists obviously must challenge the solipsistic concept that what is in the mind cannot be questioned. Disorders of consciousness, after all, represent psychiatry's domain; declaring them off-limits would eliminate the field. Many will recall how, in the 1990s, an accusation of parental sex abuse of children was deemed unquestionable by the solipsists of the "recovered memory" craze.
>
> You won't hear it from those championing transgender equality, but controlled and follow-up studies reveal fundamental problems with this movement. When

> children who reported transgender feelings were tracked without medical or surgical treatment at both Vanderbilt University and London's Portman Clinic, 70%-80% of them spontaneously lost those feelings. Some 25% did have persisting feelings; what differentiates those individuals remains to be discerned.
>
> We at Johns Hopkins University—which in the 1960s was the first American medical center to venture into "sex-reassignment surgery"—launched a study in the 1970s comparing the outcomes of transgendered people who had the surgery with the outcomes of those who did not. Most of the surgically treated patients described themselves as "satisfied" by the results, but their subsequent psycho-social adjustments were no better than those who didn't have the surgery. And so at Hopkins we stopped doing sex-reassignment surgery, since producing a "satisfied" but still troubled patient seemed an inadequate reason for surgically amputating normal organs.
>
> It now appears that our long-ago decision was a wise one. A 2011 study at the Karolinska Institute in Sweden produced the most illuminating results yet regarding the transgendered, evidence that should give advocates pause. The long-term study—up to 30 years—followed 324 people who had sex-reassignment surgery. The study revealed that beginning about 10 years after having the surgery, the transgendered began to experience increasing mental difficulties. Most shockingly, their suicide mortality rose almost 20-fold above the comparable nontransgender population. This disturbing result has as yet no explanation but probably reflects the growing sense of isolation reported by the aging transgendered after surgery. The high suicide rate certainly challenges the surgery prescription.

We seem to have this popular idea in our culture now that the loving thing to do in every case is to just affirm whatever anyone feels like doing. Want to have sex-reassignment surgery? No problem. Want to be surgically altered to look like a cat? No problem. Want to have an amputation because you don't like your arm? No problem. Want to have taxpayer-provided heroine injected by nurses? No problem. Want to adopt a lifestyle that involves having risky sex with hundreds of unprotected partners? We'll wave a rainbow flag for you. Want to get drunk and have sex before you (and they) have even graduated high school? Here are free condoms and free abortions to fix anything that might go wrong.

The really, really bad thing that we must never, ever do, apparently, is to tell someone "it's wrong".

I am really struggling to understand why telling people NOT to do things that are bad for them is a bad thing. I set boundaries on myself to keep myself out of trouble. Why can't I let other people know what they are? Why do I have to pay taxes so that other people can afford to do risky and/or immoral things that I would never do?

Study: most couples who stick it out through an unhappy period return to happiness

June 17, 2014 | by Wintery Knight | Link | Original Link

The article is by Mona Charen, and the study is by the Institute for American Values. It's an older article, but I was reading a book that mentioned the study, so I thought I would blog on it.

Excerpt:

> Now, the Institute for American Values (www.americanvalues.org) has released a new study with some intriguing data about the effects of divorce on the unhappy couples themselves. It seems that another great myth is about to tumble – the myth that at least divorce makes unhappily married adults happier.

> According to the survey, conducted by a team of family researchers, unhappily married adults who divorced were no happier five years after the divorce than were equally unhappy couples who remained together. And two-thirds of unhappily married people who remained married reported marriages that were happy five years later. Even among those who had rated their marriages as "very unhappy," nearly 80 percent said they were happily married five years later. These were not bored or dissatisfied whiners. They had endured serious problems, including alcoholism, infidelity, verbal abuse, emotional neglect, depression, illness, and work and money troubles.
>
> Even more surprising, unhappy spouses who divorced actually showed slightly more depressive symptoms five years later than those who didn't. (They did, however, report more personal growth.) And – make of this what you will – the divorced sample reported a good deal more alcohol consumption than the married group.
>
> […]**The data show that if a couple is unhappy, the chances of their being happily married five years hence are 64 percent if they stay together but only 19 percent if they divorce and remarry. (The authors acknowledge that five years is a relatively short period and many divorced people will eventually remarry, some happily.)**
>
> How did the unhappy couples turn their lives around? The study found three principal techniques. The first was endurance. Many couples do not so much solve their problems as transcend them. By taking one day at a time and pushing through their difficulties, many couples found that time itself often improved matters. Moreover, these couples maintained a negative view of the effects of divorce. "The grass is always greener," explained one husband, "but it's Astroturf."
>
> Others were more aggressive. Those the researchers labeled the "marital work

> ethic" types tackled their problems by arranging for more private time with one another, seeking counseling (from clergy or professionals), receiving help from in-laws or other relatives, or in some cases, threatening divorce or consulting a divorce lawyer.
>
> In the third category were the "personal happiness seekers" who found other ways to improve their overall contentment even if they could not markedly improve their marital happiness.
>
> Certainly the survey found some marriages that were impossible to save and some divorced couples who were happier than those who had remained married. That is as one would expect.
>
> **But the most telling aspect of this research is the light it sheds on the importance of the attitude toward marriage. Those who enter marriage with a dim (some might say accurate) view of divorce and a strong religious or other motivation for avoiding it are not only less likely to divorce; they are also less likely to be unhappy. That is the arresting news here. We've known that commitment was good for the children of such marriages. We've known that commitment was good for society. But until now, it was not clear that commitment actually made married couples themselves more likely to be happy.**

I think the last point is a good point. Right now, a lot of young people are choosing mates based on superficial criteria (looks, money, popularity). The purpose of marriage is, in their opinion, to be happy. And their spouse's job is to make them happy. That's their view of marriage. But this ignores the realities of what marriage is about. Marriage is not a contract, it's a covenant. People who marry ought to be getting into it because they want the responsibility of loving another sinner in close quarters. It's not about feelings and life enhancement.

Two new studies: fewer employers respond to resumes that mention religious affiliation

June 17, 2014 | by Wintery Knight | Link | Original Link

The article about the studies appeared in Religion News Service.

Excerpt:

> Recent college grads, take note: Mentioning a campus religion group on your resume — particularly a Muslim club — may lead to significantly fewer job opportunities.
>
> Two new sociology studies find new graduates who included a religious mention on a resume were much less likely to hear back from potential employers.
>
> The studies used fictitious resumes — with bland names that signaled no particular race or ethnicity. These were sent to employers who posted on the CareerBuilder website to fill entry-level job openings in sales, information technology and other fields suitable for first jobs out of college.
>
> The researchers tested seven religious categories including: Roman Catholic, evangelical Christian, atheist, Jewish, Muslim, pagan, and one faith they just made up, "Wallonian," to see what would happen compared to people who made no faith reference.
>
> Fewer employers called back the "Wallonians," as well as the others, reacting to "a fear of the unknown," said University of Connecticut sociology professor Michael Wallace who led the studies.
>
> In the South, where researchers sent 3,200 resumes, those with a religious mention got 29 percent fewer email responses and 33 percent fewer phone calls than otherwise identical resumes with no faith ties according to the study, released by the Southern Sociological Society on their Social Currents site.
>
> Muslims faced the sharpest discrimination with 38 percent fewer emails and 54 percent fewer phone calls to the voice mailboxes set up by the researchers.
>
> In New England, 6,400 applications were sent to 1,600 job postings by employers. But applications mentioning any religious tie were 24 percent less likely to get a phone call, according to the study published in Research in Social Stratification and Mobility.
>
> Again, Muslims bore the brunt of discrimination, receiving 32 percent fewer emails and 48 percent fewer phone calls. Catholics were 29 percent less likely to get a call and pagans were 27 percent less likely — slightly better than the "Wallonian" applicants.

Fascinating. I think that there is something in American society that is frightened by

people who have definite views on theological truths and moral truths. We don’t mind if you have these opinions as a personal preference, for your own life enhancement, but don’t bring it up in public as if it were real for everyone else.Why is that?

Well – I think it’s because people have these experience with religion being presented to them as children in *non-cognitive* ways. As a result of having it forced on them when they are young, they get uncomfortable with it. Once children get that perception that religion is a bunch of rules and regulations, they don’t have the same curiosity or tolerance for it. Some of them might even have had discusions with people who were all passion and no reason / evidence. People who would not give it a rest. Nobody wants to have a co-worker who has strong views about things, but cannot discuss it rationally when it’s appropriate to do so.

IRS required BY LAW to store hard copies of all e-mails they claim to have lost

June 18, 2014 | by Wintery Knight | Link | Original Link

From the Daily Caller.

Excerpt:

> The Internal Revenue Service is required by federal law to keep records of all agency emails and to print out hard copies of the emails to make sure they get saved in the event of a computer glitch.
>
> The IRS recently claimed that it lost 24,000 of 67,000 emails that ex-official Lois Lerner sent between 2009 and 2011, due to a computer crash. The IRS, which agreed to turn over all of Lerner's emails to the House Committee on Ways and Means, specifically lost emails Lerner sent to other Obama administration agencies and the White House. Lerner is a major figure in the targeting scandal that has hit the IRS.
>
> […]The IRS's own definition of the Federal Records Act makes clear that emails must be saved and documented, according to an instructional page for employees on the IRS website.
>
> "The Federal Records Act applies to email records just as it does to records you create using other media," according to the IRS. "Emails are records when they are: Created or received in the transaction of agency business; Appropriate for preservation as evidence of the government's function and activities; or Valuable because of the information they contain."
>
> "If you create or receive email messages during the course of your daily work, you are responsible for ensuring that you manage them properly," according to the IRS. "The Treasury Department's current email policy requires emails and attachments that meet the definition of a federal record be added to the organization's files by printing them (including the essential transmission data) and filing them with related paper records. If transmission and receipt data are not printed by the email system, annotate the paper copy."
>
> "Please note that maintaining a copy of an email or its attachments within the IRS email MS Outlook application does not meet the requirements of maintaining an official record," the IRS stated. "Therefore, print and file email and its attachments if they are either permanent records or if they relate to a specific case."
>
> Losing all evidence of agency emails, therefore, is a violation of federal law.

So if the e-mails are not found, then it's a violation of federal law, and there will have to be an investigation, and charges will have to be laid against the guilty parties. Although you would never know it from the mainstream media, our beloved socialist government is

acting more like on organized crime syndicate. It’s gangster government, as Michele Bachmann used to say.

New study: apoptosis is unchanged from Cambrian fossils to modern humans

June 18, 2014 | by Wintery Knight | Link | Original Link

Darwinian theory predicts that animals and animal subsystems all start of very small, and they get more and more complex as time passes, due to mutation and selection. That's the theory. But is it true?

Here's a striking article from Evolution News about a new PNAS peer-reviewed publication.

Excerpt:

> Science progresses when investigators boldly question assumptions. Look at the assumption that a group of scientists questioned: Darwinian evolution. Eight scientists from San Diego State University, Scripps Institution of Oceanography, and Cedars-Sinai Heart Institute published a bombshell in the *Proceedings of the National Academy of Sciences*:
>
> The **Precambrian explosion** [they mean the Cambrian explosion] led to the rapid appearance of most major animal phyla alive today. **It has been argued that the complexity of life has steadily increased since that event. Here we challenge this hypothesis through the characterization of apoptosis in reef-building corals, representatives of some of the earliest animals**. Bioinformatic analysis reveals that **all of the major components of the death receptor pathway are present in coral with high-predicted structural conservation with *Homo sapiens*.** (Emphasis added.)
>
> Apoptosis is "programmed cell death." When a cell becomes unstable or diseased, genetic algorithms kill it in an orderly way, to prevent further harm to the organism. Specialized enzymes (especially the TNF superfamilies) switch on the program, setting locked-up destroyers called caspases loose in the cell.
>
> […]Corals have many of the same TNF enzymes that humans do. This got the team wondering:
>
> The TNF receptor-ligand superfamilies (TNFRSF/TNFSF) are central mediators of the death receptor pathway, and the predicted proteome of *Acropora digitifera* contains more putative coral TNFRSF members than any organism described thus far, including humans. This **high abundance of TNFRSF members**, as well as the predicted **structural conservation** of other death receptor signaling proteins, **led us to wonder what would happen if corals were exposed to a member of the human TNFSF** (HuTNFα).
>
> In a series of experiments, they inserted coral enzymes into human cells. The human cells died. Then they ran the reciprocal experiment, putting human TNF enzymes into coral, and its cells died too. Even the bleaching process was seen

> using human enzymes. The agents of death were perfectly interchangeable, despite 550 million years for evolution to have increased the complexity of the system.
>
> […]This is evidence against Darwinian evolution on both sides of the coin: it shows no evolutionary “progress” despite all that time, and it shows a complex system appearing abruptly right at the beginning of complex animal origins.

So you get the complexity right at the beginning, and it doesn’t change in 550 million years. It doesn’t fit with the Darwinian predictions.

My experiences with Christian women in church and campus ministries

June 18, 2014 | by Wintery Knight | Link | Original Link

A friend of mine sent me some horror stories from his time dealing with single Christian women during seminary, and I thought I would write something about the horror stories from my experiences with single Christian women in campus ministries during my BS and MS programs, and in several evangelical churches that I attended in my 20s.

The biggest problem I've had with unmarried Christian women in college and in church is that it is impossible to impress them by being a competent, effective Christian man. Every skill and ability that seems to me to be useful and effective for the kingdom (or for marriage) seems to cut no ice with them. I had women in my youth group, in IVCF and in Campus Crusade have told me that being an engineer is bad, being chaste is bad, not drinking is bad, talking too much about apologetics is bad, and especially trying to get them to learn apologetics – that was really, *really* bad. They hated that. And forget trying to talk to them about abortion and homosexuality. They were very proud to be non-judgmental. It was a badge of honor, saying "I don't judge" as if they were saying "I am good person".

Everything that you might think makes sense for a man to be skilled at from a marriage point of view is viewed as creepy and weird by these church/campus-club unmarried Christian women, in my experience. I am a colored guy, so I always put their messed up standards down to the fact that I was colored and therefore was not allowed to talk to them, period. I was also surprised to see how little the command to "love your neighbor" was implemented by the unmarried Christian women. Here I was, struggling through a tough engineering program, and obviously coming from an unchurched background, yet these woman never had a supportive word for me. My interests in theology and apologetics and moral issues and politics were viewed by them with suspicion.

In retrospect, I would say the biggest argument against God's existence I ever faced was the complete disconnect between what these women professed and how they treated others.

There was one exception. When I was a teen, I had an older college student mentor me and she helped me pick up my grades – especially in English. She eventually fell away from her faith (she was a cradle Catholic). But other than her, I basically was in my mid-30s before I met a Christian woman who had any respect for me because of the things that I could do as a Christian. And that was after over a decade of donations, organizing, training, mentoring, apologetics, etc. By that time, I had my BS and MS and a boatload of savings, and yet up till then, no unmarried Christian woman had ever given me the time of day. I was sort of stuck looking to white Christian women for validation, because most colored girls are liberal. But what I found is that they had no standard in their worldview that I could be graded against favorably, other than physical appearance.

That was the scariest thing for me, to find out that there was no worldview there that distinguished between William Lane Craig and Jim Wallis, for example. There was just the outward appearance – that was the sole criterion that unmarried Christian women were using to decide whether a man had value or not. And their agenda for men was never a mentoring/discipling agenda. It was the standard secular boyfriend agenda. And very often, they chose standard secular boyfriends for that agenda. I later found out that they found men with definite moral positions and definite apologetics ability *intimidating*. Any man with fixed, entrenched positions – either about truth or moral issues – *frightened* them.

Even now, I find this such a weird thing, because in my own life, I act as a mentor to younger Christians regardless of their appearance or other such criteria. Mentoring other Christians is what Christians ought to be doing! I mentor about a dozen promising young Christians (women and men) in different countries. On a given night, you'll find me reading something they asked me to read, sending them links to evidence to help them argue, proof-reading their essays, buying them books, hearing about their school assignments, picking their elective courses, or ordering them not to take the summer off and to work instead, etc. Right now, I have two of my experienced pro-life friends helping one of them take over a pro-life club at a university. Another of my friends who does Internet consulting is helping another friend start his web site. And so on, with me or my friends mentoring other Christians just for the sake of honoring that command to love others upward. It doesn't even matter how great the person is right now, because we mentor Christians at all levels of ability. No one is left out, and no oneis turned down.

But this idea that other Christians have value simply because they are Christians was NOWHERE to be found among unmarried Christian women when I was in university and in my 20s. It's totally foreign to them that Christianity imposes those mentoring/discipling obligations on them, regardless of appearances. They are feelings-driven, not obligation-driven. They are concerned with their own agenda, and not looking to God to see what he wants them to do for their fellow Christians.

I was always the same Wintery Knight back them as I am today, just at an earlier stage of development, and yet no unmarried Christian women in the church or in a campus Christian ministry gave me so much as an affirming glance while I was working out my plans. In fact, church women often stood in the way of things I tried to do, like bring in professors to speak at IVCF or show William Lane Craig debates at Campus Crusade. Focusing on evidential issues was deemed "too divisive". It was prayer walks, hymn sings and testimonies by postmodern relativists every week. I learned not to count on unmarried Christian women for support of any kind for the things I was trying to do. No matter how good the things I wanted to do were, they always had a reason why I shouldn't be allowed to do them.

I am always surprised when I meet a woman and she wants me to read the Bible, or read a book, or do anything like that. (That actually happened to me again last week!) I've had a handful of women do that to me in my whole life. Unmarried Christian women are, in my experience, running a very secular playbook, making decisions about how to treat

others from their feelings. And then if you question them about it, they attribute their feelings to the work of the Holy Spirit. You don't really see how bad it is until you hear them tell you that God told them to move in with the atheist guy, etc. It's striking to me how far the Holy-Spirit-wrapping of their feelings goes, and yet they don't see a problem with it. I think the answer to this problem is that we really need to help women to think through their worldview and think about how to act on Christian convictions with other people, and men in particular, and men who are committed to building the Kingdom *effectively and intelligently* above all others.

Young people who voted for Obama are holding fewer and fewer jobs

June 19, 2014 | by Wintery Knight | Link | Original Link

Youth labor force participation

Stephen Moore writes about Investors Business Daily.

Excerpt:

> Economists are scratching their heads trying to figure out a puzzle in this recovery: Why are young people not working? People retiring at age 60 or even 55 in a weak economy is easy to understand. But at 25?
>
> The percentage of adult Americans who are working or looking for work now stands at 62.8%, a 36-year low and down more than 3 percentage points since late 2007, according to the Labor Department's May employment report.
>
> This is fairly well-known. What isn't so well-known is that a major reason for the decline is that fewer and fewer young people are holding jobs. This exit from the workforce by the young is counter to the conventional wisdom or the Obama administration's official line.
>
> The White House claims the workforce is contracting because more baby boomers are retiring. There's some truth to that. About 10,000 boomers retire every day of the workweek, so that's clearly depressing the labor market. Since 2009, 7 million Americans have reached official retirement age. The problem will get worse in the years to come as nearly 80 million boomers hit age 65.
>
> But that trend tells only part of the story. The chart above shows the real problem: The largest decline in workforce participation has been those under 25.
>
> […]We do no favors to the young by teaching them that they can consume or have a good time without first earning the money they spend.

I think young people are often brainwashed at a young age to think that bashing the free enterprise system and voting for socialism isn't going to take away their jobs. But if you vote to tax and regulate the businesses who may employ you later, you'll find that they are too busy groaning under the strain of big government to employ you.

If young people were serious about getting jobs, they'd be voting to cut subsidies on universities to lower tuition costs, to lower corporate taxes, to cut environmental regulations, to repeal Obamacare, and so on. They would be more concerned that schools teach them actual skills instead of politically correct views, and so they would be voting for school choice and for right-to-work laws, to weaken the teacher unions who are not accountable to them. They should be voting against the minimum wage hikes that will price them out of an all-important first job. They should be voting against the (more than) doubling of the national debt in the 5.5 years under Obama. Job offers are not just there independent of the legal and economic environment. And just reaching a certain age doesn't mean that you are qualified for a job.

Why does the Bible place restrictions on sex outside of marriage?

June 19, 2014 | by Wintery Knight | Link | Original Link

From Evidence Unseen.

Excerpt:

> God created marriage to be between one man and one woman. God created us with gender ("male and female" Gen. 1:27), and he designed it so we would "leave our father and mother" (Gen. 2:24—both singular) and become "one" with our spouse. Sex outside of this context goes beyond (or against) God's design. Jesus affirms God's original design for sex by quoting these two passages in Matthew 19, and Paul quotes Genesis 2:24 to affirm God's design for marriage as well (1 Cor. 6:16).
>
> By contrast, the NT speaks against all other forms of sexuality as *porneia*. This is the Greek root from which we get our modern term "porn." Paul writes about *porneia* often and with the strongest possible terms. Thus this isn't simply a NT *teaching*, but rather, a NT*emphasis*:
>
> (1 Cor. 6:13) The body is not for immorality [porneia].
>
> (1 Cor. 6:18) Flee immorality. Every other sin that a man commits is outside the body, but the immoral man sins against his own body.
>
> (Gal. 5:19) Now the deeds of the flesh are evident, which are: immorality, impurity, sensuality.
>
> (Eph. 5:3) But immorality or any impurity or greed must not even be named among you, as is proper among saints.
>
> (1 Thess. 4:3) For this is the will of God, your sanctification; that is, that you abstain from sexual immorality.
>
> As those who know Christ, God's will is to change us into people who have control over our sexuality, yet expressing ourselves regularly and pleasurably in marriage (1 Cor. 7:2). Resisting God's design will depreciate your life. One author rightly said, "Nobody ever broke the law of God. You break yourself against the law of God… You don't break the law of gravity. You break your neck."[1] **Of course, God completely forgives believers for our sins (Rom. 8:1), but he doesn't protect us from their *consequences* (Gal. 6:7; Heb. 12:14-17). When we live apart from our Creator's design, we will expect to see negative effects in our lives.**

I can certainly vouch for the fact that premarital sex and especially cohabitation does enormous damage to a woman's ability to be trusting and vulnerable. I find trust and vulnerability very attractive, but the women I know who have mashed themselves up with

failed sexual relationships have a greatly diminished capacity for trust and vulnerability.

More:

> Secular researchers have noted the ways in which fornication and cohabitation affect us in negative ways. Melina Bersamin (Department of Child Development—California State University) writes,
>
> College students who had recently engaged in casual sex reported lower levels of self-esteem, life-satisfaction, and happiness compared to those students who had not had casual sex in the past 30 days… College students who had recently engaged in casual sex reported higher levels of general anxiety, social anxiety, and depression compared to college students who had not had recent casual sex.[2]
>
> One study found that having sexual intercourse with someone only once or having sexual intercourse with someone known for less than 24 hours was significantly associated with feelings of sexual regret (Eshbaugh & Gute, 2008). Both men and women report sexual regret, albeit for different reasons, following casual sex encounters (Fisher et al., 2012). Feelings of sexual regret, and feelings of regret in general, have been linked to poor psychological out- comes, such as lower life satisfaction, loss of self-worth, depression, and physical health problems.[3]
>
> Likewise, Robert Durant notes that "adolescents who were sexually active had significantly higher depression scores than nonsexually active subjects." He adds that depression was "positively correlated with the number of partners in the previous 3 months." He also points out that having a strong sense of "purpose in life" was "significantly negatively correlated with… the number of sexual partners in the previous 3 months."[4] In other words, people that sleep around are not happier, but sadder. Moreover, people who feel that they have a purpose to their lives don't feel the strong sense to sleep around.

It's a question of prudence. If you want to be able to offer your future spouse trust and vulnerability, then you don't engage in premarital sex, and especially not in cohabitation. Cohabitation basically means you give everything to a person who doesn't commit to you. When it ends, your trust and vulnerability take a major hit, and you may never recover full function in that capacity. You basically just end up giving less of yourself the next time to the next person, and they are cheated out of the trust and vulnerability they deserve.

More studies:

> Hall and Zhao (from the University of Western Ontario) studied 8,177 individuals who were ever-married. They write, "Premarital cohabitors in Canada have over twice the risk of divorce in any year of marriage when compared with noncohabitors."[13]
>
> Manning (et al.) writes, "Over 50% of cohabiting unions in the US, whether or not

> they are eventually legalized by marriage, end by separation within five years compared to roughly 20% for marriages.”[14]
>
> Daniel Lichter and Zhenchao Qian (from Cornell University and The Ohio State University) write, “If serial cohabitors married, divorce rates were very high—more than twice as high as for women who cohabited only with their eventual husbands.”[15]

I think I know why cohabitation causes this higher risk of divorce. When a person cohabitates with another person and gives them *everything* (including their bodies) and the relationship fails, it makes them much more distrustful and paranoid when dealing with the next person they may like. They become unable to take the other person’s needs seriously and care for them because they are so worried about being hurt after giving up a lot to other people. If the distrustful person senses that they are holding back from the other person, they will often blame the other person for making demands on them – perhaps by imputing false motives to them, in order to justify not having to give anything back. In my experience as a chaste man, I have always felt like I was clear emotionally to give everything in each new relationship, and what I’ve found is that I have been able to easily trust each new person even after a break-up with the previous person. Break-ups don’t hurt much if you don’t get physical, and you’re more likely to stay friends with the person as well.

The really annoying thing about this is that premarital sex is so widespread that most people seem to have had it before their brains are even functioning enough to know what they really want out of life. So, instead of working backwards from the demands of marriage in order to know who to have a relationship with, they are choosing based on appearances and peer-approval far before marriage is even a possibility. By the time they get to an age where they are aware of what kind of woman or man marriage requires, they are already damaged to the point where they cannot give themselves to someone who is a good match. That’s the problem with having sex with someone when you are young – you don’t know what marriage is about, so you don’t know what to look for. It’s especially bad for women, who give away their peak sexual years (teens and 20s) to men who then want nothing to do with them. They’ve been used for sex without commitment by men who were good-looking, but not *good*.

Christian band member convicted in murder plot was actually an atheist

June 19, 2014 | by Wintery Knight | Link | Original Link

From the Christian News Network.

Excerpt:

> A so-called Christian heavy metal band whose frontman was convicted of attempting to hire a hitman to murder his estranged wife has admitted that it duped fans into believing that they were Christian in order to sell their music.
>
> "Truthfully, I was an atheist," Tim Lambesis, the lead singer and founder of As I Lay Dying told the*Alternative Press* in a recent interview. "I actually wasn't the first guy in As I Lay Dying to stop being a Christian. In fact, I think I was the third. The two who remained kind of stopped talking about it, and then I'm pretty sure they dropped it, too."
>
> The publication noted that his wife, Meggan, had likewise divulged in divorce papers that Lambesis had become an atheist. Lambesis, in admitting his atheism, outlined that he turned away from Christianity as he majored in religious studies while attending college through a long distance program.
>
> […]And one sin led to another, turning his renunciation of Christ into justification for his actions.
>
> **"The first time I cheated on my wife, my interpretation of morality was now convenient for me," Lambesis explained. "I felt less guilty if I decided, "Well, marriage isn't a real thing, because Christianity isn't real. God isn't real. Therefore, marriage is just a stupid piece of paper with the government."**
>
> But he continued to profess to be a Christian, as did others in the band, in order to sell records to Christian music fans.
>
> […]**He said that during his tenure with As I Lay Dying, he realized that a number of bands that professed to be Christians were faking their faith just as he was.**
>
> **"We toured with more 'Christian bands' who actually aren't Christians than bands that are," Lambesis stated. "In 12 years of touring with As I Lay Dying, I would say maybe one in 10 Christian bands we toured with were actually Christian bands."**

This is why my heroes in the faith are not athletes and artists. It's possible for athletes and artists to be as solid in their faith as a J. Warner Wallace or a Tim McGrew, but scoring points on a sports field or singing songs on a stage is no guarantee of that. Biblical faith is about knowledge – justified true belief. Nothing about sports or music

helps you to know whether your beliefs are true. Period.

Justina Pelletier's family promises to sue Massachusetts for kidnapping their daughter

June 20, 2014 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> The family of Justina Pelletier, the teenage girl at the center of a national parental rights dispute, vows to pursue legal action against the state of Massachusetts for what they say was essentially an abduction of their daughter.
>
> Earlier this week, Massachusetts Juvenile Court Judge Joseph Johnston signed the order for Justina to go home following a 16-month dispute between her family and state officials. Lou Pelletier said in a text message, "This battle has been finally won. The WAR will not be won until we stop this from happening to ALL CHILDREN!!"
>
> Pelletier, said, "It's an unbelievably emotional day… I'm still shellshocked. It has been 16 months of torture, but finally justice is being done."
>
> The first order of business for the family is to get Justina well and evaluate her after her treatment, or lack therof, by state officials. In her sixteen months under the "care" of the state, Justina Pelletier's health deteriorated from being a vibrant figure skater to being confined to a wheelchair, unable to walk on her own.Pelletier says his daughter has "no feeling at all below her hips" and is now confined to a wheelchair.
>
> In a picture, right, her father is shown having to carry her into their home.
>
> Next, they are considering legal action. The Pelletiers are pursuing legal action against the Massachusetts officials who took custody of Justina.

According to the Hartford Courant:

> Pelletier said he plans to pursue legal and legislative action against the Massachusetts officials who took custody of Justina.
>
> "This is just the beginning," Pelletier said. "There's going to be a Justina law," because hospitals are "taking kids, using DCF to be their little wingman. I'm going to be the guy that's going to change that."

If you haven't been following the kidnapping story, the Courant article is a GREAT summary of everything.

I would like to see them sue Massachusetts and maybe score one for parents who are tired of having their parental autonomy and authority undermined by fascists. Taxpayer-funded fascists, no less. The Pelletier family *paid* for the DCF and the judge to do this to them.

Can you imagine that parents are *paying* fascists to *torture* their own child so that she has *permanent* disabilities? It’s incredible, but that’s what it means to pay taxes to a secular government – you’re paying for things that you would never spend your own earned money on if you had the choice. And they think they are doing you a favor – providing you with a service. Because you are too stupid to know how to parent your own child. Throw them all in jail, throw away the key.

Surprise! In this post, I actually agree that men should “man up” – in one respect

June 20, 2014 | by Wintery Knight | Link | Original Link

I hope I don’t get my Christian manosphere credentials revoked, and I’m going to try very hard to explain why I am linking to this post by Matt Walsh below, in a disclaimers section.

But first, this:

It went from courting, to dating, to hanging out. Sometimes even hanging out reeks of too much commitment, in which case ‘talking’ can be used. And if talking sounds too serious, maybe we’ll start hearing ‘vicinitizing.’ That’s a word I just made up, and it means that you and your female friend are often in the same vicinity, but it doesn’t get all intense by insinuating that you’re actually in that general location together on purpose.

When did men become so afraid to make a commitment, to take the lead, to say what they want, to make long term plans, to set goals, to pursue, to talk about the future?

We are devolving into primates, losing the ability to even discuss our own behavior using words and sentences. The average single American man is now relegated to grunts and shrugs and ‘whatevers’ and ‘you knows’ when pressed to have a conversation about his dating habits. Or his vicinity habits. Or his whatever habits, because whatever, you know?

‘Hanging out’ is how we describe what we do with our buddies. Is that what you want? Do you want that beautiful woman to be your buddy? Or would you ideally prefer it if you could distinguish between your relationship with her and your relationship with your friend Steve?

And this, I really love this:

Then, one day, I met Alissa. She was looking for a grown man, and I was sick of playing games. We were both exhausted. So do you know what we did very early in our relationship?

We defined our terms.

We made our goals clear.

We were open with each other.

We spoke about the future.

We used words like ‘marriage.’

We were clear and convicted and purpose driven. I had ambitions for our relationship. *Ambitions*. I, like, had an idea about what I was doing and why I was doing it. Can you believe it? I was in it *for a reason*. I wanted it to *become something*.

See, I’d been floating like aimless debris through an ocean of cloudy intentions and half-heartedness, until I grew up and realized that romance isn’t a game, and most women aren’t frivolous bimbos. They want men who know what they want and aren’t afraid to

verbalize it. **And if they don't want that, then they aren't worth your energy. Get out now. If she still wants to pretend she's in tenth grade, let her live that fantasy with someone else.**

With Alissa, things were pretty clear from the get-go. We had a relationship. A real, live relationship. A few months into it, I proposed. Some people wait longer, which is fine. We're all on our own schedule. **But I promise you, despite popular sentiments, it doesn't take a decade and a half to figure things out.**

And finally this – I could not agree more, (but see my disclaimer below):

No matter what anyone does, or says, or thinks; no matter what we tell ourselves; no matter what society insists, romantic relationships are always serious business. Call it what you want — hanging out, talking, dating — there's a woman's heart involved in it. That means you have a responsibility, alright? You have a duty as a human being, as an adult, as a man.

She's making herself vulnerable to you. You need to honor that, protect it. And if you aren't looking for anything but cheap sex and another trophy of sexual conquest to hang on the wall in your studio apartment, then you need to protect her from yourself, because you'll be bringing nothing but disappointment and chaos into her life.

Listen, there's a lot of joy and love you're missing out on when you spend years tumbling like a ball of weeds from one opaque hang out session to another. I know this from experience.

If you're hanging out with a woman and you feel like you might be into her,*tell her*. Call her on the phone. Take her out on a date. Say the words: "I'd like to take you out." No ambiguity. Plan the date yourself. Women want you to be decisive. Lose the whole "so waddaya wanna do tonight?" schtick. Take charge. Pick her up at 7. Pay for the meal. Have a conversation with her. Go mini golfing or something. Go *somewhere*. Open the door for her. Put your phone away. Open up to her. Share your ideas, your dreams, your fears. Get to know her. Pursue her. *Pursue her*. Invest yourself in the process, as scary and unsure as it may seem. Take a risk, gentlemen. Go out on a limb for once. Be purposeful. Be desirable. Be a man.

You wouldn't go into a job interview and tell the interviewer that you aren't sure if you want the job, and you don't want to even talk about the job because it freaks you out and gives you a tummy ache, would you? So don't do that to the women you're dating, or hanging out with, or talking to, or whatever.

In the old days, they called it courting. It was a lot like dating, but with more of a point and less confusion. Maybe we should get back to that strategy.

Just this week, I was shown an e-mail from a man who has been very serious about a woman who has just swept him off his feet. He really likes her and has been very clear about his feelings for her. His long term goal for his relationship with her is marriage, and she knows that. He has been encouraging her to grow her skills and to pursue her dreams. BUT this is what she wrote to him in the e-mail I saw "**Do not talk about**

marriage, or love. This makes me uncomfortable." This is after 3 months! THREE MONTHS!

I was talking about marriage with one girl I was interested in on the FIRST meeting. And in the second meeting, she brought up John Piper's questions for couples considering marriage – it didn't bother me one bit. I was happy to have something serious to talk about with her. Just to check this out, I asked two of my co-workers what they thought. The first moved in with his girlfriend after a month, and married her within a year – they've now been married 19 years. The second was picking out engagement rings after a month of meeting his wife, was engaged 9 months later, and he's been married to her for 29 years.

I agree with Matt that IF men are interested in a woman, THEN they should state their goals and talk about the future with her. But if the woman is very spontaneous, emotional, fun-loving, etc. and only wants to talk about surfing, skydiving, etc., then a man can't be blamed for not bringing up marriage in that case.

Disclaimer

I want to be clear that this admonition to man up does not take away from anything that I've said about marriage being very, very dangerous for men. The fact of the matter is that marriage does not mean what it used to mean before feminism. To just give one quick example, no-fault divorce and anti-male divorce courts make marriage a really risky decision for a man. 70% of divorces are initiated by women, and they get full custody 90% of the time – with the child support and alimony. So I think that as long as we are talking about women who are politically conservative, into apologetics, frugal, chaste and a graduate of a STEM degree program, then men should be clear and direct and make the woman feel desired and safe. Otherwise… just stay clear of them.

Jennifer Roback Morse lectures to the Blackstone Legal Fellowship

June 20, 2014 | by Wintery Knight | Link | Original Link

Dr. Jennifer Roback Morse

Two lectures from the great Dr. Jennifer Roback Morse. One of my favorite scholars to listen to, and a great debater, as well.

Lecture one: Love and Economics

(June 13, 2014) Dr J traveled to Phoenix to participate in Alliance Defending Freedom's Blackstone Legal Fellowship, where she gave two talks. This is the first one, "Love and Economics," on what marriage is and why we need it–stay tuned for the next one!

The MP3 file is here.

Lecture two: Defending Marriage

(June 13, 2014) Dr J traveled to Phoenix to participate in Alliance Defending Freedom's Blackstone Legal Fellowship, where she gave two talks. This is the second one, "Defending Marriage," on why marriage matters and what has happened and will happen as it gets more and more redefined by the progress of the sexual revolution.

The MP3 file is here.

I was listening to these late at night, and when she said "you know Catholics aren't good with Bible verses" at the beginning of lecture two, I howled with laughter. I'm sure the property manager is going to let me know not to howl with laughter after midnight. Oh well – it was hilarious. She is Catholic. I howled again when made a comment about chaste people over the age of 30, like me. It's just FUN to listen to, but these are serious subjects.

Greg Koukl debates Michael Shermer on God, atheism, meaning and morality

June 21, 2014 | by Wintery Knight | Link | Original Link

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

HH = Hugh Hewitt
GK = Greg Koukl
MS = Michael Shermer

Here is a 32-page PDF with the full debate transcript.

And here's an excerpt:

GK: Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative?

And if they're relative, then how can we make moral judgments that are meaningful on other people?

HH: Michael Shermer?

MS: Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong, and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

HH: Greg?

GK: Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process, and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's

to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

HH: One minute to the break, Michael Shermer.

MS: I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

HH: Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

MS: Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends, honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

HH: Greg Koukl?

GK: Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

HH: Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

MS: Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

HH: Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you

can.

MS: Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

GK: Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me.

I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

MS: But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

GK: Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic evolution, and from outside terms, neither is better than the other. Why should we do that, Michael?

MS: Yeah, well I don't see how entering God into the equation changes that problem at all.

GK: Well, that's the next step. What I'm trying to show is that the should comes from the outside, and if we can demonstrate that, then we can ask…

A simple explanation of middle knowledge by Dr. Craig Blomberg

June 21, 2014 | by Wintery Knight | Link | Original Link

This article is from Denver Seminary, where Dr. Blomberg and Dr. Groothuis both teach.

Excerpt:

> Middle knowledge is a proposed solution to predestination vs. free will, to divine sovereignty and human responsibility, going all the way back to the medieval Jesuit priest Molina (so sometimes it's also called Molinism).
>
> Classic Calvinists, properly concerned to safeguard divine sovereignty, have typically rejected any theological system that bases God's predestining activity on the basis merely of his foreknowledge of how humans will respond to the gospel, because they're convinced that makes human free choice the ultimate determiner. Romans 8:29, of course, *does*base predestination on God's foreknowledge, but the Calvinist typically argues that the Greek *prōginoskō* ("foreknow") there begins already to shade over into the idea of election because in the Old Testament the Hebrew *yādā'* ("know") often appears roughly synonymous with "choose." That would explain why Paul doesn't say just that those whom God foreknew he also predestined, which could be seen as tautologous, but "predestined to be conformed to the image of his Son."
>
> Classic Arminians and Wesleyans, properly concerned to safeguard human freedom and accountability, have typically rejected any theological system that bases God's predestining activity on the basis merely of his gratuitous election, because they're convinced that makes human free choice ultimately a chimera. They often point out that *prōginoskō* is not the same verb as just *ginoskō* (which the LXX uses to translate *yādā'* and that in Greek it most commonly means simple knowledge in advance. Thus predestination *is* based on God's foreknowledge.
>
> Middle knowledge argues for both! If open theism in recent years has diminished divine omniscience more than orthodoxy has classically permitted, middle knowledge magnifies or expands God's omniscience beyond what most people have thought about. But it makes good sense: middle knowledge claims that God's perfect, infinite knowledge must be able to know not only what sentient creatures *will* freely choose in all situations in their lives but what everyone *would* do in every possible situation that they could confront. Even more magnificently, divine and unlimited knowledge must be able to discern what all possibly created beings would do in all possible situations (or, as philosophers like to say, all possible worlds).
>
> So far so good, I hope. Now here's the rub. Because there will only ever have been a finite number of humans created before God brings this world as we know

> it to an end, that means there remain countless uncreated beings that he could have chosen to create but didn't. So God's very choice to create you and me and not various other people he could have is an act of his sovereign election utterly prior to our existence. Calvinists should be happy. But it is based on knowing what we will and would do in all actual and all possible situations. Arminians should be happy. Thus, William Lane Craig in *The Only Wise God* defends this view from a libertarian Arminian perspective; Alvin Plantinga in a chapel talk at Denver Seminary years ago did the same from a libertarian Calvinist perspective, and Terrance Tiessen in *Providence and Prayer* does so from a compatibilist Calvinist perspective.

Middle Knowledge shows what is going on under the hood of classical Calvinism, which affirms both the sovereignty of God and the responsibility of man. Middle knowledge explains how God can achieve both goals simultaneously.

The apostle Paul has this to say in Acts 17:22-31:

> 22 So Paul stood in the midst of the Areopagus and said, "Men of Athens, I observe that you are very religious in all respects.
> 23 "For while I was passing through and examining the objects of your worship, I also found an altar with this inscription, ' N D ' Therefore what you worship in ignorance, this I proclaim to you.
> 24 "The God who made the world and all things in it, since He is Lord of heaven and earth, does not dwell in temples made with hands;
> 25 nor is He served by human hands, as though He needed anything, since He Himself gives to all people life and breath and all things;
> 26 and He made from one man every nation of mankind to live on all the face of the earth, **having determined their appointed times and the boundaries of their habitation,**
> **27 that they would seek God, if perhaps they might grope for Him and find Him, though He is not far from each one of us;**
> 28 for in Him we live and move and exist, as even some of your own poets have said, 'For we also are His children.'
> 29 "Being then the children of God, we ought not to think that the Divine Nature is like gold or silver or stone, an image formed by the art and thought of man.
> 30 "Therefore having overlooked the times of ignorance, God is now declaring to men that all people everywhere should repent,
> 31 because He has fixed a day in which He will judge the world in righteousness through a Man whom He has appointed, having furnished proof to all men by raising Him from the dead."

In this research paper, Craig explains in detail what middle knowledge is, and how it works to resolve problems, like "what about those who have never heard of Jesus?" and "how can we reconcile divine sovereignty and human freedom and responsibility?" Highly recommended tool for your tool chest.

Ohio governor John Kasich signs legislation to crack down on sex-trafficking

June 22, 2014 | by Wintery Knight | Link | Original Link

From Cleveland.com, a story about Ohio's Republican governor.

Excerpt:

> Gov. John Kasich intends to sign wide-ranging legislation on Friday morning designed to crack down on sex trafficking in Ohio.
>
> House Bill 130, which passed the legislature unanimously, increases penalties for those who solicit minors or the developmentally disabled, strengthens protections for victims, and makes it easier to prosecute human traffickers.
>
> The state estimates that each year an estimated 1,078 Ohio children become victims of human trafficking and 3,016 more are at risk for exploitation.
>
> Under the bill, which will take effect immediately, buying sex from a 16- or 17-year-old will now be a fifth-degree felony instead of a misdemeanor. Soliciting a younger child will be a third-degree felony, punishable by up to five years in prison.
>
> The measure also terminates parental rights for those who have trafficked their children and prohibits sex ads that depict a minor or are for a massage parlor.
>
> Kasich will sign the bill at 11 a.m. at the Ohio Department of Transportation headquarters in Columbus. Northeast Media Group staff writer Jeremy Pelzer will cover the event live in the comments section below.

I'm really not sure who could look at a child and think anything other than "this little human is made to know God, love God and love other people, so I will act in a way that helps them to do that, and does not not pull them away from that". We're not supposed to be hurting children, because children's needs are more important than adult selfishness.

You know this story reminds me of one to the reasons why I am for marriage. I think that when a child is born into a home where his or her mother and father are presented and united in their obligation to love that child, then things like this do not happen. Sex-trafficking is something that happens to children who do not have a stable, loving environment to grow up in. But what are we doing to restrain ourselves to make sure that we do the things that we need to do to wrap sex in a layer of responsibility? Responsible sex doesn't mean "safe" sex. It means sex that is contained inside the boundaries of a marriage and that any children who are produced are not seen as commodities, but as gifts that we are responsible for.

Stephen C. Meyer lectures on intelligent design and the origin of life

June 22, 2014 | by Wintery Knight | Link | Original Link

A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell".

You can get an MP3 of the lecture here. (30 MB)

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)
- the DNA molecule is composed of a sequence of proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the

first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive
- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

Proteins are constructed from a sequence of amino acids:

A sequence of amino acids forming a protein

Proteins sticking onto the double helix structure of DNA:

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

UPDATE: There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature

A friend of mine is learning apologetics, here's what she is using to learn

June 23, 2014 | by Wintery Knight | Link | Original Link

The woman I am mentoring the most energetically in apologetics sent me this list of resources below. I was so impressed by how disciplined she is that I wanted to post it.

This is what she does every day:

- William Lane Craig's Defenders podcasts (1 or 2 a day)
- Bible in a year (a few chapters as per the schedule)
- Read/listen through 6 chapters of the Bible, 20 times
- Is God Just a Human Invention? by Morrow and McDowell (a few chapters per day)
- True U DVDs (all 3 volumes) by Focus on the Family (one episode per day)
- Knowing God by J. I. Packer (one chapter per day)
- Knowledge of the Holy by A. W. Tozer (one chapter per day)
- Signature in the Cell by Stephen C. Meyer (one chapter per day)

In addition to that, she is on chapter 3 of Scott Klusendorf's "The Case for Life". We are also working our way through "Money, Greed and God" by Jay W. Richards, we are on chapter 4 there.

She has books, podcasts, and DVD lectures in there. I also got her some debates on DVD to see what the other side can say. I got her the Lennox-Dawkins debate from the Oxford Museum of Natural History and the Craig-Hitchens debate at Biola University.

When we started out, I was trying to go over the chapters with her to get her started, but now she is busy learning these things on her own. I didn't even know about most of this stuff that is on her list.

So here are some points I want to make about this.

1. I think it's good for Christians to study hard subjects and get good jobs so they have money to spend on books, lectures and DVDs. Not only can you loan out books and show DVDs to groups, but you when you get the resources for yourself, you can learn from them and share what you learn with anyone who is interested. They'll be more interested in hearing it from you than reading a whole book anyway.
2. I also think it's good for Christians to be like this woman. She is interested in apologetics because she had a co-worker who asked her a lot of questions. She decided to answer his questions rather than to attack him personally for his unbelief, or punt to faith not needing reasons or evidence. So she started to look for answers on her own, and then I came along to guide her search, provide materials and practice with her.
3. She is shy and not used to speaking up or disagreeing with others. So we are spending time discussing these materials and also debating issues. When we

> discuss a chapter, I highlight the three parts that are the most useful and relevant for debates, and try to show her the structure of the argument. She learns better when we discuss the material and when we practice debating it. I ask her – what would you say if I said this to you? And she answers. Role-play is good for learning apologetics.

So those are my three points.

I would just urge you all to be on the lookout for people who are smart and want to learn more about how to give an answer to anyone who asks them for a reason for their hope. If you are looking for a mentor, then pray that God will send you a mentor. If you want to be a mentor, pray that God will send you someone to mentor.

How do you respond to the conquests and wars in the Old Testament?

June 23, 2014 | by Wintery Knight | Link | Original Link

Joe Coder has an article about it on his web site.

Here's his overview:

> In the Old Testament are the military campaigns of Israel inconsistent with being led by a just and loving God, and inconsistent with his own commands? Here, I would like to make the case for consistency and justness.
>
> 1. **The nations of Canaan were evil, harming others, and needed to be stopped.** They had carried out incest with children/grandchildren and performed child sacrifice by fire. (Lev 18:6-30, Deut 12:31, Deut 18:9-10, Psalm 106:35, 37-38) They launched unprovoked attacks on Israel (Ex 17:8-9, Num 21:1, Num 21:2-23, 33) and even guerrilla attacks against Israel's "stragglers in the rear of the march when you were exhausted and tired." (Deut 25:18)
>
> **2. Warfare language was likely rhetorical.** There are five reasons to support the rhetorical nature of languge such as "completely destroy" (Hebrew תחרימו, literally "ban") in Deut 20:17. It likely meant a destruction of armed soldiers, buildings, and religious icons.
>
> 1. Semitic language professor and NIV, NAB, and ESV bible translator Richard Hess argues that Hebrew "ban" is "stereotypical for describing all the inhabitants of a town or region, without predisposing the reader to assume anything further about their ages or even their genders" and "need not require that there really were children, senior citizens, or women there who were put to death" even when followed by the terms "men and women" (Joshua 8:25) or "young and old" (Joshua 8:25).
> 2. In Israel's destruction of enemies we see phrases like "left no survivor" and "utterly destroyed all who breathed" (Joshua 10:40, Judges 1:8). But in Joshua 21:12-13 the author has no problem telling us these people were still there afterward: "if you ever turn away and make alliances with these nations that remain near you… God will no longer drive out these nations". In 1 Sam 15:3-4 Israel was to "strike down the Amalekites. Destroy everything that they have. Don't spare them. Put them to death–man, woman, child, infant, ox, sheep, camel, and donkey alike." In 15:8 Saul "executed all Agag's people" and Agag himself was killed in 15:33. But later in 1 Sam 27:8 we're told they're still there and " had been living in that land for a long time". Hundreds of years later in Esther 3:1 we're even told Haman was an Agagite, a descendant of the Amalekite king Agag.
> 3. Most verses on the subject speak of "driving out" and "disposessing" the

> land rather than language suggestive of genocide. E.g. Num 33:51-53, in "the land of Canaan, you must drive out all the inhabitants of the land before you. Destroy all their carved images, all their molten images, and demolish their high places. You must dispossess the inhabitants of the land and live in it, for I have given you the land to possess it." It's the same story in Lev 18:25, Num 23:31-32, Deut 6:19, 9:4, 18:12, Joshua 3:10, and 23:9.
>
> 4. Jer 4:20 suggests inhabitants fled before armies arrived: "At the sound of the horseman and bowman every city flees; They go into the thickets and climb among the rocks"
> 5. Deut 7:22 specifically says that Israel was forbidden to "destroy them all at once" and instead they would be expelled "little by little".
>
> So either all of these verses contradict one another, or the conquest language was rhetorical.
>
> **3. Many of the "cities" were probably military outposts.** For example with Jericho and Ai, Richard Hess argues there are no references to noncombatants (apart from Rahab), no archaeological evidence of non-millitary use, the term melek (Hebrew מלכי) for "king" of the cities often meant mean a military leader in Canaan (e.g. in Joshua 2:2), they were located at defensive positions, and Jericho and Ai weren't described as a large city as Gibeon and Hazor explicitly were.
>
> **4. A just God requires wrath.** It's not possible to have a God who is just but not wrathful–otherwise wrongdoers continue unabated. Paranormal investigator James Randi wrote in Skeptic Magazine, "I accuse the Christian god of murder by allowing the Holocaust to take place" yet Dawkins and Hitchens condemn God for judgment against the Canaanites. Which is it? Ultimately the the problem is we view death as the ultimate judgment, when in the theological context of the bible it's only a graduation to what's next with accountability for what we've done with what we were given.

The four points are developed with links for support. If you get this a question a lot, it's a good resource to bookmark.

IRS e-mail backups destroyed shortly after targeting of conservatives was discovered

June 24, 2014 | by Wintery Knight | Link | Original Link

Investors Business Daily reports.

Excerpt:

> The IRS canceled a contract with an email storage contractor weeks after Lois Lerner reported lost personal files and before other IRS officials had their hard drives crash as Tea Party-targeting investigations began.
>
> Timing is everything, the saying goes, and sometimes the timing of events is also very curious, as in the case of the lost emails of Lerner and at least six other officials at the very same time the IRS canceled its contract to back up and preserve those emails as required by federal law.

So the IRS did at one time have back-ups of the e-mails. And they seem to have admitted it in Congressional Testimony:

> Perhaps this is what IRS Commissioner John Koskinen was referring to when in March testimony before the House Oversight Committee he assured Rep. Jason Chaffetz that the reason requested emails were difficult to provide was that IRS emails "get taken off and stored in servers."
>
> Later we would be told that the emails were lost forever and, as we noted, Koskinen was lying in March, when he said they were somewhere, or in June, when he said they were nowhere to be found. Let us ponder another possibility: that the emails were taken off and stored in Sonasoft servers, emails that would be deleted when the IRS contract for their storage ended. They were not lost, but, in effect, deliberately destroyed.
>
> […]Sonasoft's fiscal 2011 contract with the IRS ended Aug. 31, 2011. Eight days later, and about a month after Lerner's computer allegedly crashed, the IRS officially severed its relationship with Sonasoft.
>
> Three months later, IRS official Nikole Flax, who visited the White House more than 30 times, had her computer crash with a similar loss of critical emails, something that afflicted at least half-a-dozen IRS officials in a chain of events that defies logic and the smell test.

You can kind of form a hypothesis of who ordered the hit on the conservative groups by seeing whose e-mails are being deleted and who they were talking to. If I had to bet on it, I'd say that the order to persecute the conservative groups came from the White House, perhaps from the community organizer Barack Obama himself.

George Will has a good column up in the leftist Washington Post about how the Republicans can respond to Obama's decision to act outside the rule of law.

Are same-sex unions the same as heterosexual married unions?

June 24, 2014 | by Wintery Knight | Link | Original Link

I've written before about the differences between same-sex unions and opposite sex married couples.

Here's a post from Canon and Culture on the same topic by social scientist Glenn Stanton.

He finds two differences.

First, instability:

> [T]he research is strong and numerous enough that a recent and very provocative *Atlantic* cover story on what straights could learn from gay marriage couldn't ignore it. Liza Mundy, the article's author, doesn't appear to have a conservative bone in her body, yet she is fair and straight-up honest with the research on the nature of committed same-sex relationships.
>
> […]Mundy explains that studies have found "higher dissolution rates among same-sex couples" in Scandinavia – one of the world's most gay-friendly cultures — than married heterosexual couples. This study, published in *Demography*, found that even though same-sex couples enter their legal unions at older ages — a marker related to greater relational stability – male same-sex marriages break up at twice the rate of heterosexual marriages. And the break-up rate for lesbians? A stunning 77% higher than the same-sex male unions! When controlling for possible confounding factors, the "risk of divorce for female partnerships actually is more than twice than that for male unions."
>
> […]A study of two generations of British couples (one born 1958, the other 1970) in same-sex cohabiting, opposite-sex cohabiting and opposite-sex marriage relationships found the same-sex relationships dramatically more likely to break up than the opposite-sex cohabiting and married relationships.

According to that British study, only 25% of same-sex co-habitating couples are intact after 8 years. The stability number for married couples after 8 years is 82%. That's a big difference.

But there's more:

> Other studies – conducted by celebrated lesbian scholars – find notable instability in lesbian homes, even those with children. The current National Longitudinal Lesbian Family Study (NLLFS) found "a significant difference" in family dissolution rates when comparing lesbian with mother/father headed families, 56% and 36% respectively. (p. 1201)
>
> Another research study by two celebrated gay-friendly scholars, highlights a major comparative study between hetero and lesbian homes where, in the 5-year

> period of the study, 6 of the 14 lesbian mother-headed homes had broken up compared to only 5 of the 38 mom/dad headed homes. (p. 11) These scholars creatively explains that this stability imbalance is likely due to the "high standards lesbians bring to their intimate unions…" (p.12)

Ever heard of lesbian bed death?

> And Mundy points something else predictable in lesbian relationships. In fact, its consistency has earned it a name in the LGBT community: *lesbian bed death*. Seriously. This is the truth that sexual interest and frequency in many long-term lesbian relationships tends to decline considerably and even die over the years.

Usually, in relationships, men tend to be the ones who want more frequent sex. What happens when you have no aggressors and two gatekeepers? Lesbian bed death.

Next up, something common in male homosexual relationships: infidelity.

Stanton writes:

> A noted 2010 study on non-monogamy in long-term gay relationships by two gay-affirming scholars — the Couples Study — observes in their report's first sentence: "…non-monogamous relationships are very common in the gay community…" Their data showed that of the non-monogamous, long-term couples in their study, 42 percent made an arrangement for outside-sexual relationships within the first three months of the relationship's beginning and by the end of the first year, that number increased to 49 percent. At the seventh anniversary mark, an additional 24 percent of gay couples adopted such agreements. So such agreements are increasingly made as these relationships grow longer.
>
> The *Atlantic* piece is notes this as well; explaining that after the AIDS crisis, "gay male couples are more monogamous than they used to be, but not nearly to the same degree as other kinds of couples." One study Mundy cites asked those in various relationships whether they had any agreed-upon rules permitting extra-curricular activities. The differences were astonishing. Only 4% of male/female couples had them compared to 40% of gay men in legally recognized unions and 49% in long-term cohabiting unions.
>
> Another widely respected investigation, found that only a third of gay couples had monogamous agreements and truly honored them with no outside sex. In fact, it found that in the openly nonmonogamous gay relationships, the frequency of extra-dyadic sex from its start ranged from 2 to a whopping 2,500 separate incidents. The median was a remarkable 41.5 extracurricular incidents since the relationship's beginning. Frequency in the last year was startling was well, ranging from 0 to 350 occurrences of outside sex, with a median of 8 incidences in the last twelve months. Even those who pledged true monogamy, the range was from 1 to 63 "slip-ups" with a median of 5. Five "slip-ups" are not slip-ups. The corresponding numbers for men in heterosexual marriages are microscopic

> in comparison.

So what does all this mean?

It means that if you are interested in a definition of marriage that involves stability and marital fidelity, then you shouldn't be in favor of legalizing gay marriage. When you open up the term marriage to include relationships that seem to be very unstable and/or very unfaithful, you change the definition of marriage. Marriage means life-long married love. If we just turn around and call any association of adults "marriage", then we are losing the distinctiveness of marriage in the process. Think about it. We did the same thing in the previous redefinition of marriage (no-fault divorce) which attacked the permanence of marriage. Marriage has a specific meaning and we should not be redefining it every few years for the benefit of selfish adults.

Kevin DeYoung: five questions for Christians who support same-sex marriage

June 24, 2014 | by Wintery Knight | Link | Original Link

The five questions are in this TGC post.

The list:

1. On what basis do you still insist that marriage must be monogamous?
2. Will you maintain the same biblical sexual ethic in the church now that you think the church should solemnize gay marriages?
3. Are you prepared to say moms and dads are interchangeable?
4. What will you say about anal intercourse?
5. How have all Christians at all times and in all places interpreted the Bible so wrongly for so long?

I want to focus on questions 3 and 4, because they show that the same-sex marriage side is not "nice". They are not taking their position in order to promote goodness.

Take a look:

> 3. Are you prepared to say moms and dads are interchangeable?
>
> It is a safe assumption that those in favor of gay marriage are likely to support gay and lesbian couples adopting children or giving birth to children through artificial insemination. What is sanctioned, therefore, is a family unit where children grow up de facto without one birth parent. This means not simply that some children, through the unfortunate circumstances of life, may grow up without a mom and dad, but that the church will positively bless and encourage the family type that will deprive children of either a mother or a father. So are mothers indispensable? Is another dad the same as a mom? No matter how many decent, capable homosexual couples we may know, are we confident that as a general rule there is nothing significant to be gained by growing up with a mother and a father?
>
> 4. What will you say about anal intercourse?
>
> The answer is probably "nothing." But if you feel strongly about the dangers of tobacco or fuss over the negative affects of carbs, cholesterol, gmo's, sugar, gluten, trans fats, and hydrogenated soybean oil may have on your health, how can you not speak out about the serious risks associated with male-male intercourse. How is it loving to celebrate what we know to be a singularly unhealthy lifestyle? According to the Journal of the American Medical Association, the risk of anal cancer increases 4000 percent among those who engage in anal intercourse. Anal sex increases the risk of a long list of health problems, including "rectal prolapse, perforation that can go septic, chlamydia, cyrptosporidosis,

> giardiasis, genital herpes, genital warts, isosporiasis, microsporidiosis, gonorrhea, viral hepatitis B and C, and syphilis" (quoted in Reilly, 55). And this is to say nothing of the higher rates of HIV and other health concerns with disproportionate affects on the homosexual community.

Read the whole thing.

IRS pays $50,000 for leaking names of pro-marriage donors to gay activist group

June 25, 2014 | by Wintery Knight | Link | Original Link

From the Daily Signal.

Excerpt:

> Two years after activists for same-sex marriage obtained the confidential tax return and donor list of a national group opposed to redefining marriage, the Internal Revenue Service has admitted wrongdoing and agreed to settle the resulting lawsuit.
>
> The Daily Signal has learned that, under a consent judgment today, the IRS agreed to pay $50,000 in damages to the National Organization for Marriage as a result of the unlawful release of the confidential information to a gay rights group, the Human Rights Campaign, that is NOM's chief political rival.
>
> "Congress made the disclosure of confidential tax return information a serious matter for a reason," NOM Chairman John D. Eastman told The Daily Signal. "We're delighted that the IRS has now been held accountable for the illegal disclosure of our list of major donors from our tax return."

The have the background to this story as well:

> In February 2012, the Human Rights Campaign posted on its web site NOM's 2008 tax return and the names and contact information of the marriage group's major donors, including soon-to-be Republican presidential nominee Mitt Romney. That information then was published by the Huffington Post and other liberal-leaning news sites.
>
> HRC's president at the time, Joe Solmonese, was tapped that same month as a national co-chairman of President Barack Obama's re-election campaign.
>
> […]HRC is among organizations and activists advocating same-sex marriage that routinely describe NOM as a "hate group" or "anti-gay" for making the case for preserving marriage as the union of one man and one woman.

The Human Rights Campaign is a group that had previously condemned the Family Research Council as a hate group. This is the same Family Research Council that was later attacked by a convicted domestic terrorist / gay activist. After the attack, the HRC continued to denounce the FRC as a hate group. This is the group that Obama hires out of.

Shouldn't there be criminal charges for whoever leaked the donor names to the gay activists? There should be, but…:

> Unauthorized disclosure of confidential tax information is a felony offense that

> can result in five years in prison, but the Department of Justice did not bring criminal charges.

The Department of Justice did not press charges because they are on the same team as the leakers.

Pastor Matt is picking the best books of the year…

June 25, 2014 | by Wintery Knight | Link | Original Link

Here's one from a recent blog post that I just bought for my good friend Dina, and she is really liking it.

Excerpt:

> Dr. Qureshi's book Seeking Allah, Finding Jesus: A Devout Muslim Encounters Christianity (Zondervan 2014) is a compelling and necessary read for every committed Christian. Nabeel, a medical doctor with masters degrees in religion and apologetics, has penned an apologetic, spiritual autobiography that is as much an intellectual challenge as an emotional roller coaster, which is a rare feat.
>
> Querishi was raised in a loving, muslim family with a father that served faithfully in the U.S. Navy. His family sacrificed to send him to fine universities and challenged him to think critically. He befriended a committed Christian who had a series of graceful evangelistic discussions over many years. His friend eventually introduced him to scholars Mike Licona and Gary Habermas who helped plant intellectual seeds that would eventually sprout into a faith that is shaking pillars around the world.

Look at this endorsement:

> My story, however, is nothing compared to the one presented in "Seeking Allah, Finding Jesus." Dr. Qureshi's life is so well told that I found myself sneaking pages at every opportunity whether it be standing in line at the grocery store or waiting on that mysterious person who inexplicably spends ten minutes pounding buttons at the ATM (are they trying to take out a second mortgage on their house?). I have even bought copies to give away to friends, which is something I have only done with Grek Koukl's Tactics, Lee Strobel's Case for a Creator and Det. J. Warner Wallace's Cold-Case Christianity.
>
> Dr. Qureshi, who now works for Ravi Zacharias International Ministries, has written the book that is easily the best of the year so far. It is also a fine example of the power of combining story (a potent tool with postmoderns) with strong arguments. I highly recommend it. Do yourself a favor and pick up a copy ASAP.

By the way, the woman I am currently mentoring in apologetics *loves* Nabeel's book and she even went to see him lecture. I was able to find her a DVD of Nabeel lecturing at Georgia Tech – you can get it here. I was also able to find the same lecture at Georgia Tech, apparently, on YouTube.

I've heard nothing but rave reviews of Nabeel's book from people who have read it. It's especially good for people who like biographies.

IRS Lois Lerner pushed to have Republican senator Chuck Grassley audited

June 26, 2014 | by Wintery Knight | Link | Original Link

From the web site of the House Ways and Means Committee.

Full text:

> Washington, DC – Today, Ways and Means Committee Chairman Dave Camp (R-MI) announced the Internal Revenue Service's (IRS) targeting of conservative individuals includes a sitting United States Senator. According to emails reviewed by the Committee under its Section 6103 authority, which allows the Committee to review confidential taxpayer information, Lois Lerner sought to have Senator Chuck Grassley (R-IA) referred for IRS examination.
>
> "We have seen a lot of unbelievable things in this investigation, but the fact that Lois Lerner attempted to initiate an apparently baseless IRS examination against a sitting Republican United States Senator is shocking," said Camp. "At every turn, Lerner was using the IRS as a tool for political purposes in defiance of taxpayer rights. We may never know the full extent of the abuse since the IRS conveniently lost two years of Lerner emails, not to mention those of other key figures in this scandal. The fact that DOJ refuses to investigate the IRS's abuses or appoint a special counsel demonstrates, yet again, this Administration's unwillingness to uphold the rule of law."
>
> **Background:**
> While the Ways and Means Committee investigation into Lerner's involvement in the potential Grassley examination is ongoing, documents show that Lerner received an invitation to a speaking event that was intended for Senator Grassley. Instead of forwarding the invitation to Grassley's office, Lerner immediately suggested to others in her office that the issue should be referred for examination. The Committee was able to investigate this information through its authority under Section 6103 of the tax code. A waiver was signed by Senator Grassley and his wife in order to make this information public.

And there is good news about the corruption at the IRS – the news is reaching the American public.

The Daily Signal reports:

> Americans are running out of faith in the Internal Revenue Service.
>
> Seventy-six percent believe that the "lost" Lois Lerner emails were deliberately destroyed, according to a Fox News poll. Only 12 percent believe the destruction resulted as an accident.
>
> This skepticism crossed party lines. A whopping 90 percent of Republicans doubt

> the IRS's most recent claims, as do 74 percent of independents and 63 percent of Democrats.
>
> There remains desire for congressional action. Seventy-four percent feel that lawmakers should continue investigating the IRS's targeting of conservative groups "until someone is held accountable."
>
> Americans are also dubious about President Barack Obama's claims that he first learned about the scandal through the media, with just 31 percent believing this to be true.
>
> This poll surveyed 1,018 adults at random and has a margin of error of plus-or-minus three percentage points.

And finally, this, which I posted previously, but it's SO GOOD:

Now that's effective cross-examination.

Advice for Christian parents from a woman who left Christianity at university

June 26, 2014 | by Wintery Knight | Link | Original Link

This is from the Beyond Teachable Moments blog – a great blog for Christian parents who want to raise effective, influential children.

Intro:

> I recently had the opportunity to meet an intelligent young Christian woman who is proactively learning how to discuss her faith in a secular society.
>
> Why is she so dedicated to doing this? **Because her Christian upbringing had completely failed to prepare her for the challenges of secularism, religious pluralism and atheism at university.**
>
> This young woman grew up in close-knit, loving Christian home. She faithfully attended church. She was enrolled in a Christian school that taught subjects such as apologetics, hermeneutics, inductive Bible study and managing relationships. Her parents cared about her spiritual formation.
>
> And yet, this is how she describes her university experience:
>
> "Although I was still living at home during the beginning of my freshman year, university was traumatic at best. I went from a class of 15 in a small Christian school, to 30,000 people at a public university.
>
> The most troubling thing was the amount of differing beliefs and worldviews I encountered, from professors and other students. At the time I thought they had much better arguments than I did for the validity of their views."
>
> Added to her challenge was the fact that her faith was borrowed, not her own.
>
> "I can honestly and sadly say that as I started my freshman year at age 19, my faith was very much borrowed. It was a set of rules to adhere too. Although I was well aware of the concept of a relationship with Jesus Christ, I did not have it. I was entrenched in the notion of conforming to what people wanted me to do in order to escape condemnation and judgment."
>
> "My faith at the university was non-existent. If you asked me what I believed I would say Christian, but I did not back that up with any action whatsoever."
>
> As a mom of two young boys, the top-of-mind question I had for her was: what did she wish she'd known before she went to university?

The rest of the post is her response, but I wanted to quote this part, because it reminds me of what Pastor Matt Rawlings posted about his own loss of faith a while back.

The mysterious Christian woman says this:

> **Don't use me to make you look good in front of other people at church, I**

> **can see straight through that.** It does not feel good and drives me far away. What matters is what is going on inside, not what is projected. Looking perfect and going through the motions does nothing. The very basis for Christianity is what is going on in the heart. Only by letting Jesus work in your heart can actions follow with true authenticity.

And here's what Pastor Matt said:

> Looking back, I had a very fuzzy understanding of the Gospel. I (and I think many people who call themselves Christians) are what theologians call "semi-Pelagians." I believed anyone could come to the altar but if they wanted to continue to be welcomed in the pews, they had to clean up their act and do so almost overnight. The culture of Christianity at large appeared to me to be that if you came to faith and continued to struggle with lust, a foul mouth or whatnot then there was just something wrong with you. I felt the church was more about behavior modification than grace.
>
> I needed someone who I knew loved me to sit down with me long before all of these problems arose, look me in the eye and tell me how easy and how difficult it is to be a Christian. I needed someone cared for me to unpack 2 Corinthians 5:21 and point out that by being "in Christ" I would be judged by Christ's perfect life instead of my own. I needed to know that the faith is not about "keeping the rules" but about doing things and not doing certain things to show my love and gratitude to God for what He did for me. I needed to be able to read the Bible, especially the Old Testament, in a way that always pointed to Jesus Christ. I needed to understand that God has graciously given us the spiritual disciplines of fasting, prayer, serving the poor, worship, etc. to help me grow. I needed to hear that all Christians struggle with sin and will, to a certain degree, until they go to be with the Lord or He returns to be with us.
>
> I needed good theology, good spiritual practices, good apologetics and good relationships. I needed knowledge and it needed to come from someone who I knew loved me even though I was thoroughly unlovable. You can't just leave this to the church staff because they do not have to time to meet with everyone and people with a chip on their shoulder about the church (like I had) feel like they are just doing it as part of their job. All young people in the church, especially the "troubled kids" need this. It is a lot of work but anyone's eternity is worth it, isn't it?

As J.P. Moreland has pointed out, your beliefs are not something that you form by sheer acts of will. You cannot will to believe things. Your beliefs form naturally through study, and then outward actions come from those beliefs. You cannot focus on the outward actions of your children – you have to focus on the beliefs inside. And know that those beliefs are not formed by habit, singing, church attendance or any other non-cognitive approaches. Beliefs form *through a careful study of the evidence on BOTH SIDES.* The first thing that Christian parents should be showing their kids is debates with both sides

represented. That shows them that there is more to a worldview than just being bullied into it by raising your voice at them.

Christian parents, take note. Don't be focused on making your child behave nicely on the outside and making it impossible for them to talk about temptations and doubts. Christianity comes from the inside – from the mind. You need to be helping them form a worldview that has been tested and approved by them, before they ever set foot on a university campus. The Christian faith is not adopted by habit or tradition, it is adopted by transferring knowledge and discussing opposing views openly and honestly.

Don't be like this mother who is only focused on externals – what family and friends think of her:

The good news is that atheism is not generally adopted because of logic or evidence. That means that a little bit evidence for God's existence goes a long way against *no evidence*. A little bit evidence for the reliability of the Bible goes a long way against *no evidence*. A little bit of the minimal facts case for the resurrection of Jesus goes a long way against *no evidence*. It's very important that when your children get to university that they find a conflict between *some* evidence and *no evidence*. At that point, it becomes their choice to decide what to do, and it could go either way. You don't have to make them William Lane Craig before they get to university, for example. But they should have at least read his popular-level essays and books, heard his podcasts, and seen him debate.

Peer pressure on a secular university is powerful – but if you've taught your children to value *truth* over popularity, vanity, selfishness and immorality, then you've done your job. Lots of people fall away from Christianity in university because of the hostile environment. Some fall away because they want to be approved of by their peers, some because they just want to be seen as tolerant or smart, some because they want to get good grades from liberal professors, some because they want to have a good time, etc. That's not your concern. Your concern is to demonstrate your love of truth, and communicate to them a sober assessment of the evidence pro and con on ultimate issues. After that, it's up to them.

The best explanation for the design of bird wings is intelligent design

June 26, 2014 | by Wintery Knight | Link | Original Link

A great post from Evolution News about my favorite animals in the whole world – BIRDS!

Excerpt:

> How hard can it be to make a flexible wing flap for an airplane? Almost all aircraft today use rigid wings with rigid landing flaps. They work, but they waste fuel. German engineers embarked on a mission to reduce kerosene consumption by 6%: "integrating flexible landing devices into aircraft wings is one step towards that target," a news item from Fraunhofer says. They've named the project SARISTU, for Smart Intelligent Aircraft Structures.
>
> Birds are way ahead of them:
>
> While birds are able to position their feathers to suit the airflow, aircraft wing components have so far only been rigid. As the name suggests, landing flaps at the trailing edge of the wing are extended for landing. This flap, too, is rigid, its movement being limited to rotation around an axis. This is set to change in the SARISTU project. "Landing flaps should one day be able to adjust to the air flow and so enhance the aerodynamics of the aircraft," explains Martin Schüller, researcher at the Fraunhofer Institute for Electronic Nano Systems ENAS in Chemnitz. (Emphasis added.)
>
> What are some of the challenges in building a flexible wing?
>
> 1. Knowing where to flex: The flap can't be flexible all over, or it would be hard to control. The designers made "five hard and three soft zones, enclosed within a silicon skin cover extending over the top."
> 2. Finding stretchy skin: When the soft zone moves, the skin of the aircraft has to stretch with it. "The mechanism that allows the landing flap to change shape **can only function if the skin of the landing flap can be stretched as it moves**, a **problem** tackled by researchers from the Fraunhofer Institute for Manufacturing Technology and **Advanced Materials**IFAM in Bremen."
> 3. Covering the air gap: "**Any gap** between the flap and the fixed aircraft wing**would cancel out any positive effect**," the article notes. "This led us to develop an **elastic connecting element,** and this work already covers everything from the **chemical makeup** to the **process technology** and**manufacture** of the component," an engineer says.
> 4. Designing the material to tolerances: "The **mechanism** sits underneath the soft zones, the areas that are most distended. While the **novel design is noteworthy**, it is the **material** itself that stands out, since the flexible

> parts are made of elastomeric foam that **retain their elasticity** even at**temperatures** ranging from minus 55 to 80 degrees Celsius."
>
> No feathers, but it's a start. The team showed off their prototype at the ILA Berlin Air Show in May. Apparently it was not quite ready for takeoff:
>
> When the prototype takes off for the first time it will benefit from a development known as SARISTU, a deformable wing which is currently the subject of intensive research by Fraunhofer Gesellschaft. In future the landing flaps will be designed to adapt in flight to the air flow conditions, thereby always ensuring the best possible aerodynamics.
>
> We celebrate this advance, but you know where we're going. Birds had it all figured out long ago: the right shape, the right material, the control of airflow, and much more. As Dr. Timothy Standish says in the film Flight: The Genius of Birds, "Feathers do a number of jobs remarkably well." They are individually controllable, they flex, they insulate, they save on weight, and they can handle the temperature requirements of avian flight. That's just a partial list achievements in powered flight that surpass anything man has yet designed.

If you want to get hold of that DVD on "Flight" that they mentioned, it's right here on Amazon.com. I highly recommend it.

I also highly recommend owning birds – because if you work really hard at caring for one for a long time, they might grow to trust you. There is nothing quite like a tiny little bird trusting you enough to let you gently pull open his or her wing for a closer look at how it works:

Awww! Cockatiel lets a trusted friend see under her wing

There's more to birds than just well-designed wings. There's a well-designed *heart* in there, too! That might even be *more amazing* than the design of the wing. It is to me.

Note: although this post does not provide a rigorous case for intelligent design, that can be found by looking at the work of Stephen C. Meyer on the origin of life and on the Cambrian explosion. The books that demonstrate the superiority of the intelligent design hypothesis are "Signature in the Cell" and "Darwin's Doubt". If you'd like to see a good popular-level presentation of intelligent design related to the origin of life, click here for a

lecture.

Supreme Court rules that pro-lifers have free speech right at abortion clinics

June 27, 2014 | by Wintery Knight | Link | Original Link

From USA Today.

Excerpt:

> Abortion remains an issue that divides the Supreme Court, but the justices had less disagreement Thursday in defending the free speech rights of abortion opponents.
>
> The court ruled unanimously that Massachusetts went too far — literally — when it created 35-foot buffer zones around abortion clinics to keep demonstrators away from patients.
>
> The decision united Chief Justice John Roberts and the court's four liberals, who said the distance improperly removed demonstrators from public sidewalks and spaces. The other conservative justices would have issued a more sweeping verdict, striking down the ban on grounds that it targets abortion opponents' specific point of view.
>
> "Petitioners wish to converse with their fellow citizens about an important subject on the public streets and sidewalks — sites that have hosted discussions about the issues of the day throughout history," Roberts wrote. Though the state has an interest in public safety, it "pursued those interests by the extreme step of closing a substantial portion of a traditional public forum to all speakers."
>
> […]The court's other four conservative justices agreed with the verdict in the Massachusetts case but would have gone further by striking down the law as one that illegally targets abortion opponents.
>
> "It is clear on the face of the Massachusetts law that it discriminates based on viewpoint," Justice Samuel Alito wrote. "Speech in favor of the clinic and its work by employees and agents is permitted; speech criticizing the clinic and its work is a crime. This is blatant viewpoint discrimination."

The article has a reactions from a Planned Parenthood spokeswoman. She was against the ruling.

North Carolina passes bill to prohibit discrimination against religious and political groups

June 27, 2014 | by Wintery Knight | Link | Original Link

From Campus Reform.

Excerpt:

> The North Carolina House passed a measure last week to prohibit university administrators from denying facilities, funding, or recognition to political or religious groups on the basis that they are exclusionary.
>
> The bill came in response to Christian groups that have been stripped of their student organization status because they did not allow students with other beliefs to become leaders in their organization.
>
> The bill, which has now been passed by both chambers of the North Carolina legislature, awaits Governor Pat McCrory's (R) signature.
>
> "Our society is engaged in an ongoing cultural battle," said Rep. Bert Jones (R), the bill's primary sponsor. "There is a war on God…Unfortunately these efforts have been extended to our campuses."
>
> […]"We need to make clear that just because a student decides to attend our public schools and universities … that does not somehow mean that the student forfeits his rights to the university. This bill also recognizes that there is an important difference between education and indoctrination coercion," Jones said.
>
> The bill passed the North Carolina House of Representatives by a vote of 78-37 last Wednesday. **All 37 votes against the bill were cast by Democrats.**

Lest you think that universities are not really doing this to Christian and conservative clubs, here is an example.

From the radically leftist New York Times.

Excerpt:

> For 40 years, evangelicals at Bowdoin College have gathered periodically to study the Bible together, to pray and to worship. They are a tiny minority on the liberal arts college campus, but they have been a part of the school's community, gathering in the chapel, the dining center, the dorms.
>
> After this summer, the Bowdoin Christian Fellowship will no longer be recognized by the college. Already, the college has disabled the electronic key cards of the group's longtime volunteer advisers.
>
> In a collision between religious freedom and antidiscrimination policies, the student group, and its advisers, have refused to agree to the college's demand that any student, regardless of his or her religious beliefs, should be able to run

> for election as a leader of any group, including the Christian association.
>
> Similar conflicts are playing out on a handful of campuses around the country, driven by the universities' desire to rid their campuses of bias, particularly against gay men and lesbians, but also, in the eyes of evangelicals, fueled by a discomfort in academia with conservative forms of Christianity. The universities have been emboldened to regulate religious groups by a Supreme Court ruling in 2010 that found it was constitutional for a public law school in California to deny recognition to a Christian student group that excluded gays.
>
> At Cal State, the nation's largest university system with nearly 450,000 students on 23 campuses, the chancellor is preparing this summer to withdraw official recognition from evangelical groups that are refusing to pledge not to discriminate on the basis of religion in the selection of their leaders. And at Vanderbilt, more than a dozen groups, most of them evangelical but one of them Catholic, have already lost their official standing over the same issue; one Christian group balked after a university official asked the students to cut the words "personal commitment to Jesus Christ" from their list of qualifications for leadership.
>
> […]The consequences for evangelical groups that refuse to agree to the nondiscrimination policies, and therefore lose their official standing, vary by campus. The students can still meet informally on campus, but in most cases their groups lose access to student activity fee money as well as first claim to low-cost or free university spaces for meetings and worship; they also lose access to standard on-campus recruiting tools, such as activities fairs and bulletin boards, and may lose the right to use the universities' names.

So if you agree with the secular and liberal elites, you can form a club. But if you disagree with them, you can't. Either way, you pay them your money.

You may also find this column by conservative professor Mike Adams to be of interest. He replies to a concerned parent who wants to know how bad secularism and leftism really are on campus.

Michael Brown discusses his upcoming debate on homosexuality with Matthew Vines

June 27, 2014 | by Wintery Knight | Link | Original Link

An interview with Dr. Michael Brown from Charisma News.

Intro:

> Dr. Michael Brown is author of *Can You Be Gay and Christian? Responding With Love and Truth to Questions About Homosexuality* and host of the nationally syndicated talk radio show *The Line of Fire* on the Salem Radio Network. He is also president of FIRE School of Ministry and director of the Coalition of Conscience. And on June 28, he'll be directly debating Matthew Vines on Moody Radio's program "Up for Debate."
>
> Matthew Vines has recently become the face of the current "gay Christian" movement, publishing *God and the Gay Christian* after his speech advocating Christian acceptance of homosexuality went viral in 2012.

Here's a part I liked:

> **You have stated publicly that homosexual sin is a central, gospel issue. In my own life, I've known at least one person who has turned their back on the gospel because of the Bible's stance on homosexuality and used Vines' material to justify that decision. What words would you have for someone who has rejected Christianity over this issue?**
>
> Actually, what drew me into the this issue was the impact of homosexual activism on our society, but the more I talked with those who identify as LGBT and the more I read their stories—especially those who professed to be followers of Jesus—the more my heart broke for them.
>
> So, it's very painful to hear about your friend's experience, but we'll be hearing it more and more in the coming days. The problem is when I start with "me" and then go to the Word, I will be deceived; if I start with God and then go to "me," I'll find truth and freedom. Everyone needs to give himself or herself to Jesus unconditionally to be a disciple, and in doing so, we find the path to life. But if we say, "This is who I am, and God must satisfy my needs," then we will create a new and alien faith.
>
> **What first prompted you to have an open debate with Vines?**
>
> To be perfectly clear, I've always been willing to have civil, public debates on any controversial issues of the faith that I'm focused on, which is why I've been debating rabbis for decades as a Jewish follower of Jesus. So, I've been open to debating Matthew or any other qualified representative of the "gay Christian" position for many years, and I'm pleased to have this opportunity through Moody

> Radio.
>
> In fact, if Matthew feels that the one-hour radio format doesn't allow us sufficient time to plumb the issues in sufficient depth, as a follow up to this radio debate, I'd love to help set up a formal, multi-hour debate where he could be joined by an academic colleague like Dr. James Brownson and I would be joined by Dr. James White, and we could spend a few hours together, in public, and recorded for the world to see on YouTube.
>
> I feel that events like this radio debate and other types of fair, moderated debates can only advance the cause of truth.
>
> **What do you want this debate to accomplish?**
>
> By God's grace, I want listeners to realize that there is zero scriptural support for the idea that God ever blesses or approves of committed, same-sex relationships, that homosexual practice is always sinful in His sight, that there is really no debate at all in term of what the Bible says. At the same time, I want listeners to realize how deeply God loves LGBT people, how Jesus shed the same blood for them and offers the same salvation to them, and how following Jesus unconditionally is the path to life and freedom.

I like Dr. Brown – he's a good advocate for the cause of Christian morality.

Previously, I blogged about a debate between Michael Brown and Eric Smaw. There's a video and summaries of the opening speeches in that post.

White House review of VA finds “corrosive culture” to blame for poor patient care

June 28, 2014 | by Wintery Knight | Link | Original Link

The Wall Street Journal reports.

Excerpt:

> A White House review of the VA health system points to a culture that has degraded the timely delivery of care and requires a restructuring to improve transparency and accountability.
>
> Acting Secretary of Veterans Affairs Sloan Gibson and Rob Nabors, White House deputy chief of staff, told President Barack Obama on Friday that significant further action was needed to address systemic problems.
>
> Six weeks after the president dispatched Mr. Nabors to assess problems within the VA, the president’s aide outlined a long list of issues affecting access to timely care at VA medical facilities.
>
> Mr. Nabors’s work is the latest in a series of reviews and reports issued in the past two months, including those from the VA’s independent inspector general, the Office of the Special Counsel and the VA itself. The new report found what Mr. Nabors described as a “corrosive culture” that affects employee performance and patient care. He added that the Veterans Health Administration structure has “impeded appropriate management, supervision and oversight.”
>
> **The review also found that the VA’s goal for scheduling many medical appointments within 14 days is “arbitrary, ill-defined and misunderstood.” That goal had been set in 2011. The VA recently eliminated that 14-day target.**
>
> Mr. Gibson praised the report. “We know that unacceptable, systemic problems and cultural issues within our health system prevent veterans from receiving timely care,” he said in a statement.
>
> The White House has scrambled to respond to evidence of widespread mismanagement within the VA and to fill a growing number of vacancies in top posts. **An internal assessment also revealed improper appointment-scheduling procedures and efforts to hide long wait times across the VA health system.**

Another interim report from the VA inspector general confirms that:

> The VA’s independent inspector general office has said it would likely issue in August its full report on its sweeping review of the department. An interim report, issued just days before Mr. Shinseki’s resignation, showed problems throughout the VA. They included employees tinkering with official patient appointment wait

> times to make them seem much shorter than the actual times veterans were having to wait.

In case you were wondering why this is all happening in the VA health care system and not in the private health care system, it's because the VA is 100% pure government-run health care, as health care expert Avik Roy explains in Forbes magazine. The VA is not scandal is not some sort of aberration from government-run health care. Long wait times and patient deaths are *essential* to government run health care, in practice.

Matthew Vines and Michael Brown debate homosexuality and the Bible on Moody radio

June 28, 2014 | by Wintery Knight | Link | Original Link

The audio of the Matthew Vines vs Michael Brown debate is streamed here on the Moody site.

Details:

> Can you be gay and Christian? Matthew Vines says you can and he's created a viral video and best-selling book defending his view. This Saturday on Up for Debate, Vines joins host Julie Roys to debate author and leading evangelical apologist, Dr. Michael Brown. Is gay monogamy an option for Christians? Is it unloving to reject gay marriage? Listen and join the discussion this Saturday at 8 a.m. Central Time on Up for Debate!
>
> **Matthew Vines**
>
> Matthew Vines is an advocate for the acceptance of lesbian, gay, bisexual, and transgender (LGBT) people within Christian communities and in society at large. Living in Wichita, Kansas, Matthew attended Harvard University from 2008 to 2010. He then took a leave of absence in order to research the Bible and homosexuality and work toward LGBT inclusion in the church. In March 2012, Matthew delivered a speech at a church in his hometown about the Bible and homosexuality, calling for acceptance of gay Christians and their marriage relationships. Since then, the video of the speech has been seen more than 500,000 times on YouTube, and it was featured inThe New York Times and The Christian Post. In 2013, Matthew launched The Reformation Project, a non-profit organization dedicated to training LGBT Christians and their allies to reform church teaching on sexual orientation and gender identity. Matthew's book,God and the Gay Christian: The Biblical Case in Support of Same-Sex Relationships, is in stores now.
>
> **Dr. Michael Brown**
>
> Michael Brown holds a Ph.D. from New York University in Near Eastern Languages and Literatures and is the author of 25 books, most recently Can You Be Gay and Christian? He has served as a visiting or adjunct professor at seven leading seminaries, and contributed to numerous scholarly publications, including the Oxford Dictionary of Jewish Religion and the Theological Dictionary of the Old Testament. He hosts the nationally syndicated talk radio program The Line of Fire and the TV show Answering Your Toughest Questions, and he has been active in teaching, preaching, and debating since 1973, committed to seeing a Jesus-based moral and cultural revolution.

Summary key: Julie Roys (JR), Matthew Vines (MV), Michael Brown (MB)

Summary:

Opening speeches:

- JR: Why should Christians be open to reinterpreting the Bible on homosexuality?
- MV: Consider the lives and testimonies of gay Christians. Here is my personal story.
- MV: According to the Bible, a person with same-sex attractions would have to embrace lifelong celibacy. I refuse to do that.
- MV: There are 6 passages in the Bible that are relevant to the goodness of homosexuality. All are negative.
- MV: None of these passages address gay relationships that are “long-term” and “faithful” that are based on “commitment” and “love”.
- JR: You say that it is “damaging” for Christians to disagree with you views, is that true?
- MV: Yes. One of my friends declared his homosexuality and he did not feel safe to come home. He felt pain because Christians disagreed with him.
- MV: You cannot ask a person with same-sex attractions to be celibate, it causes too much harm to ask gays to abstain from sexual relationships.
- JR: Respond to Matthew.
- MB: The Bible only permits heterosexual sexuality and in every case condemns homosexual acts.
- MB: Matthew is taking his sexual preferences and activities as given, and reinterpreting the Bible to fit it.
- MB: Genesis talks about women being made to help men, and to fulfill God’s commandment to procreate and fill the Earth.
- MB: The Bible speaks about the complementarity of the sexes when talking about how two become one in marriage.
- MB: I am very sensitive to the stories of people who are gay who experience discrimination as “gay Christians”.
- MB: You can feel sad for people who have two conflicting commitments, but that doesn’t mean we should redefine what the Bible says.
- JR: Stop talking, we have a break.

JR takes a caller for the next topic:

- Caller 1: I had same-sex attractions and I was able to change my sexuality.
- JR: Matthew, respond to that.
- MV: Alan Chambers of Exodus International says that 99.9% of people he worked with had not changed their gay orientation.
- MV: Lifelong celibacy is not acceptable to gays, so the Bible must be reinterpreted to suit gays.
- MB: Matthew thinks that God himself did not understand the concept of sexual orientation and inadvertently hurt gays because of his lack of knowledge.
- MB: There is a solution in the Bible for people who cannot be celibate, and that

solution is heterosexual marriage
- MB: If a person is only attracted to pre-teen girls, do we then have to re-write the Bible to affirm that so they won't be "harmed"?
- MB: Alan Chambers was speaking for his own group, and his statement does not account for the fact that thousands of people DO change.
- JR: What about the Jones/Yarhouse study that found that 38% of reparative therapy subjects were successful in changing or chastity?
- MV: (no response to the question)
- MV: (to Brown) do you accept that the Bible forces gays to live out lifelong celibacy

Another break, then Brown replies:

- MB: Yes. But change is possible.
- MV: Do you know of any Christian who acknowledged that this was the consequence of the Bible's teaching for gays?
- MB: Paul's explanation that the options for ALL Christians are 1) celibacy or 2) heterosexual marriage. For 2000 years.
- MV: Paul (in Romans 1) is talking about people who are not "long-term", "faithful" gay relationships.
- MV: Paul was not aware of "long-term", "faithful" gay relationships at the time he wrote his prohibitions in Romans 1.
- JR: How do you know that fixed sexual orientation is true? And that the Biblical authors would written different things if they knew?
- JR: Are there any references in the first century to "long-term", "faithful" gay relationships?
- MB: Yes, in my book I quote prominent historian N. T. Wright who documents that those relationships were known.
- MB: Matthew's view requires that God did not know about sexual orientation when ordaining the Bible's content.
- MB: Leviticus 18 is for all people, for all time. This was not just for the Jews, this was for everyone.
- MV: I am not saying that Paul was wrong because he was ignorant.
- MV: Paul was writing in a context where "long-term", "faithful" gay relationships were unknown.
- MV: NT Wright does not cite first century texts, he cites a problematic 4th century text.
- MV: Absence of 1st-century references to "long-term", "faithful" gay relationships means that God did not intend to prohibit them.
- MB: Whenever the Bible speaks about homosexuality, it is opposed to it – Old Testament and New Testament.

Another break, then the conclusion:

- JR: Respond to the Leviticus prohibition, which prohibits homosexuality for everyone,

for all time.
- MV: It is a universal prohibition on male same-sex intercourse, but it does not apply to Christians.
- MV: For example, Leviticus prohibits sex during a woman's menstrual period. And Christians are not bound by that.
- MV: What is the reason for this prohibition of male-male sex in Leviticus? It's not affirm the complementarity of the sexual act.
- MV: The Bible prohibits male-male sex because it is written for a patriarchal culture.
- MV: In a patriarchal culture, women are viewed as inferior. That's why the Bible prohibits a man from taking the woman's role in sex.
- MB: The prohibition in Leviticus is a universal prohibition against male-male sex, applicable in all times and places.
- MB: Homosexual sex is a violation of the divine order.
- MB: We can see already the consequences of normalizing this: gay marriage, and supports for polygamy and polyamory.
- MV: So the earliest reference there is to a "long-term", "faithful" gay relationship is a 4th century text.
- MV: But that gay relationship is not like modern gay relationships.

I have a few comments about Vines' points below.

My comments:

Even heterosexuals who have not married are called upon to embrace lifelong celibacy. I am in my 30s and am a virgin because I have not married. I wouldn't seek to reinrepret the Bible to allow premarital sex just because what I am doing is difficult. I would rather just do what the Bible says than reinterpret it to suit me. And it's just as hard for me to be chaste as it would be for him to be. In short, it's a character issue. He takes his right to recreational sex as non-negotiable, and reinterprets the Bible to suit. I take the Bible as non-negotiable, and comply with it regardless of whether it seems to make me less happy. With respect to the purposes of God for me in this world, my happiness is expendable. If I don't find someone to marry, I'm going to be "afflicted" with the lifelong celibacy that Vines seems to think is torture, but let me tell you – God is happy with the contributions I am making for him, and if I have to be chaste through my whole life, I am 100% fine with that. I serve the King. And not the reverse.

Notice that he talks about "long-term" but not permanent relationships, and "faithful" but not exclusive. This is important because the statistics show that gay relationships (depending on whether it is female-female or male-male) are prone to instability and/or infidelity. I just blogged on that recently, with reference to the *published research* on the subject. Vines is talking about a situation that does not obtain in the real world – according to the data. Gay relationships do not normally value permanence and exclusivity in the way that opposite-sex marriage relationships do, especially where the couple regularly attends church. The divorce rate and infidelity rate for religious couples is *far below* the rates for gay couples, depending on the sexes involved. Vines is

committed to the idea that marriage is about feelings, e.g. – "love", but that's not the public purpose of marriage. Marriage is not about love, it's about complementarity of the sexes and providing for the needs of children. We have published studies like this one showing that there are negative impacts to children who are raised by gay couples, which dovetails with studies showing that children need a mother and that children need a father. We should not normalize any relationship that exposes children to harm. We should prefer to inconvenience adults than to harm children.

Matthew Vines made an argument that Christians have to stop saying that homosexuality is wrong, because it makes gay people feel excluded. I wrote previously about the argument that gay activists use where they say "if you don't agree with me and celebrate me and affirm me, then I'll commit suicide". In that post, I quoted a prominent gay activist who made exactly that argument. I don't find the threats to self-destruction to be a convincing argument *for the truth* of the view that gay marriage being the same as heterosexual marriage. In fact, this is confirmed by a recent study which showed that features of gay relationships themselves, and not social disapproval, is to blame for high rates of suicide in the gay community.

Vines seems to want to argue that the context in which the Bible authors were writing did not allow them to address the problem of gays in "long-term", "faithful" relationships. Well, we have already seen that statistically speaking, those relationships are in the minority. One British study mentioned in the post I linked to above found that only 25% of gay couples were intact after 8 years. The number is 82% for heterosexual marriages, and that *doesn't* filter by couples who abstain from premarital sex and who attend church regularly. If you add those two criteria, the number is going to be well above 82% in my opinion. Studies show that premarital chastity and church attendance *vastly* improve the stability and quality of marriages.

In addition, Vines is trying to argue that 1) the Bible authors were not aware of "long-term", "faithful" gay relationships and 2) their failure to explicitly disqualify these "long-term", "stable" gay sexual relationships means that the Bible actually condones them. A friend of mine pointed out that this is a textbook case of the argument from silence, where someone asserts that because something is not explicitly condemned, then it must be OK. Carried through to its logical end, that would mean that things like identity theft are OK, because they are not mentioned explicitly. Brown asserted that there was a blanket prohibition on homosexual acts. He is arguing from what we know. Vines says that "long-term", "faithful" homosexual relationships are not mentioned, and are therefore OK. He is arguing from what we don't know. And he is trying to reverse the burden of proof so that he doesn't have to show evidence for his view. Brown wouldn't take the bait. The fact of the matter is that no one for the last 2000 years of church history have taken Vines' view. Every single Christian before Vines, who were closer to Jesus' teachings than Vines, understood the verses that Brown cited to be providing a blanket prohibition on homosexual sex acts. If Vines wants to claim that the Bible condones what he wants it to condone, he has to produce some positive evidence from the text or from church history or church fathers. He has *nothing* to support his case that

could convince anyone that this is what Christians have believed, and ought to believe.

Finally, if you are looking for another debate, I blogged about a debate between Michael Brown and Eric Smaw. There's a video and summaries of the opening speeches in that post.

William Lane Craig's Defenders class now live-streamed every Sunday at 11:30 AM Eastern

June 29, 2014 | by Wintery Knight | Link | Original Link

I saw this post up on Pastor Matt's blog.

He writes:

> William Lane Craig's ministry has been grace upon grace to me. He is one of the apologists whose work saved my faith from the relativistic emergent church fog in which I wandered for several years as a young Christian (you can more about that here).
>
> However, it is not just Dr. Craig's books and debates that have blessed my Christian life and ministry but his podcasts are also outstanding. I subscribe to both his Reasonable Faith and Defenders podcast. The former is conversational in style and often features Dr. Craig answering the questions of both believers and skeptics alike. The latter is a regular Sunday school class Dr. Craig teaches on theology and apologetics.
>
> Now the Defenders class is going to be live streamed from the church he attends every Sunday morning at 11:30 a.m. EST. You can watch here. The time may be bad for many of you on the east coast (I'll be preaching tomorrow at that time) but perfect for those in Europe and the west coast. Also, you can watch or listen to archived classes at Reasonable Faith.

There was a recent episode of the Reasonable Faith podcast in which Kevin Harris and William Lane Craig talked about the live-streaming of the Defenders class.

Details:

> Every church should have a class like this! Dr. Craig's 'Defenders' class gets to the meat of the Christian life and worldview. Now, there's breaking news concerning the class!

Here's a snip from the transcript that explains what Defenders is all about:

> *Dr. Craig:* We believe strongly that every Christian believer needs to be exercising his spiritual gifts in the context of the local church. There are no lone rangers in Christianity. We are part of a local body. God has gifted the church in ways that we serve and help one another. So, having a gift in the area of teaching, it would be natural for me to teach an adult Sunday School class. I thought, "Well, what might I teach on?" I didn't want to teach a course on straight apologetics. I think that would be spiritually unhealthy, just week after week to be dealing with apologetic arguments.
>
> *Kevin Harris:* Why?

Dr. Craig: Because they would not be getting any biblical input or knowledge.

Kevin Harris: You mean directly from the Scriptures?

Dr. Craig: Exactly. There would not be biblical input and teaching. So it seemed to me that it would be better for my students if I were to teach a survey of Christian doctrine. What I discovered during my doctoral studies in Germany is that when you do a survey of the body of Christian doctrine there simply naturally arises at various points along the way issues of apologetic significance that can then be addressed in passing. So, for example, if you are talking about the Doctrine of God, naturally the question will arise, "What reason is there to believe that God exists?" So you can do a sort of excursus on arguments for the existence of God. Or if you are doing Doctrine of Creation, the question will naturally arise, "How does the Christian doctrine of creation comport with what contemporary biology tells us about the evolution of biological complexity on earth?" So that will be an area, again, that you will want to address with a view toward producing what I call a synoptic Christian theology; that is to say, a theology which is integrated with the best knowledge that secular disciplines have to tell us about the world. An integrated worldview that gives a Christian perspective on science, on the arts, on literature, on history, and so forth.

So based upon my studies in Germany, I developed this survey of the whole body of Christian doctrine, or systematic theology, starting with the Doctrine of Revelation (that is to say, how does God reveal himself to us) going right up through the Doctrine of the Last Things (that is to say, the return of Christ and the final state of man into eternity), and then in between the rest of basic Christian doctrine.

Kevin Harris: You've done a series on the Doctrine of the Trinity, the Doctrine of Christ, fascinating things. Probably one of the more popular ones you did was a whole series (12 to 15 sessions) of Creation and Evolution.

Dr. Craig: Yes, that was an excursus under the Doctrine of Creation. Having given a theological understanding of creation, then how does that integrate with what we learn about the created biosphere from science?

Kevin Harris: Just a personal aside, the times that I've been in the class, it is really fun because these are the people who don't realize that you are "The WLC," they just know you as the carpenter's son who lives among them. *[laughter]* You are just Bill! But some do come to the class and seek you out because of your work, but then you've got a bunch of other people who . . .

Dr. Craig: What has happened, Kevin, is initially I just started teaching this adult Sunday School class, and we just had a handful of folks who would come. People who were interested in learning about Christian doctrine. But as Reasonable Faith developed, we began to record these classes and then to put them on the website so that they could be available as podcasts. That has been a great joy to see how people from all around the world are accessing these podcasts and

> listening to them.
>
> *Kevin Harris:* Your class asks questions. You pass the microphone around so the questions could be heard.
>
> *Dr. Craig:* That's right. One of the things that we do in the class is provide ample time for discussion. We don't have any schedule to get through. Whether we cover a lot of material in a lesson, or just a little bit of material, doesn't matter because we just continue the next Sunday wherever we happen to leave off. So the pace at which we move will be very much dictated by the people in the class and the questions that they have.
>
> One of the things that we do in the Defenders class is to encourage open exploration and questioning. So when I cover a subject, I will typically give a range of views that are present in Christian theology, very often associated with particular Christian confessions. For example, I'll say, "Here is what Catholics believe about this doctrine. Here is the Lutheran perspective. Here is what Reformed theologians say. Here is what Baptist or Methodist theologians believe." And we look at a range of options, and then give some word of assessment about them. I think folks appreciate not being put into a cage, but presented with a range of options and then being allowed to decide for themselves which one best represents the most coherent and biblically faithful view of the subject that we are discussing.
>
> *Kevin Harris:* These podcasts of the Defenders class appear at ReasonableFaith.org every Monday. So people look forward to that time when they go on, along with the new Reasonable Faith podcast. So you get Defenders and the Reasonable Faith podcasts.

You can click here to listen to it. (20 minutes)

I like his survey of opinions approach. The best sermon I ever heard was on ordinances and sacraments, and the pastor did a survey of the different views and what reasons they had to hold it. My ears perked up – you never hear anything like that in church, usually. But in the Defenders class, you hear it *every week.*

Now the lady I am mentoring most listens to this podcast – she is listening fro the beginning because they are all online now. She is getting better at apologetics every day, and I suspect that the Defenders class has a lot to do with that. She is listening to the 20 podcasts from Series 1 of the Defenders podcast. They are now on Series 2. If you like your theology done with philosophical and historical rigor, you'll find it here – this is theology you can talk to a non-Christian about.

I'm sure that some people who read my blog think that church is boring, impractical and irrelevant to the real work of being a Christian. I have sympathy with you, because I used to be you – until my friend Dina encouraged me to attend church more regularly, and made me a cross-stitch (*it took her a LONG time to make!*) that I couldn't refuse. Now I try to attend church and I do believe that it adds value to what I do as a Christian operator and agent, although my church does not know who I am and they do not use

any of my skills. I think some of you were just like I used to be, and have had nothing but bad experiences in the church. I am not minimizing the bad experiences that serious people have in unserious churches, but eventually I do want you to go to a good church and learn something and share what you know with others. But if you still cannot bring yourself to go to church YET, then consider that this Defenders class is the corrective to the bad experiences you have had in church. You are not going to find any anti-intellectualism, feminization, postmodernism, moral relativism, etc. in this class. You will actually learn something useful in this class. Every week you are going to take home something useful that makes you better at know who God is and how to act on that knowledge in practical ways. Take a look and see for yourself what goes on!

Finally, here is a list with links to all my favorite podcasts.

Study shows that children of divorce twice as likely to have a stroke

June 29, 2014 | by Wintery Knight | Link | Original Link

Science Daily reports on a peer-reviewed Canadian study that links an increased risk of stroke to divorce.

Excerpt:

> "We were very surprised that the association between parental divorce and stroke remained so strong even after we had adjusted for smoking, obesity, exercise and alcohol consumption," said [study leader Esme] Fuller-Thomson.
>
> […]Of the 13,134 total study respondents, 10.4 percent had experienced parental divorce during their childhood, and 1.9 percent reported that they had been diagnosed with a stroke at some point in their lives. When adjusting for age, race and gender, the odds of stroke were approximately 2.2 times higher for those who had experienced parental divorce.
>
> When other risk factors — including socioeconomic status, health behaviors, mental health, and other adverse childhood experiences — were controlled in a logistic regression analysis, the odds ratio of stroke for those who had experienced parental divorce remained significantly elevated.

One of the reasons that we have so much divorce is because feminists and trial lawyers lobbied to relax divorce laws – this was the first redefinition of marriage. In this redefinition, we lost the stability and permanence of marriage. Now marriage just means a temporary relationship for people to have feelings of being "happy" and "in love". It never used to mean that – it used to mean a promise to love another person regardless of how you felt.

Look at this article from Focus on the Family by Amy Tracy.

She writes:

> God is very clear, however, that He hates divorce (Malachi 2:16). He also says, "So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matthew 19:6). According to the New Testament, there are two justifications for divorce: infidelity (Matthew 5:32) and desertion (1 Corinthians 7:15).

Now, I had always taken the rule of Dr. Laura for this. She says that you can get divorced for adultery and abandonment (as above), but she allows allows for physical abuse and drug addiction. But it looks like the Bible is more strict than Dr. Laura, even.

Look at these old-fashioned wedding vows – they reflected the view that marriage was permanent, and that it was meant to persist through hardships and trials:

> _____, I love you. I prayed that God would lead me to his choice. I praise Him that tonight His will is being fulfilled. Through the pressures of the present and uncertainties of the future I promise my faithfulness, to follow you through all of life's experiences as you follow God, that together we may grow in the likeness of Christ and our home be a praise to Him.
>
> _____, I give you this ring, wear it with love and joy. I choose you to be my husband: to have and to hold, from this day forward. For better, for worse, for richer for poorer; in sickness and in health; to have and to cherish, as long as we both shall live. And hereto, I pledge you my faithfulness to show to you the same kind of love as Christ showed the Church when He died for her, and to love you as a part of myself because in His sight we shall be one.
>
> I love you, _____, and I thank the Lord for the love that has bound our hearts and lives together in spiritual fellowship of marriage. I will love, honor, cherish and obey you always. As we enter upon the privileges and joys of life's most holy relationship and begin together the great adventure of building a Christian home, I will look to you as head of our home as I have looked to Christ as Head of the Church. I will love you in sickness as in health, in poverty as in wealth, in sorrow as in joy, and will be true to you by God's grace, trusting in Him, so long as we both shall live.

The reason we cry when we read those vows (well, at least I do) is because we know that loving someone as an obligation is an enormous responsibility and sacrifice of our own selfish needs. That's what marriage USED to mean, before no-fault divorce laws. But today people on the left and the right seem to be perfectly fine with them! Even many "Christians" seem to be fine with them.

I also noticed that Stephen Baskerville has an article on no-fault divorce up in the American Conservative. (Note: I do not endorse paleo-conservatism)

Excerpt:

> First: Marriage exists primarily to cement the father to the family. This fact is politically incorrect but undeniable. The breakdown of marriage produces widespread fatherlessness, not motherlessness. As Margaret Mead pointed out long ago—yes, leftist Margaret Mead was correct about this—motherhood is a biological certainty whereas fatherhood is socially constructed. The father is the weakest link in the family bond, and without the institution of marriage he is easily discarded.
>
> […]The notion that marriage exists for love or "to express and safeguard an emotional union of adults," as one proponent puts it, is cant. Many loving and emotional human relationships do not involve marriage. Even the conservative argument that marriage exists to rear children is too imprecise: marriage creates fatherhood. No marriage, no fathers.
>
> […]Here is the second unpleasant truth: homosexuals did not destroy marriage,

> heterosexuals did. The demand for same-sex marriage is a symptom, not a cause, of the deterioration of marriage. By far the most direct threat to the family is heterosexual divorce. “Commentators miss the point when they oppose homosexual marriage on the grounds that it would undermine traditional understandings of marriage,” writes family scholar Bryce Christensen. “It is only because traditional understandings of marriage have already been severely undermined that homosexuals are now laying claim to it.”
>
> [..]Thus the third inconvenient fact: divorce is a political problem. It is not a private matter, and it does not come from impersonal forces of moral and cultural decay. It is driven by complex and lucrative government machinery operating in our names and funded by our taxes. It is imposed upon unwilling people, whose children, homes, and property may be confiscated. It generates the social ills that rationalize almost all domestic government spending. And it is promoted ideologically by the same sexual radicals who now champion same-sex marriage. Homosexuals may be correct that heterosexuals destroyed marriage, but the heterosexuals were their fellow sexual ideologues.
>
> Conservatives have completely misunderstood the significance of the divorce revolution. While they lament mass divorce, they refuse to confront its politics. Maggie Gallagher attributes this silence to “political cowardice”: “Opposing gay marriage or gays in the military is for Republicans an easy, juicy, risk-free issue,” she wrote in 1996. “The message [is] that at all costs we should keep divorce off the political agenda.”
>
> No American politician of national stature has seriously challenged unilateral divorce. “Democrats did not want to anger their large constituency among women who saw easy divorce as a hard-won freedom and prerogative,” writes Barbara Dafoe Whitehead. “Republicans did not want to alienate their upscale constituents or their libertarian wing, both of whom tended to favor easy divorce, nor did they want to call attention to the divorces among their own leadership.”

If we social conservatives care about children, then we need to be opposed to no-fault divorce. We need to be more careful about who we choose to marry, and not choose mates because of “chemistry” or “hotness” or because our friends approve of them based on arbitrary cultural standards. There are defined roles for the participants to a marriage, and there is a design for marriage, and there are specific tasks that need to get done. Marriage is a job, and it requires skills to execute difficult tasks that are morally obligatory. It’s not about immature selfish adults pursuing happiness at the expense of their children. It’s not about feelings. It’s not about sentimentality. It’s not about fun.

Divorce causes damage to the health and well-being of children, resulting in behaviors that will give us less liberty (greater intervention of government) and higher taxes (for social welfare programs) later on. There are consequences to selfishness and irresponsibility in relationships. Other people do not exist to entertain you. Relationships are not a form of recreational activity. At least they should not be for Christians. For

Christians, the goal of relationships is to get the other person to have a closer relationship with God and to be equipped to serve God better. If children are the result, then the same obligation applies to them. That is the purpose of relationships in Christianity.

Christian NHS worker charged with “bullying” for praying for Muslim co-worker

June 30, 2014 | by Wintery Knight | Link | Original Link

From the UK Telegraph. (H/T Well Spent Journey)

Excerpt:

> A Christian health worker has begun a legal challenge after being disciplined by the NHS for praying with a Muslim colleague.

> Victoria Wasteney, a senior occupational therapist in one of the country’s most racially diverse areas, was also accused of bullying the colleague after giving her a book about a Muslim woman who converts to Christianity.
>
> In addition, senior managers told Miss Wasteney that it was inappropriate to invite the woman to a community sports day organised by her church.
>
> The complaints led to Miss Wasteney being suspended on full pay for nine months.
>
> Three charges were upheld against the 37-year-old Christian at an internal disciplinary hearing in February and five charges were found to be unsubstantiated. She had to accept a final written warning at work which will remain on her records for 12 months, as well as accept a range of other requirements designed to stop her discussing her faith and beliefs with colleagues.

> Miss Wasteney said she was challenging her employers in court because political correctness in the NHS was stifling ordinary conversations about faith.
>
> […]The young Muslim woman was appointed as a newly qualified occupational therapist in a team of 30 managed by Miss Wasteney at East London NHS Foundation Trust.

I do not recommend speaking to Muslims about anything other than work at work, because of cases. If you want to say something, come home and blog what you want to say under an alias. We are not in the same world we were in 50 years ago. The things we used to do then are no longer safe. You can still have an impact, you just have to be smarter about how you do it.

Why Mark Steyn isn't keeping a list of donors to his legal defense fund

June 30, 2014 | by Wintery Knight | Link | Original Link

From Mark Steyn's blog. He explains why he cannot issue receipts for donations, because he refuses to disclose donors to the IRS.

Excerpt:

> Six months ago, I fell out with *National Review* and decided to go it alone in climate fraud Michael E Mann's defamation suit against us for mocking his "global warming" hockey stick.
>
> […][E]ver since our suggestion that you might like to help out in this manner, we've had a steady stream of emails from readers explaining that this is all well and good but it's taxable income and what I really need to do is set up a 501(c)3 or 501(c)4 or 501(c)87 or some such as a vehicle for this campaign.
>
> To which the answer is: well, we certainly considered the possibility, and a few years ago I might have entertained the notion. But not anymore. The National Organization for Marriage, which was founded to protect the pre-revisionist definition of marriage, is, in its various arms, both a 501(c)3 and a 501(c)4. As such, its tax returns are publicly available, but not its donor lists. Nevertheless, it is obliged to report its donors on Schedule B to the Internal Revenue Service. Someone at the IRS leaked the donor lists to a man called Matthew Meisel, a gay activist in Boston. Meisel in turn passed it on to the gay group Human Rights Campaign (whose president was a national co-chair of the Obama re-election campaign), and HRC in turn published the list of donors, which was subsequently re-published by The Huffington Post.
>
> There's no secret about why they'd do such a thing. As we know, if you disagree with progressive orthodoxy, you have no right to host a cable-TV home-decor show or give a commencement address at an American university or be a beauty-queen contestant. But that's not enough for these groups. If you're not a public figure, if you're just a Californian who puts up a yard sign or a bumper sticker on Proposition Eight, your car will be keyed and your house defaced. And likewise, if you slip a check in the mail for a modest sum, it is necessary that you also be made an example of. Brandon Eich, Richard Raddon and Scott Eckern all lost prominent positions as chief executives because of their donations. But Marjorie Christoffersen, a 67-year-old Mormon who works in the El Coyote restaurant in Los Angeles, was forced to quit because she wrote a $100 check in support of Proposition Eight.
>
> So, when it comes to the leaking of donor lists, we're not dealing with anything "theoretically" or "potentially" "troubling". These guys act on this information,

> and act hard, and they are willing to destroy your life for a hundred bucks.

I had a conversation like this with a friend of mine who works for a large, effective non-profit recently. I have a rule that says that I do not donate money to non-profits that will put me on a donor list and then submit that donor list to the IRS. I have had this rule since Obama came into office. The rule is there because of the problems Mark Steyn describes above. I need to not be persecuted by the government in order to do my job as a Christian. Why take chances?

Supreme Court rules in favor of religious liberty and against labor unions

July 1, 2014 | by Wintery Knight | Link | Original Link

Life News first, on the Hobby Lobby religious liberty vs abortion subsidies case.

Excerpt:

> The Supreme Court ruled today that the Christian-run Hobby Lobby doesn't have to obey the HHS mandate that is a part of Obamacare that requires businesses to pay for abortion causing drugs in their employee health care plans.
>
> The Obama administration was attempting to make Hobby Lobby and thousands of pro-life businesses and organizations comply with the HHS mandate that compels religious companies to pay for birth control and abortion-causing drugs for their employees. However, the U.S. Supreme Court today issued a favorable ruling in *Sebelius v. Hobby Lobby Stores, Inc.*, a landmark case addressing the Constitutionally guaranteed rights of business owners to operate their family companies without violating their deeply held religious convictions.
>
> Writing for the 5-4 majority, Justice Samuel Alito handed down the decision for the high court, saying, "The Supreme Court holds government can't require closely held corporations with religious owners to provide contraception coverage."
>
> The court ruled that the contraception mandate violated the Religious Freedom and Restoration Act, a 1993 law and it held that the mandate "substantially burdens the exercise of religion" and that HHS didn't use the "least restrictive means" to promote this government interest, tests required by RFRA.
>
> "HHS's contraception mandate substantially burdens the exercise of religion," the decision reads, adding that the "decision concerns only the contraceptive mandate and should not be understood to mean that all insurance mandates." The opinion said the "plain terms of Religious Freedom Restoration Act" are "perfectly clear."
>
> "If the owners comply with the HHS mandate, they believe they will be facilitating abortions, and if they do not comply, they will pay a very heavy price — as much as $1.3 million per day, or about $475 million per year, in the case of one of the companies," the opinion reads. "If these consequences do not amount to a substantial burden, it is hard to see what would."
>
> […]The Hobby Lobby decision only applies to companies, including Conestoga Wood Specialties, which had a companion case pending before the Supreme Court. Non-profit groups like Priests for Life and Little Sisters are still waiting for a ruling about their right to opt out of the mandate.
>
> […]Americans "don't give up their rights to religious freedom just because they

> open a family-run business," Lori Windham, senior counsel for the Becket Fund for Religious Liberty, which represented Hobby Lobby. **"**This is a landmark decision for religious freedom. The Supreme Court recognized that Americans do not lose their religious freedom when they run a family business."
>
> Barbara Green, co-founder of Hobby Lobby, also responded: "Our family is overjoyed by the Supreme Court's decision. Today the nation's highest court has re-affirmed the vital importance of religious liberty as one of our country's founding principles. The Court's decision is a victory, not just for our family business, but for all who seek to live out their faith. We are grateful to God and to those who have supported us on this difficult journey."

You can read the reactions from people on the left on Twitter, in which they threaten to burn Hobby Lobby stores to the ground. Note that Hobby Lobby is only objecting to covering 4 out of 20 prescribed contraceptives required by Obamacare, just the ones that can *cause abortions*. They don't want to pay money to other people to make it cheaper for them to kill unborn children. Makes sense, right? Not to the left.

And now the second decision, which was reported on in the Wall Street Journal.

Excerpt:

> Home-based care workers in Illinois aren't full-fledged public employees so they can't be forced to pay dues to a union they don't want to join, a divided Supreme Court said. But the limited ruling stopped short of barring organized labor from collecting fees from government workers who object to union representation.
>
> The court, in a 5-4 opinion by Justice Samuel Alito, said the aides weren't full public employees even though they are paid by the state with Medicaid funds. Because of that status, the workers—often family members of the disabled—couldn't be required to pay what are known as agency fees to a public-sector union that provides them representation.
>
> Justice Alito said requiring mandatory union fees violated the First Amendment rights of aides who didn't want to join or support the union. Monday's ruling split along ideological lines, with conservative justices in the majority and liberal justices in the dissent.
>
> **The high court avoided the broadest possible ruling in the case, declining a request by the challengers to limit the ability of public-sector unions to collect fees from all workers who decline to join labor unions. Labor lawyers said that while unions dodged that bullet in Monday's ruling, they may not be able to in the future. The ruling "sets the table for more challenges to agency fees down the road. And this fact will not make unions sleep any easier," said Michael Lotito, a labor lawyer at Littler Mendelson P.C.**
>
> […]The National Right To Work Legal Defense Foundation, an antiunion group in Springfield, Va., sued on behalf of eight Medicaid-paid aides, some of whom are

> covered by the SEIU agreement, saying the Illinois arrangement had forced parents and other relatives taking care of disabled people into union associations they didn't want. The foundation said Monday's ruling would free "thousands of home-care providers from unwanted union control."

And lastly, somehow I missed a third good Supreme Court decision, which *unanimously* sided with the the pro-life Susan B. Anthony list. That decision came out in mid-June.

Was early Earth a good place to create the building blocks of life?

July 1, 2014 | by Wintery Knight | Link | Original Link

The Miller-Urey experiments

Biochemist Dr. Fazale Rana of Reasons to Believe offers some evidence.

Excerpt:

> Today, the Miller-Urey experiment is considered to be irrelevant to the origin-of-life question. Current understanding of the composition of early Earth's atmosphere differs significantly from the gas mix used by Miller. Most planetary scientists now think that the Earth's primeval atmosphere consisted of carbon dioxide, nitrogen, and water vapor. Laboratory experiments indicate that this gas mixture is incapable of yielding organic materials in Miller-Urey-type experiments.
>
> In May 2003 origin-of-life researchers Jeffrey Bada and Antonio Lazcano, long-time associates of Miller, wrote an essay for Science (May 2, 2003, pp. 745-746)commemorating the 50-year anniversary of the publication of Miller's initial results.They pointed out that the Miller-Urey experiment has historical significance, but not scientific importance in contemporary origin-of-life thought. Bada and Lazcano wrote:
>
> Is the "prebiotic soup" theory a reasonable explanation for the emergence of life? Contemporary geoscientists tend to doubt that the primitive atmosphere had the highly reducing composition used by Miller in 1953.
>
> In his book Biogenesis, origin-of-life researcher Noam Lahav passes similar judgment:
>
> The prebiotic conditions assumed by Miller and Urey were essentially those of a

> reducing atmosphere. Under slightly reducing conditions, the Miller-Urey reaction does not produce amino acids, nor does it produce the chemicals that may serve as the predecessors of other important biopolymer building blocks. Thus, by challenging the assumption of a reducing atmosphere, we challenge the very existence of the "prebiotic soup", with its richness of biologically important organic compounds.
>
> For many people, the generation of amino acids from simple chemical compounds thought to be present in early Earth's atmosphere meant that life could originate all on its own without the need for a Creator. Work done on the early planetary conditions of Earth in the intervening decades between Miller's famous experiment and his death, however, have invalidated this famous experiment and its support for an evolutionary explanation for life's origin, in spite of what textbooks report.

The IDEA Center has a nice summary of origin-of-life research that explains why scientists no longer accept the idea that the building blocks of life can be formed by sparking the gasses that were present on the early Earth.

Miler and Urey used the wrong gasses:

> Miller's experiment requires a reducing methane and ammonia atmosphere, however geochemical evidence says the atmosphere was hydrogen, water, and carbon dioxide (non-reducing). The only amino acid produced in a such an atmosphere is glycine (and only when the hydrogen content is unreasonably high), and could not form the necessary building blocks of life.

Miller and Urey didn't account for UV of molecular instability:

> Not only would UV radiation destroy any molecules that were made, but their own short lifespans would also greatly limit their numbers. For example, at 100ºC (boiling point of water), the half lives of the nucleic acids Adenine and Guanine are 1 year, uracil is 12 years, and cytozine is 19 days (nucleic acids and other important proteins such as chlorophyll and hemoglobin have never been synthesized in origin-of-life type experiments).

Miller and Urey didn't account for molecular oxygen:

> We all have know ozone in the upper atmosphere protects life from harmful UV radiation. However, ozone is composed of oxygen which is the very gas that Stanley Miller-type experiments avoided, for it prevents the synthesis of organic molecules like the ones obtained from the experiments! Pre-biotic synthesis is in a "damned if you do, damned if you don't" scenario. The chemistry does not work if there is oxygen because the atmosphere would be non-reducing, but if there is no UV-light-blocking oxygen (i.e. ozone – O_3) in the atmosphere, the amino acids would be quickly destroyed by extremely high amounts of UV light (which would have been 100 times stronger than today on the early earth).This

> radiation could destroy methane within a few tens of years, and atmospheric ammonia within 30,000 years.

And there were three other problems too:

> At best the processes would likely create a dilute “thin soup,” destroyed by meteorite impacts every 10 million years. This severely limits the time available to create pre-biotic chemicals and allow for the OOL.

> Chemically speaking, life uses only “left-handed” (“L”) amino acids and “right-handed” (“R)” genetic molecules. This is called “chirality,” and any account of the origin of life must somehow explain the origin of chirality. Nearly all chemical reactions produce “racemic” mixtures–mixtures with products that are 50% L and 50% R.

Two more problems are not mentioned in the article. A non-peptide bond anywhere in the chain will ruin the chain. You need around 200 amino acids to make a protein. If any of the bonds is not a peptide bond, the chain will not work in a living system. Additionally, the article does not mention the need for the experimenter to *intervene* in order to prevent interfering cross-reactions that would prevent the amino acids from forming.

Does the free market work to reduce poverty?

July 2, 2014 | by Wintery Knight | Link | Original Link

Economist Walter Williams
From Investors Business Daily.

Excerpt:

> There has never been a purely free market economic system, just as there has never been a purely communist system. However, we can rank economies and see whether ones that are closer to the free market end of the economic spectrum are better than ones that are closer to the communist end.
>
> Let's try it.
>
> First, list countries according to whether they are closer to the free market or the communist end of the economic spectrum. Then rank countries according to per capita gross domestic product. Finally, rank countries according to Freedom House's "Freedom in the World" report.
>
> People who live in countries closer to the free market end of the economic spectrum have far greater income than people who live in countries toward the communist end — and enjoy far greater human rights protection.
>
> According to the 2012 "Economic Freedom of the World" report by James Gwartney, Robert Lawson and Joshua Hall, nations ranking in the top quartile with regard to economic freedom had average per capita GDP of $37,691 in 2010 compared with $5,188 for those in the bottom quartile.
>
> In the freest nations, the average income of the poorest 10% of their populations was $11,382. In the least free nations, it was $1,209.
>
> Remarkably, the average income of the poorest 10% in the economically freer nations is more than twice the average of those in the least free nations.
>
> Free market benefits aren't only measured in dollars and cents.
>
> Life expectancy is 79.5 years in the freest nations and 61.6 years in the least

> free.
>
> Political and civil liberties are considerably greater in the economically free nations than in unfree nations.
>
> Leftists might argue that the free market doesn't help the poor. That argument can't even pass the smell test.
>
> Imagine that you are an unborn spirit and God condemned you to a life of poverty but gave you a choice of the country in which to be poor. Which country would you choose?
>
> To help with your choice, here are facts provided by Robert Rector and Rachel Sheffield in their report "Understanding Poverty in the United States: Surprising Facts About America's Poor."
>
> - Eighty percent of American poor households have air conditioning.
> - Nearly three-fourths have a car or truck, and 31% have two or more.
> - Almost two-thirds have cable or satellite TV.
> - Half have one or more computers.
> - Forty-two percent own their homes.
> - The average poor American has more living space than the typical non-poor person in Sweden, France and the U.K. Ninety-six percent of poor parents stated that their children were never hungry; in other words, they could afford food.
>
> The bottom line is that there is little or no material poverty in the U.S.
>
> At the time of our nation's birth, we were poor, but we established an institutional structure of free markets and limited government and became rich.

This might be a good article send along to people who want to bash our free-market system. It's easy for them to make assertions that we have to do this or that policy to redistribute wealth. But the real solution to helping the poor is not to take from one and give to another, it's to put into place a system that causes wealth to be created for all. That's what happened in the United States, and you can see how it happened in other capitalist economies like Chile, Hong Kong and Singapore. Capitalism turns poor nations into rich nations.

How involved fathers improve the mental health of their daughters

July 2, 2014 | by Wintery Knight | Link | Original Link

I found this article in Scientific American via tweet from Stand to Reason.

Excerpt:

> In a series of studies beginning in 1999, he found that when girls had a warm relationship with their fathers and spent a lot of time with them in the first five to seven years of their lives, they had a reduced risk of early puberty, early initiation of sex and teen pregnancy. As Ellis continued this work, however, he became increasingly frustrated. Clearly, the association between fathers and daughters was profound. Yet he could not determine whether the parental behavior *caused* the consequences he was seeing in the daughters. An alternative was that girls who begin puberty early and engage in risky sexual behavior do so because they inherited certain genes from their parents. Fathers might pass on genes linked to infidelity to their daughters, in whom they could be associated with risky sexual behavior and early puberty. Or something else in the family's environment could be responsible for the changes in their daughters.
>
> Ellis came up with an innovative way to pose the question. He considered families in which divorced parents had two daughters separated by at least five years in age. When the parents divorced, the older sister would have had five more years with a father's consistent presence than the younger sister. If father absence causes early puberty and risky behavior, then the younger daughter should show more of that behavior than her older sibling. Also, genes or the family's environment would not confuse the results, because those would be the same for both daughters. It was close to a naturally occurring experiment, Ellis realized.
>
> Ellis recruited families with two daughters. Some were families in which the parents divorced; others were intact, to be used as a control group. He wanted to answer two questions: Was the age at which girls had their first menstrual period affected by the length of time they spent with a father in the house? And did that age vary depending on how their fathers behaved? The second question was added because fathers with a history of violence, depression, drug abuse or incarceration can affect children's development.
>
> Ellis's suspicions were confirmed. **Younger sisters in divorced families had their first periods an average of 11 months earlier than their older sisters—but only in homes in which the men behaved badly as fathers. "We were surprised to get as big an effect as we did," Ellis told me. The conclusion was that growing up with emotionally or physically distant fathers in early to middle childhood could be "a key life transition" that**

> **alters sexual development.**
>
> The next step Ellis took was to look at whether these circumstances could affect the involvement of girls in risky sexual behavior. This time he turned to Craigslist, a classified advertising Web site, and posted announcements in several cities that began, “SISTERS WANTED!” The criteria were very specific: he was looking for families with two sisters at least four years apart in age and currently between the ages of 18 and 36. He limited his search to families in which the birth parents separated or divorced when the younger sister was younger than 14 years. Ellis and his colleagues were able to recruit 101 pairs of sisters, some from families in which the parents had divorced and, using a different ad, some whose parents had not.
>
> **This time the researchers found that risky sexual behavior was not related to how long daughters lived with their fathers but to what the fathers did in the time they spent with their daughters. “Girls who grew up with a high-quality father—who spent more time as a high-investing father—showed the lowest level of risky sexual behavior,” Ellis said. “Their younger sisters, who had less time with him, tended to show the highest level of risky sexual behavior.”**

And a bit later:

> Ronald P. Rohner of the University of Connecticut has spent some years looking at the consequences for children and teenagers of being either accepted or rejected by their parents. He thinks that parental acceptance influences important aspects of personality. Children who are accepted by their parents are independent and emotionally stable, have strong self-esteem and hold a positive worldview. Those who feel they were rejected show the opposite—hostility, feelings of inadequacy, instability and a negative worldview.
>
> Rohner analyzed data from 36 studies on parental acceptance and rejection and found that they supported his theory. Both maternal and paternal acceptance were associated with these personality characteristics: A father’s love and acceptance are, in this regard, at least as important as a mother’s love and acceptance. That is not necessarily good news for fathers—it increases the demands on them to get this right. “The great emphasis on mothers and mothering in America has led to an inappropriate tendency to blame mothers for children’s behavior problems and maladjustment when, in fact, fathers are often more implicated than mothers in the development of problems such as these,” Rohner says.
>
> **Empathy is another characteristic that we hope teenagers will develop, and fathers seem to have a surprisingly important role here, too. Richard Koestner, a psychologist at McGill University, looked back at 75 men and women who had been part of a study at Yale University in the 1950s, when they were children. When Koestner and his colleagues**

> **examined all the factors in the children's lives that might have affected how empathetic they became as adults, one factor dwarfed all others—how much time their fathers spent with them. "We were amazed to find that how affectionate parents were with their children made no difference in empathy," Koestner says. "And we were astounded at how strong the father's influence was."**
>
> Melanie Horn Mallers, a psychologist at California State University, Fullerton, also found that sons who have fond memories of their fathers were more able to handle the day-to-day stresses of adulthood. Around the same time, a team at the University of Toronto put adults in a functional MRI scanner to assess their reactions to their parents' faces. Mothers' faces elicited more activity in several parts of the brain, including some associated with face processing. The faces of fathers, in contrast, elicited activity in the caudate, a structure associated with feelings of love.

So how do we avoid damaging our children? Well, we choose to have sex with people who are capable of long-term stability and commitment. And how do we do that? *We test them before we have sex with them.*

My approach to dating and courting has always been an engineer's approach. A project manager's approach. I am used to working with teams to deliver bug-free software that will exist in an enterprise environment. There, the software will have to survive unexpected disasters, peak usage and other challenges. If we are serious about avoiding harm to children, we should drop emotional/spiritual approaches to dating and courtship and stick with interview questions and performing tasks (tests). Marriage should be like software engineering projects – at least we know how to deliver quality software on time and on budget. The lazy, emotional hedonistic approach doesn't work. It doesn't work in relationships. It doesn't work in engineering.

Humility is not thinking less of yourself, it's thinking of yourself less

July 2, 2014 | by Wintery Knight | Link | Original Link

Buddy breathing

I have been getting into disagreements with the woman I am mentoring in apologetics, where she has been telling me that accurate assessments of my strengths are "proud" and that I need to be more humble. So I thought I would explain what I take humility to mean.

Here's something from J. I. Packer:

> "Being humble is not a matter of pretending to be worthless, but is a form of realism, not only regarding the real badness of one's sins and stupidities and the real depth of one's dependence on God's grace, **but also regarding the real range of one's abilities. Humble believers know what they can and cannot do. They note both their gifts and their limitations, and so are able to avoid both the unfaithfulness of letting their God-given powers lie fallow and the foolhardiness of biting off more than they can chew."**
>
> — J.I. Packer, "A Passion for Faithfulness: Wisdom From the Book of Nehemiah"

I think I can give an example here. Ever since I was young, I have wanted to do the PhD in computer science and become a Christian professor. I already have the BS and MS and I have been working in industry full-time for over 10 years. The money is there to do the PhD in computer science five times over, but I have not done it because I am not sure that I have what it takes to be a researcher. Sometimes people ask me what I studied and what I do for a living. I am accurate about my degrees, my resume and my savings, and what I am doing and can do with my resources. But I am also accurate in saying that doing a PhD takes a whole different level of commitment and sacrifice. And I am humble enough to know that it is beyond me, at least at this time. I lack the support to do it. God

hasn't given me a mentor or a wife. So I am humble about not "biting off more than I can chew". That is real humility. But trying to pretend I don't have any skills, haven't made any good decisions, or that I am lousy with money *is not humility.*

Here's her most favorite theologian, A. W. Tozer:

> **"The meek man is not a human mouse afflicted with a sense of his own inferiority. Rather he may be in his moral life as bold as a lion and as strong as Samson**; but he has stopped being fooled about himself. He has accepted God's estimate of his own life. He knows he is as weak and as helpless as God has declared him to be, **but paradoxically, he knows at the same time that he is of more importance than angels.** In himself, nothing; **in God, everything.** That is his motto. He knows well that the world will never see him as God sees him and he has stopped caring."
>
> — A. W. Tozer, "The Pursuit of God"

So let's talk about some cases where I feel I am humble, but my apologetics mentoree doesn't see it.

I know that there were things that I wanted, and things that I wanted to do in this life. Getting married early was one of them, and keeping chaste as my 20s passed by has been hard. I really wanted to be married by now and to have children and a home. If you are looking for some sort of evidence of humility in a person, that is a good place to look: how far has this person been willing to go along with God's purposes and rules, even when it meant not fulfilling their own needs and goals? Humility means not thinking of your own goals and needs. It means following the rules even when you know you aren't being fulfilled. Although I have the resources to just grab for happiness, I won't break God's rules to do it.

Let's get specific with that. There are lots of things that I would like to do for fun that cost money – like learning how to fly a plane, or buying an even faster car than I have now, or taking scuba diving lessons. For some people, it might be surfing, hang-gliding or skydiving. These entertainments cost money, but that money could just as easily be donated to a Ratio Christi event or a Faith Beyond Belief event. That's humility – putting God's needs above your own needs in stewardship of resources. Even though you have a right to be happy with what you earn, you can humble yourself and share and go without thrills and entertainment. I almost never spend money on entertainments. The argument "but you only live once, you have to experience this now" means nothing to me. I like to stay home.

Humility also comes into play when deciding what I should do with my life. I think all of us would like to be William Lane Craig or Stephen C. Meyer or Jay Richards or Michael Licona. Standing up on stage, smashing atheism into the floor with both hands. I would love to be that. To do that, though, I would have to go back to school and spend tens of thousands of dollars on PhDs, and then write books and papers. That would eat up the savings that I need for a family. Then I could be famous and awesome, like my heroes.

But I choose not to sacrifice tens of thousands of dollars on my dream, when my money and the money of other Christians who might support me could be better used for God's Kingdom by the more skilled scholars who already exist. Maybe there is someone getting a PhD in Biochemistry who I could help out instead, just by keeping my job and doing with a little less entertainment. Humility means being content with your part in the Kingdom, and not trying to be something you're not. Letting other people have the spotlight, while you just quietly help them from the shadows. It takes real faith in God to be that humble… to work in secret, and to depend *entirely* on Him for your accolades.

So how to be more humble? One good way is to sit down with someone you trust and confess things that you have done wrong, or things that you failed at. That's what I do with her, and it helps to remind me of my limitations. I try to confess my failures in achieving the things that I wanted to achieve all the time. I recommend that to everyone. It's not hard for me, I think a lot about my failures. The missed opportunities, the things I never got to do. Sometimes, you can have the best of intentions, and things just don't work out. It's good to confide in someone else when that happens. So if there is someone who you would like to be more humble, maybe the best thing to do is to ask them about their mistakes and regrets, and then just listen to them. That will work.

Clinton book publisher shipped 1 million copies, but only 160,000 copies sold

July 3, 2014 | by Wintery Knight | Link | Original Link

Hillary Clinton addresses Planned Parenthood
From the leftist Huffington Post.

Excerpt:

> If books can make presidencies — and Barack Obama proved they can– then hold the talk about the inevitability of Hillary Clinton.
>
> The Huffington Post has learned that new survey figures show sales of her foreign policy memoir, *Hard Choices*, are falling fast.
>
> According to authoritative numbers from Bookscan, which monitors sales at 80 percent of bookstores nationwide, retail sales of *Hard Choices* plummeted another 50 percent in the third week — down to 26,190 from 48,200 the week before and 85,900 the first week of publication.
>
> Books whose sales drop off by half in successive weeks generally don't become blockbusters, which could be a problem — a big one — for Clinton's publisher, Simon & Schuster.
>
> S&S reportedly shipped 1 million copies of the book to stores and is said to have paid Clinton an advance approaching $14 million. At the current rate, it would take many months to sell the million copies — an unlikely prospect according to industry sources.
>
> "It looks like they are going to be pulping a lot of paper," said a top industry source, who declined to be quoted by name because of the sensitivity of the matter in the industry. A Simon & Schuster spokesman declined immediate comment.

Total sales are only 160,000, according to the leftist Washington Post.

I think this probably has to do with her much publicized comments about being "poor",

despite having millions of dollars. The flagging book sales is good news for us who want Hillary to be the nominee for the Democrats in 2016.

Learning about the importance of courage from the Bible

July 3, 2014 | by Wintery Knight | Link | Original Link

Here are some of my favorite verses from the Bible on the topic of courage.

> "In all this, they are surprised that you do not run with them into the same excesses of dissipation, and they malign you…"
> (1 Pet 4:4)
>
> "But even if you should suffer for the sake of righteousness, you are blessed. And do not fear their intimidation, and do not be troubled…"
> (1 Pet 3:14)

And a longer one:

> 1 This, then, is how you ought to regard us: as servants of Christ and as those entrusted with the mysteries God has revealed.
>
> 2 Now it is required that those who have been given a trust must prove faithful.
>
> 3 I care very little if I am judged by you or by any human court; indeed, I do not even judge myself.
>
> 4 My conscience is clear, but that does not make me innocent. It is the Lord who judges me.
>
> 5 Therefore judge nothing before the appointed time; wait until the Lord comes. He will bring to light what is hidden in darkness and will expose the motives of the heart. At that time each will receive their praise from God.
>
> (1 Cor 4:1-5)

Or this one:

> 12 Dear friends, do not be surprised at the fiery ordeal that has come on you to test you, as though something strange were happening to you.
>
> 13 But rejoice inasmuch as you participate in the sufferings of Christ, so that you may be overjoyed when his glory is revealed.
>
> 14 If you are insulted because of the name of Christ, you are blessed, for the Spirit of glory and of God rests on you.
>
> (1 Cor 4:12-14)

Or this one:

> [16] Shadrach, Meshach and Abednego replied to him, “King Nebuchadnezzar, we do not need to defend ourselves before you in this matter.
>
> [17] If we are thrown into the blazing furnace, the God we serve is able to deliver us from it, and he will deliver us from Your Majesty’s hand.
>
> [18] But even if he does not, we want you to know, Your Majesty, that we will not serve your gods or worship the image of gold you have set up.”
>
> (Dan 3:16-18)

So often we have this very repressed view of Christianity as happiness, politeness and cleanliness. We don’t want to offend anyone, or to be disliked by anyone, or to make anyone feel bad about not knowing God and not living in a way that respects him.

Here’s John Piper explaining the importance of being “thick-skinned”:

> One thing is for sure: if you begin to lead others you will be criticized. No one will be a significant spiritual leader if his aim is to please others and seek their approval. Paul said in Galatians 1:10, “Am I seeking the favor of men or of God? Or am I trying to please men? If I were still pleasing men I should not be a servant of Christ.” Spiritual leaders do not seek the praises of men, they seek to please God. Dr. Carl Lundquist, former President of Bethel College and Seminary, said in his final report to the Baptist General Conference that there was hardly one of the 28 years in which he served the Conference that he was not actively opposed by many people.
>
> If criticism disables us, we will never make it as spiritual leaders. I don’t mean that we must be the kind of people who don’t feel hurt, but rather that we must not be wiped out by the hurt. We must be able to say with Paul in 2 Corinthians 4:8, “We are afflicted in every way, but not crushed; perplexed, but not driven to despair; persecuted, but not forsaken; struck down, but not destroyed.” We will feel the criticism but we will not be incapacitated by it. As Paul says in 2 Corinthians 4:16, “We do not lose heart.”
>
> Leaders must be able to digest depression because they will eat plenty of it. There will be many days when the temptation is very strong to quit because of unappreciative people. Criticism is one of Satan’s favorite weapons to try to get

> effective Christian leaders to throw in the towel.

And here is C.S. Lewis writing about courage:

> "Courage is not simply one of the virtues, but the form of every virtue at the testing point, which means, at the point of highest reality. A chastity or honesty or mercy which yields to danger will be chaste or honest or merciful only on conditions. Pilate was merciful till it became risky."
>
> *– from "The Screwtape Letters" by C.S. Lewis*

In my life, I have had to say things like this: "I'm really sorry that you don't like me. I'm really sorry that my decision to honor God makes you uncomfortable. But I'm not going to change for you. I'm OK with being the underdog. I don't have to be happy right now. I don't need you to approve of what I am doing."

It makes me laugh that people think I care what they think of me just because I don't act against my conscience to approve of their sinning. I've thought through my views, and seen the evidence from peer-reviewed publications, and debated with people who disagree with me and I've won. I couldn't care less about their desire for me to approve their reckless, selfish behavior. I interpret their desire for approval as weakness and I scorn their weakness. If they were right, they wouldn't need my approval.

Every Christian comes to a point where the things we hoped that God would do for us do not happen, when our former allies fall away from us, when the people entrusted with caring for us failed in their obligations… at that point we have to decide what we are going to do with God. I think Psalm 27 is an excellent thing for people to read who are in that situation. It's my favorite Psalm – I used to read it when my life was very difficult. And if things got difficult again, that's where I'd go for comfort.

By the way, Christians should have an eye out for other Christians who are in distress while striving mightily for the Lord. Act self-sacrificially in a way that you strengthen their relationship with God in Christ. Make plans to support that person, and carry them out. Instead of reducing support for Christians to just private devotions, prayer and Bible reading, you ought to act to give them support that is calculated to solve the problem. That could involve the use of money, spending time, expending effort, resolving intellectual challenges, defeating a challenger in a discussion for them, writing them with advice… anything. Really, we need to stop turning inward when another Christian is in distress. Know what the Bible says first, pray second, then take action to solve the problem. Use your mind to think of what will get the job done. That is the goal, isn't it?

You may enjoy listening to this lecture entitled "Giants in the Land", by Dr. Walter Bradley. It talks about courage, and I would say that it is the lecture that best prepared me to not care what people would think of me. There's a Bible study in the lecture, so have your Bible ready.

William Lane Craig and Paul Helm discuss Calvinism and Molinism on the Unbelievable radio show

July 3, 2014 | by Wintery Knight | Link | Original Link

I listened to this excellent discussion between Dr. William Lane Craig and Oxford University Calvinist philosopher Dr. Paul Helm. I think this is a useful discussion in general because atheists often bring up problems with Calvinism as objections to Christianity in general, such as:

- If God exists, then he controls everything and I don't have free will
- If God knows the future, then I don't have free will
- If God controls everything, then I am not responsible for my sinning
- If God has to choose me to be saved, then I am not responsible for my damnation

Details:

> If God ordains the future, can humans have free will? Are people predestined for salvation? And what does the Bible say on the matter? William Lane Craig is a Christian philosopher and leading proponent of Molinism, a view of divine sovereignty that seeks to reconcile God's fore-ordination with human free will. Paul Helm is a leading Calvin Scholar. He defends the view that God predestines the future, limiting human freedom.
>
> MP3 of this show: http://cfvod.kaltura.com/pd/p/618072/sp/61807200/serveFlavor/entryId/1_jn0bdo52/v/1/flavorId/1_q9dnsiua/name/a.mp3
>
> For William Lane Craig: http://www.reasonablefaith.org
>
> For Paul Helm: http://paulhelmsdeep.blogspot.co.uk/

I was surprised because my Calvinist friend Dina thought that Dr. Helm won this debate, but I thought that Dr. Craig won. So without further ado, here is the snark-free summary of the discussion. I also sent the summary to Dina to make sure that it was reasonably fair and accurate. She said it was biased, but she was predestined to say that. Anyway, there's a commentary on the debate over at Michael's Theology blog.

UPDATE: Remington has a podcast review in parts. Part 1 is here.

Summary:

JB: Has Lewis had any impact on your apologetics?

Craig: Not as a scholar, but more as a model of a scholar who leaves a legacy through his published work

JB: How did you become interested in Calvinism?

Helm: Starting from childhood, and lately writing more on Calvinism from a philosophical point of view

JB: How do you view God’s sovereignty?

Helm: Strong view of divine sovereignty, God is sovereign over all events, but that doesn’t mean that they are determined by him

JB: What is Calvin’s legacy?

Helm: He amplified an existing concept of predestination, and wrote on many other topics

JB: What is Molinism?

Craig: Molina affirms divine sovereignty as Paul Helm does, but he also affirms libertarian free will

Craig: Every event that occurs happens by God’s will or by God’s permission

JB: What about open theism?

Craig: Paul and I both oppose open theism

JB: How does Molinism reconcile human free will and divine sovereignty

Craig: God has knowledge of what would happen under any set of circumstances

Craig: God has knowledge of everything that COULD happen, and he has knowledge of everything that WILL happen

Craig: God knows what each person freely choose to do in any set of circumstances and he can place people in times and places where he is able to achieve his ends without violating creaturely freedom and creaturely responsibility

JB: How does this apply to the issue of salvation?

Craig: The circumstances in which God puts a person includes God leading people to him and he foreknows who will respond to his leading

Craig: God has ordered the world in such a way that he foreknows the exact people who will free respond to his leading if he puts them in certain circumstances

JB: Does God want to save the maximum of people?

Craig: My own view is that God does order the world in such a way that the maximum number of people will respond to God’s drawing them to himself

JB: Is the Molinist view gaining ground?

Craig: Yes, Calvinists and open theists are both moving towards it, and Molinism is the dominant view among philosophical theologians

JB: Why has Molinism not convinced you?

Helm: It’s an unnecessary theory, God’s natural knowledge and free knowledge covers what middle knowledge covers

Helm: Calvinism has a stronger view of sin, such that God has to act unilaterally and irrestibly to save them

JB: Are creatures free on your view?

Helm: My view of free will is weaker than Craig’s view of free will

Craig: For the Calvinist, grace is irresistible, but for the Molinist, grace is effective when it

is met with a response from the creature

Craig: The Bible affirms the strong view of free will, when it says that in certain circumstances people can freely choose to do other than they do

Helm: But if a person is in circumstances X and they are free, then why don't they choose something that isn't what God can foresee

Craig: In identical circumstances, a person has the freedom to choose, and God doesn't determine what they choose, he just foreknows what they choose

Helm: How can God foreknow what people will freely do if people have this strong view of freedom that allows them to do anything? God would not know what people can freely do if they really are free

Craig: God has knowledge of what his creatures would freely do in any set of circumstances, he has knowledge of subjunctive statements

Craig: The Scripture is filled with statements that show that God has this knowledge of what people would do in other circumstances (e.g. – 2 Cor 2:8)

Helm: I am not denying that the Bible is full of subjunctive statements, but if humans have real libertarian free will, then God cannot know what they will do

Craig: I think God does preordain everything, Molinism has a strong sense of divine sovereignty BUT the foreordaining is done with the knowledge of what humans would do in any circumstances, so that what God ordains achieves his ends, but without violating creaturely free will

Craig: I take at face value the passages of the Bible where it says that God wants all persons to be saved

Craig: When the Bible says that God wants ALL persons to be saved (2 Pet 3:9), the Bible means that God wants ALL persons to be saved

Craig: So either universalism is true OR there is something that stops all from being saved outside of God

Craig: the something that prevents all from being saved is creaturely free will

Helm: Most people don't have the opportunity to hear the gospel, so God doesn't want all to be saved

Helm: People can still be responsible for what God "fore-ordains"

JB: Can a person really be responsible for wickedness if they didn't freely choose it?

Helm: Even though God is the only one who can act unilaterally to make save people, the people who act wickedly are still responsible

Craig: Molinism provides an answer to the problem of why not all people have heard the gospel, because by using middle knowledge he is able to know who would respond to the gospel if they heard it and he places those people in the times and places where they will hear it

Craig: That solution means that NO ONE is lost because they have not heard the gospel

Craig: There is Biblical support for (Acts 17:27) God choosing the times and places where people will live SO THAT they will be led by him and be able to respond to his leading

JB: Is God the author of sin, on Calvinism?

Craig: If Calvinists define providence to mean causal determinism, then he is the cause of every effect including human actions, and he is the one who causes people to sin

Craig: This view (determinism) impugns the character of God

Helm: I don't think that sovereignty requires determinism

Helm: God has mysterious resources – which I cannot specify – that reconcile his sovereignty with human responsibility for wickedness

JB: But if God is the cause of people doing wrong things, then how can they be responsible for it?

Helm: Well, humans do cause their own actions

Craig: Helm is right to say that God has resources to reconcile God's sovereignty with free will and human responsibility, and that resource is not an unknown mystery, it's middle knowledge

Craig: I can affirm everything in the Westminster Confession except for the one clause where they expressly repudiate middle knowledge as the mechanism for reconciling divine sovereignty and free will

Helm: Well, Calvinists have a strong view of sin so that humans cannot respond to God's leading

Craig: Yes, and that's why humans need prevenient grace in order to respond to him

Craig: God has to take the initiative and draw people to himself or they cannot be saved, but that grace is resistible, and that's what the Bible teaches (Acts 7:51), so humans are still responsible if they resist God

Helm: My view of grace is that it is monergistic and irrestible, it is a unilateral action on the part of God, like pulling someone out of an icy pond which they can't get out of

JB: If humans freely choose to respond to God's drawing and leading, does that diminish grace?

Helm: Many are called but few are chosen

Craig: Molinism does not require synergism – which is the idea that humans are partly responsible for their salvation

Craig: In Eph 2:8, Scripture is clear that faith opposite to works, and responding to God's drawing is not meritorious

JB: So receiving a gift is not meritorious?

Craig: It's the passive acceptance of what someone else has done for you

Helm: But doesn't this mean that you can lose your salvation, because you can accept and resist the gift of salvation?

Craig: That's a separate question that Christians can differ on, but if the Holy Spirit

indwells a person and seals them, then that would argue for the view that salvation cannot be revoked

JB: Doesn't Romans 8 teach Calvinism pretty clearly?

Helm: This is called the "golden chain", and it does support Calvinism

Craig: Actually, this text is no problem for Molinists because the first link in the chain is foreknowledge, which, if it incorporates middle knowledge, is no problem for Molinists

Craig: What God is electing in Romans 8 is a specific group of people that he knows in advance of creating the universe will freely respond to his drawing them to him

Craig: In Acts 4:27-28, it is talking about God's foreknowledge, which involves and incorporates knowledge of what any individual would freely choose if placed in those circumstances

JB: If God actualizes a set plan with set circumstances for everyone, isn't that very similar to Calvinism?

Craig: Yes! It's a strong statement of divine sovereignty

Helm: Foreknowledge doesn't mean that God knows what people would do, it's just refering to God "knowing his own mind" about what he wants to do

JB: How do you respond to the fairness of God unilaterally and specifically choosing some people for salvation and choosing other people for damnation (because he refuses to act unilaterally for them)?

Helm: God ordinarily bypasses other people in the Bible, like when he chooses the Jews as his chosen people

Craig: The problem with that is that the Bible clearly teaches that God has a genuine will that all will be saved and he makes a genuine offer of salvation to all people

Craig: Also, just being a Jew and a member of the chosen people doesn't mean you were saved, because some Jews rebelled against God

Craig: And there were also people outside of the Jewish people who were righteous and in a relationship with God, like Job

Helm: "the fabric of our faith" depends on God's choice and his not-choice, it is fundamental to the Bible and to God's character, and choosing them "effectively" (irrestibly and unilaterally)

Helm: The idea of God considering "possible worlds", some of which are feasible and not feasible, with conflicts between the wills of free creatures in different circumstances, and then actualizing one world that achieve these ends is very messy

Craig: Some worlds may not feasible for God to create, for example a world in which everyone is saved – it is logically possible, but may not be feasible

Craig: God will not exercise any divine coercion to force people to go to Heaven against their own will

Helm: If God chooses a world because it is feasible, then he doesn't love me directly, he

is choosing a world, not individuals

Craig: Well, when God actualizes a world, he specifically knows which individuals will be saved within that world, but without disrespecting free will

Craig: The world isn't primary, the individuals are primary

Helm: I think that middle knowledge can he included in God's natural knowledge and free knowledge

Craig: The knowledge of what people would do in different circumstances is based on the freedom of the individuals

JB: Make your conclusions!

Craig: Molinism is a Biblical model for reconciling divine sovereignty with human freedom

Helm: It is intellectually mystifying to introduce this strong view of human freedom and it is not Biblical

Happy Independence Day 2014!

The Stars and Stripes

The Declaration of Independence

Here's the complete text of the Declaration of Independence here.

The best book to read about the Revolutionary War is David McCullough's "1776", which I highly recommend. The audio book version is awesome.

George Washington and the American Revolution

Washington Crossing the Delaware

To really understand the founding of the United States, you should read about the story of Washington crossing the Delaware. At this point in the Revolutionary War, the British commanders had achieved a stunning series of victories against the Americans. They had even sent word home to the King that the war was over, and that the Americans would be forced to surrender. But Washington did not give up. He attacked the British forces and took them by surprise – and he won the Battle of Trenton! That was the turning point of the war. There almost *never was* a United States of America – that's how close the revolution came to failing.

Ronald Reagan vision of America

Ronald Reagan

Here is a portion of Ronald Reagan's farewell speech:

Excerpt:

> I've spoken of the shining city all my political life, but I don't know if I ever quite communicated what I saw when I said it. But in my mind it was a tall proud city built on rocks stronger than oceans, wind-swept, God-blessed, and teeming with people of all kinds living in harmony and peace, a city with free ports that hummed with commerce and creativity, and if there had to be city walls, the walls had doors and the doors were open to anyone with the will and the heart to get here. That's how I saw it, and see it still.
>
> And how stand the city on this winter night? More prosperous, more secure, and happier than it was eight years ago. But more than that; after two hundred years, two centuries, she still stands strong and true on the granite ridge, and her glow has held steady no matter what storm. And she's still a beacon, still a magnet for all who must have freedom, for all the pilgrims from all the lost places who are hurtling through the darkness, toward home.

This is no ordinary nation. But we need to be vigilant to make sure we don't drift away from the vision of the Founders.

United States Air Force
The Star Spangled Banner

Lyrics:

“Oh, say can you see by the dawn’s early light
What so proudly we hailed at the twilight’s last gleaming?
Whose broad stripes and bright stars thru the perilous fight,
O’er the ramparts we watched were so gallantly streaming?
And the rocket’s red glare, the bombs bursting in air,
Gave proof through the night that our flag was still there.
Oh, say does that star-spangled banner yet wave
O’er the land of the free and the home of the brave?

On the shore, dimly seen through the mists of the deep,
Where the foe’s haughty host in dread silence reposes,
What is that which the breeze, o’er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning’s first beam,
In full glory reflected now shines in the stream:
‘Tis the star-spangled banner! Oh long may it wave
O’er the land of the free and the home of the brave!

And where is that band who so vauntingly swore
That the havoc of war and the battle’s confusion,
A home and a country should leave us no more!
Their blood has washed out their foul footsteps’ pollution.
No refuge could save the hireling and slave
From the terror of flight, or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O’er the land of the free and the home of the brave!

Oh! thus be it ever, when freemen shall stand
Between their loved home and the war’s desolation!
Blest with victory and peace, may the heav’n rescued land
Praise the Power that hath made and preserved us a nation.
Then conquer we must, when our cause it is just,
And this be our motto: “In God is our trust.”
And the star-spangled banner in triumph shall wave
O’er the land of the free and the home of the brave!”

America the Beautiful

Lyrics:

“O beautiful for spacious skies,
For amber waves of grain,
For purple mountain majesties
Above the fruited plain!
America! America!
God shed his grace on thee

And crown thy good with brotherhood
From sea to shining sea!

O beautiful for pilgrim feet
Whose stern impassioned stress
A thoroughfare of freedom beat
Across the wilderness!
America! America!
God mend thine every flaw,
Confirm thy soul in self-control,
Thy liberty in law!

O beautiful for heroes proved
In liberating strife.
Who more than self their country loved
And mercy more than life!
America! America!
May God thy gold refine
Till all success be nobleness
And every gain divine!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
And crown thy good with brotherhood
From sea to shining sea!

O beautiful for halcyon skies,
For amber waves of grain,
For purple mountain majesties
Above the enameled plain!
America! America!
God shed his grace on thee
Till souls wax fair as earth and air
And music-hearted sea!

O beautiful for pilgrims feet,
Whose stem impassioned stress
A thoroughfare for freedom beat
Across the wilderness!
America! America!
God shed his grace on thee
Till paths be wrought through

wilds of thought
By pilgrim foot and knee!

O beautiful for glory-tale
Of liberating strife
When once and twice,
for man's avail
Men lavished precious life!
America! America!
God shed his grace on thee
Till selfish gain no longer stain
The banner of the free!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed his grace on thee
Till nobler men keep once again
Thy whiter jubilee!"

Here is my favorite version of America the Beautiful, sung by Ray Charles.

Remember to be grateful for the Founding Fathers, and other patriots, who risked everything for liberty in the Revolutionary war. Be grateful to those men and women still fighting abroad to keep those freedoms safe from evil. And most of all, be grateful to God that America is still the beacon of liberty.

Happy Independence Day!

Obama’s open border policy introduces risk of viral outbreak, infectious diseases

July 4, 2014 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> Doctors and nurses at an alien detention camp are threatened with arrest if they talk about the risk of contagion from the influx of unaccompanied children into the U.S. Give us your poor, your tired, your infected.
>
> Last weekend, at least two confirmed cases of the swine flu virus were detected in minors being held in two separate detainment facilities in South Texas, a stark reminder that the conditions created by President Obama’s orchestrated invasion of the U.S. are ripe for viral outbreaks that jeopardize the health of American citizens.
>
> It was reported last week that at least one swine flu diagnosis cropped up at the makeshift immigrant-processing center at the Lackland Air Force Base in San Antonio. As reported by Fox News’ Todd Starnes, doctors and nurses working there were threatened with arrest if they talked about the appalling conditions and the health risks posed by such stopgap encampments.
>
> Workers guarded by a security force from the Baptist Family & Children’s Services, which was hired by the Department of Health and Human Services to run the Lackland Camp, said their cellphones and other communication devices were taken from them.
>
> “There were several of us who wanted to talk about the camps, but the agents made it clear we would be arrested,” a psychiatric counselor told Starnes.
>
> “We were under orders not to say anything.”
>
> But there’s much to talk about, and the administration is not telling us about the humanitarian crisis of its own making.
>
> “Most of the border minors are being kept in overcrowded facilities ridden with poor hygiene,” Dr. Elizabeth Lee Vliet, a preventive medicine specialist with practices in Tucson and Dallas, told Breitbart News last week, adding, “this is the ideal condition for a viral outbreak.”
>
> […]One worker told Starnes that children in the camp had measles, scabies, chicken pox and strep throat. Her concern was that the children had already been transported to Lackland from somewhere else. These unaccompanied minors are also being disbursed among the general population into the hands of adult relatives who are illegal aliens themselves.
>
> […]Border Patrol agents in Murietta, Calif., are testing positive for tuberculosis. Hand and foot disease, and Chagas, a tropical parasitic disease, both previously

> eradicated from the area, are on the rise. The possibility also exists in these conditions for diseases such as dengue and the Ebola virus to hit the U.S., considering that among the influx are illegals from Central and South America, the Middle East and even West Africa.

Is Obama to blame for this? He sure is.

> Republicans also have said the surge in families with children and children traveling alone shows the Obama administration has not done enough to secure the border and can't be trusted to carry out enhanced border security should Congress pass a comprehensive immigration bill that also offers legal status to undocumented immigrants.
>
> The Republican-controlled House Judiciary Committee, which has jurisdiction on immigration issues, has scheduled a June 25 hearing titled "An Administration-made Disaster: The South Texas Border Surge of Unaccompanied Alien Minors."
>
> "Word has gotten out around the world about President Obama's lax immigration enforcement policies and it has encouraged more individuals to come to the United States illegally," the committee said in a message posted Monday on its official Facebook page.
>
> Other prominent Republicans have taken Obama to task for not making it clear that the incoming immigrants will have to return to their countries of origin.
>
> "It's the result of the president sending the message that if you can get here and you are a young person, you can stay," Sen. John McCain, R-Ariz., told *The Arizona Republic*. "The president has got to openly say that if you come here illegally, you can't stay. And until he does that, you're going to see this flood of young people, which is absolutely unacceptable."
>
> Rep. Matt Salmon, R-Ariz., on Friday visited the Nogales detention facility, which he described as makeshift and reminiscent of the sort of emergency shelter the Federal Emergency Management Agency might erect after a natural disaster. He said he was barred from taking photos of the children, who he said were kept in cagelike chain-link enclosed spaces.
>
> "I lay this all at the president's feet," said Salmon, who is chairman of the House Foreign Affairs subcommittee on the Western Hemisphere. "It's anything but compassionate to have a policy that seems to welcome people to cross over the desert and risk rape and loss of life and dehydration. … If President Obama really cares about families and children, then he should make it really clear that there is no amnesty here, and if you come, you will be immediately deported. That's the only deterrent, because the waves are going to keep coming unless we clarify that."

My biggest concerns about the border have always national security, violent criminal activity by illegals and the strain on the social services (education, emergency room health care, etc.) caused by people who don't pay into the system, but only make

withdrawals from it. I’d never even thought about this risk of communicable diseases.The Democrats favor lax immigration policies because they know that the children of naturalized illegal immigrants will be citizens, and are almost guaranteed to vote Democrat because they are the party of big government and dependency. Lax immigration policies make sense to Democrats, it’s how they increase their pool of support for bigger government.

Three ways that generosity makes sense in the Christian worldview

July 4, 2014 | by Wintery Knight | Link | Original Link

I'm planning to be study Philippians today with the woman I am mentoring in apologetics, so I thought I would post something about generosity and sharing.

First, let's look at a few passages from the Bible that show the importance of sharing generously with others. I also want to emphasize the need to work and to not be a burden to others, and to emphasize that the goal of sharing with others is to *build them up*.

2 Thessalonians 3:10-11: (Paul speaking)

10 For even when we were with you, we used to give you this order: if anyone is not willing to work, then he is not to eat, either.

11 For we hear that some among you are leading an undisciplined life, doing no work at all, but acting like busybodies.

Acts 20:32-35: (Paul speaking)

32 And now I commend you to God and to the word of His grace, which is able to build *you* up and to give *you* the inheritance among all those who are sanctified.

33 I have coveted no one's silver or gold or clothes.

34 You yourselves know that these hands ministered to my *own* needs and to the men who were with me.

35 In everything I showed you that by working hard in this manner you must help the weak and remember the words of the Lord Jesus, that He Himself said,'It is more blessed to give than to receive.'"

Philippians 4:14-18: (Paul speaking)

14 Nevertheless, you have done well to share *with me* in my affliction.

15 You yourselves also know, Philippians, that at the first preaching of the gospel, after I left Macedonia, no church shared with me in the matter of giving and receiving but you alone;

16 for even in Thessalonica you sent *a gift* more than once for my needs.

17 Not that I seek the gift itself, but I seek for the profit which increases to your account.

18 But I have received everything in full and have an abundance; I am amply supplied, having received from Epaphroditus what you have sent, a fragrant aroma, an acceptable sacrifice, well-pleasing to God.

Luke 21:1-4: (Jesus speaking)

1 And He looked up and saw the rich putting their gifts into the treasury.

2 And He saw a poor widow putting in two small copper coins.

3 And He said, "Truly I say to you, this poor widow put in more than all *of them*;

4 for they all out of their surplus put into the offering; but she out of her poverty put in all that she had to live on."

So in an effort to keep this post small, I'm going to be brief. And practical.

Make as much money as you can

The first point I want to make is that it is impossible to share with anyone else unless you have your own financial house in order. Don't borrow money. Don't ask for money. Study hard things (STEM and useful trades) so that you always have work and are always earning money. In the 2 Thessalonians 3:10-11 passage, we learn that able-bodied people need to be working. That is a practical pre-condition of sharing with others. The more money you make the more you have to share. If you want to advance the gospel and build up others, money is absolutely vital. Don't study crap subjects in school, don't take useless jobs, don't neglect the need to build a gapless resume of increasingly more challenging work, don't get tied down by worldly goods and recreational dating early – so you can finish your education as much as you can. Be practical – charitable giving doesn't come from nowhere. It comes from a person who is ordered and disciplined. Unless you are some sort of skilled Christian scholar, don't be flying all over the world willy-nilly on expensive mission trips, either – there is plenty of work to do right where God planted you. Be a good steward of your money, and the donations of other Christians.

Partnering with others for the gospel

The second point I want to contrast is the giving I prefer with the giving I do not prefer. The giving I prefer is to give to another Christian who I know personally who is involved in ministry that advances the gospel by arguing for the truth of the gospel using apologetics. So, I like to give to groups like Ratio Christi and to Christian scholars who have ministries or who are doing useful degrees. My goal is to spread the gospel in the only way it can be spread – by demonstrating the truth of it using arguments and evidence. I do not give money to anti-poverty groups like World Vision or to unskilled missionaries who just want an extended vacation in order to satisfy some childhood fancy animated by pride and/or vanity. When I give money to another Christian, my goal is to partner with them, not to feel good about myself. I am trying to get something done for the Lord, not to feel better or to make people think I am nice or to "balance the books" with God (which is heretical).

Building your rewards in Heaven

The third point I want to make is to emphasize that this is not a pointless exercise. Everyone who is a Christian accepts that reconciliation with God is achieved not by human efforts to be good, but by acknowledging and conforming your life to a free gift that was offered by Jesus Christ. Christ died in order to pay the penalty for every individual person's rebellion against God the Father. That atoning death is the basis for our reconciliation with God, and our eternal life with him. However, the passage in Philippians makes clear that our experience of Heaven after we have been saved by grace is affected by what we do here and now. So often, what you hear in church is do this, do that, and there is never any rationality to it, no emphasis on long-term planning

or wisdom in decision-making. It's all just ad hoc emotivism. But I am telling you something different today. You have a few years on Earth to understand the example of Christ, to follow him, and share in his sufferings as you imitate his obedience. You better have some sort of plan to produce a return on God's investment in you, and it has to be a good plan. Not one that makes you feel good, but one that is likely to achieve results. Plan your charitable giving like your life were an episode of Mission Impossible, and focus on outcomes, not feelings. That doesn't mean that results are the measure of success, because that's God's job. But it does mean that you should prefer the Thomas Sowell approach to the Disney Princess approach.

The soul-making theodicy

The fourth point I want to make is that one of the reasons why God allows evil and suffering in this world is to allow us the opportunity to be active partners with him in demonstrating the love of Christ to others. God's goal for us is *not* to make us safe and happy. God's goal for us is to get us to freely enter into and sustain a relationship with him – a relationship that includes an accurate knowledge of who he is, and a free response of love and obedience to him. With respect to that goal, God is fully justified in permitting all kinds of evil and suffering, which in turn provide opportunities for us to 1) enter in to his plan of love and redemption for others and 2) demonstrate his character to the watching world through our actions as his agents. The situation is identical to what parents do in allowing their children to be hurt while learning – God holds back from annihilating some evil and suffering so that we have an opportunity to step into the breach. This advances our relationships with him through shared purpose and shared experiences. This is *fellowship with God* – not just reading devotional, pious-sounding bilge, but active partnering and dangerous action in some non-trivial enterprise. Give him your best – the same best you bring to your work or anything else in your life that really matters.

Jerry Walls lectures on objections to Reformed theology (Calvinism)

July 5, 2014 | by Wintery Knight | Link | Original Link

WARNING: This lecture is a very sharp and pointed critique of Calvinist theology. Viewer discretion is advised.

In Protestant Christianity, there is a division between people who accept Calvinist doctrines and those who don't. Both groups think that the other group are genuine Christians, but the debate has more to do with the human free will, human responsibility and who God loves.

About Dr. Jerry Walls:

- BA in Religion and Philosophy, Houghton College
- MDiv, Princeton Seminary
- STM, Yale Divinity School
- PhD in Philosophy, Notre Dame

He is a professor at Houston Baptist University. You can find a more detailed profile here.

Dr. Walls is Protestant (like me). He is a substance dualist (like me). And he believes in a real eternal Hell (like me). And he is very, very assertive. Definitely no confidence problems here. And you're not going to have a problem keeping your attention on this lecture!

Note that I do not agree with or endorse Dr. Walls on all of his views.

Here's the lecture: (64 minutes)

The MP3 file is here.

Summary:

- What are the main doctrines of Calvinism? (TULIP)
- A look at the Westminster Confession
- The nature of freedom and free will
- Calvinist doctrine of freedom: compatibilism
- The implications of compatibilism
- Who determines what each person will desire on Calvinism?
- Who does God love on Calvinism?
- The law of non-contradiction
- Does God make a genuine offer of salvation to all people on Calvinism?
- Does God love "the elect" differently than the "non-elect" on Calvinism?

He quotes at least a half-dozen Calvinist theologians in this lecture, including John Piper, J.I. Packer and D.A. Carson. And he also mentions 3 videos at the end of the lecture where he goes over specific Bible verses that seem to support Calvinism (part 4, part 5, part

6 are the ones he mentioned).

This lecture is very strong stuff, and I think that he could have been nicer when presenting it, but he hit on every single objection that I have to Calvinism, and he worked through my reasoning too! So I really liked that he validated all of my concerns about Calvinism. I'm not as bothered about the problems with Calvinism as he is, though. I don't think it's a big divisive issue. I almost always read Calvinist theologians when I am reading theology. I just conjoin Calvinism with middle knowledge and resistible grace, and it's fine. Calvinists are some of the best theologians, they are just wrong on the things he discusses in his lecture.

You may also be interested in these debates on salvation between a Calvinist and a non-Calvinist.

Love another Christian just because of the fellowship of the gospel

July 5, 2014 | by Wintery Knight | Link | Original Link

I was studying Philippians yesterday with the lady I am mentoring in apologetics. Philippians is my favorite book of the Bible. We studied Philippians 1, and used D. A. Carson's "Basics for Believers" commentary.

Here is the part I want to talk about today:

Philippians 1:1-11:

> 1 Paul and Timothy, bond-servants of Christ Jesus, To all the saints in Christ Jesus who are in Philippi, including the overseers and deacons:
>
> 2 Grace to you and peace from God our Father and the Lord Jesus Christ.
>
> 3 I thank my God in all my remembrance of you,
>
> 4 always offering prayer with joy in my every prayer for you all,
>
> 5 in view of your participation in the gospel from the first day until now.
>
> 6 *For I am* confident of this very thing, that He who began a good work in you will perfect it until the day of Christ Jesus.
>
> **7 For it is only right for me to feel this way about you all, because I have you in my heart, since both in my imprisonment and in the defense and confirmation of the gospel, you all are partakers of grace with me.**
>
> 8 For God is my witness, how I long for you all with the affection of Christ Jesus.
>
> **9 And this I pray, that your love may abound still more and more in real knowledge and all discernment,**
>
> 10 so that you may approve the things that are excellent, in order to be sincere and blameless until the day of Christ;
>
> 11 having been filled with the fruit of righteousness which *comes* through Jesus Christ, to the glory and praise of God.

Now just read that and reflect on how passionate, and even *unstable and emotional* Paul sounds about this love he has for this church. Ask yourself this: what is the basis for these feelings? Read it again, and write your answer down. I'll tell you mine in a minute.

Now here is D. A. Carson.

He writes:

> As often in his letters, Paul begins with a warm expression of thanks to God for something in the lives of his readers. Here the grounds of his thanksgiving to God are three in number, though all three are tied to the same theme.

The first is their faithful memory of him. The NIV reads, “I thank my God every time I remember you” (1: 3). But others suggest “I thank my God every time you remember me,” or something similar. The original is ambiguous. For reasons I shall not go into, I think Paul is referring to their remembrance of him. Later on he will thank the Philippians for remembering him so warmly that they sent funds to support him in his ministry. **But here the vision is broader: he perceives that their interest in him is a reflection of their continued commitment to the gospel, and that is why he thanks God for them.**

The point becomes explicit in the second cause of his thanksgiving: “In all my prayers for all of you, I always pray with joy because of your partnership in the gospel from the first day until now . . .” (1: 4– 5). Their “partnership in the gospel” injects joy into Paul’s prayers of thanksgiving: “I always pray with joy,” he writes. The word rendered “partnership” is more commonly translated “fellowship” in the New Testament. What precisely does the word mean? In common use “fellowship” has become somewhat debased. If you invite a pagan neighbor to your home for a cup of tea, it is friendship; if you invite a Christian neighbor, it is fellowship. If you attend a meeting at church and leave as soon as it is over, you have participated in a service; if you stay for coffee afterward, you have enjoyed some fellowship. In modern use, then, fellowship has come to mean something like warm friendship with believers.

In the first century, however, the word commonly had commercial overtones. If John and Harry buy a boat and start a fishing business, they have entered into a fellowship, a partnership. Intriguingly, even in the New Testament the word is often tied to financial matters. Thus, when the Macedonian Christians send money to help the poor Christians in Jerusalem, they are entering into fellowship with them (Rom. 15: 26).

The heart of true fellowship is self-sacrificing conformity to a shared vision. Both John and Harry put their savings into the fishing boat. Now they share the vision that will put the fledgling company on its feet. Christian fellowship, then, is self-sacrificing conformity to the gospel. There may be overtones of warmth and intimacy, but the heart of the matter is this shared vision of what is of transcendent importance, a vision that calls forth our commitment. So when Paul gives thanks, with joy, because of the Philippians’ “partnership in the gospel” or “fellowship in the gospel,” he is thanking God that these brothers and sisters in Christ— from the moment of their conversion (“ from the first day until now,” Paul writes)— rolled up their sleeves and got involved in the advance of the gospel. They continued their witness in Philippi, they persevered in their prayers for Paul, they sent money to support him in his ministry— all testifying to their shared vision of the importance and priority of the gospel. That is more than enough reason for thanking God.

> [..]Implicitly, such an apostolic stance asks us what gives us our greatest joy. Is it personal success? Some victory for our children? Acquisition of material things? "I have no greater joy," John writes, "than to hear that my children are walking in the truth." Paul reflects exactly the same attitude. Paul adds, "It is right for me to feel this way about all of you, since I have you in my heart . . ." (Phil. 1: 7). Probably this was written against the background of Stoic influence that was cautious about whole-life commitments, especially if they involved the "passions." Be cool; do not be vulnerable; do not get hurt. But that was not Paul's way. "It is right for me to feel this way about all of you," Paul insists, regardless of what the contemporary culture says. "I have you in my heart": my whole life and thought are bound up with you.

More:

> So strongly does he want the Philippians to recognize his devotion to them that Paul puts himself under an oath: "God can testify how I long for all of you with the affection of Christ Jesus" (1: 8). The significance of the oath is not that without it he might lie. Rather, he puts himself under an oath so that the Philippians might feel the passion of his truthfulness, in exactly the same way that God puts himself under an oath in the Epistle to the Hebrews. There the point is not that otherwise God might lie, but that God wants to be believed (Heb. 7: 20– 25). So Paul: God is my witness "how I long for all of you with the affection of Christ Jesus."
>
> Here is no mere professionalism. Nor is this an act, a bit of showmanship to "turn them on" to the apostle. Rather, it is something that repeatedly bubbles through Paul's arguments. It recurs, for example, in chapter 4: "Therefore, my brothers, you whom I love and long for, my joy and crown, that is how you should stand firm in the Lord, dear friends!" (4: 1).
>
> **Both from Paul's example and from that of the Philippians, then, we must learn this first point: the fellowship of the gospel, the partnership of the gospel, must be put at the center of our relationships with other believers. That is the burden of these opening verses. Paul does not commend them for the fine times they had shared watching games in the arena. He doesn't mention their literature discussion groups or the excellent meals they had, although undoubtedly they had enjoyed some fine times together. What lies at the center of all his ties with them, doubtless including meals and discussion, is this passion for the gospel, this partnership in the gospel.**
>
> What ties us together? What do we talk about when we meet, even after a church service? Mere civilities? The weather? Sports? Our careers and our children? Our aches and pains? None of these topics should be excluded from the conversation of Christians, of course. In sharing all of life, these things will inevitably come up. But what must tie us together as Christians is this passion for the gospel, this

> fellowship in the gospel. On the face of it, nothing else is strong enough to hold together the extraordinary diversity of people who constitute many churches: men and women, young and old, blue collar and white, healthy and ill, fit and flabby, different races, different incomes, different levels of education, different personalities. What holds us together? It is the gospel, the good news that in Jesus, God himself has reconciled us to himself. This brings about a precious God-centeredness that we share with other believers.

Does what Carson writes make you think of the Lord of the Rings book 1? ("The Fellowship of the Ring") It sounds like Christians are supposed to band together in common purpose in order to complete a quest. They are not supposed to just be hanging out to pass the time. There is planning. There is cooperation. There is danger. There is achievement. There is adventure. I think that he loves the church in Philippi because they have entered into this fellowship of the gospel with him.

More:

> Already in verse 4 Paul has insisted that whenever he prays for the Philippians, he does so with joy and thanksgiving. Now he gives us the content of his prayers for them: "And this is my prayer: that your love may abound more and more in knowledge and depth of insight, so that you may be able to discern what is best and may be pure and blameless until the day of Christ, filled with the fruit of righteousness that comes through Jesus Christ— to the glory and praise of God" (1: 9– 11).
>
> […]Second, what Paul has in mind is not mere sentimentalism or the rush of pleasure spawned, for example, by a large conference. "I pray," Paul writes, "that your love may abound more and more in knowledge and depth of insight." The kind of love that Paul has in mind is the love that becomes more knowledgeable. Of course, Paul is not thinking of just any kind of knowledge. He is not hoping they will learn more and more about nuclear physics or sea turtles. He has in mind the knowledge of God; he wants them to enjoy insight into God's words and ways, and thus to know how to live in light of them.
>
> […]**Third, for Paul this prayer has a further end in view. He lifts these petitions to God, he tells the Philippians, "so that you may be able to discern what is best and may be pure and blameless until the day of Christ" (1: 10). Clearly, Paul does not want the Philippian believers to be satisfied with mediocrity. He cannot be satisfied, in a fallen world, with the status quo. He wants these believers to move on, to become more and more discerning, proving in their own experience "what is best." He wants them to pursue what is best in the knowledge of God, what is best in their relationships with other believers, what is best in joyful obedience. For ultimately what he wants from them is perfection: he prays that they "may be pure and blameless until the day of Christ."**

Now for my thoughts.

I want all of you reading this to do one thing for me. I want you to completely abandon the criteria you are currently using for who you will be friends with and adopt Paul's criteria. I want you to put your gospel-related activities at the center of your life. Do not neglect your other practical duties like making money and saving money and so on, but when it comes to your passion, where you take risks, where your long-term goals are – I want you to put the gospel at the center. And I do not mean mere proclamation of simple statements, I mean apologetics and Christian worldview – including politics, economics, etc.

Now, that's not my main point. My main point is that I further want you to stop choosing who you will associate with based on worldly criteria. I want you to think about the people around you who are the most willing to put the gospel first and I want you to take up those people as friends. I want you to talk to them, to share with them, to encourage them, to confide in them, to listen to their confessions and to generally love them in the traditional ways that Christians love, e.g. – 1 Corinthians 13:1-13. You need to fellowship with them – invest in their enterprises, and let them invest in yours, too. This is *real love* according to the Bible.

We need to stop looking at other people on the surface level – age, skin color, wealth, clothes, etc. – and start to dig deeper underneath to find out where each person stands with respect to the gospel of Jesus Christ. Our criteria should not be present ability. We should choose those with desire, intensity, and willingness to learn *hard things*. The first person you should invest in is the person who wants to learn to defend their faith to non-Christians using the best available evidence. If that person can demonstrate their desire to do grow in knowledge and depth of insight, you should be spending your time, money and effort with that person *first*.

Three debates on divine sovereignty, predestination and free will

July 6, 2014 | by Wintery Knight | Link | Original Link

The two views being debated below are Calvinism and simple foreknowledge. Calvinism is the view that God unilaterally predetermines a selected group of individuals who will know him – the "elect". Foreknowledge is the view that God draws people to him who he foreknows will freely respond to his overtures and come to know him. What does the Bible teach about these issues?

The Calvinist debater is Dr. James White:

> James White is the director of Alpha and Omega Ministries, a Christian apologetics organization based in Phoenix, Arizona. He is a professor, having taught Greek, Systematic Theology, and various topics in the field of apologetics. He has authored or contributed to more than twenty books, including *The King James Only Controversy*, *The Forgotten Trinity*, *The Potter's Freedom*, and *The God Who Justifies*. He is an accomplished debater, having engaged in more than one-hundred moderated, public debates with leading proponents of Roman Catholicism, Islam, Jehovah's Witnesses, and Mormonism, as well as critics such as Bart Ehrman, John Dominic Crossan, Marcus Borg, and John Shelby Spong. He is an elder of the Phoenix Reformed Baptist Church, has been married to Kelli for more than twenty-eight years, and has two children, Joshua and Summer.

The Foreknowledge debater is Dr. Michael Brown:

> Michael L. Brown holds a Ph.D. in Near Eastern Languages and Literatures from New York University and has served as a visiting or adjunct professor at Southern Evangelical Seminary, Gordon Conwell Theological Seminary (Charlotte), Trinity Evangelical Divinity School, Fuller Theological Seminary, Denver Theological Seminary, the King's Seminary, and Regent University School of Divinity. He has contributed numerous articles to scholarly publications, including the Oxford Dictionary of Jewish Religion and the Theological Dictionary of the Old Testament. Dr. Brown is the author of twenty books, including, Our Hands Are Stained with Blood: The Tragic Story of the "Church" and the Jewish People, which has been translated into more than twelve languages, the highly-acclaimed five-volume series, Answering Jewish Objections to Jesus, a commentary on Jeremiah (part of the revised edition of the Expositor's Bible Commentary), and several books on revival and Jesus revolution.

Now, let's get ready to rumble!

First debate

A nice friendly debate that introduces the topic. This is the best debate for casual

listeners and non-Christians.

The MP3 file is here.

Summary:

- Introduction to Calvinist James White and some of his 90 debates
- What is Calvinism and why is it important?
- Does God love all people the same way in Calvinism?
- Does God desire the salvation of all people in Calvinism?
- Is the offer of salvation to all people a genuine offer on Calvinism?
- Does Calvinism diminish or augment God's sovereignty?
- Can God accomplish his will by permitting evil creaturely actions?
- Did Jesus die only for the "chosen", or for the possibility of salvation for all?
- Does a person's responding to God's offer of savaltion detract from Gods glory?
- Does our ability to resist God's grace mean that we are "stronger" than God?

There is a little static in the audio for a few seconds every time they come back from a break, but nothing major.

Second debate, on specific passages in the Bible

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- John 6
- Romans 8, 9
- Ephesians 1

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the Calvinist debater.

Third debate, on specific passages in the Bible

Same two guys, but this time they tackle the meaning of specific Bible passages.

The MP3 file is here.

The passages being disputed:

- Luke 13:34-35 (Deuteronomy 5:28-29)
- Ezekiel 18:21-32 (Jeremiah 3:19-20; Ezekiel 22:30-31)
- 1 John 2:1-2 (2 Pet 2:1).

Each person gets 8 minutes to exegete the text, followed by 4 minutes of cross-examination by the other debater, followed by 3 minute conclusions by each debater. These texts were chosen by the foreknowledge debater.

Three thoughts on forgiveness and reconciliation in Luke 15

July 6, 2014 | by Wintery Knight | Link | Original Link

For the final post in the series of five on Bible study / theology that I've been writing for the lady I am mentoring in apologetics, I decided to focus on a very interesting, distinctive feature of Christian theology. The Bible passage for this post is in Luke 15.

Luke 15:1-10:

> 1 Now all the tax collectors and the sinners were coming near Him to listen to Him.
>
> 2 Both the Pharisees and the scribes *began* to grumble, saying, "This man receives sinners and eats with them."
>
> 3 So He told them this parable, saying,
>
> 4 "What man among you, if he has a hundred sheep and has lost one of them, does not leave the ninety-nine in the open pasture and go after the one which is lost until he finds it?
>
> 5 When he has found it, he lays it on his shoulders, rejoicing.
>
> 6 And when he comes home, he calls together his friends and his neighbors, saying to them, 'Rejoice with me, for I have found my sheep which was lost!'
>
> 7 I tell you that in the same way, there will be *more* joy in heaven over one sinner who repents than over ninety-nine righteous persons who need no repentance.
>
> 8 "Or what woman, if she has ten silver coins and loses one coin, does not light a lamp and sweep the house and search carefully until she finds it?
>
> 9 When she has found it, she calls together her friends and neighbors, saying, 'Rejoice with me, for I have found the coin which I had lost!'
>
> 10 In the same way, I tell you, there is joy in the presence of the angels of God over one sinner who repents."

And now we go to C.S. Lewis for this quote:

> "It may be possible for each [person] to think too much of his own potential glory hereafter; it is hardly possible for him to think too often or too deeply about that of his neighbor. The load, or weight, or burden of my neighbor's glory should be laid daily on my back, a load so heavy that only humility can carry it, and the backs of the proud will be broken. It is a serious thing to live in a society of possible gods and goddesses, to remember that the dullest and most uninteresting person you talk to may one day be a creature which, if you saw it now, you would strongly be tempted to worship, or else a horror and a corruption such as you now meet, if at all, only in a nightmare. All day long we are, in some

> degree, helping each other to one or other of these destinations. It is in the light of these overwhelming possibilities, it is with the awe and the circumspection proper to them, that we should conduct all our dealings with one another…. There are no ordinary people. You have never talked to a mere mortal…. This does not mean that we are to be perpetually solemn. We must play. But our merriment must be of that kind (and it is, in fact, the merriest kind) which exists between people who have, from the outset, taken each other seriously—no flippancy, no superiority, no presumption."
>
> — C.S. Lewis "The Weight of Glory"

And then there is this from the biography of J. Warner Wallace:

> J. Warner Wallace was an atheist for 35 years. He was passionate in his opposition to Christianity, and he enjoyed debating his Christian friends. In debating his friends, J. Warner seldom found them prepared to defend what they believed. He became a Police Officer and eventually advanced to Detective. Along the way, he developed a healthy respect for the role of evidence in discerning truth, and his profession gave him ample opportunity to press into action what he had learned about the nature and power of evidence. Throughout all of this, he remained an "angry atheist", hostile to Christianity and largely dismissive of Christians.
>
> When J. Warner took time to be honest with himself, he had to admit that he never took the time to examine the evidence for the Christian Worldview without the bias and presupposition of naturalism. He never gave the case for Christianity a fair shake. When he finally examined the evidence fairly, he found it difficult to deny, especially if he hoped to retain his respect for the way evidence is utilized to determine truth. J. Warner found the evidence for Christianity to be convincing.
>
> J. Warner founded PleaseConvinceMe.com as a transparent resource that tracks his own spiritual journey. From angry atheist, to skeptic, to believer, to seminarian, to pastor, to author and podcaster, his journey has been assisted by his experience as a Detective. J. Warner wrote, "Cold-Case Christianity" with a desire to share those experiences with you, It's J. Warner's hope that his own efforts to detect and articulate the truth will help you to become a better Christian Case Maker.

In a recent podcast, I heard Wallace mention that he is now an adjunct professor in the apologetics program at Biola University. Adjunct professor.

And this from the biography of the fighting pastor, Pastor Matt Rawlings:

> Matt Rawlings is a Teaching Pastor at Christ's Community Church in Portsmouth, OH and State Director of Development for a Christian legal ministry.
>
> Matt has been married since 1998 to Emily Bennington and they have a son, Jackson who was born in 2003.

> Matt is a prodigal preacher's kid who ran away from home at 15, ended up in Hollywood at 17 where, among other things, he directed music videos for Latin MTV. He returned to his home town of Portsmouth, OH in 1991 and after a wasted year of college, he entered politics (which is just Hollywood for ugly people). Matt worked for 2 Congressional campaigns and spent 2 years working on Capitol Hill as a legislative aide during the "Gingrich Years" of 1995-1997.
>
> It was during this time that Matt was diagnosed with cancer and was saved. After graduating from Shawnee State University in 1998 with a B.A. in History, Matt studied New Testament Greek at Kentucky Christian University and then the Graduate School of Theology at Abilene Christian University where he earned a Master of Divinity.
>
> Matt then graduated from Cornell Law School in 2004 while pastoring a small church in Ithaca, New York. After a few years working in a large corporate law firm in West Virginia while serving as an interim pastor for small churches, Matt became a Teaching Pastor at Christ's Community Church in 2006. He then helped launch and lead Revolution, a Gen-X & Gen-Y ministry from 2008 to 2013.
>
> Matt earned a certificate in apologetics from BIOLA University. He also launched Free Seminary to train lay Christians to become disciple makers. When Matt isn't preaching or teaching, he is hanging out with his family or reading theology or detective novels, watching old movies or listening to really loud music.

Pastor Matt spent a period of time as an atheist, and he wrote about it candidly in several posts on his blog. But look at him now.

So here's what I want to say about all this.

The first point I want to make is that it's important to understand what human beings are in Christianity. We are not just lumps of meat who evolved by accident in an eternal, undesigned universe. Every single one of us is made in the image of God. We are embodied minds. When we die, our body stops working, but the mind/soul survives. God loves each of us equally and wants us all to come to know him and to have eternal life with him. Those who resist his loving but non-coercive drawing of us to him will spend eternity separated from him. Our lives do not end at the grave. Every single person you speak to was made to live on beyond the grave. And every moment you spend with them, (as a Christian operator, working as God's ambassador), is leading them to one eternal destination or another. It's part of God's plan for your santification that you participate in leading other people to Christ, and building them up once they've been led to Christ.

The second point I want to make is that you can know precisely nothing about what a person can accomplish for God from their present state of rebellion against God. Wallace and Rawlings were bold and determined atheists. To every prim and proper church Christian looking on then, they must have looked as if they would never come to faith in Christ, and certainly that they would never make contributions to the Kingdom like the ones they have. It would have been exactly the wrong thing to do, at that time, to count them out and to refuse to engage them. I meet Christians all the time who are regular

church-attenders and Bible-readers who I ask to engage with me to grow some of these lost-sheep or newly-found sheep, and I am so surprised to hear the pride in their voice as they dismiss these people as lost causes. *Don't do that!* You are not in a position to know what these people are capable of. And I can guarantee you that God hasn't given you so many people to mentor that you can just be cavalier about throwing some of them out that you deem to be unworthy of your time. Be careful about having *your* sins forgiven and then refusing to forgive *someone else's* sins. If someone needs your mentoring, you better put in the same effort that God put into rescuing you. God uses people to save other people, and God help the "Christian" who makes excuses for not being faithful when they are called. This is not optional.

The third point I want to make is that in the real world, we have to understand what works in order to convince someone to become a Christian or to return to the faith. Christianity is a truth-centered faith. It has certain propositions that must be affirmed as true. In order for those propositions to be *affirmed as true*, they have to be *demonstrated to be true*. The way the founder of the religion did this is by providing miracles to authenticate his claims, (just read the gospel of John). Jesus offered these miracles to unbelievers as evidence for them to then freely choose to believe his statements about himself. Here in this time and place, it falls to us to use logical arguments and evidence from nature and history to prove out these same propositions to unbelievers. If you want to be the one who is able to leave the 99 found sheep and save the 1 lost sheep, then you study apologetics and invest in relationships with people. If you want to be the one who is able to leave the 9 silver coins and save the 1 lost silver coin, then you study apologetics and invest in relationships with people. Christianity is an evidential faith. If you want to share your faith with the lost, you have to study the evidence for it.

Universities raise tuition while paying hundreds of thousands to Hillary Clinton to speak

July 7, 2014 | by Wintery Knight | Link | Original Link

A shocking story from the leftist Washington Post.

Excerpt:

> At least eight universities, including four public institutions, have paid hundreds of thousands of dollars for Hillary Rodham Clinton to speak on their campuses over the past year, sparking a backlash from some student groups and teachers at a time of austerity in higher education.
>
> In one previously undisclosed transaction, the University of Connecticut — which just raised tuition by 6.5 percent — paid $251,250 from a donor fund for Clinton to speak on campus in April. Other examples include $300,000 to speak at the University of California at Los Angeles in March and $225,000 for a speech scheduled for October at the University of Nevada at Las Vegas.
>
> The potential 2016 Democratic presidential candidate also has been paid for speeches at the University at Buffalo, Colgate University and Hamilton College in New York, as well as Simmons College in Boston and the University of Miami in Florida.
>
> Officials at those five schools refused to say what they paid Clinton. But if she earned her standard fee of $200,000 or more, that would mean she took in at least $1.8 million in speaking income from universities in the past nine months.
>
> Since stepping down as secretary of state in early 2013, Clinton has given dozens of paid speeches to industry conventions and Wall Street banks. But Clinton's acceptance of high fees for university visits has drawn particularly sharp criticism, with some students and academic officials saying the expenditures are a poor use of funds at a time of steep tuition hikes and budget cuts across higher education.
>
> At UNLV, where officials have agreed to raise tuition by 17 percent over the next four years, student government leaders wrote a letter to Clinton last week asking her to return the planned $225,000 fee to the university. If she does not, they say, they intend to protest her visit.
>
> "The students are outraged about this," said Elias Benjelloun, UNLV's student body president. "When you see reckless spending, it just belittles the sacrifices students are consistently asked to make. I'm not an accountant or economist, so I can't put a price tag on how much we should be paying her, but I think she should come for free."
>
> Clinton's spokesman, Nick Merrill, declined to comment on the UNLV students' request.

Oh, but don’t be concerned by this. You see, once this story broke, Hillary decided to give all the money away! To a non-profit! A non-profit run by her and her husband. Problem solved, Democrat-style.

Amy Hall: why is there outrage over the Hobby Lobby ruling?

July 7, 2014 | by Wintery Knight | Link | Original Link

Here's staff apologist Amy Hall over on the Stand to Reason blog.

Excerpt:

> I've come across two articles with particularly good, concise insight on what is going on here. The first is from Paul Horwitz:
>
> The first source of controversy is the collapse of a national consensus on a key element of religious liberty: accommodation. Throughout American history, there has been widespread agreement that in our religiously diverse and widely devout country, it is good for the government to accommodate religious exercise. We have disagreed about particular accommodations (may a Muslim police officer wear a beard, despite police department policy?), and especially about whether religious accommodations should be ordered by judges or crafted by legislators. But we have generally agreed that our nation benefits when we help rather than burden those with religious obligations. That consensus seems, quite suddenly, to have evaporated.
>
> […]The second article, by Julian Sanchez, gets to what I fear is at the heart of the anger:
>
> [T]he outraged reaction to the ruling ought to seem a bit puzzling. If what you are fundamentally concerned about is whether women have access to no-copay contraception, then there's no obvious reason to invest such deep significance in the precise accounting details of the mechanism by which it is provided….
>
> The outrage *does* make sense, of course, if what one fundamentally cares about—or at least, additionally cares about—is the *symbolic speech act embedded in the compulsion itself*. In other words, if the purpose of the mandate is not merely to achieve a certain practical result, but to declare the qualms of believers with religious objections so utterly underserving of respect that they may be forced to act against their convictions *regardless of whether this makes any real difference to the outcome*. And something like that does indeed seem to be lurking just beneath—if not *at*—the surface of many reactions. The ruling seems to provoke anger, not because it will result in women having to pay more for birth control (as it won't), but at least in part because it fails to send the appropriate cultural signal. Or, at any rate, because it allows religious *employers* to continue sending the wrong cultural signal—disapproval of certain forms of contraception—when sending that signal does not impede the achievement of the government's ends in any way.
>
> Personally, I have no sympathy whatever with the substantive moral views

> of *Hobby Lobby*'s owners. But I'm dismayed at how many friends who style themselves "liberals," even recognizing the ruling will make no immediate difference in employee access to contraception, seem to regard it as an appalling betrayal that the Court refused to license what amounts to purely symbolic compulsion of people with retrograde ideas. If we accept that the exemption here makes no functional difference to whether people are covered, however, that's the only rationale left for insisting on direct purchase of coverage by employers—and not, I had thought, a *legitimate* rationale for government coercion in a liberal democracy.
>
> That's troubling.

I think the reason for this is simple – people of faith have allowed the centers of influence in our society to be ceded to the secular left. When a person goes through their entire undergraduate and graduate education being taught by secular leftists, they don't have a whole lot of tolerance for people who think that nature shows evidence of a Creator/Designer. As far as they know, the universe is eternal, it never came into being out of nothing. The "design" in the universe is an accident – if the constants of physics were altered slightly, we'd just have green skin. The origin of life has been solved by Darwin, and the fossil record shows the gradual emergence of all the phyla over 4 billion years – one every few hundred million years, say. And then someone who thinks all that goes and sits on the Supreme Court and has to make sense of "religious liberty" when it conflicts with their desire to impose their social agenda – recreational sex on demand. I am surprised we even got this narrow 5-4 victory. And I don't think the next generation of Americans will be this conservative about protecting religious liberty – they think it's nonsense.

Five Bible studies on practical aspects of Christian living

July 7, 2014 | by Wintery Knight | Link | Original Link

I wrote 5 posts last week from Wednesday to Sunday, and I wanted to link to each post in the series and give everyone a chance to read them, since many of you would have been out for the long weekend.

Here are the 5 posts:

1. Humility
2. Courage
3. Generosity
4. Love
5. Forgiveness

Different people said different that different posts were better, but here is something from the love one.

Excerpt:

D. A. Carson writes:

> Both from Paul's example and from that of the Philippians, then, we must learn this first point: the fellowship of the gospel, the partnership of the gospel, must be put at the center of our relationships with other believers. That is the burden of these opening verses. Paul does not commend them for the fine times they had shared watching games in the arena. He doesn't mention their literature discussion groups or the excellent meals they had, although undoubtedly they had enjoyed some fine times together. What lies at the center of all his ties with them, doubtless including meals and discussion, is this passion for the gospel, this partnership in the gospel.

And I comment:

> My main point is that I further want you to stop choosing who you will associate with based on worldly criteria. I want you to think about the people around you who are the most willing to put the gospel first and I want you to take up those people as friends. I want you to talk to them, to share with them, to encourage them, to confide in them, to listen to their confessions and to generally love them in the traditional ways that Christians love, e.g. – 1 Corinthians 13:1-13. You need to fellowship with them – invest in their enterprises, and let them invest in yours, too. This is *real love* according to the Bible.

It's such a different definition of love to what is out there in the culture today. I hope you all like these posts.

New study: college freshmen reading lists contain no conservative books

July 8, 2014 | by Wintery Knight | Link | Original Link

Lots of leftist books, though. Here's the post about the study from The College Fix.

Excerpt:

> Young America's Foundation has surveyed the required reading programs for incoming college freshmen nationwide and found that, over the past three years, none of the colleges have assigned a conservative-leaning book.
>
> None of them.
>
> Young America's Foundation surveyed the top 50 schools as noted by *Forbes*, and "found that many of the 'required' books only offered left-wing perspectives on topics such as race, feminism, socialism, inequality, and wealth redistribution."
>
> […]"Young America's Foundation believes young people should be exposed to a true liberal education-one that includes both liberal and conservative ideas, but there appears to be no balance in these readings that are required by colleges and universities," YAF states. "From the moment students enroll in college through graduation day, they are exposed to liberal themes-and few, if any, will read a conservative book or heard from a conservative professor."

That's not all, check this out from National Review.

Excerpt:

> Although it has barely registered yet in our public debates, the teaching of American history in our high schools has just been seized in what a few sharp-eyed critics rightly call a "curricular coup." The College Board, the private company that creates the SAT test and the various Advance Placement tests, has issued a new set of guidelines that is about to turn the teaching of American history into exactly the sort of grievance-based pedagogy that D'Souza decries in his film.
>
> Leftist academics have finally figured out a way to circumvent state and local control over America's schools and effectively impose progressive political indoctrination on the entire country. Once the AP U.S. History test demands blame-America-first answers, public and private schools alike will be forced to construct an American history curriculum that "teaches to the test."
>
> Up until the last few months, the College Board has provided high school teachers with only a brief topical outline for the AP U.S. History test. The brevity of this outline has permitted states, school districts, and teachers across the country to approach American history in their own way. Now, however, the

> College Board has created a lengthy and detailed “framework” for their AP U.S. History test. That framework effectively forces teachers to adopt an ideologically left-leaning approach to American history, heavily emphasizing our country’s failings while giving short shrift to our founding principles.

If you’re going to send your kids to college, try to keep them in a STEM field. If not STEM, then trade school. Non-STEM programs are just swimming in left-wing propaganda. You don’t went to go 30K into debt just to pay for brainwashing by narrow-minded academics.

New study: cohabitation more likely to dissolve, less likely to lead to marriage

July 8, 2014 | by Wintery Knight | Link | Original Link

All I have on this is the abstract, but if someone can send me the study, I'd love to see the results section.

Abstract:

> Cohabitation is now the modal first union for young adults, and most marriages are preceded by cohabitation even as fewer cohabitations transition to marriage. These contrasting trends may be due to compositional shifts among cohabiting unions, which are increasingly heterogeneous in terms of cohabitation order, engagement, and the presence of children, as well as across socioeconomic and demographic characteristics. The author constructs 5-year cohabitation cohorts for 18- to 34-year-olds from the 2002 and 2006–2010 cycles of the National Survey of Family Growth (n = 17,890 premarital cohabitations) to examine the outcomes of cohabitations over time. Compared to earlier cohabitations, those formed after 1995 were more likely to dissolve, and those formed after 2000 were less likely to transition to marriage even after accounting for the compositional shifts among individuals in cohabiting unions. Higher instability and decreased chances of marriage occurred among both engaged and non-engaged individuals, suggesting society-wide changes in cohabitation over time.

Evidence Unseen has collected some of the other studies together.

Excerpt

> Hall and Zhao (from the University of Western Ontario) studied 8,177 individuals who were ever-married. They write, "Premarital cohabitors in Canada have over twice the risk of divorce in any year of marriage when compared with noncohabitors."[13]
>
> Manning (et al.) writes, "Over 50% of cohabiting unions in the US, whether or not they are eventually legalized by marriage, end by separation within five years compared to roughly 20% for marriages."[14]
>
> Daniel Lichter and Zhenchao Qian (from Cornell University and The Ohio State University) write, "If serial cohabitors married, divorce rates were very high—more than twice as high as for women who cohabited only with their eventual husbands."[15]

And finally, there's this study from Life Site News.

Excerpt:

> Couples who reserve sex for marriage enjoy greater stability and communication

> in their relationships, say researchers at Brigham Young University.
>
> A new study from the Mormon college found that those couples who waited until marriage rated their relationship stability 22 percent higher than those who started having sex in the early part of their relationship. The relationship satisfaction was 20 percent higher for those who waited, the sexual quality of the relationship was 5 percent better, and communication was 12 percent better.
>
> The study, published in the American Psychological Association's Journal of Family Psychology, involved 2,035 married individuals who participated in a popular online marital assessment called "RELATE." From the assessment's database, researchers selected a sample designed to match the demographics of the married American population. The extensive questionnaire included the question "When did you become sexual in this relationship?"
>
> Couples that became sexually involved later in their relationship – but prior to marriage – reported benefits that were about half as strong as those who waited for marriage.
>
> […]Sociologist Mark Regnerus of the University of Texas at Austin, who was not involved in the study, responded to its findings, saying that "couples who hit the honeymoon too early – that is, prioritize sex promptly at the outset of a relationship – often find their relationships underdeveloped when it comes to the qualities that make relationships stable and spouses reliable and trustworthy." Regnerus is the author of *Premarital Sex in America*, a book forthcoming from Oxford University Press.
>
> Because religious belief often plays a role for couples who choose to wait, Busby and his co-authors controlled for the influence of religious involvement in their analysis.
>
> "Regardless of religiosity, waiting helps the relationship form better communication processes, and these help improve long-term stability and relationship satisfaction," Busby said.

Young men and women growing up really need to be informed by their parents what they are going to want to be doing long term, and what they should be doing today to accomplish those goals. Young people benefit greatly from the guidance of older and wiser people, but in defining goals and defining the steps to reach those goals. To be a convincing parent, you have to be convinced yourself. And to be convinced yourself, you need to be seen as having knowledge, not just opinions, but knowledge. Having the right peer-reviewed papers at hand will help you to be a better parent.

Apologetics in the gospel of John: evidential or presuppositional?

July 8, 2014 | by Wintery Knight | Link | Original Link

I am reading John for the woman I am mentoring in apologetics, and it's slow going. But the most frequent thing I list in my "three points" e-mails to her is Jesus' constant use of miracles as evidence to authenticate his claims about himself.

Here's a post by Eric Chabot on the Think Apologetics blog. (H/T J. Warner Wallace tweet)

Intro:

> Apologetics is a branch of Christian theology that helps give reasons for the truthfulness of the Christian faith/worldview. The word "Apologia" means "to give reasons, make a legal defense" (Acts 26:2; 2 Tim. 4:16; 1 Pet 3:15). The apostles approach to spreading the message of the Gospel is characterized by such terms as "apologeomai/apologia" which means "to give reasons, make a legal defense" (Acts 26:2; 2 Tim. 4:16; 1 Pet 3:15); "dialegomai" which means "to reason, speak boldly" (Acts 17:2; 17; 18:4; 19:8), "peíthō" which means to persuade, argue persuasively" (Acts 18:4; 19:8), and "bebaioō " which means "to confirm, establish," (Phil 1:7; Heb. 2:3). (1)
>
> The Gospel of John records: "This is the disciple who testifies to these things and who wrote them down. We know that his testimony is true" (John 21:24).

In this post, I will highlight some of the different ways John utilizes apologetics in his testimony of who Jesus is.

Excerpt:

> **The Works of Jesus**
>
> "Works" are directly related to the miracles of Jesus (Jn. 5:20; 36;10:25; 32-28; 14:10-12; 15:24) and is synonymous with "signs." Interestingly enough, when Jesus speaks of miracles and he calls them "works" he doesn't refer to Exod. 4:1-9, but to Num. 16:28, "Hereby you shall know that the LORD has sent me to do all **these works**, and that it has not been of my own accord." For example:
>
> Jesus answered them, "I told you, and you do not believe. ***The works*** that I do in my Father's name bear witness about me" (John 10:25).
>
> If I am not doing ***the works*** of my Father, then do not believe me; but if I do them, even though you do not believe me, believe *the works,* that you may know and understand that the Father is in me and I am in the Father." (John 10:37-38).
>
> But the testimony that I have is greater than that of John. For the works that the Father has given me to accomplish, ***the very works*** that I am doing, bear witness about me that the Father has sent me (John 5: 36)
>
> "Sign"(*sēmeion*) is used seventy-seven times (forty-eight times in the Gospels).

> As far as the “signs’ Jesus does, 29:18-19; 35:5-6; 42:18; 61:1). In John’s Gospel, Jesus performs three “signs,” at the beginning of his ministry; the water turned into wine at Cana at Galilee (2:1-12), the healing of the son of the royal official at **Capernaum** (4:46-64), and catching of the fish in the sea of Galilee (21:1-14). The link between the first two signs in Jn 2:12 while the link between the last two are seen in Jn 7:1, 3-4, 6, 9. Jesus follows the pattern of Moses in that he reveals himself as the new Moses because Moses also had to perform three “signs” so that he could be recognized by his brothers as truly being sent by God (Exod 4: 1-9). In the exchange between Nicodemus said to Jesus, Nicodemus said, We know you are a teacher who has come from God. For no one could perform the miraculous *signs* you are doing if God were not with him” (John 3:2)

I really recommend reading this post, and see if you agree with me about the gospel of John. I don’t see how anyone could read this gospel and come away with the impression that Christianity is in any way a faith that denigrates reason and evidence. The whole book is a litany of evidence presented to unbelievers. If you are dealing with unbelievers, and you’re Jesus, you’re using evidence.

Major Democrat donor Costco relents from plan to pull bestselling conservative book

July 9, 2014 | by Wintery Knight | Link | Original Link

Costco donations by year
Source: Open Secrets

Story from NewsMax.

Excerpt:

> Thousands of Costco shoppers took to the wholesaler's **Facebook** page threatening to drop their store memberships after the retailer pulled copies of Dinesh D'Souza's newest anti-Obama book from its shelves, but a company official insists the decision was financial, not political.
>
> And the reaction got almost immediate results as the company announced it would put D'Souza's book, "**America: Imagine a World Without Her,**" back on its shelves, despite, what it says are poor sales.
>
> "Costco is not a book store. Our book shelf space is very limited," read a statement posted shortly after 8 p.m. on Tuesday. "We exercise discipline in the best utilization of that limited space based solely on what our members are buying. We can't carry every title that our members are interested in reading. We are constantly monitoring book sales, and make decisions to pull books off the shelves frequently based on sales volume to make room for other titles. Politics or controversy over content do not influence our decisions."
>
> The statement, signed by "Dave," went on to say the movie had renewed interest in the book causing "brisk sales at locations still in stock."
>
> "Therefore, we have made the decision to reorder the book," added Dave.

Customers were not impressed – even after the decision to censor the book was reversed:

> "By refusing to sell an anti-Obama book, you come across as a bunch of self-censoring fascists," added Shobhna Kapoor.
>
> Even after the decision, anger at the company was still showing on the Facebook page. "Your (sic) full of baloney," wrote Linda Marie Hamlet. "The book is high on the best seller list. If you think we believe your twist then you need to look at all

> the comments and those including me who are pulling our membership. Costly move for you, Costco!!!”
>
> And “Jean Marie” wrote, “Until CEO Jim, the Democrat, acknowledges the error OR resigns, I’ll not spend the $9200 that I spent in 2013 at Costco. Also, sold my Costco stock today and advise others to do the same. It ran up today on short covering.”

At the time of writing, the book was ranked so on Amazon.com:

Average Customer Review: ★★★★½ (183 customer reviews)
Amazon Best Sellers Rank: #1 in Books (See Top 100 in Books)
#1 in Books > History > **World**
#1 in Books > Politics & Social Sciences > Politics & Government > Specific Topics > **Commentary & Opinion**
#1 in Books > History > Americas > **United States**

Book pulled from Costco for low sales
Pulled due to low sales? I don’t think so. So why was it pulled?

Obama has been a great friend to Costco, “Costco Wholesale seems to lean to the Democratic side: Co-founders Jeff Brotman and Jim Sinegal held fundraisers for President Obama at their Eastside homes…”. FYI, I never shop at Costco. This story just supports that decision.

Apologetics isn't just for other people, it helps you avoid false views, too

July 9, 2014 | by Wintery Knight | Link | Original Link

From Cold Case Christianity blog.

Excerpt:

> I am an evidentialist. Most people I meet assume I take this approach because of my background as adetective, but while my investigative experience definitely plays a role in my perspective as a Christian, my family structure is the real reason I'm a committed evidentialist. I was raised in a family dominated by atheists and Mormons. My chief role model, my father, has always been a non-believer; his wife of the past forty-five years has been a committed Mormon. My six half-brothers and half-sisters were all raised as Mormons, and when one of them saw my growing interest in studying the Bible critically, she encouraged me to take a similar look at the Book of Mormon. Not knowing one from the other, I was willing to investigate both *simultaneously*. I used the same four part investigative template to test the New Testament Gospel authors and the author of the Book of Mormon (Joseph Smith). This analytical template provided me with *confidence* in the Gospels even as it *destroyed my confidence* in the Book of Mormon. As a result, I became a *Christian* at the same time I became a*Not-Mormon*. This dual experience of *becoming* and *not-becoming* had a powerful impact on the way I've looked at Christianity and the claims of competing theological systems in the years since my conversion. It is the reason why I'm an evidentialist.
>
> In the early months of my life as a Christian, I found myself continually comparing Christianity with Mormonism. When Christians offered a religious experience as confirmation of the truth of Christianity, for example, I quickly compared this to the claims of my Mormon family. The experiences of my family clearly did not lead them to the truth. When Christians told me I needed to presuppose the *authority* of the Bible before I could assess the *truth* of the Bible, I quickly compared this approach to my Mormon brothers and sisters. The efforts of my family to presuppose the authority of the Book of Mormon clearly did not lead them to the truth. When Christians defended what they believed with an approach lacking evidential strength, I quickly compared this with the defenses offered by my Mormon family. The non-evidentialism of my family clearly failed to lead them to the truth. At every turn, I recognized the important role of evidence in distinguishing truth from fiction. Evidentialism not only *lead me* to Christianity, it *protected me* from Mormonism.

Wallace talked about this more in a recent episode of his podcast.

I was talking to a woman recently about science apologetics, showing her how atheists used to believe things that have now been disproved by evidence. For example, the original secular humanist manifesto I said that the universe is “self-existent”.

Look:

> Today man’s larger understanding of the universe, his scientific achievements, and deeper appreciation of brotherhood, have created a situation which requires a new statement of the means and purposes of religion. Such a vital, fearless, and frank religion capable of furnishing adequate social goals and personal satisfactions may appear to many people as a complete break with the past. While this age does owe a vast debt to the traditional religions, it is none the less obvious that any religion that can hope to be a synthesizing and dynamic force for today must be shaped for the needs of this age. To establish such a religion is a major necessity of the present. It is a responsibility which rests upon this generation. We therefore affirm the following:
>
> FIRST: Religious humanists regard the universe as self-existing and not created.

That’s what they believed. But then science happened, and now we know better. Evidence of redshift from the farthest galaxies, to light element abundances, to the cosmic microwave background radiation, and more, provide evidence that the universe came into being. Matter, energy, space and time all had a beginning. Whatever caused the creation of the natural world has to be *supernatural.* We should let evidence like that protect us from believing false worldviews.

Apologetics 315 interviews Dr. Phil Fernandes on apologetic preaching

July 9, 2014 | by Wintery Knight | Link | Original Link

On SermonAudio.com, I found some excellent lectures from Dr. Phil Fernandes. I find it it very easy to listen to this guy. And here's Brian Auten to interview him on apologetic preaching – the inclusion of apologetics in regular Sunday preaching.

The MP3 file is here.

Description:

> Today's interview is with Phil Fernandes, president of the Institute of Biblical Defense, and the pastor of Trinity Bible Fellowship in Silverdale, Washington. He talks about apologetic preaching, how to incorporate apologetics training into the local church, evangelism, common objections to apologetics, encouragement and advice to pastors, audio/video resources, and more.
>
> Phil's books include:
>
> - *Hijacking the Historical Jesus*
> - *The Atheist Delusion*
> - *Seven Great Apologists*
> - *Contend Earnestly for the Faith: A Survey of Christian Apologetics*

This interview is awesome, especially in the second half. Here's a sample: "It's not my job as a pastor to meet people's felt needs". Awesomeness.

I like this Dr. Phil. He's very very practical and his preaching is informed by encounters with people who disagree with him. Sometimes I get the idea that pastors aren't really talking to people outside their church, but not this guy. He's grounded.

New study: most younger evangelicals hold to Biblical views on sexual issues

July 10, 2014 | by Wintery Knight | Link | Original Link

This National Review article says that evangelical Protestants, which is the most conservative kind of Christian there is, are sticking with the Bible's teachings on sex.

Excerpt:

> The research, to be fully released in September, was introduced in Mark Regnerus's presentation "Sex in America: Sociological Trends in American Sexuality," unveiled at a recent gathering of the Ethics & Religious Liberty Commission's leadership summit. According to Regnerus, when compared with the general population and with their non-observant peers, churchgoing Evangelical Christians are retaining orthodox views on Biblical sexuality, despite the shifts in broader American culture.
>
> Regnerus surveyed 15,378 persons between the ages of 18 and 60, but he focuses in particular on respondents under 40. Significantly, Regnerus did the important work of differentiating between those who identify merely verbally with a particular religious tradition and those who actually attend church weekly. A political poll that didn't differentiate between likely and unlikely voters wouldn't be an accurate representation of the electorate, and for the same reasons, a survey should distinguish between someone who says "Catholic" or "Baptist" when asked for a religious identity and someone who actually shows up in the pews.
>
> While support for same-sex marriage characterized a solid majority of those identifying as atheists, agnostics, liberal Catholics, and liberal Protestants, only 11 percent of young Evangelicals actively expressed support for same-sex marriage.
>
> Approximately 6 percent of religiously active Evangelicals expressed support for abortion rights, while over 70 percent of their non-believing peer group said they believed in abortion rights.
>
> While a large cross-section of all Americans believe in marriage's importance, Regnerus found that, for example, Evangelicals are less likely than most to perceive marriage as "outdated."
>
> Evangelical Christians were also drastically less likely to believe that cohabitation is a good idea. While upward of 70 percent of those who claim no religious affiliation or those who are "spiritual but not religious" agree that cohabitation is acceptable, approximately 5 percent of Evangelicals agreed that cohabitation is acceptable. "While left-leaning Evangelicals have received considerable media attention lately, it pays to survey the masses and see just what's going on," says

> Regnerus. “These data suggest that while a modest minority of Evangelicals under 40 profess what we might call more sexually liberal attitudes, it’s not a significant minority. Minorities can be vocal. Survey data help us understand just how large or small they really are.”

I am glad that I am an evangelical Protestant Christian. Wherever the battle lines in the culture war are drawn, you can always count on us to be there.

Mark Regnerus debunks new biased Australian gay parenting study

July 10, 2014 | by Wintery Knight | Link | Original Link

In The Public Discourse.

Excerpt:

> You will not, however, witness very many scholarly misgivings about a new published study analyzing data from the Australian Study of Child Health in Same-Sex Families (ACHESS), even though I've just offered a close analogy of its sampling and comparative strategy. I do not bear ill will toward the research team; data collection is no simple task. I won't impugn the motivations of the author and his collaborators. Those vary widely, and everyone has his own. I don't care about the source of the funding. But the study deserves some critical commentary.
>
> The authors declare that the "study aims to describe the physical, mental and social wellbeing of Australian children with same-sex attracted parents, and the impact that stigma has on them." They conclude that "children with same-sex attracted parents score higher than population samples on a number of parent-reported measures of child health." The study has generated headlines such as this one from the *Washington Post*: "Children of same-sex couples happier and healthier than peers, research shows."
>
> But we cannot learn this from the ACHESS study, because of these two sentences in the study's methodology section:
>
> The convenience sample was recruited using online and traditional recruitment techniques, accessing same-sex attracted parents through news media, community events and community groups. Three hundred and ninety eligible parents contacted the researchers…
>
> The ACHESS's interim report, issued just under two years ago, foreshadowed the positive conclusions of the recently-published article—in the same journal, no less—and had more to say about its sampling approach:
>
> Initial recruitment will . . . include advertisements and media releases in gay and lesbian press, flyers at gay and lesbian social and support groups, and investigator attendance at gay and lesbian community events . . . Primarily recruitment will be through emails posted on gay and lesbian community email lists aimed at same-sex parenting. This will include, but not be limited to, Gay Dads Australia and the Rainbow Families Council of Victoria.
>
> I don't know if there's any other way to say this than to suggest that… this is not the way to build a sense of *average* same-sex households with children. To compare the results from such an unusual sample with that of a population-

> based sample of everyone else is just suspect science. And I may be putting that too mildly.

This is not the first time a study has been biased, in fact the American Psychological Association even promotes these biased studies.

Here's the abstract from a study published in the peer-reviewed journal "Social Science Research".

Abstract:

> In 2005, the American Psychological Association (APA) issued an official brief on lesbian and gay parenting. This brief included the assertion: "Not a single study has found children of lesbian or gay parents to be disadvantaged in any significant respect relative to children of heterosexual parents" (p. 15). The present article closely examines this assertion and the 59 published studies cited by the APA to support it. Seven central questions address: (1) homogeneous sampling, (2) absence of comparison groups, (3) comparison group characteristics, (4) contradictory data, (5) the limited scope of children's outcomes studied, (6) paucity of long-term outcome data, and (7) lack of APA-urged statistical power. The conclusion is that strong assertions, including those made by the APA, were not empirically warranted. Recommendations for future research are offered.

And some the findings:

- 26 of 59 APA studies on same-sex parenting had no heterosexual comparison groups.
- In comparison studies, single mothers were often used as the hetero comparison group.
- No comparison study had the statistical power required to detect a small effect size.
- Definitive claims were not substantiated by the 59 published studies.

In comparison to these bad studies, we've had the other studies showing the harm that gay parenting does to children, as well as studies showing that children raised without a mother or raised without a father do worse than children raised with both their parents.

Nick Peters wants to see the church focus more on apologetics

July 10, 2014 | by Wintery Knight | Link | Original Link

This post by Nick Peters is a very passionate argument that the church needs to re-order its priorities.

Excerpt:

> Readers of this blog probably know by now that I quite like the church that Allie and I have found. I get a sermon that is intellectually satisfying while touching the heart as well. I wish I could say that this was the norm when it came to churches, but alas, I cannot. Too many churches have the congregations just getting some pablum so they can go home and at the end of the day feel good about themselves.
>
> Christians. Take a look at the culture around you. Does it look like we're really making an impact? Does it look like the church is being salt and light in this world?
>
> If not, then why should we go to church and feel good about ourselves? If we are not obeying the Great Commmission, then we should be looking at ourselves with shame.
>
> I have in fact reached the point where I want to go up to pastors and say to them "Please tell me why I should believe that Jesus rose from the dead." There are two answers that are unacceptable for this one. Now there could be variants on how these answers are said but the answers are still the same.
>
> "The Holy Spirit tells me that Jesus rose from the dead."
>
> "The Inerrant Word of God says Jesus rose from the dead."
>
> What's the problem with both of these? In the long run, they both beg the question. You say the Holy Spirit tells you this? Fine. The Holy Spirit also apparently tells Mormons that the Book of Mormon is from God and that Joseph Smith is a true prophet. Do you believe that? Why should I think what you're experiencing is the Holy Spirit and not something else? You could say "Well if you experience it, you know who it is." Don't you think the Mormons would say the exact same thing?
>
> What about the latter? Now I do hold to inerrancy, but I hold to inerrancy as a conclusion and not a presupposition. You want to claim your holy book is the final authority. Fine. Muslims do the exact same thing. Why is it that I should believe what you say about your holy book but I should not believe what the Muslims say about theirs?
>
> If all you have is your own subjective viewpoint for defending the resurrection, you will not last when opposition comes your way. When I meet pastors like this

> now I have a simple wish to make of them. “Get out of the pulpit. We’re in a war and we don’t need people like you dragging us down. Give your office to someone who deserves it.”
>
> […]The problem is not that the church cannot win battles. The problem is that the church rarely shows up.
>
> I have too often seen churches deny the need for apologetics training. I will go to churches regularly and offer them to come and work with them. It will be of no charge to them whatsoever! I would be delighted just to teach. 99% of the time the answer is that they don’t really need something like that. I always leave a church like that realizing the pastor is just deluding himself. As one of my mentors once told me “The pastor will call you back when his son comes home from college and announces he’s abandoned his faith.”
>
> When we encounter those who abandon their faith, it is normally for foolish reasons. Also, it can be because too much emphasis was placed on a secondary doctrine instead of a primary, the resurrection of Jesus. The two biggest offenders in this category are young-earth creationism and inerrancy. In both cases, when someone finds a reason why these are called into question and they no longer believe them, everything else crumbles like a house of cards. If inerrancy or young-earth creationism are made the foundation for the Christian faith, we are setting ourselves up to fail.

I used to belong to a church that preached the gospel, but didn’t emphasize apologetics much. I thought that the preaching was good, but I got the impression that the sermons were not really geared towards helping Christians to make a case God’s existence or the resurrection of Jesus. They sort of assumed that the Bible was true and just quoted it in lieu of arguments and evidence. It was considered very pious to “argue” in this way – although strangely, they never argued from the Bible in any other area of knowledge. I think this “assume the Bible is inerrant” approach works great when evangelizing conservative Christians, but not so great on anyone else. You could attend that church your whole life and never know the first thing about how to defend Christianity to a non-believer. Even though this is exactly what the early Christians did, as Triablogue noted earlier this week. Anyone who is interested in knowing why the churches are like this should read Eric Chabot’s post on why churches don’t teach apologetics.

Yale University Press book: fertility rates are in decline worldwide

July 11, 2014 | by Wintery Knight | Link | Original Link

I saw this article about a Yale University Press book on demographics, posted at Yale University's web site.

Excerpt:

> It's no surprise that the world's population is at an all-time high – exceeding 7 billion – although many might not know that it increased by 5 billion during the past century alone, rising from less than 2 billion in 1914. And many people would be surprised – even shocked – to know that over the past three decades, fertility rates have plummeted in many parts of the world, including China, Japan and even significant regions of India.
>
> These Asian giants have not been alone. In much of Europe, North America, East Asia and elsewhere, the average number of children born to women during the course of their childbearing years has fallen to unprecedentedly low levels.
>
> Our new book, *The Global Spread of Fertility Decline: Population, Fear, and Uncertainty* (Yale University Press, 2013) analyzes these trends and the demographic, political and economic consequences and uncertainties as low fertility has become a global phenomenon. Like other facets of globalization, low fertility rates are by no means universal: High fertility persists in sub-Saharan Africa and in parts of the Middle East, but elsewhere low fertility is more the rule than the exception. These underlying trends in childbearing mean that in the near future the rate of population growth both in Europe and Asia are likely to decline. The world is not on a path of unrestrained demographic growth, as some believe. People all over the world have hit the brakes.

It's strange because a lot of people on the secular left are worried about overpopulation, which is one of the factors causing them to push for abortion – and even subsidized abortion.

Does the Christian life require unpopularity and self-sacrifice?

July 11, 2014 | by Wintery Knight | Link | Original Link

This post on Eric Chabot's Think Apologetics blog made me think of someone I've been talking to about her life plan. He lists out the components of the gospel in long-form, then asks whether millenials are hearing that in church.

Excerpt:

> What Gospel are millennials hearing? The "Jesus will meet all my needs" Gospel?
>
> **To summarize "The Kerygma" of the early Christian community:**
>
> 1. The promises by God made in the Hebrew Bible/The Old Testament have now been revealed with **the coming of Jesus the Messiah** (Acts 2:30;3;19;24,10:43; 26:6-7;22).
>
> 2. **Jesus** was anointed by God at his baptism (Acts 10:38).
>
> 3. **Jesus** began his ministry at Galilee after his baptism (Acts 10:37).
>
> 4. **Jesus** conducted a beneficent ministry, doing good and performing mighty works by the power of God (Acts 2:22; 10:38).
>
> 5. **The Messiah** was crucified according to the plan of God (Acts 2:23).
>
> 6. **He was raised from the dead and appeared to his disciples** (Acts 2:24; 31-32; 3:15-26;10:40-41;17:31;26:23).
>
> 7. **Jesus was exalted and given the name "Lord"** (Acts 2:25-29;33-36;3:13;10:36).
>
> 8. **He gave the Holy Spirit to form the new community of God** (Acts 1:8;2;14-18;33,38-39;10:44-47).
>
> 9. **He will come again for judgment and the restoration of all things** (Acts 3:20-21;10:42; 17:31).
>
> 10. All who hear the message should repent and be baptized because of **the finished work of Jesus** (Acts 2:21;38;3:19;10:43, 17-48; 17:30, 26:20).
>
> Conclusion: If millennials are hearing a Gospel that doesn't mention any of these points, they aren't hearing the Gospel at all!
>
> […]Churches need to emphasize that we are called to be servants. Hence, we are looking for Servants! And this means there will be self denial. And he (Jesus) said to all, "If anyone would come after me, let him deny himself and take up his cross daily and follow me.– Luke 9:23.
>
> Do you know what this mean to its original hearers? The cross may be viewed as a symbol of love. But when we look at the first century context, to a Jewish person the cross was not a badge of honor but instead a sign of rejection and

> embarrassment. In other words, the cross meant misunderstanding, rejection by others, ridicule, etc. In other words, to take up our cross is death to our own reputations, our honor and how we are perceived by others.
>
> **In a world that wants instant results, self- sacrifice is tough sell. Part of the problem is that churches preach a Gospel that promises that Jesus will fix all our problems. And when things get tough, many people bail out. A long-term commitment to our Lord which involves self denial (Luke 9:23) is hard to swallow for millennials who have been told The American Dream is the way of happiness.**

I think we need to warn young people that just being willing to serve God does not reward bad planning. I know people in full-time ministry now who are facing a very challenging environment with fewer and fewer donations. It's important not to bite off more than you can chew, and then blame God for not following through.

I think in my own life, I've probably been too defensive, but I still think I've been able to score points while on defense. I never believed that I could make risky decisions and then have God automatically bail me out. I just tried to serve the best I could, within the bounds of prudence and frugality. I guess I am trying to say that I can easily see how being overly ambitious could end badly, and I would hate to see someone bail out on God because they incorrectly thought that he would reward sincere desires with happiness. In the real world, what produces results is good planning and accurate budgets. Count the cost.

Friday night movie: Decision Before Dawn (1951)

July 11, 2014 | by Wintery Knight | Link | Original Link

For Friday night, I thought I'd re-post a movie I like a lot.

IMDB rating: [7.5/10]

Description:

> WWII is entering its last phase: Germany is in ruins, but does not yield. The US army lacks crucial knowledge about the German units operating on the opposite side of the Rhine, and decides to send two German prisoners to gather information. The scheme is risky: the Gestapo retains a terribly efficient network to identify and capture spies and deserters. Moreover, it is not clear that "Tiger", who does not mind any dirty work as long as the price is right, and war-weary "Happy", who might be easily betrayed by his feelings, are dependable agents. After Tiger and another American agent are successfully infiltrated, Happy is parachuted in Bavaria. His duty: find out the whereabouts of a powerful German armored unit moving towards the western front.

Happy Friday!

Is Mormonism supported by evidence from science, philosophy and history?

July 12, 2014 | by Wintery Knight | Link | Original Link

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

The scientific evidence

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end." ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It is based on several lines of evidence, and is broadly compatible with Genesis. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

Philosophical problems

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that although Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous

> god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

The historical evidence

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell

> us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

Further study

There is a very good podcast featuring J. Warner Wallace that summarizes some other theological problems with Mormonism that I blogged about before. And if you want a nice long PDF to print out and read at lunch (which is what I did with it) you can grab this PDF by Michael Licona, entitled "Behold, I Stand at the Door and Knock".

Is the peer-review system objective and reliable?

July 12, 2014 | by Wintery Knight | Link | Original Link

When I argue, if what I am arguing can be supported by peer-reviewed literature, then I always appeal to peer-reviewed literature. But there are problems coming out with this system.

Look at this article from Evolution News.

Excerpt:

> Darwinists have had to back off considerably from the once-confident assertion that peer review in science journals constitutes, as Jerry Coyne put it in 2005 in *The New Republic*, the "gold standard for modern scientific achievement." The whole institution of peer review is so besmirched now as to arouse, not even amusement anymore, but something more like pity.
>
> In the same article, Coyne maintained that it was precisely by "By that standard" that advocates of the theory of intelligent design "have failed miserably." You mean by the standard of what is now revealed as the intellectual and scientific equivalent of insider trading? Or more like racketeering and simple fraud.
>
> The existence of a blog like *Retraction Watch* is, in this respect, a sign of the times, a measure of the extent to which science publishing has fallen into derision. Their post from a couple of days ago, on a "peer review and citation ring at the *Journal of Vibration and Control*," has been widely reported, including the retraction of 60 papers from that journal. Sixty!
>
> "This one deserves a 'wow,'" observes author Ivan Oransky. Indeed. The cat is really out of the bag.
>
> *Slate*:
>
> It may not be entirely fair to liken a "peer review and citation ring" to the academic version of an extortion ring, but there's certainly fraud involved in both. *Retraction Watch*, a blog dedicated to chronicling which academic papers have been withdrawn, is reporting that SAGE Publishing, a group that puts out numerous peer-reviewed journals, is retracting 60 papers from its *Journal of Vibration and Control* after an internal investigation uncovered extensive evidence of severe peer-review fraud.
>
> Apparently researcher Peter Chen, formerly of National Pingtung University of Education in Taiwan, made multiple submission and reviewer accounts — possibly along with other researchers at his institution or elsewhere — so that he could influence the peer review system. When Chen or someone else from the ring submitted a paper, the group could manipulate who reviewed the research, and on at least one occasion Chen served as his own reviewer.

Previously, I blogged about the problems in the peer-review process, linking to an article

from The Economist and to a podcast featuring Tulane University physicist Frank Tipler.

I'm still going to argue peer-reviewed evidence if I have it, but if some is used against me, I'll have to take a closer look.

Should illegal immigrant children from Latin America be treated the same as those from Canada and Mexico?

July 13, 2014 | by Wintery Knight | Link | Original Link

Charles Krauhammer in the Mercury News.

Excerpt:

> As is his wont, President Obama is treating the border crisis — more than 50,000 unaccompanied children crossing illegally — as a public relations problem. Where to photo op and where not. He still hasn't enunciated a policy. He may not even have one.
>
> […]These kids are being flown or bused to family members around the country and told to then show up for deportation hearings. Why show up? Why not just stay where they'll get superior schooling, superior health care, superior everything? As a result, only 3 percent are being repatriated, to cite an internal Border Patrol memo.
>
> Repatriate them? How stone-hearted, you say. After what they've been through? To those dismal conditions back home?
>
> By that standard, with a sea of endemic suffering on every continent, we should have no immigration laws. Deny entry to no needy person.
>
> But we do. We must. We choose. And immediate deportation is exactly what happens to illegal immigrants, children or otherwise, from Mexico and Canada. By what moral logic should there be a Central American exception?

And:

> Stopping this wave is not complicated. A serious president would go to Congress tomorrow proposing a change in the law, simply mandating that Central American kids get the same treatment as Mexican kids, i.e., be subject to immediate repatriation.
>
> Then do so under the most humane conditions. Buses with every amenity. Kids accompanied by nurses and social workers and interpreters and everything they need on board. But going home.
>
> One thing is certain. When the first convoys begin rolling from town to town across Central America, the influx will stop.
>
> When he began taking heat for his laxness and indecisiveness, Obama said he would seek statutory authority for eliminating the Central American loophole. Yet when he presented his $3.7 billion emergency package on Tuesday, it included no such proposal.

> Without that, tens of thousands of kids will stay. Tens of thousands more will come.
>
> Why do they come? The administration pretends it’s because of violence and poverty.
>
> Nonsense. When has there not been violence and poverty in Central America? Yet this wave of children has doubled in size in the past two years and is projected to double again by October. The new variable is Obama’s unilateral (and lawless) June 2012 order essentially legalizing hundreds of thousands of illegal immigrants who came here as children.
>
> Message received in Central America. True, this executive order doesn’t apply to those who came after June 15, 2007. But the fact remains that children coming across now are overwhelmingly likely to stay.

Do you know what would be interesting? I think it would be interesting if the people who feel that having the government giving money to the poor had their current net worth and future earnings confiscated to pay for the $17.5 trillion national debt that we have now. The rest of us who prefer to use the money we earn for other priorities, like apologetics and Christian ministry, can continue to oppose wasteful spending. I wonder how many of the do-gooders would take that offer? Let them pull their children out of high-priced universities and sell their expensive suburban homes to pay for the things their mouths speak about.

I have my own life to live. I don’t see the politicians sitting next to me at work helping me earn my salary. Why don’t they spend their own money on the things they care about, and leave me to spend mine on the things I care about? I don’t get up to go to work every day for secular socialist priorities.

How does each side of the Israel-Hamas conflict treat civilians?

July 13, 2014 | by Wintery Knight | Link | Original Link

You can learn everything you need to know about the Middle East conflict from this short video by Dennis Prager:

Now Israel is having about 80% of their country targeted by rocket attacks right now, and the attacks are designed to deliberately kill civilians. These are not military strikes designed to avoid civilian casualties, they are terrorist attacks designed to inflict civilian casualties.

Here is an article from leftist CNN that makes the point about Israel, Hamas and civilians.

Excerpt:

> Israeli forces dropped leaflets in northern Gaza on Sunday to warn residents to move away from Hamas sites to avoid military strikes.
>
> The warning came as the death toll in Gaza reached 168, with more than 1,100 people injured, the Gaza Health Ministry said.
>
> About 70% of the fatalities were civilians, of which 30% — 27 people — were children, said Chris Gunness, spokesman for the United Nations Relief and Works Agency for Palestine Refugees, which said the figures came from the U.N. Office for the Coordination of Humanitarian Affairs.
>
> Israel said its forces have struck 1,320 "terror targets" across Gaza, including 735 concealed rocket launchers.
>
> Israel has used its Iron Dome defense system against many of the more than 800 rockets fired from Gaza into Israel, the military said. Two more were intercepted Sunday over the Tel Aviv metropolitan area.
>
> […]**Video on Hamas-run television showed a Hamas spokesman urging people to serve as human shields, CNN's Jake Tapper reported Thursday.**
>
> […]**Hamas, the Palestinian militant group that controls Gaza, regularly uses sites and facilities populated by civilians.**
>
> "The leadership of Hamas and the other organizations has chosen — at a time when they are using the population of Gaza as human shields — to hide under ground, to flee abroad and to deliberately put civilians in the line of fire," Israeli Prime Minister Benjamin Netanyahu told a Cabinet meeting Sunday.
>
> "This is the entire difference between us and Hamas — we are using defensive systems against missiles to protect the residents of Israel, and they are using the residents of Gaza to protect arsenals of missiles. Nothing better underscores the difference in this campaign. Israel is a democracy that is fighting — in a

> legitimate and focused manner — against unbridled terrorists," he said.
>
> […]Throughout the conflict, Israel has warned Gaza residents of upcoming attacks targeting militants and terrorist infrastructure. On Twitter on Sunday, the IDF posted: "To warn civilians of an impending strike, the IDF drops leaflets, makes personalized phone calls & sends SMSes. How many militaries do that?"
>
> "Sirens heard across (Israel). Gaza terrorists are firing barrages of rockets. Israel is under attack," the IDF posted, with a photo asking "What would you do?"
>
> […]In leaflets dropped Sunday, the IDF warned residents that it intends "to attack terrorists and terror infrastructures." The leaflets list areas that will be targeted. "Israel is currently attacking, and will continue to attack, every area from which rockets are being launched at its territory."
>
> The leaflets told residents which roads were safe to take and gave a time frame. "The IDF is not interested in hurting you or your family members. These operations are limited and short. Whoever does not adhere to these instructions and does not vacate their house immediately is subjecting their lives and the lives of their children and family to danger," the leaflet said.
>
> The Israeli military said it also drops empty shells on roofs, an operation it calls "roof knocking," to alert civilians that airstrikes are imminent.
>
> The goal of the airstrikes, the military said, is to get Hamas militants to stop firing rockets into Israel.

Meanwhile, Israel spent a ton of money on the "Iron Dome" missile defense system in order to protect Jewish *and Arab* residents of Israel.

So, I hope this is enough to explain to people that there is no moral equivalence between Israel and terrorist groups like Hamas and Hezbollah. If you are *targeting civilians deliberately*, you are a terrorist. It's wrong, and only one side does it. Period.

I also want to point out that I have no religious reason for backing Israel against Hamas and Hezbollah in this conflict. I don't like Israel's anti-evangelism laws. But compared to the alternatives, they are the most pro-Western democracy in the area, and that's why I support them. It's strictly foreign policy and moral concerns. I am opposed to terrorism and to wage war against it, we need allies in the theater. Israel is always going to be looking out for Israel, not us, but they are a strong ally and we need to be encouraging them for that reason.

Brisbane gets coldest temperature in 103 years, Antarctic ice extents at record high

July 14, 2014 | by Wintery Knight | Link | Original Link

From The Australian.

Excerpt:

> If you are lucky enough to be reading this from the comfort of your blankets, it might be best to stay there, as Brisbane has hit its coldest temperatures in 103 years.

> Not since July 28 1911 has Brisbane felt this cold, getting down to a brisk 2.6C at 6.41am.
>
> At 7am, it inched up to 3.3C.
>
> Matt Bass, meteorologist from BOM, said the region was well below our average temperatures.
>
> "If it felt cold, that's because it was, breaking that record is pretty phenomenal for Brisbane," Bass said.
>
> "The average for this time of year is 12C, so Brisbane was about 9C below average, it is pretty impressive really, to have the coldest morning in 103 years is a big record."

And from the UK Daily Mail.

Excerpt:

> The levels of Antarctic sea-ice last week hit an all-time high – confounding climate change computer models which say it should be in decline.
>
> America's National Snow And Ice Data Center, which is funded by Nasa, revealed that ice around the southern continent covers about 16million sq km, more than 2.1 million more than is usual for the time of year.
>
> It is by far the highest level since satellite observations on which the figures depend began in 1979.
>
> In statistical terms, the extent of the ice cover is hugely significant.
>
> It represents the latest stage in a trend that started ten years ago, and means that an area the size of Greenland, which would normally be open water, is now frozen.
>
> **The Antarctic surge is so big that overall, although Arctic ice has decreased, the frozen area around both poles is one million square kilometres more than the long-term average.**
>
> In its authoritative Fifth Assessment Report released last year, the UN

> Intergovernmental Panel on Climate Change admitted that the computer models on which scientists base their projections say Antarctic ice should be in decline, not increasing.
>
> The report said: 'There is low confidence in the scientific understanding of the observed increase in Antarctic sea ice extent since 1979, due to… incomplete and competing scientific explanations for the causes of change.'

So what about those climate simulations? Well… the UK Telegraph reports on that. Excerpt:

> When future generations try to understand how the world got carried away around the end of the 20th century by the panic over global warming, few things will amaze them more than the part played in stoking up the scare by the fiddling of official temperature data. There was already much evidence of this seven years ago, when I was writing my history of the scare, The Real Global Warming Disaster. But now another damning example has been uncovered by Steven Goddard's US blog Real Science, showing how shamelessly manipulated has been one of the world's most influential climate records, the graph of US surface temperature records published by the National Oceanic and Atmospheric Administration (NOAA).

> Goddard shows how, in recent years, NOAA's US Historical Climatology Network (USHCN) has been "adjusting" its record by replacing real temperatures with data "fabricated" by computer models. The effect of this has been to downgrade earlier temperatures and to exaggerate those from recent decades, to give the impression that the Earth has been warming up much more than is justified by the actual data. In several posts headed "Data tampering at USHCN/GISS", Goddard compares the currently published temperature graphs with those based only on temperatures measured at the time. These show that the US has actually been cooling since the Thirties, the hottest decade on record; whereas the latest graph, nearly half of it based on "fabricated" data, shows it to have been warming at a rate equivalent to more than 3 degrees centigrade per century.

I wonder if taxpayers will get back the billions of dollars we wasted funding this flat-Earth theory? It was just junk science. Researchers adopted it to get grant money, governments adopted it to get more control of businesses and individual consumption. That's it. It was just Santa Claus mythology.

Health savings accounts promote personal responsibility and lower health care costs

July 14, 2014 | by Wintery Knight | Link | Original Link

An Investors Business Daily editorial by famous surgeon and conservative, Ben Carson.

Excerpt:

> Health savings accounts can be funded in a variety of different ways and give people total control of where, how and with whom they wish to spend their health care dollars. Most people will want to get the biggest bang for the buck and will independently seek out both value and quality.
>
> That, in turn, will bring all aspects of medicine into the free-market economic model, thus automatically having an ameliorating effect on pricing transparency and quality of outcomes.
>
> Many corporations and communities already have very positive experiences with HSAs. Those experiences could be further enhanced by allowing family members to shift the money in their accounts among themselves.
>
> For instance, if a family member was $500 short for a procedure or test, another family member could provide the money by authorizing its deduction from his account. This provides a whole other level of flexibility to the concept of health savings.
>
> The overwhelming majority of encounters with the medical world could be handled through this type of system, eliminating bureaucratic delays and frustration.
>
> Under ObamaCare's many rules, the amount of money allowed to be managed through health savings accounts is severely restricted. Perhaps that is because the crafters of this gigantic, bureaucratic monstrosity realized that a well-functioning savings system would be easy to understand, much less expensive and give people control of their own health care.
>
> It would also eliminate two-tiered systems of health care, making every patient equally desirable from a business perspective. There should be no limit to the money that can be contributed to and managed in an account. Money unspent at year-end should simply accumulate without penalty.
>
> If accounts are established at the time of birth, they will be even more potent, because the vast majority of people will not experience catastrophic or major medical events until well into adulthood. By that time, a great deal of money will have accumulated.
>
> Since bridge or catastrophic insurance will not be drawn upon for routine medical expenses, its costs will plummet, very much like homeowners insurance, which costs vastly less when there is a high deductible.

> Somehow over the past few decades, we as a society have wandered away from the concept of using health insurance only for major medical issues and paying for routine service ourselves. This is largely responsible for the tremendous spike in medical costs. By using HSAs, we can return to a semblance of rational thinking.

I think it’s important for us to be aware that increased government control of health care is not the only approach to reducing health care costs. In fact, my view is that health care costs have been rising precisely because the government has been so involved in controlling the health care industry.

New study lends support to Michael Behe's "Edge of Evolution" hypothesis

July 15, 2014 | by Wintery Knight | Link | Original Link

Michael Behe writes about a new study from PNAS in Evolution News. (H/T Think Apologetics)

Excerpt:

> A recent paper in *PNAS* confirms a key inference I made in 2007 in *The Edge of Evolution*. Summers *et al.* conclude that "the minimum requirement for (low) [chloroquine] transport activity … is two mutations." This is the first of three posts on the topic.
>
> […]A major point of the book was that if evolution has to skip even one baby step to attain a beneficial state (that is, if even one intermediate in a long and relentlessly detailed evolutionary pathway is detrimental or unhelpful), then the probability of reaching that state decreases exponentially. After discussing a medically important example (see below), I argued that the evolution of many protein interactions would fall into the skip-step category, that multi-protein complexes in the cell were beyond the reach of Darwinian evolution, and that design extended very deeply into life.
>
> However, at the time the book's chief, concrete example — the need for multiple, specific changes in a particular malarial protein (called PfCRT) for the development of resistance to chloroquine — was an inference, not yet an experimentally confirmed fact. It was really an excellent, obvious inference, because resistance to chloroquine arises much, much less frequently than to other drugs. For example, resistance to the antimalarial drug atovaquone develops spontaneously in every third patient, but to chloroquine only in approximately every billionth one. About PfCRT I wrote, "Since two particular amino acid changes [out of four to eight total changes] occur in almost all of these cases [of chloroquine resistance in the wild], they may both be required for the primary activity by which the protein confers resistance." The result would be that "the likelihood of a particular [malarial] cell having the several necessary changes would be much, much less than the case [for atovaquone] where it needed to change only one amino acid. That factor seems to be the secret of why chloroquine was an effective drug for decades." Still, the deduction hadn't yet been nailed down in the lab.
>
> **Now it has, thanks to Summers *et al.* 2014. It took them years to get their results because they had to painstakingly develop a suitable test system where the malarial protein could be both effectively deployed and closely monitored for its relevant activity — the ability to pump chloroquine across a cell membrane, which rids the parasite of the drug.**

> **Using clever experimental techniques they artificially mutated the protein in all the ways that nature has, plus in ways that produced previously unseen intermediates. One of their conclusions is that a minimum of two specific mutations are indeed required for the protein to be able to transport chloroquine.**

I think when we are discussing evolution, we at least have to ask the Darwnian side to bear their burden of proof. If you're saying that mutations can lead to improvements, then we need to see examples. And the examples have to have mutations that are likely to occur.

You can listen to a recent episode of the ID the Future podcast where Casey Luskin and Michael Behe went into more details about the new discovery.

Seven things that Christians should know about Paul

July 15, 2014 | by Wintery Knight | Link | Original Link

This is a great post by Eric Chabot over at Think Apologetics.

His list:

1. Paul was educated
2. Paul as an active persecutor
3. Paul's Antagonism Towards the Early Messianic Movement
4. Paul's Encounter with the Risen Messiah
5. Paul's Letters: Primary and Secondary Sources
6. Paul's use of oral tradition terminology
7. Why do Paul's Letters Matter?

I think everyone is going to look at 4 and 6 and immediately think of the early creed in 1 Corinthians 15:3-8. So I'm going to pick out #2, which mentioned in Galatians, since I was just reading that and making notes.

Here's what Eric says:

> **2. Paul as an active persecutor**
>
> The language Paul uses in his pre-revelatory encounter with the risen Lord shows how antagonistic he was towards the messianic movement. In Gal. 1:13-15, Paul uses terms such as "persecute" and "destroy" to describe his efforts to put and end to the spread of the early faith. We see here:
>
> Saul was in hearty agreement with putting him (Stephen) to death. And on that day a great persecution began against the church in Jerusalem, and they were all scattered throughout the regions of Judea and Samaria, except the apostles. Some devout men buried Stephen, and made loud lamentation over him. But Saul began ravaging the church, entering house after house, and dragging off men and women, he would put them in prison. (Acts 8: 1-3).
>
> Furthermore, Luke summarizes Paul's persecution of the early Messianic community.
>
> I myself was convinced that I ought to do many things in opposing the name of Jesus of Nazareth. And I did so in Jerusalem. I not only locked up many of the saints in prison after receiving authority from the chief priests, but when they were put to death I cast my vote against them. And I punished them often in all the synagogues and tried to make them blaspheme, and in raging fury against them I persecuted them even to foreign cities. (Acts 26:10-11).

This makes his conversion inexplicable – unless he really got the personal appearance from Jesus that he claimed to have received. His status as persecutor of the church and then leader of the church is not denied – even by skeptical historians. The practical

application of this for us is to never count out someone on the other side. The person who is the most antagonistic can make the biggest contribution.

Paul is awesome. If you doubt me, just read Ephesians 5. God used this man mightily to tell us amazing things about himself. Don’t miss out!

Mike Licona explains the As, Bs, Cs, Ds and Es of New Testament reliability

July 15, 2014 | by Wintery Knight | Link | Original Link

Mike Licona is one of my favorite Christian apologists, and here is an excellent lecture to show you why.

In the lecture, he explains why the four biographies in the New Testament should be accepted as historically accurate: (55 minutes)

Summary:

- What a Baltimore Ravens helmet teaches us about the importance of truth
- What happens to Christians when they go off to university?
- The 2007 study on attitudes of American professors to evangelical Christians
- Authors: Who wrote the gospels?
- Bias: Did the bias of the authors cause them to distort history?
- Contradictions: What about the different descriptions of events in the gospels?
- Dating: When were the gospels written?
- Eyewitnesses: Do the gospel accounts go back to eyewitness testimony?

This is basic training for Christians. They ought to show this lecture whenever new people show up, because pastors should not quote the Bible until everyone listening has this information straight.

CBO report: Social Security to be bankrupt by 2030

July 16, 2014 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Full text, because this matters:

> The $2.8 trillion Social Security Trust Fund is on track to be totally spent by 2030, the Congressional Budget Office said Tuesday.
>
> That's one year earlier than projected in 2013 and a decade earlier than the CBO estimated as recently as 2011.
>
> The CBO delivered the warning in a gloomy long-term budget outlook that shows federal debt reaching 106% of GDP in 25 years, up from 74% now.
>
> The rising debt would come despite revenue rising by 1.8 percent as share of GDP (from 17.6% to 19.4%)from 2014 to 2039 and despite spending other than health entitlements, Social Security and debt service shrinking by 2.5% of GDP (9.3% to 6.8%).
>
> The challenge: Health care spending will rise by 3.1 percent of GDP (4.9% to 8%) and Social Security 1.4 points of GDP (4.9% to 6.3%), which will in turn push interest on the debt up to 4.7% of GDP from 1.3%.
>
> Social Security's cliff, now just 16 years away, is one that Washington would be crazy to approach. At that point, incoming revenue would be enough to pay less than 75% of scheduled benefits for all beneficiaries, whether just reaching retirement or 100 years old.
>
> Up until the point of exhaustion, the trust fund provides legal authority — though no resources — for the government to pay all benefits despite Social Security's burgeoning cash-flow deficit, which the CBO expects to reach $320 billion in 2024 alone.
>
> The rapid deterioration in Social Security's finances has a number of contributing factors. The drawn-out recovery from the deep recession and the extended period of low interest rates have sapped revenue and lowered the interest that Treasury pays to the trust fund based on program surpluses from 1984 to 2009.
>
> On top of that, the CBO expects the underinvestment and long-term unemployment associated with the less-than-stellar recovery to have a lasting impact, boosting the natural rate of unemployment.
>
> In February, the CBO significantly reined in its economic optimism, slashing its projection of the total amount of wages and salaries over the 2015-2023 period by about $3.2 trillion, or 3.6%.
>
> Among the factors that the budget scorekeeper cited was ObamaCare's work-diminishing effect, which the CBO now estimates to be three times as large as it supposed in 2010.

> The CBO said that ObamaCare would reduce employment by 2 million full-time-equivalent workers in 2017, rising to 2.5 million in 2014.
>
> This reduction would result in a decline in aggregate employee compensation averaging 1% from 2017 through 2024, or $1.05 trillion.
>
> An IBD analysis pegged the revenue hit to Social Security from ObamaCare work disincentives at about $120 billion through 2024.
>
> The reduced payroll-tax contributions into Social Security would, over time, result in modestly lower benefits for those who choose less work, but the cost savings from reduced benefits would offset only a portion of the lost revenue.
>
> The nature of Affordable Care Act subsidies — they rise as income falls and decline as income rises — will make work "less attractive" by "creating an implicit tax on additional earnings," the CBO said.
>
> The work disincentive will lead some people to choose to work less, in part because subsidized health care will enable them to get by with less work.
>
> In addition, the CBO expects ObamaCare to depress wages for lower earners when employers, over time, pass along the cost of the law's employer-insurance mandate by holding back on wage increases. Lower wages, in turn, will provide another reason for some people to opt for less work, the CBO says.
>
> While the CBO expects compensation to be lower "almost entirely" because people will choose to supply less work, the CBO also expects that some employers "will respond to the penalty by hiring fewer people at or just above the minimum wage."
>
> Another important factor clouding Social Security's future: A greater share of earnings goes to those with income above the maximum subject to payroll taxes ($117,000 in 2014).
>
> As a result, while rising longevity and the retirement of baby boomers will make benefits grow faster than the economy, Social Security's tax revenue is expected only to keep pace with economic growth.

Look. I think there's practical wisdom in this CBO report for Christians. We have to take into account data like this when making our life plans. And it's not only Social Security we need to be scared of, Medicare is even MORE insolvent than Social Security. If you are under 40, *these programs are not going to be there for you*. You have to make other plans. You can't be running your life plan as if these threats do not exist, because they do. Now I want to talk about how a defensive plan can be better than an offensive plan.

The neutral zone trap

Think of ice hockey and the neutral zone trap defense:

> The defending team sets up so four players-usually both wings and both defense-remain in the neutral zone, while the center forechecks into the offensive zone. The center's job is to block the passing lanes from the puck carrier, forcing him to

> carry the puck forward into the neutral zone. Once the puck carrier reaches the neutral zone, the center stays toward the center of the ice, forcing the puck carrier along the boards. Two of the other defending team's players collapse in on the puck carrier, forcing him to dump the puck into their zone, forcing a turnover.

This plan allowed the New Jersey Devils to win the Stanley Cup against the high-powered Detroit Red Wings in 1995:

> The following season, shortened by 34 games because of a lockout ordered by NHL owners, the Devils entered the playoffs as the No. 8 seed in the conference, with only a 22-18-8 record. In the West, the Detroit Red Wings looked invincible, cruising to the Stanley Cup Finals behind a galaxy of offensive stars.
>
> But that's when Lemaire went to work, putting his Devils through daily lessons in the trap, preaching constantly about being in the right defensive position at all times. It was hard, but it worked. The Devils upset three higher seeded Eastern teams to get to the Stanley Cup Finals, but remained prohibitive underdogs against the Red Wings.
>
> Many predicted a sweep – and that's what happened. What nobody predicted was that it would be the Devils who did the sweeping, thanks to a stifling trap that limited Detroit to seven goals in four games.
>
> "They frustrated the heck out of us," former Red Wings defenseman Mike Ramsey told the St. Paul (Minn.) Pioneer Press. "You weren't trying to beat one guy. You were trying to beat four. They had enough talent and size where they didn't have to play that way. But they knew what they were doing. Every player was on the same page."
>
> When coaches across the NHL saw how Lemaire was able to totally shut down such a great offensive team, the trap began to be copied by almost everyone. Roger Neilson had implemented a form of the trap with the expansion Florida Panthers from 1993-95, and his successor, Doug MacLean, took it even further. The neutral zone became almost impossible to navigate against the Panthers in the 1996 playoffs, and Florida suddenly found itself in the Stanley Cup Finals against the offensive-minded Avalanche. Criticized by the media about the trap, MacLean responded, **"I like boring"**.

Yes, and he likes *winning*,too. Sometimes people who appear to be risk-averse seem "scared" to others… but what matters is the scoreboard.

I hate to see young people making life plans while ignoring real life obstacles. The national debt, the demographic crisis, fertility (for women), etc. are real problems. Let's take these threats into account when we are planning our lives. It's just unwise to think that we can do whatever we want and then count on God to bail us out. We need to be practical. We live in challenging times, and we need to have prosperity and stability in order to protect our faith from external threats which are so often the root of despair and

apostasy. The score on the scoreboard is not related to who took the biggest chances and felt the most excitement, it’s related to who actually scored. I feel excited when I win.

Survey finds conservative and religious students feel discriminated against

July 16, 2014 | by Wintery Knight | Link | Original Link

From Campus Reform.

Excerpt:

> Students with different political ideologies and religious beliefs feel the most discriminated on campus, according to a survey conducted by the University of Colorado.
>
> The study, taken by students, faculty and staff, was designed to measure if students were feeling unsafe or discriminated against while attending the university.
>
> The social climate survey—conducted on all four of UC's campuses—asked participants to share their key demographics, such as religion, sexual orientation, gender expression, race, political party and political philosophy. They were then asked if they ever felt discriminated against or unsafe because of those identities.
>
> The results revealed that 68 percent of students felt their campus was an overall inclusive and respectful environment. However, there were still students who reported that they felt discriminated against, and were intimidated when it came to voicing their opinions in class.
>
> Of those who hesitated to voice their opinions, 23 percent said it was due to their political philosophy while 22.1 percent referenced their religious or spiritual beliefs. Political affiliation, such as political parties, was the third highest group who feared speaking with 19.1 percent.
>
> […]Faculty at UC were not politically diverse according to the findings of the survey. Nearly 59 percent of total faculty described themselves as liberal while only 12.9 percent said they were conservative. At the Boulder campus, fewer than six percent of the faculty are Republicans.

This is what liberals call "celebrating diversity". They are all about creating an "open environment" that fosters "critical thinking". If you're going to college, stick with STEM subjects. Don't put your face in the toilet of non-STEM programs.

CDC: Gay population is 2.3%, but young Americans believe it’s 30%

July 16, 2014 | by Wintery Knight | Link | Original Link

Newsbusters reports.

Excerpt:

> A new comprehensive study by the CDC with over 33,000 participants has confirmed earlier estimates; less than 3 percent of the U.S. population self-identifies as gay, lesbian or bisexual. Earlier, much smaller-scale surveys have put that number at 4 percent.
>
> The National Health Interview Survey (NHIS), published July 15 by the CDC, was the first large-scale study of it’s kind. Data was collected from the Census Bureau, as The Washington Post reported, and 33,557 adults between the ages of 18 and 64 participated in the study, which included in-person interviews as well as follow-up phone questions.
>
> The NHIS study found that, while 96.6 percent of adults identified as “straight”, 1.6 percent identified as gay or lesbian, and 0.7 percent called themselves bisexual. 1.1 percent responded “I don’t know” or said they were “something else” not listed.
>
> That sure doesn’t sound like society according to Hollywood, or the news media, which have young Americans convinced 30 percent of the population is gay.

This is why it’s important to be skeptical of the liberal media and Hollywood. So many false ideas floating around in the popular culture, and yet most Americans think they are very well informed. Especially the young ones. They may not have skills, but they have great confidence. The public schools taught them self-esteem, if nothing else.

Senate Democrats new bill allows Gosnell-style abortion clinics in all 50 states

July 17, 2014 | by Wintery Knight | Link | Original Link

New state-level pro-life laws (by year)
From National Review.

Excerpt:

> Readers will recall, though they will not enjoy it, the details of Dr. Gosnell's case, the transcript of which reads like the screenplay for a Rob Zombie horror flick: the illegal abortions; the newborns who survived botched abortion attempts only to have their spinal cords severed with scissors; the obscenely unhygienic conditions, with free-ranging cats using the clinic as an open-air litter box; the dead patient and subsequent manslaughter conviction; and, finally, the murder convictions. The Gosnell gore-fest was a direct consequence of the elevation of abortion to divine office: Neither the local authorities in Democrat-dominated Philadelphia nor the Democrat-dominated statewide bureaucracies in Pennsylvania were much inclined to exercise basic oversight of abortion clinics. Even after a woman died under Dr. Gosnell's knife, there was little interest in investigating his practice: It took allegations of illegal prescription-drug use and the piqued interest of the DEA to put Gosnell on the radar.
>
> Senator Blumenthal proposes to apply the Philadelphia model to the nation at large. Under his bill, states would have effectively no power even to ensure that abortions are performed by licensed physicians — surely the most minimal standard of medical responsibility that there is. Laws covering grisly late-term abortions would be forcibly overturned and fetal viability would be redefined according to the subjective whim of the abortionist. While the Democrats are bemoaning a fictitious war on women, their bill would provide federal protection

> to sex-selective abortions — the barbaric practice under which generations of girls have been decimated in such backward jurisdictions as China and Azerbaijan, a practice *The Economist* describes as "gendercide." Laws restricting taxpayer funding of abortion would be overturned. Laws protecting the consciences of physicians who choose not to perform abortions would be overturned.

Senate Democrats are also engaged in other pro-abortion activities, though – like trying to force Christian-owned businesses to pay for abortion-causing drugs.

Excerpt:

> Senate Democrats today lost their bid to approve legislation to "overturn" the Supreme Court's decision protecting Hobby Lobby and other companies from being forced to comply with the HHS mandate that compels them to pay for abortion-causing drugs for their employees.
>
> Republicans were able to sustain their filibuster against the bill and prevailed on a 56-43 vote, with Democrats voting to move to a vote on the pro-abortion bill and almost all Republicans uniting to vote against it.
>
> […]The legislation Democrats wanted approved would change the Religious Freedom and Restoration Act in a way that would force companies to pay for birth control, contraception and those abortion-causing drugs.
>
> Senators Mark Udall (D-Colo.) and Patty Murray (D-Wash.), both abortion advocates, are behind the new legislation and they said, "The Protect Women's Health from Corporate Interference Act would ban employers from refusing to provide health coverage — including contraceptive coverage — guaranteed to their employees and dependents under federal law."

I am always surprised when Christians vote for Democrats. I don't see how a Christian could vote for a party that elevates abortion to the level of a sacrament, and diminishes the rights of conscience and religious liberty. What kind of religious person could vote for extremists like this?

New study: ancient Cambrian-era fossils have similar brains to animals today

July 17, 2014 | by Wintery Knight | Link | Original Link

Cambrian Explosion

Dr. Fazale Rana of Reasons to Believe tweeted this – from the prestigious journal Nature!

Excerpt:

> One could be forgiven for mistaking anomalocaridids for creatures from another world. The spade-shaped predators, which lived in the seas during the Cambrian — the geological era stretching from 541 million to 485 million years ago — had eyes that protruded from stalks and a pair of giant appendages on the sides of their mouths. **But three stunningly well-preserved fossils found in China now show that the anomalocaridid brain was wired much like that of modern creatures called velvet worms, or onychophorans.**
>
> Both anomalocaridids and onychophorans belong to the arthropods, the group of invertebrates that includes spiders and insects and whose brain structures come in three main types. Two of those were already known to be very ancient, and the new fossils, described today in *Nature*, suggest that the third type — the neural architecture found in onychophorans — **also has changed little over more than half a billion years of evolution.**
>
> Named *Lyrarapax unguispinus*, the three fossils reveal creatures that — at 8 centimetres long — are on the small side for anomalocaridids, some of which are thought to have been as long as 2 to 3 metres. But the fossils' segmented bodies and frontal appendages are pure anomalocaridid, says Nicholas Strausfeld, a neuroscientist at the University of Arizona in Tucson, who co-led the study.
>
> What really grabbed Strausfeld's attention was the creature's brain, preserved flattened like a pressed flower: "I said, 'Holy s**t, that's an onychophoran brain!'" he recalls. The animal's frontal appendages are connected to nerve bundles, or

> ganglia, in front of optic nerves. Both the ganglia and the optic nerves lead to a segmented brain. The layout is an uncanny match to the wiring of the velvet worm's brain, Strausfeld says: "It's completely unlike anything else in any other arthropod."

The fossil record is pretty simple at a high-level. Single-celled organisms from the cooling of the Earth to the Cambrian explosion. All the phyla come in 5-10 million years in the Cambrian explosion – maybe less. No new phyla emerge after that. Does that look like naturalistic Darwinian evolution to you?

How to prepare your kids for the pressure to be "cool"

July 17, 2014 | by Wintery Knight | Link | Original Link

This is a post from Pastor Matt Rawlings' blog.

Excerpt:

> […]When any eighteen year old walks on to a secular university (or even many so-called "Christian" ones) they immediately feel pressure. When a "cool professor" emerges trashing everything the eighteen year old has been taught by his or her parents to hold dear, the pressure intensifies. If the eighteen year old dares to speak up, the professor will often ridicule the poor kid like a seasoned stand-up comic dealing with a heckler. The other eighteen year old kids raised in Christian homes will see (or hear about it) and will feel even more pressure to conform.

Here is his recommendation:

> We need to continue to train our kids in apologetics but we also need to prepare them spiritually for the battle they will face on college campuses. They need to know how to engage the spiritual disciplines of prayer, fasting, etc. They also need to be connected with a community that will have their back. I would not advise anyone to attend a secular university without making sure there is a strong Christian campus presence. For example, I live in the Buckeye state and many of the young people I know want to attend Ohio State University (excuse me, The Ohio State University). I always remind them to check out strong nearby churches like Xenos and groups like Ratio Christi led by the fearless Eric Chabot.
>
> Everybody wants to be liked and everyone has a desire to fit in. The pressure to be accepted is even stronger when a person is younger. We need to train our young people to be apologists but we also need to recognize basic human nature including our ability to justify our behavior such as ignoring their training in order to sit at the cool kids' table. We need to train and prayerfully prepare. Let's get to work.

Pastor Matt had a quote from an article by Paul Vitz in his post, and I found the article. It's on Leadership University, which is the web site that got me through college with my faith intact.

Here's a bit of it:

> I am not going into this to bore you with parts of my life story, but to note that through reflection on my own experience it is now clear to me that my reasons for becoming and for remaining an atheist-skeptic from about age 18 to 38 were superficial, irrational, and largely without intellectual or moral integrity.

> Furthermore, I am convinced that my motives were, and still are, commonplace today among intellectuals, especially social scientists.
>
> […]An important influence on me in my youth was a significant social unease. I was somewhat embarrassed to be from the Midwest, for it seemed terribly dull, narrow, and provincial. There was certainly nothing romantic or impressive about being from Cincinnati, Ohio and from a vague mixed German-English-Swiss background. Terribly middle class. Further, besides escape from a dull, and according to me unworthy, socially embarrassing past, I wanted to take part in, in fact to be comfortable in, the new, exciting, even glamorous, secular world into which I was moving. I am sure that similar motives have strongly influenced the lives of countless upwardly mobile young people in the last two centuries. Consider Voltaire, who moved into the glittery, aristocratic, sophisticated world of Paris, and who always felt embarrassed about his provincial and nonaristocratic origin; or the Jewish ghettos that so many assimilating Jews have fled, or the latest young arrival in New York, embarrassed about his fundamentalist parents. This kind of socialization pressure has pushed many away from belief in God and all that this belief is associated with for them.
>
> I remember a small seminar in graduate school where almost every member there at some time expressed this kind of embarrassment and response to the pressures of socialization into "modern life." One student was trying to escape his Southern Baptist background, another a small town Mormon environment, a third was trying to get out of a very Jewish Brooklyn ghetto, and the fourth was me.
>
> […]Another major reason for my wanting to become an atheist was that I desired to be accepted by the powerful and influential scientists in the field of psychology. In particular, I wanted to be accepted by my professors in graduate school. As a graduate student I was thoroughly socialized by the specific "culture" of academic research psychology. My professors at Stanford, however much they might disagree on psychological theory, were, as far as I could tell, united in only two things-their intense personal career ambition and their rejection of religion. As the psalmist says, ". . . The man greedy for gain curses and renounces the Lord. In the pride of his countenance the wicked does not seek him; all his thoughts are, 'There is no God'" (Psalm 10:3-4).
>
> In this environment, just as I had learned how to dress like a college student by putting on the right clothes, I also learned to "think" like a proper psychologist by putting on the right-that is, atheistic-ideas and attitudes.

I blogged about Paul Vitz before. If you have not seen his lecture on the Psychology of Atheism, you really should watch it.

Natasha Crain at Christian Mom Thoughts had some practical advice for dealing with this, and in a minute I'll give you my advice, because this peer-pressure thing was *never* a problem for me.

Excerpt:

> […]I do believe there are things we can do to help *lessen our kids' concern* about coolness:
>
> - **Make sure they have Christian friends.** No, not just the kids they interact with each Sunday at church. Please don't assume your kids' "church friends" are a primary influence just because they rub elbows each week (and don't assume that church friends are truly *Christian* friends). Look at who they spend time with on their own. Meaningful peer relationships with other believers make a big difference.
> - **Give them perspective.** By and large, the most well-grounded Christian kids I've encountered have been heavily involved in service. When kids have built houses in Mexico, served their local homeless, or come to the aid of disaster victims, they are more likely to have a level-headed perspective on why the perceived "coolness" of their beliefs doesn't matter. Faith becomes a living, breathing part of their identity.
> - **Be a family that is comfortable living counter-culturally.** In the book *Revolutionary Parenting*, George Barna analyzed years of research data to determine what common factors exist in the child-rearing efforts of parents whose children remained strong in their faith into their adult years (he calls these kids "spiritual champions"). One major finding was this: *"Parents are more likely to raise spiritual champions if they accept the fact that from day one their parenting efforts will stray from the norm and will put them at odds with parents who are pursuing a more conventional approach."* When kids are raised in a home where they become comfortable living differently than the world around them, they are prepared to carry that confidence into adulthood.
> - **Give them Christian heros and role models.** Our kids need to know that the world is filled with amazing people who love the Lord: athletes, scientists, missionaries, actors, writers, government leaders, business owners…the list goes on. Wherever your child's interests lie, introduce them to Christian role models in that area and the stories of how they're making a difference for God's kingdom.

Now my turn. Peer-pressure wasn't a problem for me growing up. We were poor, so we had much more immediate problems! But I had an answer to the problem of being different from the other kids – I was going to grow up faster than they did and be more mature by *out-earning* them. I always tried to be working at least one job, and I worked summers too – kept it up through high school and my undergraduate degree. That was my plan. So that's my recommendation to young people. Get yourself the best job you can get as young as you can. Never let a summer go by when you are not working to

earn money.

I also recommend listening to this Veritas Forum lecture called "Giants in the Land", by the famous professor of mechanical engineering, Dr. Walter Bradley. My favorite lecture of all time. When you are young and it occurs to you that you are not like other people, it's a wonderful thing to have the words of Dr. Bradley in your mind. Here is my favorite part- he says: "Sometimes we protect our reputation too hard. And what we really need is to get our reputation absolutely destroyed so we don't worry about it any more… On the other side of a very ruined reputation is real freedom… to do what God wants you to do… It's the ripping the reputation off that's a little hard, right? But once it's gone, it's gone. And then you have real freedom."

I value my freedom and I know that caring what people think of me takes my freedom away! I really recommend that young people read or watch the French "Cyrano de Bergerac" (1990) (or the older black-and-white version) to learn the value of being who you are. If you are being good, you don't have to care what people think of you – although you may need an alias now, since people on the secular left have gotten so intolerant. You can be yourself and be a hero. And that's something. That's a lot!

Obama rejects subpoena that would force top aide to testify in corruption probe

July 18, 2014 | by Wintery Knight | Link | Original Link

Business Insider reports.

Excerpt:

> White House adviser David Simas will not comply with House Oversight Committee Chair Darrell Issa's (R-California) subpoena to testify before the committee on Wednesday, White House counsel Neil Eggleston wrote in a letter to Issa late Tuesday.
>
> The White House had urged Issa to drop his subpoena, offering to brief him on the role of the administration's political affairs office, of which Simas is the director. Issa has been conducting an investigation into the office for what he claims are possible violations of the Hatch Act, related to whether the administration is using taxpayer dollars for political purposes.
>
> Issa refused to lift the subpoena on Tuesday, despite a lengthy briefing Tuesday from White House staff that Issa did not attend. Issa said later in a statement it would be important to get on-the-record answers from Simas at the hearing.
>
> Eggleston sent back a letter informing him Simas was "immune" from appearing before the Oversight Committee. Eggleston said the subpoena would "threaten the longstanding interests of the Executive Branch in preserving the president's independence and autonomy." Eggleston also wrote to Issa that it was "regrettable" he had chosen ton continue to pursue the subpoena instead of working privately with the White House to resolve his questions about oversight.

Well, that's one way to cover up a scandal – just give your top aides immunity from the law. If they can't be forced to testify, then the truth will never come out.

A must-read series of posts on cosmic fine-tuning by Allen Hainline

July 18, 2014 | by Wintery Knight | Link | Original Link

There are four posts in the series, so far. I think Allen might be done, so I'm going to link to all four and snip something I like from each one.

The first post is on whether the fine-tuning is real, and whether a multiverse explains the fine-tuning so that there is no need for a cosmic Designer.

I just have to choose this quote from the atheist Stephen Hawking on the fine-tuning:

> The remarkable fact is that the values of these numbers [i.e. the constants of physics] seem to have been very finely adjusted to make possible the development of life. For example, if the electric charge of the electron had been only slightly different, stars would have been unable to burn hydrogen and helium, or else they would not have exploded. It seems clear that there are relatively few ranges of values for the numbers [i.e. the constants of nature] that would allow for development of any form of intelligent life.

And from Luke Barnes, who I've mentioned before on this blog:

> In my years of researching this topic, I'm amazed at how few scientists who have studied the fine-tuning details disagree with this core claim that the subset of life-permitting physics is a tiny fraction among possibilities. Since Luke Barnes is a top researcher on this topic, consider his input on the level of acceptance of the fine-tuning claim: *"I've published a review of the scientific literature, 200+ papers, and I can only think of a handful that oppose this conclusion, and piles and piles that support it.*[3]*"*

And on the multiverse as a way to escape the fine-tuning:

> The key issue though is that for the multiverse to be an adequate explanation for the fine-tuning it requires the conjunction of several hypotheses for which we lack *any* empirical evidence:
>
> 1. A universe-generating mechanism that generates a plethora of universes
> 2. That this mechanism doesn't itself require fine-tuning
> 3. The many-worlds interpretation of quantum physics
> 4. The ability to *widely* vary constants in those universes. If you think that it's a foregone conclusion that String Theory/M-Theory[8] will come to the rescue in this area, you should watch this video clip by Oxford physicist Roger Penrose where he exclaims that "it's not even a theory … it's a collection of hopes".
>
> Occam's razor therefore does seem to favor design over the multiverse. When

> one accounts for the extensive problems in affirming premise 2 and how these multiverse theories make predictions incompatible with our universe, the hypothesis that God designed the physics of the universe to bring about life is more plausible.

Here's the second post, where he explains the fine-tuning argument philosophically, and gives an example of one of the constants that has to be fine-tuned in order to support complex, embodied intelligence of any kind.

The cosmological constant:

> The inference to design will be more easily recognized if we shed some light as to the specialness of the required values. Consider the size of the bull's eye and wall based on just 1 parameter – the cosmological constant. There is a natural range for possible values for this constant because there are known contributions that are 10^{120}times larger than the overall net value. (There is a near perfect but inexact cancellation of contributions accurate to 120 decimal places). Let's use the most conservative numbers in the physics literature that indicate a fine-tuning to 1 part in 10^{53}. If the cosmological constant, which governs the expansion rate of the universe, had been larger than its current value by this tiny fraction, then the universe would have expanded so fast that no stars or planets would have formed and therefore no life. If the value were smaller by this amount then the universe would have rapidly collapsed before the universe cooled sufficiently to allow for stable information storage which is required by any self-replicating system such as life.

In the third post, he responds to objections to the fine-tuning argument. One objection you hear from atheists who don't understand the science is that any selection of constants and quantities is as likely as any other, so our life-permitting set is just random. Now, first off, there are only 10 to the 80 atoms in the visible universe, so if the cosmological constant is fine-tuned to 1 in 10 to the 120, it's not rational to say "it just happened randomly".

But here is Allen's response:

> However, the assumption that any set of constants is just as likely as any other is the very thing that we want to know. Starting off with that as an *assumption* begs the question against design. As Luke Barnes articulates in this excellent podcast dealing with responses to the fine-tuning claim, suppose we're playing poker and every time I deal I get a royal flush. If this continues to happen, you become increasingly convinced that I'm likely to be cheating. If I responded to an accusation of cheating by just saying "well any set of 5 cards is just as likely as any other so you can't accuse me of cheating" you would be rational to reject this explanation. The question is not "how likely is any set of 5 cards?" but rather "how likely is it I'm cheating if I just dealt myself 10 straight royal flushes?" This question accounts for the possibility that I'm cheating which

> would almost certainly be true in this scenario. So the right fine-question is "given the fine-tuning evidence, how likely is it that the constants were set at random?" The values for physical constants conform to a very particular pattern – that which supports life. The fact that we have so many finely-tuned constants makes it unlikely that they were all set at random (at least in the single universe scenario and I've already shown some of the problems/challenges in multiverse explanations.)

Every 5-card hand that you draw is equally unlikely, but the royal flush is the highest hand in the game and *always wins.* Every hand you draw is unlikely, but whatever you draw is overwhelmingly likely to not be a royal flush.

Finally, the fourth post deals with the objection that the constants and quantities could not have been other than they are.

He quotes physicist John Barrow giving 5 reasons why the constants can vary, and then this:

> Even if the constants and laws of physics couldn't vary, there is even more reason to think that there were many physically possible sets of initial conditions. Paul Davies states this emphatically:
>
> "Even if the laws of physics were unique, it doesn't follow that the physical universe itself is unique…the laws of physics must be augmented by cosmic initial conditions…there is nothing in present ideas about 'laws of initial conditions' remotely to suggest that their consistency with the laws of physics would imply uniqueness. Far from it…it seems, then, that the physical universe does not have to be the way it is: it could have been otherwise.[4]"
>
> John A. Wheeler agrees: "Never has physics come up with a way to tell with what initial conditions the universe was started off. On nothing is physics clearer than what is not physics."

The constants and quantities are not determined by physics. They were *selected* by whoever created nature in the first place.

So that's the series. I noticed that he kept linking to this Common Sense Atheism podcast featuring famous cosmologist Luke Barnes. I grabbed it to listen this weekend, and you might want to get it, too. It's over an hour. It seems like it is one stop shopping to understand common objections to the fine-tuning argument, and how strong each one is.

Friday night movie: Cyrano de Bergerac (1950)

July 18, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie in English, but black and white:

IMDB rating: [7.6/10]

Or if you are brave, you can watch the newer, color (1990) French-language version, with subtitles.

IMDB rating: [7.6/10]

Description:

> Cyrano de Bergerac is a Parisian poet and swashbuckler with a large nose of which he is self-conscious, but pretends to be proud of. He is madly in love with his "friendly cousin" (they were not actually related as cousins), the beautiful Roxane; however, he does not believe she will requite his love because he considers himself physically unattractive. Soon, he finds that Roxane has become infatuated with Christian de Neuvillette, a dashing new recruit to the Cadets de Gascogne, the military unit of which Cyrano is the captain. Christian however, despite his good looks, is tongue-tied when speaking with women. Seeing an opportunity to vicariously declare his love for Roxane, he decides to aid Christian, who does not know how to court a woman and gain her love.

Gascony (*Gasgogne* in French) is the south-west of France, and Normandy is in the north of France. Cyrano and the other cadets are from Gascony, but Christian is from Normandy.

This movie is very special to me, because I share many of the character traits and experiences of Cyrano. In fact, whenever I want to explain myself to a woman, I show her this movie and highlight certain parts. Like me, Cyrano has a distant relationship with his mother, and no sisters. Like me, his favorite color is white. For him, it symbolizes independence. For me, it symbolizes independence and also chastity, fidelity and secrecy. He wears a white plume in his hat, symbolizing his independence.

At one point in the movie, Cyrano is shown to be fond of making enemies rather than friends, because he resents the way that people are constantly trying to make friends and trying to make people like them. I have that same view. I get very annoyed with Christians who hide their convictions about truth and morality in public in order to be liked by others. In fact, I think that the two biggest challenges to being a Christian are the expectation that if God is real, then he will make you happy and the expectation that following Jesus will make people like you. It's much better if Christians expect to not be happy and to not be liked – that's the normal Christian life. Many Christians fall away from their faith because they feel that God should make them happy and that people should like them.

I wish that everyone watching the movie could understand French, because Cyrano

always speaks in rhymes in the French. He is asked by someone how he expects to survive after he has offended some fool who is protected by a powerful nobleman. Does Cyrano have a powerful protector? His reply: “No, I have no patron… but a patroness” while putting his hand on his sword. In other productions of the play, like this one, he draws his sword.

Cyrano is also very lonely, and finds women very mysterious, and therefore very desirable. But he has a long nose, so he feels that he has no hope with them, and he doesn’t even try.

Look:

> CYRANO:
> Look well at me–then tell me, with what hope
> This vile protuberance can inspire my heart!
> I do not lull me with illusions–yet
> At times I’m weak: in evening hours dim
> I enter some fair pleasance, perfumed sweet;
> With my poor ugly devil of a nose
> I scent spring’s essence–in the silver rays
> I see some knight–a lady on his arm,
> And think ‘To saunter thus ‘neath the moonshine,
> I were fain to have my lady, too, beside!’
> Thought soars to ecstasy. . . O sudden fall!
> –The shadow of my profile on the wall!

If you watch the 1990 version of the movie with subtitles, you can at least hear the rhymes – everything he says rhymes. French is a beautiful language. Here’s the play in French and in English for those who prefer to read rather than watch. If you read the play, you get more details but you lose the swordfights. Cyrano is the best swordsman in Paris, and not afraid to use his sword to make a point, so to speak.

Happy Friday!

Cosmos series promotes naturalism by distorting the history of science

July 19, 2014 | by Wintery Knight | Link | Original Link

Casey Luskin posted this in The Blaze.

Excerpt:

> The host is astrophysicist Neil deGrasse Tyson who believes "God is an ever-receding pocket of scientific ignorance." Executive producers include comedian Seth MacFarlane, who expresses his desire to be "vocal about the advancement of knowledge over faith," and Star Trek writer Brannon Braga, who says "religion sucks" and admits he "longs for" the day when "religion is vanquished."
>
> With Tyson himself admitting we must view "'Cosmos' not as a documentary about science," the series barely hides its ambitions to bring Sagan's materialistic views to a new generation.
>
> […]But have its creators pushed the agenda too far? "Cosmos" faced sharp criticism—from leading evolutionists—for inventing stories about religious persecution of scientists while whitewashing religion's positive historical influence on science.
>
> The first episode portrayed the 16th century scientist Giordano Bruno being burned at the stake by Catholic priests for teaching that the Earth orbits the Sun. The problem? Bruno wasn't a scientist and he wasn't persecuted for his heliocentric views. Of course Bruno's persecution was tragic, but the church killed him for promoting the occult worship of Egyptian deities and other quirky theological beliefs.
>
> Throughout the series, Tyson repeats this theme that religion opposes scientific advancement, whitewashing the chorus of historians who believe that religion had a positive influence on science.
>
> As prominent historian Ronald Numbers argues, "[t]he greatest myth in the history of science and religion holds that they have been in a state of constant conflict." One scholar at the staunchly pro-evolution National Center for Science Education even blasted "Cosmos" for its "slipshod history of science" and "antireligious bias."

Numbers is not a theist – he is secular, so that's an interesting quote.

The story also notes that Barack Obama endorses the series,and that's not surprising to me. As I've argued before, the man is an atheist. This series is defending his religion.

Does Jesus use hyperbole to make a point?

July 19, 2014 | by Wintery Knight | Link | Original Link

From Hank Hanegraaf's Christian Research Institute web site.

Excerpt:

> I want to pay particular attention to Jesus' statement in Luke 14:26: "If anyone comes to me and does not hate his own father and mother and wife and children and brothers and sisters, yes, and even his own life, he cannot be my disciple."
>
> One way to misinterpret this verse is to take it literally. Cults often operate on the premise that the statement is literally true — that it pits loyalty to the group against love for family. In doing so, they attempt to distance followers from family members who might make them fall away.
>
> Critics of Christianity in turn point to the verse in order to denigrate the Christian faith. An atheist, for example, quotes the verse as "a perfect illustration of how a cult operates. Sort of makes you wonder about all those conservative religionists that preach 'traditional family values!'"
>
> […]It is obvious that a literal interpretation of Jesus' statement leads to disastrous results; but what is the alternative to interpreting it literally? The only viable option is to regard the statement as being a *hyperbole* — a conscious exaggeration that expresses truth in a nonliteral manner.
>
> It apparently is not easy for people to label a statement as being a hyperbole. On the surface, it may seem to signal a lack of faith when we do not take the great promises of Scripture at face value. After all, "all things are possible with God" (Mark 10:27). Interpreting hyperbolic statements literally, however, lands us in much greater difficulties than interpreting them figuratively does.
>
> […]Elton Trueblood shows in his book *The Humor of Christ* that the most distinctive feature of Jesus' discourses is their use of exaggeration — the preposterous overstatement in the mode of "our conventional Texas story, which no one believes literally, but which everyone remembers." G. K. Chesterton notes that "Christ had even a literary style of his own.…The diction used by Christ is quite curiously gigantesque; it is full of camels leaping through needles and mountains hurled into the sea."
>
> This is, in fact, accurate; for example: "When you give to the needy, do not let your left hand know what your right hand is doing" (Matt. 6:3); "It is easier for a camel to go through the eye of a needle than for a rich person to enter the kingdom of God" (Matt. 19:24); The kingdom of God "is like a grain of mustard seed that a man took and sowed in his garden, and it grew and became a tree, and the birds of the air made nests in its branches" (Luke 13:19).

The rest of the article is worth reading – the author talks about how hyperbole works in

the Bible and how to recognize it.

I thought this was important to highlight since I love to exaggerate for effect, and now we know that it’s ok that I do. It’s a teaching tool that is useful for emphasizing a point.

What happens to people who have never heard the gospel when they die?

July 20, 2014 | by Wintery Knight | Link | Original Link

One of the most difficult questions for Christians to answer, especially when posed by adherents of other religions, is the question of what happens to those who have never heard of Jesus? In this post, I will explain how progress in the field of philosophy of religion has given us a possible (and Biblical) solution to this thorny question.

First, Christianity teaches that humans are in a natural state of rebellion against God. We don't want to know about him, and we don't want him to have any say in what we are doing. We just want to appropriate all the gifts he's given us, do whatever we want with them, and then have eternal bliss after we die. We want to do whatever we want and then be forgiven, later.

Along comes Jesus, who, through his sinless life and his death on the cross, heals that rift of rebellion between an all-good God and rebellious man. Now we have a real understanding of the fact that God is real, that he has power over death, and that he has very specific ideas on what we should be doing. If we accept Jesus' atoning sacrifice and follow his teachings, we can avoid the penalty of our rebellion.

The only problem is that in order to appropriate that free gift of reconciliation, people need to actually *know* about Jesus. And there are some people in the world who have not even *heard* of him. Is it fair that these other people will be sent to eternal separation from God, just because they happened to be born in the wrong place at the wrong time?

Enter William Lane Craig to save the day. His solution is that God orders the world in such a way that anyone who would freely choose to acknowledge Jesus and appropriate his teachings in their decision-making *will* be given eternal life. God knows in advance who would respond, and chooses their time and place of birth, and he supplies them with the amount of evidence they need.

And this agrees with what the Bible teaches. The apostle Paul says this in his apologetic on Mars Hill in Acts 17:22-31:

> 22 So Paul stood in the midst of the Areopagus and said, "Men of Athens, I observe that you are very religious in all respects.
> 23 "For while I was passing through and examining the objects of your worship, I also found an altar with this inscription, ' N D ' Therefore what you worship in ignorance, this I proclaim to you.
> 24 "The God who made the world and all things in it, since He is Lord of heaven and earth, does not dwell in temples made with hands;
> 25 nor is He served by human hands, as though He needed anything, since He Himself gives to all people life and breath and all things;
> 26 and He made from one man every nation of mankind to live on all the face of the earth, **having determined their appointed times and the boundaries**

> **of their habitation,**
> **27 that they would seek God, if perhaps they might grope for Him and find Him, though He is not far from each one of us;**
> 28 for in Him we live and move and exist, as even some of your own poets have said, ‘For we also are His children.’
> 29 “Being then the children of God, we ought not to think that the Divine Nature is like gold or silver or stone, an image formed by the art and thought of man.
> 30 “Therefore having overlooked the times of ignorance, God is now declaring to men that all people everywhere should repent,
> 31 because He has fixed a day in which He will judge the world in righteousness through a Man whom He has appointed, having furnished proof to all men by raising Him from the dead.”

In this research paper, Craig explains in detail how God foreknows how people will choose in every set of circumstances, and how God uses that knowledge to get everyone where they need to be *without violating their free will.* God wants the best for everybody, and has ordered to whole universe in order to give each of us our best opportunity for eternal life.

Here is a summary of the what is in his paper:

> The conviction of the New Testament writers was that there is no salvation apart from Jesus. This orthodox doctrine is widely rejected today because God’s condemnation of persons in other world religions seems incompatible with various attributes of God.
>
> Analysis reveals the real problem to involve certain counterfactuals of freedom, *e.g.*, why did not God create a world in which all people would freely believe in Christ and be saved? Such questions presuppose that God possesses middle knowledge. But it can be shown that no inconsistency exists between God’s having middle knowledge and certain persons’ being damned; on the contrary, it can be positively shown that these two notions are compatible.

Go read this paper and equip yourself to answer this common question!

Is it possible to preach the gospel without using words?

July 20, 2014 | by Wintery Knight | Link | Original Link

Here's a good article that answers the question.

Excerpt:

> Francis of Assisi is said to have said, "Preach the gospel at all times; when necessary, use words."
>
> This saying is carted out whenever someone wants to suggest that Christians *talk about* the gospel too much, and *live* the gospel too little. Fair enough—that can be a problem. Much of the rhetorical power of the quotation comes from the assumption that Francis not only said it but lived it.
>
> The problem is that he did not say it. Nor did he live it. And those two contra-facts tell us something about the spirit of our age.
>
> Let's commit a little history (let me un-humbly draw on some chapters from my biography of St. Francis).
>
> First, no biography written within the first 200 years of his death contains the saying. It's not likely that a pithy quote like this would have been missed by his earliest disciples.
>
> Second, in his day, Francis was known as much for his preaching as for his lifestyle.
>
> He began preaching early in his ministry, first in the Assisi church of Saint George, in which he had gone to school as a child, and later in the cathedral of Saint Rufinus. He usually preached on Sundays, spending Saturday evenings devoted to prayer and meditation reflecting on what he would say to the people the next day.
>
> […]Another early biography talked about how his preaching was received: "His words were neither hollow nor ridiculous, but filled with the power of the Holy Spirit, penetrating the marrow of the heart, so that listeners were turned to great amazement."
>
> As a result, he quickly gained followers, and it wasn't long before he told his most devoted adherents to preach as well.

The article goes on to explain where this trend of not preaching using words comes from, and whether it matches the example of Jesus in the New Testament writings. Here's a Bible passage that seems to rule out the idea that the gospel can be "preached" without "words".

Romans 10:14-15:

14 How then will they call on Him in whom they have not believed? How will they believe

in Him whom they have not heard? And how will they hear without a preacher?

15 How will they preach unless they are sent? Just as it is written, “How beautiful are the feet of those who bring good news of good things!”

Christianity is a worldview, and as a worldview, it is committed to certain propositions being true. You can’t communicate the truth of claims like “Jesus rose from the dead” by being nice to someone. You have to appeal to historical evidence.

Massachusetts town goes after Christian college over sexual morality

July 21, 2014 | by Wintery Knight | Link | Original Link

Salem, MA Mayor Kimberley Driscoll
From Campus Reform.

Excerpt:

> The town of Salem, Mass., has pitted itself against Gordon College after the president of the private Christian school added his name to a public letter to President Obama asking for a religious exemption from a planned federal mandate.
>
> The expected executive order would force any organization receiving federal funds, including religiously based organizations, to hire people whose sexual conduct may not fall in line with their beliefs. Gordon says the mandate would be an "infringement on religious liberty" and "the rights of faith-based institutions to establish a set of standards and expectations for their community."
>
> Gordon's statement of faith and conduct defines marriage as the "lifelong one-flesh union of one man and one woman." It also clarifies that the school is against "homosexual acts," not "same-sex orientation," and claims that it expects its students and faculty to "refrain from any sexual intercourse—heterosexual or homosexual; premarital or extramarital—outside of the marriage covenant."
>
> "Signing the letter was in keeping with our decades-old conviction that, as an explicitly Christian institution, Gordon should set the conduct expectations for members of our community," Gordon College President Michael Lindsay said in a statement. "Nothing has changed in our position."
>
> […]It was Lindsay's signature that prompted Salem Mayor Kimberly Driscoll to publicly chastise the school, calling the small Christian college's longstanding policies of expressly forbidding homosexual practices "offensive" in a statement released by the city. Driscoll went on to say that the city was revoking its

> contract with the college over the management of the city's Old Town Hall facility.
>
> "While I respect your rights to embed religious values on a private college campus, religious freedom does not afford you the right to impose those beliefs upon others and cannot be extended into a publicly owned facility or any management contract or a publicly owned facility, like Old Town Hall," she said.

So the mayor has decided that she should punish Christians because they have beliefs that are different than hers. She is forcing her beliefs on Lindsay, and if he then agreed with her, she would remove the punishment. Isn't it amazing how secular people are able to accuse others of doing something that they are doing themselves, and their heads don't explode from the illogic?

New study: self-control more likely to lead to happiness than indulgence

July 21, 2014 | by Wintery Knight | Link | Original Link

From the liberal New York magazine of all places.

Excerpt:

> It's tempting to pity the people who go to bed early, who are very careful with their money, who eat kale. So much self-denial! Is that any way to live? Actually — yes, suggests some recent research, which will be published in next month's *Journal of Personality*. People with higher self-control also tend to lead happier lives.
>
> Giving into life's little temptations feels pretty great in the moment, but even the smallest sabotages to your long-term goals can add up, subsequently wreaking some emotional havoc over time. "The cost to those indulgences are large, and the costs that are incurred from turning down the indulgences and turning one's back on tempting options are really not so big compared to the cost that come about from over-indulging," Kathleen Vohs, a University of Minnesota marketing professor and one of the study's co-authors, explained to Science of Us.
>
> Vohs and her colleagues did a series of three studies to reach their conclusions: In the first, they gave 414 adults an online survey. A second study involved loaner Blackberries for all 288 adult participants, who were sent seven texts a day asking whether they'd experienced a desire to have or do something, how they reacted to the desire, and how happy they were currently feeling. And for the last study, 234 adults were given that survey measuring self-control; they then identified their top three goals, and told the researchers how strictly their actions in the past week were in keeping with those goals — and how happy they were with their effort.
>
> In all three studies, the researchers found a link between self-control and happiness. The findings may be correlational and self-reported (which can always mean people may exaggerate the good stuff and minimize the bad), but the results still feel very true to life. "For me, I've actually found it to be quite an eye-opener," Vohs said. "Because the lesson that should be taken away from this paper is that the best way for people to live healthy and happy lives is to avoid temptations in the first place." Happiness is about more than living in the moment; it's important to keep the future in mind, too.

I want to relate this to the topic of how Christians decide on what they are going to do with their lives to serve God. Which approach is better – self-control or no self-control?

Look at this post by a male reader of The Thinking Housewife blog.

Excerpt:

> Since I wrote you last, I have decided to sign up for a few online dating sites, mostly out of curiosity. I could not imagine finding a serious mate on, say, *OKCupid,* but anything is possible. In poring over many hundreds of profiles in the past few days, a few things stand out to me.
>
> - I have not seen any woman make her desire for children, or even marriage, the central focus of her profile. Even though I filter profiles based on the "wants kids?" question (which is, surprisingly, often answered "yes"), nothing in the written profile suggests it is important to them. (This is occasionally not the case for Asian women)
> - The emphasis is instead on career, activities, hobbies, favourite movies/books/music, travel, and political inclinations (always to the left, sometimes the feminist left)
> - The surpreme goal of women my age appears to be to start an NGO in a Third World country.
> - Every woman my age has read *Eat, Pray, Love*.
> - Most are doing (or have done) advanced degrees, often in education or healthcare.
> - It is rare that a woman expresses interest in cooking, though most express interest in restaurants and food.
> - I have never seen a woman mention that she desires a good home, a place to call her own, or that she is otherwise domestically inclined.
>
> I suspect these line up with your readers' experiences too. That said, it may be that women view these traits as being desired by men, and they may be at odds with more deeply held needs.

In fact, The Thinking Housewife says these characteristics are also common in Christian circles:

> Right now, in this country, there are many children growing up in single-mother homes. Growing up without a father and with a mother who is usually not at home and who may bring strange men into your life is a desolating experience that has been proven to damage many people. I have a friend who is a teacher in a white working-class neighborhood. Many of the children there are growing up in homes of never-married or divorced mothers. These children are hungry for attention and love. Their situation portends further social chaos. Do you think the young Evangelical women you mention would brag about helping these white children? Would volunteer work with them have the same cachet?
>
> I suggest to you that it would not.
>
> I understand that people in Third World countries are materially *poorer* than these white children I mention. But in the Christian view, the immaterial is foremost and the*spiritual conditions* of these white children are nothing less than dire and probably worse than that of most children in the Third World. They are

> being raised by nihilistic popular culture.
>
> […]Christianity will not flourish in the Third World if it is dying in the West. We need these idealistic women to do their work at home, and that work includes becoming wives and mothers themselves.
>
> The idealism of these women is not wrong, but the direction it has taken *is*. Volunteering in the Third World has become a status symbol for Christians.

In the past, I've offered Dan Barker as an example of someone who lost his faith because of this emotional "God will save me no matter how irrational my plan is" view. I think we need to exercise self-control when deciding how to make an impact for Christ. The plan that is quick and immediate may not be the best over the long-term.

Report: UK woman had four abortions before age 16 – the age of consent

July 21, 2014 | by Wintery Knight | Link | Original Link

From the UK Daily Mail.

Excerpt:

> A British schoolgirl had four abortions before her 16th birthday, new figures today revealed.
>
> The unnamed teenager, who underwent her fourth termination in 2012, is among more than 200 under-16s to have had repeat abortions in the past three years.
>
> Shockingly, a further five of these girls had three abortions
>
> It comes amid concern that terminations are being used by teenagers as an alternative form of contraception.
>
> In 2011, a total of 84 under-16s had abortions for a second time or more, according to the Department of Health figures obtained by The Sun.
>
> The total rose to 89 out of 2,925 under-16s to have abortions in 2012, but fell to 68 of 2,538 girls last year.
>
> Last night, Norman Wells, of the Family Education Trust, said too many teenagers were having sex without thinking about the consequences.
>
> 'Too many are being taught that they have a right to sex without consequences and are free to dispose of any unborn child that threatens their lifestyle,' he said.
>
> Last year, 185,331 British women of all age groups had terminations. Of these, 50 were treated for a staggering nine abortions of more.

This is a good story to send to the safe, legal and rare crowd. How exactly do you make something *rare* when you make it safe, legal and free? When you force other people to subsidize it.

Western media silent as Muslims eject Christians from Mosul

July 22, 2014 | by Wintery Knight | Link | Original Link

From Investors Business Daily.

Excerpt:

> The fanatical Islamist group torches an 1,800-year-old church built before the founding of Islam and forces the Christian residents of Mosul to convert, pay a tax, leave or face execution.
>
> […]A photo released by Ammon News on Saturday showed a 1,800-year-old church that was set on fire by ISIL militants in Mosul, Iraq's second-largest city.
>
> It was part of a campaign against Christians there, and the destruction of their property was reminiscent of Nazi Germany's Kristallnacht, often referred to as the "Night of Broken Glass," a series of violent anti-Jewish pogroms that took place on November 9 and 10, 1938.
>
> Thousands of Christians in Mosul began fleeing the city after ISIL issued an ultimatum on Friday to Iraqi Christians living in Mosul that by Saturday at noon (5 a.m. ET), they must convert to Islam, pay a fine or face "death by the sword."
>
> […]On Monday, normally payday for municipal workers in Mosul, state workers were ordered not to pay the Christian employees. ISIL also forbade food to be distributed to Christian or Shiite families.
>
> One state employee told the Arabic news outlet Ankawa that he was "warned that if he gives rations to Christians and Shiites, he will be charged and prosecuted according to Shariah law."
>
> From Nigeria to Egypt to Afghanistan and back, this story of Christian persecution continues without much notice from the White House.

The big question for me is, why isn't this a big story in the mainstream media? I guess the victims are wrong. If it was trees or polar bears, then there would be a story. But it's Christians, so there's no story.

What is the “unforgiveable sin” in Mark 3 and Matthew 12?

July 22, 2014 | by Wintery Knight | Link | Original Link

Take a look at these two puzzling passages from the New Testament.

Mark 3:28-29:

[28] Truly I tell you, people can be forgiven all their sins and every slander they utter,

[29] but whoever blasphemes against the Holy Spirit will never be forgiven; they are guilty of an eternal sin.”

Matthew 12:30-32:

[30] “Whoever is not with me is against me, and whoever does not gather with me scatters.

[31] And so I tell you, every kind of sin and slander can be forgiven, but blasphemy against the Spirit will not be forgiven.

[32] Anyone who speaks a word against the Son of Man will be forgiven, but anyone who speaks against the Holy Spirit will not be forgiven, either in this age or in the age to come.

What can it mean?

Well, here’s a post by Dr. Paul Gould to shed some light on it.

Excerpt:

> Taken in isolation, it is hard to make sense of this passage—how is it that all kinds of sins can be forgiven but one sin will not be forgiven? What is going on here? Well, here is a principle of sound biblical interpretation:
>
> Principle #1: I*n order to correctly understand a passage, we must always look at it within its context.*
>
> And what is the passages context? The broader context can be found in Matthew 12:22-32. In this broader context we read of Jesus performing a miracle (he performs an exorcism and heals a blind and mute man), we read of the crowd’s amazement and wonderment over the identity of Jesus (“Could this be the Son of David?”), we find the slanderous (and murderous) charge of the Pharisees, and we find Jesus’ response to the Pharisees charge (both his reasoned response to their explicit charge that he drives out demons by Satan’s power as well as his warning to the Pharisees if they continue to attribute to Satan what is in fact the work of God’s Spirit).
>
> After looking at this passage in context, we find that the “unforgivable sin” is (basically) attributing what is in fact the work of God’s Spirit to His ultimate enemy, Satan.
>
> Fair enough, you say, but there are other problems passages that talk about the unforgivable sin—Hebrews 6, 1 John 5, and Hebrews 10 come to mind. What

> about those passages? Well, here is our second principle of biblical interpretation:
>
> Principle #2: *Always interpret unclear passages in light of the clear teachings of Scripture (as a whole)*.
>
> And what is the clear teaching of Scripture related to sin and forgiveness? It is this:
>
> **Forgiveness of sins is a consequence of man's repentance, and repentance is a consequence of the activity of the Holy Spirit in our hearts. So in the end, it seems that blasphemy against the Holy Spirit is nothing more or less than the unrelenting rejection of His advances.**

So, the only unforgiveable sin is the sin of deliberately rejecting God's efforts to draw you into a saving relationship with him. What does this mean for you? It means that if you are a Christian and you believe the essentials of the faith, then you aren't going to be able to lose your salvation by performing sinful actions. You can't sin your way out of God's forgiveness, because if you accept Jesus' death as payment for your sins, then it covers all your sins. I do think that the Bible is very clear that you can lose your salvation by "the unrelenting rejection" of God's advances. But that's not a description of any Christians, it's a description of someone who does not believe in Jesus.

Is the definition of atheism “a lack of belief in God”?

July 22, 2014 | by Wintery Knight | Link | Original Link

First, let’s see check with the Stanford University Encyclopedia of Philosophy.

Excerpt:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God.
> What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference between believing that there is no God and not believing that there is a God. Compare my saying, “I believe that there is no gold on Mars” with my saying “I do not believe that there is gold on Mars.” If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There’s a difference between saying, “I do not believe (p)” and “I believe (not-p).” Logically where you place the negation makes a world of difference.
>
> But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.
>
> There’s a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called “presumption of atheism.” At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position,

and the theist bears a special burden of proof with regard to his belief that God exists.

So understood, such an alleged presumption is clearly mistaken. **For the assertion that "There is no God" is just as much a claim to knowledge as is the assertion that "There is a God." Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God's existence. He confesses that he doesn't know whether there is a God or whether there is no God.**

But when you look more closely at how protagonists of the presumption of atheism used the term "atheist," you discover that they were defining the word in a non-standard way, synonymous with "non-theist." So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists). As Antony Flew confesses,

the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)

Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.

One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.

So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of

> atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, “So is there a God or not?”

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these “subjective atheists”?

Dealing with subjective atheists

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says “I lack a belief in the gravitational force!”. When you engage in serious discussions with people about God’s existence, you only care about what people know and what they can show to be true. We don’t care about a person’s psychology.

Dealing with persistent subjective atheists

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over “I lack a belief in God, I lack a belief in God”? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: “I lack a belief in cupcakes! I lack a belief in icebergs!” What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: “Wintery Knight won’t listen to me! I lack a belief in crickets!”. I think at this point you have to give up and stop talking to such a person.

And that’s why I moderate and filter comments on this blog. There are uneducated people out there with access to the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don’t *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I’m not obligated to engage in discussions with them, either.

Welfare cash used to purchase marijuana in Colorado

July 23, 2014 | by Wintery Knight | Link | Original Link

National Review has the story.

Excerpt:

> For the past six months, welfare beneficiaries in Colorado have repeatedly withdrawn their cash benefits at marijuana retailers and dispensaries, according to a new analysis by National Review Online. Such apparent abuses have caught the eye of Colorado's executive and legislative powers alike, and the state has launched an effort to curb them.
>
> At least 259 times in the first six months of legalized recreational marijuana in Colorado, beneficiaries used their electronic-benefit transfer (EBT) cards to access public assistance at weed retailers and dispensaries, withdrawing a total of $23,608.53 in Temporary Assistance for Needy Families (TANF) cash, NRO's examination found.
>
> In 2012, the latest fiscal year available, Colorado used $124 million in TANF money from the federal government, according to the Center for Budget and Policy Priorities. Withdrawals at marijuana establishments represented only a tiny fraction of the more than 500,000 total EBT transactions that have occurred since recreational weed became legal in Colorado on January 1. And it's impossible to determine how much of that welfare money actually was used to buy pot, given that cash benefits are fungible and some of these establishments also sell groceries.
>
> Nevertheless, welfare withdrawals at weed stores are coming under increasing scrutiny, and Colorado's legislators and bureaucrats are beginning an effort to restrict abuses.
>
> […]**Last session, some Colorado legislators attempted to pass a bill banning TANF withdrawals at marijuana establishments, but Democrats blocked it.** The state's Republicans did succeed, however, in passing a budget amendment that would preclude such use. Because of a legislative technicality, however, the amendment "doesn't have the power and teeth behind it that a statute does," says Colorado Springs representative Dan Nordberg, one of the key proponents of the ban. Republican lawmakers plan to re-introduce stronger legislation next session.

Democrats are *in favor* of having welfare money be used for marijuana. Imagine that.

Oxford University Press book asks: does religion cause violence?

July 23, 2014 | by Wintery Knight | Link | Original Link

J.W. Wartick posted a review of a book called "The Myth of Religious Violence", and written by Dr. William T. Cavanaugh.

Let's take a look at some of the review.

Here, J.W. quotes from the book:

> The story goes that, after the Protestant Reformation divided Christendom along religious lines, Catholics and Protestants began killing each other for holding to different doctrines. The wars of religion… demonstrated to the West the inherent danger of public religion. The solution to the problem lay in the rise of the modern state, in which religious loyalties were marginalized and the state secured a monopoly on the means of violence…
>
> This story is more than just a prominent example of the myth of religious violence. It has a foundational importance for the secular West, because it explains the origin of its way of life and its system of governance. It is a creation myth for modernity (123).

Then writes this:

> Following the lines of thinking of Voltaire, John Locke, and others, Cavanaugh argues that the myth of religious violence is perpetuated in order to marginalize that which is considered religious and give rise to the nation-state. According to this myth, "All theological religions are to be tolerated, provided they do not interfere with the obligations of citizens to the state…" (129). The myth is that religion is divisive and that they "fight over doctrines or 'religious creeds'" so that "the state steps in to make peace" (130).
>
> Cavanaugh shows that this myth is indeed false. The "wars of religion" had any number of motivating factors. The use of this story is not so much to tell a truth as it is a means by which to legitimize the nation-state. He argues towards these conclusions by showing that many "wars of religion" were in fact wars of economy, wars of power structures, and the like. He notes four primary factors for this myth to work: that combatants were motivated by religious difference, that the primary cause of war was religion, that religious causes are analytically separable from political, economic, and social causes at the time of the wars, and that the rise of the modern state was not a cause of the wars (141-142). He then analyzes each of these in turn based upon the historical record and shows that these all fail to account for the actual history of the "wars of religion." In fact, the opposite is true in each case (142-177).
>
> "We must conclude that the myth of the wars of religion is finally incredible,

> which is to say, false” (177).

> […]Perhaps the most challenging and paradigm-shifting portion of the book is that which focuses upon the uses of the myth of religious violence. Cavanaugh argues that the myth is so perpetuated because of its usefulness.

Cavanaugh has his BA from the University of Notre Dame, his MA from Cambridge University, and his PhD from Duke University. Do the secularists have anything to stack up against someone with his credentials?

If militant atheists formed their own country, what would it look like?

July 23, 2014 | by Wintery Knight | Link | Original Link

Here is a story about North Korea from the UK Telegraph about a government run by atheists, for atheists.

Excerpt:

> Christian missionaries have set up an extraordinary network of front companies – including tour agencies, bakeries, factories, farms, schools and orphanages – in order to spread the Gospel inside North Korea.
>
> For nearly two years, Kenneth Bae, a father of three and an American citizen, ran a successful travel company offering tours of North Korea.
>
> But as the 44-year-old passed through the Wonjong border crossing in November 2012, he was suddenly arrested. Convicted of "hostile acts" towards North Korea, he is currently serving 15 years in a labour camp.
>
> What exactly happened remains a mystery. Mr Bae had taken at least 15 other tour groups into North Korea without incident. However, it seems clear that his mission to spread the Christian gospel was at least one major factor that landed him in trouble.
>
> Mr Bae is not alone in using his company, Nations Tour, to evangelise inside North Korea. While precise numbers are impossible to pin down, the network of well-financed front companies, missions operating as businesses, is extensive.

> North Korea, the most hostile country in the world to organised religion, has a strong pull for a certain stripe of evangelical Christians, and the 288 sq mile "Special Economic Zone" outside the city of Rason, where Mr Bae was detained, is Ground Zero for these modern apostles.
>
> […]According to one American who once travelled with Mr Bae, but who asked to remain anonymous, their group was able to carry bibles with them into the zone. Possession of bibles by North Koreans can lead to imprisonment, torture and perhaps even death.
>
> The source said a delicate dance had played out on their arrival, with their bibles being counted by the border guards on their way in and then again when they left to make sure none had been distributed.
>
> At the final inspection, the guards even flipped through each copy to make sure no pages had been ripped out and left behind.
>
> Before arriving at the border, the 15-member group was told by Mr Bae not to discuss politics or carry out any overt proselytising. The two or three pastors travelling with them were not to be addressed by their titles.

> Once inside North Korea, they were accompanied by government minders at all times. On group hikes with these "tour guides", the source said they sang Christian songs, but hummed key verses to avoid saying "God" out loud.
>
> "That was our way of worshipping and praising in our hearts, even if we could not say it," the source said. "Talking about God directly, that would be asking for a death sentence."

This is the dream of militant groups like the Freedom From Religion Foundation. North Korea has an official state religion of atheism. Is that a factor in their horrible record for human rights? Well, according to the The Black Book of Communism, published by Harvard University Press, over 100 million innocent people were killed in atheistic, communist regimes like North Korea in the last century.

I have been working on a theory about what militant atheists mean when they say that religion causes a lot of wars. My theory is that they are actually talking about themselves. They mean *their* religion. They are boasting that they are number one at killing innocent people. A person can justify killing very easily if you believe that no one is watching you and no one will hold you accountable when you die for what you've done.

Of course there are lots of atheists in the Judeo-Christian West who live more peacefully, because they are living in a background of objective morality and human rights provided by Western religions. But in countries like North Korea, with a state religion that cannot ground free will or objective morality or human rights or judgment after death, there are fewer restraints.

Even here, we have already seen over 50 million unborn children killed since abortion became legal. And I can guarantee you that it's not authentic Christians who are having these abortions. As a group, atheists tend to be among the most radical in favor of abortion rights. The Secular Census of 2012 found that 97% of atheists vote for abortion.

The idea of the strong killing the weak for pleasure is the law of the jungle, and it's not surprising to me that those who think that humans are just animals would act this way with vulnerable children. If you only have 80 years to be happy in an accidental universe, then anything goes. No one is there to hold you accountable. If the weak get in your way, kill them all. That's atheist morality. You don't have to go to North Korea to see it.

Pro-Hamas rioters burn Jewish businesses and attack a synagogue

July 24, 2014 | by Wintery Knight | Link | Original Link

From Huffington Post UK. (H/T Bree)

Excerpt:

> France's politicians and community leaders have criticised the "intolerable" violence against Paris' Jewish community, after a pro-Palestinian rally led to the vandalizing and looting of Jewish businesses and the burning of cars.
>
> It is the third time in a week where pro-Palestinian activists have clashed with the city's Jewish residents. On Sunday, locals reported chats of "Gas the Jews" and "Kill the Jews", as rioters attacked businesses in the Sarcelles district, known as "little Jerusalem".
>
> […]Eighteen people were arrested for attacks on shops, including a kosher supermarket, a Jewish-owned chemist and a funeral home. Rioters, who carried batons and threw petrol bombs according to eyewitnesses, were yards from the synagogue when they were driven back by riot police who used tear gas.
>
> "They were shouting: 'Death to Jews,' and 'Slit Jews' throats'," David, a Jewish sound engineer told The Times. "It took us back to 1938."
>
> "We called our town 'Little Jerusalem' because we felt at home here," Laetitia, a longtime Sarcelles resident, told France 24. "We were safe, there were never any problems. And I just wasn't expecting anything like this. We are very shocked, really very shocked."
>
> Roger Cuikerman, head of the Representative Council of Jewish Institutions in France told Radio France International: "They are not screaming, 'Death to the Israelis' on the streets of Paris. They are screaming, "Death to the Jews." The community was not just scared, but "anguished."
>
> The government had banned a demonstration planned in Paris for Saturday, but posters were seen around the area which said "Come equipped with hammers, fire extinguishers and batons" and promised a "raid on the Jewish district".
>
> France has around half a million Jews, the biggest population in Europe, and around five million Muslims.

This story is an absolute outrage. I do not like it when any group is intimidated with violence, just for their beliefs. It should get a stiff response from the government, but they are very liberal.

UPDATE: Lydia posted this story about Muslims rioting in Calgary, the most conservative city in Canada. Canada had unrestricted immigration for many years under the Liberal Party, which was oddly enough supported by most Jewish voters. Now they are reaping

the whirlwind of their own choices.

Bad planning and expecting rescues from God makes Christians less effective

July 24, 2014 | by Wintery Knight | Link | Original Link

Normally I would post a study, but I'm going to make an exception and post this bit of fiction instead.

I found the story and adapted it:

> A terrible storm came into a town and local officials sent out an emergency warning that the riverbanks would soon overflow and flood the nearby homes. They ordered everyone in the town to evacuate immediately.
>
> A faithful Christian woman heard the warning and decided to stay, saying to herself, "I will trust God and if I am in danger, then God will send a divine miracle to save me."
>
> Her neighbor came by her house and said to her, "I'm leaving and there is room for you in my car, please come with me!" But the woman declined his offer. "I have faith that God will save me."
>
> As the woman stood on her porch watching the water rise up the steps, a man in a canoe paddled by and called to her, "Hurry and come into my canoe, the waters are rising quickly!" But the woman again said, "No thanks, God will save me."
>
> The floodwaters rose higher pouring water into her living room and the woman had to retreat to the second floor. A police motorboat came by and the policeman saw her at the window. "I will come up and rescue you!" he shouted. But the woman refused, waving him off saying, "Use your time to save someone else! I have faith that God will save me!"
>
> The flood waters rose higher and higher and the woman had to climb up to her rooftop.
>
> A helicopter spotted her and dropped a rope ladder. A rescue officer came down the ladder and he pleaded with the woman, "Grab my hand and I will pull you up!" But the woman STILL refused, folding her arms tightly to her body. "No thank you! God will save me!"
>
> Shortly after, the house broke up and the floodwaters swept the woman away and she drowned.
>
> When in Heaven, the woman stood before God and asked, "I put all of my faith in You. Why didn't You come and save me?"
>
> And He said, "Daughter, I sent you a warning. I sent you a car. I sent you a canoe. I sent you a motorboat. I sent you a helicopter. What more were you looking for?"

If you are looking for God to help you to do something, don't neglect the fact that God sometimes sends people to do his work, so that they can partner with him and experience him while doing his work. I think the lesson from this made-up story is that it's good to not make plans that are risky and reckless, and therefore unlikely to work.

Look at this passage from the Bible.

Matthew 4:5-7:

[5] Then the devil took Him into the holy city and had Him stand on the pinnacle of the temple,

[6] and said to Him, "If You are the Son of God, throw Yourself down; for it is written,

'He will command His angels concerning You';

and

'On *their* hands they will bear You up,
So that You will not strike Your foot against a stone.'"

[7] Jesus said to him, "On the other hand, it is written, 'You shall not put the Lord your God to the test.'"

I think what I would say is that you should make plans that are likely to work without God, and then pray for it to work extra well, with his help. Don't make a plan that will only work if you get a miracle, that would be putting God to the test. God is not honored by lousy plans that fail and make people of faith look like idiots. We have to appear as if we know what we are doing, and it is easier to love and lead others if we have our own life in order, first. For example, you can't share with others if you own nothing.

Now I've actually done stupid things that were unlikely to work myself a few times. But I have found a good way to avoid doing this. If you surround yourself with good advisors, then they will tell you not to do stupid things, or they will tell you how to do something else that achieves the same result. It's good to have advisors and good to let them know what you are planning to do so they can tell you not to do it. It works great.

There is another good post to read if you like this post, it's on decision making and the will of God.

What does the new Guzzo study tell us about the instability of cohabitation?

July 24, 2014 | by Wintery Knight | Link | Original Link

I blogged about a new study on cohabitation earlier in the month, but I only had the abstract. Now more details are out, from Family-Studies.org.

First, some context:

> In a new paper, Bowling Green State University sociologist Karen Guzzo analyzes how the odds of cohabitation leading to either getting married or breaking up have changed over the years. Before getting to her findings, let's review some of the cohabitation trends she highlights in her report (based on prior studies).
>
> 1. The majority of people in their 30s have lived with someone outside of marriage.
> 2. Cohabitation, rather than marriage, is now the more common form of first union.
> 3. Fewer marriages than in the past start out with the couple having intentions to marry.
> 4. People are more likely than ever to cohabit with multiple partners in succession—what I have called "CohabiDating."
> 5. More children than ever before are born to cohabiting couples, and this explains most of the rise in the number of children being born out of wedlock.
>
> Guzzo notes, as have others, that cohabiting has become a normative experience in the romantic and sexual lives of young adults. As young adults put off marriage until later in life, cohabitation has inhabited much of the space that used to be made up of married couples. I think this dramatic change in how relationships form matters for at least two reasons. First, many cohabiting couples have children, but they are less likely than married couples to have planned to have children and they are much less likely to remain together after having children… Second, most people want lasting love in life, and most people still intend to accomplish that in marriage.

Here is the main finding of the new paper:

> To simplify and summarize, what Guzzo found is that the increasing diversity in the types of cohabitation and cohabiters does not explain much about why things are so different from the past when it comes to increased odds that cohabiting couples will break up or not marry. **Rather, on average, all types of cohabiting couples have become more likely than in the past to break up or not transition into marriage.**

> Here’s a quote from her paper (pg. 834):
>
> Relative to cohabitations formed between 1990 and 1994, cohabitations formed from 1995–1999, 2000–2004, and 2005 and later were 13%, 49%, and 87%, respectively, more likely to dissolve than remain intact. The lower risk of marriage over remaining intact occurred only for the last two cohabitation cohorts (2000–2004 and 2005 and later), which were about 18% and 31% less likely to marry than remain intact, respectively.
>
> Moving in together is becoming less and less likely to lead to having a future together. That’s not to say that all cohabiters are in the same boat regarding their destination. Those who are engaged (or have clear plans to marry) before moving in together are far more likely to eventually marry—but as Guzzo shows, even they are becoming less likely to do so. Related to this, my colleagues and I have shown, in numerous studies, that couples with clear plans to marry before cohabiting, along with those who marry without cohabiting, tend to have happier marriages and lower odds of divorce than those who move in together before having a clearly settled commitment to the future in marriage. (We believe this is largely because, while cohabiting unions obviously break up often, they are harder to break off than dating relationships because it becomes harder to move out and move on. So some people get stuck in a relationship they would otherwise have not remained in.)
>
> […]Cohabitation is fundamentally ambiguous. In fact, that is part—but just part—of why I believe it has become so popular. Sure, there are many cohabiting couples for whom living together was understood as a step-up in commitment, but, on average, research shows it is not associated with an increase in dedication to one’s partner.

So those are the findings from the latest study. You can find more studies on cohabitation linked here in my previous post on this topic.

Muslim mother threatens to murder daughter who was raped by Mullah

July 25, 2014 | by Wintery Knight | Link | Original Link

From the leftist New York Times, of all places. This story happened in Afghanistan. (H/T Nancy)

Excerpt:

> It was bad enough that the alleged rape took place in the sanctity of a mosque, and that the accused man was a mullah who invoked the familiar defense that it had been consensual sex.
>
> But the victim was only 10 years old. And there was more: The authorities said her family members openly planned to carry out an "honor killing" in the case — against the young girl.
>
> […]This past week, the awful matter became even worse. On Tuesday, local policemen removed the girl from the shelter that had given her refuge and returned her to her family, despite complaints from women's activists that she was likely to be killed.
>
> […]The accused mullah, Mohammad Amin, was arrested and confessed to having sex with the girl after Quran recitation classes at the mosque on May 1, but claimed that he thought the girl was older and that she responded to his advances.
>
> The girl's own testimony, and medical evidence, supported a rape so violent that it caused a fistula, or a break in the wall between the vagina and rectum, according to the police and the official bill of indictment. She bled so profusely after the attack that she was at one point in danger of losing her life because of a delay in getting medical care.
>
> After the two women's officials began speaking out about the case, they started receiving threatening calls from mullahs — some of them Taliban, others on the government side — and from arbakai, or pro-government militiamen. One of their claims was that the girl was actually 17, and thus of marriageable age, not 10.
>
> Photographs of the girl… clearly show a pre-pubescent child, and the doctor said the girl weighed only 40 pounds. Few Afghans have birth records, and many do not know their precise ages. But the girl's mother said she was 10, and a forensic examination in the hospital agreed, saying she had not yet started menstruating or developing secondary sexual characteristics.
>
> […]In the hospital room, the doctor found the girl's mother holding her child's hand, and both were weeping. "My daughter, may dust and soil protect you now," Dr. Sarwari quoted the mother as saying. "We will make you a bed of dust and soil. We will send you to the cemetery where you will be safe."

> […]The doctor took the girl away to the shelter. Afterward, Dr. Sarwari and several women's affairs officials were threatened by the girl's family, and by other mullahs. "They call me and curse me, and threaten to kill me and my family, and say they know where I live," Dr. Sarwari said. "They say, once your American husbands leave Afghanistan, we will do what we want to you." (Her husband is an Afghan doctor and war veteran.)

I think there is a lesson in this for all the "anti-war" people who think that we should not be acting to restrain radical Islam in the Middle East. What would a libertarian or a leftist say to this woman? The answer is they have nothing to say. There are strategic reasons for us to have troops deployed in the Middle East – to restrain Iran for one. But when we pull out, we are saying that we don't care about these atrocities. The only way to do something is to be present on the scene and armed.

Ohio State University core class teaches that atheists are smarter than Christians

July 25, 2014 | by Wintery Knight | Link | Original Link

From Campus Reform.

Excerpt:

> Ohio State University (OSU) class has apparently determined another fundamental difference between Christians and atheists: their IQ points.
>
> An online quiz from the school's Psychology 1100 class, provided to *Campus Reform* via tip, asked students to pick which scenario they found most likely given that "Theo has an IQ of 100 and Aine has an IQ of 125."
>
> The correct answer? "Aine is an atheist, while Theo is a Christian."
>
> According to a student in the class who wished to remain anonymous, the question was a part of an online homework quiz. Students were required to complete a certain amount of quizzes throughout the course but were encouraged to finish all of them in order to prep for the final exam.
>
> "I understand that colleges have a liberal spin on things so it didn't surprise me to see the question, which is a sad thing," the student told *Campus Reform* in a phone interview. "But how can you really measure which religion has a higher IQ?"
>
> Psychology 1100 is a general education requirement class which can primarily be taught by an undergraduate teacher's assistant.
>
> […]Dr. Mike Adams, an outspoken conservative Christian professor at the University of North Carolina, said "every group is protected from offensive speech on campus except for conservative Christians."

The university is a challenging problem for Christians who want to make a difference. On the one hand, it's definitely a center of influence where many young people come to learn how the world works. On the other hand, if you are a conservative Christian, you will be attacked there. It would be nice if Christians could somehow influence the university, helping young people to find or keep their relationship with God in Christ. But I don't think it's a priority for most Christians. Ratio Christi does a good job, and I like to sponsor their events. We lose a lot of young people who are raised in Christian homes at the university.

Friday night movie: Midway (1976)

July 25, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

Description:

> The Battle of Midway, fought over and near the tiny U.S. mid-Pacific base at Midway atoll, represents the strategic high water mark of Japan's Pacific Ocean war. Prior to this action, Japan possessed general naval superiority over the United States and could usually choose where and when to attack. After Midway, the two opposing fleets were essentially equals, and the United States soon took the offensive.
>
> Japanese Combined Fleet commander Admiral Isoroku Yamamoto moved on Midway in an effort to draw out and destroy the U.S. Pacific Fleet's aircraft carrier striking forces, which had embarassed the Japanese Navy in the mid-April Doolittle Raid on Japan's home islands and at the Battle of Coral Sea in early May. He planned to quickly knock down Midway's defenses, follow up with an invasion of the atoll's two small islands and establish a Japanese air base there. He expected the U.S. carriers to come out and fight, but to arrive too late to save Midway and in insufficient strength to avoid defeat by his own well-tested carrier air power.
>
> Yamamoto's intended surprise was thwarted by superior American communications intelligence, which deduced his scheme well before battle was joined. This allowed Admiral Chester W. Nimitz, the U.S. Pacific Fleet commander, to establish an ambush by having his carriers ready and waiting for the Japanese. On 4 June 1942, in the second of the Pacific War's great carrier battles, the trap was sprung. The perserverance, sacrifice and skill of U.S. Navy aviators, plus a great deal of good luck on the American side, cost Japan four irreplaceable fleet carriers, while only one of the three U.S. carriers present was lost.

IMDB rating: [6.7/10]

Happy Friday!

Dennis Prager explains what feminism has achieved for women

July 26, 2014 | by Wintery Knight | Link | Original Link

Dennis Prager has summarized many of my viewpoints on this blog in a tiny, tiny little article. He calls it "Four Legacies of Feminism".

Read the whole glorious thing and bask in its wisdom!

Full text:

> As we approach the 50th anniversary of the publication of Betty Friedan's feminist magnum opus, *The Feminine Mystique*, we can have a perspective on feminism that was largely unavailable heretofore.
>
> And that perspective doesn't make feminism look good. Yes, women have more opportunities to achieve career success; they are now members of most Jewish and Christian clergy; women's college sports teams are given huge amounts of money; and there are far more women in political positions of power. But the prices paid for these changes — four in particular — have been great, and outweigh the gains *for women*, let alone for men and for society.
>
> 1) The first was the feminist message to young women to have sex just as men do. There is no reason for them to lead a different sexual life than men, they were told. Just as men can have sex with any woman solely for the sake of physical pleasure, so, too, women ought to enjoy sex with any man just for the fun of it. The notion that the nature of women is to hope for at least the possibility of a long-term commitment from a man they sleep with has been dismissed as sexist nonsense.
>
> As a result, vast numbers of young American women had, and continue to have, what are called "hookups"; and for some of them it is quite possible that no psychological or emotional price has been paid. But the majority of women who are promiscuous do pay prices. One is depression. *New York Times* columnist Ross Douthat recently summarized an academic study on the subject: "A young woman's likelihood of depression rose steadily as her number of partners climbed and the present stability of her sex life diminished."
>
> Long before this study, I had learned from women callers to my radio show (an hour each week — the "Male-Female Hour" — is devoted to very honest discussion of sexual and other man-woman issues) that not only did female promiscuity coincide with depression, it also often had lasting effects on women's ability to enjoy sex. Many married women told me that in order to have a normal sexual relationship with their husband, they had to work through the negative aftereffects of early promiscuity — not trusting men, feeling used, seeing sex as unrelated to love, and disdaining their husband's sexual overtures. And many

> said they still couldn't have a normal sex life with their husband.
>
> 2) The second awful legacy of feminism has been the belief among women that they could and should postpone marriage until they developed their careers. Only then should they seriously consider looking for a husband. Thus, the decade or more during which women have the best chance to attract men is spent being preoccupied with developing a career. Again, I cite woman callers to my radio show over the past 20 years who have sadly looked back at what they now, at age 40, regard as 20 wasted years. Sure, these frequently bright and talented women have a fine career. But most women are not programmed to prefer a great career to a great man and a family. They feel they were sold a bill of goods at college and by the media. And they were. It turns out that most women without a man do worse in life than fish without bicycles.
>
> 3) The third sad feminist legacy is that so many women — and men — have bought the notion that women should work outside the home that for the first time in American history, and perhaps world history, vast numbers of children are not primarily raised by their mothers or even by an extended family member. Instead they are raised for a significant part of their childhood by nannies and by workers at daycare centers. Whatever feminists may say about their only advocating choices, everyone knows the truth: Feminism regards work outside the home as more elevating, honorable, and personally productive than full-time mothering and making a home.
>
> 4) And the fourth awful legacy of feminism has been the demasculinization of men. For all of higher civilization's recorded history, becoming a man was defined overwhelmingly as taking responsibility for a family. That notion — indeed the notion of masculinity itself — is regarded by feminism as the worst of sins: patriarchy.
>
> Men need a role, or they become, as the title of George Gilder's classic book on single men describes them: *Naked Nomads*. In little more than a generation, feminism has obliterated roles. If you wonder why so many men choose not to get married, the answer lies in large part in the contemporary devaluation of the husband and of the father — of men as men, in other words. Most men want to be honored in some way — as a husband, a father, a provider, as an accomplished something; they don't want merely to be "equal partners" with a wife.
>
> In sum, thanks to feminism, very many women slept with too many men for their own happiness; postponed marriage too long to find the right man to marry; are having hired hands do much of the raising of their children; and find they are dating boy-men because manly men are so rare.
>
> Feminism exemplifies the truth of the saying, "Be careful what you wish for — you may get it."

I wish I could add something to this, but I can't because every time I think of something

to add, he says it in the next sentence.

If you like this short essay, then this medium essay arguing against feminism authored by Barbara Kay would be nice follow-up.

It might be worth forwarding these articles along to your friends. And I highly recommend books on male-female relationships and roles by George Gilder, especially "Men and Marriage".

Finding God’s will for our lives

July 26, 2014 | by Wintery Knight | Link | Original Link

I’m stealing from Amy Hall, who blogged at Stand to Reason.

Excerpt:

> Chandler Vannoy wrote about “What We Get Wrong about ‘Finding God’s Will,’” and it’s always a good time to be reminded of this:
>
> The phrase we have all heard…is we need to find God’s will for our life. And for the past 21 years, I thought I had to keep praying for God to open my eyes to the will he had laid out for me. That if I just kept searching long enough and hard enough, I would know exactly what I was supposed to do in the future.
>
> But Kevin DeYoung blew up this idea for me while I was reading his book *Just Do Something*….
>
> In the beginning of the book, DeYoung says, “We should stop thinking of God’s will like a corn maze, or a tight-rope, or a bull’s eye, or a choose-your-own-adventure novel.” This rocked my world. I always thought that if I made a wrong decision or took a wrong turn, I would be removed from God’s plan.
>
> But what he is saying here is that we are free from the burden of trying to discover God’s will ahead of time. It is not a maze for us to perfectly navigate in order to reach our end goal, but instead, God desires for us to trust Him with all of the twists and turns.
>
> Yes, God is sovereign over my life. Yes, He has specific plans for my future, but He does not expect me to find out the details of His plan before I get there. So this whole idea of finding God’s will for my life has been me searching for something God does not want to reveal.
>
> The answer for making good decisions is to learn wisdom from the words God has already given us, and to rest in the knowledge that God has guaranteed that all things work together for the good of making us more like Christ (Romans 8:28-29). Even if a wise decision leads to unforeseen difficulties, that doesn’t mean it was the “wrong” one. In fact, difficulties are the most powerful tool God regularly uses to shape us.

I think this is good advice for everyone.

Here’s a wonderful post on decision making and the will of God posted on Neil’s blog. Neil links to another post where someone is trying to figure out what God wants him to do.

Excerpt:

> **Really short version:** Aside from direct and clear personal revelation from God, you don’t have access to his sovereign will when making decisions. Therefore you must look at other factors. **If it isn’t moral, don’t do it. If it is moral**

> **but not wise, don't do it. If it is moral and wise, then use your personal preferences.**
>
> Using this model you can end up with a wise and biblical decision, but you have avoided the traps of the "God told me to ____" routine. People who run around saying that God told them this and that convey a super-spirituality that can leave less mature believers wondering if they really have a relationship with God (i.e., "God doesn't tell me every little thing to do, so maybe I don't really know him.").

He has a helpful picture posted as well:

This is actually a very important topic for me, because I like making plans and making good decisions. I like being the quarterback or squad leader of my own life. I like to pick objectives and then make plans to achieve them. (Nothing too exotic, just simple stuff like saving money or reading more books)

Actually, I really oppose the idea that God has a magical fairy tale will for each person that will make them happy and fulfilled. For me, life isn't like that. I don't expect God to lead me along like a child at a scavenger hunt. I expect to survey the battlefield where I am and then *do something* to make a difference. There are lots of things you can do that will please God. Should you focus on your career and sponsor apologetics conferences? Or should you use your spare time preparing Sunday school lessons? *There are lots of good things you could do to please God*. Your job is to pick the one that will be the most effective. It doesn't matter if it makes you happy, it only matters if it's effective and if you are good at it.

Who is Rifleman Dodd?

A while back, I was busily working my way through the U.S. Marine Corps Official Reading List, and I came across a book by C.S. Forester called *Rifleman Dodd*, or alternatively titled *Death to the French*. It's a work of historical fiction that takes place during the

Napoleonic wars. The story is about a British marksman named Dodd, who is cut off from his own lines during a withdrawal maneuver. He is subsequently left to fend for himself behind enemy lines. An ordinary man might be full of despair and forget about his mission entirely. But Dodd is no ordinary man. Not only does he find a way to survive by finding food to eat, water to drink and places to sleep, but he also tries to remember his orders and to think about what he can do to advance the cause of his General, the Duke of Wellington.

Here's an excerpt from a gritty book review:

> It's about a green-coated British infantry rifleman in the Napoleonic Wars, an age when rifles were a novelty and most of the army was red-coated and carried muskets. Private Matthew Dodd gets separated from his regiment during a retreat and finds himself stranded behind enemy (French) lines in Portugal. With the occasional aid of some natives, but mostly on his own, he harasses the French with his rifle and tries to prevent them from building a bridge across the Tagus River. It's a remarkable tale of survival and solitary achievement, of a rank-and-file soldier who lives by his wits and slowly learns to make plans without orders, and shows leadership qualities and a knowledge of warfare.

I think we're in the same situation as Dodd.

There is no point in us looking for breadcrumb trails to happiness at this point. That's not the point of Christianity. The point of Christianity is friendship with God, imitation of Christ, honoring moral obligations, self-sacrificial love for your neighbor (and even your enemies!), and dedication to the truth – whether anyone else likes you or not. It's not supposed to make you happy, and it's not necessarily going to be a normal life like everyone else has. Things may not work out the way you'd like them to.

We seem to be making such a big deal about compassion and forgiveness in the Christian life these days – such a big emphasis on our feelings. Almost like we have forgotten that we have obligations to our friend – and his objectives. A relationship doesn't mean that one person completely disregards the character and goals of the other person and then is automatically granted forgiveness whenever they want it. That's not a friendship – that's using someone else for your own ends. Maybe it's time to remember what this is all about.

William Lane Craig and atheist Daniel Dennett discuss cosmology and fine-tuning

July 27, 2014 | by Wintery Knight | Link | Original Link

This audio records a part of the Greer-Heard debate in 2007, between prominent atheist Daniel Dennett and lame theistic evolutionist Alister McGrath. Craig was one of the respondents, and this was the best part of the event. It is a little bit advanced, but I have found that if you listen to things like this over and over with your friends and family, and then try to explain it to non-Christians, you'll get it.

By the way, this is mostly original material from Craig, dated 2007, and he delivers the speech perfectly, so it's entertaining to listen to.

Craig presents three arguments for a Creator and Designer of the universe:

- the contingency argument
- the kalam cosmological argument
- the teleological argument

He also discusses Dennett's published responses to these arguments.

Dennett's response to Craig's paper

Here is my snarky paraphrase of Dennett's reponse: (this is very snarky, because Dennett was just awful)

- Craig's three arguments are bulletproof, the premises are plausible, and grounded by the best cutting edge science we know today.
- I cannot find anything wrong with his arguments right now, but maybe later when I go home it will come to me what's wrong with them.
- But atheism is true even if all the evidence is against it today. I know it's true by my blind faith.
- The world is so mysterious, and all the science of today will be overturned tomorrow so that atheism will be rational again. I have blind faith that this new evidence will be discovered any minute.
- Just because the cause of the beginning of time is eternal and the cause of the beginning of space is non-physical, the cause doesn't have to be God.
- "Maybe the cause of the universe is the idea of an apple, or the square root of 7". (HE LITERALLY SAID THAT!)
- The principle of triangulation might have brought the entire physical universe into being out of nothing.
- I don't understand anything about non-physical causation, even though I cannot even speak meaningful sentences unless I have a non-physical mind that is causing my body to emit the meaningful sentences in a non-determined manner.
- Alexander Vilenkin is much smarter than Craig and if he were here he would beat

him up good with phantom arguments.
- Alan Guth is much smarter than Craig and if he were here he would beat him up good with phantom arguments.
- This science stuff is so complicated to me – so Craig can't be right about it even though he's published about it and debated it all with the best atheists on the planet.
- If God is outside of time, then this is just deism, not theism. (This part is correct, but Craig believes that God enters into time at the moment of creation – so that it is not a deistic God)
- If deism is true, then I can still be an atheist, because a Creator and Designer of the universe is compatible with atheism.
- I'm pretty sure that Craig doesn't have any good arguments that can argue for Christianity – certainly not an historical argument for the resurrection of Jesus based on minimal facts, that he's defended against the most prominent historians on the planet in public debates and in prestigous books and research journals.

This is a very careful treatment of the arguments that Dr. Craig goes over briefly during his debates. Recommended.

Physicist George Ellis interviewed by science writer John Horgan in Scientific American

July 27, 2014 | by Wintery Knight | Link | Original Link

I'm mentioned George Ellis on this blog before, specifically on his doubts about the speculative multiverse cosmology.

Here he is interviewed in Scientific American. (H/T Think Apologetics)

Intro:

> Biologist Rupert Sheldrake, whom I interviewed in my last post, wasn't the only fascinating scientist I hung out with recently at Howthelightgetsin, a festival hosted by the Institute of Arts & Ideas. I also befriended George F. R. Ellis, the physicist-mathematician-cosmologist, an authority on the Big Bang and other cosmic mysteries. Ellis and I hit it off initially because we share some—how shall I put it?—concerns about the direction of physics, but I soon discovered that his interests range far beyond physics. He has published papers and books not only on physics and cosmology (including the 1973 classic *The Large-Scale Structure of Space-Time*, co-authored with Stephen Hawking) but also on philosophy, complexity theory, neuroscience, education and even low-income housing. (See his website, and his terrific 2011 critique of multiverse theories in *Scientific American*.) A native of South Africa, Ellis is professor emeritus at the University of Cape Town, where he taught for decades, and has also held positions at Cambridge, the University of Texas, the Fermi Institute and other institutions around the globe.

Awesome:

> ***Horgan: Lawrence Krauss, in A Universe from Nothing, claims that physics has basically solved the mystery of why there is something rather than nothing. Do you agree?***
>
> Ellis: Certainly not. He is presenting untested speculative theories of how things came into existence out of a pre-existing complex of entities, including variational principles, quantum field theory, specific symmetry groups, a bubbling vacuum, all the components of the standard model of particle physics, and so on. He does not explain in what way these entities could have pre-existed the coming into being of the universe, why they should have existed at all, or why they should have had the form they did. And he gives no experimental or observational process whereby we could test these vivid speculations of the supposed universe-generation mechanism. How indeed can you test what existed before the universe existed? You can't.
>
> Thus what he is presenting is not tested science. It's a philosophical speculation, which he apparently believes is so compelling he does not have to give any

> specification of evidence that would confirm it is true. Well, you can't get any evidence about what existed before space and time came into being. Above all he believes that these mathematically based speculations solve thousand year old philosophical conundrums, without seriously engaging those philosophical issues. The belief that all of reality can be fully comprehended in terms of physics and the equations of physics is a fantasy. As pointed out so well by Eddington in his Gifford lectures, they are partial and incomplete representations of physical, biological, psychological, and social reality.
>
> And above all Krauss does not address why the laws of physics exist, why they have the form they have, or in what kind of manifestation they existed before the universe existed (which he must believe if he believes they brought the universe into existence). Who or what dreamt up symmetry principles, Lagrangians, specific symmetry groups, gauge theories, and so on? He does not begin to answer these questions.
>
> It's very ironic when he says philosophy is bunk and then himself engages in this kind of attempt at philosophy. It seems that science education should include some basic modules on Plato, Aristotle, Kant, Hume, and the other great philosophers, as well as writings of more recent philosophers such as Tim Maudlin and David Albert.

He likes fine-tuning, but not multiverse and string theory:

> ***Horgan: Are you a fan of multiverse theories? String theory? The anthropic principle?***
>
> No (may be true but unproveable, much too much untestable speculation about existence of infinities of entities, ill defined and untestable probability measures), no (too much speculative introduction of very complex unseeable entities, treats gravity just like any other force), yes (however one responds to it, it's a real question that deserves consideration). Fine tuning of fundamental physics parameters is required in order that we can exist. Examining this issue has led to many very interesting studies.
>
> ***Horgan: Physicist Sean Carroll has argued that falsifiability is overrated as a criterion for judging whether theories should be taken seriously. Do you agree?***
>
> Ellis: This is a major step backwards to before the evidence-based scientific revolution initiated by Galileo and Newton. The basic idea is that our speculative theories, extrapolating into the unknown and into untestable areas from well-tested areas of physics, are so good they have to be true. History proves that is the path to delusion: just because you have a good theory does not prove it is true. The other defence is that there is no other game in town. But there may not be any such game.
>
> Scientists should strongly resist such an attack on the very foundations of its own

> success. Luckily it is a very small subset of scientists who are making this proposal.

Free will is real:

> ***Horgan: In some of your writings, you warn against excessive determinism in physics, and science. Could you summarize your concerns?***
>
> Many scientists are strong reductionists who believe that physics alone determines outcomes in the real world, This is demonstrably untrue – for example the computer on which I am writing this could not possibly have come into being through the agency of physics alone.
>
> The issue is that these scientists are focusing on some strands in the web of causation that actually exist, and ignoring others that are demonstrably there – such as ideas in our minds, or algorithms embodied in computer programs. These demonstrably act in a top-down way to cause physical effects in the real world. All these processes and actual outcomes are contextually dependent, and this allows the effectiveness of processes such as adaptive selection that are the key to the emergence of genuine complexity.
>
> As I stated above, mathematical equations only represent part of reality, and should not be confused with reality. A specific related issue: there is a group of people out there writing papers based on the idea that physics is a computational process. But a physical law is not an algorithm. So who chooses the computational strategy and the algorithms that realise a specific physical law? (Finite elements perhaps?) What language is it written in? (Does Nature use Java or C++? What machine code is used?) Where is the CPU? What is used for memory, and in what way are read and write commands executed? Additionally if it's a computation, how does Nature avoid the halting problem? It's all a very bad analogy that does not work.
>
> ***Horgan: Einstein, in the following quote, seemed to doubt free will: "If the moon, in the act of completing its eternal way around the Earth, were gifted with self-consciousness, it would feel thoroughly convinced that it was traveling its way of its own accord…. So would a Being, endowed with higher insight and more perfect intelligence, watching man and his doings, smile about man's illusion that he was acting according to his own free will." Do you believe in free will?***
>
> Ellis: Yes. Einstein is perpetuating the belief that all causation is bottom up. This simply is not the case, as I can demonstrate with many examples from sociology, neuroscience, physiology, epigenetics, engineering, and physics. Furthermore if Einstein did not have free will in some meaningful sense, then he could not have been responsible for the theory of relativity – it would have been a product of lower level processes but not of an intelligent mind choosing between possible

> options.
>
> I find it very hard to believe this to be the case – indeed it does not seem to make any sense. Physicists should pay attention to Aristotle's four forms of causation – if they have the free will to decide what they are doing. If they don't, then why waste time talking to them? They are then not responsible for what they say.

Sometimes, you have to just point out that a speculation is a speculation, and that we do not prefer speculations over experimental results. The data we have is consistent with an origin of the universe out of nothing, and the best explanation of this effect is a *supernatural* cause. Period.

IRS makes deal with militant atheist group to monitor sermon content

July 28, 2014 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> The next time your pastor delivers a pro-life sermon or urges the congregation to stand up for pro-life values in the political or public arena, he could be taken to task by the IRS.
>
> Alliance Defending Freedom asked the Internal Revenue Service Tuesday to release all documents related to its recent decision to settle a lawsuit with an atheist group that claims the IRS has adopted new protocols and procedures for the investigation of churches.
>
> ADF submitted the Freedom of Information Act request after learning of the IRS's agreement with Freedom From Religion Foundation in a press release the group issued on July 17 concerning its lawsuit *Freedom From Religion Foundation v. Koskinen*, which accused the agency of failing to investigate churches the way the atheist group would like.
>
> "Secrecy breeds mistrust, and the IRS should know this in light of its recent scandals involving the investigation of conservative groups," said ADF Litigation Counsel Christiana Holcomb. "We are asking the IRS to disclose the new protocols and procedures it apparently adopted for determining whether to investigate churches. What it intends to do to churches must be brought into the light of day."
>
> […]According to the Freedom From Religion Foundation press release, "The IRS has now resolved the signature authority issue necessary to initiate church examinations. The IRS also has adopted procedures for reviewing, evaluating and determining whether to initiate church investigations."

I wonder what FFRF would do if they were more powerful?

Maybe something like this what Josef Stalin did during his rule of Russia in the 1920s and 1930s.

The Library of Congress offers this in their "Soviet Archives exhibit":

> The Soviet Union was the first state to have as an ideological objective the elimination of religion. Toward that end, the Communist regime confiscated church property, ridiculed religion, harassed believers, and propagated atheism in the schools. Actions toward particular religions, however, were determined by State interests, and most organized religions were never outlawed.
>
> The main target of the anti-religious campaign in the 1920s and 1930s was the

> Russian Orthodox Church, which had the largest number of faithful. Nearly all of its clergy, and many of its believers, were shot or sent to labor camps. Theological schools were closed, and church publications were prohibited. By 1939 only about 500 of over 50,000 churches remained open.

It’s not Christians who do use government to stifle dissent – it’s atheists.

New York Times reporter urges “ruthless” elimination of dissent from gay agenda

July 28, 2014 | by Wintery Knight | Link | Original Link

National Review talks about a very striking tweet from a leftist New York Times reporter. (This is why I call them “leftist”)

Excerpt:

> Last night, *New York Times* reporter Josh Barro tweeted out a disturbing message: “Anti-LGBT attitudes are terrible for people in all sorts of communities. They linger and oppress, and we need to stamp them out, ruthlessly.”
>
> This is rather shocking. Barro is no angry blogger writing manifestos in his basement. He is a respected reporter from a prestigious newspaper that prides itself on equanimity in the face of heated debate. Yet he seems, by any reasonable measure, to be fomenting a campaign to rout out all dissenters from the sexual revolution.
>
> […]Barro’s sexual fundamentalism wants any dissent marginalized and he’s not reluctant to admit that. This attitude, which is emblematic of the increasing intolerance in many sectors of culture towards those with traditional beliefs about sexuality, penalizes citizens for their beliefs. What we see playing out, once more, is that for liberalism to take root, it must take root by authoritarian impulse where the lies of the sexual revolution, to be cemented, must be enforced through acts of social and legal coercion.

And the National Review article reminds us of the last attempt to “ruthlessly” “stamp out” traditional views on gay marriage, by convicted domestic terrorist Floyd Lee Corkins:

> Consider the real-world actions against the Family Research Council (FRC), when a shooter in 2012 broke into its building with the intent of murdering staffers. How did this come about? The Southern Poverty Law Center (SPLC) labeled FRC a “hate group.” The shooter, who wounded and would have killed a brave security guard, confessed that he was influenced by the materials posted on the SPLC’s website. Similarly, Barro’s words give license to those who would seek to disparage people with traditional beliefs about sexuality. Even if Barro doesn’t actually want violence to occur, his rhetoric could help incite it.

This is why I have an alias. Because when are dealing with people who celebrate sin, anything is possible. An alias won’t protect you forever, but it’s essential if you intend to disagree with fascists like Josh Barro.

I think people should be very careful about letting their real views out to people on the secular left. There is no morality there to stop them from doing anything. When God is dismissed from a person’s worldview, anything is possible. Anything. If you took a poll

among Democrats asking whether people should be fired from their jobs for believing in traditional marriage, like Brendan Eich, I have no doubt that they would affirm that he should be. This is the mainstream view now, and as you can see, people on the left are rapidly approaching the view of the anti-FRC domestic terrorist. Stamp them out ruthlessly. And with no awareness of what he’s really said, because that’s what’s really in his heart.

In California, 95% of professor's donations goes to Democrats

July 29, 2014 | by Wintery Knight | Link | Original Link

From The College Fix.

Excerpt:

> With midterm elections looming, an analysis of professors' recent campaign contributions to California lawmakers found that about 95 percent of their donations went to Democratic politicians.
>
> Dozens of scholars have donated nearly $200,000 to a variety of Democratic representatives, while Republican politicians only netted about $9,000 from scholars, Federal Election Commission records show.
>
> In effect, contributions by professors to Democrat lawmakers outweigh donations to Republican ones by 22 to 1, according to the *The College Fix* analysis.
>
> The analysis used figures listed on the Federal Election Commission website from January 2013 through 2014 spring filings. Both Political Action Committee and individual campaign contributions were included in the data. Only donors with occupations listed as "professor" were included in the tally.
>
> The survey looked at all 53 U.S. congressional representatives in California as well as its two U.S. Senators, 40 of whom are Democrat and 15 are Republican.
>
> The California lawmaker who appears a favorite among professors is House Minority Leader Nancy Pelosi (D-Calif.) Pelosi's Victory Fund PAC garnered the largest dollar amount in donations from professors by far at $50,500.

When people go to university, so often they think, I'll just study whatever I want. But I think given the bias of most professors, a better plan is to focus on studying something in the STEM fields, especially math, engineering and computer science, where you wouldn't be as exposed to the bias of these professors. Even if the professors are biased, there is not much they can do to inject their bias into a STEM course. It's something to think about – and STEM degrees pay better, too.

Ryan T. Anderson presents the case for natural / traditional marriage

July 29, 2014 | by Wintery Knight | Link | Original Link

A must-read long paper from the Heritage Foundation. It's a great concise presentation of the reasons why the United States should not redefine marriage. (H/T A tweet from Ryan T. Anderson)

Abstract:

> *Marriage is based on the truth that men and women are complementary, the biological fact that reproduction depends on a man and a woman, and the reality that children need a mother and a father. Redefining marriage does not simply expand the existing understanding of marriage; it rejects these truths. Marriage is society's least restrictive means of ensuring the well-being of children. By encouraging the norms of marriage—monogamy, sexual exclusivity, and permanence—the state strengthens civil society and reduces its own role. The future of this country depends on the future of marriage. The future of marriage depends on citizens understanding what it is and why it matters and demanding that government policies support, not undermine, true marriage.*

Excerpt:

> Supporters of redefinition use the following analogy: Laws defining marriage as a union of a man and a woman are unjust—fail to treat people equally—exactly like laws that prevented interracial marriage. Yet such appeals beg the question of what is essential to marriage. They assume exactly what is in dispute: that gender is as irrelevant as race in state recognition of marriage. However, race has nothing to with marriage, and racist laws kept the races apart. Marriage has everything to do with men and women, husbands and wives, mothers and fathers and children, and that is why principle-based policy has defined marriage as the union of one man and one woman.
>
> Marriage must be color-blind, but it cannot be gender-blind. The color of two people's skin has nothing to do with what kind of marital bond they have. However, the sexual difference between a man and a woman is central to what marriage is. Men and women regardless of their race can unite in marriage, and children regardless of their race need moms and dads. To acknowledge such facts requires an understanding of what, at an essential level, makes a marriage.

And a bit later:

> If the law taught a falsehood about marriage, it would make it harder for people to live out the norms of marriage because marital norms make no sense, as matters of principle, if marriage is just intense emotional feeling. No reason of

> principle requires an emotional union to be permanent or limited to two persons, much less sexually exclusive. Nor should it be inherently oriented to family life and shaped by its demands. This does not mean that a couple could not decide to live out these norms where temperament or taste so motivated them, just that there is no reason of principle to demand that they do so. Legally enshrining this alternate view of marriage would undermine the norms whose link to the common good is the basis for state recognition of marriage in the first place.
>
> Insofar as society weakens the rational foundation for marriage norms, fewer people would live them out, and fewer people would reap the benefits of the marriage institution. This would affect not only spouses, but also the well-being of their children. The concern is not so much that a handful of gay or lesbian couples would be raising children, but that it would be very difficult for the law to send a message that *fathers matter* when it has redefined marriage to make *fathers optional*.

And one last one:

> In fact, much of this is already occurring. Heritage Foundation Visiting Fellow Thomas Messner has documented multiple instances in which redefining marriage has already become a nightmare for religious liberty.[48] If marriage is redefined to include same-sex relationships, then those who continue to believe the truth about marriage—that it is by nature a union of a man and a woman—would face three different types of threats to their liberty: the administrative state, nondiscrimination law, and private actors in a culture that is now hostile to traditional views.[49]
>
> After Massachusetts redefined marriage to include same-sex relationships, Catholic Charities of Boston was forced to discontinue its adoption services rather than place children with same-sex couples against its principles.[50] Massachusetts public schools began teaching grade-school students about same-sex marriage, defending their decision because they are "committed to teaching about the world they live in, and in Massachusetts same-sex marriage is legal." A Massachusetts appellate court ruled that parents have no right to exempt their children from these classes.[51]
>
> The New Mexico Human Rights Commission prosecuted a photographer for declining to photograph a same-sex "commitment ceremony." Doctors in California were successfully sued for declining to perform an artificial insemination on a woman in a same-sex relationship. Owners of a bed and breakfast in Illinois who declined to rent their facility for a same-sex civil union ceremony and reception were sued for violating the state nondiscrimination law. A Georgia counselor was fired after she referred someone in a same-sex relationship to another counselor.[52] In fact, the Becket Fund for Religious Liberty reports that "over 350 separate state anti-discrimination provisions would likely be triggered by recognition of same-sex marriage."[53]

This article is long and comprehensive. It will take some time to read. It's includes logical arguments as well as empirical evidence from research – with footnotes. I really recommend taking a look at the article. Even if it takes a long time to read, it will definitely expand your mind to think about why we had a definition of marriage in the first place, and what we would lose by changing that definition. When you debate people who want to redefine marriage, it's very important to appeal to logical arguments and evidence from studies. Get the conversation away from emotions and instead introduce facts and arguments.

You can get an even longer treatment in the new book by Ryan T. Anderson and his co-authors Sherif Girgis and Robert P. George. This is *the* book to get on the marriage issue.

Ryan T. Anderson lectures on marriage and why it matters

July 29, 2014 | by Wintery Knight | Link | Original Link

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude others
- It's meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father
- can't say that fathers are essential for children if we support gay marriage, which makes fathers optional
- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away, there is no permanence
- the public policy consequences to undermining the norms of exclusivity and

permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

Man brings 12-year-old rape victim to three abortion clinics, none report him

July 30, 2014 | by Wintery Knight | Link | Original Link

Life News reports.

Excerpt:

> According to the group Life Dynamics out of Texas who just published a shocking report on how sexual pedophiles use abortion to cover their rapes, one rape victim was taken to three – yes three clinics who, according to Life Dynamics, failed to report the abuse.
>
> As Life Dynamics reports, according to court documents, 40 year-old Joseph Coles (pictured right), began having sex with his stepdaughter when she was 10-years-old.
>
> At 12, the stepdaughter became pregnant and her mother took her to the Cleveland Surgi-Center abortion clinic. The abortion was botched and the girl almost died from internal hemorrhaging.
>
> Although not noted in the Life Dynamics report, this blogger discovered that Cleveland Surgi-Center is a National Abortion Federation (NAF) abortion clinic which claims to have funding available. Wonder if they helped pay for this victim's abortion?
>
> Life Dynamics points out that given that the assaults on the child resumed afterward, it is clear the clinic did not file a report.
>
> Following the abortion, Coles persuaded the girl's mother to put her on birth control; however, in 2004 the child again became pregnant by Coles and was taken to Planned Parenthood in Shaker Heights.
>
> There she refused to submit to the abortion at that time but relented three days later and was taken to the Preterm Abortion Clinic in Cleveland.
>
> As before, it is evident no report was made by either Planned Parenthood or Preterm since the assaults on the child resumed after the second abortion.
>
> In June of the following year, police were made aware of the situation and Coles was arrested.

Oh, we are dealing with really ethical people, here, in these abortion clinics. I don't think they need to be regulated at all, we should just let them operate freely. Look how well that worked with Gosnell.

Christians: the world’s most persecuted people

July 30, 2014 | by Wintery Knight | Link | Original Link

Dina tweeted this article from the leftist UK Independent.

Excerpt:

> Most people in the West would be surprised by the answer to the question: who are the most persecuted people in the world? According to the International Society for Human Rights, a secular group with members in 38 states worldwide, 80 per cent of all acts of religious discrimination in the world today are directed at Christians.
>
> The Centre for the Study of Global Christianity in the United States estimates that 100,000 Christians now die every year, targeted because of their faith – that is 11 every hour. The Pew Research Center says that hostility to religion reached a new high in 2012, when Christians faced some form of discrimination in 139 countries, almost three-quarters of the world’s nations.
>
> All this seems counter-intuitive here in the West where the history of Christianity has been one of cultural dominance and control ever since the Emperor Constantine converted and made the Roman Empire Christian in the 4th century AD.
>
> Yet the plain fact is that Christians are languishing in jail for blasphemy in Pakistan, and churches are burned and worshippers regularly slaughtered in Nigeria and Egypt, which has recently seen its worst anti-Christian violence in seven centuries.
>
> The most violent anti-Christian pogrom of the early 21st century saw as many as 500 Christians hacked to death by machete-wielding Hindu radicals in Orissa, India, with thousands more injured and 50,000 made homeless. In Burma, Chin and Karen Christians are routinely subjected to imprisonment, torture, forced labour and murder.
>
> Persecution is increasing in China; and in North Korea a quarter of the country’s Christians live in forced labour camps after refusing to join the national cult of the state’s founder, Kim Il-Sung. Somalia, Syria, Iraq, Iran, Afghanistan, Saudi Arabia, Yemen and the Maldives all feature in the 10 worst places to be a Christian.

You don’t hear much in the media about this, and our foreign seems to be in retreat against radical Islam under this President.

Oh wait, Obama did have this to say:

> On Sunday, President Obama and First Lady Michelle released a statement thanking Muslim Americans for their many “achievements and contributions… to building the very fabric of our nation and strengthening the core of our

> democracy.”
>
> The comments were made to mark the celebration of Eid-al-Fitr, a time of spiritual renewal for Muslims which comes at the end of the month-long fast of Ramadan. The Obamas said in their statement that Eid “celebrates the common values that unite us in our humanity” and “welcomed their commitment to giving back to their communities.” The International Business Times reports that during Eid, Muslims join in Islamic prayer, while saying “Allahu Akbar,” or “God is Great,” and feasting.
>
> The statement further reads that the administration “wishes Muslims in the United States and around the world a blessed and joyous celebration.” The letter ended with salutation of “Eid Mubarak,” which roughly means “blessed celebration.”

I’m sure that many Muslims are law abiding, but maybe he could have urged them not to be so… violent. I’m asking too much, aren’t I?

New e-mails: IRS official Lois Lerner called conservatives “a**holes” and “terrorists”

July 31, 2014 | by Wintery Knight | Link | Original Link

CNS News reports.

Full text:

> A newly discovered email exchange from Lois Lerner’s official IRS email account “directly demonstrates Ms. Lerner’s deep animus towards conservatives, which she refers to as ‘—holes,'” House Ways and Means Committee Chair Dave Camp wrote in a letterto Attorney General Eric Holder on Wednesday.
>
> In that Nov. 9, 2012 email, Lerner further suggests that conservatives will ruin the country: “So we don’t need to worry about alien teRrorists (sic). It’s our own crazies that will take us down,” she wrote.
>
> Camp (R-Mich.) told Holder the email “shows that Ms. Lerner’s mistreatment of conservative groups was driven by her personal hostility toward conservatives.”
>
> Camp said he also has discovered that Lerner used her personal email to conduct official business,including confidential tax return information, and he once again urged the Justice Department to ramp up its investigation:
>
> “While the Committee has not seen any evidence of a serious investigation by your Department, it is my sincere hope that in light of this new, strong evidence that you immediately begin aggressively investigating this matter or appoint a special counsel.”
>
> Camp warned that failure to do so “will only further erode public trust” in the Internal Revenue Service and the Justice Department.
>
> Ways and Means is one of three congressional committees investigating the way the IRS, during Lerner’s tenure, handled groups seeking tax-exempt status. The IRS admits that conservative groups were singled out for inappropriate scrutiny and delay before the 2012 election.

But of course all the e-mails showing the direct intent to use government to persecute conservatives have been “lost”, as Newsbusters recalls:

> The committee released a partial transcript of an interview it conducted last week with IRS Deputy Associate Chief Counsel Tom Kane, who reported the computer problems. When asked how many others might be having this problem, Kane said it was “less than 20.”
>
> The IRS has told the House that several more IRS workers have experienced a computer crash, including some who worked with former IRS official Lois Lerner. Among that number are a few who worked closely at the IRS division dealing with tax-exempt organizations, which Lerner headed. Lerner has since become the

> prime target of Republican investigators, although the GOP has been hindered by the supposed loss of her emails.
>
> According to the committee, another IRS official who suffered computer problems is Justin Lowe, a technical adviser to the commissioner of Tax-Exempt and Government Entities.
>
> Another is David Fish, an adviser to Lois Lerner. Andy Megosh was also named; he is a manager of Exempt Organizations Guidance.

Has the mainstream media done a good job of reporting on all this?

No:

> The saga of Lois Lerner's missing emails took a bunch of twists and turns this past week, but you wouldn't know that if you only got your news from the Big Three (ABC, CBS, NBC) networks. On July 21, it was reported that even more IRS officials had their hard drives crash on them, including employees who "routinely corresponded" with Lerner. What a coincidence! On that same day it was revealed that a top IRS official was uncertain if backup tapes of Lerner's lost emails still existed. The next day the story changed again when it was reported that Lerner's hard drive was only "scratched" and the data was recoverable.
>
> Then on July 23 the head of the IRS testified that the back up tapes had finally been discovered but stressed he does not "how they found them" or "whether there's anything on them or not." So how many of these intriguing nuggets were reported on any of the network evening or morning shows last week?
>
> Zero.
>
> The last time the IRS story was mentioned on the Big Three nets was almost a week ago on the July 19 *CBS This Morning*. The last time ABC offered an IRS story was on the July 17 *Good Morning America*. And you have to go all the way back to last month (June 24 *Today* show) to find the last time NBC touched the scandal.
>
> And the Lerner missing email story didn't exactly heat up coverage of the IRS targeting controversy. Since the story first broke over a month ago on June 13 there have been a total of just 18 stories (CBS 10, NBC 5, ABC 3) on the IRS scandal through the morning of July 28.

I always find it a mystery when I go to the gym and see people watching something other than Fox News for news. Do they actually think that these mainstream leftist networks show news?

Stephen Baskerville: five myths about no-fault divorce

July 31, 2014 | by Wintery Knight | Link | Original Link

From the Catholic News Agency.

Introduction:

> Almost four decades after the "no-fault" divorce revolution began in California, misconceptions abound. Even the many books about divorce, including myriad self-help manuals, are full of inaccurate and misleading information. No public debate preceded the introduction of no-fault divorce laws in the 1970s, and no debate has taken place since.
>
> Yet divorce-on-demand is exacting a devastating toll on our children, our social order, our economy, and even our constitutional rights. A recent study estimates the financial cost of divorce to taxpayers at $112 billion annually. Recent demands to legitimize same-sex marriage almost certainly follow from the divorce revolution, since gay activists readily acknowledge that they only desire to marry under the loosened terms that have resulted from the new divorce laws. Divorce also contributes to a dangerous increase in the power of the state over private life.

Here are the five myths about no-fault divorce:

- No-fault divorce permitted divorce by mutual consent, thus making divorce less acrimonious
- We cannot force people to remain married and should not try
- No-fault divorce has led men to abandon their wives and children
- When couples cannot agree or cooperate about matters like how the children should be raised, a judge must decide according to "the best interest of the child"
- Divorce must be made easy because of domestic violence

And the details about number three:

> Myth 3: No-fault divorce has led men to abandon their wives and children.
>
> Fact: This does happen (wives more often than children), but it is greatly exaggerated. The vast majority of no-fault divorces — especially those involving children — are filed by wives. In fact, as Judy Parejko, author of Stolen Vows, has shown, the no-fault revolution was engineered largely by feminist lawyers, with the cooperation of the bar associations, as part of the sexual revolution. Overwhelmingly, it has served to separate large numbers of children from their fathers. Sometimes the genders are reversed, so that fathers take children from mothers. But either way, the main effect of no-fault is to make children weapons and pawns to gain power through the courts, not the "abandonment" of them by

> either parent.

Al Mohler wrote about the history of no-fault divorce a while back, and I think it's worth reviewing why we have this lousy law.

> The story behind America's love affair with no-fault divorce is a sad and instructive tale. As Baskerville documents, no-fault divorce laws emerged in the United States during the 1970s and quickly spread across the nation. Even though only nine states had no-fault divorce laws in 1977, by 1995, every state had legalized no-fault divorce.
>
> Behind all this is an ideological revolution driven by feminism and facilitated by this society's embrace of autonomous individualism. Baskerville argues that divorce "became the most devastating weapon in the arsenal of feminism, because it creates millions of gender battles on the most personal level." As far back as 1947, the National Association of Women Lawyers [NAWL] was pushing for what we now know as no-fault divorce. More recently, NAWL claims credit for the divorce revolution, describing it as "the greatest project NAWL has ever undertaken."
>
> The feminists and NAWL were not working alone, of course. Baskerville explains that the American Bar Association "persuaded the National Conference of Commissioners on Uniform State Laws [NCCUSL] to produce the Uniform Marriage and Divorce Act." Eventually, this led to a revolution in law and convulsions in society at large. This legal revolution effectively drove a stake into the heart of marriage itself, with inevitable consequences. In effect, no-fault divorce has become the catalyst for one of the most destructive cultural shifts in human history. Now, no-fault divorce is championed by many governments in the name of human rights, and America's divorce revolution is spreading around the world under the banner of "liberation."

And note that Democrats oppose any effort to reform laws that make it easy to break up marriages:

> A basic dishonesty on the question of divorce pervades our political culture. Baskerville cites Michigan governor Jennifer Granholm as referring to divorce as a couple's "private decision." Granholm's comments came as she vetoed a bill intended to reform divorce law in her state. The danger and dishonesty of referring to divorce as a couple's "private decision" is evident in the fact that this supposedly private decision imposes a reality, not only on the couple, but also on children and the larger society. Indeed, the "private decision" is really not made by a couple at all–but only by any spouse demanding a divorce.

So, no-fault was pushed by two groups: feminists and trial lawyers.

There's a lot of talk these days about gay marriage and how it undermines marital norms and normalizes raising children without either their biological father or biological mother.

But before there was gay marriage, there was no-fault divorce, which deprives children of their biological father. There is no provision for no-fault divorce in the Bible, so it seems to me that Christians should be against frivolous divorce just like we are against same-sex marriage.

Judge orders DOJ to release Fast and Furious documents blocked by Obama

August 1, 2014 | by Wintery Knight | Link | Original Link

Katie Pavlich reports on it for Townhall.com.

Excerpt:

> Thanks to a Freedom of Information Act Lawsuit pursued against the Department of Justice by government watchdog Judicial Watch, the U.S. District Court for the District of Columbia has ruled documents being withheld from Congress under President Obama's claim of executive privilege must be turned over. Obama made the claim on the same day Attorney General Eric Holder was voted in criminal and civil contempt of Congress in June 2012.
>
> "This order forces the Obama DOJ, for the first time, to provide a detailed listing of all documents that it has withheld from Congress and the American people for years about the deadly Fast and Furious gun running scandal," Judicial Watch released in a statement.
>
> The FOIA lawsuit has been ongoing for 16-months and is now proceeding after a lengthy delay. The Justice Department originally asked the court for an indefinite hold on a FOIA request from Judicial Watch, citing executive privilege and an ongoing investigation. That indefinite hold request was shot down more than a year ago.
>
> The documentation DOJ is required to now turn over is a "Vaughn index" of "all requested Fast and Furious materials from a June 2012 Judicial Watch FOIA request."

> A Vaughn index must: (1) identify each document withheld; (2) state the statutory exemption claimed; and (3) explain how disclosure would damage the interests protected by the claimed exemption." In ordering the DOJ to provide Judicial Watch the Vaughn index, the Court ruled, "In this circuit, when an agency is withholding documents under exemption claims, courts require that the agency provide a Vaughn index so that the FOIA requester – at a distinct informational disadvantage – may test the agency's claims."

> "Once again, Judicial Watch has beat Congress to the punch in getting key information about another Obama scandal – this time, the Fast and Furious outrage," Judicial Watch President Tom Fitton said in a statement. "A federal court has ordered the Obama administration to produce information that could, for the first time, provide specific details who in the administration is responsible for Fast and Furious lies to Congress and the American people. This is a battle that put Eric Holder in contempt of Congress, saw Nixonian assertions of executive privilege by Barack Obama, and a hapless Congress in face of all this

> lawlessness. Finally, we may get some accountability for Border Patrol Agent Brian Terry and the countless others murdered as a result of the insanely reckless Obama administration program."

Unfortunately, this is coming too late for Obama's 2012 re-election contest, and the mainstream media is unlikely to report it, just like they failed to report the IRS scandal. But if we all share this story, it will help people to realize how lawless and corrupt this administration really is. It's gangster government, as Michele Bachmann said. The crooks are in charge.

Samaritan’s Purse physician contracts Ebola while serving in Liberia

August 1, 2014 | by Wintery Knight | Link | Original Link

Dr. Kent Brantly

Here’s the story from the Samaritan’s Purse web site.

Excerpt:

> Dr. Kent Brantly and Nancy Writebol are in stable but grave condition. Dr. Brantly took a slight turn for the worse overnight. But even as he battles to survive Ebola, he received a remarkable gift from a patient he had helped to save.
>
> “Dr. Brantly received a unit of blood from a 14-year-old boy who had survived Ebola because of Dr. Brantly’s care,” Samaritan’s Purse President Franklin Graham said. “The young boy and his family wanted to be able to help the doctor that saved his life.”
>
> […]Dr. Brantly, a family practice physician, was serving in Liberia through our post-residency program before joining the medical team responding to the Ebola crisis. His wife and two children had been living with him in Liberia but flew home to the U.S. before he started showing any signs of illness.
>
> Last week, Dr. Brantly recognized that he had symptoms associated with Ebola, and immediately isolated himself.
>
> […]The deadly disease, which causes massive internal bleeding and has a mortality rate of 60 to 90 percent in most situations, has claimed more than 725 lives.
>
> […]“There’s an incredible level of braveness in Kent,” Robert Earley, president and CEO of JPS Health Network, told the *Fort Worth Star-Telegram*. “You don’t meet people like this every day.”

Yahoo News has more about this fine man:

> Even from his own sickbed in Africa, American physician Kent Brantly continues

> putting the well-being of others before his own.
>
> Brantly, a medical missionary in West Africa, and fellow American Nancy Writebol both contracted Ebola last weekend. They spent the past several days under quarantine and are struggling to survive.
>
> On Wednesday, an experimental serum arrived in Monrovia, Liberia, but there was only enough dosage for one patient.
>
> “Dr. Brantly asked that it be given to Nancy Writebol,” said Franklin Graham, president of Samaritan’s Purse, the Christian humanitarian organization Brantly is working for.
>
> Late Thursday, officials at Emory University Hospital near the Centers for Disease Control and Prevention in Atlanta confirmed that one of the two aid workers will soon be brought to a special high-security ward there. The name of the patient was not revealed.
>
> Brantly’s gesture of letting Writebol have the serum fits the description of selflessness and sacrifice the 33-year-old’s family back in the U.S. has given.
>
> “Kent prepared himself to be a lifetime medical missionary,” his mother, Jan Brantly, told The Associated Press on Monday. “His heart is in Africa.”
>
> After the merciful move for Writebol, a local family made its own offering to Brantly.

If you are a person who prays, say a prayer for this brave Christian man.

Friday night movie: 13 Rue Madeleine (1946)

August 1, 2014 | by Wintery Knight | Link | Original Link

Here’s tonight’s movie:

Description:

> During World War II, Charles Stevenson Gibson, a St. Louis attorney with an extensive background in international affairs, is chosen by President Roosevelt to organize the secret activities of a new Intelligence Corps. Gibson, in turn, selects Robert Sharkey, a widely traveled, multi-lingual scholar who served with distinction in World War I, to administer the complex training program.
>
> Selected groups of volunteers report to Washington for rigorous training before assignment overseas. In 1944, the candidates selected for the 77th group include Suzanne de Beaumont, a French citizen who became stranded in the U.S. when France fell, and whose husband is an artillery officer in the French army. Jeff Lassiter, the son of an American consul, educated in Geneva and Oxford and recruited from the Officers’ Training School at the University of California at Los Angeles, and Bill O’Connell, a Rutgers graduate and former employee of the foreign department of a major bank, are also chosen.
>
> At a secluded country estate, the twenty-two candidates are given two weeks of intensive testing to see if they qualify for further training. Gibson tells Sharkey he knows that one of the candidates is a German agent and Sharkey is assigned to identify him.

IMDB rating: [7.0/10]

Here’s a spy image which is pretty cool, too:

A mysterious spy lurks at night

Happy Friday!

Doctor shoots man who opened fire on hospital staff

August 2, 2014 | by Wintery Knight | Link | Original Link

I've bolded the interesting parts of the story, which is from USA Today.

Excerpt:

> A psychiatric outpatient opened fire Thursday inside a psychiatrist's office at a hospital near Philadelphia, killing his caseworker and slightly wounding the doctor, who shot the gunman with his personal firearm, authorities said.
>
> The suspect, Richard Plotts, of Upper Darby, Pa., was reported in critical condition after the shooting at 2:20 p.m. in an office at the Mercy Wellness Center of Mercy Fitzgerald Hospital in Darby, Delaware County District Attorney Jack Whelan said at an evening news conference.
>
> The unidentified 52-year-old doctor shot Plotts three times and suffered a graze wound when the suspect returned fire, Whelan said at an evening news conference. Two guns were recovered.
>
> […]Whelan said Plotts, who has a history of unspecified psychiatric problems, and his caseworker arrived at the doctor's third-floor office about 2 p.m., Whalen said. Soon after, another staffer heard a loud argument and opened the door to find the suspect pointing a gun at the doctor. The worker then closed the door and call 911.
>
> Minutes later, gunfire erupted.
>
> […]Plotts, described as being in his mid-30s, was in surgery at the Hospital at the University of Pennsylvania. He was shot twice in the torso and once in an arm.
>
> […]**A sign tells visitors to the wellness center to check weapons at the front, a medical technician told *The Philadelphia Inquirer*.**
>
> Hospital policy allows only on-duty law enforcement officers to carry weapons on campus, a Mercy Health System spokeswoman told the Associated Press.

So there was a "gun-free zone" sign. That didn't stop the crazy person from coming in with a gun. And thankfully, it didn't stop the DOCTOR from having a licensed concealed-carry firearm. But what if the doctor didn't have a firearm? Well, then he'd be dead. The police would NEVER have got there in time to save him. And who knows how many more people the crazy person would have shot? I think this story shows the reason why law-abiding people need to own and carry firearms. When seconds count, the police are just minutes away.

William Lane Craig assesses the credibility of the Rapture doctrine

August 2, 2014 | by Wintery Knight | Link | Original Link

In the Christian Post. (H/T Pastor Matt's round-up)

Excerpt:

> Several months before "Left Behind" opens in theaters, a prominent Christian philosopher is reminding the American church that the movie's claims about the rapture are false.
>
> "This doctrine is not really found in the book of Revelation. If you read the book of Revelation, you won't find any mention of the rapture there," said William Craig, a Research Professor of Philosophy at Talbot School of Theology and Professor of Philosophy at Houston Baptist University.
>
> Instead, Craig says, the idea of the rapture comes from a "misinterpretation of 1 and 2 Thessalonians where Paul is describing the coming of the Lord and resurrection of the dead, which will occur at His coming."
>
> "If you compare what Paul says there to what Jesus says about the End Times, Paul uses the same vocabulary, the same phraseology. I think it's very plausible that Paul is talking about the same event that Jesus predicted, namely the visible coming of the Son of Man at the end of human history to usher in his kingdom," said Craig. "But proponents of the rapture view, say that Paul is not at all talking about the second coming of the Christ there. What he's really talking about is this invisible preliminary secret return of Christ to snatch believers out of the world before the great tribulation occurs. I think there's no textual warrant for that at all."
>
> According to Craig, the rapture became a popular theory about the End Times due to the influence of the Scofield Reference Bible, which was published in the early 20th century and promulgated John Darby's mid-18th century's views on the rapture. Later, Christian institutions, among them Dallas Theological Seminary, and churches began teaching the validity of the rapture.
>
> "A good many Bible-believing Christians absorbed this view as their mother's milk as it were and have never thought to question its Biblical credentials," said Craig.

I have no opinion on end times doctrines, although people always ask me. I don't know and I don't care. I don't know and don't care about the rapture, especially. And what's more, I think that thinking about the exact timing and events of the end of the world is a waste of our time – it has no value whatsoever.

I wish that the Christian church put every second of time they put into reading or thinking about end times issues into science apologetics instead. I think that we would be in a

much different position culturally if we spent more time thinking about the origin of the universe, the fine-tuning, the origin of life and the Cambrian explosion than we spend reading Christian fiction and worrying about the end of the world. And I think it’s better for God if we do that, although it might be less “fun” for us.

Let’s leave the fiction reading to the atheists.

Nancy Pelosi House meltdown: chases GOP congressman Tom Marino

August 3, 2014 | by Wintery Knight | Link | Original Link

From ABC News.

Excerpt:

> In an unusual breach of decorum, even for the divided Congress, House Minority Leader Nancy Pelosi chased Rep. Tom Marino across the House floor, taking offense at comments by the Pennsylvania Republican during debate on the border funding bill Friday night.
>
> "We don't have law and order," Marino began as he wrapped up his comments on the border supplemental. "My colleagues on the other side don't want to do anything about it."
>
> "You know something that I find quite interesting about the other side? Under the leadership of the former Speaker [Pelosi], and under the leadership of their former leader [Rep. Steny Hoyer], when in 2009 and 2010, they had the House, the Senate and the White House, and they knew this problem existed," he continued. "They didn't have the strength to go after it back then. But now are trying to make a political issue out of it now."
>
> Off-mic, Pelosi then approached Marino, crossing the aisle in view of cameras, and apparently challenged Marino's assertion that Democrats did not do anything about the issue when they had majority control.
>
> "Yes it is true," Marino replied directly to Pelosi, who was House speaker in those years. "I did the research on it. You might want to try it. You might want to try it, Madam Leader. Do the research on it. Do the research. I did it. That's one thing that you don't do."
>
> Marino then urged lawmakers to support the border supplemental "because apparently I hit the right nerve."
>
> After Marino concluded his remarks and as many Republicans applauded their colleague, Pelosi crossed the chamber again in view of cameras, enraged, pointing and sticking her finger at Marino.
>
> She then followed Marino up a Republican aisle, gesturing and arguing with him. Lawmakers on the GOP side gathered in dismay as one spoke out to tell the chair that the House was not in order, in an effort to halt the bickering.
>
> Pelosi finally relented after Republicans tried to get between Pelosi and Marino, and she returned to the Democratic side of the chamber. The House then promptly voted to approve the $694 million border supplemental, 223-189.

Although Pelosi has put out the story that Marino had apologized to her, his chief of staff

is saying that never happened:

> But Marino's chief of staff, Bill Tighe, stressed that Marino did not apologize to Pelosi, and will not apologize.
>
> **"[Rep. Marino] did not apologize to Leader Pelosi and does not intend to do so as he has nothing to apologize for. She was entirely out of line in approaching him while he was recognized and delivering remarks on the Floor," Tighe wrote in an email. "Her staff's comment in your story about her accepting his apology in simply not true."**

Fox News reported that "House chamber security was seen walking through the chamber". Wow! She really could not handle him saying things that are pretty obvious. The Democrats had the House, Senate and White House for two years. They could have done anything. It's undeniable.

The loss of pastoral credibility

August 3, 2014 | by Wintery Knight | Link | Original Link

Eric Chabot of Think Apologetics posted this on Facebook.

It's a medium-length read. I want to highlight one problem – the problem of pastors never showing their work.

Excerpt:

> Around this point, it can start to dawn on one that many church leaders have only been trained in forms of discourse such as the sermon and, to a much lesser extent, the essay. Both forms privilege a single voice—their voice—and don't provide a natural space for response, questioning, and challenge. Their opinions have been assumed to be superior to opposing viewpoints, but have never been demonstrated to be so. While they may have spoken or written about opposing voices, they are quite unaccustomed to speaking or writing to them (not to mention listening to or being cross-examined by them). There are benefits to the fact that the sermon is a form of discourse that doesn't invite interruption or talking back, but not when this is the *only* form of discourse its practitioners are adept in.
>
> Many church leaders have been raised and trained in ideologically homogenous cultures or contexts that discouraged oppositional discourse. Many have been protected from hostile perspectives that might unsettle their faith. Throughout, their theological opinions and voices have been given a privileged status, immune from challenge. Nominal challenges could be brushed off by a reassertion of the monologue. They were safe to speak about and habitually misrepresent other voices to their hearers and readers, without needing to worry about those voices ever enjoying the power to answer them back. Many of the more widely read members of their congregations may have had an inkling of the weakness of their positions in the past: the Internet just makes it more apparent.
>
> A system is only as effective as its weakest component in a particular operation. The same is true of the human mind and the communities formed around thinkers. Where the capacity of agonistic reasoning is lacking, all else can be compromised. If one's opinion has never been subjected to and tried by rigorous cross-examination, it probably isn't worth much. If one lacks the capacity to keep a level head when one's views are challenged, one's voice will be of limited use in most real world situations, where dialogue and dispute is the norm and where we have to think in conversation with people who disagree with us.
>
> The teachers of the Church provide the members of the Church with a model for their own thinking. The teacher of the Church does not just teach others *what* to believe, but also *how* to believe, and the process by which one arrives at a theological position. This is one reason why it is crucial that teachers 'show their

> working' on a regular basis. When teaching from a biblical text, for instance, the teacher isn't just teaching the meaning of that particular text, but how Scripture should be approached and interpreted more generally. An essential part of the teaching that the members of any church need is that of dealing with opposing viewpoints. One way or another, every church provides such teaching. However, the lesson conveyed in all too many churches is that opposing voices are to be dismissed, ignored, or 'answered' with a reactive reassertion of the dogmatic line, rather than a reasoned response.

This is probably the biggest thing that annoys me about church. Being talked at by somebody who never explains why they believe what they believe, and who never answers criticisms to what they believe. They don't want to show their work. I really don't like that. Being forced to sit still and silent while someone else talks.

In math class, you don't get any marks for just writing the correct answer to a non-trivial problems. You have to show the steps that led to your answer. I think talking about why we believe, though, can be agitating to some people who are there in church to be comforted and to have feelings and emotions. So that's probably why pastors don't show their work, because it disrupts the comfort / happiness vibe. Still though, I think it would be a good idea for us (and I mean me, too!) to get better at hearing voices on the other side. The way I usually do this is by watching debates and reading debate books. I like there to be two sides interacting. I get annoyed when there is only one side. That's why I prefer reading evidential apologetics to philosophical theology and I prefer philosophical theology to devotional reading (A.W. Tozer and G. K. Chesterton are the worst things to read in my view, and most men I know can't stand reading them). The more testable something is, the easier it is on me. I don't like to be preached at about things that can't be tested. It annoys me, even if I agree with it.

Meriam Ibrahim arrives in US after escaping imprisonment for her Christian faith

August 4, 2014 | by Wintery Knight | Link | Original Link

Fox News reports.

Excerpt:

> A Sudanese woman who faced the death penalty for refusing to recant her Christian faith has arrived in New Hampshire, ready to begin a new life.
>
> Meriam Ibrahim, her husband and the couple's two children arrived Thursday night at Manchester-Boston Regional Airport, where they were greeted by a throng of supporters from the city's Sudanese community before getting into an SUV and leaving the airport, the New Hampshire Union Leader reports.
>
> "Thank you so much," her husband, Daniel Wani, told reporters. "I am so relieved."
>
> Ibrahim, who met Pope Francis at the Vatican last week after fleeing the U.S. embassy in Khartoum, did not speak.
>
> Her brother-in-law, Gabriel Wani, said Ibrahim has been granted asylum by the United States and will soon meet with U.S. State Department officials.
>
> Daniel Wani, a U.S. citizen since 2005, met Ibrahim on a trip to Sudan in 2011. He traveled to the war-torn African country last year to arrange for his wife and child to move to New Hampshire.
>
> Ibrahim had been sentenced to death over charges of apostasy. Her father was Muslim, and her mother was an Orthodox Christian. She married Wani, a Christian from southern Sudan, in 2011. Muslim women in Sudan are prohibited from marrying non-Muslims. By law, children must follow their father's religion.
>
> Sudan initially blocked Ibrahim from leaving the country even after its highest court overturned her death sentence in June.

That's good news. I find it interesting that she chose New Hampshire, the live-free-or-die state. She certainly made her choice to live according to her own conscience or die in the attempt. She's a hero. Thank God there was a happy ending this time.

New study: the longer people live under socialism, the less moral they become

August 4, 2014 | by Wintery Knight | Link | Original Link

From Values and Capitalism blog. (H/T Amy Hall tweet)

Excerpt:

> The longer people live under socialism, the more their value system erodes. So concludes a recent study of 259 Germans randomly picked to play a simple dice game.
>
> Researchers from the University of Munich and Duke University asked participants to throw a die 40 times and write each result down on a piece of paper. Those with the highest totals received winnings of up to $8. The twist was that each participant had to commit to picking the top or bottom number before rolling the die. They didn't have to tell anyone beforehand which side they favored, giving them the opportunity to lie when they saw which way the die had turned up.
>
> If no one had cheated, there should have been a roughly equal assortment of rolls from one to six. Instead, when researchers studied the results, they saw disproportionately more high rolls than low. Players were saying they'd picked in advance more fours, fives, and sixes than should have been possible. In short, many were cheating.
>
> Participants were then asked their age and the part of Germany where they'd lived throughout their lives. Some had spent years behind the Iron Curtain, while others had only known life in a unified Germany. When researchers placed the results of the die rolls next to where and when the participants had been born, they came to a stark conclusion.
>
> Those who hailed from socialist East Germany were twice as likely to cheat as those who'd grown up in West Germany under capitalism. Time also played a factor, for the longer a participant had lived in a socialist system the greater their likelihood for being dishonest. Those who'd lived for 20 years or more in East Germany were 65 percent more likely to cheat than their West German counterparts. And the ill-effect of socialism lingered in people's values long after its demise. Those born in the east after the fall of the Berlin Wall still showed a greater propensity for cheating than their western counterparts.

You can kind of see how socialism works by look at how Obama is taking the country away from capitalism here at home. When the basics of a capitalist economy decline, it's less attractive to try to make your own fortune, and more attractive to look to government to give you someone else's money.

The study offers some reasons for their findings:

> Participants were then asked their age and the part of Germany where they'd lived throughout their lives. Some had spent years behind the Iron Curtain, while others had only known life in a unified Germany. When researchers placed the results of the die rolls next to where and when the participants had been born, they came to a stark conclusion.
>
> Those who hailed from socialist East Germany were twice as likely to cheat as those who'd grown up in West Germany under capitalism. Time also played a factor, for the longer a participant had lived in a socialist system the greater their likelihood for being dishonest. Those who'd lived for 20 years or more in East Germany were 65 percent more likely to cheat than their West German counterparts. And the ill-effect of socialism lingered in people's values long after its demise. Those born in the east after the fall of the Berlin Wall still showed a greater propensity for cheating than their western counterparts.

Interesting to note that under Obama's leadership, fewer people are starting businesses than in previous administrations.

Breitbart explains:

> Startup businesses represent the heart of the American economy, but a new report by the Hudson Institute shows the rate of startup jobs during the last two years has been at a record low.
>
> According to the report, Under President George H.W. Bush, who essentially won Ronald Reagan's third term, there were 11.3 startup jobs per 1000 Americans. Under President Bill Clinton, there were 11.2. Under George W. Bush, there were 10.8. But under President Barack Obama, there have been 7.8 startup jobs per 1000 Americans.
>
> The study "documents a disturbing weakness in startup job creation," but "does not explain the cause of decline," even though "there is anecdotal evidence that the U.S. policy environment has become inadvertently hostile to entrepreneurial employment."

You can't argue with those numbers. Higher taxes and more regulations are not good for business.

Stephen C. Meyer discusses his book “Darwin’s Doubt” on the Michael Medved show

August 4, 2014 | by Wintery Knight | Link | Original Link

The new paperback edition of Darwin’s Doubt is now out (June 2014), and has a new epilogue responding to criticisms of the hardcover first edition. If you don’t have the book, now’s the time to grab it.

Here is a radio interview that Dr. Meyer did about the book, courtesy of the Intelligent Design: The Future podcast.

The MP3 file is available for download. (38 minutes)

The description is:

> On this episode of **ID the Future**, the Michael Medved Show welcomes Dr. Stephen Meyer to talk about his new bestselling book, *Darwin’s Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design*. Listen in as Meyer and Medved discuss the mysteries of the Cambrian explosion and why this phenomenon continues to stump Darwinian evolutionists.
>
> *Each week, leading fellows from Discovery Institute will join Michael Medved to talk about the intersection of science and culture. Listen in live online or on your local Medved station, or stay tuned at ID the Future for the weekly podcast.*

Topics:

- Darwinism offers a materialistic account of where humans and animals came from, but is that all human beings are?
- Darwin was the first to have doubt about his theory of evolution because of the sudden origin if many different animal forms in the Cambrian era
- The book is about the sudden origin of these animal forms and more generally about how much information is needed to make an animal genome
- An animal is not just the form or the organs it is also the information to make new proteins and the instructions to make proteins are in the DNA
- At least 20 new phyla appear suddenly in the Cambrian fossils and the question is what is capable of creating all of that new information
- Mathematicians and computer scientists are especially likely to doubt evolution as a way of making new features because they know that random changes to the code base of an application are more likely to break things and degrade performance
- Naturalists have tried to explain the Cambrian explosion as being a case of the transitional fossils being not yet discovered
- The consensus of science at this time is that there is no known naturalistic explanation for the sudden origin of these animal types
- Caller: how abrupt are we talking about for the introduction of these new animal

forms?

- Meyer: We can calculate the amount of time that is needed to generate change, and the period of time that is needed to generate new forms of life exceeds the time available
- Caller: is it possible that meteors, asteroids and comets could transport biological components to the Earth to shorten the development time?
- Meyer: that's related to my first book on the origin of the first living cell "Signature in the Cell", and that life-from-space hypothesis would only get you building blocks, but not the bio-molecules that have the building blocks sequences – it's the difference between a pile of Scrabble letters and a Shakespearean play – it's the arranging of the components that is the problem
- Medved: The book has a lot of endorsements from scientists who are working at good universities and institutions
- Meyer: the strange thing about exploring the limits of evolution is that you can cite mainstream papers to criticize the Darwinian mechanisms, and then the proponents of Darwinism just assert that no criticism of Darwinian evolution is allowed
- Caller Greg: are you saying that all the phyla came in during the Cambrian explosion?
- Meyer: No, of the 26 phyla that we see in the fossil record, 20 come in during the Cambrian explosion
- Caller Greg: But there are some sponges that existed before the Cambrian explosion, so maybe all the Cambrian phyla came from sponges?
- Meyer: There are 3 phyla present in the pre-Cambrian but they are not ancestral to the 20 Cambrian phyla, the sponges are very simple – 6-10 cell types, arthropods have 60-90 cell types – you can't go from sponges to compound eyes in just 5-10 million years
- Meyer: even the sponges in the pre-Cambrian appear abrutly at the end of the pre-Cambrian
- Caller Greg: but there are complex worms in the Pre-Cambrian as well, and maybe those are ancestral to the 20 new phyla that appear suddenly in the Cambrian explosion
- Caller Greg: what you're saying is that we scientists don't understand what happened so an intelligence did it
- Meyer: No, what I am saying is that the Cambrian explosion involves massive amounts of new biological information, and none of the naturalistic Darwinian mechanisms can create that much new information in that short of the time
- Caller Greg: it's magic!
- Meyer: there are two points in the development of life forms where intelligence is needed: the origin of life and the Cambrian explosion, and this is because of the new information that is being added
- Caller Greg: new information is added by Hox Gene duplication
- Caller: don't we have to look a bit more at epistemology when discussing these issues?

- Meyer: Yes, we have to highlight that many people reject intelligent design because of a pre-supposition of naturalism that prevents them from seeing that intelligence explains anything regardless of the evidence
- Caller: well if you define evolution as change over time, then evolution happened, and who cares about the details like the origin of life and Cambrian explosion?
- Meyer: well there are many definitions of evolution: 1) change over time, 2) universal common ancestry, 3) undirected random process can explain the origin of life and the explosion of new animal forms in the fossil record
- Meyer: I accept 1) and I am skeptical of 2) and 3)

You can read more about caller Greg and Hox gene duplication at Evolution News.

UK NHS creates taxpayer-funded sperm bank for lesbians and single mothers

August 5, 2014 | by Wintery Knight | Link | Original Link

Young UK socialists rejoice over Maggie Thatcher's death
From the UK Daily Mail. (H/T ECM)

Excerpt:

> Britain is to get its first NHS-funded national sperm bank to make it easier for lesbian couples and single women to have children.
>
> For as little as £300 – less than half the cost of the service at a private clinic – they will be able to search an online database and choose an anonymous donor on the basis of his ethnicity, height, profession and even hobbies.
>
> The bank, which is due to open in October, will then send out that donor's sperm to a clinic of the client's choice for use in trying for a baby.
>
> Heterosexual couples will also be able to benefit, but the move – funded by the Department of Health – is largely designed to meet the increasing demand from thousands of women who want to start a family without having a relationship with a man.
>
> […]The National Sperm Bank will be based at Birmingham Women's NHS Foundation Trust, which currently runs an existing NHS fertility clinic and recruits sperm donors from the local population.
>
> Funded by a £77,000 Government grant, the bank will be run by the National Gamete Donation Trust (NGDT) which this year received an additional £120,000 of public money to organise egg and sperm donation.
>
> Over the next three years the NGDT aims to recruit at least 1,000 men and collect sufficient donations for the sperm bank to meet demand.

> **Laura Witjens, NGDT chief executive, said: 'There are people who are medically infertile or practically infertile – they want to use donation services in the UK but can't do so because there isn't enough donated sperm.**
>
> **'The [demand from] same-sex couples and single women has grown exponentially. It's become more socially acceptable to say, I haven't found a guy yet, don't want to wait for him, still want a child.'**
>
> **She added: 'The aim is that we will have enough surplus sperm so that we will be able to set up a service for people like single women and same-sex couples.'**

Keep in mind that in the UK, the NHS allows free IVF already – including for lesbian couples and single mothers.

Excerpt:

> **Five thousand fatherless children have been born to lesbian couples and single mothers following fertility treatment in the past decade, the Daily Mail can reveal.**
>
> **The figure emerged on the day that it was announced that lesbians and older women are due to get free IVF on the taxpayer.**
>
> Women aged 40 to 42 will qualify for state-funded fertility treatment for the first time, according to the guidelines from the health spending watchdog NICE. Previously, the watchdog did not recommend IVF on the NHS for the over-39s.
>
> And – despite fears the cash-strapped health service cannot afford extra burdens – women in same-sex relationships with proven infertility will also be able to get free IVF. Up until now, lesbian couples have had to pay privately for such treatment.
>
> […]**The requirement that fertility doctors consider a child's need for a male role model before giving IVF treatment or facilitating insemination was axed.**
>
> **It was felt that the law discriminated against singletons and lesbian couples. Since that year, the total number of babies created without a father has almost quadrupled from 312 to 1,124.**

I know that my friends in the UK are very proud of their health care system, but for those of us who are free market capitalists, we understand that whatever the government nationalizes will be used to buy votes. And that's exactly what's happened in the NHS. In the free market system, people have to PAY for health care, and that means that they don't get frivolous goodies that have nothing to do with health care. But in the UK, health care isn't about health care – it's about buying votes. So old people who need medical treatment die waiting for it, but young women can get free breast enlargements, nose jobs and tummy tucks.

The UK Daily Mail explains:

> **Women are persuading doctors to perform free cosmetic surgery on the NHS by exaggerating their unhappiness with their looks.**
>
> **New research reveals that surgeons are being cajoled into offering patients thousands of pounds worth of treatment they do not need. It exposes the lengths to which some women go to persuade surgeons to operate on them for nothing – using ploys such as unflattering make-up and clothing.**
>
> **Among the operations being offered free are tummy tucks, breast implants and nose jobs.**
>
> Today surgeons claim the soaring demand for cosmetic surgery on the NHS is putting a huge strain on resources. They say many patients are placing doctors in an impossible position by refusing to accept they cannot have free surgery.
>
> […]Top 10 operations
>
> Most requested cosmetic surgery on the NHS:
>
> 1: Tummy tucks
>
> 2: Mole removal
>
> 3: Breast enhancement
>
> 4: Scar removal
>
> 5: Nose job
>
> 6: Breast reduction
>
> 7: Acne scar removal
>
> 8: Correcting breast asymmetry
>
> 9: Ear pinned back
>
> 10: Removal of bags under eyes

Why is this happening? Because when government takes over areas of the private economy, it becomes about buying votes from voters want free goodies paid for by their neighbors. It's not just cosmetic surgery – abortions are taxpayer-funded in the NHS as well. And not just one abortion, but *multiple abortions*. It's perfect and there are no losers. Except for the people being aborted, the people who pay into the system and die waiting for surgery, the men who have to pay taxes and force their wives to work to make ends meet and the fatherless children raised by lesbians and single mothers. Oh, and of course sex-change operations are free in the UK, as are sex-selection abortions. This is what socialized "medicine" really looks like. As you can tell, the social programs seem to be especially targeted to women voters. It especially rewards those who are irresponsible and reckless.

Do you favor government taking over health care in the United States? Then you better know what you are asking for.

Woman who had sex with 18 different men shocked that men don't want to marry her

August 5, 2014 | by Wintery Knight | Link | Original Link

Does being a virgin before marriage affect marital stability?
Sunshine Mary linked to a post from Reddit by a 32-year old "progressive" woman who is surprised that 15 years of sleeping around with 18 different guys is not attractive to marriage-minded men.

Excerpt:

> My parents are first generation immigrants. I have a younger brother and younger sister. In my family I was always the rebellious one; I would often challenge my parents. My family was very strict, when it came to dating and my siblings usually fell in line. However, I would challenge that norm.
>
> My brother and sister were very repressed with their sexualities as a result, while I lost my virginity at 17 to my then boyfriend. While my brother and followed the traditional Indian path. My brother ended up not having any sexual contact with a girl until he got married at 25 (arranged marriage) and now they have a child together. My sister (too never kissed a boy) has recently gotten married too at 24 with an Indian boy she met at our Temple (both parents approved).
>
> I live in LA, a city where both men and woman tend to marry a bit later in life, and yet I still spent the last years of my 20's feeling that somehow, I'd messed up. I had followed the wrong trail and thus, my "important-life-moments" timeline was off. Even with my more progressive friends it began slowly at first, when I

> was 27 … an engagement post on Facebook, an invite to a wedding—it was happening. People I knew were beginning the next stage of life and saying "I do."
>
> Throughout my whole life I never really dated any Indian guys; I exclusively dated white guys. However now I realize more than ever that the guys I dated never really took me seriously. They never really viewed me as someone they would eventually marry. I was always just some exotic fun. This part was definitely a realization that has hurt me to the core. I didn't actually do it to spite Indian men or anything like that. I did what a lot of my white female friends did; I thought I was the same as them, but that could be farther from the truth. Most white guys I ran into wanted white wives.
>
> I am now 32, and seems like everyone in my family has lapped me. I too want a family a marriage. However, now my chance of finding someone is gone. At my age getting an arranged marriage or finding another Indian man to marry me is out of the question. Majority of Indian guys usually get married pretty early. Often either to another Indian girl they meet here, or they go back to India for an arranged marriage. My parents have tried signing me up for a matrimony site, but of the guys I'd meet they would be turned off by my history (drink/eat meat/not a virgin).
>
> […]Most of my relationships have been long term I have only been with 18 guys and I have been sexually active since I was 17 years old.

She has only had steady sexual relationships with 18 guys in 15 years! That's not a lot. Is it?

Let's see what Sunshine Mary says first:

> However, the more I think about it, the more it seems to me that articles like hers are a *good* thing simply because they expose the lie. Feminists have sold young women a bill of goods, that they can live like men, work like men, have sex like men, and then turn back into women when they feel like it. We laugh at a woman like this sometimes and make fun of her and say, "Didn't she know that she'd end up like this?"
>
> No, she *didn't* know that. That's because when you are 17 years old, you don't know much, especially in this culture of extended adolescence. And when you have been told from a very young age that, as a girl, it is your destiny to Have It All exactly When You Want It, I'm sure it is very baffling to find yourself in your thirties with no husband and none in sight, with the dawning realization that your job and lonely apartment are not nearly as fulfilling as being a wife and mother would have been.
>
> […]Personally, I feel no joy in this woman's pain. I don't think a White Knight should ride in to save her because I think she should suffer the natural consequences of her decisions so that other young women may see and learn from her errors, but I take no pleasure in the fact that she will have this lot in life.

> However, what most of us don't seem to understand is that **young women make the terrible choices that they are making because they are told from an early age that these are actually *good* choices.** Some girls are able to resist that message, which saturates every aspect of the media and schools, but most girls aren't, and they don't develop the necessary wisdom until it is too late.

Emphasis hers. And now my turn.

Let me tell you what I think awaits a man who marries a woman like that, who spent her 20s hooking up with hot guys who had no interest in marriage and no demonstrated ability to protect, provide and lead on moral/spiritual issues. She will have convinced herself that she is more attractive than she really is because in her mind she deserves a man as attractive as these men. What other criteria is there for a man? It's all appearances. I therefore do not recommend that any man marry this woman as she is now. What men need in marriage is respect, affection, affirmation and approval. A woman with a background like this will not have the trust and vulnerability that a marriage-minded man wants. The only way to fix this shattered trust is a long period of chastity. She must choose to form relationships with good protector / provider / moral leader / spiritual leader men and to support those men. That is the only way to fix the damage of promiscuity, if it even can be fixed.

A man can sense how trusting and vulnerable a woman is by how much she trusts and encourages him in his plans. If a woman is constantly putting him down, calling him names, and making excuses for why she doesn't have to care about his needs and feelings, then that's just her past promiscuity showing itself. Virgins with good relationships with their fathers don't put men down like that – they choose good men who are doing good things and they build them up. My recommendation for women who realize that they are making bad choices with men and being negative about the men they choose is to look in the mirror and acknowledge that *they are the problem.* The solution, then, is to find a good man and work hard at being submissive and supportive, but chastely. Stop choosing men with motorcycles. Stop choosing atheists. Stop choosing drunkards. Stop choosing men who are pro-abortion and pro-gay-marriage. Stop choosing men who want bigger government. Just stop it.

That's the advice I would give this woman. Choose men who can do the work that men do in a marriage. Find out what a man's plan is. Build the skills he needs for his plan. Marry him.

New study: hobbit fossil re-classified as modern human

August 6, 2014 | by Wintery Knight | Link | Original Link

From Phys.org, a sober revision about a fossil discovery that received a lot of attention when it was announced. (H/T Lindsay)

Excerpt:

> In October 2004, excavation of fragmentary skeletal remains from the island of Flores in Indonesia yielded what was called "the most important find in human evolution for 100 years." Its discoverers dubbed the find *Homo floresiensis*, a name suggesting a previously unknown species of human.
>
> Now detailed reanalysis by an international team of researchers including Robert B. Eckhardt, professor of developmental genetics and evolution at Penn State, Maciej Henneberg, professor of anatomy and pathology at the University of Adelaide, and Kenneth Hsü, a Chinese geologist and paleoclimatologist, suggests that the single specimen on which the new designation depends, known as LB1, does not represent a new species. Instead, it is the skeleton of a developmentally abnormal human and, according to the researchers, contains important features most consistent with a diagnosis of Down syndrome.
>
> "The skeletal sample from Liang Bua cave contains fragmentary remains of several individuals," Eckhardt said. "LB1 has the only skull and thigh bones in the entire sample."
>
> No substantial new bone discoveries have been made in the cave since the finding of LB1.
>
> Initial descriptions of *Homo floresiensis* focused on LB1's unusual anatomical characteristics: a cranial volume reported as only 380 milliliters (23.2 cubic inches), suggesting a brain less than one third the size of an average modern human's and short thigh bones, which were used to reconstruct a creature standing 1.06 meters (about 3.5 feet tall). Although LB1 lived only 15,000 years ago, comparisons were made to earlier hominins, including *Homo erectus* and *Australopithecus*. Other traits were characterized as unique and therefore indicative of a new species.
>
> A thorough reexamination of the available evidence in the context of clinical studies, the researchers said, suggests a different explanation.
>
> The researchers report their findings in two papers published today (Aug. 4) in the *Proceedings of the National Academy of Sciences*.

So, it used to be a hobbit, but further study shows it's a modern human.

Let's take a look at what the atheist naturalist Darwinists on talkorgins.org think it is.

They write:

> Modern humans arrived on Flores between 55,000 and 35,000 years ago, and presumably interacted with *floresiensis*, though there is no evidence of this at Liang Bua. However **Indonesian folklore** tells of creatures called Ebu Gogo which were small, inarticulate, and walked with an odd gait. This sounds remarkably suggestive of *floresiensis*, but it could easily be coincidence – if *floresiensis* had been found in Ireland, we'd possibly be wondering if they were **leprechauns**.
>
> […]Some creationists are predicting that [further studies] will show *floresiensis* to be modern humans, but if, as Brown et al. believe, they descended from *Homo erectus*, the mtDNA of *floresiensis* should be even more different from modern humans than the Neandertals were.

Talk Origins Dot Org. Folklore. Leprechauns. Star Trek.

UPDATE: Evolution News has more, and it's even worse than I implied here.

Are amnesty supporters willing to house illegal immigrants?

August 6, 2014 | by Wintery Knight | Link | Original Link

From Freedom Outpost.

Excerpt:

> Dan Joseph of MRC TV visited Oldtown Alexandria, Virgina, whose demographics are largely liberal, and asked residents to sign a petition supporting bringing illegal immigrant children to their city.
>
> The ones who agreed were also asked to sign another petition agreeing to house an illegal immigrant child in their own home or apartment.
>
> As you can imagine, their ideology did not go over well with their practice.
>
> There were several people that were not interested in the first petition, though there were several who were.
>
> When it came to the second petition, there didn't seem to be anyone that wanted to take in illegal aliens.
>
> One of the funnier spots was around the 1:20 mark where Dan said that the illegals didn't eat that much, but "were members of gangs." That was not convincing enough to house any of them according to the young woman who signed the first petition.
>
> One gentleman who signed the first petition was asked to house an illegal alien and he said, "No, no, I live at home with mom."
>
> One lady said that "in spirit" she agreed with the petition, but that it was "a little too vague." You think? At least she was attempting to think, though I don't know about that whole "spirit" thing.
>
> Not one of the people that signed the petition, which would cost them an enormous amount in tax dollars, were willing to take care of one of the illegals coming across the border…. *not one*!

That's one case of liberal hypocrisy.

Here's another one:

There's two. Are there any more?

Do As I Say Not As I Do

I had a long drive on the way to my parents' house for Christmas and I decided to listen to the audio book version of Peter Schweizer's 2004 book "Do As I Say Not As I Do". In that book, he profiles a number of leftist public figures, and he discovers that leftists don't practice what they preach, because even they know that leftist ideas *don't actually work*. I really recommend the book, so let's take a closer look at it and you'll see why you

should read it, too.

Here's a 32 minute 2011 lecture about the book:

And here's an interview with the author from FrontPage magazine.

Excerpt:

> **FrontPage:** Give us some of the best examples of the gulf between some liberals' social criticisms and the ingredients of their private lives. Give us some insights, for instance, into the likes of Noam Chomsky, Michael Moore, Cornel West, Hillary Clinton, Ted Kennedy and Barbra Streisand.
>
> **Schweizer:** Looking for liberal hypocrisy is, as they say in the military, a target-rich environment. Noam Chomsky, for example, has attacked wealthy Americans who set up trusts to avoid paying inheritance taxes. But this self-professed "radical socialist" has a tax attorney and did the very same thing. (When I asked him about this hypocrisy he said it was okay because he and has family have been working on behalf of suffering people all these years.)

> Michael Moore's hypocrisy is pathological. He has said numerous times that he doesn't own a single share of stock and that capitalism is not acceptable "on any level." And yet, I found that, according to tax returns filed with the IRS, he has owned shares in Halliburton, numerous oil companies, defense contractors and other multinationals through a tax shelter. When it comes he race he's also wildly hypocritical. He says that Americans who happen to live in largely white neighbhorhoods do so because they are "racists." But he lives in Central Lake, Michigan, which according to the U.S. Census has more than 2,500 residents and not a single black person in the entire town.
>
> Cornel West has numerous times condemned middle class blacks that abandon the "chocolate cities" for the "vanilla suburbs" but guess what, his flavour of choice is vanilla, too.
>
> Ted Kennedy likes to pose as the Robin Hood of the Senate, forcing wealthy Americans to pay their taxes to help the poor. But I discovered that Kennedys record of actually paying taxes is horrible. Tax the inheritance tax. He says that Americans should pay 49% to the IRS when they die in the name of "social justice." But according to public records, the Kennedys have almost completely avoided contributing to "social justice" by placing their assets in trusts that are located overseas. The Kennedys, over the past thirty years, have paid less than 1% in inheritance taxes on more than $300 million. Ted Kennedy, like Hillary Clinton and George Soros, loves higher taxes. On other people.

And:

> **FrontPage:** Why do you think people are drawn to leftist ideals and what kind of people are they? Self-contempt appears to be a common ingredient, no?
>
> **Schweizer:** Yes, self-contempt is a big part of it. Dietrich Bonhoeffer, the great

> German pastor who stood up to Hitler, wrote a book about “cheap grace.” Liberals are guilty of cheap grace in the political sense. They feel guilty and their form of penance is embracing the destructive ideas of the progressive faith. But it’s cheap grace because as I show it the book, they don’t actually change the way they live. I think that the religious comparison makes sense because in many respects the modern day left represents a religious movement. They are motivated by a sense of sin, guilt, and the need for salvation and absolution in the political sense. Socialism offers salvation to them. Of course, they don’t actually plan to live like socialists.

I would really recommend taking a look at this book. It’s similar to Paul Johnson’s “Intellectuals” if you’ve ever read that, but it’s better.

Don Johnson: six reasons why people reject Christianity

August 6, 2014 | by Wintery Knight | Link | Original Link

Here's a post on practical evangelism by Christian scholar Don Johnson.

His list of reasons why people often reject Christianity:

1. Christians behaving badly
2. Disappointment with God
3. Weak or absent father
4. Social pressure
5. Cost of discipleship
6. Immorality (especially sexual immorality)

And here's the detail on #6:

> Of all the motivations and reasons for skepticism that I encounter, immorality is easily the most common. In particular, sexual sin seems to be the largest single factor driving disbelief in our culture. Brant Hanson calls sex "The Big But" because he so often hears this from unbelievers: "'I like Jesus, BUT…' and the 'but' is usually followed, one way or the other, with an objection about the Bible and… sex. People think something's deeply messed-up with a belief system that says two consenting, unmarried adults should refrain from sex." In other words, people simply do not want to follow the Christian teaching that sexual intercourse should take place only between and man and woman who are married, so they throw the whole religion out.
>
> The easiest way to justify sin is to deny that there is a creator to provide reality with a nature, thereby denying that there is any inherent order and purpose in the universe.
>
> Aldous Huxley admitted that this is a common reason for skepticism:
>
> I had motives for not wanting the world to have a meaning; consequently I assumed that it had none and was able without any difficulty to find satisfying reasons for this assumption…. Those who detect no meaning in the world generally do so because, for one reason or another, it suits their books that the world should be meaningless. …
>
> For myself as, no doubt, for most of my contemporaries, the philosophy of meaninglessness was essentially an instrument of liberation. The liberation we desired was …liberation from … a certain system of morality. We objected to the morality because it interfered with our sexual freedom…. There was one admirably simple method in our political and erotic revolt: We could deny that the world had any meaning whatsoever. Similar tactics had been adopted during

> the eighteenth century and for the same reasons. (Ends and Means, 270-273)
>
> Indeed, similar tactics have been used extensively up to the present day. If you are looking for two great resources that document the extent to which the work of the world's "great" atheistic thinkers has been "calculated to justify or minimize the shame of their own debauchery," (Spiegel, 72) I recommend *Intellectuals* by Paul Johnson and *Degenerate Moderns: Modernity as Rationalized Sexual Misbehavior* by E. Michael Jones. The bottom line is that these skeptical scholars didn't reach their conclusions by following the evidence where it led. They didn't "discover" that the world was meaningless and then proceed to live accordingly. They lived sinful lives (usually involving some type of sexual deviancy) and then produced theories that justified their actions.

It's important to understand that an atheist is not identical to a Christian, except not religious. There is something else going on in their minds when they reject very obvious evidences like the origin of the universe, the cosmic fine-tuning, the origin of life, the Cambrian explosion, the habitability arguments, etc. The something else that is going on is hinted at when you look at atheist attitudes to abortion. According to a recent survey of atheists, 97% of them were pro-abortion!

What kind of person likes abortion? The kind of person who wants to be sexually active with no consequences, even if it means taking someone else's life. The desire to do as they please and retreat from obligations to others is the key. Now dispensing with God and his obligations is not an unreasonable view if there is no evidence for God, but it does provide a motive for people to not look for that evidence if happiness is their main goal. When I discuss these issues with atheists, I find that no work has been done to read anything. Not even debates, where there are two sides. They don't want to hear the case for Christian theism, and they work hard to avoid stumbling across it by accident, too.

God and the cosmic authority problem

Tough Questions Answered has a quote from Christian philosopher Paul Moser that I think is relevant:

> It would be a strange, defective God who didn't pose a serious cosmic authority problem for humans. Part of the status of being God, after all, is that God has a unique authority, or lordship, over humans. Since we humans aren't God, the true God would have authority over us and would seek to correct our profoundly selfish ways.

So we're not dealing with unbiased truth-seekers here. The goal might not always be sex, but let's be honest. Who wants to have to spend time reading the Bible, praying, going to church and reading thick books by Stephen C. Meyer, Michael Licona and Hugh Ross so that we can answer questions? No one. Who wants to give up premarital sex so that we can create a stable marriage for children so they can grow up in a safe place where knowing God is natural and easy? No one. We just don't want to have to do stuff for God, even if it's good stuff. We don't want to have build a life that is a testament to God's

existence and character, especially if it means that other people will think that we are weird and maybe even a bit mean. We want to do what we want to do instead, and be liked by other people.

That's the real challenge of Christianity: setting aside what you wanted to do, and letting God be your customer, instead. You'd be surprised how many Christians aren't comfortable with the idea of serving God and being viewed in a bad way by non-Christians. They aren't OK with the self-sacrifice, and they are really not OK with the social disapproval. It's hard to be chaste, and to be known to be chaste by your peers, for example. Much easier to just give in and do what everyone else is doing.

Let's illustrate with C.S. Lewis

And here's a relevant quote from C.S. Lewis' "The Screwtape Letters" to illustrate:

> You must have often wondered why the enemy [God] does not make more use of his power to be sensibly present to human souls in any degree he chooses and at any moment. But you now see that the irresistible and the indisputable are the two weapons which the very nature of his scheme forbids him to use. Merely to over-ride a human will (as his felt presence in any but the faintest and most mitigated degree would certainly do) would be for him useless. He cannot ravish. He can only woo. For his ignoble idea is to eat the cake and have it; the creatures are to be one with him, but yet themselves; merely to cancel them, or assimilate them, will not serve.... Sooner or later he withdraws, if not in fact, at least from their conscious experience, all supports and incentives. He leaves the creature to stand up on its own legs—to carry out from the will alone duties which have lost all relish.... He cannot "tempt" to virtue as we do to vice. He wants them to learn to walk and must therefore take away his hand.... Our cause is never more in danger than when a human, no longer desiring, but still intending, to do our enemy's will, looks round upon a universe from which every trace of him seems to have vanished, and asks why he has been forsaken, and still obeys.
>
> — Uncle Screwtape, in The Screwtape Letters

I'm not a big fan of Lewis, but I think he is onto something there. That's really what the Christian life is like, and no wonder more people don't choose it. Who wants to do your duty for God, as part of a relationship with him, in a universe that seems so unfair? It's a tall order, and most people prefer to do their own thing instead of building something nice for God with their lives.

Dartmouth College won't allow female student who is being stalked to arm herself

August 7, 2014 | by Wintery Knight | Link | Original Link

Fox News reports on a story that shows you where the real war on women is. (H/T Lindsay)

Excerpt:

> A 20-year-old Dartmouth student says she may have to give up her Ivy League dream and drop out of school because the prestigious college won't allow her to carry a gun — to protect herself against a predator.
>
> Taylor Woolrich, a junior, says Dartmouth administrators told her they won't let her carry a gun on campus, even though she lives in fear of a man who has been stalking her since she was a high school student in San Diego.
>
> "It's absolutely unfair," Woolrich said about her attempts to have the school make an exception to its weapons ban. "It's one of the hardest things I've had to deal with."
>
> Woolrich was 16 years old and working in a San Diego café when she says a man came in to buy coffee and then kept returning throughout the day, staring at her for long periods of time and trying to flirt with her. The man, 67-year-old Richard Bennett, kept this up for days, she says, even sitting outside the store for an entire day and then following her home, demanding that she talk to him and saying he was "trying to protect her."
>
> She filed a restraining order, but it did little to keep Bennett away. Woolrich says he constantly harassed her during her first two years at Dartmouth, stalking her on social media and sending messages in which he "promised" to fly across the country to see her at college.
>
> "I thought they were empty threats, but when I came home from school last summer, he was at my front door within eight hours of my plane landing," she said. "That's when I realized how serious it was."
>
> **Woolrich and her family called the police, and Bennett was arrested. A search of his car uncovered a slip noose, a knife, gloves and other items.**

And:

> But Dartmouth administrators told her she was "absolutely not" allowed to carry a weapon on campus. She says she tried to plead her case and was told to speak with several campus officials, all of whom provided little to no help.
>
> "There's no option. There's no one to go to. They don't want to hear my case," she said.

> Many colleges across the country have banned guns on campus to prevent mass shootings and accidental shootings by irresponsible or inebriated students. But the pro-gun rights Crime Prevention Research Center, in a study published on Monday, said there have been no reported problems or issues with college-age permit holders on campuses in the nine states – Colorado, Florida,Wisconsin, Utah, Pennsylvania,Oregon, Mississippi, Kansas and Idaho – whose laws mandate that students and others be permitted to carry concealed handguns on public college grounds.
>
> "There's this fear about the possibility of students causing problems, but people talk about these things without actual examples," the center's president, John Lott, told FoxNews.com. "By far, the safest course of action is to carry a gun for protection, especially for female victims."
>
> "[Woolrich] has legitimate concern," he added. "There's only so much a restraining order can do."

Nothing to be concerned about, say the Darmouth College administrators. After all, we wouldn't want anyone to be shot. Guns are so bad! But I've noticed that some people agree with the Dartmouth administrators, and think that it's better for this woman to be raped and murdered, than for her to wave a handgun around to ward off her attacker. Now I disagree with these people, and I think that women should be *encouraged* to own guns, because they typically have less upper body strength than men, and guns equalize that. If anyone should be carrying a gun for self-defense, it's a woman.

Let me explain again how gun ownership deters criminals from committing crimes, by appealing to academic studies.

A quick refresher on why people own guns

People own guns so that they deter criminals and reduce the crime rate in their communities. The more guns there are in the hands of law-abiding citizens, the lower the crime rate goes, because criminals don't like being shot at by their crime victims.

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

Here is a paper by Dr. Malcolm that summarizes one of the key points of her book.

Excerpt:

> Tracing the history of gun control in the United Kingdom since the late 19th century, this article details how the government has arrogated to itself a monopoly on the right to use force. The consequence has been a tremendous increase in violent crime, and harsh punishment for crime victims who dare to fight back. The article is based on the author's most recent book, Guns and

> Violence: The English Experience (Harvard University Press, 2002). Joyce Malcom is professor of history at Bentley College, in Waltham, Massachusetts. She is also author of To Keep and Bear Arms: The Origins of an AngloAmerican Right (Harvard University Press, 1994).
>
> Upon the passage of The Firearms Act (No. 2) in 1997, British Deputy Home Secretary Alun Michael boasted: "Britain now has some of the toughest gun laws in the world." The Act was second handgun control measure passed that year, imposed a near-complete ban on private ownership of handguns, capping nearly eighty years of increasing firearms restrictions. Driven by an intense public campaign in the wake of the shooting of schoolchildren in Dunblane, Scotland, Parliament had been so zealous to outlaw all privately owned handguns that it rejected proposals to exempt Britain's Olympic target-shooting team and handicapped target-shooters from the ban.

And the result of the 1997 gun ban:

> The result of the ban has been costly. Thousands of weapons were confiscated at great financial cost to the public. Hundreds of thousands of police hours were devoted to the task. But in the six years since the 1997 handgun ban, crimes with the very weapons banned have more than doubled, and firearm crime has increased markedly. In 2002, for the fourth consecutive year, gun crime in England and Wales rose—by 35 percent for all firearms, and by a whopping 46 percent for the banned handguns. Nearly 10,000 firearms offences were committed.
>
> […]**According to Scotland Yard, in the four years from 1991 to 1995 crimes against the person in England‟s inner cities increased by 91 percent. In the four years from 1997 to 2001 the rate of violent crime more than doubled. The UK murder rate for 2002 was the highest for a century.**

I think that peer-reviewed studies – from Harvard University, no less – should be useful to those of us who believe in the right of self-defense for law-abiding people.

A more recent study – from 2014

A new study that was in the news confirms these findings. Newsmax reported on it.

Excerpt:

> A recent study showing a reverse correlation between concealed weapons and murder rates has renewed the contentious national debate about the effect of gun controls on violent crime.
>
> Reason magazine reported last week on economist Mark Gius' study of gun controls, published in the journal Applied Economics Letters showing states with restrictions on concealed weapons had higher gun-related murder rates than other states.

> The study looked at the effects on murder rates of both state-level assault weapons bans and concealed weapons restrictions from 1980 to 2009.
>
> […]The findings come as A 2007 study has been also getting a new look from those who dispute gun control efforts aimed at stemming gun violence, Boston magazine reported last summer.
>
> In research first published in Harvard's Journal of Public Law and Policy, criminologists Don Kates and Gary Mauser looked at the correlation between gun laws and death rates.
>
> "International evidence and comparisons have long been offered as proof of the mantra that more guns mean more deaths and that fewer guns, therefore, mean fewer deaths," the pair wrote in their introduction. "Unfortunately, such discussions [have] all too often been afflicted by misconceptions and factual error and focus on comparisons that are unrepresentative."
>
> The pair found "correlations that nations with stringent gun controls tend to have much higher murder rates than nations that allow guns."

It's not a reasonable position to think that disarming law-abiding citizens will reduce crime rates. The evidence is against it.

New study: relationships where babies are born before the marriage happens are more unstable

August 7, 2014 | by Wintery Knight | Link | Original Link

From Family Studies.

Excerpt:

> New research on the marital prospects of single mothers published in the August issue of the journal *Demography* has good and bad news… The good news is that biological father marriages are more enduring than stepfather marriages. In other words, saying yes to her daughter's father means that she is more likely to stay married than if she had said yes to someone else. The bad news is that even though she opted for the better bet, the odds are still stacked against her marriage lasting.
>
> […]"Among marriages that involved a black mother and a biological father," she found, "20% had dissolved within five years, and 47% had dissolved within 10 years."

Age and education of the mother did not do much to improve those odds.

More:

> […][V]ery few personal characteristics affected the divorce risk of women of any race in the study. Their husbands' characteristics didn't matter, either. Even though factors like age and education have been shown to matter quite a bit for ten-year divorce rates overall, they didn't make a difference among the women that Gibson-Davis studied: those who gave birth outside of marriage.
>
> […]By showing that a single mother is most likely to marry her child's biological father shortly after giving birth, and that such a marriage is less likely to end in divorce than marriage to another man, Gibson-Davis has provided some limited, encouraging evidence to those championing marriage promotion programs. Nevertheless, she correctly stresses that much work remains for those seeking to encourage single mothers to marry because enduring unions are relatively rare, even among biological parents. I have one window showing me why that is true. There are many others. The bottom line is that post-birth marriages are likely to be more difficult and less stable than others, and strengthening them is indeed an uphill battle.

If you're like me, and you're not having sex until you get married, now you know why. The old ways are best. Besides, when you take sex off the table, how the heck do you get a woman to like you? How does a woman get a man to like her? Oh, I have an idea. Men and women could think about how to show love for each other and how to help each other. Imagine that. That's the way people used to have relationships. You actually had to

put the work in then, and talk about things, instead of just jumping into bed after getting drunk with someone “hawt” that you just met at a party.

Did your science textbook teach that peppered moths prove evolution?

August 7, 2014 | by Wintery Knight | Link | Original Link

Here's a post by Jonathan Wells at Evolution News, which re-caps the history of the peppered moths experiment.

Excerpt: (links removed)

> The peppered moth story is familiar — even overly familiar — to most readers of ENV, so I will summarize it only briefly here. Before the industrial revolution, most peppered moths in England were light-colored; but after tree trunks around cities were darkened by pollution, a dark-colored ("melanic") variety became much more common (a phenomenon known as "industrial melanism"). In the 1950s, British physician Bernard Kettlewell performed some experiments that seemed to show that the proportion of melanic moths had increased because they were better camouflaged on darkened tree trunks and thus less likely to be eaten by predatory birds.
>
> Kettlewell's evidence soon became the classic textbook demonstration of natural selection in action — commonly illustrated with photos of peppered moths resting on light- and dark-colored tree trunks.
>
> By the 1990s, however, biologists had discovered several discrepancies in the classic story– not the least of which was that peppered moths in the wild do not usually rest on tree trunks. Most of the textbook photos had been staged.
>
> In the 2000s the story began disappearing from the textbooks. British biologist Michael Majerus then did some studies that he felt supported the camouflage-predation explanation. But before he died of cancer in 2009, he only managed to publish a report of his study in the Darwin lobby's in-house magazine *Evolution: Education and Outreach*. Now four other British biologists have presented his results posthumously in the Royal Society's peer-reviewed *Biology Letters*. In an accompanying supplement, the authors presented their version of what they call "the peppered moth debacle." And a debacle it certainly is, but not in the way they think.
>
> According to Charles Darwin, natural selection has been "the most important" factor in the descent with modification of all living things from one or a few common ancestors, yet he had no actual evidence for it. All he could offer in *The Origin of Species* were "one or two imaginary illustrations." It wasn't until almost a century later that Kettlewell seemed to provide "Darwin's missing evidence" by marking and releasing light- and dark-colored moths in polluted and unpolluted woodlands and recovering some of them the next day. Consistent with the camouflage-predation explanation, the proportion of better-camouflaged moths

> increased between their release and recapture.
>
> Throughout the 1970s and 1980s, however, researchers reported various problems with the camouflage-predation explanation, and in 1998 University of Massachusetts biologist Theodore Sargent and two colleagues published an article in volume 30 of *Evolutionary Biology* concluding "there is little persuasive evidence, in the form of rigorous and replicated observations and experiments, to support this explanation at the present time." (p. 318)
>
> The same year, Michael Majerus published a book in which he concluded that evidence gathered in the forty years since Kettlewell's work showed that "the basic peppered moth story is wrong, inaccurate, or incomplete, with respect to most of the story's component parts." (p. 116) In a review of Majerus's book published in *Nature*, University of Chicago evolutionary biologist Jerry Coyne wrote: "From time to time, evolutionists re-examine a classic experimental study and find, to their horror, that it is flawed or downright wrong." According to Coyne, the fact that peppered moths in the wild rarely rest on tree trunks "alone invalidates Kettlewell's release-and-recapture experiments, as moths were released by placing them directly onto tree trunks."
>
> In 1999, I published an article in *The Scientist* summarizing these and other criticisms of the peppered moth story, and in 2000 I included a chapter on peppered moths in my book *Icons of Evolution*. Then, in 2002, journalist Judith Hooper published a book about the controversy titled *Of Moths and Men*. Hooper accused Kettlewell of fraud, though I never did; my criticism was directed primarily at textbook writers who ignored problems with the story and continued to use staged photos even after they were known to misrepresent natural conditions.

Jonathan has actually written about a number of misleading things that you may mind in Biology textbooks.

Here are the sections in his book "Icons of Evolution":

- The Miller-Urey Experiment
- Darwin's Tree of Life
- Homology in Vertebrate Limbs
- Haeckel's Embroys
- Archaeopteryx–The Missing Link
- Peppered Moths
- Darwin's Finches
- Four-Winged Fruit Flies
- Fossil Horses and Directed Evolution
- From Ape to Human: The Ultimate Icon

Dr. Wells holds a Ph.D in Molecular and Cell Biology from the University of California at Berkeley.

What to do about Iraq: arm the Kurds and start air strikes against ISIS

August 8, 2014 | by Wintery Knight | Link | Original Link

Map of the Middle East

Fox News reports.

Excerpt:

> Iraqi militants seized control Thursday of the country's largest Christian city — reportedly telling its residents to leave, convert or die — while members of another religious minority remained trapped on a mountain without enough food or water, circumstances that fueled calls for the U.S. and U.N. to get more involved.
>
> […]The takeover in Qaraqoush is the latest in a basket of foreign policy crises testing the Obama administration. Secretary of State John Kerry dropped into Afghanistan unannounced Thursday to meet with feuding presidential candidates, on the heels of a U.S. general's murder at an army training post — while the White House plots its next move in a tense chess match over Ukraine with Russian President Vladimir Putin.
>
> Meanwhile, one U.S. lawmaker is warning that the latest developments in Iraq could become a "genocide," as the Islamic State (IS) — the militant group formerly known as ISIS — continues its march through the north, imposing its brand of Islam on Christians and other minorities.
>
> "Genocide is taking place before our eyes — and on your watch — in Iraq," Rep. Frank Wolf, R-Va., wrote in a letter earlier this week to Obama.
>
> […]In the latest development, IS militants overran a cluster of predominantly Christian villages alongside the country's semi-autonomous Kurdish region,

> sending tens of thousands of civilians and Kurdish fighters fleeing from the area, according to several priests in northern Iraq.
>
> The capture of Qaraqoush, Iraq's biggest Christian city, and at least four other nearby hamlets, brings the group to the very edge of the Iraqi Kurdish territory and its regional capital, Irbil.
>
> The Islamic State has already seized large chunks of northern and western Iraq in a blitz offensive in June, including Iraq's second-largest city of Mosul. The onslaught has pushed Iraq into its worst crisis since the 2011 withdrawal of U.S. troops.
>
> Last week, the Islamic State also seized the northwestern town of Sinjar, forcing tens of thousands of people from the ancient Yazidi minority to flee into the mountains and the Kurdish region.
>
> According to the U.N., between 35,000 and 50,000 fled to nearby Mount Sinjar and other areas, "reportedly surrounded by ISIS armed elements" and lacking water and other aid.
>
> The Washington Post detailed dire circumstances, reporting Thursday that thousands of families hiding on Mount Sinjar are desperate for help and that Iraqi government airdrops of aid are not sufficient.

CNN had some of the details of what ISIS is doing to Christians. (H/T WGB)

Excerpt:

> If you're following the news about ISIS, which now calls itself the Islamic State, you might think you've mistakenly clicked on a historical story about barbarians from millennia ago.
>
> In a matter of months, the group seized territory in both Iraq and Syria and declared an Islamic caliphate, celebrating its own shocking slaughter along the way.
>
> "I don't see any attention from the rest of the world," a member of the Yazidi minority in Iraq told the New Yorker. "In one day, they killed more than two thousand Yazidi in Sinjar, and the whole world says, 'Save Gaza, save Gaza.'"
>
> In Syria, the group hoisted some of its victims severed heads on poles. One of the latest videos of the savagery shows a Christian man forced to his knees, surrounded by masked militants, identified in the video as members of ISIS. They force the man at gunpoint to "convert" to Islam. Then, the group beheads him.

The solution is, of course, to immediately provide the Kurds with relief supplies and to begin air strikes against ISIS.

And CNN says as much:

> "The world now faces two urgent challenges: to prevent the genocide of the Yazidis and to stop ISIS from continuing to conquer swaths of the Middle East,"

> global affairs columnist Frida Ghitis wrote on CNN.com. “Bombing ISIS positions would help save the Yazidis, but supporting the Kurds is key to success on both counts.”
>
> The Iraqi Kurdish army, known as the Peshmerga, has fought ISIS but is “outgunned,” partly because the Iraqi army dropped its weapons “and fled when ISIS rolled in from Syria and captured Mosul,” Ghitis says.
>
> Ghitis wants the United States to help arm the Kurds against ISIS.
>
> […]Filkins notes that Iraq has begun air strikes aimed at helping the Kurds — but, he says, “the Iraqi Army has proved itself utterly ineffectual in combating ISIS.”

The New Yorker has a very good story about a pro-US Iraqi who had to flee Sinjar, a city seized by ISIS.

I remember during the war, which I supported wholeheartedly, the anti-war/isolationist left kept crying for us to have an “exit strategy”. And this is exactly what they meant. They wanted this to happen. They voted for this to happen. You cannot influence the world for good when you pull out of a war, and back away from evils, evils like radical Islam. We caused this, by refusing to stay the course in Afghanistan and Iraq – this is the “exit strategy” of the anti-war left: genocide against minorities by Muslim terrorists. We needed to stay and finish the job.

One other thing. In a situation like this, it’s not Code Pink or some other anti-war group that you call on to solve the problem. Air drops of food and water will be performed by the military. And that’s why we research weapons and fund a defense budget. A lot of people like to talk about problems in the world – especially on the left. But when it comes time to solve them, it often requires the work of brave men, armed and ready for battle.

I would recommend checking out The Weekly Standard podcast to get the real story on this, it’s my favorite political podcast and they have had wall-to-wall foreign policy for the last little while. You won’t have to wait long for them to post an episode, but it’s not up yet as of now (Thursday night).

Should women who get pregnant after premarital sex expect the men to marry them?

August 8, 2014 | by Wintery Knight | Link | Original Link

Mike Adams on abortion: click for larger image.

Professor Mike S. Adams is pro-life, but he posted something on Facebook that I must disagree with.

He posted this:

> Over 80% of post-abortive women said they would have had the baby if the guy had been supportive. Five guys find out their girl is pregnant: The first two pressure abortion, the third walks away or was never present, the fourth sticks around for 80 to 120 days, and the fifth steps up totally. This not a woman's problem. It is a lack-of-manhood problem.

Mike has about 5000 friends, and 44 of them liked it. I would think that most of these people would call themselves pro-life conservatives. But I don't think what he posted promotes the pro-life cause.

I replied to him with this:

> Mike I could not disagree more. It's a woman's problem unless it is rape, since the woman consents to sex with a man she is not married to. In fact, the cause of abortion is YOUR opinion – namely, the opinion that women should not be obligated to be chaste or to think rationally about who they are having sex with. There is a path to marriage that goes through courtship, and that path has a name: self-control. Stop enabling the poor choices of women, because we have to stop the murder of unborn children.

Many of Mike's friends supported him. So I wrote this:

> Wow. I had no idea that so many of Mike's friends think that the Bible is a pack of lies when it says that fornication is morally wrong. I guess you guys aren't Christians then, since you feel so free and easy about revising the Bible when you feel like it.
>
> If fornication is wrong, it's wrong for women AND men. And you don't fornicate and then expect happy outcomes from it. There is a word for a person who sins and then expects a good outcome. A FOOL.

Then Mike replied to me:

> Sorry Wintery. Where I come from the man leads and is, therefore, responsible.

I replied to that with this:

> Mike, I agree with male leading – IF the man is a Christian. But the men that these women chose are not Christians. And you can't expect men to act morally unless they have a theistic framework that grounds morality.
>
> Women should not be told, by you and others, that they can choose to have sex with immoral men and then expect the immoral men to act morally. That is just enabling abortion by justifying a lack of prudence and wisdom. Instead, we should be holding women accountable to choose men who WILL control themselves.
>
> We should not be supporting the fantasy view of love that says that recreational sex magically leads men to commit to protect, provide and lead women for life. That view is neither wise nor Biblical. On the contrary, recreational sex leads men to NOT commit. Women have to learn how to select men, to evaluate them for marriage, and to make them prove themselves. We need to tell men AND women that sex before marriage is morally wrong. And we need to be convincing by showing them how recreational sex does not lead to stable marriages, and puts children, unborn and born, in harm's way. Telling the truth about the danger of premarital sex is the best way to stop the killing of unborn children.
>
> Here's an example to make the point. We do not blame bears for mauling campers. Bears are bears, and they were bears before the campers showed up in their cave. We ought to blame the camper for choosing to wander off the trail and into the bear's den in order to PET THE BEAR. Wild bears may eat free food that is offered to them, but they are not going to let you pet them and hug them. Women, like campers, need to be responsible. They need to choose the right man for marriage. They need to exercise self control. They need to make the man prove his ability to commit and support a family BEFORE they have sex with him. No one hires an employee without understanding what job they need done and then making sure that the candidate they choose can do the job. And that's what we need to tell women.

Obviously, I was a little upset when I wrote that, but I hope it wasn't *too* bad.

So what's the point I was trying to make by being critical of Mike? I think the problem we have today is that men who are pro-life are unwilling to hold women accountable for their own poor decisions about sex and marriage. Basically, conservative and/or Christian men think that women don't need to think through what choices are most likely to avoid abortion and most likely to achieve marriage. These men give tacit approval to the popular trend of trying to achieve marriage through premarital sex (or cohabitation), when the research shows that these behaviors do not result in long-lasting stable marriages. In fact, sex out of wedlock is a good way to get into a situation where an

abortion will occur.

In my view, Mike is inadvertently *encouraging* women to get into the situations where they will be pressured to abort by reinforcing the idea that there is nothing wrong with their plan to achieve marriage by having premarital sex (or cohabitating), and then *expecting* men to respond to their pregnancy by MARRYING them. Mike seems to be telling women that it is normal for them to expect that marriage will follow from premarital sex with men who have not been vetted for the roles of provider, protector and leader As if marriage is natural for men who don't even have jobs and who are surrounded by women willing to have sex with them on the first date. Any man who will have recreational premarital sex with a woman is exactly the kind of person who *will not* commit to lifelong providing and fidelity – he is having sex before marriage because he wants recreation, without the commitment and self-sacrifice that marriage requires. Rationally speaking, it makes no sense for men to buy the cow, and to keep buying the cow with 40 years of labor, when they can get the milk for free. And that's what we need to tell women – think with your minds, not with your emotions.

Here is an interesting statistic from Relevant Magazine:

> [A] recent study reveals that 88 percent of unmarried young adults (ages 18-29) are having sex. The same study, conducted by The National Campaign to Prevent Teen and Unplanned Pregnancy, reveals the number doesn't drop much among Christians. Of those surveyed who self-identify as "evangelical," 80 percent say they have had sex.
>
> […]In addition to having premarital sex, an alarming number of unmarried Christians are getting pregnant. Among unmarried evangelical women between the ages of 18 and 29, 30 percent have experienced a pregnancy (a number that's actually 1 percent higher than among those who don't claim to be evangelical).
>
> According to the Guttmacher Institute, nearly half of all pregnancies in America are unintended. And of those, 40 percent end in abortion. More than 1 million abortions occur in the United States each year. **But perhaps the most disturbing statistic for the Church: 65 percent of the women obtaining abortions identify themselves as either Protestant or Catholic (37 percent Protestant and 28 percent Catholic). That's 650,000 abortions obtained by Christians every year.**

Christian women are not told that premarital sex is wrong by many Christians and conservatives – and out of that refusal by "Christians" and "conservatives" to take a stand, we get 650,000 abortions per year. We need to have more courage to tell women to be more self-controlled and responsible when they choose who to have sex with, and when to have sex. We need to tell women to make good decisions that lead to stable marriages. We need to tell women to study these issues and to support policies that produce strong, moral men who are willing to marry – for example, by reforming education so that our schools produce men who can find jobs, perhaps by having more

male teachers in the classroom. We need to tell women to support policies that make marriage more friendly for men, like abolishing no-fault divorce, and promoting shared parenting. Christians in particular need to counteract the views of love and romance that are prevalent in popular culture with a view of relationships built around chastity and love. Although many people today are uncomfortable with moral absolutes and moral judgments, it would be a good be a good idea for women to promote these things, so that the men they are choosing from are more moral.

In the end, I agree with Mike S. Adams in one respect. Abortion *may* be caused by a lack of manhood problem. Only the lack of manhood doesn't come from the men that women choose to have premarital sex with. The lack of manhood comes from men who refuse to hold women accountable for their own free foolish decisions that put unborn children in harm's way. In addition to the abortion problem that results from those foolish decisions, there is also the explosion in out-of-wedlock births to weigh in the balance. Again, the more people tell women that they should expect men who engage in recreational sex to commit to marriage after premarital sex (or cohabitation), the more fatherlessness we get.

Friday night movie: Five Fingers (1952)

August 8, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB rating: [7.8/10]

And rated 100% at Rotten Tomatoes, and 90% liked it.

Here's the 1952 review from the New York Times:

> Those who may fear that the old days of silken spy films are as dead as the gone days of diamond tiaras and princely diplomacy can now settle back in the comfort and the tingling satisfaction to be had from Twentieth Century Fox "Five Fingers," which arrived at the Roxy yesterday. For here, in this literate entertainment Joseph L. Mankiewicz has made with a cast that might well have been recruited at an embassy function in pre-war Berlin, is as dandy an espionage thriller as ever went through the polished hands of a Grahame Greene or an Alfred Hitchcock—or for that matter, an E. P. Oppenheim.
>
> And what's more, added to the relish of this spicy adventure that is played in a particularly suave and crafty manner by James Mason in the central spy role is the fact that the story of it is almost a literal account of a fantastic piece of spy work that was accomplished in Ankara, Turkey, in 1944. That story has since been recounted by a former attaché of the German Embassy there in a book called "Operation Cicero." It is this book by L. C. Moyzisch upon which the film is based.

And unlike modern movies, the twist ending at the end actually made sense of the biggest unanswered question I had while watching it.

Happy Friday!

Did your science textbook teach that embryo drawings prove evolution?

August 9, 2014 | by Wintery Knight | Link | Original Link

Jonathan Wells, a biologist with Ph.Ds from Yale and UC Berkeley, writes about one example of fake evidence here:

> Charles Darwin thought that "by far the strongest" evidence that humans and fish are descended from a common ancestor was the striking similarity of their early embryos. According to Darwin, the fact that "the embryos of the most distinct species belonging to the same class are closely similar, but become, when fully developed, widely dissimilar… reveals community of descent." [2] To illustrate this, German Darwinist Ernst Haeckel made some drawings in the 1860s to show that the embryos of vertebrates (fish, amphibians, reptiles, birds and mammals) look almost identical in their earliest stages.
>
> But Haeckel faked his drawings. Not only do they distort vertebrate embryos by making them appear more similar than they really are (in a way that Stephen Jay Gould wrote "can only be called fraudulent" [3]), but they also omit classes and stages that do not fit Darwin's theory. *Most significantly, Haeckel omitted the earliest stages, in which vertebrate embryos are strikingly different from each other.* The stage he portrayed as the first is actually midway through development. Yet according to Darwin's logic, early *dis*-similarities do *not* provide evidence for common ancestry.
>
> Haeckel used his faked drawings to support not only Darwinian evolution, but also his own "Biogenetic Law," which stated that embryos pass through the adult stages of their ancestors in the process of development.
>
> …Haeckel's drawings were exposed as fakes by his own contemporaries, and his Biogenetic Law was thoroughly discredited by 20th century biologists. It is now generally acknowledged that early embryos never resemble the adults of their supposed ancestors. A modern version of recapitulation claims that early embryos resemble the *embryos* of their ancestors, but since fossil embryos are extremely rare, this claim is little more than speculation based on the assumption that Darwin's theory is true.

Now the standard response from Darwinists: *no textbooks are still using the fraudulent embryo images*.

You can see the actual faked pictures from the modern textbooks here. These textbooks were being produced as late as 2004, even though the fraud was detected in the 1800s! Is this the vaunted self-correction of science, or science being twisted to support social and political goals?

And this excerpt from that article is interesting:

> Some Darwinists continue to deny that there has been any misuse of Haeckel in recent times. If that is the case, why did Stephen Jay Gould attack how textbooks use Haeckel in 2000? Gould wrote: “We should… not be surprised that Haeckel’s drawings entered nineteenth-century textbooks. But we do, I think, have the right to be **both astonished and ashamed by the century of mindless recycling that has led to the persistence of these drawings in a large number, if not a majority, of modern textbooks!**” (emphasis added) Similarly, in 1997, the leading embryologist Michael K. Richardson lamented in the journal *Anatomy and Embyology*that “Another point to emerge from this study is the**considerable inaccuracy of Haeckel’s famous figures**. These drawings are **still widely reproduced in textbooks** and review articles, and continue to exert a significant influence on the development of ideas in this field.” (emphases added)

Finally, here is a link to the peer-reviewed journal Science, where there is an article talking about the fraudulent embryo drawings.

If this is what you were taught that convinced you of evolution, better take another look at the facts. You’ve been had.

Wayne Grudem debates Richard Glover on the Bible, poverty and foreign aid

August 9, 2014 | by Wintery Knight | Link | Original Link

A great episode of the Unbelievable podcast. This is a great debate. I really enjoyed it. All three speakers were excellent putting forward their points. It's nice to hear an American voice, a British voice and an Australian voice debating an important issue. HIGHLY RECOMMENDED.

Details:

> Wayne Grudem is a theologian known for his conservative approach to both doctrine and economics. His new book "The Poverty of Nations: A Sustainable Solution" (co-authored with economist Barry Asmus) makes the case that pouring aid into developing countries is a failed strategy. Grudem debates whether the Bible supports free market, capitalist economics with Australian economist and theologian Richard Glover who wrote a critique of the book for the Australian Bible Society.

The MP3 file is here.

Summary:

Grudem:

- The Bible speaks to all of life, including economics, stewardship, government
- The study of economics helps us to understand how to take care of the poor
- My job is to apply the teachings of the Bible to all of life

Brierley:

- What's your thesis in the book?

Grudem:

- A good system is one where the poor have the opportunity to earn and save from their labor
- Book is a response to a Kenyan couple Grudem met at a London conference on business and Christianity
- Book is not concerned with how individuals and groups can do charity to help the poor
- Our church already does that and we support individuals and groups doing charity
- The book is concerned with how should nations be transformed in order to grow economically
- What should the laws, policies and cultural beliefs of a nation be in order for it to not be poor?

- The book lists factors that have moved nations from poverty to prosperity in different times and places
- The thesis of the book is this: government should set their people free to be able to produce more
- We advocate freedom in economics: freedom to work, freedom to save, freedom to start businesses
- We believe that this free enterprise view is consistent with the Bible in a number of places
- E.g. – private property is good for prosperity (thou shall not steal) but forbidden by communism

Brierley:

- What about the church sharing in communities in Acts 2 and Acts 4?

Grudem:

- That is not redistribution of wealth among individuals and businesses by a secular government
- Those passages showed that there was voluntary sharing among Christians, which is not communism

Brierley:

- What's wrong with Grudem's book?

Glover:

- The book emphasizes the Bible and the goal is to help the poor in poor countries
- Criticism 1: the book doesn't engage with non-free-market perspectives on economics
- Criticism 2: the book doesn't survey all that the Bible says about economics

Brierly:

- For 1) what is one of the views that is not considered?

Glover:

- Jeffrey Sachs says that nations need a leg up before they can grow economically
- Ha-Joon Chang says that free enterprise was not how the wealthy nations became wealthy

Grudem:

- We do engage with other points of view, especially Jeffrey Sachs in the book
- The trouble with leftist views on economic development is that it does not work in

practice
- NO COUNTRY has even been lifted out of poverty by foreign aid
- He says we don't cite enough from the wisdom literature: we have 64 citations in the index
- He says we don't cite enough from the gospels: we have 42 citations in the index
- He says we don't cite enough from the epistles: we cite 22 of 27 epistles in the index
- Some economists won't criticize cultural and moral values that hurt prosperity
- As Christians, we think that moral and cultural values are part of the problem that needs solving

Brierley:

- What about foreign aid?

Grudem:

- Foreign aid doesn't help: a lot of the money goes into government and rulers can be corrupt
- Instead of encouraging people to start businesses, it tells people to go into government to get aid money
- Economists (lists 3) are saying that foreign aid entrenches corrupt government in power, does no good

Brierley:

- If it's not working, should we keep doing it?

Glover:

- When there is an immediate need, we should do it, even if it is not a long-term solution: we need both

Brierley:

- Should we stop foreign aid completely?

Grudem:

- Voluntary charitable giving from individuals and churches to help poor countries is good
- Me and my co-author are both active on our church board that helps poor countries with urgent needs
- Food and doctors are urgent needs, and we should help, but it doesn't lift countries out of poverty
- We need a long-term solution that helps poor countries produce their own food and

doctors
- We are criticizing 1) government to government aid and 2) IMF/World bank to government aid
- We have had pushback because 500,000 people make a living from this foreign aid industry
- No country has ever been lifted out of poverty into sustainable prosperity
- That's the definition of insanity: continuing to do the same thing that has never worked

Brierley:

- Does the Bible support free enterprise as a way of creating sustainable prosperity?

Glover:

- When I said the Bible was absent from his book, absent was a bad choice of words
- But the hundreds of references he listed were not dealth with *in depth*
- In the Scriptures, God is the one who provides (e.g. – in Ephesians, Sermon on the Mount)
- The Bible is less focused on his people making money, and more focus on sharing basics, like food
- Secular governments should just take it from people who have food and give it to hungry people
- In 2 Cor 8-9, Paul talks about voluntary sharing so everyone will be equal

Brierley:

- Does 2 Cor 8-9 undermine the free enterprise system you champion in the book?

Grudem:

- The sharing in the Bible solves cases of urgent need, it does not lift countries from poverty to sustainable prosperity
- Some older translations say "equality" in 2 Cor 8:13-14, but newer translations (e.g. – ESV) say "fairness"
- The Greek word is translated as "fairly" the only other place it appears in the NT (Col 4:1), in every translation
- God uses the means of human work and productivity to provide (daily bread is baked, doesn't just fall from Heaven)
- In general, there's no provision in Scripture for a person to be dependent on donations for their entire lives
- God promises Israel fields and mountains to tend and mine, but prosperity is from work, not depending on others

Brierley:

- Does the Bible support this focus on work?

Grudem:

- Working is highly praised in Scripture, (lists Bible passages that favor work over dependency)
- Countries that were exposed to this notion of work and productivity have been more prosperous

Glover:

- Jeffrey Sachs and other development economists don't say you can be prosperous through dependence
- They say that it is a necessary part of leading to nations out of poverty into poverty

Grudem:

- It's never worked. What nation has become prosperous through foreign aid?

Glover:

- There are lots of nations, especially in Africa, where foreign aid has helped lift them out of poverty

Grudem:

- Name one country in Africa where foreign aud has lifted them out of poverty into sustainable prosperity

Glover:

- I can't think of one right now.

Grudem:

- Our book contains a map of Africa and we looked at every nation's per capita income
- No nation has been able to rise out of poverty through dependence on foreign aid
- The only close one is Botswana, but they have abundant freedoms, Christian morals, less corrupt government
- So Botswana is the best case and they became prosperous through becoming productive, not foreign aid

Brierley:

- Is he right to say that charity is a short-term solution, but that it's not good long-term for prosperity?

Glover:

- Yes, and work is a very important focus in the Scriptures as he says.
- But since the Fall work has been much harder, and may not have the outcomes that we would like

Grudem:

- I also believe in emergency aid for when catastrophies happen, like floods and famines
- But dependence on foreign aid enriches corrupt rulers and does not create the productivity that leads to sustained prosperity

Brierley:

- Can foreign aid be used to give poor nations a leg up on becoming prosperous?

Grudem:

- Dambisa Moyo, Oxford-educated economist from Zambia, says stop the aid, it's doing more harm than good
- Jeffrey Sachs' view is that foreign aid hasn't worked yet, but just keep trying a bit more
- What works: limited government, rule of law, fair courts, documented property rights, low taxes, stable currency
- People are creative and want to work, we just have to get government out of the way and let people work, earn and save

Brierley:

- Is this free enterprise system supported by the Bible?

Glover:

- The wealthy nations of the world did not become wealthy through productive work and free enterprise policies
- Ha-Joon Chang: free enterprise policies have never brought a country from poverty to wealth
- E.g. – wealth is created through tariffs (not by innovating and by economic freedom?)

Grudem:

- I've read Ha-Joon Chang's book, and his examples are very selective and limited
- Index of Economic Freedom: the freest countries are the most prosperous, the least free countries are the most poor

- When you look at macro data, instead of very selective examples, the free enterprise system is best for prosperity

Glover:

- The book doesn’t do enough to engage with leftist economists (he doesn’t say which ones)
- Just because nations who are free are rich, doesn’t mean freedom causes productivity
- There are parts of the Bible that doesn’t support the free enterprise system (he names none)

Grudem:

- The Bible is focused on work not dependency, and charity not government redistribution
- The best way to help the poor in other countries is by encouraging work and productivity

When the U.S. military retreats: ISIS beheading Christian kids and kidnapping sex slaves

August 10, 2014 | by Wintery Knight | Link | Original Link

Fox News has the story, I doubt the rest of the anti-war leftist news media will cover this story – because they caused it. They wanted it. They lobbied for it.

Excerpt:

> Hundreds of women from the Yazidi religious minority have been taken captive by Sunni militants with "vicious plans," an Iraqi official said Friday, further underscoring the dire plight of Iraq's minorities at the hands of the Islamic State group.
>
> Kamil Amin, the spokesman for Iraq's Human Rights Ministry, said hundreds of Yazidi women below the age of 35 are being held in schools in Iraq's second largest city, Mosul. He said the ministry learned of the captives from their families.
>
> "We think that the terrorists by now consider them slaves and they have vicious plans for them," Amin told The Associated Press. "We think that these women are going to be used in demeaning ways by those terrorists to satisfy their animalistic urges in a way that contradicts all the human and Islamic values."
>
> The U.S. has confirmed that the Islamic State group has kidnapped and imprisoned Yazidi women so that they can be sold or married off to extremist fighters, said a U.S. official who spoke on condition of anonymity because the information came from classified intelligence reports. There was no solid estimate of the number of women victimized, the official said.
>
> Tens of thousands of Yazidis fled when the Islamic State group earlier this month captured the northern Iraqi town of Sinjar, near the Syrian border. The Yazidis practice an ancient religion that the Sunni Muslim radicals consider heretical.
>
> The extremist group's capture of a string of towns and villages in the north has sent minority communities fleeing for their lives. The Islamic state views Yazidis and Shiite Muslims as apostates, and has demanded Christians either convert to Islam or pay a special tax.
>
> About 50,000 Yazidis — half of them children, according to U.N. figures — fled to the mountains outside Sinjar where many of them remain, trapped and running out of food and water. Late Thursday, the U.S. military cargo jets dropped humanitarian aid to the mountains.
>
> Amin's comments were the first Iraqi government confirmation that some women were being held by the group. On Tuesday, Yazidi lawmaker Vian Dakheel made an emotional plea in parliament to the Iraqi government to save the Yazidi people, saying the "women have been sold in a slavery market."

> President Obama said the humanitarian airdrops were made at the request of the Iraqi government as the Islamic State militant group tightened its grip on northern Iraq. In his remarks late Thursday, he mentioned "chilling reports" of fighters with the group "rounding up families, conducting mass executions, and enslaving Yazidi women."

And beheading Christian children, reports CNS News.

Excerpt:

> "Christianity in Mosul is dead, and a Christian holocaust is in our midst," said Mark Arabo, a Californian businessman and Chaldean-American leader. In an interview with CNN's Jonathan Mann, he called what's happening in Iraq a "Christian genocide" and said "children are being beheaded, mothers are being raped and killed, and fathers are being hung."
>
> "Right now, three thousand Christians are in Iraq fleeing to neighboring cities," he told Mann. Arabo is calling on the international community to follow France's lead and offer the Christians of Iraq asylum.
>
> "You're startling me with the severity of what you're describing," the CNN host said. "You said they are — ***beheading children***?"
>
> "They are systematically beheading children," Arabo repeated slowly. "And mothers and fathers. The world hasn't seen an evil like this for generations."
>
> "There's actually a park in Mosul where they actually beheaded children and put their heads on a stick… this is crimes against humanity. They are doing the most horrendous, the most heart-breaking crimes that you can think of."

Meanwhile, Secretary of State John Kerry was seen giving speeches critical of global warming. Priorities. We needed to pull out of Iraq after Bush won the war because we had to focus our government on more important things, like global warming.

I lay these tragedies at the feet of anyone who wanted to retreat from Iraq and Afghanistan. This is what happens when American forces retreat from fighting evil. And make no mistake, these terrorists will be back in America, and this time, they'll have money they seized from Iraqi banks and Stinger missiles they seized from Iraqi forces. And they'll walk right across our southern border with those missiles, too.

I would recommend checking out The Weekly Standard podcast to get the real story on this, it's my favorite political podcast and they have had wall-to-wall foreign policy for the last little while. Bill Kristol has just posted an episode on ISIS.

Can atheists condemn slavery as immoral? Do atheists believe that slavery is wrong?

August 10, 2014 | by Wintery Knight | Link | Original Link

Note: For a Christian response to the complaint that the Bible doesn't condemn slavery, see this article and this article for slavery in the Old Testament, and this article for slavery in the New Testament. These are all by Christian philosopher Paul Copan. You can watch a lecture with Paul Copan on the slavery challenge here, and buy a book where he answers the challenge in more detail. There is also a good debate on whether the Bible condones slavery here, featuring David Instone-Brewer and Robert Price. My post is not a formal logical essay on this issue, it is more that I am outraged that atheists, who cannot even rationally ground objective morality, insist on criticizing the morality of the Bible. I think that atheists who are serious about finding the truth about these issues should check out those links, if they are interested in getting to the truth of these matters.

In other posts, I've argued that without an objective moral standard of what is right and wrong, any judgments about right and wrong are just individual opinions. So, when an atheist says slavery is wrong, what he really means is that he thinks slavery is wrong *for him*, in the same way that he thinks that,say, that chocolate ice cream is right *for him*. He isn't saying what is wrong *objectively*, because on atheism there are no objective moral rules or duties. He is speaking for himself: "I wouldn't own a slave, just like I wouldn't eat broccoli – because it's yucky!". But he has no rational argument against other people owning slaves in other times and places, because their justification for owning slaves is the same as his justification for not owning slaves : personal preference.

So do atheists oppose slavery? Do they believe in an objective human right to liberty? Well, there are no objective human rights of any kind on atheism. Human beings are just accidents in an accidental universe, and collections of atoms do not mysteriously accrue "rights". There is no natural right to liberty on atheism. Now consider abortion, which is arguably very similar to slavery. Most atheists do favor abortion in this time and place. Like slavery, abortion declares an entire class of weaker people as non-persons in order to justify preserving their own happiness and prosperity by means of violence. That's exactly what slavery does, except abortion is worse than slavery, because you actually kill the person you are declaring as a non-person instead of just imprisoning them.

So how many atheists have this pro-abortion view that it is OK to declare unborn children as non-persons so they can kill them?

Well, according to Gallup, the "non-religious" are the group most likely to support abortion. In fact, 68% favor legalized abortion, compared to only 19% who oppose it.

Take a look at the Gallup poll data from 2012:

Americans' Abortion Views, by Education and Religion

With respect to the abortion issue, would you consider yourself to be pro-choice or pro-life?

	"Pro-choice"	"Pro-life"
	%	%
National adults	41	50
No religion	68	19
Catholic	38	54
Protestant/Other Christian	33	57
Postgraduate	58	37
College graduate only	45	53
Some college	41	49
High school graduate or less	33	53

May 3-6, 2012

GALLUP

Most atheists are OK with the strong killing the weak

The Gallup numbers might actually be low, because “No religion” might include people who are spiritual, but not religious. But what about atheists alone?

As a group, atheists tend to be among the most radical supporters of legalized abortion. The Secular Census of 2012 found that 97% of atheists vote for abortion. There are almost no pro-life atheists. Why is it that atheists look at unborn children and think it’s OK to kill them? Well, let’s see what atheists scholars think about morality, and we’ll find out why they think abortion is OK.

Atheist scholars think morality is nonsense

Atheist William Provine says atheists have no free will, no moral accountability and no moral significance:

> Let me summarize my views on what modern evolutionary biology tells us loud and clear — and these are basically Darwin’s views. There are no gods, no purposes, and no goal-directed forces of any kind. There is no life after death. When I die, I am absolutely certain that I am going to be dead. That’s the end of me. There is no ultimate foundation for ethics, no ultimate meaning in life, and no free will for humans, either.

Source: http://www.arn.org/docs/orpages/or161/161main.htm

Atheists Michael Ruse says atheists have no objective moral standards:

> The position of the modern evolutionist is that humans have an awareness of morality because such an awareness of biological worth. Morality is a biological adaptation no less than are hands and feet and teeth. Considered as a rationally justifiable set of claims about an objective something, ethics is illusory. I

> appreciate when someone says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves. Nevertheless, such reference is truly without foundation. Morality is just an aid to survival and reproduction, . . . and any deeper meaning is illusory.(Michael Ruse, "Evolutionary Theory and Christian Ethics," in The Darwinian Paradigm (London: Routledge, 1989), pp. 262-269).

Atheist Richard Dawkins says atheists have no objective moral standards:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won't find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music. (Richard Dawkins, River Out of Eden: A Darwinian View of Life (1995))

Let's take a closer look at Richard Dawkins.

Richard Dawkins and morality

Here's how far Dawkins takes his view that there is no evil and no good:

Richard Dawkins explains morality on atheism
But wait! He goes even further than mere abortion:

So, looking at Dawkins, what kind of ethic can you get from Darwinism and atheism? Survival of the fittest. The strong kill the weak.

Richard Dawkins even advocates for adultery.

Now atheists may feign morality in order to get along with other people in a society that is still anchored in Judeo-Christian values, but they tend to vote for liberal social policies, and they oppose political action by those who still hold to objective morality. So what they are working toward, generally, is less and less influence in politics by those who favor objective human rights, objective moral values and objective moral duties.

So do atheists oppose slavery, or don't they?

I actually don't think that atheists think slavery is morally wrong, although they might personally not want to own slaves in this time and place because slavery is illegal – thanks to Judeo-Christian values. But in other areas, like abortion, we can see that atheists are willing to use violence against the weak to augment their happiness and prosperity. Unborn babies are weak, like slaves. Atheists are willing to kill the weak unborn babies who stop them from pursuing pleasure and prosperity. I don't see how they would have any objections to enslaving other people if they had the strength to do so. In fact, unjust imprisonment and forced labor are happening in atheistic North Korea right now.

But do you know who does oppose slavery enough to do something about it?

Dinesh D'Souza explains:

> Slavery was mostly eradicated from Western civilization–then called Christendom–between the fourth and the tenth century. The Greco-Roman institution of slavery gave way to serfdom. Now serfdom has its problems but at least the serf is not a "human tool" and cannot be bought and sold like property. So slavery was ended twice in Western civilization, first in the medieval era and then again in the modern era.
>
> In the American South, Christianity proved to be the solace of the oppressed. As historian Eugene Genovese documents in Roll, Jordan, Roll, when black slaves sought to find dignity during the dark night of slavery, they didn't turn to Marcus Aurelius or David Hume; they turned to the Bible. When they sought hope and inspiration for liberation, they found it not in Voltaire or D'Holbach but in the Book of Exodus.
>
> The anti-slavery movements led by Wilberforce in England and abolitionists in America were dominated by Christians. These believers reasoned that since we are all created equal in the eyes of God, no one has the right to rule another without consent. This is the moral basis not only of anti-slavery but also of democracy.

And, in fact, you can see Christians pushing the culture hard against abortion today, just as we did with slavery. Defending the weak is what we do. Meanwhile, most atheists think that an unborn child has as much of a right to legal protection as a cockroach.

Conservatives and Christians taking campus discrimination / censorship cases to court

August 11, 2014 | by Wintery Knight | Link | Original Link

And they are winning – as The College Fix reports.

Excerpt:

> They've been ordered not to hand out copies of the U.S. Constitution. They've been denied promotions because of their faith. They've been forced to help pay for abortion-inducing birth control. They've been judged solely by the color of their skin.
>
> And they're fighting back. *And they're winning.*
>
> Conservative and Christian students and professors who have been denied free speech or faced discrimination and religious persecution because of their beliefs have recently enjoyed a string of courthouse victories in what's amounting to something of a banner year for such causes.
>
> There's been at least six big legal wins in as many months.

Here's one of the six that surprised me:

> Last month, the high court gave the evangelical Wheaton College the injunction it wanted against the Affordable Care Act's contraception mandate, setting a national precedent on the matter.
>
> Wheaton was among dozens of Christian and Catholic universities to file suit against the federal mandate, saying they should not be forced to pay for birth control if it violates their religious beliefs. Now the White House is writing new regulations to allow for such exemptions.

Consider Alan Sears and the pro-religious-liberty law firm "Alliance Defending Freedom". ADF is one of the groups who defends the rights of students on campus.

I found a profile of Alan in this Breitbart article.

It says:

> Alan Sears is a committed Christian attorney who served in the Reagan administration, including in the Justice Department, who became increasingly concerned about the ACLU and its leftist allies' success at sterilizing American life of every reference to God, faith, and biblical values. After returning to the private sector, he was recruited by more than thirty Christian leaders to start an organization that would build a nationwide network to fight for religious freedom, the sanctity of life, the importance of marriage, and the rights of parents. The Alliance Defense Fund thus began in 1994.
>
> Fifty years ago, references to faith were widespread in American life, where

> public prayers were common and official communications and presidential speeches would frequently cite the Bible or Christian belief, and such things were not controversial. Now the ACLU and far left has succeeded in giving us so many years of sterile secularism that it has become the new baseline. Many local school boards that once had to be sued by the ACLU to ban singing Christmas carols at a properly named Christmas Concert are now quite content to ban those carols on their own, and to order the concert renamed a Winter Concert.
>
> Now the pendulum is swinging the other way. Instead of an ACLU lawyer suing that school on behalf of some militant atheist parent, now an ADF lawyer is suing the school for telling a Christian student that she cannot draw a picture of Jesus when she's asked to draw someone who is important to her.
>
> Headquartered in Scottsdale, Arizona, Sears has built an organization that is every bit an equal to the ACLU. Its staff of roughly 200 employees includes dozens of lawyers, who coordinate the efforts of over 2,200 "allied attorneys" nationwide, in almost every state of the Union and more than a dozen countries around the globe. To date, these lawyers have contributed an astounding $141 million in pro bono legal work (yes, that means free of charge) to people and organizations involved in legal fights on ADF's issues. These attorneys become part of the Alliance upon completing ADF's weeklong legal training conference. (Full disclosure: I have attended this training academy twice—once as a lawyer in their legal track and once as a journalist in their media informational track.)
>
> ADF also makes grants to support lawyers and scholars for their work on behalf of those issues of faith, life, marriage, and families. And its Blackstone Legal Fellowship program takes over 100 promising law students every year and treats them to nine weeks of excellent food and accommodations over the summer in exchange for spending their days in lectures and seminars on natural law, government, philosophy, and learning key legal doctrines, followed by six weeks of "field work," to equip them for lifelong service of ADF's mission-related issues in whatever field they end up pursuing in their career.

Something to think about if you are a young person. It's a tough thing to make it through secular law school with your faith intact, but if you can, the benefits to all of us can be huge. It's a high-risk, high-reward option for talented young Christians and conservatives to pursue.

Are churchgoing people who accept same-sex marriage really Christians?

August 11, 2014 | by Wintery Knight | Link | Original Link

Here's a bit of research from Mark Regnerus to shed some light on what else they believe. (H/T Chris)

Excerpt:

> Churchgoing Christians who support same-sex marriage are more likely to think pornography, cohabitation, hook-ups, adultery, polyamory, and abortion are acceptable. And it's reasonable to expect continued change in more permissive directions.

> As mainline Protestant denominations increasingly accept the ordination of gay clergy and publicly affirm same-sex unions, the sociologist in me wishes to understand what this development means for people in those denominations. I'm not talking about subtle linguistic shifts. While the difference between speaking of marriage as a "civil contract between a woman and a man" and as "a unique commitment between two people" is obvious to those who pay attention to church documents, the impact of such changes on congregants' attitudes and internalized paradigms—their hearts, I suppose—is seldom considered.
>
> What is the sexual and relational morality of Christians who accept the moral legitimacy of same-sex marriages? Some questions naturally arise. Does adultery mean the same thing for both same-sex and opposite-sex unions? Does it make sense to speak of premarital sex in such a context? Historically, the fear of pregnancy was enough to scare many love-struck Christians into taking things slow, but same-sex pregnancies are an accomplishment, not an accident, and most Christians use contraception now anyway.
>
> Integrating homosexual relationships into Christian moral systems is not simple, and has ramifications for how heterosexual relationships are understood, too. What exactly do pro-same-sex-marriage Christians think about sex and relationships in general?

So he's done some research on this, and here's a snip:

> To do this, I rely on the *Relationships in America* survey, a data collection project I oversaw that interviewed 15,738 Americans, ages 18-60, in early 2014. It's a population-based sample, meaning that its results are nationally representative. The survey asked respondents to indicate their level of agreement or disagreement with these seven statements:
>
> 1. Viewing pornographic material is OK.

> 2. It is a good idea for couples considering marriage to live together in order to decide whether or not they get along well enough to be married to one another.
> 3. It is OK for two people to get together for sex and not necessarily expect anything further.
> 4. If a couple has children, they should stay married *unless* there is physical or emotional abuse.
> 5. It is sometimes permissible for a married person to have sex with someone other than his/her spouse.
> 6. It is OK for three or more consenting adults to live together in a sexual/romantic relationship.
> 7. I support abortion rights.
>
> There is more to sexual and relationship morality than just these seven items, to be sure, but they do offer us a glimpse into how people perceive various practices and relationships. In order to ensure this is not just an exercise in documenting the attitudes of Christians "in name only," I've restricted the analysis to churchgoing Christians—here defined as those who report they attend religious services at least three times a month and who self-identified with some sort of Christian affiliation. And I've restricted the analysis to those who report a position either for or against same-sex marriage. (I've excluded the one-in-four who reported they are undecided.)
>
> […]The table above displays the share of each group who either "agree" or "strongly agree" with the seven statements listed above. **At a glance, there is a pretty obvious fissure between Christians who do and do not oppose same-sex marriage. More than seven times as many of the latter think pornography is OK. Three times as many back cohabiting as a good idea, six times as many are OK with no-strings-attached sex, five times as many think adultery could be permissible, thirteen times as many have no issue with polyamorous relationships, and six times as many support abortion rights. The closest the two come together is over the wisdom of a married couple staying together at all costs (except in cases of abuse).**
>
> Churchgoing Christians who support same-sex marriage look very much like the country as a whole—the population average (visible in the third column). That answers my original question. What would a pro-SSM Christian sexual morality look like? The national average—the norm—that's what.

Click on through for the rest of it.

As a Christian man, my view is that all sex outside of marriage is wrong. When you hear a church-going person talk about changing the definition of marriage and turning a blind eye to cohabitation. divorce, etc. it's important to understand that they are just flat out rejecting the no sex outside marriage view. We now have a view of sex in culture that

“love makes it right”. And now even “marriage is for anyone who loves someone else”. It’s baloney. That’s not the Christian view, and these church-going people ought to know better.

New study: sub-optimal / poor design of the eye / retina isn't really

August 11, 2014 | by Wintery Knight | Link | Original Link

I think this "sub-optimal" argument against a Designer is stupid, because designs are always trade-offs between different quality goals, but just to put this one to bed, here is Evolution News.

Excerpt:

> Now a new paper in *Nature Communications*, "Müller cells separate between wavelengths to improve day vision with minimal effect upon night vision," has expanded upon this research, further showing the eye's optimal design. According to the paper, Müller cells not only act as optical fibers to direct incoming light through the optic nerve, but are fine-tuned to specific wavelengths to ensure that light reaches the proper retinal cells. From the Abstract:
>
> Vision starts with the absorption of light by the retinal photoreceptors — cones and rods. However, due to the 'inverted' structure of the retina, the incident light must propagate through reflecting and scattering cellular layers before reaching the photoreceptors. It has been recently suggested that Müller cells function as optical fibres in the retina, transferring light illuminating the retinal surface onto the cone photoreceptors. Here we show that Müller cells are wavelength-dependent wave-guides, concentrating the green-red part of the visible spectrum onto cones and allowing the blue-purple part to leak onto nearby rods. This phenomenon is observed in the isolated retina and explained by a computational model, for the guinea pig and the human parafoveal retina. Therefore, light propagation by Müller cells through the retina can be considered as an integral part of the first step in the visual process, increasing photon absorption by cones while minimally affecting rod-mediated vision.
>
> (Amichai M. Labin, Shadi K. Safuri, Erez N. Ribak, and Ido Perlman, "Müller cells separate between wavelengths to improve day vision with minimal effect upon night vision," *Nature Communications*, DOI: 10.1038/ncomms5319 (July 8, 2014).)
>
> The paper presents Müller cells as a direct answer to the view that the vertebrate eye has a suboptimal wiring:
>
> [T]he mammalian retina and the peripheral retina of humans and primates are organized in a seemingly reverse order with respect to the light path. This arrangement places the photoreceptors, responsible for light absorption, as the last cells in the path of light, rather than the first. Therefore, the incident light must propagate through five reflecting and scattering layers of cell bodies and neural processes before reaching the photoreceptors. This 'inverted' retinal structure is expected to cause blurring of the image and reduction in the photon

> flux reaching the photoreceptors, thus reducing their sensitivity. It has been recently reported that retinal Müller cells act as light guides serving to transfer light across the retina, from the vitreo-retinal border towards the photoreceptors.

Bookmark it because this is the kind of silly objection to design that they hear on the Discovery Channel, PBS, etc.

Arizona Planned Parenthood clinic failed to report rapist

August 12, 2014 | by Wintery Knight | Link | Original Link

From Life News.

Excerpt:

> A pro-life legal group is calling for a state investigation of an Arizona Planned Parenthood abortion clinic that allowed teen girls to be victimized by statutory rape because it failed to properly report a rapist.
>
> Planned Parenthood abortion clinics have come under fire countless times over the years for not reporting cases of statutory rape to authorities as required by state law. Earlier this year, in Arizona, officials says the abortion giant failed again to provide the proper report to authorities about a victim of a young man who is a serial rapist.
>
> **Not only did Planned Parenthood intentionally fail to report the rape but, in so doing, it allowed the rapist to rape as many as 18 or more teenage girls, authorities say, making it so the abortion company is partially responsible for victimizing them as well.**
>
> In this case, documents obtained from the Pinal County Sheriff's Office allege a counselor at a health clinic intentionally withheld information about an alleged rape from law enforcement personnel, months before others came forward to stop a Poston Butte High School student from attacking more teenagers.
>
> Tyler Kost, 18, is accused of raping or molesting at least 18 girls, most of them fellow classmates at Poston Butte High School. He is being held without bond in the Pinal County jail.
>
> In forensic interviews with Sheriff's Office sex crime detectives, a girl who says she became pregnant after Kost raped her last year visited a Planned Parenthood clinic with her mother on New Year's Eve. According to the report, her mom told the staffer about the sexual assault during the visit.
>
> "The counselor intentionally miscoded the assault as a consensual encounter," the PCSO report states. "The counselor told them that they did not want the hassle of having to report the assault to law enforcement as they were a mandatory reporter."
>
> That's a violation of Arizona law, which requires all suspected sexual abuse incidents be reported to law enforcement.
>
> Last week, Alliance Defending Freedom filed a complaint with the Arizona Department of Health Services that asks the agency to investigate a Tempe Planned Parenthood facility under a new state law that empowers such investigations.

> “Planned Parenthood’s main concern should be the safety of young girls, not the size of its profit margin,” said ADF Legal Counsel Natalie Decker. “Sadly, this is not an exception, and Planned Parenthood is abusing more than just taxpayer dollars. Their complicity in placing young girls at the mercy of adult male sexual predators can’t be ignored, nor should it be allowed to continue.”

Planned Parenthood’s new slogan should be “It’s not worth the hassle to prevent rapes”.

William Lane Craig vs Walter Sinnott-Armstrong: evil, suffering and God's existence

August 12, 2014 | by Wintery Knight | Link | Original Link

This is one the top 4 best debates that William Lane Craig has done in my opinion. (The other two are Craig-Millican debate and the first and second Craig-Dacey debates) This one doesn't seem to get a lot of play on the Internet: there's no video, transcript or anything. But it is a great debate, and on a problem we are all concerned about: the problem of evil and suffering. One other thing – Sinnott-Armstrong is also a very courteous, respectful and intelligent scholar and he is very good at defending his side. This is a very cordial and engaging debate, and because it was held in front of a church audience, it was targeted to laymen and not academics.

The MP3 file is here.

There is also a book based on this debate, published by Oxford University Press. I was actually able to find a PDF of it online. I should also remind people that you can get the wonderful Craig-Hitchens debate DVD from Amazon.com if you are looking for a debate to watch, or show in your church.

The debaters:

- William Lane Craig
- Walter Sinnott-Armstrong

The format:

- WSA: 15 minutes
- WLC: 15 minutes
- Debaters discussion: 6 minutes
- Moderated discussion: 10 minutes
- Audience Q&A: 18 minutes
- WSA: 5 minutes
- WLC: 5 minutes

SUMMARY:

WSA opening speech:

Evil is incompatible with the concept of God (three features all-powerful, all-god, all-knowing)

God's additional attributes: eternal, effective and personal (a person)

He will be debating against the Christian God in this debate, specifically

Contention: no being has *all* of the three features of the concept of God

His argument: is not a deductive argument, but an inductive/probabilistic argument

Examples of pointless, unjustified suffering: a sick child who dies, earthquakes, famines

The inductive argument from evil:

1. If there were an all-powerful and all-good God, then there would not be any evil in the world unless that evil is logically necessary for some adequately compensating good.
2. There is evil in the world.
3. Some of that evil is not logically necessary for some adequately compensating good.
4. Therefore, there can't be a God who is all-powerful and all-good.

Defining terms:

- Evil: anything that all rational people avoid for themselves, unless they have some adequate reason to want that evil for themselves (e.g. – pain, disability, death)
- Adequate reason: some evils do have an adequate reason, like going to the dentist – you avoid a worse evil by having a filling

God could prevent tooth decay with no pain

God can even change the laws of physics in order to make people not suffer

Responses by Christians:

- Evil as a punishment for sin: but evil is not distributed in accordance with sin, like babies
- Children who suffer will go straight to Heaven: but it would be better to go to Heaven and not suffer
- Free will: this response doesn't account for natural evil, like disease, earthquakes, lightning
- Character formation theodicy: there are other ways for God to form character, by showing movies
- Character formation theodicy: it's not fair to let X suffer so that Y will know God
- God allows evil to turn people towards him: God would be an egomaniac to do that
- We are not in a position to know that any particular evil is pointless: if we don't see a reason then there is no reason
- Inductive evil is minor compared to the evidences for God: arguments for a Creator do not prove that God is good

WLC opening speech:

Summarizing Walter's argument

1. If God exists, gratuitous does not exist.
2. Gratuitous evil exists.
3. Therefore, God does not exist.

Gratuitous evil means evil that God has no morally sufficient reason to permit. WSA doesn't think that all evil is incompatible with God's existence, just gratuitous evil.

Everyone admits that there are instances of evil and suffering such that we cannot see the morally sufficient reason why God would allow it to occur.

The claim of the atheist is that if they cannot see that there is a moral justification for allowing some instance evil, then there is no moral justification for that instance of evil.

Here are three reasons why we should not expect to know the morally sufficient reasons why God permits apparently pointless evil.

1. the ripple effect: the morally sufficient reason for allowing some instance of evil may only be seen in another place or another time
2. Three Christian doctrines undermine the claim that specific evils really are gratuitous
3. Walter's own premise 1 allows us to argue for God's existence, which means that evil is not gratuitous

Christian doctrines from 2.:

- The purpose of life is not happiness, and it is not God's job to make us happy – we are here to know God. Many evils are gratuitous if we are concerned about being happy, but they are not gratuitous for producing the knowledge of God. What WSA has to show is that God could reduce the amount of suffering in the world while still retaining the same amount of knowledge of God's existence and character.
- Man is in rebellion, and many of the evils we see are caused by humans misusing their free will to harm others and cause suffering
- For those who accept Christ, suffering is redeemed by eternal life with God, which is a benefit that far outweighs any sufferings and evils we experience in our earthly lives

Arguing for God in 3.

- If God exists, gratuitous does not exist.
- *God exists*
- Therefore, gratuitous does not exist.

Four reasons to think that God exists:

- the kalam cosmological argument
- the fine-tuning argument
- the moral argument
- the argument *from* evil

What is pre-suppositionalism? What is presuppositional apologetics?

August 12, 2014 | by Wintery Knight | Link | Original Link

The Messianic Drew has a post up where he explains seven reasons, and I'll add a still more important reason below.

His introduction:

> While most Christians will agree that there is a need to defend the faith, many will not realize that there is a debate regarding methodologies. This paper will address the various apologetics methods, and then analyze before critiquing the relatively new method of presuppositionalism. While this method has a lot to offer from a practical apologetics standpoint, it cannot be held rationally as a worldview. This paper will give seven reasons why this is the case.
>
> Before addressing presuppositionalism, an introduction to other apologetic methodologies is in order. The main form of apologetics used historically is called Classical Apologetics. Under this method, the apologist gives arguments for the existence of God, and then proceeds to develop Christian evidences for the Christian worldview. Arguments like the moral argument, and other reason-based argumentation tend to dominate this method.
>
> If classical apologetics is a two-step method, evidentialism is a one-step method. The evidentialist will usually forego rationalistic argumentation and will simply bring out evidences for the Christian worldview. The method of Gary Habermas is an example of evidentialism.
>
> Those methods as well as presuppositionalism are the main methods of apologetics. There are others as well, such as fideism, which tells people to just believe without argument. Polemical apologetics seeks to attack other worldviews. There are cumulative case methods of apologetics, where two worldviews face off for which one better answers life's deepest questions. There is also eclectic apologetics, which seeks to borrow methods from other schools of apologetics depending on the need.
>
> This brings the discussion to presuppositionalism, which seeks to examine the underlying assumptions of any worldview. In short, presuppositionalism states that one's foundational views are the only truly relevant factor in discussing worldviews. The founder of modern presuppositionalism is Cornelius van Til.

Here are his 7 points:

1. Presuppositionalism is circular reasoning
2. Presuppositionalism minimizes common grace
3. Presuppositionalism confuses ontological priority with epistemic priority

4. Presuppositionalism presupposes a highly controversial theory of knowledge
5. Presuppositionalism often forgets that Christianity is, at least in principle, falsifiable
6. Van Til's apologetic might not even be Christian, but may be merely theistic
7. Presuppositionalism faces the problem of incommensurability

And here is #6 in detail:

> John Johnson gives a devastating critique as to why Van Til's system is wholly inadequate when addressing other faiths, such as Islam. Van Til argues from Romans 1:18-21 that non-Christians suppress the truth, and that a presuppositional technique is necessary. However, this section of the Bible deals with knowledge of God, but not theological issues about the Trinity, Jesus, salvation by grace through faith alone, etc. [12] Instead, it only says that unbelievers are without excuse for denying monotheism. Paul reinforces this in Acts 17, when he talks about the statue to an unknown God. Paul deals with the Athenians on their own ground.
>
> A more practical example is what I call Artscroll Judaism. This is a fundamentalist sect of Orthodox Judaism, with its own think tanks which can give you an answer to anything. Anyone who is willing to take the leap into the system will find it every bit as coherent as one would find the Reformed Christian view.
>
> John Warwick Montgomery gives a fable about a conversation between two presuppositionalists from two different religions: the Shadok religion, and the Gibi religion.
>
> Shadok: You will never discover the truth, for instead of subordinating yourself to revelational truth (The Shadok Bible) you sinfully insist on maintaining the autonomy of your fallen intellect.
>
> Gibi: Quite the contrary. [He repeats the same assertion substituting the Gibi Bible for the Shadok Bible.] And I say this not on the basis of my sinful ego but because I have been elected by the Gibi God.
>
> Shadok: Wrong again! [He repeats the exact same claim, substituting Shadok Election for Gibi Election.] Moreover, the sovereign election of which I am the unworthy recipient has been the very work of God the Shadok Holy Spirit. And all of this is clearly taught in the self-validating Scripture of our people, which, I should not have to reiterate, derives from the true God and not from sinful, alledgedly autonomous man.
>
> Gibi: How dare you invert everything. [He laboriously repeats the preceding argument, substituting Gibi election, the Gibi Holy Spirit, and the Gibi Bible.]
>
> Shadok: Absurd! This is the inevitable result of your colored glasses.
>
> Gibi: It is you who have the glasses cemented to your face. Mine have been transparent through sovereign grace and Gibi election, as proclaimed by the Gibi God's word.

> Shadok: Your religion is but the inevitable byproduct of sin—a tragic effort at self-justification through idolatry. Let's see what the Shadok God really says about his word.
>
> Gibi: I will not listen to your alleged "facts." Unless you start with the truth, you have no business interpreting facts at all. Let me help you by interpreting facts revelationally.
>
> Shadok: Of course you will not listen to the proper interpretation of facts. Blinded by your sin, you catch each fact as you would a ball—and then you throw it into a bottomless pit.
>
> Gibi: That's what you do with what I say—a clear proof of your hopeless, pseudo-autonomous condition. May the Gibi God help you.
>
> Shadok: May the Shadok God help you![13]
>
> As Montgomery notes, this encounter is hopeless, since neither side can appeal to neutral facts to solve the dispute. Both sides are reduced to chest-thumping, loud assertion, and empty fideism.

It's funny but it's true! This is presuppositionalism in action. It's arguing without appealing to any facts.

And here is my eighth point from my post on presuppositionalism.

Excerpt:

> My view of presuppositional apologetics is that is as a system, it is circular reasoning. It assumes Christianity in order to prove Christianity. But there is an even worse problem with it. It's not a Biblical way of doing apologetics. It's man's way of doing apologetics, not God's. I think that the best way to understand Van Til's apologetics is by saying that it really just a sermon disguised as apologetics. The problem is that Van Til's sermon has no basis in the Bible. Wherever he is getting his view from, it's not from the Bible. When I look the Bible, I don't see any Biblical support for the view that pre-suppositional apologetics is the *only approved way* of defending the faith. Instead, the standard method seems to be evidentialism.
>
> In Romans 1, Paul writes that people can learn about God's existence from the natural world.
>
> Romans 1:18-23:
>
> 18The wrath of God is being revealed from heaven against all the godlessness and wickedness of men who suppress the truth by their wickedness,
>
> 19since what may be known about God is plain to them, because God has made it plain to them.
>
> 20For since the creation of the world God's invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that men are without excuse.

[21]For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.

[22]Although they claimed to be wise, they became fools

[23]and exchanged the glory of the immortal God for images made to look like mortal man and birds and animals and reptiles.

And in Acts, Peter appeals to eyewitness testimony for the resurrection, and Jesus' miracles.

Acts 2:22-24, and 36:

[22]"Men of Israel, listen to this: Jesus of Nazareth was a man accredited by God to you by miracles, wonders and signs, which God did among you through him, as you yourselves know.

[23]This man was handed over to you by God's set purpose and foreknowledge; and you, with the help of wicked men, put him to death by nailing him to the cross.

[24]But God raised him from the dead, freeing him from the agony of death, because it was impossible for death to keep its hold on him.

And finally from the same chapter:

[36]"Therefore let all Israel be assured of this: God has made this Jesus, whom you crucified, both Lord and Christ."

Professor Clay Jones of Biola University makes the case that the use of evidence when preaching the gospel was *standard operating procedure* in the early church. (H/T Apologetics 315)

Intro:

In 1993 I started working for Simon Greenleaf University (now Trinity Law School) which offered an M.A. in Christian apologetics (Craig Hazen was the director). Much of my job was to promote the school and although I had studied Christian apologetics since my sophomore year in high school, I decided I needed to see whether an apologetic witness had strong Biblical precedence.

It does.

As I poured through the Scripture I found that Jesus and the apostles preached the resurrection of Christ as the sign of the truth of Christianity.

What follows are some of the passages which support the resurrection witness.

Here is my favorite verse from his massive list list of verses in favor of the evidential approach to Christian apologetics:

Mat. 12:39-40: A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of the prophet Jonah. For as Jonah was three days and three nights in the belly of a huge fish, so the Son of Man will be three days and three nights in the heart of the earth.

Jesus is saying that the resurrection was deliberately given as a sign to

> unbelievers to convince them. ("The Sign of Jonah" = the resurrection)
>
> So, I see that God uses nature and miracles to persuade, which can be assessed using scientific and historical methods. Can anyone find me a clear statement in the Bible that states that only pre-suppositional arguments should be used? I could be wrong, and I am willing to be proven wrong. I think we should use the Biblical method of apologetics, not the fallen man's method of apologetics.

Presuppositional arguments, like the ontological argument from reason or the epistemological argument from reason are good. Presuppositionalism as a system is not good. It's good to learn presuppositional arguments, but as part of a quiver of arguments – not in isolation.

By the way, Eric Chabot posted a fascinating discussion between presuppositionalist James White and Richard Howe on this topic, where the point about how presupositionalism cannot prove Christianity in particular came up.

Presuppositionalism is not a Christian methodology. It's neither Biblical, nor can it be used to prove Christianity. It's man's system of apologetics, not God's.

UPDATE: David Haines posted a couple of criticisms of presuppositionalism here.

UPDATE: A rebuttal to the first of Messianic Drew's points is here.

If you want to annoy the left, then raise your children to be like Texas senator Ted Cruz

August 13, 2014 | by Wintery Knight | Link | Original Link

Texas Republican senator Ted Cruz

Here's a profile in National Review of my one of my favorite senators.

Excerpt:

> The party's highest-profile Texans, George W. Bush and Rick Perry, tended to match inarticulateness with cowboy swagger and lend themselves to mockery as intellectual lightweights. Bush went to Yale and Harvard Business School, yet no one naturally thinks of him as an Ivy Leaguer. The two Lone Star State governors played into the Left's stereotypes so nicely that if they didn't exist, the *New York Times* editorial board would have had to invent them.
>
> Cruz is different — a Princeton and Harvard man who not only matriculated at those fine institutions but excelled at them. Champion debater at Princeton. Magna cum laude graduate at Harvard. Supreme Court clerkship, on the way to Texas solicitor general and dozens of cases before the U.S. Supreme Court.
>
> Cruz is from the intellectual elite, but not of it, a tea-party conservative whose politics are considered gauche at best at the storied universities where he studied. He is, to borrow the words of the 2008 H.W. Brands biography of Franklin D. Roosevelt, a traitor to his class.
>
> Democrats and liberal pundits would surely dislike Cruz no matter where he went to school, but his pedigree adds an element of shocked disbelief to the disdain. "Princeton and Harvard should be disgraced," former Pennsylvania governor Ed Rendell exclaimed on MSNBC, as if graduating a constitutionalist conservative who rises to national prominence is a violation of the schools' mission

> statements.
>
> […]In a *Washington Post* column a year ago, Dana Milbank noted Cruz's schooling and concluded that his tea-party politics must be a put-on, that he is, underneath it all, an "intellectually curious, liberal-arts conservative." Note the insulting assumption that an interest in books and ideas immunizes someone from a certain kind of conservative politics.
>
> **One of the Left's deepest prejudices is that its opponents are stupid, and Cruz tramples on it. At hearings, Cruz has the prosecutorial instincts of a . . . Harvard-trained lawyer. Watching Attorney General Eric Holder try to fend off Cruz's questioning on the administration's drone policy a few months ago was like seeing a mouse cornered by a very large cat.**
>
> Cruz hasn't played by the Senate rules that freshmen should initially be seen and not heard. In fact, he joined the upper chamber with all the subtlety of a SWAT team knocking down a drug suspect's front door.
>
> For people who care about such things — almost all of them are senators — this is an unforgivable offense. At another hearing, as Cruz says that the highest commitment of senators should be to the Constitution, another senator can be heard muttering that he doesn't like being lectured. Chairman Pat Leahy (probably the mutterer) eventually cuts him off and informs him he hasn't been in the Senate very long.
>
> Cruz lacks all defensiveness about his positions, another source of annoyance to his opponents, who are used to donning the mantle of both intellectual and moral superiority.

And here's a quick review of where Ted Cruz came from:

> Rafael Cruz, the father of Texas Sen. Ted Cruz, invigorated the crowd during tonight's FreedomWorks Free the People event.
>
> Describing his own personal journey escaping Cuba and working hard to build a life for himself in the U.S., the elder Cruz noted comparisons that he believes exist between Fidel Castro's governance and President Barack Obama's executive actions.
>
> Upon rising to power, he said that Castro, like Obama, spoke about hope and change. While the message sounded good at the time, it didn't take long for socialism to take root in his home country. And he paid the price.
>
> For his part in the revolution — one that many originally assumed would yield a more vibrant country — Cruz was punished while in Cuba.
>
> "I was in prison," he said. "I was tortured, but by the grace of God I was able to leave Cuba on a student VISA and came to the greatest country on the face of the earth."

> Cruz described his efforts working as a dishwasher in America and paying his own way through the University of Texas. From there, he built a life for himself — one that was filled with experiences that caused him to greatly appreciate the country that had given him so much.
>
> His plight in Cuba colored his American experience
>
> "You can't understand a loss of rights unless you've experienced it," Cruz told TheBlaze following the speech.
>
> His unique perspective leaves Cruz with the ability, he argues, to see the troubling signs surrounding socialism. Young people in America today, he told TheBlaze, take for granted the rights and privileges that the U.S. has afforded them.

Fascinating.

Now people always complain when I say that I am trying to find a wife with the background, education, experience and temperment to raise effective, influential children. I have a whole list of influential people I want to clone, in fact. I want a William Lane Craig, a Wayne Grudem, a Michael Licona, a Guillermo Gonzales, an Ann Gauger, a Jennifer Roback Morse, a Scott Klusendorf, a Mark Regnerus, and… a Ted Cruz. And I've saved the money to be able to get at least a few of those, too. The truth is that I had some of the experiences that Cruz's father had, and if he can make a Ted Cruz, then so should I be able to. They have to come from somewhere!

Now of course it's hard to guarantee outcomes when it comes to raising children, but there are some things you can prepare for. You can study things you hate that are hard, and save your money for Ph.D tuition. You can go to grad school yourself and publish research. You can look for a wife who shows the ability to nurture people so that they get better and rise higher. And maybe, you might just raise the next Ted Cruz. I think the old adage "if you aim at nothing, then you will surely hit it" is a good saying for marriage. If you are going to put hundreds of thousands of dollars and decades of your life into a marriage, then you should aim at something. You might hit it. You're not just there to make another person feel good – you're there to make the marriage serve God. Raising influential, effective children is *one way* of doing that. But it doesn't happen by accident. And it isn't necessarily going to be "fun".

Do pastors have a responsibility to know apologetics?

August 13, 2014 | by Wintery Knight | Link | Original Link

The latest episode of the Reasonable Faith podcast was all about a post done by Pastor Matt Rawlings. The post talked about how churches train children to become atheists.

Pastor Matt offered 6 points in his post:

- **Reason #1 – Churches seem overprotective.**
- **Reason #2 – Teens' and twentysomethings' experience of Christianity is shallow.**
- **Reason #3 – Churches come across as antagonistic to science.**
- **Reason #4 – Young Christians' church experiences related to sexuality are often simplistic, judgmental.**
- **Reason #5 – They wrestle with the exclusive nature of Christianity.**
- **Reason #6 – The church feels unfriendly to those who doubt.**

In his post Pastor Matt said this:

> Too many churches do in fact present a shallow faith that skips doctrine and apologetics for "how to…" sermons that are little more than self-help talks with scripture sprinkled over them. The refusal to learn theology and how to defend the faith as well as to spend the time thinking about how to present them in a clear and winsome manner is at the heart of all four of the valid objections by young people to the evangelical church. Pastors must simply take this responsibility seriously and put in the time and effort. There is no other answer.
>
> […]Det. J. Warner Wallace has argued that we have to T.R.A.I.N. Christian students rather than teach them but I think we need to train all of our fellow Christians (and he would agree). Training is harder than teaching. We need to remember that it takes at least seven times for the average person today to hear something before they retain it. Also, most people do not truly understand something until they put it into practice. Thus, pastors must be trained in order train congregations to truly be lay theologians and apologists. The pastors must then challenge the congregation to use their skills reach out to the lost and help each other. And all of those trained must all help to look after the young to insure they know their faith so well that they do not fall for the poor arguments for atheism. This means pastors must implement rigorous programs for the people God has entrusted to them.

Pastor Matt lays the blame squarely on pastors for at least some of the problem. And I agree with him. But Dr. Craig asserted in his podcast that pastors should not be responsible to learn apologetics, because they were too busy with all the other duties

that pastors have to do. He gave some examples, but they were things like weddings, counseling children about drugs and marriage counseling.

So what I wanted to say about this is that Pastor Matt is right and Dr. Craig is wrong. A pastor should have at least put in the time to learn apologetics so that he is able to inject it into his sermon, where appropriate, and point people to where they can find answers when asked. It seems to me that if you are going to get up there and preach about a bunch of things, then you'd better know at least a little about why those things are true. And it can't just be "because the Bible says so" or because "that's just how I was raised". Respect for the truth claims of Christianity has to come from the top, even if the pastor leverages the skills of people in the church to address different issues in more detail.

Pastor Matt responded to Dr. Craig in this post.

Excerpt:

> The biggest disagreement I have with Dr. Craig is that he argues pastors are too busy to be trained in apologetics. As a pastor and the son of a pastor, I strongly differ! Unfortunately, what I have witnessed (and heard from several seasoned pastors of very large churches) is that too many pastors are in fact lazy. I have heard from half a dozen leaders of churches of more than 10,000 that they cannot find young seminary grads who will put in even 40 solid hours a week! Those statements may ruffle a few feathers and certainly there are hard-working, if not overworked pastors out there but they are apparently few and far between.
>
> Also, pastors often try to do things they shouldn't do. As a lawyer who used to defend churches, ministers often get into trouble for counseling those with serious issues that are beyond their training and experience. A person with addiction issues needs something like Celebrate Recovery, a person with emotional problems needs a licensed professional counselor. Ministers need to recognize their limits and engage in areas that they can and must address instead of those that are already well covered by other trained professionals.
>
> But to be fair to Dr. Craig, I think he may have misunderstood what I mean by training. I don't mean a pastor has to earn a master's degree or doctorate in apologetics or philosophy. There are many short but effective training programs out there such as his own Defenders class, the distance certificate from BIOLA, Frank Turek's short but intense CrossExamined program (that I am attending this week), etc.
>
> I agree with Dr. Craig that we should train layman to create an apologetics team in our churches (see this post) but the pastor has to take the lead. No pastor can expect his or her church to do what he or she is not willing to do. If the pastor doesn't evangelize, the church won't. If the pastor is not studying the Bible carefully, the church won't. Also, any pastor working in today's post-Christian culture must know how to meet the challenges of said culture. It is just part of the gig. So, every minister should seek some type of solid apologetics training

> and commit to regular study on the subject as well as subscribe to certain podcasts such as Reasonable Faith.

I wanted to add that I didn't agree with any of the other points where Dr. Craig disagreed with Pastor Matt. It was really surprising to me, but I think Pastor Matt is right across the board. Leadership starts from the top – how are you supposed to be able to assess different people's requests to teach apologetics or bring in speakers if you are not comfortable discerning what is good and what isn't yourself? If the pastor is going to be making those kinds of decisions, then he has to understand apologetics to some degree. Maybe not with formal training, but as much as a typical blogger like me would. Also, don't you find it weird – the idea that a pastor can get up there and preach on things to people and not be able to show anyone some reasons why these things are true? Christians have to be ready to give an answer, and that answer cannot just be "because the Bible says so".

Obama’s unemployment: 11,472,000 Americans left the workforce since January 2009

August 14, 2014 | by Wintery Knight | Link | Original Link

CNS News reports.

Excerpt:

> 11.4 million Americans age 16 and over have left the workforce since President Obama took office in January 2009, according to data released today from the Bureau of Labor Statistics (BLS).
>
> In July 2014, there were 92,001,000 Americans, 16 and over, who were classified as “not in the labor force,” meaning they not only did not have a job, but they didn’t actively seek one in the last four weeks.
>
> This number has increased by 11,472,000 since January 2009, when the number of Americans not in the labor force was 80,529,000.
>
> The number of Americans not in the labor force dropped slightly in July, down 119,000 from the 92,120,000 Americans not in the labor force in June.
>
> The participation rate, which measures the percentage of the civilian non-institutional population that participated in the labor force by either having a job or actively seeking one, increased from 62.8 percent in June to 62.9 percent in July.
>
> In July, the number of unemployed Americans increased by 197,000 (from 9,474,000 in June to 9,671,000 in July), meaning they did not have a job even though they were actively seeking one.
>
> While the number of unemployed increased in July, so did the number of employed Americans: In June, there were 146,221,000 employed Americans, and that number climbed to 146,352,000 in July, a one-month increase of 131,000.

By contrast, George W. Bush created 8.1 million jobs after his 2003 tax cut.

Excerpt:

> Obama and other critics of Bush’s tax cuts argue that they did little to boost economic growth or jobs. But they tend to start their count when Bush signed the first tax cut bill into law in mid-2001.
>
> The problem is that much of that tax plan — including reductions to most of the income tax brackets — wasn’t scheduled to take full effect until 2006.
>
> Bush’s second tax cut, signed in May 2003, accelerated those tax cuts, letting them kick in retroactively to the beginning of that year. The 2003 law also cut taxes on capital gains and dividends.
>
> It turns out that the month after Bush signed that 2003 law, jobs and the

> economy finally started growing again.
>
> From June 2003 to December 2007, the economy added 8.1 million jobs, according to the Bureau of Labor Statistics. The unemployment rate fell to 5% from 6.3%. Real GDP growth averaged close to 3% in the four-plus years after that, and the budget deficit fell steadily from 2004 to 2007.
>
> And despite Obama's claim, Bush's policies did not increase income inequality. In fact, inequality was the same when Bush left office as when he came in, according to theCensus Bureau. A study by University of California economist Emmanuel Saez found that inequality has climbed much faster under Obama.
>
> What's more, the rich ended up paying a larger chunk of the federal income tax burden after Bush's tax cuts went into effect, with the share paid by the top 1% rising to 40% by 2007, up from 37% the year before Bush took office, according to IRS data.
>
> The Congressional Budget Office, meanwhile, found that the federal income tax was more progressive in 2007 than it was back in 1979.

Recall that these tax cuts didn't cost us a thing – the 2007 deficit was $160 billion dollars, which was down from the previous year. Economic growth *raised* tax revenues.

When you let job creators keep more of their own money, they create jobs. When you tax and regulate job creators more, you destroy jobs. You can't argue with the Bureau of Labor Statistics numbers. These are the official numbers and they show that Obama failed where Bush succeeded.

Obama’s debt: federal debt up over 7 TRILLION dollars since January 2009

August 14, 2014 | by Wintery Knight | Link | Original Link

CNS News has the story.

Excerpt:

> The total federal debt of the U.S. government has now increased more than $7 trillion during the slightly more than five and a half years Barack Obama has been president.
>
> That is more than the debt increased under all U.S. presidents from George Washington through Bill Clinton combined, and it is more debt than was accumulated in the first 227 years of this nation’s existence–from 1776 through 2003.
>
> The total federal debt first passed the $7-trillion mark on Jan. 15, 2004, after President George W. Bush had been in office almost three years.
>
> […]The $7,060,259,674,497.51 in new debt that the federal government has taken on during Obama’s presidency equals $61,341.82 per household.
>
> The median household income in the United States in 2012 (the latest year estimated) was $51,017. Thus, President Obama has increased the federal debt by more than the typical household’s annual income.

I sometimes get annoyed by the fact that the stock market hasn’t tanked under Obama in the last 6 years, but there is a reason why. The reason is that he has borrowed and spent SEVEN TRILLION dollars. This makes the lack of economic growth caused by his anti-business policies, e.g. – Obamacare, look less harmful than they are. If you were in debt 30,000 and borrowed another 20,000 and started buying cars and taking vacations, you’d look pretty good. That’s basically what this President did. We look OK, but only because he borrowed $7 trillion from the next generation of Americans.

Did Jesus teach that it is wrong to judge other people?

August 14, 2014 | by Wintery Knight | Link | Original Link

Great post by Matt at MandM on an often misunderstood verse.

Here's the passage in question, Matthew 7:1-5:

[1]"Do not judge, or you too will be judged.

[2]For in the same way you judge others, you will be judged, and with the measure you use, it will be measured to you.

[3]"Why do you look at the speck of sawdust in your brother's eye and pay no attention to the plank in your own eye?

[4]How can you say to your brother, 'Let me take the speck out of your eye,' when all the time there is a plank in your own eye?

[5]You hypocrite, first take the plank out of your own eye, and then you will see clearly to remove the speck from your brother's eye.

Most people only quote the first verse, but they don't look at the rest of the verses that come after.

Here's what Matt has to say about those other verses:

> The phrase translated in the NIV as, "do not judge, or you too will be judged," was originally written by Matthew in Koine (a Greek dialect). The Interlinear Bible gives the literal translation here as, "do not judge that you be judged." In other words, do not judge others *in a way that leads one to put oneself under judgement.*
>
> […]One is not to judge in a way that brings judgment on oneself. The reason for this ("for") is that the standard one uses to judge others is the standard that one's own behaviour will be measured by. Jesus goes on to illustrate, with a sarcastic example, precisely what he is talking about; a person who nit-picks or censures the minor faults of others (taking the speck out of their brothers eye) who ignores the serious, grave, moral faults in their own life (the log in one's own eye). His point is that such faults actually blind the person's ability to be able to make competent moral judgments. This suggests that Jesus is focusing on a certain type of judging and not the making of judgments *per se*.
>
> In fact, the conclusion that Jesus does not mean to condemn *all* judging of others is evident from the proceeding sentences in the above quote. Rather than engaging in the kind of judgment Jesus has condemned one should "first take the plank out of your own eye, and then you will see clearly to remove the speck from your brother's eye." In other words one should try to rectify the serious moral flaws in one's own life precisely so one *can* assist others with theirs. One

> needs to avoid hypocrisy in order to make constructive and effective moral judgments about others. This would make no sense if Jesus meant to condemn *all* judging by this passage.

Judging happens all the time but it can be much easier for a person to accept if you do the judging in a professional way. After all, teachers tell students all the time that they are wrong, but these judgments are accepted because teachers know what they are talking about. If you are going to make a judgement, then try to do it in the way that an expert does.

This is an apologetics blog, so I feel that I should say that when you are trying to talk to someone about apologetics, then **don't** talk about their personal lives at all. Just talk about what is true in the real world, or about moral choices in general. I've noticed that people get really mad when I say that some behavior is wrong because the Bible says it, so I don't do usually that. But I've noticed that most are open to hearing the evidence for why a behavior is wrong, for example the harm caused by unwed motherhood to children. People are more likely to listen to you if you stay away from judging their personal situation.

Second piece of advice: if you are going to talk about right and wrong, start by showing someone that just because there are differences of opinion on an issue, it doesn't mean no one is right. If morality comes up as the topic, then I find it easier to first explain that just because people disagree, it doesn't mean no one is right. What I like to do for this is to bring up something that is affirmed by one religion and denied by another, like whether the universe had a beginning. Jews (for example) affirm a beginning of the universe, Mormons deny a beginning of the universe. Who is right? We have to look to science to decide it. Once we've decided it, someone is going to be right, and someone is going to be wrong. You want to get them to see that telling someone they are wrong doesn't make you a villain. In our case, if the universe had a beginning, and you tell a Mormon why you think it did using science, it's no defense against you for them to call you "intolerant" for using evidence to show you are right. Sometimes people can be wrong, and they need to tolerate when others tell them they are wrong, even if they don't agree.

Jonathan Morrow talks about that second point here:

> However, true tolerance is usually not what people have in mind when they say people should be free to believe in whatever God (or no god at all) they want to. Here is the simple, but profound point to grasp—merely believing something doesn't make it true. Put differently, people are entitled to their own beliefs, but not their own truth. Belief is not what ultimately matters—truth is. Our believing something is true doesn't make it true. ***The Bible isn't true simply because I have faith.*** Truth is what corresponds to reality—telling it like it is.

No point of view is correct just because someone believes it. Beliefs are made true if they correspond to reality. And it's not "intolerant" to "judge" truth claims that don't

correspond to reality as false.

Finally, you want to get the other person to see that saying someone is wrong isn't a bad thing – especially if their being wrong is going to get them into trouble. Suppose you tell someone "don't take a nap on the railroad tracks" because they've been doing that. This is a good thing to do. It helps them to not get run over by a train. You're not forcing them into anything, you're just giving them information that they can use or not. It's up to them to believe you or not, but they shouldn't try to shut you down by saying "don't judge me".

New study: couples that delay sexual activity experience higher quality relationships

August 15, 2014 | by Wintery Knight | Link | Original Link

Relationship stability, quality, communication, satisfaction

From Family Studies, news about TWO new studies.

Excerpt: (links removed)

> [T]wo recently published studies call into question the validity of testing sexual chemistry early in dating.
>
> My colleagues and I published the first study a few years ago in the American Psychological Association's *Journal of Family Psychology*. This study involved a national sample of 2,035 married individuals who participated in the popular online couple assessment survey called "RELATE." **We found that the longer a dating couple waits to have sex, the better their relationship is after marriage. In fact, couples who wait until marriage to have sex report higher relationship satisfaction (20% higher), better communication patterns (12% better), less consideration of divorce (22% lower), and better sexual quality (15% better) than those who started having sex early in their dating (see Figure 2). For couples in between—those that became sexually involved later in their dating, but prior to marriage—the benefits were about half as strong.**
>
> […]These patterns were statistically significant even when controlling for a variety of other variables such as respondents' number of prior sexual partners, education levels, religiosity, and relationship length.
>
> **The second study, by Sharon Sassler and her colleagues at Cornell University, also found that rapid sexual involvement has adverse long-term implications for relationship quality.** Using data from the Marital and Relationship Survey, which provides information on nearly 600 low- to moderate-income couples living with minor children, their study examined the tempo of sexual intimacy and subsequent relationship quality in a sample of married and cohabiting men and women. Their analyses also suggest that delaying sexual involvement is associated with higher relationship quality across several

> dimensions.
>
> They discovered that the negative association between sexual timing and relationship quality is largely driven by a link between early sex and cohabitation. Specifically, sexual involvement early in a romantic relationship is associated with an increased likelihood of moving more quickly into living together, which in turn is associated with lower relationship quality. This finding supports Norval Glenn's hypothesis that sexual involvement may lead to unhealthy emotional entanglements that make ending a bad relationship difficult. As Sassler and her colleagues concluded, "Adequate time is required for romantic relationships to develop in a healthy way. In contrast, relationships that move too quickly, without adequate discussion of the goals and long-term desires of each partner, may be insufficiently committed and therefore result in relationship distress, especially if one partner is more committed than the other" (p. 710).

The rest of the post talks about two reasons why this works: improved partner selection and prioritizing communication and commitment.

That's two studies, and there's a third. Dina sent me this article from the UK Daily Mail about a new study showing the importance of chastity for relationship quality and stability.

Excerpt:

> New couples who jump into bed together on the first date do not last as long in relationships as those who wait a new study has revealed.
>
> Using a sample of almost 11,000 unmarried people, Brigham Young University discovered a direct correlation between the length and strength of a partnership and the amount of time they took to have first have sex.
>
> **The study showed that those who waited to initiate sexual intimacy were found to have longer and more positive outcomes in their relationships while those who couldn't help themselves reported that their dalliances struggled to last more than two years.**
>
> 'Results suggested that waiting to initiate sexual intimacy in unmarried relationships was generally associated with positive outcomes,' said the report authored published by the U.S. National Library of Medicine National Institutes of Health.
>
> 'This effect was strongly moderated by relationship length, with individuals who reported early sexual initiation reporting increasingly lower outcomes in relationships of longer than two years.'
>
> The study examined four sexual-timing patterns: Having sex prior to dating, initiating sex on the first date or shortly after, having sex after a few weeks of dating, and sexual abstinence.
>
> Each one of these fields yielded different results in relationship satisfaction,

> stability and communication in dating situations.

Here's another recent study that shows that if a woman has more than her husband as a premarital sex partner, her risk of divorce increases.

His findings:

> Using nationally representative data from the 1995 National Survey of Family Growth, I estimate the association between intimate premarital relationships (premarital sex and premarital cohabitation) and subsequent marital dissolution. I extend previous research by considering relationship histories pertaining to both premarital sex and premarital cohabitation. I find that premarital sex or premarital cohabitation that is limited to a woman's husband is not associated with an elevated risk of marital disruption.**However, women who have more than one intimate premarital relationship have an increased risk of marital dissolution.**

Here's another study that makes it even more clear.

Findings:

> Data from the 1988 US National Survey of Family Growth (NSFG) were utilized to assess the impact of premarital sexual activity on subsequent marital stability. **Among white NSFG subjects first married in 1965-85, virgin brides were significantly less to have become separated or divorced (25%) than women who had not been virgins at marriage (35%).**
>
> **[…]The lower risk of divorce on the part of white women with no premarital sexual experience persisted even after numerous intervening and background variables were controlled.**

This study supports what the Bible says about chastity and premarital sex:

> 1 Cor. 7:8-9:
>
> 8 To the unmarried and the widows I say that it is good for them to stay single as I am.
>
> 9 But if they cannot exercise self-control, they should marry. For it is better to marry than to burn with passion.
>
> The idea of "burning" here has to do with sexual desire. Here Paul tells all unmarried people that if they cannot control their sexual desires, they need to get married. Why? Because Paul assumes that one cannot fulfill this sexual desire outside of the marital bed. While Paul would love for them to remain single (1 Cor. 7:7), he believes that sex outside of marriage is a destructive sin and *cannot* be used as a gratifying release of our sexual passions.

Although young people like to complain about "manipulation" and "controlling" when they are approached with facts, presenting evidence is really the only way to persuade them. Although they may respond with anecdotes to refute studies, studies are important

because they represent LOTS of data points, not just one or two cherry-picked cases. Hit them with the evidence before they make the wrong decisions.

Apologetics helps young men to resist being shamed by their secular peers

August 15, 2014 | by Wintery Knight | Link | Original Link

A post by Nick Peters about young people and apologetics, at the Christian Apologetics Alliance blog.

Excerpt:

> Now picture a teenage youth who is a Christian. Is he on the outs with his peers in any way? Well if he's a good and observant Christian, he'll be a virgin (since most teenagers in high school aren't married). Will that lead to any shame to his peers? Yep. Especially since they consider "getting laid" to be a rite of passage and a sign that you are a real man or woman.
>
> So what happens with a boy who's seventeen and can drive and who is with the guys who are talking about their sexual exploits and the guy has nothing to contribute? If he is asked why he's not "getting some" he replies that he is a Christian. Is that going to win him any friends? Nope. His "friends" there will most likely mock him for believing in antiquated ideas that science has disproven and tell him he needs to get with the times. Result? The young man is shamed.
>
> Now imagine instead if he's told the latter part about how his ideas are antiquated and instead, he's able to make a rational case for the resurrection of Jesus from the dead. Do you think he'll be able to be shamed the same way? Sure, his friends can still mock him, but he can take the mockery as a sign that they cannot answer his arguments. The young boy has honor then, rather than shame. He might not be sleeping around, but he can hold his head high knowing he can stand up against his peers.
>
> […]No one wants to be embarrassed, and that includes youth, but if our young people think they can do something that none of their peers can do, it will help them to have that honor that they seek, and there is nothing wrong with seeking honor. Remember the parable where Christ told us to take a lowly position at a banquet so our host would say, "Move up to a better place" and we would be honored? He was saying that that is the proper way to receive honor. Don't just go out and try to grab it. Let it be given to you.
>
> There are many things that a young person can be ashamed of, but if they're intellectually unprepared, being a Christian is something that they may be shamed for. In the face of temptation, they need a reason to be obedient rather than just, "The church says so" or "Mom and Dad say so." Neither of those will be seen as honorable positions. They need to know for themselves why it is that they hold the stance that they do. If they are waiting until marriage, they need to know why. If they believe a man rose from the dead, they need to know why.

> That youth are eating this stuff up should tell us something. Youth don't want to be shamed in the eyes of their contemporaries. They won't mind holding a different position as long as they can defend that position. If they cannot, then the tide of social pressure could be enough to get them to abandon that and if their emotions and wills start acting against Christianity, it is only a matter of time until the intellect follows.

That excerpt is basically a summary of my life – that's how I started out as a teen – with apologetics. I've been a Christian the whole time in between then and now. I think many parents and churches are wondering how it is that you get a young man to stand up to the culture and peer pressure. The answer is apologetics, and I think integrating Christianity with every other area of knowledge helps as well. Winning arguments over and over is an excellent way to build a suit of armor against temptation and peer pressure.

And in speaking to young people who were raised as Christians then fell away, the common denominator is that they were uncomfortable claiming to be Christians in a secular environment. We have to have a plan to help our young people deal with pluralism and peer pressure. Apologetics is the best answer I can think of.

Friday night movie: Sink the Bismarck! (1960)

August 15, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.2/10]

Description:

> In 1939, the Nazi Germany's largest and most powerful battleship, *Bismarck*, is launched in a ceremony at Hamburg with Adolf Hitler attending. The launching of the hull is seen as the beginning of an era of German sea power. Two years later, in 1941,British convoys are being ravaged by U-boats and surface raider attacks which cut off supplies which Britain needs to continue the war. In May, British intelligence discovers the *Bismarck* and the heavy cruiser *Prinz Eugen* are about to break into theNorth Atlantic to attack convoys.
>
> The man assigned to coordinate the hunt is the Admiralty's chief of operations, Captain Jonathan Shepard (Kenneth More), who has been distraught over the death of his wife in an air raid and the sinking of his ship by German ships commanded by Admiral Günther Lütjens (Karel Štěpánek). Upon receiving his new post, Shepard discovers Lütjens is the fleet commander on the *Bismarck*. Shepard's experience of conflict with the German Navy and his understanding of Lütjens allow him to predict the*Bismarck*'s movements. Shepard is aggressive to his staff but comes increasingly to rely on the coolness and skill of his assistant, WREN Second Officer Anne Davis (Dana Wynter).

Below are the combatants.

The German battleship Bismarck:

The Bismarck (click for larger image)

The aircraft carrier HMS Ark Royal:

HMS Ark Royal (click for larger image)

I think this battle signaled the end of battleships as the best naval unit.

So why did battleships become extinct? Well, you can get a lot more range and striking power out of several squadrons of bombers and torpedo bombers than you can out of 16 or even 18 inch guns. In fact, you'll see the torpedo bombers of the HMS Ark Royal face off against the Bismarck in the movie. Today, naval warfare is conducted with surface-to-surface missiles like the Tomahawk and the SS-N-27 Sizzler, etc. as well as air-to-surface missiles fired from land and carrier based strike aircraft. The range of these missiles is far greater than the range of the deck guns on any battleship. However, there is work being done on rail guns which may force a return to conventional deck guns, especially for operations like shore bombardments where you want to use cheaper munitions!

Happy Friday!

On wargames, history and heroes: “this story shall the good man teach his son”

August 16, 2014 | by Wintery Knight | Link | Original Link

Memoir ’44: Pegasus Bridge setup

Reposting this old post because Dina and I spent Friday night playing games again! And this is one of my favorite posts. Last night was Portal 2 and Orcs Must Die! 2.

Last night, I played through the Pegasus Bridge scenario from the Memoir ’44 wargame with Dina a few times. We actually played the online version of the game, using Steam. She was very gracious to play a wargame with me, which I don’t think is necessarily the first thing on most women’s lists of things to do on a Thursday night! I appreciated her agreeing to learn how to play and then playing with me several times. I think that Christians need to plan and execute more “together” activities like that – activities that involve interaction, co-operation, communication and engagement. We try to avoid doing things where we are both spectators. Playing wargames is not the only thing we do – we also do Bible study and cooking lessons (for me), for example.

Anyway, the point of this post is to express the deeper meaning behind playing wargames. I think that it is important to recognize and celebrate those who have demonstrated good character, whether it be now, or in the past. I think that it is important for us to search out the best role models ourselves, so that they will influence the way we act in our own lives. The second world war was a clear example of good versus evil. Anyone on the Allied side who demonstrated bravery and courage should be celebrated for safeguarding the security, liberty and prosperity that we enjoy today. In the case of Pegasus bridge, the hero is Major John Howard of the British paratroops.

Here is a quick re-cap of his exploits that day from the New York Times:

> Maj. John Howard, the commander of glider-borne British infantrymen who seized the strategically vital Pegasus Bridge in the first battle of the D-Day invasion of Normandy, died Wednesday in a hospital in Surrey, England. He was 86 and had lived in Burford, near Oxford.

> Under cover of night on June 6, 1944, six gliders carrying 181 officers and men of the Second Oxfordshire and Buckinghamshire Light Infantry landed on the eastern flank of a 60-mile invasion front on the northern coast of France. The regiment had a heritage going back to the battles of Bunker Hill and New Orleans, to Waterloo and to World War I. Now its soldiers were in the vanguard of the invasion of Hitler's Europe.
>
> Major Howard's D Company was ordered to seize two bridges, one over the Caen Canal and the other spanning the parallel Orne River. If the Germans held on to those bridges, panzer units could move across them in a counterattack isolating 10,000 British paratroopers jumping behind the British invasion beach known as Sword, where infantry forces would arrive at daybreak. And Major Howard's men sought to strike swiftly to prevent the Germans from blowing up the bridges if they were overwhelmed; the British needed those bridges to resupply their airborne units.
>
> [image]British Halifax bombers towed the gliders over the English Channel, then cut them loose.

> Major Howard's lead glider landed at 12:16 A.M., only 50 yards from the Caen Canal bridge, but the glider's nose collapsed on impact, knocking everybody aboard unconscious for a few seconds. The soldiers quickly emerged, and over the next five minutes the men directly under Major Howard killed the surprised German defenders.
>
> The nearby Orne River bridge was captured by other troops in Major Howard's unit, and soon the words "Ham and Jam," signifying mission accomplished, were radioed to the airborne.
>
> Two British soldiers were killed and 14 wounded in the operation.
>
> Over the next 12 hours, British paratroopers and commandos reinforced Major Howard's men, and British forces were able to move toward the city of Caen, their flank having been protected by the capture of the bridges.
>
> On July 16, Major Howard received the Distinguished Service Order, Britain's second-highest award for valor. On the 10th anniversary of D-Day, he received the Croix de Guerre Avec Palme from the French Government, which had renamed the Caen Canal span Pegasus Bridge, for the flying horse symbolizing the British airborne. The road crossing the bridge was later renamed Esplanade Major John Howard.

Why is this important? Well, it's important to think on the things that are excellent. There are so many things in the culture that are not excellent that we are confronted with every day. We have to make it our business to do things together where goodness is celebrated. Especially when manly virtues like courage are celebrated. We don't do that much anymore. And I think there's a connection between wargames and Christian apologetics that we need to *deliberately* encourage.

Here's an excellent passage from Shakespeare's "Henry V" that makes the point:

> This day is called the feast of Crispian:
> He that outlives this day and comes safe home,
> Will stand a tip-toe when this day is named,
> And rouse him at the name of Crispian.
> He that shall live this day, and see old age,
> Will yearly on the vigil feast his neighbours,
> And say, 'To-morrow is Saint Crispian:'
> Then will he strip his sleeve and show his scars,
> And say, 'These wounds I had on Crispin's day.'
> Old men forget: yet all shall be forgot,
> But he'll remember with advantages
> What feats he did that day. Then shall our names,
> Familiar in his mouth as household words,
> Harry the King, Bedford and Exeter,
> Warwick and Talbot, Salisbury and Gloucester,
> Be in their flowing cups freshly remembered.
> **This story shall the good man teach his son;**
> And Crispin Crispian shall ne'er go by,
> From this day to the ending of the world,
> But we in it shall be rememberèd;
> We few, we happy few, we band of brothers;
> For he to-day that sheds his blood with me
> Shall be my brother; be he ne'er so vile
> This day shall gentle his condition:
> And gentlemen in England, now a-bed
> Shall think themselves accursed they were not here,
> And hold their manhoods cheap whiles any speaks
> That fought with us upon Saint Crispin's day. (4.3.43)

This is from the famous speech in which King Henry charges his men to fight well before the famous Battle of Agincourt.

You can read more about the history of the British Airborne division and Pegasus bridge. The famous historian of the second world war Stephen E. Ambrose also wrote a history of the Pegasus bridge battle, called "Pegasus Bridge: June 6, 1944". You won't find many military historians better than Stephen E. Ambrose!

You might be surprised how many men are interested in military history and wargames, precisely because men instinctively look up to men like John Howard who embody qualities like bravery and courage. We have a dearth of moral character in this society. And we don't do much to teach young men about manly virtues, even in the church. I think that it is important for us to think of creative ways for us to present good character to our young men. Young women should also learn about good character, because they

must separate out the good men from the bad when they are courting.

Thanks to Dina for helping me to edit this post!

Ohio late-term abortion clinic closed for failure to comply with regulations

August 16, 2014 | by Wintery Knight | Link | Original Link

I'm Scheming Unborn Baby, and I approve this decision

From Life News.

Excerpt:

> An Ohio judge issued a ruling today ordering a late-term abortion practitioner to close his abortion facility.
>
> Previously, Ohio passed a law requiring that all ambulatory surgical centers must be licensed by the state and, in 1999, it came to the attention of the Ohio Health Department that abortion clinics were not in compliance with the law, having never applied for licensing. The OHD began the process of insuring that all abortion clinics came into compliance.
>
> Haskell (pictured below right), a nationally-known late-term abortionist who helped develop the now outlawed Partial-Birth Abortion procedure, has fought with the state for years and he sued the Ohio Department of Health this month for ordering his Sharonville abortion facility to close because it does not meet the minimum medical safety standards in Ohio law.
>
> […]Officials with Ohio Right to Life also applauded the decision.
>
> "Shutting down Haskell's facility is a long-sought victory for the pro-life movement," said Stephanie Ranade Krider, executive director of Ohio Right to

> Life. “As the self-proclaimed ‘poster child’ of partial birth abortion, Martin Haskell has endangered southwest Ohio children for the last 30 years. We are hopeful that this will be the final order that puts Haskell out of business in Sharonville.”
>
> “This decision is about common-sense, as evidenced by the non-partisan nature of this ruling,” said Krider. “We are grateful to the Ohio Department of Health and the office of Attorney General Mike DeWine, but we are also grateful to Judge Metz, a Democrat, for ensuring that abortionists aren’t skirting basic health and safety regulations.”

Although the Democrat made the right decision in this case, we have to keep in mind that Senate Democrats want to pass a law to strike down ALL state and local restrictions on abortion. If you vote for a Democrat, this is what you are voting for – unregulated abortion through all nine months of pregnancy.

I also hope this news story is a lesson those pro-lifers who are opposed to incremental measures that fall short of an immediate, full abolition of abortion. We have to pursue an incremental approach – that’s what works.

What criteria do historians use to get to the minimal facts about the historical Jesus?

August 17, 2014 | by Wintery Knight | Link | Original Link

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus as the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates.

For example, in his debate with Bart Ehrman, Craig was able to quote Ehrman's own writings where he agreed that all four facts were probably true.

Excerpt:

> Now in his early published work Dr. Ehrman expressed skepticism about these facts. He insisted that we cannot really affirm these facts.
>
> […]Dr. Ehrman has himself come to re-think his position on these issues. Inconsistencies in the details notwithstanding, he now recognizes that we have "solid traditions," not only for Jesus' burial, but also for the women's discovery of the empty tomb, and therefore, he says, we can conclude with "some certainty" that Jesus was in fact buried by Joseph of Arimathea in a tomb and that three days later the tomb was found empty.
>
> When I discovered that Professor Ehrman had reversed himself on this question, my admiration for his honesty and scholarly objectivity shot up. Very few scholars, once they've gone into print on an issue, have the courage to re-think that issue and admit that they were wrong. Dr. Ehrman's reversal of his opinion on these matters is testimony, not merely to the force of the evidence for these four facts, but also to his determination to follow the evidence wherever it leads. What this means is that my first contention is not an issue of disagreement in tonight's debate.

So what are the criteria that historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with

other authentic material, and so forth.

It is somewhat misleading to call these “criteria,” for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria are defeasible, meaning that they are not infallible guides to authenticity. They might be better called “Indications of Authenticity” or “Signs of Credibility.”

In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus’ life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.

What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:

(1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.

(2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.

(3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.

(4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.

(5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.

(6) Coherence: S is consistent with already established facts about Jesus.

For a good discussion of these factors see Robert Stein, “The ‘Criteria’ for Authenticity,” in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.

Notice that these “criteria” do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus’ life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same “criteria” are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur’an. Of course, if the Gospels can be shown to be generally reliable documents, so much the

> better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely

accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection
8. Don't let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And just keep in mind that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8. You have to use that – it's the law.

Back to the minimal facts criteria. The best essay on the minimal facts criteria that I've read is the one by Robert H. Stein in "Contending with Christianity's Critics". It's a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion "God raised Jesus from the dead". That whole book is really very, very good.

Robert George: United States has a moral obligation to stop the genocide in Iraq

August 18, 2014 | by Wintery Knight | Link | Original Link

I found this Christian Post article via a blog post on Think Apologetics. Robert George is one of the best (if not the best) respected Christian ethicists operating today. So it's interesting to see what he thinks we ought to do in Iraq.

Excerpt:

> Robert P. George, McCormick Professor of Jurisprudence at Princeton University, started a petition calling on President Barack Obama, Congress and the international community to destroy ISIS as a fighting force.
>
> In a Thursday video phone interview with The Christian Post (see below), George said he thought the petition was needed because ISIS, also called ISIL or the Islamic State, is committing genocide, similar to what happened in Rwanda in 1994. The United States did nothing to prevent the Rwandan genocide, and that was a mistake that should not happen again, he argued.
>
> The signers of the petition, available at iraqrescue.org, include Democrats, Republicans and independents; conservatives, liberals and moderates; and various religious traditions.
>
> Among the signers are Russell Moore, president of the Southern Baptist Convention's Ethics & Religious Liberty Commission; Ben Carson, retired Johns Hopkins neurosurgeon; Edward Whelan, president of the Ethics and Public Policy Center; Eric Metaxas, an Evangelical author and public speaker; and Nina Shea, director of the Hudson Institute's Center for Religious Freedom. (Affiliations are provided for identification only. They are not signing as representatives of the institutions they work for.) At the time of this publication, the petition had over 3,800 signatures.
>
> "Nothing short of the destruction of ISIS/ISIL as a fighting force will provide long-term protection of victims," the petition reads in part.
>
> The United States "doesn't have any real moral choice," George said. It is "our moral obligation" to stop the genocide. George does not believe the assistance necessarily requires American ground forces. Rather, the United States can contribute with air strikes, intelligence, and strategic support for the Kurdish forces and religious minorities who are being targeted by ISIS.

I think it's very important for us to speak out to our neighbors about this, because in watching the mainstream media cover this, they just want this issue to go away. They know that Obama withdrew our forces in Iraq and set up the conditions that led to this genocide. So it's up to us to keep the pressure on. Eric's post on Think Apologetics has some ideas about what to do.

Who were the Jesus Seminar? Should anyone have taken them seriously?

August 18, 2014 | by Wintery Knight | Link | Original Link

Was having a conversation Sunday evening with the woman I am mentoring and she brought up the Jesus Seminar – a small group of naturalistic, pluralistic academics. Apparently, someone's child went to college, heard about them, and lost their faith because of their writings. I wanted to find a good article for her on this, and since Dr. William Lane Craig has debated most of the leading scholars in the Jesus seminar, (e.g. – John Dominic Crossan, Marcus Borg, Roy Hoover, Gerd Ludemann, Robert Price, John Shelby Spong, etc.), I chose an article by Dr. Craig. I also link to two debates that Dr. Craig did with Jesus Seminar people below.

First a short video (4 minutes):

If you can't watch anything long, then watch that.

Here is the article, on the Reasonable Faith web site.

Intro:

> In 1985 a prominent New Testament scholar named Robert Funk founded a think tank in Southern California which he called the Jesus Seminar. The ostensible purpose of the Seminar was to uncover the historical person Jesus of Nazareth using the best methods of scientific, biblical criticism. In Funk's view the historical Jesus has been overlaid by Christian legend, myth, and metaphysics and thus scarcely resembled the Christ figure presented in the gospels and worshipped by the Church today. The goal of the Seminar is to strip away these layers and to recover the authentic Jesus who really lived and taught.

Excerpt:

> The number one presupposition of the Seminar is *antisupernaturalism* or more simply, *naturalism.*Naturalism is the view that every event in the world has a natural cause. There are no events with supernatural causes. In other words, miracles cannot happen.
>
> Now this presupposition constitutes an absolute watershed for the study of the gospels. If you presuppose naturalism, then things like the incarnation, the Virgin Birth, Jesus' miracles, and his resurrection go out the window before you even sit down at the table to look at the evidence. As supernatural events, they *cannot* be historical. But if you are at least open to supernaturalism, then these events can't be ruled out in advance. You have to be open to looking honestly at the evidence that they occurred.
>
> […][T]he second presupposition which I wanted to discuss, namely, sceptical critics presuppose that our most primary sources for the life of Jesus are not the

> Gospels, but rather writings outside the New Testament, specifically the socalled apocryphal gospels. These are gospels forged under the apostles' names, like the Gospel of Thomas, the Gospel of Peter, the Gospel of Philip, and so forth. These extrabiblical writings are said to be the key to correctly reconstructing the historical Jesus.

In addition to that, there seems to be a third presupposition – radical religious pluralism. John Dominic Crossan closed his opening speech in his debate with Dr. Craig with this:

> When I look a Buddhist friend in the face, I cannot say with integrity, "Our story about Jesus' virginal birth is true and factual. Your story that when the Buddha came out of his mother's womb, he was walking, talking, teaching and preaching (which I must admit is even better than our story)—that's a myth. We have the truth; you have a lie." I don't think that can be said any longer, for our insistence that our faith is a fact and that others' faith is a lie is, I think, a cancer that eats at the heart of Christianity.

But of course, he thinks that *all* miracle claims are lies, because of his supernaturalism. What he is really trying to do here is redefine these claims so they are not truth claims at all, but personal preference claims.

But the main point is that the co-chair of the Jesus Seminar pre-supposes that nothing that Christianity claims that offends people in other religions can be true. Before he sits down to look at the evidence. I'm not saying that these guys can't do history, I'm saying that the real debate with these guys should not be about history. The real debate should be about their presuppositions. We should work to defeat their pre-supposition naturalism with good scientific arguments like the origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, the habitability-discoverability argument, etc. And we should work to defeat their pre-supposition of pluralism by just asking them to defend it, and maybe point out that a person's being offended by some claim about reality being true does not make that claim false. Logic requires that people who make claims that are made false by reality are *wrong* and no amount of crying and sobbing can change that.

The second article in the series that Dr. Craig mentioned in the article I linked above is a generic article on the evidence for the historical Jesus. If you have not read a case for the resurrection of Jesus, then read it, too. Or you can check out this lecture by Dr. Craig on the Jesus Seminar and the historical Jesus:

If you want to see a good debate between Dr. Craig and Marcus Borg, here it is:

Dr. Borg is one of the more respected Jesus Seminar people, and a really nice guy. But also, a really wrong guy.

The key thing to know about them is that they presuppose naturalism (miracles never happen) and radical pluralism (no exclusivist religion can be correct, because that would make people in the other religions feel bad). The presuppositions are key to understanding the "historical work" of the Jesus Seminar.

Group behind indictment of Governor Rick Perry got 500K donation from George Soros

August 19, 2014 | by Wintery Knight | Link | Original Link

Here's an article from Commentary magazine, which talks about how Democrats are trying to smear Republicans with fake charges.

Excerpt:

> On April 13, 2013, Rosemary Lehmberg was pulled over for dangerous driving. She was found with an open bottle of vodka in the car, which is against the law, and her blood-alcohol level was .239 percent. (The legal limit is .08 percent. As a rule of thumb, at .1 you're happy, at .2 you're drunk, at .3 you're passed out, and at .4 you're dead. In other words, to use the technical term, she was blotto.) Taken to the police station, she was abusive and uncooperative to the point of being put in handcuffs and leg irons. She pled guilty to DWI and was sentenced to 45 days in jail and a $4000 fine. She served 20 days. Her license was suspended for 180 days.
>
> This sort of thing happens every night in every city in the country. What made this unusual was that Lehmberg is the district attorney of Travis County, Texas, which is the county where Austin, the state capital, is located. That gives the district attorney of Travis County a lot of power to investigate public corruption. Indeed she heads the state's Public Corruption unit.
>
> Governor Rick Perry, not unreasonably, thought she had disgraced herself and should resign her office. She refused. To force her out, he threatened to veto the appropriation for the Public Corruption unit and, when she stilled refused, vetoed it.
>
> For this the governor was indicted by a special prosecutor on two felony counts that, in theory, could send him to jail for the rest of his life.
>
> […]This is about as blatantly a political indictment as can be imagined. Jonathan Chait, no fan of Rick Perry, calls it unbelievably ridiculous. Even David Axelrod called the indictment "pretty sketchy." Indeed the blow back from left, right, and center is so intense that Perry may well be the first public official to actually gain political clout from being indicted.

So now, if a governor vetoes a bill, it's life imprisonment. In Texas.

But who brought this charge? A shadowy group called "Texans for Public Justice":

> Sometimes it seems like there isn't a single political issue that a Soros-funded group isn't involved in. Texans for Public Justice, one of the groups behind Rick Perry's indictment charges, is part of a "progressive" coalition that has received $500,000 from liberal billionaire George Soros.

> […]According to an Open Society Institute press release, OSI has given $500,000 to help form a coalition that "could change the way the progressive community engages public policy in Texas." Besides Texans for Public Justice, this coalition includes Texans Together, the Sierra Club, Texas Legal Services, La Fe Policy Research and Education Center, Public Citizen, and the Center for Public Policy.

This kind of judicial persecution of conservative politicians seems to happen a lot in Texas, though.

Remember Tom Delay?

> Former House majority leader Tom DeLay on Monday sharply criticized the local prosecutor's office that indicted both him and more recently fellow Texas Republican Gov. Rick Perry, calling it a "vendetta" and another example of the "criminalization of politics."
>
> In an interview with FoxNews.com, DeLay attacked nearly every aspect of the prosecution's case against Perry — suggesting it was political retribution for the governor's attempt to remove a county district attorney with a criminal record and a "conspiracy" likely traceable to Washington Democrats.
>
> "There is no doubt [the case] is politically motivated," the former House majority leader said. "Once again, the district attorney of Travis County presented a case, not unlike mine, that was very weak, if it was a case at all. … It's a conspiracy to use the legal system to politicize politics."
>
> DeLay was indicted in 2005 by a Travis County grand jury for allegedly conspiring to break election laws several years earlier in a case that involved charges of money laundering.
>
> He was convicted in January 2011 and sentenced to three years in prison. But he was allowed free on bail while appealing his conviction. The Texas Court of Appeals ruled in Sept. 2013 that the evidence in the case was "legally insufficient" to sustain the convictions and DeLay was formally acquitted.

It seems a slam dunk that Perry will be acquitted, too. But where does he go to get his reputation back before the 2016 election? Or is the legal system just there for leftists to use in order to criminalize people who disagree with them on policy?

47 of 73 federal Inspectors General protesting Obama administration obstruction of justice

August 19, 2014 | by Wintery Knight | Link | Original Link

From the Daily Signal.

Excerpt:

> In an unprecedented letter, a majority of the federal government's inspectors general (IGs) claim that the Obama administration is obstructing their investigations into government mismanagement and corruption. So much for President Obama's claim that his would be the most transparent administration in history.
>
> And it truly IS unprecedented. Rep. Darrell Issa (R-Calif.), chairman of the House Oversight and Government Reform Committee, says "there has never been a letter even with a dozen IGs complaining" about such obstruction by an administration. The fact that the Justice Department's IG, Michael Horowitz, also signed on is particularly revealing. After all, it is the duty of senior executive officers like Eric Holder to advise subordinate officials that they are obligated to cooperate with the IGs of their agencies.
>
> On Aug. 5, 47 of the federal government's 73 inspectors general, **many of whom were appointed by President Obama**, sent their letter to Issa, Sen. Thomas Carper (D-Del.), and the ranking members of the House Oversight and Government Reform and Senate Homeland Security and Governmental Affairs Committees — essentially pleading with Congress to help the IGs do their jobs uncovering waste, mismanagement, fraud, and corruption within their respective agencies.
>
> In the letter, the IGs complain about the "serious limitations on access to records that have recently impeded the work" of IGs at the Peace Corps, the EPA, and the Department of Justice. Administration lawyers have construed laws related to privilege in "a manner that would override the express authorization contained in the IG Act" and seriously impede the "ability [of the IGs] to conduct our work thoroughly, independently, and in a timely manner."
>
> According to the letter, the Justice Department withheld "essential records" in three different reviews, despite the fact that such records had been produced for the DOJ IG "in many prior reviews without objection." Michael Horowitz eventually got access to the files, it seems, but not because Department officials realized they were misinterpreting the IG law in withholding access. No, Horowitz got the records only after DOJ leadership decided that "the three reviews were of assistance to the Department of Justice's leadership."
>
> In other words, Attorney General Eric Holder and his political subordinates only

> gave the IG access to these records because they decided there was nothing in them that would prove embarrassing.

It’s the most transparent administration in history, just read the IRS e-mails that were deleted and you’ll see that there is no abuse of power at all.

New $2.2 billion solar plant kills one bird every two minutes

August 19, 2014 | by Wintery Knight | Link | Original Link

From the leftist Washington Post: (H/T Barbara)

> Workers at a state-of-the-art solar plant in the Mojave Desert have a name for birds that fly through the plant's concentrated sun rays — "streamers," for the smoke plume that comes from birds that ignite in midair.
>
> Federal wildlife investigators who visited the BrightSource Energy plant last year and watched as birds burned and fell, reporting an average of one "streamer" every two minutes, are urging California officials to halt the operator's application to build a still-bigger version.
>
> The investigators want the halt until the full extent of the deaths can be assessed. Estimates per year now range from a low of about a thousand by BrightSource to 28,000 by an expert for the Center for Biological Diversity environmental group.
>
> […]Federal wildlife officials said Ivanpah might act as a "mega-trap" for wildlife, with the bright light of the plant attracting insects, which in turn attract insect-eating birds that fly to their death in the intensely focused light rays.
>
> Federal and state biologists call the number of deaths significant, based on sightings of birds getting singed and falling, and on retrieval of carcasses with feathers charred too severely for flight.

The Associated Press had this to say this about wind power:

> The Obama administration said Friday it will allow some companies to kill or injure bald and golden eagles for up to 30 years without penalty, an effort to spur development and investment in green energy while balancing its environmental consequences.
>
> The change, requested by the wind energy industry, will provide legal protection for the lifespan of wind farms and other projects for which companies obtain a permit and make efforts to avoid killing the birds. An investigation by The Associated Press earlier this year documented the illegal killing of eagles around wind farms, the Obama administration's reluctance to prosecute such cases and its willingness to help keep the scope of the eagle deaths secret. The White House has championed wind power, a pollution-free energy intended to ease global warming, as a cornerstone of President Barack Obama's energy plan.

If it were up to me, I would just stick with clean natural gas and fracking, and build the Keystone XL pipeline. That would create a lot of jobs, and without wasting taxpayer money to reward Obama's rich campaign donors who often own these green energy

companies. But then I guess the White House would reply “but then who will kill all the endangered bird species unless we pay people to do it?”.

UK social policies undermine work and family while rewarding hedonism and sloth

August 20, 2014 | by Wintery Knight | Link | Original Link

Dina tweeted this article by Jill Kirby from the UK Daily Mail, which helps to show how government can punish good behavior, and reward destructive behavior – simply by transferring wealth.

Look:

> Over recent decades, the British state has been engaged in a huge social experiment in which traditional family structures and moral values have been deliberately undermined by official policy.
>
> In the name of progress, hard work and self-reliance have been punished through excessive taxation, while irresponsibility and idleness have been rewarded through unconditional welfare payments.
>
> The destructive consequences of this approach are now becoming ever more apparent.
>
> Britain now has a huge underclass of benefit-dependent, dysfunctional families who know far more about crime, drugs and alcohol than the world of work. Figures published yesterday revealed there are half a million problem households who, in total, cost taxpayers more than £30 billion a year through the colossal burden they impose on the welfare state, police forces and social services.
>
> The scale of this social disaster is much worse than previously estimated. A Government study in 2011 reported there were around 120,000 troubled families — four times fewer than was revealed this week.
>
> The cost is not just financial. With their self-centredness and disdain for the bonds that glue together civilised society, many of these families also bring misery to their neighbourhoods.
>
> […]When social reformer Sir William Beveridge first proposed the creation of the modern social security system in 1942, he explicitly stated that benefits should to be based on contributions through taxes and national insurance, otherwise they would simply discourage people from working and taking responsibility for their families.
>
> But his contributory principle has long since disappeared, and we now have a 'something for nothing' system where those who give the least to society receive the most. **Indeed, according to one official calculation, every 'problem household' costs the taxpayer at least £75,000 — which is more than three times average earnings.**
>
> **So we have the grotesque situation where people who try to do the right thing — who go to work and bring their children up in a stable**

> **family — are punished twice over: first through the punitive income tax rates which contribute to paying for the welfare state, and second, through subsidising again the dysfunctional families that are produced by unconditional social security.**
>
> **If the Government was serious about dealing with the problem, it would have the courage to introduce proper welfare sanctions to end the incentives to fecklessness. It would also provide real support through the tax system for the institution of marriage.**
>
> **Sadly, the Coalition has done nothing to reverse the bias of the fiscal system against married couples, whereby married families are ruthlessly penalised by withdrawal of tax allowances and benefits, whereas support is lavished on lone parents.**

And the cycle continues, because children of “lone parents” are going to be far less likely, on average, to be able to be net contributors in the society – to pay in more than they take out. It sounds so nice to redistribute wealth from people who have something to people who don’t, until you have too few people doing the right things, and too many people doing the wrong things. What happens then? I think that the responsible, hard working people will either leave the UK or curtail their productive activities. What else do you do when the government punishes you for your success and rewards other people for failure?

New study: 50 percent of divorced people wish they had never ended their marriage

August 20, 2014 | by Wintery Knight | Link | Original Link

The study was reported in the UK Daily Mail.

Excerpt:

> The decision to divorce is always going to be difficult, and for many there can be good reason to end a marriage.
>
> Yet, 50 per cent of divorcees have regrets about their break-up, a study revealed. Researchers found that after the dust settled, 54 per cent experienced second thoughts about whether they had made the right decision, with many realising they miss or still love their ex-partner.
>
> For some, the regrets have been so severe that 42 per cent have had moments where they considered giving their relationship another go, with a large percentage actually making the effort to try again and 21 per cent of those still together now.
>
> […]A spokesman for the survey, who asked 2,000 UK men and women that have either divorced or called time on a long-term relationship of more than five years, says: 'Getting divorced is a huge step for any relationship, and sometimes, the words 'I want a divorce' can be said in the heat of an argument.
>
> But once you calm down and really think about things, many realise it's the last thing they want, but by then, you can feel it's too late to take it back.
>
> And even if you don't regret it immediately, dealing with the aftermath of a break-up can lead to more second thoughts. But it's great to see some have managed to talk about their regrets and give things another go.'
>
> The study found one in five said the regrets started straight away, with another 19 per cent having second thoughts within a week of saying the D-word.
>
> ### TOP TEN REASONS FOR REGRETTING A DIVORCE
>
> 1. Missing an ex-partner
> 2. Feeling like a failure
> 3. Still being in love with an ex-partner
> 4. Realising they were being unreasonable
> 5. Feeling lonely
> 6. Discovering the grass isn't always greener
> 7. An ex-partner finding someone new
> 8. Realising they are not better off on their own
> 9. Damaging the relationship with their children

> 10. Children's lives being affected
>
> But for some, it took longer with more than one in ten admitting it took a year or more for them to wish they hadn't left their partner.
>
> Others admitted they wished they could take things back when the divorce officially came through. Especially when they have worked to divide their assets or started telling people they were calling it quits.

This study fits together well with another study that I blogged about before.

The article is by Mona Charen, and the study is by the Institute for American Values. It's an older article, but I was reading a book that mentioned the study, so I thought I would blog on it.

Excerpt:

> Now, the Institute for American Values (www.americanvalues.org) has released a new study with some intriguing data about the effects of divorce on the unhappy couples themselves. It seems that another great myth is about to tumble – the myth that at least divorce makes unhappily married adults happier.

> According to the survey, conducted by a team of family researchers, unhappily married adults who divorced were no happier five years after the divorce than were equally unhappy couples who remained together. And two-thirds of unhappily married people who remained married reported marriages that were happy five years later. Even among those who had rated their marriages as "very unhappy," nearly 80 percent said they were happily married five years later. These were not bored or dissatisfied whiners. They had endured serious problems, including alcoholism, infidelity, verbal abuse, emotional neglect, depression, illness, and work and money troubles.
>
> Even more surprising, unhappy spouses who divorced actually showed slightly more depressive symptoms five years later than those who didn't. (They did, however, report more personal growth.) And – make of this what you will – the divorced sample reported a good deal more alcohol consumption than the married group.
>
> […]**The data show that if a couple is unhappy, the chances of their being happily married five years hence are 64 percent if they stay together but only 19 percent if they divorce and remarry. (The authors acknowledge that five years is a relatively short period and many divorced people will eventually remarry, some happily.)**
>
> How did the unhappy couples turn their lives around? The study found three principal techniques. The first was endurance. Many couples do not so much solve their problems as transcend them. By taking one day at a time and pushing through their difficulties, many couples found that time itself often improved matters. Moreover, these couples maintained a negative view of the effects of

> divorce. “The grass is always greener,” explained one husband, “but it’s Astroturf.”
>
> Others were more aggressive. Those the researchers labeled the “marital work ethic” types tackled their problems by arranging for more private time with one another, seeking counseling (from clergy or professionals), receiving help from in-laws or other relatives, or in some cases, threatening divorce or consulting a divorce lawyer.
>
> In the third category were the “personal happiness seekers” who found other ways to improve their overall contentment even if they could not markedly improve their marital happiness.
>
> Certainly the survey found some marriages that were impossible to save and some divorced couples who were happier than those who had remained married. That is as one would expect.
>
> **But the most telling aspect of this research is the light it sheds on the importance of the attitude toward marriage. Those who enter marriage with a dim (some might say accurate) view of divorce and a strong religious or other motivation for avoiding it are not only less likely to divorce; they are also less likely to be unhappy. That is the arresting news here. We’ve known that commitment was good for the children of such marriages. We’ve known that commitment was good for society. But until now, it was not clear that commitment actually made married couples themselves more likely to be happy.**

I think the last point is a good point. Right now, a lot of young people are choosing mates based on superficial criteria (looks, money, popularity). The purpose of marriage is, in their opinion, to be happy. And their spouse’s job is to make them happy. That’s their view of marriage. But this ignores the realities of what marriage is about. Marriage is not a contract, it’s a covenant. People who marry ought to be getting into it because they want the responsibility of loving another sinner in close quarters. It’s not about feelings and life enhancement. The most important thing to look for in a spouse is their ability to love self-sacrificially and to make and sustain long-term commitments. Both of these capabilities are damaged the more a person goes through painful serial break-ups, because people become unable to trust and instead withhold love and commitment for their own safety.

In Canada, goose eggs are protected, but unborn children can be killed through all 9 months

August 21, 2014 | by Wintery Knight | Link | Original Link

Eagle eggs are protected, unborn babies are not

From Life News a story not about eagle eggs, but about goose eggs – in Canada.

Excerpt:

> Though majestic in flight, [geese] have become a nuisance in recent years, and with a birth rate hovering around 5 goslings per year, new methods of population control are being explored.
>
> One such method is egg addling.
>
> This practice, which is detailed on Environment Canada's website as well as The Humane Society of the United States, is a process whereby geese eggs are gently removed from the nest, coated in vegetable oil and then returned to the nest. The purpose of the oil is to prevent the embryo from developing any further. Essentially, it blocks the transfer of oxygen and other gases through the shell.
>
> The reason this practice is highly successful is because the female goose will continue laying on the eggs for a lengthy period not realizing they will never hatch. Alternatively, if the eggs are removed and destroyed, she simply will lay more eggs nearby and nullify any attempt to decrease the population. In both the United States and Canada, anyone wishing to engage in the practise of egg addling must first retain a permit from authorities.
>
> **One of the steps in the process of addling is to place the eggs in a**

> **bucket of water. If the egg sinks it is considered humane to coat it with oil. On the other hand, if the egg floats it is understood to be past 14 days of incubation which means the embryo is now viable and it would be inhumane to kill it. Regardless of your views of Canada geese, it is understandable there are some guidelines on when and how their pre-born goslings can be killed.**
>
> Juxtapose these regulations with the complete lack thereof when it comes to unwanted humans. The contrast is difficult to ignore. We have rules based on compassion to prevent people from killing a viable pre-born gosling, but no rules whatsoever when it comes to people killing unwanted pre-born people.
>
> In Canada there are multiple ways to legally end the lives of viable fetuses; some of which are barbaric and cruel. In 2010 there were over 10,000 abortions past 13 weeks gestation in our country. These pre-born children suffered through the inhumane procedure of being torn limb by limb from their mother's womb. Almost every other civilized nation and the vast majority of European countries provide fetal protection after 13 weeks gestation. Is this because these countries are paternalistic and oppressive? No, it's because they care about human rights.

Canada is a very secular country, so their abortion law is very much in favor of allowing the strong to kill the weak legally through all nine months of pregnancy. Canada has no federal law governing abortion.

Keep in mind that abortion in Canada is 100% taxpayer-funded. Everyone who pays taxes there is indirectly forced to take part in this practice.

Report: Negative impacts from the legalization of marijuana in Colorado

August 21, 2014 | by Wintery Knight | Link | Original Link

The Daily Signal reports on a new peer-reviewed study.

Excerpt:

> A published academic peer-reviewed study and another thorough study set to be released next Monday show:
>
> - An increase in marijuana-related traffic fatalities in Colorado since 2009
> - An increase in marijuana-related traffic fatalities in Colorado compared to non-"medical marijuana" states since 2009
> - Alcohol-related fatalities remained the same
>
> […]Marijuana was in essence legalized in Colorado in 2009, when the state commercialized the sale of so-called "medical marijuana." By commercializing the sale, and thus consumption of marijuana across the state, the state saw a large increase in use by its citizens, and citizens from other states, so-called pot tourists.
>
> In other words, 2009 was a pivotal year for Colorado and its' drivers.
>
> In the three years prior to 2009 (2006-2008), Colorado averaged 35 drivers per year who tested positive for marijuana in fatal accidents.
>
> In the three years after 2009 (2010-2012), Colorado averaged 57.3 drivers per year who tested positive for marijuana use in fatal accidents—a 64 percent increase over the pre-2009 numbers.

Here's the results from the abstract of the paper:

> **RESULTS:**
>
> In Colorado, since mid-2009 when medical marijuana became commercially available and prevalent, the trend became positive in the proportion of drivers in a fatal motor vehicle crash who were marijuana-positive (change in trend, 2.16 (0.45), $p<0.0001$); in contrast, no significant changes were seen in NMMS. For both Colorado and NMMS, no significant changes were seen in the proportion of drivers in a fatal motor vehicle crash who were alcohol-impaired.

And now here is another report that explains some of the other effects of legalizing marijuana.

Excerpt:

> According to the new report by the Rocky Mountain High Intensity Drug

> Trafficking Area entitled "The Legalization of Marijuana in Colorado: The Impact," the impact of legalized marijuana in Colorado has resulted in:
>
> 1. The majority of DUI drug arrests involve marijuana and 25 to 40 percent were marijuana alone.
> 2. In 2012, 10.47 percent of Colorado youth ages 12 to 17 were considered current marijuana users compared to 7.55 percent nationally. Colorado ranked fourth in the nation, and was 39 percent higher than the national average.
> 3. Drug-related student suspensions/expulsions increased 32 percent from school years 2008-09 through 2012-13, the vast majority were for marijuana violations.
> 4. In 2012, 26.81 percent of college age students were considered current marijuana users compared to 18.89 percent nationally, which ranks Colorado third in the nation and 42 percent above the national average.
> 5. In 2013, 48.4 percent of Denver adult arrestees tested positive for marijuana, which is a 16 percent increase from 2008.
> 6. From 2011 through 2013 there was a 57 percent increase in marijuana-related emergency room visits.
> 7. Hospitalizations related to marijuana has increased 82 percent since 2008.
>
> The report includes other data about the negative effect of legalizing marijuana in Colorado, including marijuana-related exposure to children, treatment, the flood of marijuana in and out of Colorado, the dangers of pot extraction labs and other disturbing factual trends.

Part of me thinks that posting this is futile. Sensible people will not be surprised by it, but the libertarians and Democrats who think that legalized pot is wonderful are probably so brain-damaged already that they won't care what studies say at all. Marijuana is dangerous and addictive. We shouldn't legalize it, and we shouldn't normalize it.

Host a same-sex wedding on your property or pay a $13,000 fine

August 21, 2014 | by Wintery Knight | Link | Original Link

From the Daily Signal.

Excerpt:

> Should the government be able to coerce a family farm into hosting a same-sex wedding?
>
> In a free society, the answer is no. Family farms should be free to operate in accordance with the beliefs and values of their owners. Government shouldn't be able to fine citizens for acting in the market according to their own—rather than the government's—values, unless there is a compelling government interest being pursued in the least restrictive way possible.
>
> But the New York State Division of Human Rights doesn't see things this way. On August 8, it fined Cynthia and Robert Gifford $13,000 for acting on their belief that marriage is the union of a man and woman and thus declining to rent out their family farm for a same-sex wedding celebration. The Human Rights Commission ruled that "the nature and circumstances of the [Giffords's] violation of the Human Rights Law also warrants a penalty."
>
> […]Here's the back story. In 2012, Melissa Erwin and Jennie McCarthy contacted the Giffords to rent the family's barn for their same-sex wedding ceremony and reception. Cynthia Gifford responded that she and her husband would have to decline their request as they felt they could not in good conscience host a same-sex wedding ceremony at their home. The Giffords live on the second and third floor of the barn and, when they host weddings on the first floor, they open part of the second floor as a bridal suite.
>
> […][The Giffords] do not object to gay or lesbian customers attending the fall festivals, or going berry picking, or doing any of the other activities that the farm facilitates. The Giffords' only objection is to being forced to abide by the government's views on sexuality and host a same-sex *wedding*. The Human Rights Commission has now declared this historic belief about marriage to be "discrimination."
>
> The Giffords must pay a $1,500 mental anguish fine to each of the women and pay $10,000 in civil damages penalty to New York State. If they can't pay in 60 days, a nine percent interest rate will be added to that total. Like Jack Phillips of Masterpiece Cakeshop, the Giffords must also institute anti-discriminationre-education classes and procedures for their staff.

How would gay marriage affect your marriage? Well, you would have to go to court, be found guilty, be re-educated, pay the gay people you offended, and then pay the

government for punishing you. And remember, you're already paying for the government to prosecute you for your views on marriage every time you pay taxes. We pay the salaries of our own executioners. How did it come to this?

Well, may I suggest that Christian pastors who drive a wedge of separation between the Christian faith and public knowledge are to blame. What I find in church is that pastors preach the same shallow gospel sermon every week, week in and week out. Everything is assumed to be true without examination, no alternatives or critical viewpoints are presented and defeated, and nothing in the sermon is ever connected to evidence in the real world. There is no emphasis on defining the Christian worldview, or on criticizing other worldviews like postmodernism, naturalism, pluralism or relativism. It's all mystical privatized fundamentalist anti-intellectual emotional piety.

The net result of this is that when Christians go out into the world, they are not equipped to discern the dangers posed by non-Christian ideologies, and they often vote for the very policies that later come back to destroy them – because secular leftists make their policies sound so *nice*. Who could be against "affordable health care" – until you realize that you're going to be paying for someone else's abortion drugs. Maybe pastors need to do a better job of connecting the Bible to real world knowledge and policies so that we don't just retreat from the field and let secular leftists rule over us.

109,631,000 Americans collect welfare, more than full-time year-round workers

August 22, 2014 | by Wintery Knight | Link | Original Link

From CNS News.

Excerpt:

> 109,631,000 Americans lived in households that received benefits from one or more federally funded "means-tested programs" — also known as welfare — as of the fourth quarter of 2012, according to data released Tuesday by the Census Bureau.
>
> The Census Bureau has not yet reported how many were on welfare in 2013 or the first two quarters of 2014.
>
> But the 109,631,000 living in households taking federal welfare benefits as of the end of 2012, according to the Census Bureau, equaled 35.4 percent of all 309,467,000 people living in the United States at that time.
>
> […]What did taxpayers give to the 109,631,000 — the 35.4 percent of the nation — getting welfare benefits at the end of 2012?
>
> 82,679,000 of the welfare-takers lived in households where people were on Medicaid, said the Census Bureau. 51,471,000 were in households on food stamps. 22,526,000 were in the Women, Infants and Children program. 20,355,000 were in household on Supplemental Security Income. 13,267,000 lived in public housing or got housing subsidies. 5,442,000 got Temporary Assistance to Needy Families. 4,517,000 received other forms of federal cash assistance.
>
> […]**In 2012, according to the Census Bureau, there were 103,087,000 full-time year-round workers in the United States (including 16,606,000 full-time year-round government workers). Thus, the welfare-takers outnumbered full-time year-round workers by 6,544,000.**

Democrats tell us that we need to raise taxes on those who work in order to spread the wealth around. But I submit that there is too much redistribution of wealth going on already, and we need to stop it. We are not sending the right message to people about the importance of working and earning with this much taxing and welfare spending.

Not just aborting babies with Down's syndrome – Dawkins supports infanticide

August 22, 2014 | by Wintery Knight | Link | Original Link

Listen up you atheists, the Pope has spoken

The UK Telegraph reports on the latest Dawkins blunder.

Excerpt:

> Richard Dawkins, the atheist writer, has claimed it is "immoral" to allow unborn babies with Down's syndrome to live.
>
> The Oxford professor posted a message on Twitter saying would-be parents who learn their child has the condition have an ethical responsibility to "abort it and try again".
>
> His comments were dismissed by charities and prompted fury online from opponents but he insisted his stance was "very civilised" because foetuses do not have "human feelings".
>
> He claimed that the important question in the abortion debate is not "is it 'human'?" but "can it suffer?" and insisted that people have no right to object to abortion if they eat meat.
>
> […]Anti-abortion campaigners describe the practice of aborting foetuses on physical grounds as a form of "eugenics".
>
> But Prof Dawkins strongly defended its as simply standard practice and ridiculed his critics as portraying him as "a horrid monster".
>
> The row erupted during a debate on Twitter about calls for further changes to Ireland's abortion laws in the wake of the case of a rape victim who was forced to carry the child until she could deliver by caesarean section.

> One participant said they would suffer a real ethical dilemma if they were carrying a child with the condition.
>
> **Prof Dawkins replied: “Abort it and try again. It would be immoral to bring it into the world if you have the choice.”**
>
> Another pointed to recent figures asking: “994 human beings with Down’s Syndrome deliberately killed before birth in England and Wales in 2012 – is that civilised?”
>
> He responded: “Yes, it is very civilised. These are foetuses, diagnosed before they have human feelings.”

I’m really not sure why anyone is surprised by this. Dawkins is an atheist and as such, he has no rational grounding for objective moral values and duties. He also does not have any rational grounding for free will, which is required for making moral choices and bearing moral responsibility. To an atheist, what people ought to do is decided by conventions and customs that vary by time and place. There is no objective moral standard for the way humans ought to be. Dawkins is an evolutionist. He believes in survival of the fittest. The unfit should die – if necessary, directly at the hands of the fit.

Listen to what he writes in his book:

> In a universe of blind physical forces and genetic replication, some people are going to get hurt, other people are going to get lucky, and you won’t find any rhyme or reason in it, or any justice. The universe that we observe has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil and no good, nothing but blind, pitiless indifference… DNA neither knows nor cares. DNA just is. And we dance to its music.
>
> –Richard Dawkins, (River Out of Eden: A Darwinian View of Life (1995))

I’m not misrepresenting him – the man is a very consistent atheist, and there is no room for morality on atheism. It’s not rationally grounded.

Here’s how far Dawkins takes his view that there is no evil and no good:

Richard Dawkins explains morality on atheism
But wait!

He goes even further than mere abortion – he also supports infanticide:

Richard Dawkins even advocates for adultery. So I’m really not sure why people are so fascinated by atheism, when this is the kind of person it produces.I am not saying that every atheist is going to treat morality as all personal preference and social convention. Just the ones who really understand it, and are consistent with it. Real atheists don’t have any rational grounding for morality in their worldview. This man has 1 million twitter followers. He is their spokesman because he reflects their views.

And finally, in the past, Dawkins has expressed that his goal is to destroy Christianity. Is this the same kind of destruction of Christianity that his fellow atheist Stalin wanted? Given Dawkins views on murdering innocent unborn and born children, I think we can infer what he means by “destroy Christianity”.

By the way, Nick Peters has also written about Dawkins’ comments, and I stole the image of Pope Dawkins from his post.

Friday night movie: Saboteur (1942)

August 22, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.3/10]

IMDB median rating: [7/10]

Description:

> Aircraft factory worker Barry Kane is accused of starting a fire at a Glendale, California airplane plant during World War II, an act of sabotage that killed his friend Mason. Kane believes the real culprit is a man named Fry who handed him a fire extinguisher filled with gasoline during the fire. When the investigators find no one named "Fry" on the list of plant workers, they assume Kane is guilty.

This one is directed by Alfred Hitchcock.

Happy Friday!

Pastor Matt: How apologetics saved my faith

August 23, 2014 | by Wintery Knight | Link | Original Link

Here's a must-read post from Pastor Matt Rawlings whose reading list I wrote about before.

Excerpt:

> I became a Christian at 24 after a cancer diagnosis. I had been an atheist for 10 years but came to God in desperation. I left Capitol Hill (and politics altogether) to learn about Christianity. I attended what many believed was a conservative seminary but had slowly slipped into liberalism by the time I arrived in 1999. I was sold on "higher criticism" (or a skeptical approach to the historicity and inerrency of Scripture) and joined the then growing "Emergent Church" movement. Within a few years, I was where Rob Bell is now–a soft universalist with a condescending attitude toward conservatives. Yet, I was also spiritually dead and was struggling with depression. I was quickly headed back to the atheism I had thought I had left behind while praying for my life.
>
> During this time of personal struggle, my wife and I were helping a small church in Charleston, West Virginia. When an elder learned my wife had a degree in micro-biology and had helped overseen a science program at Cornell, he asked her to meet with the youth group and answer their questions about science and the faith. In preparation, she picked up the book The Case for a Creator by Lee Strobel (Zondervan 2005). She devoured the book and went on and on about wonderful it was and how I had to read it. I resisted as the cover struck me as "fundamentalist nonsense." Yet, she persisted and it became clear that either I was going to read the book or spend a few nights on the couch!
>
> I opened the book with a bad attitude. After all, my seminary professors had told me that "apologetics is dead!" and that "Generation-X and -Y desired experience not 'answers.'" I was even more resistant when I saw the first few chapters take on evolution. I was convinced Genesis 1-11 was all myth, Darwin had been proven correct and that only nutters questioned it. But after reading Strobel's interaction with Dr. Jonathan Wells and Dr. Stephen C. Meyer of the Discovery Institute, I realized I had no real counter argument to intelligent design.

Read the rest.

The Case for a Creator is one of my favorite apologetics books. I have read it once, but I've listened to the audio version TEN TIMES. This book more than any other is the perfect introduction to science apologetics for beginners. I really recommend the audio book as a companion to the print version.

When I read this post by Pastor Matt, I felt that his faith was not just castles built in the sky. A lot of pastors basically start by assuming (without any evidence) that the Bible is correct in everything it says, and then they start lecturing everyone else about what the

Bible says without ever having done a moment of investigation into the evidence for or against what they are preaching about. They've never read anyone who disagrees with them, and they don't know how to explain what they believe to anyone outside the church walls. I have to tell you that this is one of the *the most uncomfortable feelings* to have when you are not yet a Christian. You are in a building filled with people who don't know whether what they believe is true. You are being lectured by a man who typically has no idea how to show others that what he is talking about is true, except for appealing to feelings. I don't know about you, but that really makes me uncomfortable. I trust people more when I know they are good at something practical, like mechanical engineering, medicine, automobile mechanics, weight-lifting, nutrition or cooking. When you read outside the Bible, it's basically treating Christianity like it's a real area of knowledge. That makes me interested, because it means we are talking about something real, not just a personal preference or a subjective experience or a community custom.

Pastor Matt is different. He's read tons of stuff outside the Bible, and he's not presupposing anything when he preaches about God and Jesus. He's got informed beliefs about this stuff. He's authentic. And you can see the strength of his convictions by looking at what he's read. He talks about his faith like we might talk about our professions. We have convictions about what we do that creates value for others because *we know how to do it*. When a pastor reads a lot on logic, philosophy, history and science, then he is able to know whether what he says he believes is really true or not *out there in the real world*. When I listen to my pastor and look at our church book store, I get very disappointed. It makes me wonder why I can't go to a church like Pastor Matt's church. Wouldn't that be great? I would really fly out of bed on Sunday morning if I thought "what is he going to teach on this morning, that I can use at work on Monday morning?" I am always interested in hearing what someone else *knows*. I am one of those people who is always asking the dentist, the doctor, the mechanic, and the food preparers "how did you do that?" I even got the recipe for the cilantro-lime rice that Chipotle makes by asking the woman who was making my burrito bowl. How did you do it? I want to know how you know.

I have a good friend of mine right now who is going through a tough time with her church. She keeps telling me that Sunday school is very emotional, and clearly designed to comfort people and make them feel "gooey" (her word). This is a woman who is on fire academically and is making tons of money in a summer job in her field. She just got a new scholarship, too. She keeps thinking that Sunday school is supposed to be the time to learn about difficult things and practical things. It's causing her to really get bored with church and even to look for a new church. I think a lot of young people are tired of being entertained in church, and they would like to get their minds on some real knowledge about God and what he's done in history and in nature. I'll bet that Pastor Matt doesn't have any problems packing his church with young people. Young people can tell when someone really knows what they are talking about, the same way that a dentist knows about teeth, or that a tax preparer knows about tax laws.

Walter Williams: where is the outrage over black-on-black crimes?

August 23, 2014 | by Wintery Knight | Link | Original Link

Walter Williams

A recent editorial by George Mason University professor of economics Walter Williams.

Excerpt:

> Each year, roughly 7,000 blacks are murdered. Ninety-four percent of the time, the murderer is another black person.
>
> According to the Bureau of Justice Statistics, between 1976 and 2011, there were 279,384 black murder victims. Using the 94-percent figure means that 262,621 were murdered by other blacks.
>
> Though blacks are 13 percent of the nation's population, they account for more than 50 percent of homicide victims. Nationally, the black homicide victimization rate is six times that of whites, and in some cities, it's 22 times that of whites.
>
> Coupled with being most of the nation's homicide victims, blacks are most of the victims of violent personal crimes, such as assault and robbery.
>
> The magnitude of this tragic mayhem can be viewed in another light. According to a Tuskegee Institute study, between 1882 and 1968, 3,446 blacks were lynched at the hands of whites. Black fatalities during the Korean War (3,075), Vietnam War (7,243) and all wars since 1980 (8,197) come to 18,515, a number that pales in comparison with black loss of life at home.
>
> It's a tragic commentary to be able to say that young black males have a greater chance of reaching maturity on the battlefields of Iraq and Afghanistan than on the streets of Philadelphia, Chicago, Detroit, Oakland, Newark and other cities.

You might remember that the NAACP just recently came out for gay marriage. Do they have their priorities straight?

Is Sam Harris successful at rationally grounding objective moral values and duties?

August 24, 2014 | by Wintery Knight | Link | Original Link

I just wanted to put out a few snips from this layperson-level article on the Reasonable Faith web site. The article is about atheist scholar Sam Harris, and his attempt to provide a basis for morality on atheism.

Here's the Harris project:

> The question then is, what is the best foundation for the existence of objective moral values and duties? What grounds them? What makes certain actions good or evil, right or wrong? Traditionally, God has been the highest Good (*summum bonum*) and His commandments constitutive of our moral duties. But if God does not exist, what foundation remains for objective moral values and duties?

Dr. Craig is able to show why Harris' attempt to ground the objective moral value of humans in "human flourishing" fails, by using the law of identity to show that Harris' rule doesn't account for the possibility that those who do evil could *possibly* flourish and be happy. If Harris is right that objective morality is *identical* to human flourishing, then it cannot even be *possible* that this be the case. This can be a bit confusing to non-philosophers, though, so I'll focus on Dr. Craig's argument against Harris' attempt to ground objective moral duties.

Dr. Craig writes:

> That takes us to a second question: Does atheism provide a sound foundation for objective moral duties? Duty has to do with moral obligation and prohibition, what I ought or ought not to do. Here reviewers of *The Moral Landscape* have been merciless in pounding Harris' attempt to provide a naturalistic account of moral obligation. Two problems stand out.
>
> **First:** Natural science tells us only what *is*, not what *ought* to be, the case. As philosopher Jerry Fodor has written, "Science is about facts, not norms; it might tell us how we are, but it wouldn't tell us what is wrong with how we are." In particular it cannot tell us that we have a moral obligation to take actions that are conducive to human flourishing.
>
> So if there is no God, what foundation remains for objective moral duties? On the naturalistic view, human beings are just animals, and animals have no moral obligations to one another. When a lion kills a zebra, it kills the zebra, but it does not *murder* the zebra. When a great white shark forcibly copulates with a female, it forcibly copulates with her but it does not *rape* her — for there is no moral dimension to these actions. They are neither prohibited nor obligatory.
>
> So if God does not exist, why think we have any moral obligations to do anything? Who or what imposes these moral duties on us? Where do they come

> from? It is hard to see why they would be anything more than a subjective impression ingrained into us by societal and parental conditioning.

So we might *feel* morally obligated to do something, maybe what our herd expects of us in this time and place we live in. But on atheism those feelings are arbitrary. After all, societies have evolved where feelings of obligation are felt by people to perform suicide bombings against civilians. On atheism, those feelings are as valid and grounded as any other "duties" because they emerge from the same process in other times and places. Obligations change between time and place – they are not objectively real. But that means that our moral duties are not objective, they are arbitrary – if atheism is true. The same "socio-biological evolution" is generating opposite moral duties in different times and places. This is not "objective".

And the second objection is even more lethal:

> **Second:** "ought" implies "can." A person is not morally responsible for an action he is unable to avoid. For example, if somebody shoves you into another person, you are not to blame for bumping into this person. You had no choice. But Harris believes that *all* of our actions are causally determined and that there is no free will. Harris rejects not only libertarian accounts of freedom but also compatibilistic accounts of freedom. But if there is no free will, no one is morally responsible for anything. In the end, Harris admits this, though it's tucked away in his endnotes. Moral responsibility, he says, "is a social construct," not an objective reality: "in neuroscientific terms no person is more or less responsible than any other" for the actions they perform. His thoroughgoing determinism spells the end of any hope or possibility of objective moral duties on his worldview because we have no control over what we do.
>
> Harris recognizes that "determinism really does threaten free will and responsibility as we intuitively understand them." But not to worry! "*The illusion of free will is itself an illusion*." The point, I take it, is that we do not really have the illusion of free will. Not only is such a claim patently false phenomenologically, as any of us can attest, but it is also irrelevant. The fact remains that whether we experience the illusion of free will or not, on Harris' view we are thoroughly determined in all that we think and do and can therefore have no moral responsibilities.

On Harris' view, human beings are computers made out of meat. But if you cannot freely make moral choices, then you cannot choose to perform moral duties or not. What is amazing to me is why he wants to deny free will in the first place. He is surely very well aware of his own experience of free will, and his own consciousness, for that matter. Before we even start to look at evidences like the origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, etc. we have evidence within ourselves that naturalism is false. I mean – has no one ever loved this man enough to point out the self-deception to him? I know people want to believe that no one will hold them accountable for their selfish, immoral actions, but surely some logical contradictions are so obvious

that the atheist has to step back from it and say “enough! I am not going to commit intellectual suicide”.

Pew survey: evangelical Christians least likely to believe superstitious nonsense

August 24, 2014 | by Wintery Knight | Link | Original Link

The Pew Research survey is here.

They are trying to see which groups believe in superstitions and new age mysticism.

Here are the parts that I found interesting:

Beliefs of Demographic, Political and Religious Groups

	% who believe in...					
	%	%	%	%	%	
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Supernatural Experiences

	[illegible]	[illegible]	Fortune	[illegible]
	[illegible]	[illegible]	[illegible]	[illegible]
[illegible]

> […]The answers were added up to create an index of belief in occult and the paranormal. While 31% of people who never worship expressed strong belief in these things, only 8% of people who attend a house of worship more than once a week did.
>
> Even among Christians, there were disparities. While 36% of those belonging to the United Church of Christ, Sen. Barack Obama's former denomination, expressed strong beliefs in the paranormal, only 14% of those belonging to the Assemblies of God, Sarah Palin's former denomination, did. In fact, the more traditional and evangelical the respondent, the less likely he was to believe in, for instance, the possibility of communicating with people who are dead.

When I think of the "weird" things that evangelical Christians believe, I think of the origin of the universe, the cosmic fine-tuning, the origin of life and the sudden origin of animal body plans in the Cambrian. All of this is superstition to an atheist, and yet all of it is rooted in mainstream science. Not just that, but they've grown stronger as science has progressed. I can accept the fact that an atheist may be ignorant of the science that defeats his atheism, but that's something that has to be remedied with more studying of the evidence, not less. If you generate a worldview by 1) your desire to dispense with moral judgment and/or 2) your desire to prefer Star Trek and Star Wars to mainstream science, then *of course* you are going to have an irrational worldview. I'm not saying that all atheists do this, surely someone like Peter Millican does not. But for rank-and-file Dawkins acolytes, I think this is pretty accurate, and it's why we get the survey results that we do.

Middle East charities pay bounties to the families of Muslim suicide bombers

August 25, 2014 | by Wintery Knight | Link | Original Link

This is what "work" looks like for terrorists

The amazing Sharyl Attkisson writes about it in The Daily Signal.

Excerpt:

> For the first time, startling details are being made public about the millions of dollars funneled from Middle East charities to Islamic terrorists and their families.
>
> The money was used to reward terrorists and their families after attacks on Israelis and U.S. nationals visiting Israel between 2000 and 2005 during the second intifada or Palestinian uprising.
>
> The evidence was presented today in a landmark case in New York federal court. Three hundred U.S. nationals claim Arab Bank knowingly provided financial services to terrorists and their financiers in violation of the U.S. anti-terrorism law. Arab Bank contends it did not knowingly serve terrorists.
>
> Bank documents reveal an elaborate system for which Amman, Jordan-based Arab Bank served as the center point. Some Israelis refer to the bank as the "Grand Central Station of terrorist financing."
>
> For example, bank documents allegedly show that a dozen Middle Eastern charities with links to the terrorist group Hamas and other radical Islamic groups transferred $32 million to Arab Bank during the second intifada. The money was

> then allegedly paid out to families of suicide bombers and other Palestinians who engaged in acts of terrorism against Jews.
>
> An additional charity, the Saudi Committee for the Support of the Intifada al Quds, sent nearly $100 million through Arab Bank. The plaintiff's analysis of bank records indicates $32 million of it ended up being distributed as cash payments to martyrs and their families, including the families of suicide bombers, and the rest was distributed to other Hamas-controlled charities.
>
> According to evidence presented by the plaintiffs today, based on bank documents, families of suicide bombers received a $5,300 payment, or about four times the average annual Palestinian income at the time of $1,600. If a martyr was wounded but not killed, he received $2,655. If a martyr was arrested and jailed, the family received $1,325. The recipients simply showed up at an Arab Bank branch, presented identification, and received the cash.

I would like to see some of our leaders in the West get serious about this money-laundering problem. But one thing is clear – if anyone is wondering which side of this conflict is good and which side is evil, then this should make it pretty clear. The side that offers rewards for intentionally targeting and murdering civilians (not the military, but civilian targets!) is the evil side.

Denominations that liberalized Christianity's teachings on sex are in decline

August 25, 2014 | by Wintery Knight | Link | Original Link

Alexander Grisworld writes about all the denominations that liberalized their teachings on sex, in The Federalist.

Excerpt:

> **The Episcopal Church**
>
> In 2003, Gene Robinson became the first openly gay, noncelibate man to be consecrated as a bishop of the Episcopal Church. In the wake of his consecration, entire dioceses severed ties with the Episcopal Church, eventually creating the Anglican Church of North America (ACNA). But the Episcopal Church continued to liberalize its sexual teachings, lifting a moratorium on any more gay bishops in 2006 and creating a "blessing ceremony" for gay couples in 2009.

> In 2002, the number of baptized U.S. members of the Episcopal Church stood at 2.32 million. By 2012, that number had fallen to 1.89 million, a decline of 18.4 percent. Meanwhile, attendance has fallen even more steeply. Average Sunday attendance in its U.S. churches was 846,000 in 2002, but had fallen 24.4 percent by 2012 to only 640,000. Other signs of congregational liveliness have fallen even further. Baptisms have fallen by 39.6 percent, and marriages have fallen by 44.9 percent.

> As for the ACNA? It's seen its membership rise by 13 percent and its Sunday attendance rise by 16 percent in the past five years. Since 2009, the ACNA has planted 488 new congregations. In 2012, the entire Episcopal Church managed to plant four new churches.

> **The Evangelical Lutheran Church of America**
>
> The Evangelical Lutheran Church of America (ELCA) was formed in 1987, when three Lutheran denominations merged to create the largest Lutheran church in America. For most of its history, gay men and women were permitted to be pastors, so long as they remained celibate. But in a narrow vote at its 2009 Churchwide Assembly, ordination was extended to gay men and women in "committed monogamous relationships." In addition, the Assembly passed an amendment allowing churches "to recognize, support and hold publicly accountable life-long, monogamous, same-gender relationships."

> From ELCA's formation in 1987 to 2009, the average decrease in membership each year was only 0.62 percent. But after the liberalization of the ELCA's stance on sexuality, membership declined a whopping 5.95 percent in 2010 and 4.98

percent in 2011. Since 2009, more than 600 congregations abandoned the denomination, with almost two-thirds joining conservative Lutheran denominations like the North American Lutheran Church and Lutheran Churches in Ministry for Christ.

By the end of 2012, ELCA had lost 12.3 percent of its members in three years—nearly 600,000 people. If the present rate of defections holds steady, ELCA will cease to exist in less than two decades.

The United Church of Christ

The United Church of Christ (UCC) has long had a reputation for unfettered liberalism, sometimes bordering on the radical. In 2008, for example, the pastor of the largest UCC congregations in the country was one Rev. Jeremiah Wright. The UCC's tendency for pushing traditional boundaries has led to unquestionably positive developments (such as the first African-American pastor as early as 1785) and the unquestionably silly (such as the first hymnal that refuses to call Jesus male). Needless to say, in 2005 UCC became the first U.S. mainline Protestant denomination to support same-sex marriage, and has been an outspoken voice in the gay marriage debate ever since.

While UCC has been bleeding members for decades, its decline rapidly acceleratedafter the gay marriage vote. Since 2005, UCC has lost 250,000 members, a decline of 20.4 percent over seven years. While an average of 39 congregations left UCC annually from 1990 to 2004, more than 350 congregations departed in the following three years. The UCC's own pension board called the 2000's decline "the worst decade among 25 reporting Protestant denominations," and admitted that "…the rate of decline is accelerating."

2013 marked a particularly grim milestone for the denomination, as membership finally fell below one million. If the post-2005 rate in membership losses doesn't taper out, the denomination will cease to exist in 30 years.

The Presbyterian Church U.S.A.

The Presbyterian Church U.S.A. (PCUSA) was flirting with loosening its sexual standards as early as its 2006 General Assembly, when it voted to allow ordination boards to essentially overlook clergy marriage standards if a candidate "adhere[s] to the essentials of the Reformed faith." By 2010, the General Assembly had passed an amendment to remove all clerical standards of sexual behavior entirely. This year's General Assembly voted overwhelmingly to change their Book of Order to redefine marriage as a civil contract between "two people" and to allow ministers to perform same-sex marriages where legal.

Hopefully by now, you can see where this is all headed. In 2006, 2.2 million

> people were members of PCUSA, a number that dropped 22.4 percent to 1.85 million by 2013. PCUSA's decline accelerated significantly after approving the ordination of non-celibate gay and lesbian clergy in mid-2011, which led to the creation of an alternative denomination in 2012 called ECO: A Covenant Order of Evangelical Presbyterians. Over 100,000 members left the PCUSA in 2012 alone.

> Once again, if post-2006 trends continue, the denomination will cease to exist by 2037.

Why is this?

I think it's because when a person says that the plain meaning of Scripture is no longer authoritative in our lives simply because it interferes with our seeking of pleasure, that *is* the ballgame. When it comes to ethics, any serious Christian is going to look to the Bible to be the guide on God's character and our duties to him that come out of being in relationship with him. If I have girlfriend, and we go out to a restaurant, I cannot spend the entire time hitting on the waitress and staring at every other girl in the room. Similarly, when a person claims to be a Christian, and be in a relationship with God, it's a two-way relationship, and our actions have got to respect God as he is. God has a design for male-female relationships – a design for love, marriage and sex. If we just decide that we don't have to care about who he is when we make these decisions about love, marriage and sex, then the relationship with him is over. It's all about us, then. And if it's all about us, then why get up and go to church at all?

The question that decides what side we are on is this: are there two people in this relationship? Do I have to care about that other person, or do I just project my feelings and desires onto them so they are just a projection of me? In my relationship with God, I know God is different than me. And I know what God is like from reading the Bible and seeing what God has done in the past. In particular, I can clearly see what Jesus has done in history. I know that God is not like me, and that he has other things he values than what I value. I know that what he wants for me is better for me in the long run than the things that seem so important to me now. Being in a relationship means that you have to listen to that other person and think about how to respect them in your decision-making. Once you put your own happiness above the things the other person cares about, it's over.

Utilitarianism and the Moral Life by J. P. Moreland

August 25, 2014 | by Wintery Knight | Link | Original Link

I found this essay on After All, but it looks like their site is not working well, so I'm just going to steal it and post it here, in case it disappears completely. This is one of my favorite short essays on utilitarianism, and it's a wonder that the thing can't stay up somewhere. Well, it will have a home here now. I'd be surprised to see anyone else be this awesome in a measly 1000 words as Dr. Moreland is below.

—-

Utilitarianism and the Moral Life

What Is Utilitarianism?

Utilitarianism (also called consequentialism) is a moral theory developed and refined in the modern world by Jeremy Bentham (1748-1832) and John Stuart Mill (1806-1873). It can be defined as follows:

> *An action or moral rule is right if and only if it maximizes the amount of nonmoral good produced in the consequences that result from doing that act or following that rule compared with other acts or rules open to the agent.*

By focusing on three features of utilitarianism, we can clarify this definition.

(1) Utilitarian theories of value.

What is a nonmoral good? Utilitarians deny that there are any moral actions or rules that are intrinsically right or wrong. But they do believe in objective values that are nonmoral.

Hedonistic utilitarians say that the only intrinsic good is pleasure and the avoidance of pain. Quantitative hedonists (Bentham) say that the amount of pleasure and pain is the only thing that matters in deciding between two courses of action, I should do the one that produces the greatest amount of pleasure and the least amount of pain (measured by factors like the duration and intensity of the pleasure). Qualitative hedonists (Mill) say that pleasure is the only intrinsic good, but the type of pleasure is what is important, not the amount. They would rank pleasures that come from reading, art, and friendship as more valuable than those that come from, say, a full stomach.

Pluralistic utilitarians say there are a number of things that have intrinsic, nonmoral value: pleasure, friendship, health, knowledge, freedom, peace, security, and so forth. For pluralists, it is not just the pleasure that comes from friendship that has value but also friendship itself.

Currently, the most popular utilitarian view of value is subjective preference utilitarianism. This position says it is presumptuous and impossible to specify things that

have intrinsic nonmoral worth. So, they claim, intrinsic value ought to be defined as that which each individual subjectively desires or wants, provided these do not harm others. Unfortunately, this view collapses into moral relativism.

(2) Utilitarians and maximizing utility.

Utilitarians use the term utility to stand for whatever good they are seeking to produce as consequences of a moral action (e.g., “pleasure” for the hedonist, “satisfaction of subjective preference” for others). They see morality in a means-to-ends way. The sole value of a moral action or rule is the utility of its consequences. Moral action should maximize utility. This can be interpreted in different ways, but many utilitarians embrace the following: the correct moral action or rule is the one that produces the greatest amount of utility for the greatest number of people.

(3) Two forms of utilitarianism: act utilitarianism and rule utilitarianism.

According to act utilitarianism, an act is right if and only if no other act available maximizes utility more than the act in question. Here, each new moral situation is evaluated on its own, and moral rules like “don’t steal” or “don’t break promises” are secondary The moral agent must weigh available alternatives and choose the one that produces the best consequences. Rule utilitarianism says that correct moral actions are done in keeping with correct moral rules, However, no moral rule is intrinsically right or wrong. Rather, a correct moral rule is one that would maximize utility if most people followed it as opposed to following an alternative rule. Here, alternative rules (e.g., “don’t lie” vs. “don’t lie unless doing so would enhance friendship”) are compared for their consequences, not specific actions.

What Is Wrong with Utilitarianism?

Several objections show the inadequacy of utilitarianism as a normative moral theory.

First, utilitarianism can be used to justify actions that are clearly immoral. Consider the case of a severely deformed fetus. The child is certain to live a brief, albeit painless life. He or she will make no contribution to society. Society, however, will bear great expense. Doctors and other caregivers will invest time, emotion, and effort in adding mere hours to the baby’s life. The parents will know and love the child only long enough to be heartbroken at the inevitable loss. An abortion negates all those “utility” losses. There is no positive utility lost. Many of the same costs are involved in the care of the terminally ill elderly. They too may suffer no pain, but they may offer no benefit to society. In balancing positives and negatives, and excluding from the equation the objective sacredness of all human life, we arrive at morally repugnant decisions. Here deontological and virtue ethics steer us clear of what is easier to what is right.

Second, in a similar way, utilitarianism denies the existence of supererogatory acts. These are acts of moral heroism that are not morally obligatory but are still praiseworthy.

Examples would be giving 75 percent of your income to the poor or throwing yourself on a bomb to save a stranger. Consider the bomb example. You have two choices — throwing yourself on the bomb or not doing so. Each choice would have consequences and, according to utilitarianism, you are morally obligated to do one or the other depending on which option maximized utility. Thus, there is no room for acts that go beyond the call of morality.

Third, utilitarianism has an inadequate view of human rights and human dignity. If enslaving a minority of people, say by a lottery, would produce the greatest good for the greatest number, or if conceiving children only to harvest their parts would do the same, then these could he justified in a utilitarian scheme. But enslavement and abortion violate individual rights and treat people as a means to an end, not as creatures with intrinsic dignity as human beings. If acts of abortion, active euthanasia, physician-assisted suicide, and so forth maximize utility, then they are morally obligatory for the utilitarian. But any moral system that makes abortion and suicide morally obligatory is surely flawed.

Finally, utilitarianism has an inadequate view of motives and character. We should praise good motives and seek good character because such motives and character are intrinsically valuable. But utilitarianism implies that the only reason we should praise good motives instead of bad ones, or seek good character instead of bad character, is because such acts would maximize utility. But this has the cart before the horse. We should praise good motives and blame bad ones because they are good or bad, not because such acts of praising and blaming produce good consequences.

In sum, it should be clear that utilitarianism is an inadequate moral theory. Unfortunately, ours is a pragmatic culture and utilitarianism is on the rise. But for those of us who follow Christ, a combination of virtue and deontological ethics is a more adequate view of common sense morality found in natural law and of the moral vision contained in the Bible.

Universities limiting student employment to comply with Obamacare

August 26, 2014 | by Wintery Knight | Link | Original Link

Well, they are certainly getting what they voted for – but good.

Campus Reform has the story.

Excerpt:

> Middle Tennessee State University (MTSU) is restricting student work because of compliance issues associated with the Affordable Care Act (ACA), commonly known as Obamacare.
>
> **In an email last week, MTSU President Sidney McPhee explained that "due to our interpretation of the reporting requirements of ACA," graduate assistants, adjunct faculty members, and resident assistants are barred from working on-campus jobs that exceed 29 hours of work per week.**
>
> Now, they cannot take on multiple campus jobs.
>
> "[E]ffective beginning with the fall semester, we will no longer allow part-time employees, or those receiving monthly stipends from the university, to accept multiple work assignments on campus," the email stated.
>
> McPhee noted that violations of the law "could add up as high as $6 million" in penalties.
>
> The *Daily News Journal* reports that graduate assistants are now restricted from picking up research work funded through grants to the university.
>
> […]As *Campus Reform* previously reported, the University of Kansas has reduced the number of hours student employees can work from 30 hours per week to 20, a move to ensure compliance with the ACA.
>
> "The revised [KU] policy seeks to balance the necessity for students to make academic progress while managing potential fiscal liabilities with ACA," Diane Goddard, KU vice provost for administration and finance wrote in an email early this month.
>
> […]Since 2012, at least 111 colleges and universities have limited adjunct professor course loads, capped student employment hours, or reduced hours for part-time faculty according to a list compiled by *Investor's Business Daily*.

Advice for college students: next time you vote, don't pay so much attention to what your liberal professors tell you about big, bad conservatives. Do your own research, make up your own mind. Think about what is best for you – ask yourself who is paying for all these happy-sounding promises that you hear from the left. We've borrowed 7 trillion dollars since Obama took office. You're paying for it, so stop adding to it.

Can a Christian woman divorce her husband if she is really, really unhappy?

August 26, 2014 | by Wintery Knight | Link | Original Link

So, the topic for this post is whether it's OK to get divorced.

I noticed a lot of people getting divorced these days in the church, and trying to justify why they are allowed to divorce and why they should be allowed to pursue remarriage. So I'm first going to quote from an article from Focus on the Family by Amy Tracy.

She writes:

> God is very clear, however, that He hates divorce (Malachi 2:16). He also says, "So they are no longer two, but one. Therefore what God has joined together, let man not separate" (Matthew 19:6). According to the New Testament, there are two justifications for divorce: infidelity (Matthew 5:32) and desertion (1 Corinthians 7:15).

Now, I had always taken the rule of Dr. Laura for this. She says that you can get divorced for adultery and abandonment (as above), but she allows allows for physical abuse and drug addiction. But it looks like the Bible is more strict than Dr. Laura, even.

Now with that Biblical standard in mind, take a look at this post about a woman who professes to be a Christian who is divorcing her husband for unhappiness, which I found on Sunshine Mary's blog.

Look:

> So how are we to understand women like Jenny Erickson, and the many other Christian women like her, who claim that despite thousands of years of Christian and Jewish tradition, despite the clear commands in Scripture not to separate from one's husband, despite the commandments against adultery, nevertheless the Lord God Himself has made a special exemption *just for her?* Because He wants her to be happy, so if she needs to be a faithless woman who breaks her vows and becomes an adulteress, then hey it's all good?
>
> […]After secretly filing for divorce from her husband, Mrs. Erickson's pastor caught wind of the situation and attempted to discuss it with her. When she refused, the pastor went to her husband about the situation. Mrs. Erickson has since railed against her soon-to-be ex-husband and her now ex-Pastor because they actually had the nerve to call what she was doing a *sin* – which, according to the Bible, is *is.* Let's read through a few quotes from Mrs. Erickson:
>
> > Thankfully, my faith in God is stronger than my fear of men, and I feel like **I'm finally getting right with Him** again after years of wandering in the wilderness.

[…]Here are a few more things that Mrs. Erickson claims:

> It's odd and strangely freeing to not know exactly where I'm going to be a year from now. I've always been the girl with The Plan. The Plan has changed every now and then, because hey, life requires adaptation, but right now there is No Plan other than love my girls like crazy, work hard enough to pay the bills, and **rely totally and fully on God.** I'm sure His Plan is better than My Plan anyway.

and

> I needed a time-out for my marriage — possibly a permanent one. *But* ***every person that tells me I'm going against God's will by separating from my husband drives me further away from wanting to reconcile with him*****.**
>
> Details aren't needed. Leif is the father of my amazing children, and I want nothing more than to be his friend again someday, regardless of what happens in our marriage. But things have been very broken between us for a very long time, and **it took every ounce of courage I had to take the step that went against everything my religious culture told me but somehow I knew God was telling me was right.**

and

> To be told that this beautiful, wonderful thing I have learned exists in my soul, this thing that gives me the strength to flip my life over when nothing else has worked, this thing that **has made me braver than I thought possible, and made me rely on God more than I ever have in my entire life … *to be told that this is a perversion of His plan for me?***

These points must confuse a lot of women because I have heard these rationalizations used by many Christian women who are leaving or have left their husbands. Therefore, allow me to clear up the confusion that seems to be rampant (but it really isn't confusion, it is willful disobedience), lest any of my sisters in Christ are considering following Mrs. Erickson's example.

God's plan for you will never include violating anything written in the Bible.

If you hear a voice whispering in your ear, *Here's the plan; what I want you to do is…* and the plan includes going against clear commandments in God's Word, then **it is not God who is speaking to you.** God's plan for your life, sister, never includes *you* filing for divorce. Not ever, not under any circumstances, no matter what your husband has or has not done, no matter what you want, no matter what would make you happy.

So, I think we (men) need to be really careful with spousal candidates (women) who claim to be Christian – we need to make sure that they really are comfortable with being led and with the authority of the Bible to overrule their feelings. In fact, you can check to see if a person takes their faith seriously just by trying to lead them to take the Bible seriously. You just have to read the Bible and think about how to live it out in a marriage, and then talk to your spousal candidate about what you've discovered. You want to present to them your plans and your reasons for those plans, and explain what you need them to do in order to make the plan work. This is a great way to see if they know what marriage is really about and how they feel about what's expected of them if they marry YOU.

What does the Bible say about capital punishment?

August 26, 2014 | by Wintery Knight | Link | Original Link

Note: This post has a twin post which talks about the evidence against capital punishment from science.

First, let's take a look at what the Bible says in general about capital punishment, using this lecture featuring eminent theologian Wayne Grudem.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

A PDF sermon outline is here.

Topics:

- what kinds of crimes might require CP?
- what did God say to Noah about CP?
- what does it mean that man is made in the image of God?
- is CP just about taking revenge?
- what does CP say about the value of human life?
- does CP apply to animals, too?
- could the statements supporting CP be understood as symbolic?
- one purpose of CP is to protecting the public
- another purpose of CP is to deter further wrongdoing
- but the Biblical purpose of CP is to achieve justice by retribution
- does the Pope make a good argument against CP?
- what is the role of civil government in achieving retribution?
- do people in Heaven who are sinless desire God to judge sinners?
- should crimes involving property alone be subject to CP?

- is the Mosaic law relevant for deciding which crimes are capital today?
- should violent crimes where no one dies be subject to CP?
- is CP widespread in the world? why or why not?
- what are some objections to CP from the Bible?
- how do you respond to those objections to CP?
- should civil government also turn the other cheek for all crimes?
- what is the "whole life ethic" and is it Biblical?
- what do academic studies show about the deterrence effect of CP?
- how often have innocent people been executed in the USA?
- should there be a higher burden of proof for CP convictions?

You can find more talks by Wayne Grudem here.

What about the woman caught in adultery?

Some people like to bring up the woman caught in adultery as proof that Jesus opposed capital punishment. But that passage of the Bible was added much later after the canon was decided.

Daniel B. Wallace is an eminent New Testament scholar who also teaches at Dallas Theological Seminary, an extremely conservative seminary.

About Dr. Wallace:

> Dr. Daniel B. Wallace
>
> - Professor of New Testament Studies
> - B.A., Biola University, 1975; Th.M., Dallas Theological Seminary, 1979; Ph.D., 1995.

> Dr. Wallace influences students across the country through his textbook on intermediate Greek grammar. It is used in more than two-thirds of the nation's schools that teach that subject. He is the senior New Testament editor of the *NET Bible* and coeditor of the *NET-Nestle Greek-English diglot*. Recently his scholarship has shifted from syntactical and text-critical issues to more specific work in John, Mark, and nascent Christology. However he still works extensively in textual criticism, and has founded The Center for the Study of New Testament Manuscripts, an institute with an initial purpose to preserve Scripture by taking digital photographs of all known Greek New Testament manuscripts. His postdoctoral work includes work on Greek grammar at Tyndale House in Cambridge and textual criticism studies at the Institut für Neutestamentliche Textforschung in Münster.

And Dr. Wallace writes about the passage in John on Bible.org.

Excerpt:

> One hundred and forty years ago, conservative biblical scholar and Dean of

Canterbury, Henry Alford, advocated a new translation to replace the King James Bible. One of his reasons was the inferior textual basis of the KJV. Alford argued that “a translator of Holy Scripture must be…ready to sacrifice the choicest text, and the plainest proof of doctrine, if the words are not those of what he is constrained in his conscience to receive as God’s testimony.” He was speaking about the Trinitarian formula found in the KJV rendering of 1 John 5:7–8. Twenty years later, two Cambridge scholars came to the firm conclusion that John 7:53–8:11 also was not part of the original text of scripture. But Westcott and Hort’s view has not had nearly the impact that Alford’s did.

For a long time, biblical scholars have recognized the poor textual credentials of the story of the woman caught in adultery (John 7:53–8:11). The evidence against its authenticity is overwhelming: The earliest manuscripts with substantial portions of John’s Gospel (P66 and P75) lack these verses. They skip from John 7:52 to 8:12. The oldest large codices of the Bible also lack these verses: codex Sinaiticus and Vaticanus, both from the fourth century, are normally considered to be the most important biblical manuscripts of the NT extant today. Neither of them has these verses. Codex Alexandrinus, from the fifth century, lacks several leaves in the middle of John. But because of the consistency of the letter size, width of lines, and lines per page, the evidence is conclusive that this manuscript also lacked the *pericope adulterae*. Codex Ephraemi Rescriptus, also from the fifth century, apparently lacked these verses as well (it is similar to Alexandrinus in that some leaves are missing).The earliest extant manuscript to have these verses is codex Bezae, an eccentric text once in the possession of Theodore Beza. He gave this manuscript to the University of Cambridge in 1581 as a gift, telling the school that he was confident that the scholars there would be able to figure out its significance. He washed his hands of the document. Bezae is indeed the most eccentric NT manuscript extant today, yet it is the chief representative of the Western text-type (the text-form that became dominant in Rome and the Latin West).

When P66, P75, Sinaiticus, and Vaticanus agree, their combined testimony is overwhelmingly strong that a particular reading is not authentic. But it is not only the early Greek manuscripts that lack this text. The great majority of Greek manuscripts through the first eight centuries lack this pericope. And except for Bezae (or codex D), virtually all of the most important Greek witnesses through the first eight centuries do not have the verses. Of the three most important early versions of the New Testament (Coptic, Latin, Syriac), two of them lack the story in their earliest and best witnesses. The Latin alone has the story in its best early witnesses.

[…]It is an important point to note that although the story of the woman caught in adultery is found in most of our printed Bibles today, the evidence suggests that the majority of Bibles during the first eight centuries of the Christian faith did not contain the story. Externally, most scholars would say that the evidence for it

> not being an authentic part of John's Gospel is rock solid.But textual criticism is not based on external evidence alone; there is also the internal evidence to consider. This is comprised of two parts: *intrinsic evidence* has to do with what an author is likely to have written; *transcriptional evidence* has to do with how and why a scribe would have changed the text.
>
> Intrinsically, the vocabulary, syntax, and style look far more like Luke than they do John. There is almost nothing in these twelve verses that has a Johannine flavor. And transcriptionally, scribes were almost always prone to add material rather than omit it—especially a big block of text such as this, rich in its description of Jesus' mercy. One of the remarkable things about this passage, in fact, is that it is found in multiple locations. Most manuscripts that have it place it in its now traditional location: between John 7:52 and 8:12. But an entire family of manuscripts has the passage at the end of Luke 21, while another family places it at the end of John's Gospel. Other manuscripts place it at the end of Luke or in various places in John 7.
>
> The *pericope adulterae* has all the earmarks of a pericope that was looking for a home. It took up permanent residence, in the ninth century, in the middle of the fourth gospel.

As this debate between Peter Williams and Bart Ehrman shows, there are only TWO disputed passages in the entire NT that are theologically significant. The long ending of Mark and this adultery passage. A good case can be made for the long ending of Mark, but it's best not to assume it in a debate. The adultery passage is practically impossible to defend as authentic. Dr. Wallace talks about both passages in this Parchment & Pen article. Wallace has also debated Bart Ehrman in the Greer-Heard Forum. What that debate showed is that the New Testament text is actually quite reliable except for those two passages, but it's important to be honest about the two places that are not well supported.

A simple case for the pro-life position by Scott Klusendorf

August 26, 2014 | by Wintery Knight | Link | Original Link

Are you able to make a basic case for the pro-life view?

Here's a short 38-lecture by Scott Klusendorf, president of the Life Training Institute.

This is a long treatment that talks about the challenge of moral relativism and the case for the pro-life view. He does show a clip of abortion in the video to the audience.

There's also a 35-minute audio recording of Scott on the LTI web site. (H/T Apologetics 315) You can put that on your podcast player and listen to it. Listen to it a lot and soon you'll sound like Scott.

Scott also has an article posted on the LTI web site for those who don't have time for the video or the audio.

In the article makes three points:

1. **Clarify the issue**
2. **Defend your pro-life position with science and philosophy**
3. **Challenge your listeners to be intellectually honest**

Here's the second point:

> Scientifically, we know that from the earliest stages of development, the unborn are distinct, living, and whole human beings. Leading embryology books confirm this.[2] For example, Keith L. Moore & T.V.N. Persaud write, "A zygote is the beginning of a new human being. Human development begins at fertilization, the process during which a male gamete or sperm … unites with a female gamete or oocyte … to form a single cell called a zygote. This highly specialized, totipotent cell marks the beginning of each of us as a unique individual."[3] Prior to his abortion advocacy, former Planned Parenthood President Dr. Alan Guttmacher was perplexed that anyone, much less a medical doctor, would question this. "This all seems so simple and evident that it is difficult to picture a time when it wasn't part of the common knowledge," he wrote in his book *Life in the Making*.[4]
>
> Philosophically, we can say that embryos are less developed than newborns (or, for that matter, toddlers) but this difference is not morally significant in the way abortion advocates need it to be. Consider the claim that the immediate capacity for self-awareness bestows value on human beings. Notice that this is not an argument, but an arbitrary assertion. Why is some development needed? And why is this particular degree of development (i.e., higher brain function) decisive rather than another? These are questions that abortion advocates do not adequately address.
>
> As Stephen Schwarz points out, there is no morally significant difference between

> the embryo that you once were and the adult that you are today. Differences of size, level of development, environment, and degree of dependency are not relevant such that we can say that you had no rights as an embryo but you do have rights today. Think of the acronym **SLED** as a helpful reminder of these non-essential differences:[5]
>
> **S**ize: True, embryos are smaller than newborns and adults, but why is that relevant? Do we really want to say that large people are more human than small ones? Men are generally larger than women, but that doesn't mean that they deserve more rights. Size doesn't equal value.
>
> **L**evel of development: True, embryos and fetuses are less developed than the adults they'll one day become. But again, why is this relevant? Four year-old girls are less developed than 14 year-old ones. Should older children have more rights than their younger siblings? Some people say that self-awareness makes one human. But if that is true, newborns do not qualify as valuable human beings. Six-week old infants lack the immediate capacity for performing human mental functions, as do the reversibly comatose, the sleeping, and those with Alzheimer's Disease.
>
> **E**nvironment: Where you are has no bearing on who you are. Does your value change when you cross the street or roll over in bed? If not, how can a journey of eight inches down the birth-canal suddenly change the essential nature of the unborn from non-human to human? If the unborn are not already human, merely changing their location can't make them valuable.
>
> **D**egree of Dependency: If viability makes us human, then all those who depend on insulin or kidney medication are not valuable and we may kill them. Conjoined twins who share blood type and bodily systems also have no right to life.
>
> In short, it's far more reasonable to argue that although humans differ immensely with respect to talents, accomplishments, and degrees of development, they are nonetheless equal because they share a common human nature.

That's the core of the basic pro-life case right there. There's also a good interview of Mr. Klusendorf that I blogged about.

Advanced Objections

You can learn more by reading basic pro-life apologetics… from Francis Beckwith. You might recognize Frank Beckwith as the author of "Defending Life: A Moral and Legal Case Against Abortion Choice". He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote easy-to-understand essays for the Christian Research Journal.

Here are four essays that answer common arguments in favor of legalized abortion.

- Part I. The Appeal to Pity
- Part II. Arguments from Pity, Tolerance, and Ad Hominem

- Part III. Is The Unborn Human Less Than Human?
- Part IV. When Does a Human Become a Person?

Here's an excerpt from Part II:

Excerpt:

> A woman who becomes pregnant due to an act of either rape or incest is the victim of a horribly violent and morally reprehensible crime. Although pregnancy as a result of either rape or incest is extremely rare, **[1]** there is no getting around the fact that pregnancy does occur in some instances.
>
> […]Despite its forceful appeal to our sympathies, there are several problems with this argument. First, it is not relevant to the case for abortion on demand, the position defended by the popular pro-choice movement. This position states that a woman has a **right** to have an abortion for **any** reason she prefers during the entire nine months of pregnancy, whether it be for gender-selection, convenience, or rape. **[3]** To argue for abortion on demand from the hard cases of rape and incest is like trying to argue for the elimination of traffic laws from the fact that one might have to violate some of them in rare circumstances, such as when one's spouse or child needs to be rushed to the hospital. Proving an exception does not establish a general rule.
>
> […]Fourth, this argument begs the question by assuming that the unborn is not fully human. For if the unborn is fully human, then we must weigh the relieving of the woman's mental suffering against the right-to-life of an innocent human being. **And homicide of another is never justified to relieve one of emotional distress**. Although such a judgment is indeed anguishing, we must not forget that the same innocent unborn entity that the career-oriented woman will abort in order to avoid interference with a job promotion is biologically and morally indistinguishable from the unborn entity that results from an act of rape or incest. And since abortion for career advancement cannot be justified if the unborn entity is fully human, abortion cannot be justified in the cases of rape and incest. In both cases abortion results in the death of an innocent human life. As Dr. Bernard Nathanson has written, "The unwanted pregnancy flows biologically from the sexual act, but not morally from it." **[5]**Hence, this argument, like the ones we have already covered in this series, is successful only if the unborn are not fully human.

Scott Klusendorf wrote the The Case for Life, which is the best book for beginners on the pro-life view. For those looking for advanced resources, Francis Beckwith, a professor at Baylor University, published the book Defending Life, with Cambridge University Press, 2007.

I found a very polished hour-long talk by Scott on Youtube. That talk was delivered to students and faculty at Furman University.

Finally, if you want to see Scott Klusendorf in a debate with a former ACLU executive, you

can see it right here.

My friend Papa Georgio sent me a post that features THREE talks by Scott Klusendorf. (H/T Religio-Political Talk)

Learn about the pro-life case

- How to take an incremental approach to the abortion problem
- Videos from academic debate on abortion at the University of Victoria
- Audio: Scott Klusendorf's 35-minute case for the pro-life position
- Audio: A 55-minute discussion featuring Greg Koukl and Scott Klusendorf
- A comparison of embryonic and adult stem cell research
- Video: 12-year old girl makes the pro-life case in a short speech
- Video:10-year old girl makes the pro-life case in a short speech
- Objective truth in the abortion debate – a pro-life training video

Lois Lerner’s Blackberry deliberately destroyed after start of congressional probe

August 27, 2014 | by Wintery Knight | Link | Original Link

Barack Obama playing golf – again!
Story from Fox News.

Excerpt:

> Director of Exempt Organizations for the Internal Revenue Service (IRS) Lois Lerner prepares to deliver an opening statement to a House Oversight and Government Reform Committee hearing on alleged targeting of political groups seeking tax-exempt status from by the IRS, on Capitol Hill in Washington. (Reuters)

> **Lois Lerner’s Blackberry was intentionally destroyed after Congress had begun its probe into IRS targeting of conservative groups, a senior IRS lawyer acknowledged in a sworn declaration.**
>
> **Thomas Kane, Deputy Assistant Chief Counsel for the IRS, wrote in the declaration, part of a lawsuit filed by Judicial Watch against the IRS, that the Blackberry was “removed or wiped clean of any sensitive or proprietary information and removed as scrap for disposal in June 2012.”**
>
> That date – June 2012 – is significant because by that time, ex-IRS official Lerner had already been summoned before congressional staffers who interviewed her

> about reports of the IRS' targeting of conservative groups.
>
> "We had already talked to her. Our personal staff and Oversight Committee staff had sat down with Ms. Lerner and confronted her about information we were getting from conservative groups in the state of Ohio and around the country," Rep. Jim Jordan, R-Ohio, told Fox News.
>
> "If you intentionally destroy evidence, that is a crime. If you make a statement in court saying the evidence is not available and it is, that is also a crime," said Jay Sekulow, Chief Counsel for the American Center for Law and Justice.
>
> The IRS did not immediately respond to Fox News' request for comment.
>
> News of the Blackberry's destruction followed Monday's statement by Judicial Watch that Justice Department attorneys said in a Friday phone call the federal government backs up all computer records to ensure continuity of government in event of a catastrophe, but retrieving the Lerner emails would simply be "too onerous."
>
> […]Cleta Mitchell, an attorney who represents other conservative groups suing the IRS, cited a whistleblower who bolsters Judicial Watch's interpretation.
>
> "I received information from a former Department of Homeland Security official who had security clearances. He just retired in April," Mitchell said. "He contacted me and he contacted Judicial Watch and some members of Congress and said there is backup material."
>
> The dueling versions are not likely to sit well with District Court Judge Emmet Sullivan, who is presiding over Judicial Watch's lawsuit against the IRS. "He gave the IRS not one, but two opportunities in court filings with him to tell him where they were," said Tom Fitton, president of Judicial Watch. "There was no mention of this backup system to the court at that time."
>
> According to Sidney Powell, author of "Licensed to Lie: Exposing Corruption in the Department of Justice," Sullivan is known to scold government lawyers who withhold evidence.
>
> Powell said Sullivan appointed an independent counsel to investigate DOJ's prosecution of now deceased Republican Senator Ted Stevens of Alaska.Sullivan described the Stevens prosecution as "the worst case of misconduct he'd seen in 25 years."
>
> Sullivan also said, "When government does not meet its obligations to turn over evidence, the system falters."

So, this is the most transparent administration ever, with "not even a smidgeon of corruption" as Obama said, with a straight face.

So I have some advice for American voters. Next time, let's insist that a person has actually done a little work on what they claim to want to do, so we know that they are serious about it. Instead of just believing happy talk, let's see the accomplishments, like we would when hiring for any job. If someone claims to be passionate and competent at

something, like cleaning up corruption and improving transparency, then let's ask them for some evidence that this has been a priority for them in the past. And that it's something they've actually been able to do to a significant degree. We need someone *competent*. Not a clown or a stand-up comedian. He is not the entertainer-in-chief, he is the commander-in-chief.

Also, Newsbusters noticed that none of the mainstream media reported on this story – which is a bombshell of a story. Remember that when you are deciding where to get your news- the mainstream media doesn't cover stories like this. It annoys me when I think of all the people in other countries who watch CNN who will never see this story or stories like it, yet they think they are being informed. Censoring stories like this is not good journalism, but if people don't know what's being left out…

Burger King leaves U.S. 35% corporate tax rate for Canada's 15% corporate tax rate

August 27, 2014 | by Wintery Knight | Link | Original Link

Prime Minister Stephen Harper: all your base are belong to us!

Wow, I really hate Burger King, but this latest move leaves me very confused. Maybe I have to eat there now?

The Chicago Tribune reports on it.

Excerpt:

> Canada has become the latest frontier for U.S. companies fleeing the high cost of business, spurred by low corporate taxes and a policy that keeps international earnings out of the clutches of the Internal Revenue Service.
>
> Burger King, the second-largest U.S. burger chain, agreed to acquire Oakville, Ontario-based Tim Hortons on Tuesday for about C$12.5 billion ($11.4 billion) in a deal that creates the world's third-largest fast-food chain and moves its headquarters in Canada. It's "not fair" that companies can renounce their U.S. citizenship by filling out paperwork, a White House spokesman said Monday.
>
> The deal for Oakville, Ontario-based Tim Hortons follows Valeant Pharmaceuticals' merger with Canada's Biovail in 2010, which sparked the latest so- called tax-inversion wave.
>
> Burger King is unlikely to be the last U.S. company to consider moving north even as President Barack Obama and his aides try to curb the practice, tax experts say. In addition to avoiding U.S. taxes on global earnings, companies like Burger King can take advantage of Canadian tax rates that have been cut by about a quarter in the past eight years.

> “We have now made it a lot more attractive for companies to say Canada is a good place to set up shop,” said Jack Mintz, director of the University of Calgary’s School of Public Policy.
>
> […]Lower corporate taxes may also be an attraction for foreign companies. Canada began cutting its federal corporate tax rate in 2001 under the previous Liberal government. Prime Minister Stephen Harper then took up the baton, dropping the rate in several steps to 15 percent in 2012. Combined with provincial rates averaging 11.5 percent, Canada’s rate of 27 percent is now the second-lowest in the Group of Seven countries behind the U.K.’s 21 percent, according to auditing and tax firm KPMG.
>
> Canada’s combined rate is still above the 24 percent average for the Organisation for Economic Co-operation and Development, according to the report.
>
> Low corporate tax rates helped the country rise to second place in a Bloomberg ranking of best countries for doing business in January, behind only Hong Kong.
>
> “We are proud that our low tax environment in Canada attracts businesses,” Carl Vallee, a spokesman for Harper, said by email on Monday.

The U.S. corporate tax rate is the highest in the world. It warms my heart to think that corporations are moving out to Canada. And I hope they take the jobs with them, because that’s the only way people will learn to elect presidents who understand economics. Our leader is out of his depth trying to run this country, and is only able to his economic failures by borrowing trillions and trillions of dollars from our children. Anybody can appear competent if they borrow and spend that much money, but it’s a bubble, just like the housing bubble his party caused. Canada’s prime minister has a BA and MA in economics – he actually knows how economies work. We could have picked someone qualified, but we didn’t.

I fully expect Obama to whine like a little girl about this, and call Burger King “unpatriotic”. This is loser talk, because he is a loser. The limit of his knowledge of economics is that he makes snarky speeches insulting people who disagree with him. Why did we elect this stand-up comedian? Is that what a President is supposed to do?

Study explains why college women embrace binge-drinking and hooking up

August 27, 2014 | by Wintery Knight | Link | Original Link

College students throwing up after binge drinking

This study is from the Institute for American Values. Despite their name, they are not conservatives. It was done by Norval Glenn and Elizabeth Marquardt.

If you download the 88 page PDF, the first few pages are an executive summary.

There are a couple of things that really struck me about this IAV study on hooking-up.

First, this one from p. 15:

> A notable feature of hook ups is that they almost always occur when both participants are drinking or drunk.
>
> A Rutgers University student observed, "You always hear people say, oh my gosh, I was so drunk, I hooked up with so and so…" Perhaps not surprisingly, many noted that being drunk helped to loosen one's inhibitions and make it easier to hook up. A number of students noted that being drunk could later serve as your excuse for the hook up. A Yale University student said, "Some people like hook up because they're drunk or use being drunk as an excuse to hook up." A New York University student observed, "[Alcohol is] just part of an excuse, so that you can say, oh, well, I was drinking."
>
> A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then

> if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."
>
> Other women observed that being drunk gives a woman license to act sexually interested in public in ways that would not be tolerated if she were sober. For instance, a University of Michigan student said, "Girls are actually allowed to be a lot more sexual when they are drunk…"
>
> A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."
>
> Some reported that drinking had led them to do things they later regretted. A University of Virginia student said, "My last random hook up was last October and it was bad. I was drunk and I just regretted it very much."

And this one from p. 30 on the effects of hooking-up on their future commitments:

> A few women did see an unambiguous connection between present relationships and future marriage.
>
> […]Many women either saw little or no connection between present and future relationships, or their understanding of this connection was curiously flat. A student at New York University said, "[The present and the future are] connected because I will still have the same values and principles that I have now, but I just won't be single anymore."A number of women said that the present and the future are connected because whatever heartache or confusion they experience now gives them lessons for the future.
>
> A University of Michigan student said, "Early relationships prepare you for marriage because it's like, oh, what type of person do I want to be with? Oh, I've had these bad experiences. Or, I've learned from this relationship that I should do this and I shouldn't do this."
>
> A sophomore at Howard University said that "I am kind of learning from a lot of the mistakes that I have made." At a further extreme, some women saw their future marriage as the reason to experiment widely in the present. A Rutgers University student said,"I think hooking up with different people and seeing what you like and don't like is a good idea. Because eventually you're going to have to… marry someone and I'd just like to know that I experienced everything."
>
> Although it is admirable to take risks and learn from one's mistakes, these women would probably find it difficult to explain how having your heart broken a few or even many times in your early years — or trying to separate sex from feeling, as in hooking up — is good preparation for a trusting and happy marriage later on.

And on p. 42, we learn what women think marriage is and isn't for:

> For instance, in the on-campus interviews one student complained, "[With]

> marriage…you have to debate everything… Why do you need a piece of paper to bond a person to you? …But I know if I don't get married I'll probably feel like… [a] lonely old woman… If anything, I'd get married [because of] that."
>
> This student went on to say that she would be satisfied to live with a man, but added that, if the man was committed to her, he would offer to marry her, and that this was the kind of commitment that she wanted. A student at the University of Washington said,"I don't want to get married right after I graduate from college. I just think that would stunt my growth in every way that there is. I would like to be in a very steady, committed relationship with a guy."

And on p. 44, we learn that they like co-habitation, which increases the risk of divorce by about 50% (but they don't know *that*):

> In the national survey, 58 percent of the respondents agreed that "It is a good idea to live with someone before deciding to marry him." This belief often coexists with a strong desire to marry, because it was embraced by 49 percent of the respondents who strongly agreed that marriage was a very important goal for them.
>
> […]Women we interviewed on campus reflected a similar range of attitudes about cohabitation. Some women thought that cohabitation was a good way to test whether one could spend a lifetime with a potential partner. In such cases, women often cited fears of divorce as the reason for trying cohabitation first. A senior at the University of Washington said, "I kind of don't really see marriages work ever, so I want to make sure that everything's all right before [we get married]. I don't see how people can get married without living together because I know like I have a best friend and I live with her and we want to kill each other, like, every few months."
>
> Other women felt that, in an age of divorce, cohabitation was a preferable alternative to marriage. A student at New York University said, "You see so [many] people getting divorces… I just don't see the necessity [of marriage]." She went on to say, "I think that I don't have to be married to [the] person that I'm with…. You know like… Goldie Hawn [and Kurt Russell]? They're not married."

But let's get back to the drinking and the hook-up sex…

Once a woman abandons femininity for feminism, then sex is all that she can use to get noticed by a man. Men are like hiring managers, and courting is like a job interview for the job of marriage and mothering. If a woman tries to get the job by having sex with the interviewer, he isn't going to hire her for the marriage job, since sex has almost nothing to do with the marriage job. Men have to think about things like fidelity and mothering ability when they are choosing a wife. The problem is that thanks to feminism, women have stopped trying to show their ability to be wives and mothers to men, preferring to instead act like men – no emotions, toughness, hardness, binge-drinking, promiscuity. Men may be happy to have sex with women like that, but they do not commit to them.

Moreover, if a man is constantly being offered sex from feminist women during his 20s and 30s, he basically loses all the time that he could be training for his roles as protector, provider and moral/spiritual leader. He will never take on those roles if he is handed sex before marriage for free. That is the root cause of the “man-up” complaint that women make. Why don’t men grow up? Because they don’t have to in order to get sex – women are giving them oral sex on the first date now. There is no need to prove themselves as husbands and fathers anymore.

In a previous post, I explained how feminists wanted to get women to drink like men, have sex like men, and to abolish courtship and marriage. Under the influence of cultural definitions of what makes a good man and a good relationship, women began to choose men to have sex with without any consideration of morality, religion, marriage, etc. This results in a cycle of binge-drinking, one-night-stands, cheating, co-habitating, breaking-up, stalking, aborting, etc., until the woman’s ability to trust and love anyone – including herself – is completely destroyed. And yet these college women somehow believe this is is “fun” and “adventurous”, that it makes them feel “sexy”, and that the experience of being selfish and seeing the worst kind of men acting in the worst possible ways, point blank, somehow prepares them for marriage and motherhood. They are told this, and they are so unable to break out of their need to “fit in” with their peers and culture that by the time they realized they’ve been had, it’s too late to fix it. And yet, they themselves made those decisions. They are responsible.

The problem is made worse because their feminist mothers often deliberately chose men who were poor moral and spiritual leaders. Often, a young unmarried woman’s biological father was NOT selected by her mother based on his ability to make commitments and moral judgments. Many feminists prefer men who do not make moral judgments or present exclusive religious views persuasively. Those are the very things that young unmarried women today seem to dislike most about men. And yet those are exactly the things that make men good husbands and fathers. Some women don’t want to be judged morally or led spiritually, so they choose immoral, non-religious men. The problem is that those men cannot then be counted on to act morally and spiritually in a relationship. They make terrible fathers for daughters, as well – perpetuating the problems of women being unable to resist a secular, relativistic, hedonistic culture. And when these marriages to bad men fail, the daughters grow up fatherless, which is arguably worse than having even a defective father.

Four ways that the progress of experimental science conflicts with atheism

August 28, 2014 | by Wintery Knight | Link | Original Link

When people ask me whether the progress of science is more compatible with theism or atheism, I offer the following four basic pieces of scientific evidence that are more compatible with theism than atheism.

Here are the four pieces of evidence best explained by a Creator/Designer:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the biological information in the first replicator (origin of life)
4. the sudden origin of all of the different body plans in the fossil record (Cambrian explosion)

And I point to specific examples of recent discoveries that confirm those four arguments. Here are just a few of them:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning to allow the existence of conscious, embodied life (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)
4. Evidence showing that Ediacaran fauna are not precursors to the Cambrian fossils, (from the journal Nature)

Atheists will typically reply to the recent scientific discoveries that overturned their speculations like this:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes
4. Maybe we will find a seamless chain of fossils that explain how the Cambrian explosion occurred slowly, over a long period time

Ever heard any of these responses?

Below I list some resources to help you to respond to the four responses of atheists to the experimental data.

1) The Big Crunch/Bounce has been disproved theoretically and experimentally.

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA
>
> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces. We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear

> to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists.

2) The multiverse has not been tested experimentally, it's pure speculation.

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.
>
> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: "Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities."
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have

no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. There is no evidence for a multiverse, but there is evidence for fine-tuning. TONS OF IT.

3) Naturalistic theories for the origin of life have two problems: can't make the amino acids in an oxydized atmosphere and can't make protein and DNA sequences by chance in the time available.

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth's atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth's interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don't have a way to build the Scrabble letters needed for life, and they don't have a way to form the Scrabble letters into

meaningful words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them.

4) The best candidate to explain the sudden origin of the Cambrian era fossils was the Ediacaran fauna, but those are now recognized as not being precursors to the Cambrian fossils.

Science Daily reports on a paper from the peer-reviewed journal Science:

> Evidence of the single-celled ancestors of animals, dating from the interval in Earth's history just before multicellular animals appeared, has been discovered in 570 million-year-old rocks from South China by researchers from the University of Bristol, the Swedish Museum of Natural History, the Paul Scherrer Institut and the Chinese Academy of Geological Sciences.
>
> […]This X-ray microscopy revealed that the fossils had features that multicellular embryos do not, and this led the researchers to the conclusion that the fossils were neither animals nor embryos but rather the reproductive spore bodies of single-celled ancestors of animals.
>
> Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> Professor Stefan Bengtson said: "These fossils force us to rethink our ideas of how animals learned to make large bodies out of cells."

The trend is that there is no evolutionary explanation for the body plans that emerged in the Cambrian era. If you want to make the claim that "evolution did it", then you have to produce the data *today*. Not speculations about the future. The data we have today says no to naturalism. The only way to affirm naturalistic explanations for the evidence we have is *by faith*. But rational people know that we need to minimize our leaps of faith, and go with the simplest and most reasonable explanation – an intelligence is the best explanation responsible for rapid generation of biological information.

Conclusion

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see way too much G. K. Chesterton, Francis Chan and other untestable, ineffective jibber-jabber. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand "Who Made God?" by Edgar Andrews – start with that! Then get Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works. You don't want to be anti-science and pro-speculation like atheists are. I recommend reading Uncommon Descent and Evolution News every day for a start.

Does the Bible say thou shalt not kill or thou shalt not murder?

August 28, 2014 | by Wintery Knight | Link | Original Link

Here is an article on it by a prominent Jewish professor of religious studies at the University of Calgary.

His qualifications are here. He is an expert in Hebrew language.

Excerpt:

> Those of us who are familiar with the original Hebrew text of the Bible find frequent occasion to whine about inaccuracies and misleading expressions in the translations that are in use among non-Jews. Many of these discrepancies arose out of patently theological motives, as Christian interpreters rewrote passages in the "Old Testament" so as to turn them into predictions or prefigurations of the life of Jesus. Some of the mistranslations, though, are harder to account for.
>
> For me, one of the most irksome cases has always been the rendering of the sixth commandment as "Thou shalt not kill." In this form, the quote has been conscripted into the service of diverse causes, including those of pacifism, animal rights, the opposition to capital punishment, and the anti-abortion movement.
>
> Indeed, "kill" in English is an all-encompassing verb that covers the taking of life in all forms and for all classes of victims. That kind of generalization is expressed in Hebrew through the verb "harag." However, the verb that appears in the Torah's prohibition is a completely different one, " ratsah" which, it would seem, should be rendered "murder." This root refers only to criminal acts of killing.
>
> It is, of course, not just a question of etymology. Those ideologies that adduce the commandment in support of their gentle-hearted causes are compelled to feign ignorance of all those other places in the Bible that condone or command warfare, the slaughter of sacrificial animals, and an assortment of methods for inflicting capital punishment.

Not that I don't agree with this guy about his comments on abortion. I think abortion IS murder, and that Jews always considered it murder. Consider this post at Reason to Stand.

Excerpt:

*"The law enjoins us to bring up all our offspring, and forbids women **to cause abortion** of what is begotten, or to destroy it afterward; and if any woman appears to have so done, she will be a murderer of her child, by destroying a living creature, and diminishing humankind."* -Josephus, 1st century Jewish historian

Regarding the KJV and its translation of the text as "Thou shalt not kill". The KJV is a poor translation of the Bible. If you know the history of Erasmus and the Textus Receptus,

you'll know it was a rush job done in 1611, and that newer and more manuscripts have emerged since 1611.

Get an NASB. That's the most literal translation available, except for the original Koine Greek itself. **Here's the relevant verse from Exodus 20 in the NASB**. If you want something readable, go for an NIV or and ESV. But to make your case, use an NASB.

Brian Auten interviews Dr. Angus Menuge on philosophy of mind

August 28, 2014 | by Wintery Knight | Link | Original Link

Click here for the interview. It's up at Apologetics 315!

Details:

> Today's interview is with Dr. Angus Menuge, Professor of Philosophy at Concordia University, and author of *Agents Under Fire: Materialism and the Rationality of Science*. He talks about his background and work, the philosophy of mind, what reason (or reasoning) is, what materialism is as a worldview, things excluded from a materialistic worldview, methodological naturalism and materialism, accounting for free will, materialistic accounts of reason, the epistemological argument from reason, the ontological argument from reason, finding the best explanation for reason, problems with methodological naturalism, implications of materialism, practical application of the argument from reason, advice for apologists, the International Academy of Apologetics, and more.

If what Dr. Menuge says in this interview is true, and I think it is, then a person who believes in materialism can neither ground free will nor rationality! So atheism wouldn't really be freethought so much as it would be… un-free… non-thought.

In case people don't want to listen to the podcast, then I've got some things for you to read below.

The ontological argument from reason

Dr. Menuge presented a paper at the real Evangelical Philosophical Society conference for students and professors of philosophy, and you can download the paper here in Word format. (here's a PDF version I made)

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because

> reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is helpful for those of you looking for some good discussion of one of the issues in the area of philosophy of mind.

You may also be interested in Alvin Plantinga's epistemological argument from reason, which is related to this argument. It shows that even to have the ability to think, you have to have a certain anthropology and you have to have mental faculties that are designed for reason, not survival.

Methodological naturalism

Dr. Menuge also wrote an article entitled "Is methodological materialism good for science?".

Intro:

> Should science by governed by methodological materialism? That is, should scientists assume that only undirected causes can figure in their theories and explanations? If the answer to these questions is yes, then there can be no such thing as teleological science or intelligent design. But is methodological materialism a defensible approach to science, or might it prevent scientists from discovering important truths about the natural world? In my contribution to The Waning of Materialism (Oxford University Press, 2010), edited by Robert Koons and George Bealer, I consider twelve of the most common arguments in favor of methodological materialism and show that none of them is convincing.
>
> Of these arguments, perhaps the most prevalent is the "God of the gaps" charge, according to which invoking something other than a material cause is an argument from ignorance which, like a bad script writer, cites a *deus ex machina* to save our account from difficulty. Not only materialists, but also many Christian thinkers, like Francis Collins, worry that appeal to intelligent design commits the God of the gaps fallacy.
>
> As I argue, however, not only is an inference to an intelligent cause not the same as an inference to the supernatural, it is a mistake to assume that all gap arguments are bad, or that only theists make them. If a gap argument is based solely on ignorance of what might explain some phenomenon, then indeed it is a bad argument. But there are many good gap arguments which are made both by scientific materialists and proponents of intelligent design.

So how do you make an argument like that?

> As Stephen Meyer has argued in his *Signature in the Cell*, intelligent design argues in just the same way, claiming not merely that the material categories of chance and necessity (singly or in combination) are unable to explain the complex specified information in DNA, but also that in our experience, intelligent agents are the only known causes of such information. The argument is based on what we know about causal powers, not on what we do not know about them.
>
> Since the inference is based on known causal powers, we learn that the cause is intelligent, but only further assumptions or data can tell us whether that intelligence is immanent in nature or supernatural. It is a serious mistake to confuse intelligent design with theistic science, and the argument that since some proponents of design believe that the designer is God, that is what they are claiming can be inferred from the data, is a sophomoric intensional fallacy.

If you think this is interesting, then do have a listen to the podcast. Dr. Menuge is not an ordinary academic – he is very direct. He calls materialism “a catastrophe” in the podcast!

Barack Obama to reporters on ISIS: “we don’t have a strategy yet”

August 29, 2014 | by Wintery Knight | Link | Original Link

The leftist Washington Post reports on the story.

Excerpt:

> President Obama said Thursday he has not decided on stepped-up military action against the Islamic State in Iraq or Syria, cautioning that he remains committed to a strategy that protects U.S. interests and builds broader partnerships to combat the threat posed by the militant group.
>
> “We don’t have a strategy yet,” Obama said during a White House news conference, referring to increased military action. “Folks are getting a little further ahead of where we’re at. …The suggestions seems to have been we’re about to go full-scale on some elaborate strategy for defeating ISIL [the Islamic State of Iraq and the Levant] and the suggestion has been we’ll start moving forward imminently and somehow with Congress still out of town, they’ll be left in the dark. That’s not going to happen.”

And in other news, Russia has invaded more of Ukraine, and Obama responded.

Excerpt:

> President Barack Obama refused to label Russia’s military action inside eastern Ukraine as an ‘invasion’ on Thursday, calling it an ‘incursion’ despite facing a reporter’s specific action about his choice of words.
>
> Following a conversation with German Chancellor Angela Merkel, Obama told reporters that the two leaders agree ‘that Russia is responsible for the violence in eastern Ukraine. … Russia has deliberately and repeatedly violated the sovereignty and territorial integrity of Ukraine.’
>
> ‘And the new images of Russian forces inside Ukraine make that plain for the world to see.’
>
> He insisted that the Russian tanks filmed rumbling through Ukraine on Thursday are merely ‘a continuation of what’s been taking place for months now.’
>
> […]Arizona Sen. John McCain, the Republicans’ top dog on the Senate Foreign Relations Committee, reacted angrily before Obama’s brief press conference.
>
> ‘Russia’s ongoing aggression in Ukraine can only be called one thing: a cross-border military invasion,’ he said. ‘To claim it is anything other than that is to inhabit President Putin’s Orwellian universe.’
>
> ‘A sovereign nation in the heart of Europe is being invaded by its larger neighbor,’ McCain declared. ‘This runs completely contrary to the civilized world

> that America and our partners have sought to build since World War II.'
>
> Obama's careful parsing was in keeping with State Department spokeswoman Jen Psaki's lukewarm refusal hours earlier, during an interview on MSNBC, to discuss varying 'terminology' related to Russian President Vladimir Putin's military moves.

Oh, I don't think we have anything to worry about. It's not an invasion, Obama says it's not:

Baghdad Obama says: "There are no Russian tanks in Ukraine"

The nice thing about foreign policy is that when you screw it up, the consequences come quickly, so you know where the failure occurred. With the borrowing of the 7 trillion dollars, Obama's managed to cloak his economic policy failures so far. But he can't hide this foreign policy mess.

Christian philosopher William Lane Craig offers marriage advice

August 29, 2014 | by Wintery Knight | Link | Original Link

This post is a 3 in one: one lecture, one question and answer, and another lecture – all on different topics.

First, I've got a lecture from the Reasonable Faith web site.

Dr. William Lane Craig is the top living Christian apologist and debater in the world today, and has 2 Masters degrees and 2 Ph.Ds. He also has scores of academic publications including books from Oxford University Press, etc.

The MP3 file is here. (14.5 Mb, about 41 minutes)

Topics:

- the stresses of ministry on marriages
- the Christian position on divorce
- balancing marriage with academic pursuits
- the importance of marrying the right person
- Dr. Craig's politically incorrect advice for choosing a spouse
- Advice for men: Marry someone who believes in you and who supports you in your calling
- Advice for women: Be the kind of person who can commit to being a helper and supporter
- Advice for men: Beware of the career woman who will put their career over supporting you in your calling
- Advice for women: Be careful about marrying if you think that your goals are more important than your husband's goals
- Advice: Don't try to find the right person *for you* but instead focus on learning about marriage and preparing for marriage
- Advice: Flee youthful lusts and pursue righteousness, love and peace
- Advice: God intends for sex to be within the bounds of marriage, so you need to guard yourself against unchastity
- Advice for men: be careful what images and movies you see with the goal of keeping your chastity
- Advice: your highest responsibility after your relationship with God is your spouse, and your studies are third
- Advice: it's better to drop classes or give up your graduate studies entirely rather than destroy your marriage
- Advice for women: understand that you have to work at the marriage in order to help your man finish his studies
- Advice: set aside a period of the day for communicating and bonding with your

spouse
- Advice: cultivate the ability to talk with your spouse on a personal level, and maintain eye contact
- Advice for men: do not break eye contact with your wife, and also hold her hand when communicating
- Advice: do not be embarrassed to seek out a marriage counselor, but make it a good counselor
- Advice: don't just be doing stuff for your mate, but also be vulnerable and transparent with your mate
- How your relationship with your wife helps you with your relationship with God
- How do you handle the rebellion of children without being overbearing and authoritarian?

There is a period of Q&A at the end. There is another piece of advice that comes out in the Q&A for women: take an interest in your spouse's work even if you don't care about it, and ask him about it every day and try to understand it. Go to the man's workplace and see what he does. Go to his presentations. Get involved in the man's ministry and help him in practical ways. Another piece of advice is to not paper over the differences – it's good to argue, because it means that problems are being confronted and worked through. Husbands should have a good male friend to talk to, and wives should have a good female friend to talk to.

I like how Dr. Craig has thought about how to have a successful marriage, how to choose the right woman, and how to love his wife. I like how he calls out men on the chastity thing. I think that chastity is more important for men than for women, because it's the men who take the lead in choosing and pursuing the right woman for their plan.

Secondly, here is my previous post on Dr. Craig's advice for married couples, where he gives 5 points of advice for married couples.

Here are the main pieces of advice Dr. Craig gives:

1. *Resolve that there will be no divorce*
2. *Delay having children*
3. *Confront problems honestly*
4. *Seek marital counseling*
5. *Take steps to build intimacy in your relationship*

And here's the controversial one (#2):

> 2. *Delay having children.* The first years of marriage are difficult enough on their own without introducing the complication of children. Once children come, the wife's attention is necessarily diverted, and huge stresses come upon you both. Spend the first several years of marriage getting to know each other, working through your issues, having fun together, and enjoying that intimate love relationship between just the two of you. Jan and I waited ten years before having

> our first child Charity, which allowed me the finish graduate school, get our feet on the ground financially, establish some roots, and enjoy and build our love relationship until we were really ready to take on the responsibilities of parenthood. The qualifier here is that if the wife desperately wants children now, then the husband should accede to her wish to become a mother, rather than withhold that from her. Her verdict should be decisive. But if you both can agree to wait, things will probably be much easier.

Third and finally, here is a previous post on Dr. Craig's advice for choosing a good spouse, with illustrations from his own marriage.

For example, Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

If you want to hear another Christian husband talk about how his wife supports him, listen to this lecture called "Giants in the Land" with Dr. Walter Bradley. It's actually my favorite lecture. I also really like his testimony lecture. If you're looking for guidance, these are some of the people I would recommend.

Friday night movie: The Enemy Below (1957)

August 29, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB mean rating: [7.8/10]

IMDB median rating: [8/10]

Description:

> The Enemy Below is a study of submarine warfare from the vantage point of both sides. Robert Mitchum plays the captain of an American destroyer, who despite having lost his family in the war endeavors to let his head rule his heart in combat. Curt Jurgens co-stars as a German U-boat commander, depicted as being as honorable and compassionate as Mitchum. The two men develop a grudging mutual respect as they pursue one another throughout the North Atlantic. Based on a novel by D. A. Rayner.

This is my favorite World War 2 submarine movie. It shows both sides, and the plot is plausible and realistic. Normally, a single destroyer would be at a disadvantage pursing a lone submarine. But this submarine is committed to a single course and keeps coming back to it, and the destroyer has a faster surface speed and better surface armament, which means it can outrun the sub if it knows (or can guess) where the sub is going.

This movie is based on a true story battle between the USS Buckley (Buckley class escort destroyer) and the U-66 (Type IXC U-boat). The Buckley class destroyer escort is designed to conduct anti-submarine warfare in teams, and is definitely the underdog in this one-on-one fight.

I really recommend this movie! Great actors, very realistic, lots of action.

DE Buckley class destroyer escort

GENERAL INFORMATION

- **Length:** "Long hull" 306′ 0″ x 300′ 0″
- **Displacement:** 1,400 long tons standard; 1,740 full load.
- **Crew:** Officers, 15; Enlisted, 198.
- **Speed:** 23.5 knots.
- **Screws:** Two.
- **Rudders:** Two.
- **Stack:** One.

ARMAMENT

- **Gun battery:** 3 x 3-inch/50 caliber dual purpose guns.
- **Initial:** 1 x twin 40mm Bofors.

- **Later:** 3 x twin 40mm Bofors.
- **Short range:** 9 x single 20mm Oerlikon.
- **Anti-submarine battery:** 2 x depth charge tracks, 8 x depth charge projectors, 1 x Hedgehog.

SS Type IXC U-Boat

GENERAL INFORMATION

- **Displacement:** (tons) 1120 (surface) 1232 (submerged)
- **Length:** (m) 76,76 oa 58,75 ph
- **Power:** (hp) 4400 (surface) 1000 (submerged)
- **Speed:** (knots) 18,3 (surface) 7,3 (submerged)
- **Range:** (miles / knots) 13450/10 (surface) 63/4 (submerged)
- **Crew:** 48-56 men
- **Max depth:** ca. 230 m (755 feet)

ARMAMENT

- **Torpedoes:** 22 4/2 (bow / stern tubes)
- **Mines:** 44 TMA

Happy Friday!

Federal bulletin: U.S. facing imminent terrorist attack via southern border

August 30, 2014 | by Wintery Knight | Link | Original Link

Judicial Watch, those guys who are always filing those useful FOIA requests, found something scary.

Excerpt:

> **Islamic terrorist groups are operating in the Mexican border city of Ciudad Juarez and planning to attack the United States with car bombs or other vehicle born improvised explosive devices (VBIED). High-level federal law enforcement, intelligence and other sources have confirmed to Judicial Watch that a warning bulletin for an imminent terrorist attack on the border has been issued. Agents across a number of Homeland Security, Justice and Defense agencies have all been placed on alert and instructed to aggressively work all possible leads and sources concerning this imminent terrorist threat.**
>
> Specifically, Judicial Watch sources reveal that the militant group Islamic State of Iraq and Greater Syria (ISIS) is confirmed to now be operating in Juarez, a famously crime-infested narcotics hotbed situated across from El Paso, Texas. Violent crimes are so rampant in Juarez that the U.S. State Department has issued a number of travel warnings for anyone planning to go there. The last one was issued just a few days ago.
>
> Intelligence officials have picked up radio talk and chatter indicating that the terrorist groups are going to "carry out an attack on the border," according to one JW source. "It's coming very soon," according to this high-level source, who clearly identified the groups planning the plots as "ISIS and Al Qaeda." An attack is so imminent that the commanding general at Ft. Bliss, the U.S. Army post in El Paso, is being briefed, another source confirms. The Department of Homeland Security (DHS) did not respond to multiple inquiries from Judicial Watch, both telephonic and in writing, about this information.
>
> The disturbing inside intelligence comes on the heels of news reports revealing that U.S. intelligence has picked up increased chatter among Islamist terror networks approaching the 13th anniversary of the 9/11 attacks.

Recall that ISIS was able to seize a lot of weapons from their victories in Iraq, including U.S.-made weapons. What kind of weapons am I talking about?

This kind:

> U.S. officials with access to the latest U.S. intelligence on Iraq told Fox News it "appears likely/probable" that U.S.-made Stinger missiles have fallen into the

> hands of Sunni insurgents.
>
> It is possible that the Islamic State of Iraq and Syria (ISIS) fighters acquired them from army bases they have taken over in recent days, the sources said.
>
> The Stinger missile is a shoulder-fired surface-to-air weapon that is used against aircraft.
>
> As ISIS forces have advanced through Iraq, concerns have increased that more U.S.-made weaponry could fall into the hands of the radical group.
>
> Iraqi intelligence officials said ISIS fighters managed to take control of two big weapons depots late last week holding some 400,000 items, including AK-47 rifles, rockets and rocket-propelled grenades, artillery shells and mortars. A quarter of the stockpiles were quickly sent to Syria in order to help the group's comrades there, they said.
>
> Also last week, according to a report from the West Point Combating Terrorism Center, the ISIS "now possesses scores of Iraqi military equipment originally provided by the United States, from Humvees and cargo vehicles to small arms."

And then there is this news:

> A laptop reportedly recovered from an Islamic State jihadist contained a hidden trove of secret plans, including weaponizing the bubonic plague, and lessons on disguise, bomb-making and stealing cars.
>
> A man identified by **ForeignPolicy.com** as Abu Ali, a commander of a moderate Syrian rebel group in northern Syria, told the publication the black laptop was seized earlier this year in a raid on an ISIS hideout in the Syrian province of Idlib, close to the border with Turkey, and belonged to a Tunisian jihadist.
>
> "We found the laptop and the power cord in a room," Ali told ForeignPolicy.com. "I took it with me."
>
> Initially, it appeared the computer had been scrubbed, but on closer inspection, thousands of secret files were discovered on the hard drive, which was not password protected, Ali said.
>
> […]ForeignPolicy.com was permitted to copy of thousands of files, which were in French, English, and Arabic. The information included videos of Usama bin Laden, ideological justifications for jihad and tutorials on how to carry out the Islamic State's deadly campaigns.
>
> […]Foreign Policy verified that the computer's owner had indeed attended a Tunisian university and studied chemistry and physics there until some time in 2011.

This is serious stuff, and pulling out of the war zone where this ISIS group is now ascendent was Obama's decision. You can't just "end" a war with Islamic terrorists by retreating, you have to stay and finish the job.

William Lane Craig lectures on naturalistic alternatives to the Big Bang

August 30, 2014 | by Wintery Knight | Link | Original Link

Here's the lecture, which was given in 2004 at the University of Colorado, Boulder. A very liberal university!

This lecture might be a little advanced for beginners, but if you stretch your mind first, you shouldn't tear anything. (Note: standard disclaimers apply if you do tear something!)

The description of the video states:

> This is quite simply one of the best lectures William Lane Craig (a philosopher of science) has given. Craig explores the origins of the universe. He argues for a beginning of the universe, while refuting scientific models like the Steady State Theory, the Oscillating Theory, Quantum Vacuum Fluctuation Model, Chaotic Inflationary Theory, Quantum Gravity Theory, String Theory, M-Theory and Cyclic Ekpyrotic Theory.

And here is the description of the lecture from Reasonable Faith:

> A Templeton Foundation lecture at the University of Colorado, Boulder, laying out the case from contemporary cosmology for the beginning of the universe and its theological implications. Includes a lengthy Q & A period which features previous critics and debate opponents of Dr. Craig who were in attendance, including Michael Tooley, Victor Stenger, and Arnold Guminski.

Craig has previously debated famous atheists Stenger and Tooley previously. And they both asked him questions in the Q&A time of this lecture. Imagine – having laid out your entire case to two people who have debated you before and who know your arguments well. What did they ask Craig, and how did he respond?

The scientific evidence

The Big Bang cosmology that Dr. Craig presents is the standard model for how the universe came into being. It is a theory based on six lines of experimental evidence.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe
3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

If you are looking for some detail on these evidences, here's a re-cap of the three main

evidences for the Big Bang cosmology from Caltech. (Numbers 2, 3 and 5 from the list above)

Excerpt:

> Until the early 1900s, most people had assumed that the universe was fixed in size. New possibilities opened up in 1915, when Einstein formulated his famous general relativity theory that describes the nature of space, time, and gravity. This theory allows for expansion or contraction of the fabric of space. In 1917, astronomer Willem de Sitter applied this theory to the entire universe and boldly went on to show that the universe could be expanding. Aleksandr Friedmann, a mathematician, reached the same conclusion in a more general way in 1922, as did Georges Lemaître, a cosmologist and a Jesuit, in 1927. This step was revolutionary since the accepted view at the time was that the universe was static in size. Tracing back this expanding universe, Lemaître imagined all matter initially contained in a tiny universe and then exploding. These thoughts introduced amazing new possibilities for the universe, but were independent of observation at that time.
>
> […]Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

It's probably a good idea to be familiar with these if you are presenting this argument, because experimental science is a reliable way of knowing about reality.

Published research paper

This lecture by Dr. Craig is based on a research paper published in an astrophysics journal, and was delivered to an audience of students and faculty, including atheist physicist Victor Stenger and prominent atheist philosopher Michael Tooley, at the University of Colorado at Boulder.

Here's the peer-reviewed article that the lecture is based on.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to

> postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

If you want something to post on your Twitter or Facebook that is much shorter than this lecture, then you should check out this quick 4-minute explanation of the kalam argument.

Satellite images show summer ice caps much larger than 2 years ago

August 31, 2014 | by Wintery Knight | Link | Original Link

The UK Daily Mail reports.

Excerpt:

> The speech by former US Vice-President Al Gore was apocalyptic. 'The North Polar ice cap is falling off a cliff,' he said. 'It could be completely gone in summer in as little as seven years. Seven years from now.'
>
> Those comments came in 2007 as Mr Gore accepted the Nobel Peace Prize for his campaigning on climate change.
>
> But seven years after his warning, The Mail on Sunday can reveal that, far from vanishing, the Arctic ice cap has expanded for the second year in succession – with a surge, depending on how you measure it, of between 43 and 63 per cent since 2012.
>
> To put it another way, an area the size of Alaska, America's biggest state, was open water two years ago, but is again now covered by ice.
>
> The most widely used measurements of Arctic ice extent are the daily satellite readings issued by the US National Snow and Ice Data Center, which is co-funded by NASA. These reveal that – while the long-term trend still shows a decline – last Monday, August 25, the area of the Arctic Ocean with at least 15 per cent ice cover was 5.62 million square kilometres.
>
> This was the highest level recorded on that date since 2006 (see graph, right), and represents an increase of 1.71 million square kilometres over the past two years – an impressive 43 per cent.
>
> Other figures from the Danish Meteorological Institute suggest that the growth has been even more dramatic. Using a different measure, the area with at least 30 per cent ice cover, these reveal a 63 per cent rise – from 2.7 million to 4.4 million square kilometres.

Previously, we had seen that Antarctic ice extents recently hit a record high. Is the rising amount of sea ice at the North and South pole evidence of global warming.

MIT physicist explains the challenge of cosmic fine-tuning for naturalism

August 31, 2014 | by Wintery Knight | Link | Original Link

Here's the article from Harper's magazine.

The MIT physicist says that the fine-tuning is real, and is best explained by positing the existence of an infinite number of universes that are not fine-tuned – the so-called multiverse.

Excerpt:

> While challenging the Platonic dream of theoretical physicists, the multiverse idea does explain one aspect of our universe that has unsettled some scientists for years: according to various calculations, if the values of some of the fundamental parameters of our universe were a little larger or a little smaller, life could not have arisen. For example, if the nuclear force were a few percentage points stronger than it actually is, then all the hydrogen atoms in the infant universe would have fused with other hydrogen atoms to make helium, and there would be no hydrogen left. No hydrogen means no water. Although we are far from certain about what conditions are necessary for life, most biologists believe that water is necessary. On the other hand, if the nuclear force were substantially weaker than what it actually is, then the complex atoms needed for biology could not hold together. As another example, if the relationship between the strengths of the gravitational force and the electromagnetic force were not close to what it is, then the cosmos would not harbor any stars that explode and spew out life-supporting chemical elements into space or any other stars that form planets. Both kinds of stars are required for the emergence of life. The strengths of the basic forces and certain other fundamental parameters in our universe appear to be "fine-tuned" to allow the existence of life. The recognition of this fine-tuning led British physicist Brandon Carter to articulate what he called the anthropic principle, which states that the universe must have the parameters it does because we are here to observe it. Actually, the word *anthropic*, from the Greek for "man," is a misnomer: if these fundamental parameters were much different from what they are, it is not only human beings who would not exist. No life of any kind would exist.
>
> If such conclusions are correct, the great question, of course, is *why* these fundamental parameters happen to lie within the range needed for life. Does the universe care about life? Intelligent design is one answer. Indeed, a fair number of theologians, philosophers, and even some scientists have used fine-tuning and the anthropic principle as evidence of the existence of God. For example, at the 2011 Christian Scholars' Conference at Pepperdine University, Francis Collins, a leading geneticist and director of the National Institutes of Health, said, "To get

> our universe, with all of its potential for complexities or any kind of potential for any kind of life-form, everything has to be precisely defined on this knife edge of improbability…. [Y]ou have to see the hands of a creator who set the parameters to be just so because the creator was interested in something a little more complicated than random particles."
>
> Intelligent design, however, is an answer to fine-tuning that does not appeal to most scientists. The multiverse offers another explanation. If there are countless different universes with different properties—for example, some with nuclear forces much stronger than in our universe and some with nuclear forces much weaker—then some of those universes will allow the emergence of life and some will not. Some of those universes will be dead, lifeless hulks of matter and energy, and others will permit the emergence of cells, plants and animals, minds. From the huge range of possible universes predicted by the theories, the fraction of universes with life is undoubtedly small. But that doesn't matter. We live in one of the universes that permits life because otherwise we wouldn't be here to ask the question.

I thought I was going to have to go outside this article to refute the multiverse, but Lightman is honest enough to refute it himself:

> The… conjecture that there are many other worlds… [T]here is no way they can prove this conjecture. That same uncertainty disturbs many physicists who are adjusting to the idea of the multiverse. Not only must we accept that basic properties of our universe are accidental and uncalculable. In addition, we must believe in the existence of many other universes. But we have no conceivable way of observing these other universes and cannot prove their existence. Thus, to explain what we see in the world and in our mental deductions, we must believe in what we cannot prove.
>
> Sound familiar? Theologians are accustomed to taking some beliefs on faith. Scientists are not. All we can do is hope that the same theories that predict the multiverse also produce many other predictions that we can test here in our own universe. But the other universes themselves will almost certainly remain a conjecture.

The multiverse is not pure nonsense, it is theoretically possible. The problem is that the multiverse generator itself would require fine-tuning, so the multiverse doesn't get rid of the problem. And, as Lightman indicates, we have no independent experimental evidence for the existence of the multiverse in any case. Atheists just have to take it on faith, and hope that their speculations will be proved right. Meanwhile, the fine-tuning is just as easily explained by postulating God, and we have independent evidence for God's existence, like the the origin of biological information, the sudden appearance of animal body plans, the argument from consciousness, and so on. Even if the naturalists could explain the fine-tuning, they would still have a lot of explaining to do. Theism (intelligent causation) is the simplest explanation for all of the things we learn from the progress of

science.

We need to be frank about atheists and their objections to the progress of science. Within the last 100 years, we have discovered that the physical universe came into being out of nothing 15 billion years ago, and we have discovered that this one universe is fine-tuned for intelligent life. I don't think it's like that the last 100 years of scientific progress on the origins question are going to be overturned so that science once again affirms what atheists believe about the universe. Things are going the wrong way for atheists – at least with respect to science.

See it in action

To see these arguments examined in a debate with a famous atheist, simply watch the debate between William Lane Craig and Christopher Hitchens, and judge which debater is willing to form his beliefs on scientific progress, and which debater is forming his beliefs *against* the science we have today, and hoping that the good science we have today based on experiments will be overturned by speculative theories at some point in the future. When you watch that debate, it becomes very clear that Christian theists are interested in conforming their beliefs to science, and atheists are very interested in speculating against what science has shown in order to maintain their current pre-scientific view. That's not what rational people ought to do when confronted with evidence.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- Near-death experiences and mental effort: evidence for the soul
- The unexpected applicability of mathematics to nature

Why doesn’t God make his existence more obvious to people?

September 1, 2014 | by Wintery Knight | Link | Original Link

Have you ever heard someone say that if God existed, he would give us more evidence? This is called the “hiddenness of God” argument. It’s also known as the argument from “rational non-belief”.

Basically the argument is something like this:

1. God is all powerful
2. God is all loving
3. God wants all people to know about him
4. Some people don’t know about him
5. Therefore, there is no God.

In this argument, the atheist is saying that he’s looked for God real hard and that if God were there, he should have found him by now. After all, God can do anything he wants that’s logically possible, and he wants us to know that he exists. To defeat the argument we need to find a possible explanation of why God would want to remain hidden when our eternal destination depends on our knowledge of his existence.

What reason could God have for remaining hidden?

Dr. Michael Murray, a brilliant professor of philosophy at Franklin & Marshall College, has found a reason for God to remain hidden.

His paper on divine hiddenness is here:
“Coercion and the Hiddenness of God“, American Philosophical Quarterly, Vol 30, 1993.

He argues that if God reveals himself too much to people, he takes away our freedom to make morally-significant decisions, including responding to his self-revelation to us. Murray argues that God stays somewhat hidden, so that he gives people space to either 1) respond to God, or 2) avoid God so we can keep our autonomy from him. God places a higher value on people having the free will to respond to him, and if he shows too much of himself he takes away their free choice to respond to him, because once he is too overt about his existence, people will just feel obligated to belief in him in order to avoid being punished.

But believing in God just to avoid punishment is NOT what God wants for us. If it is too obvious to us that God exists and that he really will judge us, then people will respond to him and behave morally out of self-preservation. But God wants us to respond to him out of interest *in him*, just like we might try to get to know someone we admire. God has to dial down the immediacy of the threat of judgment, and the probability that the threat is actual. That leaves it up to us to respond to God’s veiled revelation of himself to us, in nature and in Scripture.

(Note: I think that we don't seek God on our own, and that he must take the initiative to reach out to us and draw us to him. But I do think that we are free to resist his revelation, at which point God stops himself short of coercing our will. We are therefore responsible for our own fate).

The atheist's argument is a logical/deductive argument. It aims to show that there is a contradiction between God's will for us and his hiding from us. In order to derive a contradiction, God MUST NOT have any possible reason to remain hidden. If he has a reason for remaining hidden that is consistent with his goodness, then the argument will not go through.

When Murray offers a possible reason for God to remain hidden in order to allow people to freely respond to him, then the argument is defeated. God wants people to respond to him freely so that there is a genuine love relationship – not coercion by overt threat of damnation. To rescue the argument, the atheist has to be able to prove that God could provide *more* evidence of his existence without interfering with the free choice of his creatures to reject him.

More of Michael Murray's work

Murray has defended the argument in works published by prestigious academic presses such as Cambridge University Press, (ISBN: 0521006104, 2001) and Routledge (ISBN: 0415380383, 2007). The book chapter from the Cambridge book is here. The book chapter from the Routledge book is here.

Michael Murray's papers are really fun to read, because he uses hilarious examples. I should mention that I disagree with his view that God's work of introducing biological information in living creatures has to be front-loaded.

Here's more terrific stuff from Dr. Murray:

- "Who's Afraid of Religion?", Inaugural Lecture delivered March 30, 2006. Franklin and Marshall College.
- "Seek and You Will Find", in God and the Philosophers. Thomas Morris, editor. Oxford: Oxford University Press. 1994.

Is there any evidence of God's existence?

Yes, just watch this lecture by Dr. William Lane Craig. It contains 5 reasons why God exists and 3 reasons why it matters.

If God has a reason for allowing evil and suffering, should we know what it is?

September 1, 2014 | by Wintery Knight | Link | Original Link

This tiny little thing is a No-See-Um

Have you heard about the terrible noseeums? Then read on, for Steven Cowan will tell you about them.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude. Consider the recent Tsunami in the Indian Ocean that took the lives of almost 200,000 people. Consider as well the infamous Nazi Holocaust in which millions of Jews and others were mercilessly slaughtered. Moreover, we can watch the evening news on almost any day and hear of people in our neighborhoods being robbed, beaten, and murdered. How and why could God allow such things?

Excerpt:

> However, perhaps God's existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God's existence is inconsistent with pointless or gratuitous evil. By "pointless evil," Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe's argument may be simply stated as follows:

> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that there is pointless evil, Rowe introduces what he calls the "noseeum inference." Like the pesty little bugs that some readers may be familiar with, a "noseeum" is something that you cannot see—it is a "no-see-um." And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I "no-see-um" a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in concluding that there was no such planet.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous. Humans just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a

noseeum. Just because we don't see it doesn't mean it isn't there, and the burden of proof is on the person who says there is NO morally sufficient reason. They're making the claim, they have to shoulder the burden of proof.

By the way, I HAVE the PDF of the William Alston paper. But I can't post it publicly because it's copyrighted.

However, here is a summary of his argument: (it's unnecessarily wordy – this is not Thomas Sowell or Theodore Dalrymple writing this)

> The recent outpouring of literature on the problem of evil has materially advanced the subject in several ways. In particular, a clear distinction has been made between the "logical" argument against the existence of God ("atheological argument") from evil, which attempts to show that evil is logically incompatible with the existence of God, and the "inductive" ("empirical", "probabilistic") argument, which contents itself with the claim that evil constitutes (sufficient) empirical evidence against the existence of God. It is now acknowledged on (almost) all sides that the logical argument is bankrupt, but the inductive argument is still very much alive and kicking.
>
> In this paper I will be concerned with the inductive argument. More specifically, I shall be contributing to a certain criticism of that argument, one based on a low estimate of human cognitive capacities in a certain application. To indicate the point at which this criticism engages the argument, I shall use one of the most careful and perspicuous formulations of the argument in a recent essay by William Rowe (1979).
>
> 1. There exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse. ,
> 2. An omniscient, wholly good being would prevent the occurrence of any intense suffering it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse.
> 3. There does not exist an omnipotent, omniscient, wholly good being (p. 336).
>
> Let's use the term 'gratuitous suffering' for any case of intense suffering, E, that satisfies premise 1, that is, which is such that an omnipotent, omniscient being could have prevented it without thereby losing some greater good or permitting some evil equally bad or worse.'
>
> […]The criticism I shall be supporting attacks the claim that we are rationally justified in accepting 1, and it does so on the grounds that our epistemic situation is such that we are unable to make a sufficiently well grounded determination that 1 is the case. I will call this, faute de mieux, the agnostic thesis, or simply agnosticism. The criticism claims that the magnitude or complexity of the question is such that our powers, access to data, and so on are radically insufficient to provide sufficient warrant for accepting 1.And if that is so, the

> inductive argument collapses.

What the atheist has to show is that God could have prevented some instance of evil that appears to be pointless without losing any overall goodness. I.e. – suppose someone gets sick and has to stay home instead of going to a party. The person is suffering, but how do we know that God isn't justified in allowing this suffering? What if, by allowing this suffering, God protects the person from being killed by a drunk driver? If the atheist says that there cannot be ANY moral justification for allowing the suffering, he has to be able to know what would happen in the future to know that nothing good would never come out of it. That's the burden of proof on the atheist, and Alston claims that the atheist is not in a position to know that.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very difficult thing for an atheist to show, given our human cognitive limitations.

But as I said before, atheist confuse the purpose of life. They think that the purpose of life is to have happy feelings, and they wonder "how could allowing me to suffer create MORE happy feelings?" And that's where the problem arises. They can't accept the idea that God has a right to form their character, to put them through certain experiences, and to place humans in times and places where he can orchestrate a world that meets his needs, not our needs.

I also found this opening speech from a debate that Steven Cowan did on the problem of evil, which may also be useful to you.

The *best* place to learn about no-see-ums is in this excellent lecture by Biola University professor Doug Geivett.

UK authorities ignored gang of Muslim pedophiles who raped more than 1400 children

September 2, 2014 | by Wintery Knight | Link | Original Link

This is the latest news from the UK Telegraph.

Excerpt:

> More than 1,400 children were sexually abused over a 16 year period by gangs of paedophiles after police and council bosses turned a blind eye for fear of being labelled racist, a damning report has concluded.
>
> […]Senior officials were responsible for "blatant" failures that saw victims, some as young as 11, being treated with contempt and categorised as being "out of control" or simply ignored when they asked for help.
>
> In some cases, parents who tried to rescue their children from abusers were themselves arrested. Police officers even dismissed the rape of children by saying that sex had been consensual.
>
> […]Details of the appalling depravity in the town and the systemic failures that allowed it to continue were laid out in a report published by Professor Alexis Jay, the former chief inspector of social work in Scotland. Victims were gang raped, while others were groomed and trafficked across northern England by groups of mainly Asian men.
>
> […]Prof Jay wrote: "No one knows the true scale of child sexual exploitation in Rotherham over the years. Our conservative estimate is that approximately 1,400 children were sexually exploited over the full inquiry period, from 1997 to 2013.
>
> "It is hard to describe the appalling nature of the abuse that child victims suffered. They were raped by multiple perpetrators, trafficked to other towns and cities in the north of England, abducted, beaten, and intimidated."
>
> She added: "There were examples of children who had been doused in petrol and threatened with being set alight, threatened with guns, made to witness brutally violent rapes and threatened they would be next if they told anyone."
>
> […]Prof Jay said: "Within social care, the scale and seriousness of the problem was underplayed by senior managers. At an operational level, the police gave no priority to child sex exploitation, regarding many child victims with contempt and failing to act on their abuse as a crime."
>
> It emerged that there had been three previous reports into the problem which had been suppressed or ignored by officials, either because they did not like or did not believe the findings.
>
> **Tuesday's report concluded that by far the majority of perpetrators were Asian men, and said council officials had been unwilling to address**

> **the issue for fear of being labelled racist.**
>
> **The report stated: "Some councillors seemed to think it was a one-off problem, which they hoped would go away. Several staff described their nervousness about identifying the ethnic origins of perpetrators for fear of being thought racist; others remembered clear direction from their managers not to do so."**

So, political correctness stopped people from speaking out, for fear of being branded "racist". The accused came from a certain ethnic group, therefore the police refused to prosecute them, lest they be branded "racist" by the secular left. And now we can see what follows when the mainstream media and her allies on the left make enforcement of the law conditional on such concerns. Children are raped. No one stops them.

More from another UK Telegraph article on the same topic:

> When in 2010 five Asian men from Rotherham were jailed for grooming teenage girls for sex, it was regarded as a feather in the cap for South Yorkshire Police and the local social services which had doggedly pursued the prosecution.

> Sentencing Adil Hussain, Razwan Razaq, Mohsin Khan, Umar Razaq, and Zafran Ramzan, the judge described them as "dangerous sexual predators" and said Rotherham would be a safer place for youngsters with them off the streets.
>
> But Tuesday's damning report into sexual exploitation in the South Yorkshire town revealed in stark and horrifying detail how their appalling crimes were merely the tip of the iceberg.

> For at least 16-years gangs of mainly Asian men were able to target, groom and abuse girls as young as 11, with little to fear from the authorities.
>
> In one of the most shocking cases highlighted in the report, Professor Jay described how in 2001 a 15-year-old girl was doused in petrol by her abuser who threatened to set her alight.
>
> The teenager had been groomed by an older man who trafficked her from Rotherham to Leeds and Bradford where she was forced into having sex.
>
> When social services attempted to intervene the girl was threatened and beaten by her abuser in order to warn her off identifying him.
>
> **She was later stalked by him, doused in petrol and warned that she would be burned alive if she told the police anything. She made several attempts on her own life and eventually ended up homeless.**
>
> **No action was taken against her abuser.**
>
> The report also described how social workers and council chiefs were quick to dismiss the concerns of parents who were attempting to protect their children.
>
> In one case in 2002 a mother contacted social services to voice concerns that her 14-year-old daughter was going missing regularly and was being plied with drink

> by older males.
>
> Her mother said she was worried that her daughter had become sexually active with members of the group.
>
> But despite showing signs that she had been sexually exploited from the age of 11, the case was closed and **the social worker's assessment was that the mother was unable to accept the fact that her daughter was growing up.**
>
> While the police often failed to take action against the abusers, there were cases where concerned parents were arrested for trying to protect their own children.
>
> **The report identified two separate cases where fathers who had tracked their daughters down and were trying to remove them from houses where they were being abused, were themselves arrested.**
>
> n 2008 an 11-year-old girl came to the attention of the police after she disclosed that she and another child had been sexually abused by a group of adult males.
>
> Despite the fact she was identified as being one of a group of girls who was associating with a known sex abuser, her file was closed and she was deemed as being not at risk from sexual exploitation.
>
> Less than a month later, she was found in a derelict house with another child, and a number of adult males.
>
> She was arrested for being drunk and disorderly (her conviction was later set aside) and none of the males were arrested.
>
> **In one of the most staggering passages in the report, Professor Jay revealed how a police officer dismissed the case of a 12-year-old girl who had been having sex with up to five Asian males, because he said she had been "100 per cent consensual in every incident".**

The only person to resign for this so far is a Police Commissioner, and former Labour Party candidate. You'll recall that it was the Labour Party who created the immigraion policies that would achieve their goal of "multiculturalism" – which is another word for importing voters from poor countries who who will vote for the policies of the political left. Policies of bigger government and more dependence on government programs. You can bet that the left isn't pushing for more immigration from countries like Hong Kong or Singapore.

I think there is another lesson to this story, and it's this. All religions are not the same. They really do teach different things. Some religions support pedophilia and polygamy, and some religions support protecting children and romantic, monogamous love between men and women. They are not the same. Although we seem to have embraced this very feminized notion of compassion and non-judgmentalism in the West, we need to remember that right is not wrong, and when we refuse to make more judgments and set moral boundaries, people get hurt. Especially little children who have no mothers or no fathers to care for them.

Do most cosmologists accept the reality of the cosmic fine-tuning?

September 2, 2014 | by Wintery Knight | Link | Original Link

I don't know how I missed this, but apparently Dr. Richard Carrier, a historian, wrote a critique of the fine-tuning argument a while back, and Dr. Luke Barnes, a cosmologist responded to him.

Much of what is said by both of them in their contributions is beyond me, but I did want to quote one part from a blog post by Luke Barnes about whether most scientists accept that our universe is finely-tuned for complex embodied life.

First, Dr. Carrier writes this:

> [Dr. William Lane Craig] claims "the fundamental constants and quantities of nature must fall into an incomprehensibly narrow life-permitting range," but that claim has been refuted–by scientists–again and again. We actually do not know that there is only a narrow life-permitting range of possible configurations of the universe. As has been pointed out to Craig by several theoretical physicists (from Krauss to Stenger), he can only get his "narrow range" by varying one single constant and holding all the others fixed, which is simply not how a universe would be randomly selected. When you allow all the constants to vary freely, the number of configurations that are life permitting actually ends up respectably high (between 1 in 8 and 1 in 4: see Victor Stenger's The Fallacy of Fine-Tuning).

And Dr. Barnes replies (in part): (links removed)

> I've said an awful lot in response to that paragraph, so let's just run through the highlights.
>
> - "Refuted by scientists again and again". What, in the peer-reviewed scientific literature? I've published a review of the scientific literature, 200+ papers, and I can only think of a handful that oppose this conclusion, and piles and piles that support it. Here are some quotes from non-theist scientists. For example, Andrei Linde says: "The existence of an amazingly strong correlation between our own properties and the values of many parameters of our world, such as the masses and charges of electron and proton, the value of the gravitational constant, the amplitude of spontaneous symmetry breaking in the electroweak theory, the value of the vacuum energy, and the dimensionality of our world, is an experimental ***fact*** requiring an explanation." [emphasis added.]
> - "By several theoretical physicists (from Krauss to Stenger)". I've replied to Stenger. I had a chance to talk to Krauss briefly about fine-tuning but I'm still not sure what he thinks. His published work on anthropic matters

> doesn't address the more general fine-tuning claim. Also, by saying "from" and "to", Carrier is trying to give the impression that a great multitude stands with his claim. I'm not even sure if Krauss is with him. I've read loads on this subject and only Stenger defends Carrier's point, and in a popular (ish) level book. On the other hand, Craig can cite Barrow, Carr, Carter, Davies, Deutsch, Ellis, Greene, Guth, Harrison, Hawking, Linde, Page, Penrose, Polkinghorne, Rees, Sandage, Smolin, Susskind, Tegmark, Tipler, Vilenkin, Weinberg, Wheeler, and Wilczek. (See here). With regards to the claim that "the fundamental constants and quantities of nature must fall into an incomprehensibly narrow life-permitting range", ***the weight of the peer-reviewed scientific literature is overwhelmingly with Craig*****.** (If you disagree, start citing papers).

There's more, too.

I wish I understood cosmology enough to understand everything Dr. Barnes says, but it seems to me that this much is clear. If you're an atheist and you're reading stuff by these very far-out atheists, then you need to be very careful. Dr. Stenger and Dr. Carrier are both highly-intelligent and have great credentials, but it's probably better for all of us to be interacting with the other side when we form our worldviews.

I noticed that respected atheist Jeff Lowder has a post up where he looks at both sides and comes down more with Barnes than with Carrier.

Alexander Vilenkin: “All the evidence we have says that the universe had a beginning”

September 2, 2014 | by Wintery Knight | Link | Original Link

I’m hearing from atheists that the universe did not begin to exist, so I thought I’d explain why physicists can’t avoid a creation event – or rather, I’d let famous cosmologist Alexander Vilenkin do it.

From Uncommon Descent.

Excerpt:

> Did the cosmos have a beginning? The Big Bang theory seems to suggest it did, but in recent decades, cosmologists have concocted elaborate theories – for example, an eternally inflating universe or a cyclic universe – which claim to avoid the need for a beginning of the cosmos. Now it appears that the universe really had a beginning after all, even if it wasn’t necessarily the Big Bang.
>
> At a meeting of scientists – titled “State of the Universe” – convened last week at Cambridge University to honor Stephen Hawking’s 70th birthday, cosmologist Alexander Vilenkin of Tufts University in Boston presented evidence that the universe is not eternal after all, leaving scientists at a loss to explain how the cosmos got started without a supernatural creator. The meeting was reported in *New Scientist* magazine (Why physicists can’t avoid a creation event, 11 January 2012).
>
> […]In his presentation, Professor Vilenkin discussed three theories which claim to avoid the need for a beginning of the cosmos.

The three theories are chaotic inflationary model, the oscillating model and quantum gravity model. Regular readers will know that those have all been addressed in William Lane Craig’s peer-reviewed paper that evaluates alternatives to the standard Big Bang cosmology.

But let’s see what Vilenkin said.

More:

> One popular theory is eternal inflation. Most readers will be familiar with the theory of *inflation*, which says that the universe increased in volume by a factor of at least 10^78 in its very early stages (from 10^−36 seconds after the Big Bang to sometime between 10^−33 and 10^−32 seconds), before settling into the slower rate of expansion that we see today. The theory of *eternal inflation* goes further, and holds that the universe is constantly giving birth to smaller “bubble” universes within an ever-expanding multiverse. Each bubble universe undergoes its own initial period of inflation. In some versions of the theory, the bubbles go both backwards and forwards in time, allowing the

possibility of an infinite past. Trouble is, the value of one particular cosmic parameter rules out that possibility:

> But in 2003, a team including Vilenkin and Guth considered what eternal inflation would mean for the Hubble constant, which describes mathematically the expansion of the universe. They found that the equations didn't work (Physical Review Letters, DOI: 10.1103/physrevlett.90.151301). "You can't construct a space-time with this property," says Vilenkin. It turns out that the constant has a lower limit that prevents inflation in both time directions. "It can't possibly be eternal in the past," says Vilenkin. "There must be some kind of boundary."

A second option explored by Vilenkin was that of a cyclic universe, where the universe goes through an infinite series of big bangs and crunches, with no specific beginning. It was even claimed that a cyclic universe could explain the low observed value of the cosmological constant. But as Vilenkin found, there's a problem if you look at the *disorder* in the universe:

> Disorder increases with time. So following each cycle, the universe must get more and more disordered. But if there has already been an infinite number of cycles, the universe we inhabit now should be in a state of maximum disorder. Such a universe would be uniformly lukewarm and featureless, and definitely lacking such complicated beings as stars, planets and physicists – nothing like the one we see around us.
>
> One way around that is to propose that the universe just gets bigger with every cycle. Then the amount of disorder per volume doesn't increase, so needn't reach the maximum. But Vilenkin found that this scenario falls prey to the same mathematical argument as eternal inflation: if your universe keeps getting bigger, it must have started somewhere.

However, Vilenkin's options were not exhausted yet. There was another possibility: that the universe had sprung from an eternal cosmic egg:

> Vilenkin's final strike is an attack on a third, lesser-known proposal that the cosmos existed eternally in a static state called the cosmic egg. This finally "cracked" to create the big bang, leading to the expanding universe we see today. Late last year Vilenkin and graduate student Audrey Mithani showed that the egg could not have existed forever after all, as quantum instabilities would force it to collapse after a finite amount of time (arxiv.org/abs/1110.4096). If it cracked instead, leading to the big bang, then this must have happened before it collapsed – and therefore also after a finite amount of time.
>
> "This is also not a good candidate for a beginningless universe," Vilenkin

> > concludes.
>
> So at the end of the day, what is Vilenkin's verdict?
>
> > "All the evidence we have says that the universe had a beginning."

This is consistent with the Borde-Guth-Vilenkin Theorem, which I blogged about before, and which William Lane Craig leveraged to his advantage in his debate with Peter Millican.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, can be eternal into the past. Even speculative alternative cosmologies do not escape the need for a beginning.

Conclusion

If the universe came into being out of nothing, which seems to be the case from science, then the universe has a cause. Things do not pop into being, uncaused, out of nothing. The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

Andrew Klavan signed to write the script for the Gosnell movie

September 3, 2014 | by Wintery Knight | Link | Original Link

They got an experienced screenwriter – Life News reports.

Excerpt:

> The producers of the Gosnell movie raised the $2.1 million they needed to make the Hollywood-style film that will tell the story of the gruesome abortion practitioner. Now, they've hired a screenwriter to produce the script to tell the story.
>
> "We have some great news that we are excited to share with you," the producers Ann McElhinney and Phelim McAleer told LifeNews today in an email. "We've just signed up the best-selling author and screenwriter Andrew Klavan to write the script for the Gosnell Movie."
>
> Klavan, whose books have been made into movies directed and starring Clint Eastwood and Michael Douglas, said he had wanted to write the Gosnell screenplay "from the moment I heard it was underway." He said the Gosnell project was "a great story" but also an important tale to tell.
>
> Klavan said: "This is so much more than a job of work for me. As I've begun to get into the research materials, it's started to come home to me that we've all taken on a huge responsibility. The women who were brutalized by this Gosnell monster — they can tell their stories. But all his victims, all those babies — we've got to figure out a way to speak for them somehow."
>
> […]In a lengthy writing career Klavan has been nominated for the Mystery Writers of America's Edgar Award five times and has won twice. He has recently published a bestselling series of thriller novels for young adults, *The Homelanders*, and his YA novel *If We Survive* was nominated for an International Thriller Writers Award. His latest novel for adults, *Werewolf Cop*, is due out next spring.
>
> His essays and op-eds on politics, religion, movies and literature have appeared in the*Wall Street Journal*, *The New York Times*, *The Washington Post*, *The LA Times*, and elsewhere. His 2008 *WSJ* op-ed "What Bush and Batman Have in Common," topped the Technorati list as the most-read online piece of the day. He has also produced several popular political satire video series, including "Klavan on the Culture," for PJTV.com, "A Very Serious Commentary," for Glenn Beck's TheBlaze.com and his current series "The Revolting Truth," for TruthRevolt.org.

I've featured some of Andrew Klavan's videos on this blog before, so I already know who he is. If you don't know who he is, then trust me when I say this is a home run for the

movie. They chose well!

Growing up with two lesbian mothers: a child's perspective

September 3, 2014 | by Wintery Knight | Link | Original Link

A man raised by two lesbians tells his story in the latest Public Discourse. (H/T Brian)

Introduction:

> The children of same-sex couples have a tough road ahead of them—I know, because I have been there. The last thing we should do is make them feel guilty if the strain gets to them and they feel strange.

> Between 1973 and 1990, when my beloved mother passed away, she and her female romantic partner raised me. They had separate houses but spent nearly all their weekends together, with me, in a trailer tucked discreetly in an RV park 50 minutes away from the town where we lived. As the youngest of my mother's biological children, I was the only child who experienced childhood without my father being around.
>
> After my mother's partner's children had left for college, she moved into our house in town. I lived with both of them for the brief time before my mother died at the age of 53. I was 19. In other words, I was the only child who experienced life under "gay parenting" as that term is understood today.
>
> Quite simply, growing up with gay parents was very difficult, and not because of prejudice from neighbors. People in our community didn't really know what was going on in the house. To most outside observers, I was a well-raised, high-achieving child, finishing high school with straight A's.
>
> Inside, however, I was confused. When your home life is so drastically different from everyone around you, in a fundamental way striking at basic physical relations, you grow up weird. I have no mental health disorders or biological conditions. I just grew up in a house so unusual that I was destined to exist as a social outcast.

A striking snippet:

> In terms of sexuality, gays who grew up in traditional households benefited from at least seeing some kind of functional courtship rituals around them. I had no clue how to make myself attractive to girls. When I stepped outside of my mothers' trailer, I was immediately tagged as an outcast because of my girlish mannerisms, funny clothes, lisp, and outlandishness. Not surprisingly, I left high school as a virgin, never having had a girlfriend, instead having gone to four proms as a wisecracking sidekick to girls who just wanted someone to chip in for a limousine.
>
> When I got to college, I set off everyone's "gaydar" and the campus LGBT group

> quickly descended upon me to tell me it was 100-percent certain I must be a homosexual. When I came out as bisexual, they told everyone I was lying and just wasn't ready to come out of the closet as gay yet. Frightened and traumatized by my mother's death, I dropped out of college in 1990 and fell in with what can only be called the gay underworld. Terrible things happened to me there.
>
> It was not until I was twenty-eight that I suddenly found myself in a relationship with a woman, through coincidences that shocked everyone who knew me and surprised even myself. I call myself bisexual because it would take several novels to explain how I ended up "straight" after almost thirty years as a gay man.

Click here for the rest. I blogged before about a study that found that gay parents are more likely to raise children who become gay.

Another good book that gives a first-person account is "Out From Under" by Dawn Stefanowicz.

J.P. Moreland asks: does truth matter when choosing a religion?

September 3, 2014 | by Wintery Knight | Link | Original Link

Dr. J.P. Moreland

This lecture contains Moreland's famous "Wonmug" illustration. Ah, memories! If you don't know who Wonmug is, you can find out in this lecture.

The MP3 file is here.

Topics:

- Is it intolerant to think that one religion is true?
- Is it more important to be loving and accepting of people regardless of worldview?
- How should Christians approach the question of religious pluralism?
- How does a person choose a religion anyway?
- Who is Wonmug, and would you like to be like Wonmug?
- Is it enough that a belief "works for you", or do you want to believe the truth?
- Can all the religions in the world be true?
- Is it wise to pick and choose what you like from all the different religions?
- Is it possible to investigate which religion is true? How?
- Which religions are testable for being true or false?
- How you can test Christianity historically (very brief)

This is the most fun lecture to listen to, you should listen to it, if you like fun.

Ryan T. Anderson defends marriage at Indiana House Judiciary Committee hearing

September 4, 2014 | by Wintery Knight | Link | Original Link

(the video is 11 minutes long)

The Heritage Foundation reports.

Excerpt:

> Ryan T. Anderson, the William E. Simon Fellow at The Heritage Foundation, testified before the Indiana House Judiciary Committee yesterday on their proposed constitutional amendment to define marriage as the union of a man and woman.
>
> The controversial bill, which would place the amendment on the state ballot and give citizens the right to vote about such an important matter, spurred a three-hour heated debate full of testimonies from both supporters and opponents.
>
> Anderson, co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "*What Is Marriage? Man and Woman: A Defense*" which Justice Samuel Alito cited twice in his dissenting opinion in the Supreme Court case involving the Defense of Marriage Act, began his testimony by explaining what marriage is and why marriage matters. According to Anderson, the collapse of marriage over the past 50 years is directly tied to the over-expanded welfare state of the country, and lack of male figureheads in families.
>
> "If the biggest social problem we face right now in the United States is absentee dads," Anderson said, "How will we insist that dads are essential when the law redefines marriage to make fathers optional?"

The full testimony is here at the Public Discourse, and here is one part of it:

> Part of this is based on the reality that there's no such thing as parenting in the abstract: there's mothering, and there's fathering. Men and women bring different gifts to the parenting enterprise. Rutgers sociologist Professor David Popenoe writes, "the burden of social science evidence supports the idea that gender-differentiated parenting is important for human development and the contribution of fathers to childrearing is unique and irreplaceable." He then concludes:
>
> We should disavow the notion that mommies can make good daddies, just as we should the popular notion that daddies can make good mommies. The two sexes are different to the core and each is necessary—culturally and biologically—for the optimal development of a human being.
>
> This is why so many states continue to define marriage as the union of a man and a woman, many doing so by amending their constitutions.

> So why does marriage matter for public policy? Perhaps there is no better way to analyze this than by looking to our own president, President Barack Obama. Allow me to quote him:
>
> We know the statistics: that children who grow up without a father are five times more likely to live in poverty and commit crime, nine times more likely to drop out of school, and twenty times more likely to end up in prison. They are more likely to have behavioral problems or run away from home, or become teenage parents themselves. And the foundations of our community are weaker because of it.
>
> There is a host of social science evidence. We go through the litany and cite the studies in our book, but President Obama sums it up pretty well. We've seen in the past fifty years, since the war on poverty began, that the family has collapsed. At one point in America, virtually every child was given the gift of a married mother and father. Today, 40 percent of all Americans, 50 percent of Hispanics, and 70 percent of African Americans are born to single moms—and the consequences for those children are quite serious.
>
> The state's interest in marriage is not that it cares about my love life, or your love life, or anyone's love life just for the sake of romance. The state's interest in marriage is ensuring that those kids have fathers who are involved in their lives.

People who are honest in recognizing that fathers matter cannot press for a redefinition of marriage that makes fathers optional. Any policy that normalizes and celebrates gender-interchangeability is bad for children, and we should be favoring the rights of children over the selfishness of adults in our laws and policies. Period.

The rest of the article is a nice short summary of the case for traditional marriage. It addresses social issues like religious liberty, but it also addresses fiscal issues like the costs of social programs.

What is the purpose of capital punishment? Does it deter crime?

September 4, 2014 | by Wintery Knight | Link | Original Link

Why do some people support the death penalty? Because research conducted by multiple teams of scholars at multiple universities have shown that the death penalty deters crime.

Excerpt:

> "Science does really draw a conclusion. It did. There is no question about it," said Naci Mocan, an economics professor at the University of Colorado at Denver. "The conclusion is there is a deterrent effect."
>
> A 2003 study he co-authored, and a 2006 study that re-examined the data, found that each execution results in five fewer homicides, and commuting a death sentence means five more homicides. "The results are robust, they don't really go away," he said. "I oppose the death penalty. But my results show that the death penalty (deters) — what am I going to do, hide them?"
>
> Statistical studies like his are among a dozen papers since 2001 that capital punishment has deterrent effects. They all explore the same basic theory — if the cost of something (be it the purchase of an apple or the act of killing someone) becomes too high, people will change their behavior (forego apples or shy from murder).

And specifically:

> • Each execution deters an average of 18 murders, according to a 2003 nationwide study by professors at Emory University. (Other studies have estimated the deterred murders per execution at three, five and 14).
>
> • The Illinois moratorium on executions in 2000 led to 150 additional homicides over four years following, according to a 2006 study by professors at the University of Houston.
>
> • Speeding up executions would strengthen the deterrent effect. For every 2.75 years cut from time spent on death row, one murder would be prevented, according to a 2004 study by an Emory University professor.

In case anyone is wondering what sort of crimes are deterred by the death penalty, you can read this graphic description of a recent death-penalty crime.

What sort of crimes are eligible for the death penalty?

Here's an example of a death-penalty eligible crime from the Hartford Courant. (WARNING: graphic!)

Excerpt:

A Superior Court jury today sentenced Steven Hayes to death for the murders of Jennifer Hawke-Petit and her daughters, Hayley and Michaela, during a seven-hour home invasion, robbery and arson at their Cheshire home in July 2007.

Outside the courthouse after the verdicts, Hawke-Petit's father, the Rev. Richard Hawke, said "There are some people who do not deserve to live in God's world."

Asked what he had in his heart, Dr. William Petit Jr. struggled with his answer. "….Probably many of you have kids," he said, pausing to choke back tears. "Michaela was an 11-year-old little girl…tortured and killed in her own bedroom, surrounded by her stuffed animals…."

Petit then talked about his daughter Hayley's bright future and her strength and the children that his wife, Jennifer, helped.

"So, I was really thinking of the tremendous loss" during the verdict, Petit said, adding that he was pleased with it, but "mostly I was sad for the loss we have all suffered."

Asked if he thought there'd be closure now, Petit said, "There's never closure. There's a hole…. with jagged edges…that may smooth out with time, but the hole in your heart and the hole in your soul" remains.

"This isn't about revenge," Petit said. "Vengeance belongs to the Lord. This is about justice."

[…]The jury sentenced Hayes to death on six counts: killing Hawke-Petit and Michaela and Hayley in the course of a single action; killing a child under the age of 16; killing Hawke-Petit in the course of a kidnapping; killing Hayley in the course of a kidnapping; killing Michaela in the course of a kidnapping; and killing Hawke-Petit in the course of a sexual assault.

[…]Hayes, 47, of Winsted, was convicted Oct. 5 of breaking into the Petit home, beating Petit, tying up and torturing the family as Hayes and another man ransacked the home for cash and valuables and tortured the family for seven hours. Testimony during Hayes' trial showed that at one point in the break-in, Hayes forced Hawke-Petit to go to the bank to withdraw money. During that time, according to testimony, Komisarjevsky sexually assaulted Michaela Petit, 11.

When Hawke-Petit and Hayes returned from the bank, Hayes raped and strangled Hawke-Petit. The house was doused with gasoline and set on fire as the intruders fled, testimony showed. Hayley, 17, and Michaela died of smoke inhalation.

[…]Prosecutors used the words of Hayes' younger brother Matthew to counter testimony that home-invasion crime was an aberration in Hayes otherwise troubled but basically nonviolent life.

Matthew Hayes portrayed his brother as a conniving, sadistic, violent thief who saw Matthew take countless beatings from his brutal father for Steven Hayes' misdeeds. At one point, Steven Hayes held a gun to Matthew's head, according to the statement, which was given to state police after the home invasion.

> Examples of Hayes' sadistic behavior toward his brother included hooking Matthew to the garage door by his belt and raising the door up and down, and holding Matthew's hand to a red-hot burner. Matthew said his brother's life of crime was not a result of bad parenting or poor childhood. He said Hayes never learned to take responsibility for his actions.

Sometimes, I think that we have stopped judging others *because* we do not want to be judged *ourselves*. We hope that by not judging anyone, that we will somehow escape being judged by anyone – especially by God himself. The opposition to punishing the guilty is, I think, really just a way of expressing our desire to do away with the idea that we will finally face judgment.We seem to be able to ignore the victim's needs and act as if the criminal is the victim. We act as if deterring a crime with punishment has no impact on the decision making of people who are considering whether to commit the crime. But crime isn't some random action – criminals do consider what will happen to them if they are caught. We send potential killers a message by being willing to punish the ones we catch. But if we treat them like victims, then others watching are not going to be deterred from committing crimes.

Peter J. Williams lectures on the historical reliability of the gospel narratives

September 4, 2014 | by Wintery Knight | Link | Original Link

Peter J. Williams

Here's the main lecture: (54 minutes)

And here's the Q&A: (9 minutes)

About Peter Williams:

> **Peter J. Williams** is the Warden (CEO) of Tyndale House and a member of the Faculty of Divinity in the University of Cambridge. He received his MA, MPhil and PhD, in the study of ancient languages related to the Bible from Cambridge University. After his PhD, he was on staff in the Faculty of Divinity, Cambridge University (1997–1998), and thereafter taught Hebrew and Old Testament there as Affiliated Lecturer in Hebrew and Aramaic and as Research Fellow in Old Testament at Tyndale House, Cambridge (1998–2003). From 2003 to 2007 he was on the faculty of the University of Aberdeen, Scotland, where he became a Senior Lecturer in New Testament and Deputy Head of the School of Divinity, History and Philosophy. In July 2007 he became the youngest Warden in the history of Tyndale House. He also retains his position as an honorary Senior Lecturer in Biblical Studies at the University of Aberdeen.

Summary of the lecture:

- What if the stories about Jesus are legendary?
- were the gospels transmitted accurately?
- were the gospels written in the same place as where the events happened?
- do the gospel authors know the customs and locations where the events happened?
- do the gospels use the right names for the time and place where the events took place?
- do the gospels disambiguate people's names depending on how common those names were?
- how do the New Testament gospels compare to the later gnostic gospels?
- how do the gospels refer to the main character? How non-Biblical sources refer to

Jesus?
- how does Jesus refer to himself in the gospels? do the later Christians refer to him that way?
- how does Jesus teach? do later Christians teach the same way?
- why didn't Jesus say anything about early conflicts in the church (the Gentiles, church services)?
- did the writers of the gospels know the places where the events took place?
- how many places are named in the gospels? how about in the later gnostic gospels?
- are the botanical details mentioned in the gospels accurate? how about the later gnostic gospels?

And here are the questions from the audience:

- how what about the discrepancies in the resurrection narratives that Bart Ehrman is obsessed with?
- what do you think of the new 2011 NIV translation (Peter is on the ESV translation committee)?
- how did untrained, ordinary men produce complex, sophisticated documents like the gospels?
- is oral tradition a strong enough bridge between the events and the writers who interviewed the eyewitnesses?
- what does the name John mean?
- why did the gospel writers wait so long before writing their gospels?
- do you think that Matthew and Luke used a hypothetical source which historians call "Q"?
- which gospel do critical historians trust the least and why?

I really enjoyed watching this lecture. He's getting some of this material from Richard Bauckham's awesome book "Jesus and the Eyewitnesses", so if you aren't familiar with it, you can get an idea of what's in it. Peter Williams is a lot of fun to listen to – an excellent speaker.

You can read an interview with Peter Williams here on Between Two Worlds.

And you can listen to the Peter Williams vs Bart Ehrman debate. That link contains a link to the audio of the debate as well as my snarky summary. It's very snarky.

And Apologetics 315 also posted Peter Williams' assessment of Bart Ehrman's "Misquoting Jesus".

Dr. Walter Bradley explains the requirements for life of any imaginable kind

September 5, 2014 | by Wintery Knight | Link | Original Link

I was talking to a friend of mine earlier this week about my experiences as an undergraduate in college, and it turns out that both of us relied on the same web site to get us through our late teens and early 20s. The web site is Leadership University, and it features articles on many different topics from Christian professors.

Here's an article by famous mechanical engineering professor Walter Bradley to explain what it takes for a universe that supports complex, embodied life.

Excerpt:

> We teach mechanical engineering students to begin the design process by specifying as clearly as possible the "needs statement" for their project. Then, the assignment for the semester is to develop a design solution that accomplishes the "need(s)" specified for the project. In similar fashion, the minimal needs to be satisfied for a universe to be capable of supporting life of any imaginable type, not just life as we know it, must be identified. Like our automobile illustration, many of the specifications will necessarily be interrelated to make a functional universe. From this essential "needs statement" we can then see how these needs (or design requirements) are met in our universe. We are essentially doing reverse engineering, constructing the blueprint backwards from the product (like an illicit manufacturing company copying a competitor's product). Only then will we be ready to entertain Dawkins' question, "Are there many ways in which these requirements could be satisfied within nature?" Or are the conditions so unique and interrelated that their collective satisfaction by accident would be a "miracle" in its own right? Let us then begin by drafting a "needs statement" for a habitable universe. Then we shall see how these requirements are satisfied in our universe.
>
> ***Needs Statement for a Suitable Universe***
>
> An abbreviated list of requirements for a universe suitable to support life of any imaginable type must include the following items:
>
> - *Order* to provide the stable environment that is conducive to the development of life, but with *just enough chaotic behavior* to provide a driving force for change.
> - *Sufficient chemical stability and elemental diversity* to build the complex molecules necessary for essential life functions: processing energy, storing information, and replicating. A universe of just hydrogen and helium will not "work."
> - *Predictability in chemical reactions,* allowing compounds to form from the

various elements.

- *A "universal connector,"* an element that is essential for the molecules of life. It must have the chemical property that permits it to react readily with almost all other elements, forming bonds that are stable, but not too stable, so disassembly is also possible. Carbon is the only element in our periodic chart that satisfies this requirement.
- *A "universal solvent"* in which the chemistry of life can unfold. Since chemical reactions are too slow in the solid state, and complex life would not likely be sustained as a gas, there is a need for a liquid element or compound that readily dissolves both the reactants and the reaction products essential to living systems: namely, a liquid with the properties of water.
- *A stable source of energy to sustain living systems* in which there must be photons from the sun with sufficient energy to drive organic, chemical reactions, but not so energetic as to destroy organic molecules (as in the case of highly energetic ultraviolet radiation).
- *A means of transporting the energy* from the source (like our sun) to the place where chemical reactions occur in the solvent (like water on Earth) must be available. In the process, there must be minimal losses in transmission if the energy is to be utilized efficiently.

Unless **ALL** of these conditions and many more not included in this list are met, we would have a universe that would preclude the possibility of conscious, complex life forms. However, it is possible to meet all of these conditions for the universe and still not necessarily find a suitable habitat in the universe for complex, conscious life. Therefore, we might say that the above requirements for our universe are necessary, but not by themselves sufficient, conditions for a habitat suitable for complex human life. Next we try to identify the additional conditions within such a suitable universe that would provide a place of habitation for conscious, complex life.

Needs Statement for a Habitat Place in the Suitable Universe for Complex, Conscious Life

An abbreviated, but illustrative, list of additional requirements must be specified for a place of habitation in this universe. First, we need a star that is located in a relatively "quiet" region of the universe (e.g., not too many neighbors that are producing high intensity, sterilizing radiation). This star needs to have its highest intensity of radiation in the range that is suitable to drive the chemical reactions essential to life without destroying the products of these reactions. Furthermore, this star needs to have a very special satellite within its solar system. A partial list of the requirements this satellite must meet include:

- a planet or moon that is terrestrial–or, solid rather than gaseous;
- a temperature range suitable to maintain the universal solvent as a liquid

> rather than a solid or gas;
> - just the right concentration of heavy (radioactive) elements to heat the core of the planet and provide the necessary energy to drive plate tectonics, to build up land mass in what would otherwise be a smooth, round planet completely covered with solvent;
> - just the right amount of solvent (carefully coupled to the plate tectonics activity) to provide a planet with similar proportions of its surfaces as oceans and land mass;
> - just the right protection from the destructive forces in nature such as radiation and asteroids over a reasonable amount of time; and
> - just the right stabilized axis tilt and angular velocity to give moderate, regular, and predictable seasons and moderate temperature fluctuations from day to night.
>
> While one is temped to think that these requirements are easily met, given the large number of stars, it should be noted that there are few places in the universe sufficiently free of sterilizing radiation to provide a suitable solar system. The number of candidate "neighborhoods" is further reduced by the requirements of a sun with the right amount of mass to give the right electromagnetic radiation spectrum. Furthermore, the occurrence of a suitable satellite in conjunction with such a star is even more problematic. Only the earth in our solar system of sixty-two satellites meets the above requirements for a "home" (earth) in safe "neighborhood" like our sun and solar system, which are well placed in a quiet place in a suitable universe as described above.
>
> In the next sections, we will see how these universal and local "needs" (or design requirements) are met by: the specific mathematical form encoded in nature, the exact values of the universal constants in our universe, and the remarkable "coincidence" that initial (or boundary) conditions are exactly what they must be. We will also see that the "evolutional" or developmental path that our universe navigated is consistently remarkable, making the origin of our "Garden of Eden" all the more wondrous and enigmatic.

If you want to see the next sections of his article, you can click here to read the rest.

Why is this important? It's important because a lot of people on the other side want to dismiss the fine-tuning argument by saying that if the fundamental constants and quantities specified in the Big Bang had been different, then the results would be a universe that permits life of some other kind. That's false. If you vary the constants and quantities, you lose things that are required for any conceivable kind of complex life. You can't form stable, metal-rich stars. The universe recollapses into a hot fireball. You have only hydrogen. You have NO hydrogen. It's not just that people have some ridges on their noses or maybe an extra pair of arms. It's that there is no life, period.

This is important. There are minimum requirements for life of any conceivable kind, and messing with the fine-tuning of the universe destroys the ability of the universe to

provide those minimal requirements. Naturalists can smirk and shrug this off, but this is the science that we have today and we have to deal with it.

Dr. George Yancey lectures on anti-Christian bias in academia, and beyond

September 5, 2014 | by Wintery Knight | Link | Original Link

A 28-minute lecture on bias against religion in academia:

If you watch 5 minutes, then you'll definitely stay and watch the whole thing. It's fascinating.

Details:

> Join Dr. George Yancey in an in depth discussion of the bias taking place within academia against religion in general, but more specifically Christianity. Within the discussion Dr.Yancey uses brief explanations of his previous book, Compromising Scholarship and many other excerpts of his past research as well as his forthcoming research to give us a new viewpoint on academia and religion.

I found a quick description of Dr. Yancey's work in this New York Times article from July 2011.

It says:

> Republican scholars are more likely than Democrats to end up working outside academia,as documented by Daniel Klein, an economist at George Mason University. Dr. Klein, who calls himself a classical liberal (a k a libertarian), says that the university promotes groupthink because its system of "departmental majoritarianism" empowers the dominant faction to keep hiring like-minded colleagues. And when a faculty committee is looking to hire or award tenure, political ideology seems to make a difference, according to a "collegiality survey" conducted by George Yancey.
>
> Dr. Yancey, a professor of sociology at the University of North Texas, asked more than 400 sociologists which nonacademic factors might influence their willingness to vote for hiring a new colleague. You might expect professors to at least *claim* to be immune to bias in academic hiring decisions.
>
> But as Dr. Yancey reports in his new book, "Compromising Scholarship: Religious and Political Bias in American Higher Education," more than a quarter of the sociologists said they would be swayed favorably toward a Democrat or an A.C.L.U. member and unfavorably toward a Republican. About 40 percent said they would be less inclined to vote for hiring someone who belonged to the National Rifle Association or who was an evangelical. Similar results were obtained in a subsequent survey of professors in other social sciences and the humanities.
>
> Dr. Yancey, who describes himself as a political independent with traditional Christian beliefs and progressive social values, advises nonliberal graduate

> students to be discreet during job interviews. “The information in this research,” he wrote, “indicates that revealing one’s political and religious conservatism will, on average, negatively influence about half of the search committee one is attempting to impress.”
>
> Dr. Yancey’s research was a survey, not a field experiment, so it’s impossible to know how many of those academics who confessed to hypothetical bias would let it sway an actual decision. Perhaps they’d try to behave as impartially as the directors of graduate studies in Dr. Gross’s experiment.

The lecture is a real eye-opener. It turns out that in academia, you are likely to be viewed the same way as blacks were viewed by slave-owners, and Jews were viewed by Nazis. Stereotypes, ignorance and hatred abound.

We have a lot of work to do to correct these perceptions, but that’s not going to happen unless churches and Christian parents start to take the life of the mind more seriously.

Friday night movie: One of Our Aircraft is Missing (1942)

September 5, 2014 | by Wintery Knight | Link | Original Link

Here's tonight's movie:

IMDB rating: [7.2/10]

Description:

> During the Allied Bombing offensive of World War II the public was often informed that "A raid took place last night over …, One (or often more) of Our Aircraft Is Missing". Behind these sombre words hid tales of death, destruction and derring-do. This is the story of one such bomber crew who were shot down and the brave Dutch patriots who helped them home.

The bomber in the movie that they start with is called a Vickers Wellington. It's not very good, but the four-engine Avro Lancaster they get at the end of the movie is as good or better than the B-17 bomber used by the Americans during the war. Most people think that the Avro Lancaster was the best bomber of World War 2 on either side. My Canadian readers will be thrilled to know that Avro Canada constructed many Avro Lancasters to help with the war effort. You can still see an intact Lancaster in Alberta, Canada.

Happy Friday!

Study explores whether atheism is rooted in reason or emotion

September 6, 2014 | by Wintery Knight | Link | Original Link

From First Things, based on research reported by CNN.

> A new set of studies in the *Journal of Personality and Social Psychology* finds that atheists and agnostics report anger toward God either in the past or anger focused on a hypothetical image of what they imagine God must be like. Julie Exline, a psychologist at Case Western Reserve University and the lead author of this recent study, has examined other data on this subject with identical results. Exline explains that her interest was first piqued when an early study of anger toward God revealed a counterintuitive finding: Those who reported no belief in God reported more grudges toward him than believers.
>
> At first glance, this finding seemed to reflect an error. How could people be angry with God if they did not believe in God? Reanalyses of a second dataset revealed similar patterns: Those who endorsed their religious beliefs as "atheist/agnostic" or "none/unsure" reported more anger toward God than those who reported a religious affiliation.
>
> Exline notes that the findings raised questions of whether anger might actually affect belief in God's existence, an idea consistent with social science's previous clinical findings on "emotional atheism."
>
> Studies in traumatic events suggest a possible link between suffering, anger toward God, and doubts about God's existence. According to Cook and Wimberly (1983), 33% of parents who suffered the death of a child reported doubts about God in the first year of bereavement. In another study, 90% of mothers who had given birth to a profoundly retarded child voiced doubts about the existence of God (Childs, 1985). Our survey research with undergraduates has focused directly on the association between anger at God and self-reported drops in belief (Exline et al., 2004). In the wake of a negative life event, anger toward God predicted decreased belief in God's existence.
>
> The most striking finding was that when Exline looked only at subjects who reported a drop in religious belief, their faith was least likely to recover if anger toward God was the cause of their loss of belief. In other words, anger toward God may not only lead people to atheism but give them a reason to cling to their disbelief.

I think the best defense to this phenomena is for the church to not tell people that God's job is to make them happy in this life on Earth. I think if we spent less time selling Christianity to young people as life enhancement, we would have much fewer apostates. If young people get into their minds that God is their boss, not their waiter, then that is a

good preparation for the real world. And all of the challenges that Christians face – from poverty, to peer pressure, to health problems to persecution. Stop expecting happiness, that is not God's goal for you.

I was blessed to have discovered apologetics at a very early age. This passage from C. S. Lewis' "The Screwtape Letters" always stood out to me back then:

> Do not be deceived, Wormwood. Our cause is never more in danger than when a human, no longer desiring, but still intending, to do our Enemy's will, looks round upon a universe from which every trace of Him seems to have vanished, and asks why he has been forsaken, and still obeys.

When I was young, I shortened this quote into my motto, which lasted until just a few years back when I finally started to feel some security. And that motto was "nothing works". Nothing works. That's right, so get used to it. Everything sucks, nothing works. *Nothing works.*

Stop expecting God to make you happy. You are a soldier, and your job is to fight to the last breath in your body for the General. Hold until relieved. You're damn right it's unfair. Your whole life is unfair and then you die. Get used to it. When I was in college, my Christian friends and I used to joke that even if we fought our entire lives for God and he tossed us into Hell like firewood, we would still do the same things. We were happy to serve and we didn't think about whether we were getting what we wanted. We did not take stupid chances, but we just didn't care about being happy. We felt that God was in the right, and sinful humans were in the wrong, and that it was enough for us to serve on the right side. We didn't expect anyone to care how we felt, we just expected to serve. And if our first plan failed, we went on to the next plan, and the next, until we found a way to serve in spite of the unfairness of it all.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature

William Lane Craig lectures on failure in the Christian life

September 6, 2014 | by Wintery Knight | Link | Original Link

I found this audio on Brian Auten's Apologetics 315 web site.

Here is the MP3 file.

And here is my summary.

Intro:

- the topic of failure is not one that is often discussed by Christians
- failure #1: failure in the Christian life which is the result of sin
- failure #2: when a Christian is defeated while trying to serve God
- the consequences for failure #1 can be worse for the Christian
- the consequences for failure #2 can be worse for the world as whole
- how is it possible for a person to fail when they are obeying God? (#2)
- how can it be that God can call someone to a task then let them fail?
- failure is not persecution – persecution is normal for Christians
- failure is not trials – testing is normal for Christians to grow

Bill's failure:

- Bill had submitted all the coursework for his second doctoral degree
- but he had to pass a comprehensive oral examination
- he failed to pass the comprehensive exam
- Bill and Jan and his supporters had all prayed for him to pass
- how could God allow this to happen?

Solution to the problem:

- God's will for us may be that we fail at the things we try in life
- there are things that God may teach us through failure
- Bill learned that human relationships are more important than careers
- we need to realize that "success" in life is not worldly success
- true success is getting to know God well during your life
- and failure may be the best way to get to know God well
- it may even be possible to fail to know God while achieving a lot
- the real measure of a man is loving God and loving your fellow man

Practical:

- give thanks to God regardless of your circumstances
- try to learn from your failure
- never give up

The ending of Bill's story:

- Bill spent an entire year preparing for a re-take of his exam
- Bill was awarded his second doctorate "magna cum laude" (with great distinction)
- Bill learned that American students are not well prepared for exams
- the year of studying remedied his inadequate American education
- in retrospect, he is thankful for the failure – he learned more

If you like this, you should pick up Craig's book "Hard Questions, Real Answers", which has a chapter on this problem. And here is a similar lecture that Dr. Craig gave at his home church in Atlanta on the same topic. I'm not posting this because I've had a catastrophic failure or anything. But I think in this economy, I am seeing a lot of my plans dashed and I am being forced to circle the wagons a little and take fewer risks. I am being forced to aim for smaller goals, and plan for future difficulties. It does bother me that I can't comfortably take risks to achieve the best goals that I want to achieve. But I have to play the hand I'm dealt, and do what looks doable right now. Some of my friends are having the same problem of having to recalculate what is probable and what is possible.

New study: amicable divorce just as damaging for children as hostile divorce

September 7, 2014 | by Wintery Knight | Link | Original Link

The UK Daily Mail reports on a new study on the effects of divorce.

Excerpt:

> Divorcing parents who try to maintain an amicable relationship for the sake of their children are doing nothing to help them, a major study suggests.
>
> The impact of the split on youngsters is the same whether or not the mother and father keep cordial links, it found.
>
> […]The new study, the first in 20 years to examine how the behaviour of separated parents affects their children, was carried out by US academics.
>
> It covered 270 parents who were divorced or separated between 1998 and 2004 in an unnamed US state that compels divorcees to take part in an education programme on 'co-operative co-parenting'.
>
> Of these, 31 per cent considered their relationship with their ex-spouse as 'co-operative and involved'; 45 per cent were 'moderately engaged' with their divorced partner, with some conflict between them; and 24 per cent said their co-operation was 'infrequent but conflictual'.
>
> They were asked to say how their break-up had affected the youngest child in their family. The average age of children involved was eight years.
>
> The study, published in the academic journal Family Relations, said that children of divorced parents are more likely than others to suffer 'external' symptoms such as behaviour problems or drug abuse, more likely to have 'internal' difficulties like anxiety or depression, and more likely to do badly at school.
>
> But the researchers, headed by Dr Jonathon Beckmeyer of Indiana University, found that these children's problems were no worse if their parents continued to row and bicker with each other after the divorce.
>
> The study said 'despite the expectation that children fare better' if their divorced parents develop a co-operative relationship, the behaviour of children as assessed by their parents 'did not significantly differ' between the friendly and the fighting groups of divorcees.

So the take-home lesson is this: there is no such thing as a divorce that doesn't hurt the children. If you're thinking of divorce and you have children, just don't do it. And if you are thinking of marriage, then be careful who you marry. Don't cloud the judgment with premarital sex before you get to know the person and get the commitment.

California State University system de-recognizes IVCF from 23 campuses

September 7, 2014 | by Wintery Knight | Link | Original Link

Princess Mandy posted this story from Christianity Today, and I am blogging it.

Excerpt: (links removed)

> InterVarsity Christian Fellowship (IVCF) has been, in modern campus terminology, "derecognized" by California State University schools. Basically, they will no longer be a recognized campus organization on any of the 23 schools in that system. IVCF has been derecognized because they require their leaders to have Christian beliefs.
>
> It's not just InterVarsity that will be impacted. Following the same logic, any group that insists on requiring its leaders to follow an agreed upon set of guiding beliefs is no longer kosher (irony intended) at California's state universities. This will impact many other faith-based organizations with actual, well, faith-based beliefs. Presumably, even People for the Ethical Treatment of Animals would have to allow Oscar Meyer to lead their campus chapters.
>
> […]Now, it's not persecution. Christians are not banned. People can share their faith. But, now, what we once called "equal access" has taken another hit—people of faith do not have equal access to the university community, like the environmentalist club, the LGBT organization, or the chess club.
>
> The university system has decided that speech with beliefs that undergird it—and shape how it is organized—has to be derecognized.
>
> I asked Greg Jao, who is National Field Director & Campus Access Coordinator, what this actually meant. He explained,

> Loss of recognition means we lose 3 things: free access to rooms (this will cost our chapters $13k-30k/year to reserve room). We also lose access to student activities programs, including the new student fairs where we meet most students. We also lose standing when we engage faculty, students and administrators.

> And while they still have freedom to request a meeting spot in some buildings, they no longer have the status when other officially recognized groups request the same spot—even though they are, well, fee-paying students in a facility owned by the people of California.
>
> Jao indicated the work is not done, explaining,

> We still intend to minister on campus but loss of recognition is a significant impediment.

> The bigger, and ongoing, issue is the continual sanitization of unacceptable religious voices from universities. It's ironic—those who champion nondiscrimination, in the name of nondiscrimination, are creating rules that push out those who "discriminate" based on biblical belief statements.
>
> A few years ago, I asked in the pages of USAToday, are evangelicals no longer welcome in the public arena? If that arena is a California state university, and those evangelicals want an official school organization, that answer is obvious.
>
> This has already happened in other places, perhaps most notably at Vanderbilt University in Nashville. But, Vanderbilt is a private university. Now, state schools have decided that, due to their odd policies restricting belief based organization from requiring belief, students who have evangelical beliefs—and think the leaders of their belief-based campus organization should also have beliefs—are no longer welcome as a student organization.

Christian taxpayers in California are paying into this school system, thanks to the compulsory collection of taxes. So now Christian families will have less money to send their own kids to schools that actually allow freedom of association and equal access to Christians. We have to pay twice – once into a system that treats us as second-class citizens, and once into a private system that recognizes our fundamental rights. This is why we should be voting to cut off the money supply to the non-essential responsibilities of government. We need to keep our money to work around the discrimination of the secularists.

IRS reveals that it has lost e-mails of 5 more employees

September 8, 2014 | by Wintery Knight | Link | Original Link

Were any of these employees in on the IRS persecution of Tea Party groups prior to the 2012 election? Let's see.

Leftist Associated Press reports.

> The IRS says it has lost emails from five more workers who are part of congressional investigations into the treatment of conservative groups that applied for tax exempt status.
>
> The tax agency said in June that it could not locate an untold number of emails to and from Lois Lerner, who headed the IRS division that processes applications for tax-exempt status. The revelation set off a new round of investigations and congressional hearings.
>
> On Friday, the IRS said it has also lost emails from five other employees related to the probe, including two agents who worked in a Cincinnati office processing applications for tax-exempt status.
>
> The agency blamed computer crashes for the lost emails. In a statement, the IRS said it found no evidence that anyone deliberately destroyed evidence.

What are the odds of all these employees suddenly losing their e-mails because of "computer crashes" at the same time? Zero.

Three podcasts on human origins and a literal Adam and Eve

September 8, 2014 | by Wintery Knight | Link | Original Link

Three episodes of the ID the Future podcast on human origins.

Part 1:

> On this episode of **ID the Future**, the CSC's Rob Crowther speaks with Casey Luskin, co-author of the new book *Science & Human Origins*. There are frequent and spurious claims made in the media that the genetic and fossil evidence of human-ape common ancestry is incontrovertible. In *Science and Human Origins*, Doug Axe, Ann Gauger, and Casey Luskin seek to equip readers with the knowledge to discern interpretation from fact and rhetoric from evidence. Listen in as Luskin introduces the book and specifically discusses his own assessment of the fossil data.

The MP3 file is here. (20 minutes)

Part 2:

> On this episode of **ID the Future**, Casey Luskin interviews Dr. Ann Gauger, co-author of *Science & Human Origins* and senior research scientist at the Biologic Institute. In recent years, human origins has become an especially hot topic as some scientists claim that the human race is a product of undirected natural selection and cannot be traced back to two parents. Dr. Gauger disagrees. Tune in to hear Dr. Gauger discuss the evidence against human-ape common ancestry, drawing from her research in such fields as anatomy and population genetics.

The MP3 file is here. (12 minutes)

Part 3:

> On this episode of **ID the Future**, Casey Luskin and Ann Gauger, co-authors of *Science & Human Origins*, discuss the assumptions behind the Darwinian evolutionist's argument for common ancestry. Are these assumptions valid, or are there too many unknown variables? Dr. Gauger presents the inconsistencies between the Darwinian doctrine of common ancestry and the evidence from population genetics.

The MP3 file is here. (12 minutes)

Robin Collins lectures on the fine-tuning argument at Pepperdine University

September 8, 2014 | by Wintery Knight | Link | Original Link

Details:

> Dr. Robin Collins is a Professor of Philosophy and Chair of the Department of Philosophy at Messiah College. Collins is the foremost defender of what is known as the teleological argument for the existence of God. He has a background in both physics and philosophy and will be discussing how the specific physical constants and conditions in the universe are finely-tuned for intelligent life and how this "fine-tuning" gives us reason to believe in a Creator.

Here is the video:

Topics:

- the constants and quantities set at the origin of the universe is fine-tuned for conscious, embodied intelligences like us
- three kinds of fine-tuning: 1) laws of nature, 2) constants, 3) quantities
- examples of 1): gravity, electromagnetism, strong force, quantization, Pauli exclusion principle
- examples of 2): **gravitational constant**, **cosmological constant**,
- examples of 3): initial distribution of mass-energy
- in addition to fine-tuning for life, there is also fine-tuning for discoverability
- Naturalistic response to the evidence: the multiverse hypothesis
- problems with the multiverse hypothesis
- additional topics

I put the ones I am ready to speak on in bold. I recommend you learn those as well in order to illustrate the fine-tuning with evidence when you present it. The evidence is important because I've never found a single atheist who I discussed this with who could properly state the argument or understand the evidence. They talk about it without really understanding it, which is why we need to be ready to explain it to them.

Who warned about the consequences of pulling out of Iraq in 2007?

September 9, 2014 | by Wintery Knight | Link | Original Link

From the leftist Washington Post, of all places.

Excerpt: (links removed)

> In the summer of 2007, Bush warned of the dire consequence of pulling U.S. troops out of Iraq against the advice of our commanders on the ground. All of Washington was telling Bush that the surge he had launched would fail and that the time had come to withdraw from Iraq and accept defeat.
>
> At a White House news conference on July 12, 2007, Bush declared: "I know some in Washington would like us to start leaving Iraq now. To begin withdrawing before our commanders tell us we're ready would be dangerous for Iraq, for the region and for the United States. It would mean surrendering the future of Iraq to al-Qaeda. It would mean that we'd be risking mass killings on a horrific scale. It would mean we'd allow the terrorists to establish a safe haven in Iraq to replace the one they lost in Afghanistan. It would mean we'd be increasing the probability that American troops would have to return at some later date to confront an enemy that is even more dangerous."
>
> […]In 2010, Obama did precisely what Bush warned against and withdrew all U.S. forces from Iraq — overruling his commander on the ground, Gen. Lloyd J. Austin III, who had recommended that Obama keep 24,000 troops. And since then, everything that Bush warned would happen has come to pass.
> Bush warned that withdrawing against the advice of our military commanders would result in "mass killings on a horrific scale." Check. We're now seeing mass killings on a horrific scale — summary executions, women and children buried alive, people being crucified, the attempted genocide of the Yazidis and two American journalists beheaded.
>
> Bush warned that withdrawal would "allow the terrorists to establish a safe haven in Iraq to replace the one they lost in Afghanistan." Check. The Islamic State now controls a safe haven the size of Belgium.
>
> Bush warned withdrawing too soon would "mean we'd be increasing the probability that American troops would have to return at some later date to confront an enemy that is even more dangerous." Check. The Islamic State is far more dangerous now, the United States is back carrying out airstrikes in Iraq and Obama will address the nation on Wednesday to lay out a new military strategy to defeat the Islamic State.
>
> That's not all. In a July 14, 2007, radio address, Bush also warned that U.S. withdrawal would allow "terrorists to . . . gain control of vast oil resources they

> could use to fund new attacks on America." Check. The Islamic State now controls vast oil resources, which are bringing the group an estimated$3 million a day — helping it to become the wealthiest terror network in the world.
>
> In a Sept. 13, 2007, Oval Office address, Bush warned that "Iran would benefit from the chaos" after U.S. withdrawal from Iraq. Check. Just last week, the United States provided air cover for Iranian-back Shiite militias as they took back the town of Amerli — which means we are now serving as the de-facto air force for the same Iranian-backed militias who were responsible for many of the U.S. casualties in Iraq.
>
> […]In an April 24, 2007, news conference Bush warned that U.S. withdrawal "could unleash chaos in Iraq that could spread across the entire region." Check. After the United States withdrew from Iraq, the Islamic State moved into Syria, killing thousands and using that country as a staging area to recruit jihadists and plan its re-invasion of Iraq.

He was one of the good ones, and I miss his moral clarity – especially when it comes to foreign policy. This man knew right from wrong. If you want to have an influence in a theater of war where your enemies are active, then you need to have boots on the ground. We have an enemy in the Middle East, and that enemy is radical Islam. Bush knew that, and Obama – well he plays golf while American-born journalists have their heads hacked off. Bush knew how to promote American interests abroad with strength, but Obama does not.

Feminists angered by suggestion that alcohol education would curb sexual misconduct

September 9, 2014 | by Wintery Knight | Link | Original Link

From Campus Reform.

Excerpt:

> Dr. Stephen Joel Trachtenberg, president emeritus and current professor of public service at The George Washington University (GWU), has become the subject of outrage from feminists on social media for suggesting that alcohol education may help prevent sexual assaults on campus.
>
> During an episode of the Diane Rehm Show last week, Trachtenberg participated in a panel discussion about Greek Life at U.S. colleges in which he suggested that binge-drinking is a factor in instances of sexual misconduct.
>
> "Part of the problem is you have men who take advantage of women who drink too much and there are women who drink too much," said Trachtenberg, adding that "we need to educate our daughters and our children in that regard."
>
> Although Trachtenberg prefaced his remarks by saying people should further encourage women to not drink in excess "without making the victims responsible for what happens," female students and women's groups flooded Twitter, calling his remarks "irresponsible" and accusing him of "gross victim blaming" and being a "rape apologist."
>
> Sally Kaplan, a recent graduate of GWU and peace alliance coordinator at the non-profit organization, the Peace Alliance, created a petition using the online platform Change.org to demand that Trachtenberg "issue an apology to the GWU community" and match her and other students' crowdfunding efforts to hire a full-time "Survivors Advocate" at the university.
>
> The petition also calls on the university to provide "better support for university students including more prevention, intervention, education and survivor advocacy resources." Ironically, in a piecepublished by administrators the day after Trachtenberg's remarks, the university promoted a sexual assault prevention event sponsored by GWU's Center for Alcohol and other Drug Education.
>
> According to *Campus Safety Magazine*, "at least 50 percent of college student sexual assaults are associated with alcohol use."
>
> In a column published last October, *Slate* contributor Emily Yoffe explained that "a misplaced fear of blaming the victim has made it somehow unacceptable to warn inexperienced young women that when they get wasted, they are putting themselves in potential peril."
>
> "Let's be totally clear: Perpetrators are the ones responsible for committing their

> crimes, and they should be brought to justice. But we are failing to let women know that when they render themselves defenseless, terrible things can be done to them," wrote Yoffe.

I think I should not marry a radical feminist for the following reason. They want to be able to perform reckless actions and then blame other people when predictable consequences occur. That is scary to me. I want to marry someone who checks her own behavior and makes good decisions. When things go wrong, I want her to take responsibility for her own actions instead of playing the victim. I think the reaction by feminists is also revealing because it seems to show why they are so pro-abortion. In that issue, the feminists want the recreational sex, but not the responsibility for what the choice to have recreational sex produces. Except in that case, it's the innocent child who suffers from the mother's recklessness.

Mark D. Linville: does Darwinian evolution make morality rational?

September 9, 2014 | by Wintery Knight | Link | Original Link

Have you ever heard an atheist tell you that naturalistic evolution is an answer to the moral argument? I have. And I found a good reply to this challenge in the book "Contending With Christianity's Critics". The chapter that responds to the challenge is authored by Dr. Mark D. Linville. It is only 13 pages long. I have a link to the PDF at the bottom of this post.

First, a bit about the author:

> Blog: The Tavern at the End of the World
> Current positions:
>
> - PhD Research Fellow
> - Tutoring Fellow in Philosophy
>
> Education:
>
> - PhD in Philosophy with a minor in South Asian Studies and a specialization in Philosophy of Religion, University of Wisconsin-Madison
> - MA in Philosophy, University of Wisconsin-Madison
> - MA in Philosophy of Religion, Trinity Evangelical Divinity School
> - MA in Theology, Cincinnati Christian Seminary
> - BA in Biblical Studies, Florida Christian College

Here is his thesis of the essay:

> Darwin's account of the origins of human morality is at once elegant, ingenious, and, I shall argue, woefully inadequate. In particular, that account, on its standard interpretation, does not explain morality, but, rather, explains it away . We learn from Darwin not how there could be objective moral facts, but how we could have come to believe—perhaps erroneously—that there are.
>
> Further, the naturalist, who does not believe that there is such a personal being as God, is in principle committed to Darwinism, including a Darwinian account of the basic contours of human moral psychology. I'll use the term evolutionary naturalism to refer to this combination of naturalism and Darwinism. And so the naturalist is saddled with a view that explains morality away. Whatever reason we have for believing in moral facts is also a reason for thinking naturalism is false. I conclude the essay with a brief account of a theistic conception of morality, and argue that the theist is in a better position to affirm the objectivity of morality.

And here’s a sample to get your attention:

> But even if we are assured that a “normal” person will be prompted by the social instincts and that those instincts are typically flanked and reinforced by a set of moral emotions, we still do not have a truly normative account of moral obligation. There is nothing in Darwin’s own account to indicate that the ensuing sense of guilt—a guilty feeling—is indicative of actual moral guilt resulting from the violation of an objective moral law. The revenge taken by one’s own conscience amounts to a sort of second-order propensity to feel a certain way given one’s past relation to conflicting first-order propensities (e.g., the father’s impulse to save his child versus his impulse to save himself). Unless we import normative considerations from some other source, it seems that, whether it is a first or second-order inclination,one’s being prompted by it is more readily understood as a descriptive feature of one’s own psychology than material for a normative assessment of one’s behavior or character. And, assuming that there is anything to this observation, an ascent into even higher levels of propensities (“I feel guilty for not having felt guilty for not being remorseful over not obeying my social instincts…”) introduces nothing of normative import. Suppose you encounter a man who neither feels the pull of social, paternal or familial instincts nor is in the least bit concerned over his apparent lack of conscience. What, from a strictly Darwinian perspective, can one say to him that is of any serious moral import? “You are not moved to action by the impulses that move most of us.” Right. So?
>
> The problem afflicts contemporary construals of an evolutionary account of human morality. Consider Michael Shermer’s explanation for the evolution of a moral sense—the “science of good and evil.” He explains,
>
> By a moral sense, I mean a moral feeling or emotion generated by actions. For example, positive emotions such as righteousness and pride are experienced as the psychological feeling of doing “good.” These moral emotions likely evolved out of behaviors that were reinforced as being good either for the individual or for the group.2
>
> Shermer goes on to compare such moral emotions to other emotions and sensations that are universally experienced, such as hunger and the sexual urge. He then addresses the question of moral motivation.
>
> In this evolutionary theory of morality, asking “Why should we be moral?” is like asking “Why should we be hungry?” or “Why should we be horny?” For that matter, we could ask, “Why should we be jealous?” or “Why should we fall in love?” The answer is that it is as much a part of human nature to be moral as it is to be hungry, horny, jealous, and in love.3
>
> Thus, according to Shermer, given an evolutionary account, such a question is simply a non-starter. Moral motivation is a given as it is wired in as one of our basic drives. Of course, one might point out that Shermer’s “moral emotions”

> often do need encouragement in a way that, say, “horniness,” does not. More importantly, Shermer apparently fails to notice that if asking “Why should I be moral?” is like asking, “Why should I be horny?” then asserting, “You ought to be moral” is like asserting, “You ought to be horny.” As goes the interrogative, so goes the imperative. But if the latter seems out of place, then, on Shermer’s view, so is the former.
>
> One might thus observe that if morality is anything at all, it is irreducibly normative in nature. But the Darwinian account winds up reducing morality to descriptive features of human psychology. Like the libido, either the moral sense is present and active or it is not. If it is, then we might expect one to behave accordingly. If not, why, then, as a famous blues man once put it, “the boogie woogie just ain’t in me.” And so the resulting “morality” is that in name only.
>
> **In light of such considerations, it is tempting to conclude with C. S. Lewis that, if the naturalist remembered his philosophy out of school, he would recognize that any claim to the effect that “I ought” is on a par with “I itch,” in that it is nothing more than a descriptive piece of autobiography with no essential reference to any actual obligations.**

When it comes to morality, we are not interested in mere descriptions of behavior. We want to know about prescriptions of behavior, and whether why we should care about following those prescriptions. We are interested in what grounds our sense of moral obligation in reality. What underwrites our sense of moral obligation? If it is just rooted in feelings, then why should we obey our moral sense when obeying it goes against out self-interest? Feelings are subjective things, and doing the right thing in a real objective state of affairs requires more than just feelings. There has to be a real objective state of affairs that makes it rational for us to do the right thing, even when the right thing is against our own self-interest. That’s what morality is – objective moral obligations *overriding* subjective feelings. I wouldn’t trust someone to be moral if it were just based on their feelings.

The PDF is right here for downloading, with the permission of the author.

Gay activist pleads guilty to sexually assaulting boys

September 10, 2014 | by Wintery Knight | Link | Original Link

---

From the leftist LA Times, of all places.

Excerpt:

> A former USC professor once on the FBI's 10 Most Wanted fugitives list pleaded guilty Friday to flying to the Philippines and sexually assaulting underage boys he groomed online.
>
> Walter Lee Williams, 65, admitted engaging in illegal sexual contact with minors in foreign places, entering the plea during a brief appearance before U.S. District Judge Phillip S. Gutierrez.
>
> As part of a plea, federal prosecutors agreed to recommend that the onetime eminent professor of gender and sexuality studies serve no more than five years in a federal prison. He also would be subject to 10 years supervision upon release and must pay $25,000 in restitution to his seven victims. Williams will be sentenced Dec. 15.
> He was apprehended within a day of making the FBI's Most Wanted List in June 2013 after he was indicted on sex crimes involving two 14-year-old boys in the Philippines. He was captured in the Mexican coastal town of Playa del Carmen after a resident recognized his photo from a newspaper.
>
> Los Angeles Police Department Deputy Chief Michel Moore said Williams' conduct came to light three years ago when a person concerned about the safety of children contacted authorities.
>
> Williams taught anthropology, gender studies and history at USC for about two decades until he quit in 2011. Under the guise of academic research on sexuality in the Southeast Asia/Pacific region, he repeatedly traveled to the area.
>
> Federal prosecutors alleged that the author and Fulbright Award winner used those trips to sexually assault underage boys. Investigators believe he has at least 10 victims across Southeast Asia, aged 9 to 17.
>
> Williams engaged in webcam sex sessions with two boys, aged 13 and 14, in the Philippines in 2010. The next year, he traveled to the country and sexually assaulted both boys and a 15-year-old boy, according to the plea agreement. He was 62 at the time.
>
> While there, he also had sexual contact with three other 16-year-old boys, records show.
>
> When he returned to Los Angeles International Airport on Feb. 11, 2011, he was "intercepted," and child pornography was found on him. The professor fled Los Angeles a week after being interviewed by the FBI.
>
> An attorney for USC last year provided the FBI with materials the professor

> donated to the ONE National Gay and Lesbian Archives that contained “lascivious visual depictions of minors,” according to the plea agreement. FBI agents also obtained similar images from Williams’ former home.

And now, I’d like to go over some other recent news stories.

From the San Francisco Chronicle.

Excerpt:

> Veteran gay rights advocate and former San Francisco Human Rights Commission staffer Larry Brinkin pleaded guilty Tuesday to possessing child pornography.
>
> Brinkin, 67, changed his plea in a deal with the district attorney’s office that will result in a sentencing recommendation of six months in county jail, six months of home detention, five years of probation and lifetime registration as a sex offender.
>
> Brinkin, who worked as a senior contract compliance officer with the rights commission until his 2010 retirement, was arrested in June 2012. Authorities said e-mail attachments were found on his America Online subscriber’s account that contained images of toddlers engaged in sex acts with men.
>
> Prosecutors originally charged him with six felony counts of possessing and distributing child pornography, but dropped all but one felony count of possession as part of the plea bargain.
>
> Brinkin must undergo sex offender therapy and is banned from working with kids, contacting a juvenile without parental consent, and living with someone responsible for a child without disclosing his offender status.
>
> During his 22-year tenure at the rights commission, Brinkin helped craft the city’s Equal Benefits Ordinance, which became a national model for workplace equality for gays and lesbians. When he retired, the Board of Supervisors declared the week of Feb. 1, 2010, as Larry Brinkin Week.
>
> Brinkin, who appeared in court with his husband, has been out on $240,000 bail since September 2012. He is scheduled to return for sentencing on March 5, and to surrender into custody at a later date.

The NY Daily News reports on another similar case, and links to CBS News and the Hartford Courant.

Excerpt:

> The case of a same-sex Connecticut couple accused of repeatedly raping and abusing two of their nine adopted boys is headed for trial.
>
> Married couple George Harasz and Douglas Wirth of Glastonbury were supposed to be sentenced Friday in Hartford Superior Court under a plea deal, but instead withdrew from their agreement with prosecutors. The men had already pleaded

> no contest in January to one felony count each of risk of injury to a minor — a reduction from even more serious charges related to sexual assault.
>
> […]Harasz and Wirth adopted nine children — three sets of male siblings — beginning in 2000, and ran a home-based dog breeding business called The Puppy Guy.
>
> The couple was arrested in November 2011 following a police and state investigation of sex-abuse allegations. The children were removed from the home.
>
> Police said two boys, ages 5 and 15, accused Harasz of sexually assaulting them. Harasz was initially facing first-degree sexual assault and other charges, while Wirth had been charged with third-degree sexual assault of the 15-year-old boy.
>
> Their arrest warrants claimed the couple not only sexually and physically abused the children, but also forced them to sleep in closets.
>
> […]One of the victims who spoke during the court hearing said sexual assault began when he was 6.
>
> "They took turns raping me over and over," he said.

This story was reported in the UK Telegraph.

Excerpt:

> During his ordeal Mr Cannon was repeatedly plied with Ecstasy and cannabis before being molested by David Cannon and John Scarfe.
>
> His complaints to care workers were ignored and at one stage he was wrongly diagnosed as having mental disorders.
>
> Both men were eventually arrested and charged after Mr Cannon was readmitted to into council care following a domestic incident, at which point he managed to persuade a Forster carer he was being abused.
>
> Cannon, 54, and 31-year old Scarfe were each jailed for 30 months in 2006, for inciting sexual activity with a child.
>
> […]Cannon was allowed to adopt Andy in December 1997, when the youngster was aged eight. This came despite the fact he had earlier been convicted and put on probation for 12 months for assaulting the boy's mother, Elaine Moss, possessing cannabis and handling a stolen computer.
>
> Miss Moss had also claimed Cannon had been abusing her son.
>
> A social worker failed to bring the allegations to the attention of the family court and instead called Cannon a "very caring parent who considered his children's need".

And here's another similar story, this time from Scotland where the head of a gay youth organization was running a child sex ring.

Excerpt:

> Eight men in a Scottish paedophile ring have been found guilty of a series of “horrific” sex offences against children and babies.
>
> […]Two of the men – convicted sex offender Neil Strachan and gay rights campaigner James Rennie – were convicted of sex attacks on children.
>
> Strachan, 41, and Rennie, 38, both from Edinburgh, were also found guilty of conspiring to abuse youngsters, as were three other members of the gang.
>
> […]The jury found Rennie, the former chief of LGBT Youth Scotland, an organisation dedicated to helping young gay people, guilty of molesting a young boy over more than four years.
>
> The child was just three months old when the abuse began.

And of course we had the story of the two gay activists who adopted a boy from Russia and were later convicted of pedophilia.

I think that we need to be more careful about the needs of children when making decisions about public policy.

How brief was the period in which the Cambrian phyla suddenly appeared?

September 10, 2014 | by Wintery Knight | Link | Original Link

---

The Cambrian explosion refers to the sudden appearance of new body plans in the fossil record. ID proponents think that the period is between 5-10 million years at the most. Naturalists want to stretch out the period in which the body plans appear to tens of millions of years. The two sides can't both be right. What's the truth?

Evolution News has the answer.

Excerpt:

> To establish the length of the most explosive period of innovation within the Cambrian explosion itself, Meyer cites the work of MIT geochronologist Samuel Bowring and his colleagues as well the work of another group led by Smithsonian paleontologist Douglas Erwin. The Bowring-led study showed that (in their words) "the main period of **exponential diversification**" within the Cambrian lasted "only 5-6 million years" (emphasis added). Meyer explains:

> An analysis by MIT geochronologist Samuel Bowring has shown that the main pulse of Cambrian morphological innovation occurred in a sedimentary sequence spanning no more than 6 million years. Yet during this time representatives of at least sixteen completely novel phyla and about thirty classes first appeared in the rock record. In a more recent paper using a slightly different dating scheme, Douglas Erwin and colleagues similarly show that thirteen new phyla appear in a roughly 6-million-year window. (p. 73)

> […][T]ake a look first at the following figure that Bowring and his colleagues included in their definitive 1993 article, published in the journal Science. They use radiometric methods to date the different stages of the Cambrian period, including the crucial Tommotian and Atdabanian stages in which the greatest number of new animal phyla and classes arise. Note that the so-called Manykaian stage of the Cambrian period lasts about 10-14 million years. Note also that the main pulse of morphological innovation didn't begin during this stage but rather during the Tommotian and Atdabanian — a period that they describe as taking between "5 to 10 million years," and in a more detailed passage as taking about 5-6 million years.

> […]In the figure above, the Tommotian and Atdabanian stages of the Cambrian period together span only about 5 million years, starting at about 530 and ending about 525 million years ago. Bowring's figure also depicts the total number of classes and orders present at any given time during the Cambrian period. The biggest increases in morphological innovation occur during the Tommotian and Atdabanian stages. Indeed, during this period the number of known orders nearly

> quadruples. Moreover, Bowring and his colleagues also make clear that this period corresponds to the main pulse of Cambrian morphological innovation as measured by the number of new phyla and classes that first appear. They note that, while a few groups of animals do arise in the earliest Manykaian stage of the Cambrian, the most rapid period of "exponential increase of diversification," corresponding to the Tommotian and Atdabanian stages, "lasted only 5 to 6 m.y."

You can see the figure they are reference in the Evolution News article.

Also, check out these clips that explain the Cambrian explosion:

Part 1:

Part 2:

The first clip features James Valentine, a professor of biology at the University of California who just co-authored a new book on the Cambrian explosion and *is not* a proponent of intelligent design.

The consensus among scientists regarding the period of time *in which the new body plans appear* is 5-6 million years. Biologically speaking, that's a blink of an eye. You aren't going that kind of complexity and innovation in such a short period of time any more than you can expect to win the lottery by buying 5-6 million tickets when the odds of winning are 1 in a googol (10 to the 100th power – 1, followed by 100 zeroes). You don't have enough lottery tickets to make winning the lottery likely. Similarly, 5-6 million years is not enough time for naturalistic mechanisms to code brand new body plans from scratch. It would be like trying to research and write a Ph.D thesis during a single lunch hour. It's just not enough time to produce the amount of information that's required.

J. Warner Wallace: 10 important questions for Jehovah's witnesses

September 10, 2014 | by Wintery Knight | Link | Original Link

---

So there's this group of people called Jehovah's Witnesses that use Christian language to describe a religion that denies key parts of the Christian worldview. Since you may might them knocking on your door to tell you about their worldview, it might be worth it to read this post from J. Warner Wallace over in advance.

I'll just post a snip of the first I use when they come to my door. It's also the first on Wallace's list:

> ***If I am to accept the teaching of the Jehovah's Witness religion, I am first going to have to trust the source of this teaching. But how can I trust someone who claims to speak for God when they have been wrong about prior predictions?***
>
> *There are a number of false predictions made either by Charles Russell, subsequent leaders of the church or the Watchtower Organization itself, including this limited sampling:*
>
> ***1886 The Millennial Reign Has Already Begun*** *"The outward evidences are that the marshalling of the hosts for the battle of the great day of God almighty, is in progress while the skirmishing is commencing." (Watchtower reprints 1, page 817 January 1886)*
>
> ***1897 The Millennial Reign Began in 1874*** *" Our Lord, the appointed King, is now present, since October 1874" (Studies in the Scriptures, Vol. 4, page 621)*
>
> ***1899 The Times Described in Revelation 16 Have Begun*** *"…the 'battle of the great day of God Almighty' (Revelation 16:14), which will end in A.D. 1914 with the complete overthrow of earth's present rulership, is already commenced." (The Time Is at Hand, page 101 – 1908 edition)*
>
> ***1916 The Millennial Reign Began in 1873*** *"The Bible chronology herein presented shows that the six great 1000 year days beginning with Adam are ended, and that the great 7th Day, the 1000 years of Christ's Reign, began in 1873." (The Time Is at Hand, page ii)*
>
> ***1917 Armageddon Has Begun*** *"The present great war in Europe is the beginning of the Armageddon of the scriptures." (Pastor Russell's Sermons, 1917, page 676)*
>
> ***1918 The Saints Will Be Resurrected in 1925*** *"Therefore we may confidently expect that 1925 will mark the return of Abraham, Isaac, Jacob and the faithful prophets of old, particularly those named by the Apostle in Hebrews 11, to the condition of human perfection." (Millions Now Living Will Never Die, page 89)*
>
> *"1925 shall mark the resurrection of the faithful worthies…We are standing at the*

> *very portals of that blessed time!" (Millions Now Living Will Never Die, page 105)*
>
> ***1922 Jesus Will Return in 1925*** *"The date 1925 is even more distinctly indicated by the Scriptures than 1914." (The Watchtower, September 1st, 1922, page 262)*
>
> ***1923 Jesus Will Return in 1925*** *"Our thought is that 1925 is definitely settled by the Scriptures. As to Noah, the Christian now has much more upon which to base his faith than Noah had upon which to base his faith in a coming deluge." (The Watchtower, April 1st, 1923, page 106)*
>
> ***1925 Jesus May Return in 1925*** *"The year 1925 is here. With great expectation Christians have looked forward to this year. Many have confidently expected that all members of the body of Christ will be changed to heavenly glory during this year. This may be accomplished. It may not be. In his own due time God will accomplish his purposes concerning his people. Christians should not be so deeply concerned about what may transpire this year." (The Watchtower, January 1st, 1925, page 3)*
>
> ***1940 Armageddon is Eminent Within the Year*** *"The year 1940 is certain to be the most important year yet, because Armageddon is very near." (Informant, May 1940)*
>
> ***1941 Jesus Will Return in Months*** *"Receiving the gift, the marching children clasped it to them, not a toy or plaything for idle pleasure, but the Lord's provided instrument for most effective work in the remaining months before Armageddon." (The Watchtower, September 15th, 1941, page 288)*
>
> ***1946 Armageddon is "At the Door"*** *"…the disaster of Armageddon, greater than that which befell Sodom and Gomorrah, is at the door." (Let God be True, 1946, page 194)*
>
> ***1968 Jesus Will Return in 1975*** *"Why are you looking forward to 1975?" (The Watchtower, August 15th, 1968, page 494)*
>
> *"Just think , brothers, there is only 90 months left before 6000 years of mans existence on earth is completed… the majority of people living today will probably be alive when Armageddon breaks out." (Kingdom Mystery, March 1968, page 4)*

This is the quickest way to see why you should not convert to their organization. In the Bible, it's a serious crime to make a prediction about the future and then have it not come true. It's actually a capital offense, and it's something that "false prophets" do. But it happens all the time with JWs. Just remind them of this and say "I cannot be affiliated with any organization that fails to get their truth claims right over and over again, because it shows me clearly that they don't speak for God".

Wallace actually has the quote from the Bible in his point 3:

Deuteronomy 18:20-22:

> [20] But the prophet who speaks a word presumptuously in My name which I have not commanded him to speak, or which he speaks in the name of other gods, that prophet shall die.’
>
> [21] You may say in your heart, ‘How will we know the word which the Lord has not spoken?’
>
> [22] When a prophet speaks in the name of the Lord, if the thing does not come about or come true, that is the thing which the Lord has not spoken. The prophet has spoken it presumptuously; you shall not be afraid of him.

The other one I use is John 1:1, which Wallace’s first point under the “Biblical Questions” heading.

If you want a longer treatment of this topic, check out Michael Licona’s PDF document on Mormonism and Jehovah’s Witnesses.

IRS auditing conservative news provider Breitbart.com

September 11, 2014 | by Wintery Knight | Link | Original Link

---

Yes, the same IRS that targeted Tea Party groups in order to help Obama win re-election.

Ted Cruz wrote a letter to the IRS about the audit, and you can read it here on the Breitbart web site.

Excerpt:

> Dear Commissioner Koskinen:
>
> I write to express deep concern over the recent announcement by Breitbart News that the Internal Revenue Service recently notified the Breitbart News Network, LLC that it would be subject to a far-reaching, burdensome, and open-ended audit.
>
> As you know, the Breitbart News Network LLC is a conservative-leaning press outlet. It has editors and reporters who cover daily political news and regularly breaks stories that are critical of the Obama Administration's policies. To conduct this audit, Breitbart News Network, LLC was asked to provide the IRS with all of its organizational documents, financial records, W-2s, W-4s, 1099s, and K-1s filed, personal income tax returns for each member of the company, payroll tax forms, information regarding properties and assets acquired by the company, bank statements, and array of other records documenting revenues, expenses, and depreciation costs.
>
> This media audit, coupled with the recent proposal of 49 Senate Democrats to amend the Constitution to give Congress plenary power to regulate political speech, paints a disturbing picture of a coordinated assault on the First Amendment.
>
> In another time, under another Administration, the decision to audit a conservative news organization might not have risen to a worrisome level of concern. However, given the IRS's disturbing track record of illegally targeting conservative organizations-including the IRS recently paying a $50,000 settlement for having wrongfully leaked a conservative group's confidential tax information-and the persistent refusal by the current Department of Justice to meaningfully investigate or prosecute those crimes, the decision to audit Breitbart News Network, LLC appears highly questionable.
>
> For the IRS to behave like a partisan political organization, targeting media organizations whose views differ from the President's, would represent a gross abuse of power. It would undermine the statutory mission and integrity of the IRS. And it would likely subject IRS employees to criminal prosecution.

The rest of the letter is Ted Cruz's questioning of the IRS for their actions. It's cases like

this that make me want to abolish the entire IRS and go with a two-tier flat tax system with almost no deductions. Put the corrupt bureaucrats out of a job. That’s the only thing they will understand – the unemployment line.

Are atheists right to say that you can't prove a universal negative like "God does not exist"?

September 11, 2014 | by Wintery Knight | Link | Original Link

---

I hear a lot of atheists complaining that they shouldn't have any burden of proof because it is impossible to prove a universal negative, i.e. – "there is no God".

Here's a post from William Lane Craig about it.

Excerpt:

> The first claim is, ironically, usually found on the lips of atheists, who thereby seek to excuse themselves from bearing any share of the burden of proof in the discussion. Usually, the claim is that a universal negative cannot be proved, and therefore the claim that "There is no God" is unprovable. The second claim is typically given as the reason why a universal negative cannot be proved: no matter how much knowledge you have acquired, there will always be more facts that you do not yet know, and perhaps the exception is among them. So one can never prove that there is no God. Perversely, this is somehow interpreted, not as an admission that atheism is indefensible, but as a demonstration that it is in no need of defense!
>
> Unfortunately, the argument is misconceived on a couple of counts.
>
> First, *negative, universally quantified statements can be proved*. We do this all the time. When we make statements about "all" or "none," we are speaking about what is the case with respect to a certain domain. We are saying that all or none of the members of that domain have or has a certain property. If the domain is not too large, I can confidently make universally quantified affirmative and negative statements. For example, I am quite confident that "No U.S. Senator is a Muslim." Or again, if I have a typical sample of the domain, I can make inductive inferences on the basis of the evidence from the sample to the whole, even if the whole domain is too large for me to canvass; for example, taking as my domain all the microbes on Earth, I can confidently assert, "No microbes have brains."
>
> Now someone might say that while it is admittedly true that negative, universal statements can sometimes be proven, still the point remains that in the case of God, the domain is too large and our sample too small to come to any negative conclusion. But those who propound this argument seem to think that the way one determines whether God exists is by taking a sort of universal survey to see if anything answering to the description of God exists somewhere out there. There are, however, other ways of coming to a knowledge of negative, universally quantified statements than doing an inductive survey.
>
> For example, we can have knowledge of negative, universally quantified

> statements on the basis of things' essential properties; for example, "No water molecules are composed of CO2." (Even if something looked and behaved just like water but was made of CO2 , it still would not be water but just a look-alike substance.) Or if we could show that a notion is logically impossible, we would know that it does not exist; for example, "There are no married bachelors." Significantly, many atheists have tried just this route to proving that God does not exist, arguing that the idea of a being which is all-powerful or all-knowing is logically incoherent.
>
> […]Second, *the statement that "God does not exist" is not a universally quantified statement*. When the theist asserts that "God exists," the word "God" is being used as a proper name, not as a common noun. It is not a statement like "Dogs exist" but rather like "Lassie exists." In order to prove that God does not exist, one need not prove that there are no gods whatsoever. Our interest is in one specific being, not in all the other beings which may have been imagined or worshipped throughout the world. So the claim that "God does not exist" is really a singular claim, like "Sherlock Holmes does not exist" or "Harry Potter does not exist." No one thinks that negative, singular claims cannot be proven.

So there are two ways to disprove a universal negative. Look where you expect the thing to be evident, and show that the evidence is not there. For example, show evidence that the universe is eternal. You can't have a Creator if you can show evidence that the universe is eternal. The second way is to show that the concept of God is logically contradictory, e.g. – that the concept of a "timeless person" is self-contradictory. Scholarly atheists try to do this, but this has not filtered down to the rank and file, which is why they still hold to these atheist slogans like "you can't prove a universal negative". Of course you can.

And finally, Craig concludes with some good advice:

> The bottom line is that we have no choice but to go on the basis of the knowledge and evidence that we do have—just we do in all other affairs of life.

Rank and file atheists seem to be very keen on holding out for today's scientific and historical data to be overturned by Star Trek theories of the future. But the more we study the good, scientific arguments for God's existence, the harder it is for naturalism to account for it. I am talking about the origin of the universe, the cosmic fine-tuning, the habitability argument, the origin of life, the origin of phyla, scientific evidence for consciousness and free will (e.g. – mental effort) and so on. Not to mention other arguments like the moral argument and the minimal facts case for the resurrection of Jesus.

We have to decide on the data we have *now.* And the data we have now fits better with a theistic worldview than an atheistic worldview. I can imagine all kinds of data that would argue against Christian theism. Finding the bones of Jesus. The universe being eternal. Experimental evidence for the multiverse. A probable naturalistic scenario for the origin

of life. Etc. Arguing against Christian theism is not hard, it just takes work. That's why intelligent and informed atheists like Peter Millican and Austin Dacey can do it, but rank and file atheists want to talk about "I lack a belief in God" and "I can't prove a universal negative".

No one is asking atheists to *prove* anything, just as theists don't *prove* anything. We are asking them to give logical arguments with premises that are supported by the evidence. And that's what we expect theists to do, too. Once we have all the arguments and evidence on both sides, then people can decide for themselves. You don't have to "prove" anything in a debate, you just have to state your case as persuasively as possible and the other side does the same, then people decide. Simple.

UPDATE: My favorite atheist Jeff Lowder mentioned this post from Internet Infidels which is on the same topic. His perspective is always worth reading.

UPDATE: And my friend John Fraser has some thoughts on evidence for and against God.

UPDATE: My FB friend Bruce sent me this video:

It's William Lane Craig answering the question in a debate situation.

What are Boltzmann brains, and what challenge do they post to the multiverse hypothesis?

September 11, 2014 | by Wintery Knight | Link | Original Link

---

I thought I would turn to the atheist theoretical physicist Sean Carroll, who has previously debated William Lane Craig, to explain to us what a Boltzmann brain is, and what threat it posts to the multiverse hypothesis.

Here is Sean Caroll, quoted by About.com:

> Ludwig Boltzmann was one of the founders of the field of thermodynamics in the nineteenth century. One of the key concepts was the second law of thermodynamics, which says that the entropy of a closed system always increases. Since the universe is a closed system, we would expect the entropy to decrease over time. This means that, given enough time, the most likely state of the universe is one where everything is the in thermodynamic equilibrium … but we clearly don't exist in a universe of this type since, after all, there is order all around us in various forms, not the least of which is the fact that we exist.
>
> With this in mind, we can apply the anthropic principle to inform our reasoning by taking into account that we do, in fact, exist. Here the logic gets a little confusing, so I'm going to borrow the words from a couple of more detailed looks at the situation. As described by cosmologist Sean Carroll in *From Eternity to Here*:
>
> *Boltzmann invoked the anthropic principle (although he didn't call it that) to explain why we wouldn't find ourselves in one of the very common equilibrium phases: In equilibrium, life cannot exist. Clearly, what we want to do is find the most common conditions within such a universe that are hospitable to life. Or, if we want to be more careful, perhaps we should look for conditions that are not only hospitable to life, but hospitable to the particular kind of intelligent and self-aware life that we like to think we are….*
>
> *We can take this logic to its ultimate conclusion. If what we want is a single planet, we certainly don't need a hundred billion galaxies with a hundred billion stars each. And if what we want is a single person, we certainly don't need an entire planet. But if in fact what we want is a single intelligence, able to think about the world, we don't even need an entire person–we just need his or her brain.*
>
> *So the* reductio ad absurdum *of this scenario is that the overwhelming majority of intelligences in this multiverse will be lonely, disembodied brains, who fluctuate gradually out of the surrounding chaos and then gradually dissolve back into it. Such sad creatures have been dubbed "Boltzmann brains" by Andreas Albrecht and Lorenzo Sorbo….*

> In a 2004 paper, Albrecht and Sorbo discussed "Boltzmann brains" in their essay:
>
> *A century ago Boltzmann considered a "cosmology" where the observed universe should be regarded as a rare fluctuation out of some equilibrium state. The prediction of this point of view, quite generically, is that we live in a universe which maximizes the total entropy of the system consistent with existing observations. Other universes simply occur as much more rare fluctuations. This means as much as possible of the system should be found in equilibrium as often as possible.*
>
> *From this point of view, it is very surprising that we find the universe around us in such a low entropy state. In fact, the logical conclusion of this line of reasoning is utterly solipsistic. The most likely fluctuation consistent with everything you know is simply your brain (complete with "memories" of the Hubble Deep fields, WMAP data, etc) fluctuating briefly out of chaos and then immediately equilibrating back into chaos again. This is sometimes called the "Boltzmann's Brain" paradox.*
>
> […]Now that you understand Boltzmann brains as a concept, though, you have to proceed a bit to understanding the "Boltzmann brain paradox" that is caused by applying this thinking to this absurd degree. Again, as formulated by Carroll:
>
> *Why do we find ourselves in a universe evolving gradually from a state of incredibly low entropy, rather than being isolated creatures that recently fluctuated from the surrounding chaos?*
>
> Unfortunately, there is no clear explanation to resolve this … thus why it's still classified as a paradox.

Naturalists like to propose the multiverse as a way of explaining away the fine-tuning that we see, and explaining why complex, embodied intelligent beings like ourselves exist. But even if the multiverse hypothesis were true, we still would not expect to observe stars, planets, and conscious embodied intelligent beings. It is far more likely on a multiverse scenario that any observers we had would be "Boltzmann" brains in an empty universe. The multiverse hypothesis doesn't explain the universe we have, which contains "*a hundred billion galaxies with a hundred billion stars each*" – not to mention our bodies which are composed of heavy elements, all of which require fine-tuning piled on fine-tuning piled on fine-tuning.

William Lane Craig answered a question about Boltzmann brains a while back, so let's look at his answer since we saw what his debate opponent said above.

He writes:

> Incredible as it may sound, today the principal–almost the only–alternative to a Cosmic Designer to explain the incomprehensibly precise fine tuning of nature's constants and fundamental quantities is the postulate of a World Ensemble of (a preferably infinite number of) randomly ordered universes. By thus multiplying one's probabilistic resources, one ensures that by chance alone somewhere in

> this infinite ensemble finely tuned universes like ours will appear.
>
> Now comes the key move: since observers can exist only in worlds fine-tuned for their existence, OF COURSE we observe our world to be fine-tuned! The worlds which aren't finely tuned have no observers in them and so *cannot* be observed! Hence, our observing the universe to be fine-tuned for our existence is no surprise: if it weren't, we wouldn't be here to be surprised. So this explanation of fine tuning relies on (i) the hypothesis of a World Ensemble and (ii) an observer self-selection effect.
>
> Now apart from objections to (i) of a direct sort, this alternative faces a very formidable objection to (ii), namely, if we were just a random member of a World Ensemble, then we ought to be observing a very different universe. Roger Penrose has calculated that the odds of our solar system's forming instantaneously through the random collision of particles is incomprehensibly more probable that the universe's being fine-tuned, as it is. So if we were a random member of a World Ensemble, we should be observing a patch of order no larger than our solar system in a sea of chaos. Worlds like that are simply incomprehensibly more plentiful in the World Ensemble than worlds like ours and so ought to be observed by us if we were but a random member of such an ensemble.
>
> Here's where the Boltzmann Brains come into the picture. In order to be observable the patch of order needn't be even as large as the solar system. The most probable observable world would be one in which a single brain fluctuates into existence out of the quantum vacuum and observes its otherwise empty world. The idea isn't that the brain is the whole universe, but just a patch of order in the midst of disorder. Don't worry that the brain couldn't persist long: it just has to exist long enough to have an observation, and the improbability of the quantum fluctuations necessary for it to exist that long will be trivial in comparison to the improbability of fine tuning.
>
> In other words, the observer self-selection effect is explanatorily vacuous. It does not suffice to show that only finely tuned worlds are observable. As Robin Collins has noted, what needs to be explained is not just intelligent life, but embodied, interactive, intelligent agents like ourselves. Appeal to an observer self-selection effect accomplishes nothing because there is no reason whatever to think that most observable worlds are worlds in which that kind of observer exists. Indeed, the opposite appears to be true: most observable worlds will be Boltzmann Brain worlds.

Allen Hainline explained some of the OTHER problems with the multiverse in a post on Cross Examined's blog. I recommend taking a look at those as well, because I feel funny even *talking* about Boltzmann brains. I would rather just say that there is no experimental evidence for the multiverse hypothesis, as I blogged before, and leave it at that. But if the person you are talking to fights you on it, you can disprove the multiverse with the

Boltzmann brains.

250,000 Virginians to lose their health care coverage due to Obamacare

September 12, 2014 | by Wintery Knight | Link | Original Link

---

From the Weekly Standard.

Excerpt:

> "Nearly a quarter million Virginians will have their current insurance plans cut this fall," said the local anchor. "That is because many of them did not–are not following new Affordable Care Act rules, so a chunk of the companies that offer those individuals their policies will make the individuals choose new policies."
>
> Says the reporter, "This goes back to that now heavily-criticized line we heared before Obamacare was put in place: 'If you like your plan, you can keep it.' Ultimately, that turned out not to be true for thousands of Virginians and companies in the commonwealth. … Wednesday Virginia lawmakers on the health insurance reform commission met for the first time this year. Turns out, a staggering number of Virginians will need new plans this fall."
>
> A Virginia health official says, "Cancellation is a word that's used all the time…but really what's happened is the law has changed. We're not allowed to offer those plans anymore. So what we're saying to them is, you need to move to one that's compliant with the law because that's what we can offer."

Not everyone is going to see the full effects of Obamacare before the midterm elections, but these Virginians are seeing it. The Obama administation delayed the employer mandate until after the midterm elections, along with Obama's execute order amnesty. I hope that Americans are paying attention this time.

New study: men's success and well-being determined by relationships with parents and siblings

September 12, 2014 | by Wintery Knight | Link | Original Link

---

Astonishing post from the Art of Manliness blog. (H/T Free Northerner)

Excerpt:

> Vaillant found that the men who had the best scores in these areas during their youth and mid-life, were the happiest, most successful, and best adjusted in their latter years. This is the finding of the Grant Study that has emerged most prominently: "**It was the capacity for intimate relationships that predicted flourishing in all aspects of these men's lives**."
>
> The powerful effect of intimate relationships can be seen in a variety of factors in a man's life, including their income levels:
>
> - Men with at least one good relationship with a sibling growing up made $51,000 more per year than men who had poor relationships with their siblings, or no siblings at all
> - Men who grew up in cohesive homes made $66,000 more per year than men from unstable ones
> - Men with warm mothers took home $87,000 more than those men whose mothers were uncaring
> - The 58 men with the best scores for warm relationships made almost $150,000 more per year than the 31 men with the worst scores
>
> […]When the outcomes of the men's lives were analyzed, and compared to this set of criteria, it became quite clear that "for good or ill, the effects of childhood last a long time." **A warm childhood proved a much stronger predictor of many aspects of a man's flourishing later in life, including his overall contentment in his late seventies, than either his parent's social class or his own income**. These effects are particularly striking when the men with the warmest childhoods (who were dubbed "the Cherished") are compared with those in the bottom tenth (who were called "the Loveless"):
>
> - The Cherished made 50% more money than the Loveless
> - The Cherished were 5X more likely to enjoy rich friendships and warm social supports at age seventy
> - The Loveless were 3.5X more likely to be diagnosed as mentally ill (which includes serious depression, abuse of drugs and alcohol, and need for extended psychiatric care)
> - The Loveless were 5X more likely to be unusually anxious

> - The Loveless took more prescription drugs of all kinds, and were twice as likely to seek medical attention for minor physical complaints
>
> A loving, supportive upbringing seemed to both bolster a man's chances for success in his relationships and career, and inoculate him against future psychological distress.
>
> […]While parenting pundits at various times in our history have worried that a household full of unwavering love and support could turn out a young man who was too coddled and dependent,**the Grant Study found that abundant familial love, when coupled with an emphasis on autonomy and initiative, actually produced the *most* stoical (able to keep a stiff upper lip) and independent men.** Such men, Vaillant explains, had learned to be comfortable with their feelings, and "that they could put their trust in life, which gave them courage to go out and face it." In contrast, the men from the worst childhoods turned out to be the most dependent, and struggled with taking initiative.

And most interestingly:

> One of the findings of the study that I personally found most interesting, was that "**a mother who could enjoy her son's initiative and autonomy was a tremendous boon to his future**." Mothers of men who scored highly on the Decathlon of Flourishing admired their sons' assertiveness, and boasted to researchers that their boys were "fearless to the point of being reckless," "could fight any kid on the block," and "is a tyrant in a way that I adore." In other words, **mothers who celebrated their boys' boyishness bolstered their chances of achieving a successful, mature manhood**.

I really recommend that everyone read this post, especially if you know a young man who you want to be influential and effective. And men who are not yet married but want to should understand that who you pick to be the child's mother is going to have an ENORMOUS effect on their emotional well-being and their ability to succeed and provide. Good men require good mothers.

Friday night movie: The Crossing (2000)

September 12, 2014 | by Wintery Knight | Link | Original Link

---

Here's tonight's movie:

IMDB mean rating: [7.5/10]

IMDB median rating: [8/10]

Description:

> The drama is about George Washington crossing the Delaware River and the Battle of Trenton during the American Revolutionary War. The film opens with the retreat of the Continental Army across New Jersey after repeated losses and defeats during the campaign of 1776.
>
> After the army narrowly escapes across the river to the Pennsylvania shore, Washington, realizing that something must be done or the Revolution will collapse, conceives a plan to cross the river and conduct a surprise attack on the Hessian garrison at Trenton.
>
> Despite their own fatigue and the winter weather, Washington manages to lift his weary soldiers' spirits, allowing the army to cross the river on Christmas night. The crossing is done in one night, allowing the troops to attack Trenton at eight o' clock on December 26, 1776.

If anyone reading this blog wants to understand the true character of America, a very good thing to do is to read the book "1776" by David McCullough. It covers all of the events leading up to the crucial turning point of the American Revolution: the Battle of Trenton on December 26, 1776. I really recommend the audio version of the book. David McCullough also wrote the famous biography of John Adams which was shown on HBO, then turned into a DVD series.

Here's a quick history of the American Revolution preceding the Battle of Trenton:

> **September 1774**: Delegates from each colony met in Philadelphia, Pennsylvania in order to form the First Continental Congress. It was designed to discuss colonial grievances.
>
> **April 1775**: Battles of Lexington and Concord: An organized Massachusetts militia ("Minutemen") defended colonial munitions and forced British regulars to retreat back to Boston. Mother England was stunned.
>
> **May 1775**: The Second Continental Congress convened in Philadelphia, Pennsylvania.
>
> **June 1775**: The Continental Congress appointed George Washington as commander-in-chief of its newly established Continental Army. Soon after, British troops achieved victory at the Battle of Bunker (Breed's) Hill but suffered severe casualties during three assaults against the determined colonial troops.

March 1776: Washington commanded the American siege that eventually forced the British to evacuate Boston. The British departed by sea for Halifax.

April 1776: The Continental Army left Boston and moved south to take a defensive position in New York anticipating a British landing. Washington had hoped to keep the British from occupying this locale. New York was a familiar base of operations from the French and Indian War. The colony of New York also had a strong Loyalist population. Additionally, the force which occupied New York would be centrally located and therefore able to keep New England cut off from the south.

July 1776: The Declaration of Independence, adopted by the Second Continental Congress, officially severed American ties to Great Britain.

Summer of 1776: Though the American were successful at making a worthy stand at Lexington and Concord as well as in Boston, they soon discovered that this was only the beginning as 30,000 British troops (including their Hessians allies) arrived in New York harbor. The next few months were filled with disastrous defeats and demoralizing retreats.

August 27-30 1776: The British win the Battle of Long Island (Battle of Brooklyn)

September 15, 1776: The British occupy New York City

September 16, 1776: The British win the Battle of Harlem Heights

October 28, 1776: The American army retreats at the Battle of White Plains

November 16, 1776: The British capture Fort Washington, NY

November 20, 1776: Fort Lee, NJ falls to the British

December 1, 1776: Washington's troops retreated past New Brunswick, New Jersey and headed toward Princeton with the British following closely behind.

December 7-8, 1776: Washington's army crossed into Pennsylvania from Trenton. They were deployed to guard the River for a 25 miles stretch. All boats remained with Washington's army, making it impossible for the British to follow.

December 9, 1776: "All shops ordered to be shut; the militia to march into the Jerseys; all in hurry and confusion; news that General Howe is on his march…." Washington ordered, "Spare no pains or expense to get intelligence about the enemy's motions and intentions."

December 12, 1776: The Continental Congress abandons Philadelphia as they fear the British approaching.

December 13, 1776: Washington received the news that General Charles Lee was taken prisoner by the British at White's Tavern in Basking Ridge, New Jersey. Lee's troops were slowly marching to meet Washington when Lee made a personal side trip which caused his capture. With the loss of Lee, some assumed that America would be forced into complete surrender as he was considered a

> highly valuable soldier.
>
> [British commander] Howe announced that his campaigning season was over and he intended to winter in New York. Cornwallis intended to return to England for the winter, and, like Howe, he departed from the troops.
>
> **December 14, 1776**: Col. Johann Rall's (known as the Hessian Lion) regiment was left in Trenton as one of a loosely connected string of outposts which was to guard the king's subjects in New Jersey and keep watch against an American raid. 1500 troops were stationed at this location while the bulk of the British army wintered in New York.
>
> **December 19, 1776**: "The American Crisis" was published in Philadelphia. Thomas Paine wrote… *These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis shrink from the service of his country; but he that stands it NOW deserves the love and thanks of man and woman*.
>
> This essay rekindled the American people's desire for independence and renewed the spirit of the troops.
>
> **December 20-22, 1776**: Taking Lee's place as commander, General John Sullivan delivered Lee's remaining troops to Washington in Pennsylvania.
>
> **December 21, 1776**: The Hessians thought little of the Americans, but they thought even less of their strategic position in Trenton. Thought criticized for not constructing defensive works, Rall felt Trenton was next to impossible to defend. He stated his concerns about his position as well as his troops fatigue to his British Commanders.
>
> Rall's regiment remained alert and concerned as to their tenuous position. They intended not to remain in Trenton but rather wait for the Delaware River to freeze allowing the Hessian troops to march across the frozen river and directly toward Philadelphia.

As you can see from the timeline, Washington has been losing battle after battle leading up to Christmas of 1776. His troops are tired, ill-equipped, sick and they must be released at the beginning of 1777 when their contract is up. Many have deserted already. What will George Washington do? Is this the end of the American Revolution? Watch the movie, and find out. Then read David McCullough's book!

Happy Friday!

Obama delays amnesty by executive order until after midterm elections

September 13, 2014 | by Wintery Knight | Link | Original Link

---

From Human Events.

Excerpt:

> The White House waited until a dead spot in the news cycle on Saturday to leak that President Obama won't be handing out amnesty to five million illegal aliens before the election after all. That's how a craven political operation tries to control the spin surrounding an act of cowardice. Obama's style of "leadership" is mostly about keeping his media plates spinning, managing crises and scandals until the news cycle moves on and they die of old age. That's the essence of his non-strategy for dealing with ISIS – he just needs to keep them from pulling off any massive terror attacks, genocidal rampages, or major military advances until the media loses interest in them.
>
> It's *very* interesting that Obama's amnesty orders – formerly portrayed by conventional media wisdom as a brilliant maneuver that would checkmate Republicans politically while changing the American electorate forever – have now become another plate he needs to spin, a political crisis he had to back away from. The idea was that if Obama issued the orders, Republicans would be made to look like racist xenophobes by speaking or acting against them, but if they *didn't* raise loud objections, their own base would desert them. Instead, something very close to the *opposite* has become true. Obama is backing away from his big amnesty giveaway because endangered Democrats are telling him the 2014 elections will become a party bloodbath if he pulls the trigger. Not only will Republicans unite and become energized by the abuse of executive power to degrade American citizenship, but a sizable portion of the *Democrat* base isn't happy about the amnesty idea, due to concerns ranging from national security, to the stress placed upon government services, to the tight job market.

I think his base of union members will not be too happy with losing their jobs to newly naturalized illegal immigrants, and that's why he has to hide it until after the midterm elections. So we are seeing a situation in which the union members will work to get a man elected who will then take their jobs and give it to illegal immigrants. But this is normal – Democrats are not used to the economic way of thinking and seldom ask the most important question you can ask when it comes to economic policy – "*and then what happens?*"

Just to be clear, I am all in favor of legal immigration for skilled workers, but we cannot strain our economy by naturalizing a group of people who will take more from social services than they pay in taxes. On the other hand, if people who came here promised to

pay for their own health care, education, etc. AND never take a dime of welfare AND never commit a crime, then we could take *anybody* and just naturalize them after 10 years of working here legally with work permits. And if they broke the rules in that time, then they would be gone. But Democrats are not looking for *that kind* of skilled immigrant. They want the votes of those immigrants who depend on big government and don’t understand free market capitalism.

Christians have always stood up for a romantic, committed, exclusive view of sex

September 13, 2014 | by Wintery Knight | Link | Original Link

---

Consider this post from Michael Krueger, and it's a must-read.

Excerpt:

> [I]n the second century, as Christianity emerged with a distinctive religious identity, the surrounding pagan culture began to take notice. And it didn't like what it saw. Christians were seen as strange and superstitious–a peculiar religious movement that undermined the norms of a decent society. Christians were, well, *different*.
>
> So, what was so different about Christians compared to the surrounding Greco-Roman culture?
>
> […]While it was not unusual for Roman citizens to have multiple sexual partners, homosexual encounters, and engagement with temple prostitutes, Christians stood out precisely because of their refusal to engage in these practices.
>
> For instance, Tertullian goes to great lengths to defend the legitimacy of Christianity by pointing out how Christians are generous and share their resources with all those in need. But, then he says, "One in mind and soul, we do not hesitate to share our earthly goods with one another. All things are common among us *but our wives*" (*Apol*. 39). Why does he say this? Because, in the Greco-Roman world, it was not unusual for people to share their spouses with each other.
>
> In the second-century *Epistle to Diognetus*, the author goes out of his way to declare how normal Christians are in regard to what they wear, what they eat, and how they participate in society. However, he then says, "[Christians] share their meals, *but not their sexual partners*" (*Diogn*. 5.7). Again, this is the trait that makes Christians different.
>
> We see this play out again in the second-century *Apology of Aristides*. Aristides defends the legitimacy of the Christian faith to the emperor Hadrian by pointing out how Christians "do not commit adultery nor fornication" and "their men keep themselves from every unlawful union" (15).
>
> A final example comes from the second-century apology of Minucius Felix. In his defense to Octavius, he contrasts the sexual ethic of the pagan world with that of Christians:
>
> Among the Persians, a promiscuous association between sons and mothers is allowed. Marriages with sisters are legitimate among the Egyptians and in Athens. Your records and your tragedies, which you both read and hear with pleasure, glory in incests: thus also you worship incestuous gods, who have

> intercourse with mothers, with daughters, with sisters. With reason, therefore, is incest frequently detected among you, and is continually permitted. Miserable men, you may even, without knowing it, rush into what is unlawful: since you scatter your lusts promiscuously, since you everywhere beget children, since you frequently expose even those who are born at home to the mercy of others, it is inevitable that you must come back to your own children, and stray to your own offspring. Thus you continue the story of incest, even although you have no consciousness of your crime. But we maintain our modesty not in appearance, but in our heart we gladly abide by the bond of a single marriage; in the desire of procreating, we know either one wife, or none at all (31).

Compare that with the sexual ethic of Muslims, for example. It makes me wonder why any woman would freely choose Islam over Christianity. Or atheism, for that matter.

Here's a pro-tip for women: you want men who believe in chastity before marriage and who believe in committing to you exclusively as protector and provider for a lifetime. And they should have to prove that they can be faithful and committed during the courtship, too. You can't just take their word for it, they have to work before the marriage to demonstrate their ability as a husband and father.

This topic reminds me of my previous post about early church attitudes to abortion and infanticide. Yes, we were solid there, too. We really have always been on the right side of disagreements about sex and love.

William Lane Craig debates Austin Dacey: Does God Exist?

September 14, 2014 | by Wintery Knight | Link | Original Link

---

Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

The debaters:

- William Lane Craig
- Austin Dacey

The video: (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

Dr. Craig's opening statement:

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

Dr. Dacey's opening argument:

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

One final point:

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

Review of evidential apologetics book by pastor shows where church needs to improve

September 14, 2014 | by Wintery Knight | Link | Original Link

---

Whenever I talk to Christians, I find that they hold one of two views about what faith is.

The first view of faith is the Biblical view of faith as active trust in propositions we know to be true, because we have reasons and evidence to believe those propositions. This view is not only rooted in the Bible, but it extends through Augustine and Aquinas to the present day. I have written about this view of faith before, and quoted many theologians in support of it. In the Bible, people use miracles as a sign in order to convince skeptics. For example, Peter appeals to the resurrection in Acts 2. The Bible teaches that faith is active trusting based on evidence.

The second view is blind faith. This view is nowhere in the Bible, and this view asserts that becoming a Christian is a leap-of-faith in the dark against all the evidence. This view not only minimizes evidence, but it actually opposes presenting evidence to unbelievers and skeptics in the way that the Bible teaches. This view is nowhere in the Bible, and it was not the method used by Jesus or his followers. It is an unBiblical way of viewing faith, but it is very popular in some circles of Christianity. It is also popular among atheists, because this is what many Christian leaders and pastors tell them that faith is.

Consider this review of a recent book that defends the Gospels and the historicity of the resurrection by one such fideist pastor.

He writes:

> There are, however, two significant shortcomings to the book.
>
> First, *Cold-Case Christianity* places far too much emphasis on the role of extrabiblical sources. No doubt there is a legitimate role for biblical archaeology and extrabiblical writing from antiquity. Christianity is, after all, a faith firmly rooted in human history. But there is a grave danger when truth is suspended because of an apparent lack of corroboration from extrabiblical sources. And Wallace, I'm afraid, wanders too close to this dark side of apologetics.
>
> All of chapter 12, for instance, is devoted to proving the Gospels have external corroborative evidence—"evidence that are independent of the Gospel documents yet verify the claims of the text" (183). Wallace then addresses the historicity of the pool of Bethesda and makes another worrying statement: "For many years, there was no evidence for such a place outside of John's Gospel. Because Christianity makes historical claims, archaeology ought to be a tool we can use to see *if these claims are, in fact, true*" (201-202, emphasis added).
>
> In other words, Wallace seems to suggest we cannot affirm the truth of the Gospel accounts without the stamp of approval from archaeology and other extrabiblical sources. Such reasoning is dangerous, not least because it cannot

> affirm the inerrancy of the Bible. But also, it places the final court of appeal in the realm of extrabiblical sources rather than of God's all-sufficient, all-powerful Word.

That is a textbook definition of fideism – that belief is somehow more pious and praiseworthy the less evidence we have. And the best way to have less evidence is to study nothing at all, but to just make a leap-of-faith in the dark. Of course, a leap-of-faith can land you anywhere – Islam, Mormonism. Presumably this pastor is like the Mormons who eschew all evidence and prefer to detect the truth of Mormonism by "the burning of the bosom" which happens when people read the all-sufficient, all-powerful Book of Mormon. His view of faith is identical to theirs, and 180 degrees opposed to the Bible. He has made his leap-of-faith, and that leap-of-faith is not accountable to arguments and evidence. His faith is private and personal, based on his own feelings. He considers it blasphemous to have to demonstrate what he believes to those who disagree with him. Where is this in the Bible? It's nowhere. But it is everywhere in anti-intellectual Christian circles.

There is a good response to this blind-faith pastor on Deeper Waters. Much less angry than my response.

Excerpt:

> The dark side of apologetics? Did I somehow step into a Star Wars universe?
>
> Yes. How horrible to show that the Bible is backed up by sources outside of it. How terrible to show that these events did not happen in a vacuum. Thankfully, no one in the Bible took this approach.
>
> Except for the fact that when the gospel was being preached, there were no gospels per se and there were no epistles. Paul told Agrippa that the events done weren't done in a corner. In other words, investigate the claims for yourself! The early testimony was eyewitness testimony. Sources like Tacitus and others show the eyewitnesses were right! This was not done in a corner! This was done out in the open! Archaeology helps us confirm the biblical writings and shows that unlike the pagan myths, these events were rooted in a place and time. Is there some danger that our faith will be destroyed by outside sources?
>
> It really becomes a fideistic approach. If your worldview is true, you should have no problem putting it to the strictest scrutiny. If it is not, then you will have a problem. No Christian should fear further research into what they believe. No Christian should have a problem with extra-biblical sources. Now I do agree there is a problem with stating that EVERYTHING must be backed extra-biblically. I think this is a prejudice we too often have where nothing in the Bible can be considered historical unless it's verified somewhere else. A gospel account alone could count as a historical claim itself that can be investigated, and indeed is in NT scholarship, but where we can get extra-biblical evidence, I'm all for it.
>
> […]Christianity is a faith that is rooted in evidences so we should be able to use

> evidences to demonstrate it. I have often been told by those of the presuppositional bent that the approach is used all the time in the Bible. The problem is I can't find one. I get told passages like "The fear of the Lord is the beginning of wisdom." Yes. It is. Wisdom refers to godly living. It doesn't refer to confirming the gospel to be true. When I look at the apostles in every case, I see them pointing to evidences.

It is pastors like Pastor Bungle above who are responsible for the great falling away from Christianity that we are seeing when we look at young people. We need pastors who connect the claims of the Christian worldview to evidence.

Does a ban on “assault weapons” reduce gun violence?

September 15, 2014 | by Wintery Knight | Link | Original Link

---

From the freaking New York Times, of all places.

Excerpt:

> Over the past two decades, the majority of Americans in a country deeply divided over gun control have coalesced behind a single proposition: The sale of assault weapons should be banned.
>
> […]But in the 10 years since the previous ban lapsed, even gun control advocates acknowledge a larger truth: The law that barred the sale of assault weapons from 1994 to 2004 made little difference.
>
> It turns out that big, scary military rifles don’t kill the vast majority of the 11,000 Americans murdered with guns each year. Little handguns do.
>
> In 2012, only 322 people were murdered with any kind of rifle, F.B.I. data shows.
>
> […]This politically defined category of guns — a selection of rifles, shotguns and handguns with “military-style” features — only figured in about 2 percent of gun crimes nationwide before the ban.
>
> Handguns were used in more than 80 percent of murders each year, but gun control advocates had failed to interest enough of the public in a handgun ban. Handguns were the weapons most likely to kill you, but they were associated by the public with self-defense. (In 2008, the Supreme Court said there was a constitutional right to keep a loaded handgun at home for self-defense.)
>
> Banning sales of military-style weapons resonated with both legislators and the public: Civilians did not need to own guns designed for use in war zones.
>
> On Sept. 13, 1994, President Bill Clinton signed an assault weapons ban into law. It barred the manufacture and sale of new guns with military features and magazines holding more than 10 rounds. But the law allowed those who already owned these guns — an estimated 1.5 million of them — to keep their weapons.
>
> The policy proved costly. Mr. Clinton blamed the ban for Democratic losses in 1994. Crime fell, but when the ban expired, a detailed study found no proof that it had contributed to the decline.
>
> The ban did reduce the number of assault weapons recovered by local police, to 1 percent from roughly 2 percent.
>
> “Should it be renewed, the ban’s effects on gun violence are likely to be small at best and perhaps too small for reliable measurement,” a Department of Justice-funded evaluation concluded.

So what does work?

> “We spent a whole bunch of time and a whole bunch of political capital yelling and screaming about assault weapons,” Mayor Mitchell J. Landrieu of New Orleans said. He called it a “zero sum political fight about a symbolic weapon.”
>
> Mr. Landrieu and Mayor Michael A. Nutter of Philadelphia are founders of Cities United, a network of mayors trying to prevent the deaths of young black men. “This is not just a gun issue, this is an unemployment issue, it’s a poverty issue, it’s a family issue, it’s a culture of violence issue,” Mr. Landrieu said.
>
> More than 20 years of research funded by the Justice Department has found that programs to target high-risk people or places, rather than targeting certain kinds of guns, can reduce gun violence.

So if banning guns doesn’t stop the crime, then what is causing all the crime?

Dr. Michael Tanner of the libertarian Cato Institute explains in his testimony to Congress:

> Welfare contributes to crime in several ways. First, children from single-parent families are more likely to become involved in criminal activity. According to one study, children raised in single-parent families are one-third more likely to exhibit anti-social behavior.(3) Moreover, O’Neill found that, holding other variables constant, black children from single- parent households are twice as likely to commit crimes as black children from a family where the father is present. Nearly 70 percent of juveniles in state reform institutions come from fatherless homes, as do 43 percent of prison inmates.(4) Research indicates a direct correlation between crime rates and the number of single-parent families in a neighborhood.(5)
>
> As Barbara Dafoe Whitehead noted in her seminal article for The Atlantic Monthly:
>
> The relationship [between single-parent families and crime] is so strong that controlling for family configuration erases the relationship between race and crime and between low income and crime. This conclusion shows up time and again in the literature. The nation’s mayors, as well as police officers, social workers, probation officers, and court officials, consistently point to family break up as the most important source of rising rates of crime.(6)

Don’t ban guns, ban welfare.

What’s the earliest historical source on the life of Jesus?

September 15, 2014 | by Wintery Knight | Link | Original Link

---

First, the creed – which is found in 1 Corinthians 15:3-8:

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Almost all historians accept this creed as dating back to within 5 years of the death of Jesus. But why?

Here’s a great article from Eric Chabot, director of Ratio Christi Apologetics Alliance, The Ohio State University to explain why.

Excerpt:

> The late Orthodox Jewish scholar Pinchas Lapide was so impressed by the creed of 1 Cor. 15, that he concluded that this “formula of faith may be considered as a statement of eyewitnesses.” (5)
>
> Paul’s usage of the rabbinic terminology “passed on” and “received” is seen in the creed of 1 Cor. 15:3-8:
>
> “For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures, that he was buried, that he was raised on the third day according to the Scriptures, and that he appeared to Peter, and then to the Twelve. After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep. Then he appeared to James, then to all the apostles, and last of all he appeared to me also, as to one abnormally born.”
>
> There is an interesting parallel to Paul’s statement in 1 Cor. 15:3-8 in the works of Josephus. Josephus says the following about the Pharisees.
>
> “I want to explain here that the Pharisees passed on to the people certain ordinances from a succession of fathers, which are not written down in the law of Moses. For this reason the party of the Sadducees dismisses these ordinances, averaging that one need only recognize the written ordinances, whereas those from the tradition of the fathers need not be observed.” (6)
>
> As Richard Bauckham notes, “the important point for our purposes is that

Josephus uses the language of “passing on” tradition for the transmission from one teacher to another and also for the transmission from the Pharisees to the people.”(7)

Bauckham notes in his book Jesus and the Eyewitnesses: The Gospels as Eyewitness Testimony that the Greek word for “eyewitness” (autoptai), does not have forensic meaning, and in that sense the English word “eyewitnesses” with its suggestion of a metaphor from the law courts, is a little misleading. The autoptai are simply firsthand observers of those events. Bauckham has followed the work of Samuel Byrskog in arguing that while the Gospels though in some ways are a very distinctive form of historiography, they share broadly in the attitude to eyewitness testimony that was common among historians in the Greco-Roman period. These historians valued above all reports of firsthand experience of the events they recounted.

Best of all was for the historian to have been himself a participant in the events (direct autopsy). Failing that (and no historian was present at all the events he need to recount, not least because some would be simultaneous), they sought informants who could speak from firsthand knowledge and whom they could interview (indirect autopsy).” In other words, Byrskog defines “autopsy,” as a visual means of gathering data about a certain object and can include means that are either direct (being an eyewitness) or indirect (access to eyewitnesses).

Byrskog also claims that such autopsy is arguably used by Paul (1 Cor.9:1; 15:5–8; Gal. 1:16), Luke (Acts 1:21–22; 10:39–41) and John (19:35; 21:24; 1 John 1:1–4).

While the word “received” (a rabbinical term) can also be used in the New Testament of receiving a message or body of instruction or doctrine (1 Cor.11:23; 15:1, 3; Gal. 1:9, 12 [2x], Col 2:6; 1 Thess 2:13; 4:1; 2 Thess 3:6), it also means means “to receive from another.” This entails that Paul received this information from someone else at an even earlier date. 1 Corinthians is dated 50-55 A.D. Since Jesus was crucified in 30-33 A.D. the letter is only 20-25 years after the death of Jesus. But the actual creed here in 1 Cor. 15 was received by Paul much earlier than 55 A.D.

[…]Even the co-founder Jesus Seminar member John Dominic Crossan, writes:

“Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that “I handed on to you as of first importance which I in turn received.” The most likely source and time for his reception of that tradition would have been Jerusalem in the early 30s when, according to Galatians 1:18, he “went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days” (11).

This comment by Crossan makes sense because within the creed Paul calls Peter by his Aramic name, Cephas. Hence, if this tradition originated in the Aramaic language, the two locations that people spoke Aramaic were Galilee and Judea.

> (12) The Greek term “historeo” is translated as “to visit” or “to interview.” (13) Hence, Paul’s purpose of the trip was probably designed to affirm the resurrection story with Peter who had been an actual eyewitness to the resurrected Christ (1 Cor. 15:5).

I know what you’re thinking. You’re thinking “Hey WK, isn’t John Dominic Crossan that wacky liberal atheist who is on the far-left fringe of historical Jesus scholarship? So wacky, that he actually thought that Secret Gospel of Mark was *real*, instead of just being a hoax?” Yes, that’s the nutty John Dominic Crossan I mean. The very one.

Here’s a bit more about this early creed from Gary Habermas.

Quote:

> (1) Contemporary critical scholars agree that the apostle Paul is the primary witness to the early resurrection experiences. A former opponent (1 Cor. 15:9; Gal. 1:13-14; Phil. 3:4-7), Paul states that the risen Jesus appeared personally to him (1 Cor. 9:1; 15:8; Gal. 1:16). The scholarly consensus here is attested by atheist Michael Martin, who avers: “However, we have only one contemporary eyewitness account of a postresurrection appearance of Jesus, namely Paul’s.”[3]
>
> (2) In addition to Paul’s own experience, few conclusions are more widely recognized than that, in 1 Corinthians 15:3ff., Paul records an ancient oral tradition(s). This pre-Pauline report summarizes the early Gospel content, that Christ died for human sin, was buried, rose from the dead, and then appeared to many witnesses, both individuals and groups.
>
> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: “It is almost universally agreed today that Paul is here citing tradition.”[4] Critical scholars agree that Paul received the material well before this book was written.[5]
>
> The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul’s use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which

Jesus' resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it "indubitably goes back to the oldest phase of all in the history of primitive Christianity."[7] Joachim Jeremias agrees that it is, "the earliest tradition of all."[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even "in use by the end of 30 AD . . . ."[9]

Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that "the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . ."[10] Similarly, Michael Goulder thinks that it "goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion."[11] Thomas Sheehan agrees that this tradition "probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion."[12] Others clearly consent.[13]

Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul's reception of this report relatively soon after Jesus' death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.

(3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, "Evidently the tradition of I Cor. 15.3 had been subjected to many tests" by Paul.[15]

These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.

(4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his

> firsthand, direct approval of their resurrection message.

That’s how solid this early creed is – even atheists like Crossan and Ludemann accept it as historically reliable. It’s historical bedrock, as Michael Licona likes to say. This is the stuff that *everyone* accepts – across the ideological spectrum!

Hillary Clinton confidants were present to “separate” damaging documents before Benghazi probe

September 16, 2014 | by Wintery Knight | Link | Original Link

---

The best reporter in the universe is Sharyl Attkisson, and here’s her latest up at the Daily Signal.

Excerpt:

> As the House Select Committee on Benghazi prepares for its first hearing this week, a former State Department diplomat is coming forward with a startling allegation: Hillary Clinton confidants were part of an operation to “separate” damaging documents before they were turned over to the Accountability Review Board investigating security lapses surrounding the Sept. 11, 2012, terrorist attacks on the U.S. mission in Benghazi, Libya.
>
> According to former Deputy Assistant Secretary Raymond Maxwell, the after-hours session took place over a weekend in a basement operations-type center at State Department headquarters in Washington, D.C. This is the first time Maxwell has publicly come forward with the story.
>
> At the time, Maxwell was a leader in the State Department’s Bureau of Near Eastern Affairs, which was charged with collecting emails and documents relevant to the Benghazi probe.
>
> “I was not invited to that after-hours endeavor, but I heard about it and decided to check it out on a Sunday afternoon,” Maxwell says.
>
> He didn’t know it then, but Maxwell would ultimately become one of four State Department officials singled out for discipline—he says scapegoated—then later cleared for devastating security lapses leading up to the attacks. Four Americans, including U.S. Ambassador Christopher Stevens, were murdered during the Benghazi attacks.
>
> Maxwell says the weekend document session was held in the basement of the State Department’s Foggy Bottom headquarters in a room underneath the “jogger’s entrance.” He describes it as a large space, outfitted with computers and big screen monitors, intended for emergency planning, and with small offices on the periphery.
>
> When he arrived, Maxwell says he observed boxes and stacks of documents. He says a State Department office director, whom Maxwell described as close to Clinton’s top advisers, was there. Though the office director technically worked for him, Maxwell says he wasn’t consulted about her weekend assignment.
>
> **“She told me, ‘Ray, we are to go through these stacks and pull out**

> **anything that might put anybody in the [Near Eastern Affairs] front office or the seventh floor in a bad light,'" says Maxwell. He says "seventh floor" was State Department shorthand for then-Secretary of State Clinton and her principal advisers.**
>
> **"I asked her, 'But isn't that unethical?' She responded, 'Ray, those are our orders.' "**
>
> A few minutes after he arrived, Maxwell says, in walked two high-ranking State Department officials.
>
> In an interview Monday morning on Fox News, Rep. Jason Chaffetz, R-Utah, named the two Hillary Clinton confidants who allegedly were present: One was Cheryl Mills, Clinton's chief of staff and a former White House counsel who defended President Bill Clinton during his impeachment trial. The other, Chaffetz said, was Deputy Chief of Staff Jake Sullivan, who previously worked on Hillary Clinton's and then Barack Obama's presidential campaigns.
>
> […]**Maxwell also criticizes the ARB as "anything but independent," pointing to Mullen's admission in congressional testimony that he called Mills to give her inside advice after the ARB interviewed a potential congressional witness.**
>
> […]**Maxwell also criticizes the ARB for failing to interview key people at the White House, State Department and the CIA, including not only Clinton but Deputy Secretary of State Thomas Nides, who managed department resources in Libya; Assistant Secretary of State for Political Military Affairs Andrew Shapiro; and White House National Security Council Director for Libya Ben Fishman.**
>
> **"The ARB inquiry was, at best, a shoddily executed attempt at damage control, both in Foggy Bottom and on Capitol Hill," Maxwell says. He views the after-hours operation he witnessed in the State Department basement as "an exercise in misdirection."**

It's so surprising to me that we are just finding out about these things *now,* and through the Daily Signal, not through the mainstream media. It certainly does show what a Hillary Clinton presidency would be like, though – after all, she was Secretary of State when the attack occurred, and we can see where her staff's priority's were. This is the woman who blamed a terrorist attack on a Youtube video, to the grieving families of the victims. It sounded good to her, and made her look good, and that's what matters, right? It's not like anyone is out to harm us, right?

Federal court reinstates anti-voter-fraud law in Wisconsin, Democrats hardest hit

September 16, 2014 | by Wintery Knight | Link | Original Link

---

If it's not close, they can't cheat. And in Wisconsin, they can't cheat anyway.

National Review reports:

Voter-ID opponents have suffered another stunning blow.

> On Friday, the Seventh Circuit Court of Appeals dissolved the injunction that had been issued against Wisconsin's voter-ID law by a federal district court in April. The court told Wisconsin that it "may, if it wishes (and if it is appropriate under rules of state law), enforce the photo ID requirement in this November's elections." In reaction, Kevin Kennedy, the state's top election official, said that Wisconsin would take all steps necessary "to fully implement the voter photo ID law for the November general election." The appeals court issued its one-page opinion within hours of hearing oral arguments in the appeal.
>
> As I explained in an NRO article in May, the district court judge, Lynn Adelman, a Clinton appointee and former Democratic state senator, had issued an injunction claiming the Wisconsin ID law violated the Voting Rights Act as well as the Fourteenth Amendment. Adelman made the startling claim in his opinion that the U.S. Supreme Court's decision in 2008 upholding Indiana's voter-ID law as constitutional was "not binding precedent," so Adelman could essentially ignore it.
>
> However, that was too much for the Seventh Circuit. It pointed out, in what most lawyers would consider a rebuke, that Adelman had held Wisconsin's law invalid "even though it is materially identical to Indiana's photo ID statute, which the Supreme Court held valid in *Crawford v. Marion County Election Board*, 553 U.S. 181 (2008)."
>
> It was also obviously significant to the Seventh Circuit that the Wisconsin state supreme court had upheld the state's voter-ID law in July, since the three-judge panel cited that decision, *Milwaukee Branch of NAACP v. Walker*, too. In fact, the appeals court said the state court decision had changed the "balance of equities and thus the propriety of federal injunctive relief."
>
> In other words, there was no justification for striking down a state voter-ID law that was identical to one that had been previously upheld by both the Supreme Court of the United States and that state's highest court.
>
> […]**This is also another big defeat for Attorney General Eric Holder, who announced in July that the Justice Department would be intervening in this lawsuit. The Department lost a lawsuit that claimed South Carolina's voter-ID law was discriminatory in 2012, and a federal judge**

> **recently refused to issue an injunction against North Carolina's voter-ID law in another lawsuit filed by Justice.**

This is a big win for Wisconsin Governor Scott Walker, who faces a tough Democrat challenger backed by powerful unions in November.

Mike Licona lectures on historical methods and the New Testament

September 16, 2014 | by Wintery Knight | Link | Original Link

---

Here's a quick overview of Michael Licona's latest book on the resurrection, entitled "The Resurrection of Jesus".

60 minutes of lecture, 20 minutes of Q&A.

Summary:

- Dr. Licona's background and education
- The definition of history and philosophy of history
- Postmodern approaches to history
- Historical bedrock: facts that are historically demonstrable
- Historical criterion 1: Explanatory scope
- Historical criterion 2: Explanatory power
- Historical criterion 3: Plausibility
- Historical criterion 4: Ad Hoc / Speculation / non-evidenced assumptions
- Inference to the best explanation
- Investigating miracle claims: is it possible? How?
- Objection of James D.G. Dunn
- Objection of Bart Ehrman
- New Testament sources: Gospels and Paul's letters
- The Gnostic gospels: are they good sources?
- The minimal facts
- The hallucination hypothesis
- The best explanation

While watching this lecture, it struck what good preparation it was for understanding debates. This lecture is more about historical methods, but if you're interested in Mike's minimal facts case for the resurrection, here's a video on that:

This is the case he uses in his debates with Richard Carrier, Dale Allison, Bart Ehrman, etc.

Mike Licona's ministry is here: Risen Jesus but there is more to his work than just the resurrection. He co-edited a book on 50 evidences for God from many different areas with William Dembski. He likes evidence from every discipline you can think of, and then some.

If you are looking for a good book to read on the resurrection of Jesus, the best introductory book on the resurrection is "The Case for the Resurrection of Jesus" and the best comprehensive book is "The Resurrection of Jesus".

GAO report: Obama lied again – 1,036 Obamacare plans cover abortions

September 17, 2014 | by Wintery Knight | Link | Original Link

---

First it was “you can keep your doctor” then it was “you can keep your health plan”. Now it’s funding of abortions.

CNS News reports:

> President Obama promised that under his health care plan, “no federal dollars will be used to fund abortion,” but that’s just another broken promise, according to a new report from the Government Accountability Office, which indicates that public funding of abortion is happening on a large scale.
>
> “This confirms what we have long suspected,” Rep. Joe Pitts (R-Penn.) said in a conference call with reporters on Monday.
>
> Pitts and other Republicans asked the GAO to find out which taxpayer-subsidized plans in the Obamacare exchanges fund abortion and if consumers know about that coverage.
>
> The report concluded that in 2014, more than a thousand federally subsidized Obamacare policies paid for abortion on demand, sometimes unbeknownst to policyholders. And in five states, every plan offered on the exchanges included abortion on demand, giving consumers no alternative, as required by law.
>
> Rep. Chris Smith (R-N.J.) said the revelations defy both the longstanding Hyde Amendment, which prohibits federal funding of abortion, and the promises made by President Barack Obama.
>
> “In an 11th hour ploy to garner a remnant of pro-life congressional Democrats absolutely needed for passage of Obamacare, the president issued an executive order on March 24, 2010 that said: ‘the Act maintains current Hyde Amendment restrictions governing abortion policy and extends those restrictions to newly created health insurance exchanges’,” said Smith, who is co-chairman of the Bipartisan Congressional Pro-Life Caucus.
>
> “It turns out that those ironclad promises made by the President himself are absolutely untrue,” Smith said.

Obama, in the video above, calls allegations that his health care plan would fund abortion a “fabrication”. And many people believed him, first in 2008 then again in 2012. But as usual, he was lying. After all, Obama knows morality better than pro-lifers do, and he knows more what we should be doing with our own money than we do. We should be grateful that such a wise, moral man casts aside our childish moral objections for the greater glory of taxpayer-funded abortion. Forward!

43-year-old teacher with HIV admits having sex with teen

September 17, 2014 | by Wintery Knight | Link | Original Link

---

From CBS local news in Texas, of all places.

Excerpt:

> A North Texas teacher, who is HIV positive, was caught leaving the home of a 15-year-old boy. Police say when Roger "Joe" Kessler was questioned and he admitted having a sexual relationship with the teen. Now Kessler is charged with sexual assault of a child.
>
> The details from his arresting documents are disturbing and have both law enforcement and Richardson ISD officials on alert.
>
> Kessler is a music teacher at Richardson ISD Academy. The 43-year-old is the man police say admitted to having sex with a 15-year-old boy, at least four times. And authorities say the sexual acts were performed without Kessler telling the teen he has HIV.
>
> McKinney police say they were called to a home in the 1300 block of Gough Street on Wednesday. While authorities were responding to a burglary in progress, they arrived to Kessler being detained by the homeowner.
>
> Apparently the teenager's mother had arrived home and thought her home had been burgled, because she saw a man leaving her backyard.
>
> Further investigation revealed Kessler was trying to run away from the house where he admitted to having just had a sexual encounter with the teen.
>
> Court documents detail how Kessler and the 15-year-old met using a smart phone application called Grindr. The app bills itself as a "popular all-male location-based social network," but is known as a place for men looking for sex to connect.
>
> According to police documents, Kessler even logged on to Grindr and showed officers at the scene a series of text messages he had exchanged with the teen.

Previously, I wrote about a Center for Disease Control report that found that men who have sex with men were 150 times more likely to contract HIV, and another CDC report that found that 62% of men who have unprotected sex with other men know they have HIV.

What are the historical arguments for the empty tomb story?

September 17, 2014 | by Wintery Knight | Link | Original Link

---

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

The word resurrection means bodily resurrection

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

There are multiple early, eyewitness sources for the empty tomb

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until

> the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

A few quotes from atheist historians not from Dr. Craig's article: (thanks to Eric of Ratio Christi OSU)

> Michael Goulder (Atheist NT Prof. at Birmingham) "…it goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion." ["The Baseless Fabric of a Vision," in Gavin D'Costa, editor, Resurrection Reconsidered (Oxford, 1996), 48.]
>
> Gerd Lüdemann (Atheist Prof of NT at Göttingen): "…the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE." [The Resurrection of Jesus, trans. by Bowden (Fortress, 1994), 171-72.]
>
> Robert Funk (Non-Christian scholar, founder of the Jesus Seminar): "…The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30 C.E., the time for development was thus two or three years at most." [Roy W. Hoover, and the Jesus Seminar, The Acts of Jesus, 466.]

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source

> must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

So we are dealing with very early sources for the empty tomb.

Lack of legendary embellishments

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

The eyewitness testimony of the women

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

The earliest response from the Jewish high priests assumes the empty tomb

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to

> explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

See it used in a debate

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

Minnesota’s largest and cheapest Obamacare insurer drops out of exchange

September 18, 2014 | by Wintery Knight | Link | Original Link

---

The Daily Caller reports.

Excerpt:

> The largest insurer with the lowest premium rates on Minnesota’s Obamacare exchange is dropping out because the government health-exchange is unsustainable, the company announced Tuesday.
>
> PreferredOne Health Insurance told MNsure, the state-run exchange, Tuesday morning that it would not continue to offer its popular insurance plans on the marketplace in 2015.
>
> […]“Our MNsure individual product membership is only a small percentage of the entire PreferredOne enrollment **but is taking a significant amount of our resources to support administratively**,” the company said in a statement. “We feel continuing on MNsure was not sustainable and believe this is an important step to best serve all PreferredOne members.”
>
> PreferredOne was Minnesota’s largest exchange insurer with 59 percent of individual MNsure sign-ups, according to KSTP. Another four insurance companies — Blue Cross Blue Shield, HealthPartners, Medica and UCare — will continue to offer plans on the exchange next year.
>
> This leaves Minnesota Obamacare customers in a tricky situation. PreferredOne had significantly lower rates than any other insurer on the exchange. When these plans disappear, customers will see a significant rate hike if they choose to continue on the Obamacare exchange, independent of yearly rate hikes.
>
> Minnesota is scheduled to announce premium rates for 2015 Obamacare plans in October and signs point to looming price hikes that will hit Minnesotans doubly hard.

The administration costs are too high.

I noticed that Minnesota has a Senate election this year, and that comedian Al Franken is up for re-election, and he is leading by 9 points. Maybe Minnesota will learn something from their rate hikes and stop voting in a clown who voted for Obamacare. One can hope that money will cause them to learn their lesson.

If you care about the poor, must you vote for bigger government?

September 18, 2014 | by Wintery Knight | Link | Original Link

---

Here's an article on the Daily Signal that traces the history of big government "solutions" to poverty, and argues that big government has not been able to solve the poverty problem no matter how much money they've taken from taxpayers.

Excerpt:

> Today, the U.S. Census Bureau will release its annual report on poverty. This report is noteworthy because this year marks the 50th anniversary of President Lyndon Johnson's launch of the War on Poverty. Liberals claim that the War on Poverty has failed because we didn't spend enough money. Their answer is just to spend more. But the facts show otherwise.
>
> […]Over 100 million people, about one third of the U.S. population, received aid from at least one welfare program at an average cost of $9,000 per recipient in 2013. If converted into cash, current means-tested spending is five times the amount needed to eliminate all poverty in the U.S.
>
> But today the Census will almost certainly proclaim that around 14 percent of Americans are still poor. The present poverty rate is almost exactly the same as it was in 1967 a few years after the War on Poverty started. Census data actually shows that poverty has gotten worse over the last 40 years.
>
> How is this possible? How can the taxpayers spend $22 trillion on welfare while poverty gets worse?
>
> The answer is it isn't possible. Census counts a family as poor if its income falls below specified thresholds. But in counting family "income," Census ignores nearly the entire $943 billion welfare state.
>
> For most Americans, the word "poverty" means significant material deprivation, an inability to provide a family with adequate nutritious food, reasonable shelter and clothing. But only a small portion of the more than 40 million people labelled as poor by Census fit that description.
>
> […]According to government surveys, the typical family that Census identifies as poor has air conditioning, cable or satellite TV, and a computer in his home. Forty percent have a wide screen HDTV and another 40 percent have internet access. Three quarters of the poor own a car and roughly a third have two or more cars. (These numbers are not the result of the current bad economy pushing middle class families into poverty; instead, they reflect a steady improvement in living conditions among the poor for many decades.)
>
> The intake of protein, vitamins and minerals by poor children is virtually identical with upper middle class kids. According to surveys by the U.S. Department of

> Agriculture, the overwhelming majority of poor people report they were not hungry even for a single day during the prior year.

The article goes on t make the point that if the purpose of government social programs is to make people more independent so they can get off the welfare, then the government has *failed* to achieve that goal. In fact, they've made even *more* people dependent on government since they started to try to make them independent of government.

According to a Congressional Research Service study, we spend more on welfare per year (1.03 trillion) than we do on Social Security (725 billion) or Medicare (480 billion) or non-war defense (540 billion). And what do we get? More dependency on government, not less.

Greg Ganssle explains the problems of evil and suffering

September 18, 2014 | by Wintery Knight | Link | Original Link

---

I found these three videos on Apologetics 315. They are each about 5 minutes long.

Here's the first one:

Description:

> Part 1 of a trilogy. Greg lays out a classic argument that God does not exist, called 'The Problem of Evil'. He distinguishes two versions of that argument, which are sometimes called 'the deductive' and 'the evidential' version. He goes into some details on the deductive version.

And the second one:

Description:

> Part 2 of a trilogy. Here, Greg gives a response to the deductive version of the Problem of Evil on behalf of someone who believes that God exists. In thinking about this response, we need to think about whether God can make contradictions true, and whether God can have good reasons for allowing bad things to happen.

And the third one:

Description:

> Part 3 of a trilogy. Greg considers the evidential version of the Problem of Evil, and gives a response on behalf of someone who believes that God exists. This involves considering whether God might have a good reason to allow bad things to happen.

This is very practical and you won't find a shorter introduction to the problem of evil than these videos. When things go wrong as they sometimes will in your life it's very important to understand that we shouldn't be surprised by suffering and evil.

Probably the most important thing to understand about evil and suffering is that God is not our cosmic butler. It's not his job to provide happiness for his human pets. You would never get the idea from the Bible that God is interested in making people feel happy, especially if they ignore him and his moral laws. Everything God does with people is meant to make them know him better and serve him better, and many things that happen to us that don't make us happy, but they do give us the opportunity to either grow towards God or away from him.

If the story of Jesus tells us anything, it tells us that you can be morally perfect and still get whammed while you learn how to be obedient to God. Being good is no guarantee of happiness. Doing God's will is no guarantee of happiness. There just is no guarantee of

happiness, no matter how righteous you are. But what there is for us is a promise that God works through evil and suffering in order to make those who respond to his leading as much like his Son Jesus as they can be. And that has to be enough for us. We have to learn how to trust God through suffering. Knowing the logic of the problems of evil and suffering can help us to develop that trust.

Wikipedia editor deletes all evidence of Neil deGrasse Tyson's quote fabrication

September 19, 2014 | by Wintery Knight | Link | Original Link

---

Wikipedia is garbage, and here's a story that explains why, from The Federalist.

Excerpt:

> Neil Tyson, a prominent popularizer of science (he even has his own television show) was recently found to have repeatedly fabricated multiple quotes over several years. The fabrications were not a one-off thing. They were deliberate and calculated, crafted with one goal in mind: to elevate Tyson, and by extension his audience, at the expense of know-nothing, knuckle-dragging nutjobs who hate science. Tyson targeted journalists, members of Congress, even former President George W. Bush. And what was their crime? They were guilty of rejecting science, according to Tyson.

> There's only one problem. None of the straw man quotes that Tyson uses to tear them down are real. The quote about the numerically illiterate newspaper headline? Fabricated. The quote about a member of Congress who said he had changed his views 360 degrees? It doesn't exist. That time a U.S. president said "Our God is the God who named the stars" as a way of dividing Judeo-Christian beliefs from Islamic beliefs? It never happened.
>
> […]After I published my piece about Neil Tyson's fabrication of the George W. Bush quote, several users edited Neil Tyson's wiki page to include details of the quote fabrication controversy. The fact-loving, evidence-weighing, ever-objective editors of the online encyclopedia did not appreciate the inclusion of the evidence of Tyson's fabrication. Not at all.
>
> According to a review of the edit history of Tyson's page, one long-time Wikipedia editor deleted an entire pending section summarizing the issue of Tyson's fabricated quotes. Another editor attempted to insert a brief mention of Tyson's fabrication of the George W. Bush quote. That mention was also deleted. When it was reinserted, it was deleted yet again by an editor who describes himself as a childless progressive and an apostle of Daily Kos (h/t @kerpen). Here are just a few of that user's political ramblings, in case you were curious about the motivation behind the scrubbing of Tyson's wiki.
>
> Literally every single mention of Tyson's history of fabricating quotes has been removed from Tyson's Wikipedia page.

The Federalist post has been updated now to indicate that:

> Early this morning, in a discussion thread about whether references to Neil deGrasse Tyson's history of quote fabrication should be added to Tyson's

> Wikipedia page, an editor stated that “no version of this event will be allowed into the article.”

So I hope this helps everyone to understand that Wikipedia is a joke site, and you should try never to quote from it if you are in a debate situation.

On the other hand, I have to give kudos to well-known atheist Hemant Mehta, who has a full breakdown of Tyson’s other fabrications, and Mehta, who might be expected to cover up for Tyson, instead said this “If a pastor or right-wing conservative did it, we’d be calling them out on it immediately. Tyson doesn’t deserve a free pass just because his intentions are pure. It certainly wouldn’t (or shouldn’t) get by in an academic setting, and just because he often speaks to a lay audience doesn’t mean he should make up quotations or fail to cite them if they’re real.” Now that’s an honest atheist. The reason that quote fabrication is not punished on Wikipedia, though, is because it is a joke site. And this episode proves it.

What you do before you marry affects your marital happiness and stability

September 19, 2014 | by Wintery Knight | Link | Original Link

---

A recent article from The Federalist explains why chastity matters when choosing a mate. Excerpt:

> [A] new study shows that the more relationships you've had prior to marriage, the less likely you'll have a good marriage. This seems somewhat obvious, but it's so contrary to popular culture and practice these days that even the study's authors say the finding is "counterintuitive."
>
> "In most areas, more experience is better. You're a better job candidate with more experience, not less. When it comes to relationship experience, though, we found that having more experience before getting married was associated with lower marital quality," said Galena K. Rhoades, research associate professor of psychology at the University of Denver. She's a co-author of the study "Before 'I Do': What Do Premarital Experiences Have To Do With Marital Quality Among Today's Young Adults?," from the National Marriage Project at the University of Virginia. The report has all sorts of interesting findings, including that large weddings and conscious decision-making in relationships are also factors in happy marriages.
>
> **Previous marriages and previously having lived with a partner were both identified as risk factors for less-happy marriages, the authors said.** We know so much about how living together is a risk factor for all sorts of unhappiness that I seriously have to restrain myself from shouting at my female friends who tell me they're moving in or have moved in with their boyfriends. I mean, even if there were no moral problem with it, it's just bad strategy if you want a happy life.
>
> […][T]he nearly one-quarter of people in the study who had sex solely with the person they married reported high marital quality, higher than those who had sex with other partners prior to marriage. And the more sexual partners a woman had before marriage, the less happy she reported her marriage to be. Well that's not what we've been told by the *Cosmo*-Jezebel alliance. The study's authors speculate on why this might be.

> **One reason that more experience could lead to lower marital quality is that more experience may increase one's awareness of alternative partners. A strong sense of alternatives is believed to make it harder to maintain commitment to, and satisfaction with, what one already has. People who have had many relationships prior to their current one can compare a present partner to their prior partners in many areas—like**

> **conflict management, dating style, physical attractiveness, sexual skills, communication ability, and so on. Marriage involves leaving behind other options, which may be harder to do with a lot of experience.**

I have to say that this factor is the biggest factor that gives me pause when considering marriage with a woman with a sexual past. Will I be compared to these other men? Will I be trusted? Will she be vulnerable to me? Usually when a woman has had past experiences with bad men, then she tends to be more guarded with me, regardless of how I would perform sexually after we were married. I am interested in a woman being trusting and vulnerable, yet a sexual past usually doesn't make a woman more trusting and vulnerable.

However, there is a way to work on the problem, I think – and that way is taking a structured approach to courting that involves open communication and deliberate planning:

> [T]he hook-up thing, which was a factor in lower marital quality, also matches with other less formalized arrangements that are becoming common among younger generations. If you can make out with someone thanks to the lowered inhibitions you guzzled down at the bar, you don't have to make a formal request to ask her out or to plan a date. Similarly, many respondents reported shacking prior to marriage. And those who lived with their eventual spouse before making a commitment to marry reported lower marital quality than those who waited to move in together until they were engaged or married.

> **The study actually had people rate how much of living together was a conscious decision vs. something that just sort of happened. And the more it was a decision, the happier the eventual marriage was. This might be because of higher levels of commitment present at the time of moving in or because it reflects better communication skills, a key to marital contentment, the authors said.**

> **The same sort of conscious decision making effect could be seen in differences in pre-marital counseling. While only 32 percent of those who did not have premarital preparation reported high marital quality, that jumped to 57 percent of those who did take part in premarital preparation. Less sliding, more deciding might not be a Millennial motto but it should be.**

What you want to avoid is someone who cannot communicate and is not good at making decisions and then sticking with her decisions over the long haul. And that can be developed – it can be worked on and improved. But it takes time to do.

Here's the author's conclusion:

> All the options make it hard to man-up or woman-up and make some decisions **because we're so terrified of missing out on the next best thing.** But the whole truly counterintuitive point of a happy marriage is that you're not supposed to be thinking about what your spouse can do for you so much as what you can do for your spouse. That's why this whole commercialized approach to spouse-picking is wrong. When you're trying to figure out which yogurt to buy, you're doing a lot of comparison shopping, but you're not thinking of what you can do for the yogurt, you know?

> We all want marriage, more or less, but we couldn't be doing a worse job of trying to attain it. We want to find the perfect spouse, even though he or she doesn't exist and finding a perfect spouse isn't what marriage is about. What's worse, we demand that someone forgive us our many faults even while we're mentally comparing our potential spouse with other people or figments of our imagination. We should stop with that and really work at doing what it takes to get married and stay happily married.
>
> […]**Even if you have not made the healthiest or most prudential sexual choices prior to now, don't flip out or despair. Just because some factors are related to marital happiness doesn't mean you can't have a happy marriage. Just focus on making better decisions from this point forward. Be conscious and deliberate about them. Stop letting life happen to you and start thinking about what you want and how to get there. And, finally, remember that your big extended family is a blessing and that rituals occur throughout the world for very good reason.**

I think having a string of past relationships does lead a person to want to delay marriage and hold out for "the next best thing". That's why so many women are delaying marriage and getting into fertility problems. They want to have fun and them jump off the carousel into the respectability of marriage at the last possible instant. Which is not fun for a man who is seeking the kind of intimacy that grows slowly over time. I have always been impressed by couples who have been married for decades, but you get that by marrying for the benefit of that other person, instead of holding out for the best deal for you. If you find someone you want to care for for the rest of your life, just marry them – that's my advice. Try to make relationships more about planning and obligations, and less about fun and excitement.

Study of elementary school children finds entrenched discrimination against boys

September 19, 2014 | by Wintery Knight | Link | Original Link

---

The study is here (PDF), and Susan Walsh writes about the study on her blog. (H/T Stuart Schneiderman)

Excerpt:

> A new study of nearly 6,000 elementary school children has found that boys are discriminated against beginning in kindergarten. Christopher Cornwell, an economics professor at the University of Georgia, says that "gender disparities in teacher grades start early and uniformly favor girls."
>
> Despite having higher scores on standardized tests, boys get lower grades than girls. Why? Because teachers are basing grades at least partly on classroom behavior, and the standards are very much geared to female norms.
>
> […]Here's what the disparity looks like for kindergarten boys:
>
> | Std. Deviation | Test Scores | Grades |
> |---|---|---|
> | Reading | -.017 | -.27 |

>
> (Note: Values are approx., gauged visually from study graphic.)
>
> Another interesting finding was that boys who adhere to female norms on non-cognitive skills were not penalized. Effectively, the more female behavior was rewarded with a grade "bonus" for males.
>
> The implications of this are obvious. Masculinity, even normal maleness, is being punished in schools from a very young age. Only the most female-acting boys are rewarded with a fair assessment.

I found this story on Stuart Schnederman's blog, and this is what he had to say about it:

> The results demonstrated that schoolteachers are prejudiced against boys. When teachers do not just grade on performance, but include a number of intangible qualities that girls are more likely to possess, they are acting as bigots.

I recommend that everyone pick up a copy of "The War Against Boys" by AEI scholar Christina Hoff Sommers to learn more about this anti-male discrimination problem.

I see a lot of people raving at men to "man up" these days. Many of those people are pastors who remain ignorant about the real, systemic causes of male underachievement. Even very obvious factors – like the dominance of female teachers and administrators in schools – are ignored by the blame-men crowd. Boys generally learn better when they

learn from male teachers in all-male classrooms. But unfortunately for boys, there are people who don’t want to do what works for men, especially when it doesn’t fit with feminist ideology.

SATIRE: Unemployed Gender Studies Major Sues 'The Patriarchy'

September 20, 2014 | by Wintery Knight | Link | Original Link

---

From the Daily Currant.

Excerpt:

> An unemployed gender studies major from Eugene, Ore. sued "The Patriarchy" today in federal court for refusing to give her a job.
>
> In a 25-page brief, attorneys for Sarah Miller-Jones, 24, argue that gender discrimination from the patriarchy has prevented their client from finding gainful employment since she graduated from university three years ago.
>
> The suit seeks $2 million in compensation and $139 million in punitive damages, which together equal $1 from every adult man in America.
>
> "Despite the fact that Ms. Miller-Jones graduated with a 2.8 GPA from the prestigious University of Oregon, she has been unable to find a job fitting her qualifications," the document reads.
>
> "Ms. Miller-Jones has been on unemployment benefits for 18 months. And despite extensive coursework in Zambian feminist hip-hop she has only received six job offers — all of which were for entry-level call center and health care positions.
>
> "It is outrageous that the patriarchy refuses to offer our client a decent career. She has applied for over 20 positions in the recording, publishing and television industries and has been rejected every single time.
>
> "We all know that terms like 'no experience' and 'lack of relevant education' are codewords the patriarchy uses to keep keep women in their place. But Ms. Miller-Jones refuses to be a housewife or a nurse. She deserves a real job."
>
> Millions of young Americans who recently graduated from university are finding themselves working in jobs below their educational level.
>
> Media reports have tended to blame the slow recovery from the Great Recession for the trend. However, an equally important factor is the fact that the American university system turns out too few graduates with employable skills.
>
> There are an estimated 3 million open jobs in the United States that go unfilled due to a lack of qualified candidates. Many of these jobs are in science and engineering, while the most popular majors for U.S. college graduates are in psychology and the liberal arts.
>
> According to a former employer, Miller-Jones' gender studies degree actually hurt her employability. Gilbert Grass manages a call center for a local credit union in Eugene and says he regrets hiring her straight out of college.
>
> "She refused to use the words 'he' or 'she' when talking to customers," he says.

> “That lead to a lot of confusion. And she once gave a customer who called to check her bank balance a 20-minute lecture on how the film *Toy Story* perpetuated gender-specific archetypes of heroism.

I’m sorry, but this just makes me laugh so hard. I just want to remind everyone that this is satire. Not real! Not real!

Shorebird’s beak inspires researchers to design new water collection strategy

September 20, 2014 | by Wintery Knight | Link | Original Link

The shorebird’s beak is more interesting than you might think

Dr. Fazale Rana of Reasons to Believe tweeted this cool example of biomimetics from Science Daily.

Excerpt:

> A UT Arlington engineering professor and his doctoral student have designed a device based on a shorebird’s beak that can accumulate water collected from fog and dew.

> The device could provide water in drought-stricken areas of the world or deserts around the globe.
>
> Xin Heng… a doctoral student in Mechanical and Aerospace Engineering, and Cheng Luo, MAE professor, have made a device that can use fog and dew to collect water.
>
> Cheng Luo, professor in the Mechanical & Aerospace Engineering Department, and Xin Heng, PhD candidate in the same College of Engineering department, published “Bioinspired Plate-Based Fog Collectors” in the Aug. 25 edition of ACS’ (American Chemical Society) *Applied Materials & Interfaces* journal.
>
> The idea began when Heng saw an article that explained the physical mechanism shorebirds use to collect their food — driving food sources into their throats by opening and closing their beaks. Luo said that inspired the team to try to replicate the natural beak in the lab.
>
> “We wanted to see if we could do that first,” Luo said. “When we made the artificial beaks, we saw that multiple water drops were transported by narrow, beak-like glass plates. That made us think of whether we could harvest the water

> from fog and dew.”
>
> Their experiments were successful. They found out they could harvest about four tablespoons of water in a couple of hours from glass plates that were about 26 centimeters long by 10 centimeters wide.

Now, if we are lifting designs out of nature, then shouldn’t we give honor to God for putting the designs in there in the first place? I really think it’s important to give God credit where due for his clever designs, even if you’re not a big fan of the shorebird. I also think it’s interesting that it’s engineers who made this application of something in nature, not biologists. Also, I feel I have to mention that the birdy is also cute, which is not insignificant, if you like birds as much as I do.

Jennifer Roback Morse on the injustice of the American family court system

September 21, 2014 | by Wintery Knight | Link | Original Link

---

Here is an article by marriage-defender Jennifer Roback Morse about one of the biggest challenges to life-long married love.

Excerpt:

> Easy divorce opens the door for an unprecedented amount of government intrusion into ordinary people's lives. This unacknowledged reality is the subject of *Taken Into Custody,* by Stephen Baskerville**.** With penetrating insight, the political scientist exposes the truly breathtaking consequences of no-fault divorce for the expansion of state power and the decline of personal autonomy.
>
> First, no-fault divorce frequently means unilateral divorce: one party wants a divorce against the wishes of the other, who wants to stay married. Kim Basinger dumped Baldwin for no particular reason, unleashed the power of the Los Angeles Family Court system to inflict pain on him and, in the process, inflicted untold damage on their child. Second, the fact that one party wants to remain married means that the divorce has to be enforced. Baldwin wanted to stay married and to continue to be a husband and father. Yet, the coercive and intrusive machinery of the state must be wheeled into action to separate the reluctantly divorced party from the joint assets of the marriage, typically the home and the children.
>
> Third, enforcing the divorce means an unprecedented blurring of the boundaries between public and private life. People under the jurisdiction of family courts can have virtually all of their private lives subject to its scrutiny. If the courts are influenced by feminist ideology, that ideology can extend its reach into every bedroom and kitchen in America. Baldwin ran the gauntlet of divorce industry professionals who have been deeply influenced by the feminist presumptions that the man is always at fault and the woman is always a victim. Thus, the social experiment of no-fault divorce, which most Americans thought was supposed to increase personal liberty, has had the consequence of empowering the state.
>
> Some might think the legacy of no-fault divorce is an example of the law of unintended consequences in operation. That assumes its architects did not intend for unilateral divorce to result in the expansion of the state. But Baskerville makes the case in this book—as well as his 2008 monograph, "The Dangerous Rise of Sexual Politics," in The Family in America—that at least some of the advocates of changes in family law certainly have intended to expand the power of the state over the private lives of law-abiding citizens.

She explains who is really behind the attempt to destroy marriage, and the answer might

shock you.

It’s important for people to understand the real reasons why people are not getting married, so that we can do something to encourage them to marry that really fixes the problem. If you don’t understand the threats that men are seeing with respect to marriage, it might be a good idea to take a look at this essay by Stephen Baskerville, hosted by the Christian Touchstone magazine. It’s a summary of the book that Dr. Morse reviewed. I consider that book “Taken Into Custody” to be a must-read for anyone contemplating marriage.

Stephen C. Meyer and Marcus Ross lecture on the Cambrian explosion

September 21, 2014 | by Wintery Knight | Link | Original Link

---

Access Research Network is a group that produces recordings of lectures and debates related to intelligent design. I noticed that on their Youtube channel they are releasing some of their older lectures and debates for FREE. So I decided to write a summary of one that I really like on the Cambrian explosion. This lecture features Dr. Stephen C. Meyer and Dr. Marcus Ross.

The lecture is about two hours. There are really nice slides with lots of illustrations to help you understand what the speakers are saying, even if you are not a scientist.

Here is a summary of the lecture from ARN:

> The Cambrian explosion is a term often heard in origins debates, but seldom completely understood by the non-specialist. This lecture by Meyer and Ross is one of the best overviews available on the topic and clearly presents in verbal and pictorial summary the latest fossil data (including the recent finds from Chengjiang China). This lecture is based on a paper recently published by Meyer, Ross, Nelson and Chien "The Cambrian Explosion: Biology's Big Bang" in *Darwinism, Design and Public Education*(2003, Michigan State University Press). This 80-page article includes 127 references and the book includes two additional appendices with 63 references documenting the current state of knowledge on the Cambrian explosion data.
>
> The term *Cambrian explosion* describes the geologically sudden appearance of animals in the fossil record during the Cambrian period of geologic time. During this event, at least nineteen, and perhaps as many as thirty-five (of forty total) phyla made their first appearance on earth. Phyla constitute the highest biological categories in the animal kingdom, with each phylum exhibiting a unique architecture, blueprint, or structural body plan. The word *explosion* is used to communicate that fact that these life forms appear in an exceedingly narrow window of geologic time (no more than 5 million years). If the standard earth's history is represented as a 100 yard football field, the Cambrian explosion would represent a four inch section of that field.
>
> For a majority of earth's life forms to appear so abruptly is completely contrary to the predictions of Neo-Darwinian and Punctuated Equilibrium evolutionary theory, including:
>
> - the gradual emergence of biological complexity and the existence of numerous transitional forms leading to new phylum-level body plans;
> - small-scale morphological diversity preceding the emergence of large-scale morphological disparity; and

> - a steady increase in the morphological distance between organic forms over time and, consequently, an overall steady increase in the number of phyla over time (taking into account factors such as extinction).
>
> After reviewing how the evidence is completely contrary to evolutionary predictions, Meyer and Ross address three common objections: 1) the artifact hypothesis: Is the Cambrian explosion real?; 2) The Vendian Radiation (a late pre-Cambrian multicellular organism); and 3) the deep divergence hypothesis.
>
> Finally Meyer and Ross argue why design is a better scientific explanation for the Cambrian explosion. They argue that this is not an argument from ignorance, but rather the best explanation of the evidence from our knowledge base of the world. We find in the fossil record distinctive features or hallmarks of designed systems, including:
>
> - a quantum or discontinuous increase in specified complexity or information
> - a top-down pattern of scale diversity
> - the persistence of structural (or "morphological") disparities between separate organizational systems; and
> - the discrete or novel organizational body plans
>
> When we encounter objects that manifest any of these several features and we know how they arose, we invariably find that a purposeful agent or intelligent designer played a causal role in their origin.
>
> *Recorded April 24, 2004. Approximately 2 hours including audience Q&A.*

You can get a DVD of the lecture and other great lectures from Access Research Network. I recommend their origin of life lectures – I have watched the ones with Dean Kenyon and Charles Thaxton probably a dozen times *each*. Speaking as an engineer, you never get tired of seeing engineering principles applied to questions like the origin of life.

The Cambrian explosion lecture above is a great intermediate-level lecture and will prepare you to be able to understand Dr. Meyer's new book "Darwin's Doubt: The Explosive Origin of Animal Life and the Case for Intelligent Design". The Michigan State University book that Dr. Meyer mentions is called "Darwin, Design and Public Education". That book is one of the two good collections on intelligent design published by academic university presses, the other one being from Cambridge University Press, and titled "Debating Design: From Darwin to DNA". If you think this lecture is above your level of understanding, then be sure and check out the shorter and more up-to-date DVD "Darwin's Dilemma".

John Key leads New Zealand conservatives to 48-25 majority victory over leftists

September 22, 2014 | by Wintery Knight | Link | Original Link

National Party leader John Key

Note: The New Zealand conservative party is called the National Party, but their policies are center-right, at least on fiscal issues.

The Wall Street Journal reports on a stunning victory.

Excerpt:

> John Key is set to lead New Zealand for a third consecutive term after official results showed his party garnered 48% of the national vote, and would likely end up with 61 seats in a 121-member Parliament.
>
> […]David Cunliffe, leader of the main opposition Labour Party, conceded defeat late Saturday. The Labour Party picked up 25% of the overall vote, according to the Electoral Commission, while the Green Party, always thought to be its likeliest coalition partner, won 10%.
>
> The 53-year-old Mr. Key has helped steer New Zealand to a level of prosperity rarely found in developed countries since the global financial crisis, campaigning against a backdrop of the strongest economic growth in a decade.
>
> […]Mr. Key's victory was stronger than opinion polls were predicting. Meanwhile, Labour's weak showing was the worst since the 1920s, prompting speculation of a possible change in leadership, though Mr. Cunliffe said he had no plans to resign. "I don't believe that rotating the leaders is the key to changing and upgrading our party," he said Sunday in a television interview. "If I did, I would simply stand down now."
>
> The University of Otago's Mr. Edwards said it would be difficult for Mr. Cunliffe to reassert his authority after Labour's poor result, but added that the party still had no obvious replacement.
>
> The Green party's support was little changed from 2011, despite opinion polls predicting it could win as much as 14% of the vote. Green Party Co-leader Metiria Turei said Sunday the party had consolidated its 2011 result and held on to its

> 10% support even though the country had swung to the right.

The National Party is not achieving this economic growth by raising taxes on individuals and job creators – New Zealand has the second lowest taxes in the industrialized world.

Look:

> Many countries have been working hard to improve their tax codes. New Zealand is a good example of one of those countries. In a 2010 presentation, the chief economist of the New Zealand Treasury stated, "Global trends in corporate and personal taxes are making New Zealand's system less internationally competitive." In response to these global trends, New Zealand cut its top marginal income tax rate from 38 percent to 33 percent, shifted to a greater reliance on the goods and services tax, and cut their corporate tax rate to 28 percent from 30 percent. This followed a shift to a territorial tax system in 2009. New Zealand added these changes to a tax system that already had multiple competitive features, including no inheritance tax, no general capital gains tax, and no payroll taxes.
>
> In a world where businesses, people, and money can move with relative ease, having a competitive tax code has become even more important to economic success. The example set by New Zealand and other reformist countries shows the many ways countries can improve their uncompetitive tax codes.

Compare that with the United States which is stuck down at 30 out of 32 countries! We have a lower median income and labor force participation than we did five years ago, despite packing over NINE TRILLION dollars onto the national debt.

John Key isn't packing trillions onto his country's national debt they are set to balance the budget in the coming year. And more than the balance budget, he is also trying to privatize bloated, inefficient state-run companies. Imagine what we could do if we privatized the USPS, the departments of motor vehicles and AMTRAK. Just cut the fat out completely.

So now we have conservative majority governments in Canada (Harper), Australia (Abbott) and New Zealand (Key).

Darwinists thought whale hips were accidents of evolution, then science happened

September 22, 2014 | by Wintery Knight | Link | Original Link

---

Another win for reason in the long war between science and naturalistic philosophy.

Science Daily reports.

Excerpt:

> Both whales and dolphins have pelvic (hip) bones, evolutionary remnants from when their ancestors walked on land more than 40 million years ago. Common wisdom has long held that those bones are simply vestigial, slowly withering away like tailbones on humans.

> New research from USC and the Natural History Museum of Los Angeles County (NHM) flies directly in the face of that assumption, finding that not only do those pelvic bones serve a purpose — but their size and possibly shape are influenced by the forces of sexual selection.
>
> "Everyone's always assumed that if you gave whales and dolphins a few more million years of evolution, the pelvic bones would disappear. But it appears that's not the case," said Matthew Dean, assistant professor at the USC Dornsife College of Letters, Arts and Sciences, and co-corresponding author of a paper on the research that was published online by *Evolution* on Sept. 3.
>
> […]"Our research really changes the way we think about the evolution of whale pelvic bones in particular, but more generally about structures we call 'vestigial.' As a parallel, we are now learning that our appendix is actually quite important in several immune processes, not a functionally useless structure," Dean said.

This is not the first time this has happened – as they said, the appendix now has known functionality.

Flashback: ENCODE study falsifies Darwinian prediction that most of the genome is "Junk" DNA.

Scott Klusendorf defends the pro-life view on the Unbelievable radio show

September 22, 2014 | by Wintery Knight | Link | Original Link

---

Here are the details:

> The abortion debate reared its head again this summer after controversial tweets by Richard Dawkins made the news.
>
> Justin hosts a discussion between Mara Clarke of the Abortion Support Network and Scott Klusendorf of the Life Training Instititute. Mara believes women need to be decide whether to terminate a pregnancy, but Scott says that all depends on whether we are dealing with a human life in the womb.
>
> MP3 of this show http://media.premier.org.uk/unbelievable/5fd916e8-46a5-4b08-8eb7-0c0dc4473979.mp3

My snarky paraphrase of the debate (not exact):

- Speaker introductions
- Klusendorf: no justification for abortion is necessary if the unborn are not human
- Klusendorf: we need to address the issue "what is the unborn?" Are the unborn human?
- Klusendorf: SLED: size, level of development, environment, degree of dependency
- Klusendorf: None of these things affect the value of a human being
- Klusendorf: Even if we don't KNOW whether the unborn is human
- Mara: I'm not going to debate when life begins
- Mara: Women know when life begins by feelings
- Mara: The moral decision is "whether I can take care of this child?"
- Brierley: When is an unborn being human?
- Mara: I refuse to debate that – the real question is whether women want their babies or not
- Mara: Forced pregnancy is not OK
- Brierley: Could your justification for abortion (not wanting to care for a child) work through all 9 months?
- Mara: Late term abortions are rare, so I don't have to answer that question
- Mara: Abortion should be OK through all 9 months of pregnancy because women cannot be restricted
- Mara: Some women are poor, they need to be able to kill expensive babies at any time
- Klusendorf: although she says she won't debate the unborn, she does take a position
- Klusendorf: she assumes the unborn is not human, because she says that

insufficient funds is justification for abortion
- Klusendorf: no one argues that you can kill a two year old because they cost money, because she thinks they are human
- Klusendorf: she is begging the question by assuming the unborn are not human, but that is the issue we must resolve
- Klusendorf: I am pro-choice on many other things, e.g. women choosing their own husbands, religion, etc.
- Klusendorf: Some choices are wrong – Mara might be right, but she needs to make the case for the unborn not being human
- Brierley: What is your reason for thinking that an unborn child is different from a 2-year old?
- Mara: An unborn child is not the same as a 2-year old, in my personal opinion
- Mara: I am not a debater, so I don't have to provide reasoning for my assertion, I just feel it
- Mara: Not everybody agrees with Scott, they don't have to have a rational argument, they just need to feel differently
- Mara: From my experience, when a woman doesn't want to be pregnant, then she should be able to not be pregnant
- Mara: Women shouldn't be punished with a baby that she doesn't want, even if she chooses to have recreational sex
- Brierley: What do you think of women who think the unborn is human and do it anyway?
- Klusendorf: It's interesting that they never kill their toddlers for those reasons
- Klusendorf: I layed out scientific and philosophical reasons for the humanity of the unborn
- Klusendorf: Her response was "but some people disagree with you"
- Klusendorf: People disagreed about whether slavery was wrong, or whether women should be able to vote
- Klusendorf: that doesn't mean there is no right answer – the right answer depends on the arguments
- Klusendorf: if absence of agreement makes a view false, then it makes HER pro-choice view false as well
- Klusendorf: she did make an argument for the unborn child having no rights because of the location
- Klusendorf: she needs to explain to us why location matters – what about location confers value
- Mara: I'm not going to let Scott frame my debate for me!!!
- Mara: women get pregnant and they don't want their babies! should we put them in jail!!!!
- Klusendorf: I didn't just give my opinion, I had science and philosophy, the issue is "what is the unborn?"
- Mara: philosophical and scientific debates are unimportant, I am an expert in real women's lives

- Klusendorf: Which women? Women in the womb or only those outside the womb?
- Mara: Only those outside the womb
- Klusendorf: Only those outside the womb?
- Mara: Women living outside the womb have a right to kill women inside the womb – women have bodily autonomy
- Klusendorf: then does a pregnant woman with nausea have a right to take a drug for it that will harm her unborn child?
- Mara: Unborn children are only valuable if they are wanted, unborn children only deserve protection if they are wanted
- Mara: There are restrictions on abortion – you can't get an abortion through all nine months in the US
- Mara: There is a 24-week limit in the UK as well
- Klusendorf: There are no restrictions on abortion that conflict with "a woman's health" because Supreme Court said
- Mara: where are these late term abortion clinics?
- Klusendorf: (he names two)
- Mara: that's not enough!!! we need more! where is there one in Pennsylvania?
- Klusendorf: well, there used to be Gosnell's clinic in Pennsylvania, and you could even get an infanticide there….
- Brierley: What about Dawkins' view that it is moral to abort Down's Syndrome babies?
- Klusendorf: he is ignoring the scientific case and philosophical case for the pro-life
- Klusendorf: the pro-life view is a true basis for human equality

What I wanted Scott to ask was whether sex-selection abortions were OK with her. Since her reasoning is "if it's unwanted, it has no rights", then that would mean sex-selection abortions are just fine. That's what a UK abortion expert recently argued. And I also posted recently about how sex-selection abortions are not prosecuted in the UK. If you're looking for a war on women, there it is.

Does a new, distinct human being begin at conception?

September 23, 2014 | by Wintery Knight | Link | Original Link

---

Scott Klusendorf posted a public reply to a critic of his debate on the Unbelievable show, which I blogged about yesterday.

The full reply is here, but I wanted to highlight's Scott's scientific defense that the embryo is a human being.

He writes:

> First, your claim that because biological life is continuous (an "unbroken tree" as you put it), we can't say when the embryo's life begins, is demonstrably false. Just because life is continuous between generations does not mean we can't tell when an individual human begins to exist. The science of embryology points to a clear, non-arbitrary divide between sperm/egg on one hand, and a newly conceived embryo on the other. That is to say, from the earliest stages of development, embryos are distinct human beings. True, they have yet to grow and mature, but they are human nonetheless. Leading embryology textbooks affirm this.
>
> For example, in "The Developing Human: Clinically Oriented Embryology" (Saunders/Elsevier, 2008), Keith L. Moore & T.V.N. Persaud write: "A zygote is the beginning of a new human being. Human development begins at fertilization, the process during which a male gamete or sperm…unites with a female gamete or oocyte…to form a single cell called a zygote. This highly specialized, totipotent cell marks the beginning of each of us as a unique individual."
>
> T.W. Sadler's "Langman's Embryology" (Saunders, 1993) states: "The development of a human begins with fertilization, a process by which the spermatozoon from the male and the oocyte from the female unite to give rise to a new organism, the zygote."
>
> Embryologists Ronan O'Rahilly and Fabiola Müller write, "Although life is a continuous process, fertilization is a critical landmark because, under ordinary circumstances, a new, genetically distinct human organism is thereby formed" (Human Embryology & Teratology. 2nd edition. New York: Wiley-Liss, 1996).

And then he quotes some pro-choice scholars, *including Peter Singer and David Boonin*, to make the point:

> Contemporary defenders of abortion also reject your claim that we can't tell when individual life begins. For example, in his book "Practical Ethics" (Cambridge, 1993) Peter Singer—a bioethicist at Princeton University and supporter of both abortion and infanticide —denies your claim the beginning of human life is can't be known. He writes: "Whether a being is a member of given

> species is something that can be determined scientifically, by an examination of the nature of the chromosomes in the cells of living organisms. In this sense, there is no doubt that from the first moments of its existence an embryo conceived from human sperm and eggs is a human being."
>
> Philosopher David Boonin, author of "A Defense of Abortion" (Cambridge, 2002), writes: "A human fetus, after all, is simply a human being at a very early stage in his or her development."

I tried to space it out a bit to make it more readable. I think what his sources are saying is that when an egg and sperm meet, they create something with a completely different DNA signature than either the sperm or the egg. I think if you have an organism that has human DNA, distinct from the mother and father, and it is developing in a self-directed way (unlike your finger nails, or hair, say), then you have a distinct human life. And I don't think "because I'm bigger than she is" is an adequate reason to kill that other human being.

I have a rule in my life. Don't do anything that is likely to get an innocent person killed. Why can't everyone have this rule? Is recreational pre-marital sex REALLY that important? I don't think any of the reasons that people give for having sex (self-esteem, pleasure, etc.) are more important than not killing an innocent human being. When little lives are at stake, we grown-ups should all try to control ourselves, so that we don't harm people who are smaller and weaker than we are. It just isn't right.

You can read the whole dialog between CoD and Scott on the Unbelievable page.

This woman’s husband left her for his business partner and took her kids

September 23, 2014 | by Wintery Knight | Link | Original Link

---

A striking story from the Public Discourse.

Excerpt:

> In the fall of 2007, my husband of almost ten years told me that he was gay and that he wanted a divorce. In an instant, the world that I had known and loved—the life we had built together—was shattered.
>
> I tried to convince him to stay, to stick it out and fight to save our marriage. But my voice, my desires, my needs—and those of our two young children—no longer mattered to him. We had become disposable, because he had embraced one tiny word that had become his entire identity. Being gay trumped commitment, vows, responsibility, faith, fatherhood, marriage, friendships, and community. All of this was thrown away for the sake of his new identity.
>
> Try as I might to save our marriage, there was no stopping my husband. Our divorce was not settled in mediation or with lawyers. No, it went all the way to trial. My husband wanted primary custody of our children. His entire case can be summed up in one sentence: “I am gay, and I deserve my rights.” It worked: the judge gave him practically everything he wanted. At one point, he even told my husband, “If you had asked for more, I would have given it to you.”
>
> I truly believe that judge was legislating from the bench, disregarding the facts of our particular case and simply using us—using *our children*— to help influence future cases. In our society, LGBT citizens are seen as marginalized victims who must be protected at all costs, even if it means stripping rights from others. By ignoring the injustice committed against me and my children, the judge seemed to think that he was correcting a larger injustice.
>
> […]At the time of the first ceremony, the marriage was not recognized by our state, our nation, or our church. And my ex-husband’s new marriage, like the majority of male-male relationships, is an “open,” non-exclusive relationship. This sends a clear message to our children: what you feel trumps all laws, promises, and higher authorities. You can do whatever you want, whenever you want—and it doesn’t matter who you hurt along the way.
>
> […]Our two young children were willfully and intentionally thrust into a world of strife and combative beliefs, lifestyles, and values, all in the name of “gay rights.” Their father moved into his new partner’s condo, which is in a complex inhabited by sixteen gay men. One of the men has a 19-year-old male prostitute who comes to service him. Another man, who functions as the father figure of this community, is in his late sixties and has a boyfriend in his twenties. My

> children are brought to gay parties where they are the only children and where only alcoholic beverages are served. They are taken to transgender baseball games, gay rights fundraisers, and LGBT film festivals.
>
> Both of my children face identity issues, just like other children. Yet there are certain deep and unique problems that they will face as a direct result of my former husband's actions. My son is now a maturing teen, and he is very interested in girls. But how will he learn how to deal with that interest when he is surrounded by men who seek sexual gratification from other men? How will he learn to treat girls with care and respect when his father has rejected them and devalues them? How will he embrace his developing masculinity without seeing his father live out authentic manhood by treating his wife and family with love, honoring his marriage vows even when it's hard?
>
> My daughter suffers too. She needs a dad who will encourage her to embrace her femininity and beauty, but these qualities are parodied and distorted in her father's world. Her dad wears make-up and sex bondage straps for Halloween. She is often exposed to men dressing as women. The walls in his condo are adorned with large framed pictures of women in provocative positions. What is my little girl to believe about her own femininity and beauty? Her father should be protecting her sexuality. Instead, he is warping it.
>
> Without the guidance of both their mother and their father, how can my children navigate their developing identities and sexuality? I ache to see my children struggle, desperately trying to make sense of their world.

When I was younger and considering marriage, I thought a lot about no-fault divorce and how I would feel about my wife leaving me because she wanted to find herself in Europe, or something. I thought about the feminist judge who would give her custody of our children, and force me to pay alimony and child support. Marriage did not seem like a good risk to me then. I guess part of me always thought that feminists would be the only bad guys in this sexual revolution, and men and children were the victims of feminist selfishness. But this woman's story really makes me realize how women can be just as much the victims of judicial activism as any man was under no-fault divorce laws. That story she told about the activist judge just made my blood run cold. What must that have been like for her, to lose custody of her kids and have them put into the "gay lifestyle" Grindr-style environment? My heart goes out to her.

Previously, I blogged about Dawn Stefanowicz's story of growing up with a gay father.

Is common ancestry confirmed by molecular and morphological evidence?

September 23, 2014 | by Wintery Knight | Link | Original Link

---

Casey Luskin did a good podcast explaining a problem with two kinds of evidence commonly used to argue for common ancestry.

Details:

> On this episode of **ID the Future**, Casey Luskin takes a keen-eyed look at Darwin's tree of life and finds that common descent, far from being confirmed by the data, is actually contradicted by it, as *New Scientist* pointed out in their cover story, "Why Darwin was wrong about the tree of life."
>
> Listen in to learn how the data is challenging Darwinist assumptions, and check out "A Primer on the Tree of Life" for more information.

The MP3 file is here.

The paper linked above seems to be exactly what he read out loud in the podcast.

Here is one section from the paper that summarizes everything:

> One authoritative review paper by Darwinian leaders in this field stated, "**As morphologists with high hopes of molecular systematics, we end this survey with our hopes dampened. Congruence between molecular phylogenies is as elusive as it is in morphology and as it is between molecules and morphology.**"
>
> Another set of pro-evolution experts wrote, "That molecular evidence typically squares with morphological patterns is a view held by many biologists, but interestingly, by relatively few systematists. Most of the latter know that the two lines of evidence **may often be incongruent.**"

The two methods of determining ancestry are "often incongruent". What I am looking for in order to be convinced of common ancestry is substantial agreement between morphological phylogenies and molecular phylogenies. I don't see that, so I am still skeptical of common ancestry. Especially with all the examples of convergence that I keep finding out about.

U.S. CO2 emissions declining, but China and Asia CO2 emissions are rising

September 24, 2014 | by Wintery Knight | Link | Original Link

---

Investors Business Daily reports.

Excerpt:

> America is a global warming success story, for those who believe in such things. CO2 emissions are on the downtrend in this country. In fact, they are lower today than they were two decades ago. When you account for all the economic and population growth over those 20 years, that decline is even sharper.
>
> What's more, the U.S. — along with several other industrialized nations — is below the CO2 emission targets set by the Kyoto protocol. You know, the treaty that Al Gore & Co. said would save the planet, but that America never ratified.
>
> China is a completely different story. It's tripled the amount of CO2 it pumps into the air each year over those same two decades, to the point where it now emits almost twice as much CO2 as the U.S.
>
> Other developing countries are spewing CO2 at record levels as well. And all are increasing at rates much faster than industrialized nations could ever hope to cut theirs back.
>
> So where are the protestors? Are they in Beijing demanding that the communist leaders there "change course"? Are they in India — where CO2 levels have doubled in the past two decades — demanding more solar panels and electric cars?
>
> Nope. Instead they flock together in New York, in London, even Australia (which emits as much CO2 in an entire year as China does in 16 days).

I guess I don't really care about CO2 levels with respect to climate change, because like all other sane people, I have watched almost all of the projections made by global warming alarmists be falsified in my lifetime by actual data.

The Wall Street Journal explains how this was done.

Excerpt:

> The U.N. no longer claims that there will be dangerous or rapid climate change in the next two decades. Last September, between the second and final draft of its fifth assessment report, the U.N.'s Intergovernmental Panel on Climate Change quietly downgraded the warming it expected in the 30 years following 1995, to about 0.5 degrees Celsius from 0.7 (or, in Fahrenheit, to about 0.9 degrees, from 1.3).
>
> Even that is likely to be too high. The climate-research establishment has finally admitted openly what skeptic scientists have been saying for nearly a decade:

> Global warming has stopped since shortly before this century began.
>
> First the climate-research establishment denied that a pause existed, noting that if there was a pause, it would invalidate their theories. Now they say there is a pause (or “hiatus”), but that it doesn’t after all invalidate their theories.
>
> When the climate scientist and geologist Bob Carter of James Cook University in Australia wrote an article in 2006 saying that there had been no global warming since 1998 according to the most widely used measure of average global air temperatures, there was an outcry. A year later, when David Whitehouse of the Global Warming Policy Foundation in London made the same point, the environmentalist and journalist Mark Lynas said in the New Statesman that Mr. Whitehouse was “wrong, completely wrong,” and was “deliberately, or otherwise, misleading the public.”
>
> We know now that it was Mr. Lynas who was wrong. Two years before Mr. Whitehouse’s article, climate scientists were already admitting in emails among themselves that there had been no warming since the late 1990s. “The scientific community would come down on me in no uncertain terms if I said the world had cooled from 1998,” wrote Phil Jones of the University of East Anglia in Britain in 2005. He went on: “Okay it has but it is only seven years of data and it isn’t statistically significant.”
>
> If the pause lasted 15 years, they conceded, then it would be so significant that it would invalidate the climate-change models upon which policy was being built. Areport from the National Oceanic and Atmospheric Administration (NOAA) written in 2008 made this clear: “The simulations rule out (at the 95% level) zero trends for intervals of 15 yr or more.”
>
> Well, the pause has now lasted for 16, 19 or 26 years—depending on whether you choose the surface temperature record or one of two satellite records of the lower atmosphere. That’s according to a new statistical calculation by Ross McKitrick, a professor of economics at the University of Guelph in Canada.
>
> It has been roughly two decades since there was a trend in temperature significantly different from zero. The burst of warming that preceded the millennium lasted about 20 years and was preceded by 30 years of slight cooling after 1940.

I love science. But I love *experimental* science. When you have government, which is intent on growing larger, paying scientists to find evidence that government *needs* to grow larger, you have a conflict of interest. We shouldn’t be so anxious to *appear* on the side of the “smart” people, because “smart” people have a tendency to say stupid things when there is money being pressed into their hands. We need to be skeptical.

The cosmic background radiation is fact. The fine-tuning of the force of gravity is fact. Protein folding is fact. Predicting the weather hundreds of years into the future is something else entirely. Especially when you have to edit out the Medieval Warming Period and “hide the decline using Mike’s Nature trick”. That certainly isn’t science. It’s

prostitution.

College allows transgender man to expose himself to young girls

September 24, 2014 | by Wintery Knight | Link | Original Link

---

Todd Starnes reports on it for Fox News.

Excerpt:

> A Washington college said their non-discrimination policy prevents them from stopping a transgender man from exposing himself to young girls inside a women's locker room, according to a group of concerned parents.
>
> "Little girls should not be exposed to naked men, period," said David Hacker, senior legal counsel with the Alliance Defending Freedom. A group of concerned parents contacted the legal firm for help.
>
> Hacker said a 45-year-old male student, who dresses as a woman and goes by the name Colleen Francis, undressed and exposed his genitals on several occasions inside the woman's locker room at **Evergreen State College.**
>
> Students from nearby Olympia High School as well as children at a local swimming club share locker rooms with the college.
>
> According to a police report, the mother of a 17-year-old girl complained after her daughter saw the transgender individual walking naked in the locker room. A female swim coach confronted the man sprawled out in a sauna exposing himself. She ordered him to leave and called police.
>
> The coach later apologized when she discovered the man was transgendered but explained there were girls using the facility as young as six years old who weren't used to seeing male genitals.

And listen to what he says about it:

> Francis told KIRO-TV that he was born a man but chose to live as a woman in 2009. Francis said he felt discriminated against after he was told told leave.
>
> "This is not 1959 Alabama," Francis told the television station. "We don't call police for drinking from the wrong water fountain."

This is not 1959 Alabama. He means that if you judge him, then you are a racist. Understand? And legions of college students have been taught to agree with his view, thanks to their highly-educated humanities professors.

The story was also reported on ABC News.

Where did these non-discrimination policies come from?

Well, I remember a secular woman I worked with a while back explaining to me why she favored moral relativism. She said that she felt bad about being judged when she did something selfish, and she thought that if she refused to make any judgments of other

people, then no one would ever judge her. What she really meant is that *if she shamed people who made moral judgments of anyone* then there would be no one left with the courage *to judge her actions.* So moral relativism is really about stopping anyone from judging anyone, in order to not be judged yourself.

This is the mindset behind the people who want us to do away with moral judgments and objective moral standards. This transgender story reminds me of the two gay dads story. Two gay men adopted a newborn boy from Russia for the purpose of child molestation and sex-trafficking. The abuse started almost immediately after *the child's birth.* But this was all perfectly OK with the tolerance/compassion crowd, because as they like to say "who are we to judge?" Whenever you hear that coming from someone, remember what happens when we don't respectfully express disagreements on moral issues, and vote for sensible moral boundaries in the law. We can make moral judgments without being disrespectful or coercive about it. My own view is that we should be promoting the idea that children should grow up with their biological mothers and fathers. We should be celebrating that, and promoting that.

Should we be trying to change the world from the bottom up or the top down?

Dr. Paul Gould is a professor of philosophy (PhD from Purdue) at Southwestern Baptist Theological Seminary.

Here is his bio, which says, in part:

> I have a Masters in Philosophy of Religion and Ethics from Talbot School of Theology and a Ph.D. in Philosophy from Purdue University.
>
> I am an Assistant Professor of Philosophy and Christian Apologetics at Southwestern Baptist Theological Seminary in Fort Worth, Texas.

What his bio page doesn't say is that he left a career in business to go onto this apologetics/philosophy track. I find that very interesting, because like most professionals with an interest in apologetics, I had the same dream – to go and do a PhD and get into a college and be a positive influence on Christian kids. But the main thing is that he has had some experience in the real world.

Anyway, Dr. Gould has written two posts on how to change the world, and I want you to look at an excerpt from the first one.

First post:
