One thing I've noticed in talking to atheists who grew up in Christian homes is that they often leave their Christian worldview behind because of a disappointment with God. For some reason, they get this idea that God is our cosmic butler. We can do whatever we want in order to be happy, and if we want any help in this, then we just ring for him. When we encounter disappointment, our tendency is to just leave God behind.

Paul Copan explains the high points of the problems of evil and suffering in 17 minutes. (H/T Apologetics 315)

The MP3 file is here.

The video is here:

Topics:

- the question itself reveals that we are moral beings
- the problem of evil is the great interrupter of human well-being
- every philosophy of life has to address this question
- is God required to give us a life that is easy and comfortable?
- evil is a departure from good, i.e. – the way things ought to be
- a way things ought to be implies a plan for what ought to be
- human evil implies a plan for the way we ought to be
- free creatures have the ability to deviate from the plan
- where does this plan for the universe and us come from?
- how can there be a way we ought to be come from?
- evil is the flip side of good so where does good come from?
- God's own moral nature is the standard of good and evil
- where does evil from natural disasters come from?
- how dangerous natural phenomena preserve Earth's habitability
- there is a benefit from tectonic activity
- similarly, God lets humans freely choose knowing harm may result
- people are free to try to find meaning in something other than God
- God is able to use negative things to bring about positive results
- e.g. – when good people suffer, they can comfort and care for others
- can people be good enough on their own without God?

I do think it's worth thinking about whether the New Testament portrays God as our cosmic butler, just waiting on us hand and foot so that we can be happy. Personally, I think you'd have to be crazy to get that impression of God from the Bible. Especially from the life of Jesus, who suffers in order to do the will of his Father. Wouldn't it be funny if atheists were disbelieving in a God of their own making? Suffering in the pursuit of

goodness has always been the center of the Christian life. I'm not sure where people get this idea that God's job is to make us happy, according to our own desires. Seems kind of shallow. Certainly not Biblical. Do people even read the Bible any more to find out what God is really like? Maybe that's the problem.

If you want to read two *good* books for beginners on Christian Apologetics that cover a range of intermediate issues, then pick up "Passion Conviction" and the companion "Contending With Christianity's Critics". Awesome, awesome resources. The Kindle editions can often be had for $3 each on Amazon.

Is Sam Harris successful at rationally grounding objective moral values and duties?

February 20, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

I just wanted to put out a few snips from this layperson-level article on the Reasonable Faith web site. The article is about atheist scholar Sam Harris, and his attempt to provide a basis for morality on atheism.

Here's the Harris project:

> The question then is, what is the best foundation for the existence of objective moral values and duties? What grounds them? What makes certain actions good or evil, right or wrong? Traditionally, God has been the highest Good (*summum bonum*) and His commandments constitutive of our moral duties. But if God does not exist, what foundation remains for objective moral values and duties?

Dr. Craig is able to show why Harris' attempt to ground the objective moral value of humans in "human flourishing" fails, by using the law of identity to show that Harris' rule doesn't account for the possibility that those who do evil could *possibly* flourish and be happy. If Harris is right that objective morality is *identical* to human flourishing, then it cannot even be *possible* that this be the case. This can be a bit confusing to non-philosophers, though, so I'll focus on Dr. Craig's argument against Harris' attempt to ground objective moral duties.

Dr. Craig writes:

> That takes us to a second question: Does atheism provide a sound foundation for objective moral duties? Duty has to do with moral obligation and prohibition, what I ought or ought not to do. Here reviewers of *The Moral Landscape* have been merciless in pounding Harris' attempt to provide a naturalistic account of

> moral obligation. Two problems stand out.
>
> **First:** Natural science tells us only what *is*, not what *ought* to be, the case. As philosopher Jerry Fodor has written, "Science is about facts, not norms; it might tell us how we are, but it wouldn't tell us what is wrong with how we are." In particular it cannot tell us that we have a moral obligation to take actions that are conducive to human flourishing.
>
> So if there is no God, what foundation remains for objective moral duties? On the naturalistic view, human beings are just animals, and animals have no moral obligations to one another. When a lion kills a zebra, it kills the zebra, but it does not *murder* the zebra. When a great white shark forcibly copulates with a female, it forcibly copulates with her but it does not *rape* her — for there is no moral dimension to these actions. They are neither prohibited nor obligatory.
>
> So if God does not exist, why think we have any moral obligations to do anything? Who or what imposes these moral duties on us? Where do they come from? It is hard to see why they would be anything more than a subjective impression ingrained into us by societal and parental conditioning.

So we might *feel* morally obligated to do something, maybe what our herd expects of us in this time and place we live in. But on atheism those feelings are arbitrary. After all, societies have evolved where feelings of obligation are felt by people to perform suicide bombings against civilians. On atheism, those feelings are as valid and grounded as any other "duties" because they emerge from the same process in other times and places. Obligations change between time and place – they are not objectively real. But that means that our moral duties are not objective, they are arbitrary – if atheism is true. The same "socio-biological evolution" is generating opposite moral duties in different times and places. This is not "objective".

And the second objection is even more lethal:

> **Second:** "ought" implies "can." A person is not morally responsible for an action he is unable to avoid. For example, if somebody shoves you into another person, you are not to blame for bumping into this person. You had no choice. But Harris believes that *all* of our actions are causally determined and that there is no free will. Harris rejects not only libertarian accounts of freedom but also compatibilistic accounts of freedom. But if there is no free will, no one is morally responsible for anything. In the end, Harris admits this, though it's tucked away in his endnotes. Moral responsibility, he says, "is a social construct," not an objective reality: "in neuroscientific terms no person is more or less responsible than any other" for the actions they perform. His thoroughgoing determinism spells the end of any hope or possibility of objective moral duties on his worldview because we have no control over what we do.
>
> Harris recognizes that "determinism really does threaten free will and responsibility as we intuitively understand them." But not to worry! "*The illusion*

> *of free will is itself an illusion*." The point, I take it, is that we do not really have the illusion of free will. Not only is such a claim patently false phenomenologically, as any of us can attest, but it is also irrelevant. The fact remains that whether we experience the illusion of free will or not, on Harris' view we are thoroughly determined in all that we think and do and can therefore have no moral responsibilities.

On Harris' view, human beings are computers made out of meat. But if you cannot freely make moral choices, then you cannot choose to perform moral duties or not. What is amazing to me is why he wants to deny free will in the first place. He is surely very well aware of his own experience of free will, and his own consciousness, for that matter. Before we even start to look at scientific evidences against atheism like the origin of the universe, the cosmic fine-tuning, the origin of life, the Cambrian explosion, etc. we already have evidence within ourselves that naturalism is false.

Just in passing, my friend Micah sent me this article about Sam Harris' academic credentials. Although Harris has a PhD in neuroscience, the underlying reality is a bit more complicated. When I watched him debate William Lane Craig, he seemed to be ignorant of simple problems with his utilitarian moral views, and his inability to ground libertarian free will. The problems with utilitarianism have been known for hundreds of years. You can watch the debate yourself and see if you think he was prepared or not.

Divorce is horribly painful for boys

February 21, 2018 | by Wintery Knight | Link | Original Link

About a month ago, one of my friends ECM committed suicide. He used to send me a lot of stories for this blog. Whenever we talked about his background, he would always point to his parents' divorce as something that really hurt him badly, and caused him to abandon the faith of his childhood for drinking and promiscuity in college. I found an editorial on Fox News that talks about some of the things that he told me he had experienced.

Suzanne Venker writes:

> Broken homes, or homes without a physically and emotionally present mother and father, are the cause of most of society's ills. "Unstable homes produce unstable children," writes Peter Hasson at The Federalist.
>
> He adds, "On CNN's list of the "27 Deadliest Mass Shootings In U.S. History," seven of those shootings were committed by young males since 2005. Of the seven, only one—Virginia Tech shooter Seung-Hui Cho—was raised by his biological father throughout childhood."
>
> Life for Nikolas Cruz was no different. His adoptive father died when Cruz was very young, and his adoptive mother had a difficult time raising him.
>
> America's boys are in serious trouble. As Warren Farrell's new book, The Boy Crisis, explains, boys are experiencing a crisis of education, a crisis of mental health (as in the case of Nikolas Cruz), a crisis of purpose. And at the root of it all is fatherlessness.
>
> Indeed, there is a direct correlation between boys who grow up with absent fathers and boys who drop out of school, who drink, who do drugs, who become delinquent and who wind up in prison.
>
> And who kill their classmates.

The reason why so many people on the left want to ban guns as the solution to violent crime they don't like is because they don't want to address the root cause of the problem: fatherlessness. And why don't they want to address it? In a second editorial, Suzanne Venker explains why not.

Excerpt:

> To point out that boys need their fathers is to shine a spotlight on divorce and single mothers; and that is, admittedly, uncomfortable. But there's no way to address fatherlessness comfortably.
>
> The fact is, divorce and family breakdown—which, to answer my emailer's question, is the root of fatherlessness—is catastrophic for children. There's more than one reason why, but an obvious one is that in the majority of cases, divorce

> separates children from their fathers.
>
> This is destructive to both boys and girls, but each sex suffers differently. Girls who grow up deprived of their father are more likely to become depressed, more likely to self-harm, and more likely to be promiscuous. But they still have their mothers, with whom they clearly identify. Boys do not have a comparable identification and thus suffer more from father absence. They also tend to act out in a manner that's harmful to others, which girls typically do not.
>
> […]More often than not, children lose contact with their fathers—for two reasons. One, mothers remain the default custodial parent in the average American divorce and thus retain most of the control. Second, it is usually women who consider themselves the aggrieved party, as evidenced by the fact that wives initiate 70 percent of divorces.
>
> The unfortunate result is that some divorced mothers use any opportunity to undermine their children's relationship with their father or, if not that, dismiss the significance of a father's role.
>
> […]And the saddest part is most absent fathers aren't absent by choice. The "deadbeat dad" exists, but not in spades. In many instances, women are divorcing perfectly good husbands in their search for what they believe will be a better match—which is a natural outgrowth of no-fault divorce. Certainly, women who are married to abusive or dangerous men must file for divorce. But such husbands and fathers cannot account for the 70 percent female-led divorce rate.

Seventy percent of divorces are initiated by women, and most of those are for flimsy reasons like unhappiness. As if marriage is about feeling good, and it's the other person's job to make you feel good. And if they don't make you feel good, then you can nuke the relationship. It can be very difficult for men to make women feel anything. Most men do the normal male roles in marriage: protect, provide, lead on moral and spiritual issues. But it's becoming very common for women today to not be "happy" with the normal male roles.

Differing attitudes on divorce

Personally, I think it's because of the pattern of hedonism that they build up with alcohol and promiscuity in college. The more men that women have sex with before marrying, the higher their likelihood of dissolving their marriage.

Even one non-husband premarital sex partner raises risk of divorce

Previously, I blogged about a Swiss study that showed that children tend to rebel against the religion of their parents if the father is not actively promoting it to them. Studies of prominent atheists find that their fathers are defective in some way – absent, immoral, unfaithful, weak, etc. It's not use crying about crime later if we as a society have decided to stay silent when women choose men poorly, and choose the timing of sex in relationships poorly. If women chase bad boys and make babies with bad boys, then we should be asking them why. This is a community, and poor decisions about who to make babies with costs us all in the long run.

Ohio parents denied custody of their daughter for not supporting transgenderism

February 22, 2018 | by Wintery Knight | Link | Original Link

Gay activist vandalizes pro-marriage sign

A long, long time ago, I wrote a very long post detailing a secular case against same-sex marriage. One of the reasons was that promoting gay rights would infringe on other basic rights, like the right to free speech and freedom of association. Same-sex marriage denies that that the two genders are different. Those who disagree with this are now being punished for their disagreement, e.g. – Christian business owners. It isn't difficult to predict that transgender activism will cause the same sorts of problems.

Here's an example reported at the Daily Wire:

> On Friday, Ohio parents were denied custody of their daughter for not being supportive enough of her alleged transgenderism.
>
> The 17-year-old biologically female child identifies as a boy and claims she has suicidal thoughts over her parents' lack of support for her transgenderism (they won't, for example, call her by her new chosen male name). The parents were fighting for custody of their daughter back from the state in an effort to stop potential transgender hormone treatment.
>
> An attorney representing the parents, whose names have not been disclosed because of privacy concerns, argued that the girl was not "even close to being able to make such a life-altering decision at this time." Representatives of the girl argued that a "medical team" claimed that the treatment was a matter of life and death.
>
> Hamilton County Judge Sylvia Sieve Hendon granted custody to the girl's maternal grandparents, who are open to transgender hormone therapy. The teenager has been living with them since 2016.

> According to CNN, Hendon also granted the grandparents the option to petition to change the teen's name to her new male name in probate court. The girl is now covered by their insurance.
>
> "The grandparents, rather than parents, will be the ones to help make medical decisions for the child going forward. But before any hormone treatment is allowed, the court ordered, the teen should be evaluated by a psychologist who is not affiliated with the current facility where he is receiving treatment, on 'the issue of consistency in the child's gender presentation, and feelings of non-conformity,'" notes CNN.

I thought this part was very interesting:

> The parents' Christian faith was used against them in the case by Donald Clancy of the Hamilton County Prosecutor's Office.
>
> "Father testified that any kind of transition at all would go against his core beliefs and allowing the child to transition would be akin to him taking his heart out of his chest and placing it on the table," argued Clancy.
>
> Brinkman denied the allegations and argued that the parents believed hormone therapy was "unnecessary" and "would do more harm than good."

In cases like this, I always like to remind Christians to remember how they vote. Many Christians think that a big secular government should be empowered to hand out welfare, stop global warming, provide free sex changes, free abortions and free contraceptives, etc. But they don't understand that a big secular government does not care about religious liberty, parental autonomy, or conscience rights. They care about redistributing taxpayer money to buy the votes of people who depend on government.

Legislators and judges are paid by taxpayers, through the collection of mandatory taxes. This means that the victims of Judge Sylvia Sieve Hendon are paying her salary. They are paying her to overrule their decision-making. Think about that. And think about that again when you decide whether to vote for smaller or bigger government.

How the presence and quality of fathers affects belief in God

February 23, 2018 | by Wintery Knight | Link | Original Link

A father in the home helps children to reconcile love and moral boundaries

Here's an article by Paul Copan which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own*rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of François-Marie Arouet.

> - *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
> - *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
> - *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
> - Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
> - *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
> - *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
> - *Bertrand Russell*(1872–1970): His father died when he was 4.
> - *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
> - *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
> - *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
> - We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
> - *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
> - *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
> - *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]
>
> Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Not only is there that anecdotal evidence, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was

> asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an more difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to

see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary. It is therefore very important to children to be shepherded by a man who studied moral issues (including evidence from outside the Bible) in order to know how to be persuasive to others. If you want your child to be religious and moral, you have to pick a man who is religious and moral. And it can't just be a faith commitment that he makes, he can just lie about that. Women ought to check whether men are bound to what they believe by checking what they've read. A man usually acts consistently with what he believes, and beliefs only get formed when a man informs himself through things like reading.

My advice to Christian women is this. When you are picking a man, be sure and choose one who is already invested in Christian things and producing results. It's very unlikely that he's going to start from nothing after you marry him. If you value your kids, make a man's interest in developing and acting on a Christian worldview the main thing you are looking for.

What are the historical arguments for the empty tomb narrative?

February 24, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

The word resurrection means bodily resurrection

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb

was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

There are multiple early, eyewitness sources for the empty tomb

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

A few quotes from atheist historians not from Dr. Craig's article: (thanks to Eric of Ratio Christi OSU)

> Michael Goulder (Atheist NT Prof. at Birmingham) "…it goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion." ["The Baseless Fabric of a Vision," in Gavin D'Costa, editor, Resurrection Reconsidered (Oxford, 1996), 48.]
>
> Gerd Lüdemann (Atheist Prof of NT at Göttingen): "…the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE." [The Resurrection of Jesus, trans. by Bowden (Fortress, 1994), 171-72.]
>
> Robert Funk (Non-Christian scholar, founder of the Jesus Seminar): "…The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30

> C.E., the time for development was thus two or three years at most." [Roy W. Hoover, and the Jesus Seminar, The Acts of Jesus, 466.]

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

So we are dealing with very early sources for the empty tomb.

Lack of legendary embellishments

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

The eyewitness testimony of the women

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was

> worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

The earliest response from the Jewish high priests assumes the empty tomb

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

See it used in a debate

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

What historical evidence is there to support the post-mortem appearances of Jesus?

February 25, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson are going to take a look at the data

Eric Chabot of Ratio Christi Ohio State University has a *great* post up about the post-mortem appearances of Jesus.

The post contains:

- a list of the post-mortem resurrection appearances
- quotations by skeptical historians about those appearances
- alternative naturalistic explanations of the appearances
- responses to those naturalistic explanations

Although there is a lot of research that went into the post, it's not very long to read. The majority of scholars accept the appearances, because they appear in *so many different sources* and because some of those sources are very early, especially Paul's statement of the early Christian creed in 1 Corinthians 15:3-7, which is from about 1-3 years after Jesus was executed by the Romans. Eric's post lists out some of the skeptical scholars who the appearances, and you can see how they allude to the historical criteria that they are using. (If you want to sort of double-check the details, I blogged about how historians investigate ancient sources before)

Let's take a look at some of the names you might recognize:

> **E.P. Sanders:**
>
> That Jesus' followers (and later Paul) had resurrection experiences is, in my

> judgment, a fact. What the reality was that gave rise to the experiences I do not know. “I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: ‘I saw him first!’ ‘No! I did.’ Paul’s tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus’ followers suffered mass hysteria. But mass hysteria does not explain the other traditions.” “Finally we know that after his death his followers experienced what they described as the ‘resurrection’: the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it.”[1]
>
> **Bart Ehrman:**
>
> It is a historical fact that some of Jesus’ followers came to believe that he had been raised from the dead soon after his execution. We know some of these believers by name; one of them, the apostle Paul, claims quite plainly to have seen Jesus alive after his death. Thus, for the historian, Christianity begins after the death of Jesus, not with the resurrection itself, but with the belief in the resurrection.[2]
>
> **Ehrman also says:**
>
> We can say with complete certainty that some of his disciples at some later time insisted that . . . he soon appeared to them, convincing them that he had been raised from the dead.[3]
>
> **Ehrman also goes onto say:**
>
> Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus’ resurrection, since this is a matter of public record.[4]
>
> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don’t doubt at all that some disciples claimed this. We don’t have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don’t think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19).[5]
>
> **Marcus Borg**
>
> The historical ground of Easter is very simple: the followers of Jesus, both then and now, continued to experience Jesus as a living reality after his death. In the early Christian community, these experiences included visions or apparitions of Jesus. [8]

The references to Paul are because of the early creed he records in 1 Corinthians 15:3-7, and his conversations with the other eyewitnesses in Galatians. Eric has another post where he goes over that early creed, and it is something that every Christian should know

about. It’s really kind of surprising that you never hear a sermon on that early creed in church, where they generally sort of assume that you believe everything in the Bible on faith. But skeptical historians don’t believe in the post-mortem appearances by faith – they believe it (in part) because of 1 Corinthians 15:3-7.

If you want to see a Christian scholar make the case for the resurrection appearances in a debate, then here is a post I wrote with the video, audio and summary of the William Lane Craig vs James Crossley debate on the resurrection.

Four Broward county deputies stood outside waiting while Parkland killer shot children

February 26, 2018 | by Wintery Knight | Link | Original Link

Broward county sheriff Scott Israel and Hillary Clinton

Should we depend on the police to protect us from armed criminals? Broward county sheriff Scott Israel is a well-known Democrat who supports Hillary Clinton. After the Florida shooting, he went on CNN and blamed the law-abiding gun owners for the Florida school shooting. But it was the police officers in his own department who stood around outside the crime scene doing nothing as children were shot by a killer they had visited 45 times.

The Daily Wire reports:

> On Thursday night, the American public learned two bombshell pieces of information regarding the Parkland, Florida mass shooting. First, we learned that the Broward County Sheriff's Office was told in November that the Parkland shooter "could be a school shooter in the making" but deputies didn't bother to write up a report; that report "came just weeks after a relative called urging BSO to seize his weapons." Then, in even more shocking news, we learned that an armed school resource officer at Marjory Stoneman Douglas High School sat outside and waited for four minutes during the six minute attack that ended in the deaths of 17 human beings.
>
> So, here's what we know.
>
> We know the FBI was warned specifically about the Parkland shooter not once,

> but twice — and did nothing.
>
> We know the Broward County Sheriff's deputies were called to the home of the Parkland shooter at least 39 times since 2010.
>
> We know that the Broward County Sheriff's Office was warned multiple times about the Parkland shooter.
>
> We know that an armed officer was present during the shooting and did nothing — and that JROTC students showed far more courage.

Just to be clear, it's actually FORTY-FIVE times that the Broward county police had to visit the killer's home.

Far-left Buzzfeed reports:

> Broward County sheriff's officials said in a statement late Saturday that they responded only to 23 calls involving suspected Florida school shooter Nikolas Cruz or his family over the years, but records obtained by BuzzFeed News show at least 45 responses since 2008.
>
> The number of calls made over the years involving Cruz or his family, according to the call records, are nearly twice the number publicly disclosed by the department.

And it's not just one armed school resource officer who sat around outside doing nothing, it's FOUR armed policemen who sat around outside doing nothing.

The Daily Wire reports:

> On Friday, CNN issued a shock report finding that earlier reports regarding Broward County Sheriff's Deputy Scot Peterson — the armed school safety officer who apparently cowered outside the Marjory Stoneman Douglas High School while a mass shooter slaughtered 17 people inside — were accurate, but that Peterson wasn't the only officer waiting outside. According to CNN:
>
> When Coral Springs police officers arrived at Marjory Stoneman Douglas High School in Parkland, Florida, on February 14 in the midst of the school shooting crisis, many officers were surprised to find not only that Broward County Sheriff's Deputy Scot Peterson, the armed school resource officer, had not entered the building, but that three other Broward County Sheriff's deputies were also outside the school and had not entered, Coral Springs sources tell CNN. The deputies had their pistols drawn and were behind their vehicles, the sources said, and not one of them had gone into the school.
> So there were four armed officers outside the school. And none of them did anything, according to CNN. They instead waited for Coral Springs police to lead the charge inside.
>
> What's more, Coral Springs City Manager Mike Goodrum apparently chewed out Broward County Sheriff Scott Israel over that malfeasance on February 15 — more than a week ago. Which means that Israel knew full well that his own office

> had botched everything dramatically when he stood on stage with CNN's Jake Tapper and a crowd of angry parents and community members and blamed the National Rifle Association and Dana Loesch for his own horrible failure.

Now, you might think that the sheriff in this case would resign immediately. It would probably be a good idea for him to lose his pension, and face civil and perhaps even criminal charges for criminal negligence. So, what did he do? He went on CNN and howled about how the NRA is to blame for the shooting, and that the answer to the shooting is reduced ownership of firearms by law abiding people. The NRA and the law-abiding gun owners did not visit the suspect's house 45 times, though.

You see, Sheriff Israel expects law-abiding people to not defend themselves from the fatherless killers produced by the socialist welfare state. He expects us to rely on him and his Broward county police officers. The same police officers who stood around outside doing nothing while children were shot.

It really makes me think about why CNN had this man at a townhall where he could point fingers at the NRA and law-abiding gun owners, when the truth is that his deputies stood around doing nothing while a killer they had visited 45 times murdered innocent children. Seems to me the NRA and the law-abiding people certainly had less to do with this shooting than the Democrat sheriff and his incompetent cowardly deputies.

Which side of the abortion rights debate is backed by scientific evidence?

February 27, 2018 | by Wintery Knight | Link | Original Link

Unborn Baby – 10 weeks old

Once upon a time I didn't know much about the case for abortion rights or the case for the right to life of unborn children. My reason for not reading much about it is that I thought that it was kind of a subjective issue. But, I started a project to read 1-2 books on every conceivable topic, including one on abortion. Lo and behold, it turned out that one side did have the backing of science.

This article from The Public Discourse explains: (links removed)

> The following are typical examples—only three of the many, many we could cite. These are from standard texts by embryologists, developmental biologists, and microbiologists:
>
> "Human life begins at fertilization, the process during which a male gamete or sperm unites with a female gamete or oocyte (ovum) to form a single cell called a zygote. This highly specialized, totipotent cell marked the beginning of each of us as a unique individual." "A zygote is the beginning of a new human being (i.e., an embryo)." Keith L. Moore, The Developing Human: Clinically Oriented Embryology, 7th edition.
>
> "Fertilization is the process by which male and female haploid gametes (sperm and egg) unite to produce a genetically distinct individual." Signorelli et al., Kinases, phosphatases and proteases during sperm capacitation, Cell Tissue

> Research.
>
> “Although life is a continuous process, fertilization (which, incidentally, is not a ‘moment’) is a critical landmark because, under ordinary circumstances, a new, genetically distinct human organism is formed when the chromosomes of the male and female pronuclei blend in the oocyte” (emphasis added; Ronan O’Rahilly and Fabiola Mueller, Human Embryology and Teratology, 3rd edition.

The genetically distinct part is key – this unborn child is has a different DNA signature (a human signature) than either the mother or the father. Nothing will be added or taken away from this new signature as the unborn child grows. It never changes.

More:

> These authorities all agree because the underlying science is clear. At fertilization—or, more precisely, when the sperm (a male sex cell) fuses with the oocyte (a female sex cell, more commonly referred to as an egg)—each of them ceases to be, and a new entity, one that is both genetically and functionally distinct from either parent, is generated. This new entity, initially a single totipotent cell, then divides into two cells, then (asynchronously) three, then four, eight, and so on, enclosed all the while by a membrane inherited from the oocyte (the zona pellucida), which then dissolves during implantation, allowing for continued growth in the direction of maturity as a member of the species. Even prior to implantation, however, these cells and membrane function as parts of a whole that regularly and predictably develops into the more mature stages of a complex human body.
>
> How do we know that the result of sperm-oocyte fusion is a new entity, rather than a continuation of the oocyte? We know that a new entity exists because, once the sperm penetrates the oocyte, a completely new trajectory of biological development commences. The biological activity of an oocyte is directed toward successful fertilization; the biological activity of sperm is directed toward penetration of an oocyte. The biological activity of the new entity that results when sperm and oocyte fuse, however, is directed toward nothing less than the development of a mature human organism, distinct from either parent. Further, this new entity’s activities are directed not by instructions from the mother’s body, as some people wrongly suppose, but by its own unique set of instructions, especially the blueprint for development contained in its unique genetic material. The mother’s body recognizes the zygote and then the embryo as an entity distinct from itself. In fact, the embryo must send out chemical signals to prevent the mother’s immune system from attacking it. The embryo also emits chemical signals that induce changes in the lining of the mother’s uterus to enable successful implantation.
>
> If this embryo is provided a suitable environment, nutrition, and protection from deliberate attack, serious injury, or disease, it will develop to the mature stage of a human organism. Thus, from the zygote stage onward this distinct, new

> organism has all of the internal resources—in its genetic and epigenetic structure—needed to develop itself (or, rather, himself or herself, since in the human sex is determined from the very beginning) to the mature stage of a human organism. At no point after fertilization—implantation, gastrulation, birth, puberty, etc.—does a fundamental change in biological trajectory occur. These subsequent stages of development are simply the unfolding of the zygote's inherent dynamism toward human organismal maturity. This shows that the zygote already is a human organism—a member of the species Homo sapiens—albeit at an early stage of his or her development.

So, since I like to win arguments with science, I just took the side of the debate that was backed by science. I really hate to lose debates, you know. I really like to cite scientific evidence when I'm debating.

The crime of abortion, it seems to me, is that you are depriving a human being of his or her future, because of your convenience right now. Human beings don't have the right to take away the futures of other human beings because they want to be unburdened by the results of their own actions. We shouldn't resort to violence in order to escape responsibility for our own actions. In almost every case, (except to save the life of the mother), killing the unborn child isn't justified. It's actually very scary to me that anyone would think that hurting other people was a reasonable response to one's own diminished happiness. How did we ever get to a place in society when people don't think that taking responsibility to care for the unborn child is morally better than killing the unborn child? It's a baby for goodness sake. We ought to be serious about setting up our lives and controlling ourselves so that we never hurt an unborn child.

Wayne Grudem explains male leadership in marriage

February 28, 2018 | by Wintery Knight | Link | Original Link

Man helping a woman with proper handgun marksmanship

I'm not willing to take advice on this from most pastors, but Wayne Grudem is someone I respect because he does such a good job of applying the Bible to political issues. So he's practical.

Anyway, here is something he wrote that was shared by a newlywed couple I am friends with.

Excerpt:

> Someone might say, "Well, okay, fine. There's a leadership role for Adam, and I guess that means husbands should have a leadership role in their marriage of some sort. But how does it work? How does it work in practice?"
>
> In our own marriage, Margaret and I talk frequently and at length about many decisions. I can tell you that I wouldn't be here tonight unless Margaret and I had talked about this and asked the Lord about it, and she had given blessing to it, and said, "Yes, I think that's right." Sometimes we make large decisions such as buying a house or a car, and sometimes they are small decisions like where we should go for a walk together. I often defer to Margaret's wishes, and she often defers to mine because we love each other.
>
> In almost every case, each of us has some wisdom and insight that the other does not have. Usually, we reach agreement on the decisions that we make. Very seldom will I do something that she doesn't think is wise–I didn't say never. She prays; she trusts God; she loves God. She is sensitive to God's leading and direction, but in every decision, whether it large or small and whether we have reached agreement or not, the responsibility to make the decision still rests with me.

Now, I am not talking about every decision they make individually. Margaret controls a much larger portion of our budget than I do because all the things having to do with the household and food and clothing and house expenses and everything . . . she writes the checks and pays the bills. I take care of buying books and some things about the car. I have appointments during the day with students. She doesn't get involved in that. She has her own appointments. She has her own calendar. I don't get involved in trying to micromanage all of that. We have distinct areas of responsibility. I am not talking about those things. I don't get involved in those things unless she asks my counsel.

But in every decision that we make that affects us together or affects our family, the responsibility to make the decision rests with me. If there is genuine male headship, I believe there is a quiet acknowledgement that the focus of the decision making process is the husband, not the wife. Even though there will often be much discussion and there should be mutual respect and consideration of each other, ultimately the responsibility to make the decision rests with the husband. And so, in our marriage the responsibility to make the decision rests with me.

This is not because I am a wiser or more gifted leader. It is because I am the husband. God has given me that responsibility. It is very good. It brings peace and joy to our marriage, and both Margaret and I are thankful for it. Now, I need to add very quickly, men, this does not mean that a husband has the right to be a selfish leader.

Just about three years ago, maybe four years ago now, we started the decision making process. Margaret had been in an auto accident in Chicago. As part of the aftermath of that accident, she was experiencing some chronic pain that was aggravated by cold and humidity, and Chicago is cold in the winter and humid in the summer. Chicago was not a good place for that. Some friends said to us, "We have a second house in Mesa, Arizona, if you would ever like to go there and just use it as a vacation place, we would like you to do that."

So we did. We visited Arizona. Mesa is a suburb of Phoenix. Margaret felt better. It was hot, and it was dry. And so I said, "Wow, Margaret I would love to move here, but I am only trained to do one thing; I can teach at a seminary and that is it. There aren't any seminaries here." The next day Margaret was looking in the yellow pages–literally. She said, "Wayne, there's something here called Phoenix Seminary." One thing led to another and God was at work in that seminary, and it was starting to grow.

Then we went through a decision making process. When we were in the middle of that decision making process, on the very day that we were focusing on that, I came in my normal custom of reading through a section of scripture each day, I came to a Ephesians 5:28, "Even so husbands should love their wives as their own bodies."

> I thought if I would move to take a job in another city for the sake of my body, if I were experiencing the pain that Margaret had, and husbands should love their wives as their own bodies–then shouldn't I move? Shouldn't I be willing to move for Margaret's sake? That was really why we moved to Phoenix.

Anyway, Dina and I were talking the other night about what would happen if – hypothetically – we suddenly found ourselves stuck with a child and responsible for it's education. I said to Dina that I would have a meeting with her, and ask her to research all of the alternative forms of schooling, and look over the research on education and then come back with her recommendation about what would get us the most effectiveness for the least cost and risk. Dina said that she thought that was an excellent plan, but being the kind of person she is, she said that she would not wait to be asked to do this, but would instead pro-actively go and do the work and then present it to me to make the decision. A wife is a chief of staff, she does the research. She has to know all the politics. She has to do the face to face conversations. She has to make all the calculations. She has to be good at putting aside her feelings and being logical and analytical, in order to get results.

I think a lot of people worry that male headship means that husbands will micromanage like a tyrant, but that's just wrong. That's not at all what a man learns about how to lead others, in his workplace. A man looks for a wife with skills and experience to solve these sorts of problems for him while he is out working, and without needing a lot of guidance or monitoring from him. Micromanaging makes them both less efficient and more stressed. The more education and work history she has before she marries, the better she will be at solving problems on her own initiative. I always encourage young women to study hard things and to do hard jobs, but to stop working when young children appear (the first five years of the child's life are critical). Learning hard things and doing hard jobs makes them more prepared for the roles of wife and mother.

Similarly, a wife does not want to choose a poor leader for a husband. She wants to choose someone who makes good decisions, and follows a plan through to a result. She should be looking at his decision making, especially in education, work and finances, and deciding whether he can do the male roles in a marriage. She should be looking at his leadership style and communication ability. These things are well-defined, and she should be able to assess his ability by looking at his life to see if anyone follows his lead at work or outside of work on anything that matters. Does he reach the goals that he plans to reach? Is he realistic about risks and costs? She has to do an assessment of his leadership ability, because if she marries him, he will be leading her. Naturally, she will have to know something about leadership first, and know something about men, and what men expect to achieve with their marriages. What is his plan?

The easiest way for a man to avoid marrying a woman who resists his leadership is to not marry her. And the easiest way for a woman to avoid marrying a man who does not delegate tasks to her that she is better at is to not marry him. We are responsible for these decisions. As long as you don't follow your feelings and intuitions, you'll be fine.

Don’t marry someone unless you have observed them demonstrating their ability to do the marriage roles cheerfully and well.

YouTube is using the radically leftist SPLC to decide which videos are “hateful”

March 1, 2018 | by Wintery Knight | Link | Original Link

Google and YouTube are censoring mainstream conservative viewpoints

The Southern Poverty Law Center is in the news again. The Daily Caller is reporting that YouTube, which is owned by the fascist corporation Google, is using the SPLC to decide which videos are “hateful”. So, I thought it might be a good idea to remind everyone about the SPLC’s past connection to left-wing domestic terrorism.

Excerpt:

> The Southern Poverty Law Center is assisting YouTube in policing content on their platform, The Daily Caller has learned.
>
> The left-wing nonprofit — which has more recently come under fire for labeling legitimate conservative organizations as “hate groups” — is one of the more than 100 nongovernment organizations (NGOs) and government agencies in YouTube’s “Trusted Flaggers” program, a source with knowledge of the arrangement told TheDC.

First, recall from this article posted at The Federalist that the Southern Poverty Law Center was the source of the “hate map” which was used by convicted domestic terrorist Floyd Lee Corkins in his attempt to shoot and kill everyone at the Family Research Council.

Excerpt:

> Corkins would later admit that he had located Family Research Council’s office on a “hate map” produced by the Southern Poverty Law Center, and he planned to shoot people in the building and smear the Chick-fil-A sandwiches on them.
>
> […]Much of the ensuing media coverage ignored or downplayed Corkins’ motives, which the *Washington Post* referred to as “a detail sure to reignite the culture wars.” A year later, Southern Poverty Law Center founder Morris Dees

> was still publicly defending the inclusion of Family Research Council on the organization's "hate map."

Just to be clear, this gay activist was convicted of domestic terrorism, and received 25 years in prison. He was stopped by a security guard, and this video is the footage of the attempted mass murder.

Let's find out more about SPLC, courtesy of this article from the centrist City Journal, a very respected source.

Here is the article from City Journal.

Excerpt:

> Ironically, the SPLC not only overlooks most of the real hate groups in operation today, along with overtly race-based organizations, such as the pro-Latino National Council of La Raza and MEChA, but also labels moderates with whom it disagrees "extremists" if they deviate from its rigid political agenda, which embraces open borders, LGBT rights, and other left-wing totems. The SPLC has branded Somali-born reformer Ayaan Hirsi Ali an "anti-Muslin extremist" for her opposition to female genital mutilation and other oppressive Islamic practices, and designated the respected Family Research Council as a "hate group" for its opposition to same-sex marriage. Likewise, the organization deems mainstream immigration-reform advocates such as the Center for Immigration Studies (CIS) and Federation for American Immigration Reform (FAIR) as hate groups. British Muslim activist Maajid Nawaz—regarded by most observers as a human rights leader—is suing the SPLC for listing him as an extremist.

Not just the Family Research Council, but the Alliance Defending Freedom and Liberty Counsel, too. Defending religious liberty at the Supreme Court and winning your case apparently makes you a "hate group".

More:

> Critics of the SPLC accuse the lavishly funded organization of peddling fear and smearing political opponents—mostly conservatives—as bigots. Its "Hatewatch" list is avowedly ideological, acknowledging that it "monitors and exposes the activities of the American radical right." Few left-wing organizations—and no Islamist groups—are branded in this way by the SPLC. Nevertheless, the SPLC, founded in 1971, has burrowed itself into the civil rights movement, the organized bar, the cloistered culture of large law firms, the education system, and even law enforcement as a champion for "the exploited, the powerless and the forgotten." Its executives are richly compensated, some in excess of $400,000 annually. Operating from palatial six-story quarters in Montgomery, Alabama (sometimes called the "Poverty Palace"), it enjoys a $300 million endowment, including more than $23 million in cash.

The non-profit rating group "Charity Watch" gives the SPLC an "F" rating. This is the

lowest grade possible.

More:

> The SPLC frequently rails against public figures as “enablers” not technically designated as hate groups or extremists, such as Texas governor Greg Abbott, former congressman and presidential candidate Ron Paul, radio talk show host Glenn Beck, Fox News commentator Judge Andrew Napolitano, and Kentucky senator Rand Paul. Rush Limbaugh, the Breitbart News Network, the Boy Scouts of America, and Focus on the Family (founded by psychologist, broadcaster, and best-selling author James Dobson) have also earned the SPLC’s wrath.

And finally:

> What many of the individuals and groups condemned by the SPLC have in common is a conservative orientation. Favoring traditional marriage becomes the moral equivalent of cross-burning; opposing illegal immigration or amnesty for illegal immigrants equates to advocating genocide; resisting the spread of radical Islam invokes Timothy McVeigh; and anti-tax Tea Party groups are now indistinguishable from armed militias or Holocaust deniers. Thus, dissent is de-legitimatized, and political foes are demonized.
>
> […]SPLC senior fellow Mark Potok, a 20-year veteran of the organization and editor of its “hate list”—a quarterly publication—has admitted that “our aim in life is to destroy these groups, to completely destroy them.”

How far would the SPLC go to “destroy” their enemies? Well, the SPLC-inspired attack on the Family Research Council is not the only time that the SPLC has been linked to violent left-wing extremism.

Consider this story from the radically leftist New York Times.

They write:

> > It was a little after 5 p.m., a quiet time in a quiet neighborhood, before many people had returned home from work on Tuesday, when two women called 911 to report multiple gunshots and screams echoing through a condominium complex here near the University of North Carolina.
> >
> > By the time the police arrived, three people were dead — a newlywed couple and the woman’s sister. They were young university students, Muslims of Arab descent, and high achievers who regularly volunteered in the area. A neighbor, a middle-age white man, was missing — then under arrest and charged with three counts of murder.
> >
> > […]Mr. Hicks, appeared to have a deep dislike of all religion. On his Facebook page, nearly all of his posts expressed support for atheism, criticism of Christian conservatives or both.

Let's take a look at what's on his Facebook page:

> > His Facebook Likes included the Huffington Post, Rachel Maddow, the Southern Poverty Law Center, Freedom from Religion Foundation, Bill Nye "The Science Guy," Neil deGrasse Tyson, Gay Marriage groups and similar progressive pages.

Previously, I blogged about a peer-reviewed study published in the journal *Academic Questions*, found that the SPLC "…fails to use objective criteria in determining which organizations should be labeled a "hate group"…". Something to keep in mind now that you know that YouTube is letting them censor content.

William Lane Craig debates atheist Lawrence Krauss: Does God Exist?

March 2, 2018 | by Wintery Knight | Link | Original Link

British Spitfire and German Messerschmitt Me 109 locked in a dogfight

Here is the video from the third debate from Dr. William Lane Craig's speaking tour in Australia.

Format:

- William Lane Craig (15 min)
- Lawrence Krauss (15 min, but was actually 21:40)
- Moderated discussion
- Question and answer

Dr. Graham Oppy, the moderator, is a well-known atheist philosopher. He let Dr. Krauss speak for 21 minutes and 40 seconds, which is why my summary of Krauss is so long.

The video:

Summary

After careful consideration, I decided not to be snarky at all in this summary. What you read below is what happened. There may be some small mistakes, but I will fix those if people tell me about them. I also included some quotes and timestamps for the more striking things that Dr. Krauss said.

The debate itself starts at 4:50 with Dr. Craig's opening speech. He does use slides to show the structure of his arguments.

Dr. Craig's opening speech. (4:50)

1. The kalam cosmological argument:
    - God is the best explanation of the origin of the universe
    - The Borde Guth Vilenkin theorem supports the absolute beginning of the universe
    - Even if our universe is part of a multiverse, the multiverse itself would have to have an absolute beginning
    - Speculative cosmologies try to challenge the Big Bang theory, but none of them – even if true – can establish that the past is eternal
    - Only two types of things could explain the origin of spece, time, matter and energy – either abstract objects or minds
    - Abstract objects do not cause effects, but minds do cause effects (we do it ourselves)
    - A mind is the best explanation for the origin of the universe
2. The unreasonable effectiveness of mathematics:
    - The underlying structure of nature is mathematical – mathematics is *applicable* to nature
    - Mathematical objects can either be abstract objects or useful fiction
    - Either way, there is no reason to expect that nature should be linked to abstract objects or fictions
    - But a divine mind that wants humans to understand nature is a better explanation for what we see
3. The cosmic fine-tuning for the existence of intelligent life
    - There are two kinds of finely-tuned initial conditions: 1) cosmological constants and 2) quantities
    - These constants and quantities have to be set within a narrow range in order to permit intelligent life
    - There are three explanations for this observation: law, chance or design
    - Law is rejected because they are put in at the beginning or matter – they don't emerge from matter
    - Chance must be rejected, because they odds are just too long unless you appeal to a world-ensemble
    - We do not observe what the world ensemble hypothesis predicts that we should observe
    - Design is the best explanation for finely-tuned constants and quantities
4. The existence of objective moral values and duties
    - Our experience of morality (values and duties) is that it is objectively real and incumbent on us
    - When someone goes into a classroom and shoots at innocent children, that is objectively wrong
    - On naturalism, moral values and moral duties do not exist – they are conventional and variable by time and place
    - The best explanation for the existence of objective moral values and duties is that God exists

5. The historicity of the resurrection of Jesus
    - There are three widely-accepted facts that are best explained by the resurrection hypothesis
    - 1) the empty tomb, 2) the post-mortem appearances, 3) the early church's belief in the resurrection
    - Naturalistic attempts to explain these 3 boilerplate facts fail
    - The best explanation of the 3 minimal facts is that God raised Jesus from the dead
6. The immediate experience of God
    - Belief in God is a "properly basic" belief – rational even without arguments because of experience of God

Dr. Krauss' opening speech. (21:12)

Slides: (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14)

1. Religious pluralism I
    - There have been lots of different gods created by people through history
    - We've gotten rid of all of them by understanding how the universe works by doing science
    - Religion is just stories, and the stories are inconsistent with how the universe works
2. Progress of naturalistic science I
    - Newtonian physics refutes the idea that angels push planets around
    - Darwinian evolution refutes design arguments, including the one that Dr. Craig presented (24:10)
    - Biochemistry hasn't explained how life originated, but we will have the solution soon
    - Physics shows us that matter can be created and destroyed without need a God
    - Physics shows us that universes can be created and destroyed "no problem"
3. Religious pluralism II
    - Since we have been able to disprove all the gods we've invented, why hang on to the last one
    - It's unlikely that the God that Dr. Craig presented exists, because we disproved all the others he didn't present
4. Hiddenness of God
    - There is a complete lack of evidence for the other 999 gods, so how likely is it that the God Dr. Craig presented exists
5. Religious pluralism III
    - There are inconsistencies between various religions, so therefore there can be no religion that is right
6. Progress of naturalistic science II
    - Peasants had a very low level of knowledge about the world and they believed

in God
    - But our level of knowledge has increased over time, so we shouldn't believe in God now
    - Peasants thought that the Earth orbited the Sun, but this is now known to be false
    - The Scriptures said that the Earth orbited the Sun, but now we know that's false from science
7. Christianity plagiarizes from other religions I
    - There is nothing new or special about Jesus
    - He's just as unpleasant as all the other gods
    - Everything particular to Jesus occurs in other religions
8. Catholics are inconsistent about what they believe
    - I'll bet most Catholics don't really believe in transubstantiation
    - I'll bet most Catholics don't really believe in the virgin birth
9. The resurrection is copied from many other religions
    - Dionysus, Osiris, etc.
10. There is no evidence for the resurrection
    - The stories about Jesus were written "decades or hundreds of years after the fact"
    - The stories are inconsistent with each other
    - Dr. Craig tells me that historical Jesus scholars all accept that the resurrection happened
    - That's like saying that all alien abductions experts agree that alien abductions happened
    - It's unreasonable to think that the resurrection happened because no one saw it happen
    - I accept that people reported on appearances, but hallucination theory can explain that
11. The timeline for the creation and incarnation are all wrong
    - The creation, planet formation, hominids, incarnation, etc. all take place in the wrong times
    - If God knew what he was doing, he would done everything at better times to be more efficient
12. David Hume's argument against miracles is sound
    - Extraordinary claims require extraordinary evidence – nothing wrong with this argument
    - Miracles are really just coincidences
    - Catholic apparitions at Lourdes disprove the historical argument that Dr. Craig made for the resurrection
13. God is petty and jealous
    - God shouldn't demand that we trust him, esteem him and consider his character when we make decisions
    - The atoning death of Jesus for the sins of the world also makes no sense

14. Belief is based on geography
    - What you believe is clearly correlated with where you are born
    - There is even an Islamic clone of Dr. Craig who “uses the exact same arguments” that he does to prove Islam
    - Belief in God is decreasing in the Internet-accessible world
15. Science can develop morals without God
    - Reason is able to guide our actions to be moral
    - Morality evolves over time, so there is no objective morality
    - Catholicism teaches things that are immoral
    - Some things are prohibited by biological revulsion, such as incest
    - But if a brother and sister have sex using condoms “is that morally wrong? I can’t say it is frankly” (37:24)
16. Dr. Craig is irrational
    - “I came here convinced based on my past interactions and his writing that Dr. Craig was a dishonest Charlatan”
    - “Any argument that validates God is reasonable to him”
    - “And any argument against it is not only unreasonable but wrong and worth distorting”
    - “Because it must be wrong – he’s decided the answer in advance”
17. Dr. Craig is immoral
    - Dr. Craig thinks it is OK for God to command that Canaanite children are killed
    - “So in fact if they were Canaanite children in that schoolroom that he talked about then it would be OK”
    - It’s not reasonable to justify genocide in that way, but Dr. Craig is willing to go to those lengths
18. The cause of the origin of the space time universe need not be God
    - Dr. Craig says that if there is an explanation for the origin or space, time, matter and energy it must be God
    - But it could just as easily be turtles or Zeus
19. Dr. Craig misrepresents the Borde Guth Vilenkin theorem
    - Alexander Vilenkin wrote me an e-mail that says that the theorem doesn’t work in all cases
    - “Dr. Craig is so convinced that these arguments must be true that he won’t listen to the fact that they’re not”
20. Darwinian evolution explains the fine-tuning
    - “Life was fine tuned – we got rid of it with Darwin”
    - Mutation and natural selection explain the cosmic fine-tuning argument that Dr. Craig presented
21. Suboptimal design disproves the fine-tuning argument
    - “We get back aches” therefore “This argument that [the universe] is fine-tuned for life is nonsense”
22. William Lane Craig can be proven to exhibit homosexual behavior using logical arguments

    - Look, you can construct arguments that are clearly wrong
    - Premise 1: “All mammals exhibit homosexual behavior”
    - Premise 2: “William Lane Craig is a mammal”
    - Seems to be saying that logical arguments can prove false things “it’s nonsense”
23. Dr. Craig distorted a podcast that some group made on pain receptors
    - Dr. Craig’s faith is so strong that it causes him to distort what this group said

Discussion: (44:35)

I will not be summarizing everything that was said, just a few main points.

The segment from 52:18 to 57:12 about the Vilenkin e-mail on the BVG theorem is a must-see. Krauss is standing up and gesticulating while Craig is calmly trying to quote a paper by Vilenkin that shows that Krauss is misrepresenting Vilenkin. Krauss constantly interrupts him. After a while, when Craig exposes him as having misrepresented Vilenkin and gets him to admit that all current eternal models of the universe are probably wrong, he quietens down and can’t even look at Craig in the face.

Cosmological argument:

- Craig: The e-mail says any universe that is expanding, on average, requires a beginning
- Craig: There are two models – Aguirre & Gratton and Carroll & Chen – where there is a period of contraction before the expansion
- Craig: The two models are the ones cited in the e-mail that Dr. Krauss showed
- Craig: In the very paper by Vilenkin that I cited, he says that both of those models don’t work
- Krauss: (agitated and interrupting) Vilenkin said that they have to make an assumption about entropy that they have no rationale for
- (as Craig starts to talk Krauss makes an exaggerated, disrespectful gesture and sits down in a huff)
- Craig: Yes, an unwarranted assumption means that they don’t have EVIDENCE for their theories being correct
- Krauss: (agitated and interrupting) “All the evidence suggests that the universe had a beginning but WE DON’T KNOW!!!!!!!” (raising his voice)
- Craig: I’m not saying that we know that the universe had a beginning with certainty
- Craig: I am saying that the beginning of the universe is more probably true than false based on the evidence we have
- Craig: And you agree with me about that – you think the universe had a beginning
- Krauss: (agitated and interrupting) (Unintelligible)
- Moderator: One at a time
- Craig: In your Vilenkin e-mail slide, at the end of the paragraph where the two models are mentioned that Vilenkin specifically shows…
- (I am guessing that Craig is going to ask why so much of what Vilenkin wrote has

been cut out of the e-mail that Krauss showed)
- Krauss: (agitated and interrupting) Because it was technical…
- Moderator: Lawrence! Hang on a sec!
- Craig: He specifically shows that these models are not past eternal, and that they require a beginning just like the others…
- Krauss: (agitated and interrupting) We can do the math if you want
- Craig: Now wait. I couldn't help notice that there on your slide there was a series of ellipsis points indicating missing text…
- Krauss: (agitated and interrupting) "Yeah, because it was technical!"
- Craig: "I wonder what you deleted from the original letter"
- Krauss: (agitated and interrupting) "I just told you!"
- Craig: "Now wait. Could it have been something like this: (reads a quote from Vilenkin) 'You can evade the theorem by postulating that the universe was contracting prior to some time. This sounds as if there is nothing wrong with having contraction prior to expansion. But the problem is that a contracting universe is highly unstable. Small perturbations would cause it to develop all sorts of messy singularities, so it would never make it to the expanding phase.'
- Craig: "That's Vilenkin."
- Krauss: "In this paper, that's absolutely right"
- Krauss: But it's ok for theories to assume things that we know are wrong – they are still good theories – it's unknown
- (Craig turns away and looks through his papers)
- Craig: "Isn't it true that the only viable quantum gravity models on order today involve a beginning – have a finite past?"
- Krauss: "No"
- Craig: "Well, can you give us one then"
- Krauss: (talks about a variety of possible eternal models) "In my experience in science, all of them are probably wrong"
- Krauss: "You know most theories are wrong, which is why, you know, it's hard"
- Craig: "Right"

I noticed that a huge number of atheist web sites are taking the Vilenkin quote that Krauss used out of context, like this one and this one. There are probably a lot more of them like that, which I think is interesting. That's why we have these debates, I guess. To set the record straight about who accuses people of being dishonest, and who is actually dishonest.

Fine-tuning:

- Krauss tried to argue that he had explained the fine-tuning with the Higgs particle, but Dr. Craig said that only applied to the cosmological constant, not all the other examples of fine-tuning. Krauss said that it wasn't impressive that this universe permitted life and that "It would have been much more surprising if we evolved in a universe in which we couldn't live". Krauss argued the fine-tuning was only for "Life

like us". But Dr. Craig explained that the fine-tuning is what allows us to have the basics of any kind of life, like slow-burning stars, chemical diversity, etc. – things that are required for basic minimal life functions in any living system. Craig said that he was working with the current physical laws of this universe (F = ma, etc.) and that he was looking at what changed if we changed those even slightly. Krauss tried to say that if he changed things like the mass of particles then the strength of forces would change. (But the forces aren't laws!) Krauss argued that the cosmological constant would be even better for life if it was zero, and Craig said that the life permitting range did include zero, but that the range of life-permitting values was narrow.

Jesus' existence:

- Craig reponded to the mystery religions charge, the charge that the evidence for the minimal facts is too late/too weak, the charge that grief visions explained the evidence better, and Hume's argument against miracles. Craig brought up the early creed from 1 Cor 15:3-7 and explained to Krauss that it was 5 years after the events, and that Jewish standards of oral transmission were strong enough to ensure that the creed was reliable, and most of the eyewitnesses would still have been alive.

Audience Q and A: (1:21:09)

The first topic is the grounding of morality. Krauss agrees that there is no objective morality and no objective moral oughts. He also said that that standards of behavior are arbitrary, and that they change over time and they are adopted for promoting social order. Dr. Craig pressed the point that science itself would collapse without ethical values. It assumes them, but cannot ground them.

The next topic was free will. Krauss is a determinist. Craig asked him how he could reconcile moral responsibility with determinism.

The next topic was the effectiveness of mathematics. Krauss didn't have an explanation for it and didn't think it needed one. Then they got into whether the Genesis has been verified by science and whether it is meant to be taken literally.

The next topic was whether philosophy makes any progress. Craig gave the example of verificationism being rejected as too narrow, and self-refuting. Krauss: "I'm going to come to the defense of philosophy for the first time". Craig: "That's amazing!" Krauss said that science provides new knowledge. Craig said there were some things that could be known apart from science.

Facebook enlists left-wing Politifact and Snopes to censor criticism of Democrats

March 3, 2018 | by Wintery Knight | Link | Original Link

This week, I was appalled to see that the Babylon Bee, a Christian satire web site, was attacked by Facebook for writing a satire critical of the radically leftist CNN.

Look:

Facebook is so good at checking facts and censoring conservatives

This is what Facebook sent to Adam Ford for his satire of CNN. Since Facebook cited Snopes, I thought it might be a good idea to talk about two Facebook "fact checkers", and an example of their "fact-checking".

First, a story from The Daily Signal. Then, we'll see examples of how Facebook's censorship allies are biased against conservatives.

Let's look at the first far-left Facebook partner: Politifact. Politifact is just a group of journalists from the Tampa Bay Times newspaper.

Avik Roy, health care policy expert at Forbes magazine, writes about Politifact's assessment of Obama's promise to Americans about keeping their health plans after Obamacare.

2008 PolitiFact before the election: 'We rate his statement True'

Roy writes: (links removed)

> On October 9, 2008, Angie Drobnic Holan of PolitiFact published an article using the site's "Truth-O-Meter" to evaluate this claim: "Under Barack Obama's health care proposal, 'if you've got a health care plan that you like, you can keep it.'"

> The article assures us in its headline that “Obama’s plan expands [the] existing system,” and continues that “Obama is accurately describing his health care plan here…It remains to be seen whether Obama’s plan will actually be able to achieve the cost savings it promises for the health care system. But people who want to keep their current insurance should be able to do that under Obama’s plan. His description of his plan is accurate, and we rate his statement True.”
>
> […]As per PolitiFact’s usual M.O., Holan didn’t seek out any skeptical health-policy experts to suss out the veracity of Senator Obama’s signature claim. Instead, its sources included Jonathan Cohn, a passionate Obamacare supporter at *The New Republic*, and various interviews and statements of Mr. Obama. Holan simply took the “keep your plan” promise at face value, dismissing as dishonest anyone who dared suggest that Obama’s claim would be impossible to keep. “His opponents have attacked his plan as ‘government-run’ health care,” she wrote, the scare-quotes around “government-run” being visible to all.
>
> PolitiFact’s pronouncements about Obamacare were widely repeated by pro-Obama reporters and pundits, and had a meaningful impact on the outcome of the election. Indeed, in 2009, PolitiFact won the Pulitzer Prize for its coverage of the 2008 campaign.

Here’s the screen capture from 2008:

Politifact caught with its pants on fire

Before the election, it’s true! And Obama got re-elected, because people believed that. But what happened after the election?

2013 PolitiFact after the election: ‘We rate his statement Pants On Fire’

Roy writes: (links removed)

> On December 12, [2013] the self-appointed guardians of truth and justice at PolitiFact named President Obama’s infamous promise—that “if you like your health care plan, you can keep it”—its 2013 “Lie of the Year.”
>
> […]On November 4, Jacobson rated as “Pants on Fire” the President’s new claim that “what we said was, you can keep [your plan] if it hasn’t changed since the law passed.” Both pieces were edited by Angie Drobnic Holan, who had initially

> granted PolitiFact's seal of approval to Senator Obama's 2008 promise. Holan delivered the *coup de grâce*, declaring as PolitiFact's "Lie of the Year" the "keep your plan" promise.
>
> "The promise was impossible to keep," says Holan in her December piece. Now she tells us! But none of the key facts that made that promise "impossible" in 2008 had changed by 2013. The President's plan had always required major disruption of the health insurance market; the Obamacare bill contained the key elements of that plan; the Obamacare law did as well. The only thing that had changed was the actual first-hand accounts of millions of Americans who were losing their plans now that Obamacare was live.

And the screen capture from 2013:

The article:

Lie of the Year: 'If you like your health care plan, you can keep it'

By Angie Drobnic Holan
Published on Thursday, December 12th, 2013 at 4:44 p.m.

It was a catchy political pitch and a chance to calm nerves about his dramatic and complicated plan to bring historic change to America's health insurance system.

"If you like your health care plan, you can keep it," President Barack Obama said -- many times -- of his landmark new law.

But the promise was impossible to keep.

So this fall, as cancellation letters were going out to approximately 4 million Americans, the public realized Obama's breezy assurances were wrong.

Related rulings:

"What we said was, you can keep (your plan) if it hasn't changed since the law passed."
Barack Obama, Monday, November 4th, 2013.
Ruling: Pants on Fire! | Details

"FACT: Nothing in #Obamacare forces people out of their health plans."
Valerie Jarrett, Monday, October 28th, 2013.

Politifact says: we were just kidding! Kidding!
So when Politifact rates a statement by a Democrat as true, what they really mean is that it's pants-on-fire-false, but it's election time so they don't say that. It's not like the critical assessments of Obamacare from health policy experts were not out there between 2007-2012. It's just that the liberal journalism-major bloggers at Politifact couldn't be bothered to read them. And this is who Facebook is using as a fact checker, because Facebook has one way of seeing issues – the radical leftist way. If you disagree, then they censor your content. Because Facebook employees are close-minded, anti-intellectual socialists who hate free speech.

What about Snopes? Maybe Snopes is a more reliable "fact checker" than Politifact?

The Daily Caller explains:

> Snopes' main political fact-checker is a writer named Kim Lacapria. Before writing for Snopes, Lacapria wrote for Inquisitr, a blog that — oddly enough — is known for publishing fake quotes and even downright hoaxes as much as anything else.
>
> […]She described herself as "openly left-leaning" and a liberal. She trashed the Tea Party as "teahadists." She called Bill Clinton "one of our greatest" presidents. She claimed that conservatives only criticized Lena Dunham's comparison of voting to sex because they "fear female agency."
>
> […]Lacapria — in another "fact check" article — argued Hillary Clinton hadn't

> included Benghazi at all in her infamous “we didn’t lose a single person in Libya” gaffe. Lacapria claimed Clinton only meant to refer to the 2011 invasion of Libya (but not the 2012 Benghazi attack) but offered little fact-based evidence to support her claim.
>
> After the Orlando terror attack, Lacapria claimed that just because Omar Mateen was a registered Democrat with an active voter registration statusdidn’t mean he was actually a Democrat. Her “fact check” argued that he might “have chosen a random political affiliation when he initially registered.”

Snopes is just spin for Democrat gaffes – playing defense for the DNC. And Facebook using them to check facts, because Facebook is basically joined at the hip to the Democrat party.

Can we verify that Snopes actually lies in order to defend Democrats. Well, yes –right here. Snopes lied about American flags being present throughout the first day of the 2016 Democrat convention.

It’s groups like these who are being relied upon to spot “fake news” for Facebook. When you are on Facebook, it’s important to understand that it is a web site run by Democrats, for the benefit of Democrats. There is no balance. There is no critical thinking. The simple fact of the matter is that many fake news stories are pushed by the leftist mainstream media, and ignored by the leftist “fact checkers”. Here’s one recent example of how that works.

Making monergism make sense: a middle-knowledge approach to salvation

March 4, 2018 | by Wintery Knight | Link | Original Link

Lets take a closer look at a puzzle

This article at Free Thinking Ministries was written by my friend Tim Stratton. In it, he tries to rescue Calvinism from the horror of double-predestination.

Excerpt: (links removed)

> Many reformed folks *(freely?)* choose to reject Molinism because they contend that this theological view "smells of synergism." What is this stench that reportedly makes John Calvin turn over in his grave? Simply put, synergism is the view that man plays at least a small part in his own salvation process. Monergism, on the other hand, is the view that God is the author of salvation from beginning to end.
>
> Since Molinism affirms that man is free to choose to reject God's saving grace or not, many Calvinists jump to the conclusion and assume that Molinism must be synergistic. This does not necessarily follow.[1] Consider one possible model:
>
> 1- God, by nature, is a volitional unmoved mover who is free to choose between options in accord with His nature. (This is supported via the *Kalam* and the *Argument from Time*).
>
> 2- By God's grace, humans are created in the "image of God." By nature, then, we are free to choose between options in accord with our nature. (This is supported via the *Freethinking Argument*).
>
> 3- Adam & Eve freely chose to disobey God and this sin completely separates humanity from God. This is what it means to have a "totally depraved sin

> nature." (Every aspect of man is separated from God).
>
> 4- In this state of depraved separation from God (sin nature), humans do not even know God exists if merely left to our own devices.
>
> 5- If humans do not even know God exists, then, left to our own devices and **apart from God's grace**, it would be impossible to choose to love and follow God (thus, Pelagianism is impossible on this view).
>
> 6- God, in His love for all people, provides amazing prevenient grace to all people (Romans 1:20), writing the law on the human heart (Romans 2:15), conviction of the Holy Spirit (John 16:8-9), and draws all men (John 12:32). This is commonly referred to as "common grace."
>
> 7- Therefore, by God's grace, human nature has changed from a "totally separated from God nature" to a nature that has now experienced enough divine revelation (influences) allowing all mankind to start making some free and volitional choices in accord with our new nature; namely, to choose to resist God's grace and revelation, or not.[2] Mankind is without excuse because we do not have to resist what God has made clear (Romans 1:18-20).[3]
>
> *[Note: According to Calvinist, Matt Slick (albeit inadvertently), Mark 4:10-12 implies that if an unregenerate person gets access to clear and accurate information, then they possess the ability to become Christians!]*
>
> 8- If one does not reject or continually resist the grace and revelation God provides them, then God will continually provide more and more until the person reaches the point of "no return" and will become saved.
>
> Thus, God does *ALL* the work in salvation from beginning to end on this Molinistic model; all the human can do is freely resist God's grace and revelation, but he or she does not have to! The human does nothing to gain salvation apart from God's grace on this Monergistic Model of Molinism.

I think that Stratton's formulation above does indeed keep God as the sole initiator of salvation. And that's good. But it also makes sure that human resistance to God is allowed, and that's good. We want salvation to be 100% by faith alone in Christ alone. But we don't want God to be the cause of people not being saved (because he is the ONLY ONE who can save them, and he chooses not to save them). On Stratton's view, God wants everyone to be saved. If anyone is saved, it's because God did ALL THE WORK to lead them and secure their salvation with the death of Jesus on the cross. But, on Stratton's view, humans do get a choice – the choice to trust God or not. And so, if a person is not saved, then it's their fault – not God's. This works.

Read his whole post, and see what you think about it.

Jay Richards: eight common myths about wealth, poverty and the free market

March 5, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

Have you read Jay Richards' book "Money, Greed and God?" Because if you haven't, he's written a series of articles that summarize the main points of the book.

The index post is here.

Here are the posts in the series:

- Part 1: The Eight Most Common Myths about Wealth, Poverty, and Free Enterprise
- Part 2: Can't We Build A Just Society?
- Part 3: The Piety Myth
- Part 4: The Myth of the Zero Sum Game
- Part 5: Is Wealth Created or Transferred?
- Part 6: Is Free Enterprise Based on Greed?
- Part 7: Hasn't Christianity Always Opposed Free Enterprise?
- Part 8: Does Free Enterprise Lead to An Ugly Consumerist Culture?
- Part 9: Will We Use Up All Our Resources?
- Part 10: Are Markets An Example of Providence?

Parts 4 and 5 are my favorites. It's so hard to choose one to excerpt, but I must. I will choose… Part 4.

Here's the problem:

> **Myth #3: The Zero Sum Game Myth – believing that trade requires a winner and a loser.**
>
> One reason people believe this myth is because they misunderstand how

> economic value is determined. Economic thinkers with views as diverse as Adam Smith and Karl Marx believed economic value was determined by the labor theory of value. This theory stipulates that the cost to produce an object determines its economic value.
>
> According to this theory, if you build a house that costs you $500,000 to build, that house is worth $500,000. But what if no one can or wants to buy the house? Then what is it worth?
>
> Medieval church scholars put forth a very different theory, one derived from human nature: economic value is in the eye of the beholder. The economic value of an object is determined by how much someone is willing to give up to get that object. This is the subjective theory of value.

And here's an example of how to avoid the problem:

> How you determine economic value affects whether you view free enterprise as a zero-sum game, or a win-win game in which both participants benefit.
>
> Let's return to the example of the $500,000 house. As the developer of the house, you hire workers to build the house. You then sell it for more than $500,000. According to the labor theory of value, you have taken more than the good is actually worth. You've exploited the buyer and your workers by taking this surplus value. You win, they lose.
>
> Yet this situation looks different according to the subjective theory of value. Here, everybody wins. You market and sell the house for more than it cost to produce, but not more than customers will freely pay. The buyer is not forced to pay a cost he doesn't agree to. You are rewarded for your entrepreneurial effort. Your workers benefit, because you paid them the wages they agreed to when you hired them.
>
> This illustration brings up a couple important points about free enterprise that are often overlooked:
>
> **1. Free exchange is a win-win game**.
>
> In win-win games, some players may end up better off than others, but everyone ends up better off than they were at the beginning. As the developer, you might make more than your workers. Yet the workers determined they would be better off by freely exchanging their labor for wages, than if they didn't have the job at all.
>
> A free market doesn't guarantee that everyone wins in every competition. Rather, it allows many more win-win encounters than any other alternative.
>
> **2. The game is win-win because of rules set-up beforehand.**
>
> A free market is *not* a free-for-all in which everybody can do what they want. Any exchange must be free on both sides. Rule of law, contracts, and property rights are needed to ensure exchanges are conducted rightly. As the developer of the

> house, you'd be held accountable if you broke your contract and failed to pay workers what you promised.
>
> An exchange that is free on both sides, in which no one is forced or tricked into participating, is a win-win game.

On this view, what you really need to fear as a consumer is government intervention that restricts your choices in the marketplace, or makes some choices more expensive than they need to be (tariffs).

If you care about poverty, it's often tempting to think that it can only be solved one way – by transferring wealth from the rich to the poor. But that is a very mistaken view, as any economist will tell you. The right way to create prosperity is by creating laws and policies that unleash individual creativity. Letting individuals create innovative products and services, letting them keep what they earn, making sure that the law doesn't punish entrepreneurs – that incentivizes wealth creation. Fixing poverty does not mean transferring wealth, it means giving people more freedom to create wealth on their own. Free trade between nations is an important way that we encourage people to create better products and services that what they have available in their own countries.

Economists agree on the benefits of free trade

Who could possibly disagree with free trade? Well, many people on the left do. But economists across the spectrum of ideology (university and private sector and public sector) agree on the benefits of free trade.

Harvard economist Greg Mankiw explains what most professional economists agree on.

Excerpt:

> Here is the list, together with the percentage of economists who agree:
>
> 1. **A ceiling on rents reduces the quantity and quality of housing available. (93%)**
> 2. **Tariffs and import quotas usually reduce general economic welfare. (93%)**
> 3. Flexible and floating exchange rates offer an effective international monetary arrangement. (90%)
> 4. Fiscal policy (e.g., tax cut and/or government expenditure increase) has a significant stimulative impact on a less than fully employed economy. (90%)
> 5. The United States should not restrict employers from outsourcing work to foreign countries. (90%)
> 6. The United States should eliminate agricultural subsidies. (85%)
> 7. Local and state governments should eliminate subsidies to professional sports franchises. (85%)
> 8. If the federal budget is to be balanced, it should be done over the business cycle rather than yearly. (85%)
> 9. The gap between Social Security funds and expenditures will become

> unsustainably large within the next fifty years if current policies remain unchanged. (85%)
> 10. Cash payments increase the welfare of recipients to a greater degree than do transfers-in-kind of equal cash value. (84%)
> 11. A large federal budget deficit has an adverse effect on the economy. (83%)
> 12. **A minimum wage increases unemployment among young and unskilled workers. (79%)**
> 13. The government should restructure the welfare system along the lines of a "negative income tax." (79%)
> 14. Effluent taxes and marketable pollution permits represent a better approach to pollution control than imposition of pollution ceilings. (78%)

Socialist economic policies don't work because they are making policies that are based on economic myths. We know that these myths are myths because of economics is a mathematical science, and because we have tried good and bad policies in different times and places. We have calculations and we have experience to know what works and what doesn't work. If you want to help the poor, you have to respect what economists know about how wealth is created. The solution is not to "spread the wealth around", it's to encourage people to create more wealth by inventing things that people freely choose to buy.

If you accept Jesus and become a Christian, will God make you happy?

March 6, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

This is a wonderful, wonderful post from Amy Hall, who writes for the Stand to Reason blog.

She writes:

> I had a brief interaction with an atheist on Twitter a couple of weeks ago that unexpectedly turned to the issue of suffering when she said:
>
> You clearly never had a time you were hurt. I don't mean sick. I don't mean heart broken. I mean literally a near death experience or rape or abusive relationship…. You can keep floating on a [expletive] cloud thinking Jesus will do everything for you but it's a lie. What makes you so special?
>
> That surprised me at first because it didn't seem to have anything to do with the tweet she was responding to, and I was confused as to why she would assume I'd never been through anything traumatic. But then in subsequent tweets, when she revealed she had been raped, it became clear that her trauma had played a central role in her becoming an outspoken, obviously angry "antitheist." She's a self-described antitheist now because she thinks Christianity teaches Jesus "will do everything for you" to give you a perfect life, and now she knows that's a lie. The rape proved her understanding of Christianity false.
>
> So it made sense for her to reason that since I believe Christianity is true, I must still be under the delusion that Jesus is making my life special, which means I obviously never encountered any evil or suffering to shake that delusion.

All right, readers. I don't want any of you to be thinking that if you become a Christian

that these things should be expected to happen:

- you will feel happy all the time
- you will be able to sense God's secret plan for your life through your feelings
- God's secret plan for your life will automatically work, even though it's crazy
- God will give you a perfect spouse and lots of money without you having to study anything hard, or do any hard work
- you get permission to do things that that make you happy, even if they are expressly forbidden by the Bible
- you don't have to do anything that makes you feel bad (e.g. – talk to non-Christians about Christian truth claims), because God wants you to be happy

No! Where do people get this idea that if they convert to Christianity, then God will become their cosmic butler?

Amy has the answer: (emphasis mine)

> Hear me, everyone: **This is a failure of the church.**
>
> A friend of mine who was deeply suffering once said to me that many Christians are in for "an epic letdown" when they realize their preconceived notions about what God is expected to do for us are false. Pastors who preach a life-improvement Jesus are leading people down this precarious path to disillusionment.
>
> If suffering disproves your Christianity, you've missed Christianity. The Bible is filled with the suffering of those whom God loves. The central event of the Bible is one of suffering. Love involves suffering. "We know love by this, that He laid down His life for us; and we ought to lay down our lives for the brethren." That means suffering.

It's the church. It's the focus on happy things and having of happy feelings and happy songs and preaching designed to make us feel good. I would say the comforting devotional reading doesn't help to make us any tougher or more practical, either. That happy-clappy stuff just gives you a false sense of safety about your precarious situation. God's job is not to prevent you from suffering. In fact, even if you make really smart, practical decisions, you can expect to get creamed *anyway*.

Please take 15 minutes and read the book of 1 Peter in the New Testament.

Here's a summary from GotQuestions.org:

> **Purpose of Writing:** 1 Peter is a letter from Peter to the believers who had been dispersed throughout the ancient world and were under intense persecution. If anyone understood persecution, it was Peter. He was beaten, threatened, punished and jailed for preaching the Word of God. He knew what it took to endure without bitterness, without losing hope and in great faith living an obedient, victorious life. This knowledge of living hope in Jesus was the message

> and Christ's example was the one to follow.
>
> **Brief Summary:** Though this time of persecution was desperate, Peter reveals that it was actually a time to rejoice. He says to count it a privilege to suffer for the sake of Christ, as their Savior suffered for them. This letter makes reference to Peter's personal experiences with Jesus and his sermons from the book of Acts. Peter confirms Satan as the great enemy of every Christian but the assurance of Christ's future return gives the incentive of hope.
>
> **Practical Application:** The assurance of eternal life is given to all Christians. One way to identify with Christ is to share in His suffering. To us that would be to endure insults and slurs from those who call us "goodie two shoes" or "holier than thou." This is so minor compared to what Christ suffered for us on the Cross. Stand up for what you know and believe is right and rejoice when the world and Satan aim to hurt you.

Recently, I blogged about how suffering is compatible with an all-powerful God, so you might want to read that too if you missed it.

New study: regular churchgoers and married people most satisfied with their love life

March 7, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

One of the curious things about me is that I love to read studies in order to understand what to do in order to reach a goal. So, I read a lot of studies on marriage, finances, and moral issues. My goal is to find the "best practices" that predict good outcomes. One of the things that we should all be concerned about is having a good love life. Well, believe it or not, there are studies about how to achieve this. One of them just came out in Science Daily.

Consider this article from Science Daily.

Excerpt:

> Regular churchgoers, married people or those who enjoy harmonious social ties are most satisfied with their love life. This also goes for people who are currently in love or who experience the commitment and sexual desire of their partners, says Félix Neto and Maria da Conceição Pinto of the Universidade do Porto in Portugal. Their findings, published in an article in Springer's journal *Applied Research in Quality of Life,* look at the influences on love life satisfaction throughout one's adult life.

> The researchers associate love with the desire to enter into, maintain, or expand a close, connected, and ongoing relationship with another person. In turn, love life satisfaction is a purely subjective, overall measurement of someone's actual enjoyment of love. To investigate the factors that influence this across various age groups, 1,284 adult Portuguese women and men ranging between 18 and 90 years old were asked to evaluate and weigh specific facets of their own love lives

> by using the Satisfaction With Love Life Scale.
>
> […]**While education does not impact a person's love life satisfaction, religious involvement does. The finding that believers and regular churchgoers are positive about their love lives is in line with previous studies that associate religious involvement with better mental health and greater satisfaction with life and sexual relationships in general.**

Previously, I blogged about a study reported in USA Today, which showed that people who attend church have lower divorce rates than those who don't attend church.

Excerpt:

> It's been proclaimed from pulpits and blogs for years — Christians divorce as much as everyone else in America.
>
> But some scholars and family activists are questioning the oft-cited statistics, saying Christians who attend church regularly are more likely to remain wed.
>
> […]The various findings on religion and divorce hinge on what kind of Christians are being discussed.
>
> **Wright combed through the General Social Survey, a vast demographic study conducted by the National Opinion Research Center at the University of Chicago, and found that Christians, like adherents of other religions, have a divorce rate of about 42%. The rate among religiously unaffiliated Americans is 50%.**
>
> **When Wright examined the statistics on evangelicals, he found worship attendance has a big influence on the numbers. Six in 10 evangelicals who never attend had been divorced or separated, compared to just 38% of weekly attendees.**
>
> […]Brad Wilcox, director of the National Marriage Project at the University of Virginia, agrees there's been some confusion.
>
> "You do hear, both in Christian and non-Christian circles, that Christians are no different from anyone else when it comes to divorce and that is not true if you are focusing on Christians who are regular church attendees," he said.
>
> **Wilcox's analysis of the National Survey of Families and Households has found that Americans who attend religious services several times a month were about 35% less likely to divorce than those with no religious affiliation.**
>
> Nominal conservative Protestants, on the other hand, were 20% more likely to divorce than the religiously unaffiliated.
>
> "There's something about being a nominal 'Christian' that is linked to a lot of negative outcomes when it comes to family life," Wilcox said.

Whenever I talk to atheists about marital satisfaction and marital stability, they always tell me these myths about how atheists divorce less and are happier in their marriages

than religious people. But when I ask them for studies, they don't have any, or they start to talk about the Discovery Channel or Star Trek or something. It's like they believe things without any evidence at all. Meanwhile, one also has to note that atheists have much lower rates of marriage than church-attending believers.

Now clearly, there are going to be atheists with great marriages that never break up. But individual cases do not overturn peer-reviewed research studies. The fact is that marriage is an institution that is soaked through with moral values and moral obligations. If you think that morality is just arbitrary customs and conventions that vary by time and place, as is logically consistent with atheism, then the odds are that you won't be able to stay married for long – if you even get married at all.

Atheist Lawrence Krauss offers the best argument against Christianity

March 8, 2018 | by Wintery Knight | Link | Original Link

[image]
Richard Dawkins on atheism, morality, free will and human rights
Although there are some pretty smart atheists out there, none is smarter than the venerable Lawrence Krauss. Well, Krauss has been thinking about atheism quite a bit since his debate with William Lane Craig, and he's come up with an argument that simply can't be defeated.

Buzzfeed reports on Krauss' new argument against Christian theism:

> **When Melody Hensley** first met Lawrence Krauss, she was a 29-year-old makeup artist at a department store, and he was one of her intellectual idols. She ran an atheist website in her spare time and had just started volunteering for the Center for Inquiry (CFI), a nonprofit group committed to promoting science and reason above faith. She was hoping to build a career in the burgeoning "skeptics" movement, and Krauss was one of its brightest luminaries.
>
> At a CFI event in November 2006, Krauss asked Hensley for her card, and later, as she was leaving, asked her if she was "of age." She brushed off the odd question, excited to meet a star skeptic. When he later emailed to invite her to dinner, she accepted.
>
> "I didn't care if he flirted with me, I just wanted to be around somebody important, and I also wanted to get a job in this field," Hensley told BuzzFeed News. "I thought I could handle myself."
>
> They made a plan to eat in the restaurant at the Washington, DC, hotel where Krauss was staying, Hensley recalled. But first he asked her to come up to his room while he wrapped up some work. He seemed in no rush to leave, she said, ordering a cheese plate and later champagne, despite her suggestion that they go down to dinner.
>
> Then, Hensley said, Krauss made a comment about her eye makeup, and got very close to her face. Suddenly, he lifted her by the arms and pushed her onto the bed beneath him, forcibly kissing her and trying to pull down the crotch of her tights. Hensley said she struggled to push him off. When he pulled out a condom, Hensley said, she got out from under him, said "I have to go," and rushed out of the room.
>
> Krauss told BuzzFeed News that what happened with Hensley in the hotel room was consensual. In that room, "we mutually decided, in a polite discussion in fact, that taking it any further would not be appropriate," he told BuzzFeed News by email.

> But Hensley said that is untrue. “It was definitely predatory,” she said. “I didn’t want that to happen. It wasn’t consensual.”

The argument is supported by many interlocking evidences from different fields of study:

> BuzzFeed News has learned that the incident with Hensley is one of many wide-ranging allegations of Krauss’s inappropriate behavior over the last decade — including groping women, ogling and making sexist jokes to undergrads, and telling an employee at Arizona State University, where he is a tenured professor, that he was going to buy her birth control so she didn’t inconvenience him with maternity leave. In response to complaints, two institutions — Case Western Reserve University in Cleveland, Ohio, and the Perimeter Institute for Theoretical Physics in Waterloo, Ontario — have quietly restricted him from their campuses. Our reporting is based on official university documents, emails, and interviews with more than 50 people.

So, here is how the argument goes formally:

Premise 1. If Christianity is true, then sex outside of a natural marriage is wrong.

Premise 2. Sex outside of a natural marriage is not wrong.

Conclusion: Therefore, Christian theism is not true. (MT)

This argument seems to hold a lot of sway with many atheists, like Richard Dawkins, Richard Carrier, Michael Shermer, and so on. Pretty much everyone who makes a career out of disproving Christianity is familiar with this powerful argument.

Although this is an excellent argument (I call it the argument from immorality), it should be noted that it is not a new argument at all. It’s actually discussed in the Bible of all places, in Romans chapter 1.

Romans 1:18-25:

> [18] The wrath of God is being revealed from heaven against all the godlessness and wickedness of people, who suppress the truth by their wickedness,
>
> [19] since what may be known about God is plain to them, because God has made it plain to them.
>
> [20] For since the creation of the world God’s invisible qualities—his eternal power and divine nature—have been clearly seen, being understood from what has been made, so that people are without excuse.
>
> [21] For although they knew God, they neither glorified him as God nor gave thanks to him, but their thinking became futile and their foolish hearts were darkened.
>
> [22] Although they claimed to be wise, they became fools
>
> [23] and exchanged the glory of the immortal God for images made to look like a mortal human being and birds and animals and reptiles.
>
> [24] Therefore God gave them over in the sinful desires of their hearts to sexual impurity for the degrading of their bodies with one another.

> [25] They exchanged the truth about God for a lie, and worshiped and served created things rather than the Creator—who is forever praised.Amen.

In my experience, atheists reject the evidence for Christianity because they don't want the moral changes that come with Christianity. Even the atheists I know who claim to be "moral" nevertheless promote immorality through their political actions, voting for a world where moral evils like abortion and pedophilia cannot be judged. They also vote to suppress the disagreement of Christians, and celebrate when the state silences Christian expressions of disapproval for immorality. Actions tell what is going on much more than words.

Debating forgiveness: must a person admit wrongdoing before being forgiven?

March 9, 2018 | by Wintery Knight | Link | Original Link

Two horses fight it out, may the best horse win!

I've listened to this debate three times because I liked it so much. I even ordered Chris' book for my best friend Dina. She has listened to the debate, and is currently split between the two debaters. I am in firm agreement with the pastor Chris, although Remy has some useful things to say that I agree with.

Here's a link to the debate page on Moody Bible Institute's "Up For Debate" program with Julie Roys.

Details:

> **Should Christians Forgive No Matter What?**
>
> Should Christians forgive someone even if he's not sorry? Or does true forgiveness require repentance and a desire to reconcile? This Saturday, on Up For Debate, Julie Roys will explore this issue with Chris Brauns, a pastor who believes forgiveness requires repentance, and Remy Diederich who believes it does not.

Although I disagree with Remy, I only disagree with him about whether the guilty person must admit guilt and feel remorse and make restitution (depending on the severity of the offense). I agree with him on other things like no revenge, attitude of love, expressing willingness to forgive and be reconciled, etc. I also disagree with Remy on "forgiving God", which I think is just crazy, because when God is engineering a person's salvation, he never fails. I think that God is the Great General, and his strategies never fail to achieve the outcomes he desires (while still respecting free will). Whatever suffering or inadequacy or longing that you experience as a Christian is not some sort of mistake,

horrible as it may be for you at the time. God is not your cosmic butler, although a lot of people these days seem to think that he is, and then they get disappointed.

Anyway, please listen to that debate and comment on it about who you think is right. I think my view (and Chris' view) is in the minority in the church, because the church is so utterly *dominated* by feelings and radical feminism. I think my view (and Chris' view) is the masculine view – the view that upholds moral standards, sets moral boundaries and defends the rightness of making moral judgments.

Below, I have pasted in some of my other thoughts on forgiveness from a previous post.

I think this is the key passage – Luke 17:3-4:

> 3 Be on your guard! If your brother sins, rebuke him; and if he repents, forgive him.
>
> 4 And if he sins against you seven times a day, and returns to you seven times, saying, 'I repent,' forgive him."

That's Jesus speaking, there.

Also, I was having a debate with someone who disagrees with all this, and while debating with her, I thought of another example.

Luke 18:9-14:

> 9 And He also told this parable to some people who trusted in themselves that they were righteous, and viewed others with contempt:
>
> 10 "Two men went up into the temple to pray, one a Pharisee and the other a tax collector.
>
> 11 The Pharisee stood and was praying this to himself: 'God, I thank You that I am not like other people: swindlers, unjust, adulterers, or even like this tax collector.
>
> 12 I fast twice a week; I pay tithes of all that I get.'
>
> 13 But the tax collector,standing some distance away, was even unwilling to lift up his eyes to heaven, but was beating his breast, saying, 'God, be merciful to me, the sinner!'
>
> 14 I tell you, this man went to his house justified rather than the other; for everyone who exalts himself will be humbled, but he who humbles himself will be exalted."

So again, no forgiveness without repentance.

Forgiveness is what happens when someone who is sinned against treats the sinner as if he had never sinned. It is not on the balance sheet. It is not brought to mind. It is not held against them in the future. The forgiver trusts the sinner again as if the previous sin had never happened.

In divine (vertical) forgiveness, there is no forgiveness without repentance. There are

Bible verses above to show that.

My argument is twofold. First, there is a clear teaching of Jesus explaining the sequence of sin and forgiveness. Repentance precedes forgiveness, between humans (Luke 17:3). The verses cited by the forgive without repentance crowd don't show the mechanics of how to forgive, they are making the point that if you want God to forgive you, you should forgive others. The parable in Luke 18:9-14 affirms this again – repentance always precedes forgiveness.

Second, we have an obligation to imitate God, and that means imitating the way he forgives those who sin against him. When I raise that with the unconditional forgiveness crowd, they want to insist that there is a difference, that the word "forgive" means different things. I'm not convinced.

Finally, I do think that forgiving someone is obligatory if they sincerely repent, and even if they screw up again and again. So long as the repentance is sincere, (like if there is restitution and a genuine effort to show an understanding how the sin affected the wronged party in writing), then forgiveness should be automatic. Depending on how bad the sin is, there maybe be more to do than just say "I'm sorry". If the repentance is genuine, then I think the person who is sinned against must forgive, if they expect to be forgiven by God for the things they repent of.

Alan E. Kurschner adds one final point about the unconditional forgiveness view. He argues that there is serious textual doubt about the originality of Luke 23:34a, a text used by the pro-unconditional-forgiveness crowd. He has a journal article coming out on it, but a synopsis of his argument is here.

He also wrote this in a comment on this blog:

> Second, on Matt 6:15, this is what I have to say. Notice the then-clause: "neither will your Father forgive your sins." This would require universalism on the Father's part according to the unconditional interpretation given the first half: "But if you do not forgive others their sins." Since everyone has wronged the Father is the Father required to forgive everyone even if they are not seeking forgiveness?

So I think the case for the forgiveness being conditional on repentance is pretty strong, especially when serious harm has been caused.

City Journal publishes comprehensive profile of Southern Poverty Law Center

March 10, 2018 | by Wintery Knight | Link | Original Link

First, recall from this article posted at The Federalist that the Southern Poverty Law Center was the source of the "hate map" which was used by convicted domestic terrorist Floyd Lee Corkins in his attempt to shoot and kill everyone at the Family Research Council. He was stopped by a security guard, and the video above is the footage of the attempted mass murder.

Excerpt:

> Corkins would later admit that he had located Family Research Council's office on a "hate map" produced by the Southern Poverty Law Center, and he planned to shoot people in the building and smear the Chick-fil-A sandwiches on them.
>
> […]Much of the ensuing media coverage ignored or downplayed Corkins' motives, which the *Washington Post* referred to as "a detail sure to reignite the culture wars." A year later, Southern Poverty Law Center founder Morris Dees was still publicly defending the inclusion of Family Research Council on the organization's "hate map."

Just to be clear, this gay activist was convicted of domestic terrorism, and received 25 years in prison.

Let's find out more about SPLC, courtesy of this article from the centrist City Journal, a very respected source.

Here is the article from City Journal.

Excerpt:

> Ironically, the SPLC not only overlooks most of the real hate groups in operation today, along with overtly race-based organizations, such as the pro-Latino National Council of La Raza and MEChA, but also labels moderates with whom it disagrees "extremists" if they deviate from its rigid political agenda, which embraces open borders, LGBT rights, and other left-wing totems. The SPLC has branded Somali-born reformer Ayaan Hirsi Ali an "anti-Muslin extremist" for her opposition to female genital mutilation and other oppressive Islamic practices, and designated the respected Family Research Council as a "hate group" for its opposition to same-sex marriage. Likewise, the organization deems mainstream immigration-reform advocates such as the Center for Immigration Studies (CIS) and Federation for American Immigration Reform (FAIR) as hate groups. British Muslim activist Maajid Nawaz—regarded by most observers as a human rights leader—is suing the SPLC for listing him as an extremist.

Not just the Family Research Council, but the Alliance Defending Freedom and Liberty

Counsel, too. Defending religious liberty at the Supreme Court and winning your case apparently makes you a “hate group”.

More:

> Critics of the SPLC accuse the lavishly funded organization of peddling fear and smearing political opponents—mostly conservatives—as bigots. Its “Hatewatch” list is avowedly ideological, acknowledging that it “monitors and exposes the activities of the American radical right.” Few left-wing organizations—and no Islamist groups—are branded in this way by the SPLC. Nevertheless, the SPLC, founded in 1971, has burrowed itself into the civil rights movement, the organized bar, the cloistered culture of large law firms, the education system, and even law enforcement as a champion for “the exploited, the powerless and the forgotten.” Its executives are richly compensated, some in excess of $400,000 annually. Operating from palatial six-story quarters in Montgomery, Alabama (sometimes called the “Poverty Palace”), it enjoys a $300 million endowment, including more than $23 million in cash.

The non-profit rating group “Charity Watch” gives the SPLC an “F” rating. This is the lowest grade possible.

More:

> The SPLC frequently rails against public figures as “enablers” not technically designated as hate groups or extremists, such as Texas governor Greg Abbott, former congressman and presidential candidate Ron Paul, radio talk show host Glenn Beck, Fox News commentator Judge Andrew Napolitano, and Kentucky senator Rand Paul. Rush Limbaugh, the Breitbart News Network, the Boy Scouts of America, and Focus on the Family (founded by psychologist, broadcaster, and best-selling author James Dobson) have also earned the SPLC’s wrath.

And finally:

> What many of the individuals and groups condemned by the SPLC have in common is a conservative orientation. Favoring traditional marriage becomes the moral equivalent of cross-burning; opposing illegal immigration or amnesty for illegal immigrants equates to advocating genocide; resisting the spread of radical Islam invokes Timothy McVeigh; and anti-tax Tea Party groups are now indistinguishable from armed militias or Holocaust deniers. Thus, dissent is de-legitimatized, and political foes are demonized.
>
> […]SPLC senior fellow Mark Potok, a 20-year veteran of the organization and editor of its “hate list”—a quarterly publication—has admitted that “our aim in life is to destroy these groups, to completely destroy them.”

How far would the SPLC go to “destroy” their enemies? Well, the SPLC-inspired attack on the Family Research Council is not the only time that the SPLC has been linked to violent left-wing extremism.

Consider this story from the radically leftist New York Times.

They write:

> It was a little after 5 p.m., a quiet time in a quiet neighborhood, before many people had returned home from work on Tuesday, when two women called 911 to report multiple gunshots and screams echoing through a condominium complex here near the University of North Carolina.
>
> By the time the police arrived, three people were dead — a newlywed couple and the woman's sister. They were young university students, Muslims of Arab descent, and high achievers who regularly volunteered in the area. A neighbor, a middle-age white man, was missing — then under arrest and charged with three counts of murder.
>
> […]Mr. Hicks, appeared to have a deep dislike of all religion. On his Facebook page, nearly all of his posts expressed support for atheism, criticism of Christian conservatives or both.

Let's take a look at what's on his Facebook page:

> His Facebook Likes included the Huffington Post, Rachel Maddow, the Southern Poverty Law Center, Freedom from Religion Foundation, Bill Nye "The Science Guy," Neil deGrasse Tyson, Gay Marriage groups and similar progressive pages.

Previously, I blogged about a peer-reviewed study published in the journal *Academic Questions*, found that the SPLC "…fails to use objective criteria in determining which organizations should be labeled a "hate group"…". Something to keep in mind when you hear the left-wing media invoking the SPLC as an authority.

Why sexual permissiveness is not compatible with the welfare of children

March 11, 2018 | by Wintery Knight | Link | Original Link

Gay activist Terry Bean and Barack Obama

Here is a striking essay from the Public Discourse. It talks about how we, as a society, have generally taken on an anything-goes approach with respect to sex. The one exception (for now) is pedophilia, which is the sexual abuse of children by adults. The essay points out that there is no moral reason for having this one exception, on secularism. The exception exists because of a sort of "ick" factor – not because we have a moral framework that makes anything right or wrong objectively. The essay argues that we are not shy about harming children in a million other ways, and lists some examples. I just want to quote a few and then I'll comment about my own moral views around sexuality.

Quick summary of his argument:

> The moral structure of pedophilia is simply this: the welfare of children is subordinate to the sexual gratification of adults.
>
> […]We should be thankful that the Sanduskys and Laheys are still considered monstrous. But in contemporary America that condemnation rests on sentiment and not on moral reasoning. No one can simultaneously explain *why* their actions were so vile and uphold the first commandment of the sexual revolution: fulfill thy desires.
>
> […]No, it isn't *how* Sandusky and Lahey did what they did, or under what circumstances, that explains the disgust. It's *what* they did—but nobody wants to acknowledge that.
>
> The reason for that reluctance becomes clear, if we keep in mind the moral structure of pedophilia. Sexual gratification trumps. Thank goodness that for now,

> there aren't many men who are sexually attracted to youngsters. In that single case, we raise the banner for the children. But in no other case.

That's his argument.

Now, a quick excerpt:

> If we altered the question, and asked not how many people have done sexually abusive things with children, but how many people have done sexual things that redounded to the suffering of children, then we might confess that the only thing that separates millions of people from Jerry Sandusky is inclination. Everything that was once considered a sexual evil and that is now winked at or cheered, everything without exception, has served to hurt children, and badly.
>
> We might point here to divorce. Unless it is necessary to remove oneself and one's children from physical danger and moral corruption, the old wisdom regarding divorce should hold, if children themselves have anything to say about it. Parents will say, "My children can never be happy unless I am happy," but they should not lay that narcissistic unction to their souls. Children need parents who love them, not parents who are happy; they are too young to be asked to lay down their lives for someone else. It is not the job of the child to suffer for the parent, but the job of the parent to endure, to make the best of a poor situation, to swallow his pride, to bend her knees, for the sake of the child.
>
> We might point to births out of wedlock. The child has a right to enter more than a little nursery decorated with presents from a baby shower. He should enter a human world, a story, a people. He should be born of a mother and a father among uncles and aunts and cousins and grandparents, stretching into the distant past, with all their interrelated histories, with his very *being* reflected in all those mirrors of relation, not to mention his eyes and his hair, the talents in his fingers and the cleverness in his mind. This *belonging* to a big and dependable world can be secured only in the context of the *permanent* love of his mother and father, declared by a vow before the community and before the One in whom there is no shadow of alteration.

And now my comments about this article.

So pretty much all my regular readers know that I take extremely conservative views on social issues, since I am an evangelical Protestant Christian. But I don't just have conservative views – I am also chaste at a personal level. I am not one of these re-virgins – I have never had sex. Not once. And I don't mean I have never had sexual intercourse only, I mean that I have never even kissed a woman on the lips. I am a radical on the issue of chastity. I don't view chastity as depriving oneself of something good, I view it is as a thing that serious Christian men do when we want to enable and develop other capabilities. It's my conviction that chastity enables the capability to see women as God sees them, which is a precursor to growing them up to serve him. That's what women are for, on my view – exactly like men are for knowing and serving God. It's my belief that

once a man has premarital sex, it becomes much harder for him to view women that way.

So, I am really really really against any kind of sexual activity of any kind prior to marriage. I think that if a man wants to show affection to a woman, then sex before marriage is not the way to do that. There are other ways, and men ought to know how to speak the language of love to a woman in many different ways apart from sex, assuming that this is his goal for her. A man needs to create a context for sex before he can have it. Marriage is how a man provides a context for sex. Not just by giving a woman safety, but by specifying a shared vision which the woman agrees to support when she agrees to marriage. Men shouldn't have intimate experiences with women who are not committed to a constructive partnership with specific goals, e.g. – birthing or adopting children in order to give them a stable, loving *sane* environment to grow up in. That is so rare nowadays, especially on college campuses which are inundated with sexual liberalism, thanks to radical feminism. My conviction that sex is not something that should be done before marriage emerges partly from a concern that children should have the best opportunity for that stable environment. And that's what I want to focus on – sexual restraint as a means of providing for children and protecting children.

First, premarital sex creates a situations where abortion happens. Men and women should not engage in activities for recreational reasons that could possibility lead to the death of another human being, period. I am not one of these people who thinks "oh, poor woman who is pregnant, what a beastly man who did that to her – but she can do the right thing and keep the baby". I think that women are equally to blame with men for even having sex before marriage – the mistake was having sex in the first place. So getting pregnant and keeping the baby is good, but preventing fatherlessness and not putting burdens on taxpayers is much, much better. People who engage in premarital sex are not only selfish, immature and irresponsible, but they are actually acting in a *negligent* fashion towards the child that may result from their *choices*. We should not make choices that put innocent children at risk. Premarital sex can be compared with driving while drunk in that regard. You might think it's fun, but it's not a good, moral thing to do because of the harm that may result. Saying "but I didn't mean to" after the fact doesn't change the harm.

Second, I've blogged before about many studies (like this one) that show that premarital sex reduces relationship stability, duration, and quality. Another study I blogged about showed that the number of sexual partners that a man or woman has before marriage directly affects the probability that the relationship will provide a stable environment for raising children. So one of my reasons for being chaste is to maximize the probability of giving my future children that stable environment. Another reason to be chaste is to give my future wife that gift of fidelity. When a man has proven that he has the ability to restrain himself with his wife during the courtship, that is a signal to her that he is good at self-control. The ability to court without premarital sex shows her that he is able to think about her as a person, and that he is able to evaluate her objectively for the purpose of filling the roles of wife and mother. And that this is, in fact, his whole purpose for her. A purpose that will survive the decline of her appearance and youth. Security is another gift

that a chaste man gives his wife, so that she can age confidently.

Thirdly, I have in the past blogged about research on gay unions showing how various factors that are more probable in gay relationships, (e.g. – elevated rates of domestic violence, low relationship stability, drug abuse, high rates of promiscuity, etc.), undermine the stability of the environment in which children grow up. More here. Dr. Ryan Anderson has argued that the norms present in gay relationships will undermine the norms of traditional marriage, (permanence, sexual exclusivity, etc.), if marriage is redefined to eliminate the gender requirement. I think we need to keep the traditional definition of marriage because it's better for children if we do (and there are other reasons to prefer natural marriage, as I've written about before).

I think I've said enough here to show that very often when it comes to sexual activity what is driving my conservative views is concern for others. Concern not just for the future children, but for the future wife. And not just for them, but for society as a whole, who would have to pay the social costs of things like divorce, and the social costs of children of divorce, etc. And not just for society, but also for God, who intends sexuality for a very specific purpose – it is a form of communication for two people who have been bonded to each other for life. Marriage has to count for God and achieve his goals. One of those goals is raising up children well for his sake. And adults need to control themselves in order to provide children with what they need.

New study: single-sex schools more successful than mixed-sex schools

March 12, 2018 | by Wintery Knight | Link | Original Link

Academic Records of High School Students who Took the 2016 SAT Test, by Gender		
	Male	Female
High School Rank		
Top 10% of Class	44%	56%
Second 10% of Class	46%	54%
GPA		
A+ (97-100)	40%	60%
A (93-96)	39%	61%
A- (90-92)	43%	57%
B (80-89)	49%	51%
C (70-79)	59%	41%
D, E, F (below 70)	63%	37%
Overall GPA	3.30	3.45

Do female-dominated schools discriminate against boys?
Here is the very latest study on this important topic from the Center for Economic and Policy Research (CEPR). They found that boys and girls both do better in single-sex schools, when compared to boys and girls in mixed-sex schools.

Excerpt:

> We find robust evidence that pupils in single-sex schools outperform their counterparts in co-ed schools, by 5–10% of a standard deviation for boys and 4–7% for girls, with similar estimates across subjects (which include Korean, English, and maths). This is consistent with the findings reported in Park et al. (2013).

And this study was done in South Korea, where things are a lot more focused on academics than in North America!

In most schools, women comprise on average about 80% of the classroom instructors. This is not even to mention the administrators and the curriculum designers. It is not a friendly environment for boys. In fact, studies have shown that the typical curriculum is biased against boys. Teacher bias may also be a factor, since boys outperform their classroom grades on standardized tests (where there is no bias against them from the teachers).

Regarding the feminist curriculum, consider this report on a study from the UK Telegraph:

> A lack of male role models at home and school is turning boys off reading at a young age as they increasingly reject books as "feminine", it is claimed.
>
> [...]Gavin Barwell, chairman of the All-Party Parliamentary Group on Literacy, said reading was not seen as a "masculine thing" by boys – leaving them lagging behind girls from the age of four onwards.
>
> [...]According to Government figures, boys are less likely to read basic words or recite the alphabet by the age of five and the gap widens throughout compulsory education.

> By the age of 16, fewer than 59 per cent of boys gained a good GCSE in English last year compared with 72.5 per cent of girls.

According to a brand new report from the American Enterprise Institute, this discrimination against boys is having a long-term negative effect on their participation in graduate school:

> For the eighth year in a row, women earned a majority of doctoral degrees awarded at US universities in 2016. Of the 78,744 doctoral degrees awarded in 2016 (Table B.25), women earned 40,407 of those degrees and 52.1% of the total, compared to 37,145 degrees awarded to men who earned 47.9% of the total...
>
> [...]Women represent 57.5% of all graduate students in the US, meaning that there are now 135 women enrolled in graduate school for every 100 men.

Here is one of the AEI charts:

Total Graduate School Enrollment, By Field and Gender, 2016

Field	Male	Female	Females per 100 Males
Arts and Humanities	43.3%	**56.0%**	**129.3**
Biological, Agricultural Sciences	46.3%	**54.1%**	**116.8**
Business	55.0%	45.1%	82.0
Education	25.4%	**75.0%**	**295.3**
Engineering	75.8%	24.7%	32.6
Health Sciences	22.6%	**77.7%**	**343.8**
Mathematics and Computer Sciences	69.1%	31.5%	45.6
Physical and Earth Sciences	63.3%	37.0%	58.5
Public Administration	23.6%	**77.1%**	**326.7**
Social and Behavioral Sciences	37.5%	**62.4%**	**166.4**
Other Fields	39.5%	**62.4%**	**158.0**
Total	**42.6%**	**57.5%**	**135.0**

Source: Council of Graduate Schools

Graduate school enrollment, male vs female, 2016

You can read about a couple more studies here that also argue that the male-

underformance problem is a lack of male teachers in the classroom. It’s important to understand this, because it shows why ignorant cries of “man up” are not going to get men to perform better in school and at work. And men only marry if they feel comfortable taking on the roles of husband and father – which costs money. Men have to be able to earn money in order to engage in marriage and family, and the schools we have right now are set up against them doing that. If you want your daughters to have husbands (instead of marrying government social programs), then you’d better pay attention to these studies and vote accordingly. If you can pull your boys put of mixed-sex schools, it’s a good idea to do that. Homeschooling or single-sex private schools work better for boys.

Telford sex-trafficking ring involving up to thousand children was run by “Asian” men

March 12, 2018 | by Wintery Knight | Link | Original Link

Muslim populations in Europe

Every time I see one of these sex-trafficking of children stories in the UK media, it reminds me of the Labor Party’s decade-long strategy of importing unskilled immigrants from predominantly Muslim countries.

Here is the latest from the UK Telegraph.

Excerpt:

> Up to 1,000 children could have been abused in Britain’s biggest ever child abuse scandal, an investigation has revealed.
>
> Hundreds of children, some as young as 11, are estimated to have been drugged, beaten and raped over a 40-year period in the town of Telford.
>
> […]The investigation claims that allegations dating back to the 1980s were mishandled by authorities in Telford, who repeatedly failed to punish a network of abusers.
>
> Victims claimed that similar abuse, which has been linked to three murders and two other deaths, has continued in the area.
>
> The newspaper’s probe alleges that social workers were aware of the abuse in the 1990s, but that it took police a decade to launch Operation Chalice, an inquiry into child prostitution in the Telford area in which seven men were jailed.
>
> It is also claimed that abused and trafficked children were considered “prostitutes” by council staff, that authorities did not keep details of abusers from Asian communities for fear of being accused of “racism” and that police

> failed to investigate one recent case five times until an MP intervened.

Complaints of abuse were ignored:

> "Night after night, I was forced to have sex with multiple men in disgusting takeaways and filthy houses. I must have been getting the morning after pill from a local clinic at least twice a week but no one asked any questions.
>
> "I was told that if I said a word to anyone they'd come for my little sisters and tell my mum I was a prostitute."
>
> Another victim, aged 14 at the time, alleges that she had the baby of her 18-year-old abuser. Now 47, she said that she told the council and school of her abuse at the time but does not believe action was taken.
>
> […]Two other investigations were launched alongside Operation Chalice after two victims named dozens more abusers, yet victims have claimed that they were put off helping inquiries.
>
> One said that she left the investigation because she was not "emotionally supported" by the police. The other claimed officers deterred her from pursuing her request for evidence after they learnt she had contacted the paper.

Why didn't anybody ask any questions? Because in the feminized, pluralistic UK, people don't want to hurt the feelings of evildoers. Every crime is just an accident, and we wouldn't want to confront evil with force. That would be so… masculine.

This Telford case isn't the first UK sex-trafficking ring.

Oxfordshire

I blogged before about an article by the ultra-leftist BBC, so they are very politically correct.

They write:

> As many as 373 children may have been targeted for sex by gangs of men in Oxfordshire in the last 16 years, a serious case review found.
>
> The investigation came after a sadistic sex gang of seven men were jailed in 2013 for abusing six girls in Oxford, between 2004 and 2012.
>
> Thames Valley Police and Oxfordshire County Council made "many errors" in that case and could have acted sooner.
>
> A victim of the gang said the issue had been "swept under the carpet".
>
> Of the 373 cases, the council said about 50 victims were boys.
>
> […]The report also called for research into why a significant proportion of people convicted in these kind of cases are of "Pakistani and/or Muslim heritage".
>
> In the Oxford case, known as Operation Bullfinch, two of the men were of east African origin and five of Pakistani origin.

Rotterham

How about the Rotterham sex-trafficking gang?

Here are the facts from Powerline Blog:

Full text:

> You are probably familiar with the Rotherham scandal. Rotherham is a city in England where over a period of years, more than 1,400 girls, many of them pre-teens, were raped and trafficked by a loose consortium of men. The men were all Muslim immigrants or sons of immigrants, the girls were all, or nearly all, white. When the scandal finally came to light in 2014, city officials said that they had been reluctant to do anything about the problem for fear of being accused of racism.
>
> Several criminal trials have resulted from the scandal. The third such trial has just been completed. Six defendants were convicted and sentenced to 10 to 20 years for rape and other crimes. The Sun identified them:
>
> Brothers Basharat Dad, 32, and Nasar Dad, 36, of both of Rotherham, and Tayab Dad, 34, of Sheffield, were jailed on Tuesday for sex offences along with Matloob Hussain, 41, of Rotherham, Mohammed Sadiq, 40, of Rotherham, and Amjad Ali, of Worksop, Nottinghamshire.
>
> This is the most curious aspect of the news report:
>
> There were emotional and chaotic scenes at Sheffield Crown Court after two of the defendants shouted “Allahu Akbar” as they were led from the dock.

But wait, there are more examples.

Rochdale

Another case reported in the UK Telegraph:

> Taxi driver Shabir Ahmed, 59, was already serving a 19 year sentence from May for conspiracy, two rapes, aiding and abetting rape, sexual assault and sex trafficking. His domineering temper earned him the nickname “Daddy” by the white teenage victims.

> The ringleader, who called the judge a ‘racist b——‘, was one of nine men jailed at Liverpool Crown Court for a total of 77 years for passing round the youngsters and plying them with drugs and drink.

> […]His victim, who cannot be named, revealed Ahmed once made her kneel on the floor in a pose called the ‘chicken’, with her arms threaded through her legs and touching her ears, before striking her on the back with a cricket bat.
>
> The girl, now an adult, claims she was repeatedly raped over many years. He left her never wanting to have sex again or get married.
>
> The girl said when she was first raped she was so young she needed to stand on a chair to reach a sink.

> […]Ahmed told the court he was a standard-bearer for “targeted and weakened British Muslims”, and claimed the police were anti-Muslim
>
> He said of the Rochdale grooming trial: “We were all innocent. My only crime was to be Muslim. Not of the majority race.”
>
> In May, Ahmed and his eight co-defendants were jailed for their role in a child-sex ring.

In other cases, the police ignored the complaints of the victims.

This happens often because the UK deliberately chose a “compassionate” open-borders immigration policy. We should not imitate their example. Merit-based immigration is best.

Michael Strauss: are Earth-like planets common in the universe?

March 13, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Physicist Michael Strauss is one of my favorite speakers and scholars – he has a real love of experimental science which I find lacking in many Christian philosophers who seem to treat science (as opposed to *naturalism*) as the enemy.

Here is his latest blog post:

> When scientists say that an Earth-like planet may have been discovered, they actually mean one of three things. Either (1) the planet is in such an orbit around its central star that allows the temperature on the planet to possibly harbor liquid water, or (2) the planet is about the same size as the earth, or (3) the planet is solid and rocky rather than gaseous. Of course any one of these criteria, or even all three, does not actually give us a true Earth-like planet. We know that our moon is in the correct location to contain liquid water, but it is not "Earth-like." We know Venus is about the size of the earth, but it is not "Earth-like." We know that Mercury is rocky and not gaseous, but it is not "Earth-like." So none of these criteria really give an Earth-like planet. Headlines and sound-bites are not meant to be precise but to draw attention, and it is much more exciting to proclaim an "Earth-like" planet has been found rather than a "Venus-like" planet (if even that could be claimed).
>
> […]An enlightening book on this subject is *Rare Earth: Why Complex Life Is Uncommon in the Universe* by Peter D. Ward and Donald Brownlee, published in 2000. One of my favorite chapters in the book is titled "The Surprising Importance of Plate Tectonics" which documents why plate tectonics is required

> in order for complex life to survive. Having lived 23 years of my life in California, I am well acquainted with the consequences of plate tectonics, but had no idea that such activity was crucial for my survival. Ward and Brownlee document how plate tectonics not only forms and maintains continents, but promotes biological diversity, regulates global temperature, and helps maintain a planetary magnetic field. They write, "It may be that plate tectonics is the central requirement for life on a planet and that it is necessary for keeping a world supplied with water," (p. 220).
>
> The astrophysicist Hugh Ross has done a rough estimate of the probability of finding a single planet that could support even simple unicellular life for a sustained period of time. Including correlations and longevity factors, and assuming there are 10 billion trillion planets in the visible universe, he concludes that the probability of finding a single planet that could support unicellular life for a prolonged period of time is 1 in 10^{556}, (see Part B of this document). If this informed estimate is even close to being correct, then there are no other planets in the visible universe that can support life.

Previously, I blogged about a few of the minimum requirements that a planet must satisfy in order to support complex life.

Here they are:

- a solar system with a single massive Sun than can serve as a long-lived, stable source of energy
- a terrestrial planet (non-gaseous)
- the planet must be the right distance from the sun in order to preserve liquid water at the surface – if it's too close, the water is burnt off in a runaway greenhouse effect, if it's too far, the water is permanently frozen in a runaway glaciation
- the planet has to be far enough from the star to avoid tidal locking and solar flares
- the solar system must be placed at the right place in the galaxy – not too near dangerous radiation, but close enough to other stars to be able to absorb heavy elements after neighboring stars die
- a moon of sufficient mass to stabilize the tilt of the planet's rotation
- plate tectonics
- an oxygen-rich atmosphere
- a sweeper planet to deflect comets, etc.
- planetary neighbors must have non-eccentric orbits
- planet mass must be enough to retain an atmosphere, but not so massive to cause a greenhouse effect

That's a lot of characteristics that need to be present. When you calculate the probabilities of each one and then multiply them (product rule) to get the odds of getting a planet with ALL of them present, you get a number far smaller than the maximum number of possible life sites in the universe. We are alone.

Women who delay marriage for casual sex surprised to be single in their mid-30s

March 14, 2018 | by Wintery Knight | Link | Original Link

Divorce risk and number of pre-marital sex partners

Dr. Mark Regnerus is a sociologist at the University of Texas at Austin. He has published books on the changing nature of relationships with Oxford University Press. His newest book argues that the Sexual Revolution has caused men to lose interest in marriage because women are now giving them sex for free, without them having to prove their husband credentials first. This causes men to be disinterested in the traditional ways of impressing a woman, namely, getting a job, moving out, being willing to commit, and being able to provide for children who may appear.

The Daily Signal provides a case study taken from Regnerus' latest book "Cheap Sex", which illustrates the problem.

Excerpt:

> Sarah is 32 years old and recently moved to Texas from New York, looking for a new start—in more ways than one.
>
> Brooklyn had grown too expensive for her hipster pocketbook. A relationship she had hoped would blossom and mature there had instead withered. So to Austin she came, hoping she could improve upon her modest $22,000 annual earnings the previous year.
>
> Her most recent sexual partner—Daniel—was not actually a relationship per se. He was not the reason she moved. Rather, he was a 23-year-old American she

> had met in China four years before during a three-week language immersion program.
>
> […]When they first met, and slept together, Sarah was in a relationship with David, the man for which she had moved to, and then away from, New York. She ended up "cheating on him," that is, David, several times.
>
> […]If you're having trouble keeping times, dates, and boyfriends straight, it's understandable. Sarah herself laughs at the drama of it all.
>
> […]Getting serious was never much of an option. He was 23, and she was 32: "We both knew … he was graduating from college and, you know, like we both, at least I knew it was never gonna work out. I think he kind of felt the same way."
>
> […]When asked how rapidly her relationships tend to become sexual, Sarah replied, "the first or second date." That account did not stand out from those of many other interviewees.
>
> The numbers are on her side, too. In the 2014 Relationships in America survey, sex before the relationship begins was the modal—meaning the most common—point at which Americans report having first had sex in their current relationships.
>
> Is her timing of sex intentional? No. "It just happens," she reasoned.
>
> […]This, she claims, is the standard approach to dating among her peers, if not necessarily the most optimal: "I don't think it's unusual, but I think that for a lasting relationship, it's not the best approach."
>
> […]Three years later, now 35, Sarah continues to live in Austin and continues to find commitment elusive. She does not dislike her life, but it is not the one she envisioned a decade earlier.

Daniel is a musician, which doesn't surprise me at all. A musician, student or other unemployed penniless bad boy will not make any demands on the woman, because he almost certainly has no plan for the future. This is what many women today want: someone for *right now* who doesn't want her to do anything to prepare for marriage, e.g. – get a real job, stop the thrill-seeking, stop traveling the world. No matter what a woman says about marriage, if her actions now show an interest in fun and thrills, then she doesn't want marriage.

The typical woman's plan for marriage is simply to *imagine* marriage happening later somehow, without her having to do anything that she doesn't feel like doing right now. It would be like "planning" for your retirement by taking trips all over the world *right now,* while *imagining* living off the interest from a million dollars in savings at age 55. This problem is what happens when the culture tells women that they should not aspire to marriage, and should not measure men to see if they will make good husbands and fathers. If a woman cannot expect a man to be a man (protector, provider, moral and spiritual leader), then she will choose men on other criteria.

This is what women today want:

- hot appearance
- confident words about the future
- empty resume
- empty bank account
- several years younger than they are
- no firm convictions about morality
- no firm convictions about theology
- progressive political views, especially on abortion

Men who have no jobs and no money don't lead women, and are much easier for women to manipulate. The problem with these men is – as any married woman knows – is that *those men do not commit*. Why not? Because they *cannot afford to commit*. Marriage, put simply, costs money. Starter houses cost a quarter million. Children cost a quarter million each, not counting college. Retirement costs a quarter million per spouse. And so on. But there is no one in this society telling women that they need to care about choosing men who are serious about the objective duties of the husband role.

Women love to believe that they can choose a hot, irresponsible bad boy who gives them feelings, and then magically mold him into a husband: able to work hard, save money, be self-controlled, faithful and good with children. Feelings determine the choice of man, and feelings tell them that the man can be magically transformed into a husband somehow. Perhaps by giving him premarital sex! That will make him responsible. After all, you can put out a fire with gasoline, right? *This is the most common approach women today take to relationships: get drunk, have sex with hot bad boy, shack up with him, wait for him to propose marriage.*

I frequently tell my female friends about women I know like the one in the article – many raised by two married parents in Christian homes. They have arts degrees, empty resumes, empty bank accounts, and histories of alcoholism, bulimia, promiscuity and/or divorce. My female friends give me the same advice: "YOU NEED TO LOWER YOUR STANDARDS OR YOU'LL NEVER GET MARRIED". If that's the best that they can do, then it's no wonder that men are not interested in marriage.

If you want men to be interested in marriage, fix the root cause. The root cause of the marriage rate declining is not men. The root cause is feminism.

Five liberal Democrat policies that hurt minorities

March 15, 2018 | by Wintery Knight | Link | Original Link

Marriage and Poverty

The five policies are:

- higher minimum wage rates
- opposition to school voucher programs
- releasing criminals from jail
- affirmative action
- single mother welfare

This article is by Jason L. Riley, and it appeared in the Wall Street Journal.

Excerpt:

> At the urging of labor unions, President Obama has pushed for higher minimum wages that price a disproportionate percentage of blacks out of the labor force. At the urging of teachers unions, he has fought voucher programs that give ghetto children access to better schools.
>
> Both policies have a lengthy track record of keeping millions of blacks ill-educated and unemployed. Since the 1970s, when the federal government began tracking the racial achievement gap, black test scores in math, reading and science have on average trailed far behind those of their white classmates. And minimum-wage mandates have been so effective for so long at keeping blacks out of work that 1930, the last year in which there was no federal minimum-wage

> law, was also the last year that the black unemployment rate was lower than the white rate. For the past half-century, black joblessness on average has been double that of whites.
>
> Last week the Justice Department said it would release some 6,000 inmates from federal prison starting later this month. The goal, according to the White House, is to ease overcrowding and roll back tough sentencing rules implemented in the 1980s and ’90s.
>
> But why are the administration’s sympathies with the lawbreakers instead of their usual victims—the mostly law-abiding residents in low-income communities where many of these inmates eventually are headed? In dozens of large U.S. cities, violent crime, including murder, has climbed over the past year, and it is hard to see how these changes are in the interest of public safety.
>
> The administration assures skeptics that only “nonviolent” drug offenders will be released, but who pays the price if we guess wrong, as officials have so often done in the past?
>
> When Los Angeles asked the Rand Corp. in the 1990s to identify inmates suitable for early release, the researchers concluded that “almost no one housed in the Los Angeles jails could be considered non-serious or simply troublesome to their local communities” and that “jail capacity should be expanded so as to allow lengthier incarceration of the more dangerous.”
>
> A 2002 federal report tracked the recidivism rate of some 91,000 supposedly nonviolent offenders in 15 states over a three-year period. More than 21% wound up rearrested for violent crimes, including more than 700 murders and more than 600 rapes. The report also noted the difficulty of identifying low-risk inmates. Auto thieves were rearrested for committing more than a third of the homicides and a disproportionate share of other violent offenses.

Keep in mind that when criminals are release, they don’t go move into wealthy progressive neighborhoods. It’s not the wealthy leftists elites who have to deal with the released inmates. It’s the poor, low-income minority neighborhoods that have to deal with them.

By the way, I covered the minimum wage argument here, and I covered the school choice argument here.

That covers the first 3 policies. This article from The College Fix covers the fourth policy, affirmative action.

It says:

> A UCLA law professor critiques affirmative action as detrimental to the very people it strives to aid: minority students.
>
> Professor Richard Sander, though liberal-leaning, has deemed affirmative action practices as harmful, a notion that contradicts a liberal view in college admissions, said Stuart Taylor, a nonresident senior fellow at the Brookings

> Institution.
>
> […]Sander began teaching law at UCLA in 1989. After a few years he garnered an interest in academic support and asked permission to analyze which strategies most effectively assist struggling students.
>
> After reviewing statistics on performance, especially those of students with lower academic merit, he noticed correlations between race and academic success.
>
> "I was struck by both the degree to which it correlated with having weak academic entering credentials and its correlation with race," Sander said in a recent interview with *The College Fix.* "And as I looked into our admissions process I realized that we were giving really a large admissions preference."
>
> Sander noticed that students admitted into the law school with lower academic credentials than their peers had significantly lower percentages of passing the Multistate Bar Examination, Sander said. This especially pertained to minority students who were given special consideration in the admittance process due to their race rather than their academic preparedness.
>
> He then began thinking about whether or not these students would have better chances of succeeding if they went to a less elite university, he said.
>
> He called this discrepancy a mismatch; when minority students with lower credentials than their peers are accepted into more challenging universities and then suffer academically as a result.

And the fifth policy is welfare. Welfare encourages women to not marry the men that they have sex with, since they will lose their single mother benefits if they do. Children who are raised fatherless are more likely to struggle in a number of areas, and they are especially likely to be poor. What we should be doing (if we really want to help the poor) is paying people to get married and stay married. But Democrats are opposed to that. The connection between welfare, fatherlessness, poverty and crime is explained in a previous post.

Wayne Grudem explains what the Bible says about spending, saving and charity

March 16, 2018 | by Wintery Knight | Link | Original Link

Bible study that hits the spot

A practical lecture on money – spending, saving, charitable giving – from famous pastor Wayne Grudem.

I like the way that Wayne Grudem navigates the Bible finding the passages that tell you who God is, so that you can make better decisions by analyzing alternatives and choosing the one that gives your Boss a maximum return on investment. He's very practical.

The MP3 file is here.

The PDF outline is here.

Spending:

- Christianity does not teach asceticism (= don't enjoy anything in this world), Paul condemns it in 1 Timothy 4:1-5
- When you buy nice things, even if it is a little more expensive, it's an opportunity to be thankful for nice things that God has provided
- Even being rich is OK, but don't let it make you haughty and arrogant, and don't set your hopes on your money (see 1 Tim 6:17)
- It is important for you to earn money, and you are supposed to use it to support yourself and be independent
- It is possible to overspend and live recklessly (Luke 15:13) and it's also possible to overspend and live too luxuriously
- *Increasing your income through career progression is wise*, because it allows you to give away more and save more

- God gives us freedom to decide how much we spend, how much we give away, and how much we save
- every choice a Christian makes with money will give him or her more or less reward in his or her afterlife
- Do not spend more than you have – you should make every effort to get out of debt as quickly as possible

Saving:

- Saving money is wise so you can help yourself and others, and have money in your old age when you will not be working
- If you do not save your own money, you end up being dependent on others (e.g. – family or taxpayers)
- Not saving money for the future is a way of "putting God to the test" (Matt 4:7)
- You are to "be dependent on no one", to the extent that you can (1 Thes 4:12)
- We don't know the future, that's why we should prepare for an emergency, and buy insurance to guard (James 4:13-17)
- It's right for us to learn how to save to be able to buy bigger assets, like a car or a college education
- Saving and investing in stocks and bonds lets people in business start and grow companies, creating jobs and new products
- *Don't over-save, trusting too much in money more than you trust in God* (Ps 62.10; Matt 6:19,24; Luke 12:15-21)

Giving:

- it is required for the people of God to give something out of what they earn, but no percentage is specified (Deut 26:12-13)
- you do not give money to become right with God, you can't earn your salvation
- *a Christian gives to show God that you trust him to take care of you, and to experience trusting him through your giving*
- the quality of your resurrection life with God is affected by giving you do for the Kingdom (Phil 4, Matt 6:19-21; 1 Tim 6:18-19)
- when you get involved in the lives of others and give to them, you have the joy of experiencing caring for others (Acts 20:35)
- it's possible to give too little, but it's also possible to give too much – be careful about pride creeping in as well

The first part of this lecture made me think of my treat for the week, which is to get a double chicken burrito bowl after my weight lifting. It is very easy to say grace when you are hovering over a double chicken burrito bowl. It is good to have nice things especially when it makes you thankful for what you have.

I was so happy listening to this talk because he was condemning bad stewardship, which I see in a lot of young people these days. I was happy until he got to the part about

trusting in your savings for your security, and then I thought – that's what I do wrong! I save a lot but it's not just for emergencies and to share with others, like he was saying – I want a sense of security. This was more of a temptation in my 20s than it is now in my 30s, though.

Charity should hurt

I can remember being in my first full-time job as a newly hired junior programmer when the 2001 recession struck. I would cry while signing checks to support William Lane Craig's Reasonable Faith ministry, because I was so scared. I had no family or friends where I lived to help me if anything went wrong, and that's been the story of my working life. If anything goes wrong, there is no backup. But it's that experience of crying when I gave that allows me to say today "that's when I became the man I am, that's what a man does when he is a follower of Jesus". If you are not doing the actions of charity, then you will not having the experience of trusting God and letting him lead you. There is more to the Christian life than just saying the right things – you have to do the right things.

Don't follow your heart

If you're scared about giving when you are young, then do what I did in my 20s: work 70-hour weeks, get promoted often, and save everything you earn. I volunteered every Saturday for 9 months in order to get my first white-collar part-time job when I was still in high-school. The faster you increase your savings, the easier it's going to be to take a *genuine interest* in caring for the people around you. Read Phil 1 (fellowship), Phil 2 (concern for others), and Phil 4 (charity). Turn off your emotions and desires when it comes to choosing what to study and what work to do, and put Philippians into practice. Your freedom to give is very much tied to the quality of your decisions of what to study, where to work, how much you spend on entertainment, and so on. That's why you need to turn off your feelings and desires and do what works, even it it's not fun, and even if it involves responsibilities, expectations and obligations.

The kalam cosmological argument defended in a peer-reviewed science journal

March 17, 2018 | by Wintery Knight | Link | Original Link

Here's the peer-reviewed article. It appears in a scientific journal focused on astrophysics.

Here's the abstract:

> Both cosmology and philosophy trace their roots to the wonder felt by the ancient Greeks as they contemplated the universe. The ultimate question remains why the universe exists rather than nothing. This question led Leibniz to postulate the existence of a metaphysically necessary being, which he identified as God. Leibniz's critics, however, disputed this identification, claiming that the space-time universe itself may be the metaphysically necessary being. The discovery during this century that the universe began to exist, however, calls into question the universe's status as metaphysically necessary, since any necessary being must be eternal in its existence. Although various cosmogonic models claiming to avert the beginning of the universe predicted by the standard model have been and continue to be offered, no model involving an eternal universe has proved as plausible as the standard model. Unless we are to assert that the universe simply sprang into being uncaused out of nothing, we are thus led to Leibniz's conclusion. Several objections to inferring a supernatural cause of the origin of the universe are considered and found to be unsound.

The whole text of the article is posted online here.

Here's an excerpt in which the author, Dr. William Lane Craig, explains the Big Bang cosmology:

> The monumental significance of the Friedman-Lemaitre model lay in its historization of the universe. As one commentator has remarked, up to this time the idea of the expansion of the universe "was absolutely beyond comprehension. Throughout all of human history the universe was regarded as fixed and immutable and the idea that it might actually be changing was inconceivable."{8} But if the Friedman-Lemaitre model were correct, the universe could no longer be adequately treated as a static entity existing, in effect, timelessly. Rather the universe has a history, and time will not be matter of indifference for our investigation of the cosmos. In 1929 Edwin Hubble's measurements of the red-shift in the optical spectra of light from distant galaxies,{9} which was taken to indicate a universal recessional motion of the light sources in the line of sight, provided a dramatic verification of the Friedman-Lemaitre model. Incredibly, what Hubble had discovered was the isotropic expansion of the universe predicted by Friedman and Lemaitre. It marked a veritable turning point in the history of science. "Of all the great predictions that

> science has ever made over the centuries," exclaims John Wheeler, "was there ever one greater than this, to predict, and predict correctly, and predict against all expectation a phenomenon so fantastic as the expansion of the universe?"{10}
>
> As a GTR-based theory, the Friedman-Lemaitre model does not describe the expansion of the material content of the universe into a pre-existing, empty, Newtonian space, but rather the expansion of space itself. This has the astonishing implication that as one reverses the expansion and extrapolates back in time, space-time curvature becomes progressively greater until one finally arrives at a singular state at which space-time curvature becomes infinite. This state therefore constitutes an edge or boundary to space-time itself. P. C. W. Davies comments,
>
> > An initial cosmological singularity . . . forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity. . . . On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.{11}
>
> The popular expression "Big Bang," originally a derisive term coined by Fred Hoyle to characterize the beginning of the universe predicted by the Friedman-Lemaitre model, is thus potentially misleading, since the expansion cannot be visualized from the outside (there being no "outside," just as there is no "before" with respect to the Big Bang).{12}
>
> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"{13}
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Every theist should be able to understand and defend this argument. It is a scientific refutation of materialism, and it is supported by six lines of scientific evidence – all of which emerged as science has progressed.

Scientific evidence:

1. Einstein's theory of general relativity (GTR)
2. the red-shifting of light from distant galaxies implies an expanding universe

3. the cosmic background radiation (which also disproves the oscillating model of the universe)
4. the second law of thermodynamics applied to star formation theory
5. hydrogen-helium abundance predictions
6. radioactive element abundance predictions

Those are the scientific discoveries that have led us to the beginning of the universe, which support's Dr. Craig's argument.

This is the kind of evidence I expect all Christian theists to be using when discussing the question of whether God exists. Scientific evidence. When talking to non-Christians, we first need to show that we understand science, because science is a reliable and respected way of getting knowledge about the universe. Non-Christians do not accept the Bible, but they do accept science, so we begin evangelism with science. Science (experimental, testable, repeatable science) should set limits on what anyone can believe – including non-Christians, who might otherwise not be inclined to listen to Bible verses and theology. Important: it's not a good idea to discuss the resurrection of Jesus with a person who does not accept the scientific evidence for a Creator of the universe.

The Big Bang is not compatible with atheism

According to the Secular Humanist Manifesto, atheism is committed to an eternally existing universe, (See the first item: "Religious humanists regard the universe as self-existing and not created."). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* This falsifies eternal models of the universe, which are *required* by the atheistic worldview.

Study: lack of secure attachment during early childhood harms children

March 18, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

This is from the leftist Brookings Institute, a respected think tank

They write about a new study:

> Attachment theory is founded on the idea that an infant's early relationship with their caregiver is crucial for social and emotional development. It is an old theory, born during the 1950s. But it can bring fresh light on issues of opportunity and equality today, as a three-decade longitudinal study of low-income children from Alan Sroufe, Byron Egeland, Elizabeth Carlson, and W. A. Collins, all University of Minnesota psychologists, demonstrates.
>
> […]Small infants are heavily dependent on caregivers, who must respond to their needs. But counter-intuitively, the infants who have a reliable caregiver are also most likely to become self-efficacious later.
>
> Infants (aged 9 to 18 months) with responsive parents learn how their own behavior can impact their environment. This "call and response" process builds the infant's sense of self-efficacy— one reason parents *should* pick up the sippy cup, especially for the hundredth time! But this virtuous learning cycle breaks down if the caregiver fails to respond adequately.

Here are the definitions:

- **Secure attachment**: When the caregiver (mom, in this study) is present, the infant explores the room and interacts with the experimenter, occasionally returning to the caregiver for support. When the caregiver leaves, the child becomes sad and

hesitates to interact with the experimenter, but upon their return, is visibly excited.
- **Anxious/resistant attachment:** Regardless of the caregiver's presence, the infant shows fear of the experimenter and novel situations—these infants cry more and explore the room less. They become upset when the caregiver leaves, and while they approach upon return often resist physical contact, as a form of "punishment".
- **Anxious/avoidant attachment:** No preference is shown between a caregiver and a stranger— infants play normally in the presence of the experimenter and show no sign of distress or interest when their caregiver leaves and returns. The experimenter and the caregiver can comfort the infant equally well.

And here the results:

> The Minnesota study found that attachment makes a difference later in life. Without knowing students' attachment history, preschool teachers judged those who had secure attachments to have higher self-esteem, to be more self-reliant, to be better at managing impulses, and to recover more easily from upsetting events. When teachers were asked which students, among those with serious struggles in class, nonetheless had "a core of inner self-worth, an indication that… maybe they could get better," they picked students that had secure attachments as infants.
>
> In contrast, children with anxious/resistant attachments:
>
> - tended to hover near teachers
> - became easily frustrated
> - were more likely to be seen as "dependent" by blinded observers
> - were less competent and patient with puzzles and other cognitive challenges
>
> Children with anxious/avoidant attachments:
>
> - tended to be apathetic towards other children
> - failed to ask for adult help when stressed
> - were "often self-isolating"
>
> Both groups had higher rates of anxiety and depression as teenagers.

So again, we are seeing that when it comes to parenting, you have to think about what you are doing. That doesn't mean that you have to be slaves to your kids, or spoil them or hover over them. It means that what you are doing with your kids matters. It means that you need to make a plan to have enough time and money to be able to care for them when they need it. I think that the right time to talk about such things is during the courtship. Who is going to be watching the children? How will we afford the things that they need? How will we deal with unexpected situations?

“The Proper Care and Feeding of Husbands” is required reading for women who want to marry

March 19, 2018 | by Wintery Knight | Link | Original Link

Man helping a woman with proper handgun marksmanship

I’ve been re-reading my favorite book on marriage, and so I thought I would re-post something about it.

Sue Bohlin of Probe Ministries read “The Proper Care and Feeding of Husbands“, and her assessment is here.

Excerpt:

> Talk show host Dr. Laura Schlessinger has written a book that is improving thousands of marriages: *The Proper Care and Feeding of Husbands.*{1} We need this book because millions of wives either don’t know how to love their husbands wisely and well, or they’re too self-centered to see it as important. Dr. Laura credits this dismal condition to forty years of feminist philosophy, “with its condemnation of just about everything male as evil, stupid, and oppressive, and the denigration of female and male roles in families.”{2} While the women’s movement certainly had a hand to play in the disintegration of relationships and the family, I believe the core cause is our sinful self-centeredness, just as the Bible says.{3}
>
> Which is why we need help, and God instructs older women to train younger women to love their husband and children, to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God.{4} *The Proper Care and Feeding of Husbands* is a great resource for learning these important values and skills.

She talks about men’s needs for direct communication, respect, appreciation, support,

and sex.

And ends with this:

> I can't recommend *The Proper Care and Feeding of Husbands* highly enough. In fact, I gave a copy to my new daughter-in-law! Let me close with one more piece of wisdom from Dr. Laura: "[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration and approval of a woman. . . Women need to better appreciate the magnitude of their power and influence over men, and not misuse or abuse it."{25}

Sue is the husband of famous Christian scholar Ray Bohlin, PhD, and they've been married for a very long time.

And here's another summary of the book that I found.

Full text:

> Dr. Laura Schlessinger has written another book that deserves a place on the best seller list with six of her other books, such as Ten Stupid Things Women Do to Mess Up Their Lives and Ten Stupid Things Men Do to Mess Up Their Lives. The Proper Care and Feeding of Husbands, from this unmarried man's perspective, is an excellent manual for women on how to get want they want from men and marriage and, generally, how to be happy. Dr. Laura makes a number of important, practical points, based on her experience in private practice, from advising her radio callers, and from literally hundreds of letters and emails she received from men and women while she was writing the book. Here are the points that struck this writer, together with commentary:

> 1. **Men Need Women, and This Need Gives Women Huge Influence**. Dr. Laura states the point as follows: "[M]en are simple creatures who come from a woman, are nurtured and brought up by a woman, and yearn for the continued love, admiration, and approval from a woman." Women have great power and influence over men, and wives in particular have tremendous power over their husbands. How they use this power essentially controls the relationship, because women are the masters of most relationships and marriages. That's why Dr. Laura says that she probably won't write The Proper Care and Feeding of Wives: wives already have most of the power and their marriages depend, for the most part, on them.

> 2. **Women Err in Favoring Children Over Husband**. A friend once told this writer that once a woman has children, her husband is relegated to the moral equivalence of a piece of furniture. How sad if this is true in many marriages. Here's how Dr. Laura puts it: "Once wives became mothers, they had no time to be wives. The men would even compliment their wives on being great mothers, but expressed considerable pain over not being shown love, affection, or sexual

interest. The typical reply from a wife challenged with this was ‘I only have time to take care of one person, and our child is that person. I’m just too tired for you.’ This puts fathers in the ugly and uncomfortable position of feeling competitive with and resentful of their children, whom they love so much.”

3. **Men and Women Are Different**. That men and women are deeply different ought not to be notable, but for the fact that it is so often challenged today. Dr. Laura says that society tries to make both men and women “unisex.” But men are happiest being men, and women are happiest being women, with few exceptions. The differences start to manifest themselves very early. In one study Dr. Laura mentions, a barrier was placed between 1 year-old babies and their mothers. What did the little boys do? They attempted to get around the barrier or knock it down. The little girls? They cried until their mothers’ picked them up. Men tend to respond to things physically, women verbally. In fact, the two sexes are just right for each other.

4. **Not Every Thought and Feeling Needs to be Said**. Women tend to be so verbal, so expressive, that they can tire out men easily unless they exercise some restraint. Dr. Laura reports that wives generally overwhelm their husbands with communication. “Husbands imagine (so foolishly) that their wives are telling them something they actually need to know because they’re supposed to do something about it. Otherwise, men can’t imagine why the ‘communication’ is happening at all. It confuses them, frustrates them, and their response is to turn off. That’s when they unfairly become labeled insensitive.” Husbands and fiances are not girlfriends or psychologists, and women who want attention should adjust their communication style accordingly when speaking with them.

5. **Men Are Not Mind-Readers**. Most men are not very intuitive compared to most women. Many women “get caught up in the absurdly romanticized notion that ‘if he loved me, he’d just know what I’m thinking, what I’d like, what he should say.'” If a woman wants her man to do something, she should just ask him plainly, without nagging, and show appreciation when he does it. To act otherwise, as many women do, shows arrogance and lack of respect for the husband’s difference, and it leads to unhappiness in the marriage and in the family.

6. **Man Is an Embodied Soul**. No, Dr. Laura didn’t put it that way; “embodied soul” is a Catholic concept. But that concept is what underlies her discussion of how important it is to a man that his wife try to keep up her appearance. What does it mean that we are embodied souls? It means that our bodies are integral parts of who we are. We are not just souls. Our bodies are not like clothing that we can take on or off. There was no time during which we had only souls and not bodies, and in eternity as well we will have bodies. It is through our bodies, in fact, that we communicate to our loved ones and to the rest of the world. One

thinks of the beautiful line from the old Anglican marriage rite: bride and groom pledge to each other “with my body I thee worship.” It is ironic, but in many cases men–sex-crazed pigs in the minds of many women–actually have a truer understanding of the beauty of the body and the meaning of the marital embrace than their wives do. “Objectification” may come as much or more from the woman’s side as from the husband’s if the woman sees her own body as being separate from rather than an integral part of herself. Dr. Laura writes: “In reading all the letters from men, I was struck by their depth of senstivity about the issue of women’s appearance. It wasn’t an impersonal, animal reaction (as it is with women the men don’t personally know), it was a deeply personal one. The wife’s comfort with and appreciation of her own body and femininity, and her willingness to share that with her husband, actually fed his sense of well-being, his feeling of being loved as a husband and valued as a ‘man.'”

7. **Infidelity by Omission**. Brides and grooms make a number of vows, not only of sexual fidelity. Marital vows include and imply words like love, honor, protect, and care for. “[W]hen one breaches those vows by neglect, is that also not a form of infidelity? Perhaps we should start looking at the act of intentionally depriving a spouse of legitimate needs as infidelity, too, because it stems from being unfaithful to the intent of the vows.”

8. **In the Bedroom**. To her credit, Dr. Laura gives due place to the importance for marriage of the marital act: “The bedroom is the foundation of marriage and family.” St. Josemaria Escriva, founder of Opus Dei, that supposedly conservative institution within the Church, put it this way: “The marriage bed is an altar.” Enough said?

9. **Women Should Appreciate Men’s Masculinity**. Dr. Laura relates a trip she made recently to a swimming pool. A mom and a dad were wading with their infant child. Mom held the child against her chest, cooed to him, and swooped him up and down. She passed the baby to dad. He turned the baby’s face outward and swooshed him forward and up into the air. “Mom equals protection and nurturance. Dad equals autonomy and adventure. It is the perfect balance that helps produce a functional, secure human being.” Too many women, though, act like Alice Kramdens, constantly belitting their husbands, shooting down their aspirations, treating them like children. Dr. Laura writes: “When a wife treats her man like he’s one of her children, when she puts him down or thwarts his need for autonomy, adventure, risk, competition, challenge, and conquest, she ends up with a sullen, unooperative, unloving, hostile lump.”

10. **Thou Shalt Not Covet**. Dr. Laura contributes a novel (to this writer) and insightful contemporary application of the commandment, “thou shal not covet.” Specifically, she understands it as a rebuke to people who want it all, especially feminists. “Perhaps the feminist notions about women having power if they do it

> all has obstructed too many women's ability to realize that in real life we all make choices, and that the true joy and meaning of life is not in how many things we have or do, but in the sacrifice and commitment we make to others within the context of the choices we've made. The Tenth Commandment, about coveting, reminds us that none of us can have everything there is nor everything we want. Without enjoying and appreciating our gifts and blessings, we create a hell on earth for ourselves and for those who love us."

PCF Husbands is the best basic book on marriage. Easy to read, tons of wisdom. It's a great book for women to read to find out what men really want from a wife, and to find out what a wife should do to kep her marriage intact and satisfying. Marriage can be a beautiful thing if both people go into the relationship with the view that each person has to put in 100% effort to make it work. Understanding a man's needs helps a woman to put in her 100%. It would be hard to take care of a parrot or some other strange creature if you didn't know anything about what their needs and habits were. This book explains a lot of what women need to know about men.

America’s new generation of little secular psychopaths

March 20, 2018 | by Wintery Knight | Link | Original Link

Zombies! They can’t think about policy rationally

I’ve been reading a lot about life in the former Soviet Union, where millions of innocent people were murdered for “equality”. I’m trying to understand how it was possible for an entire population to voluntarily give up their freedom in exchange for concentration camps and mass graves. The conclusion I’ve come to is that the majority of the Russian people must have lost the ability to make judgments about right and wrong. Could such a thing happen here?

According to Everett Piper, writing in the Washington Times, it already has: (H/T Ari)

> For some 70 years, “The Lottery” has rightly been included in many literary anthologies for its shocking portrayal of the power of groupthink and the human inclination to accept evil.
>
> For more than 30 years beginning in 1970, English professor Kay Haugaard used the story to spur corresponding discussions in her literature class at Pasadena City College. Ms. Haugaard says she could always count on some common reactions:
>
> “Everyone thought it was scary because, as someone inevitably said, ‘The characters seem just like regular people — you know, like us!’”
>
> “The story always impressed the class with the insight that I felt the author had intended: the danger of just ‘going along’ with something habitually, without examining its rationale and value. In spite of the changes that I had witnessed over the years in anthologies and in students’ writing, Jackson’s message about blind conformity always spoke to my students’ sense of right and wrong.”
>
> Then in the 1990s, something started to change dramatically in how her students responded to the sobering tale. Rather than being horrified by it, some claimed

> they were bored by it, while others thought the ending was “neat.”
>
> When Ms. Haugaard pressed them for more of their thoughts, she was appalled to discover that not one student in the class was willing to say the practice of human sacrifice was morally wrong! She describes one interaction with a student, whom she calls Beth:
>
> “‘Are you asking me if I believe in human sacrifice?’ Beth responded thoughtfully, as though seriously considering all aspects of the question. ‘Well, yes,’ I managed to say. ‘Do you think that the author approved or disapproved of this ritual?’
>
> “I was stunned: This was the [young] woman who wrote so passionately of saving the whales, of concern for the rain forests, of her rescue and tender care of a stray dog. ‘I really don’t know,’ said Beth; ‘If it was a religion of long standing, [who are we to judge]?’”
>
> “For a moment, I couldn’t even respond,” reports Ms. Haugaard. “This woman actually couldn’t seem to bring herself to say plainly that she was against human sacrifice. My classes of a few years before would have burst into nervous giggles at the suggestion. This class was calmly considering it.”
>
> At one point, a student explained she had been taught not to judge, and if this practice worked for them, who was she to argue differently.
>
> Appalled by the student’s moral indifference, Ms. Haugaard concludes, “Today, for the first time in my thirty years of teaching, I looked my students in the eye and not one of them in my class could tell me that this society, this cultural behavior was a bad thing.”
>
> Not one of these students would say human sacrifice is wrong? The whole point of “The Lottery” is to show the dangers of blindly following bad ideas. But Ms. Haugaard’s students had been taught that labels like good and evil, sacred and sinful, no longer applied as absolutes — and they responded accordingly. They had been taught that to assign moral values to actions was, in itself, wrong.

She’s for stopping global warming, but not for stopping human sacrifice. How come? Because she was taught to be against global warming by her leftist public school teachers. She was “taught” her secular leftist views because the teachers presented those secular leftist views as morally pure, and opposition to those secular leftist views as morally evil. Naturally, the stupid student wanted to accept the “good” views of her far-left public school teachers. On actual moral issues like child sacrifice, she has no ability to judge right from wrong. She accepted what she was taught. She can’t think for herself. The mere mention of opposing views sends her rushing for a safe space.

The concepts of right and wrong only have meaning if there really is a way that human beings ought to behave. In a theistic worldview, right and wrong are independent of our feelings, because they are rooted in the character of the Creator and Designer of the universe. The Designer gets to decide how we should act, not us. But if there is no

Designer, (atheism), then humans decide for themselves. They decide what's right and wrong *for them* based on their feelings. What's right is what works *for them*. Theists discuss morality as they discuss mathematics – choose what is correct. Atheists discuss morality as they discuss taste in food – choose what you like. As secularists have taken over in the schools, students have lost the ability to even have conversations about morality. And so, we've raised a generation of young people who cannot make moral judgments.

How can we expect people who can't make moral judgments to respond to evils, like the evils of communism? Before you can get to concentration camps and mass graves, you have to educate the young people into imbecility. And the secular public schools have done a pretty good job of that. We've got a generation of young people who are in lockstep with their far-left atheist teachers on every issue. They can't think for themselves, and they can't listen to views different from the views their teachers taught them. They don't have the brains to resist those who would enslave us all.

Armed support officer ends attempted school shooting in Maryland

March 21, 2018 | by Wintery Knight | Link | Original Link

Gun ownership up, gun violence down

The mainstream media is using naive students like sock puppets to push an anti-self-defense agenda. I saw a clip where one of the children was explaining that armed teachers or security guards would not prevent school shootings. Instead, the solution being suggested by those on the left is to ban all semi-automatic weapons – which would mean confiscating nearly every firearm used for self-defense against criminals by law-abiding citizens.

So, does having an armed security guard on staff work?

Here's a story from the Daily Caller:

> The Great Mills High School student who injured two others Tuesday morning was stopped by the school's armed resource officer.
>
> According to St. Mary's County Sheriff Tim Cameron, the school resource officer (SRO) fired a round at the shooter, who fired a round in return. The shooter is now dead, Cameron confirmed Tuesday morning, and an investigation will determine whether the SRO's bullet struck the shooter.
>
> The incident is now over, though the shooter managed to injure two students. One of them is in critical condition in the hospital, Cameron said. The SRO was not injured during the incident.

In fact, almost all mass shootings happen in "gun-free zones", where there are no armed security guards.

Economist John Lott explains:

> Since 1950, more than 98 percent of public mass shootings in America have

> taken place where citizens are banned from carrying guns. In Europe, every mass public shooting in history has occurred in a gun-free zone. And Europe is no stranger to mass public shootings. In the past eight years, it has experienced a per-capita casualty rate 50 percent higher than that of the U.S.
>
> With permit holders preventing dozens of mass public shootings in recent years, it is unsurprising that killers try to avoid resistance.
>
> Last year, a young Islamic State sympathizer planned a shooting at one of the largest churches in Detroit. A FBI wiretap recorded his reasons for picking the church: “It’s easy, and a lot of people go there. Plus people are not allowed to carry guns in church. Plus it would make the news.”
>
> These killers might be crazy, but they aren’t stupid. Picking defenseless targets means being able to kill more people. A long list of killers explicitly have stated this reasoning, including the 2015 Charleston, S.C., church shooting, the 2012 theater shooting in Aurora, Colo., and the 2015 attack in San Bernardino, Calif.
>
> […]In March 2013, 86 percent of police officers surveyed by PoliceOne, the 450,000-member private organization of police, said that casualties would have been prevented if legally-armed citizens had been able to carry guns in places such as Newtown and Aurora.
>
> […]Last summer, professor Gary Mauser and I released a survey of all economists and criminologists who had published peer-reviewed empirical research on firearms.
>
> […]By 66 percent to 32 percent, economists and criminologists answer that gun-free zones are “more likely to attract criminals than they are to deter them.”

Allowing some teachers to voluntarily train and arm themselves would be a deterrent to school shootings. But this is not the solution that the leftist gun-grabbers are looking for. They don’t really want to solve the problem of school shootings. They just want to confiscate all legally-owned guns and abolish self-defense completely.

What criteria do historians use to get to the minimal facts about the historical Jesus?

March 22, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson: let's take a look at the facts

Have you ever heard Gary Habermas, Michael Licona or William Lane Craig defend the resurrection of Jesus in a debate by saying that the resurrection is the best explanation for the "minimal facts" about Jesus? The lists of minimal facts that they use are typically agreed to by their opponents during the debates. Minimal facts are the parts of the New Testament that meet a set of strict historical criteria. These are the facts that skeptical historians agree with, totally apart from any religious beliefs.

So what are the criteria that skeptical historians use to derive a list of minimal facts about Jesus?

Dr. Craig explains them in this article.

Excerpt:

> The other way, more influential in contemporary New Testament scholarship, is to establish specific facts about Jesus without assuming the general reliability of the Gospels. The key here are the so-called "Criteria of Authenticity" which enable us to establish specific sayings or events in Jesus' life as historical. Scholars involved in the quest of the historical Jesus have enunciated a number of these critieria for detecting historically authentic features of Jesus, such as dissimilarity to Christian teaching, multiple attestation, linguistic semitisms, traces of Palestinian milieu, retention of embarrassing material, coherence with other authentic material, and so forth.
>
> It is somewhat misleading to call these "criteria," for they aim at stating sufficient, not necessary, conditions of historicity. This is easy to see: suppose a saying is multiply attested and dissimilar but not embarrassing. If embarrassment were a necessary condition of authenticity, then the saying would have to be deemed inauthentic, which is wrong-headed, since its multiple attestation and dissimilarity are sufficient for authenticity. Of course, the criteria

> are defeasible, meaning that they are not infallible guides to authenticity. They might be better called "Indications of Authenticity" or "Signs of Credibility."
>
> In point of fact, what the criteria really amount to are statements about the effect of certain types of evidence upon the probability of various sayings or events in Jesus' life. For some saying or event S and evidence of a certain type E, the criteria would state that, all things being equal, the probability of S given E is greater than the probability of S on our background knowledge alone. So, for example, all else being equal, the probability of some event or saying is greater given its multiple attestation than it would have been without it.
>
> What are some of the factors that might serve the role of E in increasing the probability of some saying or event S? The following are some of the most important:
>
> (1) Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
>
> (2) Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
>
> (3) Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
>
> (4) Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
>
> (5) Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
>
> (6) Coherence: S is consistent with already established facts about Jesus.
>
> For a good discussion of these factors see Robert Stein, "The 'Criteria' for Authenticity," in *Gospel Perspectives I*, ed. R. T. France and David Wenham (Sheffield, England: JSOT Press, 1980), pp. 225-63.
>
> Notice that these "criteria" do not presuppose the general reliability of the Gospels. Rather they focus on a particular saying or event and give evidence for thinking that specific element of Jesus' life to be historical, regardless of the general reliability of the document in which the particular saying or event is reported. These same "criteria" are thus applicable to reports of Jesus found in the apocryphal Gospels, or rabbinical writings, or even the Qur'an. Of course, if the Gospels can be shown to be generally reliable documents, so much the better! But the "criteria" do not depend on any such presupposition. They serve to help spot historical kernels even in the midst of historical chaff. Thus we need not concern ourselves with defending the Gospels' every claim attributed to Jesus in the gospels; the question will be whether we can establish enough about Jesus to make faith in him reasonable.

And you can see Dr. Craig using these criteria to defend minimal facts in his debates. For example, in his debate with Ehrman, he alludes to the criteria when making his case for

the empty tomb.

Here, he uses multiple attestation and the criteria of embarrassment:

> Among the reasons which have led most scholars to this conclusion are the following:
>
> 1. The empty tomb is also multiply attested by independent, early sources.
>
> Mark's source didn't end with the burial, but with the story of the empty tomb, which is tied to the burial story verbally and grammatically. Moreover, Matthew and John have independent sources about the empty tomb; it's also mentioned in the sermons in the Acts of the Apostles (2.29; 13.36); and it's implied by Paul in his first letter to the Corinthian church (I Cor. 15.4). Thus, we have again multiple, early, independent attestation of the fact of the empty tomb.
>
> 2. The tomb was discovered empty by women.
>
> In patriarchal Jewish society the testimony of women was not highly regarded. In fact, the Jewish historian Josephus says that women weren't even permitted to serve as witnesses in a Jewish court of law. Now in light of this fact, how remarkable it is that it is women who are the discoverers of Jesus' empty tomb. Any later legendary account would certainly have made male disciples like Peter and John discover the empty tomb. The fact that it is women, rather than men, who are the discoverers of the empty tomb is best explained by the fact that they were the chief witnesses to the fact of the empty tomb, and the Gospel writers faithfully record what, for them, was an awkward and embarrassing fact.

There are actually a few more reasons for believing in the empty tomb that he doesn't go into in the debate, but you can find them in his written work. For example, in his essay on Gerd Ludemann's "vision" hypothesis. That essay covers the reasons for all four of his minimal facts.

So, if you are going to talk about the resurrection with a skeptic, you don't want to invoke the Bible as some sort of inerrant/inspired Holy Book.

Try this approach instead:

1. Explain the criteria that historians use to get their lists of minimal facts
2. Explain your list of minimal facts
3. Defend your list of minimal facts using the criteria
4. Cite skeptics who admit to each of your minimal facts, to show that they are widely accepted
5. List some parts of the Bible that don't pass the criteria (e.g. – guard at the tomb, Matthew earthquake)
6. Explain why those parts don't pass the criteria, and explain that they are not part of your case
7. Challenge your opponent to either deny some or all the facts, or propose a naturalistic alternative that explains the facts better than the resurrection

8. Don’t let your opponent attack any of your minimal facts by attacking other parts of the Bible (e.g. – the number of angels being one or two, etc.)

And remember that there is no good case for the resurrection that does not make heavy use of the early creed in 1 Corinthians 15:3-8.

The best essay on the minimal facts criteria that I’ve read is the one by Robert H. Stein in “Contending with Christianity’s Critics“. It’s a good short essay that goes over all the historical criteria that are used to derive the short list of facts from which we infer the conclusion “God raised Jesus from the dead”. That whole book is really very, very good.

Conservatives vote against wasteful $1.3 trillion spending bill

March 23, 2018 | by Wintery Knight | Link | Original Link

The new Republican spending bill has nothing for conservatives

Even though many conservative Republican congressmen voted against the massive spending bill, it still passed the House. All the Democrats voted for it. It's a Democrat spending bill – there's nothing in it that Trump promised. No money for the wall. No de-funding of sanctuary cities. No de-funding of Planned Parenthood. No de-funding of Obamacare.

CNBC reports:

> The U.S. Congress was racing on Thursday to approve a massive spending bill and send it to President Donald Trump for enactment before a midnight Friday government shutdown deadline, in a move that would significantly boost defense and non-military funding through Sept. 30.
>
> The House of Representatives planned to debate and vote on the measure on Thursday. If it clears the chamber, despite opposition from some conservatives protesting the measure's crushing deficit spending, it is likely to have an easier time passing the Senate.
>
> When coupled with recently enacted tax cuts, the bill is projected to result in budget deficits hitting more than $800 billion for this year. That could create political difficulties for Republicans running for re-election in November if the conservative wing of the party lashes out at this legislation.
>
> […]It also would deliver a further setback to Trump, whose proposals for severe cuts to the Environmental Protection Agency, State Department and other federal agencies would be scaled back.
>
> The bill, which also excludes some of Trump's immigration-related funding requests, was unveiled late on Wednesday. Senate No. 2 Republican John Cornyn said his chamber could take it up on Thursday night if no senator acts to slow it.
>
> On Wednesday, the White House signaled that Trump would sign the legislation if

> Congress sends it to him.
>
> House Republicans' conservative Freedom Caucus on Thursday said its roughly three dozen members would not back the bill because it massively increases spending while not defunding Obamacare, Planned Parenthood and so-called sanctuary cities.
>
> "You're going to see lots of conservatives vote against it," U.S. Representative Jim Jordan, a caucus member, told Fox News in an interview.
>
> Trump at one point wanted $25 billion included in the bill to fully fund construction of his proposed U.S.-Mexico border wall, but negotiations with Democrats to make that happen fell apart early this week, according to congressional aides.
>
> Instead, Trump would get nearly $1.6 billion more for border security this year.

Trump is busy lying about border wall funding in the bill, promising that "more will be forthcoming". But this bill is a loss for conservatives. Ted Cruz has vowed to vote against the bill in the Senate, which tells you something about whether the bill is conservative or not. It's garbage. We're going back to trillion-dollar deficits to fund worthless government bureaucracies again.

William Lane Craig discusses faith and reason with university students

March 24, 2018 | by Wintery Knight | Link | Original Link

William Lane Craig lecturing to university students

This is an interview of Dr. William Lane Craig before college students at the University of Central Florida. (95 minutes)

Questions from the interviewer: (40 minutes)

- What started you on his journey of studying faith and reason?
- How would you define the word “faith”?
- Are faith and reason compatible? How are they related?
- How can reasonable faith help us to avoid the two extremes of superstition and nihilism?
- Who makes the best arguments against the Christian faith?
- Why are angry atheists like Dawkins and Hitchens more well known than better-informed academic atheists?
- Does the Bible require Christians to give the unbeliever reasons for their faith?
- How does faith spur Christians to think carefully about the big questions in life?
- Should the American church prod churchgoers to develop their minds so they can engage the secular culture?
- When talking about Christianity intellectually, is there a risk of neglecting the experience of being a Christian?
- Which Christian apologist has shaped your thinking the most?
- Which Christian philosopher has shaped your thinking the most?
- Does the confidence that comes from apologetics undermine humility and reverence?

- If you had to sketch out a 5 minute case for Christianity, what would you present?
- Can non-Christians use their reason to arrive at truth?
- Are there cases where atheists must affirm irrational things in order to remain atheists?
- Can the universe have existed eternal, so that there is no need to explain who created it?
- Even if you persuade someone that Christianity is true, does that mean they will live it out?

There is also a long period of questions, many of them hostile, from the audience of students (55 minutes).

- Haven't you said nasty things about some atheists? Aren't you a meany?
- What do you make of the presuppositional approach to apologetics?
- Can a person stop being a Christian because of the chances that happen to them as they age?
- Why did God wait so long after humans appeared to reveal himself to people through Jesus?
- Can a person be saved by faith without have any intellectual assent to truth?
- How do you find time for regular things like marriage when you have to study and speak so much?
- How would you respond to Zeitgeist and parallels to Christianity in Greek/Roman mythology?
- Do Christians have to assume that the Bible is inerrant and inspired in order to evangelize?
- If the universe has a beginning, then why doesn't God have a beginning?
- Can you name some philosophical resources on abstract objects, Platonism and nominalism?
- How can you know that Christianity more right than other religions?
- Should we respond to the problem of evil by saying that our moral notions are different from God's?
- Define the A and B theories of time. Explain how they relate to the kalam cosmological argument.
- How can Christians claim that their view is true in the face of so many world religions?
- What is the role of emotions in Christian belief and thought?
- Can evolution be reconciled with Christian beliefs and the Bible?
- When witnessing person-to-person, should you balance apologetics with personal testimony?
- Is there a good analogy for the trinity that can help people to understand it? [Note: HE HAS ONE!]
- How can Christians reconcile God's omniscience, God's sovereignty and human free will?

This is a nice introductory lecture that is sure to get Christians to become interested in apologetics. As you watch or listen to it, imagine what the world would be like if *every* Christian could answer the questions of skeptical college students and professors like Dr. Craig. What would non-Christians think about Christianity if *every* Christian had studied these issues like Dr. Craig? Why aren't we making an effort to study these things *so that* we can answer these questions?

It is really fun to see him fielding the questions from the skeptical university students. My favorite question was from the physics student who sounds really foreign, (at 1:19:00), then you realize that he is a Christian. I do think that Dr. Craig went a little far in accommodating evolution, but I put that down to the venue, and not wanting to get into a peripheral issue. I'm also surprised that no one asked him why God allows humans to suffer and commit acts of evil.

If you are looking for a good basic book on apologetics, then I would choose "Is God Just a Human Invention?" by Sean McDowell and Jonathan Morrow.

Who is William Lane Craig?

About William Lane Craig:

> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology in La Mirada, California.
>
> Dr. Craig pursued his undergraduate studies at Wheaton College (B.A. 1971) and graduate studies at Trinity Evangelical Divinity School (M.A. 1974; M.A. 1975), the University of Birmingham (England) (Ph.D. 1977), and the University of Munich (Germany) (D.Theol. 1984). From 1980-86 he taught Philosophy of Religion at Trinity… In 1987 they moved to Brussels, Belgium, where Dr. Craig pursued research at the University of Louvain until assuming his position at Talbot in 1994.
>
> He has authored or edited over thirty books, including *The Kalam Cosmological Argument*; *Assessing the New Testament Evidence for the Historicity of the Resurrection of Jesus*; *Divine Foreknowledge and Human Freedom*; *Theism, Atheism and Big Bang Cosmology*; and *God, Time and Eternity*, as well as over a hundred articles in professional journals of philosophy and theology, including *The Journal of Philosophy*, *New Testament Studies*, *Journal for the Study of the New Testament*, *American Philosophical Quarterly*, *Philosophical Studies*, *Philosophy*, and *British Journal for Philosophy of Science*.

Craig's CV is here.

Craig's list of publications is here.

William Lane Craig is, without a doubt, the top living defender of Christianity. He has debated all of the most famous atheists, including Christopher Hitchens, Sam Harris, etc. as well as academic atheists like Quentin Smith, Peter Millican, etc. if you search this blog, you'll find many debates posted here, sometimes even with snarky summaries.

Single payer health care: man denied medical treatment is offered euthanasia

March 25, 2018 | by Wintery Knight | Link | Original Link

Fraser Institute, 2015: the cost of single payer health care

What sort of health care can you expect in a system where you pay mandatory taxes to government bureaucrats whose primary purpose is to buy votes in order to win re-election? Can these bureaucrats be trusted to give you the health care that you've paid for?

Well, in Canada, health care is paid for by mandatory collection of taxes from those who work. You don't pay for what you use, you just pay based on what you earn. The more you work, the more you pay in taxes. But paying more in taxes doesn't mean that you will get treatment. In Canada, you'll get behind people who don't pay a dime into the system. You'll wait for months. And you'll be waiting in line behind people who want IVF, abortions, sex changes, and free heroine injections. Because in Canada, health care is just vote buying. The healthiest hardest working people pay and don't use. The laziest and most irresponsible people don't pay and use too much.

But there is one thing that the Canadian government will do for you – they'll offer to murder you in order to keep you from draining health care dollars away from the people whose votes need to be bought.

Evolution News explains:

> […][A] Canadian man with serious disabilities has been refused coverage for independent-living services — but offered payment by Canadian Medicare for the costs of obtaining a lethal jab. From the *CTV News* story:
>
> [Roger] Foley's request to the Centre for Independent Living in Toronto (CILT), where he was directed to apply, was denied last year. Foley asked for a review of that decision, but his lawsuit alleges that the review process has been delayed multiple times as the CILT defaulted on deadlines.
>
> So he hired lawyer Ken Berger.

> “We don’t really understand why it’s not being solved and why we’ve had to file this lawsuit for Roger,” Berger, who specializes in health law, told CTV News. “We really didn’t want to reach this stage, but we were left with no alternative.”
>
> According to Foley’s statement of claim, the only two options offered to him have been a “forced discharge” from the hospital “to work with contracted agencies that have failed him” or medically assisted death. Refusing to leave the hospital and unwilling to die by a doctor’s hand, Foley claims he has been threatened with a $1,800 per day hospital bill, which is roughly the non-OHIP daily rate for a hospital stay.
>
> Can you imagine the screaming if a private health-insurance company were alleged to have forced these alternatives on a man with disabilities wanting assistance for independent living? The screaming would be heard in China.
>
> But this is socialized single-payer socialism. So, expect a much more muted response.
>
> Coercion to “choose” assisted suicide or euthanasia will come in many guises. This is one of them. Those with eyes to see, let them see.

Let me tell you something very important. You cannot demand quality from a service or product provider if you have already paid them. The time to ask for a lower price or higher quality is when you have your money in your pocket. That is why we are so happy to buy things from Amazon.com, but not so happy with the Postal Service or the Bureau of Motor Vehicles. Where there is competition, there is higher quality at a lower price. The free market works better than a government monopoly.

Facts vs feelings in the debate on gun control vs self-defense

March 26, 2018 | by Wintery Knight | Link | Original Link

I found a splendid at the Daily Signal article that ought to be read by everyone who has an opinion about the conflict between gun confiscation vs self-defense.

Here are the 8 points made in the article, then I'll comment on my favorite one:

> 1. Violent crime is down and has been on the decline for decades.
> 2. The principal public safety concerns with respect to guns are suicides and illegally owned handguns, not mass shootings.
> 3. A small number of factors significantly increase the likelihood that a person will be a victim of a gun-related homicide.
> 4. Gun-related murders are carried out by a predictable pool of people.
> 5. Higher rates of gun ownership are not associated with higher rates of violent crime.
> 6. There is no clear relationship between strict gun control legislation and homicide or violent crime rates.
> 7. Legally owned firearms are used for lawful purposes much more often than they are used to commit crimes or suicide.
> 8. Concealed carry permit holders are not the problem, but they may be part of the solution.

Whenever we discuss gun violence, it's very important to exclude suicides using a gun from the overall rate of gun deaths. Once you do that, you will find that the rate of violent crime has been declining as more and more law-abiding Americans have gone through the process to purchase a firearm for self-defense.

Let's talk about the gun homicide rate and how the steady increase in firearm ownership has affected that.

Here is a graph:

Gun ownership up, gun violence down

The question I want to address is this: why would someone want to own a gun in the first place?

Here are the points from the list of eight points that are relevant to that question:

> **Higher rates of gun ownership are not associated with higher rates of violent crime.**
>
> - Switzerland and Israel have much higher gun ownership rates than the United States but experience far fewer homicides and have much lower violent crime rates than many European nations with strict gun control laws.
> - Higher rates of concealed carry permit holders are even more strongly associated with reduction in violent crime than are “right-to-carry” states. The probable reason for this is that “right-to-carry” studies often include “open carry” states, which have not been shown to correlate with more people actually carrying or even owning firearms. Rates of concealed carry permit holders are better indicators of the number of people who actually possess and carry firearms within a given population.
>
> **There is no clear relationship between strict gun control legislation and homicide or violent crime rates.**
>
> - Homicide and firearm homicide rates in Great Britain spiked in the years immediately following the imposition of severe gun control measures, despite the fact that most developed countries continued to experience a downward trend in these rates. This is also pointed out by noted criminologist John Lott in his book “The War on Guns.”
> - Similarly, Ireland’s homicide rates spiked in the years immediately following the country’s 1972 gun confiscation legislation.
> - Australia’s National Firearms Act appears to have had little effect on suicide and homicide rates, which were falling before the law was enacted and

continued to decline at a statistically unremarkable rate compared to worldwide trends.
- According to research compiled by John Lott and highlighted in his book "The War on Guns," Australia's armed and unarmed robbery rates both increased markedly in the five years immediately following the National Firearms Act, despite the general downward trend experienced by other developed countries.
- Great Britain has some of the strictest gun control laws in the developed world, but the violent crime rate for homicide, rape, burglary, and aggravated assault is much higher than that in the U.S. Further, approximately 60 percent of burglaries in Great Britain occur while residents are home, compared to just 13 percent in the U.S., and British burglars admit to targeting occupied residences because they are more likely to find wallets and purses.
- It is difficult to compare homicide and firearm-related murder rates across international borders because countries use different methods to determine which deaths "count" for purposes of violent crime. For example, since 1967, Great Britain has excluded from its homicide counts any case that does not result in a conviction, that was the result of dangerous driving, or in which the person was determined to have acted in self-defense. All of these factors are counted as "homicides" in the United States.

Legally owned firearms are used for lawful purposes much more often than they are used to commit crimes or suicide.

- In 2013, President Barack Obama ordered the Centers for Disease Control and Prevention (CDC) to assess existing research on gun violence. The report, compiled by the Institute of Medicine and the National Research Council, found (among other things) that firearms are used defensively hundreds of thousands of times every year.
- According to the CDC, "self-defense can be an important crime deterrent." Recent CDC reports acknowledge that studies directly assessing the effect of actual defensive uses of guns have found "consistently lower injury rates among gun-using crime victims compared with victims who used other self-protective strategies."
- Semi-automatic rifles (such as the AR-15) are commonly used as self-defense weapons in the homes of law-abiding citizens because they are easier to control than handguns, are more versatile than handguns, and offer the advantage of up to 30 rounds of protection. Even Vox has published stories defending the use of the AR-15.
- AR-15s have been used to save lives on many occasions [list omitted by WK]

Concealed carry permit holders are not the problem, but they may be

> **part of the solution.**
>
> - Noted criminologist John Lott found that, as a group, concealed carry permit holders are some of the most law-abiding people in the United States. The rate at which they commit crimes generally and firearm crimes specifically is between one-sixth and one-tenth of that recorded for police officers, who are themselves committing crimes at a fraction of the rate of the general population.
> - Between 2007 and 2015, murder rates dropped 16 percent and violent crime rates dropped 18 percent, even though the percentage of adults with concealed carry permits rose by 190 percent.
> - Regression estimates show a significant association between increased permit ownership and a drop in murder and violent crime rates. Each percentage point increase in rates of permit-holding is associated with a roughly 2.5 percent drop in the murder rate.
> - Concealed carry permit holders are often “the good guy with a gun,” even though they rarely receive the attention of the national media. Concealed carry permit holders were credited with saving multiple lives [list omitted by WK]

So, I think that those points provide a very necessary balance for the “ban guns” crowd. Gun ownership is a vital part of a free citizen’s right to self-defense. People who want to discuss gun confiscation vs self-defense need to be aware of the way guns are really used by law-abiding people to protect themselves and their families.

Can we trust the politically correct, radically leftist FBI to protect the public?

March 27, 2018 | by Wintery Knight | Link | Original Link

The politically correct FBI fails and fails and fails again

Wow, I can remember back 10 years ago when my opinion of the FBI was that they were the morally good law enforcement agency. Now it seems that the only thing they are good at is demonizing Christians and conservatives, committing adultery with each other, covering up for corrupt Democrats, and collecting fat taxpayer-funded pensions.

We know that the FBI failed miserably to follow up on public death threats made by the Florida school shooter under his own real name. Apparently, this might have been due to the fact that the shooter was non-white, and law enforcement became very politically correct under the past Democrat administration. They certainly don't want to make Muslim terrorists a priority.

Michelle Malkin explains:

> According to a probable cause affidavit filed by the Palm Beach County police, 17-year-old Corey Johnson bought a knife last Sunday and brought it with him to a sleepover at longtime friend Kyle Bancroft's house. At 4 a.m., he decided to kill Kyle's mother, Elaine; his brother, Dane; and Dane's friend, Jovanni Sierra Brand.
>
> Corey repeatedly stabbed Jovanni in his bed and slit his throat. Then he attempted to murder Elaine as she approached the boys' bedrooms in response to Jio's last gasps. Dane rescued his mom and sustained 32 stab wounds. Both were hospitalized and survived. Jio was buried last Friday—less than a week after celebrating his 13th birthday at a pizza party attended by Corey.

> The accused killer told police he “stabbed the victims because of his Muslim faith,” watched videos of “Muslim jihadists” on his cellphone, and “was reading the Quran from his phone just prior to the attack to give him courage to carry out his intentions.”
>
> […]Corey’s brutal attack was no bolt out of the blue, no unexpected incidence of sudden jihad syndrome. Local school officials and police in Palm Beach County, along with federal and international law enforcement authorities, had encountered more red flags in their years of dealing with Corey than at a Communist May Day parade in Havana.
>
> In middle school, Corey had reportedly stalked a student and sexually harassed her. She told school police. Nothing happened. He dabbled in white supremacy, anti-Semitism, and gay-bashing, and then immersed himself in radical Islam—rising at 5 a.m. daily to pray and revere the Syrian flag.
>
> Corey’s online jihad agitation, physical abuse, and addiction to ISIS beheading videos prompted his sister in 2016 to confide in a school therapist, who contacted the local sheriff’s office.
>
> Corey’s mom, the sister told school officials, was in denial. The sister so feared for her life she slept with a knife under her bed.
>
> Law enforcement officers at the Jupiter Police Department and Palm Beach County Sheriff’s Office convened at Corey’s high school last January to investigate the self-radicalized teen’s contact with ISIS as he sought to join the terror group.
>
> The FBI’s Joint Terrorism Task Force became involved after European intelligence counterparts told them Corey had used Instagram to issue security threats to a Catholic high school in England. The threats “were so severe in nature,” local officials discovered, “that up to 100 students were removed from the school fearing some kind of attack.”
>
> One of the messages threatened: “By Allah, we will kill every single Infidel student at this school.” Corey told FBI agents he “was supportive of known terrorist Anwar al Awlaki”—the spiritual patron of lone-wolf jihadists.
>
> The FBI’s plan of action? Inaction. The agency watched and waited and wanly admonished Corey to knock it off because authorities “believed a redirection approach would be the most beneficial regarding his conduct.”
>
> “Redirection” is akin to the alternative social justice strategies school officials and police used in Parkland, Florida, before 17 innocent students and teachers died at the hands of a teen shooter who was a walking neon sign for a mental health catastrophe.
>
> No referrals, no charges, no records, no problems.
>
> Except for the fact that Corey ignored the FBI and continued his Islamic instigation online. After nearly a year of foot-dragging, the FBI gathered enough

> evidence to bring federal charges against Corey for his social media terror threats.
>
> According to records released by the Jupiter Police Department, local officials were told the charges would be brought in the summer of 2017. But on the early morning of the jihad stabbings at Palm Beach Gardens last week, the FBI and U.S. Attorney's Office had yet to take action on a known radicalized threat who had menaced his family, his schoolmates, and innocents abroad.
>
> It's a familiar narrative for the FBI—from the Boston Marathon bombers to the Orlando nightclub shooter to the Fort Lauderdale airport jihadist to the San Bernardino terrorists. Family members, teachers, neighbors, and co-workers saw something and said something.

It's just workplace violence, as Barack Obama would say. The system worked, as Janet Napolitano would say. The real priority of law enforcement should be to crack down on anti-Muslim hate, as Loretta Lynch would say. These are the imbeciles who were running federal law enforcement during the last administration.

This is the politically correct, ineffective FBI that the radically leftist media is defending these days. The leftist news media doesn't want you to own a gun or defend yourself. They want you to trust the government to protect you and your family.

Middle Eastern men who ran Oxford child sex-trafficking ring found guilty

March 28, 2018 | by Wintery Knight | Link | Original Link

Muslim populations in Europe

Note: this story is NOT about the Telford sex-trafficking ring that I reported on recently. This is about the Oxford sex-trafficking ring that I reported on in 2015.

Although this article from the far-left BBC refuses to find the common denominator in the seven men who were convicted of sex-trafficking children, but you might be able to discern it for yourself.

Excerpt:

> Seven men have been found guilty of grooming and sexually abusing teenage girls "on a massive scale" in Oxford.
>
> The gang was convicted of more than 20 offences including rape and indecent assault between 1998 and 2005.
>
> Prosecutor Oliver Saxby QC said they carried out the "routine, cynical and predatory sexual exploitation" of vulnerable girls who were groomed with alcohol and drugs.
>
> The five victims were aged between 13 and 15 when the offences started.
>
> Opening the case at Oxford Crown Court, Mr Saxby said the gang preyed on girls who had a background of problems at home.
>
> He said they offered their victims "company, attention, acceptance into the group" as well as "food, parties, alcohol, and sometimes drugs".
>
> Mr Saxby said this was all part of "the grooming process" the gang used in order

> to carry out “sexual exploitation on a massive scale”.
>
> He said the girls would be made to have sex at parties, in cars or parks, with other men around, and sometimes after being subjected to threats and violence.
>
> One girl was taken to a B&B in Iffley Road and told to have sex with older men, who one of the defendants described as “uncles”, he said.
>
> Mr Saxby added: “She says she has lost count of the number of ‘uncles’ she had sex with… After sex she would sit in the shower and scrub herself.”

And here are the names and ages of the men:

- Assad Hussain, 37, of Iffley Road, Oxford, guilty of five counts of rape and two counts of indecent assault, not guilty of one count of indecent assault.
- Kameer Iqbal, 39, of Dashwood Road, Oxford, guilty of three counts of rape.
- Khalid Hussain, 38, of Ashhurst Way, Oxford, guilty of rape and indecent assault, not guilty of one count of rape.
- Kamran Khan, 36, of Northfield Road, Bolton, guilty of indecent assault and false imprisonment, not guilty of rape.
- Moinul Islam, 41, of Wykeham Crescent, Oxford, guilty of rape, two counts of indecent assault and supplying cannabis, not guilty of false imprisonment.
- Raheem Ahmed, 40 of Starwort Path, Oxford, guilty of two counts of indecent assault and false imprisonment, not guilty of rape.
- Alladitta Yousaf, 48, of Bodley Road, Oxford, guilty of indecent assault.

In my previous article about the Telford gang, I reported on how the secular, leftist, politically correct UK police refused to take the complaints of the girls and their mothers seriously, for fear of offending the Middle Eastern men who were being accused. The police did nothing to protect the children, because the Labour Party had carefully instructed them in politically correct leftist dogma. If they had done anything to prosecute the predators, they would have lost their jobs for insensitivity and intolerance.

This is not the first time that we have had sex-trafficking gangs run by men of Middle-Eastern origin.

Rotterham

How about the Rotterham sex-trafficking gang?

Here are the facts from Powerline Blog:

Full text:

> You are probably familiar with the Rotherham scandal. Rotherham is a city in England where over a period of years, more than 1,400 girls, many of them pre-teens, were raped and trafficked by a loose consortium of men. The men were all Muslim immigrants or sons of immigrants, the girls were all, or nearly all, white. When the scandal finally came to light in 2014, city officials said that they had been reluctant to do anything about the problem for fear of being accused of racism.
>
> Several criminal trials have resulted from the scandal. The third such trial has just been completed. Six defendants were convicted and sentenced to 10 to 20 years for rape and other crimes. The Sun identified them:
>
> Brothers Basharat Dad, 32, and Nasar Dad, 36, of both of Rotherham, and Tayab Dad, 34, of Sheffield, were jailed on Tuesday for sex offences along with Matloob Hussain, 41, of Rotherham, Mohammed Sadiq, 40, of Rotherham, and Amjad Ali, of Worksop, Nottinghamshire.
>
> This is the most curious aspect of the news report:
>
> There were emotional and chaotic scenes at Sheffield Crown Court after two of the defendants shouted "Allahu Akbar" as they were led from the dock.

But wait, there are more examples.

Rochdale

Another case reported in the UK Telegraph:

> Taxi driver Shabir Ahmed, 59, was already serving a 19 year sentence from May for conspiracy, two rapes, aiding and abetting rape, sexual assault and sex trafficking. His domineering temper earned him the nickname "Daddy" by the white teenage victims.

> The ringleader, who called the judge a 'racist b——', was one of nine men jailed at Liverpool Crown Court for a total of 77 years for passing round the youngsters and plying them with drugs and drink.

> […]His victim, who cannot be named, revealed Ahmed once made her kneel on the floor in a pose called the 'chicken', with her arms threaded through her legs and touching her ears, before striking her on the back with a cricket bat.
>
> The girl, now an adult, claims she was repeatedly raped over many years. He left her never wanting to have sex again or get married.
>
> The girl said when she was first raped she was so young she needed to stand on a chair to reach a sink.
>
> […]Ahmed told the court he was a standard-bearer for "targeted and weakened British Muslims", and claimed the police were anti-Muslim
>
> He said of the Rochdale grooming trial: "We were all innocent. My only crime was

> to be Muslim. Not of the majority race."
>
> In May, Ahmed and his eight co-defendants were jailed for their role in a child-sex ring.

In other cases, the police ignored the complaints of the victims.

This happens often because the UK deliberately chose a "compassionate" open-borders immigration policy. We should not imitate their example. Merit-based immigration is best.

I find it very interesting that so many Christian leaders like Russell Moore take progressive positions on refugees and illegal immigrants. Are they not aware of what is going on in countries that embraced open borders? Or do they just not care about the fatherless little girls who suffer from their "generosity"?

Matt Dillahunty debates David Robertson on atheism, morality and evil

March 29, 2018 | by Wintery Knight | Link | Original Link

Two horses fight it out, may the best horse win!

OK. So I think it's safe to say that of all the Christian apologists out there, David Robertson is my least favorite debater. Why? Many reasons, but mostly because he does not bring in evidence, especially scientific evidence. And he seems to make these clever quips like G. K. Chesterton. I like evidence. I would rather that he talk about scientific and historical evidence.

Dina asked me to listen to this debate a while back, between David Robertson and agnostic Matt Dillahunty (he's not an atheist, he's just an agnostic). I went in absolutely convinced that Robertson was going to have his ass handed to him by Matt Dillahunty. And I could not have been more wrong.

Here's the debate posted on YouTube (audio only):

This snarky summary is just a paraphrase from certain parts of the debate, *it is not designed for accuracy*, but for fun – to make you listen to the debate. Listen to the debate to get the exact words in context.

Summary:

- Matt Dillahunty: he's an agnostic who calls himself an atheist
- David Robertson: he's from Scotland, could we not get someone better?
- Robertson opening statement is incredibly weak, as you might expect, he only had two arguments embedded in a long list of nonsense: 1) origin and design of the universe 2) reality of evil requires objective morality

1) Creation/Design:

Robertson: The fact is that matter exists. There are 3 views that could account for this fact: 1) created, 2) eternal, 3) self-generated out of nothing. Option 3) is self-contradictory, 1) requires a Creator, and 2) is falsified by the Big Bang cosmology. So what's your view?

Dillahunty: You're trying to get me to say what my view is, but I can just say "I don't know" and get out of having to take any position on how matter got here. I can say "I don't know" to all the scientific evidence for the Big Bang cosmology, too!

2) Evil requires objective morality, requires a moral lawgiver:

Robertson: evil exists, e.g. – the Holocaust. If atheism is true, objective morality is impossible. Richard Dawkins agrees. Therefore, theism is the best explanation for the existence of evil.

Dillahunty: In my opinion, morality means doing what helps people have well-being. And I think that the Holocaust is obviously bad, because it hurts the well-being of the victims.

Robertson: The problem is that on your view, different people decide what well-being is to them. If you were raised in the Social Darwinism of the Nazi regime, you would believe that the Holocaust was the best for the well-being of the society as a whole.

Dillahunty: Isn't it obvious that killing people is bad for their well-being?

Robertson: Is it bad for the well-being of unborn children to kill them?

Dillahunty: Yes

Robertson: So you're against abortion, then?

Dillahunty: No

Robertson: So you think that killing the child in the womb is against the well-being of the child, but you're for that?

Dillahunty: I don't know! I don't know!

Then Dillahunty tried to claim Hitler was a Christian:

Dillahunty: here is a quote by Hitler saying that secular schools are bad, and religious schools are good – see, he's a Christian!

Robertson: when was that said and to whom?

Dillahunty: I don't know, I don't know!

Robertson: It was said in 1933, during an election campaign, to Catholic authorities – he was a politician, looking for votes from Catholics so he could become Chancellor.

Good and evil on atheism:

Dillahunty: good actions results in states with more well-being, and evil actions result in states with less well-being.

Brierley: but when the Nazis slaughtered all those people, they believed they were increasing well-being

Dillahunty: But you could demonstrate to them that their action is not going to increase well-being. Survival of the fittest is descriptive of what happens, but it's not prescriptive.

Robertson: Whose well-being will human beings think about most, if not their own? Do you really think that you can stop people like Charles Manson from being evil by sitting down and trying to prove to them that they are not helping their victim's well-being?

(A BIT LATER)

Robertson (to Dillahunty): Is it a fact that Dachau (a concentration camp) was morally wrong?

Dillahunty: (literally, not a paraphrase) I DON'T KNOW

My thoughts:

When I listened to this debate, the overwhelming conviction that emerges is that Matt Dillahunty is not someone who forms his worldview based on evidence. His rejection of the Big Bang cosmology with "I don't know" is just atrocious. His comments about slavery in the Bible and Hitler being a Christian show that his investigations of these issues is far below the level of a responsible adult. His dallying with the Jesus-never-existed view just shows him to be fundamentally anti-intellectual, as even atheist historian Bart Ehrman denies that view. His definition of faith has nothing to do with the Bible, or Christian authorities, or Christian scholars – he invented a definition of faith that allows him to mock Christians as morons. That's just irresponsible – letting the desire to mock others cause you to distort the definition of a word. When asked to state his positions or respond to specific evidence, his response is very often "I don't know". It seems to me that atheism, to him, means not pursuing truth with the aim of grasping it. He wants to keep reality at a safe distance – that's why he says "I don't know" so often.

On morality, it's even worse. It's not surprising to me that he is pro-abortion and has no opinion about concentration camps being objectively evil. Most atheists are pro-abortion, by the way. When it comes to morality, Dillahunty only has his own personal opinions, and they refer to nothing outside his own mind. (His opinion of morality as related to well-being is utilitarianism – a very problematic view – but moreover, it is *his subjective view* – he isn't offering it as any sort of objective moral system that would be prescriptive instead of descriptive. Without an after-life, there is no reason for anyone to care about the moral point of view when it goes against their self-interest, anyway. Atheists use moral language, but their statements are not referring to any objective, prescriptive moral reality. Atheism is materialistic and therefore deterministic – it does not even ground the free will that is needed to make moral choices. Their view is Darwinian survival of the fittest, that's what emerges from their origins story – and it does not rationally ground morality. The strong kill the weak, if they can. I've written before about how difficult it is for atheists to *rationally* condemn things like slavery, and nothing in Dillahunty's presentation led me to believe that he had solved that problem.

Anybody can be an intellectually-satisfied atheist with an empty head – it's *knowledge* that causes people to conform their beliefs to *reality*. If one strives to keep one's head as empty as possible, then of course one can believe anything one wants. I'm glad, speaking as a Christian theist, that I get to follow the evidence wherever it leads. It seems to me that we should do that, rather than decide how we want to live first, and

then invent a worldview to justify our desires.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- William Lane Craig’s case for the resurrection of Jesus

William Lane Craig explains the doctrine of penal substitutionary atonement

March 30, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

Probably one of the most common questions that you hear from people who don't fully understand Christianity is this question: "why did Jesus have to die?". The answer that most Christians seem to hold to is that 1) humans are rebelling against God, 2) Humans deserve punishment for their rebellion, 3) Humans cannot escape the punishment for their rebellion on their own, 4) Jesus was punished in the place of the rebellious humans, 5) Those who accept this sacrifice are forgiven for their rebelling.

Are humans rebellious?

Some people think that humans are not really rebellious at all, but it's actually easy to see. You can see it just by looking at how people spend their time. Some of us have no time for God at all, and instead try to fill our lives with material possessions and experiences in order to have happy feelings. Some of us embrace just the parts of God that make us feel happy, like church and singing and feelings of comfort, while avoiding the hard parts of that vertical relationship; reading, thinking and disagreeing with people who don't believe the truth about God. And so on.

This condition of being in rebellion is universal, and all of us are guilty of breaking the law at some point. All of us deserve to be separated from God's goodness and love. Even if we wanted to stop rebelling, we would not be able to make up for the times where we do rebel by being good at other times, any more than we could get out of a speeding ticket by appealing to the times when we drove at the speed limit, (something that I never do, in any case).

This is not to say that all sinners are punished equally – the degree of punishment is proportional to the sins a person commits. However, the standard is perfection. And

worse than that, the most important moral obligation is a *vertical* moral obligation. You can't satisfy the demands of the moral law just by making your neighbor happy, while treating God like a pariah. The first commandment is to love God, the second is to love your neighbor. Even loving your neighbor requires you to tell your neighbor the truth – not just to make them feel good. The *vertical* relationship is more important than the *horizontal* one, and we've all screwed up the vertical relationship. We all don't want God to be there, telling us what's best for us, interfering with our fun. We don't want to relate to a loving God if it means having to care what he thinks about anything that we are doing.

Who is going to pay for our rebellion?

The Christian answer to the problem of our rebellion is that Jesus takes the punishment we deserve in our place.

However, I've noticed that on some atheist blogs, they don't like the idea that someone else can take our punishment for us to exonerate us for crimes that we've committed. So I'll quote from this post by the great William Lane Craig, to respond to that objection.

Excerpt:

> The central problem of the Penal Theory is, as you point out, understanding how punishing a person other than the perpetrator of the wrong can meet the demands of justice. Indeed, we might even say that it would be wrong to punish some innocent person for the crimes I commit!
>
> It seems to me, however, that in other aspects of human life we do recognize this practice. I remember once sharing the Gospel with a businessman. When I explained that Christ had died to pay the penalty for our sins, he responded, "Oh, yes, that's imputation." I was stunned, as I never expected this theological concept to be familiar to this non-Christian businessman. When I asked him how he came to be familiar with this idea, he replied, "Oh, we use imputation all the time in the insurance business." He explained to me that certain sorts of insurance policy are written so that, for example, if someone else drives my car and gets in an accident, the responsibility is imputed to me rather than to the driver. Even though the driver behaved recklessly, I am the one held liable; it is just as if I had done it.
>
> Now this is parallel to substitutionary atonement. Normally I would be liable for the misdeeds I have done. But through my faith in Christ, I am, as it were, covered by his divine insurance policy, whereby he assumes the liability for my actions. My sin is imputed to him, and he pays its penalty. The demands of justice are fulfilled, just as they are in mundane affairs in which someone pays the penalty for something imputed to him. This is as literal a transaction as those that transpire regularly in the insurance industry.

So, it turns out that the doctrine of substitionary atonement is not as mysterious or as objectionable as everyone seems to think it is.

Education Secretary Betsy Devos scores a victory against public sector union

April 2, 2018 | by Wintery Knight | Link | Original Link

Secretary of Education Betsy Devos

Although you would never know it from the mainstream news media, Secretary of Education Betsy Devos is doing her best to advance a taxpayer-friendly agenda in education policy.

Here's the latest from the American Enterprise Institute, a free-market think tank:

> In a noteworthy development, DeVos's team this month radically revamped the collective-bargaining agreement (CBA) that governs the 3,900 employees at the U.S. Department of Education. The new CBA, between the Department and Council 252 of the American Federation of Government Employees (AFGE), includes big changes from the 2013 agreement negotiated under the Obama administration.
>
> The new agreement doesn't address compensation or benefits, of course, since those are governed by federal law, but it does include a raft of sensible, taxpayer-friendly changes.
>
> The new CBA eliminates the set-aside of "official time" for union business. Under the old agreement, designated union representatives were free to work on union business during normal, government hours — all on the taxpayers' dime. The old CBA stipulated that "no fewer than 75" (!) union stewards across the country could work up to 40 hours a year on "official time," while another three union officers would devote 100 percent of their time to union business. Henceforth, union business will be done on union time, rather than on the taxpayers'.
>
> Under the old agreement, department employees were given only a solitary 48-hour window each year in which they could opt out of union membership; miss that, and they were automatically enrolled. Henceforth, employees who wish to

> be in the union each year will be free to do so, and they will have an extended period in which to enroll — but they will have to actively choose to join.
>
> The revamped accord also removes the requirements for “pre-decisional consultation.” Under the previous CBA, the department was required to consult the union before every agency-wide decision that could be construed as affecting the work of employees (such as transferring employees from one office to another, or even shifting employees from one project to another within the same office). Now, the department needs only notify the union of such decisions.
>
> Under the new CBA, the union will be charged “fair-market rent” for the use of government office space and federally furnished equipment to conduct union business. Under the Obama-era accord, taxpayers were required to provide space and equipment to the union free of charge.
>
> More generally, the new agreement removes a number of provisions that added burdensome procedural directives above and beyond statutory requirements when it came to things such as telework and grievance procedures.

If there is one thing I expected from Betsy Devos, it’s taxpayer-friendly education policy.

Unfortunately, the Republican party didn’t help her very much in that massive $1.3 Billion spending bill that they passed, with Democrat support. Betsy wants to cut federal spending on education, and return control of education policy to the states and municipalities. But the GOP just gave the Department of Education a bigger budget. We really need to switch out some of these big government Republicans for authentic conservatives.

Stephen C. Meyer lectures on intelligent design and the origin of life

April 3, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science
A MUST-SEE lecture based on Dr. Stephen C. Meyer's book "Signature in the Cell".

I highly recommend watching the lecture, and looking at the slides. The quality of the video and the content is first class. There is some Q&A (9 minutes) at the end of the lecture.

Topics:

- intelligent design is concerned with measuring the information-creating capabilities of natural forces like mutation and selection
- Darwinists think that random mutations and natural selection can explain the origin and diversification of living systems
- Darwinian mechanisms are capable of explaining small-scale adaptive changes within types of organisms
- but there is skepticism, even among naturalists, that Darwinian mechanisms can explain the origin of animal designs
- even if you concede that Darwinism can account for all of the basic animal body plans, there is still the problem of life's origin
- can Darwinian mechanisms explain the origin of the first life? Is there a good naturalistic hypothesis to explain it?
- there are at least two places in the history of life where new information is needed: origin of life, and Cambrian explosion
- overview of the structure of DNA and protein synthesis (he has helpful pictures and he uses the snap lock blocks, too)

- the DNA molecule is composed of a sequence of bases that code for proteins, and the sequence is carefully selected to have biological function
- meaningful sequences of things like computer code, English sentences, etc. require an adequate cause
- it is very hard to arrive at a meaningful sequence of a non-trivial length by randomly picking symbols/letters
- although any random sequence of letters is improbable, the vast majority of sequences are gibberish/non-compiling code
- similarly, most random sequences of amino acids are lab-proven (Doug Axe's work) to be *non-functional gibberish*
- the research showing this was conducted at Cambridge University and published in the Journal of Molecular Biology
- so, random mutation cannot explain the origin of the first living cell
- however, even natural selection coupled with random mutation cannot explain the first living cell
- there must already be replication in order for mutation and selection to work, so they can't explain the first replicator
- but the origin of life *is* the origin of the first replicator – there is no replication prior to the first replicator
- the information in the first replicator cannot be explained by law, such as by chemical bonding affinities
- the amino acids are attached like magnetic letters on a refrigerator
- the magnetic force sticks the letters ON the fridge, but they don't determine the specific sequence of the letters
- if laws did determine the sequence of letters, then the sequences would be repetitive
- the three materialist explanations – chance alone, chance and law, law alone – are not adequate to explain the effect
- the best explanation is that an intelligent cause is responsible for the biological explanation in the first replicator
- we know that intelligent causes can produce functional sequences of information, e.g. – English, Java code
- the structure and design of DNA matches up nicely with the design patterns used by software engineers (like WK!)

There are some *very good tips* in this lecture so that you will be able to explain intelligent design to others in simple ways, using everyday household items and children's toys to symbolize the amino acids, proteins, sugar phosphate backbones, etc.

Proteins are constructed from a sequence of amino acids:

A sequence of amino acids forming a protein

Proteins sticking onto the double helix structure of DNA:

Some proteins sticking onto the sugar phosphate backbone

I highly, highly recommend this lecture. You will be delighted and you will learn something.

Here is an article that gives a general overview of how intelligent design challenges. If you want to read something more detailed about the material that he is covering in the lecture above related to the origin of life, there is a pretty good article here.

There is a good breakdown of some of the slides with helpful flow charts here on Uncommon Descent.

What do pastors teach Christian women about relationships and marriage?

April 4, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

I enjoy reading Dalrock's blog. Recently, he posted a couple of posts (first and second) about theologian Doug Wilson. A friend gave me Wilson's book "Reforming Marriage", and I did not find it to be a helpful guide to marriage. So, I was interested to see what Dalrock found in Wilson's other writings.

Here's one quote that Dalrock found:

> As the apostle Paul is urging young women to marry, he lets a very interesting comment fall in passing. "I will therefore that the younger women marry, bear children, guide the house, give none occasion to the adversary to speak reproachfully" (1 Tim. 5:14). The word translated here as "guide the house" is oikodespotein. **The wife is to be the ruler or despot of the home.**

And:

> A wife therefore has true authority over her home which no one, including her husband, can take away from her.
>
> […]In a certain sense, a husband… is an honored and permanent guest… **he should learn to see himself as a guest.**

Now, that seems to contradict the traditional view that men are supposed to be leaders in the home. I don't think that Christian women are well-served by pastors who dispute the traditional view.

Apparently, lots of women are being told that the traditional meaning of the Bible doesn't

apply to them. I heard Ben Shapiro talk about a church-attending Christian woman who was raging at the *Jewish* men she had relationships with, because they had not married her. (in his latest podcast, H/T David)

Shapiro mentions this article from the radically-leftist Washington Post:

> At my very first job in New York, a colleague jokingly informed me: "You came in a WASP, but you're leaving a Jew."
>
> That statement was in reference to the demographics of the office's staff. Almost everyone who worked there was Jewish, and I, a recent college graduate who had spent my adolescence in a largely Christian community in the South, was not.
>
> […]Over almost seven years and two serious relationships with Jewish men who at first said religion didn't matter — and then backtracked and decided it did — I've optimistically begun interfaith relationships with an open mind twice, only to become the last woman these men dated before settling down with a nice Jewish girl.
>
> […]There were times at church that I saw couples worshiping together and felt pangs of jealousy. But I told myself every relationship had its problems and these were relatively minor.

She attended church, but she thought that a difference in religion was "relatively minor". Nevermind what the Bible says about it. I think that this woman was taught by her pastor that her feelings had more authority than the teachings of the Bible. And that she could retain the label of "Christian" and attend church, despite holding to a worldview that was essentially feminist at its core.

This isn't the first time that I've met "Christian" women raised in the church who thought that the Bible should not have any authority over their choices in relationships. Most woman I met in my teens and 20s believed that. Their only guides were their feelings and intuitions, and that even led some of them to *shack up with atheists*. And many of the men they chose were just children studying in non-STEM programs, living at home, and racking up debts. They had empty resumes, and empty bank accounts. Nothing I said to these women from wisdom or from the Bible put a dent in their priorities. And in more than one case, pastors backed them up against me.

What prompted me to write this post today was the conjunction of the Dalrock posts with what a friend of mine told me about the Christian woman he is currently dating. So let's talk about that second part.

My friend is an absolute stud of a Christian man. He has a STEM career, tons of money, his own house, and he has spent a lot of time studying apologetics and engaging in debates. He also attends church and Bible study weekly, and runs an apologetics discussion group. On paper, this guy has everything.

So I was asking him how things were going with the lady. He was telling her about his adventures debating some moral issue. Rather than asking him for details about the exchange, or saying her own view, she completely shut down and refused to discuss it at

all! And she wouldn't even recognize that what he was doing was praiseworthy, in order to encourage him. You would think that a guy would be able to impress a self-described Christian woman with his adventures as a Christian man. But it turns out that a lot of Christian women don't look for *anything seriously Christian in a man or in a marriage*.

The experience my friend described basically summarizes what I saw in my teens and 20s, until I met my friend Mary through my blog. Mary is a serious Christian woman who is chaste and active in apologetics. She can run circles around me in debates, and has a computer science degree. She works in computer science, too. Since Mary, I have even met other single and married Christian women with conservative politics, STEM degrees and solid careers and/or marriages, who read apologetics and engage in discussions with non-Christians. They do exist. But I don't think that any of these great Christian women learned to value these things in church.

I think most pastors fear hurting women's feelings by expecting them to take the Bible seriously when it comes to relationships and marriage. They minimize the obligations on women to be chaste, to date Christian men, to be focused on marriage while dating, to let husbands lead in the home, etc. It really bothers me that traditional conservative "complementarian" pastors are either unable or unwilling to tell women that the Bible has something to say about how to prepare for marriage, and who they choose to marry. Pastors are free to push their new revisionist feminist version of marriage. But I didn't get BS and MS degrees in computer science with the plan of putting in 45 years of full-time work in the private sector for a "marriage" that's been degraded by radical feminism. I offer a lot, and therefore I won't accept anything less than a Christian wife and a Christian marriage.

People wonder why men are not marrying as often as they used to. I think it has something to do with the fact that pastors are teaching women that husbands ought not be the leaders of their own homes. A Christian man will want his wife to be chief of staff in the home. She should be intelligent, accomplished and effective. Of course he will consult with her before making decisions on how to proceed. But men don't marry unless we are going to be entrusted with that leadership role. Male leadership in marriage is non-negotiable. And that's why women need to be wise about choosing the right man for that job – by relying on her mind, instead of on her feelings. Not everything a woman feels like doing is wise.

If you're a young woman wanting to impress a Christian man with your qualifications for marriage, then check out my marriage questions, and see how you do.

Sean McDowell reviews new book on Darwinian evolution and intelligent design

April 5, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

I really love the two books on intelligent design written by Dr. Stephen C. Meyer, but they are just so big that you can't really give them to a co-worker or a family member or a friend to read. I've been looking for a decent book that explains the issues in a compelling way, and now it looks like I've found one.

First, a review of the new book from Amazon:

> **Possibly the best ID book to read first**
>
> For those with a specific interest, there are many other excellent ID books that take a deep dive into a particular topic. Heretic stands out as being excellent as an introductory doorway into considering Intelligent Design.
>
> One doesn't need to be involved in the sciences to benefit greatly from this clearly written book. The great majority of the material can be readily understood by a general audience and the authors provide guidance if you want it on how to skim or skip ahead when the next part has more technical details.
>
> That said, this is now my preferred and recommended first book for any scientist who has just assumed Darwin's grand claim must be true and who hasn't yet given any serious consideration to the possibility that design is real, not merely an appearance of design.
>
> The book allows one to follow along as the main author begins from that same point of assuming Darwinism, but then must grapple and struggle with the hard realities of the evidence. Along the way, this book provides one of the clearest and most illuminating examinations of the influence of assumptions (and of

> career considerations) upon what people are willing to consider.
>
> Ultimately the book invites the reader to make the same commitment made early on by the main author to follow the evidence wherever it leads.
>
> I don't know of a book that does a better job of calling scientists away from blind faith in an assumed paradigm and toward a return to sound science based on following the observed evidence — including those most troublesome facts that don't agree with old assumptions.

OK, so this review gave me some hope, but it's what Dr. Sean McDowell had to say that really caught my attention.

He writes:

> *Heretic: One Scientist's Journey from Darwin to Design* is the most recent book published by the Discovery Institute, the foremost Intelligent Design (ID) organization. If you are looking for a good, introductory text to help understand the current debate, this is an excellent place to start.
>
> Unlike other recent book on intelligent design (such as *Darwin's Doubt* by Stephen Meyer or *Undeniable* by Doug Axe) this book does not offer a fresh argument for intelligent design. But this is hardly a criticism, because the book does not aim to. Rather, it tells the story of Matti Leisola—an accomplished scientist, professor, and researcher from Finland—and how he became disillusioned with the Darwinian paradigm and came to embrace design.
>
> The storied nature of this book is one of its greatest strengths. Rather than weeding into difficult scientific details (that can distract the non-specialist reader), *Heretic* takes readers on Leisola's personal journey of wrestling with important issues like the fossil record and the origin of life (It is also co-written with Jonathan Witt). Leisola does discuss relevant scientific issues, but with full awareness of his primarily lay audience.
>
> I am thrilled to see the Discovery Institute publishing books that take a narrative approach to origin questions. In our book *Understanding Intelligent Design*, William Dembski and I include a plethora of stories and examples. But *Heretic* is told entirely as a story, and my suspicion is that it may incite new readers to consider the arguments for intelligent design.
>
> *Heretic* would be an excellent book to give to someone who is new to discussions over Darwin and design. Along with being interesting, the narrative approach is also much "softer" to read. Rather than directly trying to persuade readers, Leisola simply shares his personal conclusions regarding origins. And yet it is impossible for the thoughtful reader to miss the force of many of his arguments, even if he or she ultimately disagrees with Leisola's conclusions.

Just in passing, I didn't like "Undeniable" at all, although I'm a great admirer of Doug Axe and his story of getting his PhD from Caltech, and then post-doctoral research on protein

formation at Cambridge University. He was able to get his research published multiple times in the peer-reviewed Journal of Molecular Biology. But I just don't find him to be a good writer, especially for ordinary people.

OK, so after reading the Amazon review and then having it confirmed with Dr. McDowell's review, I am officially excited. I decided to buy a copy of the book, but not for me. I have lots of friends who are voracious readers who can read it and then tell me what they thought of it. So, I bought a copy of it for my very best friend Dina – she has a couple of STEM degrees and a STEM career, so she'll be able to make short work of it, and then she'll tell me whether it is worth giving away to my friends and co-workers.

If anyone else has read the book and wants to send me a review, please do. My e-mail is in the About Me section. There have been so many good books coming out lately that I haven't even gotten through them all: "A Fortunate Universe" (Cambridge University Press), "The Case for Miracles" (by Lee Strobel), "Why Does God Allow Evil?" (by Clay Jones), "Five Proofs of the Existence of God" (by Ed Feser), "Discrimination and Disparities" (by Thomas Sowell), etc. I hope everyone knows about these books and gets one or two or all to read.

What is the criterion of embarrassment, and what are some examples of it?

April 6, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson are going to take a look at the data

The criterion of embarrassment is just one of the historical criteria used to select the parts of a piece of ancient literature that are likely to be historical. Other things in the source may have happened, but we can't know them as history. If significant parts of a text are historical, it is possible to accept it as historical until there are specific reasons to say that some part of it is NOT historical.

Here is William Lane Craig's list of criteria for a saying or event to be historical:

1. Historical congruence: S fits in with known historical facts concerning the context in which S is said to have occurred.
2. Independent, early attestation: S appears in multiple sources which are near to the time at which S is alleged to have occurred and which depend neither upon each other nor a common source.
3. Embarrassment: S is awkward or counter-productive for the persons who serve as the source of information for S.
4. Dissimilarity: S is unlike antecedent Jewish thought-forms and/or unlike subsequent Christian thought-forms.
5. Semitisms: traces in the narrative of Aramaic or Hebrew linguistic forms.
6. Coherence: S is consistent with already established facts about Jesus.

The criteria is the same for liberal historians and conservative historians, although some historians weight one criteria more than others when trying to evaluate the historicity of

different New Testament parts.

What's amazing is that even liberal historians will give you facts that are embarrassing to the authors as "historical".

Anyway, here are 8 examples of parts of the New Testament that exhibit the criterion of embarrassment, thanks to theologian C. Michael Patton.

1. Jesus' Baptism
2. Jesus' Family Did Not Believe
3. John the Baptist's Doubt
4. The Disciples Doubted After the Resurrection
5. Jesus Does not Know the Time of His Coming
6. Women are the First to Witness the Resurrection
7. Jesus Cursed a Fig Tree
8. Death and Resurrection of Christ

I think 6 and 8 are the ones I want you to take away with you when you finish this post.

Here they are:

> Women are the First to Witness the Resurrection
>
> This is one that is often brought up. Craig Keener puts it well enough: "The witness of women at the tomb is very likely historical, precisely because it was so offensive to the larger culture — not the sort of testimony one would invent. Not all testimony was regarded as being of equal merit; the trustworthiness of witnesses was considered essential. Yet most of Jesus' Jewish contemporaries held much less esteem for the testimony of women than for that of men; this suspicion reflects a broader Mediterranean limited trust of women's speech and testimony also enshrined in Roman law." (Keener, The Historical Jesus, 331)

And:

> Death and Resurrection of Christ
>
> This easily escapes our notice since the basic story of Christ is so well known. However, both the death and resurrection of Christ are, from the standpoint of the culture of the day, embarrassing and damaging. Concerning the death of Christ on a cross, Paul sees this problem: "But we preach Christ crucified: a stumbling block to Jews and foolishness to Gentiles" (1 Cor. 1:23). The word used for "stumbling block" is skandalon. Louw-Nida defines this as "that which causes offense and thus arouses opposition." Why? Because the Jews would never have thought their Messiah would have been hung on a tree. "Cursed is one who hangs on a tree" (Gal. 3:13; Deut 21:23). The Greeks thought of the resurrection as foolishness as they were dualist, essentially believing that the material world was evil and the spiritual world good. They would have scoffed at the idea that

> Christ returned to physical form. This is why later Greeks attempted to adapt the Christ story, doing away with the physical resurrection. Marcion is the most famous promoter of this view (see Docitism).

Now, when you are talking about the New Testament to your non-believing friends, you definitely want to draw attention to passages that are embarrassing to the authors. It will help you to be more convincing when you explain the New Testament like a historian.

By the way, you can read an entire post I did on *all the criteria* that historians use to evaluate ancient historical documents.

Peter J. Williams debates Bart Ehrman on his book "Misquoting Jesus"

April 7, 2018 | by Wintery Knight | Link | Original Link

The audio for this Unbelievable radio show debate is available from Apologetics 315.

Bart Ehrman actually posted the audio on YouTube, as well:

Details:

> Bart Ehrman is the US author of the bestselling book "Misquoting Jesus" (In the UK "Whose word is it?"). He calls into question the authority of the New Testament as scribal changes over time have changed the documents.
>
> So can we trust the scripture? Bible scholar Peter Williams believes in the reliability of the New Testament and that Bart's prognosis is far too pessimistic.

This post is a re-post from 2011. I have been listening to this lecture by Peter J. Williams on "Misquoting Jesus" this week, and it reminded me to re-post this debate.

Summary of the Williams-Ehrman debate:

Note: this summary is *snarky*. If you want an accurate view of the debate, then listen to it. My summary is meant to be humorous.

Ehrman:

- I had a mystical experience in childhood and became an evangelical Christian
- I went to Moody Bible Institute, and they told me that the Bible was inerrant
- For a while, I was committed to the view that there are no mistakes in the Bible
- At Princeton, I was taught *and graded* by professors who did not accept inerrancy
- By a strange coincidence, I began to see that the Bible did have errors after all!
- We don't have the original documents written by the original authors, we only have thousands of copies
- if the words of the Bible are not completely inerrant, then none of it is historical
- if all of the words in all the copies of the Bible are not identical, then none of it is historical

Williams:

- I would say the New and Old testaments are the Word of God
- We don't need to have the original Greek writings in order to believe in the authority of the Bible
- I believe in inerrancy, but doesn't mean there are no problems
- the doctrine of inerrancy has always referred to the original Greek copies, not the translations

Moderator:

- what are the main points of Misquoting Jesus?

Ehrman:

- we don't have the originals of any of the books of the New Testament
- we have copies that are much later, sometimes even centuries later!!1!
- the copies we have all differ from one another – they were changed by scribes!!1!
- we have 5000 manuscripts in the original Greek language
- there are hundreds of thousands of differences!!1!
- most of the differences don't matter
- some differences are significant for meaning or doctrine
- errors are propagated because the next scribe inherits the mistake of their source copy
- a large gap between the time of writing and the first extant copy means more errors have crept in

Williams:

- the reason we have so many variants is because the number of manuscripts is large

Angry Jesus or compassionate Jesus in Mark

Ehrman:

- most manuscripts say that Jesus was compassionate when healing a leper, but one says he was angry
- it makes a huge huge huge really really big difference if Jesus is compassionate or angry
- the whole Bible needs to be thrown out because of this one word between different in one manuscript

Williams:

- this variant is important for understanding the passage, but it has no great meaning
- the change is probably just an accident – the two words are very similar visually in Greek
- it's just an accident – it emerged in one manuscript, and it impacted a few more
- the tiny number of manuscripts that have the error are geographically isolated
- I'm pretty sure that WK prefers the angry Jesus anyway – so who cares?

Ehrman:

- no! someone changed it deliberately! it's a conspiracy! you should buy my book! it's a *big deal*!!!!!1!!1!one!!eleventy-one!

The woman caught in adultery in John

Ehrman:

- it is isn't in any of the earliest manuscripts
- this is an apocryphical story that some scribe deliberately inserted into the text
- most people don't even know about this! it's a cover-up! you need to buy my scandalous book!

Williams:

- that's right, it's a late addition by some overzealous scribe
- and it's clearly marked as such in every modern Bible translation
- the only people who don't know about this are people who don't read footnotes in their Bible
- and in any case, this isn't a loss of the original words of the New Testament – it's an addition

Grace of God or apart from God in Hebrews

Ehrman:

- well this is just a one word difference, but it makes a huge huge really really big difference!
- the words are very similar, so it's could be an accident I guess
- but it wasn't! this was a deliberate change! it's a conspiracy! it's a cover-up! scandal!
- buy my book! It's almost as good as Dan Brown!

Moderator:

- hmmmn…. I kind of like "apart from God" – why is this such a big scandal again?

Ehrman:

- you don't care? how can you not care? it has to be inerrant! or the whole thing is false!
- Moody Bible Institute says!

Williams:

- yeah Bart is always saying that every change is deliberate but it's just an accident
- the words are very similar, just a few letters are different, this is clearly an accident
- I have no problem with apart from God, or by the Grace of God
- please move on and stop screaming and running around and knocking things over

Moderator:

- but what if pastors try to use this passage in a sermon?

Williams:

- well, one word doesn't make a big different, the meaning that appears is fine for preaching
- it's only a problem for people who treat the Bible as a magic book with magical incantations
- they get mad because if one word is out of place then the whole thing doesn't work for their spell
- then they try to cast happiness spells but the spells don't work and they experience suffering
- the suffering surprises them since they think that fundamentalism should guarantee them happiness
- then they become apostates and get on TV where they look wide-eyed and talk crazy

Ehrman:

- hey! are you talking about me? a lot of people buy my books! i am a big success!
- it is very important that people don't feel bad about their sinning you know!

Is Misquoting Jesus an attack?

Williams:

- it's rhetorically imbalanced and misleading
- it tries to highlight change and instability and ignore the majority of the text that is stable
- he makes a big deal out of 5 or so verses that are different from the mainstream text
- he says that scribes deliberately changed the scriptures, but he doesn't prove that
- it's just as likely that the differences are just scribal errors made by accident

Ehrman:

- well, maybe the variants aren't a big deal, but what about one angel vs. two angels?
- that's a significant issue! significant enough for me to become an apostate – a *rich* apostate
- if one word is different because of an accident, then the whole Bible cannot be trusted
- it has to be completely inerrant, so a one word difference means the whole thing is unreliable
- we don't even know if Jesus was even named Jesus, because of one angel vs two angels!!!1!
- buy my book! you don't have to read it, just put it on your shelf, then you'll feel better about not having a relationships with God – because who's to say what God

really wants from you? Not the Bible!

William Lane Craig debates Peter Atkins: Does God Exist?

April 8, 2018 | by Wintery Knight | Link | Original Link

Here is the video of a debate with Peter Atkins, from the Reasonable Faith speaking tour in the UK:

This is a must-see debate. It was extremely fun to watch.

Details:

> On Wednesday 26th October 2011 William Lane Craig debated Peter Atkins on the topic: *Does God Exist?* This debate took place at the University of Manchester as part of the UK Reasonable Faith Tour with William Lane Craig. The debate was chaired by Christopher Whitehead, Head of Chemistry School at the University. Post-debate discussion was moderated by Peter S Williams, Philosopher in Residence at the Damaris Trust, UK.

Dr. William Lane Craig:

> **William Lane Craig** (born August 23, 1949) is an American analytic philosopher, philosophical theologian, and Christian apologist. He is known for his work on the philosophy of time and the philosophy of religion, specifically the existence of God and the defense of Christian theism. He has authored or edited over 30 books including *The Kalam Cosmological Argument* (1979), *Theism, Atheism and Big Bang Cosmology*(co-authored with Quentin Smith, 1993), *Time and Eternity: Exploring God's Relationship to Time* (2001), and *Einstein, Relativity and Absolute Simultaneity* (co-edited with Quentin Smith, 2007).
>
> Craig received a Bachelor of Arts degree in communications from Wheaton College, Illinois, in 1971 and two summa cum laudemaster's degrees from Trinity Evangelical Divinity School in Deerfield, Illinois, in 1975, in philosophy of religion and ecclesiastical history. He earned a Ph.D. in philosophy under John Hick at the University of Birmingham, England in 1977 and a Th.D. underWolfhart Pannenberg at the University of Munich in 1984.

Dr. Peter Atkins:

> **Peter William Atkins** (born 10 August 1940) is a British chemist and former Professor of Chemistry at the University of Oxford and a Fellow of Lincoln College. He is a prolific writer of popular chemistry textbooks, including *Physical Chemistry*, *Inorganic Chemistry*, and *Molecular Quantum Mechanics*. Atkins is also the author of a number of science books for the general public, including *Atkins' Molecules* and *Galileo's Finger: The Ten Great Ideas of Science*.
>
> Atkins studied chemistry at the University of Leicester, obtaining a bachelor's

> degree in chemistry, and – in 1964 – a PhD for research into electron spin resonance spectroscopy, and other aspects of theoretical chemistry. Atkins then took a postdoctoral position at the UCLA as aHarkness Fellow of the Commonwealth fund. He returned to Oxford in 1965 as fellow and tutor of Lincoln College, and lecturer in physical chemistry (later, professor of physical chemistry).

You can get the audio of the debate here, along with links to their previous debate from 1998. This debate is accessible and understandable to novice-level Christians.

I am happy when debates like this come out. I have friends who are Christians who doubt the importance of apologetics in evangelism, because they don't think that apologists can prove anything or win arguments. I have friends who are skeptical of using arguments that assume a 14-billion year old universe, because they think that the Big Bang is compatible with atheism (!). I have friends who think that philosophical arguments have no persuasive force. I have friends who think that nothing can be proven from history, beyond a reasonable doubt. I have co-workers who ask me whether anyone wins these debates. I think that this debate answers all of those questions.

This debate clearly shows why Christians should not shy away from studying science, philosophy and history. We will not discover anything that harms Christian theism by thinking logically and by looking at the evidence. To the contrary, it is the atheist who makes war on the progress of science, and who is forced to resist the clear experimental evidence, and to resort to baseless speculations and blind faith. If you want to see a good debate with an intelligent atheist, I recommend watching the debate between William Lane Craig and Peter Millican instead. But if you want to see a really, really overwhelming defeat for atheism, watch this debate. It is very clear at the end of this debate why Richard Dawkins refused to debate William Lane Craig at Oxford.

SUMMARY OF THE OPENING SPEECHES

I only had time to summarize the first two speeches. Keep in mind that Dr. Craig always shines in his rebuttals, and this debate is no different. So you'll want to watch those rebuttals. Dr. Atkins *literally* says in this debate in his first rebuttal "There was nothing here originally. There is nothing here now. But it is an interesting form of nothing which seems to be something." And the audience laughs nervously. This debate is like that. You will see a clear winner and clear loser in this debate. This fight is decided by knockout.

William Lane Craig opening speech:

1. the origin of the universe
2. the moral argument
3. the resurrection of Jesus

Peter Atkins opening speech:

1. Dr. Craig is stupid, lazy and evil:
– Dr. Craig's arguments are old: from the 11th century! Old arguments can't be true
– Dr. Craig is just asserting that "God did it" because he is lazy

– Dr. Craig feels pressured to agree with the theistic majority
– Dr. Craig needs a psychological crutch to comfort him
– Dr. Craig is fearful of death
– Dr. Craig is just wishing for an eternal life of bliss
– Dr. Craig is driven by his heart, and not by his head

2. Origin of the universe:
– Maybe the universe is eternal and has no beginning – we don't know
– Maybe mommy universes can give birth to daughter universes
– It is naive to think that a cause is needed to cause the creation of the universe from nothing
– Science is just about to show how it is possible that something appears out of nothing without cause
– Some scientists have already begun to speculate about about how something can come into being out of nothing
– Maybe nothing is not really nothing, but it is actually something
– It would be admitting defeat to say that God created the universe out of nothing

3. Fine-Tuning:
– It could be the case that the fundamental constants are not variable
– It could be the case that the fine-tuning of the cosmic constants is a happy accident
– It could be the case that there are billions of billions of unobservable universes that are not fine tuned
– It could be the case that the cosmic constants in these billions and billions of unobservable universes are all random so that some are fine-tuned
– Anyone who infers that an intelligence is the best explanation of a finely-tuned set of life-permitting cosmic constants is lazy

4. Purpose:
– Philosophers and theologians are stupid
– I don't think that there is purpose in the universe
– I think that the universe is more grand if there is no purpose, so there is no purpose

5. Miracles:
– I don't think that miracles happen
– The resurrection is a fabrication
– It could be the case that Jesus didn't exist
– It could be the case that Jesus wasn't really crucified
– It could be the case that Jesus didn't really die after being crucified
– It could be the case that the disciples stole his body
– It could be the case that the women went to the wrong hole in the ground
– the gospels are political propaganda written long after the events they are reporting on

6. Theodicy:
– God has no morally sufficient reason for allowing humans to perform actions that result in suffering

– God has no morally sufficient reason for allowing nature to cause suffering

7. Morality:

– customs and conventions emerges arbitrarily in different times and places based on an awareness of the consequences of actions, as well as various anecdotes and experiences

– these customs and conventions are decided based on the goal for survival, in much the same way as politeness and manners emerge for decorum and to avoid offense

– it is childish to presume that there is an umpire God who decides moral values and duties

8. Religious believers are stupid, lazy and evil:

– the notion of God has arisen because people are stupid and want to be comforted

– there are no arguments or evidences for belief in God

– people who believe in God do not think, but instead take refuge in incomprehensible nonsense

Jordan Peterson tweets an article about the minimal facts approach to the resurrection

April 9, 2018 | by Wintery Knight | Link | Original Link

Dr. Jordan Peterson is aware of the best case for the resurrection – are you? Wow.

Jordan Peterson is now known to be aware of the strongest case for the resurrection, because he's tweeted about it. Let's see what he tweeted and what's in the article.

It's this article, written by Dr. Gary Habermas, which was published at The Stream:

> Not too long ago I listed six of these events in a dialogue with an agnostic New Testament scholar. I used the historical facts that 1) Jesus died by crucifixion, 2) his early followers had experiences a short time later that they thought were appearances of Jesus, 3) and as a result, they were transformed to the point of being willing to die for this message. Further, two former unbelievers 4) James the brother of Jesus and 5) Saul of Tarsus (later the apostle Paul) both similarly thought that they had seen the risen Jesus, as well; and 6) This Gospel message of the death and resurrection of Jesus Christ began to be taught very soon after these events.
>
> Some might be surprised to hear that the agnostic scholar with whom I was dialoguing not only agreed with the historical nature of these six events, without exceptions, but he even added that each one was very well-recognized.

How come?

> Perhaps the chief reason for the widespread agreement comes from recent critical recognition that the New Testament contains dozens of brief snippets of information from the earliest church teaching — preserved from the first 20 years before the first canonical books were written. Scholars call these "creedal texts" or traditions. The best known of them is 1 Corinthians 15:3-7 which scholars agree originated no later than the early to mid-30s AD, or within just five years of the life of Christ. There is also 1 Corinthians 8:6 and 11:23-25, Romans 1:3-4, 10:9, and Philippians 2:6-11. That's not all of them. Among the many others are Luke 24:34 and the Acts sermon summaries. These texts actually predate by many years the works in which they appear.
>
> Another avenue comes from the regular use of different tools and rules used by historians and others to recognize the occurrence of past historical facts. These are often called the *criteria of authenticity*. Here are six of these that help explain how scholars come to this kind of agreement:
>
> 1. Some events are established by the *reliable testimonies* from people who were close to or who even participated in the events.
> 2. Sometimes the witnesses reported these things *very soon afterwards*, rather than waiting years to do so.
> 3. On other occasions, these events are attested by *two or even more independent sources*.
> 4. Sometimes, *enemies* who actually oppose the occurrences and would have preferred that they had not happened, might agree that they nonetheless did so.
> 5. Or the accounts may be told in a way that is so *embarrassing* to those telling it, or to their loved ones or their cause, that the best explanation for them saying it is simply that it's the truth.
> 6. Another test preferred by some scholars is the result of an event fitting well with or exhibiting similarities to other occurrences that are known to have occurred (*coherence*).
>
> There are other historical tools and rules as well, but these are among the best-known ones. Often, two or even several of these additional reasons are present and endorse the same event from different angles. Once in a while, the list of confirmatory reasons can get quite lengthy. In such cases, it becomes more and more difficult to deny the factual nature of the reports. So actually, agreement among dissimilar scholars can be fairly common.

If you've ever seen debates with atheist scholars like James Crossley, Bart Ehrman, Gerd Ludemann, etc., you know that they agree with some or all of these "minimal facts".

Now, this post is about Jordan Peterson. How come he is tweeting this argument? Well, I think part of the reason is that Peterson is a brilliant scholar, and he's going to find out about pretty much everything that he sets out to investigate. I have been told that the

New Testament is an area of interest for him. I can't help but believe that his recent dialog with the venerable Christian scholar William Lane Craig might have put him on the right track.

Here is that dialog, in case you missed it:

I would like all my readers to pray for Jordan Peterson. Ask God to do what God does best – putting people into a time and place where they can find out something about him that leads to a relationship with himself.

If you want a place to start, read Acts 17:24-26 and then ask God to engineer Jordan Peterson's life in such a way that he finds the answers to his questions from the people he meets and situations he finds himself in. God is a master architect and a brilliant general. Looking back on my life, I can clearly see how carefully he led me to know things about him, and then to know him. We just have to ask God to do what he does for Jordan Peterson. Asking is free. It might be a good idea to pray for wisdom for Dr. Peterson, as well.

Survey: young, unmarried women explain why they avoid having children

April 10, 2018 | by Wintery Knight | Link | Original Link

This article comes from the leftist Huffington Post.

They write:

> The Huffington Post and YouGov asked 124 women why they choose to be childfree. Their motivations ranged from preferring their current lifestyles (64 percent) to prioritizing their careers (9 percent) — a.k.a. fairly universal things that have motivated men not to have children for centuries. To give insight into the complex, layered decisions women make, HuffPost asked childfree readers to discuss the reasons they have chosen not to have kids and gathered 270 responses here.

They grouped the responses into 5 categories:

1. I want to prioritize my career
2. I don't like children
3. I had a bad relationship with my parents
4. I don't want the financial responsibility
5. I like my life as it is

And here are some interesting quotations:

Category 1:

> I am a first-generation college graduate in my family. My mother was a single mom my entire childhood, and I was there to see that struggle. Being a parent, for a woman, means for life. Being a parent, for men, seems to be something very different. I understand raising children is a big life change and I don't want to sell myself short on my potential to become something more and maybe even create change. **I am childfree because I want to travel, move, pursue my career wholly** and be able to push myself to be an inspiration to other women. If a child comes into my life, it won't be until I am happy and successful in my work life, and not until I am secure with my finances and a marriage. I don't want to one day wake up as an old woman wishing I had waited to have children so I could live my own life first, make mistakes, learn new things and find myself. Today kids are not for me.

Category 2:

> I'm nearly 47; my boyfriend (domestic partner) of 17 years is nearly 50. I've never been pregnant and have taken every precaution to remain childfree. I tolerate other people's children when I have to. I'm happiest when there are NO

> children around. I definitely don't want them in my home. I like my life as it is. My boyfriend and I are both scientists. We also raise snakes and spiders! **We like to travel. We travel to ride roller coasters (members of ACE — American Coaster Enthusiasts) and to attend rock concerts.** I am also a performer in a senior winter guard. My plate overfloweth! I see no reason to procreate. I would be unhappy. Why be unhappy?

Category 3:

> I have a great relationship with my husband. **We have the time and money to travel, and that gives us precious memories.** I had a bad relationship with my dad, and maybe I'm scared to treat my children like that. I'm very happy with my decision. I have a great relationship with myself too.

Category 4:

> My spouse and I have talked in depth about having children. However, **we both decided that our desire to travel the world is a financial burden in itself. If we have kids, we will never have the means to travel**, and at the end of our life, we would rather be 100 percent committed to fulfilling our own realistic dreams rather than only able to provide a subpar life for a child. Comes down to the fact we are selfish, but at least we recognize this and made the choice early enough to avoid damaging a kid

Category 5:

> The thought of having to do kiddie crap every weekend makes me want to shoot myself. I like having the extra money to save for retirement and not worry about braces, summer camp or college tuition. **I can travel on a moment's notice.** I can give my all to my job and not have to worry about daycare, sick days, or having to leave my co workers to pick up my slack. I'm the "cool aunt" to all my nieces and nephews. I have more time to do the things that make me happy and productive. My relationship with my guy is not strained due to the constant neediness of children. I don't want to put my body through pregnancy and childbirth. I can give my dog all the attention he needs and deserves.

If I had to choose one comment to represent the entire survey, it would be this one:

> The moment you have children, you're life ceases to be about yourself. Kids always take priority and I feel like I can do more for this world than just generate offspring.

I think this is the real reason why young, unmarried women choose not to prepare or plan for marriage and children . Marriage and children "some day" is like planning for your retirement by winning the lottery. It's a way for the woman to signal to her family and friends that she will *eventually* want the responsibility of a husband and kids, but not right now.

We need to move beyond a survey to quantify this, and this U.S. Census data does that:

Childless by choice, not because of men failing to "man up"

These quotations are very troubling to me. I've been serious about obtaining STEM degrees, saving money by *not traveling*, and making a plan to have a marriage and family that will serve God. I haven't used my freedom to buy alcohol or to play the field sexually. I don't see women being serious about choosing men who are serious about marriage – especially men who are financially prepared to pay for things like houses and children. A lot of women are even interested in men who are younger than they are, despite the fact that these men have not proven themselves in their careers and finances.

How can young, unmarried women be sincere about wanting marriage and children "some day" if they waste their 20s and 30s on men who aren't prepared for the financial responsibility? And that's not even to mention the fidelity responsibility – men who have self-control before marriage are more able to be faithful after marriage. It seems as if a faithful man who can provide for a family is that *last thing* that women want. Even if a man does find one who wants to get married, the financial situation between a marriage-minded man and a woman who has spent all her time traveling is going to be a huge mismatch.

Young, unmarried women seem to oppose marriage because they know it will impose responsibilities, expectations and obligations on them. And their parents, relatives, friends and co-workers are doing nothing to detect and counter this attitude. As Lindsay argued on this blog before, the marriage / children plan is an excellent way for Christians to make a difference. But it does take work – work that some young, unmarried women are deliberately avoiding.

Christian case maker warns Christians to trust the evidence, not their feelings

April 11, 2018 | by Wintery Knight | Link | Original Link

A conflict of worldviews

Alisa Childers posted a review of a recent dialog between Dr. Sean McDowell and former-Christian Bart Campolo, son of far-left progressive fake Christian Tony Campolo. The dialog occurred on the Unbelievable radio show.

Here's an exerpt from Alisa's review:

> Recently, the two came together to have a discussion on Premier Christian Radio entitled, "Why Bart Lost His Faith, Why Sean Kept His." It was a fascinating discussion, and the thing that most struck me was the reason they each gave for having become a Christian in the first place. Campolo described how he converted to Christianity after finding a youth group he connected with and attending one of their retreats:
>
> There's hundreds of kids there. It's Saturday night, there's candlelight and firelight and everybody's singing "Our God is an Awesome God," and "We Love You Lord." And in the midst of that kind of environment I had what I guess you would call a transcendent moment…I felt something. It felt like there was something happening in that room that was bigger than the group. I felt like I was connecting to something. And in that moment ….that was God.
>
> I heard something. It was real to me. People that don't believe in transcendent experiences—I always think like, "You haven't been to the right concert… You haven't used the right drugs. You haven't fallen in love with the right partner."
>
> These experiences are real, and I think whatever narrative you're in when you have one, it confirms that narrative. If I would have had that same transcendent

> moment with my friends in a mosque in Afghanistan, it would have confirmed Islam to me. But I was in the Christian world, so from that point on, Jesus was real to me.
>
> In Campolo's own words, he became a Christian because of a transcendent experience….a feeling that resonated deeply in his heart.

He had a feeling, and he took that feeling as a reason for believing propositional claims about the external world. God's existence? He had a feeling. Christ's resurrection? He had a feeling. The reliability of the Bible? He had a feeling. Instead of focusing on truth, he spent his early life pursuing social justice. He didn't look at evidence, he just tried to have experiences. He tried to chase feelings by having little Christian ministry adventures. Missions trips. Volunteer work. Community. Charismatic speaking to crowds about things he knew literally nothing about.

Further on in the dialog, he explains that his standard for allegiance is not truth, it's literally "what works". And he clarifies "what causes [people] to thrive, what causes [people] to flourish". His emphasis (in his ministry) was always on feeling good by being nice to people, because they liked him. This perspective is rampant in the evangelical church, especially among progressive young people. The idea of testing the Christian worldview against science and history to see if it is true is absolutely out. Instead, it's all about feeling good and making people like you by being nice to them.

Experiences made him an atheist. He worked with poor people, and he decided that God didn't exist because he wasn't making these people happy. He had gay roommates in college, so he decided that the Bible's rules around sexual morality had to be wrong. Never any investigation of economics to understand poverty, no investigation of homosexuality in the peer-reviewed literature, etc. It was feelings all the way. A bit later, Campolo extols the virtue of blind faith, and blasts apologetics as ineffective at changing minds. And then later, he has a bicycle crash, and he becomes convinced from that accident that "this life is all we have". So he disproved substance dualism, which is consistent with the Bible and supported by multiple lines of philosophical argumentation and experimental evidence… *by having feelings about a bicycle crash*.

Now, on this blog, we despise feelings and experiences. We discuss scientific evidence for a Creator and a Designer all the time. The origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, the habitality requirements, etc. For Campolo, Christianity was never about truth, and so he never conducted an investigation about whether it was true. The only God he would accept was a god who "worked for him" – who made him feel good, and who made people (including non-Christians) like him. It was all about him, never about adjusting himself to an objective reality that might have involved obedience to God, having some bad feelings, and being disliked by non-Christians.

The more emphasis that a person places on feelings, intuitions, travel, adventure, and social justice, the farther away they tend to be from analytical philosophy, historical investigation, scientific evidence, etc. You cannot establish the truth of a worldview by

going on a missions trip to Haiti, or by holding orphans in Bolivia. The truth of Christianity is known through study of reality, using logic, science and historical analysis. Making feelings the foundation for a worldview is just a disaster waiting to happen.

Alisa has some words of caution to young Christians and their parents about experience as the root of a Christian worldview:

1. You can be talked out of an experience.
2. Your heart and feelings lie.
3. You can fall back on evidence in times of doubt or suffering.

Here is number 2:

> The prophet Jeremiah described the human heart as "deceitful above all things and desperately sick." Proverbs 3:5-7 tells us not to "lean on our own understanding." Jesus described the human heart as being filled with thoughts like murder, adultery, sexual immorality, theft, false testimony, and slander. Proverbs 28:26 tells us that whoever trusts his own mind is a fool.
>
> **In other words, do not, under any circumstances, follow your heart.**
>
> This, of course, stands in stark contrast to the themes we are constantly encountering in entertainment and on social media. However, when it comes to spiritual beliefs, trusting our hearts and following our feelings can lead to all sorts of aberrant theology, sinful choices, and a distortion of true Christian faith.

See that?

"In other words, do not, under any circumstances, follow your heart."

We need more Christians saying this in the church. Especially Christian women – it's better when women put evidence at the center of the Christian life, and push feelings out to the edges.

By the way, she mentions a quotation from J. Warner Wallace about not being a Christian because "it works for me". I wrote a whole post about this.

If you want to read another deconversion story that shows how a focus on feelings and experiences leads to atheism, check out the story of Dan Barker. I know so many people who were raised in the church by pastors who were anxious to "protect" Christian truth claims from being proved or disproved by evidence. They thought that their approach was more pious – how dare we let science and history stand in judgment over the Bible? When I look at Dan Barker and Bart Campolo, I can see where that fideism ended up. Piety is a cheap way of gaining respect without having done any work. We need to demand better from pastors. They ought to be able to show their work. They ought to be able to demonstrate what reasoning and evidence led them to their convictions. Not their feelings and experiences, but actual reasoning and evidence.

The sooner we get to the point where Christianity is true because of reason and evidence, regardless of individual feelings, the better off we will be at being authentic followers of

Jesus.

Finally, if you liked the Unbelievable show dialog between McDowell and Campolo, there is a 3-hour discussion on the same topic, which was held at the Faith Beyond Belief conference in Calgary, Alberta, Canada last week. The video has been posted on YouTube.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information

More and more women are asking why they can't find a good man to marry

April 12, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

In the last few months, I've met 5 different Christian women in their 30s who all asked me the same question: where are all the good men who want to marry me?

Christian men's rights blogger Dalrock had two different posts where he described the answer to this question.

Here is the first post from Dalrock that concisely illustrates the problem:

> As I wrote in A very long season, feminists don't want to waste a day more of their youth and fertility on their husbands than absolutely necessary. As if to prove this very point, 30 year old Mona Chalabi writes in the NY Times* I Want My 2.3 Bonus Years:
>
> If I could prolong my time as a young adult by, say, 2.3 years, here is a list of things I would like to do:
>
> • Go to more parties. Preferably wild parties that I can think about, years later, at mild parties.
>
> […]• Have more romantic partners.
>
> […]• Get a bit higher up the career ladder a bit earlier on. That would probably boost my earnings, giving me more financial security. I could use that money to go to more parties, get a membership to a fancy gym and maybe even meet a romantic partner on the ab machines.
>
> To drive the message home, the image at the top of the article is a cartoon of a

> resentful Chalabi giving her future husband the side eye for her lost years of sampling penises!

Surely, this must be an isolated case just for New York Times feminists, right? It's not widespread, is it?

Second post from Dalrock:

> Margaret Wente at the Globe and Mail* asks where all the good men have gone. Wente comes to the conclusion that women need a sex cartel:
>
> …it's up to us to make the rules. "Why buy the cow when you can get the milk for free?" my father used to say. It drove me crazy when he said that. Now, it's dawned on me that he was right.
>
> Since the women's cartel collapsed, women's bargaining power has seriously eroded. That's why so many single women hate Tinder, which has further commodified sex for the benefit of men. Women are just another consumer good in the shop window.
>
> The apex fallacy aside, Wente is partially right. Women (as a group) have signaled to men that what they really want are exciting sexy badboys, not boring loyal dudes. **It isn't that women no longer want to marry beta providers, they just don't want to waste a day more of their youth and fertility on their husband than absolutely necessary.**
>
> As a result, some up and coming boring loyal dudes aren't knocking themselves out in their twenties while they wait for their future wife to tire of having sex with other men.

If you wonder why men are no longer performing in school, and exchanging careers for video games, the answer is simple. Men have realized that young women today, under the influence of feminism, are not interested in traditional husbands during their late teens and 20s. During these years, women are interested in travel, fun, drinking, hook-ups and cohabitation with amoral atheists. This is what I have personally observed. In the minds of young women, the highest value men are good-looking men who have no religion, and make no moral judgments, and are left of center politically – especially on abortion. There are many good men who are romantic about women from their youth, and want to get married. But when they see what young women really want, they just give up on school and work, since doing the traditional male roles has no value to young women. Many good men even give up on morality and Christianity because they want a relationship with a woman so badly.

More from second post:

> What Wente doesn't understand is that timing is everything. From an economic point of view, women are dividing up sexual access that traditionally would have been reserved only for their husband into two blocks. The first block contains their most attractive and fertile years, and it is dedicated to no strings sex with

> exciting badboys. Then, once women reach what Rollo calls the epiphany phase, they want to bargain sexual access in their remaining (older and less fertile) years for maximum beta bucks.
>
> The problem with this strategy is (generally speaking) not that the previously overlooked beta men will refuse to marry the suddenly reformed party girls. The problem is that young men now look at the men 3-5 (and even 5-10) years older than them and don't see an indication that signaling provider status will make them attractive to women. They also see a society that holds married fathers in contempt**. Most of these men are still working hard in their late teens and twenties to prepare to signal provider status in their 30s. But a growing minority of young men are no longer doing so. These men are instead working like women. Once the reformed party girls are ready to find Mr. Beta Bucks, there is a shortage of 30 something men who fit the bill. Even worse, no amount of complaining or shaming will cause the missing beta providers to go back in time and spend the prior decade preparing for this moment.

I'm one of the last men who followed the marriage-preparedness script for traditional men who wanted to marry and have four children and have a stay-at-home homeschooling mom to raise them from birth to graduate school. I find myself now in my early 40s, with a 6-figure income and a nearly 7-figure net worth. I declined to use those assets to play the field with hot bad girls, preferring instead to keep my sexual past completely clean for my eventual wife. However, what I observed in my late teens and 20s and even early 30s was a complete lack of interest in marriage ability, from non-Christian women and Christian women alike. Christian women aren't learning to value early marriage from their married parents or their evangelical churches. None of the traditional husband skills are valued by young women, i.e. – chastity, gapless resume, alcohol abstinence, undergraduate and graduate STEM degrees, experience nurturing and mentoring others, stewardship of earned income.

I recently caused an uproar on my Facebook page by saying that even if the perfect woman showed up right now to marry me, I would not pursue her because the critical time where the woman could have applied maximum youth, beauty and fertility as a wife to make an impact on my education, early career, health, and finances has passed. A younger woman develops value to her husband precisely by applying herself to him and to her family in these critical early years. Men who have experienced this self-sacrificial love and support are loyal to their wives even after their wives lose their youth and beauty. Why? Because the men know that they are much better than they could have been, having enjoyed that early investment of value made by their young wives.

Young women very supportive of premarital sex

As Christian writer Matt Walsh notes in a recent article at the Daily Wire, this "follow your heart" focus on happiness in women is lethal to marital stability, and men know it.

Excerpt:

> There was an article in *Cosmo* this week with a title that summarizes all that's wrong with *Cosmo* and modern society as a whole: "I eloped at 25, divorced at 26, and dated my way across Europe all summer." Of course, by "dated my way across Europe" she means that she slept with half the continent.
>
> The author, Elise, says she "started fighting" with her husband and within a few months they both decided that their differences were irreconcilable. Despite counseling, she says, "neither of us was happy." So, exhausted from 12 whole months of marriage, Elise embarked on a voyage of self-discovery and STD cultivation. She met random dudes in half a dozen countries and had sex with them, learning quite a lot as she went, though she can't really explain what exactly she learned or why sex was a necessary component in learning it. Finally, she came home and started dating some other guy. The end.
>
> Well, not really the end. 20 years from now I'm sure we'll get the follow up article: "I'm alone and miserable and it's everyone's fault but mine." **After all, you may be able to fill the emptiness in your soul with frivolous sex when you're young and physically desirable, but that phase is fleeting. People who don't want to "waste" their beauty and youth on a spouse, so they waste it instead on strangers who don't love them or even care what happens to them tomorrow, will be shocked when a tomorrow comes where even strangers aren't interested anymore. This is where the single-minded, utterly selfish pursuit of "happiness" at all costs inevitably leads: to rejection, despair, and a quiet, unnoticed death on a lonely hospital bed.**
>
> As Elise helpfully demonstrated, "do what makes you happy" is poison in a marriage. Many a vow has been broken because one or both partners decide to

> chase “happiness” instead of commitment, fidelity, and love. “I deserve to be happy,” reports the legion of serial divorcees, as they drift on to the next spouse, and the next, and the next, and the next, looking for the one — *the* one, finally — who might cure the misery they’ve inflicted on themselves. Increasingly unhappy, yet increasingly convinced that they deserve to be.

And this follow your heart to happiness situation is alive and well in the church today. Marriage-minded Christian men who have prepared for husband roles are surprised to find that there is often little or no difference between Elise and the Christian women the church produces. Christian men who desire to invest in a marriage that is stable, productive and influential have nowhere to turn for a wife who is able and willing to help. In my experience, the problem with happiness-focused women who delay marriage is never discussed in churches from the pulpit. The “good men to marry” that today’s 30-something women are looking for were plentiful back when those same women were in their early-to-mid 20s.

J. Warner Wallace: I am not a Christian because it works for me

April 13, 2018 | by Wintery Knight | Link | Original Link

Here's a must-read post from Cold-Case Christianity author J. Warner Wallace.

Excerpt:

> Life on this side of my decision hasn't always been easy. It's been nearly seventeen years since I first trusted Jesus as Lord and Savior. I still struggle to submit my prideful will to what God would call me to do. Christianity is not easy. It doesn't always "work" for me. There are times when I think it would be easier to do it the old way; easier to cut a corner or take a short cut. There are many times when doing the right thing means doing the most difficult thing possible. There are also times when it seems like non-Christians have it easier, or seem to be "winning". It's in times like these that I have to remind myself that I'm not a Christian because it serves my own selfish purposes. I'm not a Christian because it "works" for me. I had a life prior to Christianity that seemed to be working just fine, and my life as a Christian hasn't always been easy.
>
> I'm a Christian because it is true. I'm a Christian because I want to live in a way that reflects the truth. I'm a Christian because my high regard for the truth leaves me no alternative.

I think this is important. There are people who I know who claim to be Christian, but they are clearly believing that God is a mystical force who arranges everything in their lives in order to make them happy. They are not Christians because it's true, but because of things like comfort and community. But people ought to become Christians because they think it's true. Truth doesn't necessarily make you happy, though. Truth can impose

intellectual obligations and moral obligations on you. Seeing God as he really is doesn't help us to "win" at life, as the culture defines winning.

Winning in Christianity doesn't mean making lots of money, or being famous, or winning human competitions, or being approved of by lots of people. Winning for a Christian might involve things like building relationships with people and leading them to know that God exists and who Jesus is. That has no cash value, and it's not going to make you famous. Actually, it will probably cost you money and time, and make you unpopular with a lot of people.

The Bible doesn't promise that people who become Christians will be happier. Actually, it promises that Christians will suffer for doing the right things. Their autonomy will suffer, as they sacrifice their own interests and happiness in order to make God happy, by serving his interests. Christianity isn't something you add on to your before-God life in order to achieve your before-God goals. When you become a Christian, you get a new set of goals, based on God's character and his design for you. And although you might be very successful in the world as part of serving God, there is no guarantee of that. Christianity is not life enhancement.

Has increased education spending in schools improved student performance in test scores?

April 14, 2018 | by Wintery Knight | Link | Original Link

When I want a raise, I work harder, but lazy teachers quit working to hold signs

One of my friends has been having a debate with one of his former teachers about whether spending more money on government-run education improves tests scores. He tried posting some evidence, but she just dismissed that by claiming:

1. If we hadn't spent more money, then the student test scores would have gone down instead of staying the same.
2. Most of the money that government spends on education goes to vouchers and private schools, not public schools
3. Economists at prestigious think tanks like that Cato Institute, the Heritage Foundation, and the American Enterprise Institute cannot be trusted to accurately cite the Bureau of Labor Statistics and the National Center for Education Statistics because of the Koch Brothers
4. You can't compare the test scores of American students with the test scores of Asian students who outperform them, (for less government spending), because math is different in Asia compared to America

Let's look at some data and see if her arguments are correct.

Does more spending mean higher student performance?

National Review reported on data collected in the National Assessment of Educational Progress, which spans all 50 states.

Look:

> Comparing educational achievement with per-pupil spending among states also calls into question the value of increasing expenditures. While high-spending

> Massachusetts had the nation's highest proficiency scores on the National Assessment of Educational Progress, low-spending Idaho did very well, too. South Dakota ranks 42nd in per-pupil expenditures but eighth in math performance and ninth in reading. The District of Columbia, meanwhile, with the nation's highest per-pupil expenditures ($15,511 in 2007), scores dead last in achievement.

The student test scores are dead last, but National Review notes that "according to the National Center for Education Statistics, Washington, D.C. was spending an average of $27,460 per pupil in 2014, the most recent year for which data are available." They are spending the most per-pupil, but their test scores are dead last.

CBS News reported on another recent study confirming this:

> Decades of increased taxpayer spending per student in U.S. public schools has not improved student or school outcomes from that education, and a new study finds that throwing money at the system is simply not tied to academic improvements.
>
> The study from the CATO Institute shows that American student performance has remained poor, and has actually declined in mathematics and verbal skills, despite per-student spending tripling nationwide over the same 40-year period.
>
> "The takeaway from this study is that what we've done over the past 40 years hasn't worked," Andrew Coulson, director of the Center For Educational Freedom at the CATO Institute, told Watchdog.org. "The average performance change nationwide has declined 3 percent in mathematical and verbal skills. Moreover, there's been no relationship, effectively, between spending and academic outcomes."
>
> The study, "State Education Trends: Academic Performance and Spending over the Past 40 Years," analyzed how billions of increased taxpayer dollars, combined with the number of school employees nearly doubling since 1970, to produce stagnant or declining academic results.
>
> "The performance of 17-year-olds has been essentially stagnant across all subjects despite a near tripling of the inflation-adjusted cost of putting a child through the K-12 system," writes Coulson.

Where did the numbers come from? The Koch Brothers? No:

> Data from the U.S. Department of Education incorporating public school costs, number of employees, student enrollment and SAT scores was analyzed to explore the disparity between increased spending and decreasing or stagnant academic results.

Well, at least government-run monopoly schools outperform private private schools, right? No:

> […][P]rivate schools, where students excel over public school peers, …manage to

> operate at budgets about 34 percent lower than taxpayer-funded schools, US Finance Post reports.
>
> Public schools spend, on average, $11,000 per student, per year.
>
> Coulson noted an Arizona study he conducted which showed that the average per-pupil spending at private schools was only about 66 percent of the cost of public schools.

A more recent state-specific study from 2016 found that this is still the case.

This problem gets even worse when you look at test scores from other countries, where even less is spent on education.

As the Washington Post reported at the end of 2016:

> When it comes to math, U.S. high school students are falling further behind their international counterparts, according to results released Tuesday of an ongoing study that compares academic achievement in 73 countries. And the news is not much better in reading and science literacy, where U.S. high schoolers have not gained any ground and continue to trail students in a slew of developed countries around the globe.
>
> In the latest Program for International Student Assessment (PISA) measuring math literacy in 2015, U.S. students ranked 40th in the world. The U.S. average math score of 470 represents the second decline in the past two assessments — down from 482 in 2012 and 488 in 2009. The U.S. score in 2015 was 23 points lower than the average of all of the nations taking part in the survey.

More money is being spent, but the scores are DECREASING.

Now, why is it that increased government spending in the public school monopoly doesn't improve student performance? Well, one reason is that very little of the money makes it to the classroom.

Where does all the money go?

Let's look at four places where the money spent on the government-run public school monopoly ends up.

Administration

First, a lot of it gets paid to administrations who implement politically correct programs designed to turn the impressionable young people into little secular socialists.

Here's a helpful chart from the American Enterprise Institute:

Where does taxpayer money spent on the public school monopoly go?
I guess if a school wants to make things like Planned Parenthood sex education and LGBT indoctrination into priorities, then they would need more administrators.

Pensions

Second, education employees get enormous pensions, which are paid by taxpayers and negotiated by their unions. You would never see pensions this large in the private sector.

This is from the leftist Brookings Institute, from 2014:

> This figure shows we now spend nearly $1,100 per student on retirement benefits. The average public school student teacher ratio is 16 to 1. So we are spending about $17,000 per year per teacher in pension contributions.
>
> […]The National Council on Teacher Quality writes,
>
> In 2014 teacher pension systems had a total of a half trillion dollars in unfunded liabilities—a debt load that climbed more than $100 billion in just the last two years. Across the states, an average of 70 cents of every dollar contributed to state teacher pension systems goes toward paying off the ever-increasing pension debt, not to future teacher benefits (p. iii).
>
> While we are spending a huge amount to fund teacher pensions, most of that spending doesn't go to attracting the best teachers. It's paying off past debts.

We can't hire good teachers, because all the education spending of today is paying for the gold-plated pensions of yesterday.

That was 2014. The numbers are even worse today. Teachers contribute very, very little to their pensions, but the benefits are enormous compared to what the private sector taxpayers get in Social Security. (Which is going to be bankrupt by 2034, as reported by

the far-left PBS)

Teacher training

Third, a lot of it is spent on teacher training, because apparently teaching multiplication, Shakespeare or geography changes every year, so the teachers need tens of thousands of dollars in annual training.

The Washington Post reports on a recent study:

> A new study of 10,000 teachers found that professional development — the teacher workshops and training that cost taxpayers billions of dollars each year — is largely a waste.
>
> The study released Tuesday by TNTP, a nonprofit organization, found no evidence that any particular approach or amount of professional development consistently helps teachers improve in the classroom.
>
> […]The school districts that participated in the study spent an average of $18,000 per teacher annually on professional development. Based on that figure, TNTP estimates that the 50 largest school districts spend an estimated $8 billion on teacher development annually. That is far larger than previous estimates.
>
> And teachers spend a good deal of time in training, the study found. The 10,000 teachers surveyed were in training an average of 19 school days a year, or almost 10 percent of a typical school year, according to TNTP.

Maybe if more of the money spent on education were spent directly on hiring teachers, then we would see an improvement. Unfortunately, a lot of the money meant for teachers goes to the teacher unions. How do they spend that money?

Political Contributions

Finally, this is from OpenSecrets.org, concerning political contributions made in the most recent election cycle:

Rank	Organization	Total Contributions	To Dems & Liberals	To Repubs & Conserve	Pct to Dems & Liberals
1	Fahr LLC	$90,585,570	$90,585,570	$0	100.0%
2	Renaissance Technologies	$59,139,938	$33,414,308	$25,250,600	56.9%
3	Las Vegas Sands	$44,362,186	$51,436	$44,333,430	0.1%
4	Paloma Partners	$41,961,900	$41,958,600	$3,300	100.0%
5	Service Employees International Union	$39,389,570	$39,387,460	$2,100	100.0%
6	Adelson Drug Clinic	$38,847,300	$40,000	$38,830,000	0.1%
7	Newsweb Corp	$38,802,040	$38,796,640	$0	100.0%
8	NextGen Climate Action	$35,459,288	$35,459,288	$0	100.0%
9	American Federation of Teachers	$33,599,606	$33,580,580	$10,700	100.0%
10	Priorities USA/Priorities USA Action	$33,470,302	$33,470,302	$0	100.0%
11	National Education Assn	$29,774,140	$29,426,584	$347,306	98.8%
12	Laborers Union	$29,086,698	$28,386,961	$474,925	96.4%
13	Soros Fund Management	$28,708,898	$27,561,598	$679,700	97.6%

Top Political Contributors in 2016 election cycle

The two largest teacher unions came in at #9 and #11. Most of their donations go to Democrat Party. Democrats believe (against the evidence) that spending more money in the government-run public school monopoly will improve student performance on tests.

So, what's the solution?

The solution is that we abolish the federal Department of Education, which has done nothing to improve the quality of education for students. We need to push the education of children back down to the state and local levels. We need to empower parents to choose the schools that work best for their children by giving parents vouchers. We need to increase tax-free education savings accounts to help parents with school expenses. We should also give free college tuition to homeschooled students who are admitted to STEM programs at any college or university. We can take the money from the pensions of the union administrators, after we abolish ever single public sector teacher union in the country, and seize all their assets and pensions. If that's not enough money, then we can seize all the pensions of Department of Education employees – a just punishment for their failure to produce results while still taking taxpayer money.

Finally, we should allow people who already have private sector experience doing things like STEM to become teachers. Let's face it: the departments that grant Education degrees have the lowest entrance requirements, and produce the least competent adults. People with years of private sector work experience teach better than people with Education degrees. Let's open up teaching to people who have experience in the private sector doing software engineering, statistics, nursing, etc. and then we'll have qualified teachers.

Why does atheist historian Gerd Ludemann accept the post-mortem experiences of the risen Jesus?

April 15, 2018 | by Wintery Knight | Link | Original Link

A conflict of worldviews

William Lane Craig explains why even atheist historians like Gerd Ludemann accept that the earliest followers of Jesus had experiences in which Jesus appeared to them as resurrected Lord.

Excerpt:

> Fact #3: *On multiple occasions and under various circumstances, different individuals and groups of people experienced appearances of Jesus alive from the dead*. This is a fact which is almost universally acknowledged among New Testament scholars, for the following reasons:
>
> 1. The list of eyewitnesses to Jesus's resurrection appearances which is quoted by Paul in I Cor. 15. 5-7 guarantees that such appearances occurred.
>
> 2. The appearance traditions in the gospels provide multiple, independent attestation of such appearances.
>
> With respect to the first supporting line of evidence, it is universally accepted on the basis of the early date of Paul's tradition as well as the apostle's personal acquaintance with many of the people listed that the disciples did experience postmortem appearances of Christ. Among the witnesses of the resurrection appearances were Peter, the immediate circle of the disciples known as "the Twelve," a gathering of 500 Christian believers (many of whom Paul evidently knew, since he was aware that some had died by the time of his writing), Jesus's younger brother James, and a wider group of apostles. "Finally," says Paul, "as to one untimely born, he appeared also to me" (I Cor. 15.8).

> The second supporting line of evidence appeals again to the criterion of multiple attestation. The Gospels independently attest to postmortem appearances of Jesus, even to some of the same appearances found in Paul's list. Wolfgang Trilling explains,
>
> From the list in I Cor. 15 the particular reports of the Gospels are now to be interpreted. Here may be of help what we said about Jesus's miracles. It is impossible to 'prove' historically a particular miracle. But the totality of the miracle reports permits no reasonable doubt that Jesus in fact performed 'miracles.' That holds analogously for the appearance reports. It is not possible to secure historically the particular event. But the totality of the appearance reports permits no reasonable doubt that Jesus in fact bore witness to himself in such a way.38
>
> The appearance to Peter is independently attested by Paul and Luke (I Cor. 15.5; Lk. 24.34), the appearance to the Twelve by Paul, Luke, and John (I Cor. 15.5; Lk. 24:36-43; Jn. 20.19-20), the appearance to the women disciples by Matthew and John (Mt. 28.9-10; Jn. 20.11-17), and appearances to the disciples in Galilee by Mark, Matthew, and John (Mk. 16.7; Mt. 28. 16-17; Jn. 21). Taken sequentially, the appearances follow the pattern of Jerusalem-Galilee-Jerusalem, matching the festival pilgrimages of the disciples as they returned to Galilee following the Passover/Feast of Unleavened Bread and traveled again to Jerusalem two months later for Pentecost.
>
> Lüdemann himself concludes, "It may be taken as historically certain that Peter and the disciples had experiences after Jesus's death in which Jesus appeared to them as the risen Christ."39 Thus, we are in basic agreement that following Jesus's crucifixion various individuals and groups of people experienced appearances of Christ alive from the dead. The real bone of contention will be how these experiences are best to be explained.

Triablogue notes that most historians accept these post-mortem experiences of the risen Jesus:

> In their 2004 book, Gary Habermas and Michael Licona mention five facts accepted by the large majority of scholars:
>
> 1. Jesus died by crucifixion.
> 2. Jesus' disciples believed that he rose and appeared to them.
> 3. The church persecutor Paul was suddenly changed.
> 4. The skeptic James, brother of Jesus, was suddenly changed.
> 5. The tomb was empty.
>
> Habermas and Licona write:
>
> "On the state of Resurrection studies today, I (Habermas) recently completed an overview of more than 1,400 sources on the resurrection of Jesus published since 1975. I studied and catalogued about 650 of these texts in English, German, and

> French. Some of the results of this study are certainly intriguing. For example, perhaps no fact is more widely recognized than that early Christian believers had real experiences that they thought were appearances of the risen Jesus. A critic may claim that what they saw were hallucinations or visions, but he does not deny that they actually experienced something….roughly 75 percent of scholars on the subject accept the empty tomb as a historical fact." (The Case for the Resurrection of Jesus [Grand Rapids, Michigan: Kregel Publications, 2004], pp. 60, 70)
>
> Habermas and Licona explain that even "the majority of nonbelieving scholars" (p. 149) accept such facts, not just Christian scholars. And even many professing Christian scholars are Christian in name, but reject much of what Christians have traditionally believed. Skeptics sometimes suggest that a scholarly consensus on facts related to Jesus' resurrection isn't of much significance, because so many of the scholars are Christians, but *traditional* Christians make up only a small percentage of scholarship.

When talking about the appearances, the challenge is always to make the move from "through they saw" to "they actually saw". In chapter 6 of their introductory book on the resurrection of Jesus, "The Case for the Resurrection of Jesus", Mike Licona and Gary Habermas give some reasons why the post-mortem appearances of Jesus were not hallucinations. First, they argue that hallucinations are had by individuals, not groups. Second, they argue that the hallucination hypothesis leaves the empty tomb unexplained. It also doesn't explain the appearances to skeptical James and antagonistic Paul. Finally, the appearance narratives are too varied to be hallucinations, i.e. – individuals, groups, friends, enemies, different times and different places.

If you want to read a scholarly response to the hallucination hypothesis, it's right in the article by Dr. Craig that I was quoting from above. He assesses the hallucination hypothesis as put forward by atheist scholar Gerd Ludemann against the standard criteria for judging multiple competing historical explanations. It's too much to quote here, but click through and read it when you can. If you want to see a good summary of the arguments for the empty tomb, go right here.

See it used in a debate

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

Can a person believe in both God and Darwinian evolution?

April 16, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

The term for a person who believes in fully naturalistic evolution but who also believes in God is "theistic evolutionist".

Terrell Clemmons takes a look at one organization of theistic evolutionists "Biologos", and makes a distinction between their public statements and the real implications of their public statements.

Here is the PR / spin definition of theistic evolution:

> Evolutionary creation is "the view that all life on earth came about by the God-ordained process of evolution with common descent. Evolution is a means by which God providentially achieves his purposes in creation." This view, also called *theistic evolution*, has been around since the late nineteenth century, and BioLogos promotes it today in a variety of religious and educational settings.

And here is the no-spin definition of theistic evolution:

> As Dr. Stephen Meyer explains it, the central issue dividing Bio-Logos writers from intelligent design theorists is BioLogos's commitment to methodological naturalism (MN), which is not a scientific theory or empirical finding, but an arbitrary rule excluding non-material causation from the outset. "Unfortunately," Meyer writes,
>
> methodological naturalism is a demanding doctrine. The rule does not say "try finding a materialistic cause but keep intelligent design in the mix of live possibilities, in light of what the evidence might show." Rather, MN tells you that

> you simply must posit a material or physical cause, whatever the evidence.
>
> **What this means, according to BioLogos's own epistemology, is that God is objectively undiscoverable and unknowable—a tenet that sits squarely at odds with Christian orthodoxy, which has for centuries held that God is clearly discernible in the natural world (e.g., Romans 1:20).** Obviously, this is theologically problematic, but Meyer also points out that theistic evolution faces problems from a scientific standpoint as well, as the technical literature among evolutionary biologists is moving *away* from the Darwinian mechanism.

Whenever I talk to theistic evolutionists, I try to stop them from talking about the Bible or their faith, because that's not what is interesting to me. I don't really care about their history as a religious person, or where they go to church, or who their pastor is. When I talk about origins and evolution, I only care about the science. What the ordinary process of scientific inquiry tells us about nature? Does nature have the capacity to create all of the varieties of life without any intelligent agency playing a role? Or, are there parts of nature that are similar to computer programs, blog posts, and term papers, where the best explanation of the effect is an intelligent agent choosing how to arrange the parts to achieve functionality?

I don't accept molecules-to-man unguided evolution. This is not because I start with faith and let faith override the findings of science. It's because I think that if you look at specific areas of natural history, there is clear evidence of intelligent agency, such as in the origin of life, or the Cambrian explosion. These effects in nature are well-studied and well-understood, and they look much more like the code that a computer scientist (like me) writes than the simplistic "order" created by wind erosion or crystalline patterns or anything the blind forces of nature could produce. Blind forces are observed to make small changes – short or long finch beaks, fruit flies with 4 wings and no balancers, bacterial resistances.

What's also interesting is how often theistic evolutionists drop the theism but keep the evolution.

Consider this article about Stephen Matheson from Evolution News:

> Biologist Stephen Matheson is a longtime critic of the theory of intelligent design. His extensive attacks on Stephen Meyer's *Signature in the Cell*, for one, ranged from the substantive to the trivial and personal. The tone was frequently…abrasive, and we responded at the time. With Arthur Hunt, Dr. Matheson has debated Dr. Meyer in a forum at Biola University. Formerly a professor at an Evangelical Christian school, Calvin College, Matheson is still listed as a Blog Author at the theistic evolutionary website *BioLogos*, where it notes that he enjoys "explor[ing] issues of science and Christian faith."
>
> Well, his theistic evolutionary explorations have now terminated. As he reports on his personal blog page, where he took a hiatus of more than five years along

> with a break from his teaching, he is “happily” no longer a Christian.

OK. Now that’s just one case, but what about Howard Van Till, also of Calvin College?

Salvo magazine takes a look at what he wrote in a recent book:

> In what follows I shall use the term “naturalism,” when unqualified, to represent neither more nor less than *the rejection of supernaturalism.* Stated positively, naturalism is committed to the belief that all events that occur within this Universe are consistent with and adequately explained by the system of natural causes. This commitment necessarily entails the additional belief that the system of natural causes is fully adequate to account for all events that transpire. Focusing on the issue of the Universe’s formational economy, we can say that naturalism—as here defined -entails the RFEP.

He now gives presentations for atheist groups entitled “From Calvinism to Freethought”. Freethought is a euphemism for atheism.

Now, for the big three Western monotheistic religions: Christianity, Judaism and Islam. To deny supernaturalism IS to deny the robust theism present in the world’s big three monotheistic religions. Van Till denies theism as commonly understood now. And again, this isn’t because of the science. His heavy handed naturalistic assumption squashed out any kind of serious inquiry into areas like the origin of the universe, the cosmic fine tuning, the origin or life, the Cambrian explosion, biological convergence, so-called junk DNA, deleterious mutations, and so on. Places where you can see that naturalistic forces cannot do the creating that Van Till has faith that they can.

And for the record, I am an *enthusiastic* supporter of the standard Big Bang cosmology, and a 4.5 billion year Earth. My problem with evolution is not Bible-based, it’s science-based. If the science shows the need for intelligent causes, and I think it does, then I think that the naturalists need to adjust their assumptions and pre-suppositions to match the evidence. We have blog posts and computer science code, that’s evidence for a programmer. We have DNA and proteins and sudden origin of body plans, that’s evidence for a programmer, too.

Democrat senator imposes religious test to bar Christians from public office

April 17, 2018 | by Wintery Knight | Link | Original Link

Anti-marriage gay activists vandalize church

CIA Director Mike Pompeo has been nominated to be Secretary of State. He would be a great pick, and you can already see from his previous job that he's well qualified. But what if we decided not to care about his professional qualifications, and instead tried to oppose him based on his religious convictions?

That's what Democrat Senator Cory Booker did, here's the video: (and as you're watching, consider what relevance this has to the job of Secretary of State)

Ben Shapiro, an orthodox Jew, reported on the exchange at the Daily Wire:

> On Thursday, Senator Cory Booker (D-NJ) offered a bizarre critique of Secretary of State Mike Pompeo: Pompeo wasn't sufficiently enthusiastic about homosexual sex.
>
> Yes, this is a real thing.
>
> Booker asked Pompeo, "Do you believe gay sex is a perversion?"
>
> Pompeo is a religious Christian, so presumably he does. He answered, quite properly, "When I was a politician, I had a very clear view on whether it was appropriate for two same-sex persons to marry. I stand by that." He also informed Booker, "My respect for every individual regardless of sexual orientation is the same."

This isn't the first time that prominent Democrat senators have attacked Christian nominees for their Christian religious beliefs.

Remember when Bernie Sanders did it?

Partial transcript:

> Sanders: Let me get to this issue that has bothered me and bothered many other people. And that is in the piece that I referred to that you wrote for the publication called *Resurgent*. You wrote, "Muslims do not simply have a deficient theology. They do not know God because they have rejected Jesus Christ, His Son, and they stand condemned." Do you believe that that statement is Islamophobic?
>
> Vought: Absolutely not, Senator. I'm a Christian, and I believe in a Christian set of principles based on my faith. That post, as I stated in the questionnaire to this committee, was to defend my alma mater, Wheaton College, a Christian school that has a statement of faith that includes the centrality of Jesus Christ for salvation, and . . .
>
> […]Sanders (shouting): I understand you are a Christian, but this country are made of people who are not just — I understand that Christianity is the majority religion, but there are other people of different religions in this country and around the world. In your judgment, do you think that people who are not Christians are going to be condemned?

So basically, there is Bernie Sanders using the power of government force a Christian to deny the exclusivity of Christian theology. Something that no authentic Christian could do in good conscience. But he's not the only one.

Here's Democrat senators Dick Durbin and Diane Feinstein doing the same thing.

This is from National Review.

Excerpt:

> This afternoon, during a confirmation hearing for 7th Circuit Court of Appeals nominee Amy Coney Barrett, Democratic senator Dianne Feinstein attacked the nominee for her Roman Catholic faith.
>
> Barrett is a law professor at the University of Notre Dame who has written about the role of religion in public life and delivered academic lectures to Christian legal groups. Drawing on some of these materials, Feinstein launched a thinly veiled attack on Barrett's Catholic faith, asserting that her religious views will prevent her from judging fairly.
>
> "When you read your speeches, the conclusion one draws is that the dogma lives loudly within you," Feinstein said. "And that's of concern when you come to big issues that large numbers of people have fought for for years in this country." Feinstein is clearly hinting here at the Supreme Court decision in *Roe v. Wade*, a ruling that Feinstein supports so vociferously that she has even called it a "super-precedent."
>
> […]Other Democratic senators took issue with Barrett over her faith as well. Senate minority whip Dick Durbin criticized Barrett's use of the term "orthodox

> Catholic," insisting that it unfairly maligns Catholics who do not hold certain positions about abortion or the death penalty. (Durbin himself is a Catholic who abandoned his previous pro-life position.) "Do you consider yourself an orthodox Catholic?" he later asked Barrett point blank.

To me, the more important thing about these stories is how comfortable secular people are about forcing their secular convictions down the throats of others. What they're essentially saying is this: "I can use power to push my worldview onto you, and I can use power to stop you from living according to your convictions". You can be certain that Diane Feinstein has answers to all of the same big questions that theists have answers to: "does God exist?" "did Jesus rise from the dead?" "is there a purpose to suffering and evil?" "is there life after death?", etc. She has different answers to those same questions, but she wouldn't accuse herself of having dogma. She feels very comfortable pushing her worldview through political power, but doesn't think that theists ought to be able to do the same. questions with their respective worldviews? The answer is simple.

Why are Christians perceived as irrational? Atheists perceive Christians as having a worldview that is not based on fact. And they perceive themselves as having a worldview that is based on fact. How did this happen?

Well, simply put, Christian leaders made it happen, by refusing to focus on apologetics and evangelism. For better or worse, Christian churches (from fundamentalist Pentecostal to conservative Presbyterian) have decided that evangelism and apologetics are not important enough to focus on at church. And the result of this is that as non-Christians work their way through school and into the workplace, they never encounter any intelligent Christians who have reasons and evidence for their beliefs. Not just Christian beliefs, but policy beliefs, too. The church has failed to teach their members and adherents the importance of having answers, and this (along with the Sexual Revolution) is one of the main reasons why America has gone secular.

Even if you spend your childhood and teen years in church, you will never hear serious discussion of whether God really exists or whether the Bible is historically reliable. These things will be assumed to be true. You will be shamed if you ask questions, and you will even be shamed if you study apologetics to know how to answer these questions. This is considered pious by most church leaders, no matter what denomination you're in. Atheists are not blind to the fact that most people who profess Christ are ignorant of competing views, and cannot explain why they hold their views using reason and evidence. And that's why they are comfortable bullying us.

Tactics: the worst mistake a Christian can make when doing apologetics

April 18, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery
So, this is just an advice post for doing apologetics.

Here are three situations I've run into while doing apologetics in the last month.

First situation. I was talking with a lady who is an atheist. I had a copy of "God's Crime Scene" in my hand, and she asked me about it. I told her that it was a book written by the guy who solved the homicide case that I asked her to watch on Dateline. She remembered – it was the two-hour special on the woman who was killed with a garrotte. She pointed at the book and said "what's in it?" I said, it has 8 pieces of evidence that fit better with a theistic worldview than with an atheistic one, and some of them scientific. Her reply to me was – literally – "which denomination do you want me to join?"

Second situation. I was talking with a friend of mine who teaches in a Catholic school. She was telling that she got the opportunity to talk to her students about God, and found out that some of them were not even theists, and many of them had questions. So she asked them for questions and got a list. The list included many hard cases, like "what about the Bible and slavery" and "why do Christians oppose gay marriage?" and so on.

Third situation. Talking to a grad student about God's existence. I'm laying out my scientific arguments for her, holding up the peer-reviewed papers for each discovery. I get to the Doug Axe paper on protein folding probabilities, and she holds up her hand. One question: "Am I going to Hell?"

So think about those three situations. In each case, the opponent is trying to reject Christianity by jumping way, way ahead to the very end of the process. When you do Christian apologetics, you do not take the bait and jump to the end of the process dealing with nitty gritty details until you have made your case for the core of the Christian

worldview using your strongest evidence. Let me explain.

So, your strongest evidence as a Christian are the scientific arguments, along with the moral argument. Those would include (for starters) the following:

1. kalam cosmological argument
2. cosmic fine-tuning
3. galactic and stellar habitability
4. origin of life / DNA
5. molecular machines / irreducible complexity
6. the moral argument

The problem I am seeing today is that atheists are rejecting discussions about evidence because they think that all we are interested in is getting them to become Christians. Well, yes. I want you to become a Christian. But I know perfectly well what that entails – it entails a change of life priorities. Both of the women I spoke to are living with their boyfriends, and the kids in the Catholic school just want to have fun. None of them wants to believe in a God who will require self-denial, self-control, and self-sacrifice. Nobody wants God to be in that leader position in their lives. Christianity is 100% reversed from today's me-first, fun-seeking, thrill-seeking, fear-of-missing-out travel spirit of the age.

So, how to answer all these late-game questions? The answer is simple. You don't answer any late-game questions until the person you are talking with accounts for the widely-accepted data in your list. These are things that have got to be accepted before any discussion about minor issues like one angel vs two angels at the empty tomb can occur. When we discuss all the basic issues where the evidence is the strongest, then we can go on to discuss issues where the evidence is debatable, then finally, in the last bits before the end, we can discuss these other kinds of questions.

How to explain why this process must be followed to the person who asks specific questions about minor issues? Simple. You explain that your goal is *not* to get them to become a Christian right now. That you want to let them believe *anything thing they want.* That's right. They can believe *anything they want to believe.* As long as what they believe is *consistent with the evidence.* And what I am going to do is give them the evidence, and then they can believe whatever they want – so long as it's consistent with the evidence.

So, for example, I'm going to tell them 3 pieces of evidence for a cosmic beginning of the universe: the expanding universe (redshift), the cosmic microwave background radiation, and the light element abundances. That's mainstream science that shows that the universe came into being out of nothing, a finite time in the past. And I will charge them not to believe in any religion that assumes that the universe has always been here. For example, Mormonism is ruled out, they believe in eternally existing matter. See how that works? Hey, Ms. Atheist. You can believe anything you want. *As long as what you believe is consistent with the evidence.*

I think this approach of not letting them rush you to the end at the beginning is important

for two reasons. First, we can get our foot in the door to talk about things that are interesting to everyone, in a non-stressed environment. Everyone can talk about evidence comfortably. Second, we show that we hold our beliefs because we are simply letting evidence set boundaries for us on what we are allowed to believe. We can't believe not-Christianity, because not-Christianity is not consistent with the evidence. And you start with the most well-supported evidence, and eliminate worldviews that are falsified by the most well-supported evidence. Atheism actually gets falsified pretty quickly, because of the scientific evidence.

So, that's my advice. Had a friend of mine named William try this out about a week ago. It went down like this:

William to me:

> This guy I know messaged me and bragged for a while about how easy he can dismantle Christianity. He said: "present the gospel to me as you understand it. I'll simply ask questions to demonstrate it is not worth your belief."

WK to William:

> First of all, he isn't allowed to just sit there and poke holes in your case, he has to present a positive case for atheism. Second, don't discuss Christianity with him at all until you first discuss the evidence for theism – start with the good scientific evidence.

And William wrote this to his friend:

> The way I'm wired is that I process all competing theories and go with the best one. By doing a comparative analysis of worldviews I find that Christian theology easily explains the most about the world I find myself living in.
>
> I'm pretty sure that a God of some sort exists because of the scientific evidence for the origin of the universe and the fine tuning in physics. From there I find it quite intuitive that if a God went through the trouble of creating and tuning a universe for life that this God likely has some sort of interest in it and has revealed Himself to humanity in some way.
>
> From there I can look at the major world religions and compare them to see which one explains the past and the present the best. Christianity easily comes out on top.

And then a few days later, I got this from William:

> I finally got the agnostic to tell me what he thinks about origin and fine tuning. When I started pointing out that his views were unscientific, he blew a gasket, called me dishonest and told me he didn't want to discuss anything further.

And that's where you want to be. Cut off all discussions where the challenger tries to jump to the end and get you to debate the very last steps of your case. Present the strongest evidence for your core claims, and get him to account for this evidence within

his own worldview. Lead the discussion with public, testable evidence. All warfare depends on picking the terrain, weapons and tactics that allow you to match your strength against your opponent’s weakness.

Radical feminists oppose shutdown of underage sex-trafficking site

April 19, 2018 | by Wintery Knight | Link | Original Link

Women's March

Wow! Read that tweet by the organizer's of the Women's March (which doesn't even represent all women). A web site that facilitates "sex work" was shut down by the FBI, and the Women's March is upset. What can it mean?

Well, here's an article from The Federalist to explain. (H/T Sean M.)

Excerpt:

> Last Friday, the FBI seized Backpage.com, a website well known for facilitating the sale of trafficked minors, mostly girls, for sex all over the United States. On Monday, seven top Backpage officials were arrested after being indicted on 93 counts, including money laundering and facilitating prostitution, 17 cases of which involve trafficking victims as young as 14. *The Washington Post* says Backpage earned an estimated $500 million in prostitution-related revenue since its launch in 2004.
>
> The National Center on Missing and Exploited Children reports that 73 percent of all child sex trafficking cases it has handled involved Backpage.com. According to the National Center on Sexual Exploitation, Backpage reached 97 countries and was the world's largest single facilitator of sex trafficking. NCOSE also reports that from January 2013 to March 2015, 99 percent of Backpage's global revenue was attributable to prostitution advertising. During that time, it

> made nearly $51 million from prostitution ads in California alone.

The rest of the The Federalist article makes clear that nothing in that web site's operations made sex-trafficking "safer" for women. In fact, the whole "sex work" business is dangerous for women:

> While it's impossible to say all women in prostitution are trafficked into it, numerous young women and girls tell us they were sold into sex against their will into the industry that traffickers, sex buyers, and their supporters try to legitimize with terms like "sex work." We do know, thanks to the research of Melissa Farley at Prostitution Research and Education, that 70 percent of those in the sex industry link their entry to prior sexual abuse.
>
> Most say they entered as minors, which in the United States qualifies as trafficking. Many enter feeling they have no other options, reducing the sense of free choice in the matter. Once they're in, 89 percent of "sex workers" say they want to get out of the industry but feel they have limited options. You don't call an industry safe when women are coerced into it and have difficulty getting out.
>
> According to Farley's comprehensive studies, as many as 99 percent of those in the sex industry have said they experienced violence within it. Thanks to ladies like Marian Hatcher, who leads the human trafficking division at the Cook County Sheriff's Office, we know that 37 children and adults between 2007 and 2016 were killed as a result of online sex ads like those at Backpage.com. You don't call an industry safe when women face threats to their lives and agency within it.

Sometimes, it's a good idea to look back and see how we got to this point. Just a few decades ago, women generally did not have sex before marriage. Instead, they avoided sex with hot bad boys, found a man who could do husband roles early on, and got married. We had a lot of 40, 50 and 60 year marriages. Lots of children and grandchildren. Photo albums full of pictures. Family, relationships and community. In those days, women were more comfortable with the obligations of relationships, and they were happy to give up some freedom in order to have a strong family and home.

Today, things are different. Feminism won. Women don't look for men who would make good husbands and fathers. Women don't marry early because they see marriage as boring and sexist. Unfortunately, having a lot of fun with bad boys in your 20s isn't a plan for the next 60 years of your life.

Instead of backtracking on their mistakes, the radical feminists are now telling us we have to go forward. How far forward? We have to normalize prostitution and sex-trafficking, too. Once upon a time we had rules around sex, and men played by those rules. Now, the old rules that protected women are gone, and the radical feminists are the ones driving it. Their ideology means more to them than women's happiness and safety.

And it's not just harmful sex work that the radical feminists support. Radical feminists also championed sex-selection abortions, which allows mothers to terminate their

children for being the wrong sex. Radical feminists also support race-selection abortions, which allow mothers to terminate their children for being the wrong race. And no-fault divorce law were championed by radical feminists and their trial lawyer allies, resulting in an epidemic of fatherless children. Fatherlessness is really bad for little girls, and little boys, too.

Well, maybe I'm wrong, but I don't see how radical feminism has made the lives of women, born and unborn, better. Just because a few women made poor choices with men, and got angry at all men, that isn't a reason to let them burn down the institution of marriage. Maybe we should just encourage young women to make better choices about when to marry and who to marry than the bitter feminists did? That's what we used to do, and it seemed to me that women were a lot safer and happier with that.

There is evidence of collusion to get a presidential candidate elected

April 20, 2018 | by Wintery Knight | Link | Original Link

Left to right: Comey, Lynch, Clinton, McCabe

Nobody knows American politics better than Michael Barone. In this article for Real Clear Politics, he explains what we now know about collusion during the 2016 presidential election. This piece was tweeted by Brit Hume AND Hugh Hewitt (of MSNBC) so you know it's fair and balanced.

First, here's the status of the Russia collusion investigation:

> The Russia collusion charge had some initial credibility because of businessman Donald Trump's dealings in Russia and candidate Trump's off-putting praise of Vladimir Putin.
>
> It was fueled by breathless media coverage of such trivial events as Jeff Sessions' conversation with the Russian ambassador at a Washington reception — and, of course, by the appointment of former FBI Director Robert Mueller as special counsel. But Mueller's prosecutions of Trump campaign operatives were for misdeeds long before the campaign, and his indictment of 13 Russians specified that no American was a "knowing participant" in their work.
>
> Now there's talk that Mueller is winding up his investigation. It seems unlikely that whatever he reports will fulfill the daydreams so many liberals have of making Trump go the way of Richard Nixon.

So much for that story. Just think of how much the mainstream media talked about a story that turned out to be a big nothingburger.

But here's another collusion story that's emerging:

> Meanwhile, the evidence builds of collusion by Obama administration law enforcement and intelligence personnel in trying to elect Hillary Clinton and defeat and delegitimize Trump in and after the 2016 election.
>
> The investigation of Clinton's illegal email system was conducted with kid gloves.

> FBI Director James Comey accepted Attorney General Loretta Lynch's order to call it a "matter" rather than an "investigation." Clinton aides were allowed to keep her emails and destroy 30,000 of them, plus cellphones. They were not subject to grand jury subpoenas, and a potential co-defendant was allowed to claim attorney-client privilege.
>
> On June 27, 2016, Lynch clandestinely met with Bill Clinton on his plane at the Phoenix airport — a meeting that became known only thanks to an alert local TV reporter. Lynch supposedly left the decision on prosecution to Comey, who on July 5 announced publicly that Clinton had been "extremely careless" but lacked intent to violate the law, even though the statute punishes such violations whether they are intentional or not.
>
> Contrast that with the collusion of Obama officials with the Clinton campaign-financed Christophe Steele/Fusion GPS dossier alleging Trump ties with Russians. Comey and the Justice Department used it, without divulging who paid for it, to get a FISA warrant to surveil former Trump campaign operative Carter Page's future and past communications — the "wiretap" Trump was derided for mentioning.
>
> Similarly, when Comey informed Trump in January 2017 of the contents of the then-unpublished Steele dossier, he didn't reveal that the Clinton campaign had paid for it. Asked on his iatrogenic book tour why not, he blandly said he didn't know. And maybe he doesn't actually realize he was employing J. Edgar Hoover-like tactics to keep his job. Maybe.
>
> In any case, after he was fired, he immediately sent four of his internal memos, at least one of them classified, to a law professor friend to leak them to the press, with the intent of getting a special counsel appointed — who turned out to be his longtime friend and ally Robert Mueller. Collusion, anyone?

I wonder if the mainstream media will be as excited about reporting on this one? The mainstream media seems intent on presenting Comey as some kind of superstar public servant. But the truth is very different.

Trump needs to appoint people to these law enforcement agencies who will investigate actual crimes that were committed by the previous administration and their allies in the media. I'd like to see people who use government as a weapon put behind bars. We have to know for certain that using the government as a weapon to influence elections has consequences.

Dave Rubin interviews my favorite economist: Thomas Sowell

April 21, 2018 | by Wintery Knight | Link | Original Link

Dr. Thomas Sowell – the best economics teacher you will ever learn from

Two half-hour interviews with my FAVORITE economist, Thomas Sowell. If you haven't read any books by Thomas Sowell, then you don't know how wonderful economics can be. Thomas Sowell stands for the proposition that before you adopt an economic policy, you have to consider what incentives it will create for *everyone* involved. And he backs up his ideas with studies that span the whole range of times and places. It turns out that many bad ideas have already been disproved in different times and places, and Thomas Sowell knows them all. Thomas Sowell is a man of facts and evidence.

Description of part one:

> Dr. Thomas Sowell (Economist) joins Dave to discuss his Marxist past, free speech on campuses, distinguishing between classical liberalism and libertarianism, and his new book "Discrimination & Disparities.

Part one:

"This idiot has stumbled on something that will ruin us all". LOL!

Description of part two:

> Dr. Thomas Sowell (Economist and Author) joins Dave to discuss the role of government, the problem with minimum wage laws, his experience as a black conservative, debunking systemic racism, the importance of common decency, and his new book "Discrimination & Disparities."

Part two:

In the comments, Dave explains that YouTube has demonetized the video. I suppose that this is because the video contains conservative ideas, and YouTube is owned by the far-left Google.

Anyway, I recommend getting your hands on some Thomas Sowell books.

This one seems to be a collection of introductory essays:

The Thomas Sowell Reader

I haven't read it, but it has the highest reviews of any of his books. What I would recommend is picking up one of the OLDER versions of his "Basic Economics":

Basic Economics

You can get a used one for a couple of bucks. I read the second edition a while back, and I remember that just reading the first 3 chapters knocked my socks off. Some crazy person even uploaded the audio of the edition I read to YouTube. Just listen to the first 3-4 chapters, and you'll see what I mean. No one who wants to understand how the world *really works* can ignore Thomas Sowell.

One that I still haven't read that's short and sweet is:

The Vision of the Anointed

But a later book that is similar is actually my favorite Thomas Sowell book:

Intellectuals and Society

I also liked this one a lot:

Economic Facts and Fallacies

I once dated a homeschooled girl who came from a large, rural family. This family produced brilliant children, but the parents didn't really believe in college. I told the girl that to marry me, she would have to get a college degree. She and her parents didn't really like that, and we broke up. However, I did tell her that she should read Thomas Sowell, because she had some left of center views on public policy, e.g. – health care. I found out later that she went on to read SIX Thomas Sowell books in two months. After that, she went on to get a BA in economics via distance learning, with a 4.0 GPA! I think part of that transformation is due to the Thomas Sowell books. Thomas Sowell changes lives.

I have to include this clip of Thomas Sowell from a long time ago:

He understood the things we are fighting about today *decades ago*. This man should have been our first black president.

By the way, Dave Rubin does a lot of good interviews. This one that he did with Larry Elder was worth watching.

Democrat bill to ban public expression of Biblical morality passes California assembly

April 22, 2018 | by Wintery Knight | Link | Original Link

Young people seem to like gay marriage more than they like individual liberties

I hate California, and would never live there. I would never pay money to Sacramento Democrats to waste it on their secular, socialist priorities.

California is banning the free speech rights of Christians. That's not my headline, that's sensible David French in National Review:

> […][T]he California State Assembly is set to vote on a bill that would actually — among other things — *ban the sale of books* expressing orthodox Christian beliefs about sexual morality.
>
> Yes, ban the sale of books.
>
> Assembly Bill 2943 would make it an "unlawful business practice" to engage in "a transaction intended to result or that results in the sale or lease of goods or services to any consumer" that advertise, offer to engage in, or do engage in "sexual orientation change efforts with an individual."
>
> The bill then defines "sexual orientations change efforts" as "any practices that seek to change an individual's sexual orientation. This includes *efforts to change behaviors or gender expressions*, or to eliminate or reduce sexual or romantic attractions or feelings toward individuals of the same sex." (Emphasis added.)
>
> This is extraordinarily radical. Christian orthodoxy is simple — regardless of a person's desires (their "orientation"), the standard of right conduct is crystal clear. Sex is reserved for marriage between a man and a woman. When it comes

> to “gender expression,” there is no difference between “sex” and “gender,” and the Christian response to gender dysphoria is compassion and treatment, not indulgence and surgical mutilation.
>
> Put another way, there is a fundamental difference between temptation and sin. California law would intrude directly on this teaching by prohibiting even the argument that regardless of sexual desire, a person’s sexual behavior should conform to Biblical standards.

This bill has actually *passed* in the California assembly.

I just want to point out that David French has a JD from Harvard University. He’s not an idiot – this is what Christians of all walks of life are expected to believe. I’m not quite as successful as David is, but I haven’t even kissed a girl on the lips. I certainly would never have sex with a woman outside of marriage – what would that even communicate to her? So yes, we really do take these rules seriously, and not because we’re stupid or poor or ignorant.

When I say that people should not be having sex outside of marriage – gay or straight – I walk the walk. And I ought to be able to freely speak my view. I ought to be able to lend someone a book expressing my view, too. I ought to be able to buy a book that takes the Biblical view of sexuality seriously. This bill outlaws all of that – and violators would be persecuted using money taken from them in taxes.

You can read more about the bill here, on the California Family Council web site.

Can people change their “sexual orientation”?

A friend of mine decided to post some peer-reviewed evidence that people can and do change their “sexual orientation”.

Here is what he wrote:

> Here’s the data I’ve seen:
>
> “Among the 14% of Dutch adult males who reported ever having physical attraction to other males, about half noted that these feelings disappeared later in life”
> https://link.springer.com/article/10.1007/s10508-006-9088-5
>
> “Only 38% of exclusive same-sex attracted females stayed in this group with the rest moving into ‘occasional’ same-sex attraction (38%) or exclusive opposite-sex attraction (25%). One half of female and one third of male 21-year olds with occasional same-sex attraction only had opposite-sex attraction as 26-year olds.”
> https://link.springer.com/article/10.1007/s10508-006-9088-5
>
> “Although most (97%) heterosexuals maintained their heterosexual identity, nonheterosexuals frequently changed their identity label over the life course: 39% of gay males, 65% of lesbians, 66% of male bisexuals, and 77% of female bisexuals.”
> https://link.springer.com/article/10.1007/s10508-006-9088-5

> “The instability of same-sex romantic attraction and behavior (plus sexual identity in previous investigations) presents a dilemma for sex researchers who portray nonheterosexuality as a stable trait of individuals”
> https://link.springer.com/article/10.1007/s10508-006-9088-5
>
> “in a 5-year study… of young adults (Dickson et al., 2003)… only 65% of the men with same-sex attraction and 40% of the women with same-sex attraction did so [maintained a consistent rating of attraction over 5 years]”
> http://midus.wisc.edu/findings/pdfs/1153.pdf
>
> “in a longitudinal study of women who identified as lesbian, bisexual, or unlabeled at the first time point, 67% had changed their identity at least once over a period of 10 years (Diamond, 2008).”
> http://midus.wisc.edu/findings/pdfs/1153.pdf
>
> “Research shows that women’s sexuality tends to be more responsive to normative influences [peer pressure] than men’s sexuality (Baumeister, 2000)”
> http://midus.wisc.edu/findings/pdfs/1153.pdf
>
> If non-heterosexuals change their attraction that much on their own, I think it’s worthwhile to rigorously study therapy to find the best practices and see what can be done.

That’s the science. As a Christian, I have every reason in the world to speak about this evidence to people who are experiencing unwanted same-sex attractions. I have a right to read it in a book. I have a right to buy a book that says it. I have a right to give someone a book that says it. California would take my money and pay themselves to prosecute me for all of that. If you’re a Christian, it’s the wrong place to live. Pay your taxes in a state where the politicians respect your liberties.

Environmentalist groups caught colluding with Russians to prop up oil prices

April 23, 2018 | by Wintery Knight | Link | Original Link

Satellite measurements of global temperature through March 2018

Who has an interest in keeping oil prices high? Environmentalists do because they want people to drive less. And Russia does because their economy has a significant oil production component. Neither the environmentalists nor Russia like that American is able to use fracking to cleanly produce natural gas, because it lowers the price of oil. How far would Russia and their environmentalist allies go to stop fracking?

The Daily Signal reports:

> New Yorkers who are missing out on the natural gas revolution could be victims of Russian spy operations that fund popular environmental groups, current and former U.S. government officials and experts on Russia worry.
>
> Natural gas development of the celebrated Marcellus Shale deposits has spurred jobs and other economic growth in neighboring Pennsylvania. But not in New York, which nearly 10 years ago banned the process of hydraulic fracturing, also known as fracking, to produce natural gas.
>
> Two environmental advocacy groups that successfully lobbied against fracking in New York each received more than $10 million in grants from a foundation in California that got financial support from a Bermuda company congressional investigators linked to the Russians, public documents show.
>
> The environmental groups Natural Resources Defense Council and the Sierra Club Foundation millions of dollars in grants from the San Francisco-based Sea Change Foundation.
>
> […]When New York Gov. Andrew Cuomo, a Democrat, renewed his state's ban on fracking three years ago, the Natural Resources Defense Council issued a statement supporting the ban. So did the Sierra Club, the primary recipient of

> grants from its sister organization, the Sierra Club Foundation.
>
> Environmental activists associated with the groups receiving Sea Change Foundation grants continued to pressure Cuomo and other public officials to maintain and expand New York's fracking ban.

We know that Russia is helping dictator Bashir Assad to stay in power in Syria. It turns out that his ability to do these things is conditional on his ability to make money. The more natural gas America can get by fracking, the less influence Russia can have on the world:

> Since the U.S. is now the top producer of natural gas in the world, and well positioned to export liquefied natural gas across the globe, Russia recognizes it gradually could lose influence in parts of the world where Moscow has been the dominant supplier of oil and gas, Stiles said in a phone interview.
>
> "America's natural gas revolution has huge geopolitical ramifications, so Russia's motivation to try to block our natural gas development is easy to understand," the CIA veteran said. "If you are worried about the Russian bear rearing its ugly head in the next several years, the way to stop that and put it back into its cage is to cut it off at the knees financially."
>
> "That's what natural gas pipelines are all about and that's what fracking is all about. We are providing affordable energy to average Americans at home and our allies overseas."

Now, I'm sure that if I asked environmentalists why they are colluding with Russia, they would say that they had to everything they could to stop global warming. But is there any global warming? We know that global temperatures were higher than today during the Medieval Warming Period about a thousand years ago. Back then, as now, the sun was far more active. But solar activity has been declining lately, and is predicted to decline more. Should we expect to see a cooling period because of this?

The Stream reports on what we are seeing in the climate lately:

> Temperatures plummeted way below normal across the Northern Hemisphere this winter. Many cities in Canada, America, England, and Europe broke previous record lows. But it is not just the intensity of winter that has taken climate alarmists by surprise. It's also the length.
>
> Winter temperatures persist in many parts of Canada and Europe in late April. Some places received record amounts of snow. Some got it unexpectedly late. The prolonged winter even delayed spring planting in many regions.
>
> […]By all measures, this winter is long and severe. The implications challenge those who believe CO2 emissions are pushing global temperatures ever higher.
>
> […]Winters like this year's are not sufficient reason to claim an end to the Modern Warm Period. But they do subvert the claim of steadily, and swiftly, rising temperatures driven by CO2 emissions.
>
> […]When it comes to global temperatures, it is safe to assert (based on hundreds

> of scientific publications) that nothing unusual is happening with our climate system.
>
> Almost none of the computer climate models foresaw the 18-year absence of significant warming. No alarmist scientist warned us about the current colder-than-normal winter, which has disturbed normal life in many parts of the Northern Hemisphere.

I understand that people get scared about the future, and they like to be doing things that make them feel safer, but I think we need to be careful about restraining our energy production in order to benefit Russia. Especially if there is no global warming happening.

Mike Licona debates Bart Ehrman on the reliability of the gospels

April 24, 2018 | by Wintery Knight | Link | Original Link

Two horses fight it out, may the best horse win!

From the Unbelievable radio show, a debate featuring one of my favorite New Testament scholars, whose most recent book on gospel differences was published by Oxford University Press, the most prestigious academic press in the world.

Details:

> Bart Ehrman is well known as a US New Testament Scholar who lost his Christian faith and now questions many core precepts of Christianity, including the Resurrection of Jesus. When Mike Licona had doubts he devoted himself to investigating the evidence and became convinced that Jesus resurrection is the only rational explanation for the facts.
>
> They debate key historical facts about the resurrection – are the letters of Paul that report the resurrection and the Gospel accounts trustworthy or theologised and changed with time? What about apparent contradictions between the Gospels? Does the consensus of scholars count as evidence, or is there a Christian bias? Can a miracle count as an explanation for historical data?

The MP3 file is here. (Note: this link works)

Snarky summary of the radio debate: (items with * are my made-up paraphrases/clarifications)

Ehrman:
– Bart's new book is about forgeries in the ancient world
– some books were falsely attributed to prominent Christian figures
– there are mistakes in the Bible

– there are mistakes in the resurrection narratives
– the defeat of inerrancy led to his conversion to liberal Christianity
– the problem of evil and suffering caused him to become a non-Christian

Licona:
– there are minimal facts that are agreed to by a broad spectrum of scholars
– the minimal facts are accepted because they pass standard historical criteria
– Fact 1: Jesus died by crucifixion
– Fact 2: Individuals and groups had visions of Jesus after his death
– Fact 3: Paul, a skeptic and an enemy, had an appearance of Jesus that converted him
– these facts are agreed to atheist scholars, liberal scholars, etc.
– virtually 100% of scholars agree with these three facts
– there is no naturalistic explanation of these three facts
– therefore, the best explanation of these three facts is that God raised Jesus from the dead

Ehrman:
– all historians would accept these three facts, except for maybe the group appearances
– the death of Jesus is irrelevant to the resurrection
– the second and third point can be collapsed together
– so really there is only one fact

Moderator:
– the crucifixion is relevant because Muslims don't admit that fact
– the crucifixion important because it establishes a resurrection, not a resuscitation

Ehrman:
– well, if the point is that he died, then yes, this does require a resurrection

Licona:
– the crucifixion refutes Muslims who deny that Jesus died
– the crucifixion refutes the apparent death theory (swoon theory)
– the death is required for a bodily resurrection
– it's important to know what facts most scholars, regardless of worldview, agree on
– it's important to emphasize that Licona is working from historical bedrock facts
– the resurrection is the best explanation for the historical bedrock facts

Ehrman:
– you are trying to list 3 things, but really it is just one thing – the appearances
– and not ALL scholars agree that the group visions occurred

Licona:
– name one prominent scholar who denies the group appearances

Ehrman:
– the radically leftist atheist nutcase John Dominic Crossan denies the group appearances
* Crossan is so far on the left that I look like a nutcase for even citing him
* Crossan believes in the Secret Gospel of Mark, which is a hoax – but I still cite Crossan
* Crossan believes that the synoptics are LATER than gnostic forged gospels – but I still

cite Crossan
* Crossan presupposes atheism, so he cannot admit to miracle stories as a pre-supposition – but I still cite Crossan
* Crossan pre-supposes religious pluralism, so he cannot allow any exclusive claims Christians make – but I still cite Crossan
* Crossan is a good historian, it's just that he is so far to the left that no one – NO ONE – agrees with his all of crazy theories
* I think it is a good idea to cite historians who pre-suppose atheism and political correctness before they sit down to do history

Licona:
– let me explain why most scholars accept the individual and group post-mortem appearances
– the best source for the appearances is the early creed recorded by Paul in 1 Cor 15:3-8
– Paul himself had an appearance of Jesus after Jesus' death
– Paul received this material from a source very soon after the appearances – within 1-3 years
– we know that Paul met with Jesus disciples multiple times prior to writing
– Paul probably received it from Peter and James, who were themselves eyewitnesses

Moderator:
– this early dating presumably rules out legend

Licona:
– well legends CAN start quickly
– it does show that Paul was an eyewitness
– it does show that Paul was in contact with reliable eyewitnesses

Ehrman:
– 1 Corinthians is written around 55 AD, twenty-five years after Jesus died
– it is not implausible that Paul got the creed from the disciples, who were eyewitnesses
– but you don't need a long time for legends to emerge, so that is a possibility

Licona:
– only about 3% of people could read and write back them
– instead, people had enormous capacity for memorization
– the Pharisees were particularly good at memorization
– Jews were very serious about passing along traditions accurately
– Paul, a prominent Pharisee, would have been capable of passing on early creeds accurately
– Paul, in 1 Cor 7, shows that he is willing to separate his opinions from authentic tradition
– Paul had an opportunity in 1 Cor 7 to put words into Jesus' mouth, but he wouldn't do it

Ehrman:
– cultural anthropologists show that things do get changed in some oral cultures
– in these oral cultures, it is assumed that the story teller will change the story
– only in written cultures are they careful to avoid changing the story

– in the New Testament, you can compare the same story in two different gospels, there are differences

Licona:
– Ehrman is right that the gospel writers pick and choose things from the oral tradition that they want to include in their gospels
– different oral tradition transmission schemes have more or less embellishment
– african tribes embellish more, rabbinic teaching embellishes less
* Jesus' followers would have viewed him as a rabbi, and been careful about adding to his teachings
– Paul, an eyewitness, probably received the creed in 1 Cor 15 from other eyewitnesses
– Paul speaks about going twice to Jerusalem in Galatians
– he is meeting with Peter and James to check his facts

Ehrman:
– when you look at Mark and John, there are lots of differences in the narrative

Licona:
– I agree that the gospels have differences, but the oral tradition is likely fixed

Ehrman:
– but Mark and John have different sayings
– why doesn't Mark have the same explicit high Christology that John has?

Licona:
– first, John is trying to weave the oral tradition into a compelling story
– and second, when you look in Mark, the high Christology is there in the Son of Man sayings
– the apocalyptic Son of Man is in Mark, and everywhere in the New Testament

Ehrman:
– the "apocalyptic Son of Man" isn't in John

Licona:
– what about in John 9 with the man who was born blind

Ehrman:
– where is the apocalyptic part?

Licona:
– the healed man worships Jesus because he is the Son of Man
– that links to the apocalypic passages in the Old Testament

Moderator:
– what about the differences between the gospels?

Ehrman:
* well, now is the time for me to set up an inerrantist straw man and then knock it down!
* who was at the empty tomb: one angel or two angels? we don't know, so the whole Bible is false!
* I used to be an inerrantist, so one minor difference is enough for me to dump the whole

Bible
* I'll kill you, you stupid straw man! I hate you, Moody Bible Institute! You lied to me!

Licona:
– many of these problems can be solved by realizing that the gospel writers compress time
– the stories don't have to list ALL the characters in every scene
– you don't have to force the Bible to meet some sort of wooden chronology
– the main thing is that the events happened, not that the descriptions match word for word across sources

Ehrman:
– you can't infer a miracle from history, David Hume says so
* extraordinary claims require extraordinary evidence, David Hume says so
* no I don't know what begging the question is, I'm not a philosopher
* no I don't remember when Bill Craig kicked my ass on this Hume objection in our debate
– the New Testament gospels contradict each other at every point, they are not reliable at all!
* they cannot even agree what Jesus' name is! There are 1 trillion variants of Jesus' name!
* "one angel vs two angels" proves that the gospels contradict each other at every point
* my expansive list of FOUR theologically insignificant variants proves that the gospels contradict each other at every point

Licona:
– um, the gospels agree on the central narrative and disagree on the peripherals
– and they agree on the minimal facts I presented, even if they disagree about the number of angels

Ehrman:
* they have to agree on everything and be inerrant! The Moody Straw Man Bible Institute says so!
* I really really really need to have the number of angels be the same, or Jesus didn't die on the cross

Licona:
– but you don't deny any of the three minimal facts I presented (crucifixion, appearances, Paul)

Ehrman:
– well, I don't know if the group appearances occurred – maybe they did
– i think Jesus died on the cross, and I think that people said they saw him alive afterward

Licona:
– if you deny the minimal facts, then you are outside the majority of scholars

Ehrman:
– the majority of scholars who agree to the minimal facts you presented are Christians
* Gerd Ludemann is an atheist Christian

* James Crossley is an atheist Christian
* Hector Avalos is an atheist Christian
* the majority of the atheist scholars are all Christians!
– VIRTUALLY EVERYBODY IN THE SOCIETY OF BIBLICAL LITERATURE IS A CHRISTIAN!!! (Yes, he said that)

Licona:
– you really think so?

Ehrman
– you name one non-Christian in the SBL

Licona:
– (incredulous) um, John Dominic Crossan is an atheist

Ehrman:
– but he CLAIMS TO BE A CHRISTIAN so that means HE IS A CHRISTIAN
* all you have to do to be a Christian is claim to be one
* you can even deny the existence of God and the divinity of Christ and still be one, you bigot!

Licona:
– would Jesus or the apostles recognize a Christian as being someone who doubts God's existence

Ehrman:
– my view is that Jesus and the apostles would not recognize evangelical Christians as Christians
* a non-theist can be a Christian just by claiming to be one, but evangelical Christians are not Christians even if they claim to be Christians
– Christians can't record accurate history about the resurrection because they are biased

Licona:
– on your view, if a person is a Christian then he can't write about the evidence for the resurrection
– so then similarly, you would not allow Jews to write about the historicity of the Holocaust
– because you think that if people have an interest in what they are recording then they can't be objective
– but you have to consider the evidence we have, taking the biases of the sources into account

Ehrman:
– but the only people who believe in the resurrection are Christians!

Licona:
– well, people can consider the evidence for the resurrection as non-Christians
– and then if they accept it they can become Christians

Moderator:

– what about your bias? you don't believe in God – doesn't that pre-supposition affect how you do history?

Ehrman:
– well, I presuppose naturalism, so I can't admit to anything in history that implicates supernatural causes
* no I have never heard of the arguments for the Big Bang, fine-tuning, origin of life, Cambrian explosion, irreducible complexity, limits on mutations creating information, habitability and so on – I never heard about that stuff from my atheist university professors and even if I had I would have been expelled for talking about it because that would make people feel bad about their sinning

Licona:
– so it's not bias you are concerned about, it's that you don't want history to contradict your untested religion of naturalism?
– why not just do the history without pre-suppositions to gather the minimal facts and then see what the best explanation is?

Ehrman:
* well God is out of bounds as an explanation because I could not have got my PhD if I mentioned God
* I really needed my smart atheist professors to like me and give me good grades so God is RIGHT OUT
* ideas like a real God and moral laws and Hell makes my atheist professors uncomfortable and that means low grades for me
* I'm not really interested in butting heads with professors – it's easier to just agree with them and move on to selling books to the gullible
* My books are much more sensational than Dan Brown books, so please buy lots of them!

Licona:
– what if the historical evidence is good enough to show that Jesus rose from the dead?

Ehrman:
– well I would not call someone rising from the dead a miracle – I would call it weird
* I also think that the Big Bang is "weird" but that doesn't prove that God created the universe out of nothing
* if it's a miracle then I'm going to have to not sin, and maybe even go to Hell, and we can't have that

Licona:
– well, you accept the three minimal facts
– what if we try all the naturalistic explanations for those three facts and there are problems with all of them?
– what if the resurrection is the best explanation for the three minimal facts?

Ehrman:
– but I want to arbitrarily rule God put because I want to pre-suppose naturalism

– there is not historical reason I have to rule put supernatural explanations a priori

Licona:
– I think you are struggling with the theological implications of a historical conclusion

Ehrman:
– well when you do theology, you have to avoid grounding your theology on science or history
– theology has to be completely made up or it’s not good theology

Licona:
– I think you are letting your dislike of the implications of the resurrection determine your historical conclusions
– you have to use historical methods to gather the minimal facts that every scholar accepts, regardless of worldview
– then you weigh ALL the hypotheses, natural and supernatural, that could account for these minimal facts
– then you choose the hypothesis that best explains the minimal facts

UK police threatens those who disagree with NHS starvation of sick child #AlfieEvans

April 26, 2018 | by Wintery Knight | Link | Original Link

UK Police threatens anyone who dares express disagreement with the NHS

By now, everyone has heard about how an NHS hospital has essentially kidnapped a sick child from his parents, and they are trying to kill the (born) child through asphyxiation, starvation and dehydration. And it's being performed by the government against the will of the child's parents.

The parents want the child back so that they can take the child to a country that has modern healthcare facilities and skilled, moral medical personnel. Italy has volunteered to provide these things, and has even sent an air ambulance to transport the child. But the NHS instead wants to kill the child, because they have decreed that the child is unfit to live, i.e. – "life unworthy of life".

The judge who initially ruled against the parents of little Alfie previously ruled that a patient in a minimally conscious state be starved to death, according to Life Site News. The appeals court judge also ruled against the child because the parents were hostile to the NHS. So, the NHS can't release the child because his parents are "hostile to the NHS" after the NHS kidnapped and starved their child. This is the kind of legal reasoning that you can expect from the judges in the UK.

Government-run healthcare in practice

In the UK, the government runs a massive health care delivery system called the NHS. The NHS takes your money through taxes and then decide how to spend it according to

their own priorities. The less they spend on healthcare, the more they can pay themselves in salary, benefits and pensions. Naturally, it's very tempting for the NHS to kill their patients in order to cut costs and reduce their workload.

The NHS administration actually pays NHS hospitals "bounties" if the hospitals kill more patients by withdrawing treatment.

The UK Telegraph explains:

> Hospitals are being paid millions of pounds to reach targets for the number of patients put on a controversial pathway for the withdrawal of life-saving treatment, according to data based on Freedom of Information requests.

The NHS regularly starves patients to death. Health care is a lot of work, and this is government. Would you go to the Post Office for health care? That's what people are doing when they go to the NHS.

The priorities of the UK police

The UK police tweeted that they are busy monitoring Twitter for speech critical of the NHS. You might think that they have better things to do, like cracking down on sex-trafficking of underage British girls which happens in many, many UK cities. But it's not politically correct to enforce laws against underage sex-trafficking, because it makes the UK's far-left immigration policies look bad.

The UK Telegraph explains what happened in the most recent underage sex-trafficking case:

> The newspaper's probe alleges that social workers were aware of the abuse in the 1990s, but that it took police a decade to launch Operation Chalice, an inquiry into child prostitution in the Telford area in which seven men were jailed.
>
> It is also claimed that abused and trafficked children were considered "prostitutes" by council staff, that authorities did not keep details of abusers from Asian communities for fear of being accused of "racism" and that police failed to investigate one recent case five times until an MP intervened.

In several other underage sex-trafficking cases, the police also failed to act because it was not politically correct.

The UK police also thought that it was a good idea to arrest a 78-year-old pensioner for defending himself against a burglar who invaded his own home. That's law enforcement, UK-style.

What does the NHS do instead of healthcare?

Here is an example of what the UK spends health care money on instead of spending it on sick children:

> Josie Cunningham checked into a clinic last week to get rid of her unborn child, enabling her to create the face she believes she needs to be a porn and glamour model.

> A series of doctors had told her the cosmetic surgery was too risky.
>
> Josie, who terminated the unplanned pregnancy at 12 weeks, told the Sunday People: “I’m having this nose job no matter what gets in my way.
>
> “Pregnancy was a major obstacle and an abortion was the answer to it – so that’s what I did.
>
> […]She had a £4,800 boob job and botox on the NHS, smoked and boozed while pregnant and admitted she had planned to abort her youngest child because she had a chance of going on Big Brother.

When government takes over control of healthcare, their ambition is simple. How can we use the money we are collecting for health care to buy votes from the voters so that we can get elected? A sick little child is useless to them, but an escort who wants to be a porn star has great value. She can vote for higher taxes, more government and better salary, benefits and pensions for the NHS employees. So, what she needs is therefore called “health care”. But what the parents of a sick child wants is not health care.

That’s what it means to go to a single payer system. You pay all your money to the government in taxes, and then they decide how to spend it to achieve their goals of buying votes and winning re-election. If you need an abortion, a sex change, breast enlargements, botox, or IVF for single women who can’t be bothered to marry, then the NHS has “health care” to trade for your vote. But if you have a sick child, then you are out of luck.

Fortunately for the NHS, their screw-ups can apparently be covered up by the judges and by the police. No American could accept such restrictions on liberty, security and prosperity. We are not slaves.

The Alfie Evans story might make you recall last year, when the NHS killed a sick child named Charlie Gard. This is not a rare occurence. I have covered literally dozens of NHS horror stories over the past 9 years. You can take a look at some of them here. The conditions in NHS hospitals are absolutely appalling, and the people who work there are lazy and incompetent. The politicians, administrators, judges and police all work together to cover up the failures, so that they can keep giving themselves exorbitant salaries, benefits and pensions at taxpayer expense.

Dr. Walter Bradley lectures on scientific evidence the creation and design of the universe

April 27, 2018 | by Wintery Knight | Link | Original Link

Dr. Walter L. Bradley

This lecture is special to me, because I bought a VHS tape of it just after I started working full-time, and watched it a million times. A lot of people come to their convictions about God's existence because of parents or church or intuitions, but for me it's all about the scientific evidence. This lecture changed my life. I wish more people taught their children about this evidence! This lecture was delivered at the University of California, Santa Barbara.

About the speaker:

> Dr. Bradley received his B.S. in Engineering Science and his Ph.D. in Materials Science from the University of Texas in Austin.
>
> Dr. Bradley taught for eight years at the Colorado School of Mines before assuming a position as Professor of Mechanical Engineering at Texas A&M University (TAMU) in 1976.
>
> During his 24 years at Texas A&M, Dr. Bradley served as Head of the Department of Mechanical Engineering at Texas A&M University and as Director of the Polymer Technology Center, and received five College of Engineering Research Awards. He has received over $4,500,000 in research grants and has published over 140 technical articles and book chapters. He has also co-authored "The Mystery Of Life's Origin: Reassessing Current Theories. He is a Fellow of the American Society for Materials and of the American Scientific Affiliation and serves as a consultant for many Fortune 500 companies.
>
> He currently serves as Distinguished Professor of Engineering at Baylor University.

The lecture: (63 minutes lecture, 25 minutes audience Q&A)

Summary slide:

This slide summarizes the content of the lecture

Introduction:

- At the beginning of the 20th century, people believed that the progress of science was pointing away from an intelligent Creator and Designer, and towards naturalism
- A stream of new discoveries has shifted the support of science towards theism, and away from naturalism
- Richard Dawkins, an atheist, says that nature only has the appearance of design, but that if you look closer, naturalistic mechanisms can account for the appearance of design
- When deciding between design and apparent design ("designoid"), it matters whether you think there is an intelligence there to do the designing

Evidence #1: The Big Bang:

- an eternal "steady state" universe is more compatible with naturalism, but a created universe is more compatible with a Creator
- In 1929, Hubble used telescopes to observe that the light from distant galaxies was *redshifted.* The further away galaxies were, the faster they were moving away. Therefore, space is expanding in all directions, suggesting an explosive origin of the universe
- In 1965, the discovery of the cosmic microwave background radiation matched a prediction of the Big Bang cosmology, and of the creation event
- In 1992, the COBE space telescope allowed us to test four specific predictions of the Big Bang model, especially the predictions for light element abundances (hydrogen and helium), which matched the predictions of the creation model

Evidence #2: Simple mathematical structure of the physical laws

- the simple mathematical structure of natural laws allows us to understand these laws, make discoveries, and engineer solutions to problems
- early scientists saw the mathematical structure of the universe to mean that nature was designed by an intelligent to be understood
- the fundamental equations of the laws of the universe can be easily written on one side of one sheet of paper
- Eugene Wigner's famous paper, "The Unreasonable Effectiveness of Mathematics in the Physical Sciences" makes the point that this simple structure is an unexpected gift that allows is to do science

Evidence #3: fine-tuning of the physical constants and quantities

- in order for any kind of complex life to survive, we need stars that provide energy within specific ranges for long periods of time
- in order for any kind of complex life to survive, we need planets with stable orbits that will not suffer from extreme temperature swings as it varies in distance from its star
- in order for any kind of complex life to survive, we need stable atomic structure
- in order for any kind of complex life to survive, we need to have chemical diversity and correct relative abundances of each element
- organic life has minimum requirements: process energy, store information, replicate, and you can't fulfill those functions if there is only one element, e.g. – hydrogen
- the energy level from the photons from the sun have to match the energy levels of the different elements in order to drive the chemical bonding needed for life
- These requirements for life of any imaginable type depend on the values of the constants and quantities. The constants and quantities cannot vary much from what they are, or the universe will lose the characteristics (above) that allow it to support complex life of any imaginable time
- For example, ratio of strong force to electromagnetic force:
  – if 2% larger, then no stable hydrogen, no long-lived stars, no compounds containing hydrogen, e.g. – water
  – if 5% smaller, no stable stars, heavy hydrogen would be unstable, few elements other than hydrogen

Evidence #4: initial conditions for habitability

- Universe: expansion rate of the universe must be fast enough to avoid a re-collapse, but slow enough to allow matter to clump together and form stars and planets for complex life to live on
- Planet: right distance from the star to get the right climate
- Planet: right mass to retain the right atmosphere

Evidence #5: origin of life and information theory

- It’s possible to explain every process in an automobile engine using plain old naturalistic mechanisms – no supernatural explanation is necessary to understand the processes
- But the existence of engine itself: engineering all the parts has to be explained by the work of an intelligence
- Similarly, we can understand how living systems work, but the existence of the living systems requires an intelligence
- Even the simplest living system has to perform minimal function: capture energy, store information and replicate
- Living systems are composed of objects like proteins that are composed of sequences of components complex such that the order of the components gives the overall structure function
- Developing the components for a simple living cell is very improbable – even given the large number of galaxies, stars and planets in the universe, it is unlikely that complex, embodied life would exist *anywhere* in the universe

Evidence #6: more initial conditions for habitability

- Location within the galaxy: you need to be away from the center of the galaxy, because the explosions from dying stars, and excessive radiation will kill life
- Location within the galaxy: you need to be close enough to the center in order catch the heavy elements you need for life from the explosions of other stars
- Location within the galaxy: the best location is between two arms of a spiral galaxy, where you can get the heavy elements you need from dying stars, but without being hit with explosions and harmful radiation
- Star mass: determines rate at which the sun burns, determines the energy level of photons that are used to drive chemical bonding reactions, determines the length of time the star will be stable
- Star mass: star mass must be the correct value in order to allow liquid water on the planet’s surface, while still preserving stable orbit

I wish there was more curiosity about science in churches, and young Christians understood *how critical science is* for grounding the rationality of the Christian worldview. We need to be training up more scientists who think about the big questions, like Dr. Walter Bradley.

Physicist Victor Stenger debates William Lane Craig: Does God Exist?

April 28, 2018 | by Wintery Knight | Link | Original Link

This debate took place on March 1, 2010 at Oregon State University.

In this debate, Victor Stenger does affirm his belief that the universe could be eternal in his second rebuttal (1:02:30), thus denying the standard Big Bang cosmology. He also denies the law of conservation of energy and asserts that something can come from nothing in his concluding speech (1:33:50). He also caused the audience to start laughing when he said that Jesus was not moral and supported slavery. There is almost no snark in this summary. Instead, I quoted Dr. Stenger *verbatim* in many places. I still think that it is very entertaining even without the snarky paraphrasing.

The debate includes 30 minutes of Q&A with the students.

Here's the video of the debate:

Dr. Craig's opening speech:

- The ontological argument
- The contingency argument
- The cosmological argument
- The moral argument
- The resurrection of Jesus (3-fact version)
- Religious experience

Dr. Stenger's opening speech:

- There is no scientific evidence for God's existence in the textbooks
- There is no scientific evidence for God acting in the universe
- God doesn't talk to people and tell them things they couldn't possibly know
- The Bible says that the Earth is flat, etc.
- There is no scientific evidence that God answers prayers
- God doesn't exist because people who believe in him are ignorant
- Human life is not optimally designed and appears to be the result of a blind, ad hoc evolutionary process
- The beginning of the universe is not ordered (low entropy) but random and chaotic
- It's theoretically possible that quantum tunneling explains the origin of the universe
- The laws of physics are not objectively real, they are "our inventions"
- Regarding the beginning of the universe, the explanation is that something came from nothing*
- Nothing* isn't really nothing, it is "the total chaos that we project existed just before the big bang"
- If something has no structure, then "it is as much nothing as nothing can be"

- Consciousness is explainable solely on the basis of material processes
- There are well-informed, rational non-believers in the world and God would not allow that

Dr. Craig's first rebuttal:

Stenger's argument that there is no objective evidence for God's existence:

- First, it is not required that God rely only on objective evidence in order to draw people to himself (Alvin Plantinga)
- Second, God is not required to provide evidence to everyone, only to the people who he knows would respond to him
- Third, Craig gave lots of objective evidence, from science, history and philosophy
- Stenger asks for certain evidence (answered prayers, prophecy, etc.), but Craig presented the evidence we have

Stenger's argument that the balance of energy is zero so "nothing" exists:

- if you have the same amount of assets and liabilities, it doesn't mean that nothing exists – your assets and liabilities exist
- Christopher Isham says that there needs to be a cause to create the positive and negative energy even if they balance
- the quantum gravity model contradicts observations
- the vacuum is not the same as nothing, it contains energy and matter
- the BVG theorem proves that *any* universe that is expanding must have a beginning

Stenger's argument that mental operations can be reduced to physical operations:

- mental properties are not reducible to physical properties
- epiphenomenalism: is incompatible with self-identity over time
- epiphenomenalism: is incompatible with thoughts about other things
- epiphenomenalism: is incompatible with free will
- substance dualism (mind/body dualism) is a better explanation for our mental experience
- God is a soul without a body

Dr. Stenger's first rebuttal:

Craig's cosmological argument:

- Craig's premise is "everything has a cause", but quantum mechanics has causeless events
- There are speculative theories about how something could have come into being uncaused out of nothing
- "I don't know of a single working cosmologist today who believes there was a singularity prior to the Big Bang"
- "If there wasn't a singularity then there's no basis for arguing that time began at

that point”
- “There’s no reason from cosmology that we know of that the universe can’t be eternal”
- “When I talk about an eternal universe, I mean a universe that has no beginning or end”
- The Hartle-Hawking model doesn’t have a beginning
- “There was no violation of energy conservation by having a universe coming from nothing”
- “The universe *could have* come from a previous universe for example or even just from a region of chaos”
- The paper by Vilenkin is counteracted by other papers (he doesn’t specify which ones)

Craig’s moral argument:

- Dr. Craig is arguing from ignorance
- But morality can be decided by humanity just like governments pass laws, and that’s objective
- Dr. Craig has too little respect for the human intellect
- I don’t need to tell me that slavery is wrong
- The Bible supports slavery
- Atheists can behave as good as theists
- Morality just evolved naturally as an aid to survival

Craig’s resurrection argument:

- No Roman historians wrote about the execution of Jesus
- The empty tomb is doubtful because it is only mentioned in the gospels, not by Paul
- John Dominic Crossan says there was no empty tomb
- Christianity only survived because the Roman empire thought that they were useful

Dr. Craig’s second rebuttal:

Craig’s cosmological argument:

- There is no reason to prefer an indeterministic interpretation of quantum mechanics
- Dr. Stenger himself wrote that deterministic interpretations of quantum mechanics are possible
- The vacuum in quantum mechanics is not nothing
- The quantum vacuum he proposes cannot be eternal
- The cosmological argument does not require a singularity
- The Hartle-Hawking model is from 1983
- Hawking says that there is a beginning of space and time *after* that model
- The Hartle-Hawking model *does still have a beginning of time* – the model is not eternal

- The BVG theorem that requires a beginning for expanding universes is widely accepted among cosmologists

Craig's moral argument:

- Stenger redefined objective to mean that most people agree with it – but that's not what objective means
- Objective means right and wrong whether anyone accepts it or not
- Richard Dawkins himself says that on atheism there is "no evil and no good" – why is he wrong?
- Even Dr. Stenger says that morality is the same as passing laws – it's arbitrary and varies by time and place
- But on his view, right and wrong are the same as deciding which side of the road to drive on
- But somethings really are right and some things are really wrong

Craig's resurrection argument:

- Josephus is a Roman historian and he wrote about Jesus, for example
- There were four biographies of Jesus are the best sources for his life
- The scholars that Stenger mentioned are on the radical fringe

Dr. Stenger's second rebuttal:

Knowledge and the burden of proof:

- Dr. Craig has to bear the burden of proof, not me – because his claim is more "extravagant"
- "I don't have to prove that a God was not necessary to create the universe"
- "I don't have to prove that a God did not design the universe and life"
- "I don't have to prove that the universe did not have a beginning"
- "I don't have to prove that God did not provide us with our moral sense"
- There are a lot of books written about how morality evolved naturally
- "I don't have to prove that the events surrounding the supposed resurrection of Jesus did not take place"
- Bart Ehrman says that the gospels are generally unreliable (Note: Ehrman accepts all 3 of Craig's minimal facts)
- Just because people are willing to die for a cause, does not make their leader God, e.g. – the Emperor of Japan

Aesthetic concerns about the universe:

- I don't like dark matter and I wouldn't have made the universe with dark matter
- I don't like the doctrine of penal substitution
- I don't like the doctrine of original sin
- I don't like the heat death of the universe

Dr. Craig's conclusion:

The case for atheism:

- Dr. Stenger had two arguments and he has to support his premises
- Dr. Craig addressed his two arguments and each premise and Dr. Stenger never came back on it

The contingency argument:

- Dr. Stenger has dropped the refutation of this argument

The cosmological argument:

- The theoretical vacuum he proposes cannot be eternal

The moral argument:

- He asserts that things are wrong, but there is no grounding for that to be objective on atheism

The resurrection of Jesus:

- There are surveys of scholars on the empty tomb and 75% of them agree with it
- Bart Ehrman agrees with all 3 of the minimal facts that Dr. Craig presented
- Ehrman's objection to the resurrection is not historical: he's an atheist – he thinks miracles are impossible

Religious experience:

- No response from Dr. Stenger

Dr. Stenger's conclusion

The cosmological argument:

- "I argued that we have very good physical reasons to understand how something can come from nothing"
- "There is a natural tendency in the universe… to go from.. simpler thing to the more complicated thing"
- The transition from a vapor to a liquid to ice shows how something could come from nothing
- "It cannot be proven that the universe had a beginning"

The moral argument:

- Objective morality, which is independent of what people think, could be developed based on what people think

- “Jesus himself was not a tremendously moral person… he had no particular regard for the poor… he certainly supported slavery… he was for the subjugation of women” (audience laughter)

The resurrection argument:

- Bart Ehrman says that the majority of the gospels are unreliable

Religious experience:

- I don’t see any evidence that there is anything more to religious experience than just stuff in their heads

God’s purpose of the world should be to make people feel happy:

- God could have made people feel happier
- God could have made people not die
- God could could have made the universe smaller: it’s too big
- God could have made it possible for humans to live anywhere “even in space”

Should we be trying to change the world from the bottom up or the top down?

April 29, 2018 | by Wintery Knight | Link | Original Link

Two Air Force JTACs discuss mission parameters prior to calling in CAS

Dr. Paul Gould is a professor of philosophy (PhD from Purdue) at Southwestern Baptist Theological Seminary.

Here is his bio, which says, in part:

> I have a Masters in Philosophy of Religion and Ethics from Talbot School of Theology and a Ph.D. in Philosophy from Purdue University.
>
> I am an Assistant Professor of Philosophy and Christian Apologetics at Southwestern Baptist Theological Seminary in Fort Worth, Texas.

What his bio page doesn't say is that he left a career in business to go onto this apologetics/philosophy track. I find that very interesting, because like most professionals with an interest in apologetics, I had the same dream – to go and do a PhD and get into a college and be a positive influence on Christian kids. But the main thing is that he has had some experience in the real world.

Anyway, Dr. Gould has written two posts on how to change the world, and I want you to look at an excerpt from the first one.

First post:

> Christians like to talk—and aspire—to changing the world. This language stems very naturally from our God-given desire to *make a difference*, to *live a life that matters*. In a very real sense, making a difference *is* to change the world. But, usually, when Christians talk about "changing the world" they mean something

> like “winning the world for Christ” or “helping the gospel to gain a hearing in culture” or “contributing toward shalom.”Recently, there have been a number of very helpful books written by folks who challenge the common view of *how* to go about the task of world-changing, and call into question the relationship between Christ and culture. One of the most important books to enter this discussion is James Davison Hunter’s *To Change the World*. I highly recommend it to anyone interested in the topic of world-change. In this post I will share his critique of the “common view” of world change. I think his critique is dead on.
>
> Hunter argued that by and large, Christians have gone about the task of world changing in completely the wrong way and the result is that Christianity in our country at least and in the western world in general, represents a weak culture.
>
> He focuses on world-view ministries (primarily from the US such as Chuck Colson’s Wilberforce Forum and Focus on the Families’ Truth Project) and those like them that offer the following view of how to change the world:
>
> Common view of world change: as we change the individual beliefs and values of persons, and change enough persons, then we will ultimately change society. This is a **bottom up approach**.
>
> On the common view, the implicit view of culture is that “the essence of culture is found in the hearts and minds of individuals” and that culture change will come as enough individual lives are transformed.
>
> Hunter argues that this approach fails to take into account cultural elites and the institutions that yield power within culture.
>
> Instead, cultural change has always been **top-down:** it is always elites—those who have cultural capital to exert influence and power—who have changed the culture. This is why the university, and the media, and the arts are so important in shaping the culture.
>
> All of this leads to a fascinating conclusion: ***some*** *ideas have consequences*—namely ideas propagated by those within society who possess cultural capital and a supporting network of other individuals and institutions also within the center of cultural influence and production.

Second post is here. The second post has a link to his review of Hunter’s book (PDF), which is published by Oxford University Press.

I agree completely with the top-down thesis of James Davison Hunter, and I think that it is a *tragedy* that the Christian parents and Christian churches don’t do a good job of challenging and guiding young Christians to study the things that will allow them to have an influence. Most Christians I talk to have a negative view of steering young Christians towards advanced degrees, or towards making a lot of money, or towards positions of cultural influence, etc. Instead of focusing on being effective, they tell me “I will do what I want to do, because God has a mysterious will for me to be happy”. I don’t buy it. I am happy to consider alternative plans that serve God better, but I don’t think

that the “I’ll do what feels good” view is interested in producing a return for God in terms of money and/or influence. Crazy plans do not work out just because we want them to. There are costs to every plan, and not every plan is as likely to lead to influencing the culture as any other plan. This is reality.

I also think it is important to steer children into positions where they can be prosperous and/or influential. Again, many Christians disagree with guiding children that way. In my experience, it is assumed that children need to be happy, and that they are the best people to decide what they should be doing in life. Well, I’m not a heavy-handed bully, but I am not letting my children do whatever they like, because they don’t have enough wisdom and experience to know what to do. For example, I am not letting my children study ballet in university. It doesn’t pay the bills, and it isn’t likely that they will have an influence compared to other choices. Money is important because money can be used to fund Christian scholars, apologetics ministries and apologetics events. Marriage is a great way to have an influence, but marriage costs money, and that means that marriage-minded people should have a plan to *pay the bills* before they consider marriage. We do not have the right to *do whatever we feel like*, because we have a boss who *expects a return on his investment*. If a person is capable of doing hard things that produce a better return (money or influence or children, etc.) then he should do that.

We have a problem in this country as it is with young people borrowing tens of thousands of dollars to study things that either don’t pay off, or that don’t allow them to have an influence. It’s not unloving to tell children the truth about the choices they make. Especially when the cost of having a child is over six figures *per child*. You can have a huge Christian influence with that kind of money if you spent it on other things, like apologetics scholars, their ministries and their events. So, if you are going to have children and spend it on them, you’d better have some sort of plan, and look for a spouse who is on board with that idea of providing God with a good return on his investment. Everything we do – including the choices to marry and have children – should be focused on serving God. If people shy away from the idea of steering children to have an influence, I don’t think it’s a good idea to get married at all. Save the money and use it for the kingdom somewhere else. Marriage is about making the best decisions you can in order to serve God, and you can’t marry someone who puts their own happiness over the need to produce that return for the boss.

Having said that, if you are already married, stick with it. I am advocating for making smarter decisions *before* you commit. And before you go off to college, ask yourself: is what you are thinking of studying worth it? Trade school is an excellent option that will give you an income that can support a family AND give to apologetics ministries, with less exposure to debt. If you must go to university, then it’s generally wiser to stick with STEM degrees, so that you can get a job and actually pay off those loans. Marriages and children are NOT free. Retirement is not free. Health care is not free. Christian apologetics ministries do not run on wishes and hopes. Christian scholars do not get their degrees for free – they need support. I think another good plan is to have one person do philosophy or history and then be supported by other people with jobs in STEM fields.

That’s what I do – I help out Christian scholars on my team to finish their graduate degrees in fields related to apologetics. Those non-STEM degrees are the best way to have an influence, but it’s easier to get them as a multi-disciplinary team effort. Everyone has to pull their weight!

And one last point. The most amazing thing in the world is when I meet people who are very very skeptical about mentoring young people and steering children towards prosperous and influential areas, even though they themselves may be facing the results of their own poor decisions. You would think that someone who has burned $60,000 on a degree in Women’s Studies and can’t find a job would be on your side about helping other young people to make better decisions, but they are often not on your side. Why is that? Somewhere along the way, this culture stopped liking the Mr. Knightleys who were praised for loving people by telling them the truth about their bad decisions. Now we think that the Emmas can do whatever they want, and no one should be giving them any guidance. How sad.

Study: couples that delay sexual activity experience higher quality relationships

April 30, 2018 | by Wintery Knight | Link | Original Link

Relationship stability, quality, communication, satisfaction
From Family Studies, news about TWO new studies.

Excerpt: (links removed)

> [T]wo recently published studies call into question the validity of testing sexual chemistry early in dating.
>
> My colleagues and I published the first study a few years ago in the American Psychological Association's *Journal of Family Psychology*. This study involved a national sample of 2,035 married individuals who participated in the popular online couple assessment survey called "RELATE." **We found that the longer a dating couple waits to have sex, the better their relationship is after marriage. In fact, couples who wait until marriage to have sex report higher relationship satisfaction (20% higher), better communication patterns (12% better), less consideration of divorce (22% lower), and better sexual quality (15% better) than those who started having sex early in their dating (see Figure 2). For couples in between—those that became sexually involved later in their dating, but prior to marriage—the benefits were about half as strong.**
>
> […]These patterns were statistically significant even when controlling for a variety of other variables such as respondents' number of prior sexual partners, education levels, religiosity, and relationship length.
>
> **The second study, by Sharon Sassler and her colleagues at Cornell University, also found that rapid sexual involvement has adverse long-term implications for relationship quality.** Using data from the Marital and Relationship Survey, which provides information on nearly 600 low- to moderate-income couples living with minor children, their study examined the tempo of sexual intimacy and subsequent relationship quality in a sample of married and

> cohabiting men and women. Their analyses also suggest that delaying sexual involvement is associated with higher relationship quality across several dimensions.
>
> They discovered that the negative association between sexual timing and relationship quality is largely driven by a link between early sex and cohabitation. Specifically, sexual involvement early in a romantic relationship is associated with an increased likelihood of moving more quickly into living together, which in turn is associated with lower relationship quality. This finding supports Norval Glenn's hypothesis that sexual involvement may lead to unhealthy emotional entanglements that make ending a bad relationship difficult. As Sassler and her colleagues concluded, "Adequate time is required for romantic relationships to develop in a healthy way. In contrast, relationships that move too quickly, without adequate discussion of the goals and long-term desires of each partner, may be insufficiently committed and therefore result in relationship distress, especially if one partner is more committed than the other" (p. 710).

The rest of the post talks about two reasons why this works: improved partner selection and prioritizing communication and commitment. Improved partner selection occurs because you haven't committed too much too soon (sexually) and you have time to let things play out to see if you really fit with the other person. And if you take sex off the table, then you have to use other means in order to build emotional intimacy – communication, service, support, etc.

That's two studies, and there's a third. Dina sent me this article from the UK Daily Mail about a new study showing the importance of chastity for relationship quality and stability.

Excerpt:

> New couples who jump into bed together on the first date do not last as long in relationships as those who wait a new study has revealed.
>
> Using a sample of almost 11,000 unmarried people, Brigham Young University discovered a direct correlation between the length and strength of a partnership and the amount of time they took to have first have sex.
>
> **The study showed that those who waited to initiate sexual intimacy were found to have longer and more positive outcomes in their relationships while those who couldn't help themselves reported that their dalliances struggled to last more than two years.**
>
> 'Results suggested that waiting to initiate sexual intimacy in unmarried relationships was generally associated with positive outcomes,' said the report authored published by the U.S. National Library of Medicine National Institutes of Health.
>
> 'This effect was strongly moderated by relationship length, with individuals who reported early sexual initiation reporting increasingly lower outcomes in

> relationships of longer than two years.'
>
> The study examined four sexual-timing patterns: Having sex prior to dating, initiating sex on the first date or shortly after, having sex after a few weeks of dating, and sexual abstinence.
>
> Each one of these fields yielded different results in relationship satisfaction, stability and communication in dating situations.

Here's another recent study that shows that if a woman has more than her husband as a premarital sex partner, her risk of divorce increases.

His findings:

> Using nationally representative data from the 1995 National Survey of Family Growth, I estimate the association between intimate premarital relationships (premarital sex and premarital cohabitation) and subsequent marital dissolution. I extend previous research by considering relationship histories pertaining to both premarital sex and premarital cohabitation. I find that premarital sex or premarital cohabitation that is limited to a woman's husband is not associated with an elevated risk of marital disruption.**However, women who have more than one intimate premarital relationship have an increased risk of marital dissolution.**

Here's another study that makes it even more clear.

Findings:

> Data from the 1988 US National Survey of Family Growth (NSFG) were utilized to assess the impact of premarital sexual activity on subsequent marital stability. **Among white NSFG subjects first married in 1965-85, virgin brides were significantly less to have become separated or divorced (25%) than women who had not been virgins at marriage (35%).**
>
> **[…]The lower risk of divorce on the part of white women with no premarital sexual experience persisted even after numerous intervening and background variables were controlled.**

If you're going to talk to a young person about sex, it's a good idea to use these studies to explain what you lose by having sex too early in the relationship. Although they may respond with anecdotes to refute studies, studies are important because they represent LOTS of data points, not just one or two cherry-picked cases. My view on all this is the Bible's view – no sex before marriage. But when talking to people about this issue, I find it useful to have evidence ready in order to be convincing in every way possible.

Stop telling women that God will give them husbands later if they delay marriage now

May 1, 2018 | by Wintery Knight | Link | Original Link

Man helping a woman with proper handgun marksmanship

Dalrock blogged a splendid post about people who claim that there is a shortage of "good men". He says that if there really were a shortage of good men, then people who want women to actually get married would be telling women not to delay marriage, but to instead get serious about marrying early, when their ability to attract husband candidates is at its peak.

Dalrock writes:

> We can see the same pattern in Dr. John Piper's recent post Why Are Women More Eager Missionaries?* Piper explains that missionary work has become a pink ghetto:
>
> …the actual situation among most evangelical faith missions is that between 80–85% of all single missionaries are women. It is a rare thing, like two out of every ten, for a single man to make missions his life's vocation, which results in the overall statistics being that one-third of those in evangelical world missions are married men, one-third are married women, and 80 percent of the last third are single women. Which means that something just less than two-thirds of the total missionary force are women.
>
> **Piper's main concern with the post however is not that there aren't enough single men doing missionary work, but that women who choose this field aren't marrying as they would like. Piper complains that the problem for husband hunting missionary women is really an exacerbated version of the same problem all Christian women have, and that is an overall lack of marriageable Christian men…**

I'll save you the quotation of Piper, but his reason why missionary women struggle to find husbands is – SHOCK! – that Christian men refuse to man up. I.e – Piper believes that women can't find husbands because men are not ready and willing to marry.

More:

> **But if Piper actually believed… that there was a severe shortage of husband material men, he would focus his attention on helping the women reading navigate this incredibly difficult situation. Overseas mission work may feel empowering for young women, but (according to Piper) single women going into the mission field are greatly handicapping their prospects in an already bleak field. His advice to young women would be to choose which was truly more important to them, being a missionary or finding a husband.**

If Piper really believed that there were a shortage of marriage-minded, marriage-capable Christian men, then Piper would be counseling women who *genuinely* want to marry to make marriage a priority when they are younger, prettier and more fertile. Some women say that they want to get married "some day". But the hidden truth is often that they just want to delay marriage in order to have fun and thrills, until they get tired of it. And then they just expect a suitable man to show up right when they need one. But do men want to marry a 35-year-old woman when they are 40 as much as they want to marry a 23-year-old woman when they are 25?

More Dalrock:

> Piper even tells a story which would be a perfect way to teach this lesson. He describes a single woman named Gladys Aylward who went to a place where she found no marriageable men, and then blamed single men for not following her and proposing marriage:
>
> "Miss Aylward talked to the Lord about her singleness. She was a no-nonsense woman in very direct and straightforward ways and she asked God to call a man from England, send him straight out to China, straight to where she was, and have him propose to me." I can't forget the next line. Elisabeth Elliot said, "With a look of even deeper intensity, she shook her little bony finger in my face and said, 'Elisabeth, I believe God answers prayer. And he called him.'" And here there was a brief pause of intense whisper. She said, "'He called him, and he never came.'"
>
> Now, that experience, I would guess, is not unique to Gladys Aylward.
>
> **If Piper really believed that Christian husbands were scarce, he would be sharing this anecdote to warn young women of the foolishness of moving away from the pool of men they hope to choose a husband from and then expecting God to send the man of their choosing across the world to propose. If we were in a culture of scarcity of good men, this would be the *obvious* lesson from this story. But we live in an age with**

> **unshakable confidence that good men are not only available all around us, but will always be abundant. If Piper believed that the husband Miss Aylward was praying for was surrounded by real life English women eager to win him as a husband, this story wouldn't be complaining about why he didn't drop everything, fly to China, and propose to a woman he had never met. If Piper believed that the man was sought after as a husband in England, he would be pointing out the foolishness of Miss Aylward flying off to China and then wondering why a man she had never met didn't show up to propose once she decided she wanted to marry.**

Miss Aylward either needed to accept that being a missionary in a secular country meant not marrying, or she needed to focus on marriage first when she was attractive to men as a life partner. Many women are propositioned for sex after they hit their mid-30s, but few of them are asked to marry. This is because men need women more when they are just starting out in their careers than when they are established in their careers.

Many women have no appreciation of how investing in a husband early causes him to be loyal to her when she is older. Women think that a husband will show up when she is ready, and be loyal to her even though she was absent during the hardships of the first decade of his career. A woman can do a lot of good for a man when he is starting out in his career and trying to save money for a house. But when those years have passed, the man's ability to work and save have been largely set – without anyone's help. If he went through those years single, then he typically will have earned less and saved less than a married man, because he did it without a wife's support. Men do better in their careers and finances when they have a wife's support. Especially in the early career, which is more stressful because of the lack of work experience. If a woman wants a man to be faithful and loyal, then she needs to choose a man who needs her, and invest in him using her youth and beauty to support him during his critical 20s and early 30s. Men respond to support during the critical years with lifelong fidelity and loyalty.

By the way, for an explanation of why men prefer not to be missionaries, read this post on Deeper Strength blog.

And one last point. I have known 3 women missionaries, and many women who thought about becoming short-term missionaries. In *every case* the women had grown up as Christians, and then gone wild in their 20s with alcohol and promiscuity. And they saw missions work as a fun and thrilling way to "atone" for their wild past. Another reason for Christian men to be skeptical of women missionaries.

Is the gospel of Mark early? Is it based on eyewitness testimony?

May 1, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

Sean McDowell tweeted this interesting article from BeThinking.org, written by New Testament historian Peter J. Williams. It contains reasons why Mark is early, eyewitness testimony. I want to focus on the criterion of embarrassment, which says that if a passage contains embarrassing information about the author or the author's cause, then it's likely to be historical.

Excerpt:

> If it were not for Mark's Gospel, Mark would be a very minor figure indeed in the beginnings of Christianity. He is certainly not someone you would ascribe Mark's Gospel to in order to give it more authority, because according to the book of Acts (*Acts 13:13* and *15:37*) he abandoned Paul, one of the early Christian leaders, during a mission. We can take it therefore that the Gospel is ascribed to him because it genuinely is by him. If it is by him then it has to be written within the lifespan of someone who was an active adult in the 50s and 60s of the first century AD.

Yeah, if you're going to make up a gospel, and you want people to believe it, then you pick an author who is more famous, like Peter.

More:

> Though the Gospel makes extraordinary claims about Jesus' miraculous activities, it seems to make no attempt to cover up the failures of the early Christian leaders. The disciples are said to misunderstand (*8:14–217*), argue about who is the greatest (*9:34*), get angry with two of the leading disciples (*10:41*), and

> ultimately abandon Jesus (*14:50*). The leading disciple, Peter, denied Jesus three times (*14:66–72*). The most unusual claim that it makes is that someone who underwent a shameful execution designed by the Romans to show that he was a loser, was in fact the Son of God.
>
> It is not just the narrative which tells embarrassing stories, the things said by Jesus could also be profoundly embarrassing. According to *15:34* Jesus died asking why God had forsaken him. It is not likely that people would make up such a saying if it hadn't really occurred. According to *7:27*, Jesus told a non-Jewish woman (a Gentile) that it was not right to take that which belonged to the Jews and throw it to 'dogs', meaning Gentiles. This is not something you would make up if you were writing a Gospel and wanted gentiles to become Christians.

Although Williams is right to say that Mark is typically dated to the early 60s, the atheist historian James Crossley dates it 37-43 in his book about the gospel of Mark.

There is a podcast by J. Warner Wallace that has some more interesting information about the gospel of Mark.

The M4A file is here.

Details:

> In this blast from the past, J. Warner examines the Gospel of Mark for signs of Peter's influence. Papias, the early church bishop, claimed Mark's Gospel was written as he sat at the feet of Peter in Rome. According to Papias, Mark scribed Peter's sermons and created the narrative we now have in our Bible. In this audio podcast, J. Warner applies Forensic Statement Analysis to Mark's text to see if Peter's fingerprints are present.

You can also read a post on some of what is in the podcast, if you don't want to listen to the podcast.

Here is the part I thought was most interesting:

> **The Omissions of the Gospel Are Consistent With Peter's Influence**
>
> There are many details in the Gospel of Mark consistent with Peter's special input and influence, including omissions related to events involving Peter. How can Mark be a memoir of Peter if, in fact, the book contains so many omissions of events involving Peter specifically? It's important to evaluate the entire catalogue of omissions pertaining to Peter to understand the answer here. The vast majority of these omissions involve incidents in which Peter did or said something rash or embarrassing. It's not surprising these details were omitted by the author who wanted to protect Peter's standing in the Christian community. Mark was quite discreet in his retelling of the narrative (other Gospel writers who were present at the time do, however, provide details of Peters 'indiscretions' in their own accounts). Here are some examples of Petrine Omissions grounded in an effort to minimize embarrassment to Peter (see Cold-Case Christianity for a more

> detailed explanation of the events summarized here):
>
> Peter's shame at the "Miraculous Catch"
> *(Mark 1:16-120 compared to Luke 5:1-11)*
>
> Peter's foolish statement at the crowded healing
> *(Mark 5:21-34 compared to Luke 8:42-48)*
>
> Peter's lack of understanding related to the parable
> *(Mark 7:14-19 compared to Matthew 15:10-18 and Acts 10:9-16)*
>
> Peter's lack of faith on the lake
> *(Mark 6:45 compared to Matthew 14:22-33)*
>
> Peter's rash statement to Jesus
> *(Mark 8:31-33 compared to Matthew 16:21-23)*
>
> Peter's statement related to money
> *(Mark 10:23-31 compared to Matthew 19:23-30)*
>
> Jesus' prediction of Peter's denial
> *(Mark 14:27-31 compared to Luke 22:31-34 and John 13:34-38)*
>
> Peter's behavior at the foot-washing
> *(Mark 14:22-26 compared to John 13:2-9)*
>
> Peter's denial and Jesus' direct stare
> *(Mark 14:66-72 compared to Luke 22:54-62)*
>
> There are a number of places in the Gospel of Mark where details related specifically to the words and actions of Peter have been omitted in what appears to be an effort to protect Peter from embarrassment. This doesn't mean Peter failed to talk about these things. He may very well have included them in his sermons and teachings. But Mark, his scribe and close friend, simply chose to omit these details related to Peter, either at Peter's request or on his own initiative.

Mark doesn't want to annoy his source, Peter, by calling him out for making mistakes. He has to include the embarrassing stories, but it's less harsh than in other gospels.

Here's another blog post from Cold Case Christianity on the same topic.

By the way, when you read the Bible, you should definitely try to put the character of Jesus into practice. My pastor has just been doing sermons on John 21 and he made a big deal out of the way that Jesus reconciles with Peter. What does Jesus do? Well, there is a charcoal fire nearby at the triple denial of Jesus scene. And when Jesus makes Peter and the others breakfast, there is a charcoal fire and a triple affirmation of Jesus. My pastor says that there are no other charcoal fires anywhere in the gospel. Jesus decided to make the restoration of Peter memorable for Peter.

So, when you have a chance to get someone back on board with a worthy mission, you should be thoughtful about how they gave it up, and take them back in a way that makes them feel that the past mistakes were canceled out.

Radical feminism changes men’s perceptions of women in the workplace

May 2, 2018 | by Wintery Knight | Link | Original Link

The gender disparity in STEM fields explained

Radical feminists complain a lot about sexism, but damage is self-inflicted

Lately, we’ve seen an outburst of radical feminism as more women have been equating actual rape and sexual assault with sexist comments or clumsy passes. How does this change how women are perceived in the workplace?

Here’s an article from Medium (H/T Tracy) by an anonymous male feminist.

The first point is about how women handle disagreement, compared to men:

> When James Damore was asked for feedback from his supervisor and internally circulated his google memo, it got leaked, he got fired and women stayed at home the next Day because “for emotional reasons”
>
> **A ten page summary** of data and analysis from Damore was enough to “emotional distress” the women at the company.

This lack of resilience and self-control disrupts the workplace, and results in lost productivity. If it turns into a lawsuit, the costs are even higher. This is in addition to women having fewer STEM degrees than men, working fewer hours than men, and taking months leave for pregnancy. Not to mention affirmative action hiring and promoting in order to meet quotas of women.

Second point, is increased hostility to men.

Look at this tweet from a writer at Teen Vogue:

Emily Lindin, a mainstream writer with a degree in music history, tweets her hatred of men

She has 23,000 followers on Twitter – this woman is mainstream. I looked into her background a bit. No mention of a father at home, and a self-confessed "slutty" lifestyle from her early teens onward. Her entire writing career seems to be to attack everyone who disagrees with her promiscuity.

Feminism, as an ideology, does not allow women to prefer men who exhibit traditional masculine characteristics: providing, protecting, moral and spiritual leadership, chastity, fidelity. That's "sexist". So what's left? Get drunk and have sex with the hot bad boys, since evaluating a man's character is "sexist". Then promote false accusations and misandry to get revenge against the hot bad boys you freely chose. This will only get worse as more radical feminists waste their 20s on hot bad boys, and raise more fatherless girls when they become single mothers by choice, in their 30s.

Do men want to work with women who hate men and make false accusations with people they disagree with? I'm a conservative, Christian, pro-life virgin. I disagree with all premarital sex. If this woman worked with me and found out my views, she would almost certainly get me fired.

Another article from Medium (H/T Wes) makes a third point about how conservatives are treated by liberal women in the workplace. The article is written by a female senior software engineer, who promotes STEM to women and the elderly. She is a self-described "moderate conservative".

Excerpt:

> On September 27, 2017, I decided to attend the Atlanta Google Women Techmakers' event "Idea Jam Session," which was hosted at TechSquare Labs in

> Atlanta. At that time, I was still an active member of Women Who Code, the Atlanta GDG, and Google Women Techmakers and, perhaps naively, I just assumed that I had every right to attend the event like any other member of the group because I had not been banned.
>
> Upon arriving at the event, Maggie immediately asked me to leave the room. At the door, she informed me that she would be extremely uncomfortable if I remained a member of the community because some of the views that I had expressed on Twitter are *"very harmful to gender equality"*. She then asked Daniel Sabeo, the event coordinator at TechSquare Labs, to escort me from the facility. I was deeply upset at being publicly humiliated, but left willingly without causing any disruption.
>
> Two days later, I got an email from TechSquare Labs. Daniel had discussed the incident with Allen Nance, Paul Judge, and Rodney Sampson, the owners of the facility, and he informed me that they had collectively decided to ban me and my company from using their venue or attending any of their events because they were concerned about the "safety" of their members. I later learned from a fellow developer that Maggie had, in fact, told various people that I'd been stalking her.
>
> […]The following week, Martin Omander, GDG program manager for North America, formally banned me from the Google Developer Group and Google Women Techmakers and, again, declined to provide me with any details of the complaints against me or the rules that I'd allegedly violated.

How many women are likely to attack conservatives in the workplace?

Young, unmarried women voted 78% to 22% for Obama in 2008, according to exit polls.

National Exit Polls: 2008 Performance by Unmarried Women				
	Unmarried Women Support for Obama	Unmarried Women Support for McCain	Married Women Support for Obama	Married Women Support for McCain
Performance Across various Demographics (Exit Polls)				
National (All Women)	70%	29%	47%	50%
College Educated	73%	24%	51%	46%
Non-College Educated	68%	31%	44%	54%
Young Women (18-29)	78%	22%	55%	45%
Women Under 50	74%	25%	49%	48%
Women Over 50	64%	35%	44%	53%
Women with Income >$50K	70%	27%	44%	53%
Women with Income <$50K	71%	28%	57%	41%
Women with Children	74%	25%	51%	47%
Women without Children	68%	31%	44%	53%
Source: Exit Polls				

Exit polls from the 2008 Obama vs McCain election: unmarried women voters only

Obama was a radical feminist president who voted against banning infanticide multiple times as a state senator in Illinois. 78% of young, unmarried women voted for him

anyway. Women who graduate from college in non-STEM fields are especially progressive. In my experience, young, unmarried women typically form their views by adapting to the dominant views of their community, which is overwhelmingly liberal on campus. In my experience, men are more likely to construct a worldview through reasoning and evaluating evidence.

I've personally never met a young, unmarried woman who could answer basic political questions, like naming prior terrorist attacks against the United States, US allies, or US assets abroad, or telling me the amount of the national debt. In my experience, young unmarried women are not concerned with the plight of women in Iran, Pakistan or Afghanistan. They're not concerned with spending money today that will be paid back by generations of taxpayers not yet born.

Instead, I usually hear that they are progressive because they want taxpayer-funded abortions, taxpayer-funded contraception, no-fault divorce, single mother welfare, student-loan forgiveness, etc. They want taxpayer-funded bailouts for problems caused by their own free choices. They feel that if society is paying for something, then it's "normal" and they don't have feel guilty about making poor choices. Their primary concern about politics is being able to do what they feel like without anyone disapproving. Everything bad that happens is "unexpected", and so society should have to pay for it. It wasn't their fault that their "follow-your-heart" plan didn't work out.

I don't even speak to young, unmarried women about religion and politics in the workplace. It doesn't matter if we have the same views or not. Feeling offended and going full totalitarian is just too widespread. The rational choice for men is to disengage. I can have conversations safely about religion and politics with men, even if they disagree with me.

Two black economists explain how to not be poor in America

May 3, 2018 | by Wintery Knight | Link | Original Link

Economist Walter Williams

Walter Wiliams is one of my two favorite economists, the other being Thomas Sowell.

Here is his article on wealth and poverty on Creators written by Dr. Williams.

First, real poverty is not common in America:

> There is no material poverty in the U.S. Here are a few facts about people whom the Census Bureau labels as poor. Dr. Robert Rector and Rachel Sheffield, in their study "Understanding Poverty in the United States: Surprising Facts About America's Poor", report that 80 percent of poor households have air conditioning; nearly three-quarters have a car or truck, and 31 percent have two or more. Two-thirds have cable or satellite TV. Half have one or more computers. Forty-two percent own their homes. Poor Americans have more living space than the typical non-poor person in Sweden, France or the U.K. What we have in our nation are dependency and poverty of the spirit, with people making unwise choices and leading pathological lives aided and abetted by the welfare state.

Second, the "poverty" is not caused by racism, but by poor choices:

> The Census Bureau pegs the poverty rate among blacks at 35 percent and among whites at 13 percent. The illegitimacy rate among blacks is 72 percent, and among whites it's 30 percent. A statistic that one doesn't hear much about is that the poverty rate among black married families has been in the single digits for more than two decades, currently at 8 percent. For married white families, it's 5 percent. Now the politically incorrect questions: Whose fault is it to have children without the benefit of marriage and risk a life of dependency? Do people have free will, or are they governed by instincts?
>
> There may be some pinhead sociologists who blame the weak black family

> structure on racial discrimination. But why was the black illegitimacy rate only 14 percent in 1940, and why, as Dr. Thomas Sowell reports, do we find that census data "going back a hundred years, when blacks were just one generation out of slavery … showed that a slightly higher percentage of black adults had married than white adults. This fact remained true in every census from 1890 to 1940"? Is anyone willing to advance the argument that the reason the illegitimacy rate among blacks was lower and marriage rates higher in earlier periods was there was less racial discrimination and greater opportunity?

Third, avoiding poverty is the result of good choices:

> No one can blame a person if he starts out in life poor, because how one starts out is not his fault.
>
> If he stays poor, he is to blame because it is his fault. Avoiding long-term poverty is not rocket science. First, graduate from high school. Second, get married before you have children, and stay married. Third, work at any kind of job, even one that starts out paying the minimum wage. And finally, avoid engaging in criminal behavior. It turns out that a married couple, each earning the minimum wage, would earn an annual combined income of $30,000. The Census Bureau poverty line for a family of two is $15,500, and for a family of four, it's $23,000. By the way, no adult who starts out earning the minimum wage does so for very long.

Fourth, what stops people from making good choices is big government:

> Since President Lyndon Johnson declared war on poverty, the nation has spent about $18 trillion at the federal, state and local levels of government on programs justified by the "need" to deal with some aspect of poverty. In a column of mine in 1995, I pointed out that at that time, the nation had spent $5.4 trillion on the War on Poverty, and with that princely sum, "you could purchase every U.S. factory, all manufacturing equipment, and every office building. With what's left over, one could buy every airline, trucking company and our commercial maritime fleet. If you're still in the shopping mood, you could also buy every television, radio and power company, plus every retail and wholesale store in the entire nation". Today's total of $18 trillion spent on poverty means you could purchase everything produced in our country each year and then some.

Regarding those last two points, here is Thomas Sowell:

Economist Thomas Sowell blames welfare for killing the black family

To illustrate this point, I stole a graph from the Twitter feed of a famous man-blaming sociology professor who shall not be named (although his name rhymes with Vlad FillBox).

[image]

Black women were more likely to be married before welfare programs

In fact, there is a whole video featuring Thomas Sowell to go with this graph:

And an article to go with it:

> If we wanted to be serious about evidence, we might compare where blacks stood a hundred years after the end of slavery with where they stood after 30 years of the liberal welfare state. In other words, we could compare hard evidence on "the legacy of slavery" with hard evidence on the legacy of liberals.
>
> Despite the grand myth that black economic progress began or accelerated with the passage of the civil rights laws and "war on poverty" programs of the 1960s, the cold fact is that the poverty rate among blacks fell from 87 percent in 1940 to 47 percent by 1960. This was before any of those programs began.
>
> Over the next 20 years, the poverty rate among blacks fell another 18 percentage points, compared to the 40-point drop in the previous 20 years. This was the continuation of a previous economic trend, at a slower rate of progress, not the economic grand deliverance proclaimed by liberals and self-serving black "leaders."
>
> Ending the Jim Crow laws was a landmark achievement. But, despite the great proliferation of black political and other "leaders" that resulted from the laws and policies of the 1960s, nothing comparable happened economically. And there were serious retrogressions socially.
>
> Nearly a hundred years of the supposed "legacy of slavery" found most black children being raised in two-parent families in 1960. But thirty years after the liberal welfare state found the great majority of black children being raised by a single parent.

The rest of the article points out how even crime rates among blacks were caused by the implementation of soft law enforcement policies by progressives. Just look at the big cities if you want to know what it is like for blacks to be ruled by Democrats. It sucks!

You might have heard about Thomas Sowell because some celebrity I don't know anything about has been tweeting all kinds of stuff by Dr. Sowell:

Now this celebrity is tweeting my favorite economist Thomas Sowell

If everybody started to read more Thomas Sowell books, we would be much better off as a country! Only good things happen when people stop watching TV and listening to music and watching movies, and instead settle down in a chair with a Thomas Sowell book. I recommended a bunch of them in this previous post.

New study: faculty ratio of registered Democrats to Republicans is 12 to 1

May 4, 2018 | by Wintery Knight | Link | Original Link

The Daily Wire reports on the political convictions of the people who are being paid tens of thousands of dollars to "educate" our children.

Excerpt:

> An extensive study of 8,688 tenure-track professors at 51 of the 66 top-ranked liberal arts colleges in the U.S. published by the National Association of Scholars found that the ratio of faculty members registered as Democrats compared to those registered Republican is now a stunning 10.4 to 1. If two military colleges that are technically described as "liberal arts colleges" are removed from the calculations, the ratio is 12.7 to 1.
>
> The researcher, Mitchell Langbert, Associate Professor of Business at Brooklyn College, found that nearly 40% of the colleges in the study had *zero* faculty members who were registered Republican. Not a single one. Nearly 80% of the 51 colleges had so few Republican faculty members that they were statistically insignificant.

There is virtually zero ideological diversity, and that's how the university administrators want it. They know that young people are peer-driven and eager to conform to their elders, and they want to be sure that the environment at university produces little progressives. Critical thinking isn't a concern, ideological purity and adherence to dogma is their overriding concern. And they achieve their goal by discriminating against conservative students and faculty and Christian students and faculty. This is the REAL discrimination that open-minded, tolerant people should be concerned about. But since it's discrimination by progressives, no one is concerned about it. Not even the taxpayers paying the salaries of these overgrown children.

Now, on this blog, I have repeatedly told people two things. First of all, it's important that you don't go to university unless you are going into a STEM field. Anything else is just a waste of money. Second, you can save money by doing the first two years at a community college and then transferring.

Majors by Salary Potential – Full List

RANK	MAJOR	STARTING SALARY	MID-CAREER SALARY
1	Petroleum Engineering	$98,000	$163,000
2	Aerospace Engineering	$62,500	$118,000
3	Actuarial Mathematics	$56,100	$112,000
4	Chemical Engineering	$67,500	$111,000
5	Nuclear Engineering	$66,800	$107,000
6	Electrical Engineering (EE)	$63,400	$106,000
7	Computer Engineering (CE)	$62,700	$105,000
8	Applied Mathematics	$50,800	$102,000
9	Computer Science (CS)	$58,400	$100,000
10	Statistics	$49,300	$99,500
11	Physics	$51,200	$99,100
12	Mechanical Engineering (ME)	$60,100	$98,400
13	Biomedical Engineering (BME)	$54,900	$98,200

Starting and Mid-Career salaries by profession (click for larger image)

The first rule is there not just because the highest paying jobs are in STEM, but because STEM is also the least dominated by progressive dogma, inside and outside the university.

More:

> When Langbert broke down the political affiliations by field, he found some clear and rather unsurprising trends: by far the highest imbalance is found in the more ideological fields, in particular the social sciences and humanities:
>
> The STEM subjects, such as chemistry, economics, mathematics, and physics, have lower D:R ratios than the social sciences and humanities. The highest D:R ratio of all is for the most ideological field: interdisciplinary studies. I could not find a single Republican with an exclusive appointment to fields like gender studies, Africana studies, and peace studies. As Fabio Rojas describes with respect to Africana or Black studies, these fields had their roots in ideologically motivated political movements that crystallized in the 1960s and 1970s.
>
> Langbert found the following ratio of Democrats to Republicans in the key academic fields (ordered from most biased to most balanced):
>
> - Communications – 108 to 0 (no registered Republicans)
> - Anthropology – 56 to 0 (no registered Republicans)
> - Religion – 70:1
> - English – 48.3:1
> - Sociology – 43.8:1
> - Art – 40.3:1
> - Music – 32.8:1
> - Theater – 29.5:1

> - Classics – 27.3:1
> - Geoscience – 27:1
> - Environmental – 25.3:1
> - Language – 21.1:1
> - Biology – 20.8:1
> - Philosophy – 17.5:1
> - History – 17.4:1
> - Psychology – 16.8:1
> - Poli Sci – 8.2:1
> - Computers – 6.3:1
> - Physics – 6.2:1
> - Mathematics – 5.6:1
> - Professional – 5.5:1
> - Economics – 5.5:1
> - Chemistry – 5.2:1
> - Engineering – 1.6:1

It's very important that we learn something from this list: Democrats don't likely to test their ideas against reality. The fields that are dominated by Democrats are the ones that involve the least hard work, the least thinking, the least testing of reality, the least production of goods and services that others will want to buy. Democrats go into these fields precisely because it allows them to paint a picture of themselves as good people using words, but without having to do any work that would allow them to sell something to others that has value. I.e. – they want to talk about how great they are, but they don't want to have to do anything that anyone else would pay for in a competitive free market.

And this is only going to stop when we cut off subsidies for higher education, which is largely given to far-left administrators and far-left non-STEM professors.

Teacher union president explains how he covers up for abusive teachers

May 5, 2018 | by Wintery Knight | Link | Original Link

Education spending has tripled since 1970

In a previous post, I explained four reasons why education is so expensive, despite the fact that teachers produce underperforming students. But one factor was not mentioned, namely that it is nearly impossible to fire underperforming teachers. The teacher unions prevents teachers from being fired, even for criminal behavior.

The Daily Wire reports on a new Project Veritas video.

Here's the video:

And the article says:

> A new video from Project Veritas shows a New Jersey teachers union president explaining the methods he would use to cover for a teacher if the teacher physically or verbally abused their student.
>
> Undercover employees for Project Veritas taped Hamilton Township Education Association President David Perry asserting he would misrepresent the events of altercations between teachers and students by back-dating reports as well as urging the teacher to remain silent about what happened.
>
> Perry also stated that if a teacher abused their student, they should go to the union where a report could be created protecting them from students asserting that they had been abused.
>
> Some sample quotes from Perry:
>
> I got people who are on drugs. And she, five times she was fired, and I got her job

> back five times.
>
> If nobody brings it up from school, I don't say boo.
>
> Interviewer: So, after a certain point, the cameras are erased. Perry: Exactly. That's why I would never want to bring it up. The longer we wait, the longer there's no cameras.
>
> Now, if you go to the house of the board of education and report this, they're going to call the police, call parents and all that s***. We don't do that. We don't do that here. I'm here to defend even the worst people.
>
> But I don't want him coming in here with a bunch of lies. We need to know the truth so we can bend the truth.

When I see teachers holding signs, demanding more salary and benefits, the first thing I think of is how they want all of these things regardless of performance. Because no matter how poorly they perform, it's almost impossible to fire them. The union protects them. They're not asking for more money because they've done a good job. They don't have to do a good job in order to continue to be employed.

Here's an example of how unions protect poorly-performing teachers from parents (their customers!), reported by the radically leftist CNN:

> Former teacher Charlene Schmitz is behind bars in a federal detention center in Tallahassee, Florida, serving 10 years for using texts and instant messages to seduce a 14-year-old student.
>
> She has been fired from her job as a reading teacher at the high school in Leroy, Alabama.
>
> But she is still collecting a paycheck.
>
> Schmitz is appealing her federal conviction — and her firing. State charges filed in connection with the case are pending. Under the law in Alabama, she is still entitled to her $51,000-a-year salary while she appeals her firing.

She's a "reading teacher". Sigh.

If you think that's the exception, you should know that many, many teachers are kept in "rubber rooms", where they are paid their full teacher salary long after they have been banned from teaching for various crimes and abuses.

NBC News reports:

> Hundreds of New York City public school teachers accused of offenses ranging from insubordination to sexual misconduct are being paid their full salaries to sit around all day playing Scrabble, surfing the Internet or just staring at the wall, if that's what they want to do.
>
> Because their union contract makes it extremely difficult to fire them, the teachers have been banished by the school system to its "rubber rooms" — off-campus office space where they wait months, even years, for their disciplinary

> hearings.
>
> The 700 or so teachers can practice yoga, work on their novels, paint portraits of their colleagues — pretty much anything but school work. They have summer vacation just like their classroom colleagues and enjoy weekends and holidays through the school year.
>
> “You just basically sit there for eight hours,” said Orlando Ramos, who spent seven months in a rubber room, officially known as a temporary reassignment center, in 2004-05. “I saw several near-fights. `This is my seat.’ `I’ve been sitting here for six months.’ That sort of thing.”
>
> […]Because the teachers collect their full salaries of $70,000 or more, the city Department of Education estimates the practice costs the taxpayers $65 million a year. The department blames union rules.
>
> “It is extremely difficult to fire a tenured teacher because of the protections afforded to them in their contract,” spokeswoman Ann Forte said.

This is why we need to break up the government monopoly on education, abolish the federal Department of Education, break up the teacher unions, and put vouchers for education in the hands of parents. The only way this corrupt system is going to be fixed is to hand parents the money to choose their schools, and have schools and teachers have public reviews – like what you see on Amazon or Google reviews or Yelp. Teachers should all have to complete two years of full-time work in the private sector for whatever it is that they want to teach – to prove that they are at least capable of keeping a job where they can actually be fired for underperforming. Once parents are empowered to move their children around to get the best education (and to pay more to the best teachers and schools), then good teachers will be paid what they are worth, and bad teachers will be fired, and bad schools will close. This will raise the quality of education for EVERY student.

The Mysterious Drew lectures on Christianity and the culture war in Defenders

May 6, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

Drew taught Dr. William Lane Craig's Defenders class for two weeks in a row while Dr. Craig was in Australia. He chose to focus on secularism.

Note: Drew has some problems with the microphone for the first 2.5 minutes of part 1. Be patient.

Part 1 deals with how Europe and America became secular in different ways.

Part 1 topics:

- Secularism: the attempt to take values based on religion (e.g. – Judeo-Christian values) out of the public square
- Television programs that are targeted to more thoughtful viewers favor secular or liberal worldviews
- Consider the sexual revolution – a new set of beliefs about sex are being pushed into the culture
- Sex revolution includes: same-sex marriage, pornography, hookup culture, no-fault divorce
- The effect of the sexual revolution has been to introduce widespread fatherlessness, which is very bad for children
- The sexual revolution is being pushed in the popular culture, but also in the school sexual education programs
- You can see where secularism has led to by looking at Europe, which has largely rejected its Christian roots
- For example, Germany and Sweden are very aggressive about stamping out

homeschooling
- They do this because they are trying to push a government-approved set of beliefs and meanings onto children
- How bad could it get? You can look at how Orthodox Judaism was persecuted in Russia after the communist revolution
- How did Europe become so secular?
- Wars in Europe between Protestants and Catholics caused people to think that theistic religion was bad
- Secularists first attacked theism philosophically by trying to replace it with deism – the view that miracles do not occur
- Secularists then pushed a radical empirism which attempted to reduce religious claims to meaningless irrationality
- The Christian church responded by retreating from philosophical and theological claims and focusing on moral claims
- That's how Europe became secular, but how did America become secular?
- America became secular because Christianity was transformed from a knowledge tradition to an emotional tradition
- Pastors started to move away from presenting Christianity as *true* and instead presented it as *emotionally fulfilling*
- Pastors emphasized personal experiences instead of philosophical theology and apologetics
- European ideas arrived: deism, Darwinism, Bible criticism, etc.
- Christianity responded to this by abandoning the centers of learning it had founded (universities) into pious isolation
- As the universities became more secular, they turned out the next generation of influencers, including the media
- This retreat from intellectual engagement was augmented by a fixation on end-times speculation (e.g. Left Behind)
- (Drew talks to Jeremy, a philosophy student at Georgia State University, about whether Christianity is respected in his classes)
- How politicians and the media used the Scopes Monkey Trial to marginalize Christianity as anti-science
- The perception of Christians in the public square changed – they were viewed as ignorant, irrational and anti-science
- Instead of causing Christians to work harder at science, they became even *more* fundamentalist, and less influential
- Christians today are a tiny minority of influential groups, e.g. – scientists, media, etc.
- In contrast, secular Jews, who tend to grow up in a culture that values learning, have a much greater influence
- Even if Christians try to retreat to the country where they can homeschool, there is no hiding from the Internet
- Which organizations are working against secularism today?
- Example of what Christians can do: Plantinga's refutation of the problem of evil

- Example of what Christians can do: widespread use of ultrasound to move people to the pro-life view
- Example of what Christians can do: Liberty University's effort to produce Christians who can work in media
- A story about William Lane Craig and a secular physicist who had lost her faith

People must have liked what they heard and saw in the first week, because he got a big turnout in the second week.

Part 2 deals with practical tips for engaging in the culture.

Topics in Part 2:

- The real root cause of opposition to Christianity is from the sexual revolution
- For example, moral relativism is so popular in the university, but it is almost entirely driven by sexual liberation
- Evangelism and culture-shaping are not the same thing – each requires a different set of skills
- Where do people get their information? Public school, news media, late night comedy shows, etc.
- Two things for every Christian need to do: 1) Get informed, and 2) Get involved
- First: you do not need to be smarter than average. Dr. Craig is a leading scholar because he studies 9 hours a day
- Implying that people with influence are "smart" just provides us with an excuse not to try if we are not "smart"
- Ordinary Christians need to be willing to give up fun more than they need to be naturally "smart"
- Asks Cody: what about that Christian apologist who hung out mostly with internet atheists and then became one
- Famous quantum chemist: you're right, I am not much smarter than most people, I just work a lot harder at it
- Drew: to get informed, you should follow good Christian blogs like Apologetics 315 and Wintery Knight
- Drew knows Wintery Knight personally and WK is someone who knows apologetics but he also knows other things
- WK connects the Christian worldview to lots different things, e.g. = marriage – he can find you the right people and books
- (Drew holds up "What is Marriage?" book) This is the best book to argue the same-sex marriage issue
- (Drew hold up "The Case for Life" book) This is the best book to argue the pro-life position
- Slacktivism: don't just send people links that you find on the Internet – read the articles and books and then talk about them
- (Drew holds up the Lee Strobel "Case for" books) These are the best introductory books on basic Christian apologetics

- Audio books are a great way for people to take in the information, and you can get them for free from the library
- The Internet is not the best place for arguing about the things you learn – face to face conversations are much better
- Biola's apologetics certificate program is an excellent resource, and it's all audio lectures so you just listen to them
- You can get free apologetics audio from Apologetics 315 and Phil Fernandes
- We also need to learn how to how to change the culture and how the other side changes the culture
- To really make a difference, then a graduate degree might be for you – especially the M.A. in apologetics from Biola
- The university is also very important – Christianity needs to be represented in the university
- Influential people like Supreme Court justices come out of the university, which is why we need to be there
- The Discovery Institute is doing the most to provide a credible rival to naturalistic science
- They have a budget of $4 million dollars and they are punching way above their weight
- If every evangelical sent them $20, they'd have a budget of $1.2 billion – what could they do with that?
- (Drew puts a check for $20 for Discovery Institute in an envelope and seals it, to show how it's done)
- The Truth Project, which is put out by Focus on the Family – it's another excellent training resource
- When it comes to politics, focus on discussing policy issues, not on pushing particular candidates
- If every evangelical Christian just *pulled their own weight*, it would make a big difference
- It all starts by making the decision to take some leisure time to do things that really work

I could not agree with him more on his selections on the marriage debate and the abortion debate. I have bought at least a half-dozen of each of those for people. And I highly recommend getting the Strobel books on audio, especially the Case for a Creator. *Love that book.* Listen to it a bunch a times and you will start to talk like Lee Strobel.

I listened to all the Biola University lectures before they even had the certificate program, along with the Stand to Reason Masters Series in Christian Thought and about 60 Veritas Forum leture sets. Those things probably did the most for me to become a capable defender of Christianity.

The point he made about giving money to the Discovery Institute is important. In the last

month, I sent out $300 to a Ratio Christi chapter for a lecture they gave, and $500 for a Christian group in Canada that put on an apologetics conference.

I think he's right when he talks about everyone pulling their own weight. I spend about 2-3 hours a day reading and blogging. I donate a portion of my earnings to Christian scholars who study and/or speak at the university. I support Christian students who are doing degrees in philosophy, science and engineering. In church, I don't anything yet, but I have a network of friends who do things in church, like organize lectures, debates and apologetics book studies. My current pastor is aware of my abilities, and he's already asked me to help them with an evangelism program they are starting up.

I got started on apologetics by putting in the time on some of the things he mentioned in part 2 of his talk. The basic things to do are reading introductory books on apologetics, especially the ones on philosophy of religion, historical Jesus and physical sciences. If you can't read, then at least get hold of lectures from Biola University and listen to those, along with Lee Strobel audio books, Brian Auten interviews, William Lane Craig debates. Just put them in the car and listen, and soon you'll be sounding just like them.

Iowa’s Republican governor signs ban on abortions after unborn baby has heartbeat

May 7, 2018 | by Wintery Knight | Link | Original Link

Iowas Republican Governor Kim Reynolds did the right thing

I decided to start the week off with a happy story about a powerful Republican woman taking a bold step to defend unborn children in a blue state. Here is a story from Fox News about Iowa’s governor Kim Reynolds, a Republican, who has signed a bill banning all abortions on babies who have a heartbeat! That’s pretty early on, and will cover most abortions.

Excerpt:

> Iowa Gov. Kim Reynolds on Friday signed off on a law banning most abortions if a fetal heartbeat can be detected, or at about six weeks of pregnancy, The Associated Press reported.
>
> The restriction is the strictest abortion regulation in the nation, the AP said. It also said passage and enactment of the measure has set the state up for a protracted legal fight.
>
> The State House passed the legislation on Tuesday night with a 51-46 vote, Iowa Public Radio reported. It was debated for more than eight hours before House representatives decided on it. The bill passed the Senate early Wednesday with a 27-19 vote.
>
> The legislation bans abortion in all cases after six weeks of pregnancy, which critics of the legislation argue is before most women are aware they are pregnant. Up until now, a woman has been able to get an abortion in Iowa up to her 20th week.
>
> However, the measure would not ban abortion after six weeks in all cases — some exemptions include instances of rape, incest, fetal abnormalities or to save the mother’s life.

This is the earliest ban on abortion in the nation! I'm so impressed. I'd like women to make better choices about men and the timing of sexual activity so that we don't have to do terrible things in order to "resolve" unwanted pregnancies.

Life News has more details about how the bill works:

> The bill would require abortion practitioners to test for the unborn baby's heartbeat before performing an abortion. If a heartbeat is detected, the abortion would be prohibited except in cases involving medical emergency, rape, incest or fetal abnormalities deemed to be "incompatible" with life.
>
> Because an unborn baby's heartbeat is detectable by about six weeks of pregnancy, the bill would prohibit almost all abortions in Iowa.

Unfortunately, Planned Parenthood isn't going to give up their source of revenue without a legal fight:

> Immediately after Reynolds' announcement Friday, branches of Planned Parenthood and the American Civil Liberties Union in Iowa responded with plans to sue the state, the AP reports.
>
> […]Because of the current make-up of the U.S. Supreme Court and lower courts, a law to prohibit abortions in the first trimester most likely would not survive a court challenge. President Donald Trump promised to appoint pro-life justices to the courts, but he would have to appoint at least one more Supreme Court judge before the Iowa legislation would have a chance of being upheld.
>
> North Dakota and Arkansas passed heartbeat bills several years ago, but federal courts struck down both laws.

Although it will be a difficult fight to save this law, at least voters will get another chance to understand that Democrats are opposed to restrictions on abortion. They want abortion through all nine months of pregnancy, and taxpayer-funded in a single-payer system. That way, abortion is as easy to obtain as getting a prescription for antibiotics.

I don't see why we can't just tell women not to have sex with men before marriage. If women withheld sex from men who were not their husbands, then men would grow up and start trying to prove themselves to women as husband candidates again. Not giving men premarital sex makes them behave much better towards women. They try harder in school, they work harder at work, they treat women with respect. They learn how to behave like husbands. What is wrong with that? Is the current status quo of using Tinder to be screwed over by hot guys working for women?

Feminism's new plan to achieve lasting happiness without giving up promiscuity

May 8, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

The article that I am linking to in TODAY's post is from the far-left Huffington Post. Please do not read the article if you are under 30. Huffington Post, like most radical feminism web sites, has dropped down to the level of 50 Shades of Gray. Reader discretion is advised. But I had to write about their article because it really shows you that radical feminists are not innocent little doves hoping for traditional marriage and children.

First, a little introduction. Radical feminism is a rejection of traditional sex roles for men and women, and the committed union of men and women in marriage.

Here is what radical feminists oppose:

- female sobriety when among the opposite sex
- male sobriety when among the opposite sex
- female chastity prior to marriage
- male chastity prior to marriage
- women preparing for the traditional roles of wife and mother
- men preparing for the traditional roles of protector, provider, moral leader and spiritual leader
- paying for their own condoms and birth control pills
- men who are pro-life and pro-natural-marriage

Radical feminism wants nothing to do with men who are sober and chaste. The only real way to decide whether a man is good or bad – for a radical feminist – is whether he is attractive looking and does not try to lead women or hold them accountable morally or

spiritually. Men are just accessories designed to provide women with fun and thrills. They are not to be selected for their ability to perform “sexist” virtues like chivalry, providing or leadership.

Now, feminists have been very unhappy lately, because their plan for forming relationships (focus on career, choose hot guys, get drunk, have premarital sex, wait by the phone, claim that all men are evil when no one calls, repeat) doesn’t work. But radical feminists don’t see the problem with their promiscuity plan. They don’t think that marriage is a good thing, because it has unfair sex roles. And they don’t think that women or men should prepare for commitment by being sober, chaste and self-sacrificial. They think that they can choose pleasure right now, and at every moment following, and that this will somehow work out to provide them with lasting love, support and intimacy as they grow older. Somehow, after they tire of sexual revolutionisting with the hot guys, they will easily be able to find a man who is simultaneously hot and sober, faithful, committed, and a great father to whichever children she decided not to abort. And if this plan doesn’t “work out”, then it’s the fault of patriarchy and toxic masculinity.

The Huffington Post article explains why radical feminists think that their plan is failing:

> *[…][S]*ome straight women have thrown their hands up in despair at the prospect of dealing with straight men. These men, who grope us and talk down to us and consistently fail to clean the bathroom — we’re supposed to make lives with them? Let them touch us?
>
> Women woke up one day to find that their husbands voted for Donald Trump and their sons have been ***posting on incel boards. Even before we heard the claims about Harvey Weinstein’s history of sexual harassment and assault and the ensuing avalanche of other horrifying Me Too allegations, we heard about our president grabbing women “by the pussy,” Bill Cosby feeding women roofies, and R. Kelly allegedly sexually exploiting young girls. So many straight men, we have been forced to accept, are bad to and for us. Why would we take the enormous risk of loving one of them?

All the bad boy leftist men they freely chose to have premarital sex with for money or career advancement failed to please them. And all men must be the same. After all, radical feminists rejected traditional male virtues and roles as “sexist”. Instead, they decided to have premarital sex with secular leftists like Bill Clinton, Anthony Weiner, Elliot Spitzer, etc. Those men are fun and thrilling, and might even help your career. If these relationships failed, then surely the relationships not chosen – the ones with the sober, chaste, responsible men – would have failed, too, right? You don’t expect a woman to have a relationship with someone who doesn’t support abortion and gay marriage, do you? How could a man who is pro-child and pro-marriage possibly be suitable for commitment and parenting? Just choose the hot ones who make you tingle, and then generalize about all men from those failed experiments.

More:

> One seductive yet impossible fantasy might be the romantic attention of a man who lacks the exhausting baggage of male entitlement.

> To find such a fantastical being, women — in fiction, at least — have turned to the sea.

Yes, the radical feminists are turning to the sea to find fictional mermen who meet their feminist ideals for relationships.

More:

> Lucy, the protagonist of The Pisces, is newly single, running out of time to finish her dissertation, and spiraling out of control.
>
> […]Despite the therapy sessions, Lucy can't stop searching for male attention to restore her sense of desirability and worth. Before each encounter with a prospect, she feels buoyant and eager, but again and again, she's left sexually and emotionally unfulfilled, in part because the men don't much care whether she's enjoying herself.
>
> One man she meets on an app — a hot younger dude in an open relationship — convinces her to have sex with him in the lobby bathroom of an upscale hotel. It's quick and mediocre. She doesn't come. Afterward, he leaves without telling her, stranding her alone at the hotel bar. Lucy thought the encounter would be something different, that it would make her feel deliriously sexy and desired. She tries not to let herself feel sad about how transparently he was using her to fulfill his fantasy while her own went entirely ignored. What she wants is for even this one-time fling to care desperately about making her come, for his world to narrow around her pleasure, even for just a few minutes.

Wow, the hot bad boys don't care about the women who choose them for irresponsible recreational premarital sex? If only there were some way to keep a man committed? It can't be marriage though, and acting like a wife. That's "sexist". I'm surprised that having recreational premarital sex with a hot, promiscuous pro-abortion pro-gay-marriage Democrat doesn't lead to the woman enjoying herself in the long term.

It's mermen to the rescue, though:

> When she begins to fall for Theo, a tautly handsome swimmer she keeps seeing in the ocean near her sister's beachside home, it seems like she may have found the something that couldn't exist. Theo looks decades younger than her, but he is fascinated by her. He seeks her out, pulling up by the rocks at the edge of the beach to talk with her night after night. He wants to kiss her, then give her oral sex for hours under the stars. Soon, she learns that there's a reason he initially stayed submerged from the waist down during their encounters: He's what we might call a merman, and instead of legs he has a scaly tail.

> Like the creature in "The Shape of Water," Theo seems to be an exception to the

> rule of toxic straight maleness. Where other men hurt, threaten and betray, these unhuman beings pleasure, console and conspire with women.
>
> […]Her ex toys with her emotions; the men she dates are sexually selfish and reckless with her health. But Theo is different, both because he has a scaly tail instead of legs, and because he proclaims to be devoted to her and her pleasure.

After some discussion about the wonders of the merman's equipment, (so important to a radical feminist!), we read this:

> ….there's also an unmistakable queerness to these mythical, human-like creatures. They transgress the boundaries of what society traditionally demands from a male body. Lucy even notes a feminine quality to Theo…
>
> […]This story is a seductive one, especially to straight women who yearn to get outside of the oppressive structures and expectations of their dating realm. What if we found men who were different? Who were in touch with their emotions, called themselves "feminist allies" for reasons other than wanting to center themselves in the movement, enjoyed giving us orgasms, texted right after the first date?

Wow, she will get treated so well, and without having to marry him (sexist!), or commit to care for his needs (patriarchy!), or fulfill loving obligations for him in a restrictive long-term commitment (slavery!).

She can have sex with a hot sexy effeminate fish who is DECADES younger than she is, who doesn't have a job or savings, and who isn't able to be a father to children in any normal sense. But who cares! As long as he wants to give her orgasms, and he's young and hot, and doesn't try to tell her to get a real degree, or to get a real job, or to grow up and get married and have children who can take care of her in her old age. The merman provides all that's important to radical feminists.

And I'm sure that this plan is sustainable, too. He will love her just as much when she is old and wrinkly, because giving a merman premarital sex always makes him commit self-sacrificially for life. That's the power of recreational premarital sex – it turns irresponsible young hot mermen into pleasure-giving slaves for life.

   Ha, ha, ha! Saw this coming from a mile away. Monster porn in the form of E-books has been a big seller on sites like Amazon for a few years now! Women love stories of being ravaged by were-beasts, minotaur, fish-men, you name it! If it’s violent and non-consensual in the context of the story they are all for it! Women are weird. Weirder than men or at least as weird. I say weird, maybe I mean mental!

   This is a classic example of the problem that enshrines all forms of leftist political activism. The failure to grasp the distinction between fiction and reality. No matter how hard you scream, fight, or empower the state to take action, you cannot change the fact that we live in a real world that functions a certain way.

   A woman saying that she wants the freedom to have promiscuous sex without responsibilities or obligations while simultaneously always feeling happy and fulfilled as a result is kind of like someone saying they want the right to go swimming without getting wet. This just isn’t how it works. Sure, you can write a book where the heroine finds some sort of magic water that can be swam in without getting wet, but such a thing does not exist in reality.

   There’s not necessarily anything wrong with reading a work of fiction and enjoying it as a work of fiction, but leftists are repeatedly pointing to works of fiction (Black Panther, The Shape of Water, this Pisces book, etc.) to try and justify how the world is supposed to be while simultaneously neglecting the fact that it’s called fiction for a reason.

   This author thinks that all women are entitled to mermen who care about nothing except satisfying women’s desires 24/7. Great. The problem is such creatures do not exist (and it’s questionable whether or not a woman would truly find such a relationship satisfying in the long run).

   Many men wish that they could live the life of 007 James Bond, saving the world from villains and sleeping with hundreds of beautiful women who find themselves unable to resist his advances. The problem again is that this is a work of fiction, and even those men that do manage to bed multiple women typically find it unsatisfying in the long run.

   Women are free to make their own decisions and experience the natural

consequences of those decisions just as men are. No one, man or woman, is free to make their own decisions and then bend reality so that the consequences always turn out as they desire. This is something that will always dwell firmly in the land of fiction.

They are so beyond parody it is hard to imagine. They are putting The Onion out of business. They think they are so intelligent and then are shocked when their “bro-choice” men just use them for sex.

Just think about what abortion is. It’s saying that big strong grown ups can take risks for pleasure, and then resort to committing murder in order to get out of the consequences. What sort of imbecile thinks that it is good idea to start a relationship with someone who would commit murder in order to avoid interrupting their selfish pursuit of pleasure?
What are parents, teachers and pastors teaching women about men and marriage that they would fall this far down?

People continue to reject wisdom. There is a reason the Bible contains boring books like proverbs that give bits of knowledge to people.

Especially when young the ideas of young people are often wrong, but now people live in prolonged adolescence. With many being from 10 to 16 in their level of emotional maturity for long sections of their adult life.

They Beleive there is no knowledge from the elders to learn. Only the random ideas they they think of in their head, see in movies and YouTube videos.

And these kind of women are no different. Personal feelings, social acceptance and emulating what they see around them is important.

Sacrifice for long term gain for self, family and others is not od any value

But who cares! As long as he wants to give her orgasms, and he's young and hot, and doesn't try to tell her to get a real degree, or to get a real job, or to grow up and get married and have children who can take care of her in her old age. The merman provides all that's important to radical feminists.'

The feminist is looking for the 'perfect' man. The man who doesn't have sex as an idol (selfish pig) or even God as his source of worship (evil sexist Patriarch!)…she wants the man who makes her his idol of worship (which I would an effeminate white knight).

It's such a shame more and more women and young girls are choosing the path to promiscuity and vulgarity in order to feel empowered. The classic "Nasty Woman" is now the norm The liberal mainstream media does no favors either, only reinforcing this societal brainwashing and condones such behavior by making girls' parents seem like backwards bigots for upholding traditional virtues. Even worse, are the radical feminist parents who are raising the next generation! Even schools are helping the radical feminist agenda. The ladies of past generations are being replaced with vulgar women and any man who wants a traditional wife is being hard pressed.

If you want a "traditional wife" then be avid about finding one. I don't see the problem with being frank to the women that a man meets and saying (VERY early on before a relationship starts, like even the first date) and saying "look,

I'm looking for XYZ in a marriage and relationship. If this isn't something you're looking for as well then let's not waste each other's time". If they do not have the same "traditional" mindset, then be upset, blog about about it to work through the feelings, and move on to the next person and see if they express your same ideals. I was frustrated by a blog that was geared at helping men to find traditional submissive wives and they suggested men beat around the bush, month after month, very gently and lightly doing small "tests" to see women's levels of agreeableness. I think this just wastes people's time. I had a man with this mindset dating me once and had said approach. It was annoying to say the least, and I finished that relationship after abruptly asking him what he was trying to get at. Once the cat was out of the bag, I asked why on Earth had he not said this on our first date?! Unfortunately, he had wasted 4 months of our time because I was not looking for a lord and master to be at the mercy of nor someone to "lead me". Women don't have a duty to marry. Women don't have a duty to have children. If you're looking to date, be upfront and abrupt about what you're looking for. I didn't want a man who was looking to lord over me and I was clear at that from the beginning with my now husband. We had the same ideals, views about women, children, men, and marriage. So far we're 11 years in and still not tired of each other.

So that's the next step for feminism is it? Turning from real men (who have become increasingly effeminate thanks to their efforts) to fictional monster/super men who cannot and will never exist? How is this any different to the way that many young (especially Asian) males have turned to fictional women due to a combination of their own unattractive natures and the attitudes of modern women? To me there is no difference: they're both pathetic and feminism is largely to blame.

The purpose of Feminism is simple: to maximize women's freedom of action while minimizing their responsibility and accountability. At the same time doing the reverse for men: minimizing their freedom of action while maximizing their responsibility and accountability. It ultimately works out for no one, but that doesn't stop them pushing for it.

Women enjoy when men love them well and lead them well. The goal then should be to teach women to choose men who will love and lead well. What feminism says is that thinking about men as having certain male roles is “sexist”. So what’s left? Pick the hot guys, and try to get something going with sex. I don’t understand why a woman would think that choosing a man interested in sex (not commitment! not responsibility) and giving him what he wants without him having to earn it is a good idea. Men need to be chosen for good character. They should be chaste, so that they have demonstrated enough self-control to not cheat. They should be educated and have good jobs and money saved, so that they can give the woman a sense of security. They should not see the needs of children (born and unborn) as inconveniences to be ignored. They should not be addicted to anything that would impair their judgement or ability to serve their families. This is what women ought to be choosing. Not younger, hot-looking pro-abortion Democrats buying cocktails and looking for sex on the first date. That’s a stupid choice that doesn’t work.

Women seem to believe that love and their magical ability will make the right guy that has never behaved. Been sober or behaved around women before, faithful and good when he commits to her.
. Then they are shocked when the man reverts to previous behaviour and breaks the commitment

They make a big deal out of the surface features of a man, believing that the character is not important, or can be easily fixed later. The truth is that a guy’s appearance is easier to fix than his past and his character.

95% of romance novels have that exact plot. A woman meets a bad boy who

has been living the wild life, sleeping with dozens of women, but then he has sex with the heroine and finds that it’s so amazing that he couldn’t possibly be satisfied with another woman ever again. They then live happily ever after. Again. It only happens in fiction.

   I guess this is why Dr. Laura tells people to not think that they can change people. I think men do this too, though. Focus on youth and appearance as if it were more important than character. Ha! What matters most is the ability to be content with a commitment, and expect a roller coaster of fun and thrills to be provided by the other person.

How many pro-abortion men have to be caught raping before women stop choosing them?

May 9, 2018 | by Wintery Knight | Link | Original Link

Although I had a lot of fun attacking feminism in Tuesday's post, it wasn't my intention to attack feminism again today. But I feel I have to say something about a news story about New York Attorney General Eric Schneiderman. Although he was a major figure in the #MeToo movement, he resigned after being accused of sexual assault by four different women.

Let's start by learning a little about the man from his own tweets:

A year before Roe v. Wade, I graduated from high school, went to Washington DC, and got a job working in an abortion clinic.

I learned an important lesson at a young age.

If a woman does not have the right to control her own body, she is not truly equal. She is not truly free.

New York Attorney General Eric Schneiderman wants women to be free?
Now, let's be clear about what abortion is. Abortion is ending the life of an innocent unborn child that has human DNA distinct from either the mother or the father. It happens after two strong grown ups have agreed to have recreational sex with no plan to welcome and care for a child that they might create. They don't want to be responsible for the consequences of their own choices. If a child is conceived, then the powerful grown-ups resort to murder in order to keep the good times rolling for themselves.

That's what Democrat Attorney General Eric Schneiderman supports. And many, many young unmarried women voted for this man, precisely because he held this self-centered and irresponsible view of women, relationships and children.

In fact, radical feminists not only prefer men who have this view of relationships and sex, they insist on it.

Consider this dating guide published by a feminist writer.

Excerpt:

> 2. "What Are Your Views On Abortion?"
>
> If you're considering a sexual relationship that could potentially lead to

> pregnancy, holding conflicting views on abortion can cause a lot of tension. If you can get pregnant, you'll want to know whether someone will respect your choice to handle the pregnancy as you see fit. And if you can get someone pregnant, you want to make sure you're on the same page about what will be done about it. Even if you're not in a relationship that could lead to pregnancy, someone's views on abortion can speak volumes about their level of misogyny as well as their respect for others' bodily autonomy.

Got that? Pro-life men are mysogynistic and deny bodily autonomy. But pro-abortion men aren't misogynistic, and respect women's bodily autonomy. That's what radical feminists believe.

With that said, let's take a look at the charges against Eric Schneidernman, as reported by the New York Post.

Excerpt:

> State Attorney General Eric Schneiderman called his Sri Lankan girlfriend his "brown slave" and wanted her to refer to him as "Master," the woman says.
>
> Harvard-educated activist writer Tanya Selvaratnam told the New Yorker magazine that her yearlong affair with Schneiderman "was a fairytale that became a nightmare" — and quickly escalated into violence in the bedroom, even as he begged for threesomes.
>
> "Sometimes, he'd tell me to call him Master, and he'd slap me until I did," Selvaratnam said.
>
> "He started calling me his 'brown slave' and demanding that I repeat that I was 'his property.'"
>
> Selvaratnam said, "The slaps started after we'd gotten to know each other.
>
> "It was at first as if he were testing me. Then it got stronger and harder. It wasn't consensual. This wasn't sexual playacting. This was abusive, demeaning, threatening behavior."
>
> She said that as the violence grew, so did his sexual demands.
>
> "He was obsessed with having a threesome and said it was my job to find a woman," Selvaratnam said. "He said he'd have nothing to look forward to if I didn't and would hit me until I agreed."
>
> She said she had no intention of adding a second woman to their bed.
>
> The abuse increased until Schneiderman was not only slapping her but spitting on her and choking her, she said.
>
> "He was cutting off my ability to breathe," she said.
>
> Soon, "we could rarely have sex without him beating me."
>
> The attorney general was often fueled by booze, Selvaratnam said.
>
> And he would push her to drink, too, she said.

> “Drink your bourbon, Turnip,’’ she said he ordered her, using his nickname for her.

This is just the tip of the iceberg, there’s a lot more here at the Washington Free Beacon.

This was interesting:

> “Now that I know it’s part of a pattern, I think, God, I should have reported it,” the accuser said. “But, back then, I believed that it was a one-time incident. And I thought, He’s a good attorney general, he’s doing good things. I didn’t want to jeopardize that.”

This man is a hero of radical feminists. Here is a video featuring feminist comedian Samantha Bee:

Most women support pro-abortion men like Eric Schneiderman:

GALLUP polling: Women support abortion more than men

According to 2008 exit polls, 77% of young, unmarried women voted for a pro-abortion Democrat (Obama). Obama even voted against banning infanticide as a state senator in Illinois. Young, unmarried women had no problem voting for a supporter of infanticide (killing a baby born alive).

We know about lots of Democrats who talk about women’s rights in public, and mistreat them in private, e.g. – Ted Kennedy, Bill Cinton, John Edwards, Elliott Spitzer, Harvey Weinstein, Al Franken, etc. Some pro-abortion Democrat men kill women. Some rape women. Some sexually assault women. They are all willing to destroy a defenseless unborn child in order to escape the consequences of their selfish choices. If they are willing to kill an innocent, defenseless unborn child, they are certainly willing to sexually assault a grown woman.

Pro-abortion men are NOT the kind of men that a woman can depend on for love, fidelity, commitment and respect. It doesn’t matter how hot they are, how rich they are, or how powerful they are. If the goal is a faithful, life-long committed relationship that persists through the woman’s old age, then the answer cannot be a pro-abortion man. Just because young, unmarried women are attracted to men who are hot and non-judgmental, that does not translate into a long-term relationship where the man will be loving and leading the woman well. Women need to stop thinking that moral character doesn’t

matter when evaluating a man for a relationship. A man's refusal to condemn irresponsible behavior is not a sign of good character. A man's mistreatment of others around him is not a sign of good character. Men who don't have good character should not be chosen for relationships. Having feelings of attraction for a man does not mean that his character is suitable for loving and caring for others. Men need to be chosen based on their ability to do the job, not based on feelings of attraction.

The same women who support the pro-abortion rapists, sexual assaulters, etc. also OPPOSE men like Billy Graham and Mike Pence, who are so serious about their marriage vows that they refuse to even put themselves into situations where they might be tempted. I blogged before about how radical feminists jeered at the rules that good men impose on themselves in order to avoid even the appearance of an affair. Feminists consider Mike Pence to be a terrible person, but one feminist journalist said of Bill Clinton "I'd be happy to give him [oral sex] just to thank him for keeping abortion legal". This is the same Bill Clinton who cheated on his wife with his female subordinates, and was credibly accused of rape. But he gives feminists the tingles. Who cares about character? He's hot. And he supports abortion.

The alternative

Now, just to be clear, I am the worst freaking nightmare of a radical feminist. I am a virgin. I will not even kiss on the lips unless it's to seal an engagement. I don't buy drinks for women, unless it's one beer in a restaurant, and we're sharing it. And as far as abortion, I think life begins at conception. I also think that marriage is solely between one man and one woman, for life. Whatever it is that I'm going to do to convince a woman to marry me, it's going to be done outside of the bedroom, when she's stone-cold sober. I will get the consent of her father, first.

It is important to me that I am able to demonstrate my ability to be self-controlled and faithful to one woman, and to speak the language of love outside of the bedroom. That's what chastity is for – it demonstrates the ability to love totally apart from selfishness and lust. Fidelity is not free. Women need to be chaste themselves, and they need to insist on chastity in the men they choose. Fidelity and self-control cannot be left to chance. They are more important than surface level concerns. Instead of looking for men who want to murder children, women should be looking for men who are comfortable taking on demanding relationships and keeping their commitments even if they become difficult.

Since I have a Christian view of marriage, my marriage has a customer. My choices with women and marriage will be designed to manufacture a result for my Commanding Officer. Treating women and children badly would cause them to move away from God, and so these things are just not permitted. Women dealing with me always have that leverage – the ability to hold me accountable to that vertical commitment to our common Boss.

What is important for everyone to realize is that many women today, thanks to radical feminism, do not go after men who are prepared and suited to marriage. They do not want to marry early and have children. They want to ride the carousel with hot pro-

abortion bad boys until their looks and youth start to fade. They see marriage as boring, and children as distractions from travel and fun. They smash themselves up against pro-abortion men, and get very bitter, disrespectful and selfish. It is very hard for a marriage-minded man to marry women who graduate from the Eric Schneiderman school of relationships. Maybe we should tell women the truth for a change.

Four ways that the progress of experimental science conflicts with atheism

May 10, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

When people ask me whether the progress of science is more compatible with theism or atheism, I offer the following four basic pieces of scientific evidence that are more compatible with theism than atheism.

Here are the four pieces of evidence best explained by a Creator/Designer:

1. the kalam argument from the origin of the universe
2. the cosmic fine-tuning (habitability) argument
3. the biological information in the first replicator (origin of life)
4. the sudden origin of all of the different body plans in the fossil record (Cambrian explosion)

And I point to specific examples of recent discoveries that confirm those four arguments. Here are just a few of them:

1. An explanation of 3 of the 6 experimental evidences for the Big Bang cosmology (From an article from Caltech)
2. Examples of cosmic fine-tuning to allow the existence of conscious, embodied life (From the New Scientist)
3. Evidence that functional protein sequences are beyond the reach of chance, (from Doug Axe's JMB article)
4. Evidence showing that Ediacaran fauna are not precursors to the Cambrian fossils, (from the journal Nature)

Atheists will typically reply to the recent scientific discoveries that overturned their speculations like this:

1. Maybe the Big Bang cosmology will be overturned by the Big Crunch/Bounce so that the universe is eternal and has no cause
2. Maybe there is a multiverse: an infinite number of unobservable, untestable universes which makes our finely-tuned one more probable
3. Maybe the origin of life could be the result of chance and natural processes
4. Maybe we will find a seamless chain of fossils that explain how the Cambrian explosion occurred slowly, over a long period time

Ever heard any of these responses?

Below I list some resources to help you to respond to the four responses of atheists to the experimental data.

1) The Big Crunch/Bounce has been disproved theoretically and experimentally.

Theoretically:

> Nature 302, 505 – 506 (07 April 1983); doi:10.1038/302505a0
>
> The impossibility of a bouncing universe
>
> ALAN H. GUTH* & MARC SHER†
>
> *Center for Theoretical Physics, Laboratory for Nuclear Science and Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139, USA
>
> †Department of Physics, University of California, Irvine, California 92717, USA
>
> Petrosian1 has recently discussed the possibility that the restoration of symmetry at grand unification in a closed contracting Robertson–Walker universe could slow down and halt the contraction, causing the universe to bounce. He then went on to discuss the possibility that our universe has undergone a series of such bounces. We disagree with this analysis. One of us (M.S.) has already shown2 that if a contracting universe is dominated by radiation, then a bounce is impossible. We will show here two further results: (1) entropy considerations imply that the quantity S (defined in ref. 1 and below), which must decrease by ~1075 to allow the present Universe to bounce, can in fact decrease by no more than a factor of ~2; (2) if the true vacuum state has zero energy density, then a universe which is contracting in its low temperature phase can never complete a phase transition soon enough to cause a bounce.

Experimentally:

> The universe is not only expanding, but that expansion appears to be speeding up. And as if that discovery alone weren't strange enough, it implies that most of the energy in the cosmos is contained in empty space — a concept that Albert Einstein considered but discarded as his "biggest blunder." The new findings

> have been recognized as 1998's top scientific breakthrough by Science magazine.
>
> […]The flood of findings about the universe's expansion rate is the result of about 10 years of study, said Saul Perlmutter, team leader of the Supernova Cosmology Project at Lawrence Berkeley National Laboratory.
>
> Perlmutter and others found such a yardstick in a particular kind of exploding star known as a Type 1A supernova. Over the course of several years, the astronomers developed a model to predict how bright such a supernova would appear at any given distance. Astronomers recorded dozens of Type 1A supernovae and anxiously matched them up with redshifts to find out how much the universe's expansion was slowing down.
>
> To their surprise, the redshift readings indicated that the expansion rate for distant supernovae was lower than the expansion rate for closer supernovae, Perlmutter said. On the largest scale imaginable, the universe's galaxies appear to be flying away from each other faster and faster as time goes on.
>
> "What we have found is that there is a 'dark force' that permeates the universe and that has overcome the force of gravity," said Nicholas Suntzeff of the Cerro Tololo Inter-American Observatory, who is the co-founder of another group called the High-z Supernova Search Team. "This result is so strange and unexpected that it perhaps is only believable because two independent international groups have found the same effect in their data."

There has only been one creation of the universe, and the universe will never reverse its expansion, so that it could oscillate eternally. That view is popular, perhaps in part because many people watched videos of Carl Sagan speculating about it in public school classrooms, but all it was was idle naturalistic speculation, (Sagan was a naturalist, and held out hope that science would vindicate naturalism), and has been contradicted by good experimental science. You should be familiar with the 3 evidences for the Big Bang (redshift, light element abundances (helium/hydrogen) and the cosmic microwave background radiation. There are others, (radioactive element abundances, second law of thermodynamics, stellar lifecycle), but those are the big three. Point out how the experimental evidence for the Big Bang has piled up, making the problem even worse for the eternal-universe naturalists.

2) The multiverse has not been tested experimentally, it's pure speculation.

Speculation:

> Multiverse thinking or the belief in the existence of parallel universes is more philosophy or science fiction than science. "Cosmology must seem odd to scientists in other fields".
>
> George Ellis, a well-known mathematician and cosmologist, who for instance has written a book with Stephen Hawking, is sceptical of the idea that our universe is just another universe among many others.

> A few weeks ago, Ellis, professor emeritus of applied mathematics at the University of Cape Town, reviewed Brian Greene's book The Hidden Reality: Parallel Universes and the Deep Laws of the Cosmos (Knopf/Allen Lane, 2011) in the journal Nature. He is not at all convinced that the multiverse hypothesis is credible: "Greene is not presenting aspects of a known reality; he is telling of unproven theoretical possibilities."
>
> According to professor Ellis, there is no evidence of multiverses, they cannot be tested and they are not science.
>
> Ellis is not the only multiverse sceptic in this universe. A few months ago, science writer John Horgan wrote a column in Scientific American, expressing his doubt in multiverses.

When you get into a debate, you must never ever let the other side get away with asserting something they have no evidence for. Call them on it – point out that they have no evidence, and then hammer them with evidence for your point. Pile up cases of fine-tuning on top of each other and continuously point out that they have no experimental evidence for their speculations. Point out that more evidence we get, the more cases of fine-tuning we find, and the tougher the problem gets for naturalists. There is no evidence for a multiverse, but there is evidence for fine-tuning. TONS OF IT.

3) Naturalistic theories for the origin of life have two problems: can't make the amino acids in an oxydized atmosphere and can't make protein and DNA sequences by chance in the time available.

Building blocks:

> The oxidation state of Hadean magmas and implications for early Earth's atmosphere
>
> Dustin Trail, E. Bruce Watson & Nicholas D. Tailby
>
> Nature 480, 79–82 (01 December 2011) doi:10.1038/nature10655
>
> […]These results suggest that outgassing of Earth's interior later than ~200?Myr into the history of Solar System formation would not have resulted in a reducing atmosphere.

Functional protein sequences:

> J Mol Biol. 2004 Aug 27;341(5):1295-315.
>
> Estimating the prevalence of protein sequences adopting functional enzyme folds.
>
> Axe DD.
>
> The Babraham Institute, Structural Biology Unit, Babraham Research Campus, Cambridge CB2 4AT, UK. doug.axe@bbsrc.ac.uk
>
> Proteins employ a wide variety of folds to perform their biological functions. How are these folds first acquired? An important step toward answering this is to

> obtain an estimate of the overall prevalence of sequences adopting functional folds.
>
> […]Starting with a weakly functional sequence carrying this signature, clusters of ten side-chains within the fold are replaced randomly, within the boundaries of the signature, and tested for function. The prevalence of low-level function in four such experiments indicates that roughly one in 10(64) signature-consistent sequences forms a working domain. Combined with the estimated prevalence of plausible hydropathic patterns (for any fold) and of relevant folds for particular functions, this implies the overall prevalence of sequences performing a specific function by any domain-sized fold may be as low as 1 in 10(77), adding to the body of evidence that functional folds require highly extraordinary sequences.

So atheists are in double jeopardy here. They don't have a way to build the Scrabble letters needed for life, and they don't have a way to form the Scrabble letters into meaningful words and sentences. Point out that the more research we do, the tougher the problem gets to solve for naturalists, and the more it looks like an effect of intelligence. Write out the calculations for them.

4) The best candidate to explain the sudden origin of the Cambrian era fossils was the Ediacaran fauna, but those are now recognized as not being precursors to the Cambrian fossils.

Science Daily reports on a paper from the peer-reviewed journal Science:

> Evidence of the single-celled ancestors of animals, dating from the interval in Earth's history just before multicellular animals appeared, has been discovered in 570 million-year-old rocks from South China by researchers from the University of Bristol, the Swedish Museum of Natural History, the Paul Scherrer Institut and the Chinese Academy of Geological Sciences.
>
> […]This X-ray microscopy revealed that the fossils had features that multicellular embryos do not, and this led the researchers to the conclusion that the fossils were neither animals nor embryos but rather the reproductive spore bodies of single-celled ancestors of animals.
>
> Professor Philip Donoghue said: "We were very surprised by our results — we've been convinced for so long that these fossils represented the embryos of the earliest animals — much of what has been written about the fossils for the last ten years is flat wrong. Our colleagues are not going to like the result."
>
> Professor Stefan Bengtson said: "These fossils force us to rethink our ideas of how animals learned to make large bodies out of cells."

The trend is that there is no evolutionary explanation for the body plans that emerged in the Cambrian era. If you want to make the claim that "evolution did it", then you have to produce the data *today*. Not speculations about the future. The data we have today says no to naturalism. The only way to affirm naturalistic explanations for the evidence we have is *by faith*. But rational people know that we need to minimize our leaps of faith, and

go with the simplest and most reasonable explanation – an intelligence is the best explanation responsible for rapid generation of biological information.

Conclusion

I do think it's important for Christians to focus more on scientific apologetics and to focus their academic careers in scientific fields. So often I look at Christian blogs, and I see way too much G. K. Chesterton, Francis Chan A. W. Tozer, and other untestable, ineffective jibber-jabber. We need to bring the *hard* science, and stop making excuses about not being able to understand it because it's too hard. It's not too hard. Everyone can understand Lee Strobel's "The Case for a Creator". That's more than enough for the average Christian on science apologetics. We all have to do our best to learn what works. You don't want to be anti-science and pro-speculation like atheists are. I recommend reading Uncommon Descent and Evolution News every day for a start.

Is the vastness of the universe evidence against God's existence?

May 11, 2018 | by Wintery Knight | Link | Original Link

Apologetics and the progress of science
Physicist Hugh Ross writes about it in Salvo Magazine.

First a quick blurb about Hugh Ross:

> Hugh Ross launched his career at age seven when he went to the library to find out why stars are hot. Physics and astronomy captured his curiosity and never let go. At age seventeen he became the youngest person ever to serve as director of observations for Vancouver's Royal Astronomical Society. With the help of a provincial scholarship and a National Research Council (NRC) of Canada fellowship, he completed his undergraduate degree in physics (University of British Columbia) and graduate degrees in astronomy (University of Toronto). The NRC also sent him to the United States for postdoctoral studies. At Caltech he researched quasi-stellar objects, or "quasars," some of the most distant and ancient objects in the universe.

Now back to the topic "Is the vastness of the universe incompatible with God's existence?"

Here's Ross' introduction:

> Scientists seem more difficult to please than the golden-haired girl of fairy-tale fame. While Goldilocks troubled herself over the just-right porridge, chair, and bed, astronomers appear preoccupied with the size of the universe.
>
> In the days before telescopes, when an observer could count a few thousand stars in the night sky, many considered the universe too small and unimpressive to be the work of an almighty, all-knowing Creator. Only an infinite cosmos, they said, would befit an infinite deity. But then, others argued, an infinite cosmos might eliminate the need for a Creator.
>
> Thanks to the Hubble space telescope, scientists now see that the universe contains roughly 200 billion large- and medium-sized galaxies and about a

> hundred times as many dwarf galaxies. The stars in those galaxies add up to about fifty billion trillion, and they comprise a mere one percent of the mass of the observable universe.
>
> Because of the travel time of light, the universe humans can observe is really the universe of the past. What researchers know about the expansion and geometry of the universe informs us that the universe of today is at least several hundred times more enormous than the universe we can see. The universe is trillions of trillions of times larger and more spectacular than what the earliest astronomers presumed!
>
> And yet, this new knowledge of the vastness of the universe has led to new complaints. In his book, *God: The Failed Hypothesis,* Victor Stenger says, "If God created the universe as a special place for humanity, he seems to have wasted an awfully large amount of space." Stephen Hawking, in the best-selling science book of all time, *A Brief History of Time,* shares Stenger's view: "Our solar system certainly is a prerequisite for our existence. . . . But there does not seem to be any need for all these other galaxies." So now the universe is too big to befit the all-wise, all-powerful God of the Bible.

I like how he quotes an atheist physicist to get the challenge right. No sense in caricaturing the claim of your opponent.

I formalized Stenger's argument like this:

1. If all things in the universe are not done the way that Victor Stenger likes them, then there is no God.
2. All things in the universe were not done the way Victor Stenger likes them.
3. Therefore, there is no God.

I would deny premise 1, there, since there is no reason to believe that's it's true.

Anyway, let's see what Hugh Ross says:

> The hot big bang model (now firmly established by observations) tells us that at the moment of cosmic creation, the universe was infinitely or near-infinitely hot and compressed, and all the ordinary matter existed in the form of hydrogen. As the universe expanded, it cooled. The rate at which the universe expanded and cooled depended in large part on its mass—the greater the mass, the slower the expansion and cooling rate. The slower the expansion and cooling rate, the more time the universe would spend in the temperature range (13–150 million degrees Centigrade) at which nuclear fusion can occur.
>
> **Because of its mass, the universe spent about twenty seconds in the nuclear fusion temperature range when it was between three and four minutes old. As a result, 24.77 percent of the universe's hydrogen (by mass) fused into helium. Thus, when stars began to form—about 380,000 years later—they started off composed of about 75 percent**

> **hydrogen, 25 percent helium, and trace amounts of deuterium, lithium, and beryllium.**
>
> **In the nuclear furnaces of the stars themselves, more hydrogen fused into helium, and, in addition to the extra helium, all the rest of the elements that appear in the periodic table were synthesized (created). The capacity of stellar nuclear furnaces to produce an abundance of elements heavier than helium (all but two of the elements) depended critically on how much of the universe's initial hydrogen was fused into helium and heavier elements during the first several minutes after the cosmic creation event. How much fusion of the universe's primordial hydrogen actually occurred at this time depended, in turn, on the universe's mass or mass density.**
>
> If the universe's mass (or cosmic mass density) had been even the slightest bit less than a hundred times the fifty billion trillion stars occupying the observable universe, nuclear fusion during the first several minutes of its existence would have proceeded less efficiently. Thus, the cosmos would have been forever incapable of generating elements heavier than helium—elements such as carbon, nitrogen, oxygen, phosphorus, sodium, and potassium—all of which are essential for any conceivable kind of physical life.
>
> On the other hand, if the universe's mass had been even the slightest bit greater, nuclear fusion during the first several minutes after its beginning would have been too productive, and *all* the hydrogen in the universe eventually would have been fused (after just two generations of stars) into elements as heavy as iron or heavier. Again, all the most life-essential elements, including hydrogen itself, would have ceased to exist.

Basically, your body is made up of heavier elements, and if the universe was not as massive as it is (and as old as it is), then there would not be enough heavy elements to make you, or to make massive stars like our Sun which burn steady for long periods of time. We need the heavy elements and we need the steady source of heat.

Dr. Ross has another reason why God would use vast space and long periods of time, and if you want to read that, you can click here. I think that it's important for us all to get used to the idea that we all need to understand science apologetics. God put these evidences into the universe for us to discover and use.

William Lane Craig debates James Crossley on the resurrection of Jesus

May 12, 2018 | by Wintery Knight | Link | Original Link

Two horses fight it out, may the best horse win!
This is my favorite debate on the resurrection.

You can watch the debate here:

The MP3 file can be obtained from Apologetics 315.

There is not much snark in this summary, because Crossley is a solid scholar, and very fair with the evidence.

SUMMARY

William Lane Craig's opening speech

Two contentions:

- There are four minimal facts that are accepted by most historians
- The best explanation of the four minimal facts is that God raised Jesus from the dead

Contention 1 of 2:

Fact 1: The burial

- The burial is multiply attested
  - The burial is based on the early source material that Mark used for his gospel
  - Scholars date this Markan source to within 10 years of the crucifixion
  - The burial is also in the early passage in 1 Cor 15:3-8
  - So you have 5 sources, some of which are very early
- The burial is credited to a member of the Sanhedrin

    - the burial is probable because shows an enemy of the church doing right
    - this makes it unlikely to to be an invention

Fact 2: The empty tomb

- The burial story supports the empty tomb
    - the site of Jesus' grave was known
    - the disciples could not proclaim a resurrection if the body were still in it
    - the antagonists to the early Christians could have produced the body
- The empty tomb is multiple attested
    - it's mentioned explicitly in Mark
    - it's in the separate sources used by Matthew and John
    - it's in the early sermons documented in Acts
    - it's implied by 1 Cor 15:3-8, because resurrection requires that the body is missing
- The empty tomb was discovered by women
    - the testimony of women of women was not normally allowed in courts of law
    - if this story was being made up, they would have chosen male disciples
- The empty tomb discover lacks legendary embellishment
    - there is no theological or apologetical reflection on the meaning of the tomb
- The early Jewish response implies that the tomb was empty
    - the response was that the disciples stole the body
    - that requires that the tomb was found empty

Fact 3: The appearances to individuals and groups, some of the them hostile

- The list of appearances is in 1 Cor 15:3-8
    - this material is extremely early, withing 1-3 years after the cross
    - James, the brother of Jesus, was not a believer when he got his appearance
    - Paul was hostile to the early church when he got his appearance
- Specific appearances are multiply attested
    - Peter: attested by Luke and Paul
    - The twelve: attested by Luke, John and Paul
    - The women: attested by Matthew and John

Fact 4: The early belief in the resurrection emerged in a hostile environment

- There was no background belief in a dying Messiah
- There was no background belief in a single person resurrecting before the general resurrection of all of the righteous at the end of the age
- The disciples were willing to die for their belief in the resurrection of Jesus
- The resurrection is the best explanation for the transformation of the disciples from frightened to reckless of death

Contention 2 of 2:

- The resurrection is the best explanation because it passes C.B. McCullough's six tests for historical explanations
- None of the naturalistic explanations accounts for the minimal facts as well as the resurrection

James Crossley's opening speech

Appeals to the majority of scholars doesn't prove anything

- the majority of people in the west are Christians so of course there are a majority of scholars that support the resurrection
- there are Christian schools where denial of the resurrection can result in termination

The best early sources (1 Cor 15:3-8 and Mark) are not that good

1 Cor 15:3-8 doesn't support the empty tomb

- verse 4 probably does imply a bodily resurrection
- the passage does have eyewitnesses to appearances of Jesus
- but there are no eyewitnesses to the empty tomb in this source
- appearances occur in other cultures in different times and places
- Jesus viewed himself as a martyr
- his followers may have had hallucinations

Mark 16:1-8

- Mark is dated to the late 30s and early 40s
- The women who discover the tomb tell no one about the empty tomb

The gospels show signs of having things added to them

- Jewish story telling practices allowed the teller to make things up to enhance their hero
- one example of this would be the story of the earthquake and the people coming out of their graves
- that story isn't in Mark, nor any external sources like Josephus
- if there really was a mass resurrection, where are these people today?
- so this passage in Matthew clearly shows that at least some parts of the New Testament could involve
- what about the contradiction between the women tell NO ONE and yet other people show up at the empty tomb
- the story about Jesus commissioning the early church to evangelize Gentiles was probably added
- there are also discrepancies in the timing of events and appearances
- why are there explicit statements of high Christology in John, but not in the earlier sources?

William Lane Craig's first rebuttal

Crossley's response to the burial: he accepts it

Crossley's response to the empty tomb: he thinks it was made up

- rabbinical stories are not comparable to the gospel accounts
- the rabbinical stories are just anecdotal creative story-telling
- the gospels are ancient biographies – the genre is completely different
- the rabbinic miracle stories are recorded much later than the gospels
- the rabbi's legal and moral ideas were written down right away
- the miracle stories were written down a century or two later
- in contrast, the miracle stories about Jesus are in the earliest sources, like Mark
- the rabbinical stories are intended as entertainment, not history
- the gospels are intended as biography
- just because there are some legendary/apocalyptic elements in Matthew, it doesn't undermine things like the crucfixion that are historically accurate

Crossley's response to the evidence for the empty tomb:

- no response to the burial
- the empty tomb cannot be made up, it was implied by Paul early on
- the women wouldn't have said nothing forever – they eventually talked after they arrived to where the disciples were
- no response to the lack of embellishment
- no response to the early Jewish polemic

Crossley's response to the appearances

- he agrees that the first followers of Jesus had experiences where they thought Jesus was still alive

Crossley's response to the early belief in the bodily resurrection:

- no response about how this belief in a resurrection could have emerged in the absence of background belief in the death of the Messiah and the resurrection of one man before the general resurrection of all the righteous at the end of the age

What about Crossley's hallucination theory?

- Crossley says that the followers of Jesus had visions, and they interpreted these visions against the story of the Maccabean martyrs who looked forward to their own resurrections
- but the hallucination hypothesis doesn't account for the empty tomb
- and the Maccabean martyrs were not expecting the resurrection of one man, and certainly not the Messiah – so that story doesn't provide the right background belief for a hallucination of a single resurrected person prior to the end of the age

- if the appearances were non-physical, the disciples would not have applied the word resurrection – it would just have been a vision
- the visions could easily be reconciled with the idea that somehow God was pleased with Jesus and that he had some glorified/vindicated non-corporeal existence – but not resurrection
- not only that, the hallucination hypothesis doesn't even explain the visions, because there were visions to groups, to skeptics and to enemies in several places

What about the argument that only Christians accept the resurrection?

- it's an ad hominem attack that avoids the arguments

James Crossley's first rebuttal

Regarding the burial:

- I could be persuaded of that the burial account is accurate

Regarding the non-expectation of a suffering/dying Messiah:

- Jesus thought he was going to die
- this thinking he was going to die overturned all previous Messianic expectations that the Messiah wouldn't suffer or die
- the early Jews could easily reconcile the idea of a suffering, dead man killed by the Romans with the power of the all-powerful Messiah who supposed to reign forever
- no actually bodily resurrection would have to happen to get them to continue to identify an executed corpse with the role of Messiah

Regarding the belief in the bodily resurrection:

- it would be natural for Jews, who believed in a general resurrection of all the rigtheous dead at the end of the age, to interpret a non-physical vision of one man after he died as a bodily resurrection, even though no Jew had ever considered the resurrection of one man before the general resurrection before Jesus

Regarding the testimony of the women:

- Just because women were not able to testify in courts of law (unless there were no male witnesses), the early church might still invent a story where the women are the first witnesses
- first, the disciples had fled the scene, so only the women were left
- and it would have been a good idea for the early church to invent women as the first witnesses – the fact that they could not testify in court makes them ideal witnesses and very persuasive
- also, it's a good idea to invent women as witnesses, because the Romans had a rule that said that they never killed women, so they wouldn't have killed these women –

Romans only ever kill men
- in any case, the first witness to the empty tomb is angel, so as long as people could talk to the angel as being the first witness, that's the best story to invent

Regarding the consensus of Christian scholars:

- I am not saying that Craig's facts are wrong, just that appealing to consensus is not legitimate
- he has to appeal to the evidence, not the consensus

Regarding my naturalistic bias:

- I don't know or care if naturalism is true, let's look at the evidence

Regarding the genre of the gospels:

- the creative story-telling is common in all genres, it's not a genre in itself
- stuff about Roman emperors also has creative story-telling

Regarding the legendary nature of the empty tomb in Mark:

- First, Christians interpreted the visions as a bodily resurrection
- Second, they invented the story of the empty tomb to go with that interpretation
- Third, they died for their invention

William Lane Craig's second rebuttal

The burial:

- Bill's case doesn't need to know the specifics of the burial, only that the location was known
- the location is important because it supports the empty tomb
- to proclaim a resurrection, the tomb would have to be empty
- a tomb with a known location is easier to check

The empty tomb:

- creative story telling was common in Judaism: retelling OT stories (midrash), romances/novels, rabbinical anecdotes
- but the gospels are none of these genres – the gospels are ancient biographies
- Craig also gave five arguments as to why the tomb was empty
- the burial story supports the empty tomb
- there is multiple *independent* attestation, then it cannot be a creative fiction invented in Mark alone
- the witnesses were in Jerusalem, so they were in a position to know
- regarding the women, even though Jesus respected the women, their testimony would not be convincing to *others*, so why invent a story where they are the

witnesses
- the male disciples did not flee the scene, for example, Peter was there to deny Jesus three times
- if the story is made up, who cares what the male disciples did, just invent them on the scene anyway
- the angel is not authoritative, because the angel cannot be questioned, but the women can be questioned
- there was no response on the lack of embellishment
- there was no response to the earliest Jewish response implying that the tomb was empty

The appearances:

- we agree on the appearances

The early belief in the resurrection:

- he says that Jesus predicted his own death
- yes, but that would only cause people to think that he was a martyr, not that he was the messiah – something else is needed for them to keep their believe that he was the Messiah even after he died, because the Messiah wasn't supposed to die
- and of course, there was no expectation of a single person rising from the dead before the general resurrection, and certainly not the Messiah

The consensus of scholars:

- Jewish scholars like Geza Vermes and Pinchas Lapide accept these minimal facts like the empty tomb, it's not just Christian scholars

Against Crossley's hallucination hypothesis:

- it doesn't explain the empty the tomb
- it doesn't explain the early belief in the resurrection
- hallucinations would only lead to the idea that God had exalted/glorified Jesus, not that he was bodily raised from the dead
- the hallucination theory cannot accommodate all of the different kinds of appearances; individual, group, skeptic, enemy, etc.

The pre-supposition of naturalism:

- if Crossley is not committed to naturalism, then he should be open to the minimal facts and to the best explanation of those facts
- the hallucination hypothesis has too many problems
- the resurrection hypothesis explains everything, and well

James Crossley's second rebuttal

Religious pluralism:

- well, there are lots of other religious books
- those other religious books have late sources, and are filled with legends and myths, and no eyewitness testimony
- so why should we trust 1 Cor 15 and the early source for Mark and the other early eyewitness testimony in the New Testament?
- if other religious books can be rejected for historical reasons, then surely the New Testament can be rejected for historical reasons

Genre:

- the genre of ancient biography *can* incorporate and commonly incorporates invented legendaryt story-telling
- this is common in Roman, Greek and Jewish literature and everyone accepts that

Empty tomb: multiple attestation

- ok, so maybe the empty tomb is multiply attested, but that just gets back to a belief, not to a fact
- multiple attestation is not the only criteria, and Craig needs to use the other criteria to make his case stronger

Empty tomb: invented

- if there is a belief in the resurrection caused by the visions, then the empty tomb would have to be invented
- why aren't there more reliable stories of people visiting the empty tomb in more sources?

Empty tomb: role of the women

- there are women who have an important role in the Bible, like Judith and Esther
- Mark's passage may have used women who then kept silent in order to explain why no one knew where the empty tomb was
- if the fleeing of the men is plausible to explain the women, then why not use that? why appeal to the supernatural?
- we should prefer any explanation that is naturalistic even if it is not as good as the supernatural explanation at explaining everything

Empty tomb: embellishment

- well there is an angel there, that's an embellishment
- anyway, when you say there is no embellishment, what are you comparing it to that makes you say that?

Appearances: anthropology

- I’ve read anthropology literature that has some cases where people have hallucinations as groups

Appearances: theology

- the hallucinations would not be interpreted against the background theological beliefs that ruled out the resurrection of one man before then general resurrection of all the righteous dead
- these hallucinations could have been so compelling that they made the earliest Christians, and skeptics like James, and enemies like the Pharisee Paul abandon all of their previous background beliefs, proclaim the new doctrine of a crucified and resurrected Messiah which no one had ever expected, and then gone on to die for that belief
- the hallucinations could have changed all of their theology and reversed all of their beliefs about the what the word resurrection meant

William Lane Craig’s conclusion

Supernaturalism:

- None of the four facts are supernatural, they are natural, and ascertained by historians using normal historical methods
- the supernatural part only comes in after we decide on the facts when we are deciding which explanation is the best
- a tomb being found empty is not a miraculous fact

Genre:

- the gospels are not analagous to these rabbinical stories, the purpose and dating is different

Empty tomb:

- what multiple attestation shows is that it was not made-up by Mark
- and the argument was augmented with other criteria, like the criterion of embarrassment and the criterion of dissimilarity
- Judith and Esther are very rare exceptions, normally women were not viewed as reliable witnesses
- if the story was invented, whatever purpose the inventors had would have been better served by inventing male witnesses
- Craig grants that the angel may be an embellishment for the sake of argument, but there are no other embellishments
- the real embellishments occur in forged gnostic gospels in the second and third centuries, where there are theological motifs added to the bare fact of the empty

tomb (e.g. – the talking cross in the Gospel of Peter)
- he had no response to the earliest jewish response which implied an empty tomb

Belief in the resurrection:

- there was no way for Jewish people to interpret an appearance as a bodily resurrection before the end of the world, they did not expect that
- they could have imagined exaltation, but not a bodily resurrection

James Crossley's conclusion

Supernatural explanation:

- as long as there is any other other possible naturalistic explanation, we should prefer that, no matter how unlikely

Creative stories:

- some of these creative stories appear within the lifetimes of the people connected to the events (none mentioned)

Embellishment:

- you should compare to earlier stories when looking for embellishments, not later
- and we don't have any earlier sources, so we just don't know the extent of the embellishment

Jewish response:

- they probably just heard about the empty tomb, and didn't check on it, then invented the stole-the-body explanation without ever checking to see if the tomb was empty or not

Is the definition of atheism “a lack of belief in God”?

May 13, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

First, let’s see check with the Stanford University Encyclopedia of Philosophy:

> ‘Atheism’ means the negation of theism, the denial of the existence of God.

Stanford University is one of the top 5 universities in the United States, so that’s a solid definition. To be an atheist is to be a person who makes the claim that, as a matter of FACT, there is no intelligent agent who created the universe. Atheists think that there is no God, and theists think that there is a God. Both claims are objective claims about the way the world is out there, and so both sides must furnish forth arguments and evidence as to how they are able to *know* what they are each claiming.

Philosopher William Lane Craig has some thoughts on atheism, atheists and lacking belief in God in this reply to a questioner.

Question:

> In my discussions with atheists, they are using the term that they “lack belief in God”. They claim that this is different from not believing in God or from saying that God does not exist. I’m not sure how to respond to this. It seems to me that its a silly word-play and is logically the same as saying that you do not believe in God.
> What would be a good response to this?
> Thank you for your time,
>
> Steven

And here is Dr. Craig’s full response:

> Your atheist friends are right that there is an important logical difference

between believing that there is no God and not believing that there is a God. Compare my saying, "I believe that there is no gold on Mars" with my saying "I do not believe that there is gold on Mars." If I have no opinion on the matter, then I do not believe that there is gold on Mars, and I do not believe that there is no gold on Mars. There's a difference between saying, "I do not believe (p)" and "I believe (not-p)." Logically where you place the negation makes a world of difference.

But where your atheist friends err is in claiming that atheism involves only not believing that there is a God rather than believing that there is no God.

There's a history behind this. Certain atheists in the mid-twentieth century were promoting the so-called "presumption of atheism." At face value, this would appear to be the claim that in the absence of evidence for the existence of God, we should presume that God does not exist. Atheism is a sort of default position, and the theist bears a special burden of proof with regard to his belief that God exists.

So understood, such an alleged presumption is clearly mistaken. **For the assertion that "There is no God" is just as much a claim to knowledge as is the assertion that "There is a God." Therefore, the former assertion requires justification just as the latter does. It is the agnostic who makes no knowledge claim at all with respect to God's existence. He confesses that he doesn't know whether there is a God or whether there is no God.**

But when you look more closely at how protagonists of the presumption of atheism used the term "atheist," you discover that they were defining the word in a non-standard way, synonymous with "non-theist." So understood the term would encompass agnostics and traditional atheists, along with those who think the question meaningless (verificationists). As Antony Flew confesses,

the word 'atheist' has in the present context *to be construed in an unusual way*. Nowadays it is normally taken to mean someone who explicitly denies the existence . . . of God . . . But here it has to be understood not positively but negatively, with the originally Greek prefix 'a-' being read in this same way in 'atheist' as it customarily is in . . . words as 'amoral' . . . . In this interpretation an atheist becomes not someone who positively asserts the non-existence of God, but someone who is simply not a theist. (*A Companion to Philosophy of Religion,* ed. Philip Quinn and Charles Taliaferro [Oxford: Blackwell, 1997], s.v. "The Presumption of Atheism," by Antony Flew)

Such a re-definition of the word "atheist" trivializes the claim of the presumption of atheism, for on this definition, atheism ceases to be a view. It is merely a psychological state which is shared by people who hold various views or no view at all. On this re-definition, even babies, who hold no opinion at all on the matter, count as atheists! In fact, our

> **cat Muff counts as an atheist on this definition, since she has (to my knowledge) no belief in God.**
>
> **One would still require justification in order to know either that God exists or that He does not exist, which is the question we're really interested in.**
>
> So why, you might wonder, would atheists be anxious to so trivialize their position? Here I agree with you that a deceptive game is being played by many atheists. If atheism is taken to be a view, namely the view that there is no God, then atheists must shoulder their share of the burden of proof to support this view. But many atheists admit freely that they cannot sustain such a burden of proof. So they try to shirk their epistemic responsibility by re-defining atheism so that it is no longer a view but just a psychological condition which as such makes no assertions. They are really closet agnostics who want to claim the mantle of atheism without shouldering its responsibilities.
>
> This is disingenuous and still leaves us asking, "So is there a God or not?"

So there you have it. We are interested in what both sides *know* and *what reasons and evidence they have to justify their claim to know.* We are interested in talking to people who make claims *about objective reality*, not about themselves, and who then go on to give reasons and evidence to support their claims *about objective reality*. There are atheists out there that do make an objective claim that God does not exist, and then support that claim with arguments and evidence. Those are good atheists, and we should engage in rational conversations with them. But clearly there are some atheists who are not like that. How should we deal with these "subjective atheists"?

Dealing with subjective atheists

How should theists respond to people who just want to talk about their psychological state? Well, my advice is to avoid them. They are approaching religion irrationally and non-cognitively – like the person who enters a physics class and says "I lack a belief in the gravitational force!". When you engage in serious discussions with people about God's existence, you only care about what people know and what they can show to be true. We don't care about a person's psychology.

Dealing with persistent subjective atheists

What happens when you explain all of that to a subjective atheist who continues to insist that you listen to them repeat over and over "I lack a belief in God, I lack a belief in God"? What if you tell them to make the claim that God does not exist, and then support it with arguments and evidence, but instead they keep leaving comments on your blog telling you again and again about their subjective state of mind: "I lack a belief in cupcakes! I lack a belief in icebergs!" What if they keep e-mailing you and threatening to expose you on Twitter for refusing to listen to them, or denounce you via skywriting: "Wintery Knight won't listen to me! I lack a belief in crickets!". I think at this point you have to give up and stop talking to such a person.

And that's why I moderate and filter comments on this blog. There are uneducated people out there with access to the Internet who want attention, but I am not obligated to give it to them. And neither are you. We are not obligated to listen to abusive people who don't *know* what they are talking about. I do post comments from objective atheists who make *factual* claims about the objective world, and who support those claims with *arguments and evidence*. I am not obligated to post comments from people who refuse to make objective claims or who refuse to support objective claims with arguments and evidence. And I'm not obligated to engage in discussions with them, either.

Even alpha male bad boys are disappointed by the Sexual Revolution

May 14, 2018 | by Wintery Knight | Link | Original Link

Marriage stability vs sexual partners,(Teachman et al. JAMF, August 2010)

Thanks to radical feminism's dominance in the culture, young unmarried women are very disinterested in marriage. Many of them see marriage as boring, and children as restrictive of their freedom. Instead, young women want to make sure to use their young and fertile years to pack in as much fun and thrills as they can. So what sort of men do they choose to pursue?

This article from the UK Daily Mail illustrates the problem:

> Women are often said to be the less shallow sex when it comes to what they find attractive.
>
> But a study of an online gallery of 'hot male commuters' has found that the fairer sex are just as superficial as men – as they find muscles and money the sexiest male attributes.
>
> The study based its findings on a website called Tube Crush, where women and gay men secretly take pictures of the capital's attractive men on the London Underground.
>
> […]While the authors acknowledge that gay men also use the site, they say that female responses to the 'hot commuters' suggest females have not moved on in what they find attractive beyond 'money and strength' – despite their

> advancement in society.
>
> Signs that the man is wealthy – such as a flashy watch or an expensive suit – were considered highly attractive by site users, as were powerful arm and chest muscles.
>
> But the classic image of the 'new man' – a man holding a baby – or skinnier or nerdier types of man were far less represented.

Now, in my experience, men who are getting a lot of attention because of their looks are probably the least likely to be faithful, much less commit. If the man is putting in a lot of effort into his appearance (as opposed to his education, his career, his spiritual life, etc.), he's probably doing it in order to get sexual access to a lot of women. He's not looking to commit, in short. He's looking to play the field. But it turns out that even the men who are successful at this are not happy with their success.

Consider this article from the UK Sun: (H/T Sarah)

> It sounds like every young man's idea of heaven: endless sex with a constant stream of gorgeous, up-for-it women who don't even expect a pizza date before, or a conversation afterwards – and all via a tap on your smartphone.
>
> Yet incredibly, a new generation of handsome, successful – and sexually prolific – Tinder-weary lads are claiming sex with hundreds of one-night stands is leaving them burned out, bored – and lonely.
>
> Despite bedding a bevvie of beauties, they claim they're desperate for lasting romance – and broody for children with a new wave of sexually-liberated young women who just don't want to commit.
>
> I got to know a group of these seemingly lucky men after I co-wrote the UK's biggest ever academic study into more than 2,000 British men, released this week.
>
> Called the Harry's Masculinity Report, the survey was conducted by University College London and Harry's, a new men's grooming company that's just launched in the UK.
>
> Harry's wanted to shatter the myths around masculinity, and discover what truly made modern men tick in 2017.

Here are some details:

> One of these was Simone Ippolito, 25, from Bournemouth, a self-confessed Tinder "player" for two years.
>
> The salesman and part-time model claimed: "When I first got Tinder two years ago, it was heaven. In three months I got 300 matches. They were coming so fast I couldn't keep up.
>
> "People on Tinder are only there for sex. I've been on 200 dates, and I get a result 99 per cent of the time.

> “Getting sex is too easy. You get bored of it. Tinder takes all the pleasure out of flirting. It’s not fun anymore. Tinder is literally two glasses of wine then back home for sex. There is no emotion.
>
> “It is boring, empty and lonely. You can’t have a nice conversation after mechanical sex. It’s just sex and go. Now I just want to stop it and settle down”.
>
> Talking to other single men, it rapidly became clear that while dating apps like Tinder means it’s never been easier to get sex, it’s never been harder to fall in love.
>
> This sentiment was echoed by Gary Barnett, 34, social media manager from Brighton, who’s been single for three months.
>
> “For the first time ever in human history, sex is on tap,” he says.
>
> “Nine times out of ten you don’t even have to go out on a date. If a girl likes your photos, they just come round.
>
> “If you’re half attractive you’re bombarded with offers. You can go on Tinder dates every single night of the week.
>
> “The social interaction is totally lacking. You can have sex and never talk again.
>
> “They always ask the same three questions. ‘Hi how are you?’ ‘how’s your week been?’ or ‘I love your beard/tattoos’. That’s literally code for ‘do you want to f***?’
>
> “That was really good for the first year. I filled my boots. After 50 Tinder dates, including 20 in the last two months with no sign of any ‘keepers,’ I’m over it. You get to the point where you can’t be bothered to do it anymore”.

Ah yes, the beard and tattoos. These are apparently very important for attracting women today. But it doesn’t work to attract a serious marriage-minded women to settle down with. Men are designed to want relationships with women. But not every woman is capable of having a relationship with a man. Especially after so many women have been taught by feminism not to prefer commitment-minded men who can perform the traditional male roles: protecting, providing and leading on moral and spiritual issues. Beards, muscles, shiny watches and tattoos might attract women, but it doesn’t make those women marriage-ready. In fact, the sort of women who are impressed with appearances are probably looking for fun. They are definitely NOT going to be comfortable with relationship obligations to a husband or children. To build a capacity for self-sacrificial commitment, you don’t practice having fun and thrills. You practice self-sacrificial commitment. You work on developing a worldview that makes self-sacrificial commitment rational, even when it goes against your self-interest. A worldview like Christianity, for example.

We already knew that women are unhappy with the dating scene today. And now we know that even the men who are “succeeding” are unhappy with it too, in the long term. The Sexual Revolution has messed up love and commitment for everyone.

Should we expect to know what God’s reason is for allowing evil and suffering?

May 15, 2018 | by Wintery Knight | Link | Original Link

Lets take a closer look at a puzzle

Here is an article by Steven Cowan about the problems of evil and suffering.

Intro:

> The problem of evil is no doubt the most serious challenge to belief in God. Even religious believers find it troubling that evil exists in the world—and so much evil! It is puzzling, to say the least, that an all-powerful, absolutely good being would allow evil to exist in his creation. And yet it does. Evil and suffering exist and they are often overwhelming in their magnitude.

Now let’s find out what a noseeum is, and how it relates to the existence of evil and suffering:

> However, perhaps God’s existence is incompatible with a certain kind of evil that exists. For example, the atheist William Rowe has argued that God’s existence is inconsistent with pointless or gratuitous evil. By “pointless evil,” Rowe means evil that does not and cannot serve a greater good. And Rowe believes that there is such pointless evil in the world. He thus concludes that God does not exist. Rowe’s argument may be simply stated as follows:
>
> 1. If God exists, there would be no pointless evil.
> 2. There is pointless evil.
> 3. Therefore, God does not exist.
>
> […]But, is there pointless evil in the world? Rowe thinks there is. To show that

> there is pointless evil, Rowe introduces what he calls the "noseeum inference." Like the pesty little bugs that some readers may be familiar with, a "noseeum" is something that you cannot see—it is a "no-see-um." And a noseeum inference is a conclusion drawn on the basis of what one does not see. The basic structure of all noseeum inferences looks like this:
>
> 1. I cannot see an x.
> 2. Therefore, there probably is no x.
>
> We all make noseeum inferences everyday of our lives. Every time I go to cross a street, I look both ways and I step out into the street only after I "no-see-um" a car coming.
>
> […]Rowe applies this kind of noseeum reasoning to God and evil. Rowe suggests that if we cannot see a reason for a particular instance of evil, then there is probably not a reason. Suppose we hear about a very young child who is tortured to death to amuse some psychotic person. We think about this event and we examine all the circumstances surrounding it. No matter how hard we try, we cannot see any good reason why this child had to suffer the way she did. Since we cannot see a reason why God would allow this child to suffer, there probably is not a good reason—the child's suffering was pointless. Of course, Rowe would be quick to point out that he is not speaking merely hypothetically. There are cases like this in the news every day—real-life cases in which we shake our heads in frustration, wondering why God would allow such a thing.
>
> Is Rowe correct in his conclusion? Do such examples prove that there is pointless evil in the world? I don't think so. To see why, we must recognize that noseeum inferences are not all created equal. Some noseeum inferences, as we have seen, are reasonable and appropriate. But, many are not. Suppose I look up at the night sky at the star Deneb and I do not see a planet orbiting that star. Would it be reasonable for me to conclude that there is no planet orbiting Deneb? Of course not. Suppose that using the best telescopes and other imaging equipment presently available, I still cannot see a planet around Deneb. I would still be unjustified in concluding that there was no such planet.

In that example, the planet is the noseeum. Just because you look really hard, you can't be confident that the planet is not there. And similarly with the problem of evil and suffering, looking really hard and finding no reason does not mean that there is no reason. It just means that you are not in a good position to see the reason. You don't know enough to to be sure that there is no reason, because of your limitations as a human being.

To *know* that any given instance of evil or suffering is *gratuitous/pointless* requires a high level of knowledge. How much knowledge? Well, consider this paper by the late William Alston of Syracuse University, who lists six problems with the idea that humans can *know* that any particular instance of evil and suffering is gratuitous. (You can get the PDF here)

According to the paper, human beings just do not have the capability to know for certain that God has NO morally sufficient reason for allowing any particular instance of evil and/or suffering. God's morally sufficient reason is a noseeum. To know for sure that there is no reason, we would need to have more knowledge than we do.

Also, remember that on the Christian view, the good aim that God has is NOT to make humans have happy feelings in this life, regardless of their knowledge, wisdom and character. That's what atheists think, though. They think that God, if he exists, is obligated to make them feel happy all the time. They don't think that God's goal is being actively involved in forming their knowledge, wisdom and character. God has a purpose – to work in the world so that everyone who can freely respond to him will respond to him. The Bible says that allowing pain and suffering is one of the ways that he gets that group of people who are willing to respond to respond to him – FREELY. To be able to claim that evil is gratuitous, the atheist has to show that God can achieve his goal of saving all the people he wants to save *while permitting less suffering in the world.* And that is a very difficult thing for an atheist to show, given our human cognitive limitations.

The *best* place to learn more about no-see-ums is in this excellent lecture by Biola University professor Doug Geivett.

How long do people wait to be treated in a single-payer health care system?

May 16, 2018 | by Wintery Knight | Link | Original Link

Instead of talking about single payer health care in the abstract ("wouldn't it be nice if health care were free?"), let's discuss a concrete case of a single payer health care system. Canada's health care system is a pure government-funded system. Canadian residents pay money into the system via taxation. And when they get sick, they go into a government-run hospital and ask for government-run health care. The idea of single payer health care makes a lot of politicians feel good, and it draws applause when they talk about it in the abstract. But forget the abstract. How well does it work in reality?

Here's an article from a Canadian health care policy expert, Sally C. Pipes.

She writes:

> The Canadian single-payer regime subjects thousands of patients to life-threatening delays for treatment.
>
> Our northern neighbors' wait times grow longer with each passing year. According to the Fraser Institute, a Canadian think tank, the typical patient in need of specialist treatment last year waited 21.2 weeks after referral from a general practitioner — a record high. In 1993, the median wait time was less than half that figure — 9.3 weeks.
>
> In British Columbia, the median wait is even longer — a grand total of 26.5 weeks from referral from a general practitioner to receipt of treatment from a specialist. That's more than half a year.
>
> Lengthy delays are a hallmark of single-payer. Demand for care is essentially limitless when someone else is paying the bill.
>
> But the provincial and federal governments in Canada don't have limitless resources. So they typically set a global budget for care. Doctors and hospitals can only provide so much care before their costs exceed their revenue from the government. And they can only afford to keep a limited amount of equipment operational, such as MRI machines or CT scanners.
>
> Demand for care inevitably outstrips supply. So the government has to establish wait lists.
>
> Long waits aren't merely inconvenient; they're dangerous. Consider the case of Walid Khalfallah, a British Columbian boy with severe scoliosis profiled by the Vancouver Sun in 2012. The Sun reported that he faced a three-year wait for spinal surgery, even though medical guidelines recommended a maximum wait of three months.
>
> Delays can even prove fatal. Long waits have contributed to the deaths of more than 44,000 Canadian women in the past two decades, according to a Fraser

> Institute study.
>
> Many patients would gladly pay extra to receive care more quickly. But British Columbian law makes it effectively impossible to do so.

The hardest thing to explain to Americans who are only familiar with private insurance is that if the government tells you no in a single-payer system, your only option is to take whatever money you have left (after being taxed for the single-payer system) and go outside the country. A lot of Canadian socialist politicians do exactly that, when they need reliable health care. Like Bernie Sanders, they say one thing to their naive followers, and do something else in their private lives.

So how good is American health care? Maybe Canadians are waiting in line because their health care is so much better than ours.

American health care

One of the best health care policy experts writing today is Avik Roy, who writes for Forbes magazine.

Here is a recent column, which I think is useful for helping us all get better at debating health care policy.

Excerpt:

> It's one of the most oft-repeated justifications for socialized medicine: Americans spend more money than other developed countries on health care, but don't live as long. If we would just hop on the European health-care bandwagon, we'd live longer and healthier lives. The only problem is it's not true.
>
> […]If you really want to measure health outcomes, the best way to do it is at the point of medical intervention. If you have a heart attack, how long do you live in the U.S. vs. another country? If you're diagnosed with breast cancer? In 2008, a group of investigators conducted a worldwide study of cancer survival rates, called CONCORD. They looked at 5-year survival rates for breast cancer, colon and rectal cancer, and prostate cancer. I compiled their data for the U.S., Canada, Australia, Japan, and western Europe. Guess who came out number one?

Here is the raw data:

5-Year Relative Survival Rates in Various Cancers, From the CONCORD Study (2008)

Country	Breast Women	Colorectal Men	Colorectal Women	Prostate	Average
United States	83.9%	59.1%	60.2%	91.9%	**73.8%**
Canada	82.5%	55.3%	58.9%	85.1%	**70.5%**
Australia	80.7%	56.7%	58.2%	77.4%	**68.3%**
Austria	74.9%	52.7%	55.1%	86.1%	**67.2%**
Germany	75.5%	50.1%	55.0%	76.4%	**64.3%**
Sweden	82.0%	52.8%	56.2%	66.0%	**64.3%**
Netherlands	77.6%	53.6%	55.1%	69.5%	**64.0%**
Iceland	79.0%	49.5%	54.0%	69.7%	**63.1%**
Japan	81.6%	61.1%	57.3%	50.4%	**62.6%**
Finland	80.2%	52.5%	54.0%	62.9%	**62.4%**
Italy	79.5%	50.7%	52.7%	65.4%	**62.1%**
Norway	76.3%	51.1%	55.3%	63.0%	**61.4%**
Spain	77.7%	52.5%	54.7%	60.5%	**61.4%**
Ireland	69.6%	46.0%	50.0%	62.8%	**57.1%**
Portugal	72.2%	46.5%	44.7%	47.7%	**52.8%**
UK	69.7%	42.3%	44.7%	51.1%	**52.0%**
Denmark	73.6%	44.2%	47.7%	38.4%	**51.0%**
Switzerland	76.0%	N/A	N/A	N/A	N/A

Health care outcomes by country and type of treatment
Click here to see the larger graph.

So, what explains this?

The article continues:

> Another point worth making is that people die for other reasons than health. For example, people die because of car accidents and violent crime. A few years back, Robert Ohsfeldt of Texas A&M and John Schneider of the University of Iowa asked the obvious question: what happens if you remove deaths from fatal injuries from the life expectancy tables? Among the 29 members of the OECD, the U.S. vaults from 19th place to…you guessed it…first. Japan, on the same adjustment, drops from first to ninth.
>
> It's great that the Japanese eat more sushi than we do, and that they settle their arguments more peaceably. But these things don't have anything to do with socialized medicine.
>
> Finally, U.S. life-expectancy statistics are skewed by the fact that the U.S. doesn't have one health-care system, but three: Medicaid, Medicare, and private insurance. (A fourth, the Obamacare exchanges, is supposed to go into effect in 2014.) As I have noted in the past, health outcomes for those on government-sponsored insurance are worse than for those on private insurance.
>
> To my knowledge, no one has attempted to segregate U.S. life-expectancy figures by insurance status. But based on the data we have, it's highly likely that those on private insurance have the best life expectancy, with Medicare patients in the middle, and the uninsured and Medicaid at the bottom.

Certainly, the life expectancy in our 100% government-run health care system, the Veteran's Affairs health care system, is really, really low. They just kill the patients, give themselves bonuses, and then cover-up their failures when the investigators come.

I know that my readers who like to dig deep into economics and policy will love the links at the bottom of the article:

> For further reading on the topic of life expectancy, here are some

> recommendations. Harvard economist Greg Mankiw discusses some of the confounding factors with life expectancy statistics, citing this NBER study by June and Dave O'Neill comparing the U.S. and Canada. (Mankiw calls the misuse of U.S. life expectancy stats "schlocky.") Chicago economist Gary Becker makes note of the CONCORD study in this blog post. In 2009, Sam Preston and Jessica Ho of the University of Pennsylvania published a lengthy analysis of life expectancy statistics, concluding that "the low longevity ranking of the United States is not likely to be a result of a poorly functioning health care system."

If we're going to discuss health care, then let's discuss facts. We shouldn't be picking a health care system from the campaign speeches of politicians who tell us that we can keep our doctor, and keep our health plan, and our premiums will go down. We tried electing a charismatic deceiver in 2008, and it didn't work out. We lost our doctors, lost our health plans, and our premiums went up enormously. We can do better than single-payer health care. We can do better than socialism.

How brief was the period in which the Cambrian phyla suddenly appeared?

May 17, 2018 | by Wintery Knight | Link | Original Link

The Cambrian explosion refers to the sudden appearance of new body plans in the fossil record. ID proponents think that the period is between 5-10 million years at the most. Naturalists want to stretch out the period in which the body plans appear to tens of millions of years. The two sides can't both be right. What's the truth?

Evolution News has the answer.

Excerpt:

> To establish the length of the most explosive period of innovation within the Cambrian explosion itself, Meyer cites the work of MIT geochronologist Samuel Bowring and his colleagues as well the work of another group led by Smithsonian paleontologist Douglas Erwin. The Bowring-led study showed that (in their words) "the main period of **exponential diversification**" within the Cambrian lasted "only 5-6 million years" (emphasis added). Meyer explains:

> An analysis by MIT geochronologist Samuel Bowring has shown that the main pulse of Cambrian morphological innovation occurred in a sedimentary sequence spanning no more than 6 million years. Yet during this time representatives of at least sixteen completely novel phyla and about thirty classes first appeared in the rock record. In a more recent paper using a slightly different dating scheme, Douglas Erwin and colleagues similarly show that thirteen new phyla appear in a roughly 6-million-year window. (p. 73)

> […][T]ake a look first at the following figure that Bowring and his colleagues included in their definitive 1993 article, published in the journal Science. They use radiometric methods to date the different stages of the Cambrian period, including the crucial Tommotian and Atdabanian stages in which the greatest number of new animal phyla and classes arise. Note that the so-called Manykaian stage of the Cambrian period lasts about 10-14 million years. Note also that the main pulse of morphological innovation didn't begin during this stage but rather during the Tommotian and Atdabanian — a period that they describe as taking between "5 to 10 million years," and in a more detailed passage as taking about 5-6 million years.

> […]In the figure above, the Tommotian and Atdabanian stages of the Cambrian period together span only about 5 million years, starting at about 530 and ending about 525 million years ago. Bowring's figure also depicts the total number of classes and orders present at any given time during the Cambrian period. The biggest increases in morphological innovation occur during the Tommotian and Atdabanian stages. Indeed, during this period the number of known orders nearly

> quadruples. Moreover, Bowring and his colleagues also make clear that this period corresponds to the main pulse of Cambrian morphological innovation as measured by the number of new phyla and classes that first appear. They note that, while a few groups of animals do arise in the earliest Manykaian stage of the Cambrian, the most rapid period of "exponential increase of diversification," corresponding to the Tommotian and Atdabanian stages, "lasted only 5 to 6 m.y."

You can see the figure they are reference in the Evolution News article.

Also, check out these clips that explain the Cambrian explosion:

Part 1:

Part 2:

The first clip features James Valentine, a professor of biology at the University of California who just co-authored a new book on the Cambrian explosion and *is not* a proponent of intelligent design.

The consensus among scientists regarding the period of time *in which the new body plans appear* is 5-6 million years. Biologically speaking, that's a blink of an eye. You aren't going that kind of complexity and innovation in such a short period of time any more than you can expect to win the lottery by buying 5-6 million tickets when the odds of winning are 1 in a googol (10 to the 100th power – 1, followed by 100 zeroes). You don't have enough lottery tickets to make winning the lottery likely. Similarly, 5-6 million years is not enough time for naturalistic mechanisms to code brand new body plans from scratch. It would be like trying to research and write a Ph.D thesis during a single lunch hour. It's just not enough time to produce the amount of information that's required.

Democrat Nancy Pelosi joins the mainstream media in defending MS-13 gang from Trump

May 18, 2018 | by Wintery Knight | Link | Original Link

By now, everyone has heard that Donald Trump, in answering a question about MS-13 from Fresno, CA police, called MS-13 gang members "animals". The Democrats and their allies in the mainstream media disagreed with characterizing MS-13 gangsters as animals. Let's see a few reactions from the Democrats and their allies in the mainstream media, then we'll see what MS-13 does.

First, the facts, from the non-partisan Real Clear Politics:

> House Democratic Leader Nancy Pelosi responded to President Trump calling violent MS-13 gang members "animals," at her weekly press briefing Thursday morning. Pelosi says Trump's comments as reported are a new low, and make her wonder if the president believes "we are all God's children" or not.
>
> "When the president of the United States says about undocumented immigrants, 'these are not people, these are animals,' you have to wonder, does he not believe in the spark of divinity? In the dignity and worth of every person? 'These are not people, these are animals,' from the president of the United States."
>
> "Every day you think you've seen it all, along comes another manifestation of why their policies are so inhumane," she said.
>
> "Calling people animals is not a good thing," she said, before ending the news conference and walking out.

Even radically leftist CNN makes it clear that Trump was talking about MS-13:

CNN agrees: Trump was calling MS-13 "animals"

But that makes no difference to Nancy Pelosi. She wants to open the borders to let them in, because they have a "divine spark". Pro-amnesty groups joined Pelosi in denouncing Trump's condemnation of MS-13. Liberal journalists from National Affairs and Huffington Post and Business Insider and CNBC and MSNBC and Think Progress and the New York Times and NBC News (Andrea Mitchell) the Washington Post (Jennifer Rubin) and CBS News defended MS-13. (See this Daily Wire article for all the tweets from those sources)

Here's MSNBC anchor Lawrence O'Donnell:

Trump is Hitler, says the mainstream news media
Those tweets are still up! This is not a misunderstanding – they know Trump was talking about MS-13.

So what does MS-13 do, exactly?

Beating little girls with baseball bats: (ABC News)

> The source explained Ayala-Rivera, a high-ranking local MS-13 leader who goes by the nickname "Noctorno," pimps out a number of underage girls from a number of states. On Aug. 1, 2017, the source said Pena-Rodriguez, Romero-Rivera, Ayala-Rivera, plus two other men, used a solid bat to beat the girl behind the single-family home along Valley View Avenue. The men reportedly took turns whacking the 15-year-old girl's flailing body — 28 swings in total. Her injuries included an "indented" buttocks, discolored arms and legs, and visible bleeding from the neck down.
>
> A second unnamed source would later tell cops that Ayala-Rivera ('Noctorno') ordered the backyard clubbing because he felt the victim was "not doing a good job as an MS-13 prostitute." The same source revealed Ayala-Rivera ('Noctorno') raked in a lot of money by trafficking teenage girls to men of all ages.
>
> […]According to U.S. Immigration and Customs Enforcement (ICE), Romero-Rivera is in the United States illegally.

Gang-raping little girls: (Washington Post)

> The petite young woman was a 16-year-old Laurel High School student three years ago when she decided to skip classes one day to join two other girls at a party at a Hyattsville apartment.
>
> At the party, she said, Oscar Ramos "Casper" Velasquez took her into a bedroom, where he kissed her and told her that if she didn't have sex with him, as many as 15 other teenagers and young men at the gathering would have sex with her.
>
> When she resisted, two more young men entered the room, the woman told jurors yesterday in federal court. One man threw her on the bed and choked her, the other held down her arms and "Oscar pulled out a gun," she testified.
>
> "He put it to my head, and he said if I didn't shut up, he was going to kill me," the woman told jurors.
>
> Eight men raped her, the 19-year-old woman said. Two assaulted her simultaneously. Outside the room, she said, she heard one man say, "Five minutes each."

Murdering little girls: (ABC News)

> An MS-13 gang member has been convicted in the 2001 murder of a 13-year-old Whittier girl.
>
> On June 28, 2001, the naked body of Jacqueline Piazza was found in Elysian Park.

> She had been shot twice in the head, a statement from the district attorney's office said.
>
> Her murder remained unsolved for nearly a decade, until the Los Angeles Police Department uncovered new information and presented it to the district attorney's office, the statement said. Four men were charged in the crime in 2012.
>
> Prosecutors said the men kidnapped the victim the night before she was found and drove her to a remote area of the park, where they allegedly sexually assaulted and killed her.
>
> On Thursday, a jury found Jorge Palacios, 39, guilty of one count of first-degree murder and one count of kidnapping to commit rape.

Sex-trafficking little girls: (Washington Post)

> The 12-year-old runaway was desperate — she was out of money and had no place to stay. So she turned to the one man her friends said could help: a top MS-13 gang member.
>
> The day after they met at a party, the man drove the girl home, let her take a shower and gave her some fresh clothes. Then he told her, "We're going to work."
>
> At first, the girl didn't understand what the man meant. But everything became horribly clear after they pulled into a pharmacy parking lot and she watched another gang member return to the car with a box of condoms. The next stop was her first customer.
>
> For three months, the girl was prostituted almost daily in dingy apartments, motels and even at an auto repair shop.
>
> […]The 12-year-old was one of dozens of prostitutes, many juveniles, being sold for sex in the Washington area by members of Mara Salvatrucha, also known as MS-13, the region's largest and most dangerous street gang.

Lots more here.

Democrats and their mainstream media allies support sanctuary cities for MS-13. Anyone who disagrees is "Hitler".

Watch Nancy Pelosi defend MS-13 in her own words:

Leftists are generous with other people's money and other people's lives. It's not the rich Democrat elites and their rich allies in the mainstream media who suffer from MS-13. Nancy Pelosi has a net worth of nearly $30 million. The Democrat Party elites and the mainstream media talking heads live in gated communities, and have security systems and armed guards. They're safe from MS-13. They little girls who run away from home don't matter to them.

William Lane Craig lectures on the moral argument at Georgia Tech

May 19, 2018 | by Wintery Knight | Link | Original Link

Making sense of the meaning of atheism

This video has 3 parts, as well as questions and answers in individual clips.

For those who cannot watch the video, you can read this essay by Dr. Craig which covers exactly the same ground as the video. The essay is for Christians already familiar with basic apologetics.

Part 1 of 3:

Part 2 of 3:

Part 2 of 3:

Here's a quick couple of quotes from the essay for those who cannot watch:

> If there is no God, then any ground for regarding the herd morality evolved by homo sapiens as objectively true seems to have been removed. After all, what is so special about human beings? They are just accidental by-products of nature which have evolved relatively recently on an infinitesimal speck of dust lost somewhere in a hostile and mindless universe and which are doomed to perish individually and collectively in a relatively short time. Some action, say, incest, may not be biologically or socially advantageous and so in the course of human evolution has become taboo; but there is on the atheistic view nothing really wrong about committing incest. If, as Kurtz states, "The moral principles that govern our behavior are rooted in habit and custom, feeling and fashion,"[5] then the non-conformist who chooses to flout the herd morality is doing nothing more serious than acting unfashionably.
>
> The objective worthlessness of human beings on a naturalistic world view is

> underscored by two implications of that world view: materialism and determinism. Naturalists are typically materialists or physicalists, who regard man as a purely animal organism. But if man has no immaterial aspect to his being (call it soul or mind or what have you), then he is not qualitatively different from other animal species. For him to regard human morality as objective is to fall into the trap of specie-ism. On a materialistic anthropology there is no reason to think that human beings are objectively more valuable than rats. Secondly, if there is no mind distinct from the brain, then everything we think and do is determined by the input of our five senses and our genetic make-up. There is no personal agent who freely decides to do something. But without freedom, none of our choices is morally significant. They are like the jerks of a puppet's limbs, controlled by the strings of sensory input and physical constitution. And what moral value does a puppet or its movements have?
>
> […]Moreover, if atheism is true, there is no moral accountability for one's actions. Even if there were objective moral values and duties under naturalism, they are irrelevant because there is no moral accountability. If life ends at the grave, it makes no difference whether one lives as a Stalin or as a saint. As the Russian writer Fyodor Dostoyevsky rightly said: "If there is no immortality, then all things are permitted."

If you want a much shorter, slicker version of this argument to share, Reasonable Faith has produced this nice 5-minute video that you can tweet or share on your Facebook page or whatever:

The moral argument is the easiest argument in the world to discuss with non-Christians, as everyone has to have an answer to questions like "what makes humans valuable?" and "why should I do the right thing when it goes against my self-interest?" and "will evildoers who escape justice in this life be punished when they die?" and "do humans have free will to make moral choices?" These are interesting questions, and people can just give their opinion and then think about it as they discuss it.

If you want to show this lecture and Q&A to your apologetics group, you can find the DVD here.

You can also read a debate transcript where Dr. Craig puts his ideas to the test, against Dr. Richard Taylor. I found this debate very helpful for answering the question that everyone should be able to answer: "why should I be moral?"

Making sense of evil and suffering within a Christian worldview

May 20, 2018 | by Wintery Knight | Link | Original Link

One thing I've noticed in talking to atheists who grew up in Christian homes is that they often leave their Christian worldview behind because of a disappointment with God. For some reason, they get this idea that God is our cosmic butler. We can do whatever we want in order to be happy, and if we want any help in this, then we just ring for him. When we encounter disappointment, our tendency is to just leave God behind.

Paul Copan explains the high points of the problems of evil and suffering in 17 minutes. (H/T Apologetics 315)

The MP3 file is here.

The video is here:

Topics:

- the question itself reveals that we are moral beings
- the problem of evil is the great interrupter of human well-being
- every philosophy of life has to address this question
- is God required to give us a life that is easy and comfortable?
- evil is a departure from good, i.e. – the way things ought to be
- a way things ought to be implies a plan for what ought to be
- human evil implies a plan for the way we ought to be
- free creatures have the ability to deviate from the plan
- where does this plan for the universe and us come from?
- how can there be a way we ought to be come from?
- evil is the flip side of good so where does good come from?
- God's own moral nature is the standard of good and evil
- where does evil from natural disasters come from?
- how dangerous natural phenomena preserve Earth's habitability
- there is a benefit from tectonic activity
- similarly, God lets humans freely choose knowing harm may result
- people are free to try to find meaning in something other than God
- God is able to use negative things to bring about positive results
- e.g. – when good people suffer, they can comfort and care for others
- can people be good enough on their own without God?

I do think it's worth thinking about whether the New Testament portrays God as our cosmic butler, just waiting on us hand and foot so that we can be happy. Personally, I think you'd have to be crazy to get that impression of God from the Bible. Especially from the life of Jesus, who suffers in order to do the will of his Father. Wouldn't it be funny if atheists were disbelieving in a God of their own making? Suffering in the pursuit of

goodness has always been the center of the Christian life. I'm not sure where people get this idea that God's job is to make us happy, according to our own desires. Seems kind of shallow. Certainly not Biblical. Do people even read the Bible any more to find out what God is really like? Maybe that's the problem.

If you want to read two *good* books for beginners on Christian Apologetics that cover a range of intermediate issues, then pick up "Passion Conviction" and the companion "Contending With Christianity's Critics". Awesome, awesome resources. The Kindle editions can often be had for $3 each on Amazon.

Trump will cut $60 million of taxpayer-funding of Planned Parenthood

May 21, 2018 | by Wintery Knight | Link | Original Link

Barack Obama speaking to Planned Parenthood

The money will instead be given to women's health care providers who do not perform abortions. I looked around to find an article that didn't just report the decision, but also what PP would do about it, and how that was likely to work out for them. In cases like this, it really matters how the policy is phrased. That determines whether it can stand up to a court challenge.

Life News reports:

> The Trump administration is announcing new regulations today to partially defund Planned Parenthood and other abortion businesses of tens of millions of tax dollars. This is the second time Trump has taken steps to revoke taxpayer funding for the nation's biggest abortion business — after yanking taxpayer from from International Planned Parenthood during his first week in office.
>
> The United States spends about $260 million in Title X funds annually for family planning for low-income individuals, and Planned Parenthood is a huge recipient of those funds, as much as $50-$60 million annually.
>
> But under the proposed "Protect Life Rule," Planned Parenthood and other abortion businesses would not receive any of those tax dollars unless they completely separate their abortion business from their taxpayer-funded services, The Washington Examiner reports. That would mean housing their

> family planning services elsewhere — potentially in separate buildings and coordinated by separate staff and organizations from its abortion enterprise.
>
> "This proposal does not necessarily defund Planned Parenthood, as long as they're willing to disentangle taxpayer funds from abortion as a method of family planning, which is required by the Title X law," a Trump administration official said. "Any grantees that perform, support, or refer for abortion have a choice – disentangle themselves from abortion or fund their activities with privately raised funds."
>
> Of course, Planned Parenthood is unwilling to do so. Abortion is its primary focus, and it already is threatening a lawsuit to stop the defunding. However, the proposal is modeled after similar Reagan administration rules that the U.S. Supreme Court upheld in Rust v. Sullivan in 1991.

The Life News article also had some helpful paragraphs about how this new policy builds on the previous pro-life policies of the Trump administration:

> The Trump administration has cut several other streams of funding to Planned Parenthood as well. Soon after Trump took office, he signed the Mexico City Policy to prevent the funding of groups that promote or perform abortions overseas. This includes the International Planned Parenthood Federation, which received tax dollars under the Obama administration.
>
> In addition, in 2017, the Trump administration cut millions of dollars in grants to Planned Parenthood through the failed Teen Pregnancy Prevention Program. HHS spokesman Mark Vafiades told the New York Times last year that there is very little evidence that the program was successful. However, the abortion chain recently filed a lawsuit challenging the cuts.
>
> Planned Parenthood is the largest abortion business in America, aborting approximately 320,000 unborn babies every year. Its most recent annual report showed a record income of $1.46 billion, with about half a billion dollars coming from taxpayers.

In addition to reversing the Obama administration's funding of abortion, the Trump administration is reversing the Obama administration's policy of forcing Christian organizations to provide health insurance coverage for abortion.

Life News reported on that, as well:

> A federal district court issued an order Tuesday that permanently prevents the federal government from enforcing the Obamacare abortion-pill mandate against four Christian universities in Oklahoma represented by Alliance Defending Freedom. The order also declares that the mandate violates the federal Religious Freedom Restoration Act.
>
> The Obama-era mandate forces employers, regardless of their religious or moral convictions, to provide abortion-inducing drugs, sterilization, and contraception

> through their health plans under threat of heavy penalties. The Department of Justice, under the Trump administration, abandoned its defense of the flawed mandate, which the Department of Health and Human Services implemented during the previous administration.
>
> “Religious organizations have the freedom to peacefully operate according to their beliefs without the threat of punishment by the government. Today’s order fully affirms that freedom and provides permanent protection from the mandate,” said ADF Senior Counsel Gregory S. Baylor.
>
> “These universities no longer have to fear being forced to pay fines for simply abiding by the Christian beliefs they teach and espouse, and they are no longer required to fill out forms authorizing coverage for abortion-inducing drugs,” Baylor explained. “The government has many other ways to ensure access to these drugs without forcing people of faith to violate their deepest convictions.”
>
> ADF attorneys represent Southern Nazarene University, Oklahoma Wesleyan University, Oklahoma Baptist University, and Mid-America Christian University, all of which specifically object to providing abortifacients.

I don’t think most Democrats realize just how pro-abortion the Obama administration was. But they should have been able to predict it from the multiple times that Obama voted for abortion born-alive infants when he was a state senator in Illinois. Although Trump’s record on abortion was mixed before the election, he’s been good at canceling out some of Obama’s pro-abortion policies. Good for him.

What is the fine-tuning argument for God's existence, and does the multiverse counter it?

May 22, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

One of the best arguments for the existence of a Creator and Designer of the universe is the cosmic fine-tuning argument. The argument argues that individual constants and quantities in nature cannot be much smaller or larger than they are, because it would remove the ability of the universe to support life of any kind. Dr. Michael Strauss, an experimental physicist, explains some examples of the fine-tuning in a recent post on his blog.

He writes:

> I liken the finely-tuned universe to a panel that controls the parameters of the universe with about 100 knobs that can be set to certain values. If you turn any knob just a little to the right or to the left the result is either a universe that is inhospitable to life or no universe at all.
>
> Consider the knob that controls the strength of the strong nuclear force that holds quarks inside the neutrons and protons and binds the nucleus of the atom together. If the strength were increased by 2%, the element hydrogen would be either non-existent or very rare. Without hydrogen there would be no water (H_2O) or stars that burn hydrogen as their nuclear fuel like our sun. Without hydrogen there would be no life. If the strength of the strong nuclear force were decreased by about 5%, then hydrogen would be the only element in the universe. That would simplify the periodic table and make Chemistry class very easy, but it would render life impossible.
>
> All known life in this universe is based on the element carbon, which is formed in

> the final stages of a star's life. The carbon you and I are made of is the result of the nuclear processes that occurred as previous stars ended their lives. One nice recent study showed that if the mass of the quarks that make up neutrons and protons were changed by just a few percent, then the process that makes carbon as stars die would be altered in such a way that there would not be sufficient carbon in the universe for life. The masses of the lightest sub-atomic quarks are the precise value that is required for carbon to form and for life to exist.

Regarding the multiverse, let me just quote from MIT physicist Alan Lightman, writing in Harper's magazine about the multiverse:

> The… conjecture that there are many other worlds… [T]here is no way they can prove this conjecture. That same uncertainty disturbs many physicists who are adjusting to the idea of the multiverse. Not only must we accept that basic properties of our universe are accidental and uncalculable. In addition, we must believe in the existence of many other universes. But we have no conceivable way of observing these other universes and cannot prove their existence. Thus, to explain what we see in the world and in our mental deductions, we must believe in what we cannot prove.
>
> Sound familiar? Theologians are accustomed to taking some beliefs on faith. Scientists are not. All we can do is hope that the same theories that predict the multiverse also produce many other predictions that we can test here in our own universe. But the other universes themselves will almost certainly remain a conjecture.

The multiverse is not pure nonsense, it is theoretically possible.But even if there were a multiverse, the generator that makes the universes itself would require fine-tuning, so the multiverse doesn't get rid of the problem. And, as Lightman indicates, we have no independent experimental evidence for the existence of the multiverse in any case. Atheists just have to take it on faith, and hope that their speculations will be proved right. Meanwhile, the fine-tuning is just as easily explained by postulating God, and we have independent evidence for God's existence, like the the origin of biological information, the sudden appearance of animal body plans, the argument from consciousness, and so on. Even if the naturalists could explain the fine-tuning, they would still have a lot of explaining to do. Theism (intelligent causation) is the simplest explanation for all of the things we learn from the progress of science.

It's very important to understand that if these values were any different, then it's not like we would bridges on our foreheads, or have green skin, or have pointy ears, etc. That's what science fiction teaches you. And many atheists form their view of science by watching science fiction entertainment. But the truth is that the consequences of changing these values are much more consequential: no stars, no planets, no hydrogen, no heavy elements, the universe re-collapses into a hot fireball. You're not going to have complex, embodied intelligent agents running around making moral decisions and

relating to God in a world like that.

Questions like the existence of God should be NOT decided by feelings and faith and superstitious nonsense. They ought to be decided by evidence. Specifically, scientific evidence. Everyone has to account for this scientific evidence for fine-tuning within their worldview, and they have to account for it in a way that is responsible and rational. Punting to the multiverse, without any evidence for it, is neither rational nor responsible. Holding out hope that the evidence we have now will all go away is neither rational nor responsible.

By the way, if you are looking for a good book on the cosmic fine-tuning, especially for evangelism and debating with atheists, you really need to get a copy of "A Fortunate Universe". Although it is from one of the most prestigious academic presses, it is pretty funny to read, and the main points are made clearly, even if you don't understand the science. Two astrophysicists wrote it – one who believes that God is the best explanation of the fine-tuning, and one who doesn't. I really think that Christians need to get used to the idea that evangelism can be pretty easy, so long as you are arguing from peer-reviewed facts. When you get a good book on evidence for God that is not in dispute, then you are invincible. Everybody ought to believe in God in a universe with this much overt scientific evidence spilling out everywhere. Whether this Creator and Designer is the God of the Bible, who visited us as Jesus of Nazareth, takes more work to establish. Working through the emotional objections people have to God, and coaching them to take on the difficulties of living out a authentic Christian life (very unpopular!), is even harder.

What happens if young people stop caring about truth?

May 23, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

I noticed that young people are often unwilling to accept anything as true, especially when it interferes with their desire to seek happiness through an anything-goes sexuality. Often, opposition to abortion and/or homosexuality is an immediate deal-breaker. Nothing can be true if it contradicts the Sexual Revolution, including abortion and homosexuality.

Sean McDowell interviewed Abdu Murray about this problem.

Excerpt:

> **SEAN MCDOWELL:** ***Why did you write a book called "Saving Truth"? What makes you think truth needs saving?***
>
> ABDU MURRAY: Thanks for the opportunity to share about the book, Sean. The title is meant to be a double-entendre. In and of itself, truth doesn't need saving but it does need to be saved in the sense that we've lost our emphasis on it as a culture. We're in a "post-truth" society, which elevates personal preferences and feelings over facts and truth. We don't deny that truth exists, we just subordinate it to our preferences. We think that this will lead to freedom and human dignity and flourishing. But it won't. It will lead to chaos because truth no longer serves as the standard by which to judge human preferences and opinions. That's why we're seeing such vilification of "them." Whoever disagrees with our preferences is automatically a villain, even if the truth is on their side. We need to recover our love of the truth and its primacy if we're to escape the chaos that so laces our cultural climate. When we see that truth is the lens through which we should

> shape and express our preferences, we'll see the truth that we are made in God's image and that Jesus redeemed that image at the cross. We no longer see "us" vs. "them." Instead, we see each other as people in need of redemption. That's when we come to a knowledge of the saving truth – the truth that saves.

In my 20s and early 30s, I spent a lot of time reading about marriage, specifically studies on what decisions and factors were more likely to avoid divorce. This is because I wanted my future marriage to last and to have an impact. So, I would read studies on how delaying sexual activity makes the relationship more stable. And how cohabitation undermines the stability of any future marriage. And how regular church attendance improves marriage stability. I was interested in the truth. And whenever my desires for something right now (e.g. – premarital sex) conflicted with the truth in the studies, I just went along with the truth. What we're seeing today is that people don't care about truth when they are making decisions, especially when it comes to relationship quality and stability. Happiness is number one, and character means nothing. Somehow, things are just supposed to "work out" if you find the "right person". Good luck getting anyone to care what the Bible says about love and marriage, if it conflicts with sexual autonomy.

Here's a quote from agnostic Aldous Huxley that illustrates the point:

> I had motives for not wanting the world to have a meaning; consequently assumed that it had none, and was able without any difficulty to find satisfying reasons for this assumption. The philosopher who finds no meaning in the world is not concerned exclusively with a problem in metaphysics, he is also concerned to prove that there is no valid reason why he personally should not do as he wants to do, or why his friends should not seize political power and govern in the way that they find most advantageous to themselves… For myself, the philosophy of meaningless was essentially an instrument of liberation, sexual and political."
> Aldous Huxley in "*Ends and Means*", 1937

Before I saw this interview, I tweeted another interview with Abdu Murray posted on Bible Gateway.

Excerpt:

> **What do you mean that "autonomy is confused for freedom"?**
>
> **Abdu Murray:** The seed for the post-truth mindset is the human desire for autonomy. We've confused autonomy with freedom, thinking they're synonymous when they're not.
>
> Autonomy is the state of being a law unto one's self ("autos" meaning self and "nomos" meaning law). Someone who's autonomous is a law unto themselves and so he has no restraints whatsoever. An autonomous person can do or be whatever he wants, whenever he wants, however he wants. That ultimately leads to total chaos because if I'm a law unto myself and another person's "law unto themselves" conflicts with my law, who will decide who's right? It won't be truth,

> it'll be chaos (see Judges 17:6; 21:5: "In those days there was no king in Israel. Everyone did what was right in his own eyes").
>
> But true freedom is different. It requires boundaries; specifically the boundaries of truth and facts. As Chesterton pointed out, we don't have the freedom to draw a giraffe with a short neck. Freedom entails limits. True freedom is not the unfettered ability to do, say, or be whatever we want in any way we want. True freedom is the ability to do what we want, in accordance with what we should, based on what we are. What we are is children of the Most High. That's exactly why Jesus says that when we know the truth, the truth will set us free.

Abdu has written a book about how to deal with this. I'm not sure right now what his approach is. It's probably important to make some sort of defense of truth to young people, so that they understand why the boundaries help them. If they think they can break all the moral laws and that it will not close off some good outcomes to them later, then we need to correct that. We need to use evidence to show them that some decisions will increase or decrease their ability to get the best outcomes. Moreover, we somehow have to get them to accept that God, if he exists, might have something to say about their moral choices. And if God exists then they ought to care what he thinks they should be doing.

One of my best friends is a Christian woman who had an abortion after living with an atheist when she was younger. Looking back on her life, she did not have good guidance about what to look for in a man. Her mother married (and re-married) poorly, and so there was never a good role model around for her. She would often complain to me about how she was lied to by the culture. About what men to prefer. About how far to go with a man. About delaying marriage. About delaying children. About how much abortion would hurt her. About guarding her heart from men who had not demonstrated ability at husbands and father skills. When I met her, I wasn't very impressed with her education (English! Yucky!) and her career. But she had this hatred of lies, and a desperate desire to know how the world really worked.

More than almost any of my friends, she was utterly devoted to pursuing truth. I remember finding books that I had bought for her by really advanced writers like Stephen C. Meyer absolutely covered in underlining from cover to cover. Basically, she didn't trust her ability to make decisions because she felt she had been lied to. She wanted a true worldview, so that when she took some action X, she knew that it was likely to lead her to result Y. That's the love of truth that we need to teach the young people. Without a true worldview, (a Christian worldview, since Christianity is true), they will always be attempting to get to outcomes that have been closed off by their own poor decision-making and rebellion against God. I wish all of you could meet someone who had been raised without good leadership and good role models, and see how much some people at least really thirst for the truth and are anxious to make good decisions that honor what is true.

Survey of scientific literature finds that children need their mom for first 3 years

May 24, 2018 | by Wintery Knight | Link | Original Link

Child grabs for his mom, who is leaving for work

Recently, an article published in the Wall Street Journal reported on research survey done why a far-left Democrat psychotherapist based in far-left New York City. Surprisingly, her book caused an uproar among the author's left-wing allies. How come?

Excerpt:

> Motherhood used to be as American as apple pie. Nowadays it can be as antagonistic as American politics. Ask Erica Komisar.
>
> Ms. Komisar, 53, is a Jewish psychoanalyst who lives and practices on the Upper West Side of Manhattan. If that biographical thumbnail leads you to stereotype her as a political liberal, you're right. But she tells me she has become "a bit of a pariah" on the left because of the book she published this year, "Being There: Why Prioritizing Motherhood in the First Three Years Matters."
>
> […]The premise of Ms. Komisar's book—backed by research in psychology, neuroscience and epigenetics—is that "mothers are biologically necessary for babies," and not only for the obvious reasons of pregnancy and birth. "Babies are much more neurologically fragile than we've ever understood," Ms. Komisar says. She cites the view of one neuroscientist, Nim Tottenham of Columbia University, "that babies are born without a central nervous system" and "mothers are the central nervous system to babies," especially for the first nine months after birth.
>
> What does that mean? "Every time a mother comforts a baby in distress, she's actually regulating that baby's emotions from the outside in. After three years, the baby internalizes that ability to regulate their emotions, but not until then."

> For that reason, mothers “need to be there as much as possible, both physically and emotionally, for children in the first 1,000 days.”

What’s interesting about this is how the left responds to the science. You might have heard that the left is very fond of science, but veterans of debates about God’s existence know that people on the left tend to be hostile to science that goes against their view: the Big Bang cosmology, cosmic fine-tuning, biological information, irreducible complexity, molecular machines, habitability, etc. And early childhood education is no exception.

More:

> Christian radio stations “interviewed me and loved me,” she says. She went on “Fox & Friends,” and “the host was like, your book is the best thing since the invention of the refrigerator.” But “I couldn’t get on NPR,” and “I was rejected wholesale—particularly in New York—by the liberal press.” She did appear on ABC’s “Good Morning America,” but seconds before the camera went live, she says, the interviewer told her: “I don’t believe in the premise of your book at all. I don’t like your book.”
>
> […]Ms. Komisar tells of hosting a charity gathering for millennials at her apartment. One young woman “asked me what my book was about. I told her, and she got so angry. She almost had fire coming out of her eyes, she was so angry at my message. She said, ‘You are going to set women back 50 years.’ I said, ‘Gosh, I wouldn’t want to do that.’ ”
>
> […]The needs of children get lost in all this—and Ms. Komisar hears repeatedly that the hostility to her message is born of guilt. When she was shopping for a literary agent, she tells me, “a number of the agents said, ‘No, we couldn’t touch that. That would make women feel guilty.’ ” Another time she was rejected for a speaking gig at a health conference. She quotes the head of the host institution as telling her: “You are going to make women feel badly. How dare you?”
>
> […]**“The thing I dislike the most is day care,” she says. “It’s really not appropriate for children under the age of 3,” because it is “overstimulating” given their neurological undevelopment. She cites the “Strange Situation experiments,” devised in 1969 by developmental psychologist Mary Ainsworth, a pioneer of attachment theory: “A mother and the baby are on the floor playing. The mother gets up and leaves the baby in the room alone. The baby has a separation-anxiety response. A stranger walks in; the baby has a stressed reaction to the stranger.”**
>
> […]Researchers sample the infant’s saliva and test it for cortisol, a hormone associated with stress (and inversely correlated with oxytocin). In a series of such experiments in which Ms. Komisar herself participated, “the levels were so high in the babies that the anticipation was that it would . . . in the end, cause disorders and problems.” In a more recent variant of the experiment, scientists

> use functional magnetic resonance imaging to look directly at the brain of an infant reacting to photos of the mother and of a stranger.

I spoke to a millennial co-worker in my office who is very proud of his strong feminist views. His wife just had a baby, and they stuck the baby in daycare after 3 months so that she could go back to work. I did speak to him about what the research says (daycare and public school studies are a hobby of mine!), but I try to only disagree with him on one thing at a time, and right now, we're disagreeing about cohabitation and marital stability. It's amazing how confident millennials are about taking positions on things like daycare, cohabitation, public schools, etc. without ever having consulted the relevant peer-reviewed science.

Let's look at one of the studies, to see some evidence.

Brain scans of 3-year old children: normal vs neglected

The UK Telegraph reported on a recent study that measured the brain development of 3-year-old children.

Excerpt:

> Take a careful look at the image of two brains on this page. The picture is of the brains of two three-year-old children. It's obvious that the brain on the left is much bigger than the one on the right. The image on the left also has fewer spots, and far fewer dark "fuzzy" areas.
>
> To neurologists who study the brain, and who have worked out how to interpret the images, the difference between these two brains is both remarkable and shocking. The brain on the right lacks some of the most fundamental areas present in the image on the left. Those deficits make it impossible for that child to develop capacities that the child on the left will have: the child on the right will grow into an adult who is less intelligent, less able to empathise with others,

> more likely to become addicted to drugs and involved in violent crime than the child on the left. The child on the right is much more likely to be unemployed and to be dependent on welfare, and to develop mental and other serious health problems.
>
> […]The primary cause of the extraordinary difference between the brains of these two three-year-old children is the way they were treated by their mothers. The child with the much more fully developed brain was cherished by its mother, who was constantly and fully responsive to her baby.
>
> The child with the shrivelled brain was neglected and abused. That difference in treatment explains why one child's brain develops fully, and the other's does not.
>
> […]Professor Allan Schore, of UCLA, who has surveyed the scientific literature and has made significant contributions to it, stresses that the growth of brain cells is a "consequence of an infant's interaction with the main caregiver [usually the mother]".
>
> The growth of the baby's brain "literally requires positive interaction between mother and infant. The development of cerebral circuits depends on it."
>
> Prof Schore points out that if a baby is not treated properly in the first two years of life, the genes for various aspects of brain function, including intelligence, cannot operate, and may not even come into existence. Nature and nurture cannot be disentangled: the genes a baby has will be profoundly affected by the way it is treated.

I always like to consult the findings of science to find out the right way to achieve a goal. This puts off some prospective mates, who want to avoid planning and preparation so they can ride a roller-coaster of emotions and just do whatever they want to be happy in the moment. But in every other area of life, I've found that doing things the right way always involves studying and planning, then careful execution of a plan. Nobody passes an exam by going clubbing when they should be studying. Going clubbing is more fun "in the moment", but studying always gets better results.

In this case, it's very clear that keeping a mother at home for the first three years of each child would require some earning and saving by me, since men are the principal providers. And I expect that women who are looking for husbands to raise their children with will look for men who have made preparations to give the young children what they need. Not everything a man does is about looks and fun – there are real requirements here. It's very important for young people to prepare for marriage and raising children by working backward from what the science says about children's needs.

The more you read about the science, the less wiggle-room there is for feelings. Doing the right thing (saving money for a stay-at-home mom) is hard because it feels bad. But when you inform yourself with science, it makes it easier to override your bad feelings, because you know you're doing the right thing to achieve a result. If you can't bring yourself to prepare now to do things right later, then you should read more science, and

that might make it easier to do the right thing.

New study: switching male and female marriage roles makes both sexes unhappy

May 25, 2018 | by Wintery Knight | Link | Original Link

Child grabs for his mom, who is leaving for work

Here's a report on a new study from the UK Daily Mail.

Excerpt:

> When females were the main breadwinner in the family, they were discovered to report more symptoms of depression.
>
> However, the opposite effect was found in men: Their psychological well-being was highest when they were the primary wage-earners.
>
> Researchers at the University of Illinois examined data on nearly 1,500 men and 1,800 women, aged between 52 and 60. Their well-being was evaluated through surveys.
>
> The researchers first found that men's well-being decreased once they had exited the workforce to become home-makers.
>
> Meanwhile, the inverse was not so for women: Women's psychological well-being was not affected by leaving their jobs to become stay-at-home mothers.
>
> 'We observed a statistically significant and substantial difference in depressive symptoms between men and women in our study,' says lead researcher Karen Kramer.
>
> 'The results supported the overarching hypothesis: well-being was lower for mothers and fathers who violated gendered expectations about the division of paid labor, and higher for parents who conformed to these expectations.'

If you don't like the UK Daily Mail, CNN reported on a similar study back in 2014.

Indeed. The trouble is this: who can afford to provide for a stay-at-home wife on one salary, in a country where 30% of your income is taxed, and many things (e.g. – health care, college tuition, etc.) are way more expensive because of socialist welfare state policies? We have a $20 trillion dollar debt, and taxes are only going to go higher, making it that much harder for a working man to provide for a family – no matter how diligent he is about getting STEM degree(s) and working full time, non-stop. Marriages where the woman stays home with the children are happiest for everyone, but thanks to the voting patterns of radical feminists, husbands have been replaced by government programs, and those cost taxpayer money. You can either have a big government welfare state or you can have a stay-at-home wife. You can't have both.

I got a snarky comment on a post I wrote last week about how marriages where the husband does not work full-time are more likely to fail.

Here is the comment:

> Well done.
> I'll now await your follow-up article on the divorce rate for couples where the wife works full-time outside of the home and how men should choose a woman who has demonstrated an ability to do marriage tasks – like taking care of the household full time, raising and nuturing children, being loving and supportive of a husband when times are tough (especially if, God forbid, he should ever find himself ***unemployed*** and thus no longer a provider, in which case most wives' base and visceral impulse is to abandon him), not wanting "a career," and not insisting that her husband waste all his earnings on fun and thrills for her.

Well, I'm blogging about it again today, but if the commenter were very clever, then he would have found this post from June of 2013 entitled "STUDY SHOWS THAT FEMALE-BREADWINNER MARRIAGES ARE LESS HAPPY AND LESS STABLE".

Excerpt:

> Given these findings, it isn't surprising that when a wife earns more than her husband, the risk of divorce rises, too. To study this, the authors used a survey conducted in two waves, 1987-88 and 1992-93. (There were no more recent data available for this particular test.) Then they investigated the likelihood of a divorce in the five-year interval. For this sample, some 12 percent of all couples were divorced during this period — a sobering fact about the stability of marriages in general. But the divorce rate rose by half, to about 18 percent, for couples in which the wife earned more than the husband.

When I was a high school student, I can remember trying to decide between being an English teacher, being a prosecuting attorney, or being a software engineer. It was my Dad who pointed me towards software engineering. As an avid stock picker, my Dad was seeing tech stocks exploding in value, and he knew that I would be able to find work even if I was laid off during tough times. I am glad that I listened to his advice, although my

career still has not been easy, which is why I saved money for the two times where I was laid off (both times my subsidiary was folded by the parent company!). My reason for going into a field where I could earn more money was because I wanted to get married, have 4 children, and "heal" the experience of being neglected by my mother (who stuck me in day care after 6 weeks and worked full-time until she retired) by watching her parent my kids as a stay-at-home mom. I knew enough to know that marriage works better when the man provides and the woman focuses on the children – at least until they are 6 years old. Since then, I've discovered homeschooling, and I would definitely have done that. It's not that I am opposed to women working, it's that I am opposed to children not being raised by their mother.

As I explained in my lengthy reply to the snarky commenter, it's gotten much harder for men to be the sole provider, and have a stay at home wife and homeschooling mom:

> Regarding tough times, I think that the situation for men right now is horrible with respect to marriage and children. $20 trillion debt and a generation of unskilled snowflake millenials voting for socialism in droves. I also think that co-ed schools where teachers and administrators are 80% females produce lousy outcomes for boys (read Christina Hoff Sommers' "The War on Boys", 2nd edition). Affirmative action in higher education and in the workplace for women doesn't help men become providers, either. Men also pay the same premiums for health care as women, and yet they use far less health care: more tilting the field against men. And so on, don't even get me started on divorce courts and child custody.

If you want to do things the old-fashioned way, you definitely need to plan for it. You probably won't be able to get the outcome you want just by following your heart.

This isn't the first time that I've blogged on studies about male and female roles in marriage. If you want to get good results from your marriage, you definitely want to follow the studies below.

Cosmologist Luke Barnes answers 11 objections to the fine-tuning argument

May 26, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

This is from the blog Common Sense Atheism.

Atheist Luke Muehlhauser interviews well-respect cosmologist Luke Barnes about the fine-tuning argument, and the naturalistic response to it.

Luke M. did a good job explaining what was in the podcast. (I wish more people who put out podcasts would do that).

Details:

> In one of my *funniest* and *most useful* episodes yet, I interview astronomer Luke Barnes about the plausibility of 11 responses to the fine-tuning of the universe. Frankly, once you listen to this episode you will be better equipped to discuss fine-tuning than 90% of the people who discuss it on the internet. This episode will help clarify the thinking of anyone – including and perhaps *especially* professional philosophers – about the fine-tuning of the universe.
>
> The 11 responses to fine-tuning we discuss are:
>
> 1. "It's just a coincidence."
> 2. "We've only observed one universe, and it's got life. So as far as we know, the probability that a universe will support life is one out of one!"
> 3. "However the universe was configured, evolution would have eventually found a way."
> 4. "There could be other forms of life."
> 5. "It's impossible for life to observe a universe *not* fine-tuned for life."

> 6. “Maybe there are deeper laws; the universe *must* be this way, even though it *looks* like it could be other ways.”
> 7. “Maybe there are bajillions of universes, and we happen to be in one of the few that supports life.”
> 8. “Maybe a physics student in another universe created our universe in an attempt to design a universe that would evolve intelligent life.”
> 9. “This universe with intelligent life is just as unlikely as any other universe, so what’s the big deal?”
> 10. “The universe doesn’t look like it was designed for life, but rather for empty space or maybe black holes.”
> 11. “Fine-tuning shows there must be an intelligent designer beyond physical reality that tuned the universe so it would produce intelligent life.”
>
> **Download** CPBD episode 040 with Luke Barnes. Total time is 1:16:31.

There is a very good explanation of some of the cases of fine-tuning that I talk about most on this blog – the force of gravity, the strong force, etc. as well as many other examples. Dr. Barnes is an expert, but he is also very very easy to listen to even when talking about difficult issues. Luke M. is very likeable as the interviewer.

Courting rules: how to respect a Christian man in the style of Ephesians 5

May 27, 2018 | by Wintery Knight | Link | Original Link

I have been thinking a lot about Christian women and respect lately, and reflecting over some of the things that I have experienced with different ones that either worked or did not work. Unfortunately, it is crunch time at work, so I might not be completely coherent in this post, but I thought I would write something out anyway.

There are times when the Bible suggests a way that Christians ought to behave, and one of those cases has to do with wives giving respect to husbands in the marriage:

Ephesians 5:21-33:

[21] Submit to one another out of reverence for Christ.

[22] Wives, submit yourselves to your own husbands as you do to the Lord.

[23] For the husband is the head of the wife as Christ is the head of the church, his body, of which he is the Savior.

[24] Now as the church submits to Christ, so also wives should submit to their husbands in everything.

[25] Husbands, love your wives, just as Christ loved the church and gave himself up for her

[26] to make her holy,cleansing her by the washing with water through the word,

[27] and to present her to himself as a radiant church, without stain or wrinkle or any other blemish, but holy and blameless.

[28] In this same way, husbands ought to love their wives as their own bodies. He who loves his wife loves himself.

[29] After all, no one ever hated their own body, but they feed and care for their body, just as Christ does the church—

[30] for we are members of his body.

[31] "For this reason a man will leave his father and mother and be united to his wife, and the two will become one flesh."

[32] This is a profound mystery—but I am talking about Christ and the church.

[33] However, each one of you also must love his wife as he loves himself, **and the wife must respect her husband.**

I think it's important for us to think about how to implement the specification that the Bible sets out for men and women in marriage. The Bible sometimes sets out rules and goals for expected behaviors, which become moral obligations for anyone for follows Christ. It is up to us to convince ourselves through study that the Bible has authority to speak to us. And it is also up to us to decide the most effective way to achieve the goals that the Bible sets out. This post proposes some tips for women who want to learn how to

respect men, based on my experiences of what makes me feel respected as a man. I think this is beneficial for single women, as well, because it allows them to arouse the interest of a man *by performing good actions*.

A bit about me

There are some things you need to know about me before we can talk about what what women do to me that causes me to feel respected.

Here are some things that I want to accomplish:

- Be able to have a stay at home mother to raise our children so that they will know God, be moral and achieve great things for God in areas that matter
- Be able to fix the problem of anti-intellectualism in the church by training more and more Christians in apologetics and worldview, including politics, economics, etc.
- Be able to have a presence at the university, e.g. – by being a Christian professor, or by supporting Christian scholars, or by sponsoring Christian scholars to speak and debate at the university
- Be able to speak, write or teach about apologetics and worldview to the general public, for example people who read my blog or my co-workers, so that they either learn how to do it, or become more respectful of Christianity and its founder

I am actually working on all of those things, and many of the decisions and sacrifices that I've made so far have been to achieve those things at a higher level.

Things that women do that make me feel respected

1. Work

The first thing that really works is listening. I really feel respected when a woman listens to me explain my thoughts and feelings. This is especially true when I am talking about my work and my work day. When it comes to my work, I feel respected when a woman listens to me explain what I am doing. This allows her to be able to support me more because she understands what I am saying when I talk with terms like "unit tests", "web services", "source code repository", etc. The more time she invests in understanding software engineering (what I do for money), the more supported I will feel. I feel a lot better making sacrifices (studying hard things, working weekends, volunteering at work) when those sacrifices are understood, encouraged and supported. For example, I felt respected recently when I was working on the weekend and could not speak to a lady I really wanted to speak to. Instead of getting upset about my absence, she started making suggestions on how I could be more effective at work, by bringing healthy food so I don't go to the vending machine or my co-workers' candy dishes, by asking me about my progress every few hours. I feel respected when I can talk about my work and then be encouraged and supported in it.

2. Plan

Another area that is important to talk about is my plan. I like it when I can tell a woman the specific experiences that I had that cause me to have the plan that I have. For example, my struggles getting apologetics into the churches that I've attended have

really soured me on church leaders. Another thing I like to talk about are the Christian scholars who are my role models, and how I try to emulate them, and I want my children to emulate them, too. One lady I was speaking to has been studying areas that I care about on her own through books, lectures and debates and then going out into the world and engaging with the people around her. Sometimes just a few people, and sometimes with large groups. Recently she told me that she would like to start a group in her church to study useful books with them. This made me feel very respected. My goals matter to her, and she is trying to help with them on her own initiative, and with her own strategies. Note that women who want to respect men may find that it is useful to learn certain skills in order to be more effective at helping men with their plans. For example, she might study investing and start investing her own money, or she might study science apologetics and then engage her co-workers and friends with scientific arguments for Christian theism. She should find out what areas matter to him with respect to serving God and then come alongside him and help him.

3. Roles

A final area that is important is my roles as a man. I have been a Christian for a long time now, and I have noticed that many Christian women in the church are basically secular in the way that they choose men. Many Christian women are guided by their emotions, by pop culture notions of romance, and peer approval – even the approval of their peer group. According to the Bible, men are supposed to be the main provider for their families. So, I made the decision early in my life to prefer work to academics – so I have actually been earning money since the time I was 12 years old. My grades were As, but I was always working part-time, and in the summers. The money I earned went straight into investments, so that I would be able to afford two degrees in computer science (BS and MS) and have a nest egg saved for marriage. I had $9,000 before undergraduate school and $16,000 after, with no debts and a car. I chose computer science over English literature, because I knew that computer science was a more reliable way to earn a living. Marriages run more smoothly when money isn't a concern, so I had to take practical steps in order to avoid a known risk factor for divorce.

But women also have a role related to providing. Their role is to prefer men who take that provider obligation seriously. I feel very respected when a woman takes the time to ask me about my education, research, employment, and investments. Our culture today doesn't value men taking their provider roles seriously. Instead, many women prefer men who will not be able to exercise the authority in the home that comes from being a competent provider. They sometimes prefer to see all choices in education and work as equal, so that no man is more respected than any other man based on education, earning and saving. I see a lot of Christian women going after men who are much younger than they are, with non-STEM degrees, who have no savings, and no practical plan for financing a marriage – much less a homeschooling stay-at-home mother. That is disrespectful of the provider role, and I believe it stems from the desire to not acknowledge male leadership. When a woman minimizes the education, career and savings of the man, it diminishes her regard for his ability to navigate the world and take

responsibility. Many women want to be swept along by impressions of confidence and superficial indicators of success. But this is not wise: a man who has a gap-less resume and an investment portfolio is a good provider, and a man who lives with his parents at age 30 is not – even if he is confident, has a deep voice, nice shoes, big shoulders, and a square jaw.

To treat unequals as equals in this important area is disrespectful and unBiblical – it disrespects the Bible's mandate that the man be a good provider and instead substitutes an emotional/pop culture/peer-approval standard of what counts as a good man. Additionally, women need to have an understanding of the external conditions that strengthen a man's ability to take on the provider role. To respect a man acting as a provider also requires voting for policies that support a man's ability to work (e.g. – less regulation on business, lower corporate taxes) to keep what he earns (lower income tax, lower inflation) and to spend it the way he sees fit (privatization of health care, education, etc.) – and these issues need to be studied, not checked off on a checklist as "we agree". Studying economics and politics in depth, and being political active, are ways for women to respect men in their provider role. Women need to take action to enable policies and laws that promote liberty and prosperity. They should not be supporting policies that promote the redistribution of wealth, or reward irresponsibility and dependence. They should not support policies that punish men who work hard at being providers while rewarding men who refuse to be providers.

It also helps when a woman studies hard topics on her own – math, science, engineering and technology – and builds up her own investment portfolio. It helps her to be able to be respectful to a man because she understands exactly what he studies and exactly how hard work is and exactly how hard it is to save money in a society creeping towards socialism. A woman who experiences sacrifice and hardship herself is more likely to respect a man who does the same in order to be ready for marriage, even if she eventually gives up work when there are young children to raise. And this works for other male roles. For example, men who guard their chastity in order to protect women from infidelity should be respected for making that decision. It's important for women to study marriage research, e.g. – how factors like chastity and church attendance and cohabitation increase or decrease marriage stability, so that they have reasons and evidence to prefer men who choose to make that sacrifice.

Men also study moral questions like abortion and marriage, as well as spiritual areas like apologetics and theology, so that they can advocate for the victims of abortion and marital breakdown. Again, women must study the research on these issues so that they are able to prefer men who can do this over men who can't. Christianity is not a checkbox and you cannot equate someone who understands these issues with someone who doesn't because both attend church. When a woman puts in the effort to study apologetics, moral issues, economics and foreign policy, then a real man feels respected – because he knows that she has a standard for judging him that is a true measure of his ability to be a husband and father. It is important to treat a man who takes his male roles seriously differently from other men who do not take those male roles seriously.

Conclusion

One of the best ways to respect a man is to speak highly of his abilities in all 3 of these areas to others. If women are careful about the man they choose, then they should be able to speak highly of him with others. When a woman praises a good man, it is a signal to other men about what they should be doing in order to impress women. To change the culture and to encourage men towards marriage, women must be intentional about who they celebrate and why they celebrate them. It also helps if they understand what policies make marriage a more realistic undertaking for men, and then advocate for those policies. Again, this requires reading things like economics and law to understand what challenges a man will face from government and ideologies (feminism, socialism) should he choose to marry, and making sure that those challenges are reduced. A man feels respected when a woman has developed a detailed understanding of what marriage is about and how society needs to change to support and respect men who choose to marry and become fathers. The Bible says that divorce is morally wrong, so it is up to men and women to make decisions that reduce the risk of divorce. We can't just float through life relying on our emotions and thinking that God has a secret, mysterious plan and there is nothing for us to do. Usually, that attitude will just make us avoid learning and avoid making hard decisions to prepare for marriage, and that will not do – we are responsible to avoid divorce, and we have to make an effort in order to achieve that goal.

If any of my female readers are interested in learning about men and what men need in order to act competently as protectors, providers and moral/spiritual leaders, you can take a look at Dr. Laura Schlessinger's "The Proper Care and Feeding of Husbands" as well as Gary Chapman's "The Five Love Languages". And don't merely read the books – put it into practice by advocating for men and marriage from church to university to workplace to courtroom to government. Make plans to show that you respect Christian men who know what they are doing and why. Don't rely on your emotions to guide you – this is more of an obligation requires training, recon, planning and execution. (The same way that a man prepares to love a woman and then loves her – because women need love just like men need respect). Men pay attention to women who respect them, and it's much better for women to get attention from men by learning about them and helping them than by trying to bypass respecting the man to get attention by leveraging appearance and sexuality to get attention. And, of course, some men cannot be respected, so don't choose one of those.

Thinking practically about the gospel with an illustration from a war movie

May 28, 2018 | by Wintery Knight | Link | Original Link

The city of Mogadishu, in Somalia, Africa

I decided to re-post one of my favorite posts for Memorial Day.

First, let's get an overview that helps us understand the context and goals of the mission we are going to discuss.

The scene is set in Somalia, Africa, in 1992. There a civil war between two warlords: Ali Mahdi and Mohammed Farah Aidid. The war has destroyed agricultural operations, and the people are starving. The United Nations are trying to help, but Aidid hijacks the food from UN aircraft so that he can use the food to gain control of the people. Hundreds of thousands of Somalis are dying of starvation. The UN requests American military forces to secure the air-dropped supplies so they can be distributed to the starving people.

In December 1992, President George H.W. Bush answers the call, sending 25,000 troops to Somalia to protect the food from the Somali warlords. However, in 1993, Bill Clinton is elected. He orders that the number of U.S. troops be reduced to 12,000. Following an attack by Aidid on Pakistani peace-keepers, the U.N. issues a resolution to capture those responsible. The U.S. armed forces have the arms and training to battle evil, so they get the call to capture Aidid and his lieutenants.

In late August 1993, Task Force Ranger is deployed to Mogadishu to capture Aidid and his lieutenants at the Olympic Hotel. The U.S. force consists of 440 troops from the Army Rangers and Army Delta Force special forces, commanded by General William Garrison. Garrison requested light armored units (Bradley Infantry Fighting vehicles) that would offer more protection than the unarmored HMMWV Humvees. Garrison was denied the light armor by the Clinton administration. Garrison requested heavier air support (AC-130 Spectre gunships) that would offer better fire support than the UH-60 Blackhawk miniguns. Garrison was denied the air support by the Clinton administration. The Clinton administration did not want the American forces to appear too heavily armed for the peace-keeping role.

The actual mission turned out to be much harder than it needed to be, because of the resources denied by the Clinton administration. Although the Aidid lieutenants were captured, Aidid himself escaped. Eighty-four American soldiers were wounded. Eighteen American soldiers were killed, and their bodies were dragged through the streets of Mogadishu. This was shown over and over by the media, and it undermined American resolve to help the Somali people. As a result, Clinton had the excuse he needed to retreat the American military.

(Source: Nova Online)

Two heroes lost their lives

Today, I want to talk about two of the men who lost their lives in Operation Gothic Serpent. They are Master Sergeant Gary I. Gordon and Sergeant First Class Randall D. Shughart – a Delta Force sniper team.

Here is a clip from the movie Blackhawk Down, which shows what happened to them:

The pilot of the downed Blackhawk was protected by the two men who volunteered to go in after him. They requested that they be inserted at the crash site, even though they knew that reinforcements were likely not going to be there in time to save them. They made the request to go and help the pilot *three times* before being allowed to go in. Their first two requests were denied by their commanding officer, because the odds against their survival were so overwhelming. The rescued pilot was later released by his captors, and the two heroes were awarded the Medal of Honor for their brave actions.

A Congressional Medal of Honor

Here is a description of the requirements to be awarded a Medal of Honor:

> The Medal of Honor is the highest military decoration that may be awarded by the United States government. It is presented by the President of the United States, in the name of Congress, and is conferred only upon members of the United States Armed Forces who distinguish themselves through **conspicuous gallantry and intrepidity at the risk of life above and beyond the call of**

> **duty**:
>
> - While engaged in action against an enemy of the United States;
> - While engaged in military operations involving conflict with an opposing foreign force; or
> - While serving with friendly foreign forces engaged in an armed conflict against an opposing armed force in which the United States is not a belligerent party.

You can read the official details of their actions.

The point of this post

It is important for Christians to be familiar with real-world examples of people giving their lives in order to save the lives of others. When we see real-world examples of self-sacrifice, it helps us to understand what Jesus really achieved for us, and what he must have felt making that hard choice to volunteer to go in and rescue us. In general, my philosophy when it comes to the Bible is to make every effort to connect what the Bible says to the real world. We must not push Christianity into some far-off world of piety and feelings. We must make connections to real evidence and real life, so that what the Bible says becomes practical, and so that we have a deep friendship with and sympathy for God revealed in Jesus Christ. In real life, being willing to give your life to save someone else is hard. Understanding how that really happens will help us to value what Jesus has done for us.

Bible verses

I saw this verse on the ground outside the Airborne & Special Operations Museum in Fayetteville, NC, where I went for my summer vacation in 2015. (Thanks to my friend Curby who hosted me)

Isaiah 6:8:

> [8] Then I heard the voice of the Lord saying, “Whom shall I send? And who will go for us?”
>
> And I said, “Here am I. Send me!”

Here is the picture I took (yes, that is my running shoe):

"Here am I, send me" Isaiah 6:8

When confronted with an opportunity to imitate Christ in his self-sacrifice, we should think less about ourselves and our own desires, and take the opportunity to serve others effectively. We do not do what makes us happy, and we do not pursue fun and thrills. We do what heals, we do what helps others. We do not push away our responsibility to imitate Christ by caring for those in danger. Christianity is not just about "not doing bad things". It's the good things you do because of your relationship with Jesus that show your real allegiance, and give you the experience of being a Christian in deed.

And here is another good verse:

John 15:13:

> [13] Greater love has no one than this: to lay down one's life for one's friends.

If you get a chance to watch the movie Blackhawk Down, then do so. I highly recommend it. You can also read the book that the movie is based on.

I love the Medal of Honor books by Edward F. Murphy. He writes about all the people who have been awarded the Medal of honor in different wars: World War II, the Korean War, and the Vietnam War.

If you check my reading list, you'll find that I usually read two military books for every one book on another subject.

Is the Bible's definition of faith opposed to logic and evidence?

May 29, 2018 | by Wintery Knight | Link | Original Link

Theology that hits the spot

Probably the biggest misconception that I encounter when defending the faith is the mistaken notion of what faith is. Today we are going to get to the bottom of what the Bible says faith is, once and for all. This post will be useful to Christians and atheists, alike.

What is faith according to the Bible?

I am going to reference this article from apologist Greg Koukl of Stand to Reason in my explanation.

Koukl cites three Biblical examples to support the idea that faith is not blind leap-of-faith wishing, but is based on evidence.

1. Moses went out into the wilderness and he had that first encounter with the burning bush, and God gave him the directive to go back to Egypt and let his people go. Moses said, Yeah, right. What's going to happen when they say, why should we believe you, Moses?God said, See that staff? Throw it down.Moses threw it down and it turned into a serpent.God said, See that serpent? Pick it up.And he picked it up and it turned back into a staff.God said, Now you take that and do that before the Jewish people and you do that before Pharaoh. And you do this number with the hail, and the frogs, and turning the Nile River into blood. You put the sun out. You do a bunch of other tricks to get their attention.And then comes this phrase: "So that they might know that there is a God in Israel."
2. [I]n Mark 2 you see Jesus preaching in a house, and you know the story where they

take the roof off and let the paralytic down through the roof. Jesus said, “Your sins are forgiven.” And people get bugged because how can anyone forgive sins but God alone?Jesus understood what they were thinking and He said this: What’s harder to say, your sins are forgiven, or to rise, take up your pallet and go home?Now, I’ll tell you what would be harder for me to say : Arise, take up your pallet and go home. I can walk into any Bible study and say your sins are forgiven and nobody is going to know if I know what I am talking about or not. But if I lay hands on somebody in a wheelchair and I say, Take up your wheelchair and go home, and they sit there, I look pretty dumb because everyone knows nothing happened.But Jesus adds this. He says, “In order that you may know that the Son of Man has the power and authority to forgive sins, I say to you, arise, take up your pallet and go home.” And he got up and he got out. Notice the phrase “In order that you may know”. Same message, right?

3. Move over to the Book of Acts. First sermon after Pentecost. Peter was up in front of this massive crowd. He was talking about the resurrection to which he was an eyewitness. He talked about fulfilled prophecy. He talked about the miraculous tongues and the miraculous manifestation of being able to speak in a language you don’t know. Do you think this is physical evidence to those people? I think so. Pretty powerful.Peter tells them, These men are not drunk as it seems, but rather this is a fulfillment of prophecy. David spoke of this. Jesus got out of the grave, and we saw him, and we proclaim this to you.Do you know how he ends his sermon? It’s really great. Acts 2:36. I’ve been a Christian 20 years and I didn’t see this until about a year ago. This is for all of those who think that if you can know it for sure, you can’t exercise faith in it. Here is what Peter said. Acts 2:36, “Therefore let all the house of Israel know for certain that God has made him both Lord and Christ, Messiah, this Jesus whom you crucified.” There it is again. “Know for certain.”

What is faith according to Bible-based theologians?

I am going to reference this article from theologian C. Michael Patton of Parchment and Pen in my explanation.

Patton explains that according to Reformation (conservative, Bible-based) theologians, faith has 3 parts:

1. **notitia** – This is the basic informational foundation of our faith. It is best expressed by the word content. Faith, according to the Reformers must have content. You cannot have faith in nothing. There must be some referential propositional truth to which the faith points. The proposition “Christ rose from the grave,” for example, is a necessary information base that Christians must have.
2. **assensus** – This is the assent or confidence that we have that the *notitia* is correct… This involves evidence which leads to the conviction of the truthfulness of the proposition… This involves intellectual assent and persuasion based upon critical thought… *assensus*… says, “I am persuaded to believe that Christ rose from the grave.”

3. **fiducia** – This is the "resting" in the information based upon a conviction of its truthfulness. *Fiducia* is best expressed by the English word "trust."… Fiducia is the personal subjective act of the will to take the final step. It is important to note that while *fiducia* goes beyond or transcends the intellect, it is built upon its foundation.

So, Biblical faith is really trust. Trust(3) can only occur *after* intellectual assent(2), based on evidence and thought. Intellectual assent(2) can only occur *after* the propositional information(1) is known.

The church today accepts 1 and 3, but denies 2. I call this "fideism" or "blind faith". Ironically, activist atheists, (the New Atheists), also believe that faith is blind. The postmodern "emergent church" denies 1 and 2. A person could accept 1 and 2 but deny 3 by not re-prioritizing their life based on what they know to be true.

How do beliefs form, according to Christian philosophers?

I am going to reference a portion of chapter 3 of J.P. Moreland's "Love Your God With All Your Mind" (i.e. – LYGWYM).

J.P. Moreland explains how beliefs form and how you can change them.

1. Today, people are inclined to think that the sincerity and fervency of one's beliefs are more important than the content… Nothing could be further from the truth… As far as reality is concerned, what matters is not whether I like a belief or how sincere I am in believing it but whether or not the belief is true. I am responsible for what I believe and, I might add, for what I refuse to believe because the content of what I do or do not believe makes a tremendous difference to what I become and how I act.
2. A belief's strength is the degree to which you are convinced the belief is true. As you gain ,evidence and support for a belief, its strength grows for you… The more certain you are of a belief… the more you rely on it as a basis for action.

But the most important point of the article is that *your beliefs are not under the control of your will.*

> …Scripture holds us responsible for our beliefs since it commands us to embrace certain beliefs and warns us of the consequences of accepting other beliefs. On the other hand, experience teaches us that we cannot choose or change our beliefs by direct effort.
>
> For example, if someone offered you $10,000 to believe right now that a pink elephant was sitting next to you, you could not really choose to believe this… If I want to change my beliefs about something, I can embark on a course of study in which I choose to think regularly about certain things, read certain pieces of evidence and argument, and try to find problems with evidence raised against the belief in question.
>
> …by choosing to undertake a course of study… I can put myself in a position to undergo a change in… my beliefs… And… my character and behavior… will be

> transformed by these belief changes.

I think definition of faith is important, because atheists seemed to want to substitute their own definition of faith as blind belief for this Biblical definition, but there is no evidence for their view that faith is belief without evidence. I think this might be another case of projection by atheists. Blind faith is how they arrive at their views, so they are trying to push it onto us. But the Bible is clearly opposed to it.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds
- William Lane Craig’s case for the resurrection of Jesus

How I retained my Christian faith, sobriety and chastity on a university campus

May 30, 2018 | by Wintery Knight | Link | Original Link

A conflict of worldviews

A couple of years ago, I was talking to a woman who grew up in a Christian home that was very focused on externals. There was a lot of bullying to get her to comply with expected Christian behavior, although the expected Christian behavior was often arbitrary, and had nothing to do with Christianity and more with just appearing "nice". There was no discussion of the evidence, no talking through objections. No focus on truth at all. She was always very curious about me, and how come I didn't drink, and how come I was able to stay a virgin through college, grad school, to the present day when so many people she knew who were raised in the church fell away from it in college. My answer was simple. I didn't grow up in a Christian home so I was never bullied into acting like a Christian beyond what I was convinced of myself. I just took my time and proved everything out before I had to act any particular way. I was in the driver's seat all the time, and that's how Christianity ought to be. The truth-seeking comes first, and then the slow process of re-prioritizing comes after. Performing for your parents and church will not survive contact with college.

Growing up, I didn't ever have to go to church. I didn't go to church until I was comfortable going. If I felt bored in church, I read an apologetics book, and I did this openly. If I didn't like the words of a song, then I didn't sing. My first youth pastor, Grant, never tried to get me to be like the other kids. He asked me what I was interested in. I said "arguing with people". He gave me books by E.J. Carnell and Alister McGrath. I read them, and that was how I acted like a Christian. When I met other Christians at the church who hadn't read anything about God's existence or the historical Jesus or the problem of evil, I didn't feel pressured to be like them. In school, there were lots of people who never did any studying or lab work. They could talk a lot about things they knew nothing about.

But because they didn't know anything, they failed tests and they couldn't put anything they learned into practice, either. People can sound so smart about things… until they actually have to take a test, or put something to use practically.

To me, if you didn't like apologetics, you were a fake and you were faking behaviors of a worldview that you had never investigated. It was really obvious to me that there was more to Christianity than just God-hollering and Scripture memorization. I did swimming lessons up until the point where I got my lifeguarding certification. At the later levels, we always had written exams as well as a practical portion including activities like treading water, swimming long distances, and rescue simulations. People who could pass the written test often failed the practical. If you fail the practical, then you fail the course. Period. No exceptions.

Knowing the truth about God's existence and character comes before acting as if God is real and God has a specific character and will for us. From the existence of God, we move on to the accuracy of the Bible, and on to theology, and then and only then do we start the outward behaviors of a Christian. If you skip to the behaviors, that is unnatural – like pretending to be a doctor when you have never been to medical school. Everyone who comes to Christianity from the outside, like me, knows how strange it is to meet people in church who talk about feelings and experiences as the basis of their worldview. Those people would never do anything serious, like making investment choices, on the basis of feelings. They would never think that merely having feelings about auto repair or Java programming enabled them to solve problems in those areas. But somehow, this is the standard operating procedure in the church. Which is why so many kids raised in the church dump their faith in college. For me, it was apologetics that made me so resistant to alcohol, sex and atheism in college. After all, if you win the argument, then why should you act like the person you defeated? They lost. That means they're wrong. I didn't feel any social pressure to behave like people who couldn't beat me in an argument.

Every single day, children raised in intact Christian homes on a diet of piety and "the Bible says" come to an understanding of what Christianity is that is fundamentally different from the knowledge they are acquiring in school or at work. And that is the beginning of their loss of faith. There should be no separation between practical areas of knowledge (e.g. – mechanical engineering) and Christianity. Christianity should not be seen as easy or shallow. We should not praise people who don't know how to talk about spiritual things intelligently to non-Christians, which is the real core "skill" that Christianity requires. Christianity is not a religion of being nice or feeling good – that's what all the other religions are trying to do. Christianity is about laying hold of the truth, and adjusting your actions to it.

Every Christian ought to be trying their best to learn how to speak intelligently to non-Christians about their faith, to the best of their ability. Especially when they are confronted with educated non-Christians – which is most of us living in the Western hemisphere. No Christian should be better at something else, like sports or school or music or anything. They should put maximum effort into Christianity, and do other things in their spare time. There is no one in my office who thinks that I know more about

computer science than I do about my Christian worldview. Computer science is my day job – I have a BS and MS and 18 years experience in it. But my co-workers know what comes first, and where my real interest and passion lies. When we go out to lunch, I talk about Christian things. That's what I'm the best at. I'm not trying to impress my co-workers by being the best at computer science. I'm trying to perform for my Audience of One, and show him that his honor and reputation are my top priorities. That quiet, hidden vertical relationship is what Christianity is all about. Not my will, Lord, but your will, be done. Tiny little steps backward from selfishness to communicate to the Lord Jesus that his goals are important to me.

My friend Stephen Bedard tweeted this, recently:

> "Frankly, I find it hard to understand how people today can risk parenthood without having studied apologetics." – William Lane Craig

Typical Christian parents expect behaviors of their children but they put in almost zero effort to answer their questions. I hear from so many Christians who fell away in college about how they dropped their faith in high school but just kept acting to please their parents. And the parents had no idea. The parents are the ones who are closest to the problem. They are the ones who should be finding out what is in the culture and the schools, and discussing it with their children. Most pastors are in the business of saying things that people like in order to pack the pews, and collect offerings. They aren't there to talk about uncomfortable topics. They're no good at responding to non-Christian thought in the culture. So it really falls on the parents to do the work of answering questions and leading.

Christianity ought to be more like engineering or lab work if you want to appeal to young people – testable, repeatable, practical. Think back to math class, and how teachers would insist that students SHOW YOUR WORK, instead of just writing the answer down. Instead of just saying "the Bible says", parents really need to show young people their work – how did they arrive at their worldview? That's what parents need to be prepared to show their children. Not singing, not feelings, not community, not family time together. Facts and evidence. Because that is the only way we know to test knowledge claims to see if they are objectively true or false. Parents who get their worldview straight will also find it much easier to act in accordance with what they say they believe. Even when the pressure is on, they will know what is true, and be able to do hard things because they want to respect what is true. Coming through a test of your Christian convictions is much easier when you do the homework first. It's just like any other test in that respect. It certainly worked for me in high school and college when I had to defend my faith to non-Christians. It also helped that I had no desire to fit in with people my own age, because they didn't have jobs. I had no respect for people who didn't work for money, which is almost everyone in high school and college.

In the church, we should respect people who are able to study these issues deeply, and then have conversations about their Christian worldview with people who don't accept that God exists, and don't believe the Bible. That is what followers of Jesus did (e.g. Acts

17). We should be especially respectful of those who are able to defend the Christian worldview using scientific evidence and historical evidence. Especially those who get PhDs and do research in testable areas of knowledge that matter to the Christian worldview. Jesus offered his own resurrection as evidence of his claims to people who didn't believe him. He liked evidence, and he had a passion for the truth. And so should we, if we claim to be his followers.

Dr. Walter Bradley

By the way, the lecture that changed my life the most is this lecture by Dr. Walter Bradley, a fabulously successful professor of mechanical engineering. I got hold of this lecture from 1997, about the time when I first started working full-time. It changed my life. Our young people are being raised to look up to attractive athletes, entertaining musicians, fideistic theologians, charismatic pastors, etc. People who have never set foot in the lion's den. Dr. Bradley is an expert in the scientific evidence relevant to the Christian worldview, and has lectured on HUNDREDS of university campuses. He is invited to speak on campus because he KNOWS what he is talking about. If parents could just start by understanding what it takes to have a career as an open, visible Christian professor on a secular university campus, that would be a good start.

Woman explains what she was told about having children when she was young

May 31, 2018 | by Wintery Knight | Link | Original Link

Man teaching woman proper marksmanship

This article is by Ellie Bufkin, writing for the The Federalist. I always had a suspicion that women were being told not to marry too early, and not to have kids too early, but to instead enjoy their freedom. (With all that that entails) In some cases, it was their own mothers telling them this. Here is the story of one woman who was told to follow her dreams – as long as they didn't involve marriage and children.

Excerpt:

> Since I was young, I've heard a non-stop stream of encouragement for me, as a "modern woman," to take charge of my own life, live independently, and chase my dreams. This seems like the obvious advice we should give children, except that many people spent so much time chasing their dreams and creating their bespoke lives that they forgot to have children.
>
> While growing up in the suburbs, my post-scholastic dream did not consist of finding a partner and having babies. I wanted to see the world, experience many cultures, and live without having to worry about caring for anyone else. I ended up in a fast-paced career with a propensity for hard partying, late hours, and a taste for travel and luxury.
>
> As years ticked by, I assumed my perfect life would simply fall into place when I was ready, my career would steadily improve, and I would be swept off my feet by a perfect man. I had many friends with the exact same expectations for their lives, and today, we are pretty much all still single and childless.
>
> We set our expectations so high that we never achieved them. We dated people with the same hope for impossibly perfect lives and moved from city to city,

> hoping we could achieve a greatness that was not to be.
>
> […]Liberal feminists widely consider it to be morally wrong to have children in your twenties, or to have more than two children, or to continue any unplanned pregnancy. As a species, shouldn't we want to reproduce? If we continue to reinforce the idea that having kids is a taboo choice, how long will it be before there are no children?
>
> Many of the women I went to primary and high school with never left our little hometown, and now have their own children in the exact suburb I couldn't wait to get away from. In my twenties, I pitied them. How could they be so uncurious as to never leave home? Weren't we all raised to believe that women had choices now?

The next thing I want to do is to give you some facts about infertility, and whether women have accurate beliefs about infertility.

Dina sent me this UK Daily Mail article a while back, but I held onto it until I could find something to pair it with.

It says:

> One of Britain's top NHS fertility specialists last night issued a stark warning to women: Start trying for a baby before you're 30 – or risk never having children.
>
> In a strongly worded letter to Education Secretary Nicky Morgan, consultant gynaecologist Professor Geeta Nargund has also demanded that teenagers are taught about the dangers of delaying parenthood, because of the spiralling cost to the taxpayer of IVF for women in their late 30s and 40s.
>
> […]Prof Nargund said last night: 'Ideally, if a woman is ready for a child, she should start trying by the time she is 30. She should consider having a child early because as a woman gets older, her fertility declines sharply.'
>
> If a woman started trying early enough, doctors would still have time to diagnose problems and take action before it was too late, she said.
>
> Her comments were endorsed by Professor Allan Pacey, outgoing chair of the British Fertility Society.
>
> **'You need to be trying by 30 because if there is a problem and you need surgery, hormones or IVF, then you've got five years to sort it out,' he said. 'If a woman starts trying at 35, doctors have got to sort it out when she is already on a slippery fertility slope'.**

My friend Drew found a study reported on by ABC News, that explained why the age of 30 is so important.

Excerpt:

> By the time a woman hits 30, nearly all of her ovarian eggs are gone for good, according a new study that says women who put off childbearing for too long

> could have difficulty ever conceiving.
>
> The study published by the University of St. Andrews and Edinburgh University in Scotland found that women have lost 90 percent of their eggs by the time they are 30 years old, and only have about 3 percent remaining by the time they are 40.

Now, do most women know what the experts say about infertility?

Consider this article from Aeon magazine.

It says:

> Many studies show that women are not only woefully ignorant when it comes to fertility, conception and the efficacy of assisted reproductive technologies (ART) – but they overestimate their knowledge about the subject. **For instance, a 2011 study in *Fertility and Sterility* surveyed 3,345 childless women in Canada between the ages of 20 and 50; despite the fact that the women initially assessed their own fertility knowledge as high, the researchers found only half of them answered six of the 16 questions correctly.** 72.9 per cent of women thought that: 'For women over 30, overall health and fitness level is a better indicator of fertility than age.' (False.) And 90.9 per cent felt that: 'Prior to menopause, assisted reproductive technologies (such as IVF) can help most women to have a baby using their own eggs.' (Also false.) Many falsely believed that by *not* smoking and *not* being obese they could improve their fertility, rather than the fact that those factors simply negatively affect fertility.
>
> […]**According to a 2011 study in *Human Reproduction*, which surveyed 410 undergraduate students, most overestimated a women's chances of spontaneous pregnancy in all age groups, but particularly after receiving IVF beyond age 40.** Only 11 per cent of the students knew that genetic motherhood is unlikely to be achieved from the mid-40s onward, unless using oocytes or egg cells frozen in advance. 'This can be explained by technological "hype" and favourable media coverage of very late pregnancies,' the authors concluded.

So, I guess now I'll issue my advice to women in their 20s on how to avoid being single and childless at 35.

Money gives men confidence to pull the trigger on marriage, so you should focus your efforts on men with a solid balance sheet and a gap-less resume. Beware of men who paint a rosy picture of their finances in the future that makes you feel good, but who have not demonstrated their ability to earn or save. It's much better to focus your time on a man who can marry you *right now*. The best way to tell if a man is capable of marriage is not by listening to confident words, it's by looking to see how he has prepared to perform his roles, one of which is *provider*.

Be debt free. Study STEM in school, update your resume, and get a job that pays well.

Jobs are not meant to be fun or fulfilling. You need to be preparing financially for marriage, and that means a normal 8-4:30 job in an office with 3% annual raises and 401K matching. The more you save to help your man with the down payment on your house, the better. Pursuing fun and spending money on frivolous things like travel makes you addicted to fun, which is unsuitable for the hard work and responsibilities in marriage. Working a hard job is a good way to break down your selfishness, and prepare you to take your obligations to others seriously. *Don't* live in the moment, *do* sacrifice for the future. Believe me: a woman's debt is a *serious* damper on a man's willingness to marry her.

If you went to college, chances are that you absorbed a lot of feminism. Feminism emphasizes being free of constraints, feeling happy, having fun, career over family, and independence from the needs of men and children. You need to renew your mind in order to undo the cultural denigration of marriage and children. Get yourself a marriage mentor, ask for book recommendations that will educate you about the challenges and rewards of marriage. A good marriage mentor will explain to you why marriage is a better plan than the feminist plan, and will emphasize self-denial, self-sacrifice, self-control and serving others. It's only by getting specific about marriage and parenting that your heart will change to want to work on marriage rather than work on the things that the feminist culture prefers. I recommend Dr. Laura's book on husbands, and lectures by Dr. Jennifer Roback Morse.

This talk of infertility made me think of a woman I know who just turned 30. She spent most of her 20s in relationships with huge, tall burly men. Race car drivers, etc. She liked to travel, especially to the beach. She liked ride around with in boats with buff guys. Now, at 30, she is very jaded about men and struggling to even get a date. In my experience, men are most open to marrying a woman who is young, athletic, and doesn't have baggage from fun-seeking with hot bad boys. Sexual baggage usually builds impatience, mistrust and controlling behavior in a woman. Men prefer to marry virgins who are calm, stable and not addicted to alcohol or drugs. The less experience the better. The time to focus on serious marriage-minded providers and leaders is when you have what they want to marry.

What is the best scientific theory to explain the origin of life on Earth?

June 1, 2018 | by Wintery Knight | Link | Original Link

Evolution News talks about a new peer-reviewed science paper which re-caps the current origin of life situation:

> …the dominant biological paradigm — abiogenesis in a primordial soup. The latter idea was developed at a time when the earliest living cells were considered to be exceedingly simple structures that could subsequently evolve in a Darwinian way. These ideas should of course have been critically examined and rejected after the discovery of the exceedingly complex molecular structures involved in proteins and in DNA. But this did not happen. Modern ideas of abiogenesis in hydrothermal vents or elsewhere on the primitive Earth have developed into sophisticated conjectures with little or no evidential support.
>
> …independent abiogenesis on the cosmologically diminutive scale of oceans, lakes or hydrothermal vents remains a hypothesis with no empirical support…
>
> The conditions that would most likely to have prevailed near the impact-riddled Earth's surface 4.1–4.23 billion years ago were too hot even for simple organic molecules to survive let alone evolve into living complexity…
>
> The requirement now, on the basis of orthodox abiogenic thinking, is that an essentially instantaneous transformation of non-living organic matter to bacterial life occurs, an assumption we consider strains credibility of Earth-bound abiogenesis beyond the limit.
>
> The transformation of an ensemble of appropriately chosen biological monomers (e.g. amino acids, nucleotides) into a primitive living cell capable of further

> evolution appears to require overcoming an information hurdle of superastronomical proportions, an event that could not have happened within the time frame of the Earth except, we believe, as a miracle. All laboratory experiments attempting to simulate such an event have so far led to dismal failure.
>
> Before the extensive sequencing of DNA became available it would have been reasonable to speculate that random copying errors in a gene sequence could, over time, lead to the emergence of new traits, body plans and new physiologies that could explain the whole of evolution. However the data we have reviewed here challenge this point of view. It suggests that the Cambrian Explosion of multicellular life that occurred 0.54 billion years ago led to a sudden emergence of essentially all the genes that subsequently came to be rearranged into an exceedingly wide range of multi-celled life forms — Tardigrades, the Squid, Octopus, fruit flies, humans — to name but a few.
>
> …the complexity and sophistication of life cannot originate (from non-biological) matter under any scenario, over any expanse of space and time, however vast.

What is the explanation of the origin of life, then, according to true-believing atheists?

Richard Dawkins explains:

Got that? The origin of life on Earth is best explained as a result of higher aliens seeding the Earth with life. And where did those aliens come from? They evolved by chance. And can we observe or test the hypothesis that they evolved by chance? No.

Lest you think that this "aliens did it" explanation is a trick of video editing, consider this article from Scientific American.

Excerpt:

> Francis Crick (who co-discovered the structure of DNA with James Watson) and Leslie Orgel once proposed that life on Earth was the result of a deliberate infection, designed by aliens who had purposely fled mother nature's seed to a new home in the sun.
>
> […]The origins of life remains an unresolved mystery. I argue that Crick and Orgel's paper was meant both as a serious and plausible scientific alternative and as a means to criticize concurrent origins of life.

Previously, I've laid out the evidence for cosmic fine-tuning, so that we could understand how slight changes to the constants and quantities given at the Big Bang would make complex, embodied life in the universe impossible. The smallest of changes has massive effects: only hydrogen, no hydrogen, no stars, universe re-collapses into a hot fireball, etc. The atheistic response to this evidence, which has been documented in the most prestigious academic presses and peer-reviewed journals, is to either deny the evidence, or assert that there is an untestable, unobservable multiverse. As if this were not bad enough, the multiverse generator itself requires fine-tuning.

Similarly with the origin of the universe. The best atheistic responses to the origin of space, time, matter and energy from nothing, about 14 billion years ago, has been to either assert that nothing exists (Peter Atkins) or that the nothing that preceded the universe was actually something (Lawrence Krauss) or to introduce a speculative theoretical model that is disproved by observations (Sean Carroll).

So, let's take stock. We have evidence for the origin of the universe, like the cosmic microwave background radiation and the light element abundance observations. Atheist answer: either nothing exists right now, or the nothing causally prior to the universe was really something, or here is a disproved speculative theory. We have evidence of cosmic fine-tuning to allow the existence of complex, embodied intelligence. Atheist answer: the unobservable, untestable multiverse did it. We have evidence that origin of life was almost immediate after the cooling of the Earth, and that the problem is best explained by an intelligence sequencing amino acids and proteins, similar to the way that humans write code and blog posts. Atheist answer: unobservable, untestable aliens who evolved did it. This is not even to mention the Cambrian explosion. The last article I saw argued that the introduction of oxygen was the best naturalistic explanation for that. Does oxygen write genetic code?

I'll leave it to you to decide which side likes science, and which side likes science fiction. Personally, I would not be comfortable being an atheist at this time in history. We've just made too much scientific progress to still believe in stone-age mythology. I understand that atheists find Star Wars and Star Trek comforting and entertaining. I understand that real peer-reviewed science papers are boring and dull compared to science fiction. I'm not saying that we can't believe in atheism when we are children, and still reading comic books. But there comes a time when we need to grow up and be more responsible about adjusting our worldviews to match the progress of science. A child who believes in Santa Claus is cute, but it's not the same thing when a grown-up does it.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds
- William Lane Craig's case for the resurrection of Jesus

Good news: more parents pulling their kids out of schools to homeschool them

June 2, 2018 | by Wintery Knight | Link | Original Link

Education spending has tripled since 1970

Homeschooling is definitely NOT an easy thing to do. First, parents still have to pay taxes for the failing schools they don't want to use. Second, one parents has to give up a salary to stay home, although this is offset by not having to pay for daycare. But more parents are starting to choose homeschooling for a variety of reasons. This news article from Washington Times lays out one that I had never heard of before.

Excerpt:

> After a gunman opened fire on students in Parkland, Florida, the phones started ringing at the Texas Home School Coalition, and they haven't stopped yet.
>
> The Lubbock-based organization has been swamped with inquiries for months from parents seeking safer options for their kids in the aftermath of this year's deadly school massacres, first in Parkland and then in Santa Fe, Texas.
>
> "When the Parkland shooting happened, our phone calls and emails exploded," said coalition president Tim Lambert. "In the last couple of months, our numbers have doubled. We're dealing with probably between 1,200 and 1,400 calls and emails per month, and prior to that it was 600 to 700."
>
> […]Brian D. Ray, president of the National Home Education Research Institute in Salem, Oregon, who has conducted homeschool research for 33 years, said school safety has increasingly become an issue for parents looking at teaching their kids at home.

It’s definitely true that homeschooling is a better choice for parents seeking to pass on their worldview to their children. And I think it’s a real question whether public school administrators are doing everything possible to make schools safe. Although metal detectors and armed guards are sure ways to prevent violence, public school teachers and administrators simply don’t want to do what works. And there’s no question about what works. I recently had to renew my plates in a new county and accidentally wandered into the City Hall building. The nice armed guard standing in front of the metal detector was nice enough to point me in the right direction. That was good security.

The trouble with the schools is that, under the Obama administration, schools lost a lot of their power to remove dangerous students from the schools. This article by David French at National Review explains.

Excerpt:

> Yesterday Paul Sperry of RealClearInvestigations published a comprehensive report that reached an explosive conclusion:
>
> Despite committing a string of arrestable offenses on campus before the Florida school shooting, Nikolas Cruz was able to escape the attention of law enforcement, pass a background check and purchase the weapon he used to slaughter three staff members and 14 fellow students because of Obama administration efforts to make school discipline more lenient.
>
> […]In 2013, the Broward County school board entered into an agreement with multiple law-enforcement agencies — including the Broward County sheriff — designed to limit the number of on-campus arrests.
>
> Obama education secretary Arne Duncan even highlighted Broward County’s efforts to reduce out-of-school suspensions and try alternative forms of discipline. Broward County was reportedly “one of 53 major school districts” to adopt Obama-administration guidelines designed in part to limit law-enforcement involvement in school discipline.
>
> Sperry quoted Peter Kirsanow, a conservative member of the Commission on Civil Rights:
>
> Broward County adopted a lenient disciplinary policy similar to those adopted by many other districts under pressure from the Obama administration to reduce racial “disparities” in suspensions and expulsions. . . . In many of these districts, the drive to “get our numbers right” has produced disastrous results, with startling increases in both the number and severity of disciplinary offenses, including assaults and beatings of teachers and students.
> Sperry also wrote a comprehensive essay for the New York Post in December outlining how lax discipline policies where enabling a wave of violence against teachers and students. He detailed incidents across the country, including mass resignations of teachers after escalating assaults.
>
> In local news reports at least one former Broward school-resource officer has

> spoken bluntly about the pressure not to arrest students and said that the number of resource officers was cut in half.

The point is that it's not by accident that schools have suddenly become unsafe. It's a result of Democrat policies which favor law-breakers over student's safety. Sound familiar? That's right, it's the same leniency that Democrats show to illegal aliens who commit crimes. Remember how Nancy Pelosi defended the violent criminals in the MS-13 gang? This is normal Democrat behavior. They try to feel good about themselves and show everyone how "compassionate" they are by defending criminals while endangering the taxpayers who pay their salaries. Don't ask me why, it makes no sense to me.

Anyway, I have a cute homeschooling story about an Alabama family to from the Christian Post, which shows how good homeschooling can work.

Excerpt:

> An impressive seven of 10 homeschooled children from a Christian family in Montgomery, Alabama, which now boasts a doctor and New York City architect among them, all started college by the time they were 12; and now their parents have written a book about how they managed to pull off such staggering academic success.
>
> The parents of the 10 children, Mona Lisa and Kip Harding, are described as high school sweethearts on a website dedicated to *The Brainy Bunch Book*.
>
> "After four kids, they decided to turn to homeschooling, and their success paved the way for their children to start college by the age of 12, and go on to great careers in medicine, engineering, architecture and more," explaines the website.
>
> **Hannah, 26, is the oldest Harding child. She earned her bachelor of science in mathematics from Auburn University Montgomery and a master's degree in mathematics by the time she was 19. She is now working on a PhD in material science.**
>
> **Rosanna, 24, is now an architect in New York City and became the youngest member in the American Institute of Architects at age 23. Serena, 22, earned her bachelor's degree in biology from Huntingdon College at 17, and became one of America's youngest female doctors at 22. She is now a resident at the Naval Hospital in Bethesda.**
>
> **Their brother Heath, 17, has an master's in computer science. He earned a BA in English at 15, and he is currently working at building his tutoring and online computer business. Keith, who is 15, is pursuing a bachelor's in music at Faulkner University. Seth, just 13, is a history major at Huntingdon College, while Katrinnah, 10, is a student at Faulkner University. Their other siblings, Mariannah, 8; Lorennah, 5, and Thunder, 3, are still being homeschooled.**
>
> In an interview with KSL Kip and Mona Lisa noted that their children aren't geniuses. They simply found a way to accelerate their learning by making it fun.

> One-on-one sessions with the mother who is working on her bachelor's degree at home also helped immensely.
>
> "One teacher has 30 students on average," said Kip. "We can do better than that. Kids get left behind in a classroom. … This is where homeschooling really takes off because those kids are getting extra attention. And who's more loving than a mom and dad teaching them things?"

I think you would certainly detect problems much faster in your children's educations if you are the one teaching them.

Robin Collins and atheist Peter Millican discuss the fine-tuning of the universe for life

June 3, 2018 | by Wintery Knight | Link | Original Link

British Spitfire and German Messerschmitt Me 109 locked in a dogfight

You might remember Peter Millican from the debate he had with William Lane Craig. I ranked that debate as one of the 3 best I have ever seen, along with the first Craig vs Dacey debate and the second Craig vs Sinnott-Armstrong debate.

Details:

> Science has revealed that the fundamental constants and forces of the cosmos appear to be exquisitely fine-tuned to allow a universe in which life can develop. Is God the best explanation of the incredibly improbable odds of the universe we live in being a life-permitting one?
>
> Robin Collins is a Christian philosopher and a leading advocate of the argument for God from cosmic design. Peter Millican is an atheist philosopher at Oxford University. They debate the issues.
>
> From 'Unbelievable?' on 'Premier Christian Radio', Saturday 19th March 2016.

The debate:

As usual when the atheist is an expert, there is no snark or paraphrasing in the summary.

Summary

Brierley: What is the fine-tuning argument?

Collins: the fine-tuning is structure of the universe is extremely precisely set to allow the existing of conscious, embodied agents who are capable of moral behavior. There are 3 kinds of fine-tuning: 1) the laws of nature (mathematical formulas), 2) the constants of

physics (numbers that are plugged into the equations), 3) the initial conditions of the universe. The fine-tuning exists not just because there are lots of possibilities, but there is something special about the actual state of affairs that we see. Every set of laws, parameters and initial conditions is equally improbable, but the vast majority of permutations do not permit life. The possible explanations: theism or the multiverse.

Brierley: How improbable are the numbers?

Collins: Once case is the cosmological constant (dark energy density), with is 1 part in (10 raised to 120th power). If larger, the universe expands too rapidly for galaxies and stars to form after the Big Bang. If smaller, the universe collapses in on itself before life could form. Another case is the initial distribution of mass energy to give us the low entropy we have that is necessary for life. The fine-tuning there is 1 part in (10 raised to the 10th power raised to the 123rd power).

Brierley: What do you think of the argument?

Millican: The argument is worth taking very seriously. I am a fan of the argument. The other arguments for God's existence such as the ontological and cosmological arguments are very weak. But the fine-tuning argument has the right structure to deliver the conclusion that theists want. And it is different from the traditional design argument tended to focus on biological nature, which is not a strong argument. But the fine-tuning argument is strong because it precedes any sort of biological evolution. Although the design is present at the beginning of the universe, it is not visible until much later. The argument points to at least deism, and possibly theism. The argument is not based on ignorance, it is rooted in "the latest results from the frontiers of science" (his phrase).

Brierley: Is this the best argument from natural theology?

Collins: The cosmological argument makes theism viable intuitively, but there are some things that are puzzling, like the concept of the necessary being. But the fine-tuning argument is decisive.

Brierley: What's are some objections to the fine-tuning argument?

Millican: The argument is based on recent physics, so we should be cautious because we **maybe** we will discover a natural explanation.

Brierley: Respond to that.

Collins: The cosmological constant has been around since 1980. But the direction that physics is moving in is that there are more constants and quantities being discovered that need to be fine-tuned, not less. Even if you had a grand unified theory, that would have to be have the fine-tuning pushed into it.

(BREAK)

Millican: Since we have no experience of other laws and values from other universes, **we don't know** whether these values can be other than they are. Psychologically, humans are prone to seeing purpose and patterns where there is none, so **maybe** that's happening here.

Brierley: Respond to that.

Collins: It is possible to determine probabilities on a single universe case, for example using multiple ways of calculating Avogadro's number all converging on the same number makes it more probable.

Millican: Yes, I willing to accept that these constants can take on other values, ("principle of indifference"). But **maybe** this principle be applied if the improbability were pushed up into the theory?

Collins: Even if you had a grand theory, selecting the grand theory from others would retain the improbability.

Brierley: What about the multiverse?

Millican: **What if** there are many, many different universes, and we happen to be in the one that is finely-tuned, then we should not be surprised to observe fine-tuning. **Maybe** a multiverse theory will be discovered in the future that would allow us to have these many universes with randomized constants and quantities. "I do think that it is a little bit of a promissary note". I don't think physics is pointing to this right now.

Brierley: Respond to that.

Collins: I agree it's a promissary note. This is the strongest objection to the fine-tuning argument. But there are objections to the multiverse: 1) the fine-tuning is kicked back up to the multiverse generator has to be set just right to produce universes with different constants, 2) the multiverse is more likely to produce a small universe with Boltzmann brains that pop into existence and then out again, rather than a universe that contains conscious, embodied intelligent agents. I am working on a third response now that would show that the same constants that allow complex, embodied life ALSO allow the universe to be discoverable. This would negate the observer-selection effect required by the multiverse objection.

Brierley: Respond to that.

Millican: I don't see why the multiverse generator has to be fine-tuned, since **we don't know** what the multiverse generator is. I'm not impressed by the Boltzmann brains, but won't discuss. We should be cautious about inferring design because **maybe** this is a case where we are seeing purpose and design where there is none.

Brierley: Can you negate the discoverability of the universe by saying that it might be psychological?

Collins: These things are not psychological. The selected value for the cosmic microwave background radiation is fine-tuned for life and for discoverability. It's not merely a discoverability selection effect, it's optimal for discoverability. If baryon-photon value were much smaller, we would have known that it was not optimal. So that judgment cannot be explained by

Millican: That's a very interesting new twist.

Brierley: Give us your best objection.

Millican: I have two. 1) Even if you admit to the fine-tuning, this doesn't show a being who is omnipotent and omnisicient. What the fine-tuning shows is that the designer is doing

the best it can given the constraints from nature. **If I were God,** I would not have made the universe so big, and I wouldn't have made it last 14 billion years, just to make one small area that supports life. An all-powerful God would have made the universe much smaller, and much younger. 2) The fine-tuning allows life to exist in other solar systems in other galaxies. What does this alien life elsewhere mean for traditional Christian theology? The existence of other alien civilizations argues against the truth of any one religion.

Brierley: Respond to those.

Collins: First objection: with a finite Creator, you run into the problem of having to push the design of that creature up one level, so you don't really solve the fine-tuning problem. An unlimited being (non-material, not composed of parts) does not require fine-tuning. The fine-tuning is more compatible with theism than atheism. Second objection: I actually do think that it is likely that are other universes, and life in other galaxies and stars, and the doctrine of the Incarnation is easily adaptable to that, because God can take on multiple natures to appear to different alien civilizations.

Other resources (from WK)

If you liked this discussion, be sure and check out a full length lecture by Robin Collins on the fine-tuning, and a shorter lecture on his very latest work. And also this the Common Sense Atheism podcast, featuring cosmologist Luke Barnes, who answers about a dozen objections to the fine-tuning argument.

Under “racist” Trump, black unemployment plunges to record low

June 4, 2018 | by Wintery Knight | Link | Original Link

In the 2016 presidential election, about 90% of black voters voted for higher taxes, more government spending, more regulations, and more government. President Trump slashed the individual and corporate tax rates, and greatly reduced regulations on job creators. Fortunately for black voters, they didn’t get the bad economic policies they voted for.

The Daily Caller explains:

> Friday’s economic numbers were very good for America.
>
> The numbers reveal that the U.S. economy is booming and many key indicators of economic health are trending in the right direction. According to the Labor Department, the unemployment rate is 3.8 percent, the lowest in nearly two decades.
>
> 223,000 jobs were created and the May increase in payroll was bullish, surprising economists, according to NPR. However, the most historic data points seem to be centered around black unemployment. The unemployment rate for African-Americans plunged to 5.9 percent in May. That is a record low. Interestingly, the gap between white ad black unemployment has shrunk to the smallest since these numbers have been recorded. The white unemployment (3.5%) and black unemployment (5.9%) is the smallest gap since the release of these numbers, beginning in the early 1970s.

If you looked at who black voters tend to vote for, you would think that they favored gay rights, gay marriage, abortion through all 9 months of pregnancy, the destruction of the traditional family, and eradicating Christianity from the public square. Although there are a handful of black conservatives who connect their voting with their values, most black voters don’t.

It doesn’t make any difference if blacks identify as Christians. When the chips are down, most of them vote for abortion, gay rights and gay marriage:

Which Religions Voted for Obama in 2008?

If you include black voters who don't identify as Protestants, the number voting for Democrats is even higher, if you can believe that. Black "Protestants" vote for Democrats at about the same rates as atheists. As a non-white Evangelical Christian, I am apparently in the minority because I vote pro-life and pro-marriage.

Should we expect black voters to know that Democrat policies do not work? Well, we should certainly expect the ones living in the largest American cities to know.

Do blacks do well when they get what they vote for?

The big cities like Detroit, Milwaukee, Philadelphia, Baltimore, etc. that are so awful for law-abiding blacks to live in have been run by Democrats *for decades.*

Investors Business Daily explains:

> America is awash with troubled, dysfunctional cities that have been electing Democratic mayors for decades.
>
> - Detroit last elected a Republican mayor in 1957. It is now the model of urban failure — it's recognized more for its poverty, crime, rot and bankruptcy than the great cars that it turned out into the early 1970s. It is the poorest big city in the nation, with almost 40% of the population living below the poverty line. The website Law Street actually ranks Detroit ahead of Flint as the country's most dangerous city. Either way, it's clear that both cities have institutionalized crime problems.
>
> Detroit is also a pit of political corruption. Just in recent years, one mayor, Kwame Kilpatrick, was convicted of corruption and sent to federal prison for 28 years, while building inspectors have been indicted on federal felony bribery charges

> and a former city council member was investigated in a bribery and kickback scandal.
>
> - Chicago's last GOP mayor was elected in 1927. The nation's third-largest city is home to some of the worst inner-city violence imaginable. More than 2,300 people were shot there last year, and nearly 400 lost their lives to homicides.
>
> Its finances are just as grim. "Chicago is so broke," IBD contributor Stephen Moore explained months ago, "that its bonds are junk status, and Mayor Rahm Emanuel had to go hat in hand last week to the state capital, Springfield, for bailout money to pay the bills." Things have been rotten enough, Moore said, to send "a record number of people … fleeing Cook County, home to Chicago." Only a little more than half of the city's pension liabilities are funded.
>
> - St. Louis has been electing Democratic mayors since 1949. The Gateway to the West has become the gateway for crime. Law Street says that it's the fourth most dangerous city in the country, Forbes says it's the second. It had the sixth-highest poverty rate among big cities in 2014.
> - The last GOP mayor of Philadelphia left office in 1952. A few years ago, Moore identified it as a favorite to follow Detroit into bankruptcy.
> - Both Baltimore and Oakland had Republican mayors as late as the 1960s. In the era of Democratic rule, both are now more well known for their crime and poverty problems than for their charm and character.
> - Newark, N.J., hasn't had a GOP mayor in more than a century. It was ranked as the fifth-worst city to live in in 2015. Detroit, of course, was first.
>
> When Democrats are in control, cities tend to go soft on crime, reward cronies with public funds, establish hostile business environments, heavily tax the most productive citizens and set up fat pensions for their union friends. Simply put, theirs is a Blue State blueprint for disaster.

If you want to blame someone for the failure of the black community to get ahead, blame Democrats. They are the ones who are running things in the cities where we see all this rioting. Their policies are the cause of the poverty. You don't get job creation when you punish the job creators with high taxes and onerous regulations. You don't get fathers in the homes when you reward single motherhood by choice with welfare checks.

Supreme Court sides with Christian baker against secular left fascists and ACLU

June 5, 2018 | by Wintery Knight | Link | Original Link

Gay activist vandalizes pro-marriage sign

On Monday, the Supreme Court finally ruled on one of the cases where Christian bakers were persecuted by gay couples and gay rights activitists who wanted to use the power of the government to control the behavior of Christians. Basically, the gay rights activists wanted Christians to act like non-Christians on moral issues. They were using the power of the state to force their morality on Christians. It was the height of intolerance and bigotry.

Here is the first article from Fox News that I'm linking to, written by Kristen Waggoner. Kristen is lead counsel on this Colorado case, as well as the Washington state case against the florist Barronelle Stutzman.

Excerpt:

> On Monday, the U.S. Supreme Court ruled in favor of cake artist Jack Phillips, saying the Colorado Civil Rights Commission unjustly punished him when it ordered Jack to create a custom wedding cake celebrating a same-sex wedding. As the court said, "[t]he neutral and respectful consideration to which Phillips was entitled was compromised here …. The Civil Rights Commission's treatment of his case has some elements of a clear and impermissible hostility toward the sincere religious beliefs that motivated his objection."

You'll hear a lot of lies about the case from the mainstream media.

Here's the truth:

> Jack has never refused to serve any person based on who they are or what they look like. Everyone is welcome in his shop—even the two men who sued him. In

> fact, he told those men that, even though he couldn't create a custom cake to celebrate a same-sex marriage, he would be happy to sell them anything else in his shop or design a cake for them for a different occasion.
>
> Over the years, Jack has declined to create many custom cakes because of the messages they express. If you're looking for a ghoulish Halloween cake, a boozy bachelorette-themed dessert, or a cake celebrating a divorce—Masterpiece Cakeshop isn't your place.

Here's what the Colorado Civil Rights Commission ordered Jack to do:

> The commission's order requires cake artist Jack Phillips and his staff at Masterpiece Cakeshop to design cakes for same-sex celebrations, forces him to re-educate his staff that Colorado's Anti-Discrimination Act means that artists must endorse same-sex marriage regardless of their religious beliefs, compels him to implement new policies to comply with the commission's order, and requires him to file quarterly "compliance" reports for two years. The reports must include the number of patrons declined a wedding cake or any other product and state the reason for doing so to ensure he has fully eliminated his religious beliefs from his business.

Here's an example of the hostility to Christianity of the Colorado commissioners:

> Commissioner Diann Rice makes the following comment just before denying Phillips' request to temporarily suspend the commission's re-education order:
>
> "I would also like to reiterate what we said in…the last meeting [concerning Jack Phillips]. Freedom of religion and religion has been used to justify all kinds of discrimination throughout history, whether it be slavery, whether it be the Holocaust… I mean, we can list hundreds of situations where freedom of religion has been used to justify discrimination. And to me it is one of the most despicable pieces of rhetoric that people can use – to use their religion to hurt others."

The Commissioner certainly wasn't shy about ramming her secular leftist ideology down Jack's throat, and with the full power of the secular state behind it. But she wasn't willing to allow Jack to live according to his beliefs. He had to be forced to accept her beliefs and her morality. At gunpoint, really.

Another prominent defender of liberty is David French, who used to work for the ADF, and is now at ACLJ. He wrote about the case for National Review. He addresses the all-important question about what we can expect from future rulings. Will this decision apply broadly or narrowly?

He writes:

> […][T]he Court focused on Phillips's second claim, holding (by a 7–2 margin) that Colorado violated his right to free exercise of religion when it held him in violation of state public-accommodation law. Justice Kennedy focused on two

> critical aspects of the case to support his ruling. He first condemned anti-religious comments made by state commissioners during the hearings before the Colorado Civil Rights Commission. He especially singled out a commissioner's claim that "freedom of religion" has been used to "justify all kinds of discrimination throughout history," including slavery and the Holocaust. The commissioner called Phillips's religious-freedom claim "one of the most despicable pieces of rhetoric that people can use."
>
> […]Had Kennedy stopped his opinion at that point, Phillips's victory would have been important, but profoundly limited. The obvious response would be for the commissioners to reconsider the case, cleanse their rhetoric of outright hostility, deliver the same result on a cleaner record, and put the more difficult free-speech claim right back in the Court's lap. But Kennedy didn't stop. He found a separate ground for concluding that Colorado was motivated by anti-religious animus, and that separate ground will make it difficult for states to take aim at "offensive" religious exercise, even when it occurs in a commercial context.
>
> It turns out that the state of Colorado had protected the right of bakers to refuse to create cakes with explicitly anti-gay messages.
>
> […]All bakers — regardless of religion — have the same rights and obligations. At the same time, gay and religious customers enjoy equal rights under state public-accommodation statutes. Any ruling the commission imposes will have to apply on the same basis to different litigants, regardless of faith and regardless of the subjective "offensiveness" of the message.
>
> This is a severe blow to the state. It hoped for a ruling declaring that the cake wasn't protected expression and a free-exercise analysis that simply ratified the public-accommodation law as a "neutral law of general applicability." Such a ruling would have permitted the favoritism on display in this case. It would have granted state authorities broad discretion to elevate favored messages and suppress dissent, all while operating under the fiction that they weren't suppressing protected expression or religious exercise.

It was an excellent idea for whoever asked for those anti-gay cakes to do that so that we would know that the law was not being enforced equally. Because of that, we got a broad ruling that will be applicable elsewhere. It's not everything we wanted, but it's more than I expected.

Remembering Richard Winters on D-Day: The Battle of Brecourt Manor

June 6, 2018 | by Wintery Knight | Link | Original Link

Richard D. Winters Monument

The caption says, “Wars do not make men great, but they do bring out the greatness in good men.” Now let’s see what Dick Winters did during World War II.

Mission: locate and destroy enemy artillery

Brecourt Manor

I want to link to this article from Investors Business Daily about Lt. Winters action at Brecourt Manor.

> Here’s the summary of what Dick Winters did on the morning of June 6th, 1944:
>
> First Lt. Dick Winters leapt into leadership on D-Day, June 6, 1944. His commander’s aircraft was shot down as the men parachuted at 600 feet. When Winters headed to earth, he was in charge of a small platoon.

> When he landed, he had to command Company E with 148 men, because his commander had been lost along with the plane.
>
> Yet in the chaos, Winters could locate only a dozen other soldiers for their first task: take out a 50-man German artillery battery.
>
> “Winters ordered his assault force to strip down to only essential weapons — guns and grenades — to use against the well-prepared defenses, then deployed his machine guns to cover his advances,” Keith Huxen, senior director of research at the National WWII Museum in New Orleans, told IBD. “Waiting for the proper moment, he led a charge across an open field, gaining the first gun placement, and then they moved down the trenches, systematically destroying each gun.
>
> “In the process, Winters discovered a map detailing all German gun positions to kill American soldiers coming up from Utah Beach, which saved many lives.”
>
> Joined by five reinforcements during the fight, Winters lost four dead and six wounded. The Yanks managed to kill 15 Nazis, capture 11 and wound many others.
>
> Winters’ maneuvers are still studied at West Point as a case of successfully attacking a fixed position, despite being outnumbered.
>
> Winters (1918-2011) was born in Ephrata, Pa., and the family moved to Lancaster when he was 8.
>
> He later attributed his character and desire to go to church regularly to his mother.
>
> Winters attended local Franklin & Marshall College and earned an economics degree with top honors in 1941. He enlisted in the Army in August to shorten his service time, rather than wait to be drafted if America was to join the war.

The diagram below shows where everything was positioned. The Rangers attacked through the trenches containing the four guns, while being raked with fire from multiple MG42 heavy machine guns across the open field.

Assaulting the guns at Brecourt Manor

The operation was one of the most famous actions in the Normandy invasion, and you may have seen it portrayed in the Band of Brothers DVD series. But the article notes that when Dick Winters read the script for that series, “he asked that the profanity be cut from the dialogue of his character, since he never swore”. When the producers told him it was too late to change it, he wrote them a letter of resignation from the production, because “I don’t want these boys and girls thinking it is acceptable using profanity”. In the end, the movie makers removed the swearing by the actor portraying Winters.

If you are looking for a reason to buck the culture and stop swearing, there’s a good reason for you right there – Dick Winters never used profanity.

You can watch the scene from Band of Brothers in low resolution here:

If you play Combat Mission, like I do, you can watch a 28 minute AAR from the simulation of the battle.

Operation Market Garden

More from the article I linked above, this time from Operation Market Garden:

> Near Nijmegen on Oct. 5, Winters’ platoon was a position where any movement carried risks. Rather than retreat when fired on by a larger force behind a dike, he led a charge to the top and on the other side discovered a company of 150 Nazi SS troops. Despite having only 40 men, the Americans opened up with everything they had, then shot up a company of enemy reinforcements.
>
> The fray ended with 50 Germans dead, 11 POWs and countless wounded, with few casualties among the Americans.
>
> “This was Easy Company’s crowning achievement of the war and my apogee as a

> company commander," Winters told Kingseed. "This demonstrated its overall superiority, of every soldier, of every phase of infantry tactics: patrol, defense, attack using a base of fire, withdrawal and, above all, superior marksmanship with rifles, machine guns and mortar fire."

Dick Winters is a brave man, someone I admire him very much. And I am grateful for men like him.

I blogged about another hero of the 101st Airborne Division, Ronald Speirs, in a previous post.

Why do famous atheists believe that God does not exist?

June 7, 2018 | by Wintery Knight | Link | Original Link

The importance of fathers for teaching children about a God who cares

Here's a lecture by New York University professor Paul Vitz to explain a connection between atheism and fatherlessness:

Here's an article by Paul Copan (related to the lecture) which points out how father presence/absence and father quality affects belief and disbelief in God.

Excerpt:

> *Seventh, the attempt to psychologize believers applies more readily to the hardened atheist.*It is interesting that while atheists and skeptics often psychoanalyze the religious believer, they regularly fail to psychoanalyze *their own*rejection of God. Why are believers subject to such scrutiny and not atheists? Remember *another* feature of Freud's psychoanalysis — namely, an underlying resentment that desires to kill the father figure.
>
> Why presume atheism is the rational, psychologically sound, and default position while theism is somehow psychologically deficient? New York University psychology professor Paul Vitz turns the tables on such thinking. He essentially says, "Let's look into the lives of leading atheists and skeptics in the past. What do they have in common?" The result is interesting: *virtually all of these leading figures lacked a positive fatherly role model — or had no father at all.*[11]
>
> ### Let's look at some of them.
>
> - *Voltaire*(1694–1778): This biting critic of religion, though not an atheist, strongly rejected his father and rejected his birth name of Francois-Marie

Arouet.

- *David Hume*(1711–76): The father of this Scottish skeptic died when Hume was only 2 years old. Hume's biographers mention no relatives or family friends who could have served as father figures.
- *Baron d'Holbach*(1723–89): This French atheist became an orphan at age 13 and lived with his uncle.
- *Ludwig Feuerbach* (1804–72): At age 13, his father left his family and took up living with another woman in a different town.
- Karl Marx(1818–83): Marx's father, a Jew, converted to being a Lutheran under pressure — not out of any religious conviction. Marx, therefore, did not respect his father.
- *Friedrich Nietzsche*(1844–1900): He was 4 when he lost his father.
- *Sigmund Freud*(1856–1939): His father, Jacob, was a great disappointment to him; his father was passive and weak. Freud also mentioned that his father was a sexual pervert and that his children suffered for it.
- *Bertrand Russell*(1872–1970): His father died when he was 4.
- *Albert Camus*(1913–60): His father died when he was 1 year old, and in his autobiographical novel The First Man, his father is the central figure preoccupation of his work.
- *Jean-Paul Sartre*(1905–80): The famous existentialist's father died before he was born.[12]
- *Madeleine Murray-O'Hair* (1919–95): She hated her father and even tried to kill him with a butcher knife.
- We could throw in a few more prominent contemporary atheists not mentioned by Vitz with similar childhood challenges:
- *Daniel Dennett* (1942–): His father died when he was 5 years of age and had little influence on Dennett.[13]
- *Christopher Hitchens* (1949–): His father ("the Commander") was a good man, according to Hitchens, but he and Hitchens "didn't hold much converse." Once having "a respectful distance," their relationship took on a "definite coolness" with an "occasional thaw." Hitchens adds: "I am rather barren of paternal recollections."[14]
- *Richard Dawkins* (1941–): Though encouraged by his parents to study science, he mentions being molested as a child — no insignificant event, though Dawkins dismisses it as merely embarrassing.[15]

Moreover, Vitz's study notes how many prominent *theists* in the past — such as Blaise Pascal, G.K. Chesterton, Karl Barth, and Dietrich Bonhoeffer — have had in common a loving, caring father in their lives.[16]

Here are some corrections to the list:

1) Voltaire was not an atheist but a deist who rejected claims of the Bible's inspiration, like Paine. Voltaire's aphorism, "If God did not exist, it would be necessary to invent him,"

far from being the cynical remark it is often taken for, it was meant as a retort to the atheistic clique of d'Holbach, Grimm, and others.

2) David Hume's religious views remain uncertain. He never said he was an atheist. A gentle skeptic suits him more.

3) Bertrand Russell was an agnostic.

Not only is there that anecdotal evidence of a psychological explanation for atheism, but there is also statistical evidence.

Excerpt:

> In 1994 the Swiss carried out an extra survey that the researchers for our masters in Europe (I write from England) were happy to record. The question was asked to determine whether a person's religion carried through to the next generation, and if so, why, or if not, why not. The result is dynamite. There is one critical factor. It is overwhelming, and it is this: It is the religious practice of the father of the family that, above all, determines the future attendance at or absence from church of the children.
>
> If both father and mother attend regularly, 33 percent of their children will end up as regular churchgoers, and 41 percent will end up attending irregularly. Only a quarter of their children will end up not practicing at all. If the father is irregular and mother regular, only 3 percent of the children will subsequently become regulars themselves, while a further 59 percent will become irregulars. Thirty-eight percent will be lost.
>
> If the father is non-practicing and mother regular, only 2 percent of children will become regular worshippers, and 37 percent will attend irregularly. Over 60 percent of their children will be lost completely to the church.
>
> Let us look at the figures the other way round. What happens if the father is regular but the mother irregular or non-practicing? Extraordinarily, the percentage of children becoming regular goes*up*from 33 percent to 38 percent with the irregular mother and to 44 percent with the non-practicing, as if loyalty to father's commitment grows in proportion to mother's laxity, indifference, or hostility.
>
> […]In short, if a father does not go to church, no matter how faithful his wife's devotions, only one child in 50 will become a regular worshipper. If a father does go regularly, regardless of the practice of the mother, between two-thirds and three-quarters of their children will become churchgoers (regular and irregular). If a father goes but irregularly to church, regardless of his wife's devotion, between a half and two-thirds of their offspring will find themselves coming to church regularly or occasionally.
>
> A non-practicing mother with a regular father will see a minimum of two-thirds of her children ending up at church. In contrast, a non-practicing father with a regular mother will see two-thirds of his children never darken the church door. If

> his wife is similarly negligent that figure rises to 80 percent!
>
> The results are shocking, but they should not be surprising. They are about as politically incorrect as it is possible to be; but they simply confirm what psychologists, criminologists, educationalists, and traditional Christians know. You cannot buck the biology of the created order. Father's influence, from the determination of a child's sex by the implantation of his seed to the funerary rites surrounding his passing, is out of all proportion to his allotted, and severely diminished role, in Western liberal society.

Basically, anyone who doesn't have a benevolent, involved father is going to have an enormously difficult time believing that moral boundaries set by an authority are for the benefit of the person who is being bounded. The best way to make moral boundaries stick is to see that they apply to the person making the boundaries as well – and that these moral boundaries are rational, evidentially-grounded and not arbitrary.

New study: 90% of species on Earth today originated 100,000 to 200,000 years ago

June 8, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Well, it's Friday, so I thought we would all benefit from reading about a brand new peer-reviewed study that should be the final nail in the coffin of naturalistic evolution. At least for those with an open mind who are not wedded to the philosophical assumption of naturalism.

Phys.org (which is committed dogmatically to fully naturalistic evolution) reports:

> Mark Stoeckle from The Rockefeller University in New York and David Thaler at the University of Basel in Switzerland, who together published findings last week sure to jostle, if not overturn, more than one settled idea about how evolution unfolds.
>
> It is textbook biology, for example, that species with large, far-flung populations—think ants, rats, humans—will become more genetically diverse over time.
>
> But is that true?
>
> "The answer is no," said Stoeckle, lead author of the study, published in the journal *Human Evolution*.
>
> For the planet's 7.6 billion people, 500 million house sparrows, or 100,000 sandpipers, genetic diversity "is about the same," he told AFP.
>
> The study's most startling result, perhaps, is that nine out of 10 species on Earth today, including humans, came into being 100,000 to 200,000 years ago.
>
> "This conclusion is very surprising, and I fought against it as hard as I could,"

> Thaler told AFP.
>
> That reaction is understandable: How does one explain the fact that 90 percent of animal life, genetically speaking, is roughly the same age?

Oh, oh. Pick me, pick me. I know the answer. The answer is that the biological information in living systems was put there by an intelligent agent. You know, the same way that information in books is put there by intelligent agents. And the same way that information in computer code is put there by intelligent agents. And the same way that information in blog posts is put there by intelligent agents. We know what introduces information from our own experience.

Well, what about mutation and selection? Couldn't they create all this information in a couple hundred thousand years? Well, no. You see, mutation and selection have been tested in the lab to see how much information they can produce over generations and generations. And the conclusion is clear: it is impossible for blind forces to create the amount of information we see in living systems in the short time that is available. In fact, the whole history of the universe is not enough time for evolutionary mechanisms to create the information we have in front of us.

Before we leave the paper reported by Phys.org, here is something about whether we see the gradual emergence of complexity via lots of transitional forms in nature.

Not so much:

> […][A]nother unexpected finding from the study—species have very clear genetic boundaries, and there's nothing much in between.
>
> "If individuals are stars, then species are galaxies," said Thaler. "They are compact clusters in the vastness of empty sequence space."
>
> The absence of "in-between" species is something that also perplexed Darwin, he said.

Indeed. So perplexing.

The evidence we gain from the progress of science is always perplexing to people who assume naturalism, and then try to shoehorn reality to match their religious assumptions. I have an idea. Why don't we just make science the search for truth, no holds barred? Wouldn't that be a much better way to do science? Let's just do science honestly, and stop trying to make it prove things that are comfortable for us.

If the origin of the universe, the fine-tuning of the universe for intelligent life, the origin of the first living system, and the sudden origin of body plans in the Cambrian explosion are impossible to account for on naturalism, then maybe we need to jettison the philosophical assumption of naturalism, and just go where the evidence leads? What's wrong with that?

Facebook, Amazon, Google and Twitter ally with leftist group linked to domestic terrorism

June 9, 2018 | by Wintery Knight | Link | Original Link

Gay activist vandalizes pro-marriage sign

If you care about religious liberty, then you know all about religious liberty litigation groups like the Alliance Defending Freedom and the American Center for Law and Justice. These are the lawyers who argue religious liberty cases against secular-leftist fascists at the Supreme Court. In fact, Kristen Waggoner just won a case at the Supreme Court, defending Christian small business owner Jack Phillips from Colorado gay activists.

With that in mind, take a look at this story from the Daily Caller, about the big media corporations who oppose groups like the Alliance Defending Freedom.

Excerpt:

> Four of the world's biggest tech platforms have working partnerships with a left-wing nonprofit that has a track record of inaccuracies and routinely labels conservative organizations as "hate groups."
>
> Facebook, Amazon, Google and Twitter all work with or consult the Southern Poverty Law Center (SPLC) in policing their platforms for "hate speech" or "hate groups," a Daily Caller News Foundation investigation found.
>
> The SPLC is on a list of "external experts and organizations" that Facebook works with "to inform our hate speech policies," Facebook spokeswoman Ruchika Budhraja told TheDCNF in an interview.

So, most people reading this are probably thinking "what's the big deal? I'm just an ordinary mainstream Christian / conservative. My speech doesn't count as hate speech". If you're thinking that, you clearly do not know who the SPLC is.

More:

> Of the four companies, Amazon gives the SPLC the most direct authority over its platform, TheDCNF found.
>
> […]Jeff Bezos' company grants the SPLC broad policing power over the Amazon Smile charitable program, while claiming to remain unbiased.
>
> "We remove organizations that the SPLC deems as ineligible," an Amazon spokeswoman told TheDCNF.
>
> […]The Smile program allows customers to identify a charity to receive 0.5 percent of the proceeds from their purchases on Amazon. Customers have given more than $8 million to charities through the program since 2013, according to Amazon.
>
> Only one participant in the program, the SPLC, gets to determine which other groups are allowed to join it.
>
> Christian legal groups like the Alliance Defending Freedom — which recently successfully represented a Christian baker at the Supreme Court — are barred from the Amazon Smile program, while openly anti-Semitic groups remain, TheDCNF found in May.
>
> One month later, the anti-Semitic groups — but not the Alliance Defending Freedom — are still able to participate in the program.

So, Amazon actually banned a law firm that won a religious liberty case at the Supreme Court. Won that case 7-2, by the way. I wonder if Amazon considers that law firm a "hate group". And whether it considers the speech that persuaded 7 out of 9 Supreme Court judges to be "hate speech".

Ben Carson, the former Republican presidential candidate and current Secretary of Housing and Urban Development, was also labeled an "extremist" by the SPLC.

Carson responded:

> "When embracing traditional Christian values is equated to hatred, we are approaching the stage where wrong is called right and right is called wrong. It is important for us to once again advocate true tolerance," Carson said in response.

The Daily Caller article notes that the SPLC has been criticized from the left as well:

The SPLC has faced tough criticisms not just from conservatives, but from left-wing establishment publications, as well:

> "At a time when the line between 'hate group' and mainstream politics is getting thinner and the need for productive civil discourse is growing more serious, fanning liberal fears, while a great opportunity for the SPLC, might be a problem for the nation," Ben Schreckinger, now with GQ, wrote in a June 2017 piece for Politico.
>
> Washington Post Reporter Megan McArdle, while still reporting for Bloomberg, similarly criticized the SPLC's flimsy definition of "hate group" in

> September 2017. Media outlets who trust the SPLC's labels, McArdle warned, "will discredit themselves with conservative readers and donors."

First, recall from this article posted at The Federalist that the Southern Poverty Law Center was the source of the "hate map" which was used by convicted domestic terrorist Floyd Lee Corkins in his attempt to shoot and kill everyone at the Family Research Council.

Excerpt:

> Corkins would later admit that he had located Family Research Council's office on a "hate map" produced by the Southern Poverty Law Center, and he planned to shoot people in the building and smear the Chick-fil-A sandwiches on them.
>
> […]Much of the ensuing media coverage ignored or downplayed Corkins' motives, which the *Washington Post* referred to as "a detail sure to reignite the culture wars." A year later, Southern Poverty Law Center founder Morris Dees was still publicly defending the inclusion of Family Research Council on the organization's "hate map."

Just to be clear, this gay activist was convicted of domestic terrorism, and received 25 years in prison. He was stopped by a security guard, and this video is the footage of the attempted mass murder.

Let's find out more about SPLC, courtesy of this article from the centrist City Journal, a very respected source.

Here is the article from City Journal.

Excerpt:

> Ironically, the SPLC not only overlooks most of the real hate groups in operation today, along with overtly race-based organizations, such as the pro-Latino National Council of La Raza and MEChA, but also labels moderates with whom it disagrees "extremists" if they deviate from its rigid political agenda, which embraces open borders, LGBT rights, and other left-wing totems. The SPLC has branded Somali-born reformer Ayaan Hirsi Ali an "anti-Muslin extremist" for her opposition to female genital mutilation and other oppressive Islamic practices, and designated the respected Family Research Council as a "hate group" for its opposition to same-sex marriage. Likewise, the organization deems mainstream immigration-reform advocates such as the Center for Immigration Studies (CIS) and Federation for American Immigration Reform (FAIR) as hate groups. British Muslim activist Maajid Nawaz—regarded by most observers as a human rights leader—is suing the SPLC for listing him as an extremist.

More:

> Critics of the SPLC accuse the lavishly funded organization of peddling fear and smearing political opponents—mostly conservatives—as bigots. Its "Hatewatch"

> list is avowedly ideological, acknowledging that it "monitors and exposes the activities of the American radical right." Few left-wing organizations—and no Islamist groups—are branded in this way by the SPLC. Nevertheless, the SPLC, founded in 1971, has burrowed itself into the civil rights movement, the organized bar, the cloistered culture of large law firms, the education system, and even law enforcement as a champion for "the exploited, the powerless and the forgotten." Its executives are richly compensated, some in excess of $400,000 annually. Operating from palatial six-story quarters in Montgomery, Alabama (sometimes called the "Poverty Palace"), it enjoys a $300 million endowment, including more than $23 million in cash.

The non-profit rating group "Charity Watch" gives the SPLC an "F" rating. This is the lowest grade possible.

More:

> The SPLC frequently rails against public figures as "enablers" not technically designated as hate groups or extremists, such as Texas governor Greg Abbott, former congressman and presidential candidate Ron Paul, radio talk show host Glenn Beck, Fox News commentator Judge Andrew Napolitano, and Kentucky senator Rand Paul. Rush Limbaugh, the Breitbart News Network, the Boy Scouts of America, and Focus on the Family (founded by psychologist, broadcaster, and best-selling author James Dobson) have also earned the SPLC's wrath.

And finally:

> What many of the individuals and groups condemned by the SPLC have in common is a conservative orientation. Favoring traditional marriage becomes the moral equivalent of cross-burning; opposing illegal immigration or amnesty for illegal immigrants equates to advocating genocide; resisting the spread of radical Islam invokes Timothy McVeigh; and anti-tax Tea Party groups are now indistinguishable from armed militias or Holocaust deniers. Thus, dissent is de-legitimatized, and political foes are demonized.
>
> […]SPLC senior fellow Mark Potok, a 20-year veteran of the organization and editor of its "hate list"—a quarterly publication—has admitted that "our aim in life is to destroy these groups, to completely destroy them."

Previously, I blogged about a peer-reviewed study published in the journal *Academic Questions*, found that the SPLC "…fails to use objective criteria in determining which organizations should be labeled a "hate group"…". Something to keep in mind now that you know that media corporations are letting them censor content.

New study: same-sex attraction isn't fixed

June 10, 2018 | by Wintery Knight | Link | Original Link

The Federalist reports on what researchers have found about the nature of same-sex attraction. Is it fixed? Or does it change over time? I think that gay activists would like everyone to believe that same-sex attraction is fixed, but to learn the truth, we should look at what the scientific research says.

Excerpt:

> There is not only no scientific evidence that sexual orientation is immutable, there is conclusive scientific evidence that most people who experience exclusive same-sex attraction end up developing an interest in the opposite sex over time.
>
> This is so well established by now that scholars are busy publishing methods to measure frequency of sexual orientation change in massive longitudinal studies of youth and young adults. (I.e., How many times in nine years can we expect a homosexual sexual orientation to change? Is the change associated with lifestyle habits? Who changes more frequently: males or females?)
>
> That basic fact was already settled science when Obergefell came before the Supreme Court. Half a dozen rigorous studies could be cited from the late 1990s and early 2000s, but the most noteworthy probably remains a Cornell-led study published in 2007.
>
> In this study, Dr. Rich Savin-Williams examined a representative sample of more than 12,000 American youth, following each from the age of 16 to 22. Rather than rely on an individual's reconstruction of his or her past based on current identity, researchers met with subjects three times throughout the six-year period. Each time, they asked individuals (via a computer, to protect privacy)

> whether they had had a romantic attraction to a member of the opposite or same sex since their last interview.
>
> For instance, 17-year-old males were asked if, in the past year, they had had a romantic attraction to another male or female. About 1.5 percent reported only having a romantic attraction to other males. Five years later, when that 1.5 percent were asked about their romantic attractions since last interview, the overwhelming majority (70 percent) reported a 180-degree flip in their sexual orientation—they only had romantic feelings for women.
>
> Similarly, among females, about 40 percent switched from exclusive same-sex attraction to exclusive opposite-sex attraction. Most of the rest (45 percent of the total) reported they had feelings for both men and women. Only 1 percent of women who, at 17, reported a full year of exclusive same-sex attraction reported a similar experience in the five years that followed.

This research is in agreement with previous research on identical twin studies reported by the prestigious science journal Nature:

> When one identical twin is gay, there is about a 20% chance that the other will be as well. But because this rate is not 100%, it is thought that environmental factors play a role as well. One of the best characterized is the 'older brother effect': the chance of a man being gay increases by 33% for each older brother he has. The reason is not clear, although one hypothesis holds that the mother's immune system begins to react against male antigens and alter the fetus's development.

So, it turns out that homosexual behavior is a lot more related to free choices than it is to innate, fixed dispositions. That's what the science says. It's not what the politicians say. It's not what the Supreme Court says. It's not what Hollywood says. It's not what journalists say. But it is what science has found to be true about the universe. We are in control of our behaviors, and we have to choose things that are likely to work out in the long-term – not just what feels good to us in the moment.

Whenever I hear gay activists complaining that they have no choice but to give in to their "innate, fixed, biological" sexual attractions, I always think about how I've never been married and have had to deal with sexual attraction to the opposite sex. As a Christian, there is simply no Biblical support for sex outside of marriage. So, that means that I've had to just live with not being allowed to act on my desires. In fact, this is the normal Christian life. There was a time when people had more skepticism about their feelings and desires, and they knew that self-control was a good thing. But now it seems as if everyone is so desperate to be liked that we tell everyone yes to everything that they feel like doing. We now consider every moral viewpoint as equal to any other – all the better to do what makes us feel happy. The important goal is that we all feel good right now, and who cares about the damage that our selfishness will cause down the road? We can just act surprised when that happens and pretend that there is no such thing as cause

and effect. I can remember a time when Christians in particular had some suspicion about following your heart, because the heart was deceitful and selfish. I guess those days are over, and suddenly feelings are ruling over reason and self-control.

It's pretty clear that not everything that a person feels like doing is good for them. A lot of decisions that people make to feel good right now lead to outcomes where they or the people who are depending on them will be harmed. For example, lots of people feel like staying home from a school exam, or staying home from their jobs, or drinking alcohol all night, or taking drugs. We used to have more confidence about telling people that not everything they wanted was good for them, and to have more self-control, and to think of how their decisions would harm others. Today, society has drifted away from objective moral boundaries and self-control toward subjective feelings and moral relativism, we are all finding it more difficult to tell people that they should choose to adhere to moral standards. We always seem to be looking to big government to make our irresponsible, reckless choices to be happy in the moment "work out" somehow.

Today, when people make poor decisions that wreck their families, hurt their kids, damage their health, etc. we are more likely to tax the people who haven't been selfish and reckless in order to pay for government programs that "fix" the outcomes of the selfish, reckless people. In some countries, you can get free single mother welfare, free taxpayer-funded abortions, free sex-changes, free treatment for sexually-transmitted diseases, free rounds of IVF, and so on. Just do whatever you want and someone else who had more self-control than you did will pay for it for you. That's why we have a twenty-trillion dollar debt, which we never had during the time when we still had the courage to tell people not to do things that were risky, and would be expensive to fix when they blew up.

When did it become normal to think that cause and effect were so unpredictable that people shouldn't be blamed and held accountable for making bad decisions? When did it become normal to think that doing what feels good for ourselves should be rewarded with other people's money, through big government programs? When did it become normal to take people to court to force them to celebrate your self-centeredness, just because their disagreement with what you were doing made you feel bad?

Refugee rapes and murders 14-year-old German girl before fleeing home to Iraq

June 11, 2018 | by Wintery Knight | Link | Original Link

Muslim populations in Europe

I've been busy reading "The Strange Death of Europe", which is a book all about how European countries and the UK decided to invite millions of low-skilled immigrants from predominantly Muslim countries to immigrate, in order to achieve the goal of multiculturalism. Let's see how that's working out for Germany, as reported in this article from the radically leftist New York Times.

Excerpt:

> It was a gruesome murder: A 14-year-old girl was raped and strangled, her body buried under brushwood in a secluded area near the railway tracks near her hometown in western Germany.
>
> But the fact that the chief suspect is an Iraqi asylum seeker has turned a terrible crime into political dynamite.
>
> […]The killing comes on top of a deepening scandal and calls for a full-blown parliamentary investigation over allegations that civil servants may have granted asylum to as many as 1,000 migrants in exchange for money — and that some of those migrants may have been criminals or even terrorism suspects.
>
> The murder suspect, identified as Ali Bashar, a 20-year-old Iraqi, arrived in Germany in October 2015, shortly after Ms. Merkel opened the borders to hundreds of thousands of migrants. He was rejected in late 2016, but was allowed to stay in the country while his appeal was pending.
>
> […]He came to the attention of the police several times, involving allegations of

> jostling a police officer, robbing a passer-by and carrying a knife.

The New York Times saves the most interesting detail for last:

> Susanna's mother has been chronicling her daily anguish on Facebook since her daughter went missing on May 22.
>
> The entry on June 1, a week after her daughter had disappeared, directly addressed Ms. Merkel.
>
> "I turn to you with this cry for help because I feel abandoned by the German state as well as by our friend and helper (Police!!!)," the mother wrote.
>
> The last text message she received from her daughter's cellphone on May 23 was written in bad German. "Don't look for me," it said. "I come in 2 or 3 weeks."
>
> At that point Susanna was already dead.

Notice that just like in the United States with our school shootings, the people who commit the violence are known to the police, but because they are non-white, the police are unwilling to do anything about it. It reminds me of how the police in the UK covered up for the child sex-trafficking gangs in several cities, because the gangs were run by immigrants and refugees from predominantly Muslim countries. The police just isn't willing to do anything that would draw attention to the fact that their open borders multiculturalist immigration policies cause harm to law-abiding citizens. We have the same thing here with the police and politicians covering up for illegal immigrants who commit crimes.

I want to preface my comments by saying that I favor skilled immigration, and I think we benefit from allow non-white immigrants into the country, so long as they have to prove that they are able to hold onto a highly-skilled job while obeying the laws of our nation. Asians, for example, make particularly good immigrants by that criteria.

Open borders Southern Baptists

What is interesting about this is that I keep hearing about all of these compassionate Christians – mostly philosophers, missionaries and pastors and other wordsmiths – who keep telling me how important it is for the West to retreat from wars against radical Islam, and then welcome in predominantly Muslim immigrants who are displaced by our retreat. I ask them whether they understand that the Boston bomber's parents were let it by claiming to be refugees. I ask if they knew that the San Bernardino terrorist woman was background-checked by five different government agencies. And I ask them about the victims of crime by illegal immigrants who are convicted, but never deported. Their answer is that they didn't mean for it to happen. They thought that because they felt good supporting a policy, that meant that it would have good results.

I guess I have a simple question for the pro-refugee people. What would you say to the victims of this "generous" immigration policy? The ones who are blown up, shot up, raped, sexually assulted, intimidated? I think these kind, Bible quoting Christians want everyone to believe they are "nice". That's why they want to be so generous with other

people’s lives, other people’s chastity, other people’s modesty, other people’s money. One wonders how a feelings-driven religious leader like Russell Moore, who supports illegal immigration and Muslim refugees, would handle it if he or someone close to him were the victims of crimes committed by illegal immigrants or radical Muslims? I guess he probably hasn’t thought about that beyond the level of feelings and people-pleasing.

Ten scientific problems with global warming alarmism

June 12, 2018 | by Wintery Knight | Link | Original Link

Satellite measurements of global climate from U of Alabama Huntsville

My friend Bruce posted this article from the the Daily Wire, and I think it's a good summary of the scientific evidence against global warming alarmism. After we go over this, I'll take a stab at explaining why so many non-scientists desperately want to believe that global warming is true, and why they try to push everyone else to believe it, too.

First, the list:

1. Temperature records from around the world do not support the assumption that today's temperatures are unusual.
2. Satellite temperature data does not support the assumption that temperatures are rising rapidly
3. Current temperatures are always compared to the temperatures of the 1980's, but for many parts of the world the 1980's was the coldest decade of the last 100+ years
4. The world experienced a significant cooling trend between 1940 and 1980
5. Urban heat island effect skews the temperature data of a significant number of weather stations
6. There is a natural inverse relationship between global temperatures and atmospheric CO2 levels
7. The CO2 cannot, from a scientific perspective, be the cause of significant global temperature changes
8. There have been many periods during our recent history that a warmer climate was prevalent long before the industrial revolution
9. Glaciers have been melting for more than 150 years
10. "Data adjustment" is used to continue the perception of global warming

So, we can't look at all of these in one post. Obviously, the satellite measurements are the best thing to look at, since they cannot be tampered with as easily as the ground measurements, and they show no warming for 18 years.

But let's look at number 8 instead:

> Even in the 1990 IPCC report a chart appeared that showed the medieval warm period as having had warmer temperatures than those currently being experienced. But it is hard to convince people about global warming with that information, so five years later a new graph was presented, now known as the famous hockey stick graph, which did away with the medieval warm period. Yet the evidence is overwhelming at so many levels that warmer periods existed on Earth during the medieval warm period as well as during Roman Times and other time periods during the last 10,000 years. There is plenty of evidence found in the Dutch archives that shows that over the centuries, parts of the Netherlands disappeared beneath the water during these warm periods, only to appear again when the climate turned colder. The famous Belgian city of Brugge, once known as "Venice of the North," was a sea port during the warm period that set Europe free from the dark ages (when temperatures were much colder), but when temperatures began to drop with the onset of the little ice age, the ocean receded and now Brugge is ten miles away from the coastline. Consequently, during the medieval warm period the Vikings settled in Iceland and Greenland and even along the coast of Canada, where they enjoyed the warmer temperatures, until the climate turned cold again, after which they perished from Greenland and Iceland became ice-locked again during the bitter cold winters. The camps promoting global warming have been systematically erasing mention of these events in order to bolster the notion that today's climate is unusual compared to our recent history.

That's right, the world was much warmer than it is now during the Medieval Warming Period… so warm that you could actually farm on Greenland. But now it's all frozen over.

Bruce also posted this article from Forbes magazine about the so-called consensus about global warming among scientists.

It says:

> It is becoming clear that not only do many scientists dispute the asserted global warming crisis, but these skeptical scientists may indeed form a scientific consensus.
>
> […]Only 36 percent of geoscientists and engineers believe that humans are creating a global warming crisis, according to a survey reported in the peer-reviewed Organization Studies. By contrast, a strong majority of the 1,077 respondents believe that nature is the primary cause of recent global warming and/or that future global warming will not be a very serious problem.
>
> The survey results show geoscientists (also known as earth scientists) and

> engineers hold similar views as meteorologists. Two recent surveys of meteorologists (summarized here and here) revealed similar skepticism of alarmist global warming claims.
>
> According to the newly published survey of geoscientists and engineers, merely 36 percent of respondents fit the "Comply with Kyoto" model. The scientists in this group "express the strong belief that climate change is happening, that it is not a normal cycle of nature, and humans are the main or central cause."
>
> The authors of the survey report, however, note that the overwhelming majority of scientists fall within four other models, each of which is skeptical of alarmist global warming claims.
>
> […]Taken together, these four skeptical groups numerically blow away the 36 percent of scientists who believe global warming is human caused and a serious concern.

Most people who get excited about the threat of global warming have something to gain financially from the hysteria. For example, Democrat campaign donors who own stock in solar or wind power companies that get fat government subsidies. Solyndra was one example of that.

Why do people believe weird things?

So why do people believe these things? People believe these things for the same reason that primitive people would sacrifice animals in order to get a bountiful harvest or be spared being struck by lightning. They fear the future, and they want to believe that they are doing something in order to save themselves from doom. There is something credulous in us that seeks to know and control the future. When we are told a noble lie by grant-seeking, attention-craving academics, we believe it because we want to believe it. We want to believe that the future is going to be OK, especially when all we have to do to make it OK is recycle cans and turn off our lights when we are not using them.

This is the real psychological motivation behind the desperate desire to believe in the global warming myth. We are scared, and we want someone to save us from the future. And we jump at the chance of controlling the future, especially when it means recycling cans, rather than having to deal with our own sinfulness. We invent a new morality that justifies us rather than having to comply with the old morality. Freedom to commit adultery, as long as we recycle cans to save the planet. Sanctification through purchasing carbon credits, instead of sanctification through chastity, sobriety and self-control.

William Lane Craig debates Alex Rosenberg: Does God Exist? Video, audio and summary

June 13, 2018 | by Wintery Knight | Link | Original Link

British Spitfire and German Messerschmitt Me 109 locked in a dogfight
Here is the video of the debate:

Here is my summary of the Craig-Rosenberg debate, which occurred on February 1st, 2013 at Purdue University.

The debaters

- William Lane Craig
- Alex Rosenberg

Below is the summary.

Dr. Craig's opening speech:

The topic: What are the arguments that make belief in God reasonable or unreasonable?
First speech: arguments for reasonableness of belief in God
Second speech: respond to arguments against reasonableness of belief in God

Eight arguments:

1. Contingency argument: God – a transcendent, personal being – is the explanation of why a contingent universe exists.
2. Cosmological argument: God is the cause of the beginning of the universe, which is attested by physics and cosmology.
3. Applicability of mathematics to nature: God is the best explanation for the applicability of mathematics to nature.

4. Fine-tuning argument: God is the best explanation of the fine-tuning of the universe to permit life.
5. Intentionality of conscious states: God is the best explanation of the intentionality of our mental states.
6. The moral argument: God is the best explanation for the existence of objective moral values and duties.
7. The resurrection of Jesus: God is the best explanation for the core of historical facts accepted by most ancient historians across the ideological spectrum.
8. Religious experience: God is the best explanation of our immediate experience and knowledge of his existence.

Dr. Rosenberg's opening speech

First argument: The fallacy of ad hominem

- I don't know whether to laugh or to cry
- Dr. Craig has said all of that before in other debates
- You didn't need to come out on this cold night
- Craig's arguments have all been refuted
- Dr. Craig just doesn't listen
- Dr. Craig is not interested in getting at the truth
- Dr. Craig is just interested in scoring debate points
- The adversarial system is the wrong approach to decide truth
- Dr. Craig is very confident about his take of physics

Second argument: The fallacy of arguing from authority

- 95% of members of the NAS are atheists
- Therefore Dr. Craig cannot use science

Third argument: Effects don't require causes

- I am going to pretend that Craig said that "every effect requires a cause"
- Quantum mechanics shows that some effects occur without causes
- A particle of uranium (which is not nothing, it is something) decays without a cause
- This uncaused effect is the same as the universe coming into being out of nothing uncaused
- Therefore the principle of sufficient reason is false

Fourth argument: Silicon-based life and the multiverse

- If these constants had been different, maybe we would have other kinds of intelligent life, like silicon-based life
- Carbon-based life is not the only kind of life, maybe you can have other kinds of life, none of which have been observed
- There could be different kinds of life in other areas of the universe that we can't see

- There are things we can’t see that disprove the current physics that we can see
- Quantum foam is evidence that a multiverse exists
- The multiverse would solve the problem of fine-tuning

Fifth argument: The Euthyphro dilemma

- The moral argument is refuted by Euthyphro dilemma
- Dr. Craig is such a moron that he has never heard of the Euthyphro dilemma ever before
- This is found in the first and simplest of Plato’s dialogs
- Why is Dr. Craig so stupid that he has not read this simple dialog ever before?
- Evolution explains why humans evolve arbitrary customs and conventions that vary by time and place
- Alternative moral theories: utilitarianism, social contract, etc. that don’t require God

Sixth argument: Mormonism undermines Dr. Craig’s three minimal facts about Jesus

- Why is Dr. Craig so stupid and ignorant to persist in pushing such an ignorant, stupid argument?
- Mormonism is a silly religion that is not historically well founded
- Therefore, Jesus was not buried
- Islam is a silly religion that is not historically grounded
- Therefore, the tomb was not found empty
- Scientology is a silly religion that is not historically grounded
- Therefore, the eyewitnesses didn’t have post-mortem appearances
- Eyewitness testimony is unreliable in some cases
- Therefore, eyewitness testimony was unreliable in this case
- Apparitions of Mary are bizarre
- Therefore, the majority of historians are wrong to think that the disciples saw post-mortem appearances

Seventh argument: Deductive problem of evil

- Evil and suffering are logically incompatible with an all good, all powerful God

Eight argument: God is not just to allow evil and suffering

- God cannot make the evils of this life right in the afterlife

Dr. Craig’s first rebuttal

Dr. Rosenberg sketched the deductive argument from evil.

Dr. Rosenberg presupposes naturalism. Naturalism is a false theory of knowledge:

1. It’s too restrictive: There are truths that cannot be proved by natural science.
2. It’s self-refuting: no scientific proof for naturalism exists.

That’s why epistemological naturalism is considered false by most philosophers of science.

But more importantly than that: Epistemological naturalism does not imply metaphysical naturalism. (E.g. – W. Quine)

Dr. Rosenberg has to present arguments in favor of (metaphysical) naturalism, not just assume that (metaphysical) naturalism is true.

Dr. Craig presented eight arguments against metaphysical naturalism taken from Rosenberg’s own book:

1. The argument from the intentionality (aboutness) of mental states implies non-physical minds (dualism), which is incompatible with naturalism
2. The existence of meaning in language is incompatible with naturalism, Rosenberg even says that all the sentences in his own book are meaningless
3. The existence of truth is incompatible with naturalism
4. The argument from moral praise and blame is incompatible with naturalism
5. Libertarian freedom (free will) is incompatible with naturalism
6. Purpose is incompatible with naturalism
7. The enduring concept of self is incompatible with naturalism
8. The experience of first-person subjectivity (“I”) is incompatible with naturalism

Metaphysical naturalism is false: it is irrational and it contradicts our experience of ourselves.

And epistemological naturalism is compatible with theism.

Rebutting Dr. Rosenberg’s responses:

1. Contingency: no response

2. Cosmological: he mis-states the first premise to say every effect… when it is whatever begins to exist…, the origin of the universe was not from a vacuum, virtual particles come from a vacuum not nothing, there are interpretations of QM that are compatible with determinism. Rosenberg has to believe that the entire universe popped into being from non-being.

3. Mathematics: no response

4. Fine-tuning: the multiverse is refuted by empirical observations of the universe. Without fine-tuning, it’s not that we still have silicon to make life out of. It’s that we lose basic minimal things like chemical diversity, matter, stars, planets, etc. No life of any kind, not just no carbon-based life.

5. Intentionality: no response.

6. Moral argument: the answer to the dilemma is that you split the dilemma: God is the standard of good, and the commands flow from his unchanging moral nature. The commands are not arbitrary, and the standard is not external to God. Dr. Rosenberg is a nihilist and he cannot ground good and evil on his nihilistic view.

7. Resurrection: The Gospels are early eyewitness testimony. Mormonism and Islam have nothing to do with the minimal set of historical facts about Jesus agreed to by the

majority of ancient historians across the ideological spectrum, general statements against eyewitnesses do not refute the specific eyewitness testimony in this case.

8. Religious experience: No response.

Dr. Rosenberg's first rebuttal

I wrote a book and you should buy it, because it got me invited to this debate. Let me repeat the title a few times for you. Please buy it.

Dr. Craig is right, there are multiple interpretations of QM, not just the one I presented, including deterministic ones.

All the disturbing implications of naturalism that Dr. Craig stated follow from metaphysical naturalism, and metaphysical naturalism is true. (Note: he equates science with metaphysical naturalism)

Science proves that metaphysical naturalism is true, but I won't say what specific scientific tests prove my philosophical assumption of metaphysical naturalism.

I'll pretend that the Big Bang (science) doesn't disprove naturalism, like Dr. Craig said. Again. (covers ears) La la la, there is no Big Bang.

We didn't come here to debate epistemological naturalism and metaphysical naturalism.

Let me explain the problem of intentionality since I'm so smart and no one knows what it means.

There are many answers to this problem of intentionality.

My answer is that most scientists are naturalists, therefore naturalism is true, regardless of the argument from intentionality of mental states.

That's how I would respond to one of the eight problems with naturalism that Dr. Craig raised. I won't answer the other seven problems.

It is an argument from ignorance to argue that the applicability of mathematics to the universe requires a designer, because there are non-Euclidean geometries. Craig's argument, which he gets from people like respected physicists like Eugene Wigner, is bizarre. It is bizarre, therefore I refute Eugene Wigner and all the other scholars who make that argument. It is bizarre! Bizarre!

Deductive problem of evil: there is no response to this argument, certainly not Alvin Plantinga's free will defense. The deductive argument from evil has not been entirely abandoned at all! It's not like arch-atheist J.L. Mackie himself admits that the deductive problem of evil doesn't lead to a logical inconsistency between evil and God.

Dr. Craig has to tell me why God allows evil or God doesn't exist.

It is offensive that Dr. Craig cannot tell me why God allows every evil and suffering that occurs.

He literally said this: "I will become a Christian if Dr. Craig can tell me why God allowed EVERY EVIL THAT OCCURRED IN THE LAST 3.5 BILLION YEARS"

Dr. Craig's second rebuttal

We are not in a position to know why God allows specific instances of evil and suffering.

God cannot force people to freely do anything – freedom is not compatible with determinism. Freedom is a good, but freedom opens up the possibility of moral evil. You cannot have the good of free will without allowing people to choose to do morally evil things.

God can permit evil and suffering in order to bring more people into a relationship with him.

The atheist has to show that God could allow less evil and achieve more knowledge of God in order to say there is too much evil.

The purpose of life is not happiness, but knowledge of God.

Dr. Craig quotes agnostic Paul Draper (Purdue) and Peter Van Inwagen (Notre Dame) to state that the deductive problem of evil is dead because of free will and morally sufficient reasons for permitting evil.

1. Contingency: no response.

2. Cosmological: QM does not apply, because the universe came from nothing, not a vacuum, and QM only works in a vacuum.

3. Mathematics: He mentions alternatives like non-Euclidean geometry, but we have to explain the structure of THIS universe.

4. Fine-tuning: ???

5. Intentional states: intentional mental states proves that minds exist, which fits with theism better than it fits with atheism.

6. Moral argument: You need God to ground morality, and Dr. Rosenberg believes in morality. He needs God to ground objective moral values and duties.

7. Historical argument: He has to respond to the minimal facts supported by the consensus of ancient historians across the ideological spectrum.

8. The problems of naturalism: He says that you can't have science without naturalism, but you can have science with EPISTEMOLOGICAL NATURALISM, and theists accept science and methodological naturalism. We don't accept METAPHYSCIAL NATURALISM because of the eight problems Craig presented, like intentionality, first-person, persistence of self, etc. You can believe in both science and theism, by embracing epistemological naturalism, while rejecting methaphysical naturalism.

Dr. Rosenberg's second rebuttal

Dr. Craig hasn't answered many of my points, I won't say which ones though.

Debates don't work as a way of deciding what's true, so we should overturn the entire criminal justice system.

The principle of sufficient reason is false because it is disconfirmed by quantum mechanics. And quantum mechanics (vacuum and virtual particles that exist for a short time) is similar to the origin of the universe (nothing and entire universe and 14 billion years).

We know that alpha particles come into being without cause all the time from a quantum vacuum for a tiny sub-second duration before going out of existence, so we can say that the entire physical universe came into being for 14 billion years from absolute nothing which is not a quantum vacuum.

Peter Van Inwagen is the best metaphysician working today, and he says that my deductive argument from evil is not decisive, it's not a successful argument. (Why is he undermining his own problem of evil argument????!)

Dr. Craig invoked Plantinga's free will defense to the deductive POE. Freedom allows us to do evil. God could have given us free will without evil and suffering. I won't show how, but I'll just assert it, because debates are such a bad forum for supplying evidence for my speculative assertions.

If you answer the question 3 + 5 as being 8, then you don't have free will – you are biologically determined if you answer 8, because everyone answers 8, and that means everyone is biologically determined with no free will.

Why can't God give us free will and then prevent us from making a free choice?

No scholars date the gospels earlier than 60-70 AD, especially not atheists like James Crossley who dates Mark to 40 AD. Therefore Jesus' burial isn't historical, like the majority of scholars across the broad spectrum of scholarship agree it is.

The original New Testament documents were written in Aramaic.

All New Testament scholars are orthodox Christians, like atheist Robert Funk for example.

Dr. Craig's concluding speech

In order to sustain the deductive argument from evil, Dr. Rosenberg must show that God could create a world of free creatures with less evil.

Principle of Sufficient Reason: not using the general principle of sufficient reason, but a more modest version of this states that contingent things should have an explanation for their existence. And we know that the universe is a contingent.

The New Testament was not written in Aramaic, they were written in Greek. Dr. Rosenberg is wrong there too.

(Dr. Craig spends the rest of his concluding speech giving his testimony and urging people to investigate the New testament).

Dr. Rosenberg's concluding speech

Some long-dead French guy named Laplace said that he has no need of that (God) hypothesis. He did not know about any of Dr. Craig's arguments made in this debate tonight when he said that, though.

There is no need to explain how the universe began or how the universe is finely-tuned if you just assume metaphysical naturalism on faith.

The Easter Bunny, therefore atheism.

Most scientists are atheists, therefore atheism.

You can do a lot of science without God, just don't look at the origin of the universe, the

fine-tuning of the universe, or the other parts of science that Craig mentioned, as well as the origin of life, the Cambrian explosion, the habitability argument, and so on.

You can be a Christian, but good Christians should not use arguments and evidence.

Good Christians should be irrational and ignorant. Bad Christians look for arguments and evidence from science and history.

Good Christians should embrace the absurd. Bad Christians want to search for truth and use logic and evidence.

Ten sensible self-control laws that will reduce the risk of gun violence

June 14, 2018 | by Wintery Knight | Link | Original Link

Air Force TACPs confirm target locations with their map

I really liked this article from Intellectual Takeout, which had a list of recommendations to reduce gun violence. Although most people today are looking at gun regulations to reduce gun violence, we actually had a lot of guns in previous generations, but a lot less gun violence. Maybe it's because more people made wiser choices.

The article says:

> 1. Don't commit suicide. This is the most common gun-related death, being about 63% of all firearm deaths in the US.
> 2. Adopt a policy of not escalating any road rage situations. If someone does something offensive on the highways have it pre-settled in your mind to react by de-escalating the situation (refrain from responding in kind) and back off to allow the heat of the moment to cool.
> 3. Do not join a gang. Violence is the accepted norm among gang members, resulting in many becoming victims of gun violence.
> 4. Do not buy or sell illegal drugs. Yes, I do know that it's the drug laws more than the drugs themselves that leads to gun violence among drug buyers and sellers. But, people already on the wrong side of the law are more likely to commit gun violence than the law-abiding population.

5. Do not get involved with abusive people. Someone who previously has physically abused a partner is more likely to do so than are those who have never engaged in such abuse.

6. Implement a personal curfew. The safest place anyone can be at 2am is at home in bed. Roaming the streets in the middle of the night exposes one to gangs, drug sellers, and other dangerous people.

7. Stay away from Gun Free Zones. One study showed that 98% of all mass shootings happen in these places. Gun Free Zone signs tell violent people this is a spot where the picking will be easy. As for everywhere else, these predators may be deterred since they have to wonder if there's already a good guy with a gun on the property.

8. Do not associate with convicted criminals. Like the abuser, violent criminals out of prison are likely to continue their habits.

9. Be aware of your surroundings. Make it a habit to look around and assess any situation you are in. Most victims of gun violence have no warning of the impending danger, the old saying "to be forewarned is to be forearmed" is pertinent here. So, no staring at your cell phone!

10. Avoid people who handle guns in an irresponsible manner. Anyone who casually or even unknowingly points a gun at someone or who does not exercise good gun safety such as carefully checking to see that a gun is unloaded is someone to be avoided.

11. Bonus Suggestion: Do not be a predator. A significant number (about 700 each year) of gun deaths are justifiable homicide wherein a victim successfully defends themselves from criminal assault.

This list of self-control laws is so different than what you see politicians proposing. This list is targeted to individuals, and it is telling them to understand how danger works, and then make adjustments in their choices and priorities in order to minimize the risk. The politicians instead want to blame inanimate objects and take away the rights of law-abiding people to defend themselves from criminals.

Is expecting self-control reasonable?

I have talked to anti-gun people about changing their behavior to minimize their risk of being a victim. Their response was that they shouldn't have to act any particular way in order to avoid bad consequences. They should just be able to make the government big enough to somehow magically stop bad things from happening to them, no matter what choices they made. Their right to pursue happiness in the moment could not be challenged in any way.

It made me think of women who want to go out wearing skimpy clothes, get drunk in bars surrounded by strange men, and then cry victim when they wake-up somewhere strange the next morning. There is a wisdom to life, and wise people don't mind that they have to show a little self-control in order to avoid bad outcomes. A woman cannot shack up with a hunky guy who has tattoos, piercings and a criminal record, and then complain when he gets violent. If you choose poorly, then you will face consequences. There is a cost to making choices based on feelings alone.

The same thing happens with people who want to study English, Journalism, and other easy subjects, then can't find jobs when they graduate with tens of thousands of dollars in loans. "It's not fair" they say "I need a bailout". "The government should raise the minimum wage, so I can be paid the same as people who studied hard STEM subjects and got more productive jobs". Again, the solution is not to blame others and punt to government, the solution is to respect the way the world works and make decisions that are likely to succeed. Don't let your feelings decide. Don't do what is free, easy and fun. Don't chase thrills and travel.

Black economist Walter Williams has a famous list of four choices that he tells young people to make in order to avoid being poor.

Here are his four choices:

1. Graduate from high school
2. Get married before you have children
3. Take any job (to start out)
4. Don't commit any crimes

I have one more to add: when you marry, marry someone who takes commitment seriously, so there is no divorce. Divorce is a wealth-killer. Pick a spouse who is able to make and keep commitments that survive their changing feelings and desires. And maybe one more: study for a STEM degree if you go to college.

Again, if you try to tell young people to make good decisions like those, they don't want to listen. But making those decisions correctly actually gets them the result they want.

Previous generations tended to emphasize the importance of understanding how the world works, and then making good decisions in order to reach a goal. Those people don't look to government to solve their problems. This generation seems to be more focused on doing what feels good, then acting surprised when it doesn't "work out". They aren't curious to find out how the world really works so they can do the right thing. They just want to do and say what makes them feel good and look good to others.

Obama administration FBI on the possibility of a Trump election win: “We’ll Stop It”

June 15, 2018 | by Wintery Knight | Link | Original Link

Barack Obama and his allies in the FBI

So, the Department of Justice Inspector General’s report on the FBI’s political bias came out yesterday, and I’ve rounded up some of the most interesting findings from a variety of sources. It’s important that everyone finds out just what kind of administration we had under the Democrat Barack Obama.

Here’s an article from Fox News, which listed out 7 of the most important findings.

Let’s start with #1:

> **New texts between FBI lovers Strzok and Page were ‘disappointing’ and cast a shadow over the integrity of the entire Clinton email probe**
>
> A slew of anti-Trump text messages between special counsel Lisa Page and FBI Deputy Assistant Director Peter Strzok damaged the integrity of the entire Clinton email probe, Horowitz writes.
>
> The report unearths striking new messages between the pair that were sent and received on government devices, including one in which Strzok vows to “stop” Trump from being elected just months before the presidential election.
>
> On August 8, 2016, the IG found, Page asked Strzok “[Trump’s] not ever going to become president, right? Right?!” and Strzok replied “No. No he won’t. We’ll stop it.”

Trump won’t win, because the FBI will stop it (in their spare time, between adulterous affairs).

More:

> **Five unnamed FBI employees — including one lawyer who later worked on the Mueller probe — are under scrutiny for anti-Trump bias**

> Strzok and Page are not the only FBI officials who evidenced anti-Trump bias during the Clinton email probe, Horowitz noted in the report.
>
> The watchdog identified five other unnamed individuals, including two agents and one FBI attorney who worked on the Muller Russia probe until earlier this year, who made "statements of hostility toward then-candidate Trump and statements of support for candidate Clinton," and improperly mixed "political opinions" with case-related discussions.

The FBI fumbled the investigation of Hillary Clinton's storage and transmission of classified data on an unsecured home-brew server, which allowed her to escape government record-keeping requirements.

The Daily Caller noted that the FBI slow-walked the investigation of Hillary Clinton:

> When further Clinton emails were discovered on a laptop belonging to former congressman Anthony Weiner, who is married to longtime Clinton aide Huma Abedin, the FBI agents overseeing her case took just under a month to take meaningful action, Horowitz's report found.
>
> No later than Sept. 29, 2016, FBI executives and the agents who oversaw the Clinton email investigation were informed that "that Weiner investigation agents had discovered 141,000 emails on Weiner's laptop that were potentially relevant to the [Clinton email] investigation." Comey didn't authorize a search warrant until Oct. 27, after he was briefed on them that day, the IG report found.

But do you know what was a priority? The investigation of the Trump campaign because of the Democrat-funded Russia dossier.

The Daily Caller continues:

> The FBI prioritized investigating the Trump campaign's ties to Russia over the discovered emails on Weiner's laptop, possibly due to political bias, according to the report. Anti-Trump agent Peter Strzok was intimately involved with that decision.

So, who decided that the FBI should exonerate Clinton?

Investors Business Daily explains:

> The report also, whether intentionally or not, makes it clear why the FBI had concluded early on that there wasn't a case against Clinton: President Obama had already cleared Hillary of any wrongdoing.
>
> The IG report recalls how, during a 60 Minutes interview on October 11, 2015, Obama "characterized former Secretary Clinton's use of a private email server as a 'mistake,' but stated that it did not 'pose a national security problem' and was 'not a situation in which America's national security was endangered.' Obama also stated that the issue had been 'ginned up' because of the presidential race."
>
> It goes on to say that "Obama's comments caused concern among FBI officials

> about the potential impact on the investigation."
>
> Former EAD John Giacalone told the IG, "We open up criminal investigations. And you have the President of the United States saying this is just a mistake … That's a problem, right?"
>
> Obama repeated his absolution in April 2016 — right around the time Comey was starting to draft his statement dropping the case against Clinton.
>
> "Obama stated that while former Secretary Clinton had been 'careless' in managing her emails while she was Secretary of State, she would never intentionally do anything to endanger the security of the United States with her emails."
>
> […]From Obama on down, no one ever wanted or intended to do what should have been done: Prosecute Clinton for gross negligence in her handling of highly classified material. The entire investigation was just for show.

Should we be surprised at any of this? Not at all. We already knew that the Obama administration used the IRS to persecute conservatives. These are not people who make a it a priority to do the right thing. Being secularists, they lack an objective foundation for morality. For them, morality is just customs and conventions, not an objective design for how we ought to live. Whenever morality interferes with their desire to serve their own interests, the question they ask is "will I get caught?". Instead of listening to their consciences, they think of their own feelings and how they will be perceived.

It turns out that you can't expect a man who votes in favor of infanticide multiple times (as a state senator) to take morality seriously. It doesn't matter if a man's skin color is the color you like. If he has no capacity for put moral duties above self-interest, then you should expect corruption and abuse of power. He ruined everything he touched, from religious liberty to Iran to Syria to Libya to the cost of health care to the $20 trillion national debt, and beyond. An absolute disaster of incompetence and immorality.

Canada’s Supreme Court bans Christians from practicing law in Canada

June 16, 2018 | by Wintery Knight | Link | Original Link

Canada election results 2015

The headline is a bit broad, but give me a minute, and I’ll explain what the judges decided. For one thing, it’s only in Ontario and British Columbia where the ban is in effect. Also, the basis of the ban is that Christians cannot be lawyers if they believe that sex before marriage or outside of marriage is morally wrong. Let’s take a look at an article from the less leftist of Canada’s National newspapers, the National Post.

Excerpt:

> Trinity Western University suffered a stinging loss in the Supreme Court of Canada on Friday, which found that law societies in B.C. and Ontario were justified in not accrediting the university’s prospective law school because of its policy on premarital sex. But no one should harbour any illusions that the pain will be limited to the small Christian school in B.C.’s Fraser Valley.
>
> The impact of the court’s decision against TWU will seriously afflict the engagement of religious communities with public life across this country, regardless of whether it’s the Catholic Church, the Salvation Army or Muslim and Jewish charitable organizations.
>
> The Supreme Court was asked to decide whether TWU’s Christian “community covenant,” in which students and staff agree to the understanding that sexual relations must be limited to heterosexual marriage — which, by definition,

> excludes homosexual relations — was a legitimate prerogative for an accredited law school. In layman's terms, the court had to discern the balance between Charter-protected religious freedoms and emerging rights of sexual minorities to live their identities freely and fully.
>
> The court ruled that the refusal of the two law societies to accredit TWU's law school was a "reasonable" balancing of rights. Its logic was that LGBTQ students would be unlikely to apply to TWU given the community-covenant requirement, so they effectively would have 60 fewer spaces available to them. Other students have access to the 16 current law schools, plus TWU's 60 spots, and that therefore constitutes an inequality. By compiling that perceived inequality with the fact that students at TWU commit to reserving sexual intimacy for within traditional Christian marriage, the court concluded that the TWU covenant created a "public interest" harm to the reputation of and public confidence in the legal profession. These outweighed, in the court's assessment, the "minor" consequences of denying religious freedom to the TWU community.

The effect of this ruling is that Bible-believing Christians who study law at the only Bible-believing law school in Canada cannot practice law in two of the most populated provinces. But Ontario is the province that contains the large city of Toronto, as well as the capital city of Ottawa. This basically means that Trinity Evangelical Law School graduates would be unable to be lawyers or judges at the Supreme Court.

The Supreme Court is fine with LGBT people practicing law in Ontario and British Columbia, including at the Supreme Court, just not Christians who believe in the Bible. But those Bible-believing Christians should definitely have to pay taxes, including the taxes that go to pay for the salaries of their overlords on the Supreme Court. Basically, if you're an evangelical Christian in Canada, then you're good enough to be a slave, but not much else. You can work to pay for your secular slave masters, but you can't have the same rights as people who don't believe the Bible.

I think it goes without saying that the Supreme Court judges weren't able to get this ruling from the text of the Canadian Charter of Rights and Freedoms. They just made it up from their own secular leftist values. This is actually normal for judges in Canada. There are no judges on the Canadian Supreme Court who accept that the Charter overrules the will of the judges.

Here's a reaction to the ruling that I thought was interesting:

> "Perhaps most disappointing from our perspective, the majority failed to account for or even address the equality rights of prospective TWU students or TWU's freedom of association. These were issues we raised in our oral and written arguments to the court," says Schutten. "The majority says it need not address those rights claims, because it is sufficient to ask whether the violation of freedom of religion is justified." ARPA Canada believes that these other rights should play an important part in the "proportionality" analysis of the law

> societies’ decisions.

There is no freedom of religion in Canada. And there is no freedom of association in Canada. From previous rulings by Canadian Human Rights Commissions, we know that there is no freedom of speech in Canada. There is no right to self-defense from criminals in Canada. And there are no parental rights to educate your own children according to your Christian worldview in Canada. In Ontario, the man who wrote the education curriculum is now behind bars for child pornography, and the Supreme Court had nothing to say about whether that was morally wrong. For a long time, there has been covert discrimination against Bible-believing Christians in Canada, and now the Supreme Court has just shown what has been going on for decades and decades in universities and in government, in order to keep serious Christians out of positions of influence. From classroom teachers, to business owners to Supreme Court judges, Christians have been banned from the public square. Just like what happened to Jews in 1930s Germany.

Any Bible-believing Christian born in Canada has one mission: to get educated in a STEM skill that America needs, and then get out of that godless country. Kudos to those wise Christians who saw what was coming and got out early. It’s not the place for Christians to have a full and meaningful Christian life.

If we seriously want men to marry and become fathers, let's repeal no-fault divorce

June 17, 2018 | by Wintery Knight | Link | Original Link

I saw a very good article at the Heritage Foundation web site about the importance of fathers for children. The author Virginia Allen listed out some of the benefits that fathers provide to children:

> Studies have found that children raised without a father are:
>
> - At a higher risk of having behavioral problems.
> - Four times more likely to live in poverty.
> - More likely to be incarcerated in their lifetime.
> - Twice as likely to never graduate high school.
> - At a seven times higher risk of teen pregnancy.
> - More vulnerable to abuse and neglect.
> - More likely to abuse drugs and alcohol.
> - Twice as likely to be obese.
>
> From education to personal health to career success, children who lack a father find themselves at a disadvantage to their peers raised in a two-parent household.

I was looking for a good analysis of why there's been a decline of marriage and fatherhood, and I found an article by Joe Carter on The Gospel Coalition, of all places. By looking at marriage rates and historical events that changed the marriage rate, he was able to identify the cause of the decline of marriage – and fatherhood.

Marriage and divorce rates per capita

I'll spare you the statistical analysis, which is excellent, and give you the conclusion –

although you can guess it from the graph above:

> Now that we've explored the data, what year should we use as the marker for the beginning of the decline of marriage in the United States? I would argue for 1985, the last year that the marriage rate topped 10 percent.
>
> […]What changed in 1985 that could have led to the decline in marriage? There are likely numerous factors—which we'll examine in future articles—but one stands out in particular: By 1985, all states (except for New York) had enacted no-fault divorce legislation.

The most helpful book I know of about no-fault divorce is "Taken Into Custody", by Dr. Stephen Baskerville. He wrote a column for Crisis magazine that summarizes some of his ideas.

Excerpt:

> Feminists were drafting no-fault divorce laws in the 1940s, which the National Association of Women Lawyers now describes as "the greatest project NAWL has ever undertaken."
>
> The result effectively abolished marriage as a legal contract. Today it is not possible to form a binding agreement to create a family.
>
> The new laws did not stop at removing the requirement of citing grounds for a divorce, to allow divorce by mutual consent, as deceptively advertised at the time. Instead they created unilateral and involuntary divorce, so that one spouse may dissolve a marriage without any agreement or fault by the other.

Here's what divorce does to the spouse who is the victim of the unilateral "no-fault" divorce:

> Though marriage is a civil matter, the logic quickly extended into the criminal, including a presumption of guilt against the involuntarily divorced spouse ("defendant"). Yet formal due process protections of criminal proceedings did not apply, so forcibly divorced spouses became quasi-criminals not for recognized criminal acts but for failing or refusing to cooperate with the divorce by continuing to claim the protections and prerogatives of family life: living in the common home, possessing the common property, or—most vexing of all—parenting the common children.
>
> Following from this are the horrendous civil liberties violations and flagrant invasions of family and individual privacy that are now routine in family courts. A personalized criminal code is legislated by the judge around the forcibly divorced spouse, controlling their association with their children, movements, and finances. Unauthorized contact with their children can be punished with arrest. Involuntarily divorced parents are arrested for running into their children in public, making unauthorized telephone calls, and sending unauthorized birthday cards.

In my conversations with men, no-fault divorce laws, and anti-male divorce courts are the main reasons given for why they do not pursue marriage and fatherhood. Men do not want to be coerced in a marriage with the threat of divorce by an unhappy wife. Men do not want to be subject to the government in so many areas of their lives if the wife does carry out the threat. They especially don't want to be separated from their children. One my secular male friends told me that he would not marry unless the woman had evidence in her past of hating radical feminism and no-fault divorce. This was the main criteria. He actually was able to find a woman who was a men's rights activist who hated divorce. But that was the only way he would marry.

Statistically speaking, the wife is more likely to initiate divorce than the husband. Women initiate 70% of divorces, the majority of those just because she is "unhappy". I think this is because women get into marriage based on their feelings, and they think that it is the husband's job to make them feel good. They see their happiness as the primary goal of the marriage, and see a marriage that does not make them happy as a marriage that needs to be ended. Their view of commitment really means "I'll commit so long as it makes me feel good". None of this is particularly appealing to men, who take marriage vows to mean what they say, and think that the commitment isn't conditional on being happy. (Note: if you're husband doesn't have this view of marriage, then why did you choose him out of all the other men in the world?)

Are we going to repeal no-fault divorce, then?

My experiences speaking with divorced Christian women is that they married primarily based on first impressions and emotional responses. No-fault divorce was seen as a boon to women who had married the wrong men by following their hearts. It's an interesting question to ask whether women really would want no-fault repealed. It would mean that they would have to get serious about who they marry. They would have to think about what a man does in a marriage. They would have to think about what men want out of a marriage. And they would have to say no to their feelings, both in choosing a man, and in keeping the man after the wedding.

I've been told by women that the rapid giving of sex is a way to get attention from a man without having to be respectful of him. Are women willing to stop using sex as a tool to attract the wrong men, and start developing their skills as wives and mothers in order to attract the right men? Are women willing to stop seeing relationships as "fun and thrills", and get serious about pursuing men who have marriage and children as the goal? Are wives willing to give a man what he needs in the marriage: sex, respect and obedience? Are they willing to give up the threat of divorce in the home and learn to argue rationally and compromise?

If women aren't willing to demand the repeal of no-fault divorce laws and get serious about men and marriage, then what's the point of complaining that men don't want to marry and become fathers? If you're not willing to fix the root cause of the problem, then don't complain about the problem.

The Southern Baptist Convention's progressive immigration policies threaten public safety

June 18, 2018 | by Wintery Knight | Link | Original Link

Russell Moore and Barack Obama

I have a confession to make. I have really been struggling with the Southern Baptist Conventions slide into liberalism, not just on moral issues, but on policy issues as well. The straw that broke the camel's back for me is the SBC slide towards open borders. Thankfully, not everyone thinks it is "compassionate" to spend other people's money and risk other people's safety. The Heritage Foundation, my favorite think tank, is still taking the conservative view on immigration. And they do it by looking at the evidence of how open border policy is working out in other times and other places.

Here's the latest on Germany from Robin Simcox, writing at the Daily Signal.

Excerpt:

> Diana Feldman received an unusual text message from the phone of her 14-year-old daughter, Susanna, late last month.
>
> Written in broken German, the message said she would be back home in a few weeks and that her mother should not try to find her.
>
> Yet the message was not from Susanna. She had already been raped and strangled, and her body was dumped next to some railroad tracks in the city of Wiesbaden in western Germany.
>
> […]Ali Bashar, a 20-year-old Iraqi Kurd, entered Germany in October 2015 with his parents and was a blight from the beginning. According to the BBC, he was allegedly tied to a robbery, possession of a weapon, and sexual assault on an 11-year-old girl in the refugee shelter where he lived (and where he dealtdrugs).
>
> Bashar's asylum claim was rejected toward the end of 2016, but he was allowed to stay in the country while he appealed the decision.
>
> Over 18 months later, when he killed Susanna, a decision on his appeal still had

> not been made. Days after his crime, Bashar and seven other members of his family returned to Iraq. However, he was tracked down by Kurdish authorities and extradited to Germany.
>
> Bashar has since admitted to killing Susanna.
>
> […]Hussein Khavari arrived in Europe in January 2013. He proceeded to throw a woman over a cliff that summer in Corfu, Greece, and was subsequently imprisoned for 10 years in February 2014 for attempted murder. However, he was released after just 18 months, part of a government amnesty aimed at reducing strain on its overcrowded prisons.
>
> Khavari journeyed on to Germany, where he arrived in November 2015, and claimed asylum the following February. He claimed to be a 17-year-old Afghan upon arrival, saying that his father had been killed fighting the Taliban.
>
> In October 2016, Khavari raped and strangled Maria Ladenburger, a 19-year-old German student, in Freiburg, in southwest Germany. Khavari left his still-breathing victim to drown in a nearby river after his attack. He was sentenced to life in prison.
>
> During his trial, it emerged that rather than being a 17-year-old fatherless Afghan, Khavari was a Iranian. His father was alive and well, living in Iran. Khavari's asylum claim was also undecided at the time of Ladenburger's killing.
>
> Another case from southwest Germany, this time in Kandel, saw Mia Valentin, a 15-year-old girl, being stabbed to death by her ex-boyfriend last December. The killer, Abdul D., came to Germany from Afghanistan in April 2016, claiming to be 14 years old. In reality, he is now 20.
>
> Such stories—coming in the wake of the mass sexual assault of more than 1,000 women in Germany on New Year's Eve of 2015—have a variety of consequences.

Now consider this article from June 2016 from the far-left National Public Radio, which is delighted with the new progressive policies of the SBC:

> Matthew Soerens of the evangelical refugee resettlement group World Relief praised the move, noting that churchgoers of many religious denominations are eager to aid refugees, and are "strongly opposed to governmental efforts that would block their ability to be a part of this sort of ministry."
>
> Soerens says Donald Trump's proposal to bar immigration from countries with a "proven history of terrorism" would likely keep out Christians and other religious minorities as well.

Got that? He wants to let in refugees from countries with a "proven history of terrorism". The point about Christianity is a red herring, since almost none of the refugees admitted under Obama were Christians.

CNS News explains in this article from October, 2016:

> The administration admitted a total of 12,587 Syrian refugees during the just-ended fiscal year, exceeding the target President Obama declared last fall by 2,587 (20.5 percent).
>
> Of the 12,587, the vast majority are Sunni Muslims – 12,363 (98.2 percent) – while another 103 are identified in State Department Refugee Processing Center data simply as Muslims and a further 20 as Shi'a Muslims.
>
> Sixty-eight of the 12,587 Syrian refugees (0.5 percent) are Christians. They comprise 16 Catholics, eight Orthodox, five Protestants, four Jehovah's Witnesses, one Greek Orthodox, and 34 refugees self-identified simply as Christians.

The Bible says that rape and murder are wrong. Perhaps Southern Baptist leaders like Moore and Sorens are just more concerned with political expediency than sound theology.

Keep in mind that no one in the SBC has a real private sector job where they earn money in a competitive free market by providing goods and services. When they talk about letting in refugees, they aren't going to be liable for the crimes and social costs (education, health care, public safety, etc.). That's on you, the taxpayers. And on the little girls who are raped and murdered. The SBC is not primarily concerned about underage sex-trafficking gangs run by Pakistani Muslim immigrants. Their priority is feeling good and being liked. Meeting with Obama in the Oval Office and preening for the cameras and hearing the praises of the far-left mainstream media. They like to be seen as "compassionate" by spending other people's money and risking other people's safety.

Once again, I must mention that I myself am non-white, and I favor skilled immigrants from all races. I am in favor of naturalizing skilled immigrants who can keep a high-paying job, refrain from committing crimes, and who are barred from collecting from any social welfare program for some long period of time. But refugees and unskilled immigrants should not be put on a path to naturalization under any circumstances. If individuals want to help them, they are free to help them with acts of voluntary charity. I myself am more interested in funding pro-life, pro-marriage, apologetics, etc. efforts.

Scott Klusendorf discusses abortion and euthanasia at the Summit Forum

June 19, 2018 | by Wintery Knight | Link | Original Link

Scott Klusendorf, President of the Life Training Institute

Here's the video, featuring my favorite pro-life speakers Scott Klusendorf. Scott is the founder and President of the Life Training Institute. LTI's mission is to make a rigorous, rational defense for pro-life positions with respect to a variety of ethical issues. If you listen to Scott, you will learn a lot, and learn it from someone who has been tested on the battlefield of ideas.

Three topics:

- right to life of the unborn
- reproductive technologies
- end of life questions

40 minutes of guided discussion, 20 minutes of Q&A. This video was apparently recorded in the summer of 2016.

Abortion:

- the 1-minute case for the pro-life position (excellent)
- dealing with those who dismiss the pro-life case as religious
- how and when do people win arguments?
- how does one get better at discussing moral issues?
- who are some of the best books to get informed about life issues?
- what are some of the best books from the other side?
- what is the SLED test? do pro-abortion scholars accept it?
- if abortion were illegal, who should be punished and how much?

- is it inflammatory and dangerous to say that abortion is killing?

Assisted reproductive technologies:

- how should we speak to people considering ARTs?
- what is the underlying issue in ART discussions?
- should pro-lifers be opposed to all use of ARTs?
- what should pro-lifers think about surrogacy?
- which books provide an introduction to ART ethics?

End of life issues:

- what is the central issue in end of life discussions?
- should treatment always be continued or are there situations where treatment can be withdrawn?

Final issues:

- if a student wants to take courses in bioethics, where should they go to take courses or do a degree?
- what is the policy situation for pro-lifers in terms of legislation and SCOTUS decision-making?
- what are some policies that pro-lifers can support as incremental measures that move the issue in the right direction?

I liked this discussion. I tried to listen as someone new to the issue and he did a good job of not assuming any prior knowledge of the debate. My favorite part was his survey of books and arguments on the other side, and what they say. I don't think that most people realize what the implications of the pro-abortion worldview really are for things like infanticide, and so on. The discussion about who should be punished for abortion and how much was new to me – and that actually came up during the last election, during the GOP primary. Personally, I would let the woman get off, and just prosecute the doctor.

It's very very good to listen to crystal clear thinking on these controversial issues from someone who has encountered the other side in their writings, and in public debates with them. Not to mention having to interact with people making decisions in these areas.

A modest proposal for dealing with illegal immigrants at the border

June 20, 2018 | by Wintery Knight | Link | Original Link

Net annual cost of illegal immigration: 116 billion per year (Source: FAIR)

I want to write about Christian apologetics and moral issues, but all the news is about illegal immigration. So I feel that I must address some of the endless stream of lies and misrepresentations of the problem coming from the mainstream media.

Here is a helpful article from the Daily Signal that corrects four of the myths:

> During the White House press briefing Monday, Homeland Security Secretary Kirstjen Nielsen said: “This is a very serious issue that has resulted after years and years of Congress not taking action.”
>
> Here’s a look at four of the more questionable claims made about the enforcement action.
>
> “The Democrats forced that law upon our nation,” Trump asserted last week.
>
> Democrats, backed by some media commentators, counter that it’s not the law but a Trump administration policy.
>
> Actually, experts say, the situation is a combination of a bipartisan law and a Clinton administration policy.
>
> In 1997, the Clinton administration entered into something called the Flores Settlement Agreement, which ended a class action lawsuit first brought in the 1980s.

> The settlement established a policy that the federal government would release unaccompanied minors from custody to their parents, relatives, or other caretakers after no more than 20 days, or, alternatively, determine the "least restrictive" setting for the child.
>
> In a separate development, in 2008 the Democrat-controlled Congress approved bipartisan legislation to combat human trafficking and President George W. Bush, a Republican, signed it into law.
>
> Section 235 (g) in that law, the William Wilberforce Trafficking Victims Protection Reauthorization Act, states that unaccompanied minors entering the United States must be transferred to the custody of the Department of Health and Human Services Office of Refugee Resettlement rather than to the Department of Homeland Security.
>
> The U.S. Court of Appeals for the 9th Circuit expanded the Flores settlement in 2016 to include children brought to the country illegally by their parents.
>
> For consistency between the provision of the anti-trafficking law and the 9th Circuit's interpretation of the Flores agreement, children who came into the country illegally with parents had to be taken into HHS custody, said Art Arthur, former general counsel for Immigration and Naturalization Services (now known as Immigration and Customs Enforcement) as well as a former federal immigration judge.
>
> "As soon as their parents are detained, the children are classified as unaccompanied," Arthur, now a resident fellow for law and policy at the Center for Immigration Studies, told The Daily Signal.
>
> Some media outlets have called the practice of separating children from parents at the border "unprecedented" or a "new low" for the United States.

That is the most important point that needs to be corrected. It's important to note that families seeking asylum that enter the country legally are NOT separated. The separation is only for people with minors who enter the country ILLEGALLY and then are caught. But the main point is that everything the media is complaining about today was legal under the Obama administration. The only difference is that the media at that time had no interest in making Obama look bad.

Now for something very helpful for this problem. Oh, it's true that Senator Ted Cruz has introduced a bill that would immediately solve the problem and prevent it from happening again. His solution drew the praise of moderate conservative David French, who normally doesn't like Ted Cruz, and favors ending family separation at the border for those caught entering the country illegally.

But that's not the only solution that's been proposed. Here is John Zmirak's solution, which he posted at The Stream.

> He writes:
>
> Since the law won't let us hold children more than 10 days, and the squealing

> elites won't let us separate them from the adults who claim to be their parents, we need a sane compromise. One that:
>
> - Respects our national sovereignty and the rule of law.
> - Keeps families together.
> - Lets our bishops go back to attending George Soros' conferences. And
> - Most important of all, heals Laura Bush's broken heart. Hasn't that woman suffered enough?
>
> My plan shifts the cost of this complex policy where it really belongs. It offers the people who clamor the loudest from illegal immigration (and profit from it more than most) the chance to also absorb its costs. In the words of Nicholas Nassim Taleb, we offer them the privilege of having some "skin in the game."
>
> Yes, Harvard and Yale of course. In fact, all the Ivies. (Yes, Cornell counts.) Also Brandeis, Stanford, Duke and even those state universities that flirt with "elite" status, such as UNC and UVA. Out of respect for Catholic bishops' firm stance on these issues, major Catholic schools should also take part, such as Georgetown and DePaul University.
>
> At each of these schools the comfortable, often lavish dormitories currently inhabited by students should be filled with migrant families. Students, for their part, will reside in tent cities constructed by the Army Corps of Engineers.

I'm having a lot of debates lately with stupid, spoiled progressive millennials. They don't know anything about the world, and they never cite anything to back up their claims. They think that they can pay off the debt by taxing the productive, but they don't know what the debt is, nor how much the productive pay in taxes. They think that universal health care will reduce health care costs, but they don't know how much it costs in other countries. They think that illegal immigrants, who by definition CANNOT pay income taxes, would be a net gain to the economy because they pay more in taxes than they use in education, health care, etc.

I really can't stand these stupid stupid young people. And that's why I have to say that the Zmirak proposal has a lot more going for it than the Cruz proposal. We definitely need to put the costs of leftist compassion onto the leftists. Maybe we could also house illegal immigrants in the homes of religious leaders who have spoken out in favor of illegal immigration.

Is anyone on the secular left not an intolerant bigoted violent domestic terrorist?

June 21, 2018 | by Wintery Knight | Link | Original Link

Harassing women is just fine, says radical feminist UK Guardian writer

Well! Whenever there is an attack on conservatives by deranged secular leftists, I try to write about it. Over the years, there have been many – but they were infrequent. Now the left is becoming so violent that it's a daily occurrence. I decided to collect together a few articles to show you how intolerant and threatening the secular left has become.

Here's something from The Federalist by Kelsey Harkness, a female conservative:

> Jessica Valenti revealed a new standard for liberal feminists on Tuesday: Driving women out of restaurants is wrong, unless they're a Republican. If that woman is named Sec. Kirstjen Nielsen, the behavior is not only acceptable — it's to be applauded.
>
> The situation began when the head of the D.C. branch of Democratic Socialists of America tweeted the restaurant name and exact addresswhere Department of Homeland Security Secretary Kirstjen Nielsen sat down for dinner. The dinner came after a very public day for Nielsen, who defended the Trump administration's decision to fully enforce U.S. immigration laws against all who illegally cross the border — a policy that in some case results in separating children from their illegal immigrant parents due to a settlement entered into in 1997 by the Clinton administration.
>
> The protesters marched through MXDC Cocina Mexicana uninterrupted for 11 minutes, screaming things at Nielsen such as, "Shame, shame, shame," "Fascist pig," 'End Texas concentration camps," and "No borders, no walls, sanctuary for all."

> The protest was supported by many on the left, including an editor at The Washington Post and Valenti, a feminist writer who recently penned a New York Times op-ed telling conservative women they can't be feminists. Valenti, who supposedly stands for the championing of women, described the harassment of Nielsen "VERY satisfying" to watch.
>
> "She should never be able to show her face in public again," she said.

So, according to this feminist writer who writes for the UK Guardian, harrassment and intimidation of women is OK, as long as the woman is conservative. Female conservatives and black conservatives seem to get the maximum level of hatred from people on the secular left. There's nothing like this level of harrassment by conservatives. If we disagree with something, we write about it or vote against it. We don't shoot you full of holes like the Bernie Sanders supporter did with the Republican legislators, and like the gun-wielding gay activist tried to do at the Family Research Council.

It wasn't just the UK Guardian, either… it's CNN, too:

6:08 AM - 20 Jun 2018

CNN says that harassing women is totally OK, if they're conservative

Another female conservative Joy Pullmann had a lot more details on the hate coming from the intolerant secular left. This is from The Federalist again:

> A few weeks ago, this same local chapter of socialists, about 60 to 70 strong, marched down the middle of the street to the northern Virginia home of Lora Ries, who assisted the Trump transition team with homeland security policy and has worked for Immigration and Customs Enforcement. They stood outside her home chanting things like: "No borders! No nation! F-ck deportation!" "Aqui estamos! No nos vamos!" (Spanish for "Here we are, we're not going.") "Lora Ries, you're a villain, locking up immigrant children." "No bans, no wall,

> sanctuary for all."
>
> […]Meanwhile, activists have also begun a doxxing campaign to enable further aggressive social agitation against the homes, privacy, and careers of people who work for ICE and other federal officials.

The "activists" screen scraped LinkedIn to find all the people who enforce the border security, in order to publish their personal information. The goal was to make them easier targets for threats, violence, harassment, vandalism, etc.

Just to remind you, the last time something like this happened, it was the Southern Poverty Law Center publishing the address of the Family Research Council, a conservative think tank. The result was that a gay activists went into the building with a gun, with the goal of mass murdering everyone inside. He was later convicted of domestic terrorism. Nothing was ever done to the SPLC.

Speaking of gay activists, consider this article from the Daily Signal about the kinds of comments that Christians get when they decline to participate in same-sex weddings.

Excerpt:

> We were penalized $135,000 for the "emotional damages" we caused by politely explaining our religious convictions and why we could not create a custom cake to celebrate a same-sex ceremony.
>
> The outrageous magnitude of that penalty—based largely on the fact that we dared to quote in our business the scriptures we hold sacred—is, we think, the type of anti-religious bias Kennedy had in mind when he determined that Jack's commissioners "violated the state's duty under the First Amendment not to base laws or regulations on hostility to a religion or religious viewpoint."
>
> We hope the justice system will undo the damage Avakian's lack of respect and neutrality has inflicted upon us. When the government acts with hostility to someone's religion or religious beliefs, citizens take that as license to treat one another with even greater hostility.
>
> While Avakian was publicly judging our religious beliefs, Nicole B. voiced her opinion on Facebook: "I hope your shop burns and you never make another cake, wh—."
>
> Matthew M. wrote: "If being a Christian means being a prejudiced, stupid piece of s—, you both are great Christians!"
>
> But Briana T.'s was one of the most painful to read: "We hope your children get cancer and die … . You are worthless."
>
> Beyond that, our business was shut down, our vehicles were vandalized, our home was broken into, and we have received more death threats than we care to count.

I was just reading a tweet by the Family Research Council on Twitter, and there are threats of violence in the replies by secularist leftists. Just in case you didn't know, the

FRC publishes research papers showing the benefits of natural marriage for children over other arrangements like cohabitation and same-sex relationships. That's it, that's how they got labeled a "hate group".

Look at the reply to their tweet below:

Threats of violence against the FRC by secular leftists abound

Is this what normal rank-and-file secular leftists are like? Should we now think that everyone who identifies as a secular leftist is a potential domestic terrorist? They seem to all either be actively involved in this violence / vandalism / intimidation / harassment, or actively condoning it. They don't make arguments. They don't marshal evidence. They just make threats. They just shout and scream. They just vandalize. They just open fire on unarmed people that they disagree with. This is the secular left in America.

Are the policies of the secular left good for children?

June 23, 2018 | by Wintery Knight | Link | Original Link

[image]
Why do people think that CNN are biased leftist clowns?
The buzz on Friday was all about a fake news article put out by Time magazine, and later celebrated by CNN and the Washington Post. Let's quickly review the mistakes in the Time / CNN / Washington Post propaganda, and then we'll ask the question in the title: do people on the secular left really care about children?

The review comes from The Federalist:

> The cover features a 2-year-old Honduran girl sobbing as she looks up at Trump, with the words "Welcome to America." Inside, TIME reported the little girl was one of those separated from her mother because of the Trump administration's zero tolerance policy on families crossing the border illegally. She was taken "screaming" from her mother by border agents, the report claimed.
>
> […]"The original version of this story misstated what happened to the girl in the photo after she taken from the scene," the correction reads. "The girl was not carried away screaming by U.S. Border Patrol agents; her mother picked her up and the two were taken away together."
>
> Reuters talked to the little girl's father, who said she was not separated from her mother. The Honduran government confirmed his version of events. A border patrol agent who was at the scene, Carlos Ruiz, described what actually happened to CBS News.
>
> We were patrolling the border, it was after 10 o'clock at night. We asked her to set the kid down in front of her, not away from her … and so we can properly search the mother. So, the kid immediately started crying as she set her down. I personally went up to the mother and asked her, 'Are you doing okay, is the kid okay?' And she said, 'Yes, she's tired and thirsty and it's 11 o'clock at night.
>
> The father also revealed the mother left three other children behind, and was crossing the border in search of a job — not in search of asylum. She didn't tell any of them when she left. He told The Daily Mail the photo "broke his heart," and he didn't support her decision.
>
> "Why would she want to put our little girl through that?" he said. "But it was her decision at the end of the day."
>
> In addition, Immigration and Customs Enforcement told media outlets the mother was attempting to cross the border illegally for a second time — moving her crime from a misdemeanor up to a felony.
>
> "I don't have any resentment for my wife, but I do think it was irresponsible of her to take the baby with her in her arms because we don't know what could

> happen," the father added.
>
> He also claimed he heard the mother paid a smuggler $6,000 to get her across the border .

Even after the facts came out, Time continued to defend the piece, but then was forced to print a major correction. Time was celebrated by other #FakeNews media. CNN posted an article praising the #FakeNews story, before correcting it. The Washington Post also celebrated the #FakeNews story, until they had to issue a correction, but they hid the correction. A commonsense interpretation of these facts shows that the mainstream media really has no interest in reporting the news objectively. As I explained before, all the peer-reviewed studies show that the mainstream media is almost entirely composed of secular leftists.

But nevermind all that. I want to focus on whether the people on the secular left, and their allies in the #FakeNews media, really do have an authentic concern for children.

Do secular leftists really care about children?

This article by Trevor Grant Thomas from The American Thinker lists a few secular leftist policies that are anti-child, and then I'll excerpt one, and add some that he missed.

The list:

1. abortion (kill unwanted children)
2. welfare state (makes women to swap fathers for welfare)
3. poverty (socialism and fatherlessness kills prosperity)
4. public schools / teachers unions (against school choice and voucher programs)

The excerpt is about #2:

> Even longer than they have ignored the right to life, American liberals have worked to build a massive welfare state that has played a terrible role in the destruction of the family — especially the black family. Yesterday, Rush Limbaugh again reminded Americans which political party enabled generations of children — again, especially black children — to be separated from their parents.
>
> The Democrat Party exists on dependency, and people that escape it pose a problem. So don't buy that the Democrats care about separated families. Because, after all… the Democrat Party literally subsidized single motherhood in the black community for decades. It was called AFDC.
>
> The Democrat Party promoted a welfare policy that gave single women additional money for every child they had. The father need not ever be around. In many cases, the father was not even known, the father was not even identified because the Democrat Party assumed the role.
>
> If you want to talk about honestly separating families, the Democrat Party wrote the book on it and promoted it and campaigned on it and won elections on the basis of separated families where the government took over the economic

> responsibilities of the father.

Never forget that it was Democrats who destroyed the black family in America.

[image]
Black women were more likely to be married before welfare programs
For my contribution, I'll note that the two great redefinitions of marriage, no-fault divorce and same-sex marriage, were both championed by secular leftists. These deprived children of their biological mother or father, or both in the case of gay adoption. The sexual revolution also a project of the secular left, made sex about recreation instead of keeping it inside of a life-long commitment. Finally, the secular left under Obama increased the national debt from $10 trillion to $20 trillion. This basically means that future generations of children will have all their income taxed away to pay for the hedonism of secular leftists today. The Democrat Party is truly the party of slavery – children not yet born are their slaves.

Here is a corrected version of the Time Cover with the inaccuracies fixed:

What the Time magazine cover should have said (Source: The Daily Caller)
OK, and finally, check out this hilarious tweet by an actual journalist, Stephen Miller, who accurately predicted how CNN would attack anyone who pointed out the mistakes in the Time story. He tweeted that to Brian Stelter of CNN. And sure enough, CNN later mailed out an attack on the fact-checkers that matched Miller's prediction almost word for word.

Bible study: the importance of truth in religion

June 24, 2018 | by Wintery Knight | Link | Original Link

Bible study that hits the spot

Here's an interesting passage of the Bible. What do you all think the practical value of this passage is?

[1] In the second year of his reign, Nebuchadnezzar had dreams; his mind was troubled and he could not sleep.

[2] So the king summoned the magicians, enchanters, sorcerers and astrologers to tell him what he had dreamed. When they came in and stood before the king,

[3] he said to them, "I have had a dream that troubles me and I want to know what it means."

[4] Then the astrologers answered the king, "May the king live forever! Tell your servants the dream, and we will interpret it."

[5] The king replied to the astrologers, "This is what I have firmly decided: If you do not tell me what my dream was and interpret it, I will have you cut into pieces and your houses turned into piles of rubble.

[6] But if you tell me the dream and explain it, you will receive from me gifts and rewards and great honor. So tell me the dream and interpret it for me."

[7] Once more they replied, "Let the king tell his servants the dream, and we will interpret it."

[8] Then the king answered, "I am certain that you are trying to gain time, because you realize that this is what I have firmly decided:

[9] If you do not tell me the dream, there is only one penalty for you. You have conspired to tell me misleading and wicked things, hoping the situation will change. So then, tell me

the dream, and I will know that you can interpret it for me.”

[10] The astrologers answered the king, “There is no one on earth who can do what the king asks! No king, however great and mighty, has ever asked such a thing of any magician or enchanter or astrologer.

[11] What the king asks is too difficult. No one can reveal it to the king except the gods, and they do not live among humans.”

[12] This made the king so angry and furious that he ordered the execution of all the wise men of Babylon.

[13] So the decree was issued to put the wise men to death, and men were sent to look for Daniel and his friends to put them to death.

[14] When Arioch, the commander of the king’s guard, had gone out to put to death the wise men of Babylon, Daniel spoke to him with wisdom and tact.

[15] He asked the king’s officer, “Why did the king issue such a harsh decree?” Arioch then explained the matter to Daniel.

[16] At this, Daniel went in to the king and asked for time, so that he might interpret the dream for him.

[17] Then Daniel returned to his house and explained the matter to his friends Hananiah, Mishael and Azariah.

[18] He urged them to plead for mercy from the God of heaven concerning this mystery, so that he and his friends might not be executed with the rest of the wise men of Babylon.

[19] During the night the mystery was revealed to Daniel in a vision. Then Daniel praised the God of heaven

[20] and said:

“Praise be to the name of God for ever and ever;
wisdom and power are his.

[21] He changes times and seasons;
he deposes kings and raises up others.
He gives wisdom to the wise
and knowledge to the discerning.

[22] He reveals deep and hidden things;
he knows what lies in darkness,
and light dwells with him.

[23] I thank and praise you, God of my ancestors:
You have given me wisdom and power,
you have made known to me what we asked of you,
you have made known to us the dream of the king.”

[24]Then Daniel went to Arioch, whom the king had appointed to execute the wise men of Babylon, and said to him, “Do not execute the wise men of Babylon. Take me to the king, and I will interpret his dream for him.”

[25] Arioch took Daniel to the king at once and said, “I have found a man among the exiles from Judah who can tell the king what his dream means.”

[26] The king asked Daniel (also called Belteshazzar), “Are you able to tell me what I saw in my dream and interpret it?”

[27] Daniel replied, “No wise man, enchanter, magician or diviner can explain to the king the mystery he has asked about,

[28] but there is a God in heaven who reveals mysteries. He has shown King Nebuchadnezzar what will happen in days to come. Your dream and the visions that passed through your mind as you were lying in bed are these:

[29] “As Your Majesty was lying there, your mind turned to things to come, and the revealer of mysteries showed you what is going to happen.

[30] As for me, this mystery has been revealed to me, not because I have greater wisdom than anyone else alive, but so that Your Majesty may know the interpretation and that you may understand what went through your mind.

This passage is interesting to me because it shows the kind of attitude that God answers. The King in this passage was tired of hearing man-made stories from his servants – stories that were undoubtedly influenced by the servants desire to survive the King’s wrath. The servants would only have told the King things that were vague and happy, so that they could never be proved wrong or found to be judgmental or offensive. But the King was tired of that. He wanted someone with authority to tell him the truth about the way the world was.

In the rest of the chapter, Daniel interprets the dream, and concludes by saying this: “The great God has shown the king what will take place in the future. The dream is true and its interpretation is trustworthy.”. The King replies: “Surely your God is the God of gods and the Lord of kings and a revealer of mysteries, for you were able to reveal this mystery.”

I think it is is going to be difficult for Christians living today to be able to tell people their dreams like that. But what we can do is talk about God’s miracles as revealed by science and history. We can study astrophysics, biochemistry and history and we can explain what God did in creating and fine-tuning the universe for life, in sequencing amino acids into functioning proteins, in creating brand new body plans in the Cambrian explosion, in raising Jesus from the dead as a matter of historical record, and so on. We have to show how great God is to people who do not even think he exists, and without assuming that they believe in the Bible. And we have to do it by focusing on *what is true.*

Early last week, I got a message from a friend who was interested in a girl that he met on an online dating service. She claimed to be a Christian. My friend explained why he was so interested in some of the evidences I outlined above. She was not impressed. She said “I prefer to show people Christianity is true by not judging them, by being compassionate, by introducing them to a fun and affirming community”. There was no emphasis on truth in her approach. In fact, any religious group could do those things and “establish” their religion as true, by appealing to feelings. But this is clearly not what the God of the Bible

intends for people who seek him. He is a God of truth, and truth is established by logical reasoning and supporting evidence.

There are still people out there like the King who are looking for someone who can speak to them with authority. All it takes from us is a little studying, and we can be like Daniel, too. But we have to know what God has done from science and history, and speak with authority about how we can know that God has acted *supernaturally*. Authority to speak comes from having knowledge about what we are talking about, and knowledge comes from studying and debating with people we disagree with. Nebuchadnezzar was not a believer in the God of Israel, but he was still interested in truth. That won't always be the case, but it is the case for some people.

Can parents lead their children to be effective and influential Christians?

June 25, 2018 | by Wintery Knight | Link | Original Link

A family praying and reading the Bible

I'm not going to surprise any of my regular readers by stating that I believe that fathers should lead their children to pursue advanced degrees and to reach high positions of influence. I think it is the man's job to survey the world, to decide where the battles are being fought, to encourage his children to be the best in every academic discipline, to push them to take on difficult practical tasks, to assess their strengths and weaknesses as they progress (not their likes and dislikes), and to push them towards success in areas where the battles are being fought and where they have talent.

So, for example, if I had a child, here are some areas I would steer him/her toward:

- cosmology, to study the Big Bang and fine-tuning arguments
- software engineering, to make tons of money and not have to conform to teacher's expectations
- philosophy, because that's what William Lane Craig, Jay Richards and Stephen C. Meyer did
- New Testament, because that's what Gary Habermas, N.T. Wright, and Ben Witherington did
- economics, as long as they went to Hillsdale/Grove City, then George Mason, because they could go on to politics
- law, as long as they went to Hillsdale/Grove City, then George Mason, because they could go on to politics
- biochemistry, because intelligent design is all bound up with the origin of life chemistry – but this is risky
- paleontology, because the Cambrian explosion is an excellent apologetic argument – but this is very risky

- dentist, because you can make a ton of money, and it's not regulated
- veterinarian, because you can make a ton of money, and it's not regulated
- mathematics professor, because you can influence children, but not be turfed out for your religion/politics
- medical physics, you can make a ton of money and no risk of being discriminated against
- bioinformatics, combine software engineering and biochemistry – but this is somewhat risky
- social scientist working on social issues like marriage and parenting and social policy, but this is pretty risky

I want to lead my future children towards academic excellence and effective professions where they can exert an influence. I would do this by using things like rules, standards, accountability, and moral boundaries. I would teach my children to learn to sacrifice their happiness to love God more effectively. I would encourage them to take risks, work hard, be enterprising, and to earn and save money.

I've been practicing all of this over the years on my male and female friends. I encourage them to go back to school, get advanced degrees, bring in good speakers to church and universities, show debates, read good apologetics and economics books, earn and save money, etc. The consensus view , among men and women who I've challenged, is that all this hard work is not much fun, but that they loved the feeling of being confident in their faith, and that they loved having a worldview that was comprehensive – integrating science, politics, history, economics, philosophy, foreign policy, etc. And they felt that it made them feel closer to God because they liked having the experience of defending him.

Although the leading seems to work really well on friends, but as soon as you try it on girl friends, some of them get really mad. And they don't think that it's a good parenting style either. Some Christian women say that children should do whatever they feel like doing, that every vocation is as effective as any other, and that children will rebel against high expectations and hard work, and become atheists. And worst of all, some women think that *children need to be protected from the expectations, boundaries and standards of their own fathers.* For a Christian man thinking about having a family, the thought that his children will not amount to anything is his worst nightmare. Women need to not only be comfortable with men leading the family through goal-directed parenting, but they need to encourage the men to *be leaders*.

So some women think that male parenting is bad for children, and doesn't work to produce effect Christian kids.

But is it true?

Well consider two children of famous Christian apologists.

First, Lee Strobel's son:

> Kyle Strobel is a speaker, writer, and a practitioner of spiritual formation and community transformation. His main focus is on discipleship, spiritual formation,

> and creating a community of disciples who do the same. He has done masters work in Philosophy of Religion as well as New Testament. After doing further masters work in Spiritual Formation, Kyle has started his Ph.D in theology at the University of Aberdeen in Scotland in order to help integrate the often divorced spheres of theology and spirituality.
>
> Kyle has focused his ministry on developing and equipping people to live a Jesus way of life, which is also the subtitle to his book Metamorpha: Jesus as a way of life(Baker, April 2007). Kyle and his wife Kelli live in Aberdeen, Scotland.

Second, Josh McDowell's son:

> Head of the Bible Department at *Capistrano Valley Christian Schools*, where he teaches the courses on Philosophy, Theology, and Apologetics. He graduated summa cum laude from Talbot Theological Seminary with a double Master's degree in Theology and Philosophy. He is pursuing a Ph.D. in Apologetics and Worldview Studies from Southern Baptist Theological Seminary. Sean received the "Educator of the Year" for San Juan Capistrano, California in 2008. His apologetics training was awarded Exemplary Status by the *Association of Christian Schools International*. Sean is listed among the top 100 apologists.

I've talked to Greg Koukl, and he is amazingly intense and thoughtful about how he is raising his kids. I asked him this personally. He has a plan. He's put a lot of thought into it. I'm sure his wife supports him leading the children. Apologists are good at persuading other people, and that is *exactly* what you do with your friends… *and with your children*. If you are tough on your friends, and that works, then you can be sure that being tough on the kids will work too.

I was talking to my friend Lindsay the other day, and asking her if she thought that any of her four homeschooled children would grow up to make a difference. Her response was very different than the women who distrust men as leaders. She said "all of them will grow up to be influential Christian conservatives. I'll see to that." That answer is music to a Christian man's ears. There's nothing a man wants to hear more than that he is leaving someone in charge who respects his desire that his children will make a difference for Christ and his Kingdom. What is the point of working so hard if your wife cannot be trusted to make something happen. Even if Lindsay somehow fails, at least she intends to achieve something.

If I have children in the future, I will have to pull money away from the ministries and scholars and conferences that I like to sponsor. My friends will not be receiving gifts and books and lectures and debates. I will have a lot less time for writing and relationships with atheists and co-worker debates. I'll have to work for many years more at a boring job to pay for stuff that's just normal every day stuff. If I have to do all that, then I would like to see that my wife is prepared to raise children, is supportive and understanding of what men do in a family, and focused on serving God effectively. And I would like to see her value the fact that a man has *demonstrated his ability to lead* by building up his friends

over the *long-term* into effective and influential Christians – by giving them time and money and setting high expectations and monitoring their progress.

Women should not be afraid of men who have a track record of leading other people to be effective and influential. In fact, they should *value* it.

Is the acceleration of the universe's expansion compatible with Hinduism?

June 26, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

First, a news story – and then we'll see how the accelerating universe relates to the existence of God.

Excerpt:

> Three astrophysicists who discovered that the universe's expansion is accelerating rather than decelerating, as had been expected, win the Nobel Prize in physics.
>
> Adam Riess was sure he'd spotted a blatant error in his results. It was 1997, and the young post-doc's measurements of distant, exploding stars implied that the universe was expanding at a faster and faster rate, instead of slowing down, as he had expected.
>
> It wasn't an error at all. Instead, what was at fault were some basic assumptions about the workings of the universe.
>
> On Tuesday, the Johns Hopkins University astrophysicist received the Nobel Prize in physics for the revolutionary discovery and its implications, along with team leader Brian Schmidt of Australian National University and astrophysicist Saul Perlmutter of UC Berkeley and Lawrence Berkeley National Laboratory, who had reached the same conclusion independently.
>
> At the time of their work, astrophysicists believed that the rate of expansion of the universe — set in motion by the Big Bang 13.7 billion years ago — would be slowing down as matter was pulled together by gravity. The goal at the time was

> to figure out how rapid the deceleration was.
>
> What the two teams found instead was that the expansion of the universe was accelerating — an observation that could best be explained by the existence of a mysterious "dark energy" that pushes matter farther and farther apart.
>
> Many scientists had thought that, just as the universe started with the Big Bang, it would end with a Big Crunch — with gravity pulling all the matter in the universe inward.

Does anyone remember that week that I wrote those posts about "Why I am not a… <insert some religion here>"? I explained why I was not all kinds of different religions and denominations, including Roman Catholicism, Calvinism, Hinduism, Judaism, Islam, etc. Everyone was offended and we fought about it. Ah, I remember it well.

Now let's apply science to the Hindu religion and see if they go together, especially this new discovery about the expansion of the universe.

Why I am not a Hindu

1. Hindu cosmology teaches that the universe cycles between creation and destruction, through infinite time.
2. The closest cosmological model conforming to Hindu Scriptures is the eternally "oscillating" model of the universe.
3. The "oscillating" model requires that the universe exist eternally into the past.
4. But the evidence today shows the the universe, and time itself, had a beginning at the big bang.
5. The "oscillating" model requires that the expansion of the universe reverse into a collapse, (= crunch).
6. In 1998, the discovery of the year was that the universe would expand forever. There will be no crunch.
7. Therefore, the oscillating model is disconfirmed by observations.
8. The oscillating model also faces theoretical problems with the "bounce" mechanism.

So that's one reason why I am not a Hindu. And now we have more scientific confirmation that there is no cycle of universes coming into being and going out of being.

The absolute origin of the universe out of nothing is also incompatible with Buddhism and Mormonism and maybe other religions. They also require an eternally existing universe.

And modern cosmology disagrees with atheism, too

I think it's important for all of you to be familiar with the scientific evidence for the Big Bang. It will help you with your cosmological argument, and it will help you to refute many, many other religions that require eternal universes, including atheism.

I wrote about how the Big Bang cosmology falsifies atheism before.

Excerpt:

> According to the Secular Humanist Manifesto, atheism is committed to an

> eternally existing universe, (See the first item: “Religious humanists regard the universe as self-existing and not created.”). If something non-material brought all existing matter into being, that would be a supernatural cause, and atheists deny that anything supernatural exists. The standard Big Bang theory requires that all the matter in the universe come into being *out of nothing.* The Big Bang has been confirmed by experimental evidence such as redshift measurements, light element abundances and the cosmic microwave background radiation. This falsifies eternal models of the universe, which are *required* by atheist Scriptures.

The experimental evidence that confirms the Big Bang creation out of nothing falsifies many worldviews. Those who care about evidence will have to choose some other religion that is compatible with what we know from science today.

New study: college students drink more before casual sex than relationship sex

June 27, 2018 | by Wintery Knight | Link | Original Link

Sex events measured against intimacy level (for women only)

It turns out that college students use MORE alcohol and drugs when they have sex with strangers, and LESS alcohol and drugs when they have sex with people they are in a relationship with.

This study was reported by the far-left Psychology Today.

Excerpt:

> A recent study published in the *Journal of Sex Research* sheds some light on these questions. A research team headed by Jennifer Walsh analyzed alcohol use in almost 500 casual and 1400 romantic sexual intercourse events that happened to 300 college women on a monthly basis over a period of 12 months. Alcohol use was not very common during romantic sex: 20% of romantic encounters involved some drinking and only 5% involved heavy drinking (defined as four or more drinks). Hookups, on the other hand, were a different story: Women drank during 53% of their hookups, and drank *heavily* during 38% of all hookups.
>
> But not all hookups are created equal. There was an almost perfect linear relationship between drinking and partner closeness: The less known the partner, the more likely women drank before sex, and the more likely they drank a lot. Look at the graph I created based on their data. When the casual partner was an ex-boyfriend, for example, only 30% of hookups involved drinking and 17% heavy drinking. When the partner was a random stranger, however, 89% of hookups involved drinking and 63% involved four or more drinks!

The writer explains why this happens:

> Alcohol also provides **an excuse** to those who need one. In a world that encourages hooking up but also judges those (especially women) who engage in it too much, many seem to need it. You're a slut if you hook up with people *just because you want to*: Good girls don't actively want to hook up, and being sober means taking full responsibility for your actions. But if you can blame it on the alcohol, you're absolved of guilt. You can still be a good girl who just happened to make a mistake.

This study agrees with a study I blogged about before from the University of Virginia, which explained that college students drink before hook-ups in order to be able to explain to their friends why it wasn't their fault:

> A Rutgers University student commented, "If you're drinking a lot it's easier to hook up with someone… [and] drugs, it's kind of like a bonding thing… and then if you hook up with them and you don't want to speak to them again, you can always blame it on the drinking or the drugs."
>
> Other women observed that being drunk gives a woman license to act sexually interested in public in ways that would not be tolerated if she were sober. For instance, a University of Michigan student said, "Girls are actually allowed to be a lot more sexual when they are drunk…"
>
> A University of Chicago junior observed, "One of my best friends… sometimes that's her goal when we go out. Like she wants to get drunk so I guess she doesn't have to feel guilty about [hooking up]."

Now, the first thing I thought of when I saw this article in Psychology Today was: "I wonder what criteria these college students are using in order to decide which strangers they have sex with". And then I realized. For perfect strangers, it would have to be something obvious, like physical appearance. A study found that it takes a woman 3 minutes to decide if she likes a man or not. Whatever assessment is being made in that 3 minutes surely isn't adequate for long-term plans for marriage, children and church attendance.

Don't judge me, it wasn't my fault

It reminds me of something I read a while back in a Theodore Dalrymple book. Theodore Dalrymple is the famous psychiatrist who writes books about culture in the UK. One of his books about the complete lack of personal responsibility among criminals is actually posted online.

In the chapter "Tough Love", he talks about the nurses he works with:

> All the more surprising is it to me, therefore, that the nurses perceive things differently. They do not see a man's violence in his face, his gestures, his deportment, and his bodily adornments, even though they have the same experience of the patients as I. They hear the same stories, they see the same

signs, but they do not make the same judgments. What's more, they seem never to learn; for experience—like chance, in the famous dictum of Louis Pasteur—favors only the mind prepared. And when I guess at a glance that a man is an inveterate wife beater (I use the term "wife" loosely), they are appalled at the harshness of my judgment, even when it proves right once more.

This is not a matter of merely theoretical interest to the nurses, for many of them in their private lives have themselves been the compliant victims of violent men. For example, the lover of one of the senior nurses, an attractive and lively young woman, recently held her at gunpoint and threatened her with death, after having repeatedly blacked her eye during the previous months. I met him once when he came looking for her in the hospital: he was just the kind of ferocious young egotist to whom I would give a wide berth in the broadest daylight.

Why are the nurses so reluctant to come to the most inescapable of conclusions? Their training tells them, quite rightly, that it is their duty to care for everyone without regard for personal merit or deserts; but for them, there is no difference between suspending judgment for certain restricted purposes and making no judgment at all in any circumstances whatsoever. It is as if they were more afraid of passing an adverse verdict on someone than of getting a punch in the face—a likely enough consequence, incidentally, of their failure of discernment. Since it is scarcely possible to recognize a wife beater *without* inwardly condemning him, it is safer not to recognize him as one in the first place.

This failure of recognition is almost universal among my violently abused women patients, but its function for them is somewhat different from what it is for the nurses. The nurses need to retain a certain positive regard for their patients in order to do their job. But for the abused women, the failure to perceive in advance the violence of their chosen men serves to absolve them of all responsibility for whatever happens thereafter, allowing them to think of themselves as victims alone rather than the victims and accomplices they are. Moreover, it licenses them to obey their impulses and whims, allowing them to suppose that sexual attractiveness is the measure of all things and that prudence in the selection of a male companion is neither possible nor desirable.

Often, their imprudence would be laughable, were it not tragic: many times in my ward I've watched liaisons form between an abused female patient and an abusing male patient within half an hour of their striking up an acquaintance. By now, I can often predict the formation of such a liaison—and predict that it will as certainly end in violence as that the sun will rise tomorrow.

At first, of course, my female patients deny that the violence of their men was foreseeable. But when I ask them whether they think I would have recognized it in advance, the great majority—nine out of ten—reply, yes, of course. And when asked *how* they think I would have done so, they enumerate precisely the factors that would have led me to that conclusion. So their blindness is willful.

If Dalrymple's observations about female patients and nurses can be applied more broadly, then it explains why women initiate 70% of divorces. Women who don't want to be "forced" to be self-controlled and responsible with their choices will want an easy way to get out of it. According to Dalrymple's experience, it's not that women don't know that bad boys are lousy at marriage and fatherhood. They know it, but they choose to blind themselves to it, because it's just too much self-denial to have to be serious about making responsible choices with men and sex and marriage.

Right now, we are $20 trillion in debt, half of that thanks to Barack Obama's administration. I believe that the majority of this debt was accrued because people wanted to do what felt good to them in the moment, and then pass off the costs of their "unpredictable" mistakes onto their neighbors. The truth is that these costs will be paid by generations of young people not yet born. People shouldn't talk about how much they care about children, if their voting will force all the children of tomorrow into slavery.

One last piece of advice to men. My best friend Dina told me to always evaluate women based on their past choices, not based on the picture of themselves that they paint with words. Wise advice.

What do skeptical ancient historians think of the earliest Christian creed?

June 28, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson: let's take a look at the facts

Here is a post from my friend Eric Chabot. He writes about the earliest historical source for the minimal facts about the resurrection, which is the early creed recorded by Paul in 1 Corinthians: 3-7.

1 Cor 15:3-7:

3 For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

4 that he was buried, that he was raised on the third day according to the Scriptures,

5 and that he appeared to Cephas, and then to the Twelve.

6 After that, he appeared to more than five hundred of the brothers and sisters at the same time, most of whom are still living, though some have fallen asleep.

7 Then he appeared to James, then to all the apostles,

8 and last of all he appeared to me also, as to one abnormally born.

Just in case you didn't know, Cephas is Peter, one of Jesus' closest followers.

The general consensus among scholars is the that creed goes back to within 1-3 years after the death if Jesus, when almost all the eyewitnesses were still around.

The creed

In Eric's post, he quotes very well-known skeptical historians who affirm each part of the creed.

First, the creed as a whole is respected, even by atheist scholars like John Dominic Crossan:

> Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that "I handed on to you as of first importance which I in turn received." The most likely source and time for his reception of that tradition

> would have been Jerusalem in the early 30s when, according to Galatians 1:18, he "went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days" (3).

And atheist scholar Robert Funk:

> The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30 C.E., the time for development was thus two or three years at most." — Robert Funk co-founder of the Jesus Seminar.(5)

Let's take a look at one of the parts of the creed that is respected by skeptical historians… namely, the early belief that Jesus was resurrected shortly after his death.

The early belief in the resurrection

Skeptical scholar E.P. Sanders:

> That Jesus' followers (and later Paul) had resurrection experiences is, in my judgment, a fact. What the reality was that gave rise to the experiences I do not know. "I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: 'I saw him first!' 'No! I did.' Paul's tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus' followers suffered mass hysteria. But mass hysteria does not explain the other traditions." "Finally we know that after his death his followers experienced what they described as the 'resurrection': the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it. (14)

Skeptical scholar Bart Ehrman:

Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus' resurrection, since this is a matter of public record. (17)

> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don't doubt at all that some disciples claimed this. We don't have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don't think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19). (18)

You know, if all you did was give someone his post, I think that would be enough to show people that a more complete investigation of the historical Jesus was certainly a reasonable thing to do. It's amazing to me that people who grow up at this time when access to the data is so easy do not take the opportunity to look into Christianity.

List of virtually undeniable facts

Finally, below is a list of facts about the historical Jesus that are accepted by ancient historians – Christian, non-Christian, atheist.

These are compiled by non-Christian scholar E.P. Sanders:

From his book "Jesus and Judaism" (1985):

- Jesus was baptized by John the Baptist.
- Jesus called disciples and spoke of there being twelve.
- Jesus confined his activity to Israel.
- Jesus was a Galilean who preached and healed.
- Jesus engaged in a controversy about the temple.
- Jesus was crucified outside Jerusalem by the Roman authorities.
- After his death, his followers continued as an identifiable movement.
- At least some Jews persecuted at least parts of the new movement.

From his book "The Historical Figure of Jesus" (1993):

- Jesus was born c.4 BCE, near the time of the death of Herod the Great;
- He spent his childhood and early adult years in Nazareth, a Galilean village;
- He was baptized by John the Baptist;
- He called disciples;
- He taught in the towns, villages, and countryside of Galilee (apparently not the cities);
- He preached "the kingdom of God";
- Around the year 30 he went to Jerusalem for Passover;
- He created a disturbance in the temple area;
- He had a final meal with the disciples;
- He was arrested and interrogated by Jewish authorities, specifically the high priest;
- He was executed on the orders of the Roman prefect, Pontius Pilate;
- His disciples at first fled;
- They saw him (in what sense is uncertain) after his death;
- As a consequence they believed he would return to found the kingdom;
- They formed a community to await his return and sought to win others to faith in him as God's Messiah.

The way the resurrection of Jesus is presented on TV, you would think that mythical stories about Jesus emerged decades and even centuries after the fact in other parts of the world from where the events happened. But the trouble is that no ancient historian thinks that. Only Hollywood TV producers and movie makers think that. Now, if you are getting your view of the historical accuracy of basic Christian beliefs from television and movies, then don't be surprised if you are wrong. No one is saying that you have to go to Christian pastors and preachers for the facts, but you should go to the historians. They at least know the minimal facts.

The best way for a skeptic to tackle these issues is, I think, to watch a decent debate on the resurrection of Jesus between two respected scholars. My favorite debate on the resurrection is William Lane Craig versus atheist historian James Crossley. I have a video and a summary already ready made just waiting for you to check it out. Don't worry, no one will be looking over your shoulder making you change everything your life should you be convinced. Just watch the debate and decide what you are going to do with it on your own. You don't have to change your whole life overnight. Becoming a Christian is instantaneous and easy to do. Living like a Christian is a process, and it's between you and God how fast you go. So just see what the facts are to start with and then take it from there.

Activist arrested for child pornography, soliciting sex with children

June 29, 2018 | by Wintery Knight | Link | Original Link

Accused child rapist and child pornographer, etc. at Human Rights Campaign event (Photo credit: The Other McCain and this tweet)

I want to be careful here and just stick to the facts.

Let's start with the radically leftist New York Times, a former newspaper.

Excerpt:

> A Columbia University student whose global campaign against rape and sexual abuse of children earned him berths to speak alongside United Nations and State Department officials was himself charged this week with a series of sex crimes against children.
>
> […]He is charged with one count of enticement of a minor under the age of 18 to engage in sexual activity, which carries a maximum sentence of life in prison. He is also charged with one count of attempted sexual exploitation of a minor, one count of possession of child pornography and one count of receipt and distribution of child pornography, prosecutors said this week.

The far-left Washington Post reports:

> Over the course of several weeks between May and late June, prosecutors say, Davis exchanged text messages with undercover FBI agents, trying to arrange meetings with a 9-year-old girl, an 8-year-old girl and a 2-year-old boy. Davis allegedly sent the undercover agents sexually explicit photos and videos of children as young as infants and made clear that he wanted to have sex with children of any age, according to a federal criminal complaint.
>
> He also admitted to meeting a 13-year-old boy on the dating app Grindr, speaking with him on Snapchat and engaging in sexual activity with the boy at Davis's Manhattan apartment in June, according to the complaint.

> […]Davis told the agent that he is into children ages zero and up, and has "no limits," according to the complaint. He said he previously had sexual experiences with a 9-month-old boy, a 6-year-old girl and a 7-year-old boy. He sent the agent an array of disturbing photos showing adults sexually abusing naked children as young as infants.
>
> He asked another undercover agent to take nude pictures and videos of the agent's supposed 9-year-old daughter and the 2-year-old daughter of the agent's girlfriend. Davis told the agent he had "hundreds" of images of child pornography in his "collection," mostly "baby/toddler."
>
> Davis pressed the agent about meeting the 2-year-old girl. "When do u have that baby alone next," Davis asked. "I mean even for a few mins enough to FaceTime."
>
> Through a search warrant, authorities later found a trove of child pornography on Davis's cellphone. After his arrest, Davis admitted to having a sexual interest in infants and toddlers, keeping the child porn on his phone, and trying to set up meetings with the agents' children, authorities said.

Grindr is a famous app used by gay males to find strangers to have anonymous hook-up sex with solely based solely on physical appearance. It describes itself as "Grindr is the world's #1 FREE mobile social networking app for gay, bi, trans, and queer people to connect."

ABC News says that he is a Nobel Prize nominee. The Daily Mail posted a picture of him wearing a huge Hillary Clinton pin.

The Daily Wire reports something that the NYT and WaPo missed:

> Davis attended a Human Rights Campaign gala in New York in February 2017.

You can see the picture at the top of the post. You'll remember that wealthy Democrat donor and Obama-supporter Terry Bean was also charged for sex abuse of an underage male. Terry Bean co-founded the Human Rights Campaign, the largest LGBT activism organization in America.

Barronelle Stutzman religious liberty case parallels Jack Phillips case

June 30, 2018 | by Wintery Knight | Link | Original Link

Gay activist vandalizes pro-marriage sign

Barronelle Stutzman owns a flower shop in Washington state. A gay couple she had served for years decided to weaponize the secular state to punish her, when she declined to participate in their same-sex wedding. In this Fox News editorial, she explains what the gay activists in Washington state government did to her. Those already familiar with the case might want to read her editorial anyway, because it shows that that her case has parallels to the Jack Phillips case that was recently decided by the Supreme Court.

This is a very useful editorial because I think it really shows how to frame disagreement with homosexual redefinitions of marriage in a winsome way. If the police and the government come for you, it's important to understand how to explain yourself without being more offensive than you have to be.

Excerpt:

> I tried to do my work as an artist in ways that honored my religious beliefs, my home state of Washington turned my life upside down. Since then, my state has been prosecuting me because I declined, for religious reasons, one request to celebrate one event for one gay customer – a friend of mine named Rob, whom I'd been delighted to serve for nearly a decade.
>
> The Washington Supreme Court ruled against me last year with a decision that threatens to bankrupt my husband and me. But this week, the U.S. Supreme Court breathed new life into my case, sending it back to the Washington courts for further consideration.
>
> […]I'm also a Christian, and that affects every part of my life, including my work. Because I believe that all people are made in the very image of God, I serve

> everyone who enters my shop and treat them with dignity and respect.

She served gay people, but declined to participate in same-sex marriage weddings:

> But this doesn't mean that I can agree to every request. If people ask for custom arrangements to celebrate events or express messages that run up against my religious beliefs, I have to say 'no.' (This is particularly true for events like weddings that I personally attend.) Even then, I'll gladly create something else for them, or sell them any of my ready-to-purchase items.
>
> My relationship with Rob shows this. I served him for nearly a decade. I knew that he is gay, and he knew that I'm a Christian. None of that mattered. We enjoyed working with each other, and we quickly became friends. I was glad to create arrangements celebrating his partner's birthday, their anniversary, Valentine's Day, and other important life events. But when he asked me to design the flowers for his wedding, it was a different matter.

Her reason for declining to participate in the same-sex wedding was her own deeply-held religious convictions: (which are protected by law)

> My faith teaches me that marriage is sacred, and that it exists only in the uniting of a man and a woman. I cannot create custom floral art, or be part of an event, celebrating a view that contradicts what I believe God designed marriage to be.

She declined the request to participate in the wedding in a gentle way, and recommended other businesses who would do a good job:

> So when Rob asked me about his wedding, I walked him to a private part of my shop, took his hand in mine, told him why I couldn't do what he asked, and referred him to three other florists who I knew would do a good job. Rob said that he understood, and we hugged before he left.

It was the state of Washington that decided to force their secular left "morality" on her. They decided to make an example of her, in order to intimidate Christians into acting like non-Christians on moral issues. (similar to what happened in Colorado with the Civil Rights Commission vs Masterpiece Cakeshop).

But, just like Colorado gay activists in government, they did not apply the law consistently. Christian businesses were persecuted, but anti-Christian businesses were allowed to discriminate against Christians:

> Washington Attorney General Bob Ferguson heard about this after Rob's partner posted something on social media. Ever since, the attorney general has relentlessly – and on his own initiative – come after me in ways he's never come after anyone else. He certainly hasn't done the same to a Seattle coffee shop owner who profanely berated and openly discriminated against Christian customers.

The consequences for Barronelle are the loss of her business and everything that she owns, and hoped to pass on to her own children:

> The attorney general doesn't just want to punish me in my role as a business owner. He's sued me in my "personal capacity," meaning that my husband and I are now at risk of losing everything we own.

The attorney general was asked to stop trying to take everything she owned, but he declined to do it. He's addicted the idea of using the power of the secular government to punish religious people who disagree with him.

> I've written the attorney general a letter urging him "to drop" the personal claims that risk stripping away "my home, business, and other assets." He won't. For him, this case has been about making an example of me – crushing me – all because he disapproves of what I believe about marriage.

And remember that the salary of this fascistic attorney general is funded in part by Barronelle's own income taxes. She's paying them to persecute her for her Christian beliefs, because the people around her – some of whom claim to be Christians – voted for bigger and bigger secular leftist government.

Discrimination against Christians

I decided to take a look at the other case that she linked to, to really understand whether the state of Washington had enforced the law differently for different people. You'll remember that the favorable decision that Jack Phillips got was conditional (in part) on the law being applied inconsistently in his home state.

Here's the story:

> A homosexual coffee shop owner refused service to a group of peaceful Christian [pro-lifers] Sunday and evicted them from his shop.
>
> The [pro-lifers] had been actively engaging people in the city for several days, sharing the gospel, holding signs exposing the abortion holocaust, and handing out literature to people of the streets. According to… Caytie Davis, the group entered Bedlam Coffee to rest and have a drink but did not engage anyone there.
>
> "We had nothing on us, we weren't distributing anything," Davis said. "We bought coffee and went upstairs." Within minutes of their arrival, the barista ran up the stairs and into the back room to alert the owner of their presence.
>
> […]When the [pro-lifers] asked why they had to leave, the owner told them, "This offends me."
>
> […]Jonathan Sutherland pointed out that the literature had been found on public property, but the owner repeatedly cut him off, saying "Shut up! Shut up!"
>
> "We tried to talk to him and he wanted nothing to do with it," Davis added.
>
> "So you're not willing to tolerate our presence?" Sutherland asked.
>
> "Will you tolerate my presence?" the man responded. Sutherland assured him

> they would. “We’re actually in your coffee shop,” he said.
>
> “Really?” the owner demanded. “If I go get my boyfriend and f*ck him in the a** right here you’re going to tolerate that?”
>
> “That would be your choice,” Sutherland answered. But the owner would not be persuaded. “Are you going to tolerate it?” he asked again. “Answer my f***ing question! No, you’re going to sit right here and f***ing watch it!”
>
> “Well, we don’t want to watch that,” said Caleb Head…
>
> “Well than I don’t have to f*cking tolerate this!” the man said. “Leave! All of you. Tell all your f*cking friends, don’t f*cking come here.”
>
> The [pro-lifers] agreed to leave, but Davis took the opportunity as they left to share the message of salvation through Jesus Christ. “Just know that Christ can save you from that lifestyle,” she said.
>
> “Yeah, I like a**,” the owner responded. “I’m not going to be saved by anything. I’d f*ck Christ in the a**. Ok? He’s hot.”
>
> As they exited… Jes Sutherland commented, “Seattle has proved itself to not be tolerant.”
>
> “Don’t act so f***ing shocked b**ch,” the owner said. “Get the f*ck out.”

The story was also reported on by a neutral source, a local radio station.

The Christians didn’t even ask the gay business owner to cater a heterosexual wedding! They were just refused service for who they were… something that Barronelle and Jack did not do. Naturally, the police and the state of Washington had nothing to say about this.

Finally, some secular leftist journalists are trying to say that what the owner of the Red Hen did to White House Press Secretary Sarah Huckabee Sanders was OK, because of the Jack Phillips decision. But it’s pretty obvious to anyone who is thinking rationally, that the cases are not parallel. Jack Phillips and Barronelle Stutzman both served gay people for everything except participation in a gay wedding. But the owner of the Red Hen refused to serve people based on religious convictions or political convictions. I would be fine with radical leftists refusing to participate in my heterosexual wedding, too. People on the religious right don’t believing in forcing those who disagree with them to act as if they agreed with them. And we certainly don’t believe in using the government to force them to do it. Fascism is now and always has been a left-wing enterprise, because only people on the secular left look to government as a solution to anything that makes them feel bad.

In Canada, the Christians get jail time for disagreement

By the way, if you want to read an interesting story from The Federalist about how gay activists are using police and courts to go after Christians who say things that offend them, then read about this case from Canada, where a very weird but harmless Christian is being threatened with TWO YEARS in prison for handing out pamphlets warning gay

people about the health risks of male-male sexual behavior. Although he cited numbers from the Center for Disease Control for his little pamphlets, this was apparently too much for the Canadian police, and they decided to arrest him and threaten him with jail time. And again, he is paying the salaries of the police, prosecutors and judges through his taxes.

Is there a downside to celebrating homosexuality as normal?

July 1, 2018 | by Wintery Knight | Link | Original Link

When disagreements come up, it's good to look at what the evidence is

This article from Touchstone magazine has the numbers. The "CDC" is the government-run Centers for Disease Control.

It says:

> We don't hear much about the HIV/AIDS epidemic anymore. When was the last time you read an article either online or in a newspaper of general circulation, or saw a report on a television news program about HIV/AIDS? **And yet, with no media attention or public fanfare, Mr. Obama's proposed 2016 federal budget requests almost $32 billion for HIV/AIDS treatment and research, an increase of 3.1% over the prior year.** Notwithstanding the Supreme Court's recent decision finding a fundamental, constitutional "right" to homosexual and lesbian "marriage," there is a deeply dark and dangerous side to today's American homosexuality. Since the first cases of what would later become known as AIDS were reported in the United States in June of 1981, more than 1.8 million people in the U.S. are estimated to have been infected with HIV, of whom 658,507 have already died. Today, the Centers for Disease Control ("CDC") estimates that more than 1,218,400 people aged 13 years and older are living with HIV/AIDS in the United States. Of those, tragically, the CDC estimates that almost 1 in 8 (156,300 or 12.8%) are unaware of their infection. Homosexual and bisexual men who have sex with men, particularly young African-American men, continue to be the most seriously affected by HIV/AIDS. Over the past decade, approximately 50,000 people are newly infected *annually*. In 2013, the CDC estimated that 47,352 people were diagnosed with HIV infection, and an

> additional 26,688 people were diagnosed with full-blown AIDS in the United States. Again, according to the CDC, in 2012, notwithstanding medical advances, an estimated 13,712 people with AIDS died.
>
> Although African-Americans represent 12 percent of the U.S. population, but accounted for 44% of new HIV infections in 2012, and accounted for 41% of people living with HIV/AIDS. Hispanics/Latinos account for 20 percent of people living with HIV infection. Although homosexual and bisexual men who have exchanges of body fluids through anal intercourse and other sexual contact with other men represent a very small proportion of the male population in the United States, the CDC reports that they account for *78 percent of new HIV infections among males*, and 63 percent of all new infections. Importantly, in a typical year, the greatest number of new HIV infections occur in younger African-American males aged 13-24. Younger black men accounted for 45% of all new HIV infections among African-Americans, and *55% of new HIV infections among all younger homosexual and bisexual men*.

We can all think of behaviors that are not good for people. Suppose you notice your friend has started smoking, or maybe is eating too much and not exercising, or maybe's she's getting really thin and not eating enough – if you loved them, you would say something. What if they got defensive and they felt bad about being judged? I still think it's good to gently but firmly tell the truth.

In my office, I have leftists who often tell me to recycle cans. If I don't recycle cans, nothing bad will happen to me. But strangely enough, the leftists don't have anything to say about behaviors that really would hurt me, like homosexuality. Secondhand smoke? They will condemn that. But engaging in risky sexual activity? They want to celebrate that. What sense does this double standard make? Tell people the truth about what behaviors might hurt them, but do it in a gentle way. Don't just tell someone "it's wrong", either. Instead, show them the facts and the sources so they can check out the data for themselves.

Mexico elects Marxist President, what does it mean for America?

July 2, 2018 | by Wintery Knight | Link | Original Link

Mexico, number of murders by state, 2017 (Source: Geopolitical Futures)

Mexico has held an election, and they decided to elect someone with the policies of Hugo Chavez (Venezuela). His name is Andrés Manuel López Obrador. What does it mean for America? It means we need to build a wall on our Southern border, and quickly, too. There were a couple of great articles about the election in The Federalist.

Let's start with the first one, which emphasizes what the new government could do.

Excerpt:

> True to his left wing beliefs, his economic plan is all about taxing and spending. He calls for universal access to public colleges, raising the minimum wage and increasing spending for welfare.
>
> Yes, he wants to raise taxes and possibly clamp down on corruption to pay for these government handouts. Rather than encouraging competition, he wants to reverse the energy reforms that ended state owned Pemex's monopoly in the oil industry. He calls for an end to crude oil exports and instead, he wants to build more oil refineries to help Mexico achieve energy independence while guaranteeing employment of Pemex union workers. Rather than moving Mexico's economy forward by encouraging free trade, he wants to take Mexico backward by incentivizing agriculture, so Mexico will be self-sufficient in food production. His nationalistic economic policy suggests he's unwilling to compromise on the NAFTA negotiation with the U.S.

So, let's see what's in the list:

- raise taxes, which harms economic growth and job creation
- make higher education a state-owned monopoly
- make oil production a state-owned monopoly
- strengthen labor unions
- reduce free trade
- raise the minimum wage, which raises unemployment

We don't have to guess at how this will work out, because it's already been tried by Hugo Chavez in Venezuela. The latest news from Venezuela this week is that the military took over distribution of clean water. They're eating dogs, cats and zoo animals, and selling their bodies for something to eat. Mexico's not going to reach that point right away, but they're not special. Bad policies produce bad effects.

The article continues:

> Even if López Obrador is somehow able to keep Mexico's economy stumbling along, he has already made it clear that Mexicans and all other migrants are entitled to come to the U.S.
>
> "Very soon, with the triumph of our movement, we will defend migrants from Mexico, Central America and the whole continent and all migrants from around the world who need to leave their towns to go and make their life in the U.S.," he said at a recent campaign rally. "It's a human right we are going to defend."
>
> […]He didn't give any details on how he will "defend" all migrants' supposed human right to be in the U.S., but one reasonable guess is that he probably won't stop any migrants, whether they are Mexicans or not, from reaching the U.S. So we may see a surge of illegal crossings at our southern borders if he wins the presidency.
>
> More illegal immigrants in the U.S. may also mean higher welfare expenditures at both the state and the federal level. As Victor D. Hanson wrote, "many of the millions of Mexican expatriates in the United States who send remittances home to Mexico are themselves beneficiaries of some sort of U.S. federal, state, or local support that allows them to free up cash to send back to Mexico."

A more recent Federalist article has more, says that the real threat is not the socialist government, but the drug cartels:

> Last week, the Associated Press reported on the rise of "mass crimes" throughout Mexico, in which "whole neighborhoods [defy] police and military personnel," stealing freight trains full of merchandise or illegally tapping fuel pipelines. Much of the crime is reportedly driven by widespread despair and disgust for the government among common people, which powerful criminal syndicates are exploiting…
>
> […]Cartels across the country no longer limit their activities to drug smuggling or human trafficking, but have branched out into fuel theft, illegal fishing, mining,

> and logging. Ordinary Mexicans, especially those in rural areas, are often left with few options except to work for cartels, sometimes growing opium poppies or working as lookouts and drug mules. In some parts of the country, the “social controls” that might prevent mass crimes are simply gone, drawing comparisons to places like Afghanistan, Nigeria, and Somalia.
>
> Meanwhile, violence is rampant across the country and on track for a record number of homicides this year. In the state of Guanajuato, an agricultural and manufacturing hub northwest of Mexico City that had one of the lowest murder rates in 2010, there were more than 2,000 execution-style killings last year and more than 1,000 in the first four months of this year. In 2007, there were only 51.

Whether socialism or drug cartels, the take-away lesson for America is the same:

> If we continue to ignore the collapse of our southern neighbors and maintain our longstanding—and misbegotten—policy of benign neglect, we should expect the flow of illegal immigrants and families seeking amnesty to number not in the tens of thousands but in the hundreds of thousands, perhaps the millions. At that point, U.S. policymakers and American voters must regard the crisis for what it is: a foreign policy and national security matter, not a proxy for domestic political disputes and our never-ending culture war.

So, we’re definitely going to need that wall sooner than later.

Letting the cancer reach the healthy tissue does nothing constructive. We need to let Mexico and South America get clear on what works and what doesn’t work. If they don’t want to do the right thing in their elections, it can only mean that they haven’t hit rock bottom yet. When people want to follow their hearts, the sensible thing to do is to let them go until they destroy themselves. Unless they are willing to listen to reason, it’s a mistake to make their path to destruction more comfortable for them. Also, we need to fear the panicked grasping of the drowning person who doesn’t want the life-jacket, but instead just wants to drag us down with him. When Mexico is ready to get their lives in order, they can ask us politely to rescue them ON OUR TERMS.

Unmarried 34-year-old woman vows to change shark into loving, faithful husband by hand-feeding him raw meat

July 3, 2018 | by Wintery Knight | Link | Original Link

Melissa Brunning dispenses advice and posts exotic selfies on her page "Wild and Free" Melissa Brunning is a 34-year-old unmarried woman who operates a Facebook page called "Wild and Free". On that page, she posts inspirational quotes about travel, fun, following your heart, as well as pictures from all her exotic vacations. The "about" section of the (public) page says "My mission is to inspire others to break free from 9-5 & live LIFE on their terms, to be WILD and FREE to follow their dreams, to explore & go on adventure".

Here is her philosophy in one photo:

Life is too short to waste time listening to people with demonstrated ability and success

Anyway, you can look at all the selfies of her with her cat, her bikinis, etc. on her personal Facebook page. The reason for this post is because Melissa met a new guy on Match.com. He has everything that she wants. He's tall. He's strong. He's smooth. He has really great teeth. And most importantly, he gives the impression that he could really lose his temper at any minute and attack other men violently. Melissa is sure that she can get around that problem somehow, though. Although the man lived 1500 miles away from her, this was no problem, because Melissa loves to travel, and this trip was a once-in-a-lifetime exotic adventure!

The West Australian reported on her date:

> Melissa Brunning was on a "once-in-a-lifetime" trip cruising the majestic Kimberley on a friend's superyacht, so when an opportunity arose to feed a placid shark she was scared, but her adventurous spirit willed her to give it a go.
>
> But it all ended in a freak shark bite incident that left the Perth woman grateful she didn't lose a finger.
>
> The last of her friends to try feeding the three to four Tawny nurse sharks hanging around the back of the boat, what Ms Brunning didn't realise until it was too late was that she shouldn't hand feed the 2m shark, rather place the piece of fish in front of her and watch it go by and suck it up.
>
> With a suction "like a Hoover", the shark sucked Ms Brunning's right index finger into its mouth full of rows of razor sharp teeth.
>
> Mobile phone footage filmed by a friend of the incident at the end of May shows Ms Brunning screaming as she's pulled from the back of the boat into the croc-infested water as the shark swims off.

Oh no! The hot alpha male bad boy ate her food, bit her, and swam away without even leaving his phone number. Typical whale! Er, I mean shark. It wasn't her fault! There was no way to predict from his appearance that he would become violent and unfaithful. It

was the shark's fault – he lied to her. He presented himself as kind and sweet. The shark's toxic masculinity was clearly to blame. #Patriarchy #MeToo

Melissa is quoted in the article about the break-up with the sharp-looking thug: "We're not meant to be in the water, if we were we'd have gills." It was a love not meant to be. But while in the hospital getting taxpayer-funded health care for the "unexpected" result of her irrational choices, a nurse gave her the phone number of a hot looking crocodile who was just being released from prison. Maybe things will work out with him? At least her friends will be envious if she posts a selfie with him.

You can have a lot of fun reading the inspirational quotes on her Wild and Free page, and even more fun if you insert something about *trying to hand feed a shark* into each one.

Here are some:

- When it feels scary to jump, that is exactly when you jump, otherwise you end up staying in the same place your whole life
- Take every chance you get in life because some things only happen once
- Life is an adventure, dare it
- Live in the moment
- When was the last time you did something for the first time?
- If it scares you, it might be a good thing to try
- Anything that gets your blood racing is probably worth doing
- Be crazy, be stupid, be silly, be weird, be whatever – because life is too short to be anything but happy

I think the common denominator here is this glorification of thrill seeking and fun, at the expense of having a slow, deliberate plan that achieves a real result. When your sole purpose in life is to have good feelings, it becomes impossible to exercise self-control for the sake of something higher, like serving God. The pattern of always choosing self, self, self becomes impossible to break.

This sort of thrill-seeking lifestyle works when you're young and pretty, but it doesn't really set you up for success in the last 50 years of your life. A woman needs to use her pre-marriage time wisely. She needs to train up her wife and mother skills, and develop patience and maturity by doing hard things. She has to train herself to keep commitments if her marriage is to last. A stable marriage requires her to get comfortable with self-sacrifice. She has to train her character to be content with stability. She needs to stop seeking thrills and learn how to delay gratification.

I am seeing this attitude of hers a lot in young Christian women. There doesn't seem to be much of a vision for marriage and family being taught to women today. Women don't see Christianity as something that overrides their pleasure-seeking and self-centeredness. Instead, they just sing praise hymns, read devotionals, listen to Joyce Meyer's prosperity gospel sermons, and focus on themselves. Nutrition, fitness and travel are all good, but they cannot be the main things in life for an authentic Christian.

Christians should be concerned with God's reputation and God's goals. Christians are

meant to serve God, not themselves. Christians have to do what works for God, like apologetics. There is no such thing as a Christian whose Facebook and Instagram page celebrates “self-love”, thrill-seeking, exotic vacations, etc. A real Christian always does what works to serve God. Jesus was good at self-denial and self-control. He was obedient to God even when it cost him his life. He didn’t go on exotic vacations and do pointless, risky things to get fun and thrills.

If you missed my previous post on radical feminists turning to mermen to get around the problem of “toxic masculinity” in normal men, then be sure to read that.

For Independence Day, let’s learn about George Washington and the Battle of Trenton

July 4, 2018 | by Wintery Knight | Link | Original Link

Washington crosses the Delaware river before the Battle of Trenton

My favorite book about the American Revolutionary war by far is called “1776”. It’s written by famous historian David McCullough. The part of the book that really stuck out to me was the Battle of Trenton. I think that this battle really defines the essential character of America, as seen in the decision-making of its great general and first President, George Washington.

In the book, I learned about how George Washington and his revolutionary army had suffered a string of defeats at the hands of the powerful Commonwealth army, and their mercenary allies. It was the middle of a freezing cold winter, and the many of the sickly and ill-equipped American troops were just days from having their enlistment contracts run out. Some of the troops were not waiting for their enlistments to expire, they were just deserting. In droves.

Washington was losing, and was just days from losing his Continental Army. If the Americans lost the revolutionary war, then it would mean that every man who signed the Declaration of Independence would be hanged as a traitor. The American revolutionaries had risked everything for liberty, and they were about to lose everything – their money, their property and even their lives.

I found a page that summarizes the battles leading up to the Battle of Trenton.

First battle, a defeat for Washington:

> **The Battle of White Plains**
>
> *October 28, 1776*
>
> RESULT: BRITISH VICTORY
>
> With the British army maneuvering to make his Harlem Heights position

> untenable, George Washington withdrew from the island of Manhattan, and established a new encampment further north near White Plains, New York.
>
> On October 28, 1776, a flank attack by the British on this new position resulted in the collapse of Washington's line. Thankfully, he was able to orchestrate an orderly withdrawal that preserved the army. Unfortunately, Washington's retreat further exposed Fort Washington, which remained garrisoned on Manhattan.

Next, another defeat for Washington:

> **The Battle of Fort Washington**
>
> *November 16, 1776*
>
> RESULT: BRITISH VICTORY
>
> Following the defeat of George Washington's army at White Plains, New York, British General William Howe focused his army's attention on Fort Washington, the last post defended by the Continental army on Manhattan. Although Washington hoped to abandon the fort, his officers convinced him that it needed to be held in order to keep British ships from ascending the Hudson River.
>
> During a carefully-orchestrated, all-out attack on November 16, 1776, British and Hessian forces overwhelmed the fort's garrison after vicious fighting. When he heard the attack begin, Washington, who had stationed himself across the Hudson River in New Jersey, travelled across the river to the enter the fort and personally inspect its defenses. Several officers accompanied Washington, including Generals Israel Putnam, Hugh Mercer, and Nathanael Greene. They convinced Washington to leave the fort just 30 minutes before it was surrounded.

And then, another defeat for Washington:

> **Evacuation of Fort Lee**
>
> *November 20, 1776*
>
> RESULT: BRITISH VICTORY
>
> After the fall of Fort Washington, George Washington made plans for the evacuation of Fort Lee, which stood across the Hudson River in New Jersey. In a letter written to John Hancock on November 19, 1776, the general wrote that "…Fort Lee was always considered as only necessary in conjunction with [Fort Washington]…," and that it would be abandoned as soon as provisions and other supplies were removed.
>
> Unfortunately, a large British force succeeded in scaling the heights close to the fort on November 20, 1776. Faced with superior numbers, Washington called for the immediate evacuation of the fort, which resulted in the loss of dozens of cannon, 2-300 tents, and 1,000 barrels of flour.

That brings us to the Battle of Trenton. Across the Delaware river from Washington's army was an encampment of Hessian mercenaries, fighting for the British. The Hessians

believed that Washington's Continental army was in full retreat. The British generals had already written home to the King to tell him that the war was nearly over, and that they had won. But had they?

Washington crosses the Delaware

Here is what Washington decided to do on December 25th, 1776:

> General George Washington's commitment to cross the Delaware River on Christmas 1776 foreshadowed the many hardships faced as well as the eventual victory of the Continental Army during the American Revolution. At first glance, the decision to transport 2,400 Continental soldiers across an icy river in one night, directly into a severe winter storm of sleet and snow seems irrational.
>
> Washington's decision, however, was based on strategic motivation, understanding that the Continental Army desperately needed a victory after months of intense fighting with several significant defeats and no major victories. Washington also understood that the element of surprise was the only way that he and his army stood a chance of defeating the highly trained Hessian mercenaries.
>
> On the morning of December 25, 1776, Continental soldiers woke up in their camps along the Delaware River to a frozen, snowy covered ground. Weather conditions worsened and temperatures continued to drop throughout the day. Late in the afternoon, the Continentals left their tents and began to form along the river in anticipation of the night's events. Washington kept almost all of the details of the crossing a secret; as a result, none of the soldiers knew anything about their upcoming mission.
>
> Washington's crossing of the Delaware River on December 25, 1776 allowed his army to strike the Hessians at Trenton the next morning.
>
> Washington's plan was to cross the river at night, march to the nearby town of Trenton, New Jersey, and attack the Hessian garrison right before dawn. Time was Washington's greatest enemy; to combat it his orders called for the various regiments to assemble at their designated crossing points no later than sunset. The close proximity to the crossing points allowed the soldiers to begin the journey immediately after nightfall struck and complete the crossing no later than midnight. Once across, Washington intended for the armies to reassemble and march approximately ten miles to Trenton, arriving there no later than five o'clock in the morning to achieve surprise. Despite his meticulous planning, the schedule failed almost before it even began.
>
> Many of the regiments did not arrive at the river until well after dark. Additionally, a severe winter storm that included wind, rain, snow, hail, and sleet met the soldiers at the banks of the river significantly slowing their crossing. Many of the boats had to combat ice jams and unfavorable currents. To make matters even worse, the extreme darkness caused by the storm made it hard for

> the boatmen to see the opposite shore.
>
> The necessity of using larger ferries to carry pieces of artillery across the river caused even more delays. Washington crossed the river with John Glover's Marblehead mariners and upon arrival debated whether or not to cancel the entire operation because it was more than three hours behind schedule. Washington decided it was too costly to retreat and he painfully watched as his army continued to trickle across the river.

If you were standing by the river along with Washington watching his sick, frozen, ill-equipped army struggle across the Delaware, then you would probably think that Washington had lost the element of surprise. This attack was just taking too long to happen. Maybe Washington would give up his plan, because things hadn't gone his way. But Washington didn't quit – he persisted.

The Battle of Trenton, December 25, 1776 (click for larger image)

The Battle of Trenton

This is how the battle went down in Trenton, New Jersey:

> Immediately following his famous crossing of the Delaware River, General George Washington marched the Continental Army to Trenton, New Jersey. The army's forces included horses, guns, wagons, and soldiers, stretching for nearly one mile. The weather was worse than it had been crossing the river, but the army continued to proceed as Washington rode up and down the column pressing his men to carry on.
>
> Shortly after eight o'clock on the morning of December 26, 1776, the Continental Army started its charge on the city. Three columns marched through thick snow with Washington personally leading the middle charge. As the soldiers pushed forward, artillery began to fire. At the same time, German drums urgently called

> the Hessians to arms. To his astonishment, Washington had maintained the element of surprise.
>
> Immediately after the firing began, three Hessian regiments ran from their quarters ready to fight, quickly forming ranks. As the Hessians grouped, the Continental Army entered the city at two points: John Stark marched into the city on River Road from the west, while Nathanael Greene and Washington arrived from the north.
>
> Andreas von Wiederholdt, a Hessian lieutenant, incorrectly reported to Colonel Johann Rall that the Continental Army had surrounded Trenton and there was no available route for retreat. As a result, Rall decided to counterattack Washington within the city and not retreat across Assunpink Creek. This proved to be costly as Washington's forces occupied the highest ground in the city and had clear views of all of Rall's movements.
>
> Time after time, Washington countered Rall's efforts to outflank the Continentals. Eventually, Washington's forces overpowered the Hessians. Rall was mortally wounded and many of his soldiers broke ranks, fleeing from the fighting. Normally very disciplined, Rall's regiment was confused and disoriented without their commander. They retreated to an orchard east of Trenton where they were forced to surrender.
>
> Despite the large number of Hessians that escaped Trenton, Washington still won a crucial strategic and material victory. In only one hour of fighting, the Continental Army captured nearly nine hundred Hessian officers and soldiers as well as a large supply of muskets, bayonets, swords, and cannons. Washington ordered his soldiers to treat the Hessian prisoners in a humane manner, and the general quickly focused his attention on what to do next. Washington assembled all of his officers in Trenton to discuss whether they should attack another post, hold their position in Trenton, or retreat back across the Delaware. Washington decided that because of the condition of his army, the best move was to return to their camps across the River.
>
> When the Continental Army returned to camp on the Pennsylvania side of the Delaware River, soldiers were exhausted. They had marched and fought for two straight days through rain, snow, sleet, and hail. Washington knew that his army had far exceeded expectations at Trenton and that they faced many more challenges going forward.

Washington won two more battles in rapid succession. Many of his troops re-enlisted because of these victories. There were many battles remaining to fight, and many hardships such as the winter at Valley Forge. But the Battle of Trenton was the turning point of the revolution. George Washington would not let a string of defeats stop him.

What about all those other books that the Church left out the Bible?

July 5, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson are going to take a look at the data

You may sometimes hear the objection that there were lots of other gospels and books floating around at the time when the 27 books of the New Testament were standardized. The right way to answer this problem is to ask for a particular book that the challenger would like included and then to take a look at factors like the date it was written, who wrote it, and where it was written. When you look at these factors, it becomes obvious why the other books were left out.

Consider an article by Dr. Charles Quarles, who has written against an early dating of a "left out" book called the "Gospel of Peter". Why was it left out? Because Christian are mean? Maybe there's a historical reason why these books are not included.

Excerpt:

> An impressive number of clues suggest that this gospel [Peter] postdates even the latest New Testament book and belongs to the mid-second century. First, a close analysis of verbal parallels shared by the *Gospel of Peter* and the Gospel of Matthew suggests that the *Gospel of Peter* postdates Matthew and utilized that Gospel as a source… an examination of the vocabulary, grammar, and style of the two documents strongly favors the dependence of the *Gospel of Peter* on Matthew. Robert Gundry, one of the most respected experts on issues related to Matthew's style, called the phrase a "series of Mattheanisms" (Gundry, Matthew [Grand Rapids: Eerdmans, 1994], 584). Similarly, John Meier noted "when it comes to who is dependent on whom, all the signs point to Matthews priority. . . .

> The clause is a tissue of Matthean vocabulary and style, a vocabulary and style almost totally absent from the rest of the *Gospel of Peter*" (Meier, Marginal Jews, 1:117). This is consistent with a number of other Matthean features appear in the *Gospel of Peter* that all point to the dependence of the *Gospel of Peter* on Matthew.
>
> Second, other features of the *Gospel of Peter* suggest that the gospel not only postdates Matthew, but even postdates the latest book of the NT canon, the Book of Revelation. For example, although Matthew indicates that the Roman guard sealed the tomb of Jesus, *Gospel of Peter* 8:33 adds that it was sealed with seven seals. The reference to the seven seals conflicts with the immediate context. *Gospel of Peter* 8:32-33 states that all the witnesses present sealed the tomb. However, a minimum of nine witnesses were present leading readers to expect at least nine seals. The best explanation for the awkward reference to the seven seals is that the detail was drawn from Revelation 5:1. This allusion to Revelation fits well with the *Gospel of Peter* 9:35 and 12:50 reference to the day of Jesus' resurrection as the "Lord's Day" since this terminology only appears in Revelation in the NT and first in Revelation out of all ancient Christian literature. The reference to the "Lord's Day" in the *Gospel of Peter* is a shortened form that appears to be a later development from the original form appearing in Revelation.
>
> Still other features of the *Gospel of Peter* fit best with the historical data if the *Gospel of Peter* was produced in the mid-second century. The *Gospel of Peter* assumes the doctrine of Jesus' descent into Hades to preach to the dead. However, this doctrine first appears in the words of Justin Martyr around AD 150. The talking cross is a feature of other second-century literature. The *Epistula Apostolorum 16* states that during the second coming Jesus will be carried on the wings of the clouds with his cross going on before him. Similarly, the Ethiopic Apocalypse of Peter 1 describes the returning Christ as coming in a glory seven times as bright as the sun and with his cross going before his face. In a similar fashion, beginning in the late first century, Christian texts describe Christ as possessing gigantic stature. In an allegorical depiction of Jesus' supremacy and authority over the church, Shepherd of Hermas 83:1 described Christ as of such lofty stature that he stood taller than a tower. 4 Ezra 2:43, a portion of 4 Ezra dating to the middle or late third century, referred to the unusual height of the Son of God. These shared compositional strategies and features make the most sense if these documents and the *Gospel of Peter* were composed in the same milieu.

It turns out that Quarles has actually debated the views he presents in this article against John Dominic Crossan, the main proponent of the view that the Gospel of Peter is early. You can buy the audio on CDs here, or you can get the book. The CDs are highly recommended, but the book leaves out all the dialog, so I don't recommend it.

And you can read about two more rejected books, the Gospel of Thomas and the Gospel of Judas, as well. The authors of those two articles are Craig Blomberg and Craig A. Evans, respectively. Craig Evans is also involved in the debate I mentioned with Crossan. He was able to debunk another “lost book of the Bible” called “Secret Mark”, which turned out to be a hoax.

Why are Christians allowed to eat shellfish but not allowed to have sex before marriage?

July 6, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery
Here's a wonderful article from Peter Saunders.

The challenge:

> An argument frequently advanced by those attempting to defend homosexual practice is that Christians 'cherry pick' the commands in the Bible – that is, they chose to emphasise some commands while ignoring others.
>
> The Old Testament may forbid homosexual acts (Leviticus 18:2; 20:13) but it also forbids eating seafood without fins and scales (Leviticus 11:9-12; Deuteronomy 14:9, 10).
>
> So how can Christians then justify upholding laws on sexual morality whilst at the same time ignoring the food laws from the very same books of the Bible? Why may they eat shellfish but not be allowed to have sex outside marriage? Isn't this inconsistent and hypocritical?

The solution is that God enters into "covenants" with his people, and the terms of those covenants change.

Especially dietary laws:

> The answer to this question lies in an understanding of biblical covenants.
>
> A covenant is a binding solemn agreement made between two parties. It generally leaves each with obligations. But it holds only between the parties involved.
>
> There are a number of biblical covenants: Noahic, Abrahamic, Sinaitic (Old),

> Davidic and New.
>
> Under the Noahic covenant, which God made with all living human beings (Genesis 9:8-17), people were able to eat anything:
>
> *'Everything that lives and moves about will be food for you. Just as I gave you the green plants, I now give you everything' (Genesis 9:3).*
>
> But under the Sinaitic (Old) Covenant, which God made with the nation of Israel, people were able to eat certain foods, but not others.

Jesus clearly created a new covenant with his followers, where the dietary laws are lifted:

> Jesus said that he had come to fulfil the 'Law and the Prophets' (Matthew 5:17; Luke 24:44). He would establish this new covenant with new laws, with himself as high priest based on his own sacrificial death on the cross.
>
> This new covenant would completely deal with sin (Hebrews 10:1-18) and protect all those who put their faith in him from God's wrath and judgement…
>
> *[…]'In the same way, after the supper (Jesus) took the cup, saying, "This cup is the **new covenant** in my blood, which is poured out for you"' (Luke 22:20). '…we have been made holy through the sacrifice of the body of Jesus Christ once for all' (Hebrews 10:10)*
>
> People would come under the protection of this new covenant, not by virtue of belonging to the nation of Israel, but through faith in Christ. In fact the function of the Old Testament Law (Sinaitic covenant) was to point to Christ as its fulfilment.
>
> […]So what then did Christ say about foods? He pronounced all foods clean for his followers to eat:
>
> *' "Don't you see that nothing that enters a person from the outside can defile them? For it doesn't go into their heart but into their stomach, and then out of the body." (In saying this, Jesus declared all foods clean.) He went on: "What comes out of a person is what defiles them. For it is from within, out of a person's heart, that evil thoughts come—sexual immorality, theft, murder, adultery, greed, malice, deceit, lewdness, envy, slander, arrogance and folly. All these evils come from inside and defile a person." (Mark 7:18-23)*
>
> Jesus was making that point that under the new covenant God required purity of the heart. Internal thoughts and attitudes were as important as external actions.

Food is OK for Christians, but sexual immorality – which includes premarital sex and adultery – are NOT OK for Christians.

I think sometimes when you are talking to people whose motivation is just to get rid of any objective moral law entirely, they tend to ask questions without really wanting a good answer. This is especially true when it comes to the morality of sex. They ask the question not to get an answer, but to justify getting rid of the moral rules governing sexuality. The answers are there for people who are willing to respect God in their decision-making to find. The answers are not found only by people who have a

reason to not want to find them.

In case you're wondering, I am one of those Christian men who takes chastity seriously. Marriage is about having a close connection with your spouse. Sure, I could break the rules and have a lot of fun now. A lot of Christians have a hard time turning down fun. But when I look at Jesus, I don't see a man who is pursuing fun and thrills. I see a man who sees a need and then sacrifices his own interests to rescue others from peril.

Christopher Hitchens debates William Lane Craig at Biola U: Does God Exist?

July 7, 2018 | by Wintery Knight | Link | Original Link

Here is the video of the debate:

TOPIC: DOES GOD EXIST?

MY NOTES ON THE DEBATE: (WC = William Lane Craig, CH = Christopher Hitchens)

WC opening speech:

Introduction:

WC makes two contentions:
– there are no good arguments for atheism
– there are good arguments for theism

These topics are IRRELEVANT tonight:
– social impact of christianity
– morality of Old Testament passages
– biblical inerrancy
– the debate is whether god (a creator and designer of the universe) exists

1. cosmological argument
– an actually infinite number of past events is impossible
– number of past events must be finite
– therefore universe has a beginning
– the beginning of the universe is confirmed by science – universe began to exist from nothing
– space, time, matter, energy began at the big bang
– the creation of the universe requires a cause
– the cause is uncaused, timeless, spaceless, powerful
– the cause must be beyond space and time, because it created space and time
– the cause is not physical, because it created all matter and energy
– but there are only two kinds of non-physical cause: abstract objects or minds
– abstract objects don't cause effects
– therefore must be mind

2. teleological argument
– fine-tuned constants and ratios
– constants not determined by laws of nature
– also, there are arbitrary quantities
– constants and quantities are in narrow range of life-permitting values
– an example: if the weak force were different by 1 in 10 to the 100, then no life
– there are 3 explanations: physical law or chance or design
– not due to law: because constants and quantities are independent of the laws

– not due to chance: the odds are too high for chance
– therefore, due to design
– the atheist response is the world ensemble (multiverse)
– but world ensemble has unobservable universes, no evidence that they exist
– and world ensemble contradicts scientific observations we have today

3. moral argument
– objective moral values are values that exist regardless of what humans think
– objective values are not personal preferences
– objective values are not evolved standards that cultures have depending on time and place
– objective moral values and duties exist
– objective moral values and duties require a moral lawgiver

4. argument from resurrection miracle
– resurrection implies miracle
– miracle implies God
– 3 minimal facts pass the historical tests (early attestation, eyewitness testimony, multiple attestation, etc.)
– minimal fact 1: empty tomb
– minimal fact 2: appearances
– minimal fact 3: early belief in the resurrection
– jewish theology prohibits a dying messiah – messiah is not supposed to die
– jewish theology has a general resurrection of everybody, there is not supposed to be a resurrection of one person
– jewish theology certainly does not predict a single resurrection of the messiah after he dies
– therefore, the belief in the resurrection is unlikely to have been invented
– disciples were willing to die for that belief in the resurrection
– naturalistic explanations don't work for the 3 minimal facts

5. properly basic belief in god
– religious experience is properly basic
– it's just like the belief in the external world, grounded in experience
– in the absence of defeaters, those experiences are valid

Conclusion: What CH must do:
– destroy all 5 of WC's arguments
– erect his own case in its place

CH opening speech:

1. evolution disproves biological design argument
– evolution disproves paley's argument for a watchmaker

2. god wouldn't have done it that way
– god wouldn't have waited that long before the incarnation
– mass extinction and death before Jesus

– god wouldn’t have allowed humans to have almost gone extinct a while back in africa
– why insist that this wasteful and incompetent history of life is for us, that’s a bad design
– the universe is so vast, why would god need so much space, that’s a bad design
– there is too much destruction in the universe, like exploding stars – that’s a bad design
– the heat death of the universe is a bad design
– too many of the other planets don’t support life, that’s a bad design
– the sun is going to become a red giant and incinerate us, that’s a bad design

3. hitchens’ burden of proof
– there is no good reason that supports the existence of god
– all arguments for god can be explained without god
– atheists can’t prove there is no god
– but they can prove there is no good argument for god

4. craig’s scientific arguments don’t go far enough, they only prove deism, not theism
– the scientific arguments don’t prove prayer works
– the scientific arguments don’t prove specific moral teachings of christianity

5. if the laws of physics are so great then miracles shouldn’t be allowed
– good laws and miracles seem to be in contradiction

6. extraordinary claims need extraordinary evidence
– none of craig’s evidence was extraordinary

7. science can change, so craig can’t use the progress of science
– it’s too early for craig to use the big bang and fine-tuning
– the big bang and fine-tuning evidences are too new
– they could be overturned by the progress of science

8. craig wrote in his book that the internal conviction of god’s existence should trump contradicting evidence
– but then he isn’t forming his view based on evidence
– he refuses to let evidence disprove his view
– but then how can atheists be to blame if they don’t believe
– so evidence is not really relevant to accepting theism

9. the progress of science has disproved religion
– christianity taught that earth was center of the universe
– but then cosmology disproved that

Response to the big bang and fine-tuning arguments:
– was there pre-existing material?
– who designed the designer?

WC first rebuttal:

Reiterates his 2 basic contentions

CH agrees that there is no good argument for atheism
– then all you’ve got is agnosticism
– because CH did not claim to know there is no God

– and he gave no arguments that there is no God

CH’s evolution argument
– irrelevant to christianity
– Genesis 1 allows for evolution to have occurred
– christianity is not committed to young earth creationism
– the origin of biological diversity is not central to christianity
– st. augustine in 300 AD said days can be long, special potencies unfold over time
– also there are scientific reasons to doubt evolution
– cites barrow and tipler, and they say:
– each of 10 steps in evolution is very improbable
– chances are so low, it would be a miracle if evolution occurred

CH’s argument that god is wasteful
– efficiency is only important to people with limited time or limited resources
– therefore god doesn’t need to be efficient

CH’s argument that god waits too long to send Jesus
– population was not that high before jesus
– jesus appears just before the exponential explosion of population
– conditions were stable – roman empire, peace, literacy, law, etc.

CH’s argument that Craig’s scientific arguments only prove deism, not theism
– deism a type of theism, so those scientific arguments work
– all that deism denies is miraculous intervention

CH’s argument that Craig has a burden of proof
– theism doesn’t need to be proven with certainty
– must only prove best explanation of the evidence

CH’s citation of Craig’s book saying that evidence should not overrule experience
– there is a difference between knowing and showing christianity is true
– knowing is by religious experience which is a properly basic belief
– showing is done through evidence, and there the evidence does matter

CH’s rebuttal to the big bang
– there was no pre-existent material
– space and time and matter came into being at the big bang
– the cause must be non-physical and eternal
– cause of universe outside of time means = cause of universe did not begin to exist
– this is the state of science today

CH’s rebuttal to the fine tuning
– CH says scientists are uncertain about the fine-tuning
– craig cites martin rees, an atheist, astronomer royal, to substantiate the fine tuning
– the fine-tuning is necessary for minimal requirements for life of any kind
– the progress of science is not going to dethrone the fine-tuning

CH’s argument about heat death of the universe
– duration of design is irrelevant to whether something was designed

– cars are designed, yet they break down
– design need not be optimal to be designed
– ch is saying why create if we all eventually go extinct
– but life doesn't end in the grave on christianity

CH's rebuttal to the moral argument
– CH says no obj moral values
– but CH uses them to argue against god and christians
– but CH has no foundation for a standard that applies to God and Christians

CH's rebuttal to the resurrection argument
– empty tomb and appearances are virtually certain
– these are minimal facts, well evidenced using standard historical criteria
– best explanation of these minimal facts is the resurrection

CH's rebuttal to religious experience
– prop basic belief is rational in the absence of defeaters
– so long as craig has no psychological deficiency, experience is admissible

CH first rebuttal:

it's not agnosticism
– if there are no good arguments for theism
– then there is no reason for belief in god
– that is atheism
– everything can be explained without god

god wouldn't have done it that way
– homo sapiens is 100K years old
– for 98K years, they had no communication from God
– lots of people died in childbirth
– disease and volcanos are a mystery to them
– life expectancy is very low
– they die terrible deaths
– their teeth are badly designed
– their genitalia are badly designed
– why solve the problem of sin by allowing a man to be tortured to death
– that's a stupid, cruel, bumbling plan

lots of people haven't even heard of jesus
– many of them die without knowing about him
– they cannot be held responsible if they do not know about jesus

the early success of christianity doesn't prove christianity is true
– because then it applies to mormonism and islam, they're growing fast

objective morality
– belief in a supreme dictator doesn't improve moral behavior
– i can do moral actions that you can do

– i can repeat moral positions that you can say

religious people are immoral
– genital mutilation
– suicide bombing

moral behavior doesn't need god
– we need to act moral for social cohesion
– it evolved for our survival
– that's why people act morally
– it's degrading to humans, and servile, to require god for morality

free will
– i believe in free will
– i don't know why, because i can't ground free will on atheism
– a bossy god seems to reduce free will because then we are accountable to god

WC cross-examination of CH:

WC why call yourself an atheist when you have no reasons?

CH because absence of belief is atheism

WC but agnosticism, atheism, verificationism all don't hold that belief, which are you?

CH i think god does not exist

WC ok give me an argument for the claim you just made to know god does not exist

CH i have no argument, but i don't believe in god because it depresses me to think he might be real

WC would you agree that absence of evidence is not evidence of absence?

CH no i don't agree

WC moral argument: it's not epistemology it's the ontology – have you got a foundation for moral values and duties?

CH i do not, it's just evolution, an evolved standard based on social cohesion

CH cross-examination of WC:

CH you said that the historical reports of jesus doing exorcisms are generally accepted – do you believe in devils?

WC i commit to nothing, what I am saying there historical concensus on the reports that jesus did exorcisms

CH what about the devils going into the pigs, do you believe that?

WC yes i do, but the main point i'm making is that the historical reports show that jesus acted with divine authority

CH do you believe in the virgin birth?

WC yes, but that's not historically provable using the minimal facts methods, and i did not use the virgin birth in my arguments tonight, because it doesn't pass the historical tests to be a minimal fact

CH do you believe that all the graves opened and dead people all came out?

WC not sure if the author intended that part as apocalyptic imagery or as literal, i have no opinion on it, have not studied it

CH do exorcisms prove son of god?

WC no, i am only saying that the historical reports show that jesus exercised authority and put himself in the place of god

CH are any religions false? name one that's false

WC islam

CH so some religions are wicked right?

WC yes

CH if a baby were born in saudi arabia would it be better if it were an atheist or a muslim?

WC i have no opinion on that

CH are any christian denominations wrong?

WC calvinism is wrong about some things, but they are still christians, i could be wrong about some things, i do the best i can studying theology so i'm not wrong

WC second rebuttal

Response to CH arguments:

no reasons for atheism
– no reasons to believe that god does not exist
– ch withholds belief in god

why wait so long before contacting humans with jesus
– population matters, not time – jesus waited until there was about to be a population explosion
– there is natural revelation (Romans 1) for those who lived before christ

what about those who never heard
– (*Acts* 17:22-31) god chooses the time and place of each person who is born to optimize their opportunity to know him based on how they will respond to evidence (this is called middle knowledge)
– those who haven't heard will be judged based on general revelation

WC re-assess the state of his five arguments:

cosmological argument
– heat death of the universe won't happen on christianity

moral argument
– if no objective moral standard, can't judge other cultures as wrong
– no transcendent objective standard to be able to judge slavery as wrong

name an action argument
– e.g. – tithing

– the greatest command – love the lord your god your god with everything you've got
– atheists can't do that, and that is the biggest commandment to follow

moral obligations
– there are no objective moral obligations for anyone on atheism
– on atheism, you feel obligated because of genetics and social pressure
– on atheism, we're animals, and animals don't have moral obligations

resurrection
– the belief in resurrection of 1 man, the messiah is totally unexpected on judaism
– they would not have made this up, it was unexpected

religious experience
– experience is valid in the absence of defeaters

CH second rebuttal:

faith and reason
– Tertullian says faith is better when it's against reason

it's easy to start a rumor with faith-based people
– mother teresa: to be canonized she needs to have done a miracle
– so there was a faked miracle report
– but everybody believes the fake miracle report!
– this proves that religious rumors are easy to start
– the resurrection could have started as a similar rumor by people wanting to believe it

name an action
– tithing is a religious action, i don't have to do that

moral argument
– i can be as moral as you can without god
– i can say that other cultures are wrong, there i just said it
– without god, people would still be good, so god isn't needed

religious people did bad things in history
– this church did a bad thing here
– that church did a bad thing there
– therfore god doesn't exist

religion is the outcome of man's struggle with natural phenomenon
– that is why there are so many religions

WC concluding speech

no arguments for atheism presented

What CH has said during the debate:
– god bad, mother teresa bad, religion bad

atheism is a worldview
– it claims to know the truth
– therefore it is exclusive of other views

what does theism explain
– theism explains a broad range of experiences
– origin of universe, CH has dropped the point
– fine-tuning, CH has dropped the point
– moral, CH says that humans are no different from animals – but an evolved standard is illusory, there are no actual moral values and standards, it’s just a genetic predisposition to act in a certain way – that’s not prescriptive morality
– resurrection, CH has dropped the point
– experience, craig tells his testimony and urges the audience to give it a shot

CH concluding speech

HITCHENS YIELDS HIS ENTIRE CONCLUDING SPEECH!

A question & answer Period followed end of the formal debate

Check out my analysis of the 11 arguments Hitchens made in his opening speech in his debate with Frank Turek.

Why did European countries import millions of unskilled Muslim immigrants?

July 9, 2018 | by Wintery Knight | Link | Original Link

Muslim populations in Europe

As you can see in the right column of the blog, I am currently reading a book recommended to me that Dina, my wise advisor. The book is amazing. I want to put it in the hands of all the naive, leftist Christian leaders and Republicans who favor amnesty, and not building a border wall. If I can't convince you to read the book right now, at least take a look at this review of it in The Federalist.

Excerpt:

> The Strange Death of Europe" is a polemical but perceptive book culled from Murray's extended sojourns across Europe's frontiers – from the Italian island of Lampedusa, a flyspeck in the Mediterranean closer to the shores of North Africa than it is to Sicily, and to Greek islands that sit within sight of the Turkish coastline. These places have borne the brunt of the recent exodus from the Middle East and North Africa, but the author has also ventured to the remote suburbs of Scandinavia and Germany and France where many of these migrants end up. The resulting portrait is not a happy one.
>
> […]The distinguishing feature of modern Europe is its persistent ennui, shown in the inability or unwillingness "to reproduce itself, fight for itself or even take its own side in an argument." What's more, Europeans seem less stirred to face these unpleasant facts than they are fearful of interpreting them too precisely.

The book analyzes how the secular left "argued" for more immigration of low-skilled Muslims from countries that do not accept Western views on things like the respectful

treatment of women.

> The never-slacking thirst among Europe's political class for more immigration has rested on two flawed assumptions, one economic and the other normative (and usually in that order). The economic assumption cites the benefits of immigration without accounting for its costs, and seldom acknowledges that benefits accrue chiefly to the migrants themselves and to highly compensated native inhabitants. Most of the rest of society is left to foot the bill for this immense regressive redistribution of wealth from the poor (who are squeezed out of the labor force) to the rich (who benefit from cheap labor).
>
> Any public concerns about the financial downsides of this immigration – from increased pressure on housing markets to depressed wages – have been swept aside in deference to Europe's dwindling fertility rates. (In a classic instance of one erroneous public policy begetting another, Murray shrewdly notes that the political left encouraged a "one-child policy" in order to attain an "optimum global population" only later to demand mass immigration in order to lift birthrates back to replacement levels.) The problem of Europe's birth dearth is very real. The working-age population of Western Europe peaked in 2012 at 308 million – and is set to decline to 265 million by 2060.
>
> So how will immigration schemes alleviate Europe's fertility-driven strain on the welfare state? It is not clear that they will. Advocates of the rejuvenating effects of immigration are seldom obliged to spell out the wisdom of importing the poor and dispossessed of the world who generally lack the skills required for success in an advanced market economy. Can these migrants reliably be expected to contribute more in taxes than they consume in state aid? (They wouldn't be alone in their dependence on government largesse: plenty of native workers, too, are struggling mightily to cope with the creative destruction unleashed by the march of globalization and technology.)
>
> When advocates of open borders are pressed on these points, they generally repair to the normative argument. It has been claimed that when a flood of migrants started to pile up at Europe's frontiers in 2015, the issue ceased to be economic and instead became moral: tending to the needs of beleaguered strangers. Thus Europe's longstanding debate over immigration suddenly transformed into a contest between head and heart, and in a stampede of sanctimony it was decided that soft-heartedness was better hard-headedness.

What was amazing to me, is that people from these Islamic countries were able to just walk in to Europe and claim asylum. This put them on *an immediate path to citizenship*. Since there were so many people coming, their claims were not vetted. The immigrants would destroy their own identity documents after arriving in Europe, and then claim to be coming from whatever nation had a war going on, e.g. from Syria. Even if they could not speak any Syrian, they would still be let in and put on a path to citizenship! Incredible.

I have to include this:

> After the 7/7 bombings in London, polls revealed that 68 percent of British Muslims believe that British citizens who “insult Islam” should be arrested and prosecuted.

See, no problem at all integrating into Western civilization. It’s not like their just going to start raping and murdering 14-year-old Jewish girls, or start up underage sex-trafficking rings. But the people making the immigration policy don’t care about public safety. They want to appear compassionate. And they do it by spending *other people’s money* and by risking *other people’s safety*. There is no concern for the money and safety of taxpayers, the important thing is that the politicians feel good about themselves. They’re better than the people who they stick with the bill. Or the people they stick with the machete. I know that compassionate leftists like Russell Moore want me to think that they are good people, but I don’t. Because I always think of the victims of their compassion. Anyone who votes for more immigration without oversight and accountability is responsible for the harm.

For me, the most interesting part of the book was not about why secular leftist politicians decided to open up the borders, how many Muslim immigrants commit crimes against their welcoming hosts, how European activists subvert the law to welcome in more immigrants (including lying about their own rapes at the hands of Muslim refugees, to cover for the rapist), or how the police cover up crimes committed by Muslim refugees and immigrants. The most interesting part was how anyone who tries to make public safety or fiscal arguments against the mass importation of low-skilled Muslims was vilified. Careers were ended. Reputations were ruined. And then the Muslims themselves would launch lawsuits or take more violent, and even murderous, measures to silence their critics.

The psychological motivation of those who embrace postmodernism

July 10, 2018 | by Wintery Knight | Link | Original Link

Can a person be postmodern and a Christian? Not for long

Famous analytical philosopher John Searle has written a book "Mind, Language And Society: Philosophy In The Real World", explaining what's factually wrong with postmodernism. In the introduction, he explains what postmodernism is, and what motivates people to accept postmodernism.

He writes:

> […][W]hen we act or think or talk in the following sorts of ways we take a lot for granted: when we hammer a nail, or order a takeout meal from a restaurant, or conduct a lab experiment, or wonder where to go on vacation, we take the following for granted: there exists a real world that is totally independent of human beings and of what they think or say about it, and statements about objects and states of affairs in that world are true or false depending on whether things in the world really are the way we say they are. So, for example, if in pondering my vacation plans I wonder whether Greece is hotter in the summer than Italy, I simply take it for granted that there exists a real world containing places like Greece and Italy and that they have various temperatures. **Furthermore, if I read in a travel book that the average summer temperature in Greece is hotter than in Italy, I know that what the book says will be true if and only if it really is hotter on average in the summer in Greece than in Italy. This is because I take it for granted that such statements are true only if there is something independent of the**

> **statement in virtue of which, or because of which, it is true.**
>
> […]These two Background presuppositions have long histories and various famous names. The first, that there is a real world existing independently of us, I like to call "external realism." "Realism," because it asserts the existence of the real world, and "external" to distinguish it from other sorts of realism-for example, realism about mathematical objects (mathematical realism) or realism about ethical facts (ethical realism). The second view, that a statement is true if things in the world are the way the statement says they are, and false otherwise, is called "the correspondence theory of truth." This theory comes in a lot of different versions, but the basic idea is that statements are true if they correspond to, or describe, or fit, how things really are in the world, and false if they do not.

The "correspondence theory of truth" is the view of truth assumed in books of the Bible whose genre is such that that they were intended by the authors to be taken *literally*, (with allowances for symbolism, figures of speech, metaphors, hyperbole, etc.).

But what about the postmodernists, who seek to deny the objectivity of external reality?

More Searle:

> Thinkers who wish to deny the correspondence theory of truth or the referential theory of thought and language typically find it embarrassing to have to concede external realism. Often they would rather not talk about it at all, or they have some more or less subtle reason for rejecting it. In fact, very few thinkers come right out and say that there is no such thing as a real world existing absolutely, objectively, and totally independently of us. Some do. Some come right out and say that the so-called real world is a "social construct."

What is behind the denial of objective reality, and statements about external reality that are warranted by evidence?

> It is not easy to get a fix on what drives contemporary antirealism, but if we had to pick out a thread that runs through the wide variety of arguments, it would be what is sometimes called "perspectivism." Perspectivism is the idea that our knowledge of reality is never "unmediated," that it is always mediated by a point of view, by a particular set of predilections, or, worse yet by sinister political motives, such as an allegiance to a political group or ideology. And because we can never have unmediated knowledge of the world, then perhaps there is no real world, or perhaps it is useless to even talk about it, or perhaps it is not even interesting.

Searle is going to refute anti-realism in the rest of the book, but here is his guess at what is motivating the anti-realists:

> > **I have to confess, however, that I think there is a much deeper**

> > **reason for the persistent appeal of all forms of antirealism, and this has become obvious in the twentieth century: it satisfies a basic urge to power. It just seems too disgusting, somehow, that we should have to be at the mercy of the "real world." It seems too awful that our representations should have to be answerable to anything but us. This is why people who hold contemporary versions of antirealism and reject the correspondence theory of truth typically sneer at the opposing view.**
>
> […]I don't think it is the argument that is actually driving the impulse to deny realism. I think that as a matter of contemporary cultural and intellectual history, the attacks on realism are not driven by arguments, because the arguments are more or less obviously feeble, for reasons I will explain in detail in a moment. **Rather, as I suggested earlier, the motivation for denying realism is a kind of will to power, and it manifests itself in a number of ways. In universities, most notably in various humanities disciplines, it is assumed that, if there is no real world, then science is on the same footing as the humanities. They both deal with social constructs, not with independent realities. From this assumption, forms of postmodernism, deconstruction, and so on, are easily developed, having been completely turned loose from the tiresome moorings and constraints of having to confront the real world. If the real world is just an invention-a social construct designed to oppress the marginalized elements of society-then let's get rid of the real world and construct the world we want. That, I think, is the real driving psychological force behind antirealism at the end of the twentieth century.**

Now, I'll go one step further than Searle.

People, from the Fall, have had the desire to step into the place of God. It's true that we creatures exist in a universe created and designed by God. But, there is a way to work around the fact that God made the universe and the laws that the universe runs on, including logic, mathematics and natural laws. And that way is to *deny logic, mathematics and natural laws.* Postmodernists simply deny that there is any way to construct rational arguments and support the premises with evidence from the real world. That way, they imagine, they are free to escape a God-designed world, including a God-designed specification for how they ought to live. The postmoderns deny *the reliable methods of knowing about the God-created reality because logic and evidence can be used to point to God's existence, God's character, and God's actions in history.*

And that's why there is this effort to make reality "optional" and perspectival. Everyone can be their own God, and escape any accountability to the real God – the God who is easily discovered through the use of logic and evidence. I believe that this is also behind the rise of atheists, who feign allegiance to logic and science, but then express "skepticism" about the origin of the universe, the fine-tuning of the universe, objective

morality, the minimal facts concerning the historical Jesus, and other undeniables.

A lesson about men for marriage-minded women from the movie “High Noon”

July 11, 2018 | by Wintery Knight | Link | Original Link

Marine prays with his wife on their wedding day

One of my favorite movies for explaining the differences between men and women is “High Noon” (1952).

Here’s the summary from IMDB:

> Former marshal Will Kane (Gary Cooper) is preparing to leave the small town of Hadleyville, New Mexico, with his new bride, Amy (Grace Kelly), when he learns that local criminal Frank Miller has been set free and is coming to seek revenge on the marshal who turned him in. When he starts recruiting deputies to fight Miller, Kane is discouraged to find that the people of Hadleyville turn cowardly when the time comes for a showdown, and he must face Miller and his cronies alone.

The main theme of the film concerns Amy’s decision to break her wedding vows the very day that she makes them. She tells her new husband that he must bow to her will, and give up his male role as protector. When he explains his reasons for standing his ground to her practically (Miller will hunt them down) and morally (he has a duty protect the town), she dismisses both. She tells him that if he doesn’t run away from Miller and his gang with her, that she will get on the train and leave town by herself.

The intro of film shows the member’s of Miller’s gang assembling, and the words of the song explain the central conflict between husband and wife:

Here's the part of the lyrics we care about:

The noonday train will bring Frank Miller.
If I'm a man I must be brave
And I must face that deadly killer
Or lie a coward, a craven coward,
Or lie a coward in my grave.

O to be torn 'twixt love and duty!
S'posin' I lose my fair-haired beauty!
Look at that big hand move along
Nearin' high noon.

He made a vow while in State's Prison,
Vow'd it would be my life or his'n
I'm not afraid of death, but O,
What will I do if you leave me?

Do not forsake me O my darlin'
You made that promise when we wed.
Do not forsake me O my darlin'
Although you're grievin', I can't be leavin'
Until I shoot Frank Miller dead.

What's interesting is that his new wife Amy apparently does not understand the meaning of wedding vows or the natural roles of good men as protectors of the weak, and fighters against evil. Although she vowed to stick by him and help him, the minute anything threatening appears that makes her feel unhappy, she abandons her vows and abandons her man. Let's break down her mistakes now, using actual conversations from the movie.

First, she doesn't understand or respect the man she married *as a man*:

> **Kane**: *[while riding out of town]* It's no good. I've got to go back, Amy.
>
> **Amy**: Why?
>
> **Kane**: This is crazy. I haven't even got any guns.
>
> **Amy**: Then let's go on. Hurry.
>
> **Kane**: No, that's what I've been thinkin'. They're making me run. I've never run from anybody before.
>
> **Amy**: I don't understand any of this.
>
> **Kane**: *[after looking at his vest watch]* Well, I haven't got time to tell ya.
>
> **Amy**: Then don't go back, Will.
>
> **Kane**: I've got to. That's the whole thing. *[He turns the buggy around and rides back into town]*

Her feelings and her desires for the world to be a happy place for her are so strong that they cloud her judgment.

Second, she doesn't understand the threat posed by evil men:

More:

> **Kane:** I sent a man up five years ago for murder. He was supposed to hang. But up North, they commuted it to life and now he's free. I don't know how. Anyway, it looks like he's coming back.
>
> **Amy:** I still don't understand.
>
> **Kane:** He was always wild and kind of crazy. He'll probably make trouble.
>
> **Amy:** But that's no concern of yours, not anymore.
>
> **Kane:** I'm the one who sent him up.
>
> **Amy:** Well, that was part of your job. That's finished now. They've got a new marshal.
>
> **Kane:** He won't be here until tomorrow. Seems to me I've got to stay. Anyway, I'm the same man with or without this. [He pins his badge on his vest]
>
> **Amy:** Oh, that isn't so.
>
> **Kane:** I expect he'll come lookin' for me. Three of his old bunch are waiting at the depot.
>
> **Amy:** That's exactly why we ought to go.
>
> **Kane:** They'll just come after us, four of 'em, and we'd be all alone on the prairie.
>
> **Amy:** We've got an hour.
>
> **Kane:** What's an hour?…What's a hundred miles? We'd never be able to keep that store, Amy. They'd come after us and we'd have to run again, as long as we live.
>
> **Amy:** No we wouldn't, not if they didn't know where to find us. Oh Will! Will, I'm begging you, please let's go.
>
> **Kane:** I can't.
>
> **Amy:** Don't try to be a hero. You don't have to be a hero, not for me.
>
> **Kane:** I'm not trying to be a hero. If you think I like this, you're crazy.

Instead of recognizing how her feelings are deceiving her about the threat and trusting her husband, she tries to force him to accept her mistaken view of reality by threatening to abandon him.

One of Kane's ex-girlfriends has a talk with Amy, which helps her to understand who Kane is, and what is expected of her:

> **Amy**: That man downstairs, the clerk, he said things about you and Will. I've been trying to understand why he wouldn't go with me, and now all I can think of is that it's got to be because of you…Let him go, he still has a chance. Let him go.
>
> **Helen**: He isn't staying for me. I haven't spoken to him for a year – until today. I

> am leaving on the same train you are…What kind of woman are you? How can you leave him like this? Does the sound of guns frighten you that much?
>
> **Amy**: I've heard guns. My father and my brother were killed by guns. They were on the right side but that didn't help them any when the shooting started. My brother was nineteen. I watched him die. That's when I became a Quaker. I don't care who's right or who's wrong. There's got to be some better way for people to live. Will knows how I feel about it.
>
> **Helen**: I hate this town. I always hated it – to be a Mexican woman in a town like this.
>
> **Amy**: I understand.
>
> **Helen**: You do? That's good. I don't understand you. No matter what you say. If Kane was my man, I'd never leave him like this. I'd get a gun. I'd fight.
>
> **Amy**: Why don't you?
>
> **Helen**: He is not my man. He's yours.

Helen understands the need for a wife to stand by her man. But Amy's response to evil is to shut her eyes and focus on feeling good and being happy. Notice that her "better way" is unspecified – it's just a feeling she has that pacificism and no-violence will somehow "work" to stop evil. But in reality, pacifism is not a "better way" of dealing with evil – it does not work. Her pacifist response not only does not make evil go away, it actually encourages more evil. Weakness emboldens evildoers, and laying down your arms provokes them to do more evil. Will Kane knows this, but she won't listen to him.

You can watch the final gunfight here, as well as Amy's final decision:

So, this is why I really recommend this movie as a discussion-starter when you like a girl and are thinking of marrying her. It clarifies the essential problem with many young women today not being ready for marriage. To be fair, most women come around to respect their husbands and his different roles after they get married. However, the risk of divorce is so dangerous that it makes sense to bring it up for discussion before the marriage happens. Marriage is supposed to be an engine to serve God, and the success of that enterprise cannot be left to chance. You can't just rely on the fact that she says the words of the vow, you have to check to see if she has a habit of keeping her promises when it goes against her own self-interest.

Ask yourself: Who are you, as a man? And does your woman accept that you have obligations to stand up to evil and do good ? Will she support you in your battle against evil, or will the marriage just be about her feelings and desires? I would especially beware of women who think that God is speaking to them through their feelings and desires. Look at her friends: are they practical and successful? Or are they irresponsible, unaccountable and reckless? Look at her father: does he have a plan for her, and does he lead her to be practical, frugal and hard-working? If you are not going to get an ally and a supporter in a wife, then you will not be able to serve God well, as a married man. Think about it.

How can a successful writer who “is true to himself” end up poor?

July 12, 2018 | by Wintery Knight | Link | Original Link

My friend Lindsay sent me this article about a very successful writer who has trouble making ends meet.

The story appeared in left-leaning The Atlantic. I don’t want to rehash the whole thing, because I want to make a point.

So, first thing to quote, this guy looks like a success to others, even though he is actually really struggling:

> The Fed asked respondents how they would pay for a $400 emergency. The answer: 47 percent of respondents said that either they would cover the expense by borrowing or selling something, or they would not be able to come up with the $400 at all. Four hundred dollars! Who knew?
>
> Well, *I* knew. I knew because I am in that 47 percent.
>
> […]You wouldn’t know any of that to look at me. I like to think I appear reasonably prosperous. Nor would you know it to look at my résumé. I have had a passably good career as a writer—five books, hundreds of articles published, a number of awards and fellowships, and a small (very small) but respectable reputation. You wouldn’t even know it to look at my tax return. I am nowhere near rich, but I have typically made a solid middle- or even, at times, upper-middle-class income, which is about all a writer can expect, even a writer who also teaches and lectures and writes television scripts, as I do.

The thing I like about this guy is that he doesn’t blame anyone else but himself – he thinks that his own decisions led him to poverty. Rod Dreher has a nice list of the mistakes at American Conservative:

> **1) He chose to live in New York, which is one of the most expensive places to live in the country;**
> **2) He chose to be a writer, not the most lucrative and stable career;**
> 3) He and his wife chose to put their kids in private school, something they felt was necessary in their Brooklyn neighborhood, but an expense they could have avoided or dramatically lessened had they lived in another part of the country (they eventually moved to the Hamptons to get out of paying that tuition);
> 4) He and his wife believed their two children had “earned” the right to go to very expensive universities, and they spent everything they had, and the inheritance his parents planned to leave for him, on educating the girls;
> 5) They got caught in the housing crash and had to sell a Manhattan apartment they owned at fire sale prices;
> 6) Given the way his income as a writer is structured, taxes were a bitch (as a

> writer, trust me, this is true).

Pay close attention to 1 and 2. I would NEVER live in a garbage blue state like New York. I would rather be dead in a ditch than live in a state that is run by Democrats. I hate the high taxes and high spending of blue states. Blue states are great places to go if you want to work and have someone else steal all of your money to buy votes from lazy losers.

And as far as 2 goes, I don't think that I need to repeat my warnings to everyone about non-STEM fields.

Well, OK, I will:

Majors by Salary Potential – Full List

RANK	MAJOR	STARTING SALARY	MID-CAREER SALARY
1	Petroleum Engineering	$98,000	$163,000
2	Aerospace Engineering	$62,500	$118,000
3	Actuarial Mathematics	$56,100	$112,000
4	Chemical Engineering	$67,500	$111,000
5	Nuclear Engineering	$66,800	$107,000
6	Electrical Engineering (EE)	$63,400	$106,000
7	Computer Engineering (CE)	$62,700	$105,000
8	Applied Mathematics	$50,800	$102,000
9	Computer Science (CS)	$58,400	$100,000
10	Statistics	$49,300	$99,500
11	Physics	$51,200	$99,100
12	Mechanical Engineering (ME)	$60,100	$98,400
13	Biomedical Engineering (BME)	$54,900	$98,200

Starting and Mid-Career salaries by profession (click for larger image)

Regarding the housing crash that he mentioned, Democrats caused that, by forcing banks to loan money to people who couldn't afford to pay it back. If he voted for the Democrats, then he screwed himself again.

Now, you might think that people end up poor because they want to do work that is fun and enjoyable. And that's true, I've seen that. But this guy's problem was that he just spent beyond his means. Why? Well, the writer explains that he *is compelled* to spend the money, because spending money defines who he is. He can't say no, because he thinks that he has one life, and one chance to define himself. He can't think about the future, because he has to spend every last dime today in order to be who he really wants to be.

Dreher comments:

> He felt that to choose otherwise would have made him inauthentic, untrue to himself. He felt that he deserved the life he had, and could not choose otherwise without betraying himself. I think this must be an extraordinary thing, in terms of history: people who spend recklessly to give themselves the lives they think they deserve. If you think about it, though, our culture, which valorizes Authenticity,

> encourages this.

I have to tell you, I just don't understand this. I define myself by Christian virtues – self-control, self-sacrifice, concern for others who I know personally and in my community. I'm not a spender. I am a saver by nature, and the older I get, the more grateful that I am closer to retirement than I was before. Working gets harder as you get older, even for jobs that don't require physical labor.

If you plan ahead, you can get all your working and saving done before you're 50. That was my approach. But I see other people who haven't started working full-time by 30 and even by 35. Every day when you are in school instead of working full-time in your field is a wasted day. With few exceptions, you will learn more on the job than in the classroom. You want get out of school and get working as soon as possible, with an eye to getting married as soon as possible – since marriage is a wealth building engine. The faster you start investing, the more time your money has to grow through interest and dividends.

The bottom line is that my obligation as a Christian is not to be true to myself, or anything weird like that. My obligation is to make sure I don't starve, and then to turn to the people around me and make sure that they don't starve. Sometimes, that means giving them good advice. Sometimes, it means recognizing their achievements with little gifts. But the main thing is that the world isn't safe enough for you to put off earning so that you can do what you feel is the "real you". Being independent and then serving others is more important than being the "real you".

Why are so many women with good careers being forced to freeze their eggs?

July 13, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

The New York Times says that more and more women are having to freeze their eggs because they can't find good men to marry. The NYT doesn't think that women are doing anything wrong. They blame the men for refusing to commit. According to feminism, women who value careers, abortion rights, no-fault divorce, big government, high taxes, etc. are doing everything right. But does it work?

I thought it might be a good idea to help Western women to make better decisions with men and marriage. Although setting out boundaries seems harsh and restrictive, it's actually protective and loving. If we want women to get to a stable marriage and children, (what they really need long term, after they lose their looks and youth), then we should be bold about leading them.

The first thing to point out is that the women celebrated by the New York Times are intentionally delaying marriage for their education and careers.

Another New York Times article explains:

> It could be that the new generation of millennial women is delaying having children even longer than the women who came before them, as prime childbearing years are also critical years for advancing in a career. A recent study shows that the marital pay gap that springs up after a first child is born typically does not close if the birth happens between age 25 and 35.
>
> Shannon Hettinger, a 32-year-old from Washington, D.C., said she definitely wanted children. She grew up in a large family in a small town in Pennsylvania

> and almost all her high school friends are married with children. But she moved to Washington, and spent her 20s deciding on a career. Now that she has one she loves — she works in residential real estate sales — she is not going to stop until she gets established. That means not having children for a while.
>
> "I just want to build my book of business and see where I can go from here," she said. "My whole focus is career growth. That's my No. 1 priority."
>
> "Once I achieve a certain level of success," she added, "then I'll start thinking about a family."
>
> Ivy Gray-Klein, 26, who lives in Philadelphia and works at the University of Pennsylvania School of Design, said she was open to having children but cannot imagine doing so until she is 30 or 35. She wants to feel settled in her own life first. Now she has three roommates, is paying down her student loans and is working to build a little bit of savings.
>
> "I'm just really trying to get myself to a place that is solid," she said by phone. "Having a child right now would be so destabilizing. Children just seem like such an enormous financial undertaking."

As far as I'm concerned, once a woman reaches 30 , she's actually chosen not to marry, and not to have children. Marriage is something that men are willing to do with women in their early 20s. They want a woman to commit and invest herself in his life early. They don't commit to a woman who has spent her 20s running up debts, traveling, being promiscuous, etc. The pattern of selfish behavior that women get into damages their ability to be good wives and mothers later. And men know that.

But in this post, I'm discuss something that I think is responsible for women not finding good men: and that's the fact that many women *are not looking for good men*. In fact, some women are very attracted to very bad men.

Here's the first editorial about women and domestic terrorist Dzhokar Tsarnaev, one of the Boston marathon bombers.

Excerpt:

> Mostly, though, they think Dzhokhar is cute. The Bambi eyes (looking right out of his Instagram-doctored photos at you!), the hipster facial stubble, the masses of wine-dark tousled hair — adorable! Impassioned believers have written "Dzhokhar is innocent" on their hands and plastered "Innocent until proven guilty!!!!" posters around their towns. An 18-year-old waitress interviewed by the New York Post vowed to have Dzhokhar's last tweet before the bombing tattooed onto her arm: "If you have the knowledge and the inspiration all that's left is to take action."
>
> […]But the real cause of the Jahar craze more likely lies in something more primal and less pretty in the female psyche. I'm betting that women, young and old, are drawn to Dzhokhar not because he is a good-looking late adolescent but because he is a good-looking accused killer. He's a classic "bad boy" of the sort

> to whom women are chronically attracted because they want to reform them, or minister to their wounds, or be the healing presence they've never had — but mostly because they find them sexy.

That article also noted:

> It's not surprising, then, that every homicide perp on death row who is reasonably attractive has groupies. Consider the handsome (and widely philandering) Scott Peterson, sentenced in 2005 for killing his wife and unborn son and throwing their remains into San Francisco Bay. The day he checked into San Quentin, he received three dozen phone calls from smitten women, including an 18-year-old who wanted to become the second Mrs. Peterson.

Some of the tweets and other fangirl comments about Tsarnaev were collected in this New York Post article.

Lots of Western women from the UK, France, Russia, etc. all picked up and moved to the Middle East to become ISIS jihadi brides.

Excerpt:

> Western women joining Islamic State are increasingly from comfortable backgrounds and often well educated with romantic notions of adventure often quickly dispelled by the harshness of life as a "Jihadi bride", according to a British research report.
>
> Some 550 women from Western countries have left their homelands to join Islamic State, which has captured swathes of Syria and Iraq, said the report by the Institute for Strategic Dialogue and the International Centre for the Study of Radicalisation at King's College, London.
>
> […]It said female recruits were increasingly younger, some from comfortable backgrounds and often well-educated, and were playing "crucial" propaganda and recruitment roles.

That article is three years old, the numbers have more than doubled since then. The most common reasons cited for leaving are romance and adventure.

Psychology Today has some comments about why some women do this:

> In her post, "Women Who Love Serial Killers," PT blogger, Katherine Ramsland, offers some suggestions about why some women can be so attracted to, or hopelessly beguiled by, the most terrifying of human predators. At first, she provides explanations from the women themselves, women who actually married these dangerously unhinged criminals. Their reasons (somewhat elaborated here) include the assumptions that:

- their love can transform the convict: from cunning and cruel, to caring, concerned, and compassionate.

- there's a wounded child nested somewhere inside the killer that can be healed through a devoted nurturance that only they can provide.
- they might share the killer's media spotlight, and so triumphantly emerge from their anonymity, and maybe in the process even land a book or movie deal (an aspiration about as cynical as it is narcissisticand self-serving).

And this is even more interesting:

> To simplify this work's findings for my present purpose, however, let me begin by emphasizing that Ogas and Gaddam find substantial evidence from Web searches, posts, and many 1,000s of romance novels that women demonstrate a strong erotic preference for dominant men. Or toward what's now commonly referred to as alpha males—in the authors' words, men who are "strong, confident, [and] swaggering [as in "cocky," and the pun is intended]." Unfortunately, what these descriptors often imply is behavior sufficiently bearish, self-centered, and insensitive as to often cross the line into a physical, mental, and emotional abuse that can be downright brutal.
>
> […]Moreover, in responding to the question as to whether some men, such as "serial killers, violent offenders, and rapists," might be too dominant for women to accept, Ogas and Gaddam note: "It turns out that killing people is an effective way to elicit the attention of many women: virtually every serial killer, including Ted Bundy, Charles Manson, and David Berkowitz, have received love letters from large numbers of female fans" (p. 98).

Women choose good-looking bad boys, because they think that they can change them:

> The fantasy that seems to be operating in such devotees, and that constitutes the plot of virtually all erotic/romantic novels written with women in mind, is that the "misogyny and jerkdom" they might have to battle with in such super-dominant males is only temporary. That it doesn't really represent the man's innermost reality. That his violence and lack of tender feelings is only the beginning of the story, and that their unsparing love, affection, and dedication can ultimately transform his character by helping him get in touch with his, well, "inner goo."

I blogged before about feminists going after pro-choice bad boys like William Clinton, Peter Strzok, Eliot Spitzer, Anthony Weiner, John Edwards, Harvey Weinstein, etc. These men support selfish policies like abortion and no-fault divorce. Women seem to not understand that men who support selfishness as policy might actually BE selfish in their own lives. Men who are able to commit and raise children are not pro-abortion and pro-divorce. Those are the men who women should be pursuing, and during their early-to-mid 20s.

New study: first life pushed back earlier, leaving less time for naturalistic magic

July 14, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Whenever you discuss origins with naturalists, it's very important to get them to explain how the first living organism emerged without any help from an intelligent agent. The origin of life is an information problem. A certain minimal amount of biological information for minimum life function has to be thrown together by chance. No evolutionary mechanisms have the potential to work until replication is already in place.

Evolution News reports on a new study that makes the window for naturalistic forces to create the first self-replicating organism even smaller.

Excerpt:

> A paper in *Nature* reports the discovery of fossil microbes possibly older, even much older, than any found previously. The lead author is biogeochemist Matthew Dodd, a PhD student at University College London. If the paper is right, these Canadian fossils could be 3.77 billion years old, or even as old as — hold onto your hat, in case you're wearing one — 4.28 billion years.
>
> From the Abstract:
>
> Although it is not known when or where life on Earth began, some of the earliest habitable environments may have been submarine-hydrothermal vents. Here we describe putative fossilized microorganisms that are at least 3,770 million and possibly 4,280 million years old in ferruginous sedimentary rocks, interpreted as seafloor-hydrothermal vent-related precipitates, from the Nuvvuagittuq belt in Quebec, Canada. These structures occur as micrometre-scale haematite tubes and filaments with morphologies and mineral assemblages similar to those of

> filamentous microorganisms from modern hydrothermal vent precipitates and analogous microfossils in younger rocks. The Nuvvuagittuq rocks contain isotopically light carbon in carbonate and carbonaceous material, which occurs as graphitic inclusions in diagenetic carbonate rosettes, apatite blades intergrown among carbonate rosettes and magnetite–haematite granules, and is associated with carbonate in direct contact with the putative microfossils.
>
> This new paper is interesting to compare with a paper from last year, Nutman et al., "Rapid emergence of life shown by discovery of 3,700-million-year-old microbial structures," also in *Nature*, which found microbial structures that are a bit younger.
>
> But the "microbial structures" from Nutman et al. 2016 are different from these new "microfossils" presented by Dodd et al. 2017. In Nutman et al., they only found stromatolite-type structures rather than actual microfossils. Some stromatolite experts were a bit skeptical that what they found were really stromatolites.
>
> But the new paper by Dodd and his colleagues, "Evidence for early life in Earth's oldest hydrothermal vent precipitates," seems to offer potential bacteria-like microfossils. They are tiny black carbonaceous spheres and "hematite tubes" which the authors think are biogenically created. We've seen more convincing ancient microfossils, but these aren't bad.
>
> According to Dodd et al., these new finds would be the oldest known microfossils, if that is in fact what they are. Very interesting. If so, that just keeps pushing unquestionable evidence of life's existence on Earth further and further back, which leaves less and less time for the origin of life to have occurred by unguided chemical evolution after Earth became habitable.
>
> **If they are in fact 4.28 billion years old, then that would mean there was life very, very early in Earth's history — as Cyril Ponnamperuma said, it's like "instant life."**

Instant life is "rational" for naturalistic fideists, but for evidence-driven people who understand the long odds on generating even a simple protein by chance, it's irrationality.

Let's recall exactly how hard it is to make even a simple protein without intelligent agency to select the elements of the sequence.

The odds of creating even a single functional protein

I've talked about Doug Axe before when I described how to calculate the odds of getting functional proteins by chance.

Let's calculate the odds of building a protein composed of a functional chain of 100 amino acids, by chance. (Think of a meaningful English sentence built with 100 scrabble letters, held together with glue)

Sub-problems:

- BONDING: You need 99 peptide bonds between the 100 amino acids. The odds of getting a peptide bond is 50%. The probability of building a chain of one hundred amino acids in which all linkages involve peptide bonds is roughly (1/2)^99 or 1 chance in 10^30.
- CHIRALITY: You need 100 left-handed amino acids. The odds of getting a left-handed amino acid is 50%. The probability of attaining at random only L–amino acids in a hypothetical peptide chain one hundred amino acids long is (1/2)^100 or again roughly 1 chance in 10^30.
- SEQUENCE: You need to choose the correct amino acid for each of the 100 links. The odds of getting the right one are 1 in 20. Even if you allow for some variation, the odds of getting a functional sequence is (1/20)^100 or 1 in 10^65.

The final probability of getting a functional protein composed of 100 amino acids is 1 in 10^125. Even if you fill the universe with pre-biotic soup, and react amino acids at Planck time (very fast!) for 14 billion years, you are probably not going to get even 1 such protein. And you need at least 100 of them for minimal life functions, plus DNA and RNA.

Research performed by Doug Axe at Cambridge University, and published in the peer-reviewed Journal of Molecular Biology, has shown that the number of functional amino acid sequences is tiny:

> Doug Axe's research likewise studies genes that it turns out show great evidence of design. Axe studied the sensitivities of protein function to mutations. In these "mutational sensitivity" tests, Dr. Axe mutated certain amino acids in various proteins, or studied the differences between similar proteins, to see how mutations or changes affected their ability to function properly. He found that protein function was highly sensitive to mutation, and that proteins are not very tolerant to changes in their amino acid sequences. In other words, when you mutate, tweak, or change these proteins slightly, they stopped working. In one of his papers, he thus concludes that "functional folds require highly extraordinary sequences," and that functional protein folds "may be as low as 1 in 10^77."

The problem of forming DNA by sequencing nucleotides faces similar difficulties. And remember, mutation and selection cannot explain the origin of the *first* sequence, because mutation and selection require replication, which does not exist until that first living cell is *already in place*.

Should people in sinful lifestyles bully churches into celebrating them?

July 15, 2018 | by Wintery Knight | Link | Original Link

Anti-marriage gay activists vandalize church

This story was the topic of the most recent episode of the Reasonable Faith podcast. Basically, a conservative, apologetics-friendly church had a homosexual person who wanted to be openly gay and still be accepted as a member. After he was told by the church that he could attend the church, but not be a member, he decided to write the mainstream media to shame the church.

Here is the link to Reasonable Faith's podcast – and they have a transcript.

I want to first focus on the letter written by the gay man:

> Dear Watermark Community Church,
>
> Today I celebrate a very interesting anniversary with you. It was exactly one year ago when you told me that I was no longer worthy to serve, be in a community group, and be a member of your church.
>
> I spent years in your church battling against my homosexuality. I believed with all my heart that God would change me; I prayed for change almost daily. But when I wasn't able to change, you turned your back on me.
>
> You say our "sin" is not unique, but you treat us in a unique manner; this is unacceptable behavior. We are actual people that have actual feelings.
>
> Here we are a year later and you are still doing to others what you did to me. You are tarnishing the name of God to Christians and non-Christians alike; you should be ashamed of yourselves! Do not forget, Jesus was a angry with people just like you who said certain groups of people were not worthy to be followers of Him.
>
> Thank you for removing yourself from my life! I am who God made me to be. I

> cannot change my sexual orientation and nor would I want to. I now have internal peace and happiness unlike ever before.
>
> Jason Thomas

As Reasonable Faith notes, this is *what he said* and this is what the far-left Dallas Morning News reported. It sounds like the church was very mean to him, but is that what really happened?

Here is what the church actually wrote to him:

> Dear Jason,
>
> This is a difficult letter to write, as I am sure that it will be a difficult one to hear and receive. We genuinely care for you, love you, and want nothing more for you than to live an abundant life that is found in Jesus Christ alone.
>
> However, in our attempt to shepherd you, we have recognised a destructive pattern that prohibits us in caring for you and playing the role you desire for us to have in your life (1 Peter 5:1-4; Acts 20:28). **Specifically, your desire to actively participate in a same-sex relationship with another man, and your unwillingness to heed biblical counsel from your church to turn from that relationship, has made it exceedingly difficult to shepherd you during this time.**
>
> As we noted during our time together last Tuesday (9/29/15), and through the years, we have gently & repeatedly brought these patterns to your attention and, at times, you have heeded this counsel and repented. But now, this is no longer the case. So, in obedience to Matthew 18:15-18 and 1 Corinthians 5:11, we are left with no other option but to remove you from our body and treat you as we would anyone who is living out of fellowship with God…and we lovingly, but firmly, call you back to repentance. This means that you are no longer a member of our body at Watermark. We are praying that repentance comes quickly and that you do not continue choosing a path of destruction and one that leads you away from the authority and care of the church.
>
> We recognise that these patterns are only symptoms of a heart that is either unwilling or unable to fully trust God in every area of your life, including your sexuality. We plead with you to run to the Lord and allow the Spirit of God to begin to transform your heart in a mighty way (Titus 3:3-7).
>
> In order to help you through this time, we would like to make some tangible recommendations that we hope will serve as a catalyst for true repentance and heart-change in your life. They are:
>
> 1. Faithful attendance of Re:Generation targeting the above issue, while following counsel to not be in a dating relationship during that time.
>
> 2. Meet with a Watermark staff member who shares in the same struggle (same sex attraction) who has found freedom, healing, and victory through our Savior

> Jesus Christ (just let Brandon know when you're ready to meet with him).
>
> We affirm your many gifts, your heart of kindness, and we value the way God has uniquely formed you (Psalm 139:13-14). We all pray for your repentance and full restoration so that your gifts and passions can be fully unleashed for the Kingdom of God. We love you, Jason, and stand at the gate for you and eagerly await God's restoration in your life (Luke 15:20).
>
> In Christ,
>
> The Elders of Watermark Community Church

Here is what one of my friends at Watermark who was aware of the situation told me:

> I think it's clear that Watermark was very kind and loving in their discipline and can't be called hypocritical or homophobic, and they were not trying to change the man's sexual orientation but rather simply asking him to abstain from sexual relationships. They give lots of chances before administering discipline and the process is the same each time they go through this with members. Some repent and some turn away.

As we have seen, publicizing those who disagree with homosexuality and gay marriage is a favorite tactic of the fascist left. Sometimes, it just involves smearing (e.g. – the Southern Povery Law Center). Sometimes, it involves lawfare, (e.g. – the attorney general of Washington state). Sometimes, it involves leaking the names of pro-marriage donors (e.g. – the Human Rights Campaign). Sometimes, it involves vandalism, violence and even domestic terrorism (e.g. – Floyd Lee Corkins' attack on the Family Research Council). When it comes to homosexuality and gay marriage, fascism is the normal response to dissent.

I just find it astonishing that gay activists and other radicals on the left think that they can try to *bring in the mainstream media and the law to punish the church for holding to orthodox Christian moral values.* But this is why we call sin "sin". We don't call chastity a sin, because chaste people don't behave like fascists when they hear disagreement. We don't call having lots of children a sin, because people who have lots of children don't behave like fascists if anyone disagrees with them. There is something really wrong with these behaviors that the Bible forbids. You can see why the Bible condemns certain things as sins when you look at the fascist responses to disagreement with the sin.

Look at 1 Corinthians 6:1-10:

> [1] If any of you has a dispute with another, do you dare to take it before the ungodly for judgment instead of before the Lord's people?
>
> [2] Or do you not know that the Lord's people will judge the world? And if you are to judge the world, are you not competent to judge trivial cases?
>
> [3] Do you not know that we will judge angels? How much more the things of this life!
>
> **[4] Therefore, if you have disputes about such matters, do you ask for a**

> **ruling from those whose way of life is scorned in the church?**
>
> **5 I say this to shame you. Is it possible that there is nobody among you wise enough to judge a dispute between believers?**
>
> **6 But instead, one brother takes another to court—and this in front of unbelievers!**
>
> **7 The very fact that you have lawsuits among you means you have been completely defeated already. Why not rather be wronged? Why not rather be cheated?**
>
> 8 Instead, you yourselves cheat and do wrong, and you do this to your brothers and sisters.
>
> 9 Or do you not know that wrongdoers will not inherit the kingdom of God? Do not be deceived:Neither the sexually immoral nor idolaters nor adulterers nor men who have sex with men
>
> 10 nor thieves nor the greedy nor drunkards nor slanderers nor swindlers will inherit the kingdom of God.

Consider 1 Corinthians 5:9-13:

> 9 I wrote to you in my letter not to associate with sexually immoral people—
>
> 10 not at all meaning the people of this world who are immoral, or the greedy and swindlers, or idolaters. In that case you would have to leave this world.
>
> 11 **But now I am writing to you that you must not associate with anyone who claims to be a brother or sister but is sexually immoral or greedy, an idolater or slanderer, a drunkard or swindler. Do not even eat with such people.**
>
> 12 What business is it of mine to judge those outside the church? Are you not to judge those inside?
>
> 13 God will judge those outside. **“Expel the wicked person from among you.”**

Everyone sins. Fine. Keep it to yourself. Don’t use the law to force Bible-believing Christians to celebrate your sins. The church’s job is to help you to be more like Christ. You’re in a community where everyone is supposed to be serious about growing as a Christian and part of that involves improving your character morally. Another part means getting along with other Christians instead of being disruptive.

Regarding complaints about not being able to act on your sexual orientation, I have no sympathy. I am attracted to women, and I am a virgin, because I am not married. I am not going to church to rebel against this requirement. My job is to structure my life in such a way that it is easier to obey it, whether that involves studying the issue in the research or drawing the line long before I have to make a decision in the heat of the moment. God must be #1 in a person’s life, setting goals and policies, and our job is to make and execute effective plans that deliver results for the Boss.

By the way, do not miss this other recent article on homosexuality from Reasonable Faith.

Patient-killing replacing palliative care in Canada's single payer health care system

July 16, 2018 | by Wintery Knight | Link | Original Link

Killing patients is an easy way to keep costs down

Canada has a pure single-payer health care system. That means that Canadians are taxed (average family pays $12,057 per year), and then the government decides who will get health care. As you might expect, when health care is free, the demand for it goes up. In order to cut costs, Canada decided to stop treating the elderly.

Here's an article from Canada's far-left Maclean's magazine.

Excerpt:

> Canadians were asked in 2016 to accept what is now called Medical Assistance in Dying (MAiD) as standard practice in the health-care system. But as the second anniversary of the federal law sanctioning assisted suicide passes this month, ambiguities embedded in the new regulatory regime are turning end-of-life care into a troubling leap of faith for doctors and patients alike.
>
> Even the Collège des Médicins in Quebec, which sped ahead with its own statute in advance of Ottawa's Bill C-14, has sounded a strong warning note about patients "choosing" medical assistance in dying purely because their preference for palliative care isn't available.

That's Quebec, but there's more patient-killing going on at the other end of the country in British Columbia:

> At the other end of the country in British Columbia, an active proponent of MAiD, acknowledges that she, too, struggled to adapt to the vagueness of the federal law. Dr. Ellen Wiebe says she ultimately concluded she would have to rely on her personal best judgment about whether or not to administer death.

Although there is a shortage of funding for palliative care in Canada, there's lots of money available for abortions, sex changes, IVF, etc.

I was able to find out about Dr. Wiebe's worldview from another earlier 2016 article in the far-left Maclean's magazine:

> Much of Wiebe's 40-year career as a family physician she has spent doing abortions, including at Vancouver's first abortion clinic, as well as patient advocacy and pioneering abortion drug research.
>
> […]She was raised in a Mennonite family in Abbotsford, B.C., and Wiebe says,"I know my Bible pretty well. I could quote it, no problem." Her mother was a homemaker, and her father was a teacher who worked for the Canadian International Development Agency, which meant Wiebe and her three siblings spent parts of their childhood in Asia and Africa with them. They were "wonderful people who loved life," says Wiebe of her parents, and their Christian beliefs were an "important part of their lives for everything and anything." But as Wiebe moved through adolescence—precociously so, finishing high school at 15—she abandoned her faith. "I lost all my religiosity by the age of 17," says Wiebe. "It was just part of being in university, questioning and wondering and learning who you are."

Looks like her parents were more focused on doing good things for the poor in foreign countries, than on teaching their own child apologetics. Abbotsford is a very conservative and beautiful part of Canada. She must have had an ideal childhood.

The Heritage Foundation notes that in the Netherlands, voluntary euthanasia has already turned into involuntary euthanasia:

> For example, euthanasia is often promoted by its champions as a last resort to alleviate suffering, but the Netherlands already has moved "from assisted suicide to euthanasia, from euthanasia for the terminally ill to euthanasia for the chronically ill, from euthanasia for physical illness to euthanasia for psychological distress and from voluntary euthanasia to nonvoluntary and involuntary euthanasia." Such "termination without request or consent" has been applied to Dutch infants as well. The concern has been that public health system rationing may exert pressure not just to limit spending on certain individuals, but also, either subtly or overtly, to coerce them to be euthanized.

And I've already blogged about how the UK's government-run NHS system pays hospitals bounties for putting patient on an end-of-life track. The new guidelines are even worse, as the UK Telegraph reports:

> New NHS guidelines on “end of life” care are worse than the Liverpool Care Pathway and could push more patients to an early grave, a leading doctor has warned.
>
> Prof Patrick Pullicino, one of the first medics to raise concerns over the pathway, said the national proposals would encourage hospital staff to guess who was dying, in the absence of any clear evidence, and to take steps which could hasten patients’ death.
>
> The Liverpool Care Pathway – which meant fluids and treatment could be withdrawn, and sedation given to the dying – was officially phased out last year, on the orders of ministers.
> It followed concern that under the protocols, thirsty patients had been denied water and left desperately sucking at sponges.

There’s government run health care for you.

I’m writing about this patient-killing issue today because I think it’s interesting to think about what health care is like in a country that is basically run by atheists, like Canada is. I personally would not like to be forced to pay taxes to pay the salary of a someone like Wiebe, and let her be in charge of my life.

Matthew Vines and Michael Brown debate homosexuality and the Bible on Moody radio

July 17, 2018 | by Wintery Knight | Link | Original Link

The audio of the Matthew Vines vs Michael Brown debate is streamed here on the Moody site.

Details:

> Can you be gay and Christian? Matthew Vines says you can and he's created a viral video and best-selling book defending his view. This Saturday on Up for Debate, Vines joins host Julie Roys to debate author and leading evangelical apologist, Dr. Michael Brown. Is gay monogamy an option for Christians? Is it unloving to reject gay marriage? Listen and join the discussion this Saturday at 8 a.m. Central Time on Up for Debate!

Summary key: Julie Roys (JR), Matthew Vines (MV), Michael Brown (MB)

Summary:

Opening speeches:

- JR: Why should Christians be open to reinterpreting the Bible on homosexuality?
- MV: Consider the lives and testimonies of gay Christians. Here is my personal story.
- MV: According to the Bible, a person with same-sex attractions would have to embrace lifelong celibacy. I refuse to do that.
- MV: There are 6 passages in the Bible that are relevant to the goodness of homosexuality. All are negative.
- MV: None of these passages address gay relationships that are "long-term" and "faithful" that are based on "commitment" and "love".
- JR: You say that it is "damaging" for Christians to disagree with you views, is that true?
- MV: Yes. One of my friends declared his homosexuality and he did not feel safe to come home. He felt pain because Christians disagreed with him.
- MV: You cannot ask a person with same-sex attractions to be celibate, it causes too much harm to ask gays to abstain from sexual relationships.
- JR: Respond to Matthew.
- MB: The Bible only permits heterosexual sexuality and in every case condemns homosexual acts.
- MB: Matthew is taking his sexual preferences and activities as given, and reinterpreting the Bible to fit it.
- MB: Genesis talks about women being made to help men, and to fulfill God's commandment to procreate and fill the Earth.
- MB: The Bible speaks about the complementarity of the sexes when talking about how two become one in marriage.

- MB: I am very sensitive to the stories of people who are gay who experience discrimination as “gay Christians”.
- MB: You can feel sad for people who have two conflicting commitments, but that doesn’t mean we should redefine what the Bible says.
- JR: Stop talking, we have a break.

JR takes a caller for the next topic:

- Caller 1: I had same-sex attractions and I was able to change my sexuality.
- JR: Matthew, respond to that.
- MV: Alan Chambers of Exodus International says that 99.9% of people he worked with had not changed their gay orientation.
- MV: Lifelong celibacy is not acceptable to gays, so the Bible must be reinterpreted to suit gays.
- MB: Matthew thinks that God himself did not understand the concept of sexual orientation and inadvertently hurt gays because of his lack of knowledge.
- MB: There is a solution in the Bible for people who cannot be celibate, and that solution is heterosexual marriage
- MB: If a person is only attracted to pre-teen girls, do we then have to re-write the Bible to affirm that so they won’t be “harmed”?
- MB: Alan Chambers was speaking for his own group, and his statement does not account for the fact that thousands of people DO change.
- JR: What about the Jones/Yarhouse study that found that 38% of reparative therapy subjects were successful in changing or chastity?
- MV: (no response to the question)
- MV: (to Brown) do you accept that the Bible forces gays to live out lifelong celibacy

Another break, then Brown replies:

- MB: Yes. But change is possible.
- MV: Do you know of any Christian who acknowledged that this was the consequence of the Bible’s teaching for gays?
- MB: Paul’s explanation that the options for ALL Christians are 1) celibacy or 2) heterosexual marriage. For 2000 years.
- MV: Paul (in Romans 1) is talking about people who are not “long-term”, “faithful” gay relationships.
- MV: Paul was not aware of “long-term”, “faithful” gay relationships at the time he wrote his prohibitions in Romans 1.
- JR: How do you know that fixed sexual orientation is true? And that the Biblical authors would written different things if they knew?
- JR: Are there any references in the first century to “long-term”, “faithful” gay relationships?
- MB: Yes, in my book I quote prominent historian N. T. Wright who documents that those relationships were known.

- MB: Matthew's view requires that God did not know about sexual orientation when ordaining the Bible's content.
- MB: Leviticus 18 is for all people, for all time. This was not just for the Jews, this was for everyone.
- MV: I am not saying that Paul was wrong because he was ignorant.
- MV: Paul was writing in a context where "long-term", "faithful" gay relationships were unknown.
- MV: NT Wright does not cite first century texts, he cites a problematic 4th century text.
- MV: Absence of 1st-century references to "long-term", "faithful" gay relationships means that God did not intend to prohibit them.
- MB: Whenever the Bible speaks about homosexuality, it is opposed to it – Old Testament and New Testament.

Another break, then the conclusion:

- JR: Respond to the Leviticus prohibition, which prohibits homosexuality for everyone, for all time.
- MV: It is a universal prohibition on male same-sex intercourse, but it does not apply to Christians.
- MV: For example, Leviticus prohibits sex during a woman's menstrual period. And Christians are not bound by that.
- MV: What is the reason for this prohibition of male-male sex in Leviticus? It's not affirm the complementarity of the sexual act.
- MV: The Bible prohibits male-male sex because it is written for a patriarchal culture.
- MV: In a patriarchal culture, women are viewed as inferior. That's why the Bible prohibits a man from taking the woman's role in sex.
- MB: The prohibition in Leviticus is a universal prohibition against male-male sex, applicable in all times and places.
- MB: Homosexual sex is a violation of the divine order.
- MB: We can see already the consequences of normalizing this: gay marriage, and supports for polygamy and polyamory.
- MV: So the earliest reference there is to a "long-term", "faithful" gay relationship is a 4th century text.
- MV: But that gay relationship is not like modern gay relationships.

I have a few comments about Vines' points below.

My comments:

Even heterosexuals who have not married are called upon to embrace lifelong celibacy. I am in my early 40s and am a virgin because I have not married. I wouldn't seek to reinrepret the Bible to allow premarital sex just because what I am doing is difficult. I would rather just do what the Bible says than reinterpret it to suit me. And it's just as hard for me to be chaste as it would be for him to be. In short, it's a character issue. He

takes his right to recreational sex as non-negotiable, and reinterprets the Bible to suit. I take the Bible as non-negotiable, and comply with it regardless of whether it seems to make me less happy. With respect to the purposes of God for me in this world, my happiness is expendable. If I don't find someone to marry, I'm going to be "afflicted" with the lifelong celibacy that Vines seems to think is torture, but let me tell you – God is happy with the contributions I am making for him, and if I have to be chaste through my whole life, I am 100% fine with that. I serve the King. And not the reverse.

Notice that he talks about "long-term" but not permanent relationships, and "faithful" but not exclusive. This is important because the statistics show that gay relationships (depending on whether it is female-female or male-male) are prone to instability and/or infidelity. I just blogged on that recently, with reference to the *published research* on the subject. Vines is talking about a situation that does not obtain in the real world – according to the data. Gay relationships do not normally value permanence and exclusivity in the way that opposite-sex marriage relationships do, especially where the couple regularly attends church. The divorce rate and infidelity rate for religious couples is *far below* the rates for gay couples, depending on the sexes involved. Vines is committed to the idea that marriage is about feelings, e.g. – "love", but that's not the public purpose of marriage. Marriage is not about love, it's about complementarity of the sexes and providing for the needs of children. We have published studies like this one showing that there are negative impacts to children who are raised by gay couples, which dovetails with studies showing that children need a mother and that children need a father. We should not normalize any relationship that exposes children to harm. We should prefer to inconvenience adults than to harm children.

Matthew Vines made an argument that Christians have to stop saying that homosexuality is wrong, because it makes gay people feel excluded. I wrote previously about the argument that gay activists use where they say "if you don't agree with me and celebrate me and affirm me, then I'll commit suicide". In that post, I quoted a prominent gay activist who made exactly that argument. I don't find the threats to self-destruction to be a convincing argument *for the truth* of the view that gay marriage being the same as heterosexual marriage. In fact, this is confirmed by a recent study which showed that features of gay relationships themselves, and not social disapproval, is to blame for high rates of suicide in the gay community.

Vines seems to want to argue that the context in which the Bible authors were writing did not allow them to address the problem of gays in "long-term", "faithful" relationships. Well, we have already seen that statistically speaking, those relationships are in the minority. One British study mentioned in the post I linked to above found that only 25% of gay couples were intact after 8 years. The number is 82% for heterosexual marriages, and that *doesn't* filter by couples who abstain from premarital sex and who attend church regularly. If you add those two criteria, the number is going to be well above 82% in my opinion. Studies show that premarital chastity and church attendance *vastly* improve the stability and quality of marriages.

In addition, Vines is trying to argue that 1) the Bible authors were not aware of "long-

term", "faithful" gay relationships and 2) their failure to explicitly disqualify these "long-term", "stable" gay sexual relationships means that the Bible actually condones them. A friend of mine pointed out that this is a textbook case of the argument from silence, where someone asserts that because something is not explicitly condemned, then it must be OK. Carried through to its logical end, that would mean that things like identity theft are OK, because they are not mentioned explicitly. Brown asserted that there was a blanket prohibition on homosexual acts. He is arguing from what we know. Vines says that "long-term", "faithful" homosexual relationships are not mentioned, and are therefore OK. He is arguing from what we don't know. And he is trying to reverse the burden of proof so that he doesn't have to show evidence for his view. Brown wouldn't take the bait. The fact of the matter is that no one for the last 2000 years of church history have taken Vines' view. Every single Christian before Vines, who were closer to Jesus' teachings than Vines, understood the verses that Brown cited to be providing a blanket prohibition on homosexual sex acts. If Vines wants to claim that the Bible condones what he wants it to condone, he has to produce some positive evidence from the text or from church history or church fathers. He has *nothing* to support his case that could convince anyone that this is what Christians have believed, and ought to believe.

Finally, if you are looking for another debate, I blogged about a debate between Michael Brown and Eric Smaw. There's a video and summaries of the opening speeches in that post.

Have you heard of Kristen Waggoner and the Alliance Defending Freedom?

July 18, 2018 | by Wintery Knight | Link | Original Link

Kristen Waggoner of Alliance Defending Freedom argued Jack Phillips' case before the Supreme Court. (Photo: Jeff Malet/The Heritage Foundation)

I was very surprised to see the far-left Washington Post post a balanced article on Alliance Defending Freedom. The ADF is a group of lawyers who do battle in defense of religious liberty and conscience in the Supreme Court. They have won 9 cases at the Supreme Court in the last 7 years, despite having to argue in front of a court that had a 5-4 liberal majority.

Here's some of the article:

> Two days before the announcement of Justice Anthony M. Kennedy's retirement, a woman who stood to gain from it was on the steps of the Supreme Court once again. Kristen Waggoner's blond bob was perfectly styled with humidity-fighting paste she'd slicked onto it that morning at the Trump hotel. Her 5-foot frame was heightened by a pair of nude pumps, despite a months-old ankle fracture in need of surgery. On her wrist was a silver bracelet she'd worn nonstop since Dec. 5, 2017, the day she marched up these iconic steps, stood before the justices and argued that a Christian baker could legally refuse to create a cake for a gay couple's wedding.
>
> Her job was to be the legal mind and public face of Alliance Defending Freedom., an Arizona-based Christian conservative legal nonprofit better known as ADF. Though far from a household name, the results of ADF's work are well known. Masterpiece Cakeshop v. Colorado Civil Rights Commission was just one of ADF's cases at the Supreme Court this term. The organization has had nine successful cases before the court in the past seven years, including Burwell v. Hobby

> Lobby…

I follow very few people on Twitter, only about 27-30. One of those people is Kristen Waggoner. She is the lead counsel in many of these Supreme Court cases. She is the best at what she does.

Her silver bracelet is engraved with a famous passage that I think has inspired many Christian women of courage. It's from the book of Esther. The bracelet says "For Such A Time As This". It's a phrase that is taken from Mordecai's warning to Esther that God is sovereign over her life, and that he has put her into a position to defend her whole nation from threats.

Here's the passage in context from Esther 4:6-17:

> 6 So Hathak went out to Mordecai in the open square of the city in front of the king's gate.
>
> 7 Mordecai told him everything that had happened to him, including the exact amount of money Haman had promised to pay into the royal treasury for the destruction of the Jews.
>
> 8 He also gave him a copy of the text of the edict for their annihilation, which had been published in Susa, to show to Esther and explain it to her, and he told him to instruct her to go into the king's presence to beg for mercy and plead with him for her people.
>
> 9 Hathak went back and reported to Esther what Mordecai had said.
>
> 10 Then she instructed him to say to Mordecai,
>
> 11 "All the king's officials and the people of the royal provinces know that for any man or woman who approaches the king in the inner court without being summoned the king has but one law: that they be put to death unless the king extends the gold scepter to them and spares their lives. But thirty days have passed since I was called to go to the king."
>
> 12 When Esther's words were reported to Mordecai,
>
> 13 he sent back this answer: "Do not think that because you are in the king's house you alone of all the Jews will escape.
>
> **14 For if you remain silent at this time, relief and deliverance for the Jews will arise from another place, but you and your father's family will perish. And who knows but that you have come to your royal position for such a time as this?"**
>
> 15 Then Esther sent this reply to Mordecai:
>
> 16 "Go, gather together all the Jews who are in Susa, and fast for me. Do not eat or drink for three days, night or day. I and my attendants will fast as you do. When this is done, I will go to the king, even though it is against the law. And if I perish, I perish."

> 17 So Mordecai went away and carried out all of Esther's instructions.

Kristen Waggoner is our Esther. She actually has much better character and abilities than the real Esther .

Her biography is here on the ADF web site.

It says, in part:

> Kristen K. Waggoner serves as senior vice president of U.S. legal division and communications with Alliance Defending Freedom. In this role, Waggoner oversees the U.S. legal division, a team of 100 attorneys and staff who engage in litigation, public advocacy, and legislative support. Since she assumed this role, ADF has prevailed as lead counsel in eight U.S. Supreme Court victories, including Masterpiece Cakeshop v. Colorado Civil Rights Commission, which she argued at the Supreme Court and won. She continues as lead counsel in Arlene's Flowers v. State of Washington, which the Supreme Court remanded to the lower courts. She also served as counsel for the free speech victory that the Supreme Court handed down in National Institute of Family and Life Advocates v. Becerra.

I consider it amazing that more Christians don't know who she is. Christians tend to admire famous celebrities, athletes, artists. And prosperity gospel preachers. But these people merely *entertain* us. Kristen Waggoner is not an entertainer, she is a *warrior*. She goes into the most dangerous places and fights for the liberty of every one of us. She's become a sheep dog in order to protect the sheep. Right now, we are facing challenges from people who are trying to use the law like a weapon to bully and silence anyone who tries to live out an authentic Christian life. Powerful people are trying to say that when a Christian's liberty makes them FEEL BAD, that means that the Christian's liberty needs to be suppressed. The ADF is there to make sure that they don't succeed.

Whenever the ADF goes out to battle, I make sure to write about their cases on this blog. We should all be informed and give respect to Kristen Waggoner and everyone who works for the ADF. They are some of the most effective and influential Christians, and they deserve our gratitude and our respect.

More about her background

One of the other groups I like a lot is the Heritage Foundation, my favorite think tank. I have similar admiration and respect for the people who work there, such as Genevieve Wood and Jennifer Marshall. The Daily Signal, a news site operated by the Heritage Foundation, has posted a story about Kristen Waggoner's background.

It says:

> Waggoner grew up as Kristen Kellie Behrends in Longview, Washington, about two hours south of Seattle and an hour north of Portland.
>
> What she treasures most about her upbringing, Waggoner says, is that she was steeped in consistent values at home, church, and school that shaped her worldview without sheltering her.

> Her father taught her from Scripture about “being an Esther, being a Deborah, used by God,” she says, and that “joy and fulfillment come from having a purpose that’s bigger than ourselves.”
>
> “It’s not about us, we’re a part of a bigger story that has to do with helping human flourishing. And that just shaped my whole life, even now.”
>
> […]Once a teacher in public schools, today her father is a licensed minister in the Assemblies of God denomination. He is associate pastor of Cedar Park Church in Bothell, Washington, and superintendent of an affiliated school system.
>
> Young Kristen would go to the principal’s office to visit her father three or four times a day, sometimes because she got into trouble. In these encounters, he urged her to find and develop her talents, and apply them in a way that would honor God.
>
> And one day, Waggoner recalls, she saw clearly that defending ministries and religious freedom should be her path.
>
> […]“The right of conscience is critical to the existence of the country and is the first freedom that our other civil liberties are directly connected with,” Waggoner says. “I wanted to be a part of that—that fight to preserve it for my children and my grandchildren.”

On this blog, I put a lot of emphasis on Christians being careful about what they study in school, what jobs they take, how they manage their money, and who they choose to marry. The goal of all this is to make sure that young Christians are thoughtful about having a vision for their lives, and pursuing that vision in a way that minimizes wildness, fun and thrills. Becoming a hero doesn’t happen by accident, it takes planning and execution. There is no path to success that involves doing whatever feels good moment-by-moment. In order to make a difference, we need to be careful about doing what works, not pursuing fun and thrills in the moment.

Husband uses legally-owned firearm to rescue wife from two armed criminals

July 19, 2018 | by Wintery Knight | Link | Original Link

Pew Research: reported defensive gun usage

The mainstream media, and the culture at large, seems to spend a lot more time talking about multiple victim public shootings. But they ignore the times when legally-armed law-abiding citizens defend themselves from criminals. Here's an example of what that looks like, reported from KHOU Houston local news.

Excerpt:

> Investigators said it all started when the man's wife pulled into their driveway Tuesday night. Then the two armed suspects jumped out and tried to rob her.
>
> First, they took her purse, and then they tried to force her into the house. However, that is when her husband showed up.
>
> He heard the commotion from inside, grabbed his gun and ended up exchanging gunfire with the intruders.
>
> Fortunately, the couple weren't hit, but one of the suspects was hit in the head, police said. The other suspect took off running.
>
> Police said the injured suspect was taken into surgery.
>
> As for the couple, one can only imagine what was going through their mind when this was all over. Hopefully, they're able to find some peace of mind this morning, knowing they're OK.

Now, imagine you are the husband and you wake up to find two armed men in your

home, holding your wife hostage. The police are minutes away, even if you could make the phone call while the criminals waited patiently for you to do so. In this situation, what sort of remedy would be offered to you by people who want to confiscate your legally-owned firearms? What could they offer you that would rescue your wife and yourself, and prevent your house from being burglarized? I actually know progressives who hate gun usage so much that they actually don't believe in an individual's right to defend himself, his family and his property. There is this strange desire to try to "make peace" by surrendering to the most angry person in the room. Some progressives are really like this. They just don't believe that violence (or even the threat of violence) is ever the answer to dealing with evil. Progressives want to disarm you, but they don't want to do a think to make criminal activities harder for criminals.

The truth is that progressives often live in gated communities and have armed security. They want to be safe, but they don't care about YOUR safety.

Gun ownership up, gun violence down

The peer-reviewed research

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

I think that peer-reviewed studies should be useful for assessing gun control vs gun rights policy. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, which shows that the 1997 UK gun ban caused violent crime rates to MORE THAN DOUBLE in the four years following the ban. But both studies affirm the same conclusion – more legal firearm ownership means

less crime.

One of the common mistakes I see anti-gun advocates making is to use the metric of all “gun-related deaths”. First of all, this completely ignores the effects of hand gun ownership on violent crime, as we’ve seen. Take away the guns from law-abiding people and violent crime skyrockets. But using the “gun-related deaths” number is especially wrong, because it includes suicides committed with guns. This is the majority (about two thirds) of gun related deaths, even in a country like America that has a massive inner-city gun violence problem caused by the epidemic of single motherhood by choice. If you take out the gun-related SUICIDES, then the actual number of gun homicides has decreased as gun ownership has grown.

For a couple of useful graphs related to this point, check out this post over at the American Enterprise Institute.

(Graphic is from Pew Research 2017, page 43)

Eight tips for talking to non-Christians about Christianity

July 20, 2018 | by Wintery Knight | Link | Original Link

Two Air Force JTACs discuss mission parameters prior to calling in CAS

From Stand to Reason – some excellent tactical advice about how to have a conversation about spiritual topics with a non-Christian.

Here's the setup:

> I overheard a conversation on the airplane coming back from my vacation in Wisconsin. A Christian gentleman was vigorously sharing his faith with a gentleman in the seat directly behind me. There are some things we can learn, both good and bad, from what I overheard and take his effort—which was a good one—and channel it in a little bit more constructive direction.
>
> So I am going to give you eight points of application.

And here are my favorites from his list:

> **3. Try to stay away from religious language, terminology, and religious affect.** This person was very religious in his whole approach. I think this is hard for us as Christians because we are brought up in a Christian environment and it's natural for us to talk this way, but it sounds weird to people outside of that environment. I think there are a lot of people who may be, in principle, interested in a bona fide, genuine relationship with God through Jesus Christ but who are not interested in the Christian religion as they perceive it. This is where I think a lot of the emergent guys have a legitimate bone to pick with Evangelicalism. Let's try not to sound like Bible-thumping fundamentalists if we can avoid it, even if that's what we are, because there's no need to sound that

> way if it puts people off. Find another way to communicate the message. Just talk in a straightforward manner. Be conscious of using religious language the other person may not understand or may think is strange. Avoid all of that so they can hear the message you're trying to communicate.
>
> **4. Focus on the truth, not personal benefits of Christianity.** I appreciated the gentleman's approach in that he kept talking about truth. One person he was talking to said he liked reincarnation. The Christian man said that even if he liked reincarnation that that didn't make it true if it's not true. Liking something is not going to change reality. That's a great point. He was focusing on the truth claims of Jesus. He wasn't giving a bunch of promises. He wasn't saying, "Jesus is my ice cream. He's a great flavor. Try him to see if you like him, too." Or, "Try Jesus because he'll make your life so wonderful." Focus on truth and not personal benefits.
>
> **5. Give evidence.** This gentleman was giving all kinds of evidence for his seatmates to consider. Good for him! You should too. You know why? Because people in the Bible did, too. Jesus, Paul, Peter, all the Apostles. If you look at the details of how they communicated their faith they gave evidence for the truth of what they were saying about Jesus. In fact, if you want to get the content of the Gospel, one of the most famous passages for the articulation of the Gospel is the beginning of 1 Corinthian 15. Paul gives all kinds of evidence. It's all right there as he is explaining the Gospel. We see that all through the New Testament. So give evidences. It's appropriate. People do respond to that even in a postmodern age.

I remember that I was once working in Chicago, and after a particular good apologetics discussion with a team of engineers, I apologized to them all for being so conservative and confident that I was right. These guys all had MS and PhD degrees in computer science from top schools like Stanford, Purdue, U of I, NIU and Northwestern. I was worried that they would think that I was some sort of fundamentalist because I was so definite about what I believed. They said "you're not a fundamentalist". And I said, "but I am ultra-conservative in my theology!". And they said "That's ok – as long as you have considered different points of view and you have objective evidence, then somehow it doesn't sound fundamentalist".

I think that's something that we need to work on. When Christianity is about truth, it's open to investigation using public evidence. At work, I have explained the structure of DNA molecules in the office and had people rolling their chairs out of their cubicles to come and see me draw amino acid chains on a white board, and calculate the probabilities with a calculator. You can be a fundamentalist, without sounding like a fundamentalist. You just have to focus on public, testable evidence.

Look here:

Make religion about truth – not personal preferences. They respect that way of talking. Don't talk about your feelings or your spiritual experiences. They can't test that. Talk to

them about history and science. They CAN test that.

Memorial of Navy SEAL and Medal of Honor recipient Michael Murphy vandalized

July 21, 2018 | by Wintery Knight | Link | Original Link

Navy SEAL Michael Murphy wins Medal of Honor

I'm beside myself with rage at the news that some 14-year-old punk vandalized the memorial of Navy SEAL officer and Medal of Honor recipient Michael P. Murphy. I consider Murphy a hero. You may have read his story in the book "Lone Survivor", which was also made into a movie. I hope that punk kid goes to jail for what he did.

Fox News reports:

> Authorities in New York arrested a 14-year-old boy on Friday for allegedly vandalizing the memorial of a slain Navy SEAL and Medal of Honor recipient.
>
> Suffolk County Police received a call on Thursday that the Lt. Michael P. Murphy Memorial Park in Lake Ronkonkoma had been "vandalized."
>
> A picture released by police on Facebook showed that a granite stone with an image of the fallen soldier had been shattered.
>
> […]The suspect was charged with second-degree criminal mischief, and was scheduled to be arraigned in family court at a later date, Fox 5 reported.

The Washington Examiner reports on the story of a brave Navy SEAL named Michael Murphy. (H/T Mary)

Excerpt:

> Engaged in a frenzied firefight and outnumbered by the Taliban, Navy Lt. Michael Murphy made a desperate decision as he and three fellow SEALs fought for their lives on a rocky mountainside in Afghanistan's Kunar Province in 2005.
>
> In a last-ditch effort to save his team, Murphy pulled out his satellite phone, walked into a clearing to get reception and called for reinforcements as a fusillade of bullets ricocheted around him. One of the bullets hit him, but he finished the call and even signed off, "Thank you."
>
> Then he continued the battle.
>
> Dan Murphy, the sailor's father, said it didn't surprise him that his slain son nicknamed "The Protector" put himself in harm's way. Nor was he surprised that in the heat of combat his son was courteous.
>
> "That was Michael. He was cool under fire. He had the ability to process information, even under the most difficult of circumstances. That's what made him such a good SEAL officer," Murphy said.
>
> A warship bearing the name of the Medal of Honor recipient will be christened Saturday — on what would have been Murphy's 35th birthday — at Bath Iron Works, where the destroyer is being built.
>
> Murphy, who was 29 when he died, graduated from Pennsylvania State University and was accepted to multiple law schools, but decided he could do more for his country as one of the Navy's elite SEALS — special forces trained to fight on sea, air and land — the same forces that killed Osama bin Laden this week in Pakistan.
>
> […]Murphy, of Patchogue, N.Y., earned his nickname after getting suspended in elementary school for fighting with bullies who tried to stuff a special-needs child into a locker and for intervening when some youths were picking on a homeless man, said Dan Murphy, a lawyer, former prosecutor and Army veteran who served in Vietnam.
>
> Maureen Murphy said he thought he was too young to take a desk job as a lawyer. Instead, he went to officer candidate school, the first step on his journey to become a SEAL officer. He was in training during the Sept. 11 attacks, which shaped his views.
>
> His view was that there are "bullies in the world and people who're oppressed in the world. And he said, 'Sometimes they have to be taken care of,'" she said.
>
> On June 28, 2005, the day he was killed, Murphy was leading a SEAL team in northeastern Afghanistan looking for the commander of a group of insurgents known as the Mountain Tigers.

He certainly had amazing character.

What happened to Murphy in Afghanistan?

> The Operation Red Wings reconnaissance team rappelled down from a helicopter

> at night and climbed through rain to a spot 10,000 feet high overlooking a village to keep a lookout. But the mission was compromised the following morning when three local goat herders happened upon their hiding spot.
>
> High in the Hindu Kush mountains, Murphy and Petty Officers Marcus Luttrell of Huntsville, Texas; Matthew Axelson of Cupertino, Calif.; and Danny Dietz of Littleton, Colo.; held a tense discussion of the rules of engagement and the fate of the three goat herders, who were being held at gunpoint.
>
> If they were Taliban sympathizers, then letting the herders go would allow them to alert the Taliban forces lurking in the area; killing them might ensure the team's safety, but there were issues of possible military charges and a media backlash, according to Luttrell, the lone survivor.
>
> Murphy, who favored letting the goat herders go, guided a discussion of military, political, safety and moral implications. A majority agreed with him.
>
> An hour after the herders were released, more than 100 Taliban armed with AK-47 assault rifles and rocket-propelled grenades opened fire, attacking from higher elevation, and maneuvering to outflank the SEALs, said Gary Williams, author of "Seal of Honor," a biography of Murphy.
>
> […]As the only survivor, Luttrell has pangs of regret for voting to go along with Murphy, his best friend; he now believes the team could've survived if the goat herders were killed.

He wasn't willing to kill unarmed civilians. That's the difference between the United States and the Muslim terrorists. It's a moral difference. Michael Murphy was a good man. He used guns and violence to protect others, and he was not willing to kill unarmed civilians.

Here are the requirements for the Army version of the Medal of Honor:

> The Medal of Honor is awarded by the President in the name of Congress to a person who, while a member of the Army, distinguishes himself or herself conspicuously by gallantry and intrepidity at the risk of his or her life above and beyond the call of duty while engaged in an action against an enemy of the United States; while engaged in military operations involving conflict with an opposing foreign force; or while serving with friendly foreign forces engaged in an armed conflict against an opposing armed force in which the United States is not a belligerent party. The deed performed must have been one of personal bravery or self-sacrifice so conspicuous as to clearly distinguish the individual above his comrades and must have involved risk of life. Incontestable proof of the performance of the service will be exacted and each recommendation for the award of this decoration will be considered on the standard of extraordinary merit.

On a happier note, what kind of ship do you think would suit Michael Murphy? Something

that protects others, of course.

USS Michael Murphy DDG 112 Arleigh Burke

Arleigh Burke vessels have the AEGIS missile defense system and their role is to protect carrier strike groups from incoming SSMs and ASMs.

Excerpt:

> The Arleigh Burke Class destroyers are equipped with the Aegis combat system which integrates the ship's sensors and weapons systems to engage anti-ship missile threats.
>
> The Aegis system has a federated architecture with four subsystems – AN/SPY-1 multifunction radar, command and decision system (CDS), Aegis display system (ADS) and the weapon control system (WCS). The CDS receives data from ship and external sensors via satellite communications and provides command, control and threat assessment. The WCS receives engagement instruction from the CDS, selects weapons and interfaces with the weapon fire control systems.
>
> […]Lockheed Martin is developing the Aegis ballistic missile defence (BMD) capability for the Aegis combat system to engage ballistic missiles with the SM-3 missile. 15 Arleigh Burke destroyers have been fitted with the Aegis BMD system, which provides the capability for long-range surveillance, tracking and engagement of short and medium-range ballistic missiles. The system received US Navy certification for full deployment in September 2006. Work was completed on the 15 destroyers at the end of 2008 and the vessels, with three Ticonderoga cruisers, form the Aegis BMD fleet. On 30 July 2009 the Aegis BMD system was successfully tested by the US Navy on the USS Hopper (DDG 70). Aegis BMD is the main sea-based component of the US ballistic missile defence system.
>
> The weapons control systems include a SWG-1A for Harpoon, SWG-3 for Tomahawk, mk99 mod 3 missile fire control system, GWS34 mod 0 gun fire control system and mk116 mod 7 fire control system for anti-submarine systems.

Only two warships that I know of have the AEGIS system. The DDG Arleigh Burke and the CG Ticonderoga. They are extremely rare and special – just like Michael Murphy.

Michael Murphy was a devout Christian man, and a real hero. It makes me sad that he is gone. But his spirit will live on in the new warship that bears his name. If you want to read or learn more about Michael Murphy, you should pick up the book “Lone Survivor” or see the movie of that same title. I’ve read the book and seen the movie, and I highly recommend both. It’s important for Americans to understand just who is out there protecting them and protecting our allies. When you read the details, your heart changes. It’s a good idea for Christians in particular to always be thinking about self-sacrificial love, and even about how hard it is when someone lays down their life for their friends.

New study: what lifestyle choices lead to happiness for women?

July 21, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

In preparation for this blog post, I read an article from a far-left source about the decline of women's happiness.

Excerpt:

> As women gain political, economic and social freedoms, one would expect that they should feel even more contented relative to men. But this isn't so.
>
> The "paradox of declining female happiness" was pointed out by economists Betsey Stevenson and Justin Wolfers, who also happen to share a house and kids. They analyzed the happiness trends of US citizens between 1970 and 2005 and found a surprising result.
>
> Stevenson and Wolfers discovered that American women rated their overall life satisfaction higher than men in the 1970s. Thereafter, women's happiness scores decreased while men's scores stayed roughly stable. By the 1990s, women were less happy than men. This relative unhappiness softened after the turn of the century, but men continue to enjoy a higher sense of subjective wellbeing that is at least as high — if not higher — than women's.
>
> Those 35 years saw advances in American women's rights and financial power.

Let's take a look at a recent study that the Daily Wire reported on, to see what really makes women happy:

> Despite the onslaught of propaganda telling young girls otherwise, a recent research paper distilling data from over 30 European countries concluded that

> mothers find homemaking preferable to working full-time.
>
> Doc. PhDr. Dana Hamplová, Ph.D., a senior scientist at the Institute of Sociology, ASCR, and a current representative of the Czech Republic in the International Social Science Program, authored the paper. Addressing Betty Friedan's narrative in the book The Feminine Mystique, which claims that women are happiest and most fulfilled at work, Hamplová "explores the link between employment and subjective well-being among mothers with children under 3 years of age," reads the paper's abstract.
>
> "Analyzing multiple measures of subjective well-being, the paper shows that homemakers are generally happier than full-time workers," the scientist found.
>
> "Contrary to our expectations, homemaking was positively associated with happiness particularly among mothers who left higher quality employment for childcare. Though some variation across countries exists, it is not linked to the provision of formal childcare, duration of parental leave, or tax system," Hamplová explains.
>
> […]"Thus, similarly to several other studies, the ESS [European Social Survey] data do not corroborate Betty Friedan's idea that domesticity and housekeeping leaves women unhappy and unsatisfied," she writes. "As all 12 measures of happiness/satisfaction point to the same direction, the conclusion that mothers with younger children tend to be better off if they are not engaged in paid employment seems to be robust."

We've had lots of advancements in women's power, often coming at the expense of men (i.e. – husband candidates). For example, anti-male schools staffed by feminist administrators and feminist teachers might be great for women, but they don't produce high-earning men for women to marry. And when women vote to expand government, taxes must increase to pay for all the spending. This reduces even further the pool of men who can take on a wife and family shrinks even more because of the increased tax burden.

This article from the leftist The Atlantic explains:

> In the view that has prevailed in American education over the past decade, boys are resented, both as the unfairly privileged sex and as obstacles on the path to gender justice for girls. This perspective is promoted in schools of education, and many a teacher now feels that girls need and deserve special indemnifying consideration.
>
> […]A review of the facts shows boys, not girls, on the weak side of an education gender gap. The typical boy is a year and a half behind the typical girl in reading and writing; he is less committed to school and less likely to go to college. In 1997 college full-time enrollments were 45 percent male and 55 percent female. The Department of Education predicts that the proportion of boys in college classes will continue to shrink.

> Data from the U.S. Department of Education and from several recent university studies show that far from being shy and demoralized, today's girls outshine boys. They get better grades. They have higher educational aspirations. They follow more-rigorous academic programs and participate in advanced-placement classes at higher rates. According to the National Center for Education Statistics, slightly more girls than boys enroll in high-level math and science courses. Girls, allegedly timorous and lacking in confidence, now outnumber boys in student government, in honor societies, on school newspapers, and in debating clubs. Only in sports are boys ahead, and women's groups are targeting the sports gap with a vengeance. Girls read more books. They outperform boys on tests for artistic and musical ability. More girls than boys study abroad. More join the Peace Corps. At the same time, more boys than girls are suspended from school. More are held back and more drop out. Boys are three times as likely to receive a diagnosis of attention-deficit hyperactivity disorder. More boys than girls are involved in crime, alcohol, and drugs. Girls attempt suicide more often than boys, but it is boys who more often succeed. In 1997, a typical year, 4,483 young people aged five to twenty-four committed suicide: 701 females and 3,782 males.

It's important to note that women are not victims here, they are actually the ones who created the shortage of men who could earn enough money to support a family, and allow them to stay home with their children. Their "advancements in power" came at a cost: they undermined the system that produced men who were capable of handling the financial demands of a family where the wife can raise her own children.

Look at this study of how women have voted to expand government and therefore raise taxes on working men for social programs that replace husbands:

> This paper examines the growth of government during this century as a result of giving women the right to vote. Using cross-sectional time-series data for 1870–1940, we examine state government expenditures and revenue as well as voting by U.S. House and Senate state delegations and the passage of a wide range of different state laws. Suffrage coincided with immediate increases in state government expenditures and revenue and more liberal voting patterns for federal representatives, and these effects continued growing over time as more women took advantage of the franchise. Contrary to many recent suggestions, the gender gap is not something that has arisen since the 1970s, and it helps explain why American government started growing when it did.

Bigger government means higher taxes means men earn less money, after taxes. How are you supposed to keep your wife home to watch over the little ones when taxes are higher? You can't.

Two kinds of people who have tried to shame me away from Christianity

July 22, 2018 | by Wintery Knight | Link | Original Link

A conflict of worldviews

In my last job, I had two interesting encounters, first with a secular Jewish leftist man and second with a New Age prosperity gospel feminist Christian woman.

So let's talk about the two people.

The man who thinks that conservative Christians are stupid

The first kind of person who tried to shame me for being a Christian is the person who thinks that Christianity is stupid. This kind of person invokes things that he hears in secular leftist pop culture as if it is common knowledge that theism generally, and Christianity in particular, is false. He's watched a documentary on the Discovery channel which said that the eternally oscillating cosmology was true. Or maybe he watched a documentary on the History Channel that said that Jesus never presented himself as God stepping into history. He presents these things that he reads in the New York Times, or sees on MSNBC or hears on NPR with the authority tone that Ben Carson might take when explaining modern medicine to a witch doctor.

Here is how things usually go with him:

- Me: here are two arguments against naturalistic evolution, the origin of life and the Cambrian explosion.
- Him: but you don't believe in a young-Earth do you? I mean, you believe in evolution don't you?
- Me: let's talk about how proteins and DNA is sequenced, and the sudden origin of Cambrian body plans
- Him: (shouting) Do you believe in evolution? Do you believe in evolution?

And this:

- Me: there hasn't been any global warming for 18 years, and temperatures were warmer in the Medieval Warming Period
- Him: but you don't deny climate change, do you? everyone on NPR agrees that climate change is real
- Me: let's talk about the last 18 years of no warming, and the temperatures during the Medieval Warming Period
- Him: (shouting) Do you believe in climate change? Do you believe in climate change?

He asks these questions so he can either label me as a nut, without having to weigh the evidence I'm presenting, or have me agree with him, without having to weigh the evidence I'm presenting. It's all about ignoring the evidence, so he can get back to his busy, busy practical life – and get back to feeling smug about being smarter than others. I think a lot of men are like this – they don't want to waste their valuable time studying, they just want to jump to the right conclusion, then get back to doing whatever they want – like running marathons, or driving their kids to hockey practice, etc.

So how do you respond to a man who gets his entire worldview from the culture, but never deals with peer-reviewed evidence? Well, I think you just defeat his arguments with evidence and then present your own (peer-reviewed) evidence, and then leave it at that. If the person just wants to jump to the conclusion that all the "smart" people hold to, without doing any of the work, then you can't win. There are atheists out there who believe in the eternal oscillating universe they saw Carl Sagan talking about in their elementary school. You might try to argue for an origin of the universe by citing new evidence like the CMB and light element abundances. But sometimes, they won't care. Carl Sagan said it 50 years ago, and that settles it. It doesn't matter that the new evidence overturns the old theories, they don't care.

Do you think that Christianity will make non-Christians like you?

Consider 2 Tim 4:1-5:

1 I charge you in the presence of God and of Christ Jesus, who is to judge the living and the dead, and by his appearing and his kingdom:

[2] preach the word; be ready in season and out of season; reprove, rebuke, and exhort, with complete patience and teaching.

[3] For the time is coming when people will not endure sound teaching, but having itching ears they will accumulate for themselves teachers to suit their own passions,

[4] and will turn away from listening to the truth and wander off into myths.

[5] As for you, always be sober-minded, endure suffering, do the work of an evangelist, fulfill your ministry.

And 1 Peter 3:15-16:

[15] but in your hearts honor Christ the Lord as holy, always being prepared to make a

defense to anyone who asks you for a reason for the hope that is in you; yet do it with gentleness and respect,

[16] having a good conscience, so that, when you are slandered, those who revile your good behavior in Christ may be put to shame.

If you have orthodox theological beliefs in this day and age then you are going to be shamed, humiliated and reviled by people. And it's not just having an orthodox view of who Jesus is that annoys them (e.g. – deity, exclusivity of salvation, morality, etc.). No, their disapproval spreads on into politics, especially abortion and gay marriage – basically any kind of rules around sexuality. That's what's really bugging these people, I think.

The woman who thinks Christianity is life-enhancement

This one is especially difficult when you are a young man, because we naturally look to women for approval and respect. You find yourself sitting in church or youth group, hoping for the approval and respect from the Christian women for your sound theology and effective apologetics. Little do you know that many Christian women understand Christianity as life-enhancement, designed to produce happy feelings. God is their cosmic butler whose main responsibility is to meet their needs and make their plans work out. Although you might be keen on sound theology and good apologetics arguments, she doesn't think that's important.

So how to deal with this unmet need for approval and respect from women in the church?

First thing, be careful that you don't attend a church where the pastor in preaching and picking hymns that give you the idea that God is your cosmic butler. Second, read the Bible very carefully, and understand that with respect to God's purposes for you in this world, your happiness is expendable. You cannot be looking to attractive Christian women that you happen to meet in church to support you, as many of them have long-since sold out to the culture. They are not interested in learning *evidential* apologetics to defend God's reputation, or in defending the unborn, or in defending natural marriage, or in defending the free enterprise system that supports family autonomy from the state, etc. Those things are hard and unpopular, especially for those women who were raised to think that Christianity is about life enhancement and peer-approval.

Here's 1 Cor 4:1-5 to make the point:

1 This is how one should regard us, as servants of Christ and stewards of the mysteries of God.

[2] Moreover, it is required of stewards that they be found faithful.

[3] But with me it is a very small thing that I should be judged by you or by any human court. In fact, I do not even judge myself.

[4] For I am not aware of anything against myself, but I am not thereby acquitted. It is the Lord who judges me.

[5] Therefore do not pronounce judgment before the time, before the Lord comes, who will bring to light the things now hidden in darkness and will disclose the purposes of the heart. Then each one will receive his commendation from God.

And 2 Tim 2:4:

[4] No soldier gets entangled in civilian pursuits, since his aim is to please the one who enlisted him.

Or, since I like Ronald Speirs from Band of Brothers so much:

This is the situation in which we find ourselves, so get used to it. And believe me, I have to deal with this, too. So I have all the sympathy in the world for you. Resign yourself to the fact that no one is going to approve of you for being faithful to the gospel of Jesus Christ; not secular men, not Christian women. There is no cavalry coming to rescue you.

FBI and DOJ used Democrat-funded Steele dossier to justify wiretapping of Trump campaign

July 23, 2018 | by Wintery Knight | Link | Original Link

Left to right: Comey, Lynch, Clinton, McCabe

Wow, so for some time, the mainstream media had been telling me that the FBI and DOJ, during the Obama administration, never did any surveillance of the Trump campaign at the request of the Democrats. But whenever anyone asked them to release information about the basis for their investigations of Trump, they wouldn't reveal anything.

But Judicial Watch was on the case, and they finally managed to get heavily redacted copies of documents showing what the FBI and DOJ were doing during the election.

The basis of the FBI and DOJ surveillance of Trump campaign personnel was the Steele dossier, which was collected for Fusion GPS, a Democrat opposition research firm.

Fox News explains:

> On four occasions, the FBI told the Foreign Intelligence Surveillance (FISA) court that it "did not believe" former British spy Christopher Steele was the direct source for a Yahoo News article implicating former Trump aide Carter Page in Russian collusion, newly released documents reveal.
>
> Instead, the FBI suggested to the court, the September 2016 article by Michael Isikoff was independent corroboration of the salacious, unverified allegations against Trump in the infamous Steele Dossier. Federal authorities used both the Steele Dossier and Yahoo News article to convince the FISA court to authorize a surveillance warrant for Page.
>
> But London court records show that contrary to the FBI's assessments, Steele briefed Yahoo News and other reporters in the fall of 2016 at the direction of Fusion GPS — the opposition research firm behind the dossier.
>
> The revelations are contained in heavily-redacted documents released over the weekend after a Freedom of Information lawsuit by the organization Judicial Watch.

> The materials released by the DOJ include an October 2016 application to the Foreign Intelligence Surveillance Court to wiretap Page as well as several renewal applications.

So, there was only one source used as the basis for the surveillance warrant request: Steele's dossier. The articles that appeared in the mainstream media was all based on Steele himself.

Conservative Review has more on what was in the released FBI and DOJ memos:

> Over 400 pages of documents related to the FISA court warrant applications to surveil former Trump campaign operative Carter Page have been released. Now we know for certain: The unverified "Steele dossier" was used as evidence to get a warrant to spy on Page.
>
> Though heavily redacted, the documents make clear that the FBI told the FISA court Page is a Russian agent who was betraying the United States. The dossier, which was funded by the Hillary Clinton presidential campaign, served as the first piece of evidence cited to allege Page coordinated with the Russians to influence the election. The FBI cited additional evidence, an article written by Michael Isikoff for Yahoo news, but failed to disclose that Isikoff received his information from Christopher Steele, the ex-British spy who authored the dossier.
>
> What does that mean? It means that the FBI presented unverified campaign opposition research to FISA court judges to spy on Page, and the judges signed off on the applications.

So, who paid for the Steele dossier?

The far-left Washington Post explains:

> The Hillary Clinton campaign and the Democratic National Committee helped fund research that resulted in a now-famous dossier containing allegations about President Trump's connections to Russia and possible coordination between his campaign and the Kremlin, people familiar with the matter said.
>
> Marc E. Elias, a lawyer representing the Clinton campaign and the DNC, retained Fusion GPS, a Washington firm, to conduct the research.
>
> After that, Fusion GPS hired dossier author Christopher Steele, a former British intelligence officer with ties to the FBI and the U.S. intelligence community, according to those people, who spoke on the condition of anonymity.
>
> Elias and his law firm, Perkins Coie, retained the company in April 2016 on behalf of the Clinton campaign and the DNC. Before that agreement, Fusion GPS's research into Trump was funded by an unknown Republican client during the GOP primary.
>
> The Clinton campaign and the DNC, through the law firm, continued to fund Fusion GPS's research through the end of October 2016, days before Election Day.

The FBI and DOJ didn’t tell the FISA court about who was funding the Steele dossier when they applied for the warrant. Because if they had, they would have been denied the warrant. No FISA court would approve surveillance of the Republican party if the sole basis for the warrant was uncorroborated opposition research funded by the Democrat party. In order to get the FISA warrant, the request had to be written in such a way that the funding of the Steele dossier was not revealed, and Steele was not declared to be the source of the news articles used as corroborating evidence.

Democrats oppose bill to protect faith-based adoption and foster-care agencies

July 24, 2018 | by Wintery Knight | Link | Original Link

Anti-marriage gay activists vandalize church

Republicans are doing a good thing by making sure that Christian-owned adoption agencies and foster-care agencies are allowed to operate in line with Christian moral values. They've introduced legislation to protect these businesses from being sued because they prefer to place children in homes where a mother and a father are present. The Democrats are not happy, though.

The Federalist explains:

> A House committee passed a bill earlier this month that would allow faith-based adoption and foster-care agencies to continue operating in accord with their moral beliefs. Democrats responded calling the Child Welfare Provider Inclusion Act "disgusting, deeply immoral and profoundly offensive," "unconscionable," and "shockingly biased."
>
> The Inclusion Act was first introduced in 2014 to protect faith-based adoption agencies and foster care providers from state and local governments' discrimination against their services solely because of their religious mission to place children in loving homes with both a mother and a father. The bill sought to counteract a growing trend of invidious discrimination on the basis of faith. It became even more necessary when the city of Philadelphia moved to shut down faith-based foster-care providers earlier this year.

The law doesn't force LGBT-friendly agencies to do anything, it merely protects faith-based agencies from the kind of fascistic lawfare practices we've seen in the Masterpiece Cakeshop and Arlenes Flower's cases, where Christians are bullied by the secular state to

act as if they were non-Christians.

The article explains:

> Different providers recruit different types of families. For example, Christian providers, which often work directly with churches or other faith-based charities, usually recruit Christian families. If you get rid of some of the providers, you get rid of some of the families. The fewer providers doing the work of recruitment, the fewer homes for children.
>
> Simple enough, right? Yet the Left obfuscates by claiming LGBT couples should have a right to force providers to violate their faith or go out of business, while showing no concern for children in desperate need of families.
>
> The fact that we are talking about shutting down adoption agencies and foster care providers in the midst of a nationwide opioid crisis, where thousands of children have been displaced from their homes and need families to take care of them, shows just how radical and heartless the progressive movement has grown on any issues labeled LGBT-related. Democrats on the House Appropriations Committee, who voted unanimously to kill the Inclusion Act, made it clear: they would rather see children suffer than tolerate the very existence of faith-based providers. That position is not only indefensible, it's immoral.

It is not the Christian-owned businesses who start these wars by trying to force their views on other people, it's the secular authorities in Democrat-run cities and states who start it.

More:

> Since the legalization of same-sex marriage, faith-based child welfare providers have become an early and frequent target of the Left's pressure campaign. In 2006, Boston Catholic Charities became the first major religious organization to end its adoption services when faced with a choice between violating state law or violating its religious mission of placing children with families with both a mother and a father. Since then, authorities in San Francisco, the District of Columbia, and Illinois have followed suit, forcing faith-based agencies out of their child welfare systems. In Illinois, 3,000 children were displaced as a result.
>
> In Philadelphia, Catholic Social Services is fighting to keep its adoption agency's doors open amidst pressure from city authorities to abandon its religious mission. The city is presently facing an adoption crisis and could badly use the help of providers such as Catholic Social Services, which currently has 35 open homes for children. Instead, Philadelphia has chosen to fight these faith-based providers in court, putting radical identity politics ahead of children's real needs.
>
> […]A number of Catholic hospitals have faced lawsuits for declining to facilitate transgender mutilation procedures. States like California and Illinois have gone after pregnancy centers for refusing to promote abortion. Faith-based schools could also soon find themselves in danger of closure by blaspheming to adhere to

> leftist orthodoxy.
>
> Furthermore, there are signs even churches could eventually find themselves under attack. In Iowa and Massachusetts, houses of worship have already had to take legal measures to combat attempts to force them to open their bathrooms and other public facilities based on an individual's "gender identity," which would violate their understanding of human nature. Given current trends, it seems unlikely these will be the last attempts to force churches to substitute political correctness for their doctrine.

When the secular left presents their views, they make themselves sound so nice and tolerant. But the truth is that they are the ones who weaponize the state and law to force Christians to act against their moral convictions, or be shut down. That's actually happened with these Catholic adoption agencies.

It's very important for Christians to be discerning about what the Bible actually says about issues like sex outside of marriage, homosexuality, marriage and so on. Because if Christians don't inform themselves with facts, it's very easy for them to be dragged along into supporting a progressive agenda because it's presented to them as good and noble. We need to do a better job of thinking with our minds, instead of with our feelings. Especially when the issue is the safety and welfare of children. In the vast majority of cases, children do better with a Mom and a Dad, and that's undeniable.

Lori Alexander is right: serious Christian men prefer debt-free virgins without tattoos

July 25, 2018 | by Wintery Knight | Link | Original Link

Marriage stability vs sexual partners,(Teachman et al. JAMF, August 2010)

Christian writer Lori Alexander recently wrote a blog post (H/T Lindsay) urging Christian women to do 3 things:

1. be a virgin before marriage
2. be debt-free before marriage
3. don't get any tattoos

She also urged women to be cautious about college, because it often gets them into debt. I disagree with her a little here. I always urge young women to earn a STEM degree in college, then work a few years to pay off their loans (if any) before marrying. This is because women, like men, need to have the experience of doing something hard that they don't "feel" like doing, in order to grow. STEM degrees teach young people that the world doesn't revolve around them, and that their feelings don't matter when trying to solve a problem in the real world. It's a very useful way for women and men to break themselves out of the desire for free and easy happiness that is so common in our time.

Lori's article drew enormous opposition from both secular and Christian sources. So far, the only people defending her are men's rights sites, like Dalrock (Christian) and Spawny (non-Christian). Every other "Christian" blog or news site that I read disagreed her article, and argued that premarital sex was no big deal, that having debt was no big deal, and

that having tattoos was no big deal.

Let's take a look at her three points, then I'll explain why her article is largely correct, and why she is correct about what she asserts about the criteria that godly men have for women.

Even one non-husband premarital sex partner raises risk of divorce

Virginity

Regarding her first point, virginity is commanded by the Bible, it's in line with peer-reviewed studies on marriage quality and stability. The reason that people find this difficult is that they want the freedom to give in to sexual desires without feeling shame. They want to believe that there is no permanent effect. It doesn't help that parents and pastors are terrified of telling young people, and young women in particular, that promiscuity harms marital stability. Right now, the culture is drowning in feminism. Feminism tells women that the traditional male roles of provider, protector, and spiritual leader are "sexist". The "best" men are good-looking pro-abortion bad boys. If a Christian woman is not able to think through the meaning of sex with respect to marriage enough to control herself, it seriously harms the stability of her future marriage.

Majors by Salary Potential – Full List

RANK	MAJOR	STARTING SALARY	MID-CAREER SALARY
1	Petroleum Engineering	$98,000	$163,000
2	Aerospace Engineering	$62,500	$118,000
3	Actuarial Mathematics	$56,100	$112,000
4	Chemical Engineering	$67,500	$111,000
5	Nuclear Engineering	$66,800	$107,000
6	Electrical Engineering (EE)	$63,400	$106,000
7	Computer Engineering (CE)	$62,700	$105,000
8	Applied Mathematics	$50,800	$102,000
9	Computer Science (CS)	$58,400	$100,000
10	Statistics	$49,300	$99,500
11	Physics	$51,200	$99,100
12	Mechanical Engineering (ME)	$60,100	$98,400
13	Biomedical Engineering (BME)	$54,900	$98,200

Starting and Mid-Career salaries by profession (click for larger image)

Debt-free

Regarding her second point, almost everything a serious Christian man might plan to do for Christ with his marriage is impacted by finances. From education, to marriage timing, to number of children, to home ownership, early investment, to the success of children. to age of retirement. Less money means fewer choices, and less ability to counter challenges. Think of how important money for legal defense is to Christian-owned businesses who are being persecuted, for example. The reason that many people find the Bible's teaching on stewardship difficult is that they don't want to exercise self-control with money if they don't feel like it. They want to waste money seeking fun and thrills, and then act like their poverty could not be avoided. Being debt-free is an indicator of practical wisdom and self-control in a woman.

CHAPTER 9

Tattoos: Don't

This piece of advice may arrive a bit late for you, but I'd rather discomfit you than leave unsaid a reality check for younger friends.

Fads fade; tattoos don't. These permanent displays of youthful exuberance trigger at best mild amusement, but in some a serious concern about your maturity.

Whether or not you believe that concern to be fair, it is real. The tattoo you cover today will be an obstacle in some situations the rest of your life. Do you need it that much? Is it worth compromising your effectiveness?

This rule of tattoos is easily applied to many other areas of your style of living. Do you do anything to call attention to yourself or to make a statement? If so, is the attention worth it? Most such indulgences are self-defeating, whether it is idiosyncratic hair or clothes, a loud motorcycle, or—later in life—a palatial residence far beyond any ordinary need. The attention you are drawing to yourself is defeating your ambition by marking you as concerned with silly things.

Serious people do not seek attention except for serious purposes.

Chapter 9 of Hugh Hewitt's "In, But Not Of: A Guide to Christian Ambition"

Tattoos

Tattoos are a problem for serious Christian men for several reasons. First, they cost money and for no gain, and can even cause you losses in your career. Second, most people get them because of low self-esteem or vanity or to look rebellious or to look dangerous. None of these motivations should be acted upon by someone with a robust Christian worldview. The money could be better used on charity, or investments, etc. Women show what their priorities really are by how they spend their money and time. Show me a woman's bookshelf, and I'll tell you how seriously she has thought about what it means to be a Christian in all areas of life. Instead of showing me your tattoos to demonstrate your "spirituality", show me your apologetics books, to demonstrate your intellectual engagement. And tell me how you used that information to engage in conversations with educated non-Christians to answer their challenges to your faith. That way I'll know that you use your money to train do hard things in order to have an influence for Christ in serious, practical, effective ways. A woman who can defend her faith and discuss Christianity with non-Christians is demonstrating her ability to raise Christian children in a secular society.

A family praying and reading the Bible

The goal of marriage is to serve God

Today, young people have been taught to follow their hearts, and to deny that there is any authority or practical wisdom that should govern their decisions. They always imagine themselves to be exempt from moral rules, statistics, cause and effect, etc. They think they know better than everyone else – even though they do almost no research on their own. Every adviser who tells them to study computer science instead of creative writing is wrong. Their same-age friends know more about what causes divorces than peer-reviewed research papers. And money should be spent on skydiving and zip-lining, regardless of what financial experts like Dave Ramsey might say.

A woman who has made many mistakes cannot fix those mistakes with words. Rationalizations, evasions, and blame-shifting do not work to show that there has been real repentance. The man can only assess whether grace has caused any real re-prioritization of goals by evaluating her outward actions over a long period of time. Furthermore, if a woman who has made mistakes attacks those who correct her from Bible's teachings on chastity, stewardship, etc., then it's a sign that there is no real repentance.

Choosing a wife wisely doesn't mean that Christian men treat OTHER Christian women poorly. Christian men love all the Christian women. We care for them and support them. But when a man chooses a wife, he is choosing someone who will have more influence on his ability to serve God than anyone else. In my case, the goals for my marriage involve making a difference with apologetics in the church, having many children who will receive the educations and careers they need to have an influence, influencing government to promote Christian-friendly policies, charitable giving, mentoring young Christians, modeling a good marriage to others, and having a home that can serve to host discussions about issues that matter. These things are not free – they take careful planning and execution to achieve.

Lori's advice is intended for men who are serious about making their marriage produce a return for God. Men who are chaste themselves. Men who accept the Bible as an

authority. Men who earned STEM degrees, instead of easy nonsense degrees that don't lead to good careers. Men who earn 6-figure salaries, who buy houses for cash, and who are on track have a 7-figure net worth by age 50. Men who made good decisions cannot risk marrying someone who hasn't prepared for marriage. The wrong woman in the home could ruin the man's effort to produce a marriage that gives glory to God.

Not every man intends to achieve something for God with his marriage, but those who do need to choose a woman who has demonstrated ability at doing the job. For example, if the job requires marital fidelity, then chastity is a good indicator that the woman has the necessary self-control. If the job requires frugality, and practicality, then being debt-free, having a STEM degree, and having some private sector work experience are good indicators that she's qualified for the role. Nothing valuable in life is ever been achieved by being lazy, wild and irresponsible. Serious Christian men look for wives who have applied themselves to difficult tasks that they didn't feel like doing, who achieved success by remaining committed to the plan, in spite of their unhappy feelings and unmet desires.

We have a problem in the church such that we aren't serious about teaching young people to develop marriage-ready character and to make serious plans for marriage. We are teaching them to follow their hearts, and that their feelings and desires are clues about God's will for their happiness. We are teaching them to be uncomfortable with responsibilities, expectations and obligations to others. We are teaching them not to do their own research. We are teaching them not to make practical, wise plans. We are teaching them to ATTACK those who try to get them to be serious about doing what is likely to work. This approach is not working.

My own criteria for a wife are more demanding than Lori's. My advice there is only for serious Christian men who want their marriage to serve God.

How the discovery of the cosmic microwave background radiation falsified atheism

July 26, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p.

20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of the cosmic microwave background radiation.

Here's the history of how that discovery happened, from the American Physical Society web site:

> Bell Labs radio astronomers Arno Penzias and Robert Wilson were using a large horn antenna in 1964 and 1965 to map signals from the Milky Way, when they serendipitously discovered the CMB. As written in the citation, "This unexpected discovery, offering strong evidence that the universe began with the Big Bang, ushered in experimental cosmology." Penzias and Wilson shared the Nobel Prize in Physics in 1978 in honor of their findings.
>
> The CMB is "noise" leftover from the creation of the Universe. The microwave radiation is only 3 degrees above Absolute Zero or -270 degrees C,1 and is uniformly perceptible from all directions. Its presence demonstrates that that our universe began in an extremely hot and violent explosion, called the Big Bang, 13.7 billion years ago.
>
> In 1960, Bell Labs built a 20-foot horn-shaped antenna in Holmdel, NJ to be used with an early satellite system called Echo. The intention was to collect and amplify radio signals to send them across long distances, but within a few years, another satellite was launched and Echo became obsolete.2
>
> With the antenna no longer tied to commercial applications, it was now free for research. Penzias and Wilson jumped at the chance to use it to analyze radio signals from the spaces between galaxies.3 But when they began to employ it, they encountered a persistent "noise" of microwaves that came from every direction. If they were to conduct experiments with the antenna, they would have to find a way to remove the static.
>
> Penzias and Wilson tested everything they could think of to rule out the source of the radiation racket. They knew it wasn't radiation from the Milky Way or extraterrestrial radio sources. They pointed the antenna towards New York City to rule out "urban interference", and did analysis to dismiss possible military testing from their list.4
>
> Then they found droppings of pigeons nesting in the antenna. They cleaned out the mess and tried removing the birds and discouraging them from roosting, but they kept flying back. "To get rid of them, we finally found the most humane thing was to get a shot gun…and at very close range [we] just killed them instantly. It's not something I'm happy about, but that seemed like the only way out of our dilemma," said Penzias.5 "And so the pigeons left with a smaller bang, but the noise remained, coming from every direction."6
>
> At the same time, the two astronomers learned that Princeton University

> physicist Robert Dicke had predicted that if the Big Bang had occurred, there would be low level radiation found throughout the universe. Dicke was about to design an experiment to test this hypothesis when he was contacted by Penzias. Upon hearing of Penzias' and Wilson's discovery, Dicke turned to his laboratory colleagues and said "well boys, we've been scooped."7
>
> Although both groups published their results in Astrophysical Journal Letters, only Penzias and Wilson received the Nobel Prize for the discovery of the CMB.
>
> The horn antenna was designated a National Historic Landmark in 1990. Its significance in fostering a new appreciation for the field of cosmology and a better understanding of our origins can be summed up by the following: **"Scientists have labeled the discovery [of the CMB] the greatest scientific discovery of the 20th century."**8

It's the greatest scientific discovery of the 20th century.

In the New York Times, Arno Penzias commented on his discovery – the greatest discovery of the 20th century – so:

> The best data we have [concerning the Big Bang] are exactly what I would have predicted, had I nothing to go on but the five books of Moses, the Psalms, the bible as a whole.

Just one problem with the greatest scientific discovery of the 20th century: atheists don't accept it. Why not?

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation

- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

Are men allowed to have preferences about which women are best for marriage?

July 27, 2018 | by Wintery Knight | Link | Original Link

Telling a woman how to make wise decisions protects her

So, in my last post, I explained why men have to be careful about choosing a wife. Men have plans and they need a woman with the right skills to achieve it. Even if a woman genuinely repents her past, she may not have developed the skills for a godly man's marriage plan. For example, her 50K of student loans makes it harder to afford a stay-at-home homeschooling mother.

But many Christian women feel that there is no such thing as a Christian woman who is a bad candidate for marriage. It doesn't matter what a Christian woman did in the past, a man should not be allowed to evaluate her skills for the roles of wife and mother. After all, if God forgives a Christian woman for running up student loan debt for a useless women's studies degree, or for getting drunk and sleeping around with hawt bad boys in college, then no Christian man should hold it against her. Men are *obligated t*o disregard the past anti-marriage decisions made by women. To do anything else is to deny the Gospel of Jesus Christ. So many Christian women say.

What would happen if the shoe were on the other foot? What if it were the MAN who had been selfish, lazy and irresponsible? What if the MAN had made choices that seriously harmed his ability to perform male marriage roles like protecting and providing for his wife and children? Would marriage-ready women be *obligated* to marry this man as much as a man who had remained chaste, got a good education, built up a gapless resume, saved enough for a downpayment on a house, and taught apologetics in his home church? Is she allowed to prefer a man who has made good decisions to prepare for his marriage roles over a man who has made horrible decisions, but just hollers "grace" when anyone questions his ability to be a husband and father?

This MUST-READ article from The Federalist asks and answers that question. (H/T Lindsay)

Do you agree with the author?

> I think it's time for a conversation about another elephant in the room: this idea that women prefer physically fit men with good jobs and no criminal record. It's incredibly sexist and matriarchal to insist that women have a natural preference for men who have invested time and energy into stewarding their bodies, have shown the capability of earning a living and supporting a family, and have not gone to jail for attempting to grow 452 marijuana plants in their mother's basement.
>
> I know more than a few men who spent their twenties languishing in their parents' homes, subsisting on Cheetos and Mountain Dew, playing Xbox, watching pornography, and smoking controlled substances. If one of these men turns his life around, accepts Jesus, and starts fresh, young women have no right to overlook him as a potential mate just because he is 280 pounds, has almost no marketable skills at 30 years old, and cannot vote, serve on a jury, or own a firearm. He is created in the image of God, and accepted by Jesus! Any women who would overlook every other noble quality he possesses for basic financial security and a clean background check (not to mention browsing history) isn't a woman he should want.
>
> Men like this have often long since repented of their listless and slothful ways. If the lingering consequences of their pasts didn't stop Christ from living and dying for them, then it shouldn't stop a Christian woman from loving them, either. Period.

The Federalist article makes it clear that a man's poor choices about his education, job, obedience to the law, and physical fitness CLEARLY compromise his ability to perform his male duties to protect and provide. What about moral and spiritual leading? Well if he didn't spent his teens and 20s studying apologetics, moral issues, etc. then he isn't going to compare favorably to a man who teaches apologetics in his church, debates atheists, and writes blog posts for the Life Training Institute.

My friend Lee is a superb stay-at-home wife and mother. She says that we shouldn't accept "Jesus forgives me" as an immediate reversal of past harmful choices:

> I would note that there is a difference between just being forgiven of sin and actually repenting of it. Repenting is a turning away from and will manifest in changes; paying down debts, becoming chaste, becoming otherwise responsible and wise. Someone's past doesn't have to define their future. But that will manifest in observable and measurable changes.

She's right.

I knew a Christian woman who had 25,000 worth of student loan debt when she was 29. She wasn't using her degree, she was just working as a waitress. I found her a job as an IT project manager in an FT100 company, so she could pay off her loans. She declined, because "being a waitress is the easiest job I've ever had". She hasn't worked full-time as

a professional since January 2013. She'll say "Jesus forgives me!" and "I hate my student loans!", but the loans are even larger now, and the wasteful spending on fun and thrills hasn't stopped. Hollering "grace" and saying you hate debt doesn't make you a good steward. She's not ready to manage the finances of a household. If she had taken the job, and paid off the loans, then she would have overcome the mistake, and become marriage-ready.

So what's really behind the hysteria against men evaluating women for marriage?

Deti nails the real root problem:

> Not one person – NOT ONE PERSON – said that nonvirgins with tattoos and debt are bad people; that they are irredeemable, that they're bad Christians; that they cannot be Christians; that they're unsalvageable; that they're ugly; or that they couldn't and shouldn't marry. That is NOT what was said.
>
> All that was said was that men prefer tattooless, debtfree virgins for marriage. That's all.
>
> […]The bible… teaches repentance is the way to salvation. But repentance does not mean you no longer bear the scars of your past sins in body and mind. You do. Oh yes you do. The effects can be minimized, even overcome. But they're still there.
>
> And more to the point, what's really being complained about here is a Christian woman acknowledging that men have preferences and that men are entitled to have preferences. If women want men, then they have to satisfy those preferences or lower their standards until they find men whose preferences they can satisfy.
>
> This can't be overemphasized – it's the idea that men have preferences. Its' the idea that there's a man that's one-half of that relationship, and there are things HE wants, and HE needs, and HE desires. Why does it matter what HE wants? Why do we care about him?
>
> Men don't want to marry high N women. Men don't want to take on debt and they don't prefer markedup tatted up women who look and act like men.
>
> What this gets down to is women objecting to men having standards. Because that leads to men judging women. And that leads to men evaluating women. And that leads to men rejecting some women and accepting others. And women hate judgment and rejection, especially when it's "less than" men who are doing the judging and rejecting.

One of my editors (Mary) didn't think that some readers would know what N means. N refers to the number of sexual partners a person has had.

The reason we discuss best practices for marriage-minded women is so that young women, especially young women who lack a father in the home because of the irresponsible and selfish choices of their mothers, can get some kind of guidance about how to resist the culture's lies about men, sex and marriage. Such a woman has

NOWHERE TO GO in this culture in order to learn how to relate to men, and how to marry to a man who will love her faithfully and forever. That's not fair! We have to help her!

What Christian men are doing by promoting chastity, sobriety, good stewardship and self-control to these young women is *protecting them from a culture that lies to them*. The well-meaning Christian women who think that talking about moral boundaries and wisdom will hurt the feelings of women who have made mistakes are actually making it harder for young women who have no guidance at all. The most vulnerable ones are the ones who need to hear that chastity is wise. Doing a STEM degree is wise. Getting out of debt by spending less is wise. Not seeking attention with graffiti on your body is wise. That's what unmarried women need to hear.

It's amazing to me that so many Christians do not understand the protective value of recommending Biblical morality and Biblical wisdom to young women. They would rather sacrifice these young women to the secular culture than allow older women to feel bad about their past decisions. So many Christians seem to be more concerned about *their own feelings* than about *promoting and defending what the Bible teaches* to young people who really need help.

Are Christians responsible for making plans and making good decisions?

July 28, 2018 | by Wintery Knight | Link | Original Link

Here's a wonderful post on decision making and the will of God posted on Neil's blog. In his post, Neil explains the Biblical model for making good decisions.

Excerpt:

> **Really short version:** Aside from direct and clear personal revelation from God, you don't have access to his sovereign will when making decisions. Therefore you must look at other factors. **If it isn't moral, don't do it. If it is moral but not wise, don't do it. If it is moral and wise, then use your personal preferences.**
>
> Using this model you can end up with a wise and biblical decision, but you have avoided the traps of the "God told me to ____" routine. People who run around saying that God told them this and that convey a super-spirituality that can leave less mature believers wondering if they really have a relationship with God (i.e., "God doesn't tell me every little thing to do, so maybe I don't really know him.").

He has a helpful picture posted as well:

This is actually a very important topic for me, because I like making plans and making good decisions. I like being the quarterback or squad leader of my own life. I like to pick objectives and then make plans to achieve them. (Nothing too exotic, just simple stuff like saving money or reading more books)

Actually, I really oppose the idea that God has a magical fairy tale will for each person that will make them happy and fulfilled. For me, life isn't like that. I don't expect God to

lead me along like a child at a scavenger hunt. I expect to survey the battlefield where I am and then *do something* to make a difference. There are lots of things you can do that will please God. Should you focus on your career and sponsor apologetics conferences? Or should you use your spare time preparing Sunday school lessons? *There are lots of good things you could do to please God*. Your job is to pick the one that will be the most effective. It doesn't matter if it makes you happy, it only matters if it's effective and if you are good at it.

Who is Rifleman Dodd?

A while back, I was busily working my way through the U.S. Marine Corps Official Reading List, and I came across a book by C.S. Forester called *Rifleman Dodd*, or alternatively titled *Death to the French*. It's a work of historical fiction that takes place during the Napoleonic wars. The story is about a British marksman named Dodd, who is cut off from his own lines during a withdrawal maneuver. He is subsequently left to fend for himself behind enemy lines. An ordinary man might be full of despair and forget about his mission entirely. But Dodd is no ordinary man. Not only does he find a way to survive by finding food to eat, water to drink and places to sleep, but he also tries to remember his orders and to think about what he can do to advance the cause of his General, the Duke of Wellington.

Here's an excerpt from a gritty book review:

> It's about a green-coated British infantry rifleman in the Napoleonic Wars, an age when rifles were a novelty and most of the army was red-coated and carried muskets. Private Matthew Dodd gets separated from his regiment during a retreat and finds himself stranded behind enemy (French) lines in Portugal. With the occasional aid of some natives, but mostly on his own, he harasses the French with his rifle and tries to prevent them from building a bridge across the Tagus River. It's a remarkable tale of survival and solitary achievement, of a rank-and-file soldier who lives by his wits and slowly learns to make plans without orders, and shows leadership qualities and a knowledge of warfare.

I think we're in the same situation as Dodd.

There is no point in us looking for breadcrumb trails to happiness at this point. That's not the point of Christianity. The point of Christianity is friendship with God, imitation of Christ, honoring moral obligations, self-sacrificial love for your neighbor (and even your enemies!), and dedication to the truth – whether anyone else likes you or not. It's not supposed to make you happy, and it's not necessarily going to be a normal life like everyone else has. Things may not work out the way you'd like them to.

We seem to be making such a big deal about compassion and forgiveness in the Christian life these days – such a big emphasis on our feelings. Almost like we have forgotten that we have obligations to our friend. A relationship doesn't mean that one person does whatever they feel like, completely disregarding the character and goals of the other person and then is automatically granted forgiveness whenever they want it. That's not a

friendship – that's using someone else for your own ends.

For a lot of people today, Christianity only comes into play after you've made a mistake and you're feeling guilty. For example, suppose you decide to go to a party with your secular friends, then you drink too much, and you do something sexual that you shouldn't have done. Or maybe you watched some prosperity gospel preacher on TV, then made irresponsible business decisions thinking that God would bail you out and make you rich, and you went bankrupt. Most people think Christianity is for this situation: you're a Christian so that you don't have to feel guilty about sin. And so that you can tell people that God forgives you, so that they can't think anything bad about you, either. You sort of get your idea about what you should be doing *in order to feel good* from the culture, and God is just there to forgive it all when it blows up in your face.

But in my case, putting myself in a situation like that is not even possible. I'm more likely to try to plan to do something for God. Like, I might try to mentor a young Christian by sending them books. Or, I might try to teach a class in apologetics at my church. These are things that are for God, not for me. I'm not just being dragged along by the culture, and trying to find happiness by feeling good (e.g. – with alcohol) or being liked by non-Christians. And if my plans fail because the mentoree doesn't grow up into anything, or nobody comes to my apologetics class, that's when I go to God and say "I screwed up. but can I still be in your army?" And God always says yes to that. You don't have to be the best player on the team for the Coach to like you. He already likes you.

One of the great things about being a Christian is that you can never lose your identity as a Christian by failing to do something for him that you planned to do. That's what forgiveness is for. If you set out to do something for God's glory, and you mess it all up, that's OK. But I do think that, like Dodd, our ambition should not be about just making ourselves happy, or making non-Christians like us. We should be trying to make plans and carry them out for God.

That's how I understand forgiveness. It's not just something that's there for you to use to fix your feelings when you've been irresponsible while seeking your own happiness in secular ways. It's also there when you're trying to do something good for God, and you fail. A lot of times in life you try your best, but you fail, and then you lose something that you really wanted. With God, when you try your best for his glory, and fail, you don't lose your identity as a member of his team. I think that not losing your identity in Christ is even more important than not feeling guilty about selfish decision making.

So, have you got a plan to serve your General? Let's focus more on what operations we're planning for God than on being happy and being popular with non-Christians. Your life should not be all about you, with God just there to make your bad feelings go away. Your life should be about God's goals and God's interests.

Robert Gagnon debates gay activist Jayne Ozanne on Bible vs homosexuality

July 29, 2018 | by Wintery Knight | Link | Original Link

Gay activist vandalizes pro-marriage sign

I am tempted to say that this is the best podcast I have ever heard on the Unbelievable show. Do anything you have to do in order to listen to this podcast.

Details:

> Prof Robert Gagnon has become a well-known voice advocating the traditional biblical view on sexuality. In a highly charged show he debates the scriptural issues on sexuality with Jayne Ozanne, the director of Accepting Evangelicals who came out as gay earlier this year.

The MP3 file is here.

If you can only listen for 15 minutes, then start at 49 minutes in and listen from there.

The following summary is rated MUP for made-up paraphrase. Reader discretion is advised.

Summary:

Intro:

- Speaker introductions
- Gagnon: scholars who support gay marriage agree that the Bible doesn't support it
- Gagnon: scholars who support gay marriage agree Jesus taught male-female marriage
- Ozanne: I went to the hospital because I was sick from trying to suppress my gay desires
- Ozanne: Doctors told me that I would die if I didn't act on my gay desires
- Ozanne: I decided to reinterpret the Bible to fit with my gay desires

- Ozanne: According to my new interpretation, Jesus actually supports my gay desires

Segment 1: Genesis

- Ozanne: In Genesis the Bible says that Adam needs a woman to complete him
- Ozanne: I reinterpret this to mean that Adam needed a “complementarian human being”
- Ozanne: Genesis doesn’t say whether Eve was complemented by Adam in that chapter
- Ozanne: It’s not critical that men are complemented by women, a man could complement a man
- Ozanne: Genesis 2 doesn’t talk about children, it’s all about adult needs from a relationship
- Gagnon: Genesis 2 has never been interpreted that way in all of history
- Gagnon: Genesis 2 language specifically implies a human being who is opposite/different
- Gagnon: Genesis 2 language translates to complement or counterpart
- Gagnon: Genesis as a whole teaches that the sexuality is for male and female natures
- Gagnon: The extraction of something from the man that is given to the woman is complementarian
- Ozanne: I think that people can be complementary outside of male-female Genesis language
- Ozanne: I don’t want to discuss specific words and texts and Greek meanings
- Gagnon: the text has always been read and interpreted to support male/female complementarity
- Gagnon: the male-female nature argument is made because the two natures are complementary
- Ozanne: the text was interpreted by patriarchal males who treated women like property, it’s biased
- Ozanne: what is important to me is how Christ interprets Genesis (?? how does she know that?)
- Ozanne: I am passionate about my interpretation of Scripture which supports my gay desires
- Gagnon: just because a person is passionate about their interpretation it doesn’t make it right
- Gagnon: I am not arguing for the male-female view based on passion, but on scholarship, evidence and history
- Ozanne: both sides are equally passionate about their interpretations (?? so both are equally warranted?)
- Ozanne: the real question is why God “allowed” two different interpretations of Scripture

Segment 2: Is homosexuality a sin?

- Gagnon: Jesus affirmed traditional sexual morality, which forbids homosexuality
- Gagnon: Jesus teaches that marriage is male-female, and limited to two people
- Gagnon: No one in history has interpreted the Bible to say that homosexuality was not immoral
- Ozanne: Jesus came to bring life, and that means he supports homosexuality
- Ozanne: I was dying, and embracing my gay desires allowed me to live, so Jesus approves of me
- Ozanne: God says "I am who I am" and that means he approves of me doing whatever I want
- Ozanne: There is an imperative to be who I am, and that means embracing my gay desires
- Gagnon: Jesus argued that the twoness of the sexual bond is based on the twoness of the sexes
- Gagnon: Jesus did not come to gratify people's innate desires, he called people to repent of sin
- Gagnon: Jesus did reach out to sinners but he never condoned the sins they committed
- Gagnon: Jesus' outreach to tax collectors collecting too much and sexual sinners is the same: STOP SINNING
- Ozanne: I don't think that Romans 1 is talking about homosexuality
- Ozanne: I think it's talking about sexual addiction, not loving, committed gay relationships
- Ozanne: Paul was condemning pederasty in Romans 1, not loving, long-term, consensual sexual relationships between gay adults
- Gagnon: nothing in the passage limits the condemnation to pederasty
- Gagnon: the passage was never interpreted to be limited to pederasty in history
- Gagnon: rabbis and church fathers knew about committed two-adult same-sex relationships, and said they were wrong
- Gagnon: the argument for marriage is based on the broad two-nature argument, with no exceptions
- Gagnon: the condemnation is not limited to exploitative / coercive / lustful / uncommitted relationships
- Gagnon: even pro-gay scholars agree the passage cannot be interpreted Ozanne's way (he names two)

Segment 3: The showdown (49:00)

- Ozanne: I don't care how many pages people have written on this
- Ozanne: God says that "the wisdom of the wise I will frustrate" so you can't use scholars, even pro-gay scholars, to argue against my passionate interpretation
- Ozanne: I am not interested in the text or history or scholarship or even pro-gay

scholars who agree with you
- Ozanne: what decides the issue for me is my mystical feelings about God's love which makes my sexual desires moral
- Ozanne: you are certain that this is wrong, but your view does not "give life" to people
- Ozanne: your scholarship and historical analysis is "a message of death" that causes teenagers to commit suicide (= you are evil and a meany, Robert)
- Ozanne: "I pray for you and your soul" (= opposing me will land you in Hell) and "I hope that listeners will listen with their hearts" (?? instead of their minds?)
- Ozanne: you can prove anything you want with research, even two mutually exclusive conclusions, so you shouldn't rely on scholarship and research since it could be used to prove my view as well
- Ozanne: instead of relying on research, you should rely on your heart and your feelings about God's love to decide what the Bible teaches about sexual morality
- Gagnon: you are distorting the gospel in order to make your case
- Gagnon: attacking my "certainty" is an ad hominem attack to cover your dismissmal of the scholarship and history
- Gagnon: you distort the gospel to make it seem like Christ just wants us to get what we want, when we want it, with who we want it with
- Gagnon: Christ calls us to take up our cross, to lose our lives and to deny ourselves
- Gagnon: you have a notion of what "fullness of life" is, but it's not reflective of the gospel
- Gagnon: Paul's life was much more troubling than yours, mine or anyone else around here
- Gagnon: Paul was beaten, whipped, stoned, poorly sheltered, poorly clothed, poorly fed, shipwrecked, and anxious for his churches
- Gagnon: on your view, he should have been miserable and angry with God all the time
- Gagnon: but instead Paul was constantly thankful and rejoicing to be able to suffer with Jesus and look forward to the resurrection
- Gagnon: I have suffered too, but the suffering we go through never provides us with a license to violate the commandments of God
- Ozanne: "the ultimate thing is what people feel God has called them to"
- Ozanne: My goal right now is to tell young people that homosexuality is fine so they don't commit suicide
- Ozanne: the view that homosexuality is wrong is "evil and misguided"
- Gagnon: the greater rates of harm in the gay community are intrinsic to homosexual unions, not caused by external disapproval of homosexuality

Segment 4: Concluding statements

- Gagnon: gay male relationships on average have more sex partners and more STDs
- Gagnon: female relationships on average have shorter-length relationships and

more mental issues
- Gagnon: the greater rates of harm are because there is no complementarity / balance in the relationships
- Gagnon: everyone has some disappointment or suffering in their lives that hurts them, and that they are tempted to break the rules to fix, but we should not break the rules in order to be happy
- Ozanne: both sides are passionate, so no one can be right, and evidence proves nothing
- Ozanne: only feelings about “what God is doing” can allow us to decide what counts as sin or not
- Ozanne: the main thing that is at stake here is to make people like us, not to decide what the Bible says about sin
- Ozanne: my message to people is to do whatever you want, and ignore mean people who don’t affirm you
- Ozanne: we should be more opposed to mean people who make non-Christians feel unloved than about doing what the Bible says

New study: 1 in 8 divorces is caused by student loan debt

July 30, 2018 | by Wintery Knight | Link | Original Link

I already mentioned the studies that show that marrying a non-virgin is less stable than marrying a virgin. But what about student loans? Are they a risk factor for divorce, too? I was reading over at Captain Capitalism and saw this CNBC article, which discusses data relevant to our recent discussion about whether men ought to prefer debt-free virgins without tattoos.

Excerpt:

> When it comes to student loan debt, "for richer, for poorer" doesn't quite cut it.
>
> In general, finances are the leading cause of stress in a relationship, according to a study by SunTrust Bank, but student debt takes a particularly hard toll on a marriage.
>
> More than a third of borrowers said college loans and other money factors contributed to their divorce, according to a recent report from Student Loan Hero, a website for managing education debt.
>
> In fact, 13 percent of divorcees blame student loans specifically for ending their relationship, the report found. Student Loan Hero surveyed more than 800 divorced adults in June.

Now, when deciding whether to marry and who to marry, it does make sense to me to think about what needs to be bought and how much these things cost, and where the money will come from. It just makes sense to me that people who are REALLY interested in marriage will be interested in *doing what works to prepare for marriage*. You can't just do whatever you want before marrying, because marriage involves being faithful to your spouse, and buying things that you need for the marriage enterprise, like a home, and baby stuff. It doesn't make any sense to say "I want to get married" and then not prepare for marriage by being careful about what behavior marriage requires of you.

This 2017 article from Harvard Business Review is interesting.

It says:

> Examining 46,934 resumes shared on Glassdoor by people who graduated between 2010 and 2017, the researchers looked at each person's college major and their post-college jobs in the five years after graduation. They then estimated the median pay for each of those jobs (also using Glassdoor data) for employees with five years of experience or less. Their key finding: "Many college majors that lead to high-paying roles in tech and engineering are male dominated, while majors that lead to lower-paying roles in social sciences and liberal arts tend to be female dominated, placing men in higher-paying career

> pathways, on average."

Here's the plot, and you can click it to expand it:

Median salaries by major, broken out by gender – don't study things at the bottom! Maybe we can just simplify this whole issue by saying "it's unwise to marry people who choose not to prepare themselves for marriage". That goes for men and women, by the way. Basically, you can avoid student loans if you study something that you don't feel like studying, and work jobs that you don't feel like working, and don't buy things that you feel like buying. Don't marry people who are led by their feelings. Marry someone who demonstrates self-control.

Anyway, I feel obligated to post a relevant Dave Ramsey video, just to remind everyone that stewardship of money is a Christian virtue, and that being forgiven by Jesus for your sins doesn't make you good with money.

This one from 2014: (H/T Robb)

When I was in high school, I was far more interested in becoming an English teacher than I was in becoming a software engineer. It was my Dad who overruled my choice of college major when I was still in high school. He had me take a first-year English course at a local university. When I saw how politicized and useless it was (they were studying all sorts of politically correct postmodern relativist stuff, instead of the Great Works, and they weren't trying to learn any wisdom from any of it), I chose computer science. I did what was likely to work, instead of what was easy and fun and made me feel good. I think this makes me a grown-up. And marriage should only be done if there are two grown-ups involved in the enterprise.

New study: “Medicare For All” would cost $32.6 trillion, but it’s actually more

July 31, 2018 | by Wintery Knight | Link | Original Link

A Christian friend of mine who is divorced with children surprised me by telling me that she favored single payer health-care. I asked her if she realized that people would have to be taxed to pay for all this free health care, and she seemed to be aware of it. But even I didn’t realize how much it would really cost.

Investor’s Business Daily reports on a couple of recent studies – one from the left, and one from the far-left – that both agreed on the price tag for universal health care.

Excerpt:

> Last year, 16 Senators, including three presidential hopefuls, co-sponsored Sanders’ “Medicare for all” bill. And earlier this month, more than 70 Democrats signed on to form a “Medicare for all” caucus. Support for the bill is now something of a litmus test for Democratic hopefuls.
>
> Do they have any idea what they’re endorsing?
>
> A new study out Monday from George Mason University’s Mercatus Center finds that Sanders plan would add to federal spending in its first 10 years, with costs steadily rising from there. That closely matches other studies — including one by the liberal Urban Institute — that looked at Sanders’ plan.
>
> To put this in perspective, “Medicare for all” would the size of the already bloated federal government. Doubling corporate and individual income taxes wouldn’t cover the costs.
>
> Even this is wildly optimistic. To get to this number, author Charles Blahous had to make several completely unrealistic assumptions about savings under Sanders’ hugely disruptive plan.
>
> The first is a massive cut in payments to providers. Sanders wants to apply Medicare’s below-market rates across the board, which would amount to a roughly 40% cut in payments to doctors and hospitals. Blahous figures this will save hundreds of billions of dollars a year.
>
> But cuts of that magnitude would drive doctors out of medicine and hospitals out of business, since the only way providers can afford Medicare’s cut-rate reimbursements today is by charging private payers more.
>
> The study also assumes that shoving everyone into a government health care plan would cut administrative costs by $1.6 trillion over the next decade and prescription drug costs by $846 billion. Neither of those are likely, and wouldn’t make much of a difference in overall spending anyway. Private insurance overhead accounts for about 6% of national health spending, and drugs less than 10%.

> There's also the fact that every other federal health program has seen costs explode "unexpectedly" after they were enacted. The per-enrollee cost of ObamaCare's Medicaid expansion, for example, is almost 49% higher than expected. Medicare itself cost nearly 10 times as much as projected in its first 25 years.

The author of the Mercatus study was nominated Barack Obama to be a member of the Board of Trustees of the Social Security Trust Funds. That might explain his questionable assumptions about costs. And the Urban Institute is even further to the left. There can be no doubt that the true cost of the Sanders health care plan would be much higher than what these two studies calculated it to be.

Now, you might think that we can just tax the people who earn the most money to pay for all this spending.

In 2012, John Stossel wrote this in Forbes:

> If the IRS grabbed 100 percent of income over $1 million, the take would be just $616 billion.

In 2011, the Tax Foundation explained that even if you taxed ALL THE DISPOSABLE INCOME from all the people who make $200,000 or more, you would only raise $1.53 trillion dollars:

> There's simply not enough wealth in the community of the rich to erase this country's problems by waving some magic tax wand.
>
> […]After everyone making more than $200,000/year has paid taxes, the IRS would need to take every single penny of disposable income they have left. Such an act would raise approximately $1.53 trillion. It may be economically ruinous, but at least this proposal would actually solve the problem.

Taxing the rich isn't enough to pay for single payer health care. $32.6 trillion over 10 years works out to $3.26 trillion per year. We're not going to pay that off even with $1.53 trillion a year of additional revenue. And this is assuming that the wealthy would just allow themselves to be made into slaves, and keep working even if the government takes all their money.

Pretty soon, our mandatory expenses will consume all of our tax revenues

Who is going to pay for all the spending we already have scheduled? As the graph above shows, things are going to get worse in the future as the big entitlement programs pay out more than current tax rates take in. I'm sure glad that I'm going to be retiring before 2032, and I'm not going to be stuck with the bill for this. It's one thing for me to get out of bed every morning to be paid only 75% of what I earn. I certainly wouldn't want to be working if the tax rates here were more like Europe, so that I'd be taking home less than half of what I earn. No thank you!

By the way, it might be a good idea to think about whether you want to have children or not before you vote. Children are expensive, and if we keep electing the big spenders like Obama, then there isn't going to be any money left over to run a family and raise kids. Think about it before you vote with your feelings only.

1 Corinthians 15: the earliest source for the basic facts about the life of Jesus

August 1, 2018 | by Wintery Knight | Link | Original Link

The Son of God became flesh and dwelt among us

First, the creed – which is found in 1 Corinthians 15:3-8:

[3]For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures,

[4]that he was buried, that he was raised on the third day according to the Scriptures,

[5]and that he appeared to Peter, and then to the Twelve.

[6]After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep.

[7]Then he appeared to James, then to all the apostles,

[8]and last of all he appeared to me also, as to one abnormally born.

Almost all historians accept this creed as dating back to within 5 years of the death of Jesus. But why?

Here's a great article from Eric Chabot, director of Ratio Christi Apologetics Alliance, The Ohio State University to explain why.

Excerpt:

> The late Orthodox Jewish scholar Pinchas Lapide was so impressed by the creed of 1 Cor. 15, that he concluded that this "formula of faith may be considered as a statement of eyewitnesses." (5)
>
> Paul's usage of the rabbinic terminology "passed on" and "received" is seen in the creed of 1 Cor. 15:3-8:

> “For what I received I passed on to you as of first importance: that Christ died for our sins according to the Scriptures, that he was buried, that he was raised on the third day according to the Scriptures, and that he appeared to Peter, and then to the Twelve. After that, he appeared to more than five hundred of the brothers at the same time, most of whom are still living, though some have fallen asleep. Then he appeared to James, then to all the apostles, and last of all he appeared to me also, as to one abnormally born.”
>
> […]While the word “received” (a rabbinical term) can also be used in the New Testament of receiving a message or body of instruction or doctrine (1 Cor.11:23; 15:1, 3; Gal. 1:9, 12 [2x], Col 2:6; 1 Thess 2:13; 4:1; 2 Thess 3:6), it also means means “to receive from another.” This entails that Paul received this information from someone else at an even earlier date. 1 Corinthians is dated 50-55 A.D. Since Jesus was crucified in 30-33 A.D. the letter is only 20-25 years after the death of Jesus. But the actual creed here in 1 Cor. 15 was received by Paul much earlier than 55 A.D.
>
> […]Even the co-founder Jesus Seminar member John Dominic Crossan, writes:
>
> “Paul wrote to the Corinthians from Ephesus in the early 50s C.E. But he says in 1 Corinthians 15:3 that “I handed on to you as of first importance which I in turn received.” The most likely source and time for his reception of that tradition would have been Jerusalem in the early 30s when, according to Galatians 1:18, he “went up to Jerusalem to visit Cephas [Peter] and stayed with him fifteen days” (11).
>
> This comment by Crossan makes sense because within the creed Paul calls Peter by his Aramic name, Cephas. Hence, if this tradition originated in the Aramaic language, the two locations that people spoke Aramaic were Galilee and Judea. (12) The Greek term “historeo” is translated as “to visit” or “to interview.” (13) Hence, Paul’s purpose of the trip was probably designed to affirm the resurrection story with Peter who had been an actual eyewitness to the resurrected Christ (1 Cor. 15:5).

I know what you’re thinking. You’re thinking “Hey WK, isn’t John Dominic Crossan that wacky liberal atheist who is on the far-left fringe of historical Jesus scholarship? So wacky, that he actually thought that Secret Gospel of Mark was *real*, instead of just being a hoax?” Yes, that’s the nutty John Dominic Crossan I mean. The very one.

Here’s a bit more about this early creed from Gary Habermas.

Quote:

> Paul is clear that this material was not his own but that he had passed on to others what he had received earlier, as the center of his message (15:3). There are many textual indications that the material pre-dates Paul. Most directly, the apostle employs paredoka and parelabon, the equivalent Greek terms for delivering and receiving rabbinic tradition (cf. 1 Cor. 11:23). Indirect indications

of a traditional text(s) include the sentence structure and verbal parallelism, diction, and the triple sequence of kai hoti Further, several non-Pauline words, the proper names of Cephas (cf. Lk. 24:34) and James, and the possibility of an Aramaic original are all significant. Fuller attests to the unanimity of scholarship here: “It is almost universally agreed today that Paul is here citing tradition.”[4] Critical scholars agree that Paul received the material well before this book was written.[5]

The most popular view is that Paul received this material during his trip to Jerusalem just three years after his conversion, to visit Peter and James, the brother of Jesus (Gal. 1:18-19), both of whose names appear in the appearance list (1 Cor. 15:5; 7). An important hint here is Paul’s use of the verb historesai (1:18), a term that indicates the investigation of a topic.[6] The immediate context both before and after reveals this subject matter: Paul was inquiring concerning the nature of the Gospel proclamation (Gal. 1:11-2:10), of which Jesus’ resurrection was the center (1 Cor. 15:3-4, 14, 17; Gal. 1:11, 16).

Critical scholars generally agree that this pre-Pauline creed(s) may be the earliest in the New Testament. Ulrich Wilckens asserts that it “indubitably goes back to the oldest phase of all in the history of primitive Christianity.”[7] Joachim Jeremias agrees that it is, “the earliest tradition of all.”[8] Perhaps a bit too optimistically, Walter Kasper even thinks that it was possibly even “in use by the end of 30 AD . . . .”[9]

Indicating the wide approval on this subject, even more skeptical scholars frequently agree. Gerd Ludemann maintains that “the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus. . . . not later than three years. . . . the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE. . . .”[10] Similarly, Michael Goulder thinks that it “goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion.”[11] Thomas Sheehan agrees that this tradition “probably goes back to at least 32-34 C.E., that is, to within two to four years of the crucifixion.”[12] Others clearly consent.[13]

Overall, my recent overview of critical sources mentioned above indicates that those who provide a date generally opt for Paul’s reception of this report relatively soon after Jesus’ death, by the early to mid-30s A.D.[14] This provides an additional source that appears just a half step removed from eyewitness testimony.

(3) Paul was so careful to assure the content of his Gospel message, that he made a second trip to Jerusalem (Gal. 2:1-10) specifically to be absolutely sure that he had not been mistaken (2:2). The first time he met with Peter and James (Gal. 1:18-20). On this occasion, the same two men were there, plus the apostle John (2:9). Paul was clearly doing his research by seeking out the chief apostles. As Martin Hengel notes, “Evidently the tradition of I Cor. 15.3 had been subjected

> to many tests" by Paul.[15]
>
> These four apostles were the chief authorities in the early church, and each is represented in the list of those who had seen the resurrected Jesus (1 Cor. 15:5-7). So their confirmation of Paul's Gospel preaching (Gal. 2:9), especially given the apostolic concern to insure doctrinal truth in the early church, is certainly significant. On Paul's word, we are again just a short distance from a firsthand report.
>
> (4) Not only do we have Paul's account that the other major apostles confirmed his Gospel message, but he provides the reverse testimony, too. After listing Jesus' resurrection appearances, Paul tells us he also knew what the other apostles were preaching regarding Jesus' appearances, and it was the same as his own teaching on this subject (1 Cor. 15:11). As one, they proclaimed that Jesus was raised from the dead (15:12, 15). So Paul narrates both the more indirect confirmation of his Gospel message by the apostolic leaders, plus his firsthand, direct approval of their resurrection message.

That's how solid this early creed is – even atheists like Crossan and Ludemann accept it as historically reliable. It's historical bedrock, as Michael Licona likes to say. This is the stuff that *everyone* accepts – across the ideological spectrum. How do you account for this evidence in your worldview, especially given that Paul never recanted his preaching about Jesus?

How the WMAP satellite confirmed nucleosynthesis predictions and falsified atheism

August 2, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Prior to certain scientific discoveries, most people thought that the universe had always been here, and no need to ask who or what may have caused it. But today, that's all changed. Today, the standard model of the origin of the universe is that all the matter and energy in the universe came into being in an event scientists call "The Big Bang". At the creation event, space and time themselves began to exist, and there is no material reality that preceded them.

So a couple of quotes to show that.

> An initial cosmological singularity… forms a past temporal extremity to the universe. We cannot continue physical reasoning, or even the concept of spacetime, through such an extremity… On this view the big bang represents the creation event; the creation not only of all the matter and energy in the universe, but also of spacetime itself.

Source: P. C. W. Davies, "Spacetime Singularities in Cosmology," in The Study of Time III, ed. J. T. Fraser (Berlin: Springer Verlag).

And another quote:

> [A]lmost everyone now believes that the universe, and time itself, had a beginning at the big bang.

Source: Stephen Hawking and Roger Penrose, The Nature of Space and Time, The Isaac Newton Institute Series of Lectures (Princeton, N. J.: Princeton University Press, 1996), p.

20.

So, there are several scientific discoveries that led scientists to accept the creation event, and one of the most interesting and famous is the discovery of how elements heavier than hydrogen were formed.

Nucleosynthesis: forming heavier elements by fusion

Here's the history of how that discovery happened, from the National Aeronautics and Space Administration (NASA) web site:

> The term nucleosynthesis refers to the formation of heavier elements, atomic nuclei with many protons and neutrons, from the fusion of lighter elements. The Big Bang theory predicts that the early universe was a very hot place. One second after the Big Bang, the temperature of the universe was roughly 10 billion degrees and was filled with a sea of neutrons, protons, electrons, anti-electrons (positrons), photons and neutrinos. As the universe cooled, the neutrons either decayed into protons and electrons or combined with protons to make deuterium (an isotope of hydrogen). During the first three minutes of the universe, most of the deuterium combined to make helium. Trace amounts of lithium were also produced at this time. This process of light element formation in the early universe is called "Big Bang nucleosynthesis" (BBN).

The creation hypothesis predicts that there will be specific amounts of these light elements formed as the universe cools down. Do the predictions match with observations?

Yes they do:

> The predicted abundance of deuterium, helium and lithium depends on the density of ordinary matter in the early universe, as shown in the figure at left. These results indicate that the yield of helium is relatively insensitive to the abundance of ordinary matter, above a certain threshold. We generically expect about 24% of the ordinary matter in the universe to be helium produced in the Big Bang. This is in very good agreement with observations and is another major

> triumph for the Big Bang theory.

Moreover, WMAP satellite measurements of mass density agree with our observations of these light element abundances.

Here are the observations from the WMAP satellite:

> >
> Scientific observations match predictions

And here is how those WMAP measurements confirm the Big Bang creation event:

> However, the Big Bang model can be tested further. **Given a precise measurement of the abundance of ordinary matter, the predicted abundances of the other light elements becomes highly constrained. The WMAP satellite is able to directly measure the ordinary matter density and finds a value of 4.6% (±0.2%), indicated by the vertical red line in the graph. This leads to predicted abundances shown by the circles in the graph, which are in good agreement with observed abundances. This is an important and detailed test of nucleosynthesis and is further evidence in support of the Big Bang theory.**

"An important and detailed test".

For completeness, we should learn how elements heavier than these light elements are formed:

> Elements heavier than lithium are all synthesized in stars. During the late stages of stellar evolution, massive stars burn helium to carbon, oxygen, silicon, sulfur, and iron. Elements heavier than iron are produced in two ways: in the outer envelopes of super-giant stars and in the explosion of a supernovae. All carbon-

> based life on Earth is literally composed of stardust.

That's a wonderful thing to tell a young lady when you are on a date: "your body is made of stardust". In fact, as I have argued before, this star formation, which creates the elements necessary for intelligent life, can only be built if the fundamental constants and quantities in the universe are finely-tuned.

Now, you would think that atheists would be happy to find observations that confirm the origin of the universe out of nothing, but they are not. Actually, they are in denial.

Here's a statement from the Secular Humanist Manifesto, which explains what atheists believe about the universe:

> Religious humanists regard the universe as self-existing and not created.

For a couple of examples of how atheistic scientists respond to the evidence for a cosmic beginning, you can check out this post, where we get responses from cosmologist Lawrence Krauss, and physical chemist Peter Atkins.

You cannot have the creation of the universe be true AND a self-existing, eternal universe ALSO be true. Someone has to be wrong. Either the science is wrong, or the atheist manifesto is wrong. I know where I stand.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

The Economist: marriage is still the best place for children

August 3, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

I stopped reading The Economist when they endorsed the socialist failure Barack Obama, who doubled the national debt to $20 trillion in only 8 years. However, even a stopped clock is right twice a day. And here is one of those times.

Excerpt:

> However, there is one big reason to worry about the quality and longevity of people's intimate bonds. It is that relationships often produce children, and children are profoundly affected by how their parents get on.
>
> You could make enough confetti for a summer of weddings with all the academic papers that show how much children gain from being brought up in stable, loving families, and how much they suffer when those families break down. Culture and customs make little difference. In Japan, four-fifths of single-parent households emerge when couples divorce—a much higher share than in the West, where people usually slip into single parenthood without marrying. Japanese children living with only one parent nonetheless perform significantly worse in school tests, just as children from single-parent families do in Europe and America. In poorer countries, family breakdown can kill. According to one recent estimate, the chance that an African child will die before turning five is about 25-30 per 1,000 for those born into stable families, but 35-40 per 1,000 for the children of single, divorced or widowed parents.
>
> Marriage is not always good for children. They do not benefit when a parent marries somebody who is not their mother or father, and seem to suffer if the

> parent they live with cycles through several relationships. What they seem to need most is for their biological parents to stick together. And one strong claim that can be made for marriage is that it appears to glue parents together more tightly than any other arrangement.

This part is key, especially for those millennials who think that cohabitating before marrying makes the marriage more secure:

> Analysis of one large American data set by Kathryn Edin and Laura Tach, two sociologists, shows that 27% of marriages broke down within nine years of a child being born. By contrast, among couples who were merely cohabiting when a child appeared, 53% separated within nine years—and most of the remaining 47% were married by that point. Among couples who were dating but not living together when the child was born, 81% had split up.
>
> Again, this pattern runs across national and cultural borders. Cohabiting couples behave a bit more like married couples in countries where giving birth outside marriage is very common, such as Estonia and Norway. But they seldom attain the same level of stickiness as married couples, even after controlling for the mother's level of education.

Cohabitation doesn't work, because it's basically saying that I'm going to try the other person and see if I like the other person, and that sex is required to know if I like the other person. It doesn't really matter that you know the other person really well, because you can always get out of cohabitation just by leaving. Marriage says that I'm going to commit to the other person for life, through thick and thin. Here, both people tend to do a more thorough job of selecting their partner, perhaps even consulting fathers for advice. Why? Because getting out of a marriage is a lot harder to do, and more expensive.

In the past, I've blogged about some factors that can make your marriage pretty much divorce proof: things like chastity, not spending too much on the wedding, age of the man and woman at marriage, education levels of each spouse, number of people attending the wedding ceremony, isolation from other divorced people, church attendance, and so on. The truth is that you can engineer a marriage that's practically divorce proof. But if you insist on spontaneity and following your heart, then you aren't going to care what studies say works best. A stable marriage takes preparation, and that means making pro-marriage choices all throughout your life before your marriage, instead of doing what feels right to you in the moment. What feels good in the moment is almost never the right choice if your goal is a stable marriage.

The most important thing Christian parents need to focus on with their children

A family praying and reading the Bible

I know what you're thinking – I'm going to say apologetics. But I was actually having a talk with a young women who found the arguments for God convincing, but wasn't sure whether she was ready for a personal relationship with the God of the Bible. It got me thinking about my past and what it was about the God of the Bible that caused me to make a commitment.

If I had to say what it is that cause me to take Christianity seriously, including accepting Jesus as my Leader (more than just as my Savior), it would be the conviction that God was lining things up in my life to show himself to me. This was particularly welcome because I could see that I had not been blessed with the best situation in life to start out with.

Sean McDowell has a recent post about it, and since he is an expert in apologetics, I'm inclined to agree with him.

He writes:

> In his book *The Four Loves*, C.S. Lewis makes a distinction between "Gift-love" and "Need-love." As for Gift-love, he gives the example of a father who works and plans for the future well being of his family, even though he will die without seeing them benefit. As for Need-love, Lewis gives the example of a lonely and frightened child who comes to its mother's arms for comfort and protection. Such love is neither selfish nor improper, because children are intended to have nurturing mothers, and mothers are intended to care for their kids.
>
> According to Lewis, God's love for mankind is entirely Gift-love: "The Father gives all He is and has to the Son. The Son gives Himself back to the Father, and gives

> Himself to the world, and for the world to the Father, and thus gives the world (in Himself) back to the Father too." God does not *need* our love or worship. Rather, He freely loves us as an extension of His grace.
>
> But our love for God is different. While we *may* be able to offer God Gift-love, our love is primarily need based. Lewis explains: "But man's love for God, from the very nature of the case, must always be very largely, and must often be entirely, a Need-love." We desperately need God in both this world and the next.
>
> And then Lewis makes an additional (and helpful) distinction—while our objective need for God will never change, our *awareness* of that need can. And if our awareness of the need for God fades, then so may our faith. Thus, Lewis says:
>
> *There seems no reason for describing as hypocritical the short-lived piety of those whose religion fades away once they have emerged from "danger, necessity or tribulation." Why should they not have been sincere? They were desperate and howled for help. Who wouldn't?*
>
> In other words, if someone believes in God because of an immediate need for safety or comfort, then as soon as the danger or pain ends, so may the faith. How does this relate to students? Think about it. If a young person believes in God for social or relational needs in the family, church, or school, then when those needs fade, so will his or her faith. If belief in God fulfills some external need, then as soon as that need fades, or another venue provides satisfaction of that need, the student will likely abandon his or her faith (or minimally, have a *marginalized* faith).

The whole post is worth reading, because no less than Sean McDowell himself had a moment like this where he realized his own sinfulness and had to rely on Jesus for his forgiveness.

Judging from his tweets, I know that Sean is obsessed with super-heroes like Spider-Man, and so he would not be comparing himself to his peers in terms of righteousness. That sort of distance between you and Spider-Man can be really grating for boys. Inside, we feel like we are meant to be super-heroes. Many young men go into apologetics because they see it as a super-power. The problem of not measuring up is very strong for us, because we see the demands of Christianity as much greater than mere church attendance. I imagine that as Sean engaged with people using his apologetics super-power, he probably realized how difficult it was to know *everything* and give an answer to *everyone.* That's above and beyond the standard shortcomings or pride, anger, hatred, and so on that are inside of every person.

We are not super-heroes but we need to have super-human righteousness (that is, perfect righteousness) in order to stand before our Creator and Designer. The only solution is to rely on the imputed righteousness of Jesus for our super-hero status. It is a good and healthy thing to take on Jesus as King, and to imitate him. But when we fail, we must also rely on him as Savior. And thank God the Father for that provision of salvation. And indeed, I myself think of Jesus as Savior in the moments where I am conscious of my

own sin. But I need to think about him more than that, and I'll explain how next.

In my case, I wanted to be a super hero growing up, but I knew I wasn't coming from a family or a background that made super-heroes. I was saved in a non-Christian home where, thanks to my hands-off "parents", I was on a very dark path to failure. In fact, I can see where I would have ended up by just looking at where my older brother is now. That disaster is what my parents, my schools, my culture, etc. produced in him, and it would have been me except for God stepping in to make himself known. I get excited about God as initiator and architect of salvation (not without my free will to trust). When God architects a divine appointment for me to use my prepared abilities in his defense or in mentoring little ones, I praise God as author of salvation. But I forget that Christ is the one who allows me to be clean enough to participate in this plan.

My ambition from small was to be a super-hero, and this later turned into great respect for people in the military, especially those who are awarded the Medal of Honor, like Michael Murphy. I want God to give me the Medal of Honor, too. But sin ruins my ambition every day. When I am called out to serve and am found faithful and competent, I need to remember that what makes me fit for service is Christ's sacrifice on the cross. His shed blood is the cape that I put on when it is my turn to come off the bench and be who I was designed to be. It is very important to me that the God I serve is the kind of God who won't turn away from me when I fall short.

Where to get help if you have a selfish, absent or abusive mother or father

Bible study that hits the spot

Today, I want to say something this article about lambs in Scotland, written by Sheila Walsh in the The Stream.

She writes:

> I am very fond of sheep. I grew up on the west coast of Scotland with sheep all around me, field after field of white wool and incessant crying when things seemed a little off.
>
> […]Of all the lessons I have learned from these defenseless, gentle animals, the most profound is the most painful. Every now and then, a ewe will give birth to a lamb and immediately reject it. Sometimes the lamb is rejected because they are one of twins and the mother doesn't have enough milk or she is old and frankly quite tired of the whole business. They call those lambs, *bummer lambs*.
>
> Unless the shepherd intervenes, that lamb will die. So the shepherd will take that little lost one into his home and hand feed it from a bottle and keep it warm by the fire. He will wrap it up warm and hold it close enough to hear a heartbeat. When the lamb is strong the shepherd will place it back in the field with the rest of the flock.
>
> "Off you go now, you can do this, I'm right here."
>
> The most beautiful sight to see is when the shepherd approaches his flock in the morning and calls them out, "*Sheep, sheep, sheep*!"

> The first to run to him are the bummer lambs because they know his voice. It's not that they are more loved — it's just that they believe it.
>
> I am so grateful that Christ calls himself the Good Shepherd.
>
> "He calls his own sheep by name and leads them out. After he has gathered his own flock, he walks ahead of them, and they follow him because they know his voice." (John 10:3-4 NLT)

My older brother and I grew up with a mother who was very much focused on her career and earning and saving money for her retirement. We were both stuck in daycare very early after being born, so that she could go back to work right away. (Me after 6 weeks) My older brother has shown the ill effects of our parents (especially our mother) not having any plan for us, especially morally and spiritually. He dropped out of college after failing his first year, never had a career. Although he has normal intelligence and mental health, he never could stick in any real job.

Although there were early warning signs when his grades started to drop in Grade 5, my parents never took responsibility to make a plan to solve it. Oh, they would yell and scream at him at report card time, but just for a day or two, and after that, nothing constructive. My brother decided that he could just ride out the flak my parents gave him on report card night, and keep going with his plan of having fun and being popular. My parents just forgot about it until the next report card day, because they did not want to be distracted from their careers, hobbies and retirement planning. When dispensing rewards, my brother was always given the same as me, despite our different levels of achievement. And my parents considered this equal dispensation of rewards regardless of performance to be a great virtue, and excellent parenting.

I had the exact same upbringing as my older brother. He actually did pretty well until Grade 5 just like me, but then our paths diverged. From Grade 5 on, his grades deterioriated. He got tired of having to study and he was more interested in the opinions of his peers and conforming to popular culture. In my case, from Grade 5 on, my grades were always high-90s. I remember taking the same classes as he did, in the same high school, with the same teachers. He got a 44 in data processing, I got a 96 with the same teacher and won the award for the entire grade. Every class I went to, the teachers would speak fondly of my older brother – he was a nice guy, very popular with his peers, good at sports. But not a very good student. How was it that I was winning awards when he had scored so poorly. Was I really his brother? How could we be so different?

The difference is that in Grade 5, he got a Gideon's New Testament and he read it and he didn't put it into practice, and in Grade 5, I got a Gideon's New Testament and I read it twice and I did put it into practice. That was the difference. I had the awareness of the moral law (i.e.- wisdom) that allowed me to judge my parents and judge my peers and judge my teachers and stand alone. When you cannot rely on anyone to lead you, be able to judge when others mistreat you is very important. That is what allows you to maintain appropriate boundaries and minimize the influence of friends and family who are teaching you self-destructive behaviors. Awareness of the moral law is what allows you to stop

trying to please people who do not want what is best for you. On the other hand, God is always willing to give you wisdom if you ask Him for it, and you can find out all about him because he has left plenty of evidence concerning his existence and character for you to find. It is in knowing God as he really is that you can find your sense of value, purpose and meaning. The God of the New Testament is the God of people who are lost and need a Savior.

For me, Christianity was a simple matter of being willing to go along with what was true, and not insisting on having fun or conforming to peer expectations. The essential characteristic of my faith, in contrast to my older brother's lack of faith, was this – I did not mind being different, so long as I never lost a debate about what was true. My obedience to Christ has never been conditional on things going my way, on being liked, or anything like that. The only thing that mattered was being factually correct. It never bothered me what other people were doing, or what other people expected me to do, so long as I was acting on what I knew to be true. And God helped me to find out what was true by motivating me to study, and leading me to him with good evidence, and good mentors. Thanks to Jesus' death on the cross, the mistakes I made early did not count against me, and they never will. Jesus' death on the cross gives me the imputed righteousness that I need to stand before God holy and blameless. This is what allows me to keep learning and keep trying no matter how much I fail on any given day.

How has this affected me? Well, this is the second thing I wanted to say about the bummer lamb analogy. Since I was a victim of this hands-off, me-first style of parenting, it's caused me to be extra sensitive about being a good spiritual leader to others in the same predicament. The people I mentor can see it in the way that I treat them . I treat them the opposite of the way that my older brother and I were treated. I care what people read. I care what courses they choose. I care what they eat. I care how they feel. I care about their finances. I care about their plans to serve God. I care about their romantic relationships. I care whether they get recognition for doing good. I care whether their life is going in the right direction. One person I mentored who once considered taking her own life wrote to me when she graduated from a STEM program, and she said this: "I wish you could have been here at my graduation. My parents only paid for this degree. You were the one who got me through it". We have never met in person, but she is going to continue to make a huge difference for Christ and His Kingdom going forward.

I think when you have been a bummer lamb, you are extra careful to make decisions that will enable you to be a good shepherd to other lambs. Being a good shepherd does not mean being pious, spiritual, mystical, etc. Being a good shepherd does not mean making the lambs feel good about making bad decisions. Being a good shepherd means understanding what God has done to lead you, and then reflecting that love back to others *in practical, self-sacrificial actions that solve actual real-world problems for other people who want to know and serve God*. If you are about to jump off a cliff, the last thing you need is someone with no wisdom or experience telling you that God is OK with you doing whatever feels good to you. What you need is someone practical and competent to give you good advice, however much that advice may make you feel bad, or block your

pursuit of fun.

One of my friends proof-read the draft of this post and told me that it made her think of 2 Cor 1:3-5:

> [3] Praise be to the God and Father of our Lord Jesus Christ, the Father of compassion and the God of all comfort,
>
> [4] who comforts us in all our troubles, so that we can comfort those in any trouble with the comfort we ourselves receive from God.
>
> [5] For just as we share abundantly in the sufferings of Christ, so also our comfort abounds through Christ.“

Nothing else I do in life matters to me as much as taking care of the people I mentor, especially the ones who are lost and lacking guidance and care. I have good health, good education, good career, and great finances. But by far the most important thing I do is following the example of the Shepherd by caring for other lambs.

A woman asked me whether Hell and God's harshness caused me to doubt Christianity

August 5, 2018 | by Wintery Knight | Link | Original Link

A long journey through the night

I was having a chat on Friday with a brilliant agnostic young lady who knew as much about Christian apologetics as I did. It was very strange because she was only in her mid-20s, but she was talking about the Cambrian explosion, the resurrection scholarship of Dale Allison and Bart Ehrman, and so on. She had seen a lot of debates, and even knew about intelligent design. Anyway, she asked me two questions that I wanted to write about. The first was whether I thought that Hell was unfair, especially because it's determined by having correct beliefs, and the second was whether I thought that God was kind or harsh.

Regarding, I do hold to a traditional view of Hell being eternal separation from God. I don't think that God will be actively torturing people in Hell. I'm not sure if the flames are literal or figurative. But I do know that the severity of the punishment will be proportional to the amount of sinning, in the same way that the rewards in Heaven will be proportional to good actions here on Earth. The duration is the same, but the rewards and punishments fit our actions.

I don't have a problem with Hell because I've spent most of my life trying to talk to people about spiritual things. Although this young lady was very open-minded and honest and spiritual, more than most people in the church, even, I don't think that this is normal for non-Christians. Growing up around Muslims and Hindus, and having spoken to Jews, I know that there just isn't much curiosity about God and Jesus in these other religions. Believe me, I've tried to discuss spiritual things with people of all different religions, and the idea that religious beliefs should be bounded by logic and evidence is almost *nowhere* to be found. It's not even to be found among most Christians, but at least

we have scholars who you can find if you dig hard enough.

So, when people ask me about Hell, the first thing that comes into my mind is my experiences trying to get non-Christians to line up their beliefs about God and Jesus with logic and evidence. Although it may seem harsh to shut the door on people who don't want to put in the work, it doesn't seem harsh to me. I've had it with people who make everything except an investigation into God's existence a priority. I have no patience for people who think they are very intelligent in their thoughts about God, but then when they get into a discussion, it is obvious they haven't put in any effort.

Do you know what they do put a lot of effort into, though? Entertainment, fun and thrills. I can't tell you how many times I've tried to give books or debates to culturally Jewish atheists and Muslim-raised atheists and Hindus (because of family and community) in my previous jobs, and got no interest in truth whatsoever. They were too busy watching the Comedy Channel Democrats, and trying to get their kids into Ivy league schools, etc. to care about God or Jesus. And God is not going to force them into eternal life with him, they don't want it, and they're not going to get it. It's important to note that to not prioritize God is a choice. We in the West all have leisure time, and to be ignorant about God after 40 years of leisure time when you have put the time in elsewhere is unacceptable. God expects us to be curious about him and to do our due diligence in investigating him using as much intellect and effort as we put into our educations, careers, marriages, etc.

Regarding her other question about whether I think God is kind or harsh, I just decided to tell her that I didn't think that God was the kind of God who had to be nice to me so that I would like him. I explained to her that I had wanted marriage from an early age, and had prepared very hard for it, but that it had never happened. I'm not sure that God is able to cause women to freely desire the things I did to prepare for marriage, like chastity, STEM degrees, gap-less resume and savings. I'm not the smartest person in the world, and I did not have family or friends helping me to get ahead most of the time. It was very hard to get ready for marriage. But I realized very late in life that young, unmarried women tend to be interested in a man's appearance and in having fun – not marriage-ready preparation. They do not want a man who is serious about marriage and children until their mid-30s, which is far too old for my marriage plan to work. So, there's no point in me marrying now. So does this lack of marriage make me think that God is unkind? Not at all.

I do think that God has been kind to me with respect to health, education, career and finances. Also, I can understand from the Bible (2 Tim 2:3-4) why God might need an unmarried soldier to work for him. And this doesn't bother me, because I've read the Bible, and I didn't get the impression from it that God was my cosmic butler. Although many Western Christians think that God's sole purpose is to make them happy, there is no way to actually get that meaning out of the text. God's own Son has to suffer in order to love his Father self-sacrificially. So it's clear that God is not "kind" to those who love him in the sense that most people would like him to be. In fact, I would believe in God and

serve him, even if he were “harsher” with me than he is now.

So, why would I want to be a Christian, rather than just accept the scientific arguments for theism, and then just say that the New Testament is just not good enough historical evidence to warrant moving from theism to Christianity? Well, I did explain to her the minimal facts argument, and the historical criteria used to obtain them. And I also said that we all need to have some sort of historical explanation for the early belief in Jesus being God stepping into history, and for his rising from the dead.

But I think the real reason why I am a Christian, beyond the evidence, is just this daily experience of dealing with the lack of curiosity about God and Jesus (and sometimes outright self-delusion) that I see in so many people. I see it in uneducated people, unintelligent people, educated people, intelligent people. The willful ignorance about facts that matter, like the origin of the universe, the fine-tuning, the origin of life, the Cambrian explosion, etc. It’s not even opposition to Christian specifics, it’s opposition to plain, well-supported scientific facts. I’ve just seen this in action so much with atheists and people of other religions that I have lost all sympathy for non-Christians with respect to what God decides to do with them.

It’s not that I am concerned by their immorality, or their hedonism, primarily. It’s that I am concerned with their lack of interest in puzzling out the big questions of life in a truth-centered way. The only people I really feel comfortable with are Christians who have been serious about proportioning belief to evidence, denying themselves fun and thrills if they have to, and putting their money and time into learning how to defend God’s honor when it’s called into question. A task that simply gets you nothing good from anyone in this world. I find it amazing that there are any of us, but that’s where I want to be – in a room with people like that who put God’s goals above their own desires and needs.

All of my close male friends are either virgins or married as virgins, and they’re all into apologetics. If you understood what it means to be in a room with people who have carefully chosen to live their lives in a quiet, humble way that’s respectful to God and self-sacrificial, then you would understand why there is no substitute for Christianity. In my case, I simply do not want God to lump me in with the people I talk to who have no curiosity about truth in religion. I am not going to be like them, grabbing for happiness, while deliberately shutting their eyes to anything that might cause them to have to take God seriously in a self-sacrificial, two-way relationship. I have more sympathy for God and his reputation and honor than I do for the majority of people who I have seen deliberately keeping him at arm’s length. They want the blessings he provides, but while avoiding the demands of a relationship with him. I’m just not going to be one of them, and I don’t care what people think.

Canadian hospital denies man's requests for assisted care, offers him euthanasia instead

August 6, 2018 | by Wintery Knight | Link | Original Link

How much does "free" health care cost in Canada's single-payer system?

On this blog, I've been consistently opposed to government intervention in health care. I arrived at this position by looking at how health care works in government-run systems like the UK's NHS and Canada's single-payer health care system. We've already discussed how NHS hospitals were paid bonuses if they got more patients to die. Now Canada is doing it.

This story is from the far-left CTV News, one of Canada's national television news providers.

Excerpt:

> An Ontario man suffering from an incurable neurological disease has provided CTV News with audio recordings that he says are proof that hospital staff offered him medically assisted death, despite his repeated requests to live at home.
>
> Roger Foley, 42, who earlier this year launched a landmark lawsuit against a London hospital, several health agencies, the Ontario government and the federal government, alleges that health officials will not provide him with an assisted home care team of his choosing, instead offering, among other things, medically assisted death.
>
> Foley suffers from cerebellar ataxia, a brain disorder that limits his ability to move his arms and legs, and prevents him from independently performing daily

> tasks.
>
> In his lawsuit, Foley claims that a government-selected home care provider had previously left him in ill health with injuries and food poisoning. He claims that he has been denied the right to self-directed care, which allows certain patients to take a central role in planning and receiving personal and medical services from the comfort of their own homes.
>
> […]He is now sharing audio recordings of separate conversations he had with two health care workers at London Health Sciences Centre, where he has been stuck in a hospital bed for more than two years.
>
> In one audio recording from September 2017, Foley is heard speaking to a man about what he has described as attempts at a "forced discharge," with threats of a hefty hospital bill.
>
> When Foley asks the man how much he'd have to pay to remain in hospital, the man replies, "I don't know what the exact number is, but it is north of $1,500 a day."
>
> […]"Roger, this is not my show," the man replies. "I told you my piece of this was to talk to you about if you had interest in assisted dying."
>
> In a separate audio recording from January 2018, another man is heard asking Foley how he's doing and whether he feels like he wants to harm himself.
>
> Foley tells the man that he's "always thinking I want to end my life" because of the way he's being treated at the hospital and because his requests for self-directed care have been denied.
>
> The man is then heard telling Foley that he can "just apply to get an assisted, if you want to end your life, like you know what I mean?"

And how has the government responded to the audio recordings? The same way you would expect any government to respond – with silence:

> "I have not received the care that I need to relieve my suffering and have only been offered assisted dying. I have many severe disabilities and I am fully dependent. With the remaining time I have left, I want to live with dignity and live as independently as possible."
>
> Lawyers for the hospital were sent the audio excerpts on July 19. Foley and his lawyer have not received a response.
>
> CTV News also asked the hospital for a statement. The hospital has not responded.

This isn't the customer service that you would get in a capitalist free market where private sector businesses have to compete on price and quality for your dollars. This is single-payer health care. They have your money already, and they know that you can't go anywhere else, except to leave the country. The response of the government-run health care system to requests for better care is "go kill yourself, we already have your money".

And a lot of patients in Canada are being killed.

Wesley J. Smith explains:

> Canadian doctors and nurse practitioners have reported that they have killed almost 4,000 (3,714) patients since euthanasia was legalized in Quebec in December 2015 — after which it was legalized throughout the country by Supreme Court fiat — an act of judicial hubris quickly formalized by Parliament.
>
> Nearly 2,000 were killed in 2017, not including a few territories that did not report figures and assuming all euthanasia deaths were reported. All but one of these deaths resulted from a lethal jab — homicide — at the patients' request.
>
> […]Note that as is the usual case, the number of doctor-facilitated deaths has increased steadily since legalization. For example, there were more than 200 more such deaths in the last six months of last year than the first.

The recordings help to explain what the phrase "at the patients' request" really means.

Previously, I blogged about how the lack of money for palliative care is behind Canada's push to "suggest" euthanasia to patients who ask for better palliative care. Again, what leverage do you have if you already paid them your money in taxes? You have no leverage, and they know that.

This is what happens when government taxes people when they are well, and then decides later who to give health care to, based on the politicians deciding whose votes to buy. Naturally, the young people with less problems are given "health care", e.g. – contraceptives. abortions, sex changes, IVF, breast enlargements – because they have lots of voting ahead of them. The older people get asked to kill themselves for the good of those running this vote-buying operation.

N.T. Wright lectures on the seven mutations caused by resurrection of Jesus

August 7, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson: let's take a look at the facts

Here's a lecture from N.T. Wright, whose multi-volume case for the historicity of the bodily resurrection of Jesus seems to be getting a lot of respect from the other side, (although I strongly disagree with his economic and political views, which are naive at best). Wright has taught at Cambridge University, Oxford University, Duke University, McGill University, and lectured on dozens of prestigious campuses around the world. He's published 40 books.

Here's a video of his case for the resurrection:

You can read a written version of the lecture here.

N.T. Wright's historical case for the bodily resurrection of Jesus

Wright basically argues that the resurrection cannot have been a myth invented by the early Christian community, because the idea of the Messiah dying and being bodily resurrected to eternal life was completely unexpected in Jewish theology, and therefore would not have been fabricated.

In Judaism, when people die, they stay dead. At the most, they might re-appear as apparitions, or be resuscitated to life for a while, but then die again later. *There was no concept of the bodily resurrection to eternal life of a single person, especially of the Messiah, prior to the general resurrection of all the righteous dead on judgment day.*

Wright's case for the resurrection has 3 parts:

- The Jewish theological beliefs of the early Christian community underwent 7 mutations that are *inexplicable* apart from the bodily resurrection of Jesus
- The empty tomb
- The post-mortem appearances of Jesus to individuals and groups, friends and foes

Here's the outline of Wright's case:

> …the foundation of my argument for what happened at Easter is the reflection that this Jewish hope has undergone remarkable modifications or mutations within early Christianity, which can be plotted consistently right across the first two centuries. And these mutations are so striking, in an area of human experience where societies tend to be very conservative, that they force the historian… to ask, Why did they occur?
>
> The mutations occur within a strictly Jewish context. The early Christians held firmly, like most of their Jewish contemporaries, to a two-step belief about the future: first, death and whatever lies immediately beyond; second, a new bodily existence in a newly remade world. 'Resurrection' is not a fancy word for 'life after death'; it denotes life after 'life after death'.

And here are the 7 mutations:

1. Christian theology of the afterlife mutates from multiples views (Judaism) to a single view: resurrection (Christianity). When you die, your soul goes off to wait in Sheol. On judgment day, the righteous dead get new resurrection bodies, identical to Jesus' resurrection body.
2. The relative importance of the doctrine of resurrection changes from being peripheral (Judaism) to central (Christianity).
3. The idea of what the resurrection would be like goes from multiple views (Judaism) to a single view: an incorruptible, spiritually-oriented body composed of the material of the previous corruptible body (Christianity).
4. The timing of the resurrection changes from judgment day (Judaism) to a split between the resurrection of the Messiah *right now* and the resurrection of the rest of the righteous *on judgment day* (Christianity).
5. There is a new view of eschatology as collaboration with God to transform the world.
6. There is a new *metaphorical* concept of resurrection, referred to as being "born-again".
7. There is a new association of the concept of resurrection to the Messiah. (The Messiah was not even supposed to die, and he certainly wasn't supposed to rise again from the dead in a resurrected body!)

There are also other historical puzzles that are solved by postulating a bodily resurrection of Jesus.

1. Jewish people thought that the Messiah was not supposed to die. Although there were lots of (warrior) Messiahs running around at the time, whenever they got killed, their followers would abandon them. Why didn't Jesus' followers abandon him when he died?
2. If the early Christian church wanted to communicate that Jesus was special, despite his shameful death on the cross, they would have made up a story using the existing Jewish concept of *exaltation*. Applying the concept of bodily resurrection to a dead Messiah would be a radical departure from Jewish theology, when an

invented exaltation was already available to do the job.

3. The early church became extremely reckless about sickness and death, taking care of people with communicable diseases and testifying about their faith in the face of torture and execution. Why did they scorn sickness and death?
4. The gospels, especially Mark, do not contain any embellishments and "theology historicized". If they were made-up, there would have been events that had some connection to theological concepts. But the narratives are instead bare-bones: "Guy dies public death. People encounter same guy alive later." Plain vanilla narrative.
5. The story of the women who were the first witnesses to the empty tomb cannot have been invented, because the testimony of women was inadmissible under almost all circumstances at that time. If the story were invented, they would have invented male discoverers of the tomb. Female discovers would have hampered conversion efforts.
6. There are almost no legendary embellishments in the gospels, while there are plenty in the later gnostic forgeries. No crowds of singing angels, no talking crosses, and no booming voices from the clouds.
7. There is no mention of the future hope of the general resurrection, which I guess they thought was imminent anyway.

To conclude, Wright makes the argument that the best explanation of all of these changes in theology and practice is that God raised Jesus (bodily) from the dead. There is simply no way that this community would have made up the single resurrection of the Messiah – who wasn't even supposed to die – and then put themselves on the line for that belief.

And remember, the belief in a resurrected Jesus was something that the earliest witnesses could really assess, because they were the ones who saw him killed and then walking around again after his death. They were able to confirm or deny their belief in the resurrection of Jesus based on their own *personal experiences* with the object of those beliefs.

What does the Bible say about capital punishment?

August 8, 2018 | by Wintery Knight | Link | Original Link

Let's take a look at what the Bible says

Note: This post has a twin post which talks about the crime-preventing effect of capital punishment.

First, let's take a look at what the Bible says in general about capital punishment, using this lecture featuring eminent theologian Wayne Grudem.

About Wayne Grudem:

> Grudem holds a BA from Harvard University, a Master of Divinity from Westminster Theological Seminary, and a PhD from the University of Cambridge. In 2001, Grudem became Research Professor of Bible and Theology at Phoenix Seminary. Prior to that, he had taught for 20 years at Trinity Evangelical Divinity School, where he was chairman of the department of Biblical and Systematic Theology.
>
> Grudem served on the committee overseeing the English Standard Version translation of the Bible, and in 1999 he was the president of the Evangelical Theological Society. He is a co-founder and past president of the Council on Biblical Manhood and Womanhood. He is the author of, among other books, Systematic Theology: An Introduction to Biblical Doctrine, which advocates a Calvinistic soteriology, the verbal plenary inspiration and inerrancy of the Bible, the body-soul dichotomy in the nature of man, and the complementarian (rather than egalitarian) view of gender equality.

The MP3 file is here.

A PDF sermon outline is here.

Topics:

- what kinds of crimes might require CP?

- what did God say to Noah about CP?
- what does it mean that man is made in the image of God?
- is CP just about taking revenge?
- what does CP say about the value of human life?
- does CP apply to animals, too?
- could the statements supporting CP be understood as symbolic?
- one purpose of CP is to protecting the public
- another purpose of CP is to deter further wrongdoing
- but the Biblical purpose of CP is to achieve justice by retribution
- does the Pope make a good argument against CP?
- what is the role of civil government in achieving retribution?
- do people in Heaven who are sinless desire God to judge sinners?
- should crimes involving property alone be subject to CP?
- is the Mosaic law relevant for deciding which crimes are capital today?
- should violent crimes where no one dies be subject to CP?
- is CP widespread in the world? why or why not?
- what are some objections to CP from the Bible?
- how do you respond to those objections to CP?
- should civil government also turn the other cheek for all crimes?
- what is the "whole life ethic" and is it Biblical?
- what do academic studies show about the deterrence effect of CP?
- how often have innocent people been executed in the USA?
- should there be a higher burden of proof for CP convictions?

You can find more talks by Wayne Grudem here.

Whose job is it to teach young, unmarried women not to delay marriage for fun and thrills?

August 9, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

I found a very interesting post on a blog called Oz Conservative, which is run by an Australian traditional conservative. In the post, he looks at two women who wasted their 20s on fun and thrills. Both of them are childless and unmarried. And they are complaining that they should be married with children. How did it happen?

Excerpt:

> Rachael spent her youth going out with the bad boy type:
>
> > relationships have never been my strong point. Historically, I've picked good-looking villains and addictive personalities.
> >
> > I've had a ball and many passionate experiences, but nothing functional enough to constitute a long-term future and never anyone 'normal' enough to bring home to meet the parents.
>
> Although she puts a positive spin on being single, she admits:
>
> > I'm realistic. I've probably missed the boat as far as children are concerned, and that is a shame…
> >
> > […]Yes, the life I have today is not quite the one I envisaged 20 years ago as a young woman. I foresaw a satisfying career along with 2.4 children and a handsome husband.
>
> Then there is Bibi, now 44. She tells her story this way:

> > I am staring down the barrel of a lonely future without a man, let alone children.
> >
> > And how do I find myself in this perilous position? One reason is undoubtedly that men like young women. Yes, I was young once and all that. In my 20s and 30s I wasn't exactly a supermodel, but I was constantly surrounded by men. The trouble is I wasn't necessarily looking to settle down back then…
> >
> > Now that I am, there are very few available men out there and the ones there are would be more interested in my teenage nieces than in me…
>
> […]Bibi has a lot of friends in exactly the same boat:
>
> > In my close circle of friends, there are eight of us who are single and childless. This is a generational phenomenon – we are all aged between 37 and 45.
> >
> > When our mothers were that age, such numbers would be unimaginable.
>
> Like many women writing this kind of literature, when she looks back she recognises the negative influence of feminism on her generation of women:
>
> > I think the feminist teachings of the Sixties and Seventies seeped into our brains. My mum couldn't be called a feminist, but I, too, grew up thinking we could be anything we wanted to be and have a fulfilling career, life and relationship…
>
> […]What she is trying to say here is that feminism pushed marriage and motherhood down the list of priorities ("there was more to contend with beforehand"). She admits that she was led into the magical kind of thinking I described earlier in which there is nothing in reality to limit having things as you want them to be ("we didn't realise that men wouldn't be interested … my generation was spoilt – unrealistic, even").

The comments to the post are very interesting.

I was thinking about whose job it was to warn young Christian women about these bad choices, and I remembered a passage from the Bible.

Titus 2:3-5 explains:

> [3] Likewise, teach the older women to be reverent in the way they live, not to be slanderers or addicted to much wine, but to teach what is good.
>
> [4] Then they can urge the younger women to love their husbands and children,
>
> [5] to be self-controlled and pure, to be busy at home, to be kind, and to be subject to their husbands, so that no one will malign the word of God.

The problem is that many older Christian women made a lot of mistakes in their youth, especially with alcohol and premarital sex. And for most of them, it's more important that

they not feel guilty about it, than that they warn younger women not to make the same mistakes. So, instead of admitting guilt and setting boundaries, they often tell young women that it doesn't matter what you do in your 20s because God, the cosmic butler, will make everything work out in the end.

We just had a situation where one woman who had a successful marriage tried to give younger women some very basic advice about how to be attractive to marriage-minded men. And what happened was that she was attacked by pretty much everyone. The reaction seemed to be strongest from Christian women, however, who insisted that God's grace meant that Christian women didn't have to care what the Bible taught about morality and wisdom. The important thing was that they follow their desires in the moment, because to exercise self-control would be "horrible" and would "send the wrong message". Telling a woman not to do what she feels like is worse than murder, because women must always do what feels good. Who cares about the words of the Bible, when a woman has feelings that are a direct line to God's mysterious will for her happiness?

One of the commenters on this blog put it this way:

> I've been observing this phenomenon among so-called "Christians" for well over a decade. Concepts like "tolerance" and not being "judgmental" took hold in our culture and many Christians absorbed the mindset completely. If you point out that what someone is doing is sinful or might potentially lead to sinful behavior, they act defensive or turn the tables on you and say "well, you're not perfect either!" Some even say that they do certain things for the express purpose of not being "legalistic," because clearly, legalism is far worse than compromising one's witness. Jesus has become a postmodern hippie whose primary message is "let's all be cool to each other." The only sins left are transgressions against the belief that everyone is equal and worthy of acceptance.
>
> In reading the responses to Lori Alexander's article, my greatest takeaway is that people are rationalization machines. If they've made mistakes, they won't humbly acknowledge them and use the wisdom of their experience to guide others in the right direction. Instead, they'll try to find a way to argue that their mistakes weren't mistakes at all, and that the real sinner is the person who's judging them for what they did. It's a deceitful, selfish game, and anyone who plays it is an enemy of the Gospel. Their argument essentially boils down to "every woman, regardless of whatever bad decisions she's made in life, is entitled to a loving husband who'll provide for her." Same way everyone's entitled to free health care, regardless of whether sufficient medical resources exist, I suppose. It doesn't work that way, ladies.
>
> And they use this feminist scare word "shaming." How dare you "shame" me? I would go so far as to say that shaming is a good thing, because it incentivizes proper behavior. Men have good reasons for wanting their wives to be virgins, and if you remove the stigma against premarital sex, a lot of women are going to take Biblical teaching on the subject less seriously. If Christian men as a whole

> agreed that they would only marry virgins, I guarantee you that a lot of women would think twice about what kind of men they associated with. If you feel "shamed," it's probably a sign that you haven't truly repented of your sins. Sin separates us from God, and if you see your sins for what they are, you should have no problem condemning the sins that you yourself have committed and discouraging them in others.
>
> I'm sorry for this long-winded ramble, but it disgusts me how much politically correct rot has infested the churches, and this entire incident just confirms that Paul was correct to forbid women teaching. When everyone is afraid of upsetting women, we get false teachers popping up everywhere spreading a destructive message with nothing but rhetoric behind it. The end result? Fewer marriages, fewer children, fewer people taking Christian teachings seriously, and more people being miserable and lonely. Once you start ceding ground to liberalism, the whole thing eventually unravels. Lots of good Christian men and women can't find a spouse anymore, because their society has lied to them and they don't realize it until it's too late. Did their churches stand against the world? Did their churches provide them the guidance they needed? Or were their churches too afraid to be seen as "out of touch," and did they prioritize numbers over holiness and correct teaching? If we are sincere believers, it should be obvious which is more important.

Many of the women who chose to delay marriage for fun and thrills with the bad boys grew up in married Christian homes. Parents and pastors have, for one reason or another, decided that it is too unpleasant to warn young Christian women that their behavior may involve some costs in the long term. They don't want to make them feel bad, and women's feelings are so very much more important than what the Bible says, or even what peer-reviewed research on marriage best practices says. Even theologically conservative pastors just don't have the courage to address the influence that feminism has had on the goal-setting and decision-making of young, unmarried women. It's much easier to blame men when the woman's fun and thrills plan doesn't work out.

Luke Barnes discusses the fine-tuning of the fine structure constant

August 10, 2018 | by Wintery Knight | Link | Original Link

Fine-tuning of the strong nuclear force and the fine structure constant

Here is an article from The New Atlantis written by cosmologist Luke Barnes about one specific example of cosmic fine-tuning. (H/T Uncommon Descent via J. Warner Wallace tweet)

Excerpt:

> Today, our deepest understanding of the laws of nature is summarized in a set of equations. Using these equations, we can make very precise calculations of the most elementary physical phenomena, calculations that are confirmed by experimental evidence. But to make these predictions, we have to plug in some numbers that cannot themselves be calculated but are derived from measurements of some of the most basic features of the physical universe. These numbers specify such crucial quantities as the masses of fundamental particles and the strengths of their mutual interactions. After extensive experiments under all manner of conditions, physicists have found that these numbers appear not to change in different times and places, so they are called the fundamental constants of nature.
>
> These constants represent the edge of our knowledge. Richard Feynman called one of them — the fine-structure constant, which characterizes the amount of electromagnetic force between charged elementary particles like electrons —

> “one of the greatest damn mysteries of physics: a magic number that comes to us with no understanding by man.”
>
> […]A universe that has just small tweaks in the fundamental constants might not have any of the chemical bonds that give us molecules, so say farewell to DNA, and also to rocks, water, and planets. Other tweaks could make the formation of stars or even atoms impossible. And with some values for the physical constants, the universe would have flickered out of existence in a fraction of a second. That the constants are all arranged in what is, mathematically speaking, the very improbable combination that makes our grand, complex, life-bearing universe possible is what physicists mean when they talk about the “fine-tuning” of the universe for life.

Atheists, both rank-and-file and expert, almost universally misunderstand the fine-tuning argument. They imagine that if the constants and quantities specified at the origin of the universe were different, then humans would just have green skin, or maybe forehead ridges, or pointy ears. Atheists tend to get their view of science from science fiction in novels or television or movies. Just this week I was talking to an agnostic woman (who since reverted to atheism) and brought up the fine-tuning argument. And she said “well, maybe if the initial constants and quantities were different, then we would have evolved differently”. No, the whole point is that life *of any conceivable kind* becomes impossible if the constants and quantities are altered higher or lower. Even slightly. It’s not that you have green skin, pointy ears, and forehead ridges. It’s that you have a universe that recollapses into a hot fireball, or contains only hydrogen, or does not form stars and planets at all.

I got the impression that she hadn’t read anything about the fine-tuning from peer-reviewed scientific publications, but had just read popular responses to it from atheists with degrees in English and drama and philosophy. If you want to understand a scientific argument, then you have to go to the scientific publications, and read the science. Here is an excellent start, from two astrophysicists, and published by Cambridge University Press.

So what does the scientific evidence actually show?

Barnes explains:

> The strong nuclear force, for example, is the glue that holds protons and neutrons together in the nuclei of atoms. If, in a hypothetical universe, it is too weak, then nuclei are not stable and the periodic table disappears again. If it is too strong, then the intense heat of the early universe could convert all hydrogen into helium — meaning that there could be no water, and that 99.97 percent of the 24 million carbon compounds we have discovered would be impossible, too. And, as the chart to the right shows, the forces, like the masses, must be in the right balance. If the electromagnetic force, which is responsible for the attraction and repulsion of charged particles, is too strong or too weak compared to the strong nuclear force, anything from stars to chemical compounds would be

> impossible.
>
> Stars are particularly finicky when it comes to fundamental constants. If the masses of the fundamental particles are not extremely small, then stars burn out very quickly. Stars in our universe also have the remarkable ability to produce both carbon and oxygen, two of the most important elements to biology. But, a change of just a few percent in the up and down quarks' masses, or in the forces that hold atoms together, is enough to upset this ability — stars would make either carbon or oxygen, but not both.

It's very important that theists are well-equipped to explain how individual cases of fine-tuning work. We need to know what you lose if you alter these constants and quantities even slightly. You can read about some more examples in this previous post.

If unborn babies don’t have consciousness or don’t feel pain, may we kill them?

August 11, 2018 | by Wintery Knight | Link | Original Link

Unborn baby scheming about pro-life apologetics

Was having a conversation by e-mail yesterday with a pro-abortion atheist, and he gave two reasons why he supported abortion in the first and second trimester. First, he said that unborn babies can’t feel pain, so it’s OK to kill them. Second, he said that unborn babies don’t have consciousness, so it’s OK to kill them. I thought it might be useful to link to something that answers both of these objections.

Frank Beckwith is the author of “Defending Life: A Moral and Legal Case Against Abortion Choice“. He wrote that book for Cambridge University Press, a top academic press. But before Cambridge University Press, Beckwith wrote four easy-to-understand essays for the Christian Research Journal. Part IV is the one that has the response to the two questions raised by my atheist friend.

Part I. The Appeal to Pity

Part II. Arguments from Pity, Tolerance, and Ad Hominem

Part III. Is The Unborn Human Less Than Human?

Part IV. When Does a Human Become a Person?

Excerpt:

> Some ethicists argue that the unborn becomes fully human sometime after brain development has begun, when it becomes sentient: capable of experiencing

sensations such as pain. The reason for choosing sentience as the criterion is that a being that cannot experience anything (i.e., a presentient unborn entity) cannot be harmed. Of course, if this position is correct, then the unborn becomes fully human probably during the second trimester and at least by the third trimester. Therefore, one does not violate anyone's rights when one aborts a nonsentient unborn entity. [13]

There are several problems with this argument. First, it confuses harm with hurt and the experience of harm with the reality of harm. [14] One can be harmed without experiencing the hurt that sometimes follows from that harm, and which we often mistake for the harm itself. For example, a temporarily comatose person who is suffocated to death "experiences no harm," but he is nevertheless harmed. Hence, one does not have to experience harm, which is sometimes manifested in hurt, in order to be truly harmed.

Second, if sentience is the criterion of full humanness, then the reversibly comatose, the momentarily unconscious, and the sleeping would all have to be declared nonpersons. Like the presentient unborn, these individuals are all at the moment nonsentient though they have the natural inherent capacity to be sentient. Yet to countenance their executions would be morally reprehensible. Therefore, one cannot countenance the execution of some unborn entities simply because they are not currently sentient.

Someone may reply that while these objections make important points, there is a problem of false analogy in the second objection: the reversibly comatose, the momentarily unconscious, and the sleeping once functioned as sentient beings, though they are now in a temporary state of nonsentience. The presentient unborn, on the other hand, were never sentient. Hence, one is fully human if one was sentient "in the past" and will probably become sentient again in the future, but this cannot be said of the presentient unborn.

There are at least three problems with this response. First, to claim that a person can be sentient, become nonsentient, and then return to sentience is to assume there is some underlying personal unity to this individual that enables us to say that the person who has returned to sentience is the same person who was sentient prior to becoming nonsentient. But this would mean that sentience is not a necessary condition for personhood. (Neither is it a sufficient condition, for that matter, since nonhuman animals are sentient.) Consequently, it does not make sense to say that a person comes into existence when sentience arises, but it does make sense to say that a fully human entity is a person who has the natural inherent capacity to give rise to sentience. A presentient unborn human entity does have this capacity. Therefore, an ordinary unborn human entity is a person, and hence, fully human.

Second, Ray points out that this attempt to exclude many of the unborn from the class of the fully human is "ad hoc and counterintuitive." He asks us to "consider

> the treatment of comatose patients. We would not discriminate against one merely for rarely or never having been sentient in the past while another otherwise comparable patient had been sentient….In such cases, potential counts for everything." [15]
>
> Third, why should sentience "in the past" be the decisive factor in deciding whether an entity is fully human when the presentient human being "is one with a natural, inherent capacity for performing personal acts?" [16] Since we have already seen that one does not have to experience harm in order to be harmed, it seems more consistent with our moral sensibilities to assert that what makes it wrong to kill the reversibly comatose, the sleeping, the momentarily unconscious, and the presentient unborn is that they all possess the natural inherent capacity to perform personal acts. And what makes it morally right to kill plants and to pull the plug on the respirator-dependent brain dead, who were sentient "in the past," is that their deaths cannot deprive them of their natural inherent capacity to function as persons, since they do not possess such a capacity.

These four essays are a very good introduction to common responses to pro-abortion arguments. I recommend that people get familiar with this, as once you look into it, you will see that the abortion issue can be debated with as much confidence as William Lane Craig defends Christian theism. You will have the same access to scientific evidence and rational arguments on this topic, and so you will have the upper hand. And that's fun.

The best introductory book on the abortion / right to life issue is "The Case for Life" by pro-life debater Scott Klusendorf. The best comprehensive book is a tie between "The Ethics of Abortion" by Christopher Kaczor, and Frank Beckwith's "Defending Life: A Moral and Legal Case Against Abortion Choice".

Atheist gets her PhD in astronomy and astrophysics and finds evidence for God

August 12, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Christian apologist Terrell Clemmons tweeted this testimony by Sarah Salviander, a research scientist in astronomy and astrophysics at the prestigious University of Texas at Austin.

Dr. Salviander writes:

> I was born in the U.S., but grew up in Canada. My parents were socialists and political activists who thought British Columbia would be a better place for us to live, since it had the only socialist government in North America at the time. My parents were also atheists, though they eschewed that label in favor of "agnostic." They were kind, loving, and moral, but religion played no part in my life. Instead, my childhood revolved around education, particularly science. I remember how important it was to my parents that my brother and I did well in school.

I just want to point out that I hope that all you Christian parents are taking seriously the obligation to make your kids do well in school, because even if they start out as atheists when they are young, they can still find their way back to God through study, as Sarah did.

She had a bad start, that's for sure:

> I grew up in the 1970s and 1980s, a time when science fiction was enjoying a renaissance, thanks largely to the popularity of *Star Wars*. I remember how fascinated I was by the original *Star Wars* trilogy. It had almost nothing to do with

> science—it's more properly characterized as space opera—but it got me thinking about space in a big way. I also loved the original *Star Trek*, which was more science fiction. The stoic and logical character of Mr. Spock was particularly appealing to me. Popular science was also experiencing a renaissance at that time, which had a lot to do with Carl Sagan's television show, *Cosmos*, which I adored. The combination of these influences led to such an intense wonder about outer space and the universe, that by the time I was nine years old I knew I would be a space scientist someday.
>
> Canada was already post-Christian by the 1970s, so I grew up with no religion. In retrospect, it's amazing that for the first 25 years of my life, I met only three people who identified as Christian. My view of Christianity was negative from an early age, and by the time I was in my twenties, I was actively hostile toward Christianity. Looking back, I realized a lot of this was the unconscious absorption of the general hostility toward Christianity that is common in places like Canada and Europe; my hostility certainly wasn't based on actually knowing anything about Christianity. I had come to believe that Christianity made people weak and foolish; I thought it was philosophically trivial. I was ignorant not only of the Bible, but also of the deep philosophy of Christianity and the scientific discoveries that shed new light on the origins of the universe and life on Earth.

She documents a phase of following Ayn Rand and embracing "Objectivism", but eventually she rejects it for failing to answer the big questions of life.

More:

> I began to focus all of my energy on my studies, and became very dedicated to my physics and math courses. I joined campus clubs, started to make friends, and, for the first time in my life, I was meeting Christians. They weren't like Objectivists—they were joyous and content. And, they were smart, too. I **was astonished to find that my physics professors, whom I admired, were Christian. Their personal example began to have an influence on me, and I found myself growing less hostile to Christianity.**

This is why I think it is so important for Christian parents to raise their children to get advanced degrees… either to become professors themselves, or to finance others (e.g. – our own children) to do advanced degrees. It is so important for university students to see Christian professors on campus. And failing that, it's important that we bring Christian speakers in to debate non-Christian speakers on the important issues. This will not happen unless we recognize how important it is, and then make a plan to achieve it.

More:

> **I had joined a group in the Center for Astrophysics and Space Sciences (CASS) that was researching evidence for the big bang. The cosmic background radiation—the leftover radiation from the big bang—provides the strongest evidence for the theory, but cosmologists**

> **need other, independent lines of evidence to confirm it. My group was studying deuterium abundances in the early universe. Deuterium is an isotope of hydrogen, and its abundance in the early universe is sensitive to the amount of ordinary mass contained in the entire universe. Believe it or not, this one measurement tells us whether the big bang model is correct.**
>
> **If anyone is interested in how this works, I'll describe it, but for now I'll spare you the gruesome details. Suffice it to say that an amazing convergence of physical properties is necessary in order to study deuterium abundances in the early universe, and yet this convergence is exactly what we get. I remember being astounded by this, blown away, completely and utterly awed. It seemed incredible to me that there was a way to find the answer to this question we had about the universe. In fact, it seems that every question we have about the universe is answerable. There's no reason it has to be this way, and it made me think of Einstein's observation that the most incomprehensible thing about the world is that it's comprehensible. I started to sense an underlying order to the universe. Without knowing it, I was awakening to what Psalm 19 tells us so clearly, "The heavens declare the glory of God; the skies proclaim the work of his hands."**
>
> That summer, I'd picked up a copy of T*he Count of Monte Cristo* by Alexandre Dumas and was reading it in my off hours. Previous to this, I'd only known it as an exciting story of revenge, since that's what the countless movie and TV adaptations always focused on. But it's more than just a revenge story, it's a philosophically deep examination of forgiveness and God's role in giving justice. I was surprised by this, and was starting to realize that the concept of God and religion was not as philosophically trivial as I had thought.
>
> All of this culminated one day, as I was walking across that beautiful La Jolla campus. I stopped in my tracks when it hit me—I believed in God! I was so happy; it was like a weight had been lifted from my heart. I realized that most of the pain I'd experienced in my life was of my own making, but that God had used it to make me wiser and more compassionate. It was a great relief to discover that there was a reason for suffering, and that it was because God was loving and just. God could not be perfectly just unless I—just like everyone else—was made to suffer for the bad things I'd done.

The Count of Monte Cristo is one of my favorite, favorite books as well, and had the same impact on me as it did on her.

OK, that's enough for this post. Go read the rest, and please share it.

I spoke to her recently and she told me that she is working on several projects that are designed to get people more familiar with science and Bible issues. This woman is an expert Christian apologist and her life will have an influence. Are you going to be like her?

Will you mentor others to be like her? Will you marry someone like her? Will you raise children who are like her? I think we should all have a plan to study the areas that are important and have an influence for God with what we learn.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines

ISIS murders two thrill-seeking millennials who were cycling across the Middle East

August 13, 2018 | by Wintery Knight | Link | Original Link

It turns out that the world is a dangerous place after all

I saw this interesting article about a man and woman who decided to quit their "boring" public sector "jobs" and cycle through Africa and then through the Middle East. In this post, I want to focus on their worldviews, how people responded to the news of their deaths, and on why women are so attracted to men who don't lead them, don't protect them, and don't provide for them.

PJ Media reports:

> On August 7, the New York Times ran a story by Rukmini Callimachi about Jay Austin and Lauren Geoghegan, a young American couple, both graduates of Georgetown University, who decided to quit their humdrum office jobs and go on an epic bike ride and camping trip that would take them all over the world. "I've grown tired of spending the best hours of my day in front of a glowing rectangle, of coloring the best years of my life in swaths of grey and beige," Austin wrote. "I've missed too many sunsets while my back was turned."

I couldn't find anywhere that said what their degrees were in, but I expect that they did easy non-STEM degrees and were swimming in debt. Rather than work their way out of it, they decided to quit their jobs and go on an adventure through Africa and the Middle East, to prove to the world that evil was not real, and that all the liberal nonsense they learned in school was true.

More:

> They biked through Kyrgyzstan and entered Tajikistan. It was in that country that their journey came to an abrupt end this past July 29, when five ISIS members deliberately plowed their car into the two adventurers, killing them…

The plan they had chosen involved pointless risk-taking:

> Austin, a vegan who worked at the Department of Housing and Urban Development, and Geoghegan, a vegetarian who worked in a college admissions office, were both 29 years old – old enough, one would think, to have some idea of just how dangerous a route they had mapped out. A number of the countries they passed through are considered either "not free" or "partly free" by Freedom House. In several of them, it's not uncommon for roving criminal gangs – or, for that matter, police or soldiers or border officials – to rob, rape, or kill innocent travelers without provocation and with total impunity… Other perils include wild carnivores, extreme weather, unsanitary food preparation, and substandard medical care.

Now the first thing that pops out to me about this was "where are the woman's parents?" and then second "why did this woman choose this man, given that men have a role of protecting women?" But, you see, parents these days are terrified of telling their daughters "NO", and women like Lauren are very attracted to men who want to take them on "adventures", instead of marrying them and providing for them and their children. Adventures are desirable because there are no responsibilities or obligations. You get to show off to your boring friends how special you are, and how much fun you're having.

Let's take a close look at Austin's worldview, which Geoghegan found so attractive:

> "With…vulnerability," he wrote, "comes immense generosity: good folks who will recognize your helplessness and recognize that you need assistance in one form or another and offer it in spades."
>
> […]But to read Austin's blog is to see no hint of hesitation, on the part of either of them, to keep on cycling – no sign of fear that their luck might run out at any moment. Their naivete is nothing less than breathtaking. "You watch the news and you read the papers and you're led to believe that the world is a big, scary place," wrote Austin during their trek. "People, the narrative goes, are not to be trusted….I don't buy it. **Evil is a make-believe concept we've invented to deal with the complexities of fellow humans holding values and beliefs and perspectives different than our own."**

This was a man who did not have an accurate view of the world. He had enormous confidence in his own opinions, and he didn't bother informing himself with anything that would have contradicted his optimism. He was reckless and dangerous. And yet his "lack of fear" must have been very attractive to a woman who didn't want to "waste" her youth on responsibilities and obligations. She preferred his happy sounding words to any real demonstrated ability as a man. He didn't have a plan for her future. All he had to offer

was fun and thrills in the moment, and that's what she chose. And I'm certain that if things had continued, they would have broken up the relationship the minute that either of them had to fulfill some obligation that they didn't feel like doing.

And how did this arrogant, reckless optimism work out for him and his girlfriend?

> Even before Austin and Geoghegan met their untimely end, they had problems. In Namibia, Geoghegan picked up a stomach virus. (As Austin wrote on his blog: "she curls into the fetal position and rests, eyes closed, fighting chills and nausea and fatigue. There's little that we can do at the moment. I give her some ibuprofen." Whereupon they resume biking.) Also in Namibia, they were almost hit by a car while bicycling along a highway. In Botswana, they both got sick. In Zambia, Austin had a serious bike crash that sent him flying and left him bleeding all over. In Malawi, he got malaria. In Tanzania, a man tried to bully him into forking over some money. In Ceuta, a driver tried to run him over, and another rear-ended him. In Spain, Geoghegan got conjunctivitis. In Marseilles, she had to be hospitalized for an ear infection that had rendered her deaf. Given the dangers they braved, indeed, they were fortunate to have made it as far as Tajikistan.

Is this what a man is now? Someone who recklessly risks the life of a woman? Why doesn't he get a real STEM degree, get a real private sector job, and buy her a real house that she can feel safe in? Because this isn't what women are looking for today. They want fun and thrills and adventure. They push away men who try to get them to behave responsibly, and they put their trust in men who tell them what they want to hear: that they should follow their heart. And no one has anything to say about it. We tell young women that they are right to value fun and thrills and adventures. We tell young women that they are right to choose irresponsible bad boys who give them all the feelings.

The secular left was very supportive of what Austin did to his girlfriend:

> The Times article about Austin and Geoghegan drew hundreds of reader comments. A surprising number were by other people who'd bicycled or backpacked in far-off, dangerous places. Most saw Austin and Geoghegan as "heroic," "authentic," "idealistic," "inspiring," "a Beautiful example of Purity and Light." Sample reactions: "Their candle burned brightly before it was extinguished." And: "Good for them! They followed their dream." Then there's this: "I only see the beauty of two people taking steps to live the life they envision….The good experienced in their journey far far outweighs any negative." Easy to say when you're not the one in the body bag. "What is more dangerous," asked yet another reader, "exposing yourself to the world and its dangers, and living a full vivid life, or insulating yourself in a safe box, in front of screens, where the world and its marvels and dangers cannot touch you? Jay and Lauren understood that safety is its own danger. They are awesome people."

He was a bad leader, and he led her into a disaster. But that's what she wanted, and

everyone is celebrating what a great man he was.

No one is taking responsibility for letting it happen:

> Her parents, Robert and Elvira Geoghegan, said in a statement that her trip "was typical of her enthusiastic embrace of life's opportunities, her openness to new people and places, and her quest for a better understanding of the world."
>
> […]Santovasco, Austin's mother, said her son and his girlfriend were in the wrong place at the wrong time.
>
> "For them to be in this one place where they decided to kill people is unfathomable to us," she said.

These days, it's very fashionable for people to want to follow their hearts. Many people who believe in God don't really think about how to deny themselves in order to serve God. They think that it's God's job to sort of guarantee that they will be happy if they focus on their own desires. All they have to do is be reckless in their decisions, and have no fear, and God will make them fabulously happy. What the story of Austin and Geoghegan tells us is that hedonism is actually a *secular* life plan. Christians should not be doing things like that with their lives.

Do moral dilemmas undermine objective moral absolutes?

August 14, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

One reason why some people reject the existence of objective morality is because moral absolutes can conflict.

Canadian philosopher Michael Horner to explains the problem.

He writes:

> You may have been confronted with the story of the Nazi soldier coming to the door of the family who are hiding some Jewish people in their home and asking them point blankly, "Are there any Jews here?" The person telling the story then asks you, "What would you say?" or more precisely, "What should you say?"
>
> […]I think for many people the term moral absolutes connotes ideas like inflexibility and rigidity, and that there can never be exemptions. I have also found that many people believe that holding to moral absolutes means that circumstances are not relevant in a moral evaluation and that moral absolutism cannot handle moral dilemmas. But in fact it is possible to believe in moral absolutes, or as I prefer to call them objective moral values, without adhering to these connotations I have mentioned.
>
> For many people to believe in moral absolutes is to believe in rules that no other rules can ever trump. It follows from this that moral absolutes are all equal and there can never be any exemptions. But what if moral absolutes exist in a hierarchy?
>
> We know from experience that very often more than one moral rule applies to a situation. This often leads to moral dilemmas. So in the 'hiding the Jews example' the moral rule of telling the truth seems to apply to the situation, but it would

> seem that the moral rule to protect innocent human life from torture and murder applies also.
>
> If absolutes are all equal there is no way out of the dilemma. You can't choose one absolute over another because in doing so you would be violating at least one absolute which, in their view, is supposed to be inviolable.

So, in this case, it seems as if the moral absolutist is stuck in a dilemma. If you lie to save the innocent life, then that would be wrong. But if you tell the truth and hand the innocent person over to murderers, then that would be wrong. Does this really disprove objective moral absolutes?

This problem annoys me, because I know this is the kind of objection to objective morality that annoying philosophy lecturers like to push onto freshmen in order to convince them that morality is nonsense. But does the moral dilemma objection really work?

More Horner:

> […][I]f moral absolutes exist in a hierarchy and the circumstances or the situation were relevant in determining which absolute takes precedent, then there may be a solution to the moral dilemma. That is exactly what I think is the case in the example. I for one have no difficulty knowing that the morally right thing to do in that situation is to protect the life of innocent people from torture and murder rather than tell the truth to a person who has torture and murder in their plans. My moral intuitions are very clear about this.
>
> If someone objects and says, "No, you must always tell the truth. After all it is an absolute, and absolutes by definition can never be violated," I would point out that they are just using a different hierarchy, putting truth telling above protecting the life of innocent people from torture and murder. There is no way to avoid making a judgment like that since more than one absolute does apply to the situation. I would just ask them to think it through again, and once they see that they have to make a judgment based on some sort of hierarchy in that situation, then I think most people's moral intuitions will affirm that protecting the lives of innocent people from torture and murder, in that situation, trumps truth telling. There is no way to avoid choosing one over the other.

But isn't this moral relativism? After all, we are deciding what to do based on the situation! It's relativism, isn't it?

No, it isn't, because there is always one right thing to do in every situation. In every situation, you always follow the weightiest moral rule. The right thing to do does not depend on your subjective state of mind. It is an objective moral duty, and it is the same for everyone, across all times and in all places. That's what objective morality means - what is right and wrong is not determined by personal preferences or cultural conventions, which vary by time and place.

And of course, God is the ground of this hierarchy of objective moral absolutes. They existed through him before human beings even appeared, as part of his design for us, his

creatures. How we ought to behave is grounded ontologically in God’s design for us.

Jennifer Roback Morse lectures on sex and sexuality at Harvard University

August 15, 2018 | by Wintery Knight | Link | Original Link

Dr. Jennifer Roback Morse

Dr. Morse delivers a talk based on her book "Smart Sex" at Harvard University.

The MP3 file is here. (21 Mb) (Link in case that doesn't work)

Topics:

- the hook-up culture and its effects on men and women
- cohabitation and its effect on marriage stability
- balancing marriage, family and career
- single motherhood by choice and IVF
- donor-conceived children
- modern sex: a sterile, recreation activity
- the real purposes of sex: procreation and spousal unity
- the hormone oxytocin: when it is secreted and what it does
- the hormone vassopressin: when it is secreted and what it does
- the sexual revolution and the commoditization of sex
- the consumer view of sex vs the organic view of sex
- fatherlessness and multi-partner fertility
- how the "sex-without-relationship" view harms children

52 minutes of lecture, 33 minutes of Q&A from the Harvard students. The Q&A is worth listening to – the first question is from a gay student, and Dr. Morse pulls a William Lane Craig to defeat her objection. It was awesome! I never get tired of listening to her talk, and especially on the topics of marriage and family.

Is the Roman Catholic church serious about stopping child abuse?

August 16, 2018 | by Wintery Knight | Link | Original Link

A conflict of worldviews

At the risk of alienating my Catholic readers, I feel that I have to say something about the recent news story about the Catholic Church leaders abusing children of both sexes, and then covering it up. Let's start with a news article, then a reaction from a Catholic person I respect, then I'll give my thoughts about it.

Here's a news story from ABC News:

> Sexual assault survivors shared their stories after a Pennsylvania grand jury report accused hundreds of Roman Catholic priests of assaulting children.
>
> Speaking at a news conference Tuesday, several of them detailed heart-wrenching accounts of alleged sexual abuse against 301 priests across six of the state's eight dioceses.
>
> […]Pennsylvania's attorney general released the scathing report that revealed the results of a two-year investigation into hundreds of sexual abuse allegations. The probe found that at least 1,000 children had been abused at the hands of Catholic clergy members, dating back to the 1940s.
>
> "Predators in every diocese weaponized the Catholic faith and used it as a tool of their abuse," Attorney General Josh Shapiro said Tuesday. "Priests were raping little boys and girls and the men of God who were responsible for them not only did nothing, they hid it all. For decades."
>
> […]The investigation was based on official documents and secret archives from the church, according to the report. High-level church leaders allegedly covered up the abuse for years, fostering a "circle of secrecy," Shapiro said.

> "The cover up was sophisticated and, all the while, church leadership kept records of the abuse and the cover-up," Shapiro said Tuesday. "They sought to do the same things that senior church leaders and the diocese we investigated have done for decades: bury the sexual abuse by priests upon children and cover it up forever. Shamefully."

The key concern about this is the cover-up. The Roman Catholic church was more concerned with covering up for the abuse and rapes. That was their priority. They were concerned about defending the reputation of the corrupt child abusers. They were not concerned about the victims. And they were not concerned about what the Bible teaches about sexual immorality. Or what the Bible teaches about anything, really.

Matt Walsh, a conservative Catholic, had this to say in a post from June 2018, at the Daily Wire:

> I'm taking some heat on Twitter today because I said that the real problem in the Catholic Church isn't pedophilia but gay priests. As the statistics clearly show, the vast majority of predators in the clergy were homosexual and the vast majority were not pedophiles. The same study that reported those figures did try to absolve gay priests by claiming that their homosexuality had nothing to do with anything. But this is an assumption — I think a plainly absurd and unprovable assumption — that is not born out by their own statistics.
>
> And the problem goes beyond sex abuse of minors. As Rod Dreher has been reporting, and liberal publications agree, homosexuality runs rampant in the modern priesthood. Sexual activity between priests, and between priests and seminarians, is not uncommon. I think it is rather difficult to separate these facts from the fact that teen boys were so often sexually victimized. Is it just a coincidence that gay priests exist in such large numbers, protected by gay cabals within the Church, and at the same time there happen to be a bunch of priests molesting pubescent boys? Are these two realities entirely separate from one another?
>
> Take the case of the scummy Cardinal McCarrick. He has been accused of preying upon young boys. But most of the stories that have come out about him revolve around his sexual exploits with seminarians. Grown men, in other words. Yet we are told that the fact of his homosexuality is irrelevant. How could it be? If he were not a homosexual, he would not have molested boys. Who could dispute this? I'm not claiming that all homosexuals molest boys. I am claiming that only homosexuals molest boys. A non-homosexual, by definition, is not attracted to males.

Just to be clear, the Bible's teaching on sexual activity is that no one is allowed to engage in sexual activity outside of natural marriage. Period.

I don't feel comfortable listing the details of what the Catholic leaders did, but you can read about it on the Pennsylvania attorney general's web site. The important thing here is

that none of the men who did these things, or covered it up after, really expect to meet God face-to-face on the Day of Judgment. Everything they did to those children and young people was for their own pleasure and gratification. They certainly were not working for God, or advancing his interests. On the contrary, they put themselves first, and pushed young people away from God.

If I could summarize God's agenda for his human creations, it would be that we all not do anything that would push anyone away from a two-way relationship with God. That goes for everybody including atheists, by the way. Nobody, regardless of religion, should do anything that pushes anyone away from God. So do these Roman Catholics work for God? To work for God, minimally, is to put your own desires on hold, and perform actions that advance God's agenda. God's agenda, minimally, is that people come to have accurate beliefs about his existence and character. It's OK to be offensive to others by telling them the truth gently and respectfully. But it's not OK to harm them in a way that pushes them away from God, just because you want to gratify your own selfish desires.

Here's a thought about the search for truth and meaning. If you want to have a comprehensive worldview that answers the big questions, like cosmic origins, objective moral obligations, life after death, etc. then it's probably not a good idea to look to people in an organization to tell you what is true or not. Especially when the organization relies on feelings, mysticism, rituals, etc. An organization is interested in protecting the organization. When the Jehovah's Witnesses get caught lying about their failed end-of-the-world predictions, they cover it up. When the Mormons get caught lying about cosmology and archaeology, they cover it up. Organizations protect the organization. A much better plan, it seems to me, is to develop your own worldview, starting with the evidence from science and history. That's what I did, and I'm an evangelical Protestant Christian.

47-year-old divorced woman with kids sues dating agency for failing to find her a rich husband

August 17, 2018 | by Wintery Knight | Link | Original Link

Do young women understand how to get to a stable marriage?

Today, many women put off marriage while they're in their 20s, when they are most attractive to marriage-minded men. Some marry, but they marry based on spontaneity and feelings, and it turns into divorce. What happens next? Here's an example from the UK Daily Mail. (H/T Dina)

Excerpt:

> A divorced mother-of-three who sued an 'exclusive' dating agency after it failed to find her a rich boyfriend has been handed her money back by a top judge.
>
> Tereza Burki paid £12,600 to Seventy Thirty to hunt for 'possibly the man of my dreams, the father of my child', she told the High Court in London.
>
> The 47-year-old said the agency assured her it only dealt in 'creme de la creme' matches and could introduce her to 'bachelors you dream of meeting'.
>
> But Judge Richard Parkes QC today ordered the agency to repay her fee, ruling that she had been 'deceived' by Seventy Thirty's then-managing director.
>
> And, as well as giving her her money back, the judge awarded her £500 for the 'disappointment and sadness' she suffered. Her total award was £13,100.

Burki is 47 years old today, so in 2014, I assume that she was around 43 years old. 43, as you know, is well past the normal age for having children. Women's fertility declines sharply at age 27, then takes a nose-dive at age 35. By 40, it's nearly impossible to get pregnant, which is why women who want children ought to focus on finding a good man

in their early-to-mid-20s.

More:

> When she signed up with the agency in 2014, Mrs Burki's requirements for the men she wanted to meet were 'not modest', the judge added.
>
> She wanted a wealthy man with 'a lifestyle similar or more affluent than her own' and, ideally, 'multiple residences'.
>
> But the most important factor for Mrs Burki, who lives on an upmarket street in Chelsea, West London, was that her soulmate would be prepared to have more children, as she wanted four.
>
> […]Giving evidence during the case, Mrs Burki told the judge: 'You shouldn't promise people who are in a fragile state of mind, in their mid-40s, the man of their dreams.

I'm sure that the reason Dina sent me this article is to warn me about how irresponsible women can be. After all, this woman HAD a decade in her 20s to get serious about finding a man who would commit to her, and give her children. We don't know what happened in her 20s. But judging from the enormous gap between her demands and her own attractiveness (43 and divorced with 3 children from another man), she was probably being selfish. She's very clear about what she wants from a man, but she hasn't prepared for what a man might want from her.

So let's review that.

Marriage-minded men are interested in a wife during a certain time window when the support of a woman really makes a difference. That time period is the stressful period of a man's life, when he first graduates from college or trade school and has to start his career. The first years of a career are the most stressful. And that's when having the physical, emotional, and practical support of a young, attractive, chaste woman really makes a difference. Married men do better at things like earning, saving, health, etc. than single men. Naturally, the best time to GET THIS SUPPORT is the time when the man is doing things that determine his earning, saving, health, etc.

It's not that older women have no value. It's that the woman has to be present during the critical time when a man is trying to do hard things, and he doesn't have the safety net of savings, a resume, etc. Many men move for their first jobs, which just adds another level of difficulty to those early years. When I moved for my first job, everything was difficult: eating, sleeping, cleaning, being content with chastity, etc. I had no family nearby, and I left behind all my friends. It would have been nice to have had the support of a young, and beautiful marriage-minded woman at the critical time when I needed it.

But now, after the degrees have been earned, the gapless resume filled out, the retirement accounts filled, and the house paid for, it's hardly the time for a woman over 40 to show up and demand her share, when she never invested anything into the enterprise.

And yet, many women apparently DO think like this. Many seem to have no concept of

what a man wants out of marriage, and that's why they waste their 20s doing what feels good to them, and just expecting marriage to happen without any self-denial or self-sacrifice or self-control. If they really cared about marriage, then they would prioritize understanding what marriage-minded men want and need. They would be developing marriage skills and marriage character – things like cooking, caring for others, being good with money, child care, being sober, being faithful, etc. If a woman wants a husband, then she ought to be concerned with helping him to do the things that she expects him to do as a husband.

There used to be some awareness in young women that premarital sex with hot bad boys was bad for her future husband. That focusing on partying and travel was bad for her future husband. That doing easy degrees, getting easy jobs, while going into debt was bad for future husband. Now it seems that women are making all their decisions based on what feels good for them in the moment, in total ignorance of how that ruins their ability to invest in the man who wants to marry them later. They just can't (or won't) understand how being selfish today has consequences to marriage and family tomorrow.

Do women not look at marriage-minded men doing what we are doing and think "I don't want him to have to do that alone. I want to help him, so that it's not so difficult. And if I have to learn how to do things that help him, then I will put my own needs and feelings second, and learn to do what helps him". Is there any woman out there who looks at a good, marriage-ready man, and thinks about what he needs? And about what she can do to help him? If not, then is it any wonder that men have lost interest in marriage?

I noticed that Dalrock also posted on this, and some of the comments are interesting.

Are you ready for marriage? 10 questions to find out how prepared you are

August 18, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

Would you like your marriage to be long-lasting and fulfilling? Well, check out the questions below and see if you are ready for life-long wedded bliss.

1. Are you opposed to no-fault divorce laws?

No-fault divorce laws allow one spouse to leave the marriage at any time, for any reason, or for no reason at all. If you support no-fault divorce, then your view of marriage is that it's something to be entered into lightly, because it can be exited easily. You'll be walking down the aisle thinking "oh well, if it doesn't work out, I can always get a divorce". If you oppose no-fault divorce laws, then your view of marriage is that there is no escape hatch. You'll probably be a lot more careful about getting married. Since you are convinced that marriage is built to last forever, you'll have a courtship of at least 6 months, and involve both sets of parents in the process. If you put commitment above happiness, you're ready for marriage.

2. Are you opposed to abortion laws?

Abortion laws basically make it easy for two people to have recreational sex, and then get rid of any complications that result quickly and easily. This way, both the people that created the effect can escape the responsibility for what they did, and keep right on pursuing their goals and dreams. If you support abortion laws, you're really saying that you can engage in recreational sex with people who are unwilling to accept responsibility for any children that result. If you are pro-life, then you're saying that people should be careful about having sex, and be ready to take responsibility for a child, should one appear. Being responsible is good preparation for marriage.

3. Are you supportive of daycare for young kids?

Daycare services are essential for couples who need both the father and the mother to be working. The advantage of both parents working is that you can afford lots of shiny new stuff – like vacations, boats, shoes and handbags. Studies show that children don't die during daycare, although if you put a child in daycare, there will be effects on the child's behavior, such as higher anxiety and aggression. If you oppose daycare, you're putting the needs of your children above your need for shiny stuff. Putting the needs of children first is a sign that you are ready for the self-sacrifice that marriage requires.

4. Are you in favor of smaller government?

If you're in favor of smaller government, then you would rather keep taxes low so that more money stays in the family. If you support bigger government, then you think that government knows how to spend your money better than you and your spouse do. Additionally, government usually likes to spend more money than they take in. For example, in Obama's 8 years, we added $10 trillion dollars to the debt, which doubled from 10 to 20 trillion under his watch. If you oppose higher taxes and bigger government, then you want government to pass on less debt to your children. Putting your kids' financial well-being over your own is pro-marriage.

5. Are you in favor of school choice?

If you're opposed to school choice, then you think that government should decide which schools your children will attend. School choice laws allow parents to give money to the schools they think are best for the children. If a school has excellent teachers and teaches students skills that they can use in their professional lives, then parents can choose that school. Schools have to compete to provide higher quality to parents, for lower cost. If you support giving parents more choice, then you put the needs of children – especially poor, minority children – above the needs of education administrators and teacher unions. Putting kids fist is pro-marriage.

6. Are you in favor of premarital sex?

Premarital sex is really fun (so I'm told). You can have sex with people who are just really attractive, even if these people have lousy character. Your friends will be impressed, and you'll feel more attractive – like you were climbing a ladder of attractiveness with each new partner. If you combine sex with being drunk, then you can't remember anything after. And you can't feel guilty if the booze made you do it, right? On the other hand, if you present yourself to your spouse as a virgin, you are telling them that you have self-control, that you take sex as communication rather than recreation, and that they can trust you to be faithful by keeping sex inside the marriage. Trust is important for a good marriage.

7. Are you in favor of welfare for single mothers?

Sometimes, women find themselves pregnant before they are married. If you think that giving taxpayer money to women who have babies before they have husbands is a good idea, then you are rewarding behavior that creates fatherless children. Raising a child without a father causes serious behavioral problems. Boys tend to become more violent,

and are more likely to commit crimes. Girls tend to engage in sex at earlier ages. If you oppose encouraging fatherlessness with welfare, you want women to get married before they have kids. Taking the needs of children seriously is pro-marriage.

8. Are you in favor of same-sex marriage?

When a man and a man get married and acquire children, those children will not be raised with their birth mother. Similarly with lesbians, the children will not grow up with their birth father. Studies show that children suffer from not being raised by their biological parents. For example, children of same-sex parents have lower graduation rates than children raised by heterosexual couples. If you think that children have a right to a stable relationship with their biological mother and father, then you place a higher value on the needs of children as opposed to the needs of adults. That's a good sign you're ready for marriage.

9. Are you in favor of radical feminism?

Feminism shows that you think the purpose of marriage is to make women happy, and not to work as a team to serve God and raise good children. Indeed. Marriage doesn't work if the woman approaches it as an accessory. Marriage is about a man and a woman sacrificing their own interests and compromising in order to work together as a team. Husbands and children have needs that women should care about. Feminism teaches women that husbands and children are less important than their careers, hobbies and interests. Feminism is anti-marriage.

10. Are you responsible with earning, budgeting and saving money?

This one comes to us from Bob P. He says that marriages work better when both spouses are "committed to financial planning, budgeting and a renunciation of debt to support a lifestyle. Disagreement about financial issues is one of the greatest causes of marital stress." If you're able to choose a college major or a trade that you don't like, but that pays well, that's a positive. If you're able to string together jobs so that your resume is gap-less, that's a positive. If you're able to save money even though it means you're having less fun, that's a positive. If you're able to give away money to others to support them, that means you're able to sacrifice your interests for the benefit of others. That's pro-marriage.

Well, how did you do? Leave your ideas for more policies and points of view that are marriage-friendly in the comments.

William Lane Craig's secret weapon is his amazing wife Jan

August 19, 2018 | by Wintery Knight | Link | Original Link

My favorite painting: "Godspeed" by Edmund Blair Leighton, 1900

I want to draw your attention to a talk on "Vision in Life" given by Dr. William Lane Craig. Dr. Craig is the ablest defender of the Christian faith operating today. He has done formal academic debates with all of the best known atheists on major university campuses in front of *thousands* of university students.

It turns out that he owes a lot of his success to his amazing wife Jan.

The MP3 file is here. (32 minutes)

This talk was Dr. Craig's chapel address to Biola University students.

About 11 minutes into the talk, Bill describes what happened after he finished his Bachelor's degree at Wheaton:

> And so I joined the staff of Campus Crusade for Christ for 2 years, and was assigned to Northern Illinois University. And that was where I met my wife Jan. She was a graduate of the University of North Dakota where she had come to faith in Christ. And she had a similar vision for her life of evangelism and discipleship.
>
> And as we worked at NIU together, she with gals and I with the guys, leading students to Christ and discipling them to walk with the Lord, we fell in love. And we decided that we would be more effective if we joined forces and became a

> team.

So their reason for getting together was because they thought that they would be more effective in evangelism and discipleship if they worked as a team.

It is at this point in the talk where Bill begins to explain just how Jan molded him into the lean, mean debating machine that travels the world striking terror into the hearts of atheists.

Bill's first story about Jan occurs early after their marriage while he is working on his first Masters degree at Trinity:

> And it was also at that time that I began to see what an invaluable asset the Lord had given me in Jan. I remember I came home from classes one day, and found her at the kitchen table with all the catalogs and schedules and papers spread out in front of her and she said, "look! I've figured out how you can get two Masters degrees at the same time that it would normally take to get one! All you have to do is take overloads every semester, go to all full-time summer school and do all these other things, and you can do two MAs in the time it takes to do one!"
>
> And I thought, whoa! Are you sure you really want to make the commitment it takes to do this kind of thing? And she said, "Yeah! Go for it!" And it was then I began to see that God had given me a very special woman who was my supporter – my cheerleader – and who really believed in me. And as long as she believed in me, that gave me the confidence to dream bigger dreams, and to take on challenges that I had never thought of before.

In an article on his web site, he talks about how Jan encouraged him to do his first Ph.D:

> As graduation from Trinity neared, Jan and I were sitting one evening at the supper table in our little campus apartment, talking about what to do after graduation. Neither of us had any clear leading or inclination of what we should do next.
>
> So Jan said to me, "Well, if money were no object, what would you really like to do next?"
>
> I replied, "If money were no object, what I'd really like to do is go to England and do a doctorate under John Hick."
>
> "Who's he?" she asked.
>
> "Oh, he's this famous British philosopher who's written extensively on arguments for the existence of God," I explained. "If I could study with him, I could develop a cosmological argument for God's existence."
>
> But it hardly seemed a realistic idea.
>
> The next evening at supper Jan handed me a slip of paper with John Hick's address on it. "I went to the library today and found out that he's at the University of Birmingham in England," she said. "Why don't you write him a letter

> and ask him if you can do a doctoral thesis under him on the cosmological argument?"
>
> What a woman! So I did, and to our amazement and delight Professor Hick wrote back saying he'd be very pleased to supervise my doctoral work on that subject. So it was an open door!

And in the same article, he explains how Jan encouraged him to get his second Ph.D:

> As Jan and I neared the completion of my doctoral studies in Birmingham, our future path was again unclear to us. I had sent out a number of applications for teaching positions in philosophy at American universities but had received no bites. We didn't know what to do.
>
> I remember it like yesterday. We were sitting at the supper table in our little house outside Birmingham, and Jan suddenly said to me, "Well, if money were no object, what would you really *like* to do next?"
>
> I laughed because I remembered how the Lord had used her question to guide us in the past. I had no trouble answering the question. "If money were no object, what I'd really like to do is go to Germany and study under Wolfhart Pannenberg."
>
> "Who's he?"
>
> "Oh, he's this famous German theologian who's defended the resurrection of Christ historically," I explained. "If I could study with him, I could develop a historical apologetic for the resurrection of Jesus."
>
> Our conversation drifted to other subjects, but Jan later told me that my remark had just lit a fire under her. The next day while I was at the university, she slipped away to the library and began to research grants-in-aid for study at German universities. Most of the leads proved to be defunct or otherwise inapplicable to our situation. But there were two grants she found that were possibilities. You can imagine how surprised I was when she sprung them on me!

Both of these Ph.D experiences are also described in the talk. And the talk concludes as follows:

> **I am so thankful to be married to a woman who is tremendously resourceful, tremendously talented and energetic, who could have pursued an independent career in any number of areas, but instead, she has chose to wed her aspirations to mine, and to make it her goal to make me the most effective person I can be, for Christ. And she has been like my right arm in ministry over these many years. And it is a tremendous privilege to be a team with a person like that.**
>
> **And you young men, I would encourage you, if you marry, to find a gal who shares your vision, not some independent vision, but who is interested in aligning herself with you, and pursuing together a**

> **common vision and goal that will draw you [together], so that you will avoid the growing separateness that so often creeps into marriages.**

And now you know the rest of Bill's story. *The person you marry will have an enormous influence on the impact you will have for Christ and his Kingdom.* It is up to you to decide whether that influence is going to be positive or negative, by deciding if you will marry, and if you do marry, by deciding whom you will marry.

You may also be interested in this talk given by William Lane Craig, entitled "Healthy Relationships" (National Faculty Leadership Conf. 2008) (audio here) In that talk, he offers advice to Christians who want to have a marriage that is consistent with their Christian faith.

Facebook joins Twitter, Google and YouTube in deliberately purging conservative voices

August 20, 2018 | by Wintery Knight | Link | Original Link

Facebook, Google, Youtube, Twitter purging conservatives (Source: The Stream)

The November mid-term elections are almost here, and progressives are doing what they can to win. Apple, Facebook, Twitter, Google and YouTube are composed entirely of secular leftists. These companies apparently only hire hardcore radical leftists, (remember James Damore?). Do these big corporations act any differently from the big government fascists in Venezuela and North Korea?

Consider this article from the Daily Caller:

> Facebook is censoring PragerU videos for violating its speech codes that prohibit so-called "hate speech" and shadow banning its posts, PragerU wrote on Twitter Friday.
>
> "We're being heavily censored on @Facebook. Our last 9 posts are reaching 0 of our 3 million followers. At least two videos were deleted last night for 'hate speech' including our recent video with @ConservativeMillen," PragerU tweeted.
>
> The official PragerU Facebook page is still up on Facebook at the time of publication. Its Facebook page reposts the same videos consistently and others can still be found on the page.
>
> However, it appears that one specific PragerU social media administrator — the one who posted the videos that Facebook considered violated its "hate speech" policies — is unable to post on behalf of PragerU, resulting only other PragerU administrators being able to see the post. No one else can see the posts.

Here are some details on the specific videos that were deleted:

> One of the deleted videos, titled, "Where Are the Moderate Muslims?" was most likely posted on Facebook on Thursday.

> The presenter, Hussein Aboubakr, states that when he was growing up, his teacher and his Imam were happy when they heard about the terrorist attacks on the World Trade Center on 9/11.
>
> […]Another video, titled "Make Men Masculine Again," was posted Aug. 6 and has also been deleted. The video, presented by conservative YouTube personality Allie Stuckey, presents an argument that making men feminine is both wrong and dangerous.

The Daily Signal reports that Google is making an app to censor content critical of the Marxist government of China.

Excerpt:

> Code-named "Dragonfly," Google's highly exclusive project was started in spring 2017, and only a few hundred employees are privy to it. The purpose of Dragonfly is to produce a Google app that will adhere to China's Orwellian censorship laws.
>
> The app, which could later be expanded to a computer search engine, would actively censor information deemed subversive by the state. The engine would block queries relating to democracy, human rights, religion, and events or history the state wishes to suppress.

Google has no problem with censoring voices that are critical of far-left extremism. That's their view, so they protect it from criticism.

This article on the Federalist clearly shows that Google and YouTube are deliberately censoring conservative content. (H/T Eric)

Let's start with Google ads:

> Within days, Google blocked my ad and informed my team that we had violated their policies. I called Google. The problem, they explained, was that the video had hate speech.
>
> It was a Fox Business Network video with Trish Regan interviewing me about the Russian collusion investigation. The Google employee could not find the exact offending words, but referred me to various other supervisors up the ladder.
>
> It took much of the day… with successive employees reciting Google policies that they admitted explained nothing. We concluded I should re-submit the ad and whoever was offended at Google would be forced to surface.
>
> Once again my ad was blocked, and this time my Google account was suspended… Once again I called Google and spent a day trying to figure out what was wrong… Was I too nice to President Trump? Should I have been more critical?
>
> […]The next day, Nurse Ratched at Google finally emerged. I was never given her name, but conversations with her employees indicated her sex. It was nothing

> that I or Regan had said in the video, her team explained. Huh?
>
> No, no, the problem, I was told, was in the "crawler of words along the bottom of the video." It was a quote of Trump declaring that the Robert Mueller investigation was a "witch hunt." This was apparently hate speech.

A lot of his YouTube content was also censored:

> A viral YouTube interview with me and Fox Anchor Neil Cavuto about why Hillary Clinton lost the election was penalized. The video had more than 861,000 views and was earning an average of 15,000 views a day when it suddenly went dark. On February 17, after the new censorship took hold, this video dropped to 50 views a day. That is where it has stayed ever since.
>
> Likewise, a viral YouTube interview with me and "Fox and Friends" co-host Brian Kilmeade about the election, a video that had 961,000 views and was clicking off 20,000 views a day, suddenly dropped to 30. It all happened in one day. And it has stayed there ever since.

Remember, inside these big tech companies, it's often extreme left-wing hate groups like the SPLC making the decisions:

> In January, 2018 my channel was hit by shadow-banning. Sometime that month, Google allegedly hired thousands of outside actors supplied by the infamous Southern Poverty Law Center. This was the organization that attacked Ben Carson, the only African American in Donald Trump's cabinet. They were apparently the new arbiters of decency.

In my own case, earlier in the week I sent a photo of the 6779 Twitter followers for this blog to Dina. *An hour later*, I had lost 52 followers, down to 6727! Other people reported the same thing – lost followers and shadow-banning. It only seems to happen to conservatives, though.

Study: children of same-sex couples do less well than those of married couples

August 21, 2018 | by Wintery Knight | Link | Original Link

A family praying and reading the Bible

The Public Discourse reports on a recent study out of Canada.

Excerpt:

> A new academic study based on the Canadian census suggests that a married mom and dad matter for children. Children of same-sex coupled households do not fare as well.
>
> There is a new and significant piece of evidence in the social science debate about gay parenting and the unique contributions that mothers and fathers make to their children's flourishing. A study published last week in the journal *Review of the Economics of the Household*—analyzing data from a very large, population-based sample—reveals that the children of gay and lesbian couples are only about 65 percent as likely to have graduated from high school as the children of married, opposite-sex couples. And gender matters, too: girls are more apt to struggle than boys, with daughters of gay parents displaying dramatically low graduation rates.
>
> Unlike US-based studies, this one evaluates a 20 percent sample of the Canadian census, where same-sex couples have had access to all taxation and government benefits since 1997 and to marriage since 2005.
>
> While in the US Census same-sex households have to be guessed at based on the gender and number of self-reported heads-of-household, young adults in the Canadian census were asked, "Are you the child of a male or female same-sex married or common law couple?" While study author and economist Douglas Allen noted that very many children in Canada who live with a gay or lesbian

> parent are actually living with a single mother—a finding consonant with that detected in the 2012 New Family Structures Study—he was able to isolate and analyze hundreds of children living with a gay or lesbian *couple* (either married or in a "common law" relationship akin to cohabitation).
>
> So the study is able to compare—side by side—the young-adult children of same-sex couples and opposite-sex couples, as well as children growing up in single-parent homes and other types of households. Three key findings stood out to Allen:
>
> children of married opposite-sex families have a high graduation rate compared to the others; children of lesbian families have a very low graduation rate compared to the others; and the other four types [common law, gay, single mother, single father] are similar to each other and lie in between the married/lesbian extremes.
>
> Employing regression models and series of control variables, Allen concludes that the substandard performance *cannot* be attributed to lower school attendance or the more modest education of gay or lesbian parents. Indeed, same-sex parents were characterized by higher levels of education, and their children were more likely to be enrolled in school than even those of married, opposite-sex couples. And yet their children are notably more likely to lag in finishing their own schooling.
>
> […]The truly unique aspect of Allen's study, however, may be its ability to distinguish gender-specific effects of same-sex households on children. He writes:
>
> the particular gender mix of a same-sex household has a dramatic difference in the association with child graduation. Consider the case of girls. . . . Regardless of the controls and whether or not girls are currently living in a gay or lesbian household, the odds of graduating from high school are considerably lower than any other household type. Indeed, girls living in gay households are only 15 percent as likely to graduate compared to girls from opposite sex married homes.
>
> Thus although the children of same-sex couples fare worse overall, the disparity is unequally shared, but is instead based on the combination of the gender of child and gender of parents. Boys fare better—that is, they're more likely to have finished high school—in gay households than in lesbian households. For girls, the opposite is true. Thus the study undermines not only claims about "no differences" but also assertions that moms and dads are interchangeable. *They're not*.

With a little digging, I found the abstract of the study:

> Almost all studies of same-sex parenting have concluded there is "no difference" in a range of outcome measures for children who live in a household with same-sex parents compared to children living with married opposite-sex parents.

> Recently, some work based on the US census has suggested otherwise, but those studies have considerable drawbacks. Here, a 20% sample of the 2006 Canada census is used to identify self-reported children living with same-sex parents, and to examine the association of household type with children's high school graduation rates. This large random sample allows for control of parental marital status, distinguishes between gay and lesbian families, and is large enough to evaluate differences in gender between parents and children. Children living with gay and lesbian families in 2006 were about 65 % as likely to graduate compared to children living in opposite sex marriage families. Daughters of same-sex parents do considerably worse than sons.

The author of the study is a professor of economics at Simon Fraser University in British Columbia. His PhD in economics is from the University of Washington. A previous study had shown that gay relationships typically have far more instability (they last for more shorter times). That's not good for children either. Another study featured in the Atlantic talked about how gay relationships have much higher rates of domestic violence. That's not good for children either. So we have three reasons to think that normalizing gay relationships as "marriage" would not be good for children.

The reason I am posting this is because I want people to understand why social conservatives like me propose these laws defining and promoting marriage. We do favor natural marriage for the same reason that we oppose no-fault divorce, and for the same reason why we oppose welfare for single mothers (it encourages single motherhood). We don't want to encourage people to deprive children of their mother or their father. We look at the research, and we decide that children need their mother and father. Given the choice between the needs of the child and restraining the freedom of the adults, we prefer the child's need for her mother and father. It's not just arbitrary rules, there is a reason behind the rules.

But children are not commodities. They have certain needs right out of the box. Adults should NOT be thinking about how to duct-tape a child onto any old relationship that doesn't offer the same safety and stability that opposite sex marriage offers. We should be passing laws to strengthen marriage in order to protect children, not to weaken it. Libertarians don't want to do that, because they want adults to be free to do as they please, at the expense of children. Libertarians think that the adults should be able to negotiate private contracts and have no obligations to any children who are present, or who may be present later.

Is it the man's responsibility to pursue the woman, or the other way around?

August 22, 2018 | by Wintery Knight | Link | Original Link

Telling a woman how to make wise decisions protects her

If you ask this question theoretically, most people will probably say that it's the man's responsibility, especially in the church. Is this because women don't like the idea of having to plan out and achieve something? Maybe. But what is interesting is that the man-pursues view is very popular in the church, even though it's not very common in the Bible. Dalrock posted something about this.

He writes:

> One comment I see from fathers with surprising regularity is that their unmarried daughter is in a great position to find a husband because she's not remotely interested in the kind of men who express interest in her.
>
> I… think this is tied into the erroneous idea that the Bible teaches that men should pursue and women should judge the performance. But it isn't the Bible that teaches this ethic, it is the religion of Courtly Love that teaches this. Think of the only two women to have books of the Bible named after them. Both Ruth and Esther pursued their eventual husbands. Ruth's pursuit of Boaz resulted in her being the grandmother of King David, which meant that Christ would come from her line. Esther's pursuit of Ahasuerus allowed her to save the Jews.

Cane Caldo was actually the first to write about this on his blog:

> According to traditionalists (and others): Men are supposed to chase, and women are supposed to be caught. Or they might say: Men are to initiate, and women are to respond.
>
> […]If you fancy yourself a traditionalist… [s]earch your Bible for a story about a

> man who woos a woman directly.

So, just consider that for a minute. Ruth is probably the best example of a woman who just makes decisions to get on with life, and happens across a wealthy single man. Then she consults with Naomi and takes action to pursue that man. It works out for her. Where in the Bible does the man pursue the woman?

Derek Ramsey was able to come up with two examples, and he commented on Dalrock's blog:

> You can find examples of all cases in the Bible: fully arranged marriages (for Isaac), where the man pursued the woman (Jacob; Hosea), where the woman pursued the man (Ruth; Esther), and where both pursued each other or it wasn't clearly stated one way or the other (Samson; Solomon). I would argue that pursuit (by either sex) is neither condemned nor encouraged. Each situation is different and there is no rule one way or the other.

I think that Derek wins the argument, here. But I still think that practically speaking, in such a time (of feminism) as this, it's much much wiser for women to take action to "pursue" men she is interested in. That doesn't mean asking men out, though.

thedeti explains in a comment:

> A man setting his sights on one or two or three women and then pursuing them really hard trying to get on their radar isn't the best way to find a woman who's interested in him and who is the best match.
>
> Instead, he should be his best version of himself, and then see which women are tossing subtle signs of interest at him. Which women just kind of show up where he is, which ones make a point to say hi to him, which ones reach out to him, which ones contact him, which ones strike up conversations with him. And then from THOSE women he should select a few he is interested in and then pursue them.
>
> That certainly isn't what most Christians are teaching their children. I certainly wasn't taught this.

And a bit later, thedeti says:

> In the current #MeToo climate, false rape allegations, and sexual harassment's current definition as "any conduct or words uttered by any man anywhere that any woman within sight or earshot didn't like", this model can be downright dangerous for men.
>
> A man can no longer just pick a few girls he's interested in and pursue them. If he selects some girls who dont' like him, he's in for a world of hurt by trying to "perform" for them. If he selects one who kind of likes him, but he makes even one wrong move or says one remotely mildly offensive thing, he's done. Not only will she know about it, all her friends will know too.

> When a woman is very interested and shows it, she'll be much more forgiving of his expected missteps. That gives him room to run, and gives a budding relationship the space it needs to germinate and grow.

Deti advises women to just show up in places where men they are interested in are, and not actively discourage them. Maybe ask him questions about what he is doing as a Christian, and ask for his advice about something he knows about, etc. And deti warns women to consider that in a culture where false accusations and frivolous no-fault divorces are everywhere, men with good educations, degrees and finances will be very careful about pursuing women.

My thoughts

I was speaking to someone who thinks that she wants to be pursued by a man. I suggested that she read the book of Ruth to counter her view. The first and most important piece of advice I gave her was to "cross the room" for any man she is interested in. Stand up, walk directly at him, and speak right in his face. Maintain eye contact and speak directly to him about things he is interested in. On another day, I told her that the most important thing you can ask a man about is his vision to serve God.

As women age and lose their beauty, the only thing that remains is the man's passion – his plan – and the place of the woman within it. Men stay in love with women who have invested in the plan they made to serve God. Naturally, it's POINTLESS to choose any man unless he has a plan to serve God effectively that he has demonstrated his willingness to sacrifice for. In my case, writing this blog is a sacrifice, and giving money to Christian apologists and pro-life debaters is a sacrifice. A woman should be skeptical about anything a man says – look at what he has already done for his vision, and whether he is actually practical and determined enough to achieve anything. That's where you'll find your place. And that's what you need to investigate in a husband candidate. Standing back and remaining passive, waiting to be pursued, is just going to attract a lot of non-Christian men who are *pursuing you for sex*. If the man is pursuing you, and he hasn't told you his vision (why he needs you as his wife anyway), then he wants sex.

The pursuit of women by non-Christian alpha male bad boys seems to be welcomed, surprisingly, by a lot of passive Christian women who kind of lie back and expect to just acquiesce to experiences that feel good. Women today don't like to think about marriage in a structured way. And they especially don't want to be asked by men about past decisions, demonstrated abilities, future wife responsibilities and obligations, etc. (How dare men evaluate them for a marriage plan!) They don't want marriage, defined as self-sacrificial commitment. They want marriage as constant tingles, supplied by an alpha male bad boy who exists solely to generate feelings of happiness in them, and feelings of envy in their girlfriends. Think about marriage as a plan? That's boring. Let's get drunk and hook up with an alpha male bad boy, and see if he calls back after the abortion.

Alpha male bad boys feel good (for a while) and this is how women get trapped into relationships with men who have no reason to commit to them. A much better strategy is to stop being attracted to alpha male bad boys, and deliberately engage in conversations

with marriage-ready men. As my friend Lindsay says, you need to learn to become attracted to men who have a vision that will survive the loss of your youth and beauty.

In my own case, I'll be able to retire at 50 with a net worth well north of 7 figures. Because of this, it would be stupid for me to waste my time pursuing Christian women whose criteria for men has nothing to do with the marriage enterprise, and is *INDISTINGUISHABLE* from the criteria used by non-Christian women. The *ONLY* thing that would catch my eye at this point is a woman who is equal to me (chaste, no tattoos, STEM degree(s), debt-free, married parents, house or savings, into apologetics, conservative politics, and between the ages of 23-28). And that's a minimum. And she can forget about being pursued by me. She'll have to approach me, and question me about what my plan is, and where she would fit into it.

I've often been told by wise female Christian advisors that I need to do a better job of showing off my situation to women. But if I spent the money on sparkly things and fun, I wouldn't be financially secure, would I? It's up to women to stop being so shallow and emotional. They need to look beyond appearances and fun. They need to have a marriage focus, and they need to choose men, show up and start investigating and investing. I simply don't have the time to flail around in a feminist culture where women, including Christian women, are woefully unqualified for the marriage enterprise. It's not my job, after having made thousands of good decisions, to risk my fortune by pursuing women who have made thousands of bad decisions (promiscuity, debt, useless degrees, etc). The entitled attitudes of women today, including Christian women, is nothing short of astonishing to men like me who have spent a lifetime being careful about being chaste, sober, practical, frugal and effective.

Alistair Begg has a great sermon series on Ruth that emphasizes Ruth's agency, and her willingness to make decisions that were practical without any sort of being led by feelings or being nudged by God. Christian women, if you want to get married, then get to work on finding a man and making it easy for him to choose you.

Bible study: Was the resurrection body of Jesus spiritual or physical?

August 23, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson are going to take a look at the data

So, everyone from left to right accepts the early creed in 1 Corinthians 15:3-7 being dated to 1-3 years after the death of Jesus, even atheists like Crossley, Ludemann and Crossan. The thing is, some people are not sure that the appearances of Jesus to individuals, groups, and skeptics really were physical appearances. They say "well, Paul's appearance was non-physical, so the other ones must have been, too".

Let's take a look.

Here's a paragraph from my friend Eric Chabot, from his blog Think Apologetics. He explains why Paul's use of the word "resurrection" to describe what the other witnesses saw means *bodily* resurrection.

He writes:

> If Paul did have a vision then the term "vision" is vague and must be defined. As Licona points out, visions are either objective (i.e., something that is seen without the use of our natural senses) or subjective (i.e., a product of our minds). The real problem is with the vision hypothesis is that it doesn't explain Paul's use of resurrection to explain what had happened to Jesus. The two words are used for resurrection in the New Testament "anastasis" (rising up) and "egersis" (waking up), both imply a physical body**.** Furthermore, the use of the word "opethe" (the Greek word for appeared) shows the Gospel writers did believe that Jesus appeared physically. "There you will see (opethe) him" (Matt. 28:7); "The Lord has risen and has appeared (opethe) to Simon" (Luke 24:24).

> When they used “opethe” here, it means that He appeared physically to them.

> So when Paul gives his list of appearances in 1 Cor. 15, the issues becomes whether the appearance to him is the same as it was to the disciples. There is no doubt the post resurrection body of Jesus (after the ascension) had to be somewhat different than the body the disciples saw. Also, whenever the New Testament mentions the word body, in the context of referring to an individual human being, the Greek word “soma” always refers to a literal, physical body.Greek specialist Robert Gundry says “the consistent and exclusive use of soma for the physical body in anthropological contexts resists dematerialization of the resurrection, whether by idealism or by existentialism.” [9] Furthermore, in N.T. Wright’s The Resurrection of the Son of God shows that the Greek word for resurrection which is “anastasis” was used by ancient Jews, pagans, and Christians as bodily in nature.

Now, I think my view on this, and I’m not sure if Eric would correct me, is that Paul got an objective but non-physical vision of Jesus. There was something there that everyone else could see and hear, in my view. But in my view Paul’s “veridical” vision was post-ascension, and so non-physical. Paul uses the word resurrection to describe what the other eyewitnesses saw (and he met them at least twice, according to Gal 1 and Gal 2), and that means physical resurrected body.

Eric Chabot writes this in another place:

> **Acts 9- Paul’s Damascus Road Experience**
>
> Here we see whatever happened, this was after the ascension. Hence, to say Paul saw the exact same Jesus before he ascended is hard to infer from the text. There simply isn’t enough information here. The Bible says, “they heard” the same voice Paul did ” (Acts 9: 7). But they “did not see anyone ” (Acts 9: 7). Notice Paul was physically blinded by the brightness of the light. One way or the other, the experience involved something that was external to Paul. It wasn’t something that was the same thing as a vision that Paul talks about in 2 Cor. 12:1. Furthermore, the phrase “he let himself be seen’” (ōphthē , aorist passive,), is the word Paul uses in 1 Cor. 15:7 to describe of his own resurrection appearance as the other ones in the creed. As Paul Barnett says:
>
> “It is sometimes claimed that the word appeared (ōphthē) means a mystical seeing, as of a vision, and that since this was what Paul “saw” it was what the other apostles “saw.” In other words, after death, Jesus was taken directly to heaven whence he “appeared” to various people, mystically, as it were. This however, is not all the meaning of Paul’s words. First, the word ōphthē, “appeared” is not limited to visionary seeing it is also used for physical seeing. Moreover, the verb raise used in the phrase ‘raised on the third day” is used elsewhere in combination with the words “from the dead” which literally means “from among the corpses.” Thus raised preceding appeared gives the latter a

> physical not a mystical meaning. Christ, as “raised from the dead” ….appeared.” Furthermore, when Paul asks “ Am I not free? Am I not an apostle? Have I not seen Jesus our Lord?”(1 Cor. 9: 1), he is using the ordinary word horan, “to see” for physical sight. If “seeing” the Lord “raised from the dead” qualified others to be apostles, then Paul is, indeed, an apostle. It was no mere subjective vision that arrested Paul en route to Damascus. (8) .
>
> In the end, word studies can’t entirely resolve this issue. We need to remember the etymological fallacy as well. We would have to look at all the texts that speak of resurrection (including the entire 1 Cor. 15 chapter in their entire context as well as the anthropology of the New Testament. We also need to study the resurrection in light of the Second Temple Jewish period. See our reading list here for some resources that may help.

But conservative ancient historian Gary Habermas seems to think that Paul got the physical body as well.

He says:

> Now, I said before in 1 Corinthians 15, Paul could have chosen to only use the word *pneuma*. He doesn’t. He does say “spiritual,” but he’s got an adjective there. He also says, *soma*, “body.” What did Paul mean?

> Philippians Chapter 3. It’s a short chapter. There are 21 verses, but Paul says three things in one chapter that indicate he’s talking about a physical resurrection. In the opening verses he says, “I was a Hebrew of the Hebrews” and “as touching the law,” he says, “I was a Pharisee.” Now, it’s very well known that the Pharisee believed in a bodily resurrection. In fact, according to Acts 23, as Paul was being taken captive by the Romans to prevent his being killed, he shouted out to the group of people and said, “Why are you taking me? Because I believe in the resurrection of the dead?” He meant a literal resurrection.
>
> When the Pharisees heard that, they said there’s nothing wrong with this guy. But the Sadducees [who didn’t believe in the Resurrection] didn’t like it. So as a Pharisee, he’s agreeing with the Pharisees.
>
> So, the first evidence is from Philippians 3. As a Pharisee, Paul believes in a physical resurrection.
>
> Secondly, in verse 11 he says, “That I may attain the resurrection of the

> dead." Now, the normal Greek word for resurrection is *anastasis,* but in this passage, Philippians 3:11, he puts a prefix on there, ***ek*** *anastasis.* ***Ek****anastasis*, according to all Greek scholars that I know of, is translated in this passage: "The out resurrection from among the dead." Paul said, "I want to attain the out resurrection."
>
> Now, to a Jew, "out resurrection" means "what goes down is what comes up." You come out from death. And then just a few verses later, Philippians 3:20,21, he said, "From Heaven, we look for Jesus who will change our vile *soma* (body) to be like unto His glorious *soma* (or body)," when he should have said *pneuma*, according to this other view.
>
> So he's a Pharisee who believes in a physical resurrection. ***Ek*** *anastasis*—"resurrection from out among the dead ones."
>
> Thirdly, Paul says, "He Jesus will change ***my body*** to be like ***His body***."

> So right there in Philippians 3 alone, I think the picture of Jesus being some wispy spirit that appeared to him on the road to Damascus doesn't fit Paul's own data.

Yes, that's why Philippians is my favorite book. You can get so much useful theology out of it. Something about the resurrection in Phil 3, something about Jesus' divinity in Phil 2, and loads of practical advice on stewardship, charity, fellowship, endurance and practical love for others throughout. Some of it takes a little digging, but that's what commentaries are for, am I right? But I digress.

If you want to read something a little more challenging, I found a paper from the Evangelical Theological Society (ETS) from their journal, where it talks more about soma and anastasis. If you want a bit of a challenge, download the PDF and read it. It's by Kirk R. MacGregor and the title is "1 Corinthians 15:3B–6A, 7 And The Bodily Resurrection Of Jesus".

Christian feminist says that husbands who provide don't deserve respect

August 24, 2018 | by Wintery Knight | Link | Original Link

In previous posts, I've described how I tried to keep the male provider role in mind when deciding how hard to study, what to major in, what jobs to choose, and how much to save. I wanted to earn the respect of my future wife, and have leverage to lead the family according to a (known) plan that would produce results for God. But not everyone sees self-sacrificial decisions that produce results as worthy of respect.

Here is a comment from a Christian feminist:

> Based on this, and other things you've said, I… would frankly consider you ineligible for marriage. I have read some of your blog and it seems to me that you trust in your own earning power, your own planning ability, and haven't even considered that it's God who gives you the health and strength to carry out these things. Also, if you're planning to retire at 50 with this net wealth, then you're not giving enough money away. I don't want to marry a dead beat guy who can't provide. But I don't want to marry an arrogant guy who thinks he can provide better than God either.

I think what she's saying here, is that *despite* the husband's abilities as a provider, wives are not obligated to respect their husbands. Why not? Because the husband's preparation and planning to be the main provider was all a gift from God. The husband didn't sacrifice anything or make good decisions in order to become a good provider. God did that. So, the wife should just give God the respect, not her husband.

Is her view consistent with Ephesians 5:22-24, 33?

> [22] Wives, submit yourselves to your own husbands as you do to the Lord.
>
> [23] For the husband is the head of the wife as Christ is the head of the church, his body, of which he is the Savior.
>
> [24] Now as the church submits to Christ, so also wives should submit to their husbands in everything.
>
> [33] However, each one of you also must love his wife as he loves himself, and the wife must respect her husband.

What her view really means, in practice, is that the wife only has to "respect" her husband when she feels like it. And when is that? When he makes her feel happy. By doing what she tells him to do.

And, since provider ability was all God's doing, the husband didn't really make good decisions about education, work experience, and finances. God made all those good decisions. The husband doesn't actually know how to make good decisions, and so he shouldn't be making the decisions for the family.

In practice, only the wife knows what God has decided for her (and the family). God speaks to her directly, through her feelings. So really, she should just explain to her husband what God is telling her through her feelings, and the husband should submit to her decision-making.

United Methodist clergy declare their support for abortion

What does the Bible teach about women and marriage?

Consider Genesis 3:16:

> [16] To the woman he said,

> "I will make your pains in childbearing very severe;
> with painful labor you will give birth to children.
> Your desire will be for your husband,
> and he will rule over you."

Is the woman's her desire for her husband a romantic or sexual desire? It is not.

Famous evangelical theologian Dr. Wayne Grudem explains in his book "Biblical Foundations for Manhood and Womanhood":

> The word translated "desire" is an unusual Hebrew word, teshûqåh. What is the meaning of this word? In this context and in this construction, it probably implies an aggressive desire, perhaps a desire to conquer or rule over, or else an urge or impulse to oppose her husband, an impulse to act "against" him. This sense is seen in the only other occurrence of teshûqåh in all the books of Moses (Genesis, Exodus, Leviticus, Numbers, Deuteronomy), and the only other occurrence of teshûqåh plus the preposition 'el in the whole Bible. That occurrence of the word is in the very next chapter of Genesis, in 4:7. God says to Cain, "Sin is crouching at the door, and its desire is for you, but you must master it" (NASB). Here the sense is very clear. God pictures sin as a wild animal waiting outside Cain's door, waiting to attack him, even to pounce on him and overpower him. In that sense, sin's "desire" or "instinctive urge" is "against" him. 20

> The striking thing about that sentence is what a remarkable parallel it is with Genesis 3:16. In the Hebrew text, six words are the same and are found in the same order in both verses. It is almost as if this other usage is put here by the author so that we would know how to understand the meaning of the term in Genesis 3:16. The expression in 4:7 has the sense, "desire, urge, impulse against" (or perhaps "desire to conquer, desire to rule over"). And that sense fits very well in Genesis 3:16 also. 21

(Quotation found on Dalrock's blog)

How Christian feminists interpret the Bible

I urge you to listen to a presentation by Dr. Wayne Grudem at a meeting of the Evangelical Theological Society (ETS). He evaluates the claims of a Christian feminist named Catherine Kroeger.

- The MP3 is here. (30 minutes)
- This MP3 is a more detailed version, with slightly worse audio, and a gap at 56-58 minutes. (68 minutes)
- Here is a written summary.

Bottom line: not every church-attending woman who paints herself as a "spiritual" Christian (with words) takes the Bible seriously as an authority (in her actions).

Men: make sure you evaluate wife-candidates thoroughly, and make sure that they demonstrate the ability to do what the Bible says, especially when it goes against their feelings and desires. Never believe words about the future. Evaluate actions in the past. Your marriage must achieve something for God, and that means you must choose someone with proven character and ability, to help you execute your plan. That is why we evaluate women before proposing. Remember, after you marry her, you will be morally obligated to love her *as Christ loved the church*. Make sure you pick someone who is easy to love *all the way*.

Air Force Technical Sergeant John A. Chapman awarded the Medal of Honor

August 25, 2018 | by Wintery Knight | Link | Original Link

Air Force Technical Sergeant John Chapman, was attached to SEAL Team 6 during Operation Anaconda, during the Afghanistan War. Chapman received the Medal of Honor for his actions at the Battle of Takur Ghar.

The Air Force Times reports:

> The Battle of Takur Ghar was part of Operation Anaconda, a joint operation combining conventional forces and special operators that was one of the first major engagements of the Afghanistan War.
>
> Chapman's team, Mako 30, was one of several ordered to set up reconnaissance positions on mountaintops so as to provide overwatch and close-air support to conventional forces below.
>
> The team of SEALs helicoptered toward a mountaintop they thought was unoccupied, but it turned out to be "a hornet's nest of enemy activity" and "basically their headquarters, or their strong point," the special tactics officer said.
>
> The al Qaida fighters unleashed a barrage of fire on their Chinook, code-named Razor 03, which was struck by multiple RPGs. One of the SEALs on his team, Petty Officer 1st Class Neil Roberts, was thrown from the back into the snow below before the helicopter crash-landed about five miles away.
>
> The team — headed by Master Chief Special Warfare Operator Britt Slabinsky, the retired Navy SEAL who himself received the Medal of Honor for this battle — quickly decided that Roberts' only chance of survival would be if they got another helicopter and returned to rescue him.
>
> "They knew it had a significant chance to be a one-way mission, but they felt like that was the only chance Roberts would have to survive," the special tactics officer said. Unfortunately and unbeknownst to them, Roberts had already been killed about an hour before they returned.
>
> As the team expected, the heavily armed al Qaida fighters were prepared when they returned and once again met them with withering fire. But this time, they were able to get on the mountaintop. It was before dawn. They trudged through thigh-deep snow, wearing night vision goggles, in the "bottom of a fishbowl, surrounded on three sides by enemy with overwatching positions that are shooting down with machine guns, RPGs, heavy fire."

Keith Rocco, The Battle of Takur Ghar, National Guard Heritage Painting.)

John Chapman was on this second Chinook helicopter:

> Chapman led the charge without hesitation.
>
> “He runs essentially straight up a steep mountain into the direction of enemy fire,” the special tactics officer said.
>
> […]Chapman burst into the first bunker, killed the two enemies there in close-quarters combat and seized it. He could have stayed safe within its hardened walls, which provided plenty of cover. But instead he emerged to assault the machine gun nest in the second nearby bunker, suppressing its fire and allowing his SEAL teammates to move forward.
>
> That’s when Chapman was first wounded. The SEALs later described seeing him go down and the laser sight from his rifle, which was laying across his prone body, moving up and down with his labored breathing. Before long, they saw the laser stop moving and believed he had died.
>
> Under heavy fire, the SEALs moved back to a ridgeline and continued firing until they were pushed down the mountaintop, the special tactics officer said.

Artwork by Johnny Shumate
(Source)

Chapman was left all alone. But a third Chinook helicopter was already on the way in with reinforcements. The RPG launchers were present and capable of shooting the third Chinook down.

> Chapman was not dead, but instead unconscious and temporarily incapacitated. He awoke after a few minutes, and continued fighting the enemy in the second bunker about 10 meters away for the next hour, the special tactics officer said. There was also another group of al Qaida on top of a ridge, heavily armed with RPGs.
>
> A third Chinook, Razor 01, carrying a quick reaction force of Rangers and special tactics airmen approached shortly after 5:40 a.m. The al Qaida fighters on the ridge start to take aim with their RPGs at Razor 01. The sun had risen.

Chapman makes the decision to sacrifice his own life to protect the lives of others:

> It's impossible to know what was going through Chapman's head at that point, but the special tactics officer believes he realized the Rangers would have a better chance of survival if he could suppress that RPG fire.
>
> Chapman once again ran out from the safety of his bunker, into broad daylight. He placed himself in-between the bunker — with his back to the machine gun within — and the fighters on the ridge, and began firing.
>
> "When he stood up and got out of the bunker, I don't think he imagined he was going to survive," the special tactics officer said.
>
> Razor 01 got hit by an RPG when it was about 50 feet off the ground, the special tactics officer said, but was still able to control its landing.

The Medal of Honor (Air Force variant):

The Air Force Medal of Honor, the highest decoration in the U.S. armed forces
More:

> But it could have been much worse for Razor 1. The special tactics officer said that when Chapman opened fire on the al Qaida fighters on the ridge, he forced them to put their heads down and suppressed their RPG fire as the Chinook approached.
>
> “It’s easy to imagine that it would be a high potential for there to be a catastrophic loss of the helicopter had he not been engaging the enemy as the helicopter was on its approach,” the special tactics officer said.
>
> It’s hard to tell exactly what happened to Chapman at that point, the special tactics officer said, but the large-caliber machine gun bullets — probably from a PKM — that ultimately killed him were likely fired shortly thereafter.
>
> The Rangers poured out of Razor 01 — two were killed as soon as they emerged — and then fought for seven more hours to get to where Chapman fell. The entire battle took 17 hours from the moment when Roberts was thrown from Razor 03.

Chapman was shot 9 times, including 7 times before being killed. When his body was recovered, he had emptied 6 30-round magazines. Due to his heroic actions, the lives of several of his allies on Razor-01 were saved. It was a disastrous situation, but instead of giving up, Chapman did everything he could to fix it. Eventually, enough American forces were able to land to defeat the 400 enemy fighters. 200 enemy fighters were killed. The Americans lost 7 killed, 12 wounded.

The full Medal of Honor citation for Chapman is here.

Stephen C. Meyer: does the Big Bang cosmology disprove the existence of God?

August 26, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Here's the 66-minute video featuring Dr. Stephen C. Meyer, who holds the Ph.D in philosophy of science from Cambridge University, and other degrees in the hard sciences.

The lecture starts really, really slowly. You can just fast-forward to the 12 minute mark, or you might die of boredom.

Topics:

- Up until the the last 100 years or so, everyone agreed that the universe was eternal
- This is at odds with the traditional Christian view that God created the universe
- Materialism, the view that matter is all there is, requires eternally existing matter
- Discovery #1: Hubble discovers that the universe is expanding (redshift observation)
- The expanding universe was resisted by proponents of the eternal universe, like Einstein
- Some naturalists even proposed speculative static models like the steady-state model
- However, not of the speculative models fit with observations and experimental results
- Discovery #2: Penzias and Wilson discover the cosmic microwave background radiation
- Measurements of this background radiation confirmed a prediction of the Big Bang theory
- The steady-state theory was falsified of by the discovery of this background

radiation
- The oscillating model was proposed to prevent the need for an absolute beginning
- But the oscillating model is not eternal, it loses energy on each "bounce"
- A paper by Alan Guth and Marc Sher from 1982 proved that our universe will not bounce
- In addition, experiments reveal that the universe will expand forever, and not contract
- The beginning of the universe is more at home in a theistic worldview than an atheistic one
- The beginning of the universe fits in well with the Bible, e.g. – Genesis 1, Titus 1, etc.

In case you are wondering about what the evidence is for the Big Bang, here are 3 of the evidences that are most commonly offered:

> Three main observational results over the past century led astronomers to become certain that the universe began with the big bang. First, they found out that the universe is expanding—meaning that the separations between galaxies are becoming larger and larger. This led them to deduce that everything used to be extremely close together before some kind of explosion. Second, the big bang perfectly explains the abundance of helium and other nuclei like deuterium (an isotope of hydrogen) in the universe. A hot, dense, and expanding environment at the beginning could produce these nuclei in the abundance we observe today. Third, astronomers could actually observe the cosmic background radiation—the afterglow of the explosion—from every direction in the universe. This last evidence so conclusively confirmed the theory of the universe's beginning that Stephen Hawking said, "It is the discovery of the century, if not of all time."

By the way, Dr. Meyer also does a great job of explaining the problem of proteins, DNA and the origin of life in this lecture. And you can hear him defend his views in this debate podcast with Keith Fox and in this debate podcast with Peter Atkins. He does a great job in these debates.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason

- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig’s case for the resurrection of Jesus

The downside of the soul mate / fairy tale view of relationships

August 27, 2018 | by Wintery Knight | Link | Original Link

(Image: Husband and wife doing some woodworking together)

Astonishing article from the leftist Huffington Post, of all places. (links removed)

Excerpt:

> As millennial women, we were groomed for a white knight fantasy. From childhood favorites such as *Snow White* to adult rom-com staples such as *How to Lose a Guy in Ten Days* or *Sleepless in Seattle*, the media perpetuates a romantic storyline in which compatibility and lasting romance is something effortless, built on chance, sustained by good looks, fun dates and electric sexual chemistry. These story lines shape our expectations for romantic happiness. It is not enough to find someone with whom we are mostly compatible, who would make a good parent, with whom we could learn and grow wrinkly; now, we expect a perfect fit and an easy, instantaneous "connection." In short, we want a soul mate. But it is this desire for a soul mate that is actually the undoing of our happy ending.
>
> A "soul mate" is defined as one who is ideally suited to us, perfectly completes us, one with whom the relationship feels easy and natural. With them, a relationship is just "meant to be"… A survey of young adults conducted by the National Marriage Project found that while 84% of young adults report finding a marriage partner "very important," a full 94% of young adults say they would like to marry a soul mate, and 73% of people ages 18 – 29 believe that there is a soul mate out there for them.

Wow. That doesn't sound like a good approach to me. My approach has always been to pick the girl who was most willing to learn new things. And then to explain to her my vision for marriage and see if I could get her to work independently on that plan before I married her. I don't favor this soul mate approach at all.

Does the "soul mate" approach work?

> We heard that those who get married later and possess a college degree have fewer divorces and more stable marriages. So we spend our twenties trying to find ourselves through travel, accumulating degrees and building a career. Marriage will be the capstone of our achievements, and nothing less than tying the knot with a soul mate will suffice. But the tragic irony is that soul mate thinking makes us increasingly likely to divorce. A study of 1,400 married men and women shows that people who hold soul mate orientations are 150% more likely to end up divorced than those who do not.
>
> **The widespread cultural belief in "soul mate ideology" undermines our chances at happiness because it makes us passive receivers of idyllic romantic expectations. Further, it fosters self-centeredness; one rarely longs to be a soul mate for someone *else*, which would require effort. For this reason, believing in soul mates is one of the most dis-empowering belief systems we can adopt. As millennials, we pride ourselves on actively pursuing the life we want to live, rather than simply accepting whatever hand we are dealt. We are innovative, passionate, proactive and not afraid to take risks. Yet, there is a disconnect when it comes to our desire for lasting love. Though there are prospects around us, we forgo taking the concrete steps needed to build happy compatible relationships because we do not "feel a spark." We are passively waiting on the sidelines for love to "happen," and then wonder why it is so difficult.**

I've always felt that the soul mate approach was like the evil villain in opposition to my noble plan-based approach. My approach is to pick a woman who wants to learn and work hard. Explain your marriage plan to her, and how your marriage plan serves God. My marriage plan accomplishes four goals, for example. 1) Influence the university with apologetics, 2) influence the church with apologetics, 3) provide a model of a good marriage to people in the community, including co-workers, college students and neighbors, and 4) raise effective, influential children who will have an impact for God. Now if you are a Christian woman raised in a church that affirms the soul mate / fairy tale view of marriage with this "God has a wonderful plan for your life" stuff, then a specific, non-emotional plan from a man is the last thing you want to hear about.

Their solution is for people to work at compatibility:

> Compatibility is something co-created through intentionality and conscious choice. It involves mutual sacrifice, effort and commitment for the sake of the

> other's benefit. A recent study found that of the couples who demonstrate above average daily generosity, 50% of them report being "very happy" in marriage; among the low generosity scores, only 14% can say the same. As studies indicate, selflessness is required to create mutual compatibility. It is not instantaneous, nor does it usually begin with true love's kiss.
>
> We both know from experience that there are some you naturally connect with and others you do not. This is not a call towards forced attraction or companionship. But, our romantic futures should not be placed in the hands of blind chance. It is time we roll up our sleeves and shift our expectations from unattainable perfection to realistic romance, one that accounts for imperfection. We must understand that work in a relationship is a necessary key to success, rather than an indication of imminent failure. We will be letting go of a tired plot line that sets us up for disappointment and embracing an active role in our own unique story.
>
> How refreshing to know that we do not have to be perfect to be lovable, and that our romantic success is not solely dependent on finding the "right" fit, but instead built through cultivating daily moments of generosity, sacrifice and conscious coupling.

So in my case, I am looking for a woman who listens to the plan, develops the skills for the plan and then independently engages in activities to achieve the goals of the plan. In the past, I have had women listen to the plan carefully, including my motivations and experiences that caused me to choose this plan. And they have been willing to read books, listen to lectures, watch debates, to gain the skills needed to make a difference. And they have even engaged independently with activities like public speaking, teaching classes, and so forth. But none of the women who had done that accepted the soul mate / fairy tale view of marriage. They all wanted to hear a good plan, learn useful skills and then get to work. Big difference.

Twitter says that death threats against Dana Loesch’s children are permissible

August 28, 2018 | by Wintery Knight | Link | Original Link

I’ve said for some time that the mainstream media and the big tech companies discriminate against Christians and conservatives because they agree with secularists and progressives. Although the mainstream media and big tech companies want to present themselves as open-minded and fair, the truth is far different.

Take a look at this death threat by a young progressive fascist:

Milan Legius threatens to murder the children of Dana Loesch

I used to listen to Dana Loesch’s podcast all the time. The “Florida Man” segments are the funniest. She’s very mainstream, and a solid Christian and conservative.

And here is how Twitter responded to Dana Loesch’s husband when he complained about the death threat:

And here is how Twitter responded to the death threat
They reviewed it carefully. Threatening to murder Dana's children isn't in violation of Twitter Rules.

The Blaze reports:

> Over the weekend, National Rifle Association spokeswoman Dana Loesch received a flurry of despicable death threats on Twitter.
>
> […]One Twitter user wrote: "The only way these people learn is if it affects them directly. So if Dana Loesch has to have her children murdered before she'll understand, I guess that's what needs to happen."
>
> Loesch notified Twitter support who then issued this response: "Hello, Thank you for your recent report. We have reviewed your report carefully and found that there was no violation of the Twitter Rules against abusive behavior. (https://twitter.com/rules)."

That's how the secular left works.

On the one hand, they claim to be for free speech and open debate. One the other hand, we have a secular left attorney general searching the houses of pro-lifers. We have conservative professors being fired for disagreeing with liberal professors. We have Christian businesses being dragged into court, and threatened with losing everything they own. We have a Bernie Sanders supporter shooting at Republicans at a softball game. We have a gay activist who tried to shoot up the Family Research Council building convicted of domestic terrorism. We have Barack Obama using the IRS as a weapon to persecute conservative groups ahead of his re-election bid in 2012, and using the HHS to force Christian companies like Hobby Lobby and Little Sisters of the Poor to cover

abortifacients. In Wisconsin, the FBI and police conducted pre-dawn raids of the homes of top aides to Scott Walker, at the request of a Democrat district attorney. ARMED FBI and police. This is just a small sample, I could go on for hours.

All we have to do to understand how far the secular left goes to force their values and worldview on others is look at what has happened in history when the secular left has seized power. We know how this ends, because it's happened before, in different times and in different places. You can even see it today in places like North Korea, an officially atheist country, where the state owns the means of production.

How do we know if Facebook, Google, Twitter, Apple, Youtube, etc. agree with the progressive who tweeted the death threat against Dana Loesch's children? Well, at the time of writing (Monday night), his account was still functioning. Make of that what you will.

What got me started on apologetics? William Lane Craig debate transcripts

August 29, 2018 | by Wintery Knight | Link | Original Link

William Lane Craig lecturing to university students

Yes, William Lane Craig debate transcripts. In fact, I still read them from time to time to keep up my skills.

Here's one of my favorites, the Craig-Nielsen debate on grounding morality without God

Summary:

> THE CRAIG-NIELSEN DEBATE: GOD, MORALITY, AND EVIL
> William Lane Craig and Kai Nielsen
> with annotations by William Lane Craig
> February 1991, University of Western Ontario

Best part:

> Finally, he raises the issue of immortality and says, "Death doesn't undermine moral values. In fact, things that we value become all the more precious." Well, in one sense he's right. It's the *absence of God* that undermines the objectivity of moral values, not *death*. But let's suppose that there are objective moral values. What would be undermined by the lack of immortality? I think two things.
>
> First, I think there would be no reason to adopt the moral point of view. Since you're going to die, everyone ends up the same. It doesn't make any difference whether you live as a Hitler or a Mother Teresa. There is no relationship between your moral living and your ultimate fate. And so in that sense, death undermines the reason for adopting the moral point of view rather that just being an egoist

> and living for self.
>
> Second, there's no basis for self-sacrifice on this point of view. Why should an atheist, who knows everything is going to end in death, do things that are morally right that go against self-interest? For example, a few years ago there was a terrible mid-winter air disaster in Washington, DC, as a plane crashed into a bridge spanning the Potomac River, spilling its passengers into the icy waters. And as the helicopters came to rescue these people, attention focused on one man who again and again passed by the rope ladder rather than be pulled to safety himself. Seven times he did this, and when they came again, he was gone. The whole nation turned its eyes to this man in respect and admiration for the noble act of self-sacrifice that he did. And yet on the atheistic view, that man wasn't noble. He did the *stupidest* thing possible. He should have gone for the rope ladder first, pushed others away, if necessary, in order to survive! But to give up all the brief existence he will ever have for others he didn't even know? Why? It seems to me, then, that it's not simply the absence of God that undermines objective moral values, but ethical living is also undermined by the atheistic point of view because you then have no reason to adopt the moral point of view and you have no basis for acts of self-sacrifice.
>
> By contrast, on the Christian view, where you have both God and immortality, you have the necessary presuppositions for the affirmation of objective moral values and for consistent living of the ethical life.

And another of my favorites, the Craig-Taylor debate on the ontological grounding of morality.

Summary:

> Is The Basis Of Morality Natural Or Supernatural?
> Richard Taylor and William Lane Craig
> October 1993, Union College, Schenectady, New York

Sample Craig:

> (2) I argued that moral accountability also exists under the supernaturalist view, and Professor Taylor didn't deny the point.
>
> (II) What about my critique, then, of naturalism? I said that naturalism doesn't provide a sound foundation for morality, and here I made two points:
>
> (1) On the naturalist view, objective right and wrong do not exist. Again, Professor Taylor doesn't deny this point; he just says, "Well, to say that they're conventional doesn't mean they're contemptible." Well, granted; but it *does* mean they're arbitrary, they're non–objective. There's no more difference between moral right and wrong than driving on the right–hand side of the road versus the left–hand side of the road. It's simply a societal convention. And the modern evolutionist thinks these conventions are just based in socio–biological

> evolution. According to Michael Ruse, a professor of the philosophy of science,

> The position of the modern evolutionist…is that humans have an awareness of morality…because such an awareness is of biological worth. Morality is a biological adaptation, no less than are hands and feet and teeth…. Considered as a rationally justifiable set of claims about an objective something, [ethics] is illusory. I appreciate that when somebody says, 'Love thy neighbor as thyself,' they think they are referring above and beyond themselves…. Nevertheless…such reference is truly without foundation. Morality is just an aid to survival and reproduction and…any deeper meaning is illusory….{26}

> This is essentially the same view as Professor Taylor's. Moral values are simply rooted in socio–biological evolution, that have passed down as certain taboos and certain commands, but they have no objective validity in terms of their moral rightness or wrongness. Professor Taylor says, "But I have a high regard for people who are truly moral and decent." I don't deny that. Of course he does! But the point is that in his ethics, in his philosophy, he has no *basis* for that affirmation. What I bring is not a new set of values—I think we pretty much hold those in common—but I'm offering a secure *foundation* for those values that we all want to hold dear.
>
> You see, on Professor Taylor's view, there really isn't any objective morality. I think every one of us here tonight would agree that it's wrong to kill babies and that the holocaust was morally wrong. But in his book Professor Taylor says, "The infanticide practiced by the Greeks of antiquity did not violate their customs. If we say it was nevertheless wrong, we are only saying that it is forbidden by *our* ethical and legal rules. And the abominations practiced by the Nazis…are forbidden by our rules, and not, obviously, by theirs."{27} I submit that that is simply a patently false view of moral values and that naturalism, therefore, can't provide any objective basis for right and wrong.

And another of my favorites, the Craig-Tooley debate on the problem of evil.

Summary:

> A Classic Debate on the Existence of God
> Dr. William Lane Craig & Dr. Michael Tooley
> November 1994, University of Colorado at Boulder

Sample Craig:

> (2) Christian doctrines increase the probability of the coexistence of God and the evils in the world. Let me just mention a couple of these.
>
> (i) On the Christian view, the purpose of life is not happiness as such in this life. Rather it is the knowledge of God—which will ultimately produce true and everlasting happiness. What that means is that many evils occur in this life which might be utterly pointless with respect to producing human happiness. But they

> might not be pointless with respect to producing the knowledge of God. Dr. Tooley assumes when he talks about changes that would make this world a better place, that the purpose of life is basically to be happy in this life. And I certainly admit that you could make changes that might appear to make this life a better place, make it happier. But that's not God's purpose. So if you understand that the purpose of life is not happiness as such, I think that you can see that the existence of evil doesn't necessarily cast any improbability upon God's existence.
>
> (ii) It's also the Christian view that God's purpose spills over into eternal life. In the afterlife God will bestow a glory and happiness upon us that is incomparable to what we've suffered here on earth. And the longer we spend in eternity with Him, the more the sufferings in this life shrink by comparison to an infinitesimal instant. Dr. Tooley admits in his article that it is possible that immortality could justify such evils. But, he says, it's "very unlikely" that there is life after death. Well, I have two comments. First, I'd like him to prove that it's unlikely that there is life after death.{26} Second, I suggest that the resurrection of Jesus gives us grounds for hoping in life after death, and I've attempted to justify that historically. So given these Christian doctrines, I think you can see that the existence of God and evil is not so improbable after all.
>
> […]
>
> (4) Finally, I think that there is actually an argument for God from evil. It would go like this:
>
> (i) If God does not exist, objective moral values do not exist. If there is no God, moral values are either socio-biological by-products or just expressions of personal preference.
>
> (ii) Evil exists. That's the premise of the atheist. There is real evil in the world.
>
> (iii) Therefore, objective values do exist. Some things are really wrong.
>
> (iv) Therefore, God exists.
>
> Thus the presence of evil in the world actually demonstrates God's existence because in the absence of God, there wouldn't be any distinction objectively between good and evil, between right and wrong. So although evil in one sense calls into question God's existence, in a much deeper sense, I think, it actually requires God's existence.
>
> So in the light of these four responses, I think that the argument from evil, as difficult and emotionally pressing as it might be, in the end doesn't constitute a good argument against the existence of God. So I think the four arguments given against the existence of God by Dr. Tooley are inconclusive. You've still got my six arguments for God's existence, and therefore I still think that on balance the evidence favors theism as the more rational worldview.

There are more debate transcripts on Craig's Reasonable Faith web site.

Can feminism be defended with reason and evidence? Jordan Peterson vs Cathy Newman

August 30, 2018 | by Wintery Knight | Link | Original Link

Can radical feminism be defended rationally and evidentially?

There was a short discussion recently on UK Channel 4 between Canadian university professor named Jordan Peterson, and a radical feminist with an undergraduate degree in English named Cathy Newman. While you watch, imagine that she is teaching some non-STEM course that you've enrolled in. Would you dare to disagree with her?

First, the video, which has over 11 million views:

And here is an article from the UK Spectator: (paywalled)

> Whatever else anybody might think of him, Professor Peterson is a man of remarkable learning and experience, and does not appear to have arrived at any of his views by the now common means of 'I reckon'. Yet Newman, who approaches the interview with the trademark sourness she employs for everyone she expects to disagree with, treats this is just another chance to burnish her own social justice credentials and expose her guest as a bigot. Big mistake.
>
> Storming straight in with the differences between the sexes, in the opening minutes it is clear that Professor Peterson is willing to back up all his views with references, data and calm analysis.
>
> By 11 minutes in she is saying 'I think I take issue with (that)', before demonstrating that she can't. Soon she is reduced to dropping the bombshell observation that 'all women are different'. By 16.45 there is a palpable win, as Peterson points out that Newman has exactly the disagreeable and aggressive qualities that allow certain types of people to succeed. By 19.30 she is having to throw out things to him that he hasn't even said, such as 'You're saying women aren't intelligent enough to run top companies'. A minute later and she is reduced to countering empirical evidence with anecdote. Peterson presents the data about men in general and Newman responds with the 'I know plenty of men who aren't (like that)' card. Shortly after that (at 22.25) Newman is reduced to

> spluttering and then silence. She tries to pull herself together. But she can think of nothing to say.

To be honest, Cathy Newman is nothing like the women I'm friends with. All of my closest friends are Christian women. All of them are anti-feminist to some degree, with the most successful one professionally (Dina) being the wisest and most anti-feminist of all. When I think of my panel of wise Christian women advisors – each with one or more STEM degrees – I don't recognize Cathy Newman in them. But Cathy Newman does remind me of the radical feminists I encountered when I was doing my BS and MS degrees in computer science at the university.

In my experience, radical feminists debate using six tactics:

1. Deny facts or evidence because men were involved in researching them or discovering them
2. Countering empirical data with anecdotes and personal experiences
3. Taking arguments and evidence as if they are personal attacks
4. Becoming hysterical and crying
5. Claiming that disagreement with feminism will produce violence against women and women committing suicide, etc.
6. Trying to get you expelled, fired or silenced – often by making false accusations or faking hate crimes against themselves

It's important for everyone to understand the views of others in order to know how defensible our own views are. In order to get the best scholarly case for radical feminism, I like to read feminist academics like Christina Hoff Sommers, Camille Paglia, Jennifer Roback Morse, etc. who evaluate and critique radical feminist scholarship. That's how I encounter the ideas of those I disagree with (as well as listening to and watching debates).

Here's a short Factual Feminist video:

I understand the claims that are made by radical feminists, but I am also aware of what the evidence says. I don't try to stop feminists from making claims, I just study how to refute their claims.

But what about the radical feminists? Do they do a good job of understanding those who disagree with them? Let's take a look at an example which I think is representative of feminist tolerance and open-mindedness.

The Toronto Sun reports on a sociology professor who gave her students an assignment – an assignment with some very peculiar constraints.

Excerpt:

> A Ryerson University student who wanted to write a paper on the "myth" of the male-female wage gap was told by her prof that not only was she wrong, she should only rely on feminist journals for her assignment instead of business sources which "blame women," her sister says.

> Josephine Mathias, 21, a fourth-year political science student at University of Toronto, took to YouTube Wednesday to criticize the assignment given her twin Jane for a sociology class.
>
> […]After Jane sent an email describing her intention to write about the wag gap, her instructor replied that her premise was wrong, Josephine said.

Here's what the professor said:

> **"Perhaps you want to write your paper on the glass ceiling. You need to look at feminist sources on this issue…Do NOT use business sources. They blame women. The reality is patriarchy," says the instructor's email, posted online.**
>
> **In a copy of the assignment provided to the Toronto Sun by Josephine, the instructor also notes that Ontario and Canada government websites and Statistics Canada will not be considered scholarly sources.**
>
> **"Government websites state government policy that is devoid of analysis, and usually reproduces mainstream stereotypes, assumptions and misconceptions," the assignment says.**

What is interesting is that the professor makes about $167,000 a year – higher than the average professor's salary. And she's not teaching computer science or petroleum engineering. I find it interesting that another Canadian university reprimanded a grad student for showing a debate clip that offered both sides of the transgenderism debate. Leftist tolerance. Leftist open-mindedness.

Once you've paid your tuition, and the leftist has the grading pen, you lose every argument. Either you get an F, or you get expelled. If you're in the workplace, you get fired. False charges are often made. Hate crimes are faked. Anything to play the victim, rather than address the arguments and evidence. This is how people on the left "debate".

As I wrote previously, the more women embrace radical feminism, the more toxic they become to men. Not just in the classroom or the workplace, but in relationships. Who wants to marry someone whose only response to reason is fury? Men might be OK with temporary arrangements with abusive women. At least while those women have youth and beauty. But men don't marry abusive women. At least, not if they have any wisdom.

54-year-old feminist angry at dating agency for not finding her a rich husband

August 31, 2018 | by Wintery Knight | Link | Original Link

Kate Mulvey at age 53 expects that rich men will want to marry her

A little while ago, I blogged about a 47-year-old mother of three who sued a dating agency for failing to find her a rich husband. That was pretty bad, but I found something even worse. A 54-year-old woman who spend all her savings on a dating agency. She expected them to find her loads of rich men who want to marry her – despite her never having invested anything in them.

The UK Telegraph reports:

> Glass of wine in hand, the man sitting opposite me in the restaurant was in full flow. While he was droning on about his work commitments, I zoned in and out trying to work out how on earth I was going to get to through this first date. I had expected to meet an eligible bachelor, but he had turned out to be so boring that he made me want to stick asparagus up my nostrils.
>
> This memory came flooding back when I read about, Tereza Burki, a City financier who, last week, successfully sued a Knightsbridge-based elite matchmaking service, for the return of her £12,600 annual fee after they failed to find her the man of her dreams.
>
> A couple of years ago, I too joined an expensive matchmaking agency. I had just come out of a seven year relationship, and was on the wrong side of 50.
>
> I soon tired of online dating and receiving messages from over weight baldies

> who peppered their emails with childish emojis. I hankered to find Mr Right-for-me, a man who was suitably educated and a successful professional.
>
> And so this is how I found myself, throwing money (my entire savings to be precise) to an upmarket matchmaking agency in central London. The agency claimed to filter out the undesirables, the mediocre and give clients the personal touch, so I handed over the hefty sum of £6,000.
>
> As I waited to be matched with someone from their 'extensive database', I idly imagined my handsome date, cashmere polo neck, a bit academic and kind. We'd eat steak tartare and swap notes on our latest clever box-set find and favourite novels.
>
> The first indication that all was not as I had expected came when I met personal matchmaker at a Park Lane hotel for 'tea and an interview'… told her how I loved folk music, my favourite film was The Deer Hunter, and enjoyed weekends in the countryside.
>
> […]A few days later she emailed me with the details of W, "a successful entrepeneur who had travelled extensively and also liked folk music". When I met him at a pub in Richmond, I was shocked. I was expecting a cultured and dynamic man, instead I got a man in a pair of jeans, a moth eaten jumper and the table manners of a modern day Baldrick.
>
> And therein lies the rub. These agencies trade on their exclusivity, yet the men I met were far from the international super elite they promised.

Isn't this terrible? Clearly the dating agency is to blame. It should be easy for a penniless, feminist hedonist to find rich men who want to spend all their money taking care of a 54-year-old woman who had *literally nothing to do with the process by which they earned all that money*.

One thing we know about her for sure is that she is impractical. She is 54 years old and has just spent her last savings on a *dating agency*. From her other comments about the type of men she is looking for, we can infer that she wasted a lot of money on travel, fine dining, and other frivolous experiences designed to produce feelings of sophistication without any practical plan for preparing for the financial demands of old age. What's the point of having fun "in the moment" if you don't have any plan to allow sustainable recreation in the future, when you're too old to work?

I spent some time reading articles by Kate Mulvey, and here is what I was able to determine:

- she has no useful degrees – she paid for useless degrees in Italian and French, instead of studying something useful, like computer science or nursing or petroleum engineering. Her "writing" is all about fashion, dating and "lifestyles"
- her opinion on children: "uppity children take your time, emotions and energy" – she sees children as a detriment to her highest priority (her career). She says "I, however, have lived a life of unfettered freedom to take on projects, write books and

travel”
- she had loads of entertaining men “beating a path to [her] door” when she was younger
- she spend thousands of pounds on plastic surgery
- she blames her lack of marriage success on her being “brainier” than men
- she turned down men who wanted to marry her, as late as age 33
- her book is called “Accidental Singleton” because her approach to life – anti-marriage hedonism – has accidentally left her single and penniless at age 54

Although she talks a lot about being intelligent, it seems to me that an intelligent woman would have practical degrees, savings and an awareness of what men actually want from a woman – and WHEN they want it. Men want a woman to support them in their most difficult period, just after they graduate and hit the job market. Starting out in a career is hard because the man doesn’t have savings or a resume or references. The support of a young, attractive, virtuous woman means everything during those difficult years. This is when a wife has the most impact on her husband’s ability to earn and save, on his mental health, on his physical health, etc.

Somehow, this narcissist thinks that she can just show up in a man’s life, after he has done all his earning alone, and grab hold of the things that she never helped build. She wasted all her youth and beauty chasing experiences with attractive bad boys, but she thinks that it’s reasonable for a man to invest all his wealth in her. A woman has value to a man at the time when he is attempting to do difficult things, but lacks support.

What exactly is it that a woman like Kate has to offer a man, given her life choices? Does anyone think that this woman has marriage-character? Does anyone think that her life of selfishness and hedonism has prepared her to be a good wife? What kind of conversation about moral obligations could you have with someone who has only ever done what felt good to her in the moment? Has her string of failed relationships with hot bad boys prepared her to be trusting and unselfish? How about to be faithful? Or even to be content? What is it that she thinks that she is offering that would justify the heavy investment that she is asking for, especially in an age of no-fault-divorce and anti-male divorce courts?

I think people really underestimate how much goes into making a good wife. The character she has to develop. The skills that she has to develop. The way she treats her husband, which often comes from carefully cultivating virtues like chastity and sobriety. Her worldview, which affects whether she has practical abilities like love, forgiveness and self-control. Her ability to be good with money. Her ability to nurture others and make social connections consistent with marriage and homemaking. Her ability to bear children, and then nurture them during the critical first 5 years after – not to mention homeschooling, which is increasingly valuable in a time when underperforming government-run schools seek to indoctrinate, rather than educate, children.

Nothing about this woman makes me think that she has any marriage-related character traits or abilities. Any idiot can spend someone else’s money on their own feelings, fun

and thrills. But it takes a carefully crafted woman to really do the work of a wife. Marriage isn’t there so that women can be happy. Marriage is an enterprise. Being selfish – doing what is easy, and what feels good moment by moment – doesn’t prepare a woman for the enterprise.

New study: belief in free will linked to ability to behave morally and to help others

September 1, 2018 | by Wintery Knight | Link | Original Link

J. Warner Wallace: God's Crime Scene

This is a re-post because I am travelling today.

A while back I finished reading "God's Crime Scene", the new book by J. Warner Wallace. I wanted to post something about some studies he mentioned in Chapter 6, on free will. This is one of the places where he found evidence in a surprising area.

Wallace says that free will makes more sense if theism is true, because we have non-material souls that interact with our bodies, but are not causally determined by them. On atheism, only matter exists, and you can't get free will (or consciousness) from matter. So atheists like Sam Harris and Alex Rosenberg, for example, deny free will, because they are materialists and atheists.

Anyway, here's what he writes on p. 256:

> In 2008, researchers from the University of Minnesota and the University of British Columbia conducted experiments highlighting the relationship between a belief in determinism and immoral behavior. They found students who were exposed to deterministic literature prior to taking a test were more likely to cheat on the test than students who were not exposed to literature advocating determinism. The researchers concluded those who deny free will are more inclined to believe their efforts to act morally are futile and are, therefore, less likely to do so.

> In addition, a study conducted by researchers from Florida State University and the University of Kentucky found participants who were exposed to deterministic literature were more likely to act aggressively and less likely to be helpful toward others." Even determinist Michael Gazzaniga conceded: "It seems that not only do we believe we control our actions, but it is good for everyone to believe it."" The existence of free will is a common characteristic of our experience, and when we deny we have this sort of free agency, there are detrimental consequences.

I decided to look up these studies.

Here's the abstract for first study: (2008)

> Does moral behavior draw on a belief in free will? Two experiments examined whether inducing participants to believe that human behavior is predetermined would encourage cheating. In Experiment 1, participants read either text that encouraged a belief in determinism (i.e., that portrayed behavior as the consequence of environmental and genetic factors) or neutral text. Exposure to the deterministic message increased cheating on a task in which participants could passively allow a flawed computer program to reveal answers to mathematical problems that they had been instructed to solve themselves. Moreover, increased cheating behavior was mediated by decreased belief in free will. In Experiment 2, participants who read deterministic statements cheated by overpaying themselves for performance on a cognitive task; participants who read statements endorsing free will did not. These findings suggest that the debate over free will has societal, as well as scientific and theoretical, implications.

And the abstract for the second study: (2009)

> Laypersons' belief in free will may foster a sense of thoughtful reflection and willingness to exert energy, thereby promoting helpfulness and reducing aggression, and so disbelief in free will may make behavior more reliant on selfish, automatic impulses and therefore less socially desirable. Three studies tested the hypothesis that disbelief in free will would be linked with decreased helping and increased aggression. In Experiment 1, induced disbelief in free will reduced willingness to help others. Experiment 2 showed that chronic disbelief in free will was associated with reduced helping behavior. In Experiment 3, participants induced disbelief in free will caused participants to act more aggressively than others. Although the findings do not speak to the existence of free will, the current results suggest that disbelief in free will reduces helping and increases aggression.

So what to make of this?

If you're an atheist, then your worldview is telling you that what you are doing now is the result of genetic programming and sensory inputs. You're not conscious. You can't reason. You make no free choices, including moral choices. Naturally, someone who

believes this is going to struggle with prescriptive morality, including self-sacrificial care and concern for others. Their worldview undermines the *rationality* of the moral point of view. You might find atheists acting morally for their own purposes, but their worldview doesn't rationally ground it. This is a big problem for people who can see objective morality woven into the universe – and themselves – because they have the awareness of objective right and wrong.

I think what atheists like to say is "I can be moral, too". That's not interesting. What is interesting is whether it is rational for you to be moral when things start to get a bit uncomfortable. When I look at the adultery of Dawkins, the polyamory of Carrier, the divorces of Shermer and Atkins, etc. I am not seeing anything that really wows me. They all deny free will of course, and think that trying to resist temptation is a waste of time. What difference would it make if they did, anyway – there's no afterlife on atheism.

Wallace explains how the awareness of free will and moral choices caused him to turn away from atheism, in this blog post.

He writes:

> As an atheist, I chose to cling to naturalism, in spite of the fact that I lived each day as though I was capable of using my *mind* to make *moral choices* based on more than my own opinion. In addition, I sought *meaning and purpose* beyond my own hedonistic preferences, as though meaning was to be discovered, rather than created. I called myself a naturalist while embracing three characteristics of reality that simply cannot be explained by naturalism. As a Christian, I'm now able to acknowledge the "grounding" for these features of reality. My *philosophical* worldview is consistent with my *practical* experience of the world.

I think atheists who want to be honest about their own experience of first-person consciousness, free will, moral realism, etc. will do well to just accept that theism rationally grounds all of these things, and so you should accept theism. Theism is real. If you like morality, and want to be a virtuous person, then you should accept theism.

Mainstream media defends Pope accused of covering up homosexual sexual assaults

September 2, 2018 | by Wintery Knight | Link | Original Link

Barack Obama shakes hands with Pope Francis

During the past week, news stories reported that Pope Francis actually knew about the epidemic of sexual assaults and rapes by homosexual priests in the Catholic church. His response leaves a lot to be desired.

The National Catholic Register reported this earlier in the week:

> In an extraordinary 11-page written testament, a former apostolic nuncio to the United States has accused several senior prelates of complicity in covering up Archbishop Theodore McCarrick's allegations of sexual abuse, and has claimed that Pope Francis knew about sanctions imposed on then-Cardinal McCarrick by Pope Benedict XVI but chose to repeal them.
>
> Archbishop Carlo Maria Viganò, 77, who served as apostolic nuncio in Washington D.C. from 2011 to 2016, said that in the late 2000s, Benedict had "imposed on Cardinal McCarrick sanctions similar to those now imposed on him by Pope Francis" and that Viganò personally told Pope Francis about those sanctions in 2013.
>
> Archbishop Viganò said in his written statement, simultaneously released to the Register and other media, (see full text below) that Pope Francis "continued to cover" for McCarrick and not only did he "not take into account the sanctions that Pope Benedict had imposed on him" but also made McCarrick "his trusted counselor." Viganò said that the former archbishop of Washington advised the Pope to appoint a number of bishops in the United States, including Cardinals Blase Cupich of Chicago and Joseph Tobin of Newark.
>
> Archbishop Viganò, who said his "conscience dictates" that the truth be known as

> "the corruption has reached the very top of the Church's hierarchy," ended his testimony by calling on Pope Francis and all of those implicated in the cover up of Archbishop McCarrick's abuse to resign.

Speaking as a Protestant, I thought that Benedict was the best Pope the Roman Catholic church ever had. I used to call him "The Protestant Pope", because he had so few of the problems that Protestants like me dislike about Roman Catholic doctrines. It doesn't surprise me that he did the right thing when the crisis was brought to his attention. But his successor has not done the right thing. He has different priorities.

The New York Times reported:

> As he flew near Caribbean islands devastated by Hurricane Irma on his way back to the Vatican from Colombia on Sunday, Pope Francis said that political leaders and others who denied climate change reminded him of a passage from the psalms about man's stubbornness.
>
> […]On the flight, the pope nevertheless appealed again to Mr. Trump, this time on his decision to end President Obama's Deferred Action for Children Program, known as DACA.
>
> […]In contrast to his negative appraisal of Mr. Trump's approach to immigration, the pope praised Italy's efforts to welcome large numbers of migrants even as it sought to stem the tide of immigrants coming from Libya.

In fact, the defenders of the Pope made clear that his priorities are global warming and open borders, not following what the Bible says about sex outside of marriage.

Catholic journalist Emily Zanotti explains, in the Daily Wire:

> In a bizarre interview with a Chicago NBC affiliate, Cardinal Blaise Cupich, head of the Archdiocese of Chicago, suggested recent claims made by a former apostolic nuncio — the Vatican's envoy to the United States — that Pope Francis not only disregarded sexual abuse allegations against Cardinal Theodore McCarrick, but promoted McCarrick and sought his counsel, were going down a "rabbit hole."
>
> The Pope, Cupich told NBC, has more important things to attend to than sex abuse scandals, like climate change and immigration.
>
> "The Pope has a bigger agenda," Cardinal Cupich said. "He's got to get on with other things, of talking about the environment and protecting migrants and carrying on the work of the church. We're not going to go down a rabbit hole on this."

Clearly, this is the focus of Catholic church leadership. Global warming and open borders both help to destroy free market capitalism, and increase the size of the secular government. (Global warming alarmism allows the government to tax and regulate energy production and consumption, and open borders brings in a lot of low-skilled immigrants who tend to vote for higher taxes and more welfare spending). That's the Pope's priority. And since it's also the mainstream media's priority, they are defending

him from his critics.

Ben Shapiro, writing in the far-left Newsweek, explains:

> So, did the press leap to investigate Vigano's claims? Did they demand answers from Pope Francis? Did we see the same type of courageous, comprehensive coverage of Francis' activities that we saw from the Globe team circa 2003? Of course not.
>
> Instead, mainstream media outlets went out of their way to portray Vigano as a disgruntled conservative angry at Pope Francis' progressive interpretation of Catholic doctrine. The New York Times headlined, "Vatican Power Struggle Bursts Into Open as Conservatives Pounce." Their print headline was even worse: "Francis Takes High Road As Conservatives Pounce, Taking Criticisms Public."
>
> Yes, according to the Times, the story wasn't the sitting Pope being credibly accused of a sexual abuse cover-up—it was conservatives attacking him for it. The problem of child molestation and sexual abuse of clergy took a back seat to Francis' leftist politics, as the Times piece made clear in its first paragraph: "Since the start of his papacy, Francis has infuriated Catholic traditionalists as he tries to nurture a more welcoming church and shift it away from culture war issues, whether abortion or homosexuality. 'Who am I to judge?' the pope famously said, when asked about gay priests. Just how angry his political and doctrinal enemies are became clear this weekend…"
>
> It wasn't just the Times. On Wednesday, Reuters headlined, "Defenders rally around pope, fear conservatives escalating war." On Thursday, Reuters doubled down with this headline: "Conservative media move to front line of battle to undermine Pope Francis." The Telegraph (U.K.) reported, "Vatican analysts say the attack appears to be part of a concerted effort by conservatives to oust Pope Francis, who they dislike for his relatively liberal views…
>
> […]The media's disgraceful attempts to cover for Francis because of their love for his politics merely exposes the actual malign motivations of many in the media: they were happy to expose misconduct and evil inside the Catholic Church when the pope was a conservative; they're happy to facilitate a cover-up when the pope is a liberal.

As an evangelical conservative Christian, the Bible means more to me than the opinions of any man. The Bible is God speaking to his creatures about what their priorities ought to be. So, as a Bible-believing Christian, I'm primarily concerned about chastity, fidelity, protecting the unborn and promoting natural marriage. I wish we could all agree that these things should be our priorities. People should not be having sex outside of marriage, or cheating on their spouses. Unborn children should not be killed. Young children should grow up in stable homes with their biological mother and father present.

And I also believe in small government and low taxes, because parents need to keep the money they earn, in order to run their families properly. Parents should not be taxed to

pay for high energy costs (global warming alarmism causes higher energy costs, for example Germany and Canada) and unskilled immigrants (higher police, education and health care costs, as seen in places like France and the UK). I want strong families where children grow up loved and protected. And I think Catholics should agree with me on this.

Brown University suppresses new study showing transgenderism is not genetic

September 3, 2018 | by Wintery Knight | Link | Original Link

Annual referrals for 2016/17 (all ages)

What's the best explanation of this transgenderism data? Genetics or cultural pressure? Are people on the secular left interested in conforming their beliefs to what scientists discover about the universe? Do they greet the progress of science with an open heart and an open mind? Well, we already know that secular leftists are hostile to what science has shown about the origin of the universe, and the fine-tuning of the universe for intelligent life. But what about moral issues like transgenderism?

Consider this study, which was reported by Science Daily:

> This month, a Brown University researcher published the first study to empirically describe teens and young adults who did not have symptoms of gender dysphoria during childhood but who were observed by their parents to rapidly develop gender dysphoria symptoms over days, weeks or months during or after puberty.
>
> [...]The study was published on Aug. 16 in *PLOS ONE*.
>
> Littman surveyed more than 250 parents of children who suddenly developed gender dysphoria symptoms during or after puberty.
>
> The pattern of clusters of teens in friend groups becoming transgender-identified, the group dynamics of these friend groups and the types of advice viewed online led her to the hypothesis that friends and online sources could spread certain beliefs. Examples include the belief that non-specific symptoms such as feeling uncomfortable in their own skins or feeling like they don't fit in — which could be a part of normal puberty or associated with trauma — should be perceived as gender dysphoria; the belief that the only path to happiness is transition; and the belief that anyone who disagrees with the teen is transphobic and should be cut out of their life.
>
> "Of the parents who provided information about their child's friendship group, about a third responded that more than half of the kids in the friendship group

> became transgender-identified," Littman said. "A group with 50 percent of its members becoming transgender-identified represents a rate that is more 70 times the expected prevalence for young adults."
>
> Additionally, 62 percent of parents reported their teen or young adult had one or more diagnoses of a psychiatric disorder or neurodevelopmental disability before the onset of gender dysphoria. Forty-eight percent reported that their child had experienced a traumatic or stressful event prior to the onset of their gender dysphoria, including being bullied, sexually assaulted or having their parents get divorced.
>
> This suggests that the drive to transition expressed by these teens and young adults could be a harmful coping mechanism like drugs, alcohol or cutting, Littman said. With harmful coping mechanisms, certain behaviors are used to avoid feeling negative emotions in the short term, but they do not solve the underlying problems and they often cause additional problems, she noted.

Well, this seems like a OK study, and, as a Christian, my gut response to scientific data is to agree with it, and adjust my beliefs accordingly. I am a little concerned that her data is coming from self-selected individuals who are self-reporting, but it can be hard to find transgender test subjects.

This article at The Federalist had a few examples to illustrate the conclusion of the study:

> The study includes other eye-opening information, such as case studies of several children's stories.

- > "A 14-year-old natal female and three of her natal female friends were taking group lessons together with a very popular coach. The coach came out as transgender, and, within one year, all four students announced they were also transgender."
- > "A 14-year-old natal female and three of her natal female friends are part of a larger friend group that spends much of their time talking about gender and sexuality. The three natal female friends all announced they were trans boys and chose similar masculine names. After spending time with these three friends, the 14-year-old natal female announced that she was also a trans boy."

I thought this quote from that article was interesting as well, given the culture's obsession with "bullying", which is a nebulous term that can mean actual bullying, or mere disagreement.

> The study also may indicate that school "anti-bullying" programs typically created by LGBT activist organizations such as the Human Rights Campaign may help accelerate children identifying as transgender by pushing peers and

> authority figures to profusely express their support. It also may suggest that Marxist-style identity politics that brand heterosexuality as oppressive increase gender dysphoria.

Coming out as transgender means instant fame and popularity, because you're a victim, and everyone has to be nice to you… or else:

> "Great increase in popularity among the student body at large. Being trans is a gold star in the eyes of other teens," wrote one parent on the study response form. Another wrote, "not so much 'popularity' increasing as 'status' … also she became untouchable in terms of bullying in school as teachers who ignored homophobic bullying …are now all at pains to be hot on the heels of any trans bullying."

Very interesting. But the secular left had a completely different reaction to the study.

The Daily Wire reports:

> In any case, this Brown University study could not stand — any effort to actually research the environmental component of transgenderism is met with raucous calls for censorship. And Brown immediately caved. The University pulled down a news article about the study. Realistically, Brown and the journal in which the original comment was published, PLOS ONE, turned against the study because it offended politically correct sensibilities about transgenderism.

Here's what the spokeswoman for Brown University had to say about pulling the study:

> Independent of the University's removal of the article because of concerns about research methodology, the School of Public Health has heard from Brown community members expressing concerns that the conclusions of the study could be used to discredit efforts to support transgender youth and invalidate the perspectives of members of the transgender community.
>
> […]There is an added obligation for vigilance in research design and analysis any time there are implications for the health of the communities at the center of research and study.

So much for the spirit of free inquiry and academic debate on the Brown University campus. The progress of science has been overridden by the hysterical reactions of the secular left.

The future is Canada

In Canada – a country that does not have free speech protected by law – it's actually a criminal offense to make transgender people feel bad by disagreeing with them.

A Canadian human rights lawyer explained what the law is in Canada:

> Brown, who appeared with Peterson before the Senate last May to argue against Bill C-16, said a "small cadre of trans activists" have "made a successful

> revolution” by instantiating a social construct into law.
>
> Denying gender theory under Bill C-16 could result in jail or bankruptcy, he said.
>
> A human rights tribunal can levy fines, or assign a “public interest remedy,” such as sensitivity training, and non-compliance would be considered contempt of court, said Brown.
>
> […]He advised people watch the case of Barry Neufeld, a British Columbia school trustee facing a human rights complaint for “transphobia” for criticizing the province’s Sexual Orientation and Gender Identity (SOGI 123) curriculum.

If you want to know what’s coming to America in ten years, just look north to Canada. Right now, we are having gay activists sue Christian business owners who refuse to take part in same-sex weddings. Canada was doing that in the late 90s and 2000s. Now Canada is arresting people, bankrupting them, and putting them in jail, for using *the wrong pronouns* when referring to transgender people. That shows you where the secular left in America would like to take our country. Are you comfortable with having your free speech limited like this?

Greg Koukl debates Michael Shermer on God, atheism, meaning and morality

September 4, 2018 | by Wintery Knight | Link | Original Link

Two tough rams butt heads, and may the best ram win!

The full transcript of a debate between Michael Shermer, editor of Skeptic magazine, and Greg Koukl, president of Stand to Reason. This debate occurred on Hugh Hewitt's radio show, and was moderated by Hugh Hewitt.

HH = Hugh Hewitt
GK = Greg Koukl
MS = Michael Shermer

Here is the full debate transcript from Stand to Reason.

And here's an excerpt:

GK: Right. Actually, the big question here, Hugh, is whether it's possible to be good without God. Now I'm not talking about whether it's possible to be good without a belief in God. I certainly think that's possible, but be good without God. And the answer to that question hinges entirely on precisely what you mean by good. And so I was going to give an illustration. So a man drags a young girl into the alley, he sexually abuses her, strangles here, and tosses her into the dustbin. Is that act wrong? Now I think everybody listening is going to admit it is wrong. But here is the real question. What do we mean when we say that that act of rape and abuse and murder is wrong? Are we describing the action itself, the object? Are we saying that the object, the rape, the murder, has a quality of being wrong, and therefore, wherever that rape goes, the wrongness follows it, just like your height, 6' 2", or whatever it is, is an objective quality of you. Wherever you go, your height follows you in the same way. Does the wrongness follow the rape? Well, if it's a quality of the rape, if it's an objective quality of the rape, then it does. And it doesn't matter what people think about it, or what cultures decides, or what your evolutionary conditioning is. The rape is still wrong. The other alternative is that you're not talking about the rape. You're talking about yourself. You're talking about your genetic

conditioning. You're talking about your culture's decision about that kind of thing. And if that's the case, then the truth of the wrongness of the rape is simply in the individual or the subject. And this is why philosophers distinguish between ethical objectivism and ethical subjectivism. Now there's lots of different subjectivisms in ethics. But simply put, if you're an ethical subjectivist, you're a relativist. And actual ethics don't exist. Ethics are an illusion. If you conclude that ethics are an illusion, there's lots of different ways to explain it. Michael's written a really great book, I think, called The Science Of Good And Evil. I've read most of it, and it's well written, and it's very compelling. But it's a description about how the illusion of ethics has taken place. If you want to go that route, you're welcome to go that route. But what you can't do is you can't then talk about morality as if it's objective when your explanations are subjective. So this is a problem that I think all atheists, including Michael, have to solve. Are ethics objective or relative? And if they're relative, then how can we make moral judgments that are meaningful on other people?

HH: Michael Shermer?

MS: Wow, let's just get right into it. Well, I don't think it's quite so black and white. That is to say I think there are provisional moral truths that exist whether there's a God or not. In other words, it's wrong, morally, absolutely morally wrong to rape and murder. And that would be true whether there was a God or not. In other words, if…is God saying that it's wrong because it's really wrong, and He's instructing us in his Holy Scripture that it's wrong? Or is it only wrong because He said so? And if it turned out there wasn't a God, would that make it okay? And my answer is no, it really is wrong, whether God says it's wrong or not. That is to say I think it really exists, a real, moral standard like that. Why? Well, because first, you could ask the person who is being affected, we should always ask the moral recipient of the act, how do you feel about being raped or murdered or stolen from or lied to. And the moral actor will tell you, it doesn't matter whether, if I could use a current example, I haven't any idea if Tiger Woods and his wife are religious or not. But you can just ask his wife whether it was morally right or wrong, and she'll tell you. It doesn't matter whether there's a God or not. It's wrong. And so that's the first principle. Just ask. Ask the moral recipient of whether it's right or wrong. But I think Greg's after something deeper, that is to say is there something even deeper still behind the moral actor's feelings about how they're treated. And the answer is yes, I think so. We're a social species. We don't live in isolation. We live as members of a group. And as such, there's no possible way our group could survive, be cohesive, be a unit of any kind of solidarity against other groups, or against a harsh environment. If there were too much violations of social norms, that is if there were constant lying and cheating and raping and murdering, there's no way a social group could hang together. And as such, as we all know, we're very tribal. We're tribal against other groups, but within our groups, we're very pro-social, altruistic, cooperative. We have a good and evil in our nature. So to this extent, I find myself interesting often in agreement with my conservative friends on most of the things they consider morally, moral truths. That is, we share the same moral values, even though I come at it from a different perspective.

HH: Greg?

GK: Yeah, I'm actually not after something deeper here, Michael. At least to start out the discussion, I'm trying to be as simple and clear and precise as possible, because it's very easy to weave together a bunch of things that sound persuasive, but turn out to be different things. Like for example, Darwinian evolution, which is a materialistic process, and here I mean the blind watchmaker thesis, the neo-Darwinian synthesis, natural selection working on mutations, and a kind of a cultural evolution that Michael has just referred to as we work together as a group to survive as a group. Those are two entirely different things. One is materialistic, Darwinian, the other one is intelligent design, quite frankly, where the group gets together and makes some determinations to encourage some behavior and discourage others. What I'm trying to do is to be able to answer the question that came up initially, is God necessary for morality, which Michael denies. It's to say well, what is it that morality, that we're trying to describe? It is either objective, and therefore an immaterial obligation that applies to certain behaviors, or it is subjective. The things that Michael described were variously subjective, evolutionary elements, subjective cultural elements, but then he affirmed that we all have good and evil in our nature, or an awareness of that. I agree with that entirely. We all are aware of those things. That's why even if we don't believe in God, we can still know morality and follow it. The question is what accounts for real, genuine objective morality?

HH: One minute to the break, Michael Shermer.

MS: I'm not arguing for cultural evolution. I'm actually arguing as part of our, what you described as materialistic, natural selection, Darwinian evolution, that it's not enough to just pretend or fake being a good group member. You actually have to believe it, feel it, and live it. So what I'm arguing is that natural selected certain moral sentiments, as Adam Smith called them, moral feelings, an actual empathy, Adam Smith talked about, we actually empathize with somebody else, we can put ourselves into their shoes and feel their pain, I'm arguing that's very real. It's every bit as real a part of our evolutionary heritage as our eyes and our hands.

– – – –

HH: Michael Shermer, when we went to break, you were saying that evolutionary biology has produced a real morality.

MS: Yeah, I think really, Adam Smith had it right in his very first book, The Theory Of Moral Sentiments, long before Darwin, that we actually have in our biological nature, our human nature, the capacity to feel other people's pain. He called it empathy, we think of it often either as empathy or sympathy. That is, we really do connect to other people. A lot of good research on this now, brain scans, you can show somebody a little video of somebody they know, or have feelings for, getting pricked with a pin, and the same areas of their brain light up, the pain receptors, as in the person getting the pin prick. In other words, we have an evolved tendency to really be deeply, emotionally connected to our fellow group members. And that's why I say groups like World Vision, where you want to adopt a child, it doesn't help to show a picture of 10,000 starving African kids. What does

affect us is one child, a picture of one child with a little biography. That's how you get people to adopt a child to donate. The reason for that is because essentially they're tricking the brain, our brains into making that stranger an honorary family member, an honorary within group member, which is why I argue that free trade is one of the best ways of defusing normal tribal tensions between people. It makes them honorary friends, honorary members. Well, what's going on there is we're tricking the brain into sort of this evolutionary rule of thumb – be nice to people that are like you and that are related to you, and that you know, and that are fellow group members, and don't do what our natural tendency is, is to be tribal and xenophobic against those other guys. And free trade is one of the best things you can do for that. So I'm arguing that's actually tapping something deep within us.

HH: Greg Koukl?

GK: Yeah, basically, I agree with Mike completely here. We do have this tendency, and it seems to be universal among humankind. The question is, what is that tendency, actually? And what is the best way to explain it? And I see like a handful of significant problems with using evolution to explain morality. The first one is that evolution is a materialistic process. And here, I'm going back to an original point, and I don't want people to lose it. There is no way that you can take molecules, and reorganize them in any fashion, over any length of time, and have pop out of the mixture an objective moral principle that's immaterial, and that applies to human beings. All you're going to get is a reorganization of the molecules. And what they can produce, and this is what Mike has done in his book, and he mentioned just s few moments ago, they can produce sentiments. They can produce feelings. They can produce behavior. But this leads us to the second problem of using evolution to explain morality, is that morality is more than sentiments, feelings and behavior. Morality entails things like motive and intention. I mean, you could have a guy walk into a garage, walk out with a hose, and is that wrong? Well, it depends. Is it his hose or somebody else's hose? Did he intend to take the other person's hose? Is he borrowing the hose? So we can see here are elements that are part of the moral thing that needs to be explained, that are immaterial, and therefore the Darwinian explanation can't even in principle go there. It can't do that job. But here's the worst problem. Regardless of what our sentiments happen to be regarding moral actions, we can feel good or feel bad or whatever, the problem is that morality is prescriptive, not merely descriptive. That is it tells us not just what we did, but what we ought to have done in the past, and what we ought to do in the future. That is not something that any Darwinian mechanism can describe, because nothing about my biology can inveigh upon me to act a certain way for moral reasons in the future. It doesn't tell me why I should be good tomorrow. This is a huge difference between these two views, the descriptive and the prescriptive. Prescriptive is part of morality, and can't even, in principle, be explained by an evolutionary materialistic system.

HH: Michael Shermer, I'll give you a start on that. We have about 45 seconds to the break, so you may want to…we'll come back after the break and pick up. But what's your start to that?

MS: Well, the start would be that again, let's not think of evolution just as nature red and tooth and claw, and it's nasty, brutish and short, but that in fact, we have this whole other social evolution. And I'm not talking about cultural evolution where we consciously make decisions, but subconsciously, because it's in part of our nature to actually, seriously, deeply feel for other people and their actions, and the consequences of our actions, so that we actually have a sense of right and wrong that we're born with, but then culture taps into and tweaks, one way or the other.

– – – –

HH: Michael Shermer, when we went to break, Greg had made the argument that the Darwinian model simply cannot explain immaterial concepts like morality, that there's just no way you can rearrange the molecules to get there. You're saying well, yes you can.

MS: Yeah, I think so, because if we think of morality as another suite of emotions that are involved with other people's behaviors, the consequences of our actions, how we feel about them, how people feel about us when we do these things, that's as every bit as important a biological part of our nature as anything else we talk about. So let's take a real simple emotion. When you're hungry, nobody does any calculations about the caloric input/output ratios of eating an apple versus an ice cream, although now it's posted on the walls for us to see. But we just feel hungry, and we feel hungry for certain kinds of foods. The feeling of hunger is a proxy for something else. Evolution's done the calculating for us. You need food, so we're going to, your hypothalamus is going to secrete these certain chemicals that causes your stomach to rumble and so on. When you're attracted to somebody else, a member of the opposite sex, nobody does the calculation by, let's say, a man finds a woman attractive who has a .67 hip to waist ratio, and an hourglass figure, although that is pretty much universal. Nobody walks about with calipers taking measurements of who they're going to want to date or ask out. You just look around, and you just go wow, I really find this woman attractive. It's a feeling you have, okay? So those are kind of simple emotions, but sliding up the scale, the moral emotions are really no different. When I lie to somebody, I've violated a social norm, and they respond in a very angry, hostile way. So those emotions that we both share, guilt, shame, anger, disgust, involved a social relationship that whether it was a norm violation, those are the kinds of emotions that are just like hunger and sexual attraction that are built into us by nature, by evolution. Or, if you wish, this is how God created the moral sentiments, just like He created everything else in the universe, through a process of nature. I think that's equally reasonable to argue. So I don't see that it has to be an atheistic viewpoint versus a theistic viewpoint to get to our moral sentiments. Why couldn't God have used evolution to create the moral sentiments as I've described them?

GK: Yeah, well, you don't actually believe that, I know, Mike, so this is kind of like adding God to the soup, you know, if it makes people feel better. But the basic argument is that evolution all by itself can do the trick. And I think if your listeners are listening carefully, what they're going to hear is Mike has just described, and if I'm being unfair to your assessment here, let me know, Mike, that moral feelings are simply that. They are

sophisticated emotions that do some work for us for survival, and even on a group level. Now there's a name for this. It's called emotivism. A.J. Ayer, the famous atheist, offered this description of morality. It's a relativistic scheme of morality. Morality doesn't actually exist, Ayer argued. There is no objective right or wrong. Rape isn't wrong itself. What happens is, we have feelings about it, and we express it in moral language, but rape isn't really wrong. So your listeners are going to have to ask themselves the questions. When they just survey their own moral senses, and we all have access to this, do we want to believe that scientists have figured out that really what we're doing is feeling sophisticated, complicated emotions, and that the emotions are in us, and we are not seeing anything about the action? Or does it seem like rape is wrong? Look, when I say rape is wrong, I'm talking about the rape. When I say liver is awful, I'm talking about me. I'm talking about my own tastes and preferences. It's interesting, as Michael has given his explanation, though, that he's doing, and I don't know if you are aware of this, Michael, but you're doing the very thing that I kind of warned against. You give a description of the foundations of morality that turn out to be relativistic, but then there's a smuggling of a more objectivistic morality in the back door, like when Michael says you don't have to do what your nature tells you to do, in other words, what you've been programmed by evolution to do. You can kind of rise above that. Well, now we're talking about a morality that isn't dictated by evolution, but a morality that we can employ through our acts of will, to rise above this kind of brutish evolutionary morality. And that sounds suspiciously like the very thing that I'm talking about here.

MS: But I don't mean, there's nothing to rise above by itself. Yes, we have to say rise above our tribal instincts to be xenophobic when we meet somebody who's a stranger, who's different from us. We all struggle against that, particularly in a black and white America, where there's always been this underlying tension. Indeed, so culture helps us do that – education, travel, diversity of exposure to different people. That makes you a little more tolerant. Okay, but I'm not talking about that. What I'm talking about is tapping into the good part of our nature, the fact that in addition to that xenophobic tribalism we have, we also have this other side that almost never gets discussed in evolutionary…even in evolutionary circles, you'll still hear evolutionary biologists talking about, in a way that Huxley did, and Herbert Spencer did in Darwin's own time, that we have to somehow struggle mightily against our genes to overcome that nasty tendency we have to want to rape, kill, pillage and destroy. Well no, actually, we have this whole other side that's just as genetically programmed into our nature. And the point of culture – education, politics, economics and so on, is to tap into the better angels of our nature as Lincoln said.

GK: Okay, here's the question I have for you, Michael, then. You've identified that really, we have good and we have bad. That's part of, under your terms, that's part of our genetic nature, and we can choose to tap into what you call the good side. Why ever should we do such a thing if there is not a higher standard that directs our action to the better side, your words, than the bad side, your words, if really, ultimately, they are both the result of a genetic evolution, and from outside terms, neither is better than the other.

Why should we do that, Michael?

MS: Yeah, well I don’t see how entering God into the equation changes that problem at all.

GK: Well, that’s the next step. What I’m trying to show is that the should comes from the outside, and if we can demonstrate that, then we can ask…

Gosnell movie set to open in October 2018 in 100 theaters

September 6, 2018 | by Wintery Knight | Link | Original Link

Empty benches where the mainstream media ought to be during the Gosnell trial

At the time of the Gosnell story, I remember that there was a nationwide, wall-to-wall media blackout. Every single mainstream media source was colluding with the others not to report on the story. It was impossible to get news for weeks, until finally the mainstream media's pro-abortion, pro-infanticide bias became the story, and they had to start reporting on the trial.

For example, Life News reported that it took ABC News 56 days to begin covering the story, and they only did it because pro-lifers marched on their headquarters:

> Fifty six days after the grisly trial of abortionist Kermit Gosnell began, ABC broke its self-imposed blackout and finally offered coverage.
>
> *World News* anchor Diane Sawyer belatedly told viewers that Gosnell was convicted on three counts of first degree murder against newborn babies, as well as on a slew of other charges. Terry Moran explained, "**For two months, jurors heard often shocking, grisly testimony**." He described the details as a "house of horrors." A house of horrors that ABC took 56 days to notice.
>
> As the Media Research Center has aggressively documented, ABC went from March 18, 2013 (the trial's start) through Monday afternoon with no coverage. Yet during the same time, the network devoted a staggering 187 minutes (or 70 segments) to other shocking criminal cases, such as Jodi Arias and Amanda Knox.

CNS News did a comparison between the Gosnell murder trial and the coverage of the gay NBA player:

> In the eight days since NBA player Jason Collins announced he was gay, the news

> media have covered the story in 2,381 places. But in the first eight days of the trial of Dr. Kermit Gosnell and his "House of Horrors" abortion business, the media covered the story in 115 places, meaning that Collins' "gay" news received more than 1,970.4% more news coverage.

Given the media blackout, I wanted to blog about the new movie about the Gosnell murders. Although the Gosnell movie was filmed in 2015, it's only being released next month. It turns out that the same sort of people who covered up for Gosnell in the mainstream media also got the release of the movie delayed.

A National Review story by the director explains what the movie is about and why its release was delayed.

Excerpt:

> The film has a gritty "just the facts, ma'am" style, is well acted, with powerful, moving performances by Dean Cain, Sarah Jane Morris, and Michael Beach, among many others, and moves like a bullet train. So why has it taken three years to be released?
>
> I realize, looking back, that I was quite naïve about how this film would be received. I truly believed that if we did it the right way, even the so-called Hollywood Left would appreciate our fairness in telling the story, see its value, and, furthermore, share our goals in getting this important story before the public.
>
> Sadly, I was wrong. As I said, this town runs on fear — the fear not only of failure but, more insidiously, of being shunned because of your political opinions. […]More than once, I was asked questions like "Are you crazy?" or "Are you sure you want to do this?"
>
> […]Fear is destructive and dangerous. Fear is what allowed Gosnell to commit multiple murders. The powers-that-be were afraid to allow inspections of his clinic, even after multiple complaints, for fear of being called racist or "anti-woman."

I was looking for some background on the two people behind the Gosnell movie, and I found an article by Terrell Clemmons over on the Salvo magazine web site. It turns out that the filmmakers were *neutral* on abortion before they looked into investigation of the Gosnell abortion clinic.

Excerpt:

> Phelim McAleer was in Pennsylvania in early 2013 doing a series of screenings of his film *FrackNation*. As he often did when travelling, he checked the local paper for interesting court cases underway, and a case concerning a doctor in Philadelphia caught his attention. And so it happened that on one of his days off, he walked into the courtroom where abortionist Kermit Gosnell was standing trial for a slew of charges including (but not limited to) murder, infanticide, and

> multiple violations of state abortion law.
>
> Phelim had seen a lot in his twenty-five years in journalism (he started his career in a part of Northern Ireland known as “Bandit Country”), but the evidence he saw that day in Room 304 of the Philadelphia Justice Center surpassed anything he’d previously encountered. The photos displayed up on a big screen—pictures of well-formed babies, some of whose necks had been snipped with scissors after live birth—were more horrific than anything he’d ever seen. All of this was shocking in itself, but what was even more astounding to him as a journalist was that the press gallery behind him was completely empty. There were *no* national journalists covering this case. Not one. *How could this be?*
>
> He returned home to Los Angeles and told his journalist partner and wife, Ann McElhinney, that he had found the next project they would work on. At first, Ann wanted nothing to do with it. This subject was foreign territory for them, way outside their wheelhouse. Besides, both she and Phelim had always considered themselves neutral on abortion. Why venture into such a hornet’s nest?
>
> Phelim ordered the court transcripts anyway, and Ann read them. Afterward, she agreed, *Yes, they would make this film.* It was more than an assent or a shared inclination. It was a *conviction*. Here was information of significant public interest, and it was shameful that no one was putting it out. A film about this *had* to be made; therefore, they would make it.

The film will open in 100 theaters, and when I looked, I saw that it was actually going to be a drive for me to get to the closest one.

It’s not surprising to me that the atheists in the mainstream media would seek to suppress the Gosnell story by not covering it. When you jettison objective morality from your worldview, you tend to fall back on a definition of morality that is more like “peer approval”. The mainstream media probably just thinks, if fewer people know the truth about this story, then they’ll still think I’m a good person for being pro-abortion. They lied and covered-up because their personal sense of moral goodness was at stake.

Scott Klusendorf defends the pro-life view on the Unbelievable radio show

September 7, 2018 | by Wintery Knight | Link | Original Link

I'm Scheming Unborn Baby, and I approve of this debate

This is a re-post of a debate on abortion.

Here are the details:

> Justin hosts a discussion between Mara Clarke of the Abortion Support Network and Scott Klusendorf of the Life Training Instititute. Mara believes women should decide whether to terminate a pregnancy, but Scott says that all depends on whether we are dealing with a human life in the womb.

MP3 of this show

My snarky paraphrase of the debate (not exact):

- Speaker introductions
- Klusendorf: no justification for abortion is necessary if the unborn are not human
- Klusendorf: we need to address the issue "what is the unborn?" Are the unborn human?
- Klusendorf: SLED: size, level of development, environment, degree of dependency
- Klusendorf: None of these things affect the value of a human being
- Klusendorf: Even if we don't KNOW whether the unborn is human
- Mara: I'm not going to debate when life begins
- Mara: Women know when life begins by feelings

- Mara: The moral decision is “whether I can take care of this child?”
- Brierley: When is an unborn being human?
- Mara: I refuse to debate that – the real question is whether women want their babies or not
- Mara: Forced pregnancy is not OK
- Brierley: Could your justification for abortion (not wanting to care for a child) work through all 9 months?
- Mara: Late term abortions are rare, so I don’t have to answer that question
- Mara: Abortion should be OK through all 9 months of pregnancy because women cannot be restricted
- Mara: Some women are poor, they need to be able to kill expensive babies at any time
- Klusendorf: although she says she won’t debate the unborn, she does take a position
- Klusendorf: she assumes the unborn is not human, because she says that insufficient funds is justification for abortion
- Klusendorf: no one argues that you can kill a two year old because they cost money, because she thinks they are human
- Klusendorf: she is begging the question by assuming the unborn are not human, but that is the issue we must resolve
- Klusendorf: I am pro-choice on many other things, e.g. women choosing their own husbands, religion, etc.
- Klusendorf: Some choices are wrong – Mara might be right, but she needs to make the case for the unborn not being human
- Brierley: What is your reason for thinking that an unborn child is different from a 2-year old?
- Mara: An unborn child is not the same as a 2-year old, in my personal opinion
- Mara: I am not a debater, so I don’t have to provide reasoning for my assertion, I just feel it
- Mara: Not everybody agrees with Scott, they don’t have to have a rational argument, they just need to feel differently
- Mara: From my experience, when a woman doesn’t want to be pregnant, then she should be able to not be pregnant
- Mara: Women shouldn’t be punished with a baby that she doesn’t want, even if she chooses to have recreational sex
- Brierley: What do you think of women who think the unborn is human and do it anyway?
- Klusendorf: It’s interesting that they never kill their toddlers for those reasons
- Klusendorf: I layed out scientific and philosophical reasons for the humanity of the unborn
- Klusendorf: Her response was “but some people disagree with you”
- Klusendorf: People disagreed about whether slavery was wrong, or whether women should be able to vote

- Klusendorf: that doesn't mean there is no right answer – the right answer depends on the arguments
- Klusendorf: if absence of agreement makes a view false, then it makes HER pro-choice view false as well
- Klusendorf: she did make an argument for the unborn child having no rights because of the location
- Klusendorf: she needs to explain to us why location matters – what about location confers value
- Mara: I'm not going to let Scott frame my debate for me!!!
- Mara: women get pregnant and they don't want their babies! should we put them in jail!!!!
- Klusendorf: I didn't just give my opinion, I had science and philosophy, the issue is "what is the unborn?"
- Mara: philosophical and scientific debates are unimportant, I am an expert in real women's lives
- Klusendorf: Which women? Women in the womb or only those outside the womb?
- Mara: Only those outside the womb
- Klusendorf: Only those outside the womb?
- Mara: Women living outside the womb have a right to kill women inside the womb – women have bodily autonomy
- Klusendorf: then does a pregnant woman with nausea have a right to take a drug for it that will harm her unborn child?
- Mara: Unborn children are only valuable if they are wanted, unborn children only deserve protection if they are wanted
- Mara: There are restrictions on abortion – you can't get an abortion through all nine months in the US
- Mara: There is a 24-week limit in the UK as well
- Klusendorf: There are no restrictions on abortion that conflict with "a woman's health" because Supreme Court said
- Mara: where are these late term abortion clinics?
- Klusendorf: (he names two)
- Mara: that's not enough!!! we need more! where is there one in Pennsylvania?
- Klusendorf: well, there used to be Gosnell's clinic in Pennsylvania, and you could even get an infanticide there….
- Brierley: What about Dawkins' view that it is moral to abort Down's Syndrome babies?
- Klusendorf: he is ignoring the scientific case and philosophical case for the pro-life
- Klusendorf: the pro-life view is a true basis for human equality

What I wanted Scott to ask was whether sex-selection abortions were OK with her. Since her reasoning is "if it's unwanted, it has no rights", then that would mean sex-selection abortions are just fine. That's what a UK abortion expert recently argued. And I also posted recently about how sex-selection abortions are not prosecuted in the UK. If you're

looking for a war on women, there it is.

How to avoid choosing a charming, deceitful narcissist for a spouse

September 8, 2018 | by Wintery Knight | Link | Original Link

Marriage stability vs sexual partners,(Teachman et al. JAMF, August 2010)

For fun, I've decided to publish the 2000-word first draft that I normally send to my 6 female editors, because sometimes it's fun to let people know what I *really* think about things before my editors force me to make it sound much better and more persuasive.

We got a comment yesterday that I thought was worth a response.

Let's start with the comment:

> My husband was a Narcissist. He slept all over the county and never worked a day in this marriage. Plus, He couldn't decide if he was straight or gay. After my son finally left home I filed for divorce. I wish I did it sooner. Now he claims to be born again and wants to stay together. When is enough, enough?

We don't know if this woman was a Christian, was chaste, and whether the man she chose was Christian or was chaste. All we know is that the man she chose was attractive enough to easily find other women who would have sex with him despite the fact that he was married. Whatever he has, it's something that causes women who are not married to him to have sex with him. That's who the divorced woman chose to marry. His "charm" wasn't from his moral character or his deep knowledge of Christian theology and apologetics.

My first response to this was to put the responsibility on the person who had chosen the

bad husband. After all, I reasoned, everyone who takes a massive step like marriage is obligated to investigate who it is they are marrying.

But when I said that, I got some responses from women that said that she wasn't responsible for her poor choice of man, and that she was an innocent victim of his magical charming powers.

Here's Lee:

> A lot of time people don't show their worst qualities until the relationship is firmly in place, and it starts coming out slowly. It's not always as clear cut as a woman stupidly choosing an unsuitable husband who acted unsuitable from the get-go. I mean yeah, sometimes it's obvious early on and the woman is just stupid/ blind/broken/other. But we should be careful to not assume, and careful to not make harsh judgments from our ignorance.

If dangers like infidelity are not "obvious" then it's not the woman's fault that she didn't detect it. Apparently there is no way for the woman to detect it if it's not obvious, so she's not responsible.

And Mary:

> Narcissists are skilled at charming and persuading people that they're really great. And they're skilled at convincing others that their misgivings are irrational fears. Unfortunately,there are a lot of people like that. Not saying that people (men AND women, btw!) don't just sometimes choose stupidly, for bad reasons like "hotness" and excitement. But narcissists are a whole other kettle of fish. They can come out with a completely different personality once they've snagged their prey.

If a bad person is "skilled at charming", then their victim has no way of evaluating them accurately. Basically, deciding who to marry is just an activity where you talk, and decide how you feel about that person's talk. If the person is charming, then they make you feel good, and it's rational to marry them. A lot of women express this as "I want a man who is confident". It's never been explained to me how "confidence" is any evidence that the man has an ability and a past pattern of self-control and fidelity.

And Sara:

> Probably because narcissists can be very charming at first and easily win people over.
>
> […] What I was trying to say and the article pointed out is the power of narcissists is they can put people, especially women, under a spell of sorts. They are just so slick and charming that common sense goes right out the window. They don't think to verify all these things that seem obvious because they are so captivated.

All that's necessary to detect a charming narcissist is "common sense". His suitability to

do husband and father roles should be “obvious” from what he says and how he makes her feel.

So, let’s take a look at some tips for avoiding these charming narcissists who can convince you to marry them just with their words and the feelings they cause.

How to avoid marrying a charming narcissist who cheats on you

Here is some advice on how to avoid marrying a charming narcissist.

1. Evaluate a person based on objective evidence instead of how they make you feel with their words

There are a lot of lies coming out of the artists, actors, celebrities, etc. in this secular leftist culture that basically say that marriage is all about you and your feelings. If you prepared for marriage by watching movies made by pedophiles in Hollywood, and listening to music made by promiscuous musicians, and reading self-help fiction written by divorced spinsters, then you are not ready to detect a charming narcissist. Marriage is a practical enterprise, with distinct roles for husbands and wives that must be performed regardless of how either spouse feels. You need to understand and evaluate what *behaviors* are expected of husbands and wives in a marriage, and then look for *evidence* that the person you want to marry can perform those behaviors.

For example, if the behavior is fidelity, then the person should be able to demonstrate chastity and self-control during the courtship, and produce references from past girlfriends / boyfriends, and have written about chastity and self-control using research sources to explain the connection between premarital sex and marital instability. If you’re choosing with your feelings, and you haven’t done an analysis of marriage roles, and partner abilities, you’re headed for a disaster.

Just so you know, when I said this to some of the pro-irresponsibility, non-judgemental women I know, their response was to laugh in my face at the idea of asking someone’s previous partners about whether they were chaste and self-controlled. And this is why people are taken by surprise by the charming talk of narcissists. Feelings-oriented people today laugh at the idea of doing any evaluation, preferring to rely on their feelings. A lot of the failure to choose wisely is just down to people not understanding how the world works, then trying to manufacture a psycho-babble rationalization of why they screwed up.

When you’re hiring someone, you do a job interview, you test their skills, you contact their references, you do a drug test, a credit check, a criminal record check. And you have other skilled people sit in on the interviews and tests, in order to make sure that the person can really do the job they are being interviewed for. The marriage evaluation should include everything that the job interview includes *as a minimum.* Marriage is at least as complicated as choosing to hire someone for a job. If you aren’t doing the bare minimum of evaluating their education, career and finances, then you are setting yourself up for failure.

2. Learn what it takes to make morality rational, and then determine if your

candidate is capable of being moral

Because marriage deals so much with moral obligations, it's incumbent on you to read extensively on moral issues. *You yourself* should have developed worldview (through study and debate) that rationally grounds the minimum requirements for moral values and duties: 1) free will, 2) consciousness, 3) objective moral values, 4) objective moral duties, 5) a divine judge, 6) life after death. Why? Because doing the right thing isn't something that you always feel like doing. When doing the right thing goes against your feelings, you will need to have a *reason* to act against your own self-interest. And that reason is going to be because the world is the sort of place where morality is real, and independent of your feelings, where you are a free moral agent, and where is a divine judge and an afterlife.

At the center of the ability to rationally ground morality is the ability to know God is real rationally, and to defend his existence using objective evidence and logical arguments. If you don't know whether God exists based on logic and evidence, how will you evaluate whether someone else knows it? If you can't rationally ground doing the right thing when it goes against your interest, then you won't be able to know how to ask questions and investigate in order to decide whether someone else is moral or not. Marrying someone who doesn't believe in a moral lawgiver and a moral judge after death is as prudent to going into a city dump eating all your meals from what you find there.

In the specific case of fidelity, it's important to remember that some people have goals and an understanding about how poor choices right now will make those goals more difficult to obtain. It's easy to say that you want your spouse to be faithful. But what's really needed is to measure what they are really trying to achieve in life, and whether they understand how infidelity would affect those plans. If you can't see from their past decisions that they KNOW that 1) marriage and family are important enough to sacrifice for and 2) that they understand and apply the research that shows what decisions helps to make a marriage last (e.g. – no premarital sex), then, they don't really have the goals and the information that you want in a marriage partner.

Conclusion

I have to end this post with the reaction from my friend Lindsay, who is one of my reliable advisors. She responded to Lee and Mary above with this:

> There are ways to avoid marrying a narcissist, addict, abuser, or other bad man. However, most women don't know how to evaluate men because no one ever told them what to watch for or that they need to focus on long term character traits and not ignore red flags. They have been actively encouraged to follow their hearts and indoctrinated in this view since they were small children. That doesn't mean they are without blame, but they have also been let down by their families, friends, and society as a whole. Women need the eyes of family and friends on the men they date to help them see problems they might not recognize and warn them. But too often, family and friends are too uncomfortable saying something and think they are supposed to stay out of it.

> Our society has broken down and women do not have the protections they need.

Lindsay probably has the best and most successful marriage of anyone I know. She did everything right that I tell young women to do. Multiple STEM degrees, debt-free, years of private sector experience, married a virgin as a virgin herself right in the middle of her 23-27 year window, and is now a homeschooling mother of 3. Perfect, and did a thorough evaluation of her perfect husband Doug. Doug had done enormous amounts of work demonstrating through actions and achievements that he had the character and skills to be an excellent husband and father. Anyone who evaluated him beyond the surface level of talk and feelings and “confidence” would have found a gold mine of husband and father capability. Capabilities which are now on display in their marriage.

Note: in all truth, this is something that men do even more than women. Men choose entirely on appearance, they dirty themselves up with unchastity as if that has no effect on their ability to evaluate a woman properly, they read next to nothing about feminism and divorce, and then they cry and whine when the bad woman they married cleans them out in divorce courts. My recommendation to men is that they spend more time on education, career, finances, morality and Christianity, and less time getting drunk, watching sports, and having premarital sex. Get yourself some good advisors and get started early on evaluating young women for the roles of wife and mother. If they haven’t prepared for marriage like Lindsay did, dump them immediately, and move on to the next candidate.

Dennis Prager: which sin is the worst sin?

September 9, 2018 | by Wintery Knight | Link | Original Link

Let's take a look at what the Bible says

In this post, Dennis Prager argues that the worst sin is when people who claim to have allegiance for God perform evil acts, thus bringing God's reputation into disrepute.

I found a Prager University video on the same topic:

Excerpt:

> The worst sin is committing evil in God's name.
>
> How do we know?
>
> From the third of the Ten Commandments. This is the only one of the ten that states that God will not forgive a person who violates the commandment.
>
> What does this commandment say?
>
> It is most commonly translated as, "Do not take the name of the Lord thy God in vain. For the Lord will not hold guiltless" — meaning "will not forgive" — whoever takes His name in vain."
>
> Because of this translation, most people understandably think that the commandment forbids saying God's name for no good reason. So, something like, "God, did I have a rough day at work today!" violates the third commandment.
>
> But that interpretation presents a real problem. It would mean that whereas God could forgive the violation of any of the other commandments — dishonoring one's parents, stealing, adultery or even committing murder — He would never forgive someone who said, "God, did I have a rough day at work today!"
>
> Let's be honest: That would render God and the Ten Commandments morally incomprehensible.
>
> As it happens, however, the commandment is not the problem. The problem is the translation. The Hebrew original doesn't say "Do not take;" it says "Do not

> carry." The Hebrew literally reads, "Do not carry the name of the Lord thy God in vain."
>
> This is reflected in one of the most widely used new translations of the Bible, the New International Version, or NIV, which uses the word "misuse" rather than the word "take:"
>
> "You shall not misuse the name of the Lord your God."
>
> This is much closer to the original's intent.
>
> What does it mean to "carry" or to "misuse" God's name? It means committing evil in God's name.
>
> And that God will not forgive.
>
> Why not?
>
> When an irreligious person commits evil, it doesn't bring God and religion into disrepute. But when a religious person commits evil in God's name he destroys the greatest hope for goodness on earth — belief in a God who demands goodness, and who morally judges people.
>
> The Nazis and Communists were horrifically cruel mass murderers. But their evils only sullied their own names, not the name of God. But when religious people commit evil, especially in God's name, they are not only committing evil, they are doing terrible damage to the name of God.

Sean McDowell has a post about Dennis Prager's view, and he says:

> Given this context, an obvious example is Muslim radicals killing innocent people in the *name* of God. But the most recent example, which is rightly a prominent story in the news, is the rampant sexual abuse of children by Catholic priests. The story runs deeper than most people could have ever imagined, involving the systematic cover-up of over 1,000 cases against children by 300 priests in Pennsylvania *alone* over the past seventy years. The individual stories are harrowing, heart-breaking and infuriating.
>
> Sadly, these horrific actions don't merely reflect on the individual priests, but on the Catholic Church, the entire Christian faith, and religion in general. And rightly so. Can we really blame people who abandon God when his "representatives" commit such abominable crimes?
>
> As Prager has sadly, but correctly, observed: "No atheist activist is nearly as effective in alienating people from God and religion as are evil 'religious' people."

Now, I don't agree with Dennis on his ranking this sin as the worst. I would put carrying the Lord's name in vain lower, and say that rebellion against God is the worst sin. That's what I would say intellectually speaking. Emotionally speaking, I think that attacking people for their allegiance to God is the worst sin, like when gay activists go after Christian business owners for trying to take the Bible seriously about marriage, for example. Just don't get in the way of a Christian and their relationship with God, you

atheists. You’re doing something absolutely horrible when you make it harder for a Christian to follow Jesus. You might disagree with Christianity, but it would be wise not to persecute Christians, just in case we’re right about what is true.

Dennis is Jewish, so he believes that religions should be judged based on whether they produce good or not, rather than whether they are true or not. I try to listen to Dennis’ radio show as often as I can, and although he does like to discuss what we can know about God from science and history, he doesn’t think that getting the right answers to theological questions is as important as doing the right actions. I think that might be why he chose this one as the worst, because actions are more important to him. I agree with him that it is certainly very bad to invoke God in a way that makes God look bad.

CDC reports: STD rates hit all-time high for the fourth straight year

September 10, 2018 | by Wintery Knight | Link | Original Link

Preliminary CDC numbers for STDs in 2017

I've been blogging about skyrocketing rates of sexually-transmitted-diseases for the last few years, and particularly how it impacts high risk groups, e.g. – men who have sex with men. The attitude that the culture is taking towards this is to not make any moral judgments, but someone is going to have to pay for all the health care that is required to "fix" this problem.

Fox News reports on the latest numbers:

> Sexually-transmitted diseases continue to hit all-time highs in the U.S. with the Centers for Disease Control and Prevention (CDC) reporting a 10 percent spike for chlamydia, gonorrhea and syphilis in 2017. The federal health agency said in a report released Tuesday that the numbers, which include nearly 2.3 million new cases of the aforementioned diseases, reflect a "steep, sustained increase" in STDs since 2013.
>
> "We're sliding backward," Jonathan Mermin, director of CDC's National Center for HIV/AIDS, Viral Hepatitis, STD and TB Prevention, said. "It is evident the systems that identify, treat and ultimately prevent STDs are strained to near-breaking point."
>
> The data, which was presented at the 2018 STD Prevention Conference, found a 67 percent increase in gonorrhea diagnoses, which officials sounded alarm over

> due to the growing threat of untreatable strains.

The CDC gives us the numbers well enough, but like all government agencies, their attitude is not to tell the selfish adults to behave morally. They blame "stigma and discrimination" for the rise in STDs, and recommend more government as the solution. I.e. – they think that people who disapprove of sex outside of marriage are to blame for the skyrocketing rates of STDs. If we all stopped making the irresponsible, reckless people feel bad with our ignorant moral judgments, then the STD problem would immediately be solved.

Anyway, here is an article that talks about untreatable strains of gonorrhea in particular:

> Scientists have found a "superbug" strain of gonorrhea in Japan that is resistant to all recommended antibiotics and say it could transform a once easily treatable infection into a global public health threat.
>
> The new strain of the sexually transmitted disease — called H041 — cannot be killed by any currently recommended treatments for gonorrhea, leaving doctors with no other option than to try medicines so far untested against the disease.
>
> […]Gonorrhea is a bacterial sexually transmitted infection and if left untreated can lead to pelvic inflammatory disease, ectopic pregnancy and infertility in women.
>
> British scientists said last year that there was a real risk of gonorrhea becoming a superbug — a bacteria that has mutated and become resistant to multiple classes of antibiotics — after increasing reports of gonorrhea drug resistance emerged in Hong Kong, China, Australia and other parts of Asia.

Now, I know it's tempting (for some people who like tolerance) to say that we should let people do whatever they want to do, and not judge them. After all, we can just take some money from the wealthy in order to solve these problems without making anyone feel bad. I hear this a lot from the the "don't judge" crowd. But this time, it looks like no amount of money is going to solve this problem, and maybe the judgers were right to warn.

Syphilis is also a problem in certain high risk groups:

> The sometimes-deadly disease syphilis is exploding in the United States, with most of the increase since 1995 among men who have sex with men (MSM), according to a new report from the Atlanta-based Center for Disease Control (CDC).
>
> As recently as 2000, researchers believed the total elimination of syphilis was within reach. The recent dramatic increases in infections, coupled with the observation that syphilis closely tracks with other diseases like AIDS, have the medical and scientific community deeply concerned. The CDC report considers "the increase in syphilis among MSM is a major public health concern."
>
> According to the report, "During 2005-2013, the number of primary and

> secondary syphilis cases reported each year in the United States nearly doubled, from 8,724 to 16,663; the annual rate increased from 2.9 to 5.3 cases per 100,000 population."
>
> The report also says that "men contributed an increasing proportion of cases, accounting for 91.1% of all primary and secondary syphilis cases in 2013." Most of the increases came from men who have sex with men, which were responsible for 77% of cases in 2009 but 83.9% in 2012, what the report calls "the vast majority of male… syphilis cases."

HIV is also a problem for this same group:

> A fact sheet released at the end of June by the US Centers for Disease Control (CDC) warns that HIV rates, already at epidemic proportions, are continuing to climb steadily among men who have sex with men (MSM).
>
> "Gay and bisexual men remain at the epicenter of the HIV/AIDS epidemic," says Jonathan Mermin, the director of the CDC's division of HIV/AIDS prevention.
>
> The CDC notes that while homosexual men make up only a very small percentage of the male population (4%), MSM account for over three-quarters of all new HIV infections, and nearly two-thirds (63 percent) of all new infections in 2010 (29,800).
>
> "Men who have sex with men remain the group most heavily affected by HIV in the United States," the fact sheet states.

We do have certain segments of the population who think that normal sexuality means having sex with dozens, hundreds and even thousands of partners. Just on the grounds of "they're hot". And naturally, these people are at higher risk for STDs.

Ryan T. Anderson lectures on marriage and why it matters

September 11, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

Here's the lecture:

About the speaker:

> Ryan T. Anderson researches and writes about marriage and religious liberty as the William E. Simon Fellow at The Heritage Foundation. He also focuses on justice and moral principles in economic thought, health care and education, and has expertise in bioethics and natural law theory.
>
> Anderson, who joined the leading Washington think tank's DeVos Center for Religion and Civil Society in 2012, also is the editor of *Public Discourse*, the online journal of the Witherspoon Institute of Princeton, N.J.
>
> Anderson's recent work at Heritage focuses on the constitutional questions surrounding same-sex "marriage." He is the co-author with Princeton's Robert P. George and Sherif Girgis of the acclaimed book "What Is Marriage? Man and Woman: A Defense" (Encounter Books, December 2012).

The lecture starts at 7:20 in. The lecture ends at 49:35. There are 32 minutes of Q&A.

Introduction:

- When talking about marriage in public, we should talk about philosophy, sociology and public policy
- Gay marriage proponents need to be pressed to define what marriage is, on their view
- Every definition of marriage is going to include some relationships, and exclude

others
- It’s meaningless to portray one side as nice and the other mean
- Typically, marriage redefiners view marriage as a more intense emotional relationship
- Marriage redefiners should be challenged in three ways:
- 1) Does the redefined version of marriage have a public policy reason to prefer only two people?
- 2) Does the redefined version of marriage have a reason to prefer permanence?
- 3) Does the redefined version of marriage have a reason to prefer sexual exclusivity?
- Also, if marriage is just about romance, then why is the state getting involved in recognizing it?
- The talk: 1) What marriage is, 2) Why marriage matters, 3) What are the consequences of redefining marriage?

What marriage is:

- Marriage unites spouses – hearts, minds and bodies
- Marriage unites spouses to perform a good: creating a human being and raising that human being
- Marriage is a commitment: permanent and exclusive
- Male and female natures are distinct and complementary

The public purpose of marriage:

- to attach men and women to each other
- to attach mothers and fathers to their children
- there is no such thing as parenting, there is only mothering and fathering
- the evidence shows that children benefit from mothering and fathering
- boys who grow up without fathers are more likely to commit crimes
- girls who grow up without fathers are more likely to have sex earlier
- Children benefit from having a mother and a father
- can’t say that fathers are essential for children if we support gay marriage, which makes fathers optional
- without marriage: child poverty increases, crime increases, social mobility decreases, welfare spending increases
- when government encourages marriage, then government has less do to – stays smaller, spends less
- if we promote marriage as an idea, we are not excluding gay relationships or even partner benefits
- finally, gay marriage has shown itself to be hostile to religious liberty

Consequences redefining marriage:

- it undermines the norm in public like that kids deserve a mom and a dad – moms and dads are interchangeable
- it changes the institution of marriage away from the needs of children, and towards the needs of adults
- it undermines the norm of permanence
- we learned what happens when marriage is redefined before: with no-fault divorce
- no-fault divorce: after this became law, divorce rates doubled – the law changed society
- gay marriage would teach society that mothers and fathers are optional when raising children
- if marriage is what people with intense feelings do, then how can you rationally limit marriage to only two people?
- if marriage is what people with intense feelings do, then if other people cause intense feelings, there's no fidelity
- if marriage is what people with intense feelings do, then if the feelings go away, there is no permanence
- the public policy consequences to undermining the norms of exclusivity and permanence = fatherless children and fragmented families
- a final consequences is the decline and elimination of religious liberty – e.g. – adoption agencies closing, businesses being sued

We're doing very well on abortion, but we need to get better at knowing how to discuss marriage. If you're looking for something short to read, click here. If you want to read a long paper that his book is based on.

Pro-life journalist gets police protection after receiving death threats and rape threats

September 12, 2018 | by Wintery Knight | Link | Original Link

Abortion Rights March

Most pro-lifers tend to focus more on persuading a woman not to kill a child she's already conceived. My view on abortion debating goes even further: I think that we should be persuading women not to have irresponsible sex in the first place. DC McAllister tweeted out something that I agree with, and now she's getting death threats and rape threats. This is why I have an alias.

PJ Media explains:

> Last week, PJ Media contributor and Fox News guest Denise McAllister sent out a powerful tweet denouncing the abortion movement. Little did she know, days later she would be in hiding, scared for her life. When she went public about receiving death and rape threats, pro-abortion Twitter users championed the threats against her.
>
> "At the root of [abortion] hysteria is women's unhinged desire for irresponsible sex. Sex is their god. Abortion is their sacrament," McAllister tweeted. "It's abhorrent as women have flung themselves from the heights of being the world's civilizing force to the muck and mire of dehumanizing depravity."

Now, I do think it's important to be able to make a defense for the humanity of the unborn using reason and evidence. But I like what she tweeted here. We have to also make a case that a woman should view sex outside of marriage as a mistake. A mistake that is unlikely to work out in the long run.

Anyway, you can imagine what pro-abortionists did next… these are people who think you can kill unborn babies, after all. Not the best at moral virtue. Because "don't kill the babies" is pretty much the most obvious moral rule there is.

More:

> McAllister told PJ Media that she received death and rape threats, over multiple forms of private communication.
>
> “They are threats outside of Twitter, stating they know where I live,” McAllister said. “Threats of rape and strangling. I spoke to the police. I am on home watch.”
>
> “My children are very frightened,” she added.
>
> On Sunday, she went public about the threats. “I am facing legit death & rape threats because I have dared to call out women who are hysterical about abortion and to challenge them to be responsible and not to elevate sex to the point that they’re willing to kill human life to avoid their responsibilities. How sick is that?” McAllister tweeted.
>
> Some people responded with sympathy … to the person making the death and rape threats!
>
> “People don’t react well to your extremism,” a user named Monika D. responded.

I took a look at her Twitter feed to see how things were going, and she had gone into hiding with her family, because of the rape threats, strangling threats, and death threats. Then, after she got police protection, she returned to social media. Police protection is not given unless the threat is credible.

Anyway, here’s what I want to say about this. I understand that women who have abortions are stressed and not in their right minds. But what about pro-abortion activists? When you meet someone who is pro-abortion, you’re talking to someone who is cannot answer the simplest moral questions correctly. There just is not factual, science-based case against the full humanity of the unborn. The justifications given for taking the life of an unborn child simply aren’t capable of making the act morally permissible.

Abortion is this generation’s slavery. It’s the exploitation of one class of weaker individuals by a class of stronger individuals, for the selfish gain of the stronger individuals. It really is nothing more than “I want to have sex with that hot guy, to boost my self-esteem”, followed by “I want to kill my baby so I can go on living for myself”. The point is that just like slavery, abortion is rationally indefensible to anyone capable of even basic moral reasoning. Everyone who is pro-abortion today would have own slaves. Everyone who is pro-life today would have been an abolitionist.

So, we shouldn’t expect people on the pro-abortion side of the aisle to be very concerned about doing what’s moral when it conflicts with their self-interest.

So, how far does this inability to think about right and wrong go?

Consider a few stories from the past summer:

- Democrat Charged With Threatening to Kill Top Pro-Life Congressman Chris Smith
- Man Threatens to Kill Pro-Life Members of Congress (Steve Scalise and Cathy McMorris Rodgers) and Their Children
- Planned Parenthood Volunteer Arrested for Threatening to Kill Pro-Life

Congressman's (Brian Masts) Children
- Man Drives Up to Pro-Life Advocate and Points a Loaded Rifle in His Face

Look. When you're willing to kill an unborn child, simply because the child is the wrong race, or because the child is the wrong sex, because of how it impacts you, then anything is possible. Morality simply isn't a concern for you. If you're willing to do the worst thing, then you're willing to do anything.

These are not good people, and it shows.

The production of carbon from lighter elements is fine-tuned to an amazing degree

September 13, 2018 | by Wintery Knight | Link | Original Link

Fine-tuning of the strong nuclear force and the fine structure constant

If there is one thing that science fiction is good for, it's for popularizing the phrase "carbon-based life". Everyone has heard that carbon is essential for life. But do you know why carbon is so important? And did you know that the reaction that produced the carbon in our universe is actually fine-tuned, and therefore evidence for a Creator and Designer of the universe?

Hugh Ross has a new article up in Salvo magazine, which I found thanks to a post at Uncommon Descent.

Now he starts off with a discussion of how the mass density of the universe needed to be fine-tuned in order to produce elements heavier than hydrogen from the (only) hydrogen that was present at the creation event. I've talked about that reaction previously, but I won't repeat that here. Nucleosynthesis is one of the most important chemical reactions in science, and something every Christian should know and understand well enough to explain it.

You can't make complex embodied intelligent creatures such as ourselves out of only hydrogen and helium, but you can't make a life permitting universe without some hydrogen and helium. For one thing, you can't have liquid water without some hydrogen.

But the element carbon is the center hub of all of the molecules inside of us that allow for the storage and processing of information necessary for life. And it turns out that the

reaction that creates carbon from elements lighter than carbon is fine-tuned to an amazing degree.

Excerpt:

> But cosmic mass density is not the only thing that must have been exquisitely fine-tuned for the universe to contain any carbon. The nuclear resonance (or energy) levels for helium, beryllium, carbon, and oxygen also had to be exquisitely fine-tuned for carbon to exist. Here's how that happens.
>
> Stars fuse carbon and oxygen from helium through a series of reactions known as the triple-alpha process, in which three helium nuclei are combined to make one carbon nucleus. In the first step in this process, two helium nuclei (with 2 protons each) fuse together to make beryllium (which has 4 protons). Next, a helium nucleus fuses with a beryllium nucleus to make carbon (which has 6 protons). Then, some carbon nuclei fuse with helium nuclei to make oxygen (which has 8 protons).
>
> The only reason that the triple-alpha process produces any carbon or oxygen at all is because in the first step, the ground state energy level (i.e., the state of an atom when all of its electrons are at their lowest energy levels) of the beryllium-8 nucleus (containing 4 protons and 4 neutrons) almost exactly equals the ground state energy level of two helium-4 nuclei (2 protons and 2 neutrons each). In the second step, the ground state energy level of a beryllium-8 nucleus plus a helium-4 nucleus almost exactly equals the energy level of an excited state of a carbon-12 nucleus (6 protons and 6 neutrons). In the third step, the ground state energy level of a carbon-12 nucleus at 7.65 million electron volts is just slightly larger than the ground state energy level of an oxygen-16 nucleus (8 protons and 8 neutrons) at 7.12 million electron volts.[1]
>
> If it were not for the near equivalences or resonances of the nuclear energy levels of two helium nuclei relative to a beryllium nucleus, and of a beryllium nucleus plus a helium nucleus relative to a carbon nucleus, the universe would contain very little or no carbon and very little or no elements heavier than carbon. Life would be impossible.
>
> Furthermore, unless the difference in the nuclear energy levels between a carbon nucleus and an oxygen nucleus were precisely 0.53 million electron volts, the universe would contain either a lot of carbon and no oxygen or a lot of oxygen and no carbon. Either way, physical life would be impossible in the universe.
>
> In the early 1950s, astronomer Fred Hoyle and physicist Willy Fowler were the first to understand how critical the relative nuclear energy levels of helium, beryllium, carbon, and oxygen were for making life possible in the universe. Commenting on the highly fine-tuned nature of these nuclear energy levels, Hoyle wrote in an article he published in *Engineering & Science*,
>
> A common sense interpretation of the facts suggests that a superintellect has

> monkeyed with the physics, as well as with chemistry and biology, and that there are no blind forces worth speaking about in nature. The numbers one calculates from the facts seem to me so overwhelming as to put this conclusion beyond question.[2]

The article continues to explain that there is an additional problem of carbon fine-tuning related to habitability.

The carbon formation problem is one of the best examples of fine-tuning, and as you can see, it’s even admitted by atheists. It’s not the easiest one to explain (because resonance levels are not familiar in every day life), but it’s worth knowing about all three of the fine-tuning topics in the post.

Keep in mind that the more science has made progress, the more fine-tuning problems we have discovered. The trend is very bad if you are a naturalist. But very good if you are a theist. Evidence matters, and scientific evidence is the best kind of evidence.

New study: more than half of all female-to-male transgender teens attempt suicide

September 14, 2018 | by Wintery Knight | Link | Original Link

Anti-marriage gay activists vandalize church

A recent study by a researcher out of Brown University found that the exploding rates of transgender young people is being driven in part by social factors. In particular, coming out as transgender gives young people instant popularity, and everyone around them feels obligated to affirm them and agree with them. Or else. What's missing? What's missing is any sort of warning about the dangers of transgenderism.

The Daily Wire reports on a new study from the American Academy of Pediatrics.

Excerpt:

> A new study from the American Academy of Pediatrics found an alarming number of teens who identify as transgender or nonbinary have attempted suicide at least once, showcasing the dangers of the transgender movement. More than half of all female-to-male transgender teens, for example, have attempted to end their lives.
>
> Researchers behind the study used data collected from more than 600 teens over a 36-month period, June 2012 to May 2015, from the "Profiles of Student Life: Attitudes and Behaviors" survey.
>
> The study found that female-to-male trans teens had the highest suicide attempt rate of all other identity groups surveyed: 50.8%. Unsurprisingly, other gender-confused teens had outrageously high rates of suicide attempts, too. Nonbinary adolescents, meaning teens who do not identify exclusively as female or male, were found to have a 41.8% suicide attempt rate; male-to-female trans teens had a 29.9% rate; and "questioning" teens had a rate of 27.9%.

> By comparison, teens who identified as their biological sex and corresponding gender suffered relatively low (though still too high) rates: females were found to have a 17.6% rate while males had the lowest of any other group at 9.8%.

When I tell LGBT people about the health risks of their choices, and cite peer-reviewed studies, the most frequent response is that they get angry and even violent and demand approval. I have even heard threats that if I don't approve of what they feel like doing, then they will kill themselves, and their blood will be on my hands.

The thing is, there is a study about that. Even though LGBT people think that approval will make them feel better about what they are doing, it's not true. In societies where social approval and government support of LGBT behaviors are HIGHER than in America, the suicide rates are still extremely high.

Life Site News explains:

> A study out of Sweden published last month has found that suicide risk among active homosexuals is high even in a region that is highly tolerant of same-sex behaviour.
>
> Published in the *European Journal of Epidemiology*, the authors found that men in same-sex "marriages" were at three times greater risk of suicide than men who are married to women.
>
> The authors note in their abstract:
>
> Even in a country with a comparatively tolerant climate regarding homosexuality such as Sweden, same-sex married individuals evidence a higher risk for suicide than other married individuals.

Just in passing, what a strange way to respond to disagreement. I have people disagree with my chastity, my Christianity, my conservative politics, etc. all the time. It never occurs to me to threaten to commit suicide if they don't approve. I also don't try to get them fired, insult them, shame them, vandalize their property, assault them, murder them, or drag them in front of a government-run political correctness panel. I don't even mind that they use their free speech to disagree with me. After all, they are people made in the image of God, with an equal right to be in a relationship with God. I can't do anything that is going to cause them to think that God doesn't love them.

It's useful to remember that the Christian view on life is not to neglect God's design and tell people to do whatever they want. The Christian view is to tell people God's design, set boundaries, and encourage people to make good decisions. Christians don't believe in love as mere acceptance. Christians believe in "love warns". I tell young people not to run up student loan debt studying useless non-STEM degrees. They might feel bad, but it's the truth: they won't be able to find a job that allows them to pay the money back. Warning people about sexual issues is the same thing, in my mind.

Study: sex-reassignment surgery does not improve mental health of transgender people

September 15, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

I found this peer-reviewed PLOS study while reading an article from CNS News.

The study takes a look at sex-reassigned people in pro-LGBT Sweden, between 1973 and 2003. Specifically, they aim to measure "mortality, morbidity, and criminal rate after surgical sex reassignment of transsexual persons" over a 30 year period.

The setting is important because Sweden has a much higher tolerance for gay rights than other Western countries, e.g. – America. There's virtually no dissent from the gay rights agenda in Sweden – certainly no organized dissent.

Here are the results and the conclusion:

> ### Results
>
> The overall mortality for sex-reassigned persons was higher during follow-up (aHR 2.8; 95% CI 1.8–4.3) than for controls of the same birth sex, particularly death from suicide (aHR 19.1; 95% CI 5.8–62.9). Sex-reassigned persons also had an increased risk for suicide attempts (aHR 4.9; 95% CI 2.9–8.5) and psychiatric inpatient care (aHR 2.8; 95% CI 2.0–3.9). Comparisons with controls matched on reassigned sex yielded similar results. Female-to-males, but not male-to-females, had a higher risk for criminal convictions than their respective birth sex controls.
>
> ### Conclusions
>
> Persons with transsexualism, after sex reassignment, have considerably higher risks for mortality, suicidal behaviour, and psychiatric morbidity than the general

> population. Our findings suggest that sex reassignment, although alleviating gender dysphoria, may not suffice as treatment for transsexualism, and should inspire improved psychiatric and somatic care after sex reassignment for this patient group.

So, there were higher risks of death, higher risk of suicidal behavior, and higher mental illness.

The CNS News article interviewed a Johns Hopkins University scientist who is familiar with the history of sex-reassignment surgery.

Excerpt:

> Dr. Paul R. McHugh, the Distinguished Service Professor of Psychiatry at Johns Hopkins University and former psychiatrist–in-chief for Johns Hopkins Hospital, who has studied transgendered people for 40 years, said it is a scientific fact that "transgendered men do not become women, nor do transgendered women become men."
>
> […]Dr. McHugh, who was psychiatrist-in-chief at Johns Hopkins Hospital for 26 years, the medical institute that had initially pioneered sex-change surgery – and later ceased the practice – stressed that the cultural meme, or idea that "one's sex is fluid and a matter of choice" is extremely damaging, especially to young people.
>
> […][T]here is plenty of evidence showing that "transgendering" is a "psychological rather than a biological matter," said Dr. McHugh.
>
> "In fact, gender dysphoria—the official psychiatric term for feeling oneself to be of the opposite sex—belongs in the family of similarly disordered assumptions about the body, such as anorexia nervosa and body dysmorphic disorder," said McHugh.
>
> "Its treatment should not be directed at the body as with surgery and hormones any more than one treats obesity-fearing anorexic patients with liposuction," he said.
>
> In fact, at Johns Hopkins, where they pioneered sex-change-surgery, "we demonstrated that the practice brought no important benefits," said Dr. McHugh. "As a result, we stopped offering that form of treatment in the 1970s."

Regarding the study, McHugh says this:

> The most thorough follow-up of sex-reassigned people—extending over 30 years and conducted in Sweden, where the culture is strongly supportive of the transgendered—documents their lifelong mental unrest."
>
> "Ten to 15 years after surgical reassignment, the suicide rate of those who had undergone sex-reassignment surgery rose to 20 times that of comparable peers," said McHugh.

Normally, when it comes to questions like these, I think it’s best to be guided by the evidence. What good would it do to tell someone to do something that makes them like you today (“you’re so tolerant and compassionate”) if they commit suicide tomorrow? Although people today think that being truthful and setting boundaries is “intolerant”, it can actually save someone’s life. When you stop someone from *going further* in a direction that will expose them to harm, you’re actually doing the right thing – even if they hate you right now for disagreeing with them. (That hatred of dissent is a sign that they are wrong, by the way)

Is the presupposition of naturalism in science good for the pursuit of truth?

September 16, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

This topic came up recently in a discussion, and I wanted to be sure that all my readers were aware of how to think about the work that the presupposition of naturalism does in supporting naturalistic views of science. When I was little, way back in the 1990s, Phillip E. Johnson's work on the definitions of science, evolution and creation were very important stuff. He was everywhere, doing lectures on university campuses and debates on the radio with Eugenie Scott. I was able to get a bunch of this audio from Access Research Network on AUDIO CASSETTES, but now that's all obsolete.

Thankfully, I was able to find an old column written by Johnson in the Wall Street Journal, and preserved by Access Research Network.

Excerpt:

> A Chinese paleontologist lectures around the world saying that recent fossil finds in his country are inconsistent with the Darwinian theory of evolution. His reason: The major animal groups appear abruptly in the rocks over a relatively short time, rather than evolving gradually from a common ancestor as Darwin's theory predicts. When this conclusion upsets American scientists, he wryly comments: **"In China we can criticize Darwin but not the government. In America you can criticize the government but not Darwin."**
>
> That point was illustrated last week by the media firestorm that followed the Kansas Board of Education's vote to omit macro-evolution from the list of science topics which all students are expected to master. Frantic scientists and educators warned that Kansas students would no longer be able to succeed in college or graduate school, and that the future of science itself was in danger. The *New*

> *York Times* called for a vigorous counteroffensive, and the lawyers prepared their lawsuits. Obviously, the cognitive elites are worried about something a lot more important to themselves than the career prospects of Kansas high school graduates.
>
> The root of the problem is that "science" has two distinct definitions in our culture. On the one hand, science refers to a method of investigation involving things like careful measurements, repeatable experiments, and especially a skeptical, open-minded attitude that insists that all claims be carefully tested. Science also has become identified with a philosophy known as materialism or scientific naturalism. This philosophy insists that nature is all there is, or at least the only thing about which we can have any knowledge. It follows that nature had to do its own creating, and that the means of creation must not have included any role for God. Students are not supposed to approach this philosophy with open-minded skepticism, but to believe it on faith.
>
> […]All the most prominent Darwinists proclaim naturalistic philosophy when they think it safe to do so. Carl Sagan had nothing but contempt for those who deny that humans and all other species "arose by blind physical and chemical forces over eons from slime." Richard Dawkins exults that Darwin "made it possible to be an intellectually fulfilled atheist," and Richard Lewontin has written that scientists must stick to philosophical materialism regardless of the evidence, because "we cannot allow a Divine Foot in the door."

So, if you're having a discussion with a person who believes in naturalism – that everything in nature can be explained by material forces alone – then they will give you a stock response to all of your evidence for something outside of nature.

- Origin of the universe? *That's not science*
- Cosmic fine-tuning? *That's not science*
- Origin of life? *That's not science*
- Cambrian explosion? *That's not science*
- Habitability-discoverability? *That's not science*

It's not that the people who did the science around these discoveries invoked God, and that's why it's not science. On the contrary, the mainstream scientists who made these discoveries scrupulously left God out of their microscopes and telescopes. These discoveries – which have only gotten worse for the naturalists as more details emerge – do not have easy naturalistic explanations. If you ask the naturalist for an explanation, they will resort to various sorts of speculations:

- future science will undermine all our current knowledge
- we are in an unobservable multiverse that exists eternally
- aliens seeded the Earth with life, and THEY evolved
- there are lots of fossils we haven't discovered yet

- there are lots of stars and planets we haven't discovered yet

What's the answer to this arguing from ignorance?

I think ridicule is best. You need to start by telling the full story about how these discoveries were made. Name the scientists, state the dates. Tell the whole story of how the science was done. Do this for each discovery. Then, at the end, ask them which of these scientific discoveries they deny. Ask them for naturalistic explanations of the ones they accept. Pretend to be confused, then concerned about their sanity. Finally, you should be as condescending as possible, and just explain that we can't believe in fairies and unicorns. Explain things to them as if they were a child: we have to base our worldview on what science has revealed. We can't hold out for Santa Claus to come down the chimney with new science that undermines all we have discovered. We have to go with the science we have today, and the science we have today says Creator and Designer. That is the best explanation of the what we know right now. And the trend is that these discoveries are becoming even MORE difficult for naturalism to account for. I guarantee you that the average rank-and-file atheist knows more about Star Wars and Star Trek lore than they do about actual scientific discoveries that threaten their beloved religion of naturalism.

Try to make your face look like Tucker Carlson:

The Tucker Carlson face conveys a mix of confusion, disappointment and horror

For God's sake, even Richard Dawkins admitted in his debate with John Lennox that a good case can be made for a deistic God from the science we have now. If Dawkins can admit this, then you need to be extremely harsh to the village atheists.

If the word "naturalism" is all new to you, you should probably read the whole article and this longer article as well. The longer article really explains the different definitions of the words that are used in these debates. Johnson's an excellent writer, and you will learn a lot.

Alexandria Ocasio-Cortez explains how she will pay for $40 trillion in new spending

September 17, 2018 | by Wintery Knight | Link | Original Link

---

Young people seem to think that implementing socialism in the United States won't cost them a thing. The truth is, the rich don't have enough money to cover all the spending that socialists want to do. It's going to be young people who are stuck with the bill, and they'll have to scale their lives down to third world levels to pay for what they voted for.

Here's a socialist (former bartender) to explain how she would pay for $40 trillion in new spending, over 10 years:

The Daily Wire reports:

> TAPPER: "Right. I get that. But the price tag for everything that you laid out in your campaign is $40 trillion over the next 10 years. I understand that Medicare for all would cost more to some wealthier people and to the government and to taxpayers, while also reducing individual health care expenditures. But I am talking about the overall package. You say it's not pie in the sky but $40 trillion is quite a bit of money. And the taxes that you talked about raising to pay for this, to pay for your agenda, only count for two [trillion dollars]. We're going by left-leaning analysts."
>
> OCASIO-CORTEZ: "Right. When you look again at how our health care works, currently we pay — much of these costs go into the private sector. So, what we see, for example, is, you know, a year ago I was working downtown in a restaurant. I went around and I asked how many of you folks have health insurance? Not a single person did. They're paying — they would have had to pay $200 a month for a payment for insurance that had an $8,000 deductible. What these represent are lower cost overall for these programs. Additionally, what this is, it's a broader agenda. We do know and acknowledge that there are political realities. They don't always happen with just a wave of a wand but we can work to make these things happen. In fact, when you look at the economic activity that it spurs — for example, if you look at my generation, millennials, the amount of economic activity that we do not engage in. The fact that we delay purchasing homes, that we don't participate in the economy as purchasing cars as fully as fully as possible is a cost. It is an externality, if you will, of unprecedented amount of student loan debt."
>
> TAPPER: "I am assuming I won't get an answer for the other $38 trillion. We'll have you back and go over that."

Some people are going to vote for her just because she's young, female, and sounds so passionate. But let's take a look at some numbers so we can understand how feasible her plans are.

First, the rich don't earn enough money to be able to pay for trillions of dollars in spending.

In 2012, John Stossel wrote this in Forbes:

> If the IRS grabbed 100 percent of income over $1 million, the take would be just $616 billion.

In 2011, the Tax Foundation explained that even if you taxed ALL THE DISPOSABLE INCOME from all the people who make $200,000 or more, you would only raise $1.53 trillion dollars:

> There's simply not enough wealth in the community of the rich to erase this country's problems by waving some magic tax wand.
>
> […]After everyone making more than $200,000/year has paid taxes, the IRS would need to take every single penny of disposable income they have left. Such an act would raise approximately $1.53 trillion. It may be economically ruinous, but at least this proposal would actually solve the problem.

Socialists want to spend $40 trillion more over 10 years, or about $4 trillion per year. Taking most of what the wealthy earn would make up less than half of that spending.

Anyway, we're not in a position to be doing any spending, because the costs of our *existing* socialist programs will be *increasing* going forward.

Pretty soon, our mandatory expenses will consume all of our tax revenues USA Today explains:

> After averaging 35 percent of national income from the mid-1950s through 2008, the national debt has surged to 78 percent today and is projected to reach 100 percent within a decade, and 200 percent by 2050. Even these scary estimates rest on rosy assumptions — no new military or economic crises and creditors

> willing to accept record-low interest rates from a government heading towards a debt crisis.

Just to be clear, he's talking about the debt-to-gdp ratio. When ours gets too high, interest on the debt will rise, be ause lenders aren't sure they'll be getting their money back. This will put us into a debt death spiral.

More:

> The cause of this coming debt deluge is no mystery: Social Security and Medicare are projected to run a staggering $82 trillion cash deficit over the next 30 years. We are adding 74 million retiring baby boomers to a system that provides Medicare recipients with benefits three times as large as their lifetime contributions and pays Social Security benefits typically exceeding lifetime contributions (even accounting for inflation and interest on the contributions).

We can't afford the spending we're already committed to *right now*:

> Politicians promise changes to avoid cuts in Social Security and Medicare, but their alternatives are plainly insufficient. Democrats favor tax hikes on the rich, but even doubling the highest two tax brackets to 70 and 74 percent would close just one-fifth of these programs' shortfalls — and even that assumes people keep working at 90 percent tax rates when including state and payroll taxes. Slashing defense spending to European levels would close just one-seventh of the gap. Single-payer healthcare proposals are projected by even liberal economists to increase the debt. Republicans favor cuts in antipoverty and social spending, but even the unimaginable elimination of all anti-poverty spending would close barely half of the shortfall.

So, who's going to pay for all this? It will be the people who have to work and pay income taxes for the next 30 years. The very same young Americans who are voting for socialists today. They're the ones who are going to have to survive on a fraction of what their parents earned.

But there's more. The truth is that raising taxes on the wealthy will cause enormous damage to job creators. If you look at socialist countries, the unemployment rate among young people is astronomical compared to the USA today. Why? Because these other countries have taxed and regulated businesses so much that they simply don't have money to hire people, and if they do hire people, they pay them less than what they can earn for the same work in America.

Reuters explains:

> Last December, the most recent full figures available, 25 million of the EU's workforce of 240 million were unemployed and actively looking for jobs, producing an unemployment rate of 11 percent.
>
> An additional 11 million were unemployed but had stopped looking or were not immediately available to start work, and were therefore not classified as

> unemployed. Adding them to the total would bump the jobless rate up to 15 percent.
>
> Then there were more than 9 million part-time workers who wanted to work more hours but had no opportunity to do so – they were counted as employed but felt underemployed.
>
> And finally there were those who were overqualified for their jobs and might well have been making more money elsewhere if they had found the right match for their skills.

European socialism is a kind of hybrid of socialism and capitalism, so it’s not too bad. In places like Cuba, and Venezuela, you get the real thing. I doubt that most young people really understand what is going on right now on the streets of Cuba and Venezuela. If they did, maybe they wouldn’t be voting for socialism here.

How often are accusations of rape or sexual assault false?

September 18, 2018 | by Wintery Knight | Link | Original Link

---

Should we "automatically believe rape claims" like Jackie's UVA rape claim?

The purpose of this post is to make the case that claims of rape and sexual assault should be made to the police, investigated by the police, and then proceed to trial. We should not punish men for charges that are made outside of the criminal justice system. Let's take a look at some previous cases and studies to see why not.

Here's one reported by the far-left Newsweek:

> *Rolling Stone*'s disastrous and discredited campus rape story now has a price tag.
>
> The magazine has settled a defamation lawsuit filed by the University of Virginia fraternity at the center of the 2014 blockbuster feature by Sabrina Erdely, which was retracted after key details in the story were called into question. According to reports, *Rolling Stone* will pay a settlement amounting to $1.65 million.
>
> The article, which was published in late fall 2014, described an alleged brutal gang rape of a student named "Jackie" at a UVA fraternity. The story drew wide attention and triggered a police investigation, but it was officially retracted in April 2015 after Jackie's claims were called into question.

Why did she lie?

The Washington Examiner reports:

> Documents have shown that Jackie likely made up the gang rape to try and win the affection of fellow student Ryan Duffin. She had tried other lies to get his

> sympathy, including pretending to have a terminal illness. When that didn't work, she tried to make him jealous by inventing an attractive man who would constantly say she had a crush on someone else and he didn't understand why.
>
> When that didn't work, she went on a fake date with the fake man, and then claimed she had been gang raped. That didn't win his affection either, and the two eventually stopped talking.

She lied, because she wanted to get affection and sympathy from a boy she liked.

Here's another featuring a student at Hofstra University, reported by the NY Post:

> The Hofstra freshman who had a raunchy restroom romp and then cried rape made up the twisted tale because she didn't want her schoolmates — particularly her new boyfriend — to think she was easy, the beau told The Post yesterday.
>
> "I think she needs a psychologist. She probably felt like, 'They'll think I'm a slut,' " her boyfriend, who asked not to be identified, told The Post.
>
> Danmell Ndonye, 18, who had accused five men of gang rape, admitted the truth only when prosecutors confronted her after learning of a cellphone video that captured the whole sordid episode and showed she had willingly participated, officials said.

She lied because she didn't want her boyfriend (and others) to think that she was a slut.

Although she made a false rape accusation, she never received any jail time. In fact, she was never even charged.

Another, reported by the Associated Press:

> Nikki Yovino, 20, of South Setauket, New York, was sentenced Thursday in Bridgeport Superior Court. She agreed to serve the jail time when she pleaded guilty in June, just before jury selection was to begin, to misdemeanor charges of falsely reporting an incident and interfering with police.
>
> Yovino was attending Sacred Heart University in Fairfield when she reported being raped by two school football players at an off-campus party in Bridgeport in October 2016. But police said she later admitted making up the allegations so she wouldn't ruin a relationship with another student.
>
> […]Both players remained unidentified until Thursday, when Malik St. Hilaire came forward to speak at the sentencing and confront Yovino. The Connecticut Post reported Yovino rolled her eyes and smirked as St. Hilaire talked about how the allegations affected his life.

She lied, because she didn't want to ruin a relationship with her boyfriend. And of course there are cases where the woman just wants to get revenge on men for sex she consented to, but that later made her feel bad, as in the Duke University lacrosse case. False accusations of rape or sexual assault are used by people to get attention and sympathy, or to get an alibi when they've done something wrong, etc.

Clearly, there are cases where people lie about rape and sexual assault. That's why we need to get the police involved, and not punish anyone except in the ordinary way that laws and courts punish. Let's take a look at some studies to see how often false charges are made.

What do the studies show?

A Fox News article from a prominent equity feminist, Wendy McElroy cites several studies, here's one:

> […][The] study conducted by Eugene J. Kanin of Purdue University… examined 109 rape complaints registered in a Midwestern city from 1978 to 1987.
>
> Of these, 45 were ultimately classified by the police as "false." Also based on police records, Kanin determined that 50 percent of the rapes reported at two major universities were "false."
>
> […][E]ven a skeptic like me must credit a DNA exclusion rate of 20 percent that remained constant over several years when conducted by FBI labs. This is especially true when 20 percent more were found to be questionable.
>
> False accusations are not rare. They are common.

So, there's only a 41 percent conviction rate. DNA testing exonerates 20% of men, and makes the guilt another 20% of men "questionable". A total of 59 percent of cases didn't result in a conviction.

In false rape cases, men can spend years in jail, until the women finally admits she made the whole thing up. There are campus cases where only the accused's witnesses are consulted, only evidence confirming guilt is considered, the charges and evidence are hidden from the accused, the accused is denied legal representation, the accused is denied cross-examined of the accuser, etc.

A double standard

So, that's how men accused of sexual assault and rape are treated, but what about women?

Consider this case where a female teacher got zero jail time for sexually assaulting an underage male student. Or this case from the UK where a married mother of two was convicted of producing child pornography, but also received no jail time. It's not just that men are being denied due process when they are accused of something. It's that women ARE NOT being punished when they ARE found guilty of something. There just seems to be a widespread view that women are never responsible for their bad choices, and that men are always to blame for everything. What are women learning from this about how they should treat men in their own lives? Should we expect men to have friendships with women and pursue relationships with women in this cultural climate?

Are the Washington Post and the New York Times trustworthy or fake news?

September 19, 2018 | by Wintery Knight | Link | Original Link

---

[image]
Why do people think that CNN are biased leftist clowns?
If someone asked you to name the most prestigious national newspapers, you might be tempted to name the Washington Post and the New York Times. Both papers enjoy wide circulation, and they both used to have a reputation for honest journalism. But lately, people have been accusing them of publishing fake news stories in order to benefit the Democrat party. What is the truth?

Well, consider this article from The Federalist about two recent news stories, one from each paper.

Excerpt:

> The Washington Post is standing by its August 29 report that the Trump administration is cracking down on potentially fraudulent passports, although it is marked by a stunning number of reporting failures, detailed most thoroughly by The Huffington Post on Monday. Reporters and editors on the story got facts wrong, misled readers, left out key data contradicting the premise of the article, and failed to reach out to the family of a deceased man accused of fraud in the story.
>
> The initial story claimed the Trump administration is taking unprecedented action against thousands of Hispanic people living near the southern border suspected of having obtained false U.S. birth certificates. It was based largely on anecdotal evidence from immigration lawyers working in the area who said they are seeing a surge in the number of passports under scrutiny.
>
> Within hours of its publication, a Slate reporter pointed out the practice of denying passports to people issued birth certificates from midwives suspected of fraud began under the George W. Bush administration, and continued through the Barack Obama administration. The story was corrected Aug. 31 to reflect this error. The story also asserted the Trump administration is newly targeting people delivered by a Texas doctor suspected of fraud, but HuffPo reports that practice also predates this administration.
>
> After the State Department released numbers contradicting the story's premise a few days after publication, editors added a new claim — that the Trump administration was newly denying passports to people living far from the border. HuffPo found this too was a practice that predates the Trump administration.
>
> Those numbers provided by the State Department showed that not only has the rate of passport denials declined under Trump, but the number of passports

> under scrutiny has also declined. Editors issued a Sept. 1 correction to reflect that the rate was lower, but left out the numbers indicating the total number of passports under scrutiny is also lower.
>
> Following these two major corrections, reporters continued to find problems with the paper's handling of the facts and new contradictory information, particularly about the deceased doctor named in the story. The reporter did not reach out to the doctor's family for his side of the story, although he is named as under suspicion of fraud by the government. And he was wrongly identified as a gynecologist, when he is in fact a general practitioner.
>
> The family reached out to the paper immediately after the story was published, hoping to correct the record, but the paper ignored them for nearly two weeks, until HuffPo asked about the inquiries. Finally, the paper issued a third correction on Sept. 13 incorporating the family's perspective.

And what about the New York Times?

> On the same day Washington Post issued its third correction to this story, The New York Times published a hit on Nikki Haley that was problematic in a less complicated way, but more brazen in its disregard for the basics of reporting. The remains of this report are comically banal. It was initially a "bombshell" implying Haley should be potentially removed from her post as ambassador for needlessly lavish spending as the State Department implements budget cuts, but is now a toothless report on the Obama State Department's years-old decision to buy pricey curtains for a new ambassador residence.
>
> The first headline read, "Nikki Haley's View of New York Is Priceless. Her Curtains? $52,701," and was splashed next to a photo of Haley. Buried in the piece, however, was a line contradicting the impression the article was framed to create — "A spokesman for Ms. Haley said plans to buy the curtains were made in 2016, during the Obama administration. Ms. Haley had no say in the purchase, he said."
>
> After initial criticism, editors moved that line up several paragraphs, but eventually rechecked the facts and overhauled the entire frame of the story. One Obama administration official said the curtains were chosen in part for security reasons.

Now, if you look at all the corrections made by the progressive mainstream media, what you'll find is that their mistakes almost always punish the Republican party, and almost always benefit the Democrat party. No exceptions. These newspapers are allies of the Democrat party, and they know that for every 100 people who see the fake news story, only 1 person will see the correction. And this is how they sway public opinion. Fake news now, correction in a few weeks, to keep up a patina of respectability.

What do the studies show?

Here’s a UCLA study on media bias.

Excerpt:

> Of the 20 major media outlets studied, 18 scored left of center, with CBS’ “Evening News,” The New York Times and the Los Angeles Times ranking second, third and fourth most liberal behind the news pages of The Wall Street Journal.
>
> Only Fox News’ “Special Report With Brit Hume” and The Washington Times scored right of the average U.S. voter.
>
> The most centrist outlet proved to be the “NewsHour With Jim Lehrer.” CNN’s “NewsNight With Aaron Brown” and ABC’s “Good Morning America” were a close second and third.
>
> “Our estimates for these outlets, we feel, give particular credibility to our efforts, as three of the four moderators for the 2004 presidential and vice-presidential debates came from these three news outlets — Jim Lehrer, Charlie Gibson and Gwen Ifill,” Groseclose said. “If these newscasters weren’t centrist, staffers for one of the campaign teams would have objected and insisted on other moderators.”
>
> The fourth most centrist outlet was “Special Report With Brit Hume” on Fox News, which often is cited by liberals as an egregious example of a right-wing outlet. While this news program proved to be right of center, the study found ABC’s “World News Tonight” and NBC’s “Nightly News” to be left of center. All three outlets were approximately equidistant from the center, the report found.
>
> “If viewers spent an equal amount of time watching Fox’s ‘Special Report’ as ABC’s ‘World News’ and NBC’s ‘Nightly News,’ then they would receive a nearly perfectly balanced version of the news,” said Milyo, an associate professor of economics and public affairs at the University of Missouri at Columbia.”

Here’s a Harvard University study on media bias.

Excerpt:

> The programming studied on Fox News offered a somewhat more positive picture… of Republicans and more negative one of Democrats compared with other media outlets. Fox News stories about a Republican candidate were most likely to be neutral (47%), with the remainder more positive than negative (32% vs. 21% negative). The bulk of that positive coverage went to Giuliani (44% positive), while McCain still suffered from unflattering coverage (20% positive vs. 35% negative).
>
> When it came to Democratic candidates, the picture was more negative. Again, neutral stories had a slight edge (39%), followed by 37% negative and 24% positive. And, in marked contrast from the rest of the media, coverage of Obama was twice as negative as positive: 32% negative vs. 16% positive and 52% neutral.

> But any sense here that the news channel was uniformly positive about Republicans or negative about Democrats is not manifest in the data."

From the Washington Examiner, a study of the political contributions made by the mainstream media.

Excerpt:

> Senior executives, on-air personalities, producers, reporters, editors, writers and other self-identifying employees of ABC, CBS and NBC contributed more than $1 million to Democratic candidates and campaign committees in 2008, according to an analysis by *The Examiner* of data compiled by the Center for Responsive Politics.
>
> The Democratic total of $1,020,816 was given by 1,160 employees of the three major broadcast television networks, with an average contribution of $880.
>
> By contrast, only 193 of the employees contributed to Republican candidates and campaign committees, for a total of $142,863. The average Republican contribution was $744.
>
> […]The data on contributions by broadcast network employees was compiled by CRP at the request of *The Examiner* and included all 2008 contributions by individuals who identified their employer as one of the three networks or subsidiaries. The data does not include contributions by employees of the three networks who did not identify their employer.
>
> The CRP is the organization behind OpenSecrets.org, the web site that for more than a decade has put campaign finance data within reach of anybody with an Internet connection.
>
> President Obama received 710 such contributions worth a total of $461,898, for an average contribution of $651 from the network employees. Republican presidential nominee Sen. John McCain received only 39 contributions totaling $26,926, for an average donation of $709.

Those are the facts about media bias.

So when you read stories in conservative news media, such as The Federalist, Daily Caller, Daily Wire, Daily Signal, Washington Free Beacon, etc. about how the leftist mainstream media printed fake news again, and have to correct it, you understand why this is happening.

Is Sam Harris successful at rationally grounding objective moral values and duties?

September 20, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

I just wanted to put out a few snips from this layperson-level article on the Reasonable Faith web site. The article is about atheist scholar Sam Harris, and his attempt to provide a basis for morality on atheism.

Here's the Harris project:

> The question then is, what is the best foundation for the existence of objective moral values and duties? What grounds them? What makes certain actions good or evil, right or wrong? Traditionally, God has been the highest Good (*summum bonum*) and His commandments constitutive of our moral duties. But if God does not exist, what foundation remains for objective moral values and duties?

Dr. Craig is able to show why Harris' attempt to ground the objective moral value of humans in "human flourishing" fails, by using the law of identity to show that Harris' rule doesn't account for the possibility that those who do evil could *possibly* flourish and be happy. If Harris is right that objective morality is *identical* to human flourishing, then it cannot even be *possible* that this be the case. This can be a bit confusing to non-philosophers, though, so I'll focus on Dr. Craig's argument against Harris' attempt to ground objective moral duties.

Dr. Craig writes:

> That takes us to a second question: Does atheism provide a sound foundation for objective moral duties? Duty has to do with moral obligation and prohibition, what I ought or ought not to do. Here reviewers of *The Moral Landscape* have been merciless in pounding Harris' attempt to provide a naturalistic account of

> moral obligation. Two problems stand out.
>
> **First:** Natural science tells us only what *is*, not what *ought* to be, the case. As philosopher Jerry Fodor has written, "Science is about facts, not norms; it might tell us how we are, but it wouldn't tell us what is wrong with how we are." In particular it cannot tell us that we have a moral obligation to take actions that are conducive to human flourishing.
>
> So if there is no God, what foundation remains for objective moral duties? On the naturalistic view, human beings are just animals, and animals have no moral obligations to one another. When a lion kills a zebra, it kills the zebra, but it does not *murder* the zebra. When a great white shark forcibly copulates with a female, it forcibly copulates with her but it does not *rape* her — for there is no moral dimension to these actions. They are neither prohibited nor obligatory.
>
> So if God does not exist, why think we have any moral obligations to do anything? Who or what imposes these moral duties on us? Where do they come from? It is hard to see why they would be anything more than a subjective impression ingrained into us by societal and parental conditioning.

So we might *feel* morally obligated to do something, maybe what our herd expects of us in this time and place we live in. But on atheism those feelings are arbitrary. After all, societies have evolved where feelings of obligation are felt by people to perform suicide bombings against civilians. On atheism, those feelings are as valid and grounded as any other "duties" because they emerge from the same process in other times and places. Obligations change between time and place – they are not objectively real. But that means that our moral duties are not objective, they are arbitrary – if atheism is true. The same "socio-biological evolution" is generating opposite moral duties in different times and places. This is not "objective".

And the second objection is even more lethal:

> **Second:** "ought" implies "can." A person is not morally responsible for an action he is unable to avoid. For example, if somebody shoves you into another person, you are not to blame for bumping into this person. You had no choice. But Harris believes that *all* of our actions are causally determined and that there is no free will. Harris rejects not only libertarian accounts of freedom but also compatibilistic accounts of freedom. But if there is no free will, no one is morally responsible for anything. In the end, Harris admits this, though it's tucked away in his endnotes. Moral responsibility, he says, "is a social construct," not an objective reality: "in neuroscientific terms no person is more or less responsible than any other" for the actions they perform. His thoroughgoing determinism spells the end of any hope or possibility of objective moral duties on his worldview because we have no control over what we do.
>
> Harris recognizes that "determinism really does threaten free will and responsibility as we intuitively understand them." But not to worry! "*The illusion*

> *of free will is itself an illusion*." The point, I take it, is that we do not really have the illusion of free will. Not only is such a claim patently false phenomenologically, as any of us can attest, but it is also irrelevant. The fact remains that whether we experience the illusion of free will or not, on Harris' view we are thoroughly determined in all that we think and do and can therefore have no moral responsibilities.

On Harris' view, human beings are computers made out of meat. But if you cannot freely make moral choices, then you cannot choose to perform moral duties or not. What is amazing to me is why he wants to deny free will in the first place. He is surely very well aware of his own experience of free will, and his own consciousness, for that matter. Before we even start to look at scientific evidences against atheism like the origin of the universe, the cosmic fine-tuning, the origin of life, the Cambrian explosion, etc. we already have evidence within ourselves that naturalism is false.

Just in passing, my friend Micah sent me this article about Sam Harris' academic credentials. Although Harris has a PhD in neuroscience, the underlying reality is a bit more complicated. When I watched him debate William Lane Craig, he seemed to be ignorant of simple problems with his utilitarian moral views, and his inability to ground libertarian free will. The problems with utilitarianism have been known for hundreds of years. You can watch the debate yourself and see if you think he was prepared or not.

Have you heard about Dr. Angus Menuge's ontological argument against naturalism?

September 21, 2018 | by Wintery Knight | Link | Original Link

Soldiers of the 101st Airborne Division test the new M-17 pistol

My friend Seth mentioned to me that he likes the argument from reason, so I thought I would post something about it from a Christian scholar who I really admire. Dr. Angus Menuge offers the best (I think) argument for the proposition that theism is the best ground for our reasoning capability.

Let's start with some information about Dr. Menuge:

> Dr. Angus Menuge joined Concordia University Wisconsin in 1991. He earned his BA from the University of Warwick, England, and his MA and Ph.D. degrees from the University of Wisconsin-Madison, where he studied philosophy, computer science and psychology. Menuge's dissertation was on the philosophy of action explanation, and his current research interests include philosophy of mind, philosophy of science and Christian apologetics.
>
> In 2003, Menuge earned a Diploma in Christian Apologetics from the International Academy of Apologetics, Evangelism and Human Rights, which meets each July in Strasbourg, France. His thesis, a critique of scientific materialism, went on to become the book *Agents Under Fire: Materialism and the Rationality of Science* (Lanham, MD: Rowman and Littlefield, 2004).
>
> […]A frequent speaker, Menuge has given presentations on Christianity and culture, science and vocation, philosophy of mind, C. S. Lewis, Intelligent Design and the case against scientific materialism. He is a member of the Evangelical Philosophical Society.

Dr. Menuge presented a paper at a recent Evangelical Philosophical Society conference

for students and professors of philosophy, and you can download the paper here as a PDF. I got these straight from the source, and got permission to post them, too.

Here is the introduction to the paper that Dr. Menuge read at the EPS conference:

> The argument from reason is really a family of arguments to show that reasoning is incompatible with naturalism. Here, naturalism is understood as the idea that foundationally, there are only physical objects, properties and relations, and anything else reduces to, supervenes on, or emerges from that. For our purposes, one of the most important claims of naturalism is that all causation is passive, automatic, event causation (an earthquake automatically causes a tidal wave; the tidal wave responds passively): there are no agent causes, where something does not happen automatically but only because the agent exerts his active power by choosing to do it. The most famous version of the argument from reason is *epistemological*: if naturalism were true, we could not be justified in believing it. Today, I want to focus on the *ontological* argument from reason, which asserts that there cannot be reasoning in a naturalistic world, because reasoning requires libertarian free will, and this in turn requires a unified, enduring self with active power.
>
> The two most promising ways out of this argument are: (1) Compatibilism—even in a deterministic, naturalistic world, humans are capable of free acts of reason if their minds are responsive to rational causes; (2) Libertarian Naturalism—a self with libertarian free will emerges from the brain. I argue that neither of these moves works, and so, unless someone has a better idea, the ontological argument from reason stands.

The paper is 11 pages long, and it is awesome for those of you looking for some good discussion of one of the issues in the area of philosophy of mind.

By the way, the epistemological argument from reason (P(R) on N & E is low) is the argument made by the famous Christian philosopher Alvin Plantinga. I blogged about that argument before. It's good to know BOTH of these arguments. They both work, and they are both awesome. If you put these two arguments together with William Lane Craig's moral argument, that's three strong philosophical arguments that are easy to use, but backed by solid analytic philosophy.

Powerpoint slideshow

But there is more than just the paper! At the EPS apologetics conference, which is meant for lay people as well as scholars, he presented this slideshow which I converted to PDF. The slides are easier to understand than the paper, but the paper is not too bad.

Audio from Apologetics 315

Click here for an interview with Dr. Menuge. It's up at Apologetics 315!

Details:

> Today's interview is with Dr. Angus Menuge, Professor of Philosophy

> at Concordia University, and author of *Agents Under Fire: Materialism and the Rationality of Science*. He talks about his background and work, the philosophy of mind, what reason (or reasoning) is, what materialism is as a worldview, things excluded from a materialistic worldview, methodological naturalism and materialism, accounting for free will, materialistic accounts of reason, the epistemological argument from reason, the ontological argument from reason, finding the best explanation for reason, problems with methodological naturalism, implications of materialism, practical application of the argument from reason, advice for apologists, the International Academy of Apologetics, and more.

If what Dr. Menuge says in this interview is true, and I think it is, then a person who believes in materialism can neither ground free will nor rationality! So atheism wouldn't really be freethought so much as it would be… un-free… non-thought.

Frequent denial of sex breaks the marriage covenant as much as adultery

September 22, 2018 | by Wintery Knight | Link | Original Link

Marriage and family

Let's start this post by quoting a passage from the Bible.

1 Corinthians 7:1-5:

1 Now concerning the things about which you wrote, it is good for a man not to touch a woman.

2 But because of immoralities, each man is to have his own wife, and each woman is to have her own husband.

3 The husband must fulfill his duty to his wife, and likewise also the wife to her husband.

4 The wife does not have authority over her own body, but the husband *does*; and likewise also the husband does not have authority over his own body, but the wife *does*.

5 Stop depriving one another, except by agreement for a time, so that you may devote yourselves to prayer, and come together again so that Satan will not tempt you because of your lack of self-control.

So with that in mind, I want to turn to a well-known Jewish talk show host named Dennis Prager, who is much loved and listened to by Christians. Dennis Prager features a lot of discussions about male-female relationships on his show, particularly during the male-female hour. In this two part series on male sexuality, he explains why women should not deprive their husbands of sex without a good reason.

Part 1 is here.

Excerpt:

> It is an axiom of contemporary marital life that if a wife is not in the mood, she

> need not have sex with her husband. Here are some arguments why a woman who loves her husband might want to rethink this axiom.
>
> First, women need to recognize how a man understands a wife's refusal to have sex with him: A husband knows that his wife loves him first and foremost by her willingness to give her body to him. This is rarely the case for women. Few women know their husband loves them because he gives her his body (the idea sounds almost funny). This is, therefore, usually a revelation to a woman. Many women think men's natures are similar to theirs, and this is so different from a woman's nature, that few women know this about men unless told about it.
>
> This is a major reason many husbands clam up. A man whose wife frequently denies him sex will first be hurt, then sad, then angry, then quiet. And most men will never tell their wives why they have become quiet and distant. They are afraid to tell their wives. They are often made to feel ashamed of their male sexual nature, and they are humiliated (indeed emasculated) by feeling that they are reduced to having to beg for sex.
>
> When first told this about men, women generally react in one or more of five ways…

He then explains the 5 ways that women respond to this.

Here's one:

> 1. You have to be kidding. That certainly isn't my way of knowing if he loves me. There have to be deeper ways than sex for me to show my husband that I love him.

I think that this is a common mistake that liberal women make because they think that men are just hairy women. But men are not women, we are different and sex means something different to men than it does to women. In the past, *most* women understood how men are different than women, but younger women have been taught that there are no differences between the sexes. To think any different is "sexism".

Here's another from the list:

> 4. You have it backwards. If he truly loved me, he wouldn't expect sex when I'm not in the mood.

Again, this is the common mistake that many younger women today make in thinking that love is a one-way street – flowing from men and children to the woman. If men and children DON'T do what the woman wants, or if they make demands on her, then they don't "love" her and she is justified in ignoring them.

Liberal women have been taught to believe that they are always victims or some group of oppressors, such as men and children or corporations. It makes them rebel against having to do anything for anyone else, because they don't want to be "oppressed". That makes them unable to accept that relationships are give-and-take, Once a commitment to love another person permanently has been made, then each person has

responsibilities to provide for the needs of the other.

I actually had a conversation with a Christian woman once who said that women should not be obligated to do things that they didn't feel like doing. I asked her if men were obligated to go to work when they didn't feel like going. She said yes, and acted as though I were crazy for asking. I just laughed, because she didn't even see the inconsistency. The truth is that men often don't feel like working, but they get up and go to work anyway, whether they like it or not (in most cases). Similarly, a women should feel obligated to have sex with her husband, even if she is not in a perfect mood for it (in most cases). Sometimes, a man stays home from work, and it's OK. And sometimes a woman says no to sex, and it's OK. But it's not OK to stop doing it for months and months with no good reason.

Part 2 is here.

Excerpt:

> Here are eight reasons for a woman not to allow not being in the mood for sex to determine whether she denies her husband sex.

He then explains the eight reasons.

Here's one of them:

> 7. Many contemporary women have an almost exclusively romantic notion of sex: It should always be mutually desired and equally satisfying or one should not engage in it. Therefore, if a couple engages in sexual relations when he wants it and she does not, the act is "dehumanizing" and "mechanical." Now, ideally, every time a husband and wife have sex, they would equally desire it and equally enjoy it. But, given the different sexual natures of men and women, this cannot always be the case. If it is romance a woman seeks — and she has every reason to seek it — it would help her to realize how much more romantic her husband and her marriage are likely to be if he is not regularly denied sex, even of the non-romantic variety.

Women have to engage their husbands if they expect their husbands to engage in the marriage as a husband and father. Men can't do their protector, provider and spiritual leader roles forever unless their needs are met at some point. Performance of these male duties is not free. Wives have to love their husbands in the way that men expect to be loved. That's what they vowed to do in the wedding, isn't it?

At the end of the article, Prager makes a general point about women that I think needs to be emphasized over and over and over:

> That solution is for a wife who loves her husband — if she doesn't love him, mood is not the problem — to be guided by her mind, not her mood, in deciding whether to deny her husband sex.

This problem of sex-withholding is so widespread, that it really makes me (although I am

a virgin) wonder what women think that marriage is about anyway. When a woman vows to love her husband, what do they think that word really means? Why do women think that men marry? What do men want that marriage provides for them? Which of those needs are the women's responsibility to provide for? I think these are questions that men should ask women. I think women should be prepared to answer them. Men should expect that women be reading books on men and marriage, and that she has relationships with men where she is giving support, respect, affirmation, affection and approval. You can learn a lot about a woman by how she treats her father, for example.

Unfortunately, many men today haven't thought through what they need from wives in a marriage. They spend their young years chasing women who are fun and sexually permissive. Every husband I asked about what they need has told me that respect, affirmation, affection and regular sex are more important than appearance and fun. Pre-marital sex, having fun, getting drunk, and going out, etc. are not the right foundation for marriage – which requires mutual self-sacrifice in order to work.

Another point: I have a friend who is very concerned that men are breaking sexual rules, but he seems oblivious to 1 Corinthians 7:1-5. I asked him privately what he thought about sex-withholding, and whether this might cause husbands to turn to pornography and even affairs, and I mentioned 1 Corinthians 7:1-5. He said: "no, it's not something I take much interest in". I was tempted to ask him if the Bible was something that he does not take much interest in.

I think he misreads 1 Corinthians 7:1-5 so that it could only be used to condemn *men*. If that were his view, then it actually worries me if well-meaning men are actually undermining marriage, by teaching women that they have no responsibilities to keep the marriage going, and helping them to feel like victims when their marriages fall apart. Sometimes even people who claim to be pro-marriage can undermine marriage practically-speaking, because of their unBiblical belief that women are "naturally good" and should not have any responsibilities in a marriage.

I thought this attitude was so interesting in view of what I read in the Proper Care and Feeding of Husbands. In that book, Dr. Laura urges women to be sensitive to their husbands' different male natures in order to avoid them looking at pornography and having affairs. Withholding sex from a man is the equivalent of a man withholding *conversation* to a woman. Sex is how a man feels loved! What's remarkable is how female callers on her show are shocked that men react badly to being deprived of sex.

I do think that some men will look at porn and cheat regardless of what their wife does sexually, but then it again falls to the woman to choose a man who has demonstrated that he has self-control – i.e., a virgin who has remained chaste with her throughout the courtship and protected her from doing sexual things outside of the covenant context. Chastity is hard, but it is how a man loves his wife self-sacrificially, before he even meets her. It should be a trait much sought after *and respected* by women. Basically, women need to be led by their minds, not by their feelings, when choosing a husband.

A man has to get up and go to work every day for his family, regardless of whether he

feels like it or not. In fact, the many decisions he has made before getting married are also made not because they make him happy, but because he needs to be responsible to his future wife and children. The decision to study science? Loving obligation. The decision to go to grad school in science? Loving obligation. The decision to work in a demanding, risky career? Loving obligation. The decision to save money and eat instant oatmeal for dinner? Loving obligation. Men don't do these things because we enjoy them. We do it because we love our wives and children self-sacrificially, *before we ever even meet them*. I think that women need to do the same.

Did Jesus appeal to evidence when reaching out to skeptics?

September 23, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

From Eric Chabot of Ratio Christi – Ohio State University.

He lists eight ways that Jesus makes his case.

Here's one of the ways:

> **2. Jesus Appealed to Evidence**
>
> Jesus knew He could not show up on the scene and not offer any evidence for His Messiahship. In his book On Jesus, Douglas Groothuis notes that Jesus appealed to evidence to confirm His claims. John the Baptist, who was languishing in prison after challenging Herod, sent messengers to ask Jesus the question: "Are you the one who was to come, or should we expect someone else?" (Matt. 11:3). This may seem an odd question from a man the Gospels present as the prophetic forerunner of Jesus and as the one who had proclaimed Jesus to be the Messiah. Jesus, however, did not rebuke John's question. He did not say, "You must have faith; suppress your doubts." Instead, Jesus recounted the distinctive features of His ministry:
>
> "Go back and report to John what you hear and see: The blind receive sight, the lame walk, those who have leprosy are cured, the deaf hear, the dead are raised, and the good news is preached to the poor. Blessed is the man who does not fall away on account of me." (Matt. 11:4-6; see also Luke 7:22).
>
> Even in the Messiah Apocalypse, which is dated between 100 and 80 B.C.E mentions a similar theme as seen in Matt.11: 4-6: "He [God] frees the captives, makes the blind see, and makes the bent over stand straight…for he will heal the

> sick, revive the dead, and give good news to the humble and the poor he will satisfy, the abandoned he will lead, and the hungry he will make rich."
>
> Jesus' works of healing and teaching are meant to serve as positive evidence of His messianic identity, because they fulfill the messianic predictions of the Hebrew Scriptures. What Jesus claimed is this:
>
> 1. If one does certain kinds of actions (the acts cited above), then one is the Messiah.
> 2. I am doing those kinds of actions.
> 3. Therefore, I am the Messiah.

And:

> **5. The Miracles of Jesus**
>
> In the Bible, miracles have a distinctive purpose: they are used for three reasons:
> 1. To glorify the nature of God (John 2:11; 11:40)
> 2. To accredit certain persons as the spokesmen for God (Acts 2:22; Heb. 2:3–4)
> 3. To provide evidence for belief in God (John 6:2, 14; 20:30–31). (3)
>
> Nicodemus, a member of the Jewish ruling council, the Sanhedrin, told Jesus, "'Rabbi, we know you are a teacher who has come from God. For no one could perform the miraculous signs you are doing if God were not with him' " (Jn. 3:1–2). In Acts, Peter told the crowd that Jesus had been "accredited by God to you by miracles, wonders and signs, which God did among you through him" (Acts 2:22).
>
> In Matthew 12:38-39, Jesus says, "A wicked and adulterous generation asks for a miraculous sign! But none will be given it except the sign of Jonah the prophet." In this Scripture, God confirmed the Messianic claim when Jesus said the sign that would confirm his Messiahship was to be the resurrection.
>
> It is important to note that not all witnesses to a miracle believe. Jesus did not do His miracles for entertainment. They were done to evoke a response. So perhaps Paul Moser is right on target in what he calls "kardiatheology" – a theology that is aimed at one's motivational heart (including one's will) rather than just at one's mind or one's emotions. In other words, God is very interested in moral transformation.
>
> We see Jesus' frustration when His miracles did not bring the correct response from his audience. "Even after Jesus had done all these miraculous signs in their presence, they still would not believe in him" (John 12:37). Jesus himself said of some, "They will not be convinced even if someone rises from the dead" (Luke 16:31). One result, though not the purpose, of miracles is condemnation of the unbeliever (cf. John 12:31, 37). (4)

I am forever pointing this out to people. Jesus didn't get people to follow him because he was nice. And he didn't just talk to people who agreed with him. He even promised "a

wicked generation” his resurrection as evidence for his claims. He called his resurrection “the sign of Jonah”, and it was meant for people who were looking for a “sign”. This is the way we should be – using whatever evidence we can dig up from science, history, law, and even the social sciences (when arguing moral issues).

Read the rest here. Surprise! Jesus loves to convince people, and not just by quoting the Bible to people who already accept the Bible, either. His goal was not to make people accept his claims because of their feelings, but because of the evidence he offered them.

Ford’s last witness says that she doesn’t remember a party with Kavanaugh

September 24, 2018 | by Wintery Knight | Link | Original Link

---

The blocking of Brett Kavanaugh is all about Roe v. Wade, and its going poorly
I am not happy with the Weekly Standard being so anti-Trump, but this article about the accusations by registered Democrat Christine Ford is interesting. She named four witnesses in her accusation of Supreme Court nominee Brett Kavanaugh, and all four have now refused to support her claims. Let’s take a look at an article from the Weekly Standard.

Excerpt:

> Christine Blasey Ford has claimed that four other people attended a small gathering at which she was allegedly assaulted by Brett Kavanaugh. Three of those people, PJ Smyth, Mark Judge, and Kavanaugh, have already denied any recollection of attending such a party.
>
> On Saturday night, Leland Ingham Keyser, a classmate of Ford’s at the all-girls school Holton-Arms and her final named witness, denied any recollection of attending a party with Brett Kavanaugh.
>
> “Simply put, Ms. Keyser does not know Mr. Kavanaugh and she has no recollection of ever being at a party or gathering where he was present, with, or without, Dr. Ford,” lawyer Howard J. Walsh said in a statement sent to the Senate Judiciary Committee.

> CNN reports that " Keyser is a lifelong friend of Ford's."
>
> Keyser previously coached golf at Georgetown University and is now executive producer of Bob Beckel's podcast. Keyser is the ex-wife of Beckel, a former Democratic operative and commentator. A search on OpenSecrets.org reveals Keyser's only political donation has been to former Democratic senator Byron Dorgan.
>
> […]All of Ford's named witnesses of the party, both male and female, have now denied any recollection of attending such a party.

This story troubles me because I keep thinking about what it will be like for Christian conservatives going forward. Will they always be blocked from positions of influence with unsupported accusations of sexual misconduct?

With that in mind, I recommend that Christian mothers and fathers take steps to teach their children how to avoid false accusations made by secular leftists.

Here's a good article by Megan Fox from PJ Media about that.

It says (in part):

> Mothers of sons everywhere should be terrified by the constant destruction of men by duplicitous, lying women and an overzealous and political Senate confirmation process. All a scheming broad has to do these days is claim that your son touched her inappropriately more than two decades ago and she can derail his career. Worse, if your son ever happens to end up in front of the Senate, U.S. senators may drive his wife to suicide. The Senate confirmation hearing for Miguel Estrada, a Bush choice, was so stressful that Estrada's wife had a miscarriage, developed a drinking problem, and overdosed on pills and died, according to The New Yorker.

She has a list of advice for parents who don't want that to happen to their children.

One of them is this:

> 1. Take him to church and make sure the lessons stick
>
> Make sure your son knows how to treat others, what his moral obligations to himself and his family are, and to follow God's laws in regards to dating and marriage. Try to impart the importance of saving sex for marriage. What can happen to him if he fails to do that (poverty, child support, disease, death, false rape charge) isn't worth it.

People sometimes ask me how it's possible for me to treat conservative Christian women so well, and then write such harsh judgments of non-Christian women on my blog. Well, I think that Christian men should treat serious Christian women well, but not everyone who claims to be a Christian really is one. Regarding non-Christian leftist women, my advice is don't talk to them, don't do anything for them. There are plenty of women who take Christianity seriously who we can pay attention to and help instead. Youth and beauty are

not a good measures of a woman's character. Good women are chaste and sober and self-controlled. I don't it's possible to do a relationship with a woman who is drinking a lot, pursuing fun and thrills, etc.

More good advice:

> 3. Teach your son to assume he will one day have a position of high importance and encourage him to live accordingly
>
> This is the Mike Pence school of behavior that will serve him well. Do not be alone with a woman who is not your wife if you are married. If you are not married, then try to have witnesses when dealing with women. Double-dating may soon be the only smart thing for a man to do when looking for a mate to protect himself from dangerous women who would like to hurt him. Teach him that anything he might say or do today could affect him and cost him a job 30 years from now. Show him what's happening to Brett Kavanaugh. Teach him to choose his friends wisely, to stay sober, and to stay away from shenanigans that could come back and haunt him.

If you're planning to have an influence, then you need to understand that there are secular leftist women out there who will use false accusations in order to stop you from making a difference. If your goal is to get on the Supreme Court and reverse Roe v. Wade, understand that according to Gallup polls, almost all young unmarried women want to keep abortion legal. There is a significant group of young unmarried women who think that they should prioritize drinking a lot, and having recreational sex with hot bad boys. They see taxpayer-funded contraceptives and taxpayer-funded abortions as part of their plan to have a lot of sex with hot bad boys. They will do anything to stop pro-life men from putting an end to their fun.

This third one is my favorite:

> 4. Don't trust women
>
> […]Contrary to the saccharine platitude that "women don't lie," women lie all the time. They lie like crazy. The younger they are, the more they lie and scheme. It's probably the rage of hormones and insecurity that contribute to it, but most women lie and scheme. Teach your sons to search out morally upstanding girls and to avoid drama queens. The religious ones are usually better. Stay very far away from party girls and girls who use drugs or drink underage. Those girls are momentarily fun, but ultimately trouble. Teach him to stay away from those girls.

Now, when wise people tell women to avoid rape by being careful how much they drink, and what they wear, and where they go for fun and parties, women tend to get mad and say "don't tell me what to do, just let me do what I want, and tell men not to rape". Men, if you think that you should be able to drink what you want, wear what you want, and go wherever you want seeking pleasure, you are mistaken. The costs to you if you get slapped with a false accusation or a false paternity suit or a frivolous divorce will be disastrous. You need to take responsibility for your own decisions, and that means having

an *accurate* view of how women really are, so that you know how to tell the sheep from the goats. All women are not the same inside, and inside is where it really matters – especially at a time like this. Men need to avoid women who are let by their feelings, and prefer women who do the right thing when they don't feel like it.

My previous post reviewed what studies say about whether accusations of rape and sexual assault are likely to be true.

Conservative mothers reflect on what frivolous accusations mean for their son's futures

September 25, 2018 | by Wintery Knight | Link | Original Link

Boys are enrolling in university at a much lower rate than girls

Yesterday, I blogged about Megan Fox, a conservative mother of a son, who had some advice for young men who want to make a difference. She advised them to treat women and sex in accordance with Christian values, to document situations that could be misconstrued later, to live their lives as if they would one day be in a position of influence, and to remember that women "lie and scheme", especially young, unmarried women.

I noticed that she linked to another article on PJ Media, by another mother of two boys named Sarah Hoyt. Sarah's article is called "When Every Boy Is Guilty, Every Girl Becomes a Monster".

She writes:

> Let me tell you about my experience with Colorado Springs area public schools while raising two boys:
>
> In Manitou Springs, in first grade, my older son started making poems to girls.
>
> […]I got a phone call saying he was sexually harassing a girl. Since at 6 he didn't know how to spell "harassment" and would be uncertain on the meaning of "sexual" (both boys were far less curious than I was at their ages) I begged leave to differ, marched down to the school like the wrath of mom and demanded proof. At which point I was given a very bad, rather innocent poem. I mean the

> boy didn't even say he wanted to kiss her. Just that she was pretty and her eyes were like stars.

Writing poems to a girl is harassment, because the boy is 6 years old.

But that's not all, there's more:

> Next came elementary school in Colorado Springs. Younger son (slower developing than his brother, and at that time completely unaware of the difference in "vive la difference.") was in third grade.
>
> […]Apparently, my son had a little friend who happened to be a girl. He was trying to get her attention so they could play the "space game"… There were other kids in the way, and she couldn't hear him shout. So he reached – through the other kids – and touched her three times.
>
> At which point, all hell broke loose.
>
> Apparently a playground guard thought this girl was "very pretty" and "all the little boys were interested in her" (yes, third grade. Is anyone else getting a creepy vibe?), so when younger son touched her "on the butt" (playground guard's version) the playground guard KNEW what she had to do.
>
> She descended upon the kids, whisked the little girl to counseling and the little boy to the principal's office to be threatened with suspension and the police.
>
> I asked my son, right there, in front of all of them, what he'd confessed to.
>
> He said they'd told him touching someone on the butt was sexual harassment so he'd confessed to that.

The child had no idea what sexual harassment even was, but the female playground guard was sure that's what he had done. Public schools are 80%+ female teachers and administrators, most of whom have non-STEM degrees and little to no private sector work experience. Are you really going to hand your boys to them? You better come up with a better plan than that if you want your boys to have an influence.

Here's another article from The Federalist, written by Melissa Danford, a homeschooling mother of four boys.

She writes:

> I cannot accept a world in which my sons will be raised under the tyranny of a lawless, vindictive society that wants to subdue and oppress men in the name of equality for women. It's time to take a stand. Mammas, we have to fight for our men, because they are in danger. My father is, my husband is, and my sons are. Your father is, your husband is, and your sons are. This madness will consume them all.

It would be nice if her views were widespread, but they are not. The Wall Street Journal reports on a recent poll:

> By 3 percentage points, men want Republicans rather than Democrats to control Congress, 47% to 44%. Women, by contrast, favor Democratic control by 25 percentage points — 58% to 33%. Among white voters, the gender disparity was the largest since 2008.

I blogged previously about how 77% of young, unmarried women supported Barack Obama in 2008. Women support abortion, gay marriage, and big government in larger numbers than men.

Why do young, unmarried women favor big government? In my experience young, unmarried women struggle with moral rules. They feel that they are exempt from cause and effect, because they are *special*. They want to do whatever they feel like doing "in the moment", e.g. – getting drunk and having premarital sex with hot bad boys for fun. And they don't want to be judged for it, or lose out on anything good further down the road. This attitude leads them to vote for a big government that will pay for their mistakes, and give them life outcomes equal to the married women who made wiser decisions. Unfortunately for men, we are seeing right now what happens when Democrats are put into positions of power by the votes of these young, unmarried women. Conservative Christian young men hoping to have an influence will always have to be watching their backs for their next accuser.

Kavanaugh: “I did not have sex in high school or for many years thereafter”

September 26, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

So, Brett Kavanaugh did an interview where he and his wife answered questions about the vague and unsupported charges being made against him by registered Democrat women. In the interview, he explained that he did not have sex in high school or for many years thereafter, which is what you would expect from a Christian conservative.

Here’s part of the transcript from Daily Wire:

> **Brett Kavanaugh:** […]When I was in high school – and I went to an all boys catholic high school, a judgment (ph) high school, where I was focused on academics and athletics, going to church every Sunday at Little Flower, working on my service projects, and friendship, friendship with my fellow classmates and friendship with girls from the local all girls Catholic schools.
>
> And yes, there were parties. And the drinking age was 18, and yes, the seniors were legal and had beer there. And yes, people might have had too many beers on occasion and people generally in high school – I think all of us have probably done things we look back on in high school and regret or cringe a bit, but that’s not what we’re talking about.
>
> We’re talking about an allegation of sexual assault. I’ve never sexually assaulted anyone. I did not have sexual intercourse or anything close to sexual intercourse in high school or for many years there after. And the girls from the schools I went

> to and I were friends —
>
> **Martha MacCallum:** So you're saying that through all these years that are in question, you were a virgin?
>
> **Brett Kavanaugh:** That's correct.
>
> **Martha MacCallum:** Never had sexual intercourse with anyone in high school –
>
> **Brett Kavanaugh:** Correct.

I know this is going to be hard to believe for the average Democrat, since they seem to be incapable of understanding how seriously religious people take the moral demands of their religion. But take it from me, there are Christians who take the Bible's teaching on sobriety and chastity seriously. I'm in my early 40s and still a virgin, and I'm sure I'm not the only one. Sex is for marriage. Period. People who are serious about their faith order their lives in a way such that they maintain their sobriety and chastity. Real Christians do.

Anyway, here's a short clip showing his response above:

The full video is here.

But there's something else I want to say about this, and about my alias.

Clarence Thomas

You see, I have known that women on the secular left made false charges for some time. My first exposure to the idea that women lied against innocent men for their own reasons was in Harper Lee's book "To Kill a Mockingbird", which I read in my freshman year of high school. The victim of the lies was a colored man, like me. I understood the message of the book very clearly.

This story came to life during the nomination of my favorite Supreme Court justice Clarence Thomas. Clarence Thomas looks a bit like me – we're both non-white males. When I saw the Democrats put forward a woman who made unverifiable claims to try to stop a pro-life man from reaching the Supreme Court, I learned a valuable lesson. Secular leftists women will lie and ruin a man's career in order to protect their right to have sex with hot bad boys, and escape the consequences. That's what this is all about – promiscuity and abortion.

Take a look at Clarence Thomas' response to the Democrat lies, and think about how this would have affected a young non-white male watching this, and thinking about his future, and wanting to have an influence as a Christian:

Sometimes, I look back on this testimony and think whether what happened to Clarence Thomas made me distrust women. Once I realized that women – that any woman – was capable of lying like this to punish a good man, I stopped believing that women were trustworthy by default. Certainly, what happened to Clarence Thomas pushed me towards becoming a software engineer – a high-earning, male-dominated field where I would have limited exposure to false accusations.

Later on, I would read the exit polls of elections. I experienced shock and disbelief about how many young, unmarried women wanted to identify as Democrats and support

Democrat policies. It really became clear to me that I had to make decisions about education, career and finance that would avoid the risk of secular leftist women finding out what I really believed, and making false accusations at me to hold me back in my career, and in my life plan. I wasn't quick enough at this, because once a woman who found out that I was a virgin and believed in chastity before marriage spread it all over a company I was interning with. Fortunately, this was just a contract job. But I was not offered a full-time job with them afterwards. I learned my lesson from that. Most good men can probably tell you a story like that – when they learned that being a good person would draw a hostile response from women who were interested in pursuing fun and thrills against the moral law, then escaping judgment and consequences afterwards.

I think women who imagine that they want to get married some day should really think about what message their silence in the face of injustices to people like Clarence Thomas and Brett Kavanaugh sends to young, successful conservative Christian men. Women, we are watching you. And we are evaluating you to see whether you are on the side of the radical feminists, or on the side of Christianity and conservative pro-family policies. So far, most women I've met seem to have a lot more allegiance for feminism than they do for morality, marriage and family.

Defending good men is not something that you can cram for at the last minute after wasting your life having fun with the wrong people and pushing policies that promoted selfishness. Good men will ask you questions, and if you've been on the secular left most of your life, you won't know how to respond, and you won't have any demonstrated actions to show that your allegiance is with us, instead of with the liars.

Don't cry to good men later that you want marriage when you didn't do anything to defend the honor and reputation of good men when we were under attack.

Did Christine Ford name Kavanaugh as her attacker before his Supreme Court nomination?

September 27, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

I wanted to post something that collects together what we know about Christine Ford's accusation against Kavanaugh. She released her opening statement for the Thursday hearing on Wednesday night. I read various articles from conservative and liberal sources to ferret out the most interesting details of this case for you. I hope you will enjoy it.

National Review posted about it:

> Ford repeats her accusations against Kavanaugh but names no new witnesses and gives no new information. She also confirms that she did not name Kavanaugh as the alleged assailant to anyone "outside of therapy" "until July 2018" when she "saw press reports stating that Brett Kavanaugh was on the "short list" of potential Supreme Court nominees":
>
> I do not recall each person I spoke to about Brett's assault, and some friends have reminded me of these conversations since the publication of The Washington Post story on September 16, 2018. But until July 2018, I had never named Mr. Kavanaugh as my attacker outside of therapy.
>
> This all changed in early July 2018. I saw press reports stating that Brett Kavanaugh was on the "short list" of potential Supreme Court nominees. I thought it was my civic duty to relay the information I had about Mr. Kavanaugh's conduct so that those considering his potential nomination would know about the

> assault.

This part is important:

> **Per the Washington Post, Kavanaugh's name is not in the therapist's notes:**
>
> **The therapist's notes, portions of which were provided by Ford and reviewed by The Washington Post, do not mention Kavanaugh's name but say she reported that she was attacked by students "from an elitist boys' school" who went on to become "highly respected and high-ranking members of society in Washington."**

And it concludes:

> Which is to say that we have an accusation that has not been corroborated by any of the named witnesses, all of whom have either said that it categorically did not happen, or that they do not know Brett Kavanaugh, or that they have no memory of any such party or event; that is strenuously denied by the accused; and that was not fleshed out to anyone other than the accuser's husband until the day Kavanaugh's name became national news.

Ford's only support comes from sworn affidavits of people who say that she TOLD THEM that she was assaulted. Did she name Kavanaugh to them? I looked over the affidavits. Her husband's affidavit says that she named Kavanaugh in 2012 to the therapist. But we KNOW from the Washington Post that the therapist's notes don't name Kavanaugh, so we don't have evidence that her husband told the truth. And he's hardly an unbiased witness. The Keith Koegler affidavit names Kavanaugh, but only from an e-mail he got from Ford on or after June 29, 2018. And two others (Adela Gildo-Mazzon and Rebecca White) don't mention Kavanaugh by name AT ALL. Just that she said she was attacked.

Remember, all these affidavits prove is that she TOLD THEM about an attack, NOT that the attack actually happened the way she is telling now.

Something else she claimed was also falsified.

The Daily Caller reports:

> Ford's claim that there were "4 boys and a couple of girls" at the party contradicts Ford and her lawyer's other accounts of how many people were present.
>
> In her letter to Democratic Sen. Dianne Feinstein, Ford claimed that there were "four others" present. She also told The Washington Post that there were "four boys at the party" and two — Kavanaugh and his friend, Mark Judge — in the room where the assault allegedly occurred.
>
> Ford's lawyer, Debra Katz, later told CNN that there were four guys and one other girl at the party.
>
> […]**Since Ford's allegations were first made public, there have been**

> **three different accounts of how many people were at the party she claims to have been assaulted at: four boys, four boys and one girl, and four boys and a couple of girls.**
>
> Kavanaugh, Judge and two other alleged party attendees all say they do not recall the party in question or any assault.

One of her named witnesses is her lifelong friend Leland Keyser.

The anti-Trump Weekly Standard notes:

> On Saturday night, Leland Ingham Keyser, a classmate of Ford's at the all-girls school Holton-Arms and her final named witness, denied any recollection of attending a party with Brett Kavanaugh.
>
> "Simply put, Ms. Keyser does not know Mr. Kavanaugh and she has no recollection of ever being at a party or gathering where he was present, with, or without, Dr. Ford," lawyer Howard J. Walsh said in a statement sent to the Senate Judiciary Committee.
>
> CNN reports that "Keyser is a lifelong friend of Ford's."
>
> Keyser previously coached golf at Georgetown University and is now executive producer of Bob Beckel's podcast. Keyser is the ex-wife of Beckel, a former Democratic operative and commentator. A search on OpenSecrets.org reveals Keyser's only political donation has been to former Democratic senator Byron Dorgan.

What about the polygraph? Well, her lawyers administered a polygraph in August 2018, that consisted of only two questions.

CBS News explains:

> Following Ford's interview she was given a polygraph examination with the following two questions:
>
> 1. Is any part of your statement false?
> 2. Did you make up any part of your statement?
>
> Ford answered "no" to both questions.

Kavanaugh was *not named in the two-question polygraph test.*

Ford's lawyers are refusing to release details about the polygraph to the Senate Judiciary Committee.

A Wall Street Journal columnist tweets:

Kimberley Strassel
@KimStrassel

Follow

More: Judiciary Committee sent letter today to Ford's attnys requesting 1) audio/visual recordings taken during Fords's polygraph; and 2) charts/data used in drawing polygraph conclusions. Ford's attnys just now refused to supply, saying such material not "important." Really?

9:54 PM - 26 Sep 2018

Kimberley Strassel is a columnist for Wall Street Journal.
Polygraphs are inadmissible in court because they are considered to be unreliable as evidence.

Could Ford have gotten Kavanaugh mixed up with a different man? Yes! In fact, two men have come forward claiming to be Ford's attacker.

The Daily Wire reports:

> Politico congressional reporter Burgess Everett reported the summary from the Judiciary Committee, which stated: "Committee staff have a second interview with a man who believes he, not Judge Kavanaugh, had the encounter with Dr. Ford in the summer of 1982 that is the basis of her allegation. He described his recollection of their interaction in some detail."
>
> A second Politico reporter, Elana Schor, added that the Judiciary also had a phone interview with a second man who also believed that he may have assaulted Ford in the summer of 1982.

That would explain why she told the people in her affidavits about the attack, but only recently named Kavanaugh as the attacker.

Moderate senator Lindsey Graham rips Democrats for unfair treatment of Kavanaugh

September 28, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

Democrats have accused Kavanaugh of drugging and raping women, participating in gang rapes and operating a gang-rape ring (when he was a high school student). I tweeted a lot about the hearing on Thursday, but the comments of Lindsey Graham, a moderate centrist Republican, was the best response to the Democrat's charges against Kavanaugh.

First, here is a good sample of how the Democrats questioned Kavanaugh during the hearing, to evaluate his suitability for the Supreme Court of the United States of America: (5 minutes)

Kavanaugh threw up too much, farted too much, etc. when he was 16 years old.

Senator Lindsey Graham also questioned Kavanaugh: (5 minutes)

He's so angry that his thoughts are all jumbled up. But you can get the basic idea of what he's saying.

Real Clear Politics had the transcript, here's some of it:

> SEN. LINDSEY GRAHAM (R-SC): If you wanted an FBI investigation, you could have come to us. What you want to do is destroy this guy's life, hold this seat open and hope you win in 2020. You've said that, not me.
>
> […]This is the most unethical sham since I've been in politics. And if you really

> wanted to know the truth, you sure as hell wouldn't have done what you've done to this guy.
>
> […]Boy, you all want power. God, I hope you never get it. I hope the American people can see through this sham.
>
> That you knew about it and you held it. You had no intention of protecting Dr. Ford. none. She's as much of a victim as you are.
>
> God, I hate to say it because these [Democrats] have been my friends, but… [t]his is going to destroy the ability of good people to come forward because of this crap. Your high school yearbook. You have interacted with professional women all your life, not one accusation. You're supposed to be Bill Cosby when you're a junior and senior in high school. And all of a sudden you got over it. It's been my understanding that if you drug women and rape them for two years in high school, you probably don't stop.
>
> […]To my Republican colleagues: If you vote no, you are legitimizing the most despicable thing I have seen in my time in politics.

I listened to reactions from people like Dana Loesch, Buck Sexton and Matt Walsh to Lindsey Graham on their podcasts, and they were as shocked as I was. This is the guy who, throughout his career, bent over backwards to cut compromise deals with Democrats in the Senate. He's been centrist moderate as a Republican senator. I have nothing good to say about him. I supported his last primary challenger, and was disappointed when Graham won the primary.

So I really have no idea what is going on here – this is the last thing I would have expected from Graham. But it does tell you something about how unfair the Kavanaugh hearings were.

Here is Senator Graham sounding less angry, and more coherent, talking to the news media – the same news media that fawned over his RINO actions for so many years: (5 minutes)

PJ Media summarized the video above:

> "I feel ambushed," Graham told reporters at the conclusion of the hearing this afternoon.
>
> "When it comes to where it happened," Graham said, "I still don't know. I don't know when it happened. She says she's 100% certain it did happen. I bet you Judge Kavanaugh will say I'm 100% sure I didn't do it."
>
> He said the people named by Ford as corroborating witnesses "don't know what Ms. Ford's talking about." In addition, "She can't tell how she got home and how she got there and that's the facts I'm left with. A nice lady who has come forward it to tell a hard story that's uncorroborated."
>
> "And this is enough, " he said. "God help anybody else who gets nominated," Graham continued. **"Based on what I heard today, you could not get a**

> **search warrant or an arrest warrant because you don't know the location, you don't know the time, you don't have any corroboration."**
>
> Graham said all he heard today was a bunch of speeches from politicians who have politicized the confirmation process..
>
> The South Carolina senator, who has a background as a prosecutor and a judge, said, "I didn't find her allegations to be corroborated against Mr. Kavanaugh. I don't doubt something happened to her… but she can't tell me the house, the city, the month of the year."
>
> "When you have a emotional accusation and an emotional denial," he explained, "you use the rule of law, the presumption of innocence attaches to the person accused. You have to give them… time and location. You ask is there anybody to verify this, and when you give hames all of them goes the other way."
>
> Asked about whether Graham thought there should be a full investigation, the visibly angry Graham said, "If you really believe we needed an investigation for this, why didn't you tell us in August? The FBI is going to tell us what? What house are they going to go to? What city are they going to go to? Who are they going to talk to because they can't tell us the month, barely the year."
>
> "This is all delay" on the part of Democrats, he told reporters. "I'm not going to reward people for playing a political game." He said Ford "is just as much a victim as, I think, Brett Kavanaugh. Somebody betrayed her trust. And we know who she gave the letter to and the people that betrayed her trust, they owe her an apology."

There were not enough specific details in Ford's testimony to warrant a search warrant, an arrest warrant, or any further investigation. In any case, the Democrats had the allegations in July, but they didn't ask for an investigation then, because they wanted to drag out the confirmation process past the mid-terms.

The Senate Judiciary Committee vote on Kavanaugh is scheduled for Friday morning, a full Senate procedural vote on Saturday, and the full Senate confirmation vote on Tuesday. Already, Bob Corker, who was on the fence about Kavanaugh has tweeted that he will support Kavanaugh. A tweet from a reporter from The Atlantic suggests that Democrat Joe Manchin will do the same. A tweet from a Washington Post reporter Friday morning says Jeff Flake will vote for Kavanaugh. We're still waiting to hear from center-left Republican senators Lisa Murkowski and Susan Collins, as well as red-state Democrats Joe Donelly and Heidi Heitkamp.

More Lindsey Graham on video here. (8 minutes)

Large-scale UK study confirms the importance of fathers to children

September 29, 2018 | by Wintery Knight | Link | Original Link

A family praying and reading the Bible

Dina sent me this article from the UK Daily Mail.

Excerpt:

> A father's love is as important to a child's emotional development as a mother's, a large-scale study has confirmed.
>
> Examining the cases of more than 10,000 sons and daughters revealed how a cold or distant father can damage a child's life, sometimes for decades to come.
>
> The review of 36 studies from around the world concluded that his love is at least as important to youngsters as that of their mothers.
>
> Researcher Professor Ronald Rohner said that fatherly love is key to development and hopes his findings will motivate more men to become involved in caring for their offspring.
>
> 'In the US, Great Britain and Europe, we have assumed for the past 300 years that all children need for normal healthy development is a loving relationship with their mother,' he said.
>
> 'And that dads are there as support for the mother and to support the family financially but are not required for the healthy development of the children.
>
> 'But that belief is fundamentally wrong. We have to start getting away from that idea and realise the dad's influence is as great, and sometimes greater, than the mother's.'
>
> His conclusions came after he examined data from studies in which children and adults were asked how loving their parents were.

> Questions included if they were made to feel wanted or needed, if their parents went out of their way to hurt their feelings and if they felt loved.
>
> Those taking part also answered questions about their personality. These ranged from 'I think about fighting or being mean' to 'I think the world is a good, happy place'.
>
> Tallying the results showed that those rejected in childhood felt more anxious and insecure as well as hostile and aggressive.
>
> Many of the problems carried over into adulthood, reported the study published in the journal Personality and Social Psychology Review.
>
> Crucially, a father's love was often just as important as a mother's. In some cases, it was even more so. One reason for this may be that rejection is more painful when it comes from the parent the child regards as more powerful or respected.

You can read more about how fatherlessness damages children here.

I think the first question we should ask the people who want to redefine marriage is this: "which parent to do you think that a child can do without? the mother or the father?". We must do everything we can as a society to keep both of a child's natural parents in the home while the child grows up. If we really care about children, then we should prefer to meet their needs, even if the grown-ups have to be a bit more responsible in their decision making. if the conflict is between innocent children and selfish grown-ups, then the children should win.

We need laws and policies that promote traditional marriage, not laws and policies that break it down and destroy it. Repealing no-fault divorce, lowering subsidies for single motherhood, and making shared parenting the default position, would all help solve the problem. Policies like school choice and lower corporate tax rates helps men to be able to perform in their role as provider. We have to be practical and ask: "what makes men capable of marriage and parenting?" If we want strong fathers, then it makes sense to ask how to make fatherhood more reasonable: what do men need in order to do what we want them to do?

Christians should be especially concerned about the presence of fathers, given the evidence I blogged about before showing how the presence of quality fathers is essential for passing Christian beliefs on to children. Churches need to ask themselves tough questions: Are we teaching women how to choose men based on practical concerns and proven abilities in our churches? And are we doing a good job of attracting men to churches by promoting the masculine, practical aspects of Christianity that men like – like science, apologetics debates, economics and foreign policy?

Are all sins equally bad? Or are there degrees of severity for different sins?

September 30, 2018 | by Wintery Knight | Link | Original Link

Bible study that hits the spot

This question came up recently so I did some digging on theology web sites to find what Bible verses applied to the question.

Here's what Ligonier said:

> It's clear that we have different degrees of sin when we consider the warnings of Scripture. There are at least twenty-two references in the New Testament to degrees of rewards that are given to the saints in heaven. There are different levels, different rewards, and different roles in heaven. The Bible warns us against adding to the severity of our judgment. Jesus said to Pontius Pilate, "He who delivered me over to you has the greater sin" (John 19:11). Jesus measures and evaluates guilt, and with the greater guilt and greater responsibility comes the greater judgment. It's a motif that permeates the New Testament.
>
> The idea of gradation of sin and reward is based upon God's justice. If I commit twice as many sins as another person, justice demands that the punishment fits the crime. If I've been twice as virtuous as another person, justice demands that I get more of a reward. God tells us that entrance into heaven will be only on the basis of the merit of Christ, but once we get to heaven, rewards will be dispensed according to works. Those who have been abundant in good works will receive an abundant reward. Those who have been derelict and negligent in good works will have a small reward in heaven. By the same token, those who have been grievous enemies of God will have severe torments in hell. Those who have been

> less hostile will have a lesser punishment at the hands of God. He is perfectly just, and when He judges, He will take into account all of the extenuating circumstances. Jesus said, "I tell you, on the day of judgment people will give account for every careless word they speak" (Matt. 12:36).

A while back, my friend Dina sent me a sermon where that exact passage (John 19) was brought up by the pastor.

I think the correct position is that *any sin* is enough to separate you from God, but some sins are more severe than others in God's objective standard of right and wrong.

OK, that was fine and good, but then I noticed a few days later that Michael Krueger had also blogged about this "all sin are equal" view, too.

Krueger says this:

> First, to say all sins are the same is to confuse the *effect* of sin with the *heinousness* of sin. While all sins are equal in their effect (they separate us from God), they are not all equally heinous.
>
> Second, the Bible differentiates between sins. Some sins are more severe in terms of impact (1 Cor 6:18), in terms of culpability (Rom 1:21-32), and in terms of the judgment warranted (2 Pet 2:17; Mark 9:42; James 3:1).

Even more Bible references, so we're not on the wrong track.

So then why do some people insist that all sins are equal? It turns out that it is coming from the secular ideal of *non-judgmentalism*.

Krueger explains:

> We should begin by observing that this phrase does not come from Scripture. People do not use it because it appears in the Bible. Why then do they use it?
>
> One reason, as noted above, is that some Christians use this phrase to uphold the seriousness of sin. It is viewed as a way to remind people not to be dismissive about their sin or regard it is a triviality.
>
> Others use this phrase as way to "flatten out" all sins so that they are not distinguishable from each other. Or, to put it another way, this phrase is used to portray all human beings as precisely the same. If all sins are equal, and all people sin, then no one is more holy than anyone else.
>
> In a world fascinated with "equality," this usage of the phrase is particularly attractive to folks. It allows everyone to be lumped together into a single undifferentiated mass.
>
> Such a move is also useful as a way to prevent particular behaviors from being condemned. If all sins are equal, and everyone is a sinner, then you are not allowed to highlight any particular sin (or sinner).
>
> Needless to say, this usage of the phrase has featured largely in the recent cultural debates over issues like homosexuality. Yes, homosexuality is a sin,

> some Christians reluctantly concede. But, they argue, all sins are equal in God's sight and therefore it is no different than anything else. Therefore, Christians ought to stop talking about homosexuality unless they are also willing to talk about impatience, anger, gluttony, and so on.

Krueger also posted this fascinating follow up post, where he looks at how the phrase is being used by people on Twitter.

Look at these tweets:

- All sins are equal. People tend to forget that. There is no bigger or smaller sin. Being gay and lying, very equal.
- all sins are equal in God's eyes. whatever you're doing, is no better than what someone else is doing.
- If you have sex before marriage please don't come on social media preaching about the wrongs of homosexuality. All sins are equal
- Need people to realize that all sins are equal… don't try to look down on me or question my faith just cuz you sin differently than I do.
- Don't understand why you're so quick to judge me, when all sins are equal. So much for family..
- if you think being gay is a sin, let me ask you something, have you not done anything wrong in your life? all sins are equal. we're sinners
- Nope no difference at all. All sins are equal no matter what you're running for. The bible says do not judge lest ye be judged
- A huge problem I have with religion is the notion that all sins are equal. Like pre-martial sex and murder are the same amount t of bad.
- people do bad things because they believe that all sins are equal and ~god~ loves y'all equally so he's going to forgive you naman ha ha ha
- It a sin to condemn another sinner and their actions. All sins are equal. So what makes you better than the person you're condemning?
- I think so b/c having sex before marriage doesn't make you less of a women then if you waited until marriage.. all sins are equal soo
- friendly reminder, all sins are equal in gods eyes so you're not better than I am in any way. please worry about your own sins before mine.

> People don’t like when I suggest abortion as an option. This is a free country and all sins are equal so mind your business!!!

> What I do is no worse than wat you do… all sins are equal no matter what it is… a sin is a sin

> to god all sins are equal so you have no right to compare your sins to someone else’s bc in the end it doesn’t matter

The first thing that I noticed is that premarital sex and homosexuality are the most popular sins. I would think that divorce and abortion would be up there in the rankings, as well.

Something strange has happened in our society such that more and more people want to be led by their feelings, rather than be bounded by rules or standards. When people get caught breaking moral rules, rather than be accountable, they attack the person judging them. They would rather escape the judgment of their peers than admit fault and try to fix the mistake, and do better next time.

It’s so bad now, that the people who *have* morals and who *make* moral judgments are seen as the real bad people. The immoral people are on the offense, and even trying to ban people from being able to disagree with them. We’re seeing that with people who are being attacked for defending natural marriage against divorce and redefinition of marriage. In France, they want to make speech critical of abortion a criminal offense. And in Canada, they’ve now made speech critical of the gay agenda a criminal offense. (It’s already a human rights tribunal offense)

What is even more interesting is when the people who push the “don’t judge me” line try to justify it from the Bible. Very strange, but we seem to have forgotten the value of setting moral boundaries. Now moral boundaries are “evil”. Instead, having compassion for people who break the moral boundaries and harm themselves and others is “good”.

I had no idea that there were so many people making decisions based on feelings

October 1, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

I've been reading about Christine Ford's accusation against Brett Kavanaugh a lot. Ford hasn't been able to provide any specific details about when and where this assault happened, or who was present, or how she got to and from the place where it happened. I listened to a few debates on the facts of the case, and no one on Ford's side could produce any *evidence* to back up her story.

Rob Tracinski posted an interesting article at The Federalist. He had been engaging with many people who "believed" in Ford's story on Twitter.

He writes:

> There is only one fundamental dividing line in the reaction to the televised hearings about accusations against Brett Kavanaugh, and it's not solely a partisan one. It's the line between those who judged the hearing based on emotions and those who judged it based on reason.
>
> The testimony of Kavanaugh's accuser, Christine Blasey Ford, added nothing of substance to the claims already reported. She was still unable to place her accusation at a specific time and place, to fill in many of the gaps in her recollections, or to find a single other person supposedly present who could confirm any aspect of her story. It remains a vague claim with no corroborating evidence.

> Based on reason and evidence alone, you would have to conclude that we have gotten no farther in the case and are not likely to get any farther.
>
> […]But evidence and logic are not what we heard about in most of the reactions to the hearings. What we heard about is how the testimony made people *feel*.
>
> The attack on logic began before the hearings, with commenters pointing to quotes saying the case against Kavanaugh is "plausible" and "believable"—but providing no actual evidence that it actually did happen—then describing this as "compelling." But "plausible" is the opposite of compelling. Direct evidence *compels* belief, logically speaking. Someone's speculations about what *might* have happened have no logical standing and compel nothing.
>
> Or consider the phrase you probably heard a thousand times today: that Kavanaugh should not be confirmed because he is "credibly accused." What does that mean? What makes the accusation "credible," and what evidentiary status does that give it? A vague accusation with no independent corroboration from the very people the accuser herself described as witnesses doesn't sound all that credible to me.
>
> But you will look in vain for any clear standard of what is "credible." It is not an evidentiary term but an emotional one. All it means is "this is something I feel like believing."
>
> People are not judging credibility based on evidence. They are judging based on how the two witnesses made them feel, which is to say that they base it on a purely emotional reaction—a reaction heavily influenced by partisan loyalties that prejudice you for or against the two witnesses.
>
> So we get pure appeals to emotion like this one: "I can't imagine how many thousands of women, around the world, are in tears as they listen to Christine Blasey Ford's voice cracking." Kavanaugh's voice cracked, too. Does that mean we should also embrace his side of the story?
>
> The ability to jerk tears in the audience does not constitute evidence, and if all important issues are to be resolved by the test of who is a more charismatic speaker, then impartial justice becomes impossible. On this issue, Conor Friedersdorf makes a highly relevant point: "I've studied too many criminal trials that sent innocents to jail or that acquitted the guilty to trust that a mass audience can distill whether anyone is telling the truth or not by consulting their gut while watching testimony."
>
> This was the problem from the very beginning. Everyone was talking about how each of the witnesses "looks" and about what's "sympathetic"—as if it's all about the feels, rather than evidence or logic.

One far-left feminist named Ana Marie Cox tweeted that she didn't believe Kavanaugh's tears because "the boyfriend that abused me cried a lot":

> When it's all about feelings, the logic must be bent and twisted to fit. So when

> Kavanaugh became emotional while describing his young daughter's reaction to this case, it wasn't proof of a man who loves his daughter. No, it was proof that he was abuser. Why? Because "The boyfriend that abused me cried a lot." Get the logic here? Because one man was abusive and cried in an attempt to get sympathy from his victim, then any man who cries is therefore an abuser. This line was repeated a lot, mostly by women citing an abusive man in their own lives, sometimes a father but usually an ex-boyfriend or ex-husband.

Note that whenever a woman has a defective father, that man was *chosen by her mother*. Her mother is responsible for the choice of *this man* and the choice to make babies with *this man.* Similarly, a woman who has a defective ex-boyfriend or ex-husband is responsible for her choice of *this boyfriend* or *this husband*. Although women often blame men for treating them badly, in almost every case, the harm results from *a woman's own choices*. The choice to drink too much, the choice to go to parties, the choice to pursue an attractive irresponsible bad boy, etc.

NPR posted a poll on the trial, and the poll found that:

- 32% of men believe Kavanaugh's account, 28% believe Ford.
- 35% of women believe Ford's account, 20% believe Kavanaugh.

Why are so many women opposed to Kavanaugh?

Well, thanks to feminism, many women find it very hard to choose men who are good at commitment, self-sacrifice and marriage roles. Feminists consider the traditional male roles to be "sexist", so they don't choose men who can perform the traditional male roles. In pre-feminist times, women looked for men who were chaste, sober, good providers, good with children (e.g. pro-life), serious about religion, serious about moral character, and who put the needs of others first. They chose men who would be good at marriage. But because of feminism, choosing men based on "rigid gender identities" for a "sexist" institution like marriage is simply not done. Men who are good at marriage are "boring", and the best men are the men who let women be as selfiish as they want to be. So, feminists marry men like Ted Kennedy, Anthony Weiner and Bill Clinton because those men are "feminists" who believe that recreational sex, abortion and no-fault divorce are good things.

I had a female friend who I used to work with in my last job who once showed me a web site filled with pictures of men's faces. Some of them were normal people, and some of them were crazy. And she proudly told me that she was able to pick which ones were crazy with 100% accuracy. She was so proud of her ability to judge men based on appearances. She had complete confidence in her feelings and intuitions. In fact, she got some kind of crazy thrill out of making decisions based on her feelings. The freedom to choose without having any evidence was intoxicating to her. Logic? Evidence? Those things were restrictive and would take away her freedom to make herself happy. She married an atheist devotee of Ayn Rand, despite being Catholic herself. And naturally, they divorced. Trying to think through whether a person who extols the virtue of

selfishness can enter an institution like *marriage* is hard work. She decided to just make the decision based on appearances, feelings and intuitions. I'm sure that today she would tell me how untrustworthy, scary and evil all men are, too.

Feminists want to choose men based on how the man makes them feel, rather than by evaluating his suitability for commitment. This plan never works, and it makes these women very, very bitter. In fact, the same women who are believing Ford based on their feelings, without any evidence, are the ones choosing bad men based on their feelings, without any evidence that he is able to do the job of a husband and father. The problem is the same – making decisions with feelings instead of being bound by the evidence.

William Lane Craig debates Daniel Came: Does God exist?

October 2, 2018 | by Wintery Knight | Link | Original Link

Dr. Craig's opening speech summary slide

The video of the debate was posted by ReasonableFaith.org – Dr. Craig's organization. This debate occurred in March 2017 at the University of Dublin, in Ireland.

The video: (91 minutes)

My non-snarky summary is below.

Dr. Craig's opening speech

Two claims:

1. There are good reasons to think that theism is true.
2. There are not comparably good reasons to think that atheism is true.

Five reasons for God's existence:

1. The beginning of the universe
– actual infinite past is mathematically impossible
– BGV theorem: any universe that is on balance expanding in its history (like ours) cannot be past eternal

2. Fine-tuning of cosmic quantities and constants
– slight changes to quantities and constants prevent a universe from supporting complex embodied life
– the multiverse response of atheists conflicts with observations, e.g. the Boltzmann Brains problem

3. Objective moral values
– God's existence is required to ground objective moral values and duties

4. Minimal facts case for the resurrection of Jesus

– there are good reasons to accept the most widely accepted facts about the historical Jesus (empty tomb, appearances, early widespread belief in the resurrection)
– the best explanation of these minimal facts is that God raised Jesus from the dead

5. Experience God directly
– in the absence of any defeaters to belief in God, a person can experience God directly

Dr. Daniel Came's opening speech

1. The hiddenness of God
– if God wants a personal relationship with us, and a relationship with God would be the greatest good for us
– God ought to reveal himself to us, but he does not reveal himself to many people, the "non-resistant non-believers"

2. The inductive problem of evil
– many evil events occur that are pointless – there is no morally sufficient reason why God would allow them to occur
– examples: animal suffering, children born with disease, tsunamis
– the theistic response to this is that humans are not in a position to know whether there are morally sufficient reasons, due to our limitations of knowing the consequences
– but this ripple effect defense has 4 possible outcomes, 3 of which don't do the job of justifying

Dr. Craig's first rebuttal

1. The hiddenness of God
– God's goal is not to make his existence known, but to draw them into a love relationship
– it's speculative that overt displays of God's existence would draw people to him in a love relationship, they might resent his bullying
– atheist would have to prove that God could draw more people into a love relationship with him by revealing himself more overtly

2. The inductive problem of evil
– as humans, we are not in a position to know for certain that any apparently pointless evil really is pointless
– William Alston article: 6 limitations of human knowing make it impossible to judge that an evil is actually "pointless"
– Dr. Came says that there are 4 possibilities for the ripple effects, and since 3 are bad, it's likely that there are not morally sufficient reasons for a apparently pointless evil
– it is logically fallacious to assert probability conclusions without knowing the probabilities of those 4 options
– there is actually an argument from evil: since the problem of evil requires an objective standard of good and evil by which to measure, and God is the only possible ground of objective morality, then pressing the problem of evil actually requires the atheist to assume God, in order to ground this objective moral standard

Dr. Came's first rebuttal

3. Objective moral values

– there are naturalistic theories of moral realism where objective moral duties and objective moral values exist in a naturalistic universe
– I'm not saying that any of them are correct, but there are many theories about object morality in a naturalistic universe

There are naturalistic theories for all of the 5 arguments that Dr. Craig presented. It is Dr. Craig's responsibility to present those naturalistic theories and prove that they are not as good as his explanations. I'm not going to defend (or even name!) a single naturalistic theory for any of these 5 arguments by Dr. Craig.

Dr. Craig's explanations for the 5 evidences he gave can't be admitted, because we have to know how God did something *in naturalistic terms* before we can know that God did it supernaturally. Explanations are only valid if they are naturalistic.

1. The beginning of the universe
– naturalism explains how the universe expands after it came into being, so that explains how it came into being
– the God explanation, that God created the universe out of nothing, is not admissible, because it is not naturalistic
– how does God, as an unembodied mind interact with the physical world?
– the only agency that we know about is human agents, and we have bodies, so how could God perform actions without having a body?

The theistic hypothesis does not make any predictions, but naturalism makes lots of testable predictions. God could do anything, so he is not constrained and is therefore untestable. We can't infer God as an explanation in principle because we can't predict what is more probable if God exists than if he does not.

2. Fine-tuning of cosmic quantities and constants
– the university was not set up to make embodied intelligence plausible, because the vast majority of the universe is hostile to life
– there are models of the multiverse that escape the Boltzmann Brains problem that Dr. Craig raised

Dr. Craig's second rebuttal

Some of Dr. Craig's arguments are deductive (e.g. – the beginning of the universe, objective moral values), so that the conclusion follows from the premises if the premises are true. The resurrection passes the standard tests for historical explanations.

1. The beginning of the universe
– the whole point of the argument is that there is no naturalistic explanation for an ultimate beginning of the universe

2. Fine-tuning of cosmic quantities and constants
– the whole point of the argument is that there is no naturalistic explanation for a design of the universe to support life
– he has to prove that intelligences has to be attached to bodies
– human beings are non-physical minds united to physical bodies
– naturalistic attempts to explain mental operations fail

– the arguments *prove* that unembodied minds exist
– the vast expanse of the universe is required in order to form the galaxies, stars and heavy elements needed for complex life
– why expect that the entire universe should be small, or that life would be everywhere?
– a non-fine-tuned world is more likely in the multiverse, and in a multiverse, we are more likely to have a Boltzmann brain world than a world with complex, embodied life
– Dr. Came has not advanced any naturalistic explanation for the fine-tuning

3. Objective moral values
– non-theistic ethical theories cannot account for the ontological foundations of objective moral values and duties
– atheistic theories of moral realism simply assume objective moral values out of thin air
– it is especially hard to find any basis for objective moral duties in the absence of God

Dr. Came's second rebuttal

5. Religious experience
– Dr. Craig should not bring up religious experience in a debate where arguments and evidence are central
– people who have dreams, hallucinations and psychotic delusions could appeal to religious experience
– religious experience is by no means universal, and it is possible to doubt it

3. Objective moral values
– there are lots of atheists who hold to objective moral values
– Dr. Craig has to explain how God grounds objective moral values and duties
– Dr. Craig has to explain why atheist moral realist theories don't work to ground objective moral values and duties

1. The beginning of the universe
– Dr. Craig claims that something can't come from nothing, that's not an argument
– there are numerous models that don't require an absolute beginning of the universe
– Dr. Craig cites the BGV theorem, but Guth (one of the authors) says that only the inflation has a beginning, not the whole universe

Dr. Craig's conclusion

1. The beginning of the universe
– on theism, there is an efficient cause, but no material cause, for the origin of the universe
– on atheism, there is neither an efficient cause nor a material cause, for the origin of the universe: that's worse!
– if he thinks that there are models of the universe that don't require a beginning, then let him name a viable eternal model of the universe
– he never refuted the mathematical argues against an infinite past

2. Fine-tuning of cosmic quantities and constants
– nothing to refute

3. Objective moral values

– God is a better ground for morality than humans, because he is ultimate, and not contingent and arbitrary
– God is a being who is worthy of worship, and therefore command his creatures with moral duties

4. Minimal facts case for the resurrection of Jesus
– nothing to refute

5. Religious experience
– only justified because there are no defeaters to it

1. The hiddenness of God
– atheist has to show that if God's existence were more obvious, that it would result in more people being drawn to him

2. The inductive problem of evil
– Dr. Came's argument was logically fallacious, and makes errors in probability theory

Dr. Came's conclusion

Sometimes, people can't prove something, but lack of evidence is a justification for doubting it, e.g. – werewolves.

If none of Craig's arguments work, then it follows that it is not rational to believe that God exists, and it is rational to believe that God does not exist.

Atheists shouldn't have a burden of proof for what they know, only theists have a burden of proof for what they know.

My thoughts

One quick point. If life were common everywhere then atheists would infer that God wasn't involved in it. Period. "Life is everywhere, so it's common, why do we need a designer?" they'd say. I agree with Dr. Came about denouncing religious experience in a formal debate. I don't like when Dr. Craig brings this up, but I see why he does it – he's an evangelist, and that's a good thing, too. I just worry about how it looks to atheists, although it's good for sincere seekers. I'm not the one on the stage, though, Dr. Craig is.

I think the point about more overt revealing by God would annoy people and make them turn away. Think of how gay people respond to the suggestion that there is anything wrong with them, with rage, vandalism, threats, coercion, attempts to get you to lose your job and business, and using government as a weapon to fine and imprison you. It's really obvious to me that more God does not mean more *love* of God. For those who don't want God, the hiddenness is respect for their choice to put pleasure above the search for truth. (I mean the gay activists – I have great sympathy for people who struggle with same-sex unwanted attractions because they were impacted by a failed bond with their parent of the same sex as they are).

Whenever I meet people like Dr. Came, I always urge them to keep investigating and pursuing truth, because they will find it if they are sincerely seeking after God. Some atheists do sincerely seek God, but I don't know any who haven't found him. I'm not sure if that's because those atheists who claim to be non-resistant and rational are in fact

resistant and non-rational, or what the real reason is. If you believe the Bible, *all* unbelief is non-rational and resistant (see Romans 1). Regarding the werewolves, we don't have any good arguments for werewolves, we do have good arguments for God. Dr. Came didn't refute the arguments that Craig raised, nor did his own arguments for atheism work. And there are many, many more arguments (origin of life, Cambrian explosion, habitability-discoverability, molecular machines) that Craig did not raise, too.

Will Christine Ford be charged with perjury after her ex-boyfriend's sworn testimony?

October 3, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

Christine Ford's ex-boyfriend told the Senate Judiciary Committee *under oath* that he witnessed her coaching a friend on how to take a polygraph. So what? Well, Ford told the Senate Judiciary Committee that she "NEVER" (her words) coached anyone else about polygraphs. Looks like someone is going to be facing perjury charges all right, and not about farting or drinking beer!

First, The Federalist recalls how Ford answered questions about her polygraph at her Senate Judiciary Committee hearing:

> At last week's hearing, Ford was specifically asked by Rachel Mitchell, an experienced sex crimes prosecutor who was hired by the committee to question Ford and Kavanaugh, whether she had advised anyone on how to take a polygraph.
>
> "Have you ever had discussions with anyone, beside your attorneys, on how to take a polygraph?" Mitchell asked.
>
> "Never," Ford responded.
>
> "And I don't just mean countermeasures," Mitchell said, "but I mean just any sort of tips, or anything like that."
>
> "No," Ford said.

> "[H]ave you ever given tips or advice to somebody who was looking to take a polygraph test?" Mitchell continued.
>
> "Never," Ford replied again.

The Federalist article has the full statement.

The Wall Street Journal notes: (it's pay-walled)

> The statement was reviewed by The Wall Street Journal.
>
> Dr. Ford's lawyers didn't respond to a request for comment.
>
> The writer's name was redacted. In the letter to the committee, the writer said that he dated Dr. Ford from 1992 to 1998, found her to be "truthful" and said he had no ill will toward her.
>
> He wrote that she never told him she was a victim of sexual assault or mentioned Judge Kavanaugh's name.
>
> He said that while they were dating, Dr. Ford lived with a female friend. That person was interviewing for a federal job. The writer said he witnessed Dr. Ford help her friend prepare to take a lie-detector test.
>
> Because of her background in psychology, the writer said, Dr. Ford was able to help her friend understand "what to expect, and how polygraphs worked," putting her mind at ease about the forthcoming test.
>
> In his letter, Sen. Grassley wrote that Dr. Ford's testimony at the hearing "raises specific concerns about the reliability of her polygraph examination results. The Senate therefore needs this information."

National Review adds:

> The two dated for six years and Ford never expressed a fear of flying or closed spaces, traits she told the committee she struggles with, he said.
>
> The man also claims Ford lied about and then admitted to charging a credit card they used to share for about $600 of merchandise.

Personally, I don't believe her story, and now that we have evidence that she perjured herself, I'd like to see her face criminal charges and spend some time in prison.

And I'd like to see her lawyers investigated and disbarred, if they are found guilty. And I want them to explain who is paying their lawyer fees and for Ford's polygraph. If Ford or Ford's lawyers are linked to George Soros, then we can certainly do something about George Soros' influence in America.

And we can have an FBI investigation of Diane Feinstein's on-staff Chinese spy – and find out what he was doing working for her for 20 years. I'd like that investigation to last as long as the media took smearing Trump with Russia collusion nonsense.

But first, let's confirm Kavanaugh. This week. I want all the Democrat senators in red states to go on the record on where they stand on Kavanaugh. I want it done before the

mid-terms, so everyone in Indiana, Montana, West Virginia, North Dakota, and Missouri are very clear about who they should vote for in the mid-terms.

Note: at the time of writing (Tuesday night) this story had only been reported on National Review, The Federalist, the Washington Examiner, Fox News, the Daily Caller, and other right of center outlets. Not one far-left news media source, e.g. – CNN, MSNBC, ABC, NBC, CBS, NYT, WaPo, etc. had a thing to say about it. This failure to report happens ALL THE TIME (remember the Gosnell trial?) Remember that next time you are consuming fake news from the progressive mainstream news media. They lie.

What are the historical arguments for the empty tomb narrative?

October 4, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

I wanted to go over this article by William Lane Craig which includes a discussion of the empty tomb, along with the other minimal facts that support the resurrection.

The word resurrection means bodily resurrection

The concept of resurrection in use among the first converts to Christianity was a *Jewish* concept of resurrection. And that concept of resurrection is unequivocally in favor of a *bodily resurrection*. The body (soma) that went into the grave is the body (soma) that came out.

Craig explains what this means with respect to the fast start of Christian belief:

> For a first century Jew the idea that a man might be raised from the dead while his body remained in the tomb was simply a contradiction in terms. In the words of E. E. Ellis, "It is very unlikely that the earliest Palestinian Christians could conceive of any distinction between resurrection and physical, 'grave emptying' resurrection. To them an *anastasis* without an empty grave would have been about as meaningful as a square circle."

And:

> Even if the disciples had believed in the resurrection of Jesus, it is doubtful they would have generated any following. So long as the body was interred in the tomb, a Christian movement founded on belief in the resurrection of the dead man would have been an impossible folly.

It's significant that the belief in the resurrection started off in the city where the tomb

was located. Anyone, such as the Romans or Jewish high priests, who wanted to nip the movement in the bud could easily have produced the body to end it all. They did not do so, because they could not do so, although they had every reason to do so.

There are multiple early, eyewitness sources for the empty tomb

Paul's early creed from 1 Corinthians 15:3-7, dated to within 5 years of the crucifixion, implies the empty tomb.

Craig writes:

> In the formula cited by Paul the expression "he was raised" following the phrase "he was buried" implies the empty tomb. A first century Jew could not think otherwise. As E. L. Bode observes, the notion of the occurrence of a spiritual resurrection while the body remained in the tomb is a peculiarity of modern theology. For the Jews it was the remains of the man in the tomb which were raised; hence, they carefully preserved the bones of the dead in ossuaries until the eschatological resurrection. There can be no doubt that both Paul and the early Christian formula he cites pre-suppose the existence of the empty tomb.

The dating of the resurrection as having occurred "on the third day" implies the empty tomb. The date specified for the resurrection would have been the date that the tomb was discovered to be empty.

> The phrase "on the third day" probably points to the discovery of the empty tomb. Very briefly summarized, the point is that since no one actually witnessed the resurrection of Jesus, how did Christians come to date it "on the third day?" The most probable answer is that they did so because this was the day of the discovery of the empty tomb by Jesus' women followers. Hence, the resurrection itself came to be dated on that day. Thus, in the old Christian formula quoted by Paul we have extremely early evidence for the existence of Jesus' empty tomb.

A few quotes from atheist historians not from Dr. Craig's article: (thanks to Eric of Ratio Christi OSU)

> Michael Goulder (Atheist NT Prof. at Birmingham) "…it goes back at least to what Paul was taught when he was converted, a couple of years after the crucifixion." ["The Baseless Fabric of a Vision," in Gavin D'Costa, editor, Resurrection Reconsidered (Oxford, 1996), 48.]
>
> Gerd Lüdemann (Atheist Prof of NT at Göttingen): "…the elements in the tradition are to be dated to the first two years after the crucifixion of Jesus…not later than three years… the formation of the appearance traditions mentioned in I Cor.15.3-8 falls into the time between 30 and 33 CE." [The Resurrection of Jesus, trans. by Bowden (Fortress, 1994), 171-72.]
>
> Robert Funk (Non-Christian scholar, founder of the Jesus Seminar): "…The conviction that Jesus had risen from the dead had already taken root by the time Paul was converted about 33 C.E. On the assumption that Jesus died about 30

> C.E., the time for development was thus two or three years at most." [Roy W. Hoover, and the Jesus Seminar, The Acts of Jesus, 466.]

The early pre-Markan burial narrative mentions the empty tomb. This source pre-dates Mark, the earliest gospel. The source has been dated by some scholars to the 40s. For example, the atheist scholar James Crossley dates Mark some time in the 40s. (See the debate below)

> *The empty tomb story is part of the pre-Markan passion story and is therefore very old*. The empty tomb story was probably the end of Mark's passion source. As Mark is the earliest of our gospels, this source is therefore itself quite old. In fact the commentator R. Pesch contends that it is an incredibly early source. He produces two lines of evidence for this conclusion:
>
> (a) Paul's account of the Last Supper in 1 Cor. 11:23-5 presupposes the Markan account. Since Paul's own traditions are themselves very old, the Markan source must be yet older.
>
> (b) The pre-Markan passion story never refers to the high priest by name. It is as when I say "The President is hosting a dinner at the White House" and everyone knows whom I am speaking of because it is the man currently in office. Similarly the pre-Markan passion story refers to the "high priest" as if he were still in power. Since Caiaphas held office from AD 18-37, this means at the latest the pre-Markan source must come from within seven years after Jesus' death. This source thus goes back to within the first few years of the Jerusalem fellowship and is therefore an ancient and reliable source of historical information.

So we are dealing with very early sources for the empty tomb.

Lack of legendary embellishments

The empty tomb narrative in the gospels lacks legendary embellishments, unlike later 2nd century forgeries that originated outside of Jerusalem.

The eyewitness testimony of the women

This is the evidence that has been the most convincing to skeptics, and to me as well.

> *The tomb was probably discovered empty by women*. To understand this point one has to recall two facts about the role of women in Jewish society.
>
> (a) Woman occupied a low rung on the Jewish social ladder. This is evident in such rabbinic expressions as "Sooner let the words of the law be burnt than delivered to women" and "Happy is he whose children are male, but woe to him whose children are female."
>
> (b) The testimony of women was regarded as so worthless that they were not even permitted to serve as legal witnesses in a court of law. In light of these facts, how remarkable must it seem that it is women who are the discoverers of Jesus' empty tomb. Any later legend would certainly have made the male disciples to discover the empty tomb. The fact that women, whose testimony was

> worthless, rather than men, are the chief witnesses to the empty tomb is most plausibly accounted for by the fact that, like it or not, they were the discoverers of the empty tomb and the gospels accurately record this.

The earliest response from the Jewish high priests assumes the empty tomb

This report from Matthew 28 fulfills the criteria of enemy attestation, although Matthew is not the earliest source we have. Oh, well.

> In Matthew 28, we find the Christian attempt to refute the earliest Jewish polemic against the resurrection. That polemic asserted that the disciples stole away the body. The Christians responded to this by reciting the story of the guard at the tomb, and the polemic in turn charged that the guard fell asleep. Now the noteworthy feature of this whole dispute is not the historicity of the guards but rather the presupposition of both parties that the body was missing. The earliest Jewish response to the proclamation of the resurrection was an attempt to explain away the empty tomb. Thus, the evidence of the adversaries of the disciples provides evidence in support of the empty tomb.

Note how careful Craig is not to imply that the guard tradition is historical, because we can't prove the guard as a "minimal fact", since it doesn't pass the standard historical criteria.

See it used in a debate

You can see the arguments made and defended from criticism in this debate with the atheist scholar James Crossley.

This my favorite resurrection debate.

What are the historical arguments for the post-mortem appearances of Jesus?

October 5, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson are going to take a look at the data

Eric Chabot of Ratio Christi Ohio State University has a *great* post up about the post-mortem appearances of Jesus.

The post contains:

- a list of the post-mortem resurrection appearances
- quotations by skeptical historians about those appearances
- alternative naturalistic explanations of the appearances
- responses to those naturalistic explanations

Although there is a lot of research that went into the post, it's not very long to read. The majority of scholars accept the appearances, because they appear in *so many different sources* and because some of those sources are very early, especially Paul's statement of the early Christian creed in 1 Corinthians 15:3-7, which is from about 1-3 years after Jesus was executed by the Romans. Eric's post lists out some of the skeptical scholars who the appearances, and you can see how they allude to the historical criteria that they are using. (If you want to sort of double-check the details, I blogged about how historians investigate ancient sources before)

Let's take a look at some of the names you might recognize:

> **E.P. Sanders:**
>
> That Jesus' followers (and later Paul) had resurrection experiences is, in my

> judgment, a fact. What the reality was that gave rise to the experiences I do not know. “I do not regard deliberate fraud as a worthwhile explanation. Many of the people in these lists were to spend the rest of their lives proclaiming that they had seen the risen Lord, and several of them would die for their cause. Moreover, a calculated deception should have produced great unanimity. Instead, there seem to have been competitors: ‘I saw him first!’ ‘No! I did.’ Paul’s tradition that 500 people saw Jesus at the same time has led some people to suggest that Jesus’ followers suffered mass hysteria. But mass hysteria does not explain the other traditions.” “Finally we know that after his death his followers experienced what they described as the ‘resurrection’: the appearance of a living but transformed person who had actually died. They believed this, they lived it, and they died for it.”[1]
>
> **Bart Ehrman:**
>
> It is a historical fact that some of Jesus’ followers came to believe that he had been raised from the dead soon after his execution. We know some of these believers by name; one of them, the apostle Paul, claims quite plainly to have seen Jesus alive after his death. Thus, for the historian, Christianity begins after the death of Jesus, not with the resurrection itself, but with the belief in the resurrection.[2]
>
> **Ehrman also says:**
>
> We can say with complete certainty that some of his disciples at some later time insisted that . . . he soon appeared to them, convincing them that he had been raised from the dead.[3]
>
> **Ehrman also goes onto say:**
>
> Historians, of course, have no difficulty whatsoever speaking about the belief in Jesus’ resurrection, since this is a matter of public record.[4]
>
> Why, then, did some of the disciples claim to see Jesus alive after his crucifixion? I don’t doubt at all that some disciples claimed this. We don’t have any of their written testimony, but Paul, writing about twenty-five years later, indicates that this is what they claimed, and I don’t think he is making it up. And he knew are least a couple of them, whom he met just three years after the event (Galatians 1:18-19).[5]
>
> **Marcus Borg**
>
> The historical ground of Easter is very simple: the followers of Jesus, both then and now, continued to experience Jesus as a living reality after his death. In the early Christian community, these experiences included visions or apparitions of Jesus. [8]

The references to Paul are because of the early creed he records in 1 Corinthians 15:3-7, and his conversations with the other eyewitnesses in Galatians. Eric has another post where he goes over that early creed, and it is something that every Christian should know

about. It’s really kind of surprising that you never hear a sermon on that early creed in church, where they generally sort of assume that you believe everything in the Bible on faith. But skeptical historians don’t believe in the post-mortem appearances by faith – they believe it (in part) because of 1 Corinthians 15:3-7.

If you want to see a Christian scholar make the case for the resurrection appearances in a debate, then here is a post I wrote with the video, audio and summary of the William Lane Craig vs James Crossley debate on the resurrection.

How does the lynching of Brett Kavanaugh affect Christian men who want to have an influence?

October 6, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

Well, on Friday, I asked one of the atheist senior software engineers I work with how he felt about the Kavanaugh nomination. He told me three things. First, that they shouldn't give a job that lasts "40 years" to someone who got angry about being accused of being a gang rapist. Second, he had not followed the Kavanaugh news for a week. And third, that Trump was a horrible President, and hadn't don't *anything* right.

Here is a comprehensive summary of the Kavanaugh confirmation process from famous religious liberty defender David French.

Here's what's in it:

- the overall pattern of sensational accusations being made, then unraveling after investigations prove them false
- the left's insistence that Kavanaugh *disprove* the allegations, rather than the accusers having to *prove* them
- the left's claim that Kavanaugh's defense against the allegations shows that he doesn't have the temperament for SCOTUS
- the evidential problems with Christine Ford's accusation
- the evidential problems with Deborah Ramirez's accusation
- the evidential problems with Julie Swetnick's accusation
- the charge that Brett Kavanaugh committed perjury when talking about his drinking

and his high school yearbook

Let's focus on the most credible accusation from Christine Ford:

> It's an assault that verges on attempted rape. But the evidence simply doesn't support this claim. In fact, her claim is worse than just "uncorroborated," it's contradicted – sometimes even by her own testimony and her own evidence. And her behavior since bringing the claim raises further doubts about its veracity.
>
> Consider the following, undisputed facts about her testimony and the evidence she's provided. Not one of the witnesses that she's put forward have backed her version of events – not even her own friends. At best they've said they have no recollection of the party. Her friend, Leyland Keyser, went further, declaring through her attorney that "Simply put, Ms. Keyser does not know Mr. Kavanaugh and she has no recollection of ever being at a party or gathering where he was present, with, or without, Dr. Ford."
>
> Moreover, Dr. Ford herself has provided conflicting accounts of her age at the time of the attack and the number of attendees at the party. Even the evidence of the details of the attack isn't uniform. Her therapists' notes allegedly indicate that four boys were present, not just Kavanaugh and Judge. She claims these notes are erroneous, but contemporaneous notes of a conversation are almost always far more reliable than a years-later recollection of that same conversation.
>
> Dr. Ford's conduct since coming forward has also been disturbing. When making a serious claim against another person, it is the obligation of the accuser to come forward with evidence. Instead, she has withheld evidence – including her complete therapists' notes and the complete polygraph record. She has defied the Senate Judiciary Committee and refused to fully cooperate with its investigation. In a civil litigation context, the persistent refusal to hand over relevant evidence can lead to dismissal of a plaintiff's claim. In this context, it should at the very least lead to a negative inference about the contents of the withheld evidence.

The article did not cover the sworn statement of Ford's boyfriend, which directly contradicted her testimony under oath. This would open her up to charges of perjury, if pursued. And the article also didn't mention how many of her stories meant to delay the confirmation process were falsified after being investigated, e.g. – her fear of flying which kept her from testifying on time.

What the Kavanaugh lynching means for Christian men

I am concerned about what young Christian men will have learned from the false accusations against Kavanaugh. Is it worth it to be sober and chaste in order to do well in school, and get good jobs? Well, the message of the Kavanaugh fiasco is that everything you do can be undone with a few false accusations. If you rise too high, then the secular left can destroy your reputation, your career, get you fired, destroy your finances by

forcing you to defend yourself in court, etc. Good degrees and good jobs take a lot of hard work and self-sacrifice, especially in a time when progressives are receiving preferential treatment. Is it worth it to try?

Suppose a young Christian man were clever and avoided all alcohol and sex in high school and college, like I did. Suppose he did two STEM degrees in order to get into a male-dominated field like I did. I've worked in FT100 companies that aggressively promoted abortion and gay rights. I saw women who were outspoken proponents of same-sex marriage get promoted over conservatives with real STEM skills. Imagine I were going for a promotion in competition with a leftist woman. She could make up any story she wanted without any evidence in order to get me fired. This is what the Kavanaugh case clearly shows.

One final point. Is it worth it for a Christian conservative man to get married and have children in an environment like this? If a man is fired from his job on a false charge, it puts a serious strain on his marriage. I am watching what gay activists are doing to Christian business-owners right now. Death threats, vandalism, organizing protests, negative reviews… trying to make it impossible for Christians and conservatives to earn a living. Trying to make it so that their children starve. Christian men who want to have an influence aren't stupid. They count the cost of every decision before making it. A man who has a wife and kids is simply not as free to be who he really is and say what he really thinks as a man who is unmarried and who uses an alias.

A lot of Christians seem to like to say how great it is that they focus on "spiritual things" while ignoring politics. Well, when those Christians see secular leftists climbing into power and ruling over what Christians can say or do, I hope they will remember that all it takes for evil men to triumph is for good men to do nothing. Every time the secular left puts on a show of intimidation, more and more young Christians will get the message: you can't win, so don't try. The secular leftists are *fascists* – they will use power, threats of violence, and violence itself in order to neutralize the influence of those who make them feel ashamed of what they are doing.

Bible study: what does the Christian concept of "grace" mean?

October 7, 2018 | by Wintery Knight | Link | Original Link

A good shepherd rescuing a lost sheep, who had no hope

My friend Wessel sent me this sermon a few days ago because I was looking for a good sermon on grace. Some of my friends pitched in with sermons, but this one from a South African church was BY FAR the best. I've listened to it 3 times already. The speaker sounds exactly like one of best friends from university, Andrew, who is from South Africa.

I'm testing out a new file download service, so I hope this works… here is the MP3 file. (7 megabytes, 30 minutes) [FIXED!]

Let me know if you can't download that.

The text of the sermon is Genesis 48:1-20:

> 1 Some time later Joseph was told, "Your father is ill." So he took his two sons Manasseh and Ephraim along with him.
>
> 2 When Jacob was told, "Your son Joseph has come to you," Israel rallied his strength and sat up on the bed.
>
> 3 Jacob said to Joseph, "God Almighty appeared to me at Luz in the land of Canaan, and there he blessed me
>
> 4 and said to me, 'I am going to make you fruitful and increase your numbers. I will make you a community of peoples, and I will give this land as an everlasting possession to your descendants after you.'
>
> 5 "Now then, your two sons born to you in Egypt before I came to you here will be reckoned as mine; Ephraim and Manasseh will be mine, just as Reuben and

Simeon are mine.

[6] Any children born to you after them will be yours; in the territory they inherit they will be reckoned under the names of their brothers.

[7] As I was returning from Paddan, to my sorrow Rachel died in the land of Canaan while we were still on the way, a little distance from Ephrath. So I buried her there beside the road to Ephrath" (that is, Bethlehem).

[8] When Israel saw the sons of Joseph, he asked, "Who are these?"

[9] "They are the sons God has given me here," Joseph said to his father.

Then Israel said, "Bring them to me so I may bless them."

[10] Now Israel's eyes were failing because of old age, and he could hardly see. So Joseph brought his sons close to him, and his father kissed them and embraced them.

[11] Israel said to Joseph, "I never expected to see your face again, and now God has allowed me to see your children too."

[12] Then Joseph removed them from Israel's knees and bowed down with his face to the ground.

[13] And Joseph took both of them, Ephraim on his right toward Israel's left hand and Manasseh on his left toward Israel's right hand, and brought them close to him.

[14] But Israel reached out his right hand and put it on Ephraim's head, though he was the younger,and crossing his arms, he put his left hand on Manasseh's head, even though Manasseh was the firstborn.

[15] Then he blessed Joseph and said,

"May the God before whom my fathers
  Abraham and Isaac walked faithfully,
the God who has been my shepherd
  all my life to this day,

[16] the Angel who has delivered me from all harm
  —may he bless these boys.
May they be called by my name
  and the names of my fathers Abraham and Isaac,
and may they increase greatly
  on the earth."

[17] When Joseph saw his father placing his right hand on Ephraim's head he was displeased; so he took hold of his father's hand to move it from Ephraim's head to Manasseh's head.

[18] Joseph said to him, "No, my father, this one is the firstborn; put your right hand on his head."

[19] But his father refused and said, "I know, my son, I know. He too will become a

> people, and he too will become great. Nevertheless, his younger brother will be greater than he, and his descendants will become a group of nations."
>
> 20 He blessed them that day and said,
>
> "In your[c] name will Israel pronounce this blessing:
> 'May God make you like Ephraim and Manasseh.'"
>
> So he put Ephraim ahead of Manasseh.

So, in this story, God continues his tradition of choosing the lowly people in the world instead of the people who are seen as "better". God does this in many cases, because he has a big heart for people who are born in a bad position. Normally in the world, people always choose what they think is best for them. They choose the prettiest girl. They choose the most tallest man. Those who need a little extra help or care are passed over. God sometimes does the complete opposite of this. Instead of choosing the obvious "best person", he chooses a much lower person, and he lifts them up to do great things.

Consider 1 Corinthians 1:26-31:

> 26 Brothers and sisters, think of what you were when you were called.Not many of you were wise by human standards; not many were influential; not many were of noble birth.
>
> 27 But God chose the foolish things of the world to shame the wise; God chose the weak things of the world to shame the strong.
>
> 28 God chose the lowly things of this world and the despised things—and the things that are not—to nullify the things that are,
>
> 29 so that no one may boast before him.
>
> 30 It is because of him that you are in Christ Jesus, who has become for us wisdom from God—that is, our righteousness, holiness and redemption.
>
> 31 Therefore, as it is written: "Let the one who boasts boast in the Lord."

The speaker in the sermon explains the idea of grace by talking about sheep and shepherds. He explains that unlike clever homing pigeons, sheep are prone to wandering off and they aren't able to find their way home. Sometimes, they get lost, and sometimes they even wander into danger. A bad shepherd would just say that he only wanted to have the best sheep – the smartest ones or the richest ones or the best looking ones or the most popular ones. But a good shepherd is sorry for the sheep that needs the most help, and is the most lost, and in the most danger. God is like a good shepherd. God sends his Son to die to atone for the sins of the bad sheep in this world, even when they didn't deserve it. (John 3:16-17) That's grace. But he also arranges the world in a way that bad sheep have an opportunity to reach out and find him. (Acts 17:24-27) That's grace, too.

In my own life, I have often found myself being excluded or discounted by people, usually because of my skin color or because of my early childhood poverty or because I just struggle to understand what I'm expected to say and to do. But a funny thing often

happens. Right when I am feeling the worst about being excluded, God comes along and gives me something special to do, that makes me forget about being excluded. And that's been my experience of grace, ever since I was little and even to this day. The honor of being allowed to participate in God's plan makes me forget what it feels like to be excluded. The very best things I've achieved in my life are the times where God showed me someone who started out life in a terrible situation (usually because of the selfish decisions of their irresponsible parents) and then I participated in God's plan to lead them out of the mess they started out from.

I think one of the biggest reasons why some Christians stick with Christianity through thick and thin is that they have this experience of grace. This experience of grace means that no matter what, that sheep is going to loyal to that shepherd who chose him when he was at his lowest and most vulnerable. The first part of the choosing is obviously Jesus dying on the cross to atone for your rebellion. But after that, God carefully reveals himself to the sheep. And then there is the guidance that helps the sheep to avoid destroying himself with sin. If the sheep makes mistakes, the good shepherd has already laid down his life to pay for them. This is a lot of effort being put into this rescue operation. It's difficult for people who have never experienced grace to realize how real and life-transforming it is. For those who have not experienced it, I really recommend that you pray to God, in the name of Jesus, and ask him to give you grace.

There are still things in my life where God has decided that he is not going to fix it. And, strangely enough, that doesn't make me disloyal to him at all. Why not? Well, you have to read the Bible and understand that Jesus was not spared from suffering or death in his loyal obedience to God. He wasn't given everything he wanted to feel happy all the time. When you understand that this is the character of your shepherd, then it's much easier for you to put up with the things you lack, too.

Has increased education spending in schools improved student performance in test scores?

October 8, 2018 | by Wintery Knight | Link | Original Link

When I want a raise, I work harder, but lazy teachers quit working to hold signs

One of my friends has been having a debate with one of his former teachers about whether spending more money on government-run education improves tests scores. He tried posting some evidence, but she just dismissed that by claiming:

1. If we hadn't spent more money, then the student test scores would have gone down instead of staying the same.
2. Most of the money that government spends on education goes to vouchers and private schools, not public schools
3. Economists at prestigious think tanks like that Cato Institute, the Heritage Foundation, and the American Enterprise Institute cannot be trusted to accurately cite the Bureau of Labor Statistics and the National Center for Education Statistics because of the Koch Brothers
4. You can't compare the test scores of American students with the test scores of Asian students who outperform them, (for less government spending), because math is different in Asia compared to America

Let's look at some data and see if her arguments are correct.

Does more spending mean higher student performance?

National Review reported on data collected in the National Assessment of Educational Progress, which spans all 50 states.

Look:

> Comparing educational achievement with per-pupil spending among states also calls into question the value of increasing expenditures. While high-spending

> Massachusetts had the nation's highest proficiency scores on the National Assessment of Educational Progress, low-spending Idaho did very well, too. South Dakota ranks 42nd in per-pupil expenditures but eighth in math performance and ninth in reading. The District of Columbia, meanwhile, with the nation's highest per-pupil expenditures ($15,511 in 2007), scores dead last in achievement.

The student test scores are dead last, but National Review notes that "according to the National Center for Education Statistics, Washington, D.C. was spending an average of $27,460 per pupil in 2014, the most recent year for which data are available." They are spending the most per-pupil, but their test scores are dead last.

CBS News reported on another recent study confirming this:

> Decades of increased taxpayer spending per student in U.S. public schools has not improved student or school outcomes from that education, and a new study finds that throwing money at the system is simply not tied to academic improvements.
>
> The study from the CATO Institute shows that American student performance has remained poor, and has actually declined in mathematics and verbal skills, despite per-student spending tripling nationwide over the same 40-year period.
>
> "The takeaway from this study is that what we've done over the past 40 years hasn't worked," Andrew Coulson, director of the Center For Educational Freedom at the CATO Institute, told Watchdog.org. "The average performance change nationwide has declined 3 percent in mathematical and verbal skills. Moreover, there's been no relationship, effectively, between spending and academic outcomes."
>
> The study, "State Education Trends: Academic Performance and Spending over the Past 40 Years," analyzed how billions of increased taxpayer dollars, combined with the number of school employees nearly doubling since 1970, to produce stagnant or declining academic results.
>
> "The performance of 17-year-olds has been essentially stagnant across all subjects despite a near tripling of the inflation-adjusted cost of putting a child through the K-12 system," writes Coulson.

Where did the numbers come from? The Koch Brothers? No:

> Data from the U.S. Department of Education incorporating public school costs, number of employees, student enrollment and SAT scores was analyzed to explore the disparity between increased spending and decreasing or stagnant academic results.

Well, at least government-run monopoly schools outperform private private schools, right? No:

> […][P]rivate schools, where students excel over public school peers, …manage to

> operate at budgets about 34 percent lower than taxpayer-funded schools, US Finance Post reports.
>
> Public schools spend, on average, $11,000 per student, per year.
>
> Coulson noted an Arizona study he conducted which showed that the average per-pupil spending at private schools was only about 66 percent of the cost of public schools.

A more recent state-specific study from 2016 found that this is still the case.

This problem gets even worse when you look at test scores from other countries, where even less is spent on education.

As the Washington Post reported at the end of 2016:

> When it comes to math, U.S. high school students are falling further behind their international counterparts, according to results released Tuesday of an ongoing study that compares academic achievement in 73 countries. And the news is not much better in reading and science literacy, where U.S. high schoolers have not gained any ground and continue to trail students in a slew of developed countries around the globe.
>
> In the latest Program for International Student Assessment (PISA) measuring math literacy in 2015, U.S. students ranked 40th in the world. The U.S. average math score of 470 represents the second decline in the past two assessments — down from 482 in 2012 and 488 in 2009. The U.S. score in 2015 was 23 points lower than the average of all of the nations taking part in the survey.

More money is being spent, but the scores are DECREASING.

Now, why is it that increased government spending in the public school monopoly doesn't improve student performance? Well, one reason is that very little of the money makes it to the classroom.

Where does all the money go?

Let's look at four places where the money spent on the government-run public school monopoly ends up.

Administration

First, a lot of it gets paid to administrations who implement politically correct programs designed to turn the impressionable young people into little secular socialists.

Here's a helpful chart from the American Enterprise Institute:

Where does taxpayer money spent on the public school monopoly go?
I guess if a school wants to make things like Planned Parenthood sex education and LGBT indoctrination into priorities, then they would need more administrators.

Pensions

Second, education employees get enormous pensions, which are paid by taxpayers and negotiated by their unions. You would never see pensions this large in the private sector.

This is from the leftist Brookings Institute, from 2014:

> This figure shows we now spend nearly $1,100 per student on retirement benefits. The average public school student teacher ratio is 16 to 1. So we are spending about $17,000 per year per teacher in pension contributions.
>
> […]The National Council on Teacher Quality writes,
>
> In 2014 teacher pension systems had a total of a half trillion dollars in unfunded liabilities—a debt load that climbed more than $100 billion in just the last two years. Across the states, an average of 70 cents of every dollar contributed to state teacher pension systems goes toward paying off the ever-increasing pension debt, not to future teacher benefits (p. iii).
>
> While we are spending a huge amount to fund teacher pensions, most of that spending doesn't go to attracting the best teachers. It's paying off past debts.

We can't hire good teachers, because all the education spending of today is paying for the gold-plated pensions of yesterday.

That was 2014. The numbers are even worse today. Teachers contribute very, very little to their pensions, but the benefits are enormous compared to what the private sector taxpayers get in Social Security. (Which is going to be bankrupt by 2034, as reported by

the far-left PBS)

Teacher training

Third, a lot of it is spent on teacher training, because apparently teaching multiplication, Shakespeare or geography changes every year, so the teachers need tens of thousands of dollars in annual training.

The Washington Post reports on a recent study:

> A new study of 10,000 teachers found that professional development — the teacher workshops and training that cost taxpayers billions of dollars each year — is largely a waste.
>
> The study released Tuesday by TNTP, a nonprofit organization, found no evidence that any particular approach or amount of professional development consistently helps teachers improve in the classroom.
>
> […]The school districts that participated in the study spent an average of $18,000 per teacher annually on professional development. Based on that figure, TNTP estimates that the 50 largest school districts spend an estimated $8 billion on teacher development annually. That is far larger than previous estimates.
>
> And teachers spend a good deal of time in training, the study found. The 10,000 teachers surveyed were in training an average of 19 school days a year, or almost 10 percent of a typical school year, according to TNTP.

Maybe if more of the money spent on education were spent directly on hiring teachers, then we would see an improvement. Unfortunately, a lot of the money meant for teachers goes to the teacher unions. How do they spend that money?

Political Contributions

Finally, this is from OpenSecrets.org, concerning political contributions made in the most recent election cycle:

Rank	Organization	Total Contributions	To Dems & Liberals	To Repubs & Conserve	Pct to Dems & Liberals
1	Fahr LLC	$90,585,670	$90,585,670	$0	100.0%
2	Renaissance Technologies	$59,139,938	$33,414,305	$25,250,600	56.9%
3	Las Vegas Sands	$44,362,166	$51,435	$44,333,430	0.1%
4	Paloma Partners	$41,961,900	$41,958,600	$3,300	100.0%
5	Service Employees International Union	$39,389,570	$39,387,460	$2,100	100.0%
6	Adelson Drug Clinic	$38,847,300	$40,000	$38,830,000	0.1%
7	Newsweb Corp	$38,802,040	$38,796,640	$0	100.0%
8	NextGen Climate Action	$35,459,288	$35,459,288	$0	100.0%
9	American Federation of Teachers	$33,599,605	$33,589,580	$10,700	100.0%
10	Priorities USA/Priorities USA Action	$33,470,302	$33,470,302	$0	100.0%
11	National Education Assn	$29,774,140	$29,426,584	$347,306	98.8%
12	Laborers Union	$29,086,698	$28,386,961	$474,925	96.4%
13	Soros Fund Management	$28,708,898	$27,561,598	$679,700	97.6%

Top Political Contributors in 2016 election cycle

The two largest teacher unions came in at #9 and #11. Most of their donations go to Democrat Party. Democrats believe (against the evidence) that spending more money in the government-run public school monopoly will improve student performance on tests.

So, what's the solution?

The solution is that we abolish the federal Department of Education, which has done nothing to improve the quality of education for students. We need to push the education of children back down to the state and local levels. We need to empower parents to choose the schools that work best for their children by giving parents vouchers. We need to increase tax-free education savings accounts to help parents with school expenses. We should also give free college tuition to homeschooled students who are admitted to STEM programs at any college or university. We can take the money from the pensions of the union administrators, after we abolish ever single public sector teacher union in the country, and seize all their assets and pensions. If that's not enough money, then we can seize all the pensions of Department of Education employees – a just punishment for their failure to produce results while still taking taxpayer money.

Finally, we should allow people who already have private sector experience doing things like STEM to become teachers. Let's face it: the departments that grant Education degrees have the lowest entrance requirements, and produce the least competent adults. People with years of private sector work experience teach better than people with Education degrees. Let's open up teaching to people who have experience in the private sector doing software engineering, statistics, nursing, etc. and then we'll have qualified teachers.

Pro-abortion man assaults pro-life woman at peaceful demonstration

October 9, 2018 | by Wintery Knight | Link | Original Link

Huma Abedin (left), Harvery Weinstein (center), Hillary Clinton (right)

I'm getting a little annoyed at how pro-abortion men are widely perceived to be superior to pro-life men. These days, men without any moral boundaries are "better", because they don't tell women what's right or wrong. Well, here's the truth: if a man is willing to put recreational sex above the obligation to care for innocent human beings, then he's not a good man.

Here's the video of the assault:

And here's the story that goes with it, from Fox News.

Excerpt:

> Jordan Hunt has been identified as the culprit behind the attack after a video of him spin-kicking the woman went viral. He deleted his social media accounts after the backlash.
>
> In the video, he is seen approaching a group of pro-life activists and engaging them in a discussion about abortion before suddenly kicking an activist and ripping a Campaign Life ribbon off her jacket and fleeing the scene.
>
> […]Marie-Claire Bissonnette, the 27-year-old woman involved in the incident, is the youth coordinator with Campaign Life Coalition and has since spoken out about the ordeal.
>
> "He kicked me in the shoulder, my phone went flying," Bissonnette told the Toronto Sun. "I start shouting for someone to call police and before he runs away, he goes up to me and I had a ribbon on my jacket indicating the leader, he tore it off my chest."

> She said that the kick left her with minor pain and those who saw the incident "were in shock."
>
> […]"It's not the first time I've experienced physical aggression from people who disagree with our message," she told the newspaper. "I don't think it's acceptable to show any physical violence to anyone who disagrees with you. The perpetrator should know that."

In the last week, I've been seeing a lot of tweets from pro-abortion men who are very angry that their right to have recreational sex "without consequences" might be impacted by the new Supreme Court Justice, Brett Kavanaugh. Although they make a big deal about being "pro-woman", they are really thinking about their own ability to have sex without having to take responsibility for their actions.

Let's think through what a woman should be looking for in a man, by working backwards.

Getting old alone is difficult. So women should be thinking about how to keep a man committed to them after they lose start to lose their youth and beauty. The simplest way to not grow old alone is to invest early and often in a man who does what he promises to do even when it doesn't feel good. Pro-abortion men are not the kind of men who make commitments that require them to sacrifice their own interests. After all, if a man thinks that it is OK to kill an unborn child in order to maximize his own pleasure, then he can't be relied upon to put the woman's interests above his own selfishness.

A good man never tells a woman to put selfishness above moral obligations, either. A good man always builds a woman up, and doesn't think about what he can get from her first. Good men want to build women up so that it's safe to commit to them, and to have children with them. Good men know that women need to be encouraged and cared for so that they are able to do the right things. And that means telling women the truth, and telling women "no" if the woman wants to do something morally wrong or reckless. Telling a woman yes when she wants to do something morally wrong isn't loving her. It isn't setting her up to be the kind of woman a man can commit to, and build a life with.

Although pro-abortion men seem to be better to feminists today, because they don't tell women what's right and wrong, they are actually worse, in the long run. Such men are no good for self-sacrificial love. Women should choose to avoid them, no matter how good they make women feel "in the moment".

John Lennox and Paul Davies discuss aliens and the origin of life

October 10, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

An amazing debate about the origin of life and the cosmic fine-tuning between a Christian and a materialist agnostic. John Lennox is AWESOME in this debate, and he only talks for a tiny part of the debate. He's very gracious, and focused the discussion on the areas that we care about. Paul Davies is an EXCELLENT scientist and well aware of what Christians believe. This is a great debate, very easy to listen to. Justin, the moderator, does a great job controlling a fantastic discussion.

Details

What does it take for life to get going in our universe? Is there intelligence in the stars or right under our nose? Renowned astrophysicist Paul Davies chats to Oxford Professor of Mathematics John Lennox.

A popular science author, Davies is also the Chair of the SETI post detection task force. His latest book "The Eerie Silence" which marks SETI's 50th anniversary examines the likelihood of the universe producing life elsewhere.

John Lennox is a Christian Mathematician and philosopher. He is the author of "God's Undertaker: has science buried God?" and has debated Richard Dawkins on several occasions.

Davies' work on the fine tuning of the universe for life has been sympathetic to theism. In this programme Lennox challenges Davies to look to design not just in cosmology but in the cell. They also chat about what the discovery of ET would mean for Christian theology.

Summary

Justin:

- Is there meaning in the universe?

Paul:

- We have no evidence for or against intelligent life elsewhere in the universe
- The vastness of the universe makes me think there is life elsewhere
- Humans are capable of observing and understanding the universe
- It seems the universe has the ability to create observers to understand it
- If one species has this ability, then we should expect others to do it

John:

- The fact that we can observe the universe and do science has cosmic significance
- Our rare habitable planet and our ability to do science is suggestive of purpose
- So science itself points to an extra-terrestrial intelligence: GOD
- The complexity of life and consciousness itself points away from atheism
- Monotheism gave birth to science
- Human minds capable of doing science are not compatible with atheistic materialism

Justin:

- Why do you say that either we are the only life or there are many different kinds of life?

Paul:

- There are lots of factors that have to be met to have a site for simple life
- These are related to the fine-tuning of cosmic constants, e.g. gravitational force
- But there are also factors that have to be met for originating intelligent life
- Things like convergence, self-organization, etc.
- So the cosmic requirements and evolutionary requirements are different
- Darwinian evolution doesn’t solve the problem of the origin of life
- 50 years ago, skepticism about alien life existing anywhere was excessive
- Today, credulity about alien life exiting everywhere is excessive
- The naturalist is searching for a process that creates life easily

John:

- Paul agrees that there is no theory for a naturalistic origin of life
- This is fatal for the idea that life can emerge elsewhere in the universe
- We have not discovered any law that produces life without an intelligence

- Consider the method used by SETI used to detect an alien intelligence
- Why can't this method be applied to the origin of life on Earth?
- Why can't an intelligence created specified complexity (functional information)?
- Why can't an intelligence created epigenetics and protein folding?

Paul:

- Darwinian evolution can add new biological information after life begins

John:

- Darwinian evolution assumes a mutating replicating life form to act on

Paul:

- You can't generate specified complexity by using physical laws
- You can't generate specified complexity by chance
- At this point we are guessing as to how life might have formed

John:

- Why do we have to rule out an intelligent cause a priori
- If you can recognize an intelligence in outer space, why not in living systems?

Paul:

- I don't mind the word "intelligence", it's the word "signal"
- I oppose the idea that God or aliens manipulated physical stuff to create life
- It's an "ugly explanation and very unappealing both theologically and scientifically"
- I prefer the idea that the universe has processes to self-organize and create complexity
- When it comes to supernatural meddling by God, "I don't want that"
- If I were God, I would create the universe so that I would not have to intervene
- I think God would be more clever if he did not have to intervene
- My preferences about what is "clever" determines what scientific conclusions are allowed

John:

- Humans already have experience with their non-material minds to move atoms (matter)
- If God is a mind, then there is no reason why he cannot move atoms (matter)

Paul:

- My mind is physical, so are you saying that God is physical?
- If God intervenes in the universe, then what is he doing now?

John:

- There is a distinction between acts of creation and providential upholding the universe
- God is also speaking to people and drawing humans toward him
- God is spirit, not material

Paul:

- How can a non-physical entity cause effects on the physical world?

John:

- What science reveals that there is information needed for the origin of life
- Information requires an intelligence to create it, just as with human who write books
- That's not God of the gaps – it's an inference based on what we know today

Paul:

- We may be able to explain the origin of life later, using matter, law and chance
- What you're saying is that God tinkers with the genome
- If you say that God intervened once, then he intervenes all the time, everywhere!
- I don't want a God who tinkers in the genome
- if God could intervene in the universe that would remove its intelligibility

John:

- Look at the cover of this book – when I read words, I infer an intelligence
- There are bad gaps that the progress of science closes
- There are good gaps that science opens, showing the need for intelligence
- On the one hand, you say we have no theory of the origin of life
- On the other hand, you know that an intelligent designer wasn't involved
- If we don't know how life began, why do you rule God out a priori?

Paul:

- What scientists want to do is to explain the universe without involving God
- naturalists want to use science to discover only materialist explanations
- The purpose of SETI is to prove that there is other life in the universe
- This would then show that there is a naturalistic way of making life
- I agree that information in living systems is real hard to explain materialistically
- I believe in the power of emergence
- We might discover laws that prove that complexity can emerge without intelligence
- The discovery of alien life would help to show that no intelligence is needed to make life

Justin:

- What sort of cosmic fine-tuning is needed at the Big Bang for life to occur?

Paul:

- It’s true that the universe appears extremely fine-tuned for life to exist
- The typical answer from naturalists is that there is a multiverse
- But the multiverse “falls far short” of providing a good answer to the fine-tuning
- It’s irrational to appeal to massive numbers of unseen universes to explain fine-tuning
- The design and purpose seen in the universe may be due to God or it may be emergent

John:

- The fine-tuning is real and the multiverse is a desperate attempt to evade the creator
- Sir Martin Rees (an atheist) says he “prefers” the multiverse to a designer
- Scientists are not supposed to prefer anything except what is true

Justin:

- Would the discovery of aliens hurt Christianity, because of the belief in the uniqueness of humans?

Paul:

- Christians believe that Jesus came to save HUMANS specifically, not animals or aliens
- If we were to discover intelligent aliens, it would challenge traditional religions
- What will God do with alien races? Multiple incarnations? Or just preach the gospel to them?

John:

- We don’t know if the aliens exist, first of all – it’s speculative
- The Bible teaches that humans bear the image of God
- We just don’t know whether alien species are also made in God’s image

Democrat Phil Bredesen's staff say he is lying to Tennessee voters to appear moderate

October 11, 2018 | by Wintery Knight | Link | Original Link

Conservative Marsha Blackburn is running for Senate in Tennessee

I hope everyone knows about James O'Keefe, and the excellent undercover videos that he makes for his Project Veritas operation. One of the most important Senate races in the country is the race to fill an open seat in Tennessee. Regular readers know that I am a huge admirer of Marsha Blackburn – a pro-life conservative. She is running against a far-left progressive named Phil Bredesen.

Here is the latest from Project Veritas:

> Project Veritas Action Fund has released a second undercover video from campaigns during this 2018 election season. This report exposes Tennessee staffers from Phil Bredesen's U.S. Senate campaign revealing his willingness to court moderate voters through deceit. This was especially evidenced by Bredesen's recent statement suggesting he would, if he was already in the Senate, vote to confirm now Supreme Court Justice Brett Kavanaugh.
>
> […]Maria Amalla and Will Stewart, staffers in Bredesen's campaign, both say on hidden camera that if he were in the Senate, Bredesen would not actually have voted to confirm then-Judge Brett Kavanaugh. They explained that the statement Bredesen issued in support of Kavanaugh was a political ploy to gain the support of moderate voters in Tennessee.
>
> JOURNALIST: "Like he wouldn't really vote yes [for Kavanaugh,] would he?"
>
> AMALLA: "No, it's a political move… He thinks that like we're down like half a point right now. It's like really close and we're losing by a point or two. So he

> thinks that if like by saying this he's appealing to more moderate republicans and he'll get more of them to vote for us."
>
> ---
>
> JOURNALIST: "I was so confused because I just can't believe he would actually vote [for Kavanaugh.]"
>
> STEWART: "He wouldn't. But he's saying he would… Which I don't know if it makes it worse or better. No, it makes it better…"
>
> When asked to clarify that Bredesen is only saying he'd vote for Kavanaugh to "get the Republican vote," Amalla, a field organizer for Bredesen's campaign, affirmed, "Yes." Amalla reiterated, "[Bredesen] thought that like by coming out in support [of Justice Kavanaugh] that it would get more republicans on his side. He wasn't doing as well in the rural parts."

Here's the full video:

I have written about Marsha Blackburn 68 times since I started blogging in early 2009. She is one of my favorite conservatives. In all honesty, I would vote for her against pretty much anyone running against her. She is endorsed by the NRA , the Chamber of Commerce, and the pro-life Susan B. Anthony List.

Other Senate races: (current polls from Real Clear Politics)

TOP SENATE RACES	POLL AVERAGE
Florida Rick Scott (R)	Nelson (D) +2.4
Tennessee Marsha Blackburn (R)	Blackburn (R) +2.7
Indiana Mike Braun (R)	Donnelly (D) +2.5
Missouri Josh Hawley (R)	Hawley (R) +0.4
Montana Matt Rosendale (R)	Tester (D) +3.0
Arizona Martha McSally (R)	Sinema (D) +1.8
Nevada Dean Heller (R)	Rosen (D) +1.2
North Dakota Kevin Cramer (R)	Cramer (R) +8.7
Texas Ted Cruz (R)	Cruz (R) +6.0

Poll averages for critical Senate races

The Tennessee Senate race is one of the most important races, but there are other close ones. If you live in one of these states, make sure you get registered and get out to vote. If you can put up a yard sign (I have three of them, one for each Republican candidate) then you should do that. I also got bumper stickers from the campaign office, and bought magnet stickers to stick them on, so that I can switch them back and forth between my cars.

Look, I believe that if we can get another 2-3 more conservative senators into the Senate, then we might see judges even more conservative than Brett Kavanaugh. My favorite candidate is Raymond Kethledge, but I'd like Amy Barrett to replace Ruth Bader Ginsburg. We could get these two justices on the Supreme Court, but only if we take Senate elections seriously. Yard signs are good. Bumper stickers are good. Going door to door is good. Making calls to get out the vote is good. Do all you can if you're in one of these critical states.

The Gosnell movie opens today in 750 theaters, and I'm going to see it!

October 12, 2018 | by Wintery Knight | Link | Original Link

Empty benches at the Gosnell trial reserved for the mainstream news media

Since I'm going to see the Gosnell movie today, I thought I would read a few articles to remind me of the facts. The best article was by the film makers themselves, writing for the Daily Signal.

They say:

> In progressive Pennsylvania, here was a doctor, Kermit Gosnell, an African-American, he's in his early 70s now, who ran an abortion clinic for 30 years, where he routinely, and these are not my words, this is the grand jury's words, where he routinely delivered babies alive and then cut their necks with scissors.
>
> And he did this for 30 years. That's why in the eyes of the grand jury and also ABC's Terry Moran, he was described as America's biggest serial killer, which is the phrase we use in the film.
>
> There's so many details that are worth dwelling on in a way. He trained his untrained staff to do this while he wasn't there, and when I say untrained staff, these are people posing as nurses, who have a seventh-grade education and have a cocktail of alcoholism, mental health issues, and criminal difficulties. People who would not be … as the detective in the case, Jim Wood, said, "You wouldn't let them mow your lawn, let alone give people anesthesia."
>
> This is who gave anesthesia and, in fact, the best anesthesiologist in the

> premises was a 15-year-old. I'll just repeat that once more for anyone who didn't hear it. A 15-year-old, one-five, a teenager, who actually took her job very seriously and created a cheat sheet for herself so that she could try to remember, so she'd look at somebody and go, "A bit of pink, a bit of red," and she would do kind of a cocktail of the anesthesia drugs based on that.
>
> There are cats walking around in this clinic. The doctor, when he did turn up, which was late in the evening, would eat breakfast cereal in the same room where people were having these procedures. Plus, he cut the legs, the feet and legs in some cases, off some of these babies and kept them in jars like trophies.
>
> And two women dead.

Here's the trailer (2 minutes):

What's interesting about the story is how many people on the left covered for Gosnell, and how many more people on the left tried to censor the Gosnell movie. The Federalist had a good article about it. The (very left-wing) Pennsylvania government refused to do anything about Gosnell, the (very left-wing) Philadelphia authorities didn't want to do anything about Gosnell, the mainstream news media, e.g. – CNN, the Washington Post, NPR, etc. refused to cover the trial, Kickstarter banned the campaign to fund the Gosnell movie, and now far-left Facebook is censoring ads for the movie. And finally, after the movie was made, theaters didn't want to show it, because it was "too controversial". Nobody wanted to cover the trial, and nobody wants you to see the movie.

The screenplay was written by famous Hollywood screenwriter Andrew Klavan, and has some well known actors in the cast. The trial dialogue is taken directly from the court transcripts. It's opening in 750 theaters today. And it's rated PG-13, because they aren't showing any graphic images. The emphasis will be on the trial, the conflict will be between the police and those wanting to cover-up the crime, and the suspense will be over the jury's verdict.

I see one movie in the theaters every few years. The last one was "13 Hours" in 2016. But I'm going to go see this one, because I wrote about 25 posts about the story, and I want to see what went on at the trial.

Find a theater here.

What’s behind the epidemic of false rape accusations on campus?

October 13, 2018 | by Wintery Knight | Link | Original Link

College students puking in toilet

Heather McDonald is concerned about the feminist left’s effort to undermine the presumption of innocence for men accused of rape. She makes an argument in the prestigious City Journal that there is actually a reason why we should not believe women’s rape claims, especially in an age of feminism, until we have the evidence that proves that the man being accused is guilty.

First, she gives an example of the fake rape charge made by the Columbia University student Emma Sulkowicz. I’ll omit the history of consent before, during, and after the sex and go straight to the reason for the false accusation:

> It wasn’t until eight months after their August 2012 coupling that Sulkowicz filed a campus-rape charge, alleging that Nungesser had anally raped her while she struggled and told him to stop. She claims that she waited so long to file so as to avoid re-traumatizing herself. **Nungesser argues that she was simply chagrined that they had not become an exclusive couple.**

Reason magazine actually reported that she texted Nungesser to come over and “f*** me in the butt”. We have that text, and we know that this happened. So what happened? She had painful sex with a guy, and the relationship ended, and she wanted to shame him for breaking up with her after she gave him recreational sex. She felt she was entitled to a relationship after doing so much.

Here's another one where the consent was documented before during and after the act, and the woman made a false accusation after because she was disappointed that the sex did not result in a relationship:

> In September 2013, two freshmen at Occidental College in Southern California had sex after both had been on a 24-hour drinking binge.
>
> **Jane reported their coupling to campus authorities only after seeing that John was unaffected emotionally by it, whereas she, having lost her virginity, felt distracted and unable to concentrate.**

He was found guilty of rape and expelled.

In another case:

> **In another case, a female student was caught by her boyfriend while cheating on him with another male student.** She then filed a complaint of assault against that second male. The morning after their sexual encounter, they had exchanged texts. He wrote: "How do I compare with your boyfriend?" She responded to the boy she later accused of rape: "You were great."

Saying no to the hot guy would have deprived her of a pleasurable experience. The rape charge got her out of being sanctioned by her boyfriend and judged by her peers. She probably couldn't even understand why her boyfriend was angry, or why her friends thought less of her. After all, it's her right to pursue happiness, and nobody should judge her.

So, what's really happening? What's really happening is that women are consenting to sex, sometimes after having chosen to get drunk, then when they sober up and realize how it makes them look to others – their boyfriends, their peers, their family, their pastors – they use rape charges as an excuse to rehabilitate their reputation. Regret over consensual sex is driving the rape accusations.

MacDonald explains:

> Our booze-fueled hook-up culture has made relations between men and women messier than ever, leaving many girls and women with pangs of regret—but those regrets do not equal rape. If we were actually in the midst of an "epidemic of sexual assault," as New Jersey senator Cory Booker asserted the evening of the Ford-Kavanaugh hearings, we would presumably have seen women and girls take protective actions, such as avoiding frat parties and flocking to single-sex schools. None of those protective actions has occurred, however. Either women are too clueless to avoid patent danger, or the epidemic of sexual assault is a fiction. All evidence points to the latter conclusion.

I have some thoughts about this, too.

In my experience dealing with women on college campuses, they tend to want a relationship, but the only men they are attracted to are hot bad boys who refuse to

commit to them with marriage before having sex. So, the women give the hot non-committing bad boys the sex, thinking that the sex will be so good that it will lead to a relationship. The alcohol is used to provide an excuse later on, if the sex doesn't result in a relationship. And if it doesn't result in a relationship, they accuse the hot bad boy of rape in order to restore their reputation with their friends, ("I'm not a slut"), and punish the hot bad boy for not committing to them.

The more distrust there is between men and women, the fewer men and women will get married. What should we do? We should encourage women to stop drinking so much, to stop choosing men for fun and thrills, to stop having recreational sex, and to stop blaming their own poor choices on men.

UPDATE: Glenn found a great article at The Federalist which talks about women making poor choices, then blaming the bad men they freely chose:

> But in the Me Too era and under the burgeoning expectation of enthusiastic consent, the first questions asked are something like, "What kind of horrible man would do this?" and, "How can we make him pay for this crime yucky way he behaved toward women?" Any attempt to ask why a woman would invite a man into her bedroom late into the evening if she didn't want to have sex with him, accept the offer of a third date after she really didn't enjoy the first two, or continue a years-long sexual relationship even though sometimes the sex made her feel bad, are considered victim blaming. It is as though we are to believe that the woman involved has no agency, no free will, and no control over her own choices.

A lot of harmful and costly social outcomes happen when women choose bad men, and do bad things with those men. Abortion, divorce, single mother welfare, fatherlessness, and deterring good men from having relationships (because women are seen as crazy and irresponsible). We'd better start holding women accountable to make better decisions about men, and prioritize marriage over fun and thrills.

Robin Collins lectures on the fine-tuning argument at Pepperdine University

October 14, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science
Details:

> Dr. Robin Collins is a Professor of Philosophy and Chair of the Department of Philosophy at Messiah College. Collins is the foremost defender of what is known as the teleological argument for the existence of God. He has a background in both physics and philosophy and will be discussing how the specific physical constants and conditions in the universe are finely-tuned for intelligent life and how this "fine-tuning" gives us reason to believe in a Creator.

Here is the video:

Topics:

- the constants and quantities set at the origin of the universe is fine-tuned for conscious, embodied intelligences like us
- three kinds of fine-tuning: 1) laws of nature, 2) constants, 3) quantities
- examples of 1): gravity, electromagnetism, strong force, quantization, Pauli exclusion principle
- examples of 2): **gravitational constant**, **cosmological constant**,
- examples of 3): initial distribution of mass-energy
- in addition to fine-tuning for life, there is also fine-tuning for discoverability
- Naturalistic response to the evidence: the multiverse hypothesis
- problems with the multiverse hypothesis
- additional topics

I put the ones I am ready to speak on in bold. I recommend you learn those as well in order to illustrate the fine-tuning with evidence when you present it. It’s important to understand that if the constants and quantities change, it’s not that you still have life, but just with pointy ears and/or green skin. It’s that you don’t have stars or planets or heavy elements or chemical reactions. Things that are necessary for complex, intelligent life forms of any conceivable kind.

Does Google’s anti-conservative bias affect its products and services?

October 15, 2018 | by Wintery Knight | Link | Original Link

Google’s new motto

Recently, there were two news stories making their bias even more obvious. A leaked video showed Google executives lamenting Hillary Clinton’s, and a leaked briefing revealed how Google favors European-style censorship over free speech. In addition, one of their senior managers tweeted vicious vulgarities against the Republican party.

Let’s start with the leaked video, which was reported by the Epoch Times.

Excerpt:

> A confidential video recorded at Google has been leaked to the press, exposing top leadership openly bemoaning Hillary Clinton’s 2016 loss and discussing how President Donald Trump’s election “conflicts with many” of the company’s values.
>
> The full recording, originally marked as “Internal Only,” that was leaked to Breitbart by an anonymous source depicts the company’s first all-hands weekly meeting after the 2016 presidential election. The unabashed remarks from top leaders reflect a sunken and depressed mood—some are on the edge of tears over the election results—while at the same time express a desire to fight Trump’s policies and reshape public opinion.
>
> Co-founders Larry Page and Sergey Brin, vice presidents Kent Walker and Eileen Naughton, CFO Ruth Porat, and CEO Sundar Pichai all spoke at length during the hourlong meeting.
>
> Throughout the meeting, executives switched back and forth between emotional and combative discourse, as they discussed potential plans for using the company’s powerful resources.
>
> “I certainly find this election deeply offensive and I know many of you do too,” Google co-founder Sergey Brin said. “It conflicts with many of our

> [company's] values."
>
> Meanwhile, CFO Ruth Porat said they have an obligation to "fight for what's right and to never stop fighting for what's right."
>
> "Our values are strong," she said. "We will fight to protect them and we will use the great strength and resources and reach we have to continue to advance really important values."
>
> At one point, Porat appeared to hold back tears when recalling the moment she realized Hillary Clinton could lose.

Here's a clip of the highlights:

Alone, the video would be damning, but it just the latest in a sequence of news stories showing Google's anti-American bias.

Here's a story from last week, reported by Breitbart:

> An internal company briefing produced by Google and leaked exclusively to Breitbart News argues that due to a variety of factors, including the election of President Trump, the "American tradition" of free speech on the internet is no longer viable.
>
> […]But the 85-page briefing, titled "The Good Censor," admits that Google and other tech platforms now "control the majority of online conversations" and have undertaken a "shift towards censorship" in response to unwelcome political events around the world.
>
> Examples cited in the document include the 2016 election and the rise of Alternative for Deutschland (AfD) in Germany.

Does Google have a plan to influence elections by incorporating biased, inaccurate information in their products and services? Consider this article from the Daily Caller, which reports on internal e-mails from their marketing department:

> A newly revealed tranche of emails between Google executives reportedly details how the company supported rides for Hispanic voters in the 2016 election, which one executive characterized as being an effort to boost turnout for Democratic candidate Hillary Clinton.
>
> According to an email chain between Google executives obtained by Fox News' Tucker Carlson and Breitbart News, Google's Multicultural Marketing development head Eliana Murillo sent out an email the day after the 2016 election detailing that Google had "supported partners like Voto Latino to pay for rides to the polls in key states," which she characterized as a "silent donation."
>
> "We even helped them create ad campaigns to promote the rides (with support from HOLA folks who rallied and volunteered their time to help)," Murillo said. "We supported Voto Latino to help them land an interview with Sen. Meza of Arizona (key state for us) to talk about the election and how to use Google search

> to find information about how to vote. They were a strong partner, among many in this effort."
>
> "Ultimately, after all was said and done, the Latino community did come out to vote, and completely surprised us," Murillo wrote in the email. "We never anticipated that 29% of Latinos would vote for Trump. No one did. We saw headlines like this about early voter turn out and thought that this was finally the year that the 'sleeping giant' had awoken."
>
> Murillo noted that 71 percent of Latinos voted for Clinton and that "that wasn't enough." She said that despite efforts to remain "objective," that Trump's win was "devastating for our Democratic Latino community."

Google spent their own money in order to boost the turnout of a group that they thought would help Democrats get elected.

Here's Tucker Carlson reporting on the leaked e-mail:

Just last week, a manager at Google tweeted out hate speech against the Republican party:

> In a Twitter rant over the weekend, Google design lead Dave Hogue claimed Republicans will "descend into the flames" of hell, and described members of the GOP as "treasonous" and "evil" following the confirmation of Brett Kavanaugh to the Supreme Court.
>
> "You are finished, @GOP. You polished the final nail for your own coffins. F***. YOU. ALL. TO. HELL," posted Hogue. "I hope the last images burned into your slimy, evil, treasonous retinas are millions of women laughing and clapping and celebrating as your souls descend into the flames."

Note that the F-word was not censored, because this person has no self-control, or respect for people who disagree with his own biased viewpoints. Google likes him, though – they made him a manager. He apparently has the emotional stability to rise high at Google.

I think the case is pretty clear about Google's bias. It might be time for the federal government to step in and make sure that they aren't influencing elections with biased, inaccurate information delivered by their products and services.

Previously, I blogged about how Google allies with a leftist group linked to convicted domestic terrorist Floyd Corkins, and how Google seeks to discredit conservative sources in their search engine, and how Google fired a senior engineer for disagreeing with radical feminism, and how Google censored pro-life videos, and how Google censored conservative videos from Prager University, and how Google started a worldwide campaign to push for same-sex marriage.

Why are Western feminists silent about rapes committed outside the United States?

October 16, 2018 | by Wintery Knight | Link | Original Link

Yazidi sex slave survivor Nadia Murad is awarded the Nobel Prize

My personal opinion on rape (a violent sexual attack that results in genital penetration without consent) is that the attacker should be killed or castrated (if male). Is the left against rape? They don't seem to tell women how to minimize risk, and they don't seem be concerned about rapes committed by their interesectional allies. Take a look at this article from the Daily Signal.

Excerpt:

> As feminists were busy peddling their "War on Women" narrative in the U.S., Yazidi sex slave survivor Nadia Murad was honored with the Nobel Peace Prize for fighting a real War on Women in the Middle East.
>
> Nadia was honored for her efforts to end the use of sexual violence as a weapon of war, together with Dr. Denis Mukwege of the Democratic Republic of Congo, who has been a relentless healer and advocate for women.
>
> […]Nadia was abducted in northern Iraq in August 2014, when ISIS took over her village. Militants gave the Yazidi people—a Kurdish and Arabic-speaking religious minority—two choices: Convert to Islam or die. Refusing to give in, Nadia watched men get massacred and family members march to their graves.
>
> At just 21 years old, she was kidnapped alongside an estimated 3,000 other Yazidi women and girls, traded as sex slaves from one ISIS fighter to another. She

> was forced to pray, dress up, and apply makeup in preparation for her rape, which was often committed by gangs.

How much have we heard from the Western feminists about this, as opposed to Christine Ford's fairy tale?

> While any comparison between Nadia's story and the accusations leveled against newly minted Supreme Court Justice Brett Kavanaugh would be completely unfair, it is fair to wonder how news of uncorroborated allegations of gang rape brought by porn lawyer Michael Avenatti can overshadow a gang rape survivor-turned-women's advocate being honored with the most prestigious award in the world.
>
> For years, it seemed the world didn't care about Nadia's story and the thousands of others like it. It took two years for then-Secretary of State John Kerry to declare crimes against Yazidis, Christians, and Shiite Muslims genocide, and the United Nations as well.
>
> […]…the Obama administration did little to hold ISIS accountable for its crimes or to alleviate the suffering of survivors. The Trump administration is trying to right those wrongs by providing aid to the most vulnerable victims of ISIS genocide, but a lot of work remains to be done.

The author, Kelsey Harkness, wonders why American feminists get so involved with unsubstantiated charges, when there are real rapes going on *regularly* in other countries.

Let's face it: the only people who are in a position to stop the rapes going on in places like Iraq are the U.S. Armed Forces. It certainly isn't Code Pink. And how does the secular left treat the Armed Forces? They want to cut their funding, retreat them out of countries where women have no rights at all, and destroy their fighting ability by pushing liberal policies on them. If you're not in favor of the American Armed Forces being properly equipped and doing their jobs to keep our enemies in check, then you're not in favor of someone being there to protect Yazidi women from rape. Period. End of issue. Everyone who voted for Obama, and withdrawal from Iraq, voted to let ISIS rape Yazidi women.

What about Hillary Clinton?

What's amazing to me is how people on the secular left in America want everyone to believe that they are the party who cares the most about women. But as I've argued before, most men and women who support Democrats do so because want to have irresponsible recreational sex without consequences. That is their main issue. But then they turned around and (in 2016) voted for a woman who covered up credible accusations of sexual assault *and even rape* against her husband, in the 2016 presidential election.

Here's a story about Hillary Clinton from the Daily Wire:

> During a CBS "Sunday Morning" interview, correspondent Tony Dokoupil asked Hillary if her husband should have stepped down after his affair with Monica

> Lewinsky — and his blatant lie to the American people when he said “I did not have sexual relations with that woman.”
>
> “Absolutely not,” she said.
>
> “It wasn’t an abuse of power?” Dokoupil asked.
>
> “No. No.” Why, you ask? Hillary said the relationship was not an abuse of power because Lewinsky “was an adult.” At the time of the affair, Clinton was 49, Lewinsky was 22.
>
> Bill Clinton was also accused numerous times of sexual assault. In 1994, Paula Jones initiated a sexual harassment lawsuit against Clinton, claiming that he pulled out his penis and told her to “kiss it.” In 1998, Kathleen Willey alleged that Clinton groped her in a hallway in 1993. That same year, Juanita Broaddrick alleged that Clinton had raped her in the spring of 1978. Bill also carried on an affair with lounge singer Gennifer Flowers, and Arkansas State Troopers said they often procured women for the then-governor.

When I think about how secular leftists supported the biggest RAPE APOLOGIST in the history of our nation, it seems ridiculous to me that they would try to present themselves as caring about women. What they care about is recreational sex and abortion, and they’ll abandon real women who need real help if that gets them what they want.

What do Democrats think about North Korea?

Last point. Democrats love to lecture us all on how wonderful things are in atheist countries that have socialism. Well, North Korea’s official state religion is atheism, and they have full-blown communism- the government owns all the means of production. What is it like to be a woman there?

When was the last time you heard a Democrat criticize North Korea? How could they – North Korea is everything they aspire to. And the U.S. Constitution is everything they hate.

Lawrence Krauss debates “A Universe From Nothing” with an astrophysicist

October 17, 2018 | by Wintery Knight | Link | Original Link

Two horses fight it out, may the best horse win!

Dina sent me news of an exciting episode of Unbelievable, which features Lawrence Krauss, who debated William Lane Craig. Krauss’ book was also reviewed in the New York Times.

Details:

> Lawrence Krauss is a Cosmologist at Arizona State University who describes himself as an “anti-theist”. His latest book “A Universe From Nothing” has received both acclaim and criticism for its attempt to answer the question “Why is there something rather than nothing?” Debating the issue with Krauss is Rodney Holder, Course director at the Faraday Institute, Cambridge. An astrophysicist and priest by background. In a lively exchange they debate whether Krauss’ “nothing” is “nothing”, fine tuning and multiverses, scientific knowledge, miracles and the usefulness of theology and philosophy.

This debate is quite entertaining, and do not be intimidated if your don’t understand science. You can understand pretty easily who is arguing based on facts and who is speculating about unobservable, untestable entities. At one point, Krauss actually denies that there is any fine-tuning in the universe, so please see this link to refute that claim as well as this podcast which explains some examples of fine-tuning. Krauss gets a bit angry at the beginning, but calms down.

Quotation marks are for direct quotes, italics is for made-up snark. See below the summary for more posts that are related to this one.

Summary of the discussion: (picked up at 9:30 when they start talking about the

book)

Brierley:

- explain your theory of how the universe can come into being from nothing

Krauss:

- the nothing that preceded the universe is “no space, no time, no universe”
- theists say that God is responsible for creating the universe out of this nothing
- but the laws of nature can create the universe uncaused out of nothing

Holder:

- Krauss sometimes writes that the nothing is really a quantum vacuum, but that is not nothing
- He even acknowledges in his book that a quantum vacuum is not nothing
- He thinks that the nothing has properties, even though it has no being
- It has the property of being unstable
- It has the property of being acted on by quantum fields
- It has the property of being acted on by gravity

Krauss:

- But nothing can have the potential to do things inside it
- For example suppose you have an electron, *which is not nothing*
- If it jumps from one level to another, it emits light
- There was no potential for the light in the electron, but it was there as part of atomic structure

Holder:

- But in cases like that, there is something physical that has the potential

Krauss:

- Well, how did God makes the universe then if it had no potential?

Holder:

- God existed, and the potential for creating the universe in himself

Brierley:

- Consider the critical review of your book in the New York Times

Krauss:

- It was written by a philosopher, so I dismissed it

Brierley:

- Consider the critical review of your book in the Scientific American

Krauss:

- These book reviewers have not even read my book!

Krauss:

- Science will be able to figure out how to make something from nothing in the future
- We are even now speculating about interesting questions, like is there a multiverse?

Brierley:

- Consider the critical review of your book in the New York Times
- The author of the review claims that you equivocate on the term "nothing"
- In order to get things to pop into being, you have to make "nothing" mean "something"
- Reviewer: none of Krauss' theories explain how something can come from actual nothingness

Krauss:

- In physics, something and nothing are not that different
- The reviewer doesn't understand the physics
- He doesn't understand quantum field theory
- You could call a quantum vacuum "nothing", *(this is the vacuum fluctuation model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*
- Maybe there is an eternally existing multiverse that we can't observe or test scientifically
- Maybe it has laws that we don't know about which allow our universe to pop into being
- Maybe this popping into being is uncaused
- (alarmed) Who made God? Who made God?

Holder:

- God is eternal and necessary

Krauss:

- (interrupting, angry) What does it mean for something to be necessary?

Holder:

- Basically, you have to decide whether there is more evidence that the necessary being God or a multiverse

Brierley:

- So Dr. Krauss are you willing to say that the universe is a brute fact, in some sense, and requires no explanation

Krauss:

- (angry) Religious people are stupid because they just assume brute facts, *not like me and my unobservable, untestable multiverse*
- (angry) Religious people are against the progress of science, they don't want to figure out how things work

Brierley:

- But isn't it possible that naturalists can be opposed to the progress of science?
- What about the way the Fred Hoyle opposed the Big Bang because he wanted an eternal universe

Krauss:

- (angry) But naturalists like me let the facts determine our beliefs, *like the facts about the eternal unobservable, untestable multiverse*
- (angry, shouting) Philosophers are stupid, they know nothing!

=== Break ===

Brierley:

- Do you see any evidence of purpose in the universe?

Krauss:

- Well maybe I would believe if the stars lined up to spell out a message from God

Brierley:

- Actually no, that wouldn't be evidence for God on your multiverse view
- if there an infinite number of universes existing for an infinite amount of time, then anything can happen no matter how unlikely it is
- therefore, no evidence could convince you that God exists, since the unobservable, untestable, eternal multiverse can make anything it wants

Krauss:

- That's a true statement, *and very convenient for atheists who don't want to be*

accountable to God, don't you think?

Brierley:

- Back to the multiverse, how does it solve the fine-tuning?

Krauss:

- "We have no idea if the universe is fine-tuned for life", *even though the atheist Martin Rees who endorsed Krauss' book wrote his own book about the fine-tuning of the universe called "Just Six Numbers"*
- Inflationary theory does suggest a way to create multiple universes, *(this is the chaotic inflationary model, refuted by William Lane Craig in a peer-reviewed publication in an astrophysics journal – get the full text of the article here)*

Brierley:

- But this theory is still very much a hypothesis, isn't it? We can't observe *or test* this hypothesis can we?

Krauss:

- "No, and that is really important to state"
- "I'm an empiricist, so if you can't falsify it and if you can't test it then it's not science"
- In my book, I speculate about a way that we could test the multiverse theory

Holder:

- Yes, in principle, the multiverse would be scientific if you could test it through other theories like inflationary theory
- There are a lot of speculations about multiverse theory, but no evidence from predictions that were validated in the lab

Krauss:

- "I agree completely with everything you just said"

Brierley:

- Roger Penrose agrees with Holder that the multiverse theory is too speculative
- (To Holder) Isn't the multiverse theory better than positing a completely different kind of being, which is God?

Holder:

- The multiverse theory is extremely speculative
- Even if the multiverse were true, you would still need to explain the multiverse

Krauss:

- People don't oppose my book because it's full of self-contradictory speculations
- People oppose my book because they are stupid and ignorant

Holder:

- There are things that exist that science cannot measure, like objective morality
- It's possible to give explanations for moral behavior by appealing to evolution
- But that does not ground self-sacrificial morality, such as what occurs in the Christian life

Brierley:

- Dawkins says there is no purpose or morality in in the universe, do you agree?

Krauss:

- "There is certainly no evidence of any of that"

Brierley:

- In the book, you talk about how we live in a special time in the universe's history to be able to do science, *(i.e. – The Privileged Planet hypothesis)*
- You also write about how all the discoveries were are making will not be communicated to anyone in other places in the universe
- So what is the meaning of doing science on your view? And why are you sad at the knowledge that will not be available to people in the future?
- Are you longing for some kind of purpose?

Krauss:

- No, I just get enjoyment from studying the universe with science to gain understanding

Holder:

- What do you make of Einstein's statement about the unexpected comprehensibility of the universe
- Theists would say that this is because God wanted us to study and understand and gain knowledge

Krauss:

- "It is remarkable that the universe is comprehensible"

Brierley:

- Why is the universe comprehensible?

Krauss:

- Well, maybe the universe just has to be that way

Brierley:

- What do you make of the heat death of the universe, when all life in the universe will die out?

Krauss:

- That's the way the universe is

=== BREAK ===
Krauss:

- I wouldn't want to live in a universe where there was a God
- God is a cosmic Saddam Hussein
- "Religious people turn their minds off" and believe in God for consolation

Holder:

- First, Jesus is the revelation of God and he is no Saddam Hussein
- Second, the Christian life is anything but easy, we are facing some persecution already in the UK
- Third, there is also the problem of being accountable to God when we die
- It's very much like science – Christianity is the way it is, not the way we want it to be

Krauss:

- "If you don't believe in him, you don't get any of the benefits, so you have to believe"
- "And then if you've done something wrong, you're going to be judged for it"
- "So I don't want to be judged by God, I want to be… that's the bottom line"

Holder:

- Well, Jesus has died to pay the price for those things we've done wrong
- Although we will have to face the charges for what we've done, believers will ultimately be forgiven

Finally, Peter Sean Bradley note that Krauss is now walking back his rhetoric in response to criticisms from people like atheist John Horgan.

My conversation about morality with an atheist millennial man

October 18, 2018 | by Wintery Knight | Link | Original Link

A meme that was posted on the WK Facebook page, by the new meme admin

I spent some time talking to an atheist millennial recently. He considers himself a moral person, and he is very helpful to others. I asked him to define morality, and he said that morality was feeling good, and helping other people to feel good. I was trying to think of a way to punch a hole in his feelings-based utilitarianism. How could I show him that happy feelings are not a good basis for morality?

Now, you're probably thinking that abortion is the most obvious example of something that is morally wrong – it's just killing a baby because adults don't want to take responsibility for their foolish pursuit of pleasure. But atheists typically don't think of unborn children as people. They usually believe in naturalistic evolution, and they are committed to a view of reality where the universe is an accident, human beings are accidents, there are no objective human rights, and biological evolution progresses because the strong survive while the weak die. So you aren't going to be able to generate a moral standard that includes compassion for weak unborn children on that scenario. If the rule is "let's do what makes us happy", and the unborn child can't voice her opinion, then the selfish grown-ups win.

Instead, I decided to focus on fatherlessness. I asked him whether he thought that fatherlessness harmed children. Surprisingly, he said that it didn't, and that he had a relative who was doing a great job raising fatherless kids. I asked him if he had ever looked at the research on what father absence does to children. He hadn't. Then I asked

him if a system of sexual rules based on “me feeling good, and other people around me feeling good”, was likely to protect children. He went silent.

Well, that was the end of that conversation. And I think it was a nice window into how millennials – who are absolutely clueless about what research says about sex, dating, marriage and parenting – think about relationships. They’re making decisions based on their feelings, then acting surprised when their “common sense” decisions based on happiness “in the moment” blow up in their faces, and destroy the lives of their children, including their unborn children.

Unfortunately, young people are having children outside of a marriage commitment more and more.

Out-of-wedlocks births rising as cohabitation replaces marriage

Far-left Bloomberg News reports:

Forty percent of all births in the U.S. now occur outside of wedlock, up from 10 percent in 1970, according to an annual report released on Wednesday by the United Nations Population Fund (UNFPA), the largest international provider of sexual and reproductive health services. That number is even higher in the European Union.

The EU has a higher rate of fatherless births because they have high taxes and big government to allow women to have children without having to commit to a husband:

> The EU likely sees more births out of wedlock because many member countries have welfare systems that support gender-balanced child care, said Michael Hermann, UNFPA’s senior adviser on economics and demography, in an interview. Public health care systems, paid paternal leave, early education programs and tax incentives give unwed parents support beyond what a partner can provide.

More welfare and more government services make it easier for women to pursue relationships with men who aren’t interested in marriage. Hot bad boys who give them all the tingles. Big government makes those boring, predictable marriage-ready men dispensable. Big government also makes it much harder for a man who does marry to

afford a stay-at-home mother for his kids, because he has to pay higher taxes for big government.

More:

> The data show such births in the U.S. and EU are predominantly to unmarried couples living together rather than to single mothers, the report says.
>
> […]Jones also noted that the rise in births outside of marriage is closely correlated to delays in childbearing. "Women are claiming their ground professionally," she said. "Delaying motherhood is a rational decision when you consider the impact it can have on your career, and that's contributing to this trend."
>
> [….]The traditional progression of Western life "has been reversed," said John Santelli, a professor in population, family health and pediatrics at Columbia's Mailman School of Public Health. "Cohabiting partners are having children before getting married. That's a long-term trend across developing nations."
>
> Regardless of marital status, more couples are choosing not to have kids at all. The U.S. fertility rate hit a historic 30-year low last year, according to the Centers for Disease Control and Prevention. Hermann said the rise in births outside of wedlock has actually mitigated the decline in fertility, which "would be much steeper if women weren't having children outside marriage."

What's interesting about this anti-marriage article is that they have nothing to say about the research showing that cohabitation – and also marriages that occur after a period of cohabitation – are inferior to no-cohabitation marriages. People who are serious about self-control, and who are serious about committing through thick and thin, tend to have longer lasting marriages. But we don't prioritize chastity, fidelity and self-sacrificial commitment anymore, because that relationships that require self-denial make us unhappy.

The article concludes: "We can't go back to the '50s". Right. Because if feelings-based "morality" is assumed, then any choice between adult happiness and children's happiness will favor the adults. Today's young people carefully AVOID any evidence that contradicts their new "happiness-morality". They act surprised when their unstable relationships dissolve, leaving children separated from their fathers. Marriage requires that both partners have a system of morality that puts the commitment above happy feelings. People have to be accustomed to doing things that feel bad, just because they are good and moral things to do according to an objective standard of morality. The new atheist morality of happy feelings doesn't develop the character needed for commitment.

If you ask an atheist millennial, they think they are doing a great job of being "moral". They don't see the messes they are making for children as something that they are causing themselves, with their own foolish feelings-based decision-making. They think they know everything about relationships through their feelings. They think that they are exempt from the patterns of cause and effect in the peer-reviewed research.

Fact-checking the fact-checkers: is Politifact reliable or biased?

October 19, 2018 | by Wintery Knight | Link | Original Link

Politifact is a web site run by some left-wing journalists at the Tampa Bay Times. As you might expect from academic studies of media bias, their content might as well be written by the Democrat Party. But it's not enough to just declare Politifact a Democrat propaganda operation – I need to actually give you details and examples. And so I will, in the rest of this post.

Let's start with two recent examples, then I'll show you the worst example of media bias I have ever seen from Politifact.

Missouri Senate Race

Here's one analysis from the Daily Wire:

> On Tuesday, Politifact, which purports to be a neutral fact-checking website but in fact leans heavily to the left, got caught protecting a member of the Democratic Party: Democratic Missouri Sen. Claire McCaskill.
>
> Politifact took issue with the ad from The Senate Leadership Fund, a pro-Republican super PAC, that claimed that McCaskill said "normal people" could afford private planes.
>
> […]After they were corrected, Politifact acknowledged the mistake, writing,
>
> Initially, we published this fact-check with a rating of False, because based on the video available, it did not appear that McCaskill was talking about private planes. After publication, we received more complete video of the question-and-answer session between McCaskill and a constituent that showed she was in fact responding to a question about private planes, as well as a report describing the meeting. We re-assessed the evidence, archived the original version here, and published the version you see here with a new rating of Half True. We apologize for the error.

Daily wire also linked to some more failed Politifact "fact checks": here, here, and here.

Arizona Senate Race

Politifact also screwed up their fact-check for the Arizona Senate race.

The Daily Caller explains:

> PolitiFact incorrectly labeled it "mostly false" that Democratic Senate candidate Kyrsten Sinema "protested troops in a pink tutu" during its live fact-check of the Arizona Senate debate Monday night.
>
> It's an established fact that Sinema, a former Green Party activist who co-founded an anti-war group, wore a pink tutu at one of the multiple anti-war

> protests she attended in 2003.
>
> "While we were in harm's way, she was protesting our troops in a pink tutu," Republican candidate Martha McSally, a former Air Force fighter pilot, said during Monday night's debate.

Here's their Politifact's evaluation of McSally's claim:

Who are you going to believe? Politifact, or your own eyes?
And here's the photo of Kyrsten Sinema, protesting the troops, in a pink tutu:

Anti-war Democrat Senate candidate Kyrsten Sinema in a pink tutu
The Daily Caller notes:

> A 2003 Arizona State University news article at the time described Sinema

> wearing "something resembling a pink tutu" at one of the protests.
>
> […]Sinema openly associated with fringe elements of the far-left during her anti-war activism.
>
> She promoted an appearance by Lynne Stewart, a lawyer who was convicted of aiding an Islamic terrorist organization, in 2003.
>
> Sinema also reportedly partnered with anarchists and witches in her anti-war activism and said she did "not care" if Americans wanted to join the Taliban.

Colonel Martha McSally, as I've blogged about before, is a former U.S. Air Force A-10 fighter pilot, and squadron commander. She logged a lot of hours leading actual combat missions against America's enemies – the sorts of people who sell and rape Yazidi girls. She fought them.

And now for the big one: Politifact's fact-checking of Obamacare.

Obama's claims about Obamacare

Avik Roy, health care policy expert at Forbes magazine, wrote about Politifact's assessment of Obama's promise to Americans about keeping their health plans after Obamacare.

In 2008, before the presidential election, PolitiFact rated Obama's claims about Obamacare "True":

Roy writes: (links removed)

> On October 9, 2008, Angie Drobnic Holan of PolitiFact published an article using the site's "Truth-O-Meter" to evaluate this claim: "Under Barack Obama's health care proposal, 'if you've got a health care plan that you like, you can keep it.'"

And she concluded:

> […]…people who want to keep their current insurance should be able to do that under Obama's plan. His description of his plan is accurate, and we rate his statement True."

Roy notes:

> PolitiFact's pronouncements about Obamacare were widely repeated by pro-Obama reporters and pundits, and had a meaningful impact on the outcome of the election. Indeed, in 2009, PolitiFact won the Pulitzer Prize for its coverage of the 2008 campaign.

Here's the screen capture from 2008:

The Truth-O-Meter Says:

Under Barack Obama's health care proposal, "if you've got a health care plan that you like, you can keep it."

Barack Obama on Tuesday, October 7th, 2008 in a debate in Nashville, Tenn.

Obama's plan expands existing system

Barack Obama defended his health care plan during a debate in Nashville, Tenn., on Oct. 7, 2008. His opponents have attacked his plan as "government-run" health care.

Share this story:

Recommend 185

Tweet 380

"No. 1, let me just repeat, if you've got a health care plan that you like, you can keep it," Obama said. "All I'm going to do is help you to lower the premiums on it. You'll still have choice of doctor."

Obama is accurately describing his health care plan here. He advocates a program that seeks to build on the current system, rather than dismantling it and starting over.

Politifact says that everyone who likes their health care plan can keep it

Before the election, it's true! And Obama got re-elected, because people believed that. But what happened after the election?

In 2013, after the 2012 election, PolitiFact rated Obama's claims about Obamacare "Pants On Fire":

Roy writes: (links removed)

> On December 12, [2013] the self-appointed guardians of truth and justice at PolitiFact named President Obama's infamous promise—that "if you like your health care plan, you can keep it"—its 2013 "Lie of the Year."
>
> […][N]one of the key facts that made that promise "impossible" in 2008 had changed by 2013. The President's plan had always required major disruption of the health insurance market; the Obamacare bill contained the key elements of that plan; the Obamacare law did as well. The only thing that had changed was the actual first-hand accounts of millions of Americans who were losing their plans now that Obamacare was live.

And the screen capture from 2013:

The article:

Lie of the Year: 'If you like your health care plan, you can keep it'

By Angie Drobnic Holan

Published on Thursday, December 12th, 2013 at 4:44 p.m.

It was a catchy political pitch and a chance to calm nerves about his dramatic and complicated plan to bring historic change to America's health insurance system.

"If you like your health care plan, you can keep it," President Barack Obama said -- many times -- of his landmark new law.

But the promise was impossible to keep.

So this fall, as cancellation letters were going out to approximately 4 million Americans, the public realized Obama's breezy assurances were wrong.

Related rulings:

"What we said was, you can keep (your plan) if it hasn't changed since the law passed."

Barack Obama, Monday, November 4th, 2013.

Ruling: Pants on Fire! | Details

"FACT: Nothing in #Obamacare forces people out of their health plans."

Valerie Jarrett, Monday, October 28th, 2013.

Politifact said one thing before the election, and the opposite afterwards

So when Politifact rates a statement by a Democrat as true, what they really mean is that it's pants-on-fire-false, but it's election time so they don't say that. It's not like the critical assessments of Obamacare from health policy experts were not out there between 2007-2012. I know, because I blogged on every study and report on the predicted effects

of the law that I could find. But the intellectually lazy journalism-major clowns at Politifact couldn’t be bothered to read those studies and reports.

Video, audio and summary of William Lane Craig vs Peter Millican debate

October 20, 2018 | by Wintery Knight | Link | Original Link

British Spitfire and German Messerschmitt Me 109 locked in a dogfight

Here's a debate with a well-qualified atheist and Dr. Craig.

Video:

Audio:

Description from the Youtube upload:

> This debate on "Does God Exist?" took place in front of a capacity audience at the Great Hall, University of Birmingham. It was recorded on Friday 21st October 2011 as part of the UK Reasonable Faith Tour with William Lane Craig.
>
> William Lane Craig is Research Professor of Philosophy at Talbot School of Theology, La Mirada, California and a leading philosopher of religion. Peter Millican is Gilbert Ryle Professor of Philosophy at Hertford College, University of Oxford and a noted scholar in studies of Hume.
>
> The debate was hosted by the University of Birmingham Student Philosophy Society, and the debate was moderated by Professor Carl Chinn.

Dr. Millican proved to be an amazing debater, and that allowed Dr. Craig to show the full range of his talents in a way that he has never done before. This was a great debate – right up there with Craig's two debates against Austin Dacey and Paul Draper. Dr. Millican is excellent at analytical philosophy, had studied cosmology and physics, and he came prepared to answer Craig's arguments. There is NO SNARK in my debate summary below, out of respect for Dr. Millican. However, I haven't proof-read it, so please do point out any

errors. There is about 30 minutes of Q&A time at the end.

Dr. Craig's opening speech:

There are good reasons to believe that God exists.

There are no good reasons to believe that God does not exist.

A1) The origin of the universe

1. The universe began to exist
2. If the universe began to exist, then the universe has a transcendent cause.
3. The universe has a transcendent cause.

The origin of the universe is confirmed by philosophical arguments and scientific evidence.

There cannot be an actual infinite number of past events, because mathematical operations like subtraction and division cannot be applied to actual infinities.

The Borde-Guth-Vilenkin (BGV) proof shows that every universe that expands must have a space-time boundary in the past. That means that no expanding universe, no matter what the model, cannot be eternal into the past.

Even speculative alternative cosmologies do not escape the need for a beginning.

The cause of the universe must be transcendent and supernatural. It must be uncaused, because there cannot be an infinite regress of causes. It must be eternal, because it created time. It must be non-physical, because it created space. There are only two possibilities for such a cause. It could be an abstract object or an agent. Abstract objects cannot cause effects. Therefore, the cause is an agent.

A2) The fine-tuning of the universe

1. The fine-tuning of the universe is either due to law, chance or design.
2. It is not due to law or chance.
3. Therefore, it is due to design.

The progress of science has revealed that the Big Bang was fine-tuned to allow for the existence of intelligent life.

Type 1: Constants like the gravitational constant are finely-tuned, and are not dependent on the laws of physics.

Type 2: Quantities like the amount of entropy in the universe, are not dependent on the laws of physics.

The range of life-permitting values is incredibly small compared to the possible values of the constants and quantities. (Like having a lottery with a million black balls and one white ball, and you pick the white ball. Even though each individual ball has the same tiny chance of being picked, but the odds are overwhelming that the whichever ball you pick will be black, and not white).

Not only are the numbers not due to laws, but they are not due to chance either. It's not

just that the settings are unlikely, it's that they are unlikely and they conform to an independent pattern – namely, the ability to support complex life.

A3) The moral argument

1. If God does not exist, then objective moral values do not exist.
2. Objective morality does exist.
3. Therefore, God exists.

Objective moral values are values that exist independently of whether any humans believe them or not.

Michael Ruse, an atheist philosopher agrees that if God does not exist, then there is only a "herd morality" that is determined by biological evolution and social evolution. There no objective moral standard, just different customs and conventions that vary by time and place. Anyone who acts against the herd morality is merely being unfashionable and unconventional. On the atheistic view, there is nothing objective and binding about this evolved "herd morality". However, people do experience objective moral values, and these cannot be grounded on atheism.

Furthermore, God must exist in order to argue that there is evil in the world. In order to be able to make a distinction between good and evil that is objective, there has to be a God to determine a standard of good and evil that is binding regardless of the varying customs and conventions of different people groups. Even when a person argues against God's existence by pointing to the "evil" in the world, they must assume objective moral values, and a God who grounds those objective moral values.

A4) The resurrection of Jesus.

1. There are certain minimal facts that are admitted by the majority of historians, across the ideological spectrum: the empty tomb, the appearances and the early belief in the resurrection.
2. Naturalistic attempts to explain these minimal facts fail.
3. The best explanation of these facts is that Jesus rose from the dead.

A5) Religious experience

People can know that God exists through experience. In the absence of defeaters for these experiences, these experiences constitute evidence for God's existence.

Dr. Millican's opening speech:

Dr. Craig has the burden of proof because he claims that God exists.

The Christian God hypothesis:

1. An omnipotent, omniscient, omnibenevolent God created the universe.
2. This God cares about humans.
3. This God has acted in history though the life of Jesus of Nazareth.

This is a factual claim, and we are discussing the evidence for whether these claims are

true or false. We are not interested in religious practice, or the consolation of religious belief, nor any other religions.

A1) Religious pluralism and epistemology

Human beings are purpose-finding creatures – we are prone to prefer explanations that involve purpose.

Human beings are pattern-finding animals – we tend to find designs in states of affairs.

Human beings have an interest in maintaining religious hierarchies because of the power it gives them.

Religious beliefs are not determined by rational considerations, but are determined by geographic location.

The same non-scientific method of generating religious beliefs (purpose-finding, pattern-finding, geographic location, parental teaching, charismatic speakers, praise songs and worship, religious education, ancient holy books) is being used in several religions, and it leads to different, contradictory truth claims. So at least some of those conflicting claims are false. And if the method is generating some false claims, then it's not a good method, and it undermines all the religions that use those methods.

A2) Absence of evidence is evidence of absence

There is no scientific evidence for God.

A3) Mental processes depend on physical systems

There is no scientific evidence for a disembodied intelligence.

Our universal human experience is that intelligence and mental operations require a physical brain.

The quality of our thinking depends on physical conditions, like being tired or on drugs.

But Christian theists believe that mental processes can exist independently of an underlying physical reality, unimpaired by the death of the physical body and the brain.

R.A1) The origin of the universe

1. There is no evidence that whatever begins to exist requires a cause. All the evidence we have of things beginning to exist are when something is created from rearrangements of other things that already existed.

The closest analog we have to something coming into being from nothing is quantum particles coming into being from nothing, and that causation is random.

There is no evidence that thoughts can bring about physical effects, and Bill is arguing for a mental cause to the origin of the universe.

Even if things that begin to exist IN the universe have causes, it doesn't hold for the universe as a whole. Bill is committing the fallacy of composition.

Time begins with the universe, but our experience of causation is that it is a temporal process. So if there is no time "prior to" the universe's beginning, then how can there be a cause to the universe?

It’s possible that there could be something outside our universe that is eternal.

It’s also possible that the Big Bang could be wrong, and this universe could oscillate eternally and not require a beginning.

2. There are cosmological theories that avoid the beginning of the universe by positing a prior period of contraction prior to the Big Bang.

The beginning of this universe depends on general relativity, and that theory breaks down at the level of quantum mechanics.

3. There is no evidence that minds can exist without an underlying physical system. So even if there is a cause of the universe, then it is neither an abstract object nor a mind. It would have to be something else, and not something we are familiar with – we are just not in a position to speculate of what it could be.

R.A3) The moral argument

Atheists do believe in a standard of morality that is not based on what groups of humans believe.

Utilitarians think there is a standard of moral values that is objective, because the measure of human happiness (for the greatest number) is objective, even if people are mistaken about what promotes that happiness.

Kantians have a rational process for determining which moral imperatives should be universalized.

Humeans have a system that is rooted in natural human sentiment.

Dr. Craig’s first rebuttal:

I do not have the only burden of proof. The topic is “Does God Exist?”. If Dr. Millican answers “no” then he has a burden of proof, otherwise we are left with agnosticism.

R.A1) Religious pluralism and epistemology

First, there is no single common method of adopting a religion.

Second, MY method this evening is logic and evidence and personal experience – which is the same as his method. So his comments about how people in different religions adopt their religion through parents, church, singing, etc. have no bearing on the arguments I will be making.

R.A2) Absence of evidence is evidence of absence

Absence of evidence is only evidence of absence if we can reasonably expect that there should be some evidence that is not present. He would have to show that there should be more evidence for God’s existence that the 5 arguments that I already presented – something that we should expect to see that we don’t see.

R.A3) Mental processes depend on physical systems

No response by Dr. Craig. (but see below)

A1) The origin of the universe

1. He says that there are speculative cosmologies like the multiverse that escape the

need for a beginning, but that's false, the BGV proof applies to them, and they do need a beginning.

He says that you can escape BGV by positing a contraction prior to the expansion. However Vilenkin says that any contraction phase is unstable and would introduce additional singularities that would hamper any later expansion phase.

He says that we need a theory of quantum gravity in order to describe the early universe. But Vilenkin says that the BGV proof is independent of gravity as defined by general relativity.

He did not respond to the philosophical arguments for a beginning of the universe.

2. He says that we don't have experience of things coming into being except from material causes. However, it would be even more difficult to explain the universe coming into being on atheism since you can't appeal to a material cause nor to an efficient cause. Even Hume recognizes that things can't pop into being without causes.

He talks about how in quantum physics virtual particles appear out of nothing. But that's false, because the quantum vacuum in which virtual particles appear is not nothing, it is a sea of subatomic particles and energy. Quantum physics is not an exception to the idea that things that come into being require a cause.

He mentions the fallacy of composition. But I am not saying that everything in the universe has a cause, therefore the universe as a whole has a cause. I am saying that non-being has no capacity to bring something into being. Non-Being doesn't even have the potential to bring something into being.

3. He says that there are no unembodied minds, so the cause of the universe can't be an unembodied mind. But the argument concludes that there is a non-material cause, and it can't be an abstract object, so it would have to be a mind.

In addition, we ourselves are unembodied minds. This is because physical objects cannot have the properties that minds have, like the property of having feelings.

Material conceptions of mind don't explain identity over time.

Material conceptions of mind don't explain free will.

Material conceptions of mind don't explain intentional states (thinking about something).

Material conceptions of mind don't explain mental causation.

The best explanation for our own first person experience of the mental realm is a substance dualism. We are non-material minds, and we can cause effects in the physical world. And God does the same thing. He is a mind, and he causes physical effects.

A2) He gave no response.

A3) He says that there are atheistic theories of morality that don't depend on the opinions of groups. But these theories all depend on the idea that human beings have instrinsic value – that they are the sorts of things to which moral considerations apply. Naturalism cannot ground this moral value – human beings are no more valuable any other animal.

Also, there are no objective moral obligations in naturalist systems of morality, because there is no one in authority to command them. Moral prescriptions require moral prescribers.

A4) He gave no response.

A5) He gave no response.

Dr. Millican's first rebuttal:

R.A2) The fine-tuning argument

We have to be careful not to judge what counts as finely-tuned through our intuitions.

We have to be careful about reasoning for a sample size of this one observable universe.

We don't really know about the full range of possibilities for these constants and quantities.

There might be other universes that we can't observe that aren't fine-tuned, and we just happen to be in the one that is fine-tuned.

The fine-tuning might be solved by future discoveries, like the inflationary cosmology removed some of the fine-tuning.

There might be a multiverse that we don't have evidence for right now.

We need to be careful about using science to prove God because science might change in the future.

The universe is very big and mysterious.

This argument doesn't prove that God is good. He could be evil = anti-God.

God created the universe inefficiently if his goal was to produce life.

God created the universe too big.

God created the universe too old.

God created too many galaxies and stars that are not hospitable to life.

If the universe were fine-tuned for life, then there should be more aliens.

If the universe were fine-tuned for life, then there are probably lots of alien civilizations. But then Jesus would have to appear to all of the aliens too.

R.A1) The origin of the universe

2. It's not a big deal that you can get multiple solutions to equations involving subtraction of actual infinities. For example, the equation 0 x y = 0 has many solutions for y, but that doesn't mean that multiplication doesn't work in the real world.

A2) Absence of evidence is evidence of absence

I would expect that there would be more evidence than there is.

R.A1) The origin of the universe

2. The BVG proof might be overturned by future scientific discoveries. We have no reason to be confident in current physics.

I agree that the quantum vacuum is something and not nothing, but it's similar to

nothing.

We don’t have any reason to believe that things that come into being require causes – except for our universal experience that this is always the case.

3. As to the cause of the universe coming into being, you said that it could only be an abstract object or a mind, and it can’t be an abstract object because they don’t cause effects, so it must be a mind. But there are all sorts of things we’ve never thought of that it could be other than a mind.

I agree that mental properties are not physical properties and that epiphenomenalism is incorrect. Physical objects can have “algorithmic properties” as well as physical properties, it doesn’t mean that computers have minds.

Dr. Craig’s second rebuttal:

R.A2) Absence of evidence is evidence of absence

He expressed his personal opinion that there should be more evidence, but that’s not an argument.

God knows how people will respond to getting more evidence or less evidence and he has to be careful not to take away their free will to disbelieve by piling them up with coercive evidence. God’s goal is not just to convince people that he exists. God’s goal is to have people respond to him and pursue him.

A1) The origin of the universe

2. He said that multiple answers to equations are no problem. But the problem is that you can’t translate multiple answers into a real world context.

The problem is that you are subtracting an identical number from an identical number and getting contradictory results, and that cannot be translated into the real world, where subtraction always gives a definite single result.

He talks about how you can get multiple answers with multiplication by 0. But 0 is not a real quantity, it is just the absence of something, and that cannot translate into the real world, because it has no being.

He says that I am only using evidence from current physics. But that is the point – the evidence of current physics and cosmology supports the beginning of the universe.

3. He said that an umembodied mind can’t be the cause, but we are minds and we cause effects on our physical bodies.

In addition, the design argument supports the idea that the cause of the universe is intelligent.

A2) The fine-tuning of the universe

He says we should be cautious. Of course.

He says the probabilities can’t be assessed. But you can just take the current value and perturb it and see that the resulting universe loses its ability to support life, and you can test an entire range around the current value to see that that vast majority of values in the range don’t permit life.

He says that the current physics is not well-established, but there are so many examples of fine-tuning across so many different areas of science that it is not likely that all of them will be overturned, and the number of finely-tuned constants and quantities has been growing, not shrinking.

He says it doesn't prove that God is good, and he's right – that's what the moral argument is for.

He says that God isn't efficient enough, but efficiency is only important for those who have limited time and/or limited resources. But God has unlimited time and resources.

He says that the universe is too old, but the large age of the universe is a requirement to support intelligent life – (i.e. – you need third generation stars to provide a stable source of energy to planets, and those stars require that two generations of stars are born and die).

He said what about aliens, and theists are open to that, and God can certainly provide for the salvation of those beings, if they have fallen into sin.

Dr. Millican's second rebuttal:

R.A1) The origin of the universe

3. Just because epiphenominalism is false, it doesn't mean that substance dualism is true.

The majority of philosophers of mind do not accept substance dualism.

R.A3) The moral argument

The majority of philosophers are moral realists, but a minority of philosophers are theists. So that means that there must be some way of justifying morality on atheism, which I will not describe right now.

Atheists can express their opinion that humans have intrinsic moral value.

He grants that atheists can perceive moral values. But if atheists can perceive moral values, then why is God needed to enable that?

Atheists can express their opinion that humans are special. We can be rational, and that makes us special.

Atheists can express their opinion that it is good to care about other humans because they are of the same species.

R.A4) The resurrection of Jesus

We don't have any reasons to believe i the supernatural.

The gospels are written late for the purposes of evangelism.

The gospels are not independent, e.g. Matthew and Luke depend on Q.

John is the latest gospel, and the Christology of John is the highest of all.

The four gospels agree because the early church rejected other (unnamed) gospels that didn't agree.

Matthew 27 – the earthquake and the raised saints – is not recorded in any other contemporary non-Christian source.

Dr. Craig's final rebuttal:

A3) The moral argument

He says that human beings are rational, and that gives them value. But atheists like Sam Harris prefer the flourishing of sentient life. He includes non-rational animals as having moral value. So without God, we see that the choice of who or what has moral value is arbitrary. And where would objective moral duties come from if there is no moral lawgiver?

The fact that most atheists accept objective moral values doesn't mean that they can rationally ground those values on their atheistic worldview. You can't provide a basis for moral values on atheism by counting the number of atheists who accept objective morality. It's not surprising that atheists can perceive objective moral values IF they are living in auniverse created by God who grounds these objective moral values and duties that atheists perceive.

A4) The resurrection of Jesus

He cites Geza Vermes and Bart Ehrman as authorities on the historical Jesus, but both of them accept all three of the facts that I presented as minimal facts. Ehrman doesn't accept the resurrection of Jesus because he presupposes naturalism. He rejects the resurrection on philosophical grounds, not historical grounds.

Dr. Millican's final rebuttal:

R.A5) Religious experience

Religious experience is an unreliable way to test the claims of a religion, because lots of religions have them and they make contradictory truth claims. In the future, we may discover naturalistic ways of explaining religious experience.

R.A4) The resurrection of Jesus

Even if you can make a case for the resurrection based on these3 minimal facts, there are other stories in the New Testament like Matthew 27 that are quite weird and they undermine the 3 minimal facts that even Geza Vermes and Bart Ehrman accept.

R.A1) The origin of the universe

Bill hasn't shown that there is any reason for thinking that things don't come into being, uncaused, out of nothing.

A4) The problem of evil

Theists can't explain what God's specific morally sufficient reasons are for permitting the apparently gratuitous evil that we see.

Wayne Grudem explains what the Bible says about spending, saving and charity

October 21, 2018 | by Wintery Knight | Link | Original Link

Bible study that hits the spot

A practical lecture on money – spending, saving, charitable giving – from famous pastor Wayne Grudem.

I like the way that Wayne Grudem navigates the Bible finding the passages that tell you who God is, so that you can make better decisions by analyzing alternatives and choosing the one that gives your Boss a maximum return on investment. He's very practical.

The MP3 file is here.

The PDF outline is here.

Spending:

- Christianity does not teach asceticism (= don't enjoy anything in this world), Paul condemns it in 1 Timothy 4:1-5
- When you buy nice things, even if it is a little more expensive, it's an opportunity to be thankful for nice things that God has provided
- Even being rich is OK, but don't let it make you haughty and arrogant, and don't set your hopes on your money (see 1 Tim 6:17)
- It is important for you to earn money, and you are supposed to use it to support yourself and be independent
- It is possible to overspend and live recklessly (Luke 15:13) and it's also possible to overspend and live too luxuriously
- *Increasing your income through career progression is wise*, because it allows you to give away more and save more

- God gives us freedom to decide how much we spend, how much we give away, and how much we save
- every choice a Christian makes with money will give him or her more or less reward in his or her afterlife
- Do not spend more than you have – you should make every effort to get out of debt as quickly as possible

Saving:

- Saving money is wise so you can help yourself and others, and have money in your old age when you will not be working
- If you do not save your own money, you end up being dependent on others (e.g. – family or taxpayers)
- Not saving money for the future is a way of "putting God to the test" (Matt 4:7)
- You are to "be dependent on no one", to the extent that you can (1 Thes 4:12)
- We don't know the future, that's why we should prepare for an emergency, and buy insurance to guard (James 4:13-17)
- It's right for us to learn how to save to be able to buy bigger assets, like a car or a college education
- Saving and investing in stocks and bonds lets people in business start and grow companies, creating jobs and new products
- *Don't over-save, trusting too much in money more than you trust in God* (Ps 62.10; Matt 6:19,24; Luke 12:15-21)

Giving:

- it is required for the people of God to give something out of what they earn, but no percentage is specified (Deut 26:12-13)
- you do not give money to become right with God, you can't earn your salvation
- *a Christian gives to show God that you trust him to take care of you, and to experience trusting him through your giving*
- the quality of your resurrection life with God is affected by giving you do for the Kingdom (Phil 4, Matt 6:19-21; 1 Tim 6:18-19)
- when you get involved in the lives of others and give to them, you have the joy of experiencing caring for others (Acts 20:35)
- it's possible to give too little, but it's also possible to give too much – be careful about pride creeping in as well

The first part of this lecture made me think of my treat for the week, which is to get a double chicken burrito bowl after my weight lifting. It is very easy to say grace when you are hovering over a double chicken burrito bowl. It is good to have nice things especially when it makes you thankful for what you have.

I was so happy listening to this talk because he was condemning bad stewardship, which I see in a lot of young people these days. I was happy until he got to the part about

trusting in your savings for your security, and then I thought – that's what I do wrong! I save a lot but it's not just for emergencies and to share with others, like he was saying – I want a sense of security. This was more of a temptation in my 20s than it is now in my 30s, though.

Charity should hurt

I can remember being in my first full-time job as a newly hired junior programmer when the 2001 recession struck. I would cry while signing checks to support William Lane Craig's Reasonable Faith ministry, because I was so scared. I had no family or friends where I lived to help me if anything went wrong, and that's been the story of my working life. If anything goes wrong, there is no backup. But it's that experience of crying when I gave that allows me to say today "that's when I became the man I am, that's what a man does when he is a follower of Jesus". If you are not doing the actions of charity, then you will not having the experience of trusting God and letting him lead you. There is more to the Christian life than just saying the right things – you have to do the right things.

Don't follow your heart

If you're scared about giving when you are young, then do what I did in my 20s: work 70-hour weeks, get promoted often, and save everything you earn. I volunteered every Saturday for 9 months in order to get my first white-collar part-time job when I was still in high-school. The faster you increase your savings, the easier it's going to be to take a *genuine interest* in caring for the people around you. Read Phil 1 (fellowship), Phil 2 (concern for others), and Phil 4 (charity). Turn off your emotions and desires when it comes to choosing what to study and what work to do, and put Philippians into practice. Your freedom to give is very much tied to the quality of your decisions of what to study, where to work, how much you spend on entertainment, and so on. That's why you need to turn off your feelings and desires and do what works, even it it's not fun, and even if it involves responsibilities, expectations and obligations.

Indiana Senate candidate Joe Donelly on judges, amnesty, abortion, tax cuts, spending, welfare

October 22, 2018 | by Wintery Knight | Link | Original Link

Heritage Action Scorecard for Democrat Joe Donnelly Indiana

A lot of American voters tend to approach elections like they approach food, clothes and entertainment. They choose what they like "in the moment". But feelings about appearances is not the right way to measure a candidate. The right way to measure is by looking at the voting record. So let's do that with Democrat Senate candidate Joe Donnelly of Indiana.

Democrat Senate candidate Joe Donnelly of Indiana

The Heritage Foundation is a respected Washington think tank, and they've collected together all the votes of the candidates.

Here are some of the votes that I found the most interesting:

For restricting choice in health insurance:

> Disapproval of the Trump Administration's "Short-Term, Limited Duration Insurance" Rule10/10/2018The Senate voted on a Joint Resolution (S.J. Res. 63) providing for congressional disapproval of the rule issued by the Trump administration related to "Short-Term, Limited Duration Insurance." Sponsored by Sen. Tammy Baldwin (D-Wis.), S.J. Res. 63 would use the Congressional Review Act (CRA) to overturn a new Trump era rule that would expand the availability of affordable short-term, limited duration health plans to one year.

Against Supreme Court nominee Brett Kavanaugh:

> To confirm Brett Kavanaugh to the Supreme Court10/05/2018The Senate voted on the confirmation of D.C. Circuit Court Judge Brett Kavanaugh to the Supreme Court. Judge Kavanaugh was nominated by President Donald Trump on July 9th, 2018 and was included in The Heritage Foundation's original list of potential

> Supreme Court nominees.

For wasteful government spending:

> Bloated $855 Billion CROMNIBUS Spending Package09/18/2018Back in March, President Trump nearly vetoed a $1.3 trillion omnibus spending bill promising the American people that he “will never sign another bill like this again.” One of the President’s objections to the omnibus was its lack of conservative policy riders – particularly sufficient funding for border security – combined with increases in the Democrats’ spending priorities. Six months later Republicans and the President find themselves in a similar situation.

Against defunding Planned Parenthood:

> Paul Amendment to defund Planned Parenthood08/23/2018To prohibit Federal funds being made available to a Planned Parenthood and other abortion facilities.

For individual mandates in health care:

> Motion to table Cruz, Cotton, Lee, Johnson D.C. Individual Mandate Amendment to Senate Minibus08/01/2018The Senate will vote on an amendment offered by Sen. Ted Cruz (R-Texas) to Fiscal 2019 Interior-Environment, Financial Services, Agriculture, and Transportation-HUD Appropriations Act (H.R. 6147). The amendment would prohibit funding for the District of Columbia’s Health Insurance Requirement Amendment Act, essentially Obamacare’s individual mandate penalty applied to the district. Heritage Action supports the amendment and is opposed to the motion to table it.

For welfare entitlements without work requirement:

> 2018 Food Stamp and Farm Bill06/28/2018This month, the Senate could vote on the Agriculture Improvement Act of 2018 (S. 3042), more commonly known as the “farm bill.” Despite repeated calls to enact work requirements for food stamp recipients and to reform runaway farm subsidies, the Senate Agriculture Committee approved a farm bill that maintains dysfunctional and distortive status quo welfare and agricultural policies.

Against cuts in government spending:

> Rescissions Package to Cut Spending from Expired and Unnecessary Programs06/20/2018This week, the Senate will vote on the Trump administration’s rescissions request to cut spending by nearly $15 billion, titled the Spending Cuts to Expired and Unnecessary Programs Act (H.R. 3). Under current law, the Senate has until June 22nd to approve the House-passed bill under expedited rules.

For control of the Internet by left-wing IT corporations:

> Repeal of the FCC's "Restoring Internet Freedom" rule05/16/2018The Senate voted on a Joint Resolution (S.J. Res. 52) providing for congressional disapproval of the rule issued by the Federal Communications Commission (FCC) related to "Restoring Internet Freedom." Sponsored by Sen. Edward J. Markey (D-Mass.), S.J. Res. 52 would use the Congressional Review Act (CRA) to reestablish draconian net neutrality regulations imposed on broadband internet service providers under former President Obama's FCC. Those net neutrality rules were recently repealed by the FCC under the courageous leadership of Chairman Ajit V. Pai.

For amnesty for illegal immigrants:

> Cloture for Schumer-Rounds-Collins Amnesty Amendment02/15/2018The Schumer-Rounds-Collins amnesty proposal, revealed by the "Common Sense Coalition" drew fire from the Department of Homeland Security (DHS), which said the bill would "effectively make the United States a Sanctuary Nation." Entitled the "Immigration Security and Opportunity Act," this legislation provides amnesty and a path to citizenship to millions of illegal immigrants, fails to end chain migration and establish a merit-based immigration system for the 21st century, fails to secure the southern border, and undermines internal enforcement immigration policy.

Against tax cuts:

> Tax Cuts and Jobs Act Final Vote12/20/2017This week, the House and Senate will vote on the Tax Cuts and Jobs Act (H.R. 1), the most significant tax reform and tax cut legislative initiative since the 1986 tax reform package passed under President Ronald Reagan. The bill would make sweeping changes to the individual and corporate codes, and eliminate Obamacare's individual mandate penalty.

Against tax-deferred education savings plans:

> Expanding 529 Savings Plans12/01/2017The Senate could vote on an amendment (#1725) offered by Senator Ted Cruz (R-Texas) to the Tax Cuts and Jobs Act (H.R. 1) that expands higher education savings plans to include K-12 private school tuition and homeschool expenses. This amendment would help expand school choice by allowing families to use 529 account funds to help pay for private elementary and secondary education, including homeschooling.

Against repeal of government-run health care:

> Repeal Title I of Obamacare10/19/2017The Senate will vote on an amendment (#1430) offered by Senator Mike Lee (R-Utah) to H. Con. Res. 71 that would repeal Title I of Obamacare. This amendment expands the budget resolution's existing deficit neutral reserve fund for legislation that repeals Obamacare to specifically include the repeal of Title I of Obamacare.

Against de-funding of Planned Parenthood:

> Disapproval of Title X Funds for Planned Parenthood03/30/2017This week the House of Representatives is expected to vote on H.J.Res. 43, sponsored by Rep. Diane Black (R-TN), a disapproval resolution of the final rule submitted by Obama's Secretary of Health and Human Services (HHS) relating to compliance with Title X requirements by project recipients in selecting sub-recipients. Title X of the Public Health Service Act provides federal funds to states for family planning grants. Once states receive the funds, they have the ability to prioritize sub-recipients, directing funds to organizations like community health centers and family health clinics. While federal law prohibits government funding for abortion, it does allows certain public dollars, like the Title X grants, to support abortion providers if the funds are directed to non-abortion related health services. Under this exception, Planned Parenthood has been eligible to receive Title X funds, per the states' discretion.

If you live in this state, please consider sharing this article to let everyone know how this candidate has voted in the past.

If you would like to read something about his Republican rival, this article from National Review covers that.

Montana Senate candidate Jon Tester on judges, amnesty, abortion, tax cuts, spending, welfare

October 22, 2018 | by Wintery Knight | Link | Original Link

Heritage Action Scorecard for Democrat Jon Tester Montana

A lot of American voters tend to approach elections like they approach food, clothes and entertainment. They choose what they like "in the moment". But feelings about appearances is not the right way to measure a candidate. The right way to measure is by looking at the voting record. So let's do that with Democrat Senate candidate Jon Tester of Montana.

Democrat Senate candidate Jon Tester of Montana

The Heritage Foundation is a respected Washington think tank, and they've collected together all the votes of the candidates.

Here are some of the votes that I found the most interesting:

For restricting choice in health insurance:

> Disapproval of the Trump Administration's "Short-Term, Limited Duration Insurance" Rule10/10/2018The Senate voted on a Joint Resolution (S.J. > Cloture for Schumer-Rounds-Collins Amnesty Amendment02/15/2018The Schumer-Rounds-Collins amnesty proposal, revealed by the "Common Sense Coalition" drew fire from the Department of Homeland Security (DHS), which said the bill would "effectively make the United States a Sanctuary Nation." Entitled the "Immigration Security and Opportunity Act," this legislation provides amnesty and a path to citizenship to millions of illegal immigrants, fails to end chain migration and establish a merit-based immigration system for the 21st century, fails to secure the southern border, and undermines internal enforcement immigration policy.

Against Pain-Capable Unborn Child Act:

> Cloture on Pain-Capable Unborn Child Act01/29/2018
>
> Next week, the Senate will vote on the Pain-Capable Unborn Child Protection Act (S. 2311), introduced by Sen. Lindsey Graham (R-S.C.). This legislation would protect unborn children by preventing abortions 20 weeks after fertilization, at which time scientific evidence suggests the unborn child can feel pain. The House passed a similar bill last fall by a vote of 237 to 189.

Against tax cuts:

> > Tax Cuts and Jobs Act Final Vote12/20/2017This week, the House and Senate will vote on the Tax Cuts and Jobs Act (H.R. 1), the most significant tax reform and tax cut legislative initiative since the 1986 tax reform package passed under President Ronald Reagan. The bill would make sweeping changes to the individual and corporate codes, and eliminate Obamacare's individual mandate penalty.

Against tax-deferred education savings plans:

> > > > Expanding 529 Savings Plans12/01/2017The Senate could vote on an amendment (#1725) offered by Senator Ted Cruz (R-Texas) to the Tax Cuts and Jobs Act (H.R. 1) that expands higher education savings plans to include K-12 private school tuition and homeschool expenses. This amendment would help expand school choice by allowing families to use 529 account funds to help pay for private elementary and secondary education, including homeschooling.

Against repeal of government-run health care:

> > > > > Repeal Title I of Obamacare10/19/2017The Senate will vote on an amendment (#1430) offered by Senator Mike Lee (R-Utah) to H. Con. Res. 71 that would repeal Title I of Obamacare. This amendment expands the budget resolution's existing deficit neutral reserve fund for legislation that repeals Obamacare to specifically include the repeal of Title I of Obamacare.

Against Supreme Court nominee Neil Gorsuch:

> Nomination of Neil Gorsuch to Supreme Court04/07/2017
>
> Later this week, the Senate is expected to vote on the confirmation of Tenth

> Circuit Court of Appeals Judge Neil Gorsuch to the Supreme Court. Judge Gorsuch was nominated by President Donald Trump on January 31, 2017.

Against de-funding of Planned Parenthood:

> > > > Disapproval of Title X Funds for Planned Parenthood03/30/2017This week the House of Representatives is expected to vote on H.J.Res. 43, sponsored by Rep. Diane Black (R-TN), a disapproval resolution of the final rule submitted by Obama's Secretary of Health and Human Services (HHS) relating to compliance with Title X requirements by project recipients in selecting sub-recipients. Under this exception, Planned Parenthood has been eligible to receive Title X funds, per the states' discretion.

If you live in this state, please consider sharing this article to let everyone know how this candidate has voted in the past.

If you would like to read something about his Republican rival, this article from Great Falls Tribune covers that.

Does God’s omniscience conflict with human free will?

October 23, 2018 | by Wintery Knight | Link | Original Link

I have a key that will unlock a puzzling mystery

Here’s the setup for the question, from Come Reason Ministries.

Excerpt:

> Hello,
>
> Christian doctrine holds that God is all knowing (1 John 3:20), and humans have free will (Deuteronomy 30:19 is my favorite example). however, at my favorite apologetics debate board, I have seen skeptics raise an objection to these points several times. the basic logic behind their arguments is this:
>
> 1. A being with free will, given two options A and B, can freely choose between A and B.
> 2. God is omniscient (all-knowing).
> 3. God knows I will choose A.
> 4. God cannot be wrong, since an omniscient being cannot have false knowledge.
> 5. From 3 and 4, I will choose A and cannot choose B.
> 6. From 1 and 5, omniscience and free will cannot co-exist.
>
> I have read many counter-arguments from apologetics sites, but they were either too technical (I couldn’t understand them), or not satisfying. so, I was wondering what would your input be on this issue?
>
> Thank you,
>
> Justin

Ever heard that one? I actually had that one posed to me by a guy I used to work with who had a Ph.D in computer science from Northwestern. So this is an objection you may actually hear.

Here's Lenny Eposito's answer:

> Hi Justin,
>
> Thanks for writing. This is a great question as it shows how even those who appeal to logic can have biases that blind them. Let's examine this argument and see if it follows logically.
>
> Premises 1 and 2 in your outline above are the main premises to the argument and are not disputed. The Christian worldview argues that every human being is a free moral agent and is capable of making choices simply by exercising their will, not under compulsion or because of instinct. Also, it is a long held doctrine of Christianity that God is all-knowing. The Bible says that God knows "the end from the beginning (Isaiah 46:10)." For omniscience to be truly knowledgeable it must be correct knowledge, so premise number 4 is also granted.
>
> However, point number 5 is where the logic falters. Those who argue in this manner make the mistake of thinking that because God possesses knowledge about a specific matter, then he has influenced it. That does not follow at all. Just because God can foresee which choice you will make, it does not mean you couldn't still freely choose the other option.
>
> Let me give you an example. I have a five year old son. If I were to leave a chocolate chip cookie on the table about a hour before dinner time and my son was to walk by and see it, I know that he would pick up the cookie and eat it. I did not force him to make that decision. In fact, I don't even have to be in the room at all. I think I know my son well enough, though, to tell you that if I come back into the kitchen the cookie will be gone. His act was made completely free of my influence, but I knew what his actions would be.
>
> In examining the argument, the assumption is made in premise 3 that because God knows I will choose A somehow denies me the choice of B. That is the premise that Christianity rejects. Omniscience and free will are not incompatible and it is a non-sequitor to claim otherwise.
>
> Thank you Justin for this interesting question. I pray that you will continue to defend the gospel of our Lord and may He continue to bless you as you seek to grow in Him.

That's a great answer and should work in ordinary conversations.

More technical

J.W. Wartick maps out the arguments more fully with symbolic logic here on his Always Have A Reason blog. But I'll just excerpt the gist of it.

Excerpt:

> It is necessarily true that if God knows x will happen, then x will happen. But then if one takes these terms, God knowing x will happen only means that x will happen, not that x will happen *necessarily.* Certainly, God's foreknowledge of an event means that that event will happen, but it does *not* mean that the event could not have happened otherwise. If an event happens necessarily, that means the event could not have happened otherwise, but God's foreknowledge of an event doesn't somehow transfer necessity to the event, it only means that the event will happen. It could have been otherwise, in which case, God's knowledge would have been different.
>
> […]Perhaps I could take an example. Let's say that I'm going to go to classes tomorrow (and I do hope I will, I don't like missing classes!). God knows in advance that I'm going to go to classes tomorrow. His knowledge of this event means that it will happen, but it doesn't mean that I couldn't choose to stay in and sleep for a while, or play my new copy of Final Fantasy XIII, or do something more useless with my time. If I chose to, say, play Final Fantasy XIII (a strong temptation!), then God simply would have known that I would play FFXIII. His knowledge does not *determine* the outcome, His knowledge is simply *of the outcome*.

If we choose A, God would foreknow A. If we choose B, God would foreknow B. His foreknowledge of our choices is contingent on our making free choices.

Florida Senate candidate Bill Nelson on judges, amnesty, abortion, tax cuts, spending, welfare

October 24, 2018 | by Wintery Knight | Link | Original Link

Heritage Action Scorecard for Democrat Bill Nelson Florida

A lot of American voters tend to approach elections like they approach food, clothes and entertainment. They choose what they like "in the moment". But feelings about appearances is not the right way to measure a candidate. The right way to measure is by looking at the voting record. So let's do that with Democrat Senate candidate Bill Nelson of Florida.

Democrat Senate candidate Bill Nelson of Florida

The Heritage Foundation is a respected Washington think tank, and they've collected together all the votes of the candidates.

Here are some of the votes that I found the most interesting:

For restricting choice in health insurance:

> Disapproval of the Trump Administration's "Short-Term, Limited Duration Insurance" Rule10/10/2018The Senate voted on a Joint Resolution (S.J. Res. 63) providing for congressional disapproval of the rule issued by the Trump administration related to "Short-Term, Limited Duration Insurance." Sponsored by Sen. Tammy Baldwin (D-Wis.), S.J. Res. 63 would use the Congressional Review Act (CRA) to overturn a new Trump era rule that would expand the availability of affordable short-term, limited duration health plans to one year.

Against Supreme Court nominee Brett Kavanaugh:

> > To confirm Brett Kavanaugh to the Supreme Court10/05/2018The Senate voted on the confirmation of D.C. Circuit Court Judge Brett Kavanaugh to the Supreme Court. Judge Kavanaugh was nominated by President Donald Trump on July 9th, 2018 and was included in The Heritage

> > Foundation's original list of potential Supreme Court nominees.

For wasteful government spending:

> > > Bloated $855 Billion CROMNIBUS Spending Package09/18/2018Back in March, President Trump nearly vetoed a $1.3 trillion omnibus spending bill promising the American people that he "will never sign another bill like this again." One of the President's objections to the omnibus was its lack of conservative policy riders – particularly sufficient funding for border security – combined with increases in the Democrats' spending priorities. Six months later Republicans and the President find themselves in a similar situation.

Against defunding Planned Parenthood:

> > > Paul Amendment to defund Planned Parenthood08/23/2018To prohibit Federal funds being made available to a Planned Parenthood and other abortion facilities.

For individual mandates in health care:

> > > Motion to table Cruz, Cotton, Lee, Johnson D.C. Individual Mandate Amendment to Senate Minibus08/01/2018The Senate will vote on an amendment offered by Sen. Ted Cruz (R-Texas) to Fiscal 2019 Interior-Environment, Financial Services, Agriculture, and Transportation-HUD Appropriations Act (H.R. 6147). The amendment would prohibit funding for the District of Columbia's Health Insurance Requirement Amendment Act, essentially Obamacare's individual mandate penalty applied to the district. Heritage Action supports the amendment and is opposed to the motion to table it.

For welfare entitlements without work requirement:

> > > > 2018 Food Stamp and Farm Bill06/28/2018This month, the Senate could vote on the Agriculture Improvement Act of 2018 (S. 3042), more commonly known as the "farm bill." Despite repeated calls to enact work requirements for food stamp recipients and to reform runaway farm subsidies, the Senate Agriculture Committee approved a farm bill that maintains

> > > > dysfunctional and distortive status quo welfare and agricultural policies.

Against cuts in government spending:

> > > > Rescissions Package to Cut Spending from Expired and Unnecessary Programs06/20/2018This week, the Senate will vote on the Trump administration's rescissions request to cut spending by nearly $15 billion, titled the Spending Cuts to Expired and Unnecessary Programs Act (H.R. 3). Under current law, the Senate has until June 22nd to approve the House-passed bill under expedited rules.

For control of the Internet by left-wing IT corporations:

> > > > Repeal of the FCC's "Restoring Internet Freedom" rule05/16/2018The Senate voted on a Joint Resolution (S.J. Res. 52) providing for congressional disapproval of the rule issued by the Federal Communications Commission (FCC) related to "Restoring Internet Freedom." Sponsored by Sen. Edward J. Markey (D-Mass.), S.J. Res. 52 would use the Congressional Review Act (CRA) to reestablish draconian net neutrality regulations imposed on broadband internet service providers under former President Obama's FCC. Those net neutrality rules were recently repealed by the FCC under the courageous leadership of Chairman Ajit V. Pai.

For amnesty for illegal immigrants:

> Cloture for Schumer-Rounds-Collins Amnesty Amendment02/15/2018The Schumer-Rounds-Collins amnesty proposal, revealed by the "Common Sense Coalition" drew fire from the Department of Homeland Security (DHS), which said the bill would "effectively make the United States a Sanctuary Nation." Entitled the "Immigration Security and Opportunity Act," this legislation provides amnesty and a path to citizenship to millions of illegal immigrants, fails to end chain migration and establish a merit-based immigration system for the 21st century, fails to secure the southern border, and undermines internal enforcement immigration policy.

Against tax cuts:

> > Tax Cuts and Jobs Act Final Vote12/20/2017This week, the House and Senate will vote on the Tax Cuts and Jobs Act (H.R. 1), the most significant tax reform and tax cut legislative initiative since the 1986 tax reform package passed under President Ronald Reagan. The bill would make sweeping changes to the individual and corporate codes, and eliminate Obamacare's individual mandate penalty.

Against tax-deferred education savings plans:

> > > Expanding 529 Savings Plans12/01/2017The Senate could vote on an amendment (#1725) offered by Senator Ted Cruz (R-Texas) to the Tax Cuts and Jobs Act (H.R. 1) that expands higher education savings plans to include K-12 private school tuition and homeschool expenses. This amendment would help expand school choice by allowing families to use 529 account funds to help pay for private elementary and secondary education, including homeschooling.

Against repeal of government-run health care:

> > > > Repeal Title I of Obamacare10/19/2017The Senate will vote on an amendment (#1430) offered by Senator Mike Lee (R-Utah) to H. Con. Res. 71 that would repeal Title I of Obamacare. This amendment expands the budget resolution's existing deficit neutral reserve fund for legislation that repeals Obamacare to specifically include the repeal of Title I of Obamacare.

Against Supreme Court nominee Neil Gorsuch:

> Nomination of Neil Gorsuch to Supreme Court04/07/2017
>
> Later this week, the Senate is expected to vote on the confirmation of Tenth Circuit Court of Appeals Judge Neil Gorsuch to the Supreme Court. Judge Gorsuch was nominated by President Donald Trump on January 31, 2017.

Against de-funding of Planned Parenthood:

> > > > Disapproval of Title X Funds for Planned Parenthood03/30/2017This week the House of Representatives is expected to vote on H.J.Res. 43,

> > > > sponsored by Rep. Diane Black (R-TN), a disapproval resolution of the final rule submitted by Obama's Secretary of Health and Human Services (HHS) relating to compliance with Title X requirements by project recipients in selecting sub-recipients. Title X of the Public Health Service Act provides federal funds to states for family planning grants. Once states receive the funds, they have the ability to prioritize sub-recipients, directing funds to organizations like community health centers and family health clinics. While federal law prohibits government funding for abortion, it does allows certain public dollars, like the Title X grants, to support abortion providers if the funds are directed to non-abortion related health services. Under this exception, Planned Parenthood has been eligible to receive Title X funds, per the states' discretion.

Missouri Senate candidate Claire McCaskill on judges, amnesty, abortion, tax cuts, spending, welfare

October 24, 2018 | by Wintery Knight | Link | Original Link

Heritage Action Scorecard for Democrat Claire McCaskill Missouri

A lot of American voters tend to approach elections like they approach food, clothes and entertainment. They choose what they like "in the moment". But feelings about appearances is not the right way to measure a candidate. The right way to measure is by looking at the voting record. So let's do that with Democrat Senate candidate Claire McCaskill of Missouri.

Democrat Senate candidate Claire McCaskill of Missouri

The Heritage Foundation is a respected Washington think tank, and they've collected together all the votes of the candidates.

Here are some of the votes that I found the most interesting:

For restricting choice in health insurance:

> Disapproval of the Trump Administration's "Short-Term, Limited Duration Insurance" Rule10/10/2018The Senate voted on a Joint Resolution (S.J. Res. 63) providing for congressional disapproval of the rule issued by the Trump administration related to "Short-Term, Limited Duration Insurance." Sponsored by Sen. Tammy Baldwin (D-Wis.), S.J. Res. 63 would use the Congressional Review Act (CRA) to overturn a new Trump era rule that would expand the availability of affordable short-term, limited duration health plans to one year.

Against Supreme Court nominee Brett Kavanaugh:

> > To confirm Brett Kavanaugh to the Supreme Court10/05/2018The Senate voted on the confirmation of D.C. Circuit Court Judge Brett Kavanaugh to

> > the Supreme Court. Judge Kavanaugh was nominated by President Donald Trump on July 9th, 2018 and was included in The Heritage Foundation's original list of potential Supreme Court nominees.

For wasteful government spending:

> > > Bloated $855 Billion CROMNIBUS Spending Package09/18/2018Back in March, President Trump nearly vetoed a $1.3 trillion omnibus spending bill promising the American people that he "will never sign another bill like this again." One of the President's objections to the omnibus was its lack of conservative policy riders – particularly sufficient funding for border security – combined with increases in the Democrats' spending priorities. Six months later Republicans and the President find themselves in a similar situation.

Against defunding Planned Parenthood:

> > > Paul Amendment to defund Planned Parenthood08/23/2018To prohibit Federal funds being made available to a Planned Parenthood and other abortion facilities.

For individual mandates in health care:

> > > Motion to table Cruz, Cotton, Lee, Johnson D.C. Individual Mandate Amendment to Senate Minibus08/01/2018The Senate will vote on an amendment offered by Sen. Ted Cruz (R-Texas) to Fiscal 2019 Interior-Environment, Financial Services, Agriculture, and Transportation-HUD Appropriations Act (H.R. 6147). The amendment would prohibit funding for the District of Columbia's Health Insurance Requirement Amendment Act, essentially Obamacare's individual mandate penalty applied to the district. Heritage Action supports the amendment and is opposed to the motion to table it.

For welfare entitlements without work requirement:

> > > > 2018 Food Stamp and Farm Bill06/28/2018This month, the Senate could vote on the Agriculture Improvement Act of 2018 (S. 3042), more commonly known as the "farm bill." Despite repeated calls to enact work requirements for food stamp recipients and to reform

> > > > runaway farm subsidies, the Senate Agriculture Committee approved a farm bill that maintains dysfunctional and distortive status quo welfare and agricultural policies.

Against cuts in government spending:

> > > > Rescissions Package to Cut Spending from Expired and Unnecessary Programs06/20/2018This week, the Senate will vote on the Trump administration's rescissions request to cut spending by nearly $15 billion, titled the Spending Cuts to Expired and Unnecessary Programs Act (H.R. 3). Under current law, the Senate has until June 22nd to approve the House-passed bill under expedited rules.

For control of the Internet by left-wing IT corporations:

> > > > Repeal of the FCC's "Restoring Internet Freedom" rule05/16/2018The Senate voted on a Joint Resolution (S.J. Res. 52) providing for congressional disapproval of the rule issued by the Federal Communications Commission (FCC) related to "Restoring Internet Freedom." Sponsored by Sen. Edward J. Markey (D-Mass.), S.J. Res. 52 would use the Congressional Review Act (CRA) to reestablish draconian net neutrality regulations imposed on broadband internet service providers under former President Obama's FCC. Those net neutrality rules were recently repealed by the FCC under the courageous leadership of Chairman Ajit V. Pai.

For amnesty for illegal immigrants:

> Cloture for Schumer-Rounds-Collins Amnesty Amendment02/15/2018The Schumer-Rounds-Collins amnesty proposal, revealed by the "Common Sense Coalition" drew fire from the Department of Homeland Security (DHS), which said the bill would "effectively make the United States a Sanctuary Nation." Entitled the "Immigration Security and Opportunity Act," this legislation provides amnesty and a path to citizenship to millions of illegal immigrants, fails to end chain migration and establish a merit-based immigration system for the 21st century, fails to secure the southern border, and undermines internal enforcement

> immigration policy.

Against Pain-Capable Unborn Child Act:

> Cloture on Pain-Capable Unborn Child Act01/29/2018
>
> Next week, the Senate will vote on the Pain-Capable Unborn Child Protection Act (S. 2311), introduced by Sen. Lindsey Graham (R-S.C.). This legislation would protect unborn children by preventing abortions 20 weeks after fertilization, at which time scientific evidence suggests the unborn child can feel pain. The House passed a similar bill last fall by a vote of 237 to 189.

Against tax cuts:

> > Tax Cuts and Jobs Act Final Vote12/20/2017This week, the House and Senate will vote on the Tax Cuts and Jobs Act (H.R. 1), the most significant tax reform and tax cut legislative initiative since the 1986 tax reform package passed under President Ronald Reagan. The bill would make sweeping changes to the individual and corporate codes, and eliminate Obamacare's individual mandate penalty.

Against tax-deferred education savings plans:

> > > Expanding 529 Savings Plans12/01/2017The Senate could vote on an amendment (#1725) offered by Senator Ted Cruz (R-Texas) to the Tax Cuts and Jobs Act (H.R. 1) that expands higher education savings plans to include K-12 private school tuition and homeschool expenses. This amendment would help expand school choice by allowing families to use 529 account funds to help pay for private elementary and secondary education, including homeschooling.

Against repeal of government-run health care:

> > > > Repeal Title I of Obamacare10/19/2017The Senate will vote on an amendment (#1430) offered by Senator Mike Lee (R-Utah) to H. Con. Res. 71 that would repeal Title I of Obamacare. This amendment expands the budget resolution's existing deficit neutral reserve fund for legislation that repeals Obamacare to specifically include the repeal of Title I of Obamacare.

Against Supreme Court nominee Neil Gorsuch:

>

> Nomination of Neil Gorsuch to Supreme Court04/07/2017
>
> Later this week, the Senate is expected to vote on the confirmation of Tenth Circuit Court of Appeals Judge Neil Gorsuch to the Supreme Court. Judge Gorsuch was nominated by President Donald Trump on January 31, 2017.

Against de-funding of Planned Parenthood:

> > > > Disapproval of Title X Funds for Planned Parenthood03/30/2017This week the House of Representatives is expected to vote on H.J.Res. 43, sponsored by Rep. Diane Black (R-TN), a disapproval resolution of the final rule submitted by Obama's Secretary of Health and Human Services (HHS) relating to compliance with Title X requirements by project recipients in selecting sub-recipients. Title X of the Public Health Service Act provides federal funds to states for family planning grants. Once states receive the funds, they have the ability to prioritize sub-recipients, directing funds to organizations like community health centers and family health clinics. While federal law prohibits government funding for abortion, it does allows certain public dollars, like the Title X grants, to support abortion providers if the funds are directed to non-abortion related health services. Under this exception, Planned Parenthood has been eligible to receive Title X funds, per the states' discretion.

New York Times: bomb technicians say devices had hallmarks of fake explosives

October 25, 2018 | by Wintery Knight | Link | Original Link

[image]
Why do people think that CNN are biased leftist clowns?
I just wanted to post something about the reports we're all hearing about devices that look like bombs that are being sent to a few prominent Democrats. Although the death threats to Republicans, mob violence against Republicans, and bombs sent to Republicans were not news, the mainstream media has decided that this is news, and so I must respond.

Here is an article from the far-left New York Times.

They write:

> Some bomb technicians who studied photos of the device that circulated on social media suggested that the bomb sent to CNN had hallmarks of fake explosives — the kind more typically depicted on television and in movies, rather than devices capable of detonating.
>
> A digital clock was taped to the middle of the pipe, a feature that experts say is typically shown on fictional bombs in an attempt to ratchet up dramatic tension, but unnecessary in real life.
>
> In fact, bombmakers generally avoid attaching visible clocks to their devices to keep from tipping off their targets about when the bombs are set to explode.

That's not stopping CNN from running wall-to-wall coverage about how real their bomb is, though.

Do you know what wasn't news, though? The packages delivered to Republicans.

The same NYT article explains:

> Earlier this month, federal authorities said they intercepted multiple packages suspected of containing the lethal substance ricin, addressed to Mr. Trump and at least two top Pentagon officials. In February, an envelope containing a white, powdery substance that investigators later determined was cornstarch was sent to the Manhattan apartment of Donald Trump Jr.'s mother-in-law.

One ex-Navy EOD bomb disposal expert tweeted out his skepticism on Twitter:

> A few observations from a former bomb disposal officer (i.e. Me):
>
> 1. Proper pipe bombs don't have wires connected to both ends. That's dumb.
>
> 2. You can find timers / remote control receivers WAY smaller than whatever that white box is. A proper timer would best be stored inside the pipe, making it fully encapsulated. That thing is just silly looking.

> 3. “Hoax Devices” are FAR more common than real ones.
>
> 4. Bottom Line: Whoever made that wanted it to be painfully obvious to anyone and everyone that it’s a “bomb.” This is nearly the same as a bundle of road flares wrapped together with an old-timey alarm clock ticking away.

I think we need to be cautious about this because we know that people on the left are prone to faking hate crimes against themselves.

We’re two weeks out of mid-terms right now, and the Democrat candidates need all the help they can get from the media. This news story definitely helps the Democrats counter the #jobsNotMobs theme of Republican candidates. That’s why I think we should be skeptical and wait for the evidence.

Just to be clear, whoever sent those packages should be found guilty of domestic terrorism, and sentenced accordingly. However, we don’t know who is responsible right now.

Arizona Senate candidate Kyrsten Sinema on judges, amnesty, abortion, tax cuts, spending, welfare

October 26, 2018 | by Wintery Knight | Link | Original Link

Heritage Action Scorecard for Democrat Kyrsten Sinema Arizona

A lot of American voters tend to approach elections like they approach food, clothes and entertainment. They choose what they like "in the moment". But feelings about appearances is not the right way to measure a candidate. The right way to measure is by looking at the voting record. So let's do that with Democrat Senate candidate Kyrsten Sinema of Arizona.

Democrat Senate candidate Kyrsten Sinema of Arizona

The Heritage Foundation is a respected Washington think tank, and they've collected together all the votes of the candidates.

Here are some of the votes that I found the most interesting:

For wasteful government spending:

> Bloated $855 Billion CROMNIBUS Spending Package09/26/2018Back in March, President Trump nearly vetoed a $1.3 trillion omnibus spending bill promising the American people that he "will never sign another bill like this again." One of the President's objections to the omnibus was its lack of conservative policy riders – particularly sufficient funding for border security – combined with increases in the Democrats' spending priorities. Six months later Republicans and the President find themselves in a similar situation.

Against cuts to wasteful government spending:

> Rescissions Package to Cut Spending from Expired and Unnecessary Programs06/07/2018Today, the House will vote on the Spending Cuts to Expired and Unnecessary Programs Act (H.R. 3), introduced by House Majority Leader Kevin McCarthy (R-Calif.), as modified by the Rules committee to adjust to a

> supplementary message from President Trump earlier this week.

Against repealing regulations that hurt small businesses:

> Rollback of onerous bank regulations from the Dodd-Frank Act05/22/2018The House voted on the Economic Growth, Regulatory Relief, and Consumer Protection Act (S. 2155), introduced by Chairman Mike Crapo (R-Idaho). This bill provides targeted exemptions for smaller banks from various Dodd-Frank regulations put in place after the housing market collapse and financial crisis in 2008.

Against cutting subsidies for inefficient energy sources:

> Biggs Farm Bill Amendment to Repeal Bioenergy Subsidy Program05/17/2018The House voted on and failed to pass an amendment offered by Rep. Andy Biggs (R-Ariz.) to H.R. 2, the Agriculture and Nutrition Act of 2018. This amendment would repeal all Department of Agriculture biofuel and energy subsidy programs contained within Title IX of the 2014 Farm Bill.

For welfare entitlements without work requirement:

> McClintock Work Requirement Farm Bill Amendment05/17/2018The House voted on and failed to pass an amendment offered by Rep. Tom McClintock (R-Calif.) to H.R. 2, the Agriculture and Nutrition Act of 2018. The McClintock proposal amends SNAP work requirements to repeal geographic area waivers and allow states to exempt only five percent of SNAP recipients. Additionally, the amendment sets the same work requirement for married parents as for single parents, reducing a long-standing marriage penalty.

Against Born-Alive Abortion Survivors Protection Act:

> Born-Alive Abortion Survivors Protection Act (H.R.4712)01/19/2018This week, the House will vote on the Born-Alive Abortion Survivors Protection Act (H.R. 4712), introduced by Rep. Marsha Blackburn (R-Tenn.). This legislation requires that appropriate medical care be given to any child who survived an attempted abortion, and establishes criminal penalties for health care practitioners that violate this requirement (the mother of a child born alive may not be prosecuted) and a civil right of action to enforce the law.

Against tax cuts:

> Tax Cuts and Jobs Act (H.R.1)12/20/2017This week, the House and Senate will vote on the Tax Cuts and Jobs Act (H.R. 1), the most significant tax reform and tax cut legislative initiative since the 1986 tax reform package passed under President Ronald Reagan. The bill would make sweeping changes to the individual and corporate codes, and eliminate Obamacare’s individual mandate penalty.

Against the Pain-Capable Unborn Child Protection Act:

> Pain-Capable Unborn Child Protection Act (H.R. 36)10/03/2017This week, the House will vote on the Pain-Capable Unborn Child Protection Act (H.R. 36), introduced by Rep. Trent Franks (R-Ariz.). This legislation would protect unborn children by preventing abortions 20 weeks after conception, at which time scientific evidence suggests the child can feel pain. In 2015, a similar bill passed the House by a 242-184 vote.

Against cutting funding for global warming alarmism:

> Norman Amendment to Cut EPA Funding09/13/2017The House will vote on an amendment offered by Rep. Ralph Norman (R-S.C.) to H.R. 3354, the fiscal year 2018 omnibus spending measure. The amendment would reduce total appropriations to the Environmental Protection Agency (EPA) by $1,869,087,000.

Against allowing the U.S. Armed forces to use cost-effective, capable energy sources for their operations:

> Buck NDAA Amendment to Alternative Energy Requirements07/13/2017The House will vote on an amendment offered by Rep. Ken Buck (R-CO) to H.R. 2810, the National Defense Authorization Act (NDAA) for Fiscal Year 2018. This amendment would prohibit funding for the renewable energy mandate at the Department of Defense (DOD) and prohibit the Secretary of Defense from purchasing alternative energy unless it is equivalent to conventional energy in terms of cost and capability. Alternative energy research is exempted under this amendment.

Against prohibiting taxpayer funds from being used for sex change operations for members of military:

> Hartzler NDAA Amendment on Gender Transition Funding07/13/2017The House will vote on an amendment offered by Rep. Vicky Hartzler (R-MO) to H.R. 2810, the National Defense Authorization Act (NDAA) for Fiscal Year 2018. This amendment would prohibit funds from being used by the Department of Defense (DOD) to provide medical treatment (other than mental health treatment) related to gender transition for members of the military.

Against de-funding of Planned Parenthood:

> This week the House of Representatives is expected to vote on H.J.Res. 43, sponsored by Rep. Diane Black (R-TN), a disapproval resolution of the final rule submitted by Obama’s Secretary of Health and Human Services (HHS) relating to compliance with Title X requirements by project recipients in selecting sub-recipients. Title X of the Public Health Service Act provides federal funds to states for family planning grants. Once states receive the funds, they have the ability to prioritize sub-recipients, directing funds to organizations like community health

> centers and family health clinics. While federal law prohibits government funding for abortion, it does allows certain public dollars, like the Title X grants, to support abortion providers if the funds are directed to non-abortion related health services. Under this exception, Planned Parenthood has been eligible to receive Title X funds, per the states' discretion.

Against the No Taxpayer Funding for Abortion and Abortion Insurance Act:

> No Taxpayer Funding for Abortion and Abortion Insurance Full Disclosure Act of 2017 (H.R. 7)01/24/2017This week the House will vote on the No Taxpayer Funding for Abortion and Abortion Insurance Full Disclosure Act of 2017 (H.R. 7). Sponsored by Rep. Christopher Smith (R-NJ), the bill would establish a permanent, government-wide prohibition on federal taxpayer funding of abortion and health benefits plans that include coverage of abortion, as well as prevent federal tax dollars from being entangled in abortion coverage under Obamacare.

Against repeal of government-run health care:

> Obamacare Repeal Budget Resolution01/13/2017On Friday, the House will consider a concurrent resolution (S. CON. RES. 3). While the resolution will technically set the congressional budget for the United States Government for the remaining eight months of fiscal year 2017, its only functional purpose will be to produce reconciliation instructions that unlock fast track authority that Congress can then use to repeal Patient Protection and Affordable Care Act (PPACA). Separately, there is an expectation that the fiscal year 2018 budget resolution will reflect the longstanding conservative values embedded in previous GOP budgets. But to be absolutely clear, adopting S. CON. RES 3 is the only way to expedite the repeal of Obamacare.

Against accountability and transparency in government regulation:

> REINS Act (H.R. 26)01/05/2017This week, the House will vote on the Regulations from the Executive in Need of Scrutiny Act of 2017 (H.R. 26). The bill, introduced by Rep. Doug Collins (R-GA) 79%, would increase accountability for and transparency in the federal regulatory process by requiring Congress to approve all new major regulations.

If you live in this state, please consider sharing this article to let everyone know how this candidate has voted in the past.

Nevada Senate candidate Jacky Rosen on gay rights, amnesty, abortion, tax cuts, spending, welfare

October 26, 2018 | by Wintery Knight | Link | Original Link

Heritage Action Scorecard for Democrat Jacky Rosen Nevada

A lot of American voters tend to approach elections like they approach food, clothes and entertainment. They choose what they like "in the moment". But feelings about appearances is not the right way to measure a candidate. The right way to measure is by looking at the voting record. So let's do that with Democrat Senate candidate Jacky Rosen of Nevada.

Democrat Senate candidate Jacky Rosen of Nevada

The Heritage Foundation is a respected Washington think tank, and they've collected together all the votes of the candidates.

Here are some of the votes that I found the most interesting:

For wasteful government spending:

> Bloated $855 Billion CROMNIBUS Spending Package09/26/2018Back in March, President Trump nearly vetoed a $1.3 trillion omnibus spending bill promising the American people that he "will never sign another bill like this again." One of the President's objections to the omnibus was its lack of conservative policy riders – particularly sufficient funding for border security – combined with increases in the Democrats' spending priorities. Six months later Republicans and the President find themselves in a similar situation.

Against cuts to wasteful government spending:

> Rescissions Package to Cut Spending from Expired and Unnecessary Programs06/07/2018Today, the House will vote on the Spending Cuts to Expired and Unnecessary Programs Act (H.R. 3), introduced by House Majority Leader Kevin McCarthy (R-Calif.), as modified by the Rules committee to adjust to a

> supplementary message from President Trump earlier this week.

Against repealing regulations that hurt small businesses:

> Rollback of onerous bank regulations from the Dodd-Frank Act05/22/2018The House voted on the Economic Growth, Regulatory Relief, and Consumer Protection Act (S. 2155), introduced by Chairman Mike Crapo (R-Idaho). This bill provides targeted exemptions for smaller banks from various Dodd-Frank regulations put in place after the housing market collapse and financial crisis in 2008.

Against cutting subsidies for inefficient energy sources:

> Biggs Farm Bill Amendment to Repeal Bioenergy Subsidy Program05/17/2018The House voted on and failed to pass an amendment offered by Rep. Andy Biggs (R-Ariz.) to H.R. 2, the Agriculture and Nutrition Act of 2018. This amendment would repeal all Department of Agriculture biofuel and energy subsidy programs contained within Title IX of the 2014 Farm Bill.

For welfare entitlements without work requirement:

> McClintock Work Requirement Farm Bill Amendment05/17/2018The House voted on and failed to pass an amendment offered by Rep. Tom McClintock (R-Calif.) to H.R. 2, the Agriculture and Nutrition Act of 2018. The McClintock proposal amends SNAP work requirements to repeal geographic area waivers and allow states to exempt only five percent of SNAP recipients. Additionally, the amendment sets the same work requirement for married parents as for single parents, reducing a long-standing marriage penalty.

Against Born-Alive Abortion Survivors Protection Act:

> Born-Alive Abortion Survivors Protection Act (H.R.4712)01/19/2018This week, the House will vote on the Born-Alive Abortion Survivors Protection Act (H.R. 4712), introduced by Rep. Marsha Blackburn (R-Tenn.). This legislation requires that appropriate medical care be given to any child who survived an attempted abortion, and establishes criminal penalties for health care practitioners that violate this requirement (the mother of a child born alive may not be prosecuted) and a civil right of action to enforce the law.

Against tax cuts:

> Tax Cuts and Jobs Act (H.R.1)12/20/2017This week, the House and Senate will vote on the Tax Cuts and Jobs Act (H.R. 1), the most significant tax reform and tax cut legislative initiative since the 1986 tax reform package passed under President Ronald Reagan. The bill would make sweeping changes to the individual and corporate codes, and eliminate Obamacare’s individual mandate penalty.

Against cutting funding for global warming alarmism:

> Norman Amendment to Cut EPA Funding09/13/2017The House will vote on an amendment offered by Rep. Ralph Norman (R-S.C.) to H.R. 3354, the fiscal year 2018 omnibus spending measure. The amendment would reduce total appropriations to the Environmental Protection Agency (EPA) by $1,869,087,000.

Against cutting funding for wasteful government-run monopolies:

> Budd Amendment to Eliminate $900 million Amtrak 'Earmark'09/06/2017The House will vote on an amendment offered by Rep. Ted Budd (R-N.C.) to H.R. 3354, the fiscal year 2018 omnibus spending measure. The amendment would eliminate $900 million in specifically designated spending contained in the Transportation-Housing and Urban Development (T-HUD) appropriations bill that would go directly to the Gateway project – a $29.5 billion tunnel, bridge and infrastructure project intended to improve Amtrak's passenger rail service between Newark and New York City. Partial funding for this project comes from eliminating the wasteful Obama-era Transportation Investment Generating Economic Recovery (TIGER) grant program.

Against allowing the U.S. Armed forces to use cost-effective, capable energy sources for their operations:

> Buck NDAA Amendment to Alternative Energy Requirements07/13/2017The House will vote on an amendment offered by Rep. Ken Buck (R-CO) to H.R. 2810, the National Defense Authorization Act (NDAA) for Fiscal Year 2018. This amendment would prohibit funding for the renewable energy mandate at the Department of Defense (DOD) and prohibit the Secretary of Defense from purchasing alternative energy unless it is equivalent to conventional energy in terms of cost and capability. Alternative energy research is exempted under this amendment.

Against prohibiting taxpayer funds from being used for sex change operations for members of military:

> Hartzler NDAA Amendment on Gender Transition Funding07/13/2017The House will vote on an amendment offered by Rep. Vicky Hartzler (R-MO) to H.R. 2810, the National Defense Authorization Act (NDAA) for Fiscal Year 2018. This amendment would prohibit funds from being used by the Department of Defense (DOD) to provide medical treatment (other than mental health treatment) related to gender transition for members of the military.

Against de-funding of Planned Parenthood:

> This week the House of Representatives is expected to vote on H.J.Res. 43, sponsored by Rep. Diane Black (R-TN), a disapproval resolution of the final rule submitted by Obama's Secretary of Health and Human Services (HHS) relating to

> compliance with Title X requirements by project recipients in selecting sub-recipients. Title X of the Public Health Service Act provides federal funds to states for family planning grants. Once states receive the funds, they have the ability to prioritize sub-recipients, directing funds to organizations like community health centers and family health clinics. While federal law prohibits government funding for abortion, it does allows certain public dollars, like the Title X grants, to support abortion providers if the funds are directed to non-abortion related health services. Under this exception, Planned Parenthood has been eligible to receive Title X funds, per the states' discretion.

Against the No Taxpayer Funding for Abortion and Abortion Insurance Act:

> No Taxpayer Funding for Abortion and Abortion Insurance Full Disclosure Act of 2017 (H.R. 7)01/24/2017This week the House will vote on the No Taxpayer Funding for Abortion and Abortion Insurance Full Disclosure Act of 2017 (H.R. 7). Sponsored by Rep. Christopher Smith (R-NJ), the bill would establish a permanent, government-wide prohibition on federal taxpayer funding of abortion and health benefits plans that include coverage of abortion, as well as prevent federal tax dollars from being entangled in abortion coverage under Obamacare.

Against repeal of government-run health care:

> Obamacare Repeal Budget Resolution01/13/2017On Friday, the House will consider a concurrent resolution (S. CON. RES. 3). While the resolution will technically set the congressional budget for the United States Government for the remaining eight months of fiscal year 2017, its only functional purpose will be to produce reconciliation instructions that unlock fast track authority that Congress can then use to repeal Patient Protection and Affordable Care Act (PPACA). Separately, there is an expectation that the fiscal year 2018 budget resolution will reflect the longstanding conservative values embedded in previous GOP budgets. But to be absolutely clear, adopting S. CON. RES 3 is the only way to expedite the repeal of Obamacare.

Against accountability and transparency in government regulation:

> REINS Act (H.R. 26)01/05/2017This week, the House will vote on the Regulations from the Executive in Need of Scrutiny Act of 2017 (H.R. 26). The bill, introduced by Rep. Doug Collins (R-GA) 79%, would increase accountability for and transparency in the federal regulatory process by requiring Congress to approve all new major regulations.

If you live in this state, please consider sharing this article to let everyone know how this candidate has voted in the past.

Physicist Michael Strauss discusses Christianity and science at Stanford University

October 27, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science
This is one of my favorite lectures.

The lecture:

Dr. Strauss delivered this lecture at Stanford University in 1999. It is fairly easy to understand, and it even includes useful dating tips.

Here is a clip:

The full video can be watched on Vimeo:

Summary:

What does science tell us about God?
– the discoveries of Copernicus made humans less significant in the universe
– the discoveries of Darwin should that humans are an accident
– but this all pre-modern science
– what do the latest findings of science say about God?

Evidence #1: the origin of the universe
– the steady state model supports atheism, but was disproved by the latest discoveries
– the oscillating model supports atheism, but was disproved by the latest discoveries
– the big bang model supports theism, and it is supported by multiple recent discoveries
– the quantum gravity model supports atheism, but it pure theory and has never been tested or confirmed by experiment and observation

Evidence #2: the fine-tuning of physical constants for life
– there are over 100 examples of constants that must be selected within a narrow range

in order for the universe to support the minimal requirements for life
– example: mass density
– example: strong nuclear force (what he studies)
– example: carbon formation

Evidence #3: the fine-tuning of our planet for habitability
– the type of galaxy and our location in it
– our solar system and our star
– our planet
– our moon

It's a good lecture explaining a couple of basic arguments for a cosmic Creator and Designer. If you add the origin of life and the Cambrian explosion (Stephen C. Meyer's arguments), then you will be solid on the basic scientific arguments for a Creator and Designer of the universe.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge's ontological argument from reason
- Alvin Plantinga's epistemological argument from reason
- William Lane Craig's moral argument
- The unexpected applicability of mathematics to nature
- Six reasons why you should believe in non-physical minds
- William Lane Craig's case for the resurrection of Jesus

What theory of truth should a Bible-believing Christian accept?

October 28, 2018 | by Wintery Knight | Link | Original Link

Investigation in progress

I was just thinking to myself this week about why I keep running into people who identify as Christians who are open and unrepentant about habitual sin. Now, I'm not perfect, but you don't see me out there in public saying that the Bible is wrong. I would not claim that some behavior that was condemned by all previous generations of Christians is suddenly ok.

So, I thought and thought and thought about it, and here is what I came up with. Somehow, people have come to a view of Christianity that tells them that Christianity is not something that is true about the universe out there. Instead, Christianity is "true" in the sense that it "works for them".

So they aren't saying that God actually exists or that Jesus actually rose from the dead, because they don't know if those things are objectively true. They're just saying that they like some Christian words and behaviors because those things make them feel good. Christianity is not something they could defend as objectively true to any non-Christian using reason and evidence. They like how the idea of a loving God makes them feel. Or maybe they like invoking the idea of "do not judge" when someone questions their destructive choices or immorality. But they don't actually submit to these ideas as "true" in the same way that they take the instructions on a medicine bottle as true.

Here's a post by Aaron Brake at Stand to Reason, that explains three different views of truth. He calls the view that I talked about the "pragmatic view of truth". He says that the pragmatic view is that things are true if they "work" for the individual. So, in the case of my Christians-who-deny-Jesus-as-Lord, these people pick and choose things that work for them out of Christianity, e.g. – the love of God, the "do not judge" fragment, the women

taken in adultery, etc. But they leave out the moral obligations that Christians have believed for thousands of years, e.g. – no sex before marriage, marriage is between a man and woman for life, divorce is pretty much always unjustified, and adultery is never OK under any circumstances.

Here is the view of truth that he thinks is best:

> Finally, there is the **correspondence theory** of truth: *truth is when an idea, belief, or statement matches (or corresponds with) the way the world actually is (reality).*
>
> This may rightly be labeled the "common sense" view of truth. While not taught explicitly in Scripture, it is assumed throughout both the Old and New Testaments. The correspondence theory of truth states that an idea, belief, or statement is true if it matches, or corresponds with, reality. In this sense, reality is the truth-maker, and the idea, belief, or statement is the truth-bearer. When the truth-bearer (an idea) matches the truth-maker (reality), they are said to stand in an "appropriate correspondence relationship," and truth obtains.
>
> Consider the following statements:
>
> 1. Donald Trump is the current President of the United States.
> 2. The city of Los Angeles is located in California.
> 3. Elective abortion kills an innocent human being.
>
> Are these statements *true*? They are if, in fact, they match reality. Statement number 1 is true if, in reality, Donald Trump is the current President of the United States. Statement 2 is true if, in fact, the city of Los Angeles is located in California. And statement 3 is true if elective abortion really does kill an innocent human being. Easy enough, right? Aristotle put it this way:
>
> To say of what is that it is not, or of what is not that it is, is false, while to say of what is that it is, and of what is not that it is not, is true; so that he who says anything that it is, or that it is not, will say either what is true or what is false.
>
> **A Case for Correspondence**
>
> Christian philosopher J.P. Moreland notes two main arguments which have been advanced in favor of the correspondence theory of truth: the descriptive and the dialectical.
>
> The descriptive argument simply presents specific cases that help illustrate the concept of truth. For example, in Moreland's bookstore case, an individual named Joe has the thought "Richard Swinburne's book *The Evolution of the Soul* is in the bookstore." When Joe enters the bookstore and sees the book, he actually experiences truth, a correspondence relation between his thought and reality. Again, this is the "common sense" definition of truth since it is the view we all presuppose in our daily actions and speech; i.e., everyone assumes the correspondence theory of truth when reading a medicine label or dialing a phone

> number.

That theory of truth is the normal theory of truth, and it's the one used in the Bible, e.g. – Elijah on Mount Carmel, Jesus calling his resurrection the Sign of Jonah. If the Bible teaches something, then that teaching is true, because it conforms to the way the world really is. Objective reality makes the Bible's statements true or false. It's true whether people like it or not.

Here's what I suspect is true of all the liberal Christians that I've met. None of them will have looked into things like the existence of God or the resurrection to see if they are objectively true. They'll not even be interested in lifting a finger to study in order to find out whether those things are true. If they evangelize, they'll tell stories about their own life experiences and feelings, and try to "sell" Christianity based on felt needs being met. They'll not waste a second on studying the laws of logic, or science or history in order to demonstrate Christian claims as true – especially the ones that don't "ring true" to them.

It makes me think of that post that I wrote about John Searle and his suspicion about why people become postmodern relativists. He thinks it's so that they can deny reality if reality constrains their will to pursue happiness. I've actually seen this when people break all the rules in their selfish pursuit of happiness, and then when it all explodes in their face, they claim that life is unpredictable, and it wasn't their fault. The rejection of the correspondence theory of truth is – I think – rooted in this desire to dismiss anything that could act as a brake on their hedonism. They don't care that you can produce studies after studies showing that fatherlessness is bad for children. If God didn't give them a husband, then they are perfectly justified in having children through a sperm donor, and raising the fatherless child with welfare money. The simplest way out of your Bible verses and fatherlessness studies is for them to say that doing wrong "works for them" and so it's "true for them".

If Republicans are going to hold the House, they'll need the votes of black Americans

October 29, 2018 | by Wintery Knight | Link | Original Link

Michigan Senate candidate John James

I've been following the Michigan Senate race between Republican John James and Democrat Debbie Stabenow. James, a black conservative, flew attack helicopters in Iraq, and now runs a private sector business. You can't get more rooted in reality than that. What I've noticed about James is his challenge to other blacks to vote for ideas and ideals.

Here's his latest ad:

The Washington Examiner notes:

> "The Democratic business model is reliant upon keeping black folks dependent on the government," James said in the ad. "Countless people have died for our right to think and to vote for ourselves, yet Democratic leadership asks us to outsource our voice on a straight-ticket ballot to a godless party that neither represents our values nor our economic best interests."
>
> "We've marched from Selma to New York, we've rebelled from Watts to Detroit, and ain't nothing changed in 50 years," he said. "The Democratic Party leadership cares more about the black vote than the black people. And it's time to wake up."
>
> James, a West Point graduate who served as a commander in aviation missions in Iraq, released his new ad in Detroit on the same day that former president Barack Obama is set to visit that city to campaign for Democrat Debbie Stabenow.
>
> James said in an interview, "The ad is not meant to divide or attack his fellow Michiganders. It is a criticism of the party leadership that took God out of its platform and left Detroit the most segregated city in America."
>
> Stabenow has consistently held a healthy double-digit lead over James, but has

> seen that cushion evaporate in the past month.
>
> On Thursday, a Free Press poll conducted by EPIC-MRA of Lansing Michigan put her lead at 7 percentage points. That same poll showed her up 23 points in September.
>
> On Oct. 29, Vice President Mike Pence will host a rally in Grand Rapids for James, who returned home from his military service to run his family's business.

James is the first black Republican to run for statewide office in Michigan in four decades.

Why should blacks vote for a Republican? Black unemployment is at a record low (along with Hispanic unemployment).

USA Today noted:

> September's 3.7 percent unemployment rate, a nearly 50-year low, is helping all U.S. workers, but it's especially beneficial to disadvantaged groups that have struggled to land jobs — like black teenagers.
>
> The jobless rate for African-Americans age 16 to 19 fell from 20.1 percent to 19.3 percent last month, the lowest on records dating to 1972.

If blacks were just voting on objective criteria – raw numbers – they'd vote for Republicans.

Against dependency on the government

I also noted that James is a strong believer in male leadership, and that got him trouble with the anti-male left:

Right now, we have an epidemic in the black community where black women are choosing men poorly, and creating fatherless children in homes who are more likely to be dependent on government. As a non-white conservative, I find this upsetting, because it means that non-whites are arriving at different life outcomes from other Americans through their own choices. When poor choices are made early on in life, it's difficult to recover even when you learn from your mistakes.

I don't see how the black community is ever going to recover from a 70% out-of-wedlock birth rate unless they start shaming black women for having sex with men who are not willing to commit to leading a family before they have sex. There are single black men of good character who could have been chosen instead. Men who would commit before asking for sex. But if women make choices based on appearances and feelings, then the bad boys will get picked every time.

The Democrat party has an interest in making more people dependent on government, and that's why they favor government programs that incentivize making fatherless children. Democrats promote premarital sex and welfare programs to blacks, which discourages good black men from working and marrying. They also oppose school choice, so that parents are forced to put their children into failing schools staffed by unionized teachers who are unaccountable. If we're going strictly on policy, then the Republican party has a lot more to offer black Americans than the Democrats.

New study: virgins have happiest marriages, more sex partners means more unhappiness

October 30, 2018 | by Wintery Knight | Link | Original Link

Although we live in a culture that is dominated by the thoughts and opinions of secular leftists, science provides useful information for those who want defend Biblical morality. Consider the issue of sexuality and marriage. Secular leftists claim that sex outside of marriage is natural, and produces happiness. Bible believing Christians and Jews say chastity is best. Who is right?

Here is the latest study authored by Dr. Nicholas Wolfinger, a sociologist at the University of Utah. His previous book on relationships was published by Oxford University Press. In his analysis of the data, Wolfinger controlled for divorce rates, religiosity, and socioeconomic status.

Here's the most important graph:

Study: virgins have the happiest marriages, more partners means less happiness

Other factors that increased marital happiness: having a 4-year college degree (5%), having a salary > 78K (5%), regular church attendance (6%). Notice that women are more dissatisfied with marriage (in general) than men are, and they tend to blame the spouse they freely chose for that unhappiness.

The Federalist also reported on previous research relevant to this study:

> Psychologists Galena K. Rhoades and Scott M. Stanley found that women who have had sex with someone other than their husband report statistically significant drops in marital quality over those who don't. A 2004 study by

> sociologist Jay Teachman showed that intimate premarital activities such as cohabitation and intercourse increased the rate of marital dissolution by anywhere between 28 and 109 percent, depending on the activity.

Wolfinger also noted in a previous study that only 5% of women were virgins when they married.

Wolfinger noted that a possible explanation for the link between promiscuity and unhappiness is that people look back on their past partners and compare their spouse unfavorably to them. This is especially the case with women. My concern about this is that feminism has taught women to try to increase their social standing by having hook-up sex with attractive bad boys. If those women ever marry, they do it when they are older, less fertile, and less attractive. The husband they eventually "settle" for will (in their minds) always compare unfavorably to the hot bad boys they had sex with when they were younger and prettier. This, I believe, is what leads to their unhappiness with the man they chose to marry.

More partners also means more marital instability

In a previous post, I blogged about several studies linking virginity to marital stability. Couples who don't have sex before marriage, or even who delayed it, reported better communication, higher satisfaction, better quality sex, and a lower chance of divorce.

Men ought to be aware of this research when they are choosing a spouse. Obviously, you want a virgin, for the increased happiness and increased stability. For marriage-friendly character, you want to avoid women who are promiscuous thrill-seekers. You want to avoid women who run up debt doing easy non-STEM degrees and traveling. You want to avoid women who hook up with hot bad boys aren't serious about commitment. Women who choose fun and thrills in their teens and 20s are setting a pattern of using sex as a way to get happiness in the moment. Later on, they'll continue that pattern of seeing relationships as commodities that are designed to make them feel good, moment by moment. They'll look at marriage as a way to fulfill *their* needs. They'll have internalized the view that relationships are not commitments to invest in self-sacrificially. The pattern will be: "if it doesn't make me feel happy right now, then it should be ended". Men who aren't serious about evaluating the character of the women for the marriage enterprise are running the risk of divorce, it's that simple.

The best way to make sure that you have a clear head when evaluating a woman is to stay sober, and keep her hands off of you. When a man refuses to let a woman cloud his judgment with sex, then she is forced to learn how to love him, help him, and submit to his leadership. Male chastity encourages women who have been influenced by feminism to abandon selfishness, fun-seeking, and thrill-seeking, so that they learn to care for others. Male chastity also helps a man to resist older women who chose bad boys in their teens and 20s and want to get married to a good provider in their 30s. The studies discussed above clearly show that such women are more likely to be unhappy, and their future marriages are more likely to be unstable. Avoid them.

The 5 Taliban commanders that Obama traded for a deserter have returned to the Taliban

October 31, 2018 | by Wintery Knight | Link | Original Link

CNN politics

Bowe Bergdahl pleads guilty to desertion, faces up to life in prison

By Devon M. Sayers and Holly Yan, CNN

Updated 7:27 PM ET, Mon October 16, 2017

Private Bowe Bergdahl pled guilty to charges of mischief and desertion

We live in a world where people get their news by watching far-left news media. They're sure that Obama did a great job, but they can't remember exactly what he did that was so great. When Obama asserts that he led a "scandal-free" administration, they just nod their heads like trained seals. They can't remember any of Obama's scandals.

One such scandal is Obama's decision to trade five senior Taliban commanders – who were captured on the battlefield – for a Private for walked off his post (deserted) in Afghanistan. He abandoned his brothers in a combat zone. Perpetual liar Susan Rice – who falsely blamed the Benghazi terrorist attack on a YouTube video – claimed that Bergdahl was a hero who had "served honorably". It was only later that Bergdahl was charged with mischief and treason. And he pleaded guilty to those charges. It should be noted that he isn't just a "deserter". He put down his weapons and took off his uniform and sought refuge with enemy forces. He's not just a deserter, he's a traitor. Exactly the kind of person who Democrats admire.

Did Bergdahl's desertion have any consequences for his brothers in the military? Yes. When his absence was discovered, ground and air assets were diverted from their missions in order to search for him, to "rescue" him. Not just a few assets, but a huge number of assets were diverted to searching for him. U.S. troops *lost their lives* searching for him. Some were maimed and injured searching for him. And what's more, if you've read the book "Red Platoon", you know that other operations were impacted. Men were

killed in Eastern Afghanistan at the Battle of Keating, because their close air support assets were re-tasked with searching for Bergdahl.

At the time of the trade, Obama *promised* that these five Taliban commanders would never again attack U.S. Armed Forces on the battlefield. That was how he justified the trade.

Time magazine reported:

> When U.S. President Barack Obama agreed in May to exchange five Taliban detainees from Guantanamo Bay for Bowe Bergdahl, a U.S. soldier who had been held captive for five years, his political opponents had a field day. They warned that the detainees risked returning to Afghanistan, and to militancy. Obama, with the backing of the government of Qatar that had agreed to host the men, promised that they would be kept far from the battlefield.

Here is the latest news from the Washington Free Beacon:

> The five members of the Afghan Taliban who were released from the U.S. military prison at Guantanamo Bay in exchange for captured American Army Sgt. Bowe Bergdahl in 2014 have joined the Taliban's political office in Qatar, according the insurgent group's spokesman, Zabihullah Mujahid.
>
> […]"The Taliban are bringing back their old generation, which means the Taliban have not changed their thinking or their leadership," said Haroun Mir, a political analyst in Kabul. "What we are more worried about is if tomorrow the Taliban say 'we are ready to negotiate,' who will represent Kabul? That is the big challenge because the government is so divided, not just ideologically but on ethnic lines."
>
> […]President Barack Obama received backlash in 2014 when his administration orchestrated the prisoner swap for Bergdahl, prompting him to defend his decision.

The Obama administration favored our enemies at the expense of our own armed forces in so many ways.

They rewarded convicted traitor Private Bradley Manning with a pardon for his treason, and a free sex change – paid for by taxpayers. He leaked so many military secrets to our enemies, but the Obama administration had to protect him from his punishment, because they agreed with what he did. Later on, he would run as a Democrat, because that's what he is.

The Obama administration forced many policies on the military that were designed to reduce our effectiveness. Sometimes, it was overt, like canceling the deal to help Poland with missile defense. Or backing out of Syria in order to hand it to the Russians. Or give Iran a green light and $400 million dollars to research nuclear weapons. Or forcing the U.S. Navy to use green energy. The list goes on and on. I personally know people who left the military because of the Obama administration's anti-military policies.

And it's not just the armed forces, it's our spies and diplomats. Instead of pushing an

agenda of world peace, the State Department antagonized other nations by pushing for legalized abortion and same-sex marriage. Hillary Clinton, the Secretary of State, was allowed to operate a private, unsecure e-mail server in her bathroom. She sent and received classified e-mails over that server. And we know know that the server was hacked by the Chinese.

During the Obama administration, our allies were continuously disappointed. Our enemies were continuously emboldened. The Democrats did not take the job of protecting taxpayers seriously. No one who cares about projecting American strength and values abroad should ever vote for the Democrat party.

William Lane Craig lectures on the evidence for the resurrection of Jesus

November 1, 2018 | by Wintery Knight | Link | Original Link

Sherlock Holmes and John Watson: let's take a look at the facts

Here is Dr. William Lane Craig giving a long-form argument for the historical event of the resurrection of Jesus, and taking questions from the audience.

The speaker introduction goes for 6 minutes, then Dr. Craig speaks for 35 minutes, then it's a period of questions and answers with the audience. The total length is 93 minutes, so quite a long period of Q&A. The questions in the Q&A period are quite good.

Introduction:

- Many people who are willing to accept God's existence are not willing to accept the God of Christianity
- Christians need to be ready to show that Jesus rose from the dead as a historical event
- Private faith is fine for individuals, but when dealing with the public you have to have evidence
- When making the case, you cannot assume that your audience accepts the Bible as inerrant
- You must use the New Testament like any other ancient historical document
- Most historians, Christian and not, accept the basic minimal facts supporting the resurrection of Jesus

Fact #1: the burial of Jesus following his crucifixion

- Fact #1 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #1 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #1 passes the criterion of enemy attestation, since it praises one of the

Sanhedrin
- Fact #1 is not opposed by any competing burial narratives

Fact #2: on the Sunday following his crucifixion, Jesus' tomb was found empty by some women

- Fact #2 is supported by the early Passion narrative which was a source for Mark's gospel
- Fact #2 is implied by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #2 is simple and lacks legendary embellishment, which argues for an early dating
- Fact #2 passes the criterion of embarrassment, because it has female, not male, witnesses
- Fact #2 passes the criterion of enemy attestation, since it is reported by the Jewish leaders

Fact #3: Jesus appeared to various people in various circumstances after his death

- Fact #3 is supported by the early creed found in Paul's first letter to the Corinthians (1 Cor 15)
- Fact #3 is supported by multiple, independent reports of the events from all four gospels
- Fact #3 explains other historical facts, like the conversion of Jesus' skeptical brother James

Fact #4: the earliest Christians proclaimed their belief in the resurrection of Jesus

- Fact #4 explains why the earliest Christians continued to identify Jesus as the Messiah
- Fact #4 explains why the earliest Christians were suddenly so unconcerned about being killed

Dr. Craig then asks which hypothesis explains all four of these facts. He surveys a number of naturalistic hypotheses, such as the hallucination theory or various conspiracy theories. All of these theories deny one or more of the minimal facts that have been established and accepted by the broad spectrum of historians. In order to reject the resurrection hypothesis, a skeptic would have to deny one of the four facts or propose an explanation that explains those facts better than the resurrection hypothesis.

I listened to the Q&A period while doing housekeeping and I heard lots of good questions. Dr. Craig gives very long answers to the questions. One person asked why we should trust the claim that the Jewish leaders really did say that the disciples stole the body. Another one asked why we should take the resurrection as proof that Jesus was divine. Another asks about the earthquake in Matthewand whether it is intended to be historical or apocalyptic imagery. Dr. Craig is also asked about the Jewish scholar Geza

Vermes, and how many of the minimal facts he accepts. Another questioner asked about the ascension.

If you are looking for a good book to read on this topic, the best introductory book on the resurrection is “The Case for the Resurrection of Jesus” and the best comprehensive book is “The Resurrection of Jesus“.

Abortion debate: a secular case against legalized abortion

November 2, 2018 | by Wintery Knight | Link | Original Link

Unborn baby scheming about being only two months old

Note: this post has a twin! Its companion post on a secular case against gay marriage is here.

Now, you may think that the view that the unborn deserve protection during pregnancy is something that you either take on faith or not. But I want to explain how you can make a case for the right to life of the unborn, just by using reason and evidence.

To defend the pro-life position, I think you need to sustain 3 arguments:

1. The unborn is a living being with human DNA, and is therefore human.
2. There is no morally-relevant difference between an unborn baby, and one already born.
3. None of the justifications given for terminating an unborn baby are morally adequate.

Now, the pro-abortion debater may object to point 1, perhaps by claiming that the unborn baby is either not living, or not human, or not distinct from the mother.

Defending point 1: Well, it is pretty obvious that the unborn child is not inanimate matter. It is definitely living and growing through all 9 months of pregnancy. (Click here for a video that shows what a baby looks like through all 9 months of pregnancy). Since it has human DNA, that makes it a human. And its DNA is different from either its mother or

father, so it clearly not just a tissue growth of the father or the mother. More on this point at Christian Cadre, here. An unborn child cannot be the woman's own body, because then the woman would have four arms, four legs, two heads, four eyes and two different DNA signatures. When you have two different human DNA signatures, you have two different humans.

Secondly, the pro-abortion debater may try to identify a characteristic of the unborn that is not yet present or developed while it is still in the womb, and then argue that because the unborn does not have that characteristic, it does not deserve the protection of the law.

Defending point 2: You need to show that the unborn are not different from the already-born in any meaningful way. The main differences between them are: *size, level of development, environment* and *degree of dependence*. Once these characteristics are identified, you can explain that none of these differences provide moral justification for terminating a life. For example, babies inside and outside the womb have the same value, because location does not change a human's intrinsic value.

Additionally, the pro-abortion debater may try to identify a characteristic of the already-born that is not yet present or developed in the unborn, and then argue that because the unborn does not have that characteristic, that it does not deserve protection, (e.g. – sentience). Most of the these objections that you may encounter are refuted in this essay by Francis Beckwith. Usually these objections fall apart because they assume the thing they are trying to prove, namely, that the unborn deserves less protection than the already born.

Finally, the pro-abortion debater may conceded your points 1 and 2, and admit that the unborn is fully human. But they may then try to provide a moral justification for terminating the life of the unborn, regardless.

Defending point 3: I fully grant that it is sometimes justifiable to terminate an innocent human life, if there is a moral justification. Is there such a justification for abortion? One of the best known attempts to justify abortion is Judith Jarvis Thomson's "violinist" argument. This argument is summarized by Paul Manata, one of the experts over at Triablogue:

> Briefly, this argument goes like this: Say a world-famous violinist developed a fatal kidney ailment and the Society of Music Lovers found that only you had the right blood-type to help. So, they therefore have you kidnapped and then attach you to the violinist's circulatory system so that your kidneys can be used to extract the poison from his. To unplug yourself from the violinist would be to kill him; therefore, pro-lifers would say a person has to stay attached against her will to the violinist for 9 months. Thompson says that it would be morally virtuous to stay plugged-in. But she asks, "Do you have to?" She appeals to our intuitions and answers, "No."

Manata then goes on to defeat Thomson's proposal here, with a short, memorable

illustration, which I highly recommend that you check out. More info on how to respond to similar arguments is here.

Here is the best book for beginners on the pro-life view.

For those looking for advanced resources, Francis Beckwith, a professor at Baylor University, published the book Defending Life, with Cambridge University Press, 2007.

Kavanaugh rape accuser put forward by Democrats admits she made it all up to get attention

November 3, 2018 | by Wintery Knight | Link | Original Link

Brett Kavanaugh, his wife, and his two daughters

The Supreme Court is important to Christians and conservatives because it decides whether rights like free speech, freedom of religion, right to self-defense, etc. will be respected by government. During the last Supreme Court hearing, Democrats put forward a number of rape accusations to block a conservative nominee. We're now finding out how credible those accusations were.

Judy Munro-Leighton

The Daily Caller reports:

> A woman who acknowledged falsely accusing Supreme Court Justice Brett Kavanaugh of rape is being referred to the FBI and Department of Justice for investigation, according to an official letter.
>
> Senate Judiciary Committee Chairman Chuck Grassley said in a letter sent Friday to FBI Director Christopher Wray and Attorney General Jeff Sessions that the woman, Judy Munro-Leighton, admitted Thursday that she falsely claimed in an email to committee staff on Oct. 3 that Kavanaugh and a friend had raped her.
>
> In the email, Munro-Leighton claimed to be the author of an anonymous letter sent to California Democratic Sen. Kamala Harris on Sept. 19. In that letter, a person who signed the letter as "Jane Doe" claimed Kavanaugh and a friend

> raped her in the back of a car.
>
> Grassley, an Iowa Republican, said investigators quickly discovered that Munro-Leighton was a "left-wing activist" who is decades older than Kavanaugh.
>
> But after reaching Munro-Leighton on Thursday, she admitted "that she had not been sexually assaulted by Judge Kavanaugh and was not the author of the original 'Jane Doe' letter."
>
> Munro-Leighton said that she "just wanted to get attention" for her "ploy."

When the mainstream media reported that Kavanaugh was "credibly accused" of rape by multiple women, this is the kind of accusation they were referring to. Credibly accused by very respectable, stable, accomplished women who had nothing to gain by coming forward and reporting their truth.

Was this accusation a deliberate coordinated effort between Democrat senators and this left-wing activist? We'll find out, as long as the Democrats don't win the Senate and stop the investigation. Right now it looks about 50-50 that the Democrats will win the Senate, but that depends on the voter turnout. They're almost certainly going to end all investigations in the House when they win the House on Tuesday. It's virtually guaranteed that the Democrats will win the House on Tuesday.

Previously, another false rape accuser put forward by the Democrats to block Kavanaugh was also caught lying.

Julie Swetnick

Real Clear Politics recalls how the mainstream media reported her baseless accusations:

> Julie Swetnick, one of the women accusing Judge Brett Kavanaugh of sexual assault, talks about gang-rape parties with NBC's Kate Snow. Swetnick said she was drugged and gang-raped by Kavanaugh and friend Mark Judge. NBC News stated that Swetnick's claims could not be independently verified.
>
> Swetnick is represented by Michael Avenatti, who is also the attorney for adult film actress Stormy Daniels.
>
> "I cannot specifically say that he was one of the ones who assaulted me," Swetnick acknowledged.

She's now been referred to the FBI for a criminal investigation:

> Senate Judiciary Committee Chairman Chuck Grassley today referred Julie Swetnick and her attorney Michael Avenatti to the Justice Department for criminal investigation relating to a potential conspiracy to provide materially false statements to Congress and obstruct a congressional committee investigation, three separate crimes, in the course of considering Justice Brett M. Kavanaugh's nomination to the Supreme Court of the United States.

Swetnick's allegation was seized upon by Democrat politicians and activists as a "credible" accusation. She couldn't be lying, because she had such a great career. She

was respected – she had so many security clearances. The mainstream media told us how respected and emotionally stable she was. Feinstein presented the accusation in the Senate hearing, asking Kavanaugh if he was guilty of being a gang rapist. It later emerged that Swetnick preferred method of having sex was with multiple men at the same time.

Who benefits from a false rape accusation?

During the hearing, Democrat senators told the Kavanaugh accusers who had contacted them (?) things like "You had absolutely nothing to gain" by making these accusations. Is that true?

This LifeZette article reports:

> Ford has raked in an estimated $1 million from crowdfunding campaigns supporting her and several book deals, RealClearInvestigations reported.
>
> "You had absolutely nothing to gain by bringing these facts to the Senate Judiciary Committee," Sen. Dick Durbin (D-Ill.) memorably said during Ford's September testimony, as Breitbart noted.
>
> "I want to thank you," Sen. Kamala Harris (D-Calif.) also said during the September hearing. "Because you clearly have nothing to gain for what you have done."
>
> […]Ford has also reached hero status in Palo Alto, California, her home town.
>
> Mayor Liz Kniss, a Democrat, announced this month that she planned to honor Ford in a public ceremony at a Palo Alto City Council meeting.

What about Kavanaugh, did he get to keep the money raised for him, and will he get book deals from liberal publishers?

> While Kavanaugh reportedly has turned down hundreds of thousands of dollars raised for him and his family through a GoFundMe campaign,Dr. Christine Blasey Ford, has raked in a million bucks — and several book deal offers.
>
> Kavanaugh declined over $600,000 in small donations that had been collected during his confirmation hearings, Yahoo reported, as he endured divisive and bitter rhetoric nationally over his nomination, public protests, and multiple unfounded accusations regarding sexual assault.

If the Democrats take control the Senate on Tuesday, we can expect that all of Trump's future Supreme Court picks will face a similar horde of false rape accusations. The difference will be that the Senate committee, which will be run by Democrats, won't be investigating the accusers' claims, and they won't be referring them to the FBI for criminal investigations if they're caught lying. It will just be the accusers, their Democrat allies in the Senate, and the lapdog liberal media, against Kethledge or Barrett or whoever the nominee happens to be.

Facts vs feelings in the debate on gun control vs self-defense

November 4, 2018 | by Wintery Knight | Link | Original Link

I found a splendid at the Daily Signal article that ought to be read by everyone who has an opinion about the conflict between gun confiscation vs self-defense.

Here are the 8 points made in the article, then I'll comment on my favorite one:

> 1. Violent crime is down and has been on the decline for decades.
> 2. The principal public safety concerns with respect to guns are suicides and illegally owned handguns, not mass shootings.
> 3. A small number of factors significantly increase the likelihood that a person will be a victim of a gun-related homicide.
> 4. Gun-related murders are carried out by a predictable pool of people.
> 5. Higher rates of gun ownership are not associated with higher rates of violent crime.
> 6. There is no clear relationship between strict gun control legislation and homicide or violent crime rates.
> 7. Legally owned firearms are used for lawful purposes much more often than they are used to commit crimes or suicide.
> 8. Concealed carry permit holders are not the problem, but they may be part of the solution.

Whenever we discuss gun violence, it's very important to exclude suicides using a gun from the overall rate of gun deaths. Once you do that, you will find that the rate of violent crime has been declining as more and more law-abiding Americans have gone through the process to purchase a firearm for self-defense.

Let's talk about the gun homicide rate and how the steady increase in firearm ownership has affected that. When you look at the graph below, keep in mind that two thirds of the homicide are *suicides committed with a firearm.*

Here is a graph:

Gun ownership up, gun violence down

The question I want to address is this: why would someone want to own a gun in the first place?

Here are the points from the list of eight points that are relevant to that question:

> **Higher rates of gun ownership are not associated with higher rates of violent crime.**
>
> - Switzerland and Israel have much higher gun ownership rates than the United States but experience far fewer homicides and have much lower violent crime rates than many European nations with strict gun control laws.
> - Higher rates of concealed carry permit holders are even more strongly associated with reduction in violent crime than are “right-to-carry” states. The probable reason for this is that “right-to-carry” studies often include “open carry” states, which have not been shown to correlate with more people actually carrying or even owning firearms. Rates of concealed carry permit holders are better indicators of the number of people who actually possess and carry firearms within a given population.
>
> **There is no clear relationship between strict gun control legislation and homicide or violent crime rates.**
>
> - Homicide and firearm homicide rates in Great Britain spiked in the years immediately following the imposition of severe gun control measures, despite the fact that most developed countries continued to experience a downward trend in these rates. This is also pointed out by noted criminologist John Lott in his book “The War on Guns.”
> - Similarly, Ireland’s homicide rates spiked in the years immediately following the country’s 1972 gun confiscation legislation.
> - Australia’s National Firearms Act appears to have had little effect on suicide and homicide rates, which were falling before the law was enacted and

continued to decline at a statistically unremarkable rate compared to worldwide trends.
- According to research compiled by John Lott and highlighted in his book "The War on Guns," Australia's armed and unarmed robbery rates both increased markedly in the five years immediately following the National Firearms Act, despite the general downward trend experienced by other developed countries.
- Great Britain has some of the strictest gun control laws in the developed world, but the violent crime rate for homicide, rape, burglary, and aggravated assault is much higher than that in the U.S. Further, approximately 60 percent of burglaries in Great Britain occur while residents are home, compared to just 13 percent in the U.S., and British burglars admit to targeting occupied residences because they are more likely to find wallets and purses.
- It is difficult to compare homicide and firearm-related murder rates across international borders because countries use different methods to determine which deaths "count" for purposes of violent crime. For example, since 1967, Great Britain has excluded from its homicide counts any case that does not result in a conviction, that was the result of dangerous driving, or in which the person was determined to have acted in self-defense. All of these factors are counted as "homicides" in the United States.

Legally owned firearms are used for lawful purposes much more often than they are used to commit crimes or suicide.

- In 2013, President Barack Obama ordered the Centers for Disease Control and Prevention (CDC) to assess existing research on gun violence. The report, compiled by the Institute of Medicine and the National Research Council, found (among other things) that firearms are used defensively hundreds of thousands of times every year.
- According to the CDC, "self-defense can be an important crime deterrent." Recent CDC reports acknowledge that studies directly assessing the effect of actual defensive uses of guns have found "consistently lower injury rates among gun-using crime victims compared with victims who used other self-protective strategies."
- Semi-automatic rifles (such as the AR-15) are commonly used as self-defense weapons in the homes of law-abiding citizens because they are easier to control than handguns, are more versatile than handguns, and offer the advantage of up to 30 rounds of protection. Even Vox has published stories defending the use of the AR-15.
- AR-15s have been used to save lives on many occasions [list omitted by WK]

Concealed carry permit holders are not the problem, but they may be

> **part of the solution.**
>
> - Noted criminologist John Lott found that, as a group, concealed carry permit holders are some of the most law-abiding people in the United States. The rate at which they commit crimes generally and firearm crimes specifically is between one-sixth and one-tenth of that recorded for police officers, who are themselves committing crimes at a fraction of the rate of the general population.
> - Between 2007 and 2015, murder rates dropped 16 percent and violent crime rates dropped 18 percent, even though the percentage of adults with concealed carry permits rose by 190 percent.
> - Regression estimates show a significant association between increased permit ownership and a drop in murder and violent crime rates. Each percentage point increase in rates of permit-holding is associated with a roughly 2.5 percent drop in the murder rate.
> - Concealed carry permit holders are often “the good guy with a gun,” even though they rarely receive the attention of the national media. Concealed carry permit holders were credited with saving multiple lives [list omitted by WK]

So, I think that those points provide a very necessary balance for the “ban guns” crowd. Gun ownership is a vital part of a free citizen’s right to self-defense. People who want to discuss gun confiscation vs self-defense need to be aware of the way guns are really used by law-abiding people to protect themselves and their families.

Who is better on health care? Republicans (Ted Cruz) or Democrats (Bernie Sanders)?

November 4, 2018 | by Wintery Knight | Link | Original Link

I noticed that the Democrats are trying to focus on health care in the 2018 mid-terms, so I thought I would re-post a debate on health care between Ted Cruz and Bernie Sanders. I think debates are always a good idea, because you have to listen to both sides. If you can't watch the full debate, there's a good article summarizing the main points further down.

Here is the full video:

It's 90 minutes long. No commercials. This was basically a debate of similar substance to the William Lane Craig debates, where actual economic evidence was *continuously produced* in order to show who was telling the truth, and who was just trying to be popular by saying what people who are uneducated at economics want to hear. In short: there was a clear winner and loser in this debate, and it was clear all the way through, and was reinforced over and over every time evidence was produced. The person producing the evidence would turn his back on the camera, and return to his podium to get the evidence. That person won the debate by being grounded in reality.

Also, the questions were excellent, especially from the small business owners who were impacted by Obamacare. The moderators were biased towards Sanders, but not excessively.

For those who cannot watch, there is an article at the Daily Signal.

Full text:

> In a prime-time debate on CNN this week, Sens. Bernie Sanders, I-Vt., and Ted Cruz, R-Texas, discussed "The Future of Obamacare" in America. Cruz, a leading critic of the law, used the moment to outline the law's failures.
>
> Here are four things Cruz said about Obamacare:
>
> 1) "Now, nobody thinks we're done once Obamacare is repealed. Once Obamacare is repealed, we need commonsense reform that increases competition, that empowers patients, that gives you more choices, that puts you in charge of your health care, rather than empowering government bureaucrats to get in the way. And these have been commonsense ideas."
>
> 2) "Indeed, I don't know if the cameras can see this, but in 70 percent of the counties in America, on Obamacare exchanges, you have a choice of one or two health insurance plans, that's it … It's interesting. You look at this map, this also very much looks like the electoral map that elected Donald Trump. It's really quite striking that the communities that have been hammered by this disaster of a law said enough already."
>
> During one of the more powerful moments in the debate, Cruz held up aHeritage

> Foundation chart showing viewers how many counties in the U.S. have access to only one or two insurers under Obamacare. Additionally, only 11 percent of counties have access to four or more insurance providers.
>
> 3) “Whenever you put government in charge of health care, what it means is they ration. They decide you get care and you don’t. I don’t think the government has any business telling you you’re not entitled to receive health care.”
>
> The U.S. should not envy other health care systems, especially Canada and the United Kingdom, Cruz said. He referred to a governor from Canada who came to the U.S. specifically to have heart surgery.
>
> 4) “That’s why I think the answer is not more of Obamacare, more government control, more of what got us in this mess. Rather, the answer is empower you. Give you choices. Lower prices. Lower premiums. Lower deductibles. Empower you and put you back in charge of your health care.”
>
> Obamacare is burdening Americans. The average deductible for a family on a bronze plan is $12,393, according to a HealthPocket analysis. According to aneHealth report, the average nationwide premium increase for individuals is 99 percent and 140 percent for families from 2013-2017.

I really recommend you watch this debate, because it these things were done on a weekly or monthly basis, then people would be able to think critically about what they are presented with from the mainstream media, Hollywood elites and liberal academics.

Why should an independent voter vote Republican in the mid-terms?

November 5, 2018 | by Wintery Knight | Link | Original Link

After Trump tax cuts, real GDP growth far exceeds Obama years

I have a friend in Canada who asks me about American politics. For some reason, the first things out of my mouth are always the latest scandals about Democrats. I am just getting started when she says "no, no, no… don't tell me why I shouldn't vote Democrat. Tell me why I should vote Republican." Well, there are three good reasons to vote Republican. Job creation, law and order, national security.

Let's look at the first one. The latest economic numbers came in last week, and they were very good for the country, and for the Republicans.

The Washington Post reported on the numbers:

> Hiring surged and wages grew more than they have in almost a decade, the government said Friday in a report seized on by Republicans just before the midterm elections as evidence their policies are delivering for American workers.
>
> In a key economic snapshot before Tuesday's vote, the Labor Department's monthly jobs report showed that the typical worker's earnings rose by 3.1 percent in the past year — the biggest such leap since 2009.
>
> Federal economists reported 250,000 new jobs in October, the 97th straight month of gains, and the unemployment rate remained at a nearly half-century low of 3.7 percent, underlining the strong fundamentals of the economy, despite stock market jitters.
>
> […]The strong jobs creation last month defied expectations, even by Trump's top economist, Kevin Hassett, who said he had been bracing for a dip in hiring after Hurricane Michael pummeled the Florida panhandle and Georgia.
>
> "We were expecting a number way below this, so it was a big surprise," Hassett said. "We've got extraordinary job growth even in the face of literal head winds from a hurricane."
>
> […]Every major sector added employees, including manufacturing, where there

> has been evidence that the tariffs are starting to bite. Hispanic unemployment hit a new low of 4.4 percent.
>
> "This is the best labor environment in over a decade," said Joseph Brusuelas, chief economist at RSM U.S., an international consulting firm.
>
> African American unemployment, at 6.2 percent, is close to an all-time low, although it still remains nearly double the white unemployment rate.

Investors Business Daily, a national newspaper focused on the stock market, recalls what things were like during 8 years of socialism under Barack Obama:

> During the Obama years, labor force growth slowed to well below 1% a year, while productivity grew at just 1%. Wage growth was exceedingly slow. These alone explain why the economy never managed 3% growth in any year during Obama's time in office.
>
> "Under President Obama, the growth in the labor force … slowed dramatically to less than half the rate of the previous four presidencies," as Real Clear Markets described the Obama record in early 2017, as his second term ended. "The labor-force participation rate has dropped to its lowest level in decades, 62.8% compared to a peak of 67.1% in the late 1990s."
>
> Why did this happen? High taxes, excessive regulation, ObamaCare, Dodd-Frank, wasteful "stimulus," and a host of other misbegotten policies that sped up departures from the labor force and curbed business investment.
>
> The declining labor participation rate, in particular, hurt. Labor force growth during the Obama era was a meager 0.4% a year. At the same time, productivity grew less than 1% a year. Meanwhile, as the New York Times recently admitted, an "invisible" recession in business investment hit the economy in 2014 and lasted until 2016.

But what changed? What did Trump do differently?

> […][A]t the same time the wage data came out, another equally telling report emerged: Productivity. It showed that productivity grew 2.2% in the third quarter, after jumping 3% in the second quarter. That was the fastest burst of productivity growth in four years.
>
> By comparison, since World War II, productivity has grown by an average of about 2% a year. It was why the American economy performed so well during that time. But since the end of the Internet boom in 2000, productivity has slowed to about 1% or so.
>
> […]Productivity typically begins rising when businesses invest in new equipment and training for their workers, in pursuit of new products, new markets, new innovations. Productivity, as the cliche goes, is the secret sauce of all successful economies.
>
> And productivity is the real reason why workers are getting wage hikes. Trained

> workers are worth more in our new, fast-growth economy.
>
> But beyond even that, as economists will tell you, the rate of growth of productivity, the rate of growth of business investment and the rate of growth of your labor force essentially define the speed limit of your economy. All three are rising right now.

Trump's plan was to cut the corporate tax rate, cut individual tax rates, cut small business tax rates, and de-regulate the economy. That worked. Workers learned more, earned more, and kept more of what they earned. Trump bet everything on America's risk-taking entrepreneurs, and he won. Bigly.

What would Democrats do if they win the House on Tuesday (which is likely)? They want to make workers more expensive to hire, by raising the minimum wage. Their plan is to take money away from job creators, in order to bribe young, low-information voters to vote Democrat.

Investors Business Daily explains:

> In California, New York, and other states where the $15 minimum wage has been adopted, we've seen dozens of businesses — many of them small businesses — close because a wage hike is simply unaffordable. Others have raised their prices or laid off employees to cope with the higher wage floor. Take Reaching Beyond Care, a child-care provider in Oakland, which was converted to a part-time after-school program. Or consider Long Island's Tropical Smoothie Cafe, which "now schedules one less person per hour and expects employees to work faster."
>
> We're talking jobs, jobs, and more lost jobs. In California, a $15 minimum wage is expected to cost the state as many as 400,000 jobs. It's a similar story in cities like Seattle, and Flagstaff, Ariz. Are unemployed workers truly better off when hourly wages increase?

Independent voters tend to be more practical and numbers-driven than members of either party. Their demand? Show us the money. Well, we had lots of time to observe how the policies of Democrats worked under Obama, and where the Democrats in Democrat-run cities want to take us. And we also know what works, because Trump has done it for all to see. If you want to have job security, more productivity, higher wages, and keep more of what you earn, then vote Republican. Vote for what works. Not for what feels good.

Trump re-imposes sanctions on Iran, leading sponsor of Islamic terrorism

November 5, 2018 | by Wintery Knight | Link | Original Link

Obama stopped all sanctions on Iran, and gave them $1.7 billion, putting Israel at risk
Which mistake was Obama's worst? Was it causing people to lose their doctors? Was it raising their health care premiums by thousands? Doubling the national debt from 10 to 20 trillion dollars? Those mistakes can all be reversed. But what about Iran, the largest sponsor of terrorism in the world? Obama ended sanctions on Iran, and sent them $1.7 billion to help them to develop nuclear weapons. How do you reverse that?

Well, that's hard to fix.You might be curious about what Iran is doing with all that money. Well, they are involved in fighting the West in various places like Syria and Yemen, and they also sponsor terrorist groups like Hamas and Hezbollah.

Here's an example of some of their recent work, as reported by the radically leftist Washington Post:

> Denmark is leading a push for new E.U. sanctions against Iran, after its intelligence agencies blamed Tehran for a foiled plot to assassinate an Iranian dissident on Danish soil. The plot was already uncovered in September and triggered a massive police operation, in which Denmark shut down streets and bridges nationwide.
>
> Agencies revealed only this week that the operation probably had prevented what they say was a plan to kill a member of the Arab separatist movement ASMLA, which advocates for carving out an independent Arab state from Iran. A suspect of Iranian origin was arrested two weeks ago.

Recall that Obama had to shut down an investigation of Iran's involvement with drug smuggling in order to get his deal passed.

It came out recently that Obama was so desperate to give the Iranian regime this money, that he actually stopped an investigation into drug-smuggling by Iran's terrorist ally, Hezbollah.

The Stream reports on the story:

> President Barack Obama torpedoed a DEA-led effort to stop Hezbollah from smuggling cocaine into the country. POLITICO broke the bombshell news Sunday night. The reason for allowing the Iran-backed terror group's criminal enterprise to continue? Obama's desperate desire for better relations and a nuclear deal with Iran.
>
> The DEA teamed with dozens of agencies here and abroad in 2008 after discovering Hezbollah had grown beyond Middle East politics and thuggery into international crime. The special task force was called Project Cassandra. For eight years Project Cassandra worked to unravel Hezbollah's drug and weapons trafficking, money laundering and other criminal activities.
>
> […]Project Cassandra traced the crime syndicate to "the innermost circle of Hezbollah and its state sponsors in Iran."

What should Trump do to roll back the damage that Obama did?

Well, Trump already started by withdrawing from Obama's Iran deal, but he can't get back that $1.7 billion. That money is gone. But there is something else he can do… he can restore the sanctions against Iran that Obama lifted.

Here is the latest news about the Trump administration, reported by the NY Post:

> Secretary of State Mike Pompeo argued that the new Iran sanctions – going into effect one day before the U.S. midterm elections – are tough enough to keep the Islamic Republic from pursuing a nuclear weapon.
>
> "No one is going to argue that Secretary Pompeo isn't hard on Iran and no one is going to argue that President Trump isn't doing the same," Pompeo told Chris Wallace on "Fox News Sunday."
>
> […]"The Iranian banks that engage in sanctionable behavior will be sanctioned by the Department of Treasury, period, full stop."
>
> […]On "Face the Nation" Pompeo confirmed that "European countries will not be permitted to do business with both the United States and with Iran."
>
> […]The Trump administration is reimposing a second round of sanctions against Iran on Monday after the president withdrew in May from the Iran nuclear deal, which was brokered by former President Obama.

This all sounds good to me – at least America is leading from the front and battling against evil, using a mix of diplomacy, sanctions and military preparedness. Iran

understands strength, and they'll be much less likely to pursue terrorism, drug smuggling and assassinations now. It really does matter who is in charge. People who care about the harm that evil nations cause should vote for Republicans, so that evil nations are deterred instead of emboldened.

Today, your vote will make a difference in these 14 close Senate races

November 6, 2018 | by Wintery Knight | Link | Original Link

Leans Dem	Toss Up	Leans GOP
MI: Stabenow (D)	AZ: Open (R)	TN: Open (R)
MN2: Smith (D)	FL: Nelson (D)	TX: Cruz (R)
NJ: Menendez (D)	IN: Donnelly (D)	
WI: Baldwin (D)	MO: McCaskill (D)	
OH: Brown (D)	MT: Tester (D)	
	NV: Heller (R)	
	WV: Manchin (D)	

Toss-up Senate races to be decided on Tuesday (Source: RCP)
I think it's almost beyond dispute that the Republicans will lose the House of Representatives on Tuesday, but the Senate is still in the balance. Above is a list of the toss-up Senate races. If you are in one of these states then you really need to vote today.

Republican candidates (by state)

- **Arizona**: Martha McSally
- **Florida**: Rick Scott
- **Indiana**: Mike Braun
- **Michigan**: John James
- **Minnesota**: Karin Housley
- **Missouri**: Josh Hawley
- **Montana**: Matt Rosendale
- **Nevada**: Dean Heller
- **New Jersey**: Bob Hugin
- **Ohio**: Jim Renacci
- **Tennessee**: Marsha Blackburn
- **Texas**: Ted Cruz
- **West Virginia**: Patrick Morrissey
- **Wisconsin**: Leah Vukmir

When I look over this list, the names that really stand out to me are Ted Cruz and Marsha Blackburn – two conservatives with proven records on pretty much everything I care about. But there are also some interesting new candidates, especially John James. He's in a tight race against Debbie Stabenow, a career politician.

John James is an Apache helicopter pilot and business owner

Fox News talked about him a bit in an article about the 5 of the races where the underdog has a chance at defeating the entrenched incumbent:

> Ahead of Election Day, Republican John James gained steam in his quest to unseat longtime incumbent Sen. Debbie Stabenow. The Michigan Democrat has held her seat since 2001 and led James by double digits last month — but recent polling reflects a tightening race.
>
> Both an EPIC-MRA poll and a Mitchell Research & Communications poll from late October showed Stabenow in the lead by just 7 points. An Emerson poll had her up by 9 points. In comparison, an EPIC-MRA poll had Stabenow ahead by 23 points in September.
>
> "John James is giving 43-year politician Debbie Stabenow the fight of her political life, and there's zero question she'll be running scared these final days," Tori Sachs, James' campaign manager, told Fox News in a statement.
>
> Jake Davison, the editor of Inside Michigan Politics, told Fox News that James, an Army veteran, is "an absolute star" who has "the base really fired up."
>
> James has been endorsed by President Trump and multiple people in his administration have hit the campaign trail for the Republican candidate. The Ending Spending Action Fund super PAC, funded by GOP mega-donors, also launched a $1 million advertising campaign buy for James ahead of the election as strategists told Politico the race is closer than some may expect.
>
> Fox News has ranked the race as likely Democrat.

If you're in Michigan, you really need to make an effort to get this man elected on Tuesday. We rarely get rock star candidates like this, and we need to pull out all the stops to send him to the Senate.

Surprisingly, James isn't the only pilot we're running – we also have former squadron

leader Martha McSally, who flew the A-10 Thunderbolt in combat. She's running for Senate in Arizona. Her race is currently a toss-up, because her radically leftist opponent is pretending to be a Republican in spite of her hard-left record.

Patrick Morissey in West Virginia is also seeing a late surge against Joe Manchin, who voted against de-funding Planned Parenthood.

Why should you vote Republican?

Famous conservative Ben Shapiro, an orthodox Jew, listed 10 reasons why people should vote conservative, for Real Clear Politics.

His list:

1. The Courts
2. The Investigations
3. Impeachment
4. The Economy
5. Foreign Policy
6. Polarizing Culture Wars
7. Attacks on Religious Liberty
8. The Twisting Of Social Media
9. The Democrat-Media Complex
10. Mob Rule

The ones I care the most about are the courts and religious liberty. I do not want to be compelled by leftists (whose salaries I pay with my taxes) to act as if I am a secular leftist. I am not a secular leftist, and I want to be able to work and save without having to *act like* a secular leftist.

Let's look at some of his points:

> 6. Polarizing Culture Wars. We've already seen the Democrats suggest that mob politics is the new normal. We've seen the Democrats capitalize on racial issues to polarize the country; we've seen them try to divide Americans by class and sex as well. With the platform of Congress, look for Democrats to attempt a series of divisive maneuvers intended to relaunch the culture wars in new and frightening ways.
>
> 8. The Twisting Of Social Media. Democrats have made a habit of threatening our biggest social media companies with investigations and regulations should they fail to crack down on conservative perspectives. Democrats, angry at Hillary Clinton's 2016 loss, blamed companies like Facebook for so-called "fake news," and attributed Clinton's utter incompetence to the impact of Russian bots. Democrats don't believe any of that, but they've frightened social media companies into cracking down on free speech, as a leaked report from Google to Breitbart News showed this week. Social media companies are deeply afraid of

> Democrats punishing them for failing to target conservatives. Don't be surprised if those social media companies escalate their efforts to do just that.
>
> 9. Radical Growth of the Democrat-Media Complex. We already know that the mainstream media institutions are dominated by Democratic supporters. And we know that those Democratic supporters will parrot any talking points the Democratic Party pushes. But with Democrats in power pushing every line of attack simultaneously, the media's never-ending firehose of anti-Republican propaganda will merely widen the nozzle. If you're worried about media bias now, wait until Democrats control the Congress and put President Trump in their sights.
>
> 10. Mob Rule. Democrats believe that they must lash out in anger in order to win in 2018. If they do win, they'll double down on that anger, hoping it carries them to victory in 2020. Like the mobs invading the Senate and the steps of the Supreme Court? Enjoying top Democratic officials nodding and smiling at crowds harassing Republicans in restaurants? Get ready for much, much more. The only way to shut down the Democrats' new mob rule strategy is to stop them cold at the ballot box.

Think about the way that things have been going in the culture. The secular left owns the public schools, higher education, Hollywood, hedge funds, the mainstream media, big government, the courts… they occupy all of the commanding heights of culture. If you think that they won't use that power to coerce you, you're mistaken. And you only have to look at what happens to Christians and conservatives in Europe, Canada and other countries where the left rules. Be sure that you take time to vote today, and share something on your wall to encourage everyone you know to vote as well.

Is asking “Am I going to Hell?” a good rebuttal to scientific arguments for theism?

A conflict of worldviews

I want to use this woman’s story to show how sensible atheists reach a belief in God.

Excerpt:

> I don’t know when I first became a skeptic. It must have been around age 4, when my mother found me arguing with another child at a birthday party: “But how do you know what the Bible says is true?” By age 11, my atheism was so widely known in my middle school that a Christian boy threatened to come to my house and “shoot all the atheists.” My Christian friends in high school avoided talking to me about religion because they anticipated that I would tear down their poorly constructed arguments. And I did.
>
> As I set off in 2008 to begin my freshman year studying government at Harvard (whose motto is *Veritas*, “Truth”), I could never have expected the change that awaited me.
>
> It was a brisk November when I met John Joseph Porter. Our conversations initially revolved around conservative politics, but soon gravitated toward religion. He wrote an essay for the *Ichthus*, Harvard’s Christian journal, defending God’s existence. I critiqued it. On campus, we’d argue into the wee hours; when apart, we’d take our arguments to e-mail. Never before had I met a Christian who could respond to my most basic philosophical questions: How does one understand the Bible’s contradictions? Could an omnipotent God make a stone he could not lift? What about the Euthyphro dilemma: Is something good because God declared it so, or does God merely identify the good? To someone like me, with no Christian background, resorting to an answer like “It takes faith” could

> only be intellectual cowardice. Joseph didn't do that.
>
> And he did something else: He prodded me on how inconsistent I was as an atheist who nonetheless believed in right and wrong as objective, universal categories. Defenseless, I decided to take a seminar on meta-ethics. After all, atheists had been developing ethical systems for 200-some years. In what I now see as providential, my atheist professor assigned a paper by C. S. Lewis that resolved the Euthyphro dilemma, declaring, "God is not merely good, but goodness; goodness is not merely divine, but God."
>
> Joseph also pushed me on the origins of the universe. I had always believed in the Big Bang. But I was blissfully unaware that the man who first proposed it, Georges Lemaître, was a Catholic priest. And I'd happily ignored the rabbit trail of a problem of what *caused* the Big Bang, and what *caused* that cause, and so on.
>
> By Valentine's Day, I began to believe in God. There was no intellectual shame in being a deist, after all, as I joined the respectable ranks of Thomas Jefferson and other Founding Fathers.
>
> I wouldn't stay a deist for long. A Catholic friend gave me J. Budziszewski's book Ask Me Anything, which included the Christian teaching that "love is a commitment of the will to the true good of the other person." This theme—of love as sacrifice for true good—struck me. The Cross no longer seemed a grotesque symbol of divine sadism, but a remarkable act of love. And Christianity began to look less strangely mythical and more cosmically beautiful.

So, I want to point out the progression of her beliefs from atheist to deist to Christian. First, she listened to the scientific arguments for God's existence, which took her to deism, which is a variety of theism where God just creates the universe and then doesn't interfere with it after. Those arguments, the Big Bang and the cosmic fine-tuning, were enough for her to falsify atheism and prove some sort of theism. After that, she remained open to the evidence for Christian theism, and finally got there after looking at other evidence.

But this makes me think of how some of the atheists that I talk to do the exact opposite of what she did. I start off by explaining to them scientific evidence for a Creator and Designer. I explain the mainstream discoveries that confirm an origin of the universe (e.g. – light element abundance predictions and observations), and I cite specific examples of fine-tuning, (e.g. – the gravitational constant). I explain protein sequencing and folding, and calculate the probabilities of getting a protein by chance. I explain the sudden origin of the phyla in the Cambrian explosion, and show why naturalistic explanations fail. I talk about the fine-tuning needed to get galaxies, solar systems and planets to support life. But many of these atheists don't become deists like the honest atheist in the story. Why not?

Well, the reason why not is because they interrupt the stream of scientific evidence coming out of my mouth and they start to ask me questions that have nothing to do with what we can know through science. See, evangelism is like building a house. You have to

start with the foundation, the walls, the plumbing, the electricity, etc., but you can't know all the specific details about furniture and decorations at the beginning. But militant atheists don't care that you are able to establish the foundations of Christian theism – they want to jump right to the very fine-grained details, and use that to justify not not building anything at all. Just as you are proving all the main planks of a theistic worldview with science, they start asking "am I going to Hell?" and telling you "God is immoral for killing Canaanite children", etc. They want to stop the construction of the house by demanding that you build everything at once. But, it is much easier to accept miracles like the virgin birth if you have a God who created the universe first. The foundation comes first, it makes the later stuff easier to do.

So rather than adjust their worldview to the strong scientific evidence, and then leave the puzzling about Hell and Old Testament history for later, they want to refute the good scientific arguments with "Am I going to Hell?". How does complaining about Hell and unanswered prayer a response to *scientific evidence*? It's not! But I think that this does explain why atheists remain atheists in the face of all the scientific evidence against naturalism. They insulate their worldview from the progress of science by focusing on their emotional disappointment that they are not God and that God isn't doing what they want him to do. That's the real issue. Authority and autonomy. In my experience, they are usually not accountable to science, although there are, thank God, exceptions to that rule.

Stop telling women that God will give them husbands later if they delay marriage now

November 8, 2018 | by Wintery Knight | Link | Original Link

Man helping a woman with proper handgun marksmanship

Dalrock blogged a splendid post about people who claim that there is a shortage of "good men". He says that if there really were a shortage of good men, then people who want women to actually get married would be telling women not to delay marriage, but to instead get serious about marrying early, when their ability to attract husband candidates is at its peak.

Dalrock writes:

> We can see the same pattern in Dr. John Piper's recent post Why Are Women More Eager Missionaries?* Piper explains that missionary work has become a pink ghetto:
>
> …the actual situation among most evangelical faith missions is that between 80–85% of all single missionaries are women. It is a rare thing, like two out of every ten, for a single man to make missions his life's vocation, which results in the overall statistics being that one-third of those in evangelical world missions are married men, one-third are married women, and 80 percent of the last third are single women. Which means that something just less than two-thirds of the total missionary force are women.
>
> **Piper's main concern with the post however is not that there aren't enough single men doing missionary work, but that women who choose this field aren't marrying as they would like. Piper complains that the problem for husband hunting missionary women is really an exacerbated version of the same problem all Christian women have, and that is an overall lack of marriageable Christian men…**

I'll save you the quotation of Piper, but his reason why missionary women struggle to find husbands is – SHOCK! – that Christian men refuse to man up. I.e – Piper believes that women can't find husbands because men are not ready and willing to marry.

More:

> **But if Piper actually believed… that there was a severe shortage of husband material men, he would focus his attention on helping the women reading navigate this incredibly difficult situation. Overseas mission work may feel empowering for young women, but (according to Piper) single women going into the mission field are greatly handicapping their prospects in an already bleak field. His advice to young women would be to choose which was truly more important to them, being a missionary or finding a husband.**

If Piper really believed that there were a shortage of marriage-minded, marriage-capable Christian men, then Piper would be counseling women who *genuinely* want to marry to make marriage a priority when they are younger, prettier and more fertile. Some women say that they want to get married "some day". But the hidden truth is often that they just want to delay marriage in order to have fun and thrills, until they get tired of it. And then they just expect a suitable man to show up right when they need one. But do men want to marry a 35-year-old woman when they are 40 as much as they want to marry a 23-year-old woman when they are 25?

More Dalrock:

> Piper even tells a story which would be a perfect way to teach this lesson. He describes a single woman named Gladys Aylward who went to a place where she found no marriageable men, and then blamed single men for not following her and proposing marriage:
>
> "Miss Aylward talked to the Lord about her singleness. She was a no-nonsense woman in very direct and straightforward ways and she asked God to call a man from England, send him straight out to China, straight to where she was, and have him propose to me." I can't forget the next line. Elisabeth Elliot said, "With a look of even deeper intensity, she shook her little bony finger in my face and said, 'Elisabeth, I believe God answers prayer. And he called him.'" And here there was a brief pause of intense whisper. She said, "'He called him, and he never came.'"
>
> Now, that experience, I would guess, is not unique to Gladys Aylward.
>
> **If Piper really believed that Christian husbands were scarce, he would be sharing this anecdote to warn young women of the foolishness of moving away from the pool of men they hope to choose a husband from and then expecting God to send the man of their choosing across the world to propose. If we were in a culture of scarcity of good men, this would be the *obvious* lesson from this story. But we live in an age with**

> **unshakable confidence that good men are not only available all around us, but will always be abundant. If Piper believed that the husband Miss Aylward was praying for was surrounded by real life English women eager to win him as a husband, this story wouldn't be complaining about why he didn't drop everything, fly to China, and propose to a woman he had never met. If Piper believed that the man was sought after as a husband in England, he would be pointing out the foolishness of Miss Aylward flying off to China and then wondering why a man she had never met didn't show up to propose once she decided she wanted to marry.**

Miss Aylward either needed to accept that being a missionary in a secular country meant not marrying, or she needed to focus on marriage first when she was attractive to men as a life partner. Many women are propositioned for sex after they hit their mid-30s, but few of them are asked to marry. This is because men need women more when they are just starting out in their careers than when they are established in their careers.

Many women have no appreciation of how investing in a husband early causes him to be loyal to her when she is older. Women think that a husband will show up when she is ready, and be loyal to her even though she was absent during the hardships of the first decade of his career. A woman can do a lot of good for a man when he is starting out in his career and trying to save money for a house. But when those years have passed, the man's ability to work and save have been largely set – without anyone's help. If he went through those years single, then he typically will have earned less and saved less than a married man, because he did it without a wife's support. Men do better in their careers and finances when they have a wife's support. Especially in the early career, which is more stressful because of the lack of work experience. If a woman wants a man to be faithful and loyal, then she needs to choose a man who needs her, and invest in him using her youth and beauty to support him during his critical 20s and early 30s. Men respond to support during the critical years with lifelong fidelity and loyalty.

By the way, for an explanation of why men prefer not to be missionaries, read this post on Deeper Strength blog.

A Harvard University student explains how evidence changed her mind about God

November 9, 2018 | by Wintery Knight | Link | Original Link

Harvard University student discovers apologetics

Here's a must-read article about the effectiveness of apologetics on college campuses in Christianity Today.

Excerpt:

> I don't know when I first became a skeptic. It must have been around age 4, when my mother found me arguing with another child at a birthday party: "But how do you know what the Bible says is true?" By age 11, my atheism was so widely known in my middle school that a Christian boy threatened to come to my house and "shoot all the atheists." My Christian friends in high school avoided talking to me about religion because they anticipated that I would tear down their poorly constructed arguments. And I did.
>
> As I set off in 2008 to begin my freshman year studying government at Harvard (whose motto is *Veritas*, "Truth"), I could never have expected the change that awaited me.
>
> It was a brisk November when I met John Joseph Porter. Our conversations initially revolved around conservative politics, but soon gravitated toward religion. He wrote an essay for the *Ichthus*, Harvard's Christian journal, defending God's existence. I critiqued it. On campus, we'd argue into the wee hours; when apart, we'd take our arguments to e-mail. Never before had I met a Christian who could respond to my most basic philosophical questions: How does one

> understand the Bible's contradictions? Could an omnipotent God make a stone he could not lift? What about the Euthyphro dilemma: Is something good because God declared it so, or does God merely identify the good? To someone like me, with no Christian background, resorting to an answer like "It takes faith" could only be intellectual cowardice. Joseph didn't do that.
>
> And he did something else: He prodded me on how inconsistent I was as an atheist who nonetheless believed in right and wrong as objective, universal categories. Defenseless, I decided to take a seminar on meta-ethics. After all, atheists had been developing ethical systems for 200-some years. In what I now see as providential, my atheist professor assigned a paper by C. S. Lewis that resolved the Euthyphro dilemma, declaring, "God is not merely good, but goodness; goodness is not merely divine, but God."
>
> Joseph also pushed me on the origins of the universe. I had always believed in the Big Bang. But I was blissfully unaware that the man who first proposed it, Georges Lemaître, was a Catholic priest. And I'd happily ignored the rabbit trail of a problem of what *caused* the Big Bang, and what *caused* that cause, and so on.
>
> By Valentine's Day, I began to believe in God. There was no intellectual shame in being a deist, after all, as I joined the respectable ranks of Thomas Jefferson and other Founding Fathers.
>
> I wouldn't stay a deist for long. A Catholic friend gave me J. Budziszewski's book Ask Me Anything, which included the Christian teaching that "love is a commitment of the will to the true good of the other person." This theme—of love as sacrifice for true good—struck me. The Cross no longer seemed a grotesque symbol of divine sadism, but a remarkable act of love. And Christianity began to look less strangely mythical and more cosmically beautiful.

Now, I'm going to get into a lot of trouble for saying this, but I think that if you are a Christian and you are in a secular university, then you really need to have put in the effort to study the areas of science, history and philosophy that are relevant to the Christian faith. This is regardless of your personal abilities or field of study. We must all make an effort regardless of how comfortable we are with things that are hard for us to learn.

Granted, most people today are not interested in truth, because we just have this cultural preoccupation with having fun and feeling good and doing whatever we want to do whenever we want to do it. Most atheists I've met are like that, but some are more honest, open-minded, and they just have never encountered any good reasons or evidence to think that God exists and that Jesus is anything other than a man. There are a lot of atheists like that who are just waiting to hear some decent evidence. Our job is to prepare for them and then engage them, if they are willing to be engaged.

I think that definition of love she cited – self-sacrifice for the true good of another person – is important. I don't think that ordinary Christians like you or me spends time on apologetics because we "like" it. I know lots of Christians who are in tough, expensive

academic programs trying to get the skills they need to defend truth in areas that matter. They do this because they know that there are people out there who are interested in truth, and who are willing to re-prioritize their lives if the truth is made clear to them. We need to be willing to serve God by doing hard things that work.

Positive arguments for Christian theism

- The kalam cosmological argument and the Big Bang theory
- The fine-tuning argument from cosmological constants and quantities
- The origin of life, part 1 of 2: the building blocks of life
- The origin of life, part 2 of 2: biological information
- The sudden origin of phyla in the Cambrian explosion
- Galactic habitable zones and circumstellar habitable zones
- Irreducible complexity in molecular machines
- The creative limits of natural selection and random mutation
- Angus Menuge’s ontological argument from reason
- Alvin Plantinga’s epistemological argument from reason
- William Lane Craig’s moral argument
- The unexpected applicability of mathematics to nature
- Arguments and scientific evidence for non-physical minds

Jim Wallis debates Jay Richards on Christianity and economics

November 10, 2018 | by Wintery Knight | Link | Original Link

In this post, I have the video of a debate on the topic of what Christians should think about economics and economic policies. In addition to the video, I summarized the two opening speeches and the two rebuttals, for those who prefer to read rather than watch. We'll start with a short biography about each of the debaters.

The video recording:

The debaters

Jay Richards:

> Jay Richards, Ph.D., is a Senior Fellow of the Discovery Institute where he directs the Center on Wealth, Poverty and Morality, and is a Visiting Scholar at the Institute for Faith, Work & Economics. Most recently he is the co-author with James Robison of the best-selling *Indivisible: Restoring Faith, Family, and Freedom Before It's Too Late".*
>
> In addition to writing many academic articles, books, and popular essays on a wide variety of subjects, he recently edited the new award winning anthology, *God & Evolution: Protestants, Catholics and Jews Explore Darwin's Challenge to Faith* . His previous book was *Money, Greed, and God: Why Capitalism Is the Solution and Not the Problem* (HarperOne, May 2009), for which he received a Templeton Enterprise Award in 2010.
>
> […]In recent years, he has been a Contributing Editor of The American at the American Enterprise Institute, a Visiting Fellow at the Heritage Foundation, and a Research Fellow and Director of Acton Media at the Acton Institute. Richards has a B.A. with majors in Political Science and Religion, an M.Div. (Master of Divinity) and a Th.M. (Master of Theology), and a Ph.D. (with honors) in philosophy and theology from Princeton Theological Seminary.

Jim Wallis:

> Jim Wallis (born June 4, 1948) is a Christian writer and political activist. He is best known as the founder and editor of *Sojourners* magazine and as the founder of the Washington, D.C.-based Christian community of the same name. Wallis is well known for his advocacy on issues of peace and social justice. […]He works as a spiritual advisor to President Barack Obama.
>
> […]In 2010, Wallis admitted to accepting money for Sojourners from philanthropist George Soros after initially denying having done so. […]In 2011, Wallis acknowledged that Sojourners had received another $150,000.00 from Soros' Open Society Foundation.

Wallis just came out this month in favor of gay marriage. He is also a strong supporter of Barack Obama, who is radically pro-abortion. Some pro-lifers have argued that Barack Obama has the same views on abortion as Kermit Gosnell, because Obama voted twice to allow abortions on babies who were already born alive.

The format of the debate

- 20 minute opening speeches
- 10 minute rebuttals
- 10 minutes of discussion
- Q&A for the remainder

SUMMARY

I use italics below to denote my own observations.

Jim Wallis' opening speech:

My goal is to spark a national conversation on the "common good".

A story about my son who plays baseball.

The central goal of Christianity is to promote the "common good".

Quotes "Catholic social teaching" which values "human flourishing".

The "common good" is "human flourishing".

Is the purpose of Christianity is to make sure that everyone has enough material stuff or to preach the gospel?

When Christians go on mission trips, it's good that they focus on things like human trafficking.

Democrat John Lewis is the "conscience of the U.S. Congress".

John Lewis gets a 0% rating from the American Conservative Union in 2012.

John Lewis gets a 8% rating from the American Conservative Union in 2011.

John Lewis gets a 2.29% lifetime rating from the American Conservative Union.

Nothing is going well in Washington right now except comprehensive immigration reform.

Does he think that Christianity means giving 20-30 million illegal immigrants a path to citizenship, while skilled engineers cannot even get green cards, even though there is a shortage of them? Does he think that the other people in society who earn more than they receive from the government ought to be taxed more in order to provide more services and benefits to those who earn less than they take from the government?

Jay Richards' opening speech:

Two topics: 1) what is the common good? 2) what should Christians do to promote the common good?

Catholicism defines the "common good" as "Indeed, the common good embraces the sum of those conditions of the social life whereby men, families and associations more adequately and readily may attain their own perfection."

We have natural ends that we are supposed to be achieving and some places, like South Korea, are better for allowing that to happen.

The common good is broader and prior to any sort of political specification.

It's not the political good or what the state is supposed to do.

It's not about the communal good, as in Soviet Russia, where the communal good was above individual and familial good.

The common good is the social conditions that promote the things that we humans have in common as individuals and members of family.

The common good takes account of who we are as individuals and in associations with other individuals, e.g. – families.

Christians don't have to be doing the same things to promote the common good, e.g. – pastors, entrepreneurs, etc.

The church, as the church, has as its primary goal making disciples of all nations.

But even in that capacity, the church should be interested in more than just conversions and saving souls.

We also have to care about God's created reality including things like physics, education, etc.

How should Christians promote the common good in politics?

Question: when is coercion warranted?

In Romans 13, Paul says that the state does have power to coerce to achieve certain ends, like justice.

Most Christians think that there are some things where the state can use coercion, for example, to prevent/punish murder.

It is OK for the police to use coercive force to maintain public order and the rule of law.

But we need to ask whether other things are legitimate areas for the state to use coercive force.

We should only give the state power to coerce when there is no other way to achieve a goal.

We need to leverage the science of economics in order to know how to achieve the common good.

Jay Richards' main point in the debate

Henry Hazlitt: "The art of economics consists in looking not merely at the immediate but at the longer effects of any act or policy; it consists in tracing the consequences of that policy not merely for one group but for all groups."

For example, what happens if we raise the federal minimum wage to $50. What happens next for all groups? That's what we need to ask in order to know which policies achieve the common good.

When it comes to economics a lot of things have been tried in other places and times.

We can know what works and doesn't work by studying what was tried before and in other places.

Many things are counter-intuitive – things that sound good don't work, things that sound bad do work.

Principle: "We are our brother's keeper". Christians have an obligation to care for their neighbors.

We all agree on the goal. But how do we do things that will achieve that goal?

We have to distinguish aspirations from principles and prudential judgment.

Principle: We should provide for the material needs of the poor.

Prudence: Seeing the world as it is, and acting accordingly.

Example policies: which minimum wage is best? None? $10? $20?

We decide based on seeing how different economic policies achieve the goal of helping the poor.

Jim Wallis' first rebuttal:

Jesus commanded us to "care for the poor and help to end poverty".

Actually, Jesus thought that acknowledging him and giving him sacrificial worship was more important than giving money to the poor, see Matthew 26:6-13:

[6] While Jesus was in Bethany in the home of Simon the Leper,

[7] a woman came to him with an alabaster jar of very expensive perfume, which she poured on his head as he was reclining at the table.

[8] When the disciples saw this, they were indignant. "Why this waste?" they asked.

[9] "This perfume could have been sold at a high price and the money given to the poor."

[10] Aware of this, Jesus said to them, "Why are you bothering this woman? She has done a beautiful thing to me.

[11] The poor you will always have with you, but you will not always have me.

[12] When she poured this perfume on my body, she did it to prepare me for burial.

[13] Truly I tell you, wherever this gospel is preached throughout the world, what she has done will also be told, in memory of her."

It's not clear to me whether Jim Wallis thinks that preaching is more important than redistributing wealth to address material inequality.

I like what Jesus said in a TV series, even though it's not in the Bible when an actor playing Jesus said to "change the world".

Jesus never said to "change the world" in the Bible. Should we be concerned that he is quoting a TV actor playing Jesus instead of Jesus.

Here is a terrific story about Bill Bright.

I love Catholic social teaching.

Quote: "All are responsible for all".

I go to the World Economic Forum at Davos, Switzerland every year. I spoke once at 7 AM on the 4th floor.

It's a funny place for a Christian to be if they care about the poor – rubbing shoulders with leftist elites. He must have named a dozen high-profile people that he spoke with during the debate, as if he could win the debate by some sort of argument from name-dropping. He mentioned the Davos thing several times!

The greatest beneficiary of government actions to deal with the economic crisis was Wall Street banks.

I'm going to tell you a story about what a Washington lawyer says to Jesus.

I've had conversations with business leaders where I tell them to integrate moral truths.

I talk about the Good Samaritan parable.

Quote: "Do you love your undocumented neighbor?"

Quote: "Do you love your Muslim neighbor?"

Jay Richards' first rebuttal:

Who is responsible for your own children? Who knows the most about them?

Parents should have more discretion over their children because they have more knowledge about their child and what's best for them.

The Good Samaritan doesn't show that government should confiscate wealth through taxation and redistribute it.

The Good Samaritan emphasizes voluntarily charity to help people who are not necessarily your immediate neighbor.

Some of the things we do should be for the good of other people in other countries.

But then we are back to leveraging economics to know what policies are good for those other people in other countries.

The principle of subsidiarity: if a problem can be addressed by a lower level of society (family) then we shouldn't make higher levels (government) address it.

The best place to take care of children is within the family.

Only if the family fails should wider and wider spheres get involved.

Although we want to think of the common good in a global sense, we don't want to lose sight of the fact

The financial crisis: we need to integrate moral truths, but also economic truths.

We don't want to assume policies based on intuitions, we want to check our intuitions using economic principles.

Why did we have a financial crisis in mortgages, but not in commodities futures or technology, etc.?

Greed is a contributing factor in all areas of business.

Something more was going on in the mortgage markets than just greed.

There were specific policies that caused the mortgage lending crisis.

The root cause of the problem were "affordable housing policies" that lowered lending restrictions on low income people.

The policy ended up degrading the underwriting standards on loans.

Government intruded into the market and undermined the normal ways of

People were getting massive loans with no income, no jobs, no assets and no down payment.

The federal government created a market for risk loans by guaranteeing

There was a government imposed quota on mortgage lenders such that 50% of their loans had to be given to high-risk borrowers.

That is what led to the financial crisis. Not the free market, but intrusions into the free market.

These policies were well-meaning and implemented by people from both parties. But they had bad effects.

Marine Captain earned Medal of Honor fighting communists in North Korea

November 11, 2018 | by Wintery Knight | Link | Original Link

First, let's go from the top down to set the context for the profile of William E. Barber.

Map of the Korean War

In the summer of 1950, North Korean communists launch a completely unprovoked attack across the 38th parallel against their peaceful, democratic neighbors, the South Koreans. The Americans immediately sent an invasion force by sea to drive them out. The North Koreans easily manage to take over the capital Seoul, and the allies are left with only one port in the southeast – Pusan. In September of 1950, American forces land an invasion force at Inchon, cutting off the North Korean invasion force surrounding Pusan. The North Koreans retreat, and there is hope that American forces will be home by Christmas. But then, unbeknownst to the Americans, the Chines communists invade North Korea from the north and surround the American forces near the Chosin reservoir, threatening to annihilate an entire Marine division.

The Marines at Yudam-Ni are surrounded and must retreat to Hagaru-Ri

As you can see from the map, there are a whole bunch of American troops fighting to the north/east and south/west of the Chosin Reservoir. The marines near Yudam-Ni need to retreat along a road called the MSR (main supply road) back to Hagaru-Ri. But in order to conduct that retreat, they have to hold onto the vital Toktong pass, which is overwatched by Fox company from their position on Fox Hill. Can Charlie company and Fox company hold off the entire Chinese 59th division (10,000 men) with only two companies (about 250 men each)?

U.S. Marines “The Chosin Few”, December 1950

Well, the book I read (which Dina gave me for Christmas), was about Fox company and their defense of the Toktong pass. This is what the leftist New York Times had to say about the man in charge of Fox company (“F company”) in a 2002 article:

> Col. William E. Barber, who won the Medal of Honor for his leadership of a vastly outnumbered company under siege on a snowy hilltop in one of the worst defeats in Marine history, the Battle of the Chosin Reservoir in 1950, died on April 19 at his home in Irvine, Calif. He was 82.
>
> The cause was bone-marrow cancer, said Jerry Courtier, a friend who hopes to write Colonel Barber’s biography.
>
> The reservoir is south of the Yalu River, which separates North Korea from China. After the Americans had pushed the North Koreans almost to the Yalu, 150,000 Chinese troops unexpectedly crossed the river into North Korea. Colonel Barber’s unit, Company F of the Second Battalion of the Seventh Marines, First Marine Division, was on a hill that commanded the Toktong Pass, a vital gap between Yudam Ni and Hagaru Ri, two towns separated by 78 miles.
>
> The stakes were huge. If F Company yielded its position, 8,000 marines at Yudam Ni would be cut off from the 3,000 at Haguru Ri by tens of thousands of Chinese troops.
>
> Through five days and six nights in subzero weather and often swirling snow, Colonel Barber, then a captain, inspired his men, outnumbered more than five to one, to cling to their tenuous positions. He was shot in a bone near his groin on the second day but continued to make the rounds of the hill. He likened the wound to a bee sting.
>
> When the unit was ordered to withdraw and fight its way to safety, Captain Barber refused. Three times, the enemy broke through the line, only to be repulsed.
>
> ”I knew that we could probably hold, and I knew that if we didn’t hold we could exact a very heavy toll,” he said in an interview in 1976 with The Los Angeles Times.
>
> His citation for the nation’s top medal said that he commanded his men from a stretcher. But Hector A. Cafferata Jr., who as a rifleman won the Medal of Honor in the same battle, insisted that Captain Barber refused the stretcher.
>
> ”He walked the line, he kept us together,” said Mr. Cafferata, who was beside Captain Barber when he was shot.
>
> In the mayhem, the Chinese blew whistles, beat cymbals and tooted bugles as they repeatedly attacked. Coffee froze before men could drink it, and some of the wounded died because plasma froze with no way to thaw it.
>
> When the battle was over, more than 1,000 enemy soldiers were dead. Of Captain Barber’s original 240 men, 82 were able to walk away.

> Gen. Raymond G. Davis, who was a lieutenant colonel in the Marines, received a Medal of Honor for leading the unit that rescued F Company.
>
> William Earl Barber was born on Nov. 30, 1919, in Dehart, Ky. He attended what is now Morehead State University in Morehead, Ky., for two years and enlisted in the Marines, at the age of 21, in 1940.
>
> He was so good at shooting a rifle that he was made a weapons instructor. After volunteering for parachute training, he demonstrated such proficiency that he became a parachute instructor.
>
> In World War II, he was promoted to sergeant in 1942 and commissioned a second lieutenant in 1943. He was a rifle platoon commander at Camp Pendleton, Calif., when his unit was shipped to the Pacific.
>
> Colonel Barber was in the first wave to hit Iwo Jima, where he was wounded twice. He received the Silver Star for bravery in addition to two Purple Hearts. At a ceremony on the 50th anniversary of the battle in 1995, he said:
>
> ”I am older now, as you are, but I can still see the colors of that February morning. The sky. The island. And sometimes I think I can hear the noise of battle.”
>
> He was treated in Japan for his wounds and returned to the United States, where he worked as a recruiter, among other positions. He was promoted to captain in 1949 and was in the force that occupied Japan.
>
> When he joined F Company in Korea, he saw a raggedy unshaven bunch and immediately ordered the the troops to shave, shine their shoes and look like marines. He suggested that his new charges resembled Pancho Villa’s bandits.
>
> ”He was one tough guy,” Mr. Cafferata said. ”He was by the book.”

He was by the book. He enlisted in the Marines because he was grateful to his country for allowing him to escape poverty and go into college, and he wanted to give something back.

You can read a review of the book I read about Fox company, and read about some of the details of what it was like for those men. You’ll never look at your own troubles the same way again. You can also read about Barber’s Medal of Honor citation here.

The Medal of Honor, Navy and Marines variant

So, now that I am done with that book, I have moved on to another Korean War book that Dina gave me, this one about George company. The Korean War might have been our most just war – defending a peaceful democratic ally from a totalitarian communist regime. You just have to compare North Korea and South Korea today to understand the stakes. North Korea is basically a godless concentration camp that tortures and murders its people if they so much as think the wrong thoughts about the atheist state. South Korea is free and prosperous, where the people have human rights, like the right to free speech and freedom of religion.

It's important for me to read about the hardships that real heroes face, so that I don't complain too much about my own tiny struggles. When you read about the struggles of great American soldiers, so many good things happen to you. Your own problems get smaller, your humility and gratitude get bigger. And you are reminded about why America is a great country, and what American character is really like. These things are not taught by leftists in the public schools. They are not talked about by leftists in the mainstream media. They are not presented by leftists in the Hollywood film industry. If you want to know the real America, you have to find it yourself.

Florida election supervisors trying to steal Senate and Governor wins from Republicans

November 12, 2018 | by Wintery Knight | Link | Original Link

I thought this was an interesting story. In Florida, Republicans won the elections for Senate and Governor. But the people counting votes in Broward and Palm Beach refused to finalize their vote counts. And they are preventing any journalists from filming how they are counting the votes.

The Federalist explains what the problem is:

> Three days after election night, when Gov. Rick Scott delivered a victory speech and held a comfortable margin of votes against Democratic Sen. Bill Nelson, loads of ballots favoring the Democratic candidate mysteriously turned up in Palm Beach and Broward counties — where one official has a history of violating election laws.
>
> State law requires that all early and by-mail votes be tabulated within 30 minutes of the polls closing, but three days later, Broward County Supervisor of Elections Dr. Brenda Snipes still refuses to specify how many people voted, how many ballots have been tabulated, and how many are left to count.
>
> Since Tuesday, 80,000 new votes have mysteriously turned up in Broward County and another 15,000 in Palm Beach County. These newly discovered ballots have been "breaking almost 3-to-1 in favor of Democrats," narrowing the margin between these two candidates to likely force a recount after Saturday's noon deadline requiring all counties to turn over election results to the state Division of Elections.

Daily Wire reports that reporters who want to film them counting the votes are being threatened with arrest:

> […][The] Palm Beach Post… explains that elections supervisor, Susan Bucher, broke from normal practice by banning cameras from recording the ballot review process, which Gov. Rick Scott — who is waiting to see if he was elected to the senate — accused of "incompetence."
>
> Police were brought in to keep journalists out and block their view.
>
> NBCUniversal, Fox Television, and Scripps Media sued Bucher over her refusal to let the media cover the public event. Marissa Bagg, a reporter for NBC 6 Miami, posted the emergency petition on Twitter, writing that the media outlets were suing "Susan Bucher and the Palm Beach County Canvassing Board for refusing to allow us to record video while they review ballots in a public meeting."

What doesn't the Demcrat elections officer want the journalists to see? Well for one thing, the two Democrat candidates who lost want the votes of non-citizens to be counted.

The Federalist explains:

> During review of provisional ballots to determine whether a recount is justified in the tight Florida governor, senate, and agriculture commission races, Palm Beach County Supervisor of Elections Susan Bucher identified a voter as a non-citizen and declared that the ballot would not be counted.
>
> Attorneys representing the Democratic candidate for senate Bill Nelson and the Democratic candidate for governor Andrew Gillum objected.

This tweet from Andrew Guest notes that the Broward county election supervisor has a very bad history being fair with elections: (H/T Daily Wire)

1. Illegally destroying ballots (Sun Sentinel, May 14, 2016)
2. Absentee ballots that never arrived (Miami Herald, November 6, 2016)
3. Fellow democrats accused her precinct of individual and systemic breakdowns that made it difficult for voters to cast regular ballots (Miami Herald, November 4, 2014)
4. Posted election results half an hour before polls closed – a very clear violation of election law. (Miami Herald, November 2, 2016)
5. Sued for leaving amendments off of ballots (Miami Herald, October 20, 2016)
6. Claiming to not have the money to notify voters when their absentee ballot expired (Sun Sentinel, November 8, 2016)
7. Having official staffers campaign on official time (Broward Beat, July 20, 2016)
8. Problems printing mail ballots (Miami Herald, November 2, 2016)
9. Accusations of ballot stuffing (Heritage, August 1, 2017)
10. Voters receiving ballots with duplicate pages (Miami Herald, November 2, 2016)
11. Slow results and piles of ballots that cropped up way after Election Day (The Capitolist, November 8, 2016)
12. Opening ballots in private, breaking Florida law (Politico, August 13, 2016)

Broward County Supervisor of Elections, Brenda Snipes

The tweet has all the links to the stories, and as you can see, they are pretty reliable sources.

Current Florida Governor Rick Scott has filed a lawsuit demanding that Snipes reveal how many ballots Broward county has. She is way over the deadline, and hasn't revealed the number of ballots.

Secular leftists demand Christian student senator resign for disagreeing with them

November 13, 2018 | by Wintery Knight | Link | Original Link

Isabella Chow, a Christian woman encircled by secular leftist fascists

I had to blog about this story about a tough girl at UC Berkeley who is taking a lot of heat for her Christian beliefs. It would have been easier for her to keep them private. But they forced her to vote, and she had to respect her conscience. Campus Reform posted an article about the facts of the case.

It says:

> Isabella Chow is an elected student senator who represents the Associated Students of the University of California party Student Action. But after choosing to abstain from voting on a resolution to oppose the recent Title IX changes proposed by President Donald Trump, Chow's own party disavowed her.
>
> The proposed Title IX changes lack a legal definition of gender, effectively limiting "gender identity" to one's physical sex, according to the Wall Street Journal. The resolution before the Berkeley student government was a statement of opposition to these proposed changes, intended to display solidarity with members of the LGBT community, specifically "transgender, intersex, nonbinary and gender nonconforming students," as reported by the independent student newspaper the *Daily Californian*.

That article was from November 9th, but The College Fix had some news in their article posted Monday:

> Chow has faced intense backlash over her position, with numerous individuals slamming her on social media (one commenter on Facebook called Chow a "mental imbecile") as well as in person. **The response has been so hostile**

that Chow has made changes to how she gets around campus. “I don’t feel safe walking alone to class and take precautions not to walk alone at night,” Chow said.

Chow provided *The Fix* with multiple Internet postings openly accusing her of bigotry and hatred. One, from student senator Teddy Lake, said that Chow’s Christian beliefs “were not beliefs at all— they were hateful prejudices that deserve nothing less than the strongest condemnation.”

Several posts on the website Reddit were filled with angry comments. One commenter accused Chow of “sanctimonious holier-than-thou bullsh*t,” and another said: “She’s a horrible person.”

The editors of *The Daily Californian* published an editorial calling for Chow’s resignation, accusing her of “publicly dismissing the identities of individuals on campus” and “eras[ing] and dehuman[izing]” numerous Berkeley students.

“Chow used her powerful public platform to negate entire experiences and identities. UC Berkeley students cannot allow and accept leaders like Chow to make decisions on their behalf,” the editors wrote.

The campus’s Queer Alliance Resource Center, meanwhile, produced a statement in opposition to Chow.

“Her ‘love’ is no protection against the current oppression faced by trans, intersex, and non-binary individuals. Instead, her ‘love’ pads her condescending disapproval towards us and reminds us of our history of surviving so-called ‘love.’ Senator Chow’s ‘love’ is not of warmth and compassion but of judgement and disapproval. We cannot sit idly by while Chow sits on moral high ground casting moral judgements,” the statement reads.

The Center also produced a petition calling on Chow to resign.

[…]At a student senate meeting last week, numerous members of the Berkeley community publicly expressed their opinions, almost all of them explicitly critical of Chow.

“I condemn Isabella Chow’s words, not because they’re different from mine, but because they are dangerous, and inherently prejudiced. I encourage Senator Chow to reach a dialogue with queer-affirming Christian communities that LGBT existence is compatible with the love of God,” one student said.

Another attendee said to Chow: “Your Christian morals should not be in our student government or for any government; and if you cannot separate your religion from your job as a senator, please resign.”

Another accused Chow of “speaking words of hate, mashed under the name of love.”

Chow eventually approached *The Daily Californian* asking if the publication would run either a statement or an op-ed by her. *The Daily* refused to publish either.

She has sunk a ton of money into her education, and now she is at the mercy of far-left professors and TAs. For her sake, I hope that she is working toward a STEM degree. It will help her to find work going forward. This is definitely going to affect her whole life going forward – a lot of big companies aren't going to hire someone like her who refuses to go along with the LGBT agenda. I hope she's prepared for that.

Resiliency

I was watching this video from Prager University on resiliency, and it was talking about several ways that a person can make themselves defensible against unexpected setbacks.

Watch:

I think it's important for Christians to think carefully about what they will study and where they work. Having a good education and money makes it easier to deal with threats like the ones arrayed against Isabella. It allows you to find work more easily, to move if you have to, etc. It's important to train your character by studying hard things, doing hard things and finishing what you start. Having a platform to tell your story is important. Having a network of accomplished friends helps, too.

If you marry, then marry someone with courage and strength, who will stand by you, and help you to persist. It's a serious mistake to marry someone who doesn't understand Christianity *as service*, and who doesn't have any strength to deploy in case of a crisis. If you're being attacked, you want a stable partner who has strength in practical areas, and informed convictions. Not someone who is drowning in sin, narcissism, student loan debt, peer pressure, drug addiction, reckless thrill-seeking, etc.

Some jobs and cities have a lot of anti-Christian progressives. It's easier to avoid those if you have a good education, practical skills and a good resume. Often, the influence you have is going to be determined by the decisions you make to make yourself resilient. My ambition has always been to have an influence without allowing the secular left to easily silence me. If they know where I work, and where I live, then they can put pressure on me to recant my views. Conversely, if I am careful about education, career and finance, then I can put pressure on them to back off if they challenge me.

As we saw when fascists broke down the door at Tucker Carlson's home, we are living in a time of secular leftist facism. And this fascism is defended even by the elites in the mainstream media.

Here's a concept every Christian should know that people in information security speak about… being a "hard target":

> A **hard-target** is a person who, due to their actions and/or appropriate protective measures, is able to minimize existing risks and thus most likely represents an unattractive target. Originally, these two terms come from the military and relate to protected and unprotected targets.

The Christian life is a lot more *strategic* than churches teach us. We're obsessed with compassion, feelings, and not being judged. Instead, we should be focused on having an

influence and making ourselves into hard targets for the secular culture. We have a sanitized view of how sin corrupts non-Christians, allowing them to do unspeakable evils to Christians who merely *disagree* with them. We think that secular leftists will behave like moral people, as if denying God's existence makes no difference to a person's ability to be moral. We think that nihilists will respect our basic human rights – human rights that they can't even rationally ground in their worldview. And we think that God's job is to protect us and make us feel good no matter how unprepared and reckless we are.

If you want to have an influence, then you need to make every decision *wisely*, in order to prepare for the day when your cover is blown behind enemy lines. Remember, with respect to God's purposes in the world, your happiness is expendable.

Are Mormon doctrines supported by philosophy, science and history?

November 14, 2018 | by Wintery Knight | Link | Original Link

A conflict of worldviews

This post presents evidence against Mormonism/LDS in three main areas. The first is in the area of science. The second is in the area of philosophy. And the third is in the area of history.

The scientific evidence

First, let's take a look at what the founder of Mormonism, Joseph Smith, believes about the origin of the universe:

> "The elements are eternal. That which had a beggining will surely have an end; take a ring, it is without beggining or end – cut it for a beggining place and at the same time you have an ending place." ("Scriptural Teachings of the Prophet Joseph Smith", p. 205)
>
> "Now, the word create came from the word baurau which does not mean to create out of nothing; it means to organize; the same as a man would organize materials and build a ship. Hence, we infer that God had materials to organize the world out of chaos – chaotic matter, which is element, and in which dwells all the glory. Element had an existance from the time he had. The pure principles of element are principles which can never be destroyed; they may be organized and re-organized, but not destroyed. They had no beggining, and can have no end." ("Scriptural Teachings of the Prophet Joseph Smith", p. 395)

A Mormon scholar named Blake Ostler summarizes the Mormon view in a Mormon theological journal:

> "In contrast to the self-sufficient and solitary absolute who creates *ex nihilo* (out

> of nothing), the Mormon God did not bring into being the ultimate constituents of the cosmos — neither its fundamental matter nor the space/time matrix which defines it. Hence, unlike the Necessary Being of classical theology who alone could not *not* exist and on which all else is contingent for existence, the personal God of Mormonism confronts uncreated realities which exist of metaphysical necessity. Such realities include inherently self-directing selves (intelligences), primordial elements (mass/energy), the natural laws which structure reality, and moral principles grounded in the intrinsic value of selves and the requirements for growth and happiness." (Blake Ostler, "The Mormon Concept of God," *Dialogue: A Journal of Mormon Thought 17* (Summer 1984):65-93)

So, Mormons believe in an eternally existing universe, such that matter was never created out of nothing, and will never be destroyed. But this is at odds with modern cosmology.

The Big Bang cosmology is the most widely accepted cosmology of the day. It denies the past eternality of the universe. This peer-reviewed paper in an astrophysics journal explains. (full text here)

Excerpt:

> The standard Big Bang model thus describes a universe which is not eternal in the past, but which came into being a finite time ago. Moreover,–and this deserves underscoring–the origin it posits is an absolute origin *ex nihilo*. For not only all matter and energy, but space and time themselves come into being at the initial cosmological singularity. As Barrow and Tipler emphasize, "At this singularity, space and time came into existence; literally nothing existed before the singularity, so, if the Universe originated at such a singularity, we would truly have a creation *ex nihilo.*"
>
> […]On such a model the universe originates *ex nihilo* in the sense that at the initial singularity it is true that *There is no earlier space-time point* or it is false that *Something existed prior to the singularity.*

Christian cosmology requires such a creation out of nothing, but this is clearly incompatible with what Mormons believe about the universe. The claims about the universe made by the two religions are in disagreement, and we can test *empirically* to see who is right, using *science*.

Philosophical problems

Always Have a Reason contrasts two concepts of God in Mormonism: Monarchotheism and Polytheism. It turns out that although Mormonism is actually a polytheistic religion, like Hinduism. In Mormonism, humans can become God and then be God of their own planet. So there are many Gods in Mormonism, not just one.

Excerpt:

> [T]he notion that there are innumerable contingent "primal intelligences" is

> central to this Mormon concept of god (P+M, 201; Beckwith and Parrish, 101). That there is more than one god is attested in the *Pearl of Great Price*, particularly Abraham 4-5. This Mormon concept has the gods positioned to move "primal intelligences along the path to godhood" (Beckwith and Parrish, 114). Among these gods are other gods which were once humans, including God the Father. Brigham Young wrote, "our Father in Heaven was begotten on a previous heavenly world by His Father, and again, He was begotten by a still more ancient Father, and so on…" (Brigham Young, *The Seer*, 132, quoted in Beckwith and Parrish, 106).
>
> […]The logic of the Mormon polytheistic concept of God entails that there is an infinite number of gods. To see this, it must be noted that each god him/herself was helped on the path to godhood by another god. There is, therefore, an infinite regress of gods, each aided on his/her path to godhood by a previous god. There is no termination in this series. Now because this entails an actually infinite collection of gods, the Mormon polytheistic concept of deity must deal with all the paradoxes which come with actually existing infinities…

The idea of counting up to an actual infinite number of things by addition (it doesn't matter what kind of thing it is) is problematic. See here.

More:

> Finally, it seems polytheistic Mormonism has a difficulty at its heart–namely the infinite regress of deity.
>
> […]Each god relies upon a former god, which itself relies upon a former god, forever. Certainly, this is an incoherence at the core of this concept of deity, for it provides no explanation for the existence of the gods, nor does it explain the existence of the universe.

Now let's see the historical evidence against Mormonism.

The historical evidence

J. Warner Wallace explains how the "Book of Abraham", a part of the Mormon Scriptures, faces historical difficulties.

The Book of Abraham papyri are not as old as claimed:

> Mormon prophets and teachers have always maintained that the papyri that was purchased by Joseph Smith was the actual papyri that was created and written by Abraham. In fact, early believers were told that the papyri were the writings of Abraham.
>
> […]There is little doubt that the earliest of leaders and witnesses believed and maintained that these papyri were, in fact the very scrolls upon which Abraham and Joseph wrote. These papyri were considered to be the original scrolls until they were later recovered in 1966. After discovering the original papyri, scientists, linguists, archeologists and investigators (both Mormon and non-

> Mormon) examined them and came to agree that the papyri are far too young to have been written by Abraham. They are approximately 1500 to 2000 years too late, dating from anywhere between 500 B.C. (John A. Wilson, Dialogue: A Journal of Mormon Thought, Summer 1968, p. 70.) and 60 A.D. If they papyri had never been discovered, this truth would never have come to light. Today, however, we know the truth, and the truth contradicts the statements of the earliest Mormon leaders and witnesses.

The Book of Abraham papyri do not claim what Joseph Smith said:

> In addition to this, the existing papyri simply don't say anything that would place them in the era related to 2000BC in ancient Egypt. The content of the papyri would at least help verify the dating of the document, even if the content had been transcribed or copied from an earlier document. But the papyri simply tell us about an ancient burial ritual and prayers that are consistent with Egyptian culture in 500BC. Nothing in the papyri hints specifically or exclusively to a time in history in which Abraham would have lived.

So there is a clear difference hear between the Bible and Mormonism, when it comes to historical verification.

Further study

If you want a nice long PDF to print out and read at lunch (which is what I did with it) you can grab this PDF by Michael Licona, entitled "Behold, I Stand at the Door and Knock".

Democrat Michael Avenatti made famous by CNN arrested for domestic violence

November 15, 2018 | by Wintery Knight | Link | Original Link

Michael Avenatti, Democrat hero, defender of women and women's rights
Michael Avenatti is the lawyer connected to one of Trump's accusers (Swetnick) who is now under FBI criminal investigation for "potentially false statements". He appeared many times on CNN and MSNBC during the Kavanaugh hearings. He calls himself "an advocate for women's rights".

Here is the latest reported by The Federalist, and confirmed by tweets by the Los Angeles Police Department.

Excerpt:

> Avenatti was arrested Wednesday after a woman reportedly filed felony domestic violence charges against him following an incident that allegedly occurred between the two on Tuesday, then a second confrontation the next day.
>
> "We're told her face was 'swollen and bruised' with 'red marks' on both cheeks," TMZ reports.
>
> We're told security brought her inside the building, took her upstairs and Michael showed up 5 minutes later and ran into the building. He screamed repeatedly, 'She hit me first.'
>
> […]Cops showed up and escorted Avenatti into a corner of the apartment lobby and spoke with him for 5 to 10 minutes and then took him into custody.

CNN loved to have Avenatti on to discuss women's rights and how mean Republicans are to women. Even when there were more important news stories, they just kept bringing

him on, and on, and on. How often?

The Washington Free Beacon noted:

> The Washington Free Beacon analyzed 108 appearances by Avenatti on MSNBC and CNN over a 64-day period from March 7 to May 10. To calculate his earned media time, the Free Beacon multiplied the length of his appearances on a program by its "National Publicity Value" determination from media monitoring site TVEyes.com.
>
> The total came out to $174,631,598.07 from at least 65 CNN appearances and 43 MSNBC appearances. Avenatti's favorite shows include CNN's "Anderson Cooper 360" (at least 20 interviews), MSNBC's "The Last Word with Lawrence O'Donnell" (14), CNN's "New Day" (12), CNN's "Tonight with Don Lemon" (eight), and MSNBC's "Deadline White House" (seven).

65 appearances on CNN over a 64-day period? CNN really liked him. Maybe they really liked what he had to say to their audience about women's rights, and violence against women.

But other mainstream media shows also had him on to talk about how mean Republicans supposedly are to women:

> Avenatti has also been featured on CBS comedy show "The Late Show with Stephen Colbert," Showtime's "The Circus," NBC's "Megyn Kelly Today," ABC's "The View," HBO's "Real Time with Bill Maher," and network morning shows "Today," "CBS This Morning," and "Good Morning America."

In light of his arrest, consider these screenshots of Avenatti's web site.

Michael Avenatti cares a lot about domestic violence against women

Michael Avenatti cares a lot about domestic violence against women

Would you say that he has what it takes to follow in the footsteps of Bill Clinton, and win the Democrat presidential nomination, as their anointed champion of women's rights? It looks like he's running for President in 2020. As a Democrat. Of course.

According to this tweet from a Daily Wire reporter, everyone except CNN reported on the arrest of CNN's star lawyer promptly. I wonder what caused CNN to delay reporting on the arrest of their frequent guest? The delayed reporting makes me wonder what they really think about domestic violence, sexual assault, and rape.

Democrat women seem to really like bad boys like Bill Clinton, Elliot Spitzer, John Conyers, Anthony Weiner… and the twice-divorced Michael Avenatti. They think that pro-abortion Democrat men are great defenders of "women's rights", and therefore very attractive and desirable. It never made sense to me, though, why women find a man's willingness to kill his own innocent unborn children an attractive trait. If a man will stand by while a woman kills an "inconvenient" child, then it seems to me that he could do anything to a grown woman. Domestic violence is mild when compared to murdering an innocent unborn child. When Democrat pro-abortion men commit domestic violence against women, it certainly doesn't surprise me. Why does it surprise the Democrat women who love them so much?

Tad Hopp accumulated $100,000 of college debt, now he wants a taxpayer bailout

November 16, 2018 | by Wintery Knight | Link | Original Link

Brain vs Heart, from: theawkwardyeti.com

Here's an interesting editorial from a "Christian" left blog. (H/T Acton Institute via Lindsay)

The author, Tad Hopp is graduating a PCUSA seminary – an extremely liberal, left-wing denomination.

He writes:

> I graduated college in 2007.
>
> […] I majored in English, not exactly what most people consider a 'marketable' or 'practical' degree…
>
> […]I went to a somewhat expensive private school…
>
> […]I did what many students in their last year of high school do: I went to the school where I felt I was being called…
>
> […]I do not regret my four years at my undergraduate institution one bit.
>
> [….]When I graduated college, I owed nearly $50,000 in student loan debt and was unemployed for almost six months before I finally found a low-paying office job.
>
> […]"Can't find a job? Well, you should have majored in something more 'practical', like economics or business or medicine." Yeah, that *would* be great…if those were the subjects where my skills and passions lie. They're not.
>
> […]I felt called to go to seminary.

> […]I will graduate seminary with close to six figures worth of student loan debt.

Let’s take stock of what he’s said so far:

- he studied English, a language that he already spoke, which has one of the lowest employment rates
- he was warned by people who knew something about earning and saving money not to study English
- he went to a school he couldn’t afford to go to, and he graduated with $50,000 in debt
- he went to seminary, another subject that doesn’t pay, and added another $50,000 or so of debt
- he says that he doesn’t have to study subjects that lead to a career because he isn’t “passionate” about them
- he “followed his heart” by going to the school that he had mystical, emotional, intuitions about = “calling”

My advice to Tad at this point would be for him to take the Bible seriously when it says this:

2 Thessalonians 3:10:

> 10 For even when we were with you, we used to give you this order: if anyone is not willing to work, then he is not to eat, either.

And 1 Timothy 5:8:

> 8 But if anyone does not provide for his own, and especially for those of his household, he has denied the faith and is worse than an unbeliever.

The Bible is giving us the goal of working. So what should we do to be able to reach that goal? Why should anyone hire us? What is working really about? It’s those kinds of questions that should guide what we study in school, and what jobs we pursue.

We know what careers have the highest starting salaries and mid-career salaries:

Majors by Salary Potential – Full List

RANK	MAJOR	STARTING SALARY	MID-CAREER SALARY
1	Petroleum Engineering	$98,000	$163,000
2	Aerospace Engineering	$62,500	$118,000
3	Actuarial Mathematics	$56,100	$112,000
4	Chemical Engineering	$67,500	$111,000

Starting and Mid-Career salaries by profession (click for larger image) (Source)

Why do some people get paid more than others? The answer is supply and demand. Prices are a way of determining what is most valued by your fellow man. Business owners pay more to people who offer their customers more value. If you really want to serve your neighbor, you have to learn something they really want, but can't easily obtain. And then you will be paid more. You can't do what makes you happy. You have to do what makes customers happy. That's how the free market works – you make money when you provide something of value to others. You make money when you serve others. This is something that is very hard for self-centered, feelings-driven young progressives to grasp. But it's something older Americans all know.

More Tad:

> Is the PCUSA doing anything to address this crisis?
>
> […]What has our government done to address this issue?
>
> […]I, like so many in my generation, voted for Obama…
>
> […]It seems to me that we've bought into the lie that student loan debt is brought on by the individual person…
>
> […]You know what I think might stimulate the economy? Automatically cancelling every single outstanding student loan!

He insists that the results of his own choices aren't his fault. But didn't he make the choices about what to study? Didn't he make the choice to follow his heart? Didn't he disregard the advice of people who urged him to be practical? Who is to blame, if not he, himself?

Tad needs to push away all his friends who told him to "follow his heart" and stick close by his friends who told him to focus on providing value to others. Don't look for advice

from dreamers, look for advice from doers. Dreamers talk. But doers have *demonstrated* the ability to create plans that work to achieve *results*.

By the way, some of you might be wondering how serious this person was about his Christianity. Well, in another post, he comes out as gay. So clearly the Bible is being interpreted in a way where feelings are overturning the plain meanings of words. People who read the Bible closely never come away with the message that they should follow their hearts.

Democrat Congressman proposes using nuclear weapons to enforce gun confiscation

November 17, 2018 | by Wintery Knight | Link | Original Link

Rep. Eric Swalwell
@RepSwalwell

Replying to @Rambobiggs

And it would be a short war my friend. The government has nukes. Too many of them. But they're legit. I'm sure if we talked we could find common ground to protect our families and communities.

11/16/18, 3:22 PM

Don't resist confiscation of your semi-automatic, or Dems will nuke you

Do you have a semi-automatic gun? That's a gun that fires one bullet for every one trigger pull. Most handguns and rifles are semi-automatic. Well, if you have one, then there's a Democrat planning to confiscate it. And if you don't want to give it up, then he says that he would use nuclear weapons to *destroy you*.

NBC News reports:

> A Democratic congressman has proposed outlawing [semi-automatic guns] and forcing existing owners to sell their weapons or face prosecution, a major departure from prior gun control proposals that typically exempt existing firearms.
>
> […]Swalwell proposes that the government should offer up to $1,000 for every weapon covered by a new ban, estimating that it would take $15 billion to buy back roughly 15 million weapons — and "criminally prosecute any who choose to defy [the buyback] by keeping their weapons."
>
> In the past, Democrats and gun safety groups have carefully resisted proposals that could be interpreted as "gun confiscation," a concept gun rights groups have often invoked as part of a slippery slope argument against more modest proposals like universal background checks.
>
> Swalwell addressed these arguments directly, saying he and other Democrats

> had been too deferential to Second Amendment activists and should follow the lead of teenage survivors of the Parkland shooting who have been more strident.

The Washington Times reported on Swalwell's plan to deal with those who refuse to disarm themselves:

> Rep. Eric Swalwell, California Democrat, warned gun owners Friday that any fight over firearms would be "a short one," because the federal government has an extensive cache of nuclear weapons.
>
> After Joe Biggs tweeted that Mr. Swalwell "wants a war" over the Second Amendment, Mr. Swalwell responded, "And it would be a short war my friend."
>
> "The government has nukes. Too many of them. But they're legit," the congressman tweeted. "I'm sure if we talked we could find common ground to protect our families and communities."

People who purchase firearms legally are among the most law-abiding people in the country. Make no mistake. This Democrat lawmaker isn't threatening to take guns away from criminals. He is proposing to confiscate the guns of law-abiding Americans, who simply want to defend their families and their property from criminals.

It's very interesting to think about all the law-abiding gun owners in states like Arizona, Montana, Nevada, Ohio, Michigan, etc. who voted for Democrat senators in the 2018 mid-terms, isn't it? What were they thinking, when they elected Democrats? Or maybe they weren't thinking at all. When elections are happening, it's important to look at the records of the candidates, not what they say in ads and at campaign events.

The peer-reviewed research

Whenever I get into discussions about gun control, I always mention two academic books by John R. Lott and Joyce Lee Malcolm.

- The Lott book was published by the University of Chicago Press (now in its 3rd edition)
- The Malcolm book was published by Harvard University Press

I think that peer-reviewed studies should be useful for assessing gun control vs gun rights policy. The book by economist John Lott, linked above,compares the crime rates of all U.S. states that have enacted concealed carry laws, and concludes that violent crime rates *dropped* after law-abiding citizens were allowed to carry legally-owned firearms. That's the mirror image of Dr. Malcolm's Harvard study, which shows that the 1997 UK gun ban caused violent crime rates to MORE THAN DOUBLE in the four years following the ban. But both studies affirm the same conclusion – more legal firearm ownership means less crime.

One of the common mistakes I see anti-gun advocates making is to use the metric of all "gun-related deaths". First of all, this completely ignores the effects of hand gun ownership on violent crime, as we've seen. Take away the guns from law-abiding people

and violent crime skyrockets. But using the “gun-related deaths” number is especially wrong, because it includes suicides committed with guns. This is the majority (about two thirds) of gun related deaths, even in a country like America that has a massive inner-city gun violence problem caused by the epidemic of single motherhood by choice. If you take out the gun-related SUICIDES, then the actual number of gun homicides has decreased as gun ownership has grown.

For a couple of useful graphs related to this point, check out this post over at the American Enterprise Institute.

William Lane Craig debates Austin Dacey: Does God Exist?

November 18, 2018 | by Wintery Knight | Link | Original Link

Two tough rams butt heads, and may the best ram win!
Here is the video and summary of a debate between Christian theist William Lane Craig and Austin Dacey at Purdue University in 2004 about the existence of God.

The debaters:

- William Lane Craig
- Austin Dacey

The video: (2 hours)

The video shows the speakers and powerpoint slides of their arguments. Austin Dacey is one of the top atheist debaters, and I would put him second to Peter Millican alone, with Walter Sinnott-Armstrong in third place. This is the debate to show people who are new to apologetics. The debate with Peter Millican is better for advanced students, and that's no surprise since he teaches at Oxford University and is familiar with all of Dr. Craig's work. The Craig-Dacey debate is the one that I give to my co-workers.

By the way, you can get the DVDs and CDs for the first Craig-Dacey debate and the second Craig-Dacey debate and the second Craig-Sinnott-Armstrong debate. The Peter Millican debate is not available on DVD, but the link above (Peter Millican) has the video and my summary.

Dr. Dacey's 5 arguments below are all good arguments that you find in the academic literature. He is also an effective and engaging speaker, This is a great debate to watch!

SUMMARY of the opening speeches:

Dr. Craig's opening statement:

Dr. Craig will present six reasons why God exists:

1. (Contingency argument) God is the best explanation of why something exists rather than nothing
2. (Cosmological argument) God's existence is implied by the origin of the universe
3. (Fine-tuning argument) The fine-tuning of the universe for intelligent life points to a designer of the cosmos
4. (Moral argument) God is the best explanation for the existence of objective moral values and objective moral duties
5. (Miracles argument) The historical facts surrounding the life, death and resurrection of Jesus
6. (Religious experience) God's existence is directly knowable even apart from arguments

Dr. Dacey's opening argument:

There are two ways to disprove God's existence, by showing that the concept of God is self-contradictory, or by showing that certain facts about ourselves and the world are incompatible with what we would expect to be true if God did exist. Dr. Dacey will focus on the second kind of argument.

1. The hiddenness of God
2. The success of science in explaining nature without needing a supernatural agency
3. The dependence of mind on physical processes in the brain
4. Naturalistic evolution
5. The existence of gratuitous / pointless evil and suffering

One final point:

One thing that I have to point out is that Dr. Dacey quotes Brian Greene during the debate to counter Dr. Craig's cosmological argument. Dr. Craig could not respond because he can't see the context of the quote. However, Dr. Craig had a rematch with Dr. Dacey where was able to read the context of the quote and defuse Dr. Dacey's objection. This is what he wrote in his August 2005 newsletter after the re-match:

> The following week, I was off an another three-day trip, this time to California State University at Fresno. As part of a week of campus outreach the Veritas Forum scheduled a debate on the existence of God between me and Austin Dacey, whom I had debated last spring at Purdue University. In preparation for the rematch I adopted two strategies: (1) Since Dacey had come to the Purdue debate with prepared speeches, I decided to throw him for a loop by offering a different set of arguments for God, so that his canned objections wouldn't apply. I chose to focus on the cosmological argument, giving four separate arguments for the beginning of the universe, and on the evidence for Jesus' resurrection. (2) I reviewed our previous debate carefully, preparing critiques of his five atheistic arguments. In the process I found that he had seriously misunderstood or misrepresented a statement by a scientist on the Big Bang; so I brought along the book itself in case Dacey quoted this source again. I figured he might change

> his arguments just as I was doing; but I wanted to be ready in case he used his old arguments again.
>
> […]The auditorium was packed that night for the debate, and I later learned that there were overflow rooms, too. To my surprise Dr. Dacey gave the very same case he had presented at Purdue; so he really got clobbered on those arguments. Because he wasn't prepared for my new arguments, he didn't even respond to two of my arguments for the beginning of the universe, though he did a credible job responding to the others. I was pleased when he attacked the Big Bang by quoting the same scientist as before, because I then held up the book, specified the page number, and proceeded to quote the context to show what the scientist really meant.

Dr. Craig is always prepared!

38-year-old single mother of seven, pregnant with twins, demands better government housing

November 19, 2018 | by Wintery Knight | Link | Original Link

38-year-old single mother with 7 kids, 2 more on the way

I saw this article about an unmarried woman, pregnant with twins, who already has 7 children from a variety of men. She is currently living in a 4-bedroom house paid for by taxpayers. She is angry because the government isn't giving her enough money to pay for her lifestyle choices.

This article comes from the UK Daily Mail:

> A 38-year-old mother-of-seven who is pregnant with twins is begging to be rehoused from her 'hellish' four-bedroom council flat which she says isn't good enough for her.
>
> […]The single mother said: 'My relationship with some of my children is at breaking point, we can't keep living like this.
>
> […]'I just want to get out of this hell. I'd rather live anywhere else, as long as it is not in here. It has been really tough.
>
> 'I'm feeling down every night and sometimes you just feel like giving up. But I just have to keep going for the sake of the kids.'

She can fix everything that's gone wrong with a little more taxpayer money. That will make it unnecessary for her to choose men who commit before sex, and let her have the freedom to choose the "best" men for relationships.

More:

> After spending a month in various hotels, West Lothian Council found them the flat in Bathgate and they moved in on September 20.

> But after moving into her new Bathgate property, Ms Burns complained that the flat did not come with a television…

She wasn't even provided with a taxpayer-funded telly! How else to people get televisions except from welfare programs?

Anyway, how did this happen? Well, it happens because women are increasingly choosing men who are not willing to marry first, and using premarital sex and cohabitation to land them. Something that the previous generation of married women from 50 years ago would never have done.

The Daily Caller explains:

> Unmarried couples are having roughly 40 percent of all births in the U.S., marking a trend that may be detrimental to the upbringing of those children.
>
> For the first time in U.S. history, out-of-wedlock births in America are largely a result of cohabitation, according to the United Nations Population Fund 2018 State of World report released Wednesday. Single mothers had nearly 90 percent of out-of-wedlock births in 1968, but that number decreased to 53 percent in 2017, according to the Pew Research Center.
>
> "Compared to children of married parents, those with cohabiting parents are more likely to experience the breakup of their families, be exposed to 'complex' family forms, live in poverty, suffer abuse, and have negative psychological and educational outcomes," according to the Institute for Family Studies (IFS).
>
> […]Children with single parents have the highest rates of poverty followed by children living with unmarried, cohabiting parents, the IFS reported.
>
> Between 2006 and 2010, 23 percent of births to married women were unintended while 51 percent of births to unmarried cohabiting women were unintended. That number rose to 67 percent for unmarried women not cohabiting.
>
> **Two-thirds of cohabiting parents split up before their child reaches age 12, while only a quarter of married parents divorce, according to an April 2017 Brookings Institution report.**

The problem of fatherless children is getting worse. And taxpayers will be on the hook to pay for it – that's what the story of the 38-year-old woman shows. Productive people have to pay when women are not persuaded to make better decisions about which men to have relationships with, and when to have sex.

My experience

I know three young women who are cohabitating right now. I have had a few conversations with them about what they are studying, what jobs they want to get, and what their plans for the future are.

All three of these women have never married, and are in their early 20s and attractive. Two of them have children. The live-in boyfriends are getting sex without having to

commit first. The boyfriends (judging from photos) seem to have been chosen purely for looks. Tall, muscles, beards, tattoos, piercings, etc. Obviously, none of them is a Christian. There just isn't anything in society telling young women that a Christian worldview matters in a relationship. And none of the men has a STEM degree, a career or savings -they're too young to have those things to prove their ability to provide. But they're still co-habitating, and get all the benefits of a wife without having to have proven themselves capable of the responsibilities, expectations and obligations of a husband.

Each of these women is spending the young and attractive period of her life in unstable relationships with men who think of sex as recreational, rather than something that is saved for inside the marriage covenant. If their past relationships fail, they will have a much harder time finding a good man. They will have sexual baggage. They will probably have children from another man. They will have bitterness and mistrust towards men. They will be selfish and unwilling to give to a future husband. The same women who will complain that no one will marry them at age 35 are the ones who could *easily* have had a *marriage-ready* man at age 25.

Making monergism make sense: reconciling divine sovereignty and free will

November 20, 2018 | by Wintery Knight | Link | Original Link

Lets take a closer look at a puzzle

This article at Free Thinking Ministries was written by my friend Tim Stratton. In it, presents a view of God's sovereignty over salvation without falling into the error of double-predestination.

Excerpt: (links removed)

> Many reformed folks *(freely?)* choose to reject Molinism because they contend that this theological view "smells of synergism." What is this stench that reportedly makes John Calvin turn over in his grave? Simply put, synergism is the view that man plays at least a small part in his own salvation process. Monergism, on the other hand, is the view that God is the author of salvation from beginning to end.
>
> Since Molinism affirms that man is free to choose to reject God's saving grace or not, many Calvinists jump to the conclusion and assume that Molinism must be synergistic. This does not necessarily follow.[1] Consider one possible model:
>
> 1- God, by nature, is a volitional unmoved mover who is free to choose between options in accord with His nature. (This is supported via the *Kalam* and the *Argument from Time*).
>
> 2- By God's grace, humans are created in the "image of God." By nature, then, we are free to choose between options in accord with our nature. (This is supported via the *Freethinking Argument*).
>
> 3- Adam & Eve freely chose to disobey God and this sin completely separates

> humanity from God. This is what it means to have a "totally depraved sin nature." (Every aspect of man is separated from God).
>
> 4- In this state of depraved separation from God (sin nature), humans do not even know God exists if merely left to our own devices.
>
> 5- If humans do not even know God exists, then, left to our own devices and **apart from God's grace**, it would be impossible to choose to love and follow God (thus, Pelagianism is impossible on this view).
>
> 6- God, in His love for all people, provides amazing prevenient grace to all people (Romans 1:20), writing the law on the human heart (Romans 2:15), conviction of the Holy Spirit (John 16:8-9), and draws all men (John 12:32). This is commonly referred to as "common grace."
>
> 7- Therefore, by God's grace, human nature has changed from a "totally separated from God nature" to a nature that has now experienced enough divine revelation (influences) allowing all mankind to start making some free and volitional choices in accord with our new nature; namely, to choose to resist God's grace and revelation, or not.[2] Mankind is without excuse because we do not have to resist what God has made clear (Romans 1:18-20).[3]
>
> *[Note: According to Calvinist, Matt Slick (albeit inadvertently), Mark 4:10-12 implies that if an unregenerate person gets access to clear and accurate information, then they possess the ability to become Christians!]*
>
> 8- If one does not reject or continually resist the grace and revelation God provides them, then God will continually provide more and more until the person reaches the point of "no return" and will become saved.
>
> Thus, God does *ALL* the work in salvation from beginning to end on this Molinistic model; all the human can do is freely resist God's grace and revelation, but he or she does not have to! The human does nothing to gain salvation apart from God's grace on this Monergistic Model of Molinism.

I think that Stratton's formulation above does indeed keep God as the sole initiator of salvation. And that's good. But it also makes sure that human who resist God's leading are responsible for their choice to resist God, and that's good. We want salvation to be 100% by faith alone in Christ alone. But we don't want God to be the cause of people not being saved. On Stratton's view, God wants everyone to be saved. If anyone is saved, it's because God did ALL THE WORK to lead them and secure their salvation with the death of Jesus on the cross. But, on Stratton's view, humans do get a choice – the choice to trust God or not. And so, if a person is not saved, then it's their fault – not God's. This works.

Read his whole post, and see what you think about it.

Boys underperform at school because feminists block attempts to help them

November 21, 2018 | by Wintery Knight | Link | Original Link

College graduation rates for men and women (Source: Brookings Institute)

Britain is a country that is absolutely dominated by radical feminists. And it affects everything from their collectivist views on economic policy, to their pro-criminal views in the justice system, to their open-borders views on immigration, their preference for government-run healthcare, their hatred of self-defense, and so on. So, I wouldn't expect to see an article about the plight of boys in a feminist society published in a British newspaper.

Nevertheless, here is an article from the UK Telegraph that explains how the public schools are handling the problem of underperforming boys.

It says:

> Britain's education system is failing to tackle the "astonishing" underperformance of boys as feminists have made the topic "taboo", the former head of the university admissions service has warned.
>
> Mary Curnock Cook, who was chief executive of Ucas until last year, said the fact that boys are falling behind in education is a national scandal – yet it is such an "unfashionable" topic to discuss that it has become "normalised".
>
> Girls outperform boys in all aspects of education, from primary school to GCSEs and A-level results. Last year, 57 per cent of women went to university compared to 43 per cent of men, a gap that has widened significantly over the last decade.
>
> […]Ms Curnock Cook said that the debate about gender equality tends to be dominated by issues such as the gender pay gap and the glass ceiling.
>
> "But those are work issues, not education issues," she said. "Quite often

> initiatives to support men do meet derision from feminists."
>
> When attempts are made to address men's issues, they are ridiculed and are met with the "wrath" of feminist and gender equality groups, she said.
>
> Last month the only university in the UK with a men's officer scrapped the role after the candidate withdrew due to "harassment".

But, it's happening in America as well.

An article from 2013 appeared in the far-left The Atlantic. It explains how the school system punishes boys and favors girls – from kindergarten to the workplace, where women receive affirmative action preferences.

Excerpt:

> Boys in *all* ethnic groups and social classes are far less likely than their sisters to feel connected to school, to earn good grades, or to have high academic aspirations. A recent working paper from the National Bureau of Economic Research documents a remarkable trend among high-achieving students: In the 1980s, nearly the same number of top male and female high school students said they planned to pursue a postgraduate degree (13 percent of boys and 15 percent of girls). By the 2000s, 27 percent of girls expressed that ambition, compared with 16 percent of boys. During the same period, the gap between girls and boys earning mostly A's nearly doubled—from three to five percentage points.
>
> This gap in education engagement has dire economic consequences for boys. A 2011 Brookings Institution report quantifies the economic decline of the median male: For men ages 25 to 64 with no high school diploma, median annual earnings have declined 66 percent since 1969; for men with only a high school diploma, wages declined by 47 percent. Millions of male workers, say the Brookings authors, have been "unhitched from the engine of growth." The College Board delivered this disturbing message in a 2011 report about Hispanic and African-American boys and young adults: "Nearly half of young men of color age 15 to 24 who graduate from high school will end up unemployed, incarcerated or dead." Working-class white boys are faring only slightly better. When economist Andrew Sum and his colleagues at the Center for Labor Market Studies at Northeastern University examined gender disparities in the Boston Public Schools, they found that for the class of 2007, among blacks and Hispanics, there were 186 females for every 100 males attending a four-year college or university. For white students: 153 females to every 100 males.

Just like in the UK, American feminists oppose doing anything to help boys:

> In the U.S., a powerful network of women's groups works ceaselessly to protect and promote what it sees as female interest. But there is no counterpart working for boys—they are on their own.

Previously, I blogged about a study showing that female teachers grade boys lower than girls.

It's important for parents to understand that the problem of boys underperforming in school and work is not caused by boys. It's not with video games, it's not with sports, or anything else that anti-male people might blame. The problem with boys not learning and boys not working is caused by an education system dominated by anti-male feminists who systematically discriminate against boys, making it harder for them to learn the skills they need to find work.

The problem isn't going to be fixed by airhead feminist pastors and other male "leaders" telling boys to "man up". The problem is going to be fixed when parents realize that radical feminism is hostile to boys, and that institutions that are dominated by radical feminism are damaging to boys. I have a Jewish friend named Ari who homeschools all his children. He spends a lot of time and effort on this. He told me that sending boys to public schools is child abuse. I used to laugh at him when he said that. What a funny exaggeration, I thought. Now I'm not so sure he was joking.

The pilgrims experiment with communism before the second Thanksgiving

November 22, 2018 | by Wintery Knight | Link | Original Link

Less than half the original pilgrims made it to the the first Thanksgiving

Here's an article from The Stream about the second Thanksgiving, by Dante Witt. I like this article because it tells us so much about the character of the United States of America. Why are we so conservative about economics?

She briefly retells the story of how the pilgrims were helped by Squanto, which I blogged about in a previous Thanksgiving Day post, then she talks about the troubles they had next.

Excerpt:

> Although Squanto's farming techniques worked better than their old ones, the pilgrims still could not produce enough food. Was it bad luck? Bad soil? No. The Mayflower pilgrims were part of a joint stock company which stipulated that the pilgrims would pool their resources, and receive a share of the profit.
>
> The strategy turned out to be deeply misguided, working about as well as various communist economic schemes hundreds of years later. The sad state of the colony after two years of communism, wrote William Bradford, "may well evidence the vanity of that conceit of Plato's and the other ancients applauded by some of later times; that the taking away of property and the bringing of community into a commonwealth would make them happy and flourishing; as if they were wiser than God" (p. 121).

> So the pilgrims amended their contract so that each family was now responsible for its own provision. The difference was stark. Bradford explained:
>
> This had good success, for it made all hands very industrious, so that more corn was planted than could have been by any other means the Governor could use, and saved him a great deal of trouble, and gave far better content. The women now went willingly into the field, and took their little ones with them to set corn; which before would allege weakness and inability; whom to have compelled would have been thought great tyranny and oppression.
>
> In fact, it's estimated the colonists planted about six times the crops they would have planted otherwise.

That shows where Americans get their views of economics, but what about the praying and the gratitude?

More:

> With new farming techniques and an amended government, the pilgrims did all they humanly could to ward off starvation. But they could not control the weather. A drought settled on the colony and threatened to kill the corn before the harvest. Recognizing with the Psalmist that "except the Lord build the house, they labor in vain that build it," the colonists turned to God. According to Bradford, they "set apart a solemn day of humiliation to seek the Lord by humble & fervent prayer, in this great distress." What was the outcome?
>
> And he was pleased to give them a gracious & speedy answer, both to their own & the Indians admiration, that lived amongst them. For all the morning, and greatest part of the day, it was clear weather & very hot, and not a cloud or any sign of rain to be seen, yet toward evening it began to overcast, and shortly after to rain, with such sweet and gentle showers, as gave them cause of rejoicing, & blessing God. It came, without either wind, or thunder, or any violence, and by degrees in that abundance, as that the earth was thoroughly wet and soaked therewith. Which did so apparently revive & quicken the decayed corn & other fruits, as was wonderful to see, and made the Indians astonished to behold. (p. 131)
>
> Seeing the speedy results of the Puritans' prayers, an Indian named Hobanak said, "Now I see that the Englishman's God is a good God, for he hath heard you, and sent you rain, and that without storms and tempests and thunder, which usually we have with our rain, which breaks down our corn, but yours stands whole and good still; surely your God is a good God." (pp. 64-5)
>
> Then William Bradford again proclaimed a day of Thanksgiving to God, the forerunner of the American tradition of Thanksgiving.

So, this story explains why the United States has this character that values the free enterprise system, hard work, individual achievement, prayer, and gratitude. These are

the values that make us American, that made us into such a great nation.

Study: the early Earth's atmosphere contained oxygen

November 23, 2018 | by Wintery Knight | Link | Original Link

Christianity and the progress of science

Here's a paper published in the prestigious peer-reviewed science journal *Nature*, entitled "The oxidation state of Hadean magmas and implications for early Earth's atmosphere". This paper is significant because it undermines naturalistic scenarios for the origin of life.

Evolution News explains what the paper is about.

Excerpt:

> A recent *Nature* publication reports a new technique for measuring the oxygen levels in Earth's atmosphere some 4.4 billion years ago. The authors found that by studying cerium oxidation states in zircon, a compound formed from volcanic magma, they could ascertain the oxidation levels in the early earth. Their findings suggest that the early Earth's oxygen levels were very close to current levels.
>
> […]Miller and Urey conducted experiments to show that under certain atmospheric conditions and with the right kind of electrical charge, several amino acids could form from inorganic compounds such as methane, ammonia, and water. Several experiments have been done using various inorganic starting materials, all yielding a few amino acids; however, one key aspect of all of these experiments was the lack of oxygen.
>
> If the atmosphere has oxygen (or other oxidants) in it, then it is an oxidizing atmosphere. If the atmosphere lacks oxygen, then it is either inert or a reducing atmosphere. Think of a metal that has been left outside, maybe a piece of iron. That metal will eventually rust. Rusting is the result of the metal being oxidized.

> With organic reactions, such as the ones that produce amino acids, it is very important that no oxygen be present, or it will quench the reaction. Scientists, therefore, concluded that the early Earth must have been a reducing environment when life first formed (or the building blocks of life first formed) because that was the best environment for producing amino acids. The atmosphere eventually accumulated oxygen, but life did not form in an oxidative environment.
>
> The problem with this hypothesis is that it is based on the assumption that organic life must have formed from inorganic materials. That is why the early Earth must have been a reducing atmosphere. Research has been accumulating for more than thirty years, however, suggesting that the early Earth likely did have oxygen present.
>
> […]Their findings not only showed that oxygen was present in the early Earth atmosphere, something that has been shown in other studies, but that oxygen was present as early as 4.4 billion years ago. This takes the window of time available for life to have begun, by an origin-of-life scenario like the RNA-first world, and reduces it to an incredibly short amount of time. Several factors need to coincide in order for nucleotides or amino acids to form from purely naturalistic circumstances (chance and chemistry). The specific conditions required already made purely naturalist origin-of-life scenarios highly unlikely. Drastically reducing the amount of time available, adding that to the other conditions needing to be fulfilled, makes the RNA world hypothesis or a Miller-Urey-like synthesis of amino acids simply impossible.

So here's where we stand. If you are a materialist, then you need a reducing environment on the early Earth in order to get organic building blocks (amino acids) from inorganic materials. However, the production of these organic building blocks (amino acids) *requires* that the early Earth atmosphere be oxygen-free. And the problem with this new research, which confirms previous research, is that the early Earth contained huge amounts of oxygen – the same amount of oxygen as we have today. This is lethal to naturalistic scenarios for creating the building blocks of life on the Earth's surface.

Other problems

If you would like to read a helpful overview of the problems with a naturalistic scenario for the origin of life, check out this article by Casey Luskin.

Excerpt:

> The "origin of life" (OOL) is best described as the chemical and physical processes that brought into existence the first self-replicating molecule. It differs from the "evolution of life" because Darwinian evolution employs mutation and natural selection to change organisms, which requires reproduction. Since there was no reproduction before the first life, no "mutation – selection" mechanism was operating to build complexity. Hence, OOL theories cannot rely upon natural

> selection to increase complexity and must create the first life using only the laws of chemistry and physics.
>
> There are so many problems with purely natural explanations for the chemical origin of life on earth that many scientists have already abandoned all hopes that life had a natural origin on earth. Skeptical scientists include Francis Crick (solved the 3-dimensional structure of DNA) and Fred Hoyle (famous British cosmologist and mathematician), who, in an attempt to retain their atheistic worldviews, then propose outrageously untestable cosmological models or easily falsifiable extra-terrestrial-origin-of-life / panspermia scenarios which still do not account for the natural origin of life. So drastic is the evidence that Scientific American editor John Horgan wrote, "[i]f I were a creationist, I would cease attacking the theory of evolution … and focus instead on the origin of life. This is by far the weakest strut of the chassis of modern biology."[3]

The article goes over the standard problems with naturalistic scenarios of the origin of life: wrong atmosphere, harmful UV radiation, interfering cross-reactions, oxygen levels, meteorite impacts, chirality, etc.

Most people who are talking about intelligent design at the origin of life talk about the information problem – how do you get the amino acids to form proteins and how do you get nucleotide bases to code for amino acids? But the starting point for solving the sequencing problem is the construction of the amino acids – there has to be a plausible naturalistic scenario to form them.
